The constable begs to state the time actually taken was something under what has been stated to your Worship. The constables were away from the boatshed exactly two hours and three-quarters. A quarter of an hour of that the constables were alongside the "Vernon"—making actual time under way two hours and a half, the principle part of which was taken in the return, owing to being under sail, which has been stated by the s.-constable meant two hours. If the constable had been the senior in the boat no doubt he would have taken the other plan in returning. The constable in charge is the person that thought we making more headway than if were pulling against the wind. Mr. Inspector Donohoe has stated that the constables were called into his office and asked the reasons for the unnecessary delay, which the constable in charge was asked about before dinner. If the constable had been asked at the same time, the constable might have given a good explanation as to the being so long; but the constable is not asked until after dinner when he taken before Mr. Inspector Donohoe, and the constable accused of the words before your Worship which the constable honestly denies ever coming out of his lips. The constable begs to state that he does not consider that he was insolent to Mr. Inspector Donohoe in any way, but the constable owns to having pointed to the s.-constable when the s.-constable should accuse the constable of what was never used. The constable also owns to having addressed the s. constable as that man is not telling the truth, which the constable only hopes the s.-constable would do. The constable begs to state that he would listen to any remarks that Mr. Inspector Donohoe felt inclined to make, but when he was going to answer was not allowed to have the least opportunity of doing so, and told that he was suspended, which suspension lasted fifteen minutes. The constable did make the remarks that it would be better for a man to transfer to the Metropolitan Force, but the constable meant the detective force, and when the constable mentioned it to Mr. Inspector Donohoe the constable was told that he would not be recommended, as he was not thought a fit and proper person for the Detective Force. The constable was asked whether he was going to give Mr. Inspector Donohoe his transfer; the constable replied that he had no intention of doing so. The constable at the same time mentioned that his intentions were to hand a report in to the Inspector-General which the constable did, but was informed your Worship refused. The constable was called into Mr. Inspector Donohoe's office and asked for an explanation why the constable did not send in the report. The constable never refused to furnish Mr. Inspector Donohoe with a report, but the constable informed Mr. Inspector Donohoe that it would be ready by the next day. The constable was relieved from duty that night to furnish the report which the constable started, and was seen in his quarters at 12 p.m. that night by S.-constable Skinner, who came to the door and spoke to the constable. The constable was employed also the best part of the next day in the kitchen at the same report, which was handed to Mr. Inspector Donohoe as soon as finished. The constable begs to state that he is of a different principle to be of a violent and insolent manner to any one, more especially his superior officers, and trusts that if he is not to be believed that His Worship Mr. Marsh, Esq., S.M., would recommend his transfer to the metropolitan police.

W. E. QUELCH.

Exhibit No. 4.—Part d.

Water Police Station, 3 February, 1887.

CONSTABLE W. E. Quelch, No. 5,076, respectfully begs that the following statement through Mr. Inspector Donohoe to Mr. J. M. Marsh, Esq., S.M., will be excepted from the constable wished to clear himself of the manner his is accused of having performed his duty. If your Worship recollect that on the last occasion that he reported S.-constable Skinner, that your Worship gave the constable an excellent character as to the manner in which the constable performed his duty, and stated at the same time that your Worship had noticed the constable about the Courts. Your Worship also asked Mr. Inspector Donohoe as to the constable's character. Your Worship received at that time a reply that the constable was of a very good character, and that the constable had never been found fault with, which conduct your Worship commended the senior-constable upon. The senior-constable cannot deny that he has not told the constable himself that the constable done his duty in a proper manner. The constable begs to state to your Worship to explain to what as been stated by the senior-constable's referring to the matter on not answering them when being told off for duty. The constable having previously served twelve years in Her Majesty's Imperial Service, where discipline and the law is so strict that every member are always instructed by his superior officer that when he is spoken to or ordered by his superior officer that he is on no account to make any reply or answer to his superior officer, in which case, if he does answer his superior officer, it is put down as insubordination at once. The constable begs that your Worship will look at the point that after the constable having served twelve long years in Her Majesty's Imperial Service under such discipline, and was never charged with being insubordinate to one single officer, does it not strike your Worship that it would take the constable some time before he could get out of such

such discipline. The constable begs to state that ever since he has been attached that he has always been civil to every one belonging to the station as well as outside, and has always gone wherever he has been sent in the most urgent way impossible, and begs to state that if he had been in charge of the boat that he would have been the same; but owing to once being ask by the constable he was sent with wether he was in charge or not, considered it best to hold his tongue. If your Worship would ask the senior-constable wether the constable done his duty in the proper manner when sent with the senior-constable to the picnic given to William Beach, where the constables were under the eye of several gentlemen of the House of Parliament, which the constable can name, besides many other well-known gentlemen. If your Worship would only ask the senior-constable whether he performed his duty in a proper way, the same as the constable did, under the eyes of such gentleraaen. The constable cannot refrain from keeping such truth after having been charged with not performing his duty in a proper way, for which he has never been found fault with by any one before the present time since he has been attached to this station. What the constable has stated to your Worship is gospel truth, and if it were not the truth the constable would never take the Holy Bible in his hand to enter the same church as your Worship enters as long has he lives. The constable considers that the conduct of S.-c. Skinner at the mentioned picnic, under the eye of three Members of the House of Parliament and other gentlemen of the Crown, was unbecoming his position; and having mentioned the words to the constable that there was no duty wanted to be done here, the constable replied that it was just the place where duty ought to be performed in a proper manner. The constable never had his photo. taken along with the company; neither did he have any refreshments or eatables from the time the constable left the station untill he returned, but done his duty about the grounds from start to finish as any constable should do, and showing an example to the senior-constable that he ought to do his duty in the same manner. If your Worship does not believe the constable is telling the truth, your Worship will be punishing an innocent man.

W. E. QUELCH.

Exhibit No. 4.—Part e.

3 February, 1887.

MEMO.
THE insubordinate conduct of Water Police Constable Quelch, complained of by Mr. Inspector Donohoe, in his letter of the 31st January, is in my opinion fully proved, and the evidence of the sergeant and three senior-constables is confirmatory of the fact.

The lengthy explanation offered in reply by Water Police Constable Quelch is not satisfactory, and does not in any way exculpate him from the charge.

It is, therefore, of the highest importance, as well for the discipline of the Service, as for the harmony of this Force, that Water Police Constable Quelch should be removed therefrom, or transferred to the Metropolitan or some other Force, and I would strongly recommend the adoption of such a course; otherwise, I fear, the present ill feeling which too evidently exists on Water Police Quelch's part towards all those in the Water Police under whose authority he may be placed will be the constant source of strife and dissension hereafter.

J. MILBOURNE MARSH,
W.P.M.

Edmund Fosbery, Esq., Inspector-General of Police, Sydney.

It would be unfair to transfer a man with such a character as that given to Constable Quelch by his superior officers to the Metropolitan District. As he is generally complained of for disrespect and want of cheerful obedience of orders, as well as insubordination, he had better send in his resignation or be discharged.—E.F., B.C., 4/2/87. J. Milbourne Marsh, Esq., P.M.

Exhibit No. 4.—Part f.

Quelch—Insubordination—Water Police.

Water Police Station, 5 February, 1887.

CONSTABLE W. E. Quelch, No. 5,076, respectfully tenders his resignation to the Inspector-General as a police constable, and respectfully begs that his resignation may be accepted forthwith.

CONSTABLE W. E. QUELCH.

Forwarded to Inspector-General of Police.—J. MILBOURNE MARSH, P.M., 5th February, 1887. The Inspector-General of Police, Sydney. Resignation accepted and discharge approved.—EDMUND FOSBERY, I.-G.P., 5/2/87. Mr. Inspector Donohoe.

Exhibit No. 4.—Part g.

My dear Fosbery,

Saturday, 6 March, 1887.

Quelch's case is a hard one, and I would like you to reinstate him in the Water or to put him in the Foot Police.

He has explained to me that in tendering his resignation he did so looking upon your suggestion as orders.

I think he should have asked for an inquiry instead.

Yours, &c.,
GEORGE R. DIBBS.

E. Fosbery, Esq., Inspector-General of Police.

For Mr. Marsh's information.—EDM. FOSBERY, I.-G.P., B.C., 7/3/87. The Water Police Magistrate.

Exhibit No. 4.—Part h.

My dear Dibbs,

Police Department, Inspector-General of Police Office, 7 March, 1887.

Ex-Water Police Constable Quelch has evidently misrepresented the facts of his case to you.

The Water Police Magistrate (Mr. Marsh), submitted the case to me—one of insubordination, fully proved. The Inspector reported that Quelch was a most violent tempered man, always disputing his orders, and Mr. Marsh added that it was of the highest importance, as well for the discipline of the Service, as for the harmony of the Force that Quelch should be removed therefrom.

How could I retain such a man.

Yours, &c.,
EDM. FOSBERY.

G. R. Dibbs, Esq., M.P., Reform Club.

Exhibit No. 4.—Part i.

My dear Fosbery,

Water Police Office, Sydney, 7 March, 1887.

I return Mr. Dibbs's letter to you and your reply thereto. I thought that the inquiry I made into ex-Constable Quelch's conduct was sufficient to show how inadvisable it was that he should remain in the Water Police Force any longer.

Ex-Constable Quelch has just called upon me, saying he was directed by you to ask for a character during his service in the Water Police, up to the time of his resignation. As I am somewhat doubtful of the matter, I should be glad to know from yourself if such be the case or not, as I am under the impression that characters are never given except from your office.

Yours, &c.,
J. MILBOURNE MARSH.

Parliamentary Question—Quelch.

QUESTION—LEGISLATIVE ASSEMBLY, 3 APRIL, 1897.

- (18.) *Senior-constable Quelch* :—*Mr. Fegan*, for *Mr. Black*, asked the Colonial Secretary,—
- (1.) Is it a fact that Senior-constable Quelch has succeeded in having some publicans fined under the Licensing Act by disguising himself as a fish-hawker, and obtaining liquor some minutes before the prescribed opening-hour?
 - (2.) Is it a fact that this officer, having summoned the owner of a dog which tore his uniform, withdrew the charge on receiving compensation, which he pocketed, for the damage done?
 - (3.) Is it a fact that this officer also brought a charge of drinking during prohibited hours against a fellow-constable, and that the case was dismissed by *Mr. Smithers*, after inspection of the premises, on the grounds that it was impossible for Quelch to have seen the offence committed?
- Sir George Dibbs* answered,—The following information has been supplied by the Inspector-General of Police :—
- (1.) No; the senior-constable was in uniform.
 - (2.) The constable had his trousers torn by a dog, the owner of which paid 18s. 6d. for the damage. There was no summons.
 - (3.) The charge referred to was dismissed; the magistrate remarking that, as the senior-constable might possibly have made a mistake, he would give the benefit of the doubt.

Exhibit No. 6.—Part b.

Sir,

Redfern Station, 2 April, 1897.

Re attached memo. in reference to questions to be asked by *G. Black, Esq., M.L.A.*, in the Legislative Assembly. I have the honor to report that I have made inquiry, and, so far as I can ascertain, there is no foundation for the statement made in the first question, *re* the catching the publicans, the senior-constable being in uniform all the time.

As regards the second question, I interviewed *Mr. O'Donnell*, who corroborated the statement of Senior-constable Quelch, which is attached.

With reference to the case of the publican *Brüll*, I was in court, having charge of the case. The magistrate, *G. Smithers, Esq., S.M.*, did not state that it was impossible for Quelch to see *Swan*; he merely said that he thought the senior-constable might possibly have made a mistake, and in consequence would give the defendant the benefit of the doubt.

I have, &c.,

George Read, Esq., Superintendent.

EDMUND LAWLESS,

Inspector.

Forwarded to the Inspector-General of Police. The senior-constable received 18s. 6d. from *Mr. O'Donnell* as compensation for the destruction of his private trousers. He was off duty when it occurred. The detections were made of the publicans referred to by the senior-constable when in night-duty uniform.—*G. READ, Superintendent, 2/4/94.*

Exhibit No. 6.—Part c.

Redfern Station, 1 April, 1894.

SENIOR-CONSTABLE *William E. Quelch* most respectfully begs to report, for the information of his Superintendent, with reference to the questions to be asked by *Mr. Black*, a Member of the Legislative Assembly, in connection with the senior-constables' duty:

That in November last, complaints being made of publicans committing a breach of the Licensing Act by early-morning trading, the senior-constable and constable were instructed to attend to the complaint. On Friday, the 3rd of November last, seeing a number of men walking in and out the side door of the "Bellevue Hotel," which was left open, the senior-constable and Constable *Edwards* entered and found the men in the bar drinking liquor, the licensee behind the bar supplying the liquors. He was spoken to by the senior-constable, and admitted that he was fairly caught breaking the law.

A summons was issued against the licensee for keeping his house open for the sale of liquor during prohibited hours at 5.27 a.m. on the 3rd November, 1893, and he appeared before *Whittingdale Johnson, Esq., S.M.*, on the 7th November, 1893, and pleaded guilty to the information, and was fined £3, with costs 5s. 6d.

On Thursday, November 23rd, seeing men entering and leaving the "Imperial Hotel," the door, which was left open, as in last case, the senior-constable and Constable *Edwards* entered. The men were in the hotel; the licensee was supplying the liquors. He was spoken to by the senior-constable, and he admitted that it was a fair catch—that it was his fault for leaving the door open.

A summons was issued against the licensee for keeping his house open for the sale of liquor during prohibited hours at 5.35 a.m. on the 23rd November, 1893, and he appeared before *A. M. Fisher, Esq., S.M.*, on the 28th November, 1893, and pleaded guilty to the information, and was fined £2, with costs 5s. 6d. in each of the cases. The senior-constable did not obtain liquor, but witnessed the public supplied; neither did he disguise himself as a fish-hawker, but wore his uniform, and did his duty in each case in a straightforward, honest manner.

With reference to the second question: On the 5th of November, 1892, a dog tore a pair of the senior-constable's own private trousers. The dog was afterwards claimed by an independent gentlemen, *Mr. G. O'Donnell*, of Pitt-street, Redfern, who replaced the trousers and destroyed the dog.

No summons was ever issued against *Mr. O'Donnell*, so it would be impossible for the senior-constable to withdraw a summons that was never issued. If such summons had been issued, the senior-constable thinks it would have been a persecution, and not a prosecution, against such a respectable person.

With reference to the third question: A summons was issued against a publican for supplying liquor to others than *bonâ fide* inmates, lodgers, or travellers, at 1.10 a.m. on the 7th of January last. A constable was called as a witness for the defence. Some unusual circumstances took place during the hearing of the case in connection with the defence, which was commented upon by the presiding magistrate. There was an inspection made by the magistrate, but not at the corresponding time the offence was committed, the inspection being in broad daylight, the offence being committed in the dark, quiet, early hours of the morning, which would give a different view. No such remarks were made by the Presiding Magistrate, *Mr. Smithers, S.M.*, on the case being dismissed as those contained in the last portion of the question.

The senior-constable's case was not closed when the case was dismissed, he having two sergeants and a constable to call to prove that the evidence given by the licensee and the constable that they saw the senior-constable outside the hotel at 12.15 a.m. was not true, as the senior-constable was writing at the station at that time and did not leave the station till some minutes after. The information was laid in this case from instructions from his inspector, and as this case has been before his Department, he does not wish to state further than that he merely done his duty in the case in a honest, straightforward manner.

George Read, Esq., J.P., Superintendent.

WILLIAM E. QUELCH,

Senior-constable.

Exhibit No. 7.—Part a.

To the Inspector-General of Police, New South Wales.—

Sir,

65, Elizabeth-street, Sydney, 16 July, 1897.

I have been instructed by *Mrs. Norah McInerney*, licensee of the "Court House Hotel," Redfern-street, Redfern, to bring under your notice the insulting and inexplicable conduct displayed towards her and the members of her family on Sunday last, the 11th instant.

The facts are shortly as follows:—At about half-past 1 on Sunday, the 11th instant, just after the family had dined, *Mrs. McInerney's* son, *James*, aged 17, went to the side door of the hotel. Constable *Quelch* was standing alone, near the door. On seeing the lad, *Quelch* shouted out, "I am here, I am here; I will have you all out of here by the end of the year; you can now go and tell your priest so." *Quelch* was highly excited, and was gesticulating wildly.

Mrs. McInerney very keenly feels the insulting remarks so made, more especially as she has been the licensee of this hotel for over thirteen years, and never yet has she been before a Court charged with any offence.

I therefore trust, sir, that you will call for a report on this matter, and on the conduct of Constable *Quelch* generally.

I am, &c.,

JOSEPH A. DOYLE.

Referred to Superintendent *Read* for inquiry and report.—*E.F., I.-G.P., 16/7/97.*

Exhibit

Exhibit No. 7.—Part b.

Redfern Station, 18th July, 1897.

SENIOR-CONSTABLE W. E. Quelch respectfully reports, for the information of the Superintendent, with reference to attached letter, written on behalf of Mrs. McInerney, licensee of the "Court House Hotel," George and Redfern Streets, Redfern.

A systematic Sunday trade is done at the above hotel. A strict watch is kept from both sides the hotel by the daughters and a boarder, a relative, who sits on the balcony.

On Sunday, the 11th instant, the senior-constable saw seven men let in and out the side door in George-street by the son, who let in and out two; these were also seen to leave hotel by Senior-constable Proctor. The son then let in and out three more, and then two more, the last two observations being made from inside the Police Court room. It is a most *diabolical* statement on the part of Mrs. McInerney to say the senior-constable was standing outside. On the senior-constable leaving the station, the son was then in the act of letting in two more men. On his observing the senior-constable some 50 yards away, he shut the door of the parlour. On going around into Redfern-street, the daughter was there watching. The senior-constable said, "Your brother has just let in and out several men by your other side door. I shall *recorded* it at the station." The daughter replied, "What do you want to come and bother us for. If my father was alive, you would not come and bother us." The senior-constable replied that he did not come there to bother them, but to do his duty, and that it would not trouble him if her father was alive, in the least; that I should still do my duty just the same, and that was the least I would do. If the daughter feels disposed to construe the word "least" into that of "priest" she is quite at liberty to do so; nevertheless, it's false.

The licensee was not present; if she had been, the senior-constable would have spoken to her, and not the daughter. The observations were entered at the station at the time.

This hotel has been mentioned to Inspector Lawless about the Sunday trading by prominent gentleman, who has also mentioned the same facts to the senior-constable.

Mr. Doyle asks for a report of the general conduct of the senior-constable, which the senior-constable thinks most impertinent. That gentleman has on several occasions had the opportunity of testing such, and has tried and signally failed, and has now been prompted by evil-disposed persons, who would try to make out the senior-constable a maniac and didn't know what he was doing, by the statements in the letter. This letter, dated the 16th inst., was late news to the senior-constable, who knew what was working by a remark dropped at the Station, and conveyed to the senior-constable by Sergt. Vane on the 14th inst. by one that frequents the hotel.

No doubt Mrs. McInerney wants the senior-constable to close his eyes on Sundays, or to follow in the foot-steps of some of my comrades, which will never happen as long as the senior-constable is entrusted to do his duty in an impartial, honest, and straightforward manner.

Mrs. McInerney has been the licensee of the hotel since the 6th June, 1893, and not for the past thirteen years. Her husband held the license previous, who always made it his point to encourage the police, some of the men having boarded with them.

George Read, Esq., Superintendent.

WILLIAM E. QUELCH,
Senior-constable.

Forwarded to the Superintendent.—E. LAWLESS, Inspector, 19/7/97. G. Read, Esq.

Forwarded to the Inspector-General of Police. Senior-constable Quelch appears to me to have simply performed his duty in this matter. He denies that he used any insulting language, but the McInerneys can, if they think fit, make their complaint to a magistrate and ask for a summons against the senior-constable.—GEO. READ, Superintendent, 19/7/97.

Reply to Mr. Doyle that the senior-constable emphatically denies having used the expression attributed to him. The duty he was performing at the time was in obedience to his instructions, but should his client think proper, she can make her complaint to a magistrate, and apply for a summons against the senior-constable.—Done.—A.B., 19/7/97.

Mr. Read will see within the tenor of my reply, but I cannot comprehend the object of this wandering, irrelevant report from Senior-constable Quelch. What does he mean by his charges against his comrades?—E.F., 19/7/97. Supt. Read.

Exhibit No. 7.—Part c.

Mrs. Norah McInerney, "Court House Hotel," Redfern, *per* Mr. Doyle, Solicitor.—Complaint against Senior-constable Quelch.

Redfern Station, 21st July, 1897.

SENIOR-CONSTABLE W. E. Quelch respectfully reports, for the information of the Superintendent, with reference to that portion of his report of the 18th instant:

The senior-constable's meaning is: observing several of the police visiting this hotel, and knowing the amount of trade done on Sundays, it is hardly possible for them, in the ordinary execution of their duty, not to observe the same, and then fail to record such in the observation book at the Station for that purpose.

George Read, Esq., Superintendent.

WILLIAM E. QUELCH,
Senior-constable.

Forwarded to the Superintendent.—E. LAWLESS, Inspector., 22/7/97. G. Read, Esq. Forwarded to the Inspector-General.—G. READ, Superintendent, 22/7/97.

Exhibit No. 8.—Part a.

Reports by different Officers *re* Charges.

MEMO.

Police Department, Inspector-General's Office, Sydney, 21 August, 1897.

SUPERINTENDENT READ will please to peruse carefully the statements made in Parliament affecting Senior-constable Quelch.

He will cause to be extracted at length, and in the words made use of by Members, the accusations made against Senior-constable Quelch.

Any reports or papers bearing on the charges will be attached.

Also the articles from *Truth* referred to, which I have not seen, and inform me if any civil action is contemplated.

I may say that it is then my intention, after the formulated charges have been shown to Mr. Dacey, M.P., to ascertain if they correctly summarise his accusations, that a Royal Commission be opened to a Stipendiary Magistrate to inquire into the same on oath, and report to the Government. I would have caused Senior-constable Quelch to be proceeded against under the Police Regulation Act, but the charges could not be framed, I fear, definitely and completely to allow of investigation in that manner.

I desire expedition.

E.F.

Exhibit No. 8.—Part b.

Police Department, Superintendent's Office,

Metropolitan District, Sydney, 23rd August, 1897.

Sir,

I have the honor to forward a statement of accusations of misconduct made by Mr. Dacey, the Honorable Member for Botany, against Senior-constable Quelch in his place in Parliament on the 17th instant.

In formulating the charges, I have, in accordance with your instructions, adhered as nearly as possible to the Honorable Member's own language, omitting only such portions of his speech as were not required to fully express the alleged misconduct.

Senior-constable Quelch has not yet taken any steps to vindicate his character by civil action, but he informs me that he is considering the advisability of doing so.

The accompanying reports relate to charge No. 5, which was investigated and decided by myself without reference to the Inspector-General.

I have, &c.,

GEO. READ,
Superintendent.

The Inspector-General of Police.

Exhibit

Exhibit No. 8.—Part c.

"TRUTH," SUNDAY, 8TH AUGUST, 1897.

Police v. People—Quelch—Squelch Him—Constable Quelch, of Redfern—A Menace to the Reputation of the Force—Quelch a Bugbear in the Division—Why does Lawless stick to him—Quelch must go—Or there will be an Uprising in Restful Redfern.

THIS is not the first occasion upon which this paper has felt constrained to animadvert upon the conduct of the Redfern police. It is only a very short while back that *Truth* had the painful duty of showing how that illustrious Redfern policeman, alleged "detective" Dukes, with his unfortunate mate, Constable Hinds, deliberately arrested the Elliotts, father and son, on a charge of burglary under arms, when they well knew that the men they impudently gathered in and tried their damndest to "send up" were absolutely innocent.

This paper showed this at the time, and no one, let alone Dukes and Hinds, dare come forward and refute the bold charges then given utterance to.

It might have been thought that such a glaring exposure of police crookedness in one division would have restrained other officers therein from overstepping the bounds of police prudence, at least for a while. But some of the men of the division feel so safe under the ægis of their chief, that they do and dare anything, however outrageous.

In the Redfern Division, there is a little coterie of favoured confidants, to whose opinions, irrespective of their grade, the officers defer, to the extent of even ignoring immediate non-commissioned officers. If one of these favourites gets into trouble at head quarters, even though it may go so far as to cause his reduction in rank a couple of grades, he takes but scant notice, for he knows that he will soon get promoted again. Why, Dukes was degraded from Senior-constable to plain constable, and influence got him his two grades back in about a fortnight.

But it is the conduct of Senior-constable Quelch that *Truth* now wishes to make public in the interests of the Force as well as for the protection of the people. That Quelch is totally unfit to wear "the coat," is a fact well-known to all his brother officers (even his superior, Lawless, must be aware of that fact), while there is not one inhabitant of the Redfern Division who would say a good word for this notorious man—most of them are bursting to say all that is bad of him.

One of Quelch's most notable characteristics is his snaky jealousy of other officers, which carries him so far as to induce him to condone or remain blind to criminal conduct rather than they shall secure good cases, likely to lead to their promotion. Here are a few instances:

A short while back, as Constable Bruce was walking his rounds in the small hours in the eastern part of Redfern, he disturbed two men, who ran from him. Bruce chased them right into the hands of Quelch, who was roundsman. Bailed up, they told a whining tale about being on their way to the Farmers' and Dairymen's Milk Company for their supply to serve their customers. They gave names and addresses, one of them saying he lived in Pymont. And Quelch either would not or could not see any anomaly in a man coming round through East Redfern on his way from Pymont to the Farmers' and Dairymen's Milk Company! He let the men go, calmly ignoring a strong protest from Bruce. The angered constable immediately returned on their tracks, and found a sack full of pigeons in the lane from which the precious pair of "milkmen" had bolted when he disturbed them. Bruce thus lost an excellent case, while two night-hawks went free to continue their depredateions, as it will be shown they did, and it will also be shown that Quelch was once more their saviour.

Constable Brennan was on duty at 5.45 a.m., a few weeks back, when he noticed three men standing outside Riddell's boot store on Botany Road. Considering their actions suspicious, he crept quietly towards them, and had got within 60 yards of them when they saw him and bolted. Brennan is a "colt," and has not yet lost the rapid use of a remarkably smart pair of legs; so, finding he was fast overhauling them, with all their 60 yards, start, they turned into an alley-way, and stood snarling, at bay. Brennan pulled his gun and covered them, and being joined by a watchman, the three were soon at Redfern station, where Quelch was in charge. On the way they gave Brennan names and addresses. At the station, when questioned by Quelch, they gave different ones, one of them the same as that given a few days before by one of the pigeon-stealers he had so stupidly or maliciously allowed to escape.

Even that significant fact did not appear to arouse any interest in Quelch. The constable who had had such good reason to gather the trio in, asked him to detain them while he went back to investigate as to what they had been doing that caused them to flee when they saw a policeman. Nothing could have been more reasonable, and yet Quelch refused, contenting himself with taking down the fictitious names and addresses, and let them go free.

Lord! how they must have chuckled as they walked straight down into Liverpool-street, city, and sold the proceeds of the burglary they had committed at Riddell's, and which they had upon their persons when Quelch refused to book a charge of being suspected persons, so as to allow of their being searched and detained. A few moments after they had gone away rejoicing and praising God for making constables of the Quelches of this world, young Brennan went back and found Riddell's place broken open and large bundles of boots and shoes placed at the door ready for removal.

They were industrious gentlemen, too. That same night, or early next morning, Cohen's jewellery shop, King-street, Newtown, was broken into and robbed. During the following day, Constables Macatoney and Welsh arrested two noted characters in George-street on suspicion of their being the burglars. They didn't have any Quelch to "crab their pitch," so the heavenly twins "went in," were searched, and the loot of the Cohen stronghold found upon them. They gave the same names as two of Brennan's friends had done to him. Brennan noticed this, and went to interview the pair, with the result that he at once identified the two as being identical with two of the three Quelch had refused to take charge of.

What can have been Quelch's motive in treating these same men twice with such exceptional leniency? If it was lazy carelessness, it should be enough to prove him unfit for his position. If it was to prevent younger officers from securing creditable cases, then he ought to be given a flying start from the Force.

A report was made to the Inspector-General of Quelch's attitude in the boot burglary, and evidence was taken at an inquiry. Under the regulations it was competent for the station constables who were present to have over-ridden his dictum, and either compelled him to accept Brennan's charge or have called the sergeant from his bed, and submitted the case to him as senior station officer. They neglected their duty in not adopting either course, and though they were very wide-mouthed in their outside condemnation of Quelch's conduct in the case, when they were called upon for their report, they stuck to Quelch, for their own interests. The consequence was that Quelch escaped the just consequences of this gross folly, or misdemeanour, and Brennan lost a splendid case, and one likely to advance him on the road to promotion; though the Inspector-General minuted in his favour, and he got his men eventually, for all three of them were convicted at last sessions, for the Riddell burglary.

The whole division grins broadly when Quelch goes into the box. He is notorious for the amazing strength of his evidence. Mr. Smithers, S.M., can bear *Truth* out in this. The "Somerset Hotel" case to wit. In that instance Quelch swore to seeing a brother constable drinking at illegal hours, through the key-hole of a room. He swore most emphatically that he could see right into the bar, through the keyhole. A number of witnesses for the defence swore just as positively that this was impossible, so Mr. Smithers, strongly impressed with the very reasonable idea that there was flat perjury on one side or the other, left the bench and went and inspected the premises. His inspection was so interfered with by the now funky Quelch that he had to ask the sergeant to "remove that man, and keep him quiet." Also it perfectly satisfied him as to which side the flat perjury was on. He returned to the Court, and in dismissing the case said that Quelch's conduct was such as to render him unfit for his position, and a lot more besides. Yet Quelch is there to-day, a dangerous man placed in a position of authority and a certain degree of power which he grossly abuses.

On a Saturday evening in May last a young man, well known in Redfern, left the drapery establishment where he works, in company with one of the young ladies of the shop, with the intention of seeing her safely home, as she lived in a lonely part near Mount Carmel and it was after 11 o'clock. To reach her home they crossed Mount Carmel (or Waterloo) Park, and just as they emerged therefrom they were bailed up by Quelch, who was in uniform, and who made a most insulting suggestive remark, and then ordered the young man to clear out or he'd lock him up.

Being, luckily, a strong and hearty young fellow, who was quite capable of holding his own, man to man, with Quelch, he flatly refused to leave the young lady to the tender mercies of a crooked-minded cop, and as Quelch found he was determined, he stated his intention of seeing where the girl lived anyway. So he accompanied the young couple until, within a few yards of, and in sight of her own gate, the young man bade her good night and remained to watch her safe within. But Quelch had another game to play. So he went at her side to the gate, where he detained her, using covert threats and cajolings alternately, as inducements to her to meet him on a date and at a place he defined. In desperate fear, and anxiety to get rid of her unwelcome wooer, the girl at last agreed to do so, but, of course, never intended to keep the appointment.

And this is a specimen senior-constable of the New South Wales police! A sample of the class of men who are supposed to protect our women and girls from violence or blackmailing ruffianism

Quelch

Quelch was at one time a Water Policeman, but after being sent back to the depot for some reason, he was appointed to the foot police. How, under the circumstances, he ever got into the street police is a question that demands an answer, as does the question as to what powerful influence it is that keeps such a character in the Force.

Quelch goes out of his way to make cases, and is notorious for most malignant spite. He has hounded one unfortunate publican out of the district, a ruined man. To gratify his malice he even went to the trouble of raking up a forgotten clause in the Pawnbroker's Act, which provides that no pledge shall be taken before 8 a.m., and went the length of summoning a most respectable pawnbroker of many years' standing in the district, for taking a pledge from a regular customer, at 7.30 a.m.

Three or four weeks ago, on a Sunday, the young son of Mrs. McInerney, who has for sixteen years, without a mark against her, kept the "Court-house Hotel," right under the Redfern clock, and opposite the police station, was expecting a buggy to call for him. He had been laid up for a fortnight, and was going for a drive after his dinner.

Young McInerney is shipping clerk at Toohy's Brewery. Just before sitting down to his dinner he stepped to the side door to compare his watch with the town clock over his head. Just then Quelch swooped up with a "Ha-ha-a-a! I'm here, you see." The lad, scared, slammed the door to, and went in to his dinner, white with the shock to his weak nerves. They had just sat down, mother, son, and other members of the family, when Quelch suddenly stuck his head through the open window, close to the old lady's side, with a wild shout, "Ha-ha-a-a! I missed you that time, but, by Christ, I'll have you yet. I'll have you out of that before the year is out, and go and tell that to your priest."

The suddenness of this ruffianly act caused Mrs. McInerney to go into a hysterical fit, from which she has not yet fully recovered.

It would appear that Quelch has a deadly down on Roman Catholics. Belike he's a Yellow Puppette, for he goes the length to frequently insult Mrs. McInerney's young daughter as she goes to Sunday Mass, with such remarks as, "Yes, you ought to go to church, you ought." And not one of the family can meet him without, being insulted. Yet, though so severe on publicans, Mr. Quelch is not himself a teetotaler.

There is not a senior-constable in the division who can work well with this extraordinary man. Indeed, it is not long since one very decent two-stripe man had to ask for a transfer elsewhere, and got it, as he flatly refused to work in the same division as Quelch.

Surely, in face of such an indictment as the above, this man will not be allowed longer to disgrace a fine force. Neither *Truth* nor the people of the district will be satisfied with his "removal." Besides, fancy the feelings of the police of any district to which he might be transferred. What a treat for everybody, from sub to probationer, to have such an audacious incompetent sent among them, to crawl to his superiors and spy upon and bully and wrong his inferiors as he now does at Redfern. By all or any means, Mr. Inspector-General, cleanse the Force of the foul stain of this man's presence therein. Once fired, as was Coufts when *Truth* made the Force too hot to hold him, Quelch could imitate that perjured pet's example, and go into the beer trade himself, and find out how pleasant it is to be dogged and spied upon by other Quelches and Coufts who have not yet lost their coats.

Exhibit No. 8.—Part d.

"TRUTH," SUNDAY, 22 AUGUST, 1897.

Police v. People—Quelch—Squelch him—Senior-constable Quelch's case before Parliament—A terrible array of damning accusations—Quelch stigmatised as Burglar and Perjurer—Dacey's Diatribes endorsed by Levien.

ON Tuesday evening, at 4.50, Mr. J. R. Dacey, member for Botany, moved the adjournment of the House to consider the conduct of Senior-constable Quelch, of Redfern, whose extraordinary vagaries, insolent, overbearing treatment of citizens, and suspicious acts, were pretty fully set forth in *Truth* of August 8. Of course *Truth* did not publish all it knew, but it was well posted, as was hinted in that article, and was merely keeping a reserve fire for close range.

However, the charges made in the Assembly on Tuesday, while in many cases a repetition of what this paper has already published, are in some instances new to the public, and they and their endorsement disclose a very terrible state of things.

Mr. Dacey said:—

The peculiar conduct of Senior-constable Quelch, one of the policemen in the Redfern Division, has been of such a nature as to raise up a considerable amount of scandal of such proportions that I consider it my duty to bring the matter under the notice of this House. Week after week "*Truth*," one of the city papers, has brought very serious charges against this constable, and he has made no attempt to defend his character. Therefore, the public have no option but to believe the statements contained in that paper. Over and above that, there are other charges that have not been stated publicly, which I will bring before the notice of the House this evening. First, I think that I will be able to show that this senior-constable has been

GUILTY OF THE GROSSEST PERJURY,

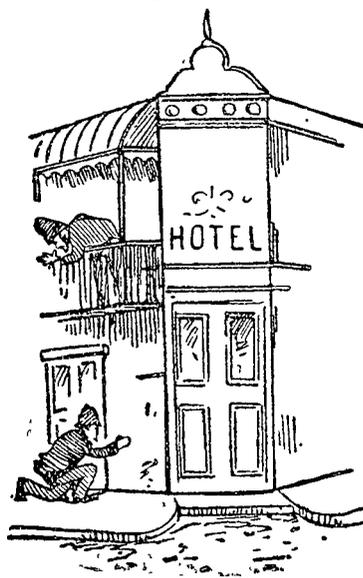

and, further, I hope before I sit down to show that he is simply a burglar, police-constable and all as he is. Some time ago he brought an action against the lessee of the "Somerset Hotel," Redfern, for selling drink within prohibited hours. He also charged a brother policeman, named Swan, with being present in the hotel, and drinking within those prohibited hours. Quelch swore that he looked through the keyhole and saw Constable Swan drinking a glass of beer. The evidence was so conflicting that the magistrate decided to go and inspect the premises for himself, with the result that when he looked through the keyhole of the door he could only see a man's legs in the position indicated by Quelch. The keyhole was too low to enable one to see a man's body; therefore it was an absolute impossibility for Senior-constable Quelch to see what a man was doing inside. The case stands thus: Constable Swan was to meet a friend from the country, named Cook, an alderman, at 10 o'clock on this particular night. Cook did not turn up until half-past 11, and when he did, as a traveller he was entitled to get some drink. Swan refused to have anything but a cigar, and after chatting for a few moments he decided to go home. The landlady, when she opened the door, said she saw a constable on the opposite side of the street. Swan went on to the balcony to see who the constable was. When he did so he

SAW QUELCH LOOKING THROUGH THE KEYHOLE,

and at that particular moment Quelch swore he saw Swan drinking a glass of beer, although Swan was looking over the balcony at Quelch. I sent a telephone message through to Swan the other day to ask him if this was the fact; but there is such a reign of terrorism in the Police Department that he was afraid to answer me. I think it is what the public might expect that when a senior-constable is proved to have committed such outrageous perjury some steps should be taken to punish that officer. If it was a private person, if it was an unfortunate publican, he would have been prosecuted for perjury. In contravention of the strict instructions of the Inspector-General, who orders that no constable shall in any way try to trick a publican into supplying liquor within prohibited hours,

QUELCH DISGUISED A YOUNG NEW POLICEMAN

as a fisherman, and sent him into an hotel next the fish market before 6 o'clock in the morning to appeal to the publican for a drink. Quelch got a conviction by that, in my opinion, most contemptible action. Similarly he sent the same constable, disguised as a driver, into an hotel next McMahon's stables. He was disguised as one of McMahon's drivers. The result was that the lessee of that hotel was also fined. Some short time ago a constable named Bruce was on duty at the Baptist Estate, near Moore Park, when he saw three men prowling about in a suspicious manner. He went over to see what they were at, and they ran away. He chased the men, who actually

RAN INTO THE ARMS OF QUELCH.

Quelch heard their yarn, which was that they were dairymen going to the Farmers' and Dairymen's Milk Supply Company to get milk for their customers; but, strange to say, they said they lived at Pymont. How could they possibly be over at Moore Park if they were coming from Pymont to get milk from the company's premises in Harris-street, Pymont? Quelch did not see the absurdity of that; but he took down these men's names and let them go. A few minutes after Bruce went back on their tracks and discovered a sack full of pigeons which these men had evidently stolen. Shortly after this there was

A ROBBERY AT BOTANY ROAD,

at a boot store, kept by a man named Riedel. Constable Brennan saw three men in front of Riedel's shop under rather suspicious circumstances, and he tried to get near them. When he got within about 60 yards of them they ran away. He went after them, and eventually arrested them, with the assistance of Special-constable Brewin. They gave their names and addresses, and he took them to the station, where Quelch was. They gave different names and addresses to Quelch, and one of them gave the self-same name that one of the pigeon-stealers gave a few nights previously. Notwithstanding that,

QUELCH RELEASED THESE MEN.

While these men were standing in the presence of Quelch they actually had on their persons the stolen boots out of Riedel's shop. The arresting constable appealed to Quelch to wait until he went back to see if a robbery had been committed; but he refused to do so, because, as I think I will show, Quelch was in league with these men, whom he twice saved from the clutches of the law. These men were released, and afterwards the robbery was discovered. It was found that the window was cut open, and a quantity of goods taken away. Then they sought to arrest the men again; but, of course, the addresses were bogus, and they could not be found. A couple of nights afterwards the same three men committed

A BURGLARY AT COHEN'S JEWELLERY SHOP,

King-street, Newtown, or rather two of them did. Seeing their names recorded, I suppose in the books which the police have, Brennan went there and found two of the burglars who had been concerned in the robbery of Riedel's boot store; but he had some difficulty in getting the third. If Quelch had arrested these men when they were caught in connection with stealing pigeons, Riedel's boot store would not have been broken into, nor would Cohen's jeweller's shop. They caught two men, and eventually arrested a third man. The third man swore in court that he never was with these burglars, and the burglars themselves swore that he was not. So through Quelch allowing the three men to escape, there is considerable doubt as to whether the police have the third man. That is one instance of the suspicious conduct of Senior-constable Quelch;

HERE IS ANOTHER INSTANCE:

In July, 1896, upon the advent of the Public Service Board, it was decided to remove the offices of the Director of Charitable Institutions from "Myall House," Redfern, to Richmond-terrace, in the Domain. Pursuant to this determination the front part of the building was vacated, and all the things were removed. There was at the back of the premises a store, containing boots, shirts, and other articles. There was a clerk named Coghlan there in charge during the daytime, and he was asked by the Director of Charitable Institutions to draw the attention of the police to the fact that the place was unprotected at night, and that it was necessary for them to keep an eye upon it. As far as I can ascertain the only man who received this information was Quelch. Coghlan showed him over the premises, and the amount of stock which the place contained, and, strange to say, about three nights afterwards

THE BUILDING WAS BROKEN INTO

under circumstances of the most suspicious character. Coghlan had told Quelch that he left the store between 5 and 6 o'clock in the afternoon. On this particular night Coghlan returned in company with another clerk named Newcombe. They stood outside the store door, at the back of the main building, yarning, for about ten minutes. The place where they stood yarning is not more than about 12 feet away from the door behind which Quelch was hidden. One of the clerks finally went into the main building and lit the gas and called out, "What did you leave the middle door open for?" The door had also been taken off its hinges. The other clerk had been to one of the out-houses, and when he came out of the out-house he put his knee against an empty case opposite an outside door broken off its hinges, and placed it in a line with some other cases. This so disturbed the burglar inside the door that he pushed the door open and rushed out. The man who rushed out of the building was, strange to say,

SENIOR-CONSTABLE QUELCH.

Coghlan said, "What is this?" whereupon Quelch said, "Someone has been in, and has got away over the fence." Now, if Quelch had gone into the store after the burglar, seeing that he went in in the dark, and did not know what might happen to him, it is not at all likely that he would have closed the door after him. It is not at all likely that he would have done that had he not been there with an unlawful intent. He would have left the door open as a means of escape in case of danger. On the place being examined inside, it was found that something like £20 worth of goods were prepared ready for removal. The two clerks, as I have pointed out, stood outside the building for about ten minutes yarning about the Charities Department work, the books, and other subjects, and Quelch was standing—I paced the distance to-day—at a point not more than 12 feet away from them. Although he stood only that distance away from them, several minutes elapsed before he came out from his hiding place. I will now mention another case. Constable Lambert was on duty one night and heard a noise at Biron Pogson's grocery shop. He came up to the place to see what it was. He found the door open and

SENIOR-CONSTABLE QUELCH INSIDE WITH A BAG OF GROCERIES.

Quelch said, "Someone has broken into the place." What I wish to draw particular attention to is that this case of attempted robbery of the grocery store has not been reported at head-quarters. That is a significant fact. Quelch was the officer to have reported it, but he has not yet made his report.

An Hon. Member: What about the other constable?

Mr. DACEY: He was Quelch's subordinate. It was the duty of the senior-constable to report the matter. I may mention, in passing, that I do not know Constable Lambert, and that I do not know Senior-constable Quelch. About six months ago Constable Hill, when on duty on the Botany Road, saw a man crossing the road in a slouch hat, and with a bag of something on his back. Hill approached the man, and was astonished to find that he

WAS HIS SENIOR OFFICER, QUELCH,

who said, "It's all right, Hill; I have been getting some sand for my canaries." Now, I submit that when you connect these three cases together, the facts look extremely suspicious as against Senior-constable Quelch. Another point to which I would direct attention is this: Senior-constable Quelch receives 9s. a day, or £3 3s. a week. With that he pays principal and interest instalments on a house worth between £700 and £800. The house is elaborately furnished, and

QUELCH DRESSES ON SUNDAY IN A SILK "BELLTOPPER,"

in broadcloth clothing, and kid gloves. Can anyone tell me how that is done on 9s. a day?

Mr. LEVIE: The hon. member has evidently never been a policeman!

Mr. DACEY: I could not do it on four times 9s. a day.

Mr. LEVIE: The hon. member has not been long enough in the Force.

Mr. DACEY: If I were long enough in the Force I should probably be able to have a house as good as Quelch's, and as elaborately furnished as Quelch's, and I should also be able to dress in the elaborate manner in which Quelch dresses. Some of these cases, I understand, have been inquired into by the Inspector-General of Police; but what I would ask the hon. gentleman at the head of the department to do is to institute a Ministerial inquiry into the truth of the statements I make. Let him get his own officers in the Charities Department to make inquiry. I have given the names of the two clerks who were present at the attempted robbery at "Myall House." These charges are too serious to be looked over. The public do not like to think that they are giving their property over to the protection of thieves and burglars. They do not like to think that they are appealing to burglars themselves to protect them against other burglars.

Mr. HOGUE: Does the hon. member charge this man with being a burglar?

Mr. DACEY: I do. I also charge him with being a perjurer on the verdict of Mr. Smithers, the Stipendiary Magistrate. Is it right that we should have a man who will perjure himself, as this man did, in such a responsible position in the Police Force of the Colony? I desire the hon. gentleman to confine the inquiry solely to the conduct of Senior-constable Quelch,

Quelch, and I have worded my notice of motion accordingly. Let hon. members consider the suspicious circumstances attending the three cases I have mentioned, and I think they will then agree with me that, if the police authorities will not take action, it is the bounden duty of the hon. gentleman at the head of the Government to cause inquiry to be made into the man's character. He should be called upon either to defend his character by prosecuting the newspaper to which I have referred, or he should resign. Surely, if he is fit to occupy the position he does, he ought to defend his character from the charges levelled at him in certain newspapers in this city. If the Government will cause inquiry to be made, they will find that what I have stated with regard to the release of the burglars is absolutely correct. The same observation applies to the other cases I have mentioned. I feel sure that on inquiry the truth of my statements will be substantiated.

Mr. Levien said: This is not one of the kind of things I care to take part in. I do not believe in hitting a man below the belt. I have no doubt that the hon. member who has moved the adjournment is actuated by the highest motives in the interests of the public, and with no regard to the fact of an approaching election.

I AM NOT A BELIEVER IN QUELCH.

I do not think he is a man that will altogether speak the truth; but I think it would have been far better, in the interests of the Force, had the hon. member put his charges in writing, and sent them to the Inspector-General. Without a doubt they are serious charges. There are four or five charges, any one of which, if proved, would send a man to gaol for the rest of his life. The hon. gentleman takes no action after he hears these things. The persons whose places are broken into take no action, and nothing is done. The Inspector-General, according to the Colonial Secretary, hears nothing whatever about the charges, and until to-night we hear nothing about them. With reference to the evidence given by Quelch, that he saw a publican through a key-hole, that is a notorious case. The hon. member for Camden, the hon. member for West Macquarie, and everyone else who was in Court heard Quelch swear that he saw a man through a key-hole, when such a thing was physically impossible. It should have been the duty of the presiding magistrate to recommend the man's dismissal or have an inquiry. There is no doubt he told a lie.

I BELIEVE HE IS A LIAR

beyond all doubt, and as far as I am concerned, I would not have him in the force ten minutes.

Mr. Crick: A policeman tell a lie!

Mr. Levien: A policeman would be rather a novelty who did not tell a lie. But according to the hon. member for Waterloo

THEY ARE ALL MODELS,

and the hon. gentleman speaks from experience. It was the bounden duty of the hon. member who made these serious accusations to compel the persons whose places were broken into to lay a charge against Quelch, to be brought before the Inspector-General of Police. I suppose the more numerous these cases became, the more suspicious they became, and not until they became suspicious did it occur to the minds of people that Quelch was an absolute burglar. As to his going from place to place committing burglaries, I believe that is rather a far-fetched story.

I BELIEVE HE WOULD TELL A LIE,

but I cannot believe from my knowledge of the man that he is mixed up in all these burglaries—that he is going round aiding people to commit these crimes. I do not believe that his superior officer, Inspector Lawless, would allow him to be guilty of such a course of conduct. Inspector Lawless is a man whom everyone respects and esteems, and from my knowledge of him, I believe we can rely upon him. I suppose Inspector Lawless has made inquiries and satisfied himself beyond all doubt. The hon. gentleman lives in the electorate, why could he not go to Inspector Lawless and say to him, "Your officer is suspected of being concerned in certain robberies?"

BUT NOTHING OF THE KIND IS DONE,

and a motion of adjournment is taken advantage of to bring before the House charges against this man's character of dereliction of duty and of thieving. I think it is rather an unfair way of proceeding. [What a grand old "kiddier" Harry Levien is? As if he didn't know what a lot of satisfaction anybody who went to Lawless about Quelch's misconduct would get. In Lawless' eyes Quelch is a cock angel and a prize bencher at that.—Ed. *Truth*.] He should have been charged in the proper way before the Inspector-General of Police. I suppose the highest motives are moving the hon. member for Botany in the discharge of his important duties as a custodian of the people's interests, and perhaps some advantage may be gained at the general election, because this man is, perhaps, one of the most distasteful men in the Police Force.

I KNOW SOMETHING OF HIM,

and only the other day I mentioned to the Inspector-General that he ought to be removed. At the same time I can hardly believe that he has been guilty of the serious charges brought against him. Now that the hon. member for Botany has taken on himself the responsibility of making those serious charges, and of naming the persons who he says can prove them, it will be the duty of the Colonial Secretary to make the necessary inquiries in the interests of the public, a course which I have no doubt the hon. member will take.

It will also be the pleasing duty of *Truth*, next Sunday, to give the outline of the "speeches" of certain other members who addressed themselves to this theme, Solon Anderson's and Dismal Jimmy M'Gowen's, for instance. They will make choice reading—with a running comment?

Exhibit No. 8.—Part e.

Redfern Station, 27 May, 1897.

CONSTABLE PATRICK McEVoy BRENNAN begs respectfully to report the following circumstances to the Superintendent:—

That at 5.30 a.m. on the 26th instant, whilst the constable was standing at the corner of Raglan-street and Botany Road, Waterloo, he heard a grating sound. The constable went on tip-toe into the road, and saw three men standing up close to a shop window, and apparently tampering with it. One of them, on seeing the constable, cried out, "Nit." The three men then ran away, followed by the constable, who threw away his macintosh in the chase. The constable came up with them at the rear of the "Commercial Hotel," when they turned at bay with the evident intention of showing fight; the constable then drew his revolver and threatened to blow out the brains of the first man who interfered with him. The constable, with the revolver still in his hand, marched them back to Botany Road, where he was joined by Special-constable Brewin, who, with drawn revolver also, assisted the constable to take them under arrest to the station. On arriving with the prisoners at the station the 6 o'clock a.m. relief was parading, and the constable remained in the yard with the men until the relief had left, when he took them inside. Senior-constable Quelch (who was in charge of the constable) coming into the station, he explained the above circumstances to him, and said, "It would be as well, senior, to detain them and see what they have done down the road." The senior-constable asked them their names and addresses, when they gave him different ones to those they had already given to the constable previously when asked by him. This fact the constable especially pointed out to the senior-constable. Also on Constable Kidd entering their names down, one of them stated he lived in Liverpool-street, city, notwithstanding he had just told Senior-constable Quelch that he lived in Pymont. This fact the constable also pointed out to the senior-constable. The constable has since ascertained that all these names and addresses were fictitious. On the senior-constable having obtained their names and addresses in the above manner, he said, much to the constable's surprise, "You can go now"; and, turning to the constable, he added, "You'll know what to do if you see them again." The constable thereupon remonstrated at such a decision, stating that they should certainly be detained, and Special-constable Brewin or somebody be sent down the road to see if anything was wrong, also to telephone to ascertain whether they had given correct addresses. In spite of all this, the senior-constable turned the men out of the station, and the constable went home dispirited at such treatment. The constable afterwards ascertained that the shop where these men were seen by him had been found at 7 a.m. by Constable Hind with the front window broken and a quantity of boots stolen.

The constable also begs to draw the attention of the Superintendent to the facts of a similar case, which occurred in his relief a few days ago, viz., "Constable Bruce came upon two men under suspicious circumstances about 4 a.m.; they, seeing the constable, ran away, and were chased by him through a lane and into the arms of Senior-constable Quelch, who was passing."

passing. The senior-constable took their names and addresses, and allowed them to go on the spot, although they gave most suspicious and unsatisfactory circumstances of themselves. Immediately after being allowed to go a bag of live pigeons was found in the lane through which they ran, and it was afterwards ascertained that a house had been robbed. The strangest circumstance of this case is that one of the men gave the same address as one of the three men found in Botany-Road on the 26th instant.

Also, one of the three men referred to answers the description of a man who, at 6 a.m. the 25th instant, was seen by Senior-constable Quelch on the roof of a shop in Redfern-street, and who, on being disturbed by the senior-constable mounting a verandah after him, made off, after which a window adjoining the said roof, belonging to John Hunter's boot shop, was found broken open.

The constable feels it most unjust to him, that through the action of Senior-constable Quelch the ends of justice have been defeated, and a case which would have reflected some credit upon the constable has been lost. He also reports the matter out of self-protection, as the whole of these circumstances are now public property in the district through the special constable.

PATRICK M. BRENNAN,

Constable, No. 6,748.

Forwarded to the Superintendent. I was not previously made aware of these facts, no report having been made to me of the occurrence.—E. LAWLESS, Inspector. G. READ, Esq., Superintendent, 29/5/97.

Exhibit No. 8.—Part f.

Redfern Station, 28 May, 1897.

SENIOR-CONSTABLE GEORGE H. HARRISON respectfully reports, for the information of the Superintendent, with reference to the attached reports :—

That on the 26th instant, at 6 a.m., during the parading of the first relief by Senior-constable Bourke and the senior-constable, he saw Constable Brennan and Special-constable Brewin come into the station yard with three men, and on going out with the relief, Constable Brennan informed Senior-constable Bourke to the effect that he brought the three men, whom he had found under suspicious circumstances, running across Botany Road. Senior-constable Bourke told him to wake up Senior-constable Proctor, who was in charge of the station, and also to inform his Senior-constable (Quelch), who was then coming into the yard with the night duty relief. The senior-constables then went out to their respective sections, not knowing what transpired afterwards, leaving Senior-constable Quelch to deal with the matter, as it happened during his tour of duty and on the relief he had charge of, to which Constable Brennan was attached.

George Read, Esq., Superintendent.

GEORGE H. HARRISON,

Senior-constable.

Exhibit No. 8.—Part g.

Redfern Police Station, 28 May, 1897.

CONSTABLE ARCHIBALD KIDD respectfully reports for the information of his inspector that at 6 o'clock on the morning of the 26th instant the constable was on reserve duty, when Constable Brennan brought to the station three young men. The 6 o'clock relief then marched in, and were dismissed by Senior-constable Quelch, who was in charge of them; and in answer to a question from the senior-constable, Constable Brennan said, "These three young men were going up the Botany Road, and when they saw me they ran up Chaple-lane." The constable said he followed them, and when he asked them what they ran for, one of them said he was taken short, and had to run up the lane to ease himself. Constable Brennan said he thought their actions rather suspicious, so he brought them to the station. The senior-constable then questioned them, when one of them said he was a dealer, and lived at Ultimo, and had been to Cooper-street, Waterloo, to call his mate, so as to get to the markets early. One of the men seemed to be known to Constable C. Willson, who was then going off duty, and addressing him said, "You know me, Mr. Willson; I live in Cooper-street, Waterloo." Constable Willson said, "Yes, I know you; you used to live in Cooper-street, but I have not seen you for some time." The senior-constable asked Constable Brennan if he had looked round to see all was right where he saw them. He said, "No; I brought them straight to the station."

The senior-constable then told the constable to enter the occurrence in the station Rough Book, which the constable did. The senior-constable then cautioned them about their actions, and let them go.

By what was said in the station the constable heard nothing more suspicious than the fact that they had run into the lane. They denied they saw the constable until he came up to them, when one of them was easing himself.

Edmund Lawless, Esq., Inspector.

ARCHIBALD KIDD,

Constable, No. 5,754.

Exhibit No. 8.—Part h.

(*Australian Star*, Friday, 28th May, 1897.)

Robbery at Newtown.—A Pawnbroker's Shop Entered.—Two Arrests in the City.

A PAWBROKING establishment at 107, King-street, Newtown, occupied by Mr. Isaac Cohen, was broken into early this morning, and a quantity of jewellery and other articles were stolen. Entrance was effected by breaking a window, and the orthodox ransacking process was accomplished without interruption. Two arrests were, however, made a few hours later in the city. Constable M'Atamney was informed about 8 o'clock that two men had been endeavouring to dispose of sundry articles at a second-hand dealer's shop in Liverpool-street. The constable obtained accurate descriptions of the men, and was aware that sufficient time had not elapsed to enable them to leave the vicinity, even if they suspected that their movements had attracted notice. The constable, without much difficulty, located them at Mrs. Bailey's "Full and Plenty" restaurant, Pitt-street, and waited for the appearance of another officer to render help in the event of resistance. As no constable appeared he went across the road to the Central Police Station, and returned with Constable Welch. When the constables reached the restaurant they saw the two men standing in a right-of-way next the premises. As soon as they saw the police they made a hurried retreat to an outhouse, where they were captured. They were escorted to the Central, where portion of the stolen property was found upon each of them. They gave the names of William Murray, 30, a baker, and James Conlon, 26, a dealer. Conlon said to Constable M'Atamney that they received the goods in their possession from a man in the street.

The accused appeared before Mr. Addison, S.M., at the Central Police Court, and were remanded to Newtown to appear on Monday on a charge of, in company, burglariously breaking and entering the dwelling-house of Isaac Cohen, 107, King-street, Newtown, and stealing therein a box containing jewellery, spectacles, cutlery, and property in all valued at £6 10s., his property. Bail was not applied for.

Exhibit No. 8.—Part i.

Redfern Station, 28 May, 1897.

SENIOR-CONSTABLE W. E. QUELCH respectfully reports for the information of the Superintendent with reference to the report of Constable Brennan of this station :—

That on Wednesday, the 26th instant, at 6 a.m., on parading the night relief at the Post Office to be marched into the station off duty, Constable Brennan was absent. On arriving into the station the senior-constable found Constable Brennan and three men in the charge-room. Senior-constables Bourke and Harrison and five constables had just marched out on duty, and were at the station when Constable Brennan took the men into the station, if the constable required any assistance.

On the senior-constable dismissing the relief, Constable Brennan reported the following :—"As I was coming up Botany Road from Raglan-street I saw these three men on the footpath; when they saw me they ran across the road to Chapel-lane; I ran after them and caught them, and asked them what was the matter; they replied that they ran into the lane to ease themselves, having taken short." The senior-constable asked the constable if he had found anything wrong in the locality

locality he saw them. He replied, no; and also if he had seen them carrying anything. He again replied, no. The senior-constable then asked what he had against them. He replied, nothing; that he thought it very peculiar they should run away when they saw him, the constable, coming. One of the men, James Conlon, then said, "You know me, Constable Willson;" who replied, "Yes; I know you right enough; who are these other two with you at this time." They replied, "We have been to Conlon's place." As Constable Brennan had nothing further to report and the men not being known to be convicted of any offence, the report as stated by Constable Brennan was entered in the Rough Book at the station by Constable Kidd and the names and addresses also.

On taking the names and addresses, one of them, William Murray, gave Pymont in the first instance. After the other men's names and addresses had been entered first, the senior-constable on asking Murray for his address again, he then gave at Mrs. Bayley's Restaurant, Liverpool-street. The senior-constable then said, "You gave me Pymont just now." He replied, "Yes; that is my proper home, but I am stopping at Mrs. Bayley's just now." The names and addresses given are—James Conlon, 111 Cooper-street, Waterloo; Harry Wilson, Bunn-street, Ultimo; and William Murray, at Mrs. Bayley's Restaurant, Liverpool-street.

The constable clearly states in his report now, that he heard a grating sound and went towards the men, who ran away on seeing the constable. By so doing the constable had to pass the window, but saw nothing wrong. After he had passed and got these men and with the assistance he mentions, and having only to cross the road to the window, and still the constable does not go to ascertain if anything was wrong. Having stated he heard a noise, no boots were found on these men or in the locality they ran; and, according to the quantity of boots reported to be stolen, would make a good-sized parcel.

The constable refers to an instance that occurred on the morning of the 17th instant. On that date, at 4:15 a.m., Constable Bruce was passing along Zamia-street, and saw two young men passing at the corner of Marriott-street. A lamp is on that corner. They had nothing in their possession. Shortly after they passed through a lane to Young-street, and along to Redfern-street. As they seemed in a hurry, they were stopped at the corner of Redfern and Young streets, where the senior-constable was standing, and questioned by the senior-constable why they were hurrying. Whilst so doing Constable Bruce came round the corner from Telopia-street, and not the lane that Constable Brennan states they were chased by Constable Bruce. The men replied that they were going to the market and were late, and were running to keep themselves warm, which is a frequent thing to see at this period of the year. There was no charge against either of these men, as Constable Bruce clearly stated that he saw the men on the corner, and also before they got anywhere near the spot where the pigeons were found by the senior-constable, with nothing in their possession. A report was made of pigeons being stolen some thirty-six hours after on that beat. One of the men gave his address in this instance in the same street as one of the men brought to the station by Constable Brennan, but not the same house, as the constable appears to make out; neither does his description in any way resemble the man referred to.

The constable states that at 6 a.m., the 25th instant, that the senior-constable saw a man on a roof. At that time the senior-constable was with the constable and the whole of the relief at the station, and, after dismissing the relief, went home and put on a plain coat and hat, with the intention of going to the fish-market. On passing along Redfern-street, a man informed the senior-constable that he had a short time previously seen a man on Medcalf's shop roof. The senior-constable got up from an adjoining place, and saw a man, about 80 feet away, clearing over the back, dressed in black, and disappear. It being dark at the time, and no assistance at hand, the man could not be found. A window at the back of Mr. Hunter's shop was shut down, but on examination was found to have been forced then or some time previous; but nothing up to the present time has been reported stolen from those premises.

The senior-constable denies the wilful accusations made against him by the constable, and is of opinion that the constable's report is made out by someone prejudiced to injure the senior-constable—the constable did not make his report out at the station in a manly way—and is certain it is not drafted out in the manner gifted to the constable's ability. The constable's report is a tissue of lies from beginning to end, and the senior-constable kindly asks the Superintendent to call upon Senior-constable Bourke, and constables Kidd, Willson, and Guthrie of this station, for a report, being present on the occasion when Constable Brennan gave the report of the occurrence, all of which is in the Rough Book at the station, and mentioned in the senior-constable's report. Had the constable reported at the time what he now states, the senior-constables would most decidedly have gone down and seen for themselves what was wrong, whilst the men would have been detained. The route of the occurrence in the Occurrence Book states no person suspected.

George Read, Esq., Superintendent.

WILLIAM E. QUELCH,

Senior-constable.

Exhibit No. 8.—Part j.

Redfern Station, 29 May, 1897.

CONSTABLE SAMUEL BROWN GUTHRIE reports for the information of Inspector Lawless, *re* men brought to the station on the morning of the 26th, by Constable Brennan, that on the morning of the 26th, when going off duty at 6 a.m., he saw three men in the station. He heard Senior-constable Quelch ask Constable Brennan what they were up to. Constable Brennan replied, "I saw them in the Botany Road, and when they saw me they ran up Chaple-lane. I ran after them, and caught them. I asked them what they ran away for. One of them replied that he only went up there to ease himself. I brought them to the Botany Road, and there met Bruin, the watchman, who assisted me to the station with them." One of them turned to Constable Willson, and said, "You know me, Mr. Willson." The senior-constable then asked them their names:—James Conlon, 111 Cooper-street, Waterloo; William Murray and Harry Wilson, both of No. 9 Bunn-street, Ultimo. The senior-constable then asked Constable Brennan if he saw them carrying anything, and he replied, "No." He then asked him if everything was all right in the locality. He replied, "As far as I could see; but I thought it strange that they should run away on seeing me." The senior-constable asked them where they lived again. Conlon and Wilson gave the same address; but Murray gave that of Mrs. Bailey's Restaurant, Liverpool-street. The senior-constable then said, "That is not the address you gave just now." Murray then said that he was only staying at Mrs. Bailey's, but his home was in Bunn-street, Ultimo. Constable Kidd entered the names of the three men in the Rough Book, and they were allowed to go. This is all that passed in the constable's hearing.

SAMUEL B. GUTHRIE,

Constable.

Redfern Station, 29th May, 1897.

CONSTABLE CHARLES WILLSON reports for the information of Inspector Lawless *re* men brought to the station on the morning of 26th instant, by Constable Brennan:—

That on the morning of the 26th instant, when going off duty at 6 a.m., he saw three men in the station. He heard Senior-constable Quelch ask Constable Brennan what they had been up to. Constable Brennan replied, "I saw them in the Botany Road, and when they saw me they ran away up Chapel-lane. I ran after them and caught them. I asked them what they were doing there. One of them replied that they only came there to ease themselves. I brought them to the Botany Road and met the watchman, Bruin, who assisted me to bring them to the station." One of them turned to the constable and said, "You know me, Mr. Willson." The senior-constable then asked them their names, and they gave the names of James Conlon, William Murray, and Harry Wilson. He then asked them where they lived. Murray and Wilson said they lived in Bunn-street, Ultimo. Conlon gave his address as 111, Cooper-street, Waterloo. The senior-constable then asked Constable Brennan whether he saw them carrying anything, and he replied "No." He asked him whether everything was all right in the locality, and the constable replied, as far as he could see; but he said he thought it strange that they should run away on seeing him. The senior-constable asked them where they lived again. Conlon and Wilson gave the same address, but Murray gave another address—that of Mrs. Bailey's restaurant, Liverpool-street. The senior-constable then said "That is not the address you gave just now." Murray explained that he was only staying at Bailey's, but Bunn-street was his home. Constable Kidd entered the names and addresses, and the men were allowed to depart.

Mr. Lawless, Inspector.

CHARLES WILLSON,

Constable.

Exhibit

Exhibit No. 8.—Part l.

Redfern Station, 29 May, 1897.
 REFERRING to the previous report of Constable Brennan, he begs to further state, for the information of the Superintendent, that two of the three men discharged by Senior-constable Quelch on the morning of the 26th instant are now in Darlinghurst Gaol, on remand, charged with burglary—the constable having seen them there and identified them.

George Read, Esq., Superintendent.

PATRICK M. BRENNAN,
 Constable, No. 6,748.

Forwarded to the Superintendent, G. Read, Esq.—E. LAWLESS, Inspector, 31/5/97.

Exhibit No. 8.—Part m.

MEMORANDUM.

Police Department, Superintendent's Office, Metropolitan District, Sydney, 31 May, 1897.
 If Constable Brennan informed Senior-constable Quelch of all the circumstances of the case, *i.e.*, that he heard a grating sound close to a shop window, as if it were being tampered with; that the three men ran away at such a speed that the constable was compelled to part with his cape to overtake them; and that they manifested an intention to resist arrest, inducing the constable to threaten to shoot them, it was undoubtedly the duty of the senior-constable to have detained them until due inquiry had been made. But, according to the reports of the senior-constable and Constables Willson, Guthrie, and Kidd none of the circumstances I have mentioned were communicated to the senior-constable, except that as soon as the men saw the constable in the Botany Road they ran away. All the reports should be shown to the constable, and he invited to make any further statement he may wish, after which I will decide the matter.

Inspector Lawless, Redfern.

G. READ,
 Superintendent.

Exhibit No. 8.—Part n.

Redfern, 2 June, 1897.
 SENIOR-CONSTABLE W. E. QUELCH respectfully reports Constable P. M. Brennan, No. 6,748, of this station, for maliciously trying to injure the senior-constable's reputation.

The senior-constable begs to draw the Superintendent's attention to the constable's three statements, *viz.*, the report in the first instance, entered at the station; secondly, the constable's report against the senior-constable; and thirdly, the evidence of the constable, on oath, in the witness-box in support of a charge of burglary against the two men referred to in the constable's report.

Before the constable had completed his evidence, his Worship (Mr. Delohery) turned to Constable Bannan, conducting the case, and said, "Is this all the evidence you have to put forward in support of this charge against these two men?" On his Worship being answered in the affirmative, turned to the constable in the witness-box, said, "Did you see these men doing anything when you first saw them outside the shop?" The constable replied, "No." His Worship then asked whether he saw them carrying anything, or if he had found or traced any of the property to their possession. The constable replied, "No."

His Worship then heard and questioned the prosecutor as to all he knew in the case, and if he had any suspicion of, or saw, these men on his premises. On the prosecutor replying "No," his Worship then said, "You have no evidence whatever against these men to support this charge. You are discharged. It is only a case of mere suspicion."

The senior-constable asks the Superintendent if he would be good enough to have a copy of the depositions taken, with a copy of the entry in the Rough Book at the station, so as to compare the constable's three statements with the reports of the senior-constable and those of Constables Kidd, Willson, and Guthrie.

The constable failed to give in his evidence on oath, the most vital parts which he had previously reported in writing to his Superintendent.

The constable was advised by Senior-constable Ingram at the station, he knowing the messages that had come through the telephones before the constable charged these men, that whatever he, the constable, done would be on his own responsibility, word having come that this charge had been declined an entry in the charge-books at the other stations.

George Read, Esq., Superintendent.

WILLIAM E. QUELCH,
 Senior-constable.

COPY of entry in Rough Book at the Redfern Police Station, 26th May, 1897, *re* James Conlon, William Murray, and Henry Wilson, who were brought to the station by Constable Brennan.

Redfern Station, 3 June, 1897.
 James Conlon, 111, Cooper-street, Waterloo; William Murray, Mrs. Bayley's Restaurant, Liverpool-street, City; Harry Wilson, 9, Bunn-street, Ultimo. Brought to station by Constable Brennan at 6 a.m., 26th, who found them in Chapel-lane, Alexandria, where they had run from Botany Road. They explained, "one of them had been taken short, and run into the lane to ease himself." Allowed to go by Senior-constable Quelch.

Entered in the Rough Book, in the presence of Senior-constable Quelch and Constable Brennan, by Constable Kidd.

6 a.m., 26th May, 1897.

ARCHIBALD KIDD,
 Constable.

Exhibit No. 8.—Part o.

Redfern Station, 2 January, 1897.
 CONSTABLE PATRICK M. BRENNAN begs respectfully to report for the information of the Superintendent.

Senior-Constable Quelch states in his report that although the constable passed by the window which was broken open it was not noticed by him.

The constable begs to draw the Superintendent's attention to that portion of the constable's report where he states he went on tiptoe into the road and was seen by one of the men. The constable ran up the middle of the road after them, and therefore could not notice the window, as the road at that particular part was in darkness. After the men were turned out of the station, the constable was too disgusted at such a proceeding to make further inquiries, there was another constable then on the beat, so he went home.

The senior-constable further states that the constable's report was framed by someone, other than the constable, and strives to prejudice the constable's report by stating his literary ability would not allow of him framing such a report. The constable begs to state that the only assistance he got was a few minor corrections made by his wife. The constable brought the prisoners to the station direct, as he thought men found under such circumstances as they were, should not have a chance to escape.

The two men (Wm. Murray and James Conlon) were brought before the Redfern Police Court on the 1st instant charged with burglary and discharged, C. Delohery, Esq., S.M., remarking it was most suspicious. In answer to his Worship, the constable had to admit that the men were never searched at the station. The constable would undoubtedly have searched them and probably some of the stolen property would have been found on them, which would lead to further inquiries being made, and some of the property recovered when the men might have been found guilty of burglary, were it not that the constable was under the orders of his senior-constable.

The constable is at a loss to know why it was the other constables made out their reports as they have done, but believes they were in fear of the senior-constable.

Special-constable Brewin who assisted the constable to arrest the men, and will, I have no doubt, be available for interview.

The constable in all other matters strongly adheres to his former report.

George Read, Esq., Superintendent.

PATRICK M. BRENNAN,
 Constable, No. 6,748.

Exhibit

Exhibit No. 8.—Part p.

[MEMO.]

Redfern Station, 3 June, 1897.

IN forwarding the attached reply of Constable Brennan, after his perusal of the several statements of Senior-constable Quelch and Constables Willson, Kidd, and Guthrie, I beg to state that I have read the depositions taken at the hearing of the case against these men; in it no mention is made of Brennan having heard a noise as of scratching or trying any window. Constable Brennan seems to be of nervous temperament, and being anxious to do his duty, "never having had a case of this kind before," no doubt became excited, and neglected to tell the senior-constable the whole particulars, although he persists that he did. Attached is a copy of the entry made at the time by Constable Kidd at the station.

Senior-constable Quelch now forwards a report against Constable Brennan for maliciously trying to injure his reputation.

I have, &c.,

EDMUND LAWLESS,

Inspector.

George Read, Esq., Superintendent, Metropolitan District.

Exhibit No. 8.—Part q.

[MEMO.]

Superintendent's Office, Sydney, 4 June, 1897.

THE statements of the constable with regard to the suspicious conduct of the three men referred to may be substantially correct, but the evidence is overwhelming that he only communicated a very unimportant portion of the particulars to his senior-constable, whose statement is supported by those of Constables Kidd, Willson, and Guthrie, whose reports agree with the entry in the Rough Book.

The constable, according to the statement of Mr. Lawless, is of an excitable temperament, and possibly imagined he had made a fuller report to his officer than he did, and there is the further fact that he had just previously been engaged with what to most men would be an exciting event. The discrepancy in his evidence at the Court and his written statement are unsatisfactory, and I am warranted in assuming that his deposition is the more reliable version of the matter. I trust, therefore, he will be more guarded in future. I think the circumstances scarcely warrant the belief that he had any deliberate purpose to injure his superior officer. I trust, therefore, Senior-constable Quelch will withdraw his complaint.

I notice the constable's last report is dated in January.

G. READ,

Superintendent.

Mr. Inspector Lawless, Redfern Station.

Exhibit No. 8.—Part r.

[MEMO.]

Redfern Station, 4 June, 1897.

THE minutes of the Superintendent have been read and explained to Senior-constable Quelch and Constable Brennan.

The senior-constable now states that he wishes to withdraw his report against Constable Brennan, who appeared to be satisfied with the decision of the Superintendent.

I have, &c.,

EDMUND LAWLESS,

Inspector.

George Read, Esq., Superintendent, Metropolitan District.

Exhibit No. 9.

COPY of entry in Occurrence Book at the Redfern Police Station, 17th May, 1897.

Found, in a lane off Zamia-street, Redfern, about 4.15 a.m., the 17th instant, by Senior-constable Quelch, and now at this station, an owner required,—a bag containing four pigeons.

GEORGE PROCTOR, S.-C.

Exhibit No. 10.

COPY of entry in Property Book, page 96, at Redfern Police Station, 18th May, 1897.

Date, 18/5/97. Description of property, four pigeons. Found in a lane off Young-street on 16th instant, by Senior-constable Quelch. Stolen from J. Cussen, 42, Thurlow-street. Given to owner.

Exhibit No. 11.

This deponent, *Patrick McEvoy Brennan*, on his oath, states as follows:—I am a constable of police, stationed at Redfern; about 3 p.m. yesterday I charged both accused while in custody on another charge with in company burglariously breaking and entering the dwelling-house of John Riddle, 29, Botany Road, Waterloo, on the 26th May, 1897, and stealing therein his property valued at about 30s.—three pairs of ladies' shoes, and several pairs of boys' boots; each replied, "not guilty"; I remember the 26th ultimo, about 5.30 a.m.; I was standing near the corner of Botany Road and Raglan-street, Waterloo; I saw three men standing on the footpath under prosecutor's verandah; I walked up the middle of the road towards them; one of the men called out "Nit," and the three of the men ran away; they ran up Chapel-lane and into Spencer's-lane; I followed them; I overtook them in Spencer's-lane; I drew my revolver and asked the men what was up now, how was it they ran away; the accused are two of the men; Conlon replied, "I went up the lane to ease myself, I was suffering from diarrhoea"; I said, "It is curious that you hav'n't a button undone"; I then took them into custody under cover of my revolver, and marched them before me into Botany Road; I there met Special-constable Brewin, who assisted me to take them to the station; at the station the senior-constable took their names and addresses and they were let go.

To Bench: They were not searched; Murray gave the name of William Murray, living in Pymont; he afterwards gave his address as care of Mrs. Bailey's restaurant, Liverpool-street, Sydney; Conlon gave his name as James Conlon, 111, Cooper-street, Waterloo; the third man gave the name of Wilson; I afterwards, about 8 p.m., found that the shop of Mr. John Riddell had been broken open; it was the shop under the verandah of which I found the three men; I went off duty at 6 a.m.; on the morning in question I passed the window of the shop about 4 o'clock, it was then intact; I identified the accused at Darlinghurst Gaol from amongst a number of others.

To Conlon: When I met you you were standing.

To Murray: When you went away I chased you; you ran up the lane; I pulled out a revolver; I saw no property on the men.

Taken and sworn at Redfern, this 1st day }

of June, 1897, before me,— }

C. DELOHEBY, S.M.

PATRICK M. BRENNAN.

Exhibit No. 12.

THIS deponent, *Patrick Brennan*, on his oath states as follows:—I am a constable of police, stationed at Redfern; about 5:30 a.m. on the 26th day of May, 1897, I was on duty at the corner of Botany-road and Raglan-street, Waterloo; I saw three men standing under the verandah of John Riddell's shop, 29, Botany-street, Waterloo; both the accused were of the men; there was another man; I walked into the middle of the road on tiptoe towards the accused to see what they were doing; one man saw me and cried out "Nit"; the three men then ran away across Botany-road into Chapple-lane; it was about 50 yards from the shop; they ran up Chapple-lane; I ran after them and they turned into Spence's-lane; I came up with the men there; I then drew my revolver and asked them what their game was; one of them said, "I was taken short and came up here to ease myself"; it was Conlon; I said, "It is a very curious thing you have not a button undone"; his clothes were in no way disarranged; I marched the three of them into Botany-road, where I was joined by Special-constable Brewin, who assisted me to take the men to the Redfern Police Station; when I got to the station I explained the circumstances to Senior-constable Quelch in their presence; he took their names and addresses and let them go; I have since found that none of the addresses were correct; the accused were not searched; at no time was a hand laid on them; before seeing the men, I heard a scraping noise in the direction of the shop window where they were standing; I had passed the shop window at 4:15 a.m.; the window was then intact; I told the senior-constable what had happened; I have since seen the window; the lower corner of one of the panes was sufficiently broken to allow of the property being removed.

To Conlon: I saw it the same day; as far as I remember it is the same evidence as I gave before; I saw the accused at Darlinghurst Gaol amongst six others; I picked them out and put my hand on them and said, "Those are the men."

Taken and sworn at Redfern, this 10th day }
of June, 1897, before me,— }

G. H. ADDISON, S.M.

PATRICK M. BRENNAN.

Exhibit No. 13.

THIS deponent, *Patrick Brennan*, on his oath, states as follows:—I am a constable of police, stationed at Redfern; I remember the 26th day of May, 1897; about 5:30 a.m. I was on duty at the corner of Raglan-street and Botany road, Waterloo; I saw three men—accused, and Murray and Conran (Conlon)—standing under the verandah of a shop window, which I afterwards found to be John Riddle's; when I saw the men I walked out into the middle of the road to try and get as near as I could to them; when I got a short way up the road one of the men cried out "Nit," and the three of them ran away across Botany-road and up Chapple-lane and into Spence's-lane; when I got to the corner of Spence's-lane and Chapple-lane the three men turned and faced me; I drew my revolver and marched them down Botany-road; I asked them what their game was; Conlon replied, "I was taken short and wanted to ease myself"; I said, "It is a very strange thing that you have not got your dress undone"; he had his dress in no way disarranged; I marched them down Botany-road; I was joined by Special-constable Brewin, who assisted me to bring the men to the station; when there the men's names and addresses were taken, and they were let go; they were not searched; a hand was not put on them from first to last; I found all the given addresses were fictitious; I returned to the shop about 2:30 p.m.; I saw the front shop window broken; I went there from something I heard; I am sure accused is one of the three.

To Bench: I passed the window about 4:15 a.m. that day; it was then intact; I first saw the three men right close to the window—so close as to touch it; I first heard a grating sound when I came to the corner.

To accused: I was about 130 yards from the shop at first; I then heard a grating sound; I ran after you and had not time to look at the window; I swear you were one of the three men standing at the window; I have since seen you at Belmore; I did not then arrest you as I had insufficient evidence at the time.

Taken and sworn at Redfern, this 15th day of }
July, 1897, before me,— }

C. DELOHEBY, S.M.

PATRICK M. BRENNAN.

Exhibit No. 14.

JAMES CONLON, 111, Cooper-street, Waterloo; William Murray, Mrs. Bayley's Restaurant, Liverpool-street, City; Harry Wilson, 9 Bunn-street, Ultimo. Brought to station by Constable Brennan at 6 a.m., 26th inst., who found them in Chapple-lane, Alexandria, where they had run from Botany-road. They explained one of them had been taken short and run into the lane to ease himself. Allowed to go by Senior-constable Quelch.—6 a.m., 26/5/97.

Exhibit No. 15.

COPY of entry in Information Book at Redfern Police Station, 25th October, 1897.

JAMES SIDDONS, 134, Botany-road, Alexandria, complains that young men about his shop at above residence annoy and threaten him, and throw stones at his premises. They have broken three windows in his shop during the last three weeks from stone throwing. He desires police attention.

Exhibit No. 16.

COPY of entry in Rough Book at Redfern Police Station, 10th May, 1896.

ABOUT 5:30 a.m., 10th instant (May, 1896), Senior-constable Quelch saw a man coming from Mr. Flynn's, butcher, in McNamee's-lane, Alexandria. On seeing the senior-constable he ran away. The senior-constable gave chase, and caught him at the corner of Margaret and Wyndham Streets, Redfern. He had a bag of meat and bread, a small bag of corn, some sugar, and sundries in his possession. As he would not account for the things Senior-constable Quelch took him back to Mr. Flynn's shop, and afterwards to Mr. Flynn's house. He admitted stealing the articles. He was an engineer in Mr. Flynn's employ, and he declined to prosecute. His name is Charles Russell, 59, George-street, Waterloo.

FOUND open by Brewin, the shop side door of Marshall's, chemist, 97, Regent-street, at 3.50 a.m., 16/3/94. No person resides on the premises; everything appeared correct. **QUELCH.**

Exhibit No. 18.

COPY of entry from Rough Book at Redfern Police Station, 17th May, 1897.

ABOUT 4.15 a.m., this date, as Constable Bruce was working Zamia-street he saw two young men standing; seeing the constable coming they walked to St. Saviour's-lane, and then ran through this lane to Young-street, to Redfern-street, where they were stopped by Senior-constable Quelch and questioned. Having nothing in their possession, and stating they were going to the markets and were running to keep themselves warm, their names and addresses were taken. 1st—Frederick Page, 3 Bunn-street, Ultimo (next Senior-sergeant Roden), about 19 years old, 5 ft. 6 in., hair black, fair complexion, very small black moustache, dressed in dirty light tweed trousers, no vest, white shirt, woollen singlet, outside dark sac. coat, black soft hat. 2nd—William Wilkinson, at R. Robinson's, 163 Albion-street, Pyrmont, about 19 years old, 5 feet, fair complexion, clean shaved, dressed in dirty brown mixture tweed sac suit and soft felt hat; wore sand shoes. A small bag was afterwards found in the lane, containing four pigeons, where they ran through. Pigeons now at the station; an owner required.

Exhibit No. 19.

ATTEMPT TO ROB A GOVERNMENT STORE.

(*Daily Telegraph*, Saturday, 27 June, 1896.)

As Senior-constable Quelch, of the Redfern police, was walking down Cleveland-street, at about 7.30 last evening, he observed a man acting in a suspicious manner in front of the building at 289 Cleveland-street, until lately used as a branch office of the Asylum Department. With the intention of watching his movements, Quelch crossed over into Prince Alfred Park, but the man made off towards Castlereagh-street, and when Quelch got there he had disappeared. Knowing the place to be unoccupied, except at the rear, where a small out-building is used as a store for Asylum supplies, Quelch proceeded through to the back which abuts on James-street; here he found that the door, which was padlocked, had been removed from its hinges, which were on the outside. Hearing someone approaching he hid in a dark corner, and as the visitor entered the door he jumped out and grabbed him. It turned out, however, to be Mr. Coghlan, the clerk in charge, who was returning to do some back work. A light being procured, it was found that an inner door had also been removed from its hinges, and access gained to the store. Samples of everything in the store had been heaped up ready to be carried away, a large sack being partly filled with a miscellaneous collection of goods. The thieves had decamped. Two screw-drivers were found on the floor, one of them bearing the stamped initials F.L.P. A constable was left in charge during the night.

Exhibit No. 20.

LIST OF ARTICLES, MYALL HOUSE.

HALF-bleached holland, 46 yards; Russia crash, 14½ yards; 5 pairs women's leather boots, Ba.; 3 pairs women's leather vamps, size 7; 4 pairs bath slippers, size 6; 2 pairs cloth vamps, size 7; 1 dozen braces D-E; 1 dozen women's single B.C.H. 4; 1 dozen women's single B.C.H.; 1 gross of pairs of laces; 4 pairs of leggings (men's); 3 dozen table-spoons, branded G.S.; 3 dozen desert spoons, branded G.S.; 7 dozen Brooks' cotton; 7 dozen Coates' cotton; 1 lb. black thread; 1 lb. white thread; 2 water-proof sheets; 1 and 9-12 dozen of tape (white); 1 dozen fine-tooth combs; 2 gross of white brace buttons; 1 set of draughtsmen; 2 gross of brace buttons (black); 9 pairs of specks; 2 cork-screws; 1 shoemaker's emery board; 1 pair of eyelet pliers.

Inventory of property packed ready for removal at Myall House, Cleveland-street.—26/6/96. 7.30 p.m.

Re Superintendent. 7 p.m. at corner of Cleveland and Baptist-streets.

Between 7.15 and 7.30 p.m., 26th instant; about 5 feet 8 inches, dressed in dark clothes; went into Park; saw me watching; cleared round Castlereagh-street; could not see him; returned; found door open; a man then came; pounced out on him; turned out to be the clerk. As soon as light was struck it was found they had also taken the hinges off all doors inside and all sorts of goods heaped ready for removal. Branded with Government Asylums' brand. Two screw-drivers found in store. Clerk suspects the push next door, who, he says, were a bad lot. The next yard is Kimber's yard.

The charge of Sunday selling at Redfern.

THE case brought by Inspector Lawless against Joseph Brüll for allowing liquor to be drunk upon his premises at 1.10 a.m. on 7th inst., which was begun on Tuesday, was concluded at Redfern yesterday, before Mr. Smithers, D.S.M.

Mr. Carter Smith, solicitor for the defence, enlivened the proceedings somewhat by securing the depositions which were taken on Tuesday, and reading them in the yard at the back of the Court to his witnesses, who had not yet been examined. Inspector Lawless said he considered it gross impertinence, and called the attention of the Magistrate to the fact. Mr. Smith was, therefore, called into Court, and ordered to deliver up the papers, being told he had no right to do such a thing. He explained that he considered he was perfectly in order in doing so, but would not have done it had he not left a full note of the proceedings which he himself had taken at the time in another Court.

The case for the defence was then entered upon, and Mrs. Brüll, Griffiths, and Constable Swan were examined. It was sworn that these persons, together with Mr. Cook, were the only ones in the house at the time; that Swan had nothing to drink after 11, and that Griffiths and Cook were lodgers.

Mr. Smithers dismissed the case, remarking that Senior-constable Quelch must have been mistaken when he thought he saw Swan drinking.

Exhibit No. 30.

Redfern Police Station, Friday, 20th August, 1897.

CONSTABLE Hill respectfully begs to report, for the information of his Superintendent, that about 5 p.m., the 18th instant, Senior-constable Quelch called at his residence and asked him, in the event of the constable being questioned regarding a certain matter which the senior-constable anticipated would be the subject of a future inquiry, to make certain false statements, to shield the senior-constable. The facts in question were as follows:—That about 4.20 a.m., on February 16th, 1897, the constable met Senior-constable Quelch, in plain clothes, coming from a vacant allotment on to the Botany-road, carrying a sack, which he said contained sand. The senior was in sole charge of the division at the time, and at 6 a.m. he was in uniform and took the relief off duty. Constable Whitehair, who was directly opposite, saw the constable stop Senior-constable Quelch. When the senior-constable called at the constable's house, he asked him to say, if he was questioned about this matter, that he (Senior-constable Quelch) was off duty at the time, which would be telling a deliberate lie. And he added, "If you will stick to me, I will stick to you. Say this for me, Ted." Under the circumstances, the constable considers it his duty to acquaint his Superintendent of these facts.

EDMUND MASHAM HILL,
Constable, No. 5426.

G. Read, Esq., Superintendent.

Forwarded to the Superintendent. I was not previously made aware of this matter.—E. LAWLESS, Inspector, 21/8/97.

AT 5:30 a.m. Senior-constable Quelch brought to the station a woman named Ann Brown, of Pitt-street, Waterloo, found in the parlor of the "Salutation Hotel," where she had been detained by the licensee for an immoral purpose. The back of the hotel was open, and a light outside of the front door burning all night. Senior-constable entered with Constables Edward and Castle, and found the licensee having connection with the woman in the parlor.

SENIOR-CONSTABLE QUELCH.

Attended to. Constable Jackson for inquiry and report. This woman is married and living with her husband at above address.

Exhibit No. 36.—Part a.

Dear Sir,

Balmain, 12 May.

The following case will, I think, be most fairly and best dealt with by you. Some want me to send it to *Truth*, but I have too much respect for the Police Department to do that. On Saturday night, the 1st of May, at quarter past 11, a young man and most respectable girl had been in the Waterloo Park, 100 yards from the young lady's residence, when a constable came up and made insulting remarks, took their names, and threatened to summon them for indecent behaviour. He tried to persuade the young lady to go for a walk with him and he would not summon her. Enquire fully into this matter and you will find most dastardly conduct by the constable. You doubtless know what constable would be on duty at that time. The name of the young man spoken of is Mr. L. Crosby, care of Kahla, draper, Regent-street, Redfern. He probably will give you particulars, though she does not want to be mixed in anything of the sort, for reasons easily understood.

Yours, &c.,

MARY WILLOUGHBY.

Referred to Mr. Lawless for inquiry and report.—G. READ, Superintendent, 18/5/97. Mr. Lawless.

Exhibit No. 36.—Part b.

Sir,

Redfern Station, 21 May, 1897.

Re attached letter of complaint: I have the honor to report that I have made inquiry, and ascertained that it was not the constable on the beat, as he was engaged with a charge before and after the time mentioned. I also interviewed Mr. Crosby, mentioned in the letter, who stated that he could not identify the constable; consequently it would be of no use his coming to the station, which I suggested. I subsequently saw him in Regent-street, when he stated that the writer of the letter had not given her proper name, and they had agreed not to proceed any further in the matter.

I have, &c.,

EDMUND LAWLESS,

George Read, Esq., Superintendent, Metropolitan District.

Inspector.

Madigan—Illtreating a Horse.

MICHAEL MADIGAN, 26, cruelly illtreating a horse at Darlington, on the 18th August, 1894. Pleads not guilty. Remanded till to-morrow. Bail allowed, self in £5 and one in £5.

C. DELOHERY, D.S.M.

Redfern, 20th August, 1894.

RECOGNIZANCE for the appearance of the Defendant, where the case is adjourned, or not at once proceeded with.
New South Wales, }
to wit.

BE it remembered that on the 20th day of August, in the year of our Lord one thousand eight hundred and ninety-four, Michael Madigan, of Shepherd-street, Darlington, in the Colony of New South Wales, blacksmith, and Owen Crilley, of 81, Darlington Road, Darlington, in the said Colony, carrier, personally came before the undersigned, one of Her Majesty's Justices of the Peace in and for the said Colony, and severally acknowledged themselves to owe to our Sovereign Lady the Queen the several sums following (that is to say), the said Michael Madigan the sum of five pounds, and the said Owen Crilley the sum of five pounds, of good and lawful money of Great Britain, to be made and levied of their several goods and chattels, lands and tenements, respectively, to the use of our said Lady the Queen, her heirs and successors, if the said Michael Madigan shall fail in the condition indorsed.

Taken and acknowledged, the day and year first above-mentioned, }
at the Police Office, Redfern, in the said Colony, before me,— }

WM. CARSON, J.P.

OWEN CRILLEY.
MICHAEL MADIGAN.

Condition.

The condition of the within recognizance is such that if the said Michael Madigan shall personally appear, on Tuesday, the 21st day of August, 1894, at ten of the clock in the forenoon, at the Police Office, Redfern, in the Colony of New South Wales, before such Stipendiary Magistrate in and for the Metropolitan Police District, in the said Colony as may then be there, to answer further to the charge of cruelty to a horse exhibited against the said Michael Madigan, and to be further dealt with according to law, and there attend from day to day, until the charge shall be disposed of. Then the said recognizance to be void, or else to stand in full force and virtue.

WM. CARSON, J.P.

Exhibit

Exhibit No. 43.—Part b.

This deponent, *William E. Quelch*, on oath, states as follows:—I am a senior-constable of police; on 18th instant, at 4 20 p.m., I was in Raglan-street, Darlington; I saw a horse inside a blacksmith's shop, which was shut up; the horse was kicking; some children were looking through the fence saying, "Oh, the cruel man"; accused could have heard it; I went to a lane at the end of the shop where there is an opening intended for a window sash; I looked through that, and saw the accused with a red-hot iron burning the fetlock off one of the animal's hind legs; the foot was bleeding freely; the accused's left hand and 6 inches up his arm was smothered with blood; no new shoes were put on the horse; the shoe of the foot which was burnt was not touched; the only foot touched was a front foot that had some nails put in it; besides accused, two men were in the shop, one employed by the owner of the horse, he was holding the horse's head, another gentleman, whom I have seen here to-day, who paid the farrier some money when they had finished; I went to the gate; they opened the gate to bring the horse out; they saw me; the man at the horse's head backed it in again and spoke to accused; while I was watching I saw the horse kicking and limping and shaking; I said to the man holding the animal, "What is the matter with the horse," he said, "Nothing boss, only had a shoe put on"; I asked accused the same question; he made the same reply; the other man attempted to take the horse away; I got it by the head; I prevented him; I said, "If there is nothing wrong with the horse why are you burning it about the feet so, and causing it pain"; Drake replied, "he only had a kick in the dray and cut his foot"; accused was present; I said, "I can see no cut, the only thing visible is the burn"; at that time some one brought the owner up; he wanted to take the horse away; he came in the forge; he followed me to the station, and bailed accused out; I brought the horse to the station and accused; I charged him with cruelly illtreating the horse; accused muttered some reply; Crilley said, "If anyone is in fault it is me"; accused washed the blood off his hands at the forge.

To Mr. Moffit: Accused never said, "I didn't do it"; I never asked who did it; I said, "What is the matter with the horse"; I know when a horse is being cruelly illtreated; I don't know much about horses; it was never said, "No one here did it"; the horse was at once taken to the depot, and well kept and fed there; the horse was not clipped; I swear accused illtreated the horse.

To Police: I inquired who did it, to see was it necessary; they denied anything being the matter.

Taken and sworn at Redfern, this 21st day }
of August, 1894, before me,— }
C. DELOHERY, S.M.

WILLIAM E. QUELCH.

Exhibit No. 43.—Part c.

This deponent, *Thomas Vane*, on oath, states as follows:—I am a sergeant of Police; about 4.45 p.m. on 18th instant, I saw the horse at the station; I looked at it; the off hind leg, I think, was bleeding; the horse seemed very lame, and held his foot up, as if in great pain; I saw the horse go away.

To Mr. Moffit: I used to know a good deal about horses; the horse had the appearance of having a greasy heel; I have seen them fired by a hot iron; a fungus growth may have been removed; horses are fired for greasy heels.

Taken and sworn at Redfern, this 21st day }
of August, 1894, before me,— }
C. DELOHERY, S.M.

THOS. VANE.

Exhibit No. 43.—Part d.

This deponent, *Michael Madigan*, on oath, states as follows:—I am a farrier; on 18th instant I never operated on the horse; he had greasy heels and a fungus growth called "stones"; the proper process is searing; I think it is less painful in the long run to operate; the horse is working now; the blood on my hand got on through my fastening a loose shoe; I swear I never performed the operation; I am proprietor of the farriery; Crilley was the man who did the operation; he performed it carefully and skilfully.

Taken and sworn at Redfern, this 21st day }
of August, 1894, before me,— }
C. DELOHERY, S.M.

MICHAEL MADIGAN.

Exhibit No. 43.—Part e.

This deponent, *Thomas Green*, on oath, states as follows:—I am a Veterinary Surgeon, and a Member of the College of Veterinaries; I have a diploma; I remember the horse; I saw it after 18th instant; it had been suffering from greasy heels, and had a fungus growth, which would be best removed by firing; the result of the operation was successful, and relieved the horse from all pain; before the operation he would be in pain; cauterising the place was the right process.

To Police: Didn't see the horse before the operation; an unskilful operation would cause unnecessary pain.

To Bench: The operation was a skilful one; my evidence was not believed once by a Magistrate; I do not admit the method of a red-hot sharp shovel to be the correct one; burning the growth away would be correct.

THOS. GREEN, M.R.C.V.S.

Exhibit No. 43.—Part f.

This deponent, *Tom Drake*, on oath states as follows:—I am a labourer employed by Mr. Crilley; accused didn't operate on the horse, or touch it with a hot iron; he only fastened a shoe; accused had blood on his hands from lifting the foot to examine a shoe; the foot was bleeding before the operation was performed; the horse seems better now; I told the constable that accused didn't perform the operation; I wasn't drunk.

To Police: The horse hadn't got a kick in the dray; I admit saying it had; I had hold of the horse; I don't know what Crilley paid the farrier; I saw he was well dressed, as he is to-day; I was stopped by the police; I shoved the horse back into the shed.

To Bench: The operation was done at the forge; I don't know what Crilley went away for; he may have been away for ten minutes.

THOMAS DRAKE.

Exhibit No. 43.—Part g.

This deponent, *Owen Crilley*, on oath states as follows:—I am owner of the horse in question; I operated upon the horse in the shed, with searing irons, for greasy heel; I tried a lotion; I then used the searing iron as the lotion was not successful; I have been amongst horses since 1871; I have performed the operation before in the presence of a veterinary surgeon; I left the shed with the irons; I saw the constable at the corner of Codrington-street and Darlington Road; the horse kicked very little; I went home to mix some oil; the growth used to bleed of its own accord; it would be painful; the horse is a great deal better now than before.

To Police: I have a very good memory; I saw Quelch at a quarter past 4 p.m.; I was dressed as I am now; I had no blood on me; I said to the police "you have arrested the wrong man, you don't know what you are doing"; I never said anything about sending the horse down to be operated on; I had no oil when I came down; I mentioned to the police about the oil; I asked for the horse to be taken home.

Redfern, 21st October, 1894.

Exhibit No. 44.

COPY of letter from Senior-constable W. E. Quelch to Superintendent George Read.

Redfern Station, 20 August, 1897.

SENIOR-CONSTABLE W. E. QUELCH most respectfully makes application to the Superintendent for permission to prosecute Mr. Norton, the proprietor and editor of *Truth* newspaper, with reference to article published in that paper on Sunday, the 8th instant.

The senior-constable brought the publication under the notice of his inspector, who advised the senior-constable to take no notice of it, but now that a Member of the Assembly has thought fit to bring the matter into Parliament behind the back of the senior-constable, the senior-constable's reputation is assailed, having no means of defending himself, by the remarks used inside that Chamber being privileged.

The senior-constable has consulted Mr. Charles Bull, solicitor, in the matter, and that gentleman considers that a prosecution should take place in reference to the article published. In the interest of the Force the senior-constable, therefore, asks the Superintendent if he would be good enough to recommend the senior-constable's application and assist the senior-constable as far as practicable.

W. E. QUELCH,
Senior-constable.

George Read, Esq., Superintendent.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PRISONS.

(REPORT ON, FOR THE YEAR 1897.)

Printed under No. 1 Report from Printing Committee, 30 June, 1898.

The Comptroller-General of Prisons to The Minister of Justice.

Sir, Comptroller-General's Office, Sydney, 20th June, 1898.

I have the honor to present to you my Annual Report upon the Prisons Department of New South Wales for the year 1897. The statistical tables have been rearranged and added to, and they exhibit the general operations of the twelve months.

2. The year has been a very busy one, and has been characterised by the initiation of many changes in procedure, the more important of which are described in a separate appendix. It has also been thought well to include therein particulars of some few alterations which were brought into operation after the close of the year, but which had been in course of preparation during the twelve months. Appendix I contains reports from the officers-in-charge of all the more important prisons. They describe the effects of the various changes recently introduced, and their experienced opinions are of considerable value. Appendix II deals with the industrial branch of the gaol system, and briefly describes the increase which has taken place in the industries, details being shown in the two summaries attached to Mr. Urquhart's report. Appendix III refers to medical and lunacy matters. Appendix IV is in two parts—A, containing various statistics in connection with prisoners; and Part B, dealing with expenditure, and the number and distribution of the staff. The remaining appendix briefly explains the nature of certain changes which took place during the year, or shortly after its close; and it also contains the new and amended Regulations which have been authorised by the Governor-in-Council during the same period.

3. The number of prisoners of all kinds on the 31st December last was 2,260, as compared with 2,357 on the same date of the preceding year. This showed a decrease of 97, while the general population increased from 1,297,640 to 1,323,460. Not since 1883 has the prison population been so low in number at the close of any year. The ages of those confined showed that 307 were under 25; 545 between 25 and 30; 720 between 30 and 40; 395 were between 40 and 50; while of the remainder 291 were upwards of 50, and the ages of 2 were not ascertainable. Just 56 per cent. were between 25 and 40 years old. Omitting prisoners under sentence of imprisonment only and those awaiting trial or under remand, the remainder (1,852) were serving sentences as follows:—Over 2 years, 762 (11 females), and not exceeding that period, 1,090 (159 females); the figures for the preceding year were 813 and 1,167 respectively. During the year 1897, exclusive of one life-sentenced prisoner, 193 persons were sentenced to penal servitude or hard labour for terms of 3 years and upwards, the average sentence being between 4 and 5 years.

83—A

4.

[875 copies—Approximate Cost of Printing S.L. (labour and material), £90 5s. 1d.]

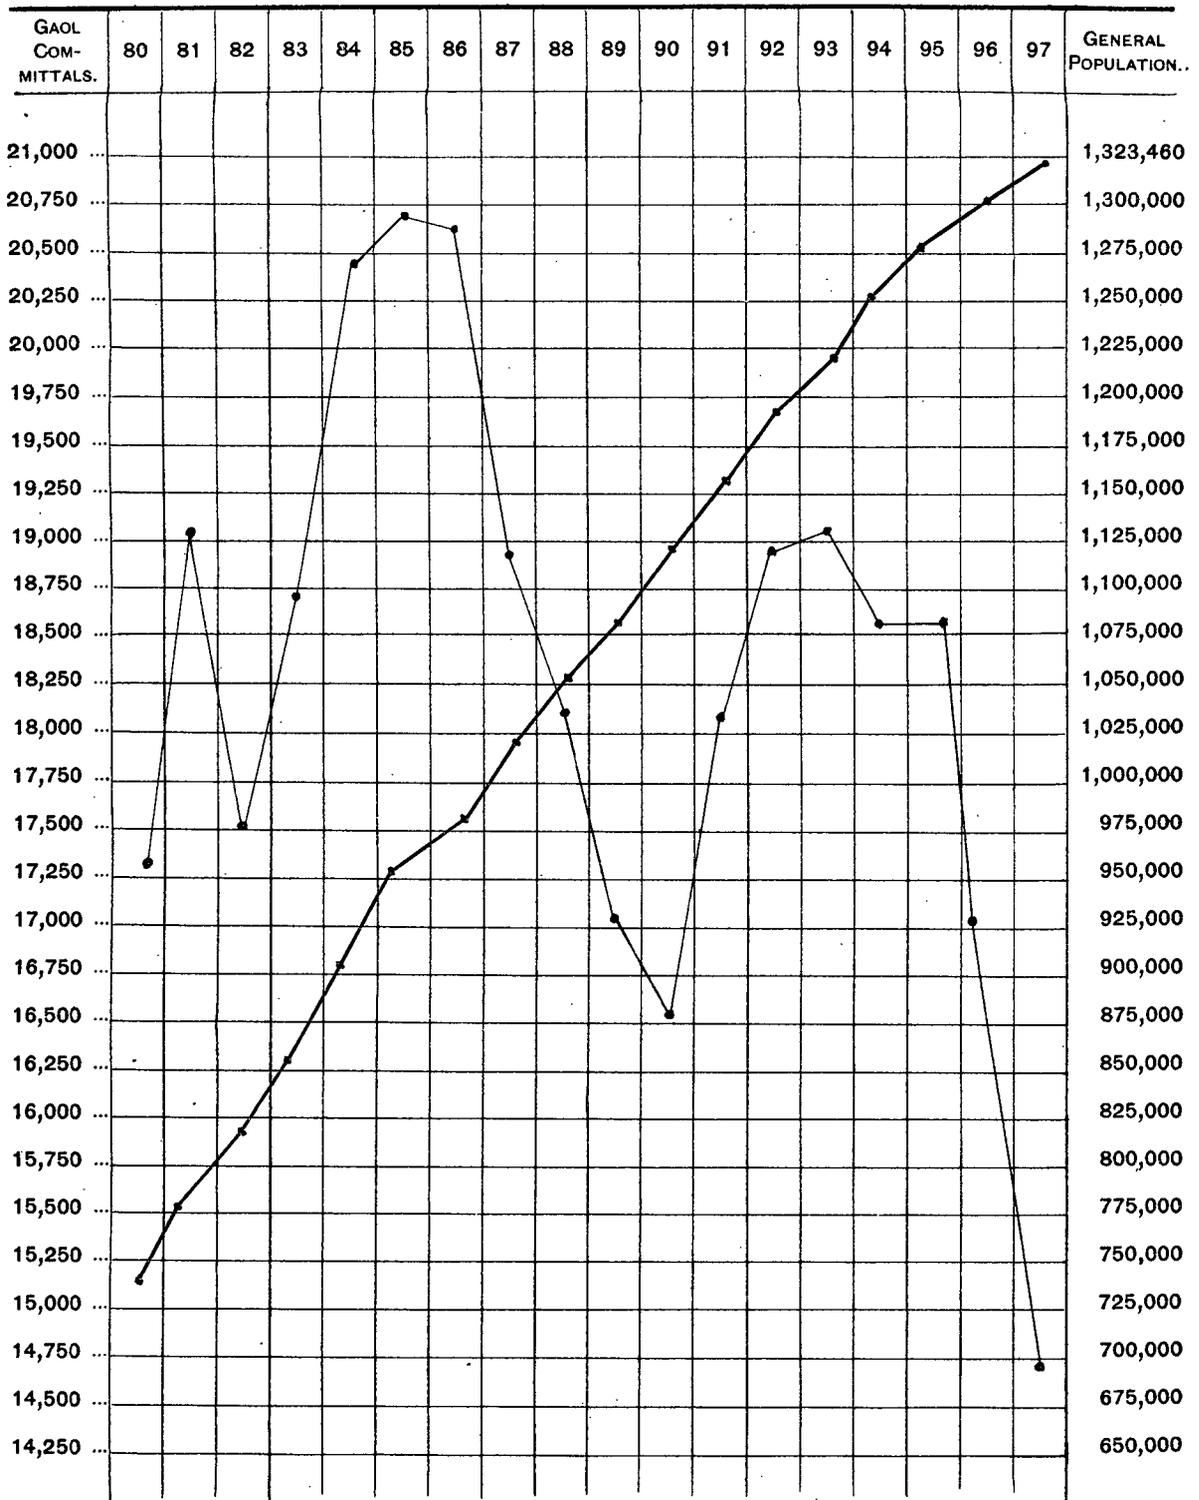

4. The entries and discharges numbered 14,737 and 14,834, as compared with 17,012 and 17,115 in 1896. These figures show a very gratifying drop in the number of persons committed to gaol during the past twelve months as compared with each of the two years before. In 1895 the committals were 18,552, or 27 more than in the preceding year. In 1896 they fell to 17,012, and in 1897 the number was reduced to 14,737—a decrease of 2,275 as compared with 1896, and of no less than 3,815 as compared with 1895. In two years the entries to gaol decreased 20 per cent., while the general population of the country increased from 1,277,870 to 1,323,460 during the same period. The decrease was principally among the vagrant and petty-offender class, who much dislike some alterations which have taken place in gaol routine. A chart has been prepared, and is included in this report, showing the number of entries to gaol and the increase of the general population year by year since 1879. In 1880 the proportion of entries to prison to the general population was 2:32 per cent. In 1897 the proportion was only 1:11.

5. It must be observed that included in the total number 14,737 are persons who, having been convicted more than once during the year, are consequently counted more than once. Drunkards and habitual vagrants continue to come and go under existing prison conditions, from which they derive little or no benefit from a reformatory point of view. Some practical change in present methods is urgently required. I have already outlined a plan for dealing with this class of persons, and you have sanctioned a sum being placed on the Estimates for the construction of a penitentiary for vagrants and casual drunkards, and of an inebriate asylum for the habitual drunkards. The sites proposed for these establishments are healthfully and conveniently situated, and it is earnestly to be hoped that nothing will occur to prevent the early realisation of a much-needed reform. To show the necessity for some alteration, it is pointed out that on the 1st May of the present year there were in Biloela Gaol 6 men whose convictions averaged 104 each, and 6 women who averaged 160 each. One unfortunate had been sent to prison on no less than 351 occasions.

6. One striking feature in connection with the number of gaol entries is that 57 per cent. were imprisoned in default of payment of fines. Out of 14,737 persons sent to gaol no less than 8,342 were so dealt with. The experience of the English Commissioners for Prisons is similar, and in a Bill now before the Imperial Parliament it is proposed to allow part-payment of fines where the full amount cannot be produced. It is explained that “the detention of such persons in prison may be both harmful to themselves and injurious to their families, and it has long been the rule of the Home Office that every facility should be afforded them of obtaining their release. These facilities, it is proposed, should be extended by allowing, in those cases in which a portion only of the amount can be raised, a reduction of sentence to be made, bearing the same proportion to the full term as the portion of the fine paid bears to the full amount. The results of this proposal will be important from a financial point of view as well. 81,439 persons, or more than half the total number of those received into prison during the year, were committed to prison in default of payment of a fine. If, in the numerous cases in which the prisoners could have raised a portion of the fine, that portion could have been accepted in part satisfaction of their punishment, the Exchequer and Local Authorities would have received a large sum, and, at the same time, the State would have been relieved of the cost of their maintenance in prison.” With these views I thoroughly concur. The adoption of a similar plan in this country would be attended by beneficial results.

7. The total number of prisoners convicted at the Circuit Courts and Courts of Quarter Sessions during the year was 892. Of these 410, or 46 per cent., had not been previously convicted; 145 (16·2 per cent.) had 1 previous conviction; 86 (9·7) had 2; 50 (5·6) had 3; 42 (4·7) had 4; 23 (2·6) had 5; 78 (8·7) had from 6 to 10; while the remainder, 58 (6·5), had over 10, and in some cases over 20, previous convictions.

8. The conduct of the prisoners has been generally good, and the great bulk of them conformed to the Regulations. Some of the reforms introduced considerably interfered with customs of long standing, and naturally caused a certain restlessness; but, notwithstanding the changes introduced, the year showed but comparatively little punishment. For the first time for many years no corporal punishment took place;
and

Prisoners counted once every time received. If J. Smith was received six times in year he would be counted 6.

Red line shows growth of general population.

Black line shows number of entries into gaol.

In 1880, the proportion of entries to gaol to the general population was 2·32 per cent.

In 1897, the proportion of gaol entries to the general population was 1·11 per cent.

If the gaol entries had increased in the same proportion as the general population, the entries for 1897 would have amounted to 30,791. Actually they were 16,054 below that number.

and of the total number of prisoners received into gaol, over 95 per cent. received no punishment at all. Escapes (3 recaptured) were 4 in number, as compared with 13 escapes, or attempted escapes, during the previous year.

9. The cases of sickness treated were fewer in number than in 1896, and the general health has been good. The deaths, exclusive of 3 executions and 1 suicide, amounted to 21—a very small proportion to the total number of prisoners, when it is considered that the gaols are occasionally made use of for the reception of aged or diseased persons, who, for various reasons, cannot gain admission to public hospitals, and against whom therefore a charge of vagrancy is preferred in order that they may be sent to gaol for the purpose of receiving medical treatment. Table C gives particulars of the various deaths, several of which occurred a few days after reception. Two recent instances of this took place at Young, where some old men, suffering from illness, none of whom had previous prison history, were committed to gaol for vagrancy. One died two days after admission, and the other on the day following his reception into prison. If the Charitable Institutions Department had small local centres established in various parts of the country for the reception of sick paupers who cannot obtain hospital treatment, the Prison establishment would be relieved of a task which it is unsuited to perform.

10. Table E gives particulars of each case of insanity occurring in prison. The total number treated was 156, of whom 110 showed symptoms of insanity on reception into gaol, and 15 within one month after admission. In addition, 365 persons were sent to prison charged with being of unsound mind or for protection, besides others who were received in a demented condition suffering from the effects of drink. Altogether, upwards of 500 persons were treated in prison for actual or supposed insanity. This entailed work of a character which could not be satisfactorily performed. The gaols were never intended to take the place of lunatic asylums, and the gaol officials were certainly not selected on account of any special knowledge they might possess in the treatment of the insane. There are few matters in connection with prison administration which need more immediate attention than the question of the treatment of insane prisoners, or of those strongly suspected of insanity. A Board has been appointed by you, composed of the Chief Medical Adviser, the Inspector-General of the Insane, and the Comptroller-General of Prisons, to deal with this important subject, with a view to bringing about a change in the existing system which is admittedly unsatisfactory.

11. No alteration took place in the number of prisons, although intimation has been made that two new gaols are to be opened at Wyalong and Narrandera respectively. The existing prisons, which seem numerous for such a country, comprise 8 principal gaols, 11 minor gaols of the first class, 4 of the second class, and 36 police gaols—altogether 59. They contain 2,165 cells of various kinds, a number still insufficient to admit of each prisoner having a separate cell. More accommodation is, however, being provided at Parramatta and at Tamworth; and this, together with the construction of the new Penitentiary, will allow of the very desirable plan of giving each prisoner a separate cell being carried out, and of so preventing the association which now has to take place for lack of room.

12. The Departmental reorganisation which was commenced upon my assuming office in June, 1896, was continued during the year; one effect being to still further reduce the expenditure for salaries in the principal gaols. Omitting the police gaols, the savings in this direction in 1896 amounted to £6,922. For the year now under review a further larger saving was effected to the extent of £7,651, making a total drop of £14,573. Table 9 shows details of this retrenchment, which was largely brought about by not filling up unnecessary positions as they became vacant, and by a rearrangement of duties. The daily average number of prisoners in the gaols referred to was 171 less than in 1895; but notwithstanding this, the cost per head decreased by £4 6s. 11d. as compared with that year, and by 18s. 9d. as compared with the cost in 1896. The total amounts appropriated for the services of the Department for the three past years were £117,707 for 1895; £100,699 for 1896; and £98,514 (including £2,200 from Treasurer's Advance Account) for 1897—a decrease of £19,000. Under present conditions, the yearly amount required for the future, should not exceed £98,000.

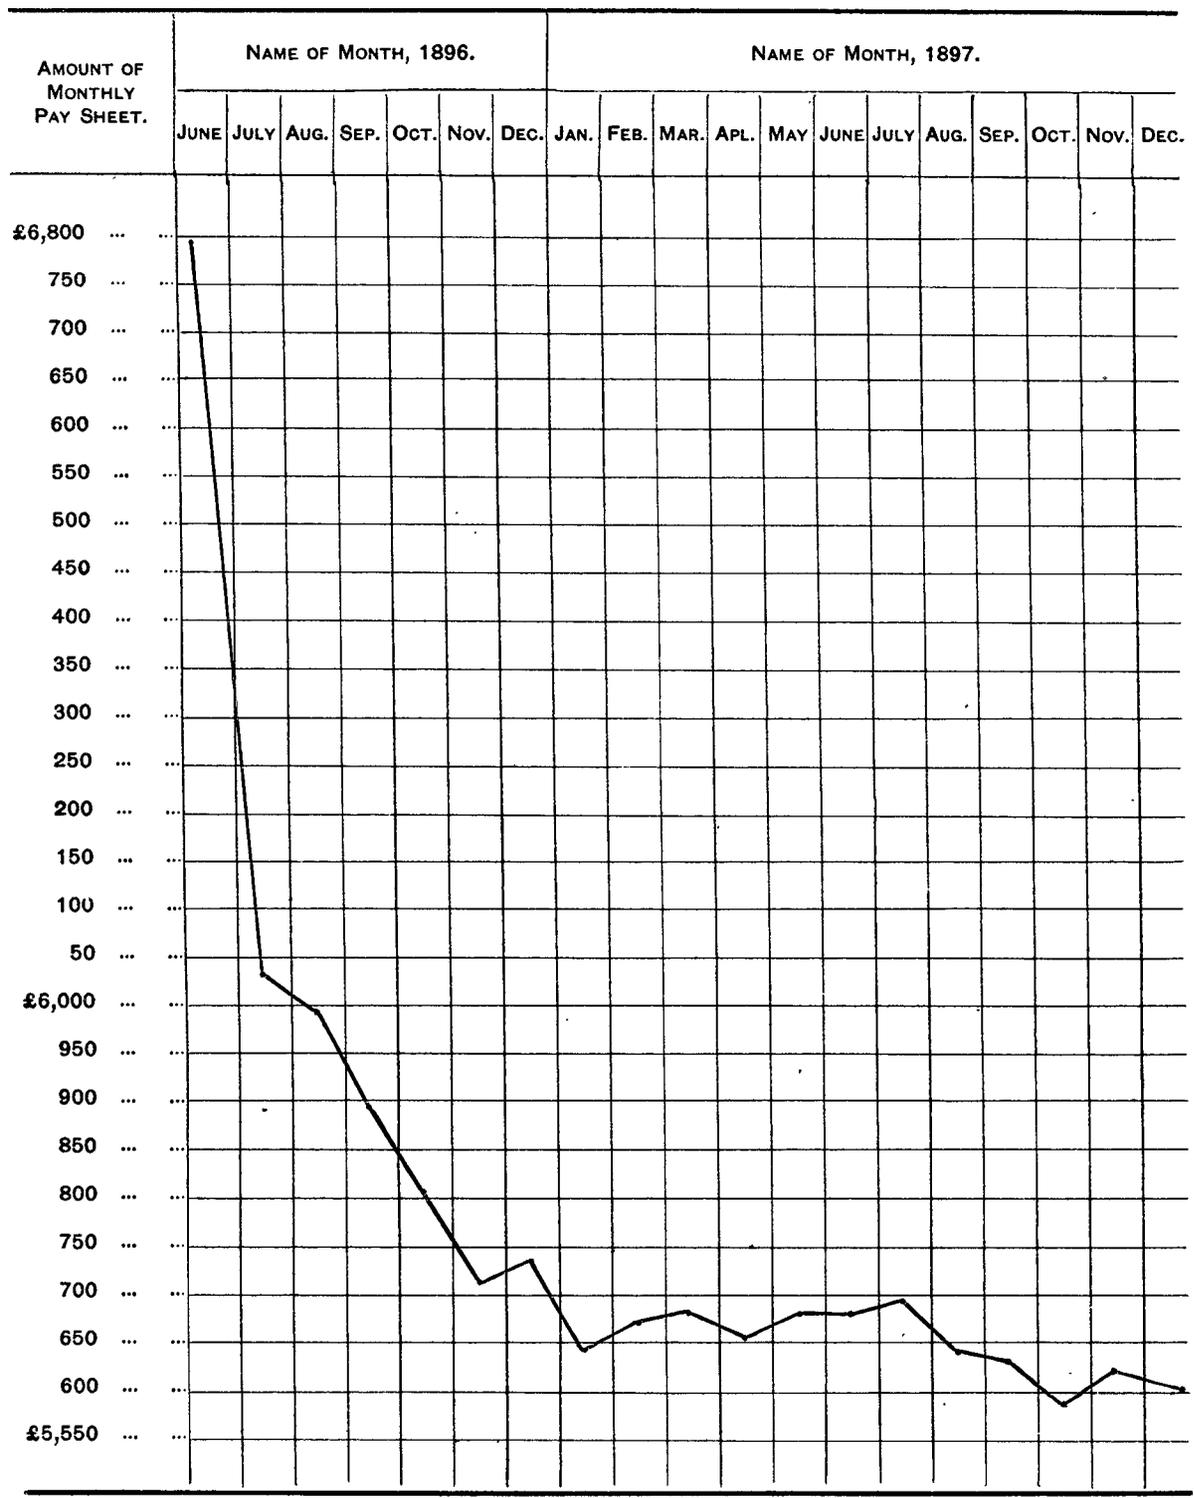

£98,000. This amount might be reduced, however, if a number of expenses now unfairly borne by the Prisons' establishment, were made chargeable to the proper votes, such as those for the Lunacy, the Charitable Institutions, and the Sheriff's Departments. It is quite possible too, to lessen the cost without impairing efficiency by reducing the status of some of the minor gaols, and so reducing the staffs. Some of these places should never have been built. As it is, they have to be kept in order, but it is a waste of money and a waste of power to maintain them on the present scale. At one of these establishments the prisoners cost annually £100 per head; at another they cost £73. At each establishment there is a gaoler, a matron, a senior-warder, visiting-surgeon, two chaplains, and four warders, all receiving pay; and they have a daily average number of prisoners to look after of fourteen in one place, and of twenty in the other. Both gaols are connected by rail with one of the labour prisons, and it would be easy to transfer all but the very short-sentenced persons, and thus do away with the necessity for the comparatively large staff that is now maintained. A reduction such as has here been suggested was carried out recently in the cases of the gaols at Wollongong, Yass, Forbes, and Wagga Wagga, resulting in a saving of 53 per cent., the cost decreasing from £4,905 per annum to £2,326; while no inconvenience has arisen from the change in methods. A map has been prepared showing the position of each of the gaols and its status, the distance from the nearest railway stations, and the number of prisoners at the close of the year.

13. The report of the Director of Labour on the gaol industries shows that a large increase has taken place in the work turned out by prisoners. The new orders received, from various Government departments for goods not hitherto made in the prisons, created much additional work of a remunerative character, and enabled the larger gaols to keep the inmates busily employed. The total value of the labour only, performed by prisoners (excluding domestic work, cleaning, cooking, and so forth), amounted to £19,000, computed at a reduction of 17 per cent. on the preceding years' prices for articles made for other departments. The occupations comprised making clothing for the Hospitals for the Insane, clothing for the Charitable Institutions, clothing for the aboriginals, boots and leggings for the police, beds and bedding for hospitals, 2,500 pairs boots—in addition to manufacturing many other articles—for the State Children's Relief Department, and a large amount of brush-making, book-binding, mat-making, tinsmithing, upholstering, &c., for various Government departments. In addition, all the warders' uniform clothing and boots were made by the prisoners, who also manufactured all of their own clothing and boots, as well as the various utensils and furniture used in the different gaols. A large amount of building work has also been undertaken, especially at Parramatta, Tamworth, Young, Biloela, Bathurst, and Maitland. The marble industry at Bathurst has kept a number of men fully employed, and at Trial Bay substantial work has been done in the construction of the breakwater. Towards the close of last year a commencement was made to cultivate the waste lands surrounding the different gaols. This outdoor work is of a wholesome and remunerative character, and is beneficial in every way. It has been extended during the past year with excellent results, and provision is being made to still further enlarge its operations. No afflictive or penal labour, such as the crank, treadmill, shot drill, &c., is carried on in our gaols.

In connection with the industrial branch of the prison system, tasks have been instituted in all occupations, and are regulated by a fixed schedule. The prisoners employed are, on completing their tasks, given a small indulgence, and are also credited with their earnings, which vary according to their being in gaol for the first, second, or third time. On serving a fourth conviction, they receive the indulgence, but are not otherwise remunerated. They can, however, in common with prisoners of fewer convictions, work in excess of their task, and for all such extra labour they are credited with a share of the value of their work. The earnings paid to prisoners on discharge last year amounted to £1,804.

14. With regard to the treatment of prisoners, the most important changes effected were in the direction of abolishing the yarding system; the setting apart of Goulburn Gaol for first-convicted prisoners under sentences of twelve months and upwards; and the reclassification of female prisoners. The first-mentioned alteration, when

SALARIES CHART.—Showing decrease in Salaries, month by month, from June, 1896, to December, 1897, caused by not filling up unnecessary positions as they became vacant.

EXPLANATORY NOTES.

In June, 1896, the amount paid for salaries was £6,794 7s. 2d., or at the rate of £81,532 yearly.
 In Dec., 1897, " " " £5,603 1s. 9d., " " £67,237 "

A further saving has been effected since December, 1897. Rate of saving effected (salaries only) £14,295.

<p><i>Amounts voted.</i></p> <p>1895-96 £117,707 1896-97 100,699 1897-98 96,314</p>	<p><i>Salaries and Contingencies.</i></p> <p>} Difference between 95-96 and 97-98, £21,393, but it is probable the vote for the latter year will be exceeded by £2,000, reducing the saving to £19,000.</p>
---	---

when completed, will be the largest measure of reform yet introduced into the gaols of the Colony. It will restrict the opportunities for contamination by abolishing the association of prisoners in yards and in cells, and it will undoubtedly add to the discipline and good order of the service. By setting apart Goulburn Gaol for the treatment of certain first-convicted persons, it is hoped to still further lessen the dangers arising from association; while the same aim has influenced the reclassification by prisons, of the female inmates. The latter plan has not yet been completed, but, so far as it has been carried out, the new departure is likely to effect much good. Amongst other alterations in procedure, which are being carried out, are:—

The lighting of cells.

The general adoption of physical drill in connection with the treatment of young prisoners.

Improvement in hygiene as regards the clothing, &c., of female prisoners.

The separation of trial prisoners who had been previously convicted from those who had not.

Improvements in the character and quantity of library books.

The use of books by short-sentenced prisoners.

The numbering of prisoners so as to lessen the chances of recognition by former fellow prisoners after discharge.

Improvements in various sanitary directions.

The introduction of hoot-cleaning.

Improvement in cooking and dietary arrangements.

Introduction of a few simple drill movements in order to encourage order and regularity in moving about the gaols.

The extension of the remission system to prisoners serving sentences of twelve months and under (sanctioned since close of year 1897).

Most of these matters are fully explained in Appendix V, to which I beg to invite attention. The reports from the various officers-in-charge of gaols, contained in Appendix I, also supply information in connection with many of the changes above referred to.

15. The arduous and somewhat unthankful task of reorganising the internal working of the various gaols, which was commenced at the latter end of 1896, was continued during the year, and occasioned considerable alterations in discipline and routine. The detector-clock system and the change in the hours of night-duty were extended to all the principal gaols. The duties of many of the posts were altered; greater attention was given to drill; and several other changes in routine were adopted with beneficial results. It was found that the staff could be largely reduced without impairing efficiency, and consequently, during the eighteen months ending in December last, no less than fifty-three warders' situations were left unfilled, as from various causes they became vacant. The accompanying chart shows the operations of retrenchment, month by month, during the period named.

It was found possible to allow an annual holiday to all classes of warders, to extend Sunday leave, and to allow, for the first time, a general system of sick leave on pay. Since the close of the year, Regulations have been approved of by which the deductions from salaries for the use of quarters have been reduced 50 per cent.; and, in certain cases, extra allowances have been granted to warders stationed in remote districts. In addition, refreshments have been allowed to officers on night guard; and those engaged in drilling 7th class prisoners have received extra pay. All of these advantages, which have been conferred with your approval, have created a large additional expenditure, but this has been more than compensated for by the savings brought about by the abolition of unnecessary offices.

16. With a view to the gradual improvement of the status and morale of the subordinate staff some very important reforms were brought into operation, by which, amongst other things, an educational test was applied to applicants for employment. This will have the effect of preventing any further additions to the ranks of illiterate officers. It has also been provided that the lower ranks will not be eligible for promotion until they pass a qualifying examination in various subjects connected with the theory and practice of prison work. It is intended to institute small libraries containing
works

works on criminology and prison management at all the principal gaols for the use of the officers, and every inducement will be held out to warders to qualify themselves for examination and promotion. A minimum and maximum rate of pay has been established for each rank with regular yearly increments—contingent on good behaviour—leading from one to the other, and it is hoped that all of these changes will, as time goes on, raise the standard of efficiency. Full particulars of these regulations will be found in Appendix V.

17. Upon the whole, the warder's staff has done good work. The majority are steady, intelligent, and interested in the discharge of their duties, and no less than eighty-eight officers were rewarded by promotion. But there are still some men whose want of education and other drawbacks should have prevented their admission to the service. It is to be regretted, too, that certain of the staff have been disloyal to their employment by trafficking with prisoners, by neglecting their work, and by otherwise breaking the regulations. The following list will show the number of retirements, promotions, punishments, &c., during the past three years:—

Year.	Retired.	Resigned.	Dismissed.	Fined.	Reduced in rank.	Promoted.	Transferred.	Exchanged.
1895	7	11	7	22	3	21	41	9
1896	67	21	11	25	1	42	102	5
1897	10	23	7	38	12	88	109	14

18. Several important changes in the personnel of the higher grades of the service took place, and the head-quarters staff was reorganised. This latter arrangement led to the appointment of Mr. A. H. Collis, for many years Deputy-Comptroller, to the position of Governor of Darlinghurst Gaol, at which place he has effected a great improvement in management. Mr. McCauley was promoted to the position of Deputy-Comptroller and Inspector of Prisons; Mr. Willard received a well deserved promotion to the rank of first clerk, a position which he occupies with advantage to the department; the new office of statist and accountant was filled by the transfer of Mr. Windon from the Department of Justice; and several other promotions took place amongst the subordinate clerical staff. Mr. Bloxham was appointed Governor of Goulburn Gaol; Mr. Urquhart was placed generally in charge of the industries as Director of Labour; and Mr. Jay was promoted to the charge of Armidale Gaol, *vice* Mr. Govers, deceased.

19. During the year I was enabled to visit all of the gaols other than the police gaols. All of the prisoners were seen, and 456 were afforded the opportunity to prefer verbal requests on various subjects. In addition, the officers of all ranks were interviewed, and an estimate obtained, by personal observation, of their qualifications. A routine of duty was affixed to the various positions, and subsequently a framed copy of each person's duties (apart from the General Regulations) was framed and hung up in the lodge of every prison for general information. In addition, the Deputy-Comptroller made a large number of inspectorial visits, which were the means of checking certain abuses and of bringing about an improvement in discipline. It may here be noted that, besides the 456 verbal requests made to me by the prisoners, 876 written applications were carefully considered and dealt with.

20. In Appendix V, I have ventured to indicate some directions in which reform should take place in the future. All of these matters have received your consideration, and, by your direction and approval, initiatory steps have been taken to carry some of them out. The treatment of inebriates; the construction of a separate prison on modern lines for females; the establishment of a penitentiary for misdemeanants, casual drunkards, vagrants, and petty offenders; the treatment of lunatic criminals; the complete lighting of cells; the education of illiterate prisoners; the improvement of hygiene and of sanitary appliances generally; and the abolition of the yarding of prisoners, are all among many matters which it is hoped will receive practical attention in the future. Legislation is greatly needed to restrict the entrance into this Colony of the criminal class from elsewhere. At present, New South Wales is at a serious disadvantage in this respect, and, amongst other consequential disabilities, has to support in

in its prisons a large number of prisoners who have graduated in crime elsewhere, and who are allowed to enter this country after it has become dangerous for them to remain in their native states. At one of our prisons on the Victorian border, of the total admissions during twelve months, only 22 per cent. were native born. Of the remainder, 25 per cent. were from Victoria, which colony has a very stringent enactment against the admission to its territory of discharged criminals from New South Wales and elsewhere.

21. In another direction, not connected with the Prison administration, but which has much to do with the broad question of checking the growth of the criminal population, is the matter of the reformatory treatment of juvenile wrongdoers. It is satisfactory to observe that few children are now committed to prison. None should be. Legal technicalities occasionally hinder the dictates of common sense, and children are consequently sent to gaol. To put a stop to any chance of further foolish proceedings of this sort, legislation is required. Power should be given to the judiciary, as well as to the magistracy, to commit all persons under 17, whatever might be the offence charged against them, to reformatory institutions for the young. Exceptional cases might arise where some other course was advisable, but they would be few in number, and a special statement should in such cases be required from the sentencing authority to be made in open Court. The present dividing lines between the Reformatory and the Industrial School should be abolished, and all such establishments should form part of a common system under one management. At present, classification is attempted on imperfect lines, with the result that boys are sent to the Industrial School who are fitter subjects for the Reformatory, and *vice versa*. There is no present power to correct such errors. The only possible chance to arrive at a proper classification is by personal and careful observation after sentence, assisted by the history and antecedents of each case. A receiving depôt for observation, with other graded institutions differing in treatment and in discipline for the reception of the various classes, is what is needed; and transfers from one to another as conduct and character improved or deteriorated should be allowed at the discretion of the controlling head. Accompanying the necessary legislation to make the foregoing treatment possible, should also be provision for the treatment of habitual truants who largely form the class from which the reformatory boys are recruited; the regulation of juvenile hawkers and newsboys; and the prevention of street wandering, after certain hours at night, of young girls, unless accompanied by their parents or other responsible persons. The best way to reduce crime and to relieve the community of the intolerable expense and suffering which it now entails is to see that boys and girls are exposed to contaminating influences as little as possible. If persons neglect their parental duties the State should intervene for the general good.

22. The thanks of the Department are due to the Howard Association, the Inspector-General of Victorian Prisons (Captain Evans, R.N.), the Manager of the Elmira Reformatory, United States, and to a large number of prison authorities in various parts of the world, for the assistance and valuable advice which have been afforded. I would also beg to place on record my high appreciation of the services and assistance rendered by the Deputy-Comptroller, Mr. S. M'Cauley, throughout a very trying and eventful year.

I have, &c.,
FREDK. W. NEITENSTEIN,
 Comptroller-General of Prisons.

1.—DARLINGHURST GAOL.

Extract from the Governor's Report.

I HAVE the honor to submit the annual returns for the year 1897. There were 5,149 males, 1,563 females, total 6,712 prisoners received, and 5,184 males, 1,614 females, total 6,798 discharged, during the year. Their conduct, on the whole, has been good; they have been usefully and remuneratively employed on the various industries. The recent introduction of standard works of fiction has been conducive to good behaviour in the yards.

The physical drill has been kept up with advantage to the health and discipline of those undergoing it; they lose the sullen dogged appearance frequently seen on seventh-class prisoners. There is no doubt that the seventh-class treatment is a vast improvement on the former practice of associating young offenders with each other and older criminals. It is certainly punitive, but I am of opinion that the system of drill is more advantageous than the monotonous exercise on the circle. It improves those undergoing it physically.

Extract from Report of Government Medical Officer as to the effect of Physical Drill on Seventh-class Prisoners.—"The improvement in the condition of seventh-class prisoners, who have been drilled, is plainly observable. In my opinion such prisoners on discharge have a great advantage over the ordinary seventh-class prisoner. They are in good condition and fit to engage in hard manual work. With increased muscularity and physical well-being there is usually increased self-respect, and, consequently, less likelihood of their returning to their former ways.—ROBT. T. PATON, Govt. Medical Officer."

The system of night duty, inaugurated in 1896, has been carried out satisfactorily during the year, and is much appreciated by the officers. The alteration in the overseers' hours has brought about an improvement in the management of the workshops. Better arrangements have been made for the storing of prisoners' private clothing.

Prisoners awaiting trial for the first time have been separated from those previously convicted.

The ventilation of the wings has been greatly improved by the removal of the iron ceilings of the corridors. The major portion of the Gaol has been repainted; and minor repairs and alterations have been effected.

The rations supplied had in some instances to be rejected, but on each occasion the contractors sent in a fresh supply of good quality.

I took charge of the Gaol on the 10th of August last. The personnel of the staff has been greatly changed during the year.

The number of female warders has been reduced by four on account of removal of prisoners to other Gaols.

The conduct of the officers has been good; they have worked well and accorded me loyal support.

The Regulations and orders have been strictly complied with, except such cases as have been reported.

The general health of the prisoners has been good.

There has been a decrease in salaries, as compared with the year 1896, to the amount of £961 8s. 7d. The decrease in the salaries of 1897 is caused by the reduction in the staff.

With reference to the cost of this Gaol for the year 1897, compared with 1896, the saving in salaries has been chiefly brought about by the reduction in same having been extended over the whole period of 1897, whereas the reduced rates of pay were only six months in force in 1896, viz., from 30th June. Towards the close of 1897, three female warders were transferred to Biloela Gaol, and another resigned, whose places were not filled, thus making a further saving. The contingent expenses have increased slightly over £1,400, chiefly through better clothing and new blankets being issued to prisoners, the extra clothing supplied to female prisoners, towels, and other necessary articles; the increase under this heading being over £800. During the year 1896 no water-rates are shown as being paid, as at the time a dispute with the Water and Sewerage Board existed; but in 1897 water-rates amounting to £432 2s. 5d. were paid, and alterations to the tank cost a further sum of £44 17s. 6d. The gas account in 1897 shows an increase of £41 15s. This is attributed mostly to the extra quantity used in the manufacture of goods, a material increase in this department having shown itself in 1897 as compared with 1896.

ARTHUR H. COLLIS,
Governor.

2.—GOULBURN GAOL.

Extract from the Governor's Report.

Appointment.—Appointed to this Department and Gaol, February 20th, 1897, I duly took charge on that date.

Conduct—Staff.—The conduct of the staff generally has been, with few exceptions, satisfactory, and discipline excellent. In certain cases, cautions, reprimands, or fines have been found necessary in the interests of the Department. These have been tempered with advice and encouragement. Result: The same officer has seldom been up a second time for dereliction of duty.

Officers transferred, &c.—Chief Warder Scott promoted to Darlinghurst; Senior Warder Steele to Berrima; 1st-class Warder M'Kay to Bathurst; V. Codrington, junior clerk, to Darlinghurst; 3rd-class Warders Armstrong to Albury, E. Irwin to Darlinghurst, G. B. Broadbent to Broken Hill; Probationary Warders, Bailey, Clarkson, and Morris to Darlinghurst; Female Warder Miss Amor to Young. Warder Elliott resigned from Service.

Officers appointed.—Following officers took up duty:—Governor, Chief Warder Bromley from Bathurst; Senior Warder Smyth and 1st-class Warder Tierney from Berrima; 3rd-class Warders Waite from Broken Hill and Shepherd from Berrima; Probationary Warders Morris, Bailey, and Clarkson; W. J. Denmead, junior clerk (probationary); Mr. Richard Rex, appointed schoolmaster and storekeeper, in lieu of Mr. Pope, resigned.

Prisoners received, discharged, totals, &c.—Total number of prisoners received for year, 378; discharges, 438; highest number on one day, 288, on 22nd March; lowest, 211, on 22nd December; total in gaol on last day of year, 213.

Deaths.—Number of deaths, 2. Coroner's inquests held. Verdict, "Death from natural causes." In both cases disease was advanced when received.

Health of prisoners.—General health of prisoners very good, and, so far as local cases go, the hospital has been lightly taxed. Daily average actually in hospital, 8·479, representing 101 prisoner-patients for the year. This number would have been further reduced could certain cases have been relegated to asylums. Some have been inmates of either hospital or observation cells all, or nearly all, their time, and others remanded for transfer by police to asylums. Scheming or malingering have been infrequent, though some attempts are occasionally made to get out of certain work. The hospital has been made as bright and cheerful as a few flowers, pictures, &c., can make it. In genuine cases the prisoner is treated as a patient first, and prisoner after—humanity and economy combined.

Sanitary.—Sanitary condition, good. Several very necessary additions and improvements effected; defective drainage remedied. Two galvanised air-vents to carry off sewer-gas have been erected by prison labour—one each in lane at female quarters on the north side, and lane, corner of workshops, south side. The only escape for sewer-gas prior to this appeared to be in upper floor (bath-room water pipe) of the Governor's quarters. On being pointed out to the Government Architect's Officer it was remedied at once, and an unpleasant and dangerous matter removed. In several instances exact localities of drains do not appear to have been minutely recorded.

Conduct of prisoners.—Conduct of prisoners and general discipline have been good, and a distinct improvement is noticeable all round during the latter half of the year. Notwithstanding the introduction of many new matters of detail—some practically removing cherished customs and practices—there has been relatively no trouble in enforcing them, and punishments have been decreasing.

Nuisances, known as "pushes" and "pebbles," in the yards, or elsewhere, have become almost, if not quite, an unknown quantity.

Liberal use of special yards, and strict application of the term "indulgence," as applied to tea and tobacco, for only those deserving cases where it is earned, have been the main instruments used in bringing this about.

Punishments.—Total punishments for year, 103; that for the last quarter, 18—a considerable reduction in number.

Record Reign.—In honor of Her Majesty's "Record Reign," extra remission in cases of certain well-conducted prisoners was granted by the clemency of the Executive.

Uniform Appearance.—Uniformity in dress and general appearance have been given attention to. Handkerchiefs of unbleached calico, blacking for boots, and several minor items have been adjusted or supplied.

Drill.—Drill of officers has been regular, and shows much improvement. The Morris aiming-tubes asked for, and which have been approved by you, will, when they arrive, allow of full practice being indulged in without loss of time.

Night Duty.—Night-watch system works well, and has been faithfully carried out, as may be gathered from the fact that upon but very few occasions has any officer, senior-in-charge or sentry, been found fault with; and this though I have visited the posts, at all hours, between 600 and 700 times since February. The Deputy-Governor, in addition, also visits them in the same way.

Staff.—The female warders' staff has been reduced from three to two.

Female Prisoners.—Six prisoners on 31st December, 1897, being two first-timers and four others. Conduct of female prisoners has been good, with few exceptions. Like the male prisoners, they have been kept employed at suitable work.

Library.—Library stock of books has been increased to 1,375. They include standard fiction by Dickens, Lytton, Thackeray, Scott, &c., and are welcomed by prisoners. Method of distribution improved.

Principal visits.—Principal visits for the year:—Comptroller-General of Prisons, March 5th, 6th, and 7th, July 19th and 20th; Deputy-Comptroller of Prisons and Inspector, January 28th and 29th, June 9th and 10th, September 27th and 28th, December 13th; His Honor Judge Fitzhardinge, July 29th; His Honor Judge Stephen, October 15th; Government Architect, February 2nd and November 19th; Acting Government Architect, September 18th; Government Architect, Queensland, February 2nd; Swiss Consul, June 16th; Mr. R. H. Reilly, Inspector Public Accounts, April 30th. Visitors to the gaol have been admitted according to new regulation 60.

First-convicted Prisoners' Gaol.—It having been decided to make this a first-convicted prisoners' gaol, steps have been taken with that end in view, and a number of prisoners, old offenders, have been transferred during the last quarter to other gaols. In their places first-convicted men have been sent here. Total number, other than "first-timers," 69. Of those are a number of short-sentence men, from local courts, whose sentence will expire at such an early date as not to make it worth the expense of transit, escort, &c., to transfer them before discharge. These, and all such, are kept as much as possible apart from all first-convicted men. The latter number 135. (Females, 4 old hands and 2 first convicted, not included in these numbers.) I scarcely think many of the old hands look with favour upon the approaching restricted association system. This, the numbering, and several other matters of detail go against their grain, as they lose much that was valued by them in prison and in freedom. To the better-class prisoner these disadvantages will not be likely to appear.

Quality of Work.—The quality of work done in the shops is good, and shows marked improvement all round latterly. "Indulgence" must be honestly won. Tasks have been raised.

Agricultural Work.—Agricultural work has been made one of the features of the year, and has been attended with successful results. Gangs of four prisoners under one armed warder have been employed daily since I took this work in hand. Generally three or four gangs have been kept at trenching, manuring, and preparing land for vegetable growing. There have not been any attempts to escape during the year. There is now an area of 6 acres 3 roods 20 perches under cultivation—one garden on the north and one on the south side of the gaol. Half of the latter has been made up almost solely of soil carted out of the tip. The whole has been trenched from 18 in. to 2 ft. deep, as required.

Crops.—The potato crop here is, up to now, said to be looking better than any in the neighbourhood; and with these, and the prospect of a large pumpkin supply, swedes, marrows, onions, parsnips, carrots, cabbage, &c., and succession crops in a fair condition, I hope to keep the gaol well supplied, and independent of contractor's supplies.

Effect on Prisoners.—Prisoners, with the exception of some to whom any kind of work is objectionable, have welcomed the opportunity to assist in the labour of growing their own vegetables; and though of necessity the hours in the hot months are not the ones selected by the free farmer as most suitable for operations, still the work done has satisfied me under the circumstances, and results may be left to speak for themselves. It was fortunate that recently, when it became impossible here to obtain good potatoes, the gaol garden was able to supply the whole requirements in green vegetables. Since October 16th to date, 3,326 lb. have been supplied to prisoners, being principally cabbage, onions, carrots, and turnips.

In addition, it may be specially mentioned the valuable nature such work affords to prisoners. Practical and healthy, it has already afforded instances of weaning off a prisoner from the erroneous idea so many have, that there is only one place for him—the city. Several who have taken somewhat kindly to the work may be found to have followed it up when their freedom is regained; at least, such is the intention of some. If they do, then perhaps a further good may result.

Meals inspected.—Every meal is inspected and reported to me.

Headings of employment.—Principal heads of work prisoners have been employed under:—Bricklaying, &c., blacksmithing, carpentering, painting, plumbing, bookbinding, hatmaking, printing, shoemaking, tailoring, gardening, labouring (ordinary and farm), cooking, sweeping, washing, sanitary work, wood-cutting, stabling, hospital and observation cell work, pumping, police labour, &c.

Additions, alterations, repairs, &c.—Additions, extensions, and alterations have been made in various ways. Blacksmiths' shop completed, coal and iron store attached; store-room for Government Architect; shoemakers and bookbinders' shops; store and office, upper and lower floors. The former shoemakers' shop is now used by hatmakers, and joins the tailors; and the space before occupied by the bookbinders is thrown into the tailors. The bookbinders' shop is removed to the extreme end, beyond bootmakers. With one further improvement in the arrangement of boot-cutting room and office, to be removed to the end, the whole shop will be so fixed as to permit of complete supervision from any point. Tell-tale tool boards are introduced all round—carpenters, bootmakers, tailors, &c. The old store, now vacated for the new, has been subdivided into three parts—one as a paint shop, one as chief overseer's tool house, and the other for useful lumber, easy of access when required for use. On the upper floor the wall, formerly dividing bootmakers from hatmakers, has been removed, and two steel girders placed in to secure general stability of walls and roof. A produce store has been erected at the end of special yards, and old sheds there demolished. Old sheds and unsightly places have been removed from outside grounds; fences partially repaired (pending arrival of material); pipes connected with main drains; sewer gas vent-pipes erected; observation holes made for special yards; six posts lettered, &c., for night duty; hot-water pipes from heater erected in cook-house connecting "A" and "D" Wings and hospital; iron check-gate and railings in lane from female quarters to wall; cell shutters removed from outside to inside cells, with light string attached; improvements to Chapel, and extension of rails; yards, &c., top-dressed; lockers, &c., repaired and painted all round in yards; roofs and gutterings repaired; and all other general repairs deemed necessary. A lumber yard, fenced in with old garden-fence material, and timber sheds, &c., made uniform in appearance, and enlarged for Government Architect's material.

A saving of £754 19s. 3d. for the year has been made.

F. E. BLOXHAM,
Governor.

3.—PARRAMATTA GAOL.

Extract from the Governor's Report.

THE industries of the gaol have advanced considerably during the year, and have been sufficient for the full employment of the prisoners.

Of these industries may be mentioned the manufacture of boots for the inmates of the Hospitals for the Insane, Gaols, Industrial School, and State children, etc.; clothing for the Hospitals for the Insane, Prisons, Aborigines, etc. These boots and clothing include those for Officers of the Prisons generally.

Galvanised iron-ware for the Hospitals for the Insane, Government Stores and Prisons, and iron barrows for general Prisons, Police, and other services, and all iron work necessary for the Prisons, or required to be used in other manufactured articles.

Carpenter's work-tables and stools for separate treatment, garden, stable, and navy barrows for different services, barrack tables, forms, stretchers, and Prison tables, stools, etc.

Cabbage-tree

Cabbage-tree hats for Gaols generally, the sennit for which is plaited by prisoners undergoing the reformatory treatment of 7th class.

Sample cabbage-tree hats have been furnished to the heads of Departments of Lunacy and Charities, and a small number as a trial supply forwarded.

No. 6 wing is being proceeded with, and will very soon be ready for the wood-work of the roof.

The dividing of the double cells in No's. 1 and 2 wings has been completed, and is now being proceeded with in No. 3 wing; this gives extra cell accommodation for twenty prisoners in each of these wings, or sixty cells in all additional, and the separation of the prisoners at night by confinement in single cells a most desirable work.

The carpenters' shop in the main range of work-shop buildings has been converted into a School-room, and the School-room at the further end of the balcony of this range utilised as a tailors' shop. The painters' shop in this range has been removed to the new carpenters' shop over the stone-cutters' shed, and that shop utilised as a store for carpenters, ironmongery, etc.

The temporary building, formerly occupied as a tailors' shop, and originally built and occupied as a mat shop, has been pulled down and removed, and an ornamental plot formed in its place.

The prisoners in separate treatment are employed shoe-making and tailoring, and full work is found for all.

The prisoners' bedding and clothing are ample and of good quality, and the rations, as supplied daily by the contractor, are of the best of their various kinds. Baked dinners (roast beef and mutton) are now supplied three times weekly, instead of twice as heretofore. Bathing is ordered twice a week to the prisoners instead of once a week as formerly.

A large area of Prison land has been cultivated (about 3 acres) outside the walls by Prison labour, for the purpose of raising vegetables for Prison use, and has proved a great success; from August 1st to December 31st, 7½ tons of vegetables were raised and supplied to the Gaol, and consisted of pumpkins, potatoes, cabbages, parsnips, carrots, turnips, and onions. The area now tilled is only a portion of what will shortly be available, when I am hopeful of being able to raise vegetables and maize to supply other Gaols as well as this.

A great improvement in the gait and appearance of the prisoners has been brought about by the introduction of drill, of falling-in in line, and dressing and marching to and from the yards four times a day.

During the year several changes have taken place in the staff, Dr. O'Connor, Visiting Surgeon, having been transferred, and Dr. Violette resumed here, Mr. Wickham, Junior Clerk, promoted to the head office, and among the other Officers one retired, one resigned, and eleven were transferred.

A great improvement has been made in the class of works in the Gaol Library, by the introduction of a better class of light literature, such as Thackeray, Dickens, and other good authors' works, a decided departure and improvement in any rule or practice hitherto obtaining.

The Lunacy and Observation Ward have been frequently visited by Dr. Manning, Inspector-General of the Insane, and he has always expressed his entire satisfaction with its management, and the care and attention exercised in dealing with its inmates, and so recorded in his journal on the occasion of these visits.

The Comptroller-General of Prisons visited the Gaol three times during the year, and the Deputy-Comptroller and Inspector of Prisons seven times.

RETURN of the Value of Prisoners' Labour, 1897.

THOS. BARNETT,
Governor.

4.—BATHURST GAOL.

Extract from the Governor's Report.

Improvements or Alterations.—The freestone coping of the main wall commenced in September, 1896, was finished in November, but the final trimming of the joints of the work has yet to be completed. In the mean time the wall is secure enough to prevent any moisture entering on the top, but a space of 5 or 6 feet from the top should be pointed as soon as the work can be undertaken. It was started, but had to be abandoned for other work. The cost of stone for the new coping was £224 16s. 8d., and the work was done by prison labour.

The large pond in the gaol reserve was partially cleaned during the dry early months of the year. This gave many tons of earth, but not of very good quality, for the sewage farms (gaol gardens). The gutters of the wing roofs which had been injured by the 1896 snow-storm were repaired by free labour.

At your suggestion a dwarf wall and rails was placed across the passage between the back of female prisoners' hospital and the main wall, thus saving a sentry at the corner of the wall near the exercise ring.

A machine for cutting marble has been placed in position, also an engine for driving the machine; but no connection has been made pending instructions from the Government Architect's Department. During this year, it is hoped, progress will be made with this work. A plan for a new shed, under which all the marble work can be carried on, is now under consideration.

State and Condition of Buildings.—All in good order, except some repairs required to roof slatings and gutters, which will be done as soon as possible.

The Contractor's supplies of Rations have been good, and regularly delivered.

The new system of Night Duty was commenced on 18th February. It works very well. There is, of course, a great deal more vigilance at night. Calls are regularly delivered, and warders constantly on the alert.

In October a number was allotted to each male prisoner, and calling prisoners by name ceased. The cell doors of the "A" division and 7th class now show each prisoner's number, not his name, and the system is carried out in the overseers' books and in the various muster rolls.

I have had no trouble to get this done. Notices have been placed in the lane where the working musters are held, so that the men when in the ranks must see them, reading as follows:—"No talking permitted in the lane going to musters, at musters, or while dispersing to yards. Fall in quickly and without noise for all musters." The general morning and evening musters are also properly conducted. Check-rolls are now in use at all musters.

Once a week a dozen prisoners are taken unawares from the works and searched in their cells.

The books have been withdrawn from the special yards during working hours, and going from yard to yard on holidays has ceased.

The bread is issued in the way you directed—two-thirds for breakfast and dinner, and the remainder in the afternoon. The yards are visited at the dinner-hour. There was a number of complaints at first, but they are now rarely made. The rations, as a rule, have been excellent in this gaol.

I am having frames made for holding the regulations in the yards, and a second lot of night-tubs is slowly being made. There is only one tinsmith now here, and he is almost a new hand at the work.

The shop and other work of prisoners goes on well, and the general conduct of the prisoners is fairly good. They have taken very well to the new discipline—better than I expected. This is very satisfactory.

Prisoners at exercise on the ring now keep step, and are more closely supervised by the warder on the platform there.

The wardsmen and assistant yardsmen, after they have finished their special work, go to other labour in the gaol instead of idling in their yards.

The available warders had morning drill until the 1st instant.

The overseers observe the new duty hours: 8:30 a.m. to 4:30 p.m., and to 12:30 p.m. on Saturday.

The Warders of each class have had leave on Sundays as they could be spared. On the whole the warders are doing their duty better, they are more attentive, look after the prisoners better, and, on their part, I have no reason to suspect any disloyalty. The three new senior wardens are good officers, especially senior warders Cunningham and M'Kay. I have a very good opinion of the former.

The new routine is a decided improvement on the former system. It calls for more effectiveness and vigilance on the part of officers, and thereby ensures better discipline. Lapses will occur; they must be noticed and checked at once, and the superior officers should constantly be on the alert to keep their subordinates and the prisoners up to the higher standard.

Blacking was issued to prisoners of several yards in order that their boots and shoes should be polished before evening muster.

Attention has been given to the system of mustering prisoners before and after their work. All men in the gaol have now to answer their numbers, and to comport themselves properly in the ranks, besides passing to their yards from the ranks in the lane and on the pentagon in single file. All this helps to make men feel that they are under a disciplinary system, and acts as an incentive to good conduct.

Conduct of staff and of prisoners.—During the year four warders were fined, and one of these was fined a second time. There were twelve reprimands of officers, eight cautions and admonitions; one warder was transferred to another gaol for misconduct. On the whole the conduct of the staff has been good, while the prisoners' conduct may be reported as fairly good. There were two cases of assault on officers by prisoners. No prisoner was whipped.

The promotions have been:—Mr. Munsell, clerk, to Deniliquin Gaol; 3rd-class Warder Hughes as 2nd-class to Sydney Gaol; 1st-class Warder Willats as Senior-warder to Broken Hill Gaol (probationary); 3rd-class Warder Connington as 2nd-class to Sydney Gaol (probationary); 3rd-class Warder McArthur as 1st-class to Biloela Gaol (probationary); Mr. Flynn, clerk, from head office to this gaol; 1st-class Warder Cunningham as Senior-warder to this gaol; 1st-class Warder M'Kay as Senior-warder to this gaol; 1st-class Warder Warren as Senior-warder to this gaol; 2nd-class Warder Chapman as 1st-class warder to this gaol (probationary); 2nd-class Warder Soane as 1st-class warder (probationary) to this gaol; 2nd-class Warder Black as 1st-class warder (probationary) to this gaol, and Chief Warder Pynor as Deputy-Governor to this gaol.

Resignations.—3rd-class Warder Dineen; 3rd-class Warder M'Gregor; Rev. Father Riordan, succeeded by the Rev. Father M'Gee; 3rd-class Warder Stokes; Chief-warder Doig, retired.

Arrivals from other Gaols.—3rd-class Warder Dineen from Berrima Gaol; 1st-class Warder Ruane from Parramatta Gaol; Senior-warder Clinton from Sydney Gaol; 3rd-class Warder Lynch from Trial Bay; 3rd-class Warder Grant from Broken Hill Gaol.

Appointed.—D. W. Graham as probationary warder.

Voluntary Reductions.—1st-class Warder Ruane to 3rd-class; Senior-warder Clinton to 1st-class, and then transferred to Maitland Gaol.

Exchange.—Senior-warder Lowry with Senior-warder Clinton of Sydney; 1st-class warder Kelly with 1st-class Warder Ruane of Parramatta Gaol; 3rd-class Warder Wyllie with 3rd class Warder Lynch of Trial Bay.

Transfers.—3rd-class Warder Rees to Dubbo Gaol; 3rd-class Warder Cowley to Sydney Gaol; Deputy-Governor Bromley to Goulburn Gaol as Chief Warder; 1st-class Warder Clinton to Maitland Gaol.

The

The 1896-7 Autumn Crop of Potatoes.—The first of the kind planted in the Gaol Reserve in December, 1896, in connection with the employment of prisoners at this work, was dug in April, but, owing to the very dry weather, there was a poor return. It was sufficient only to supply 1 and 2 rations, with other gaol-grown vegetables, for four months. The hospital patients were supplied with gaol-grown vegetables. The following are the weights taken of vegetables grown, and used in the cook-house since July, 1897, when the order came out to weigh all grown produce: Potatoes, 1,315 lb. + 1,528 lb. = 2,843 lb.; pumpkins, 2,070½ lb. (224 lb. of this to Parramatta Gaol); celery, 333 lb.; cabbage, 191 lb. 10 oz.; turnips, 302 lb.; carrots, 60¾ lb.; parsnips, 6½ lb. I may mention that a very good strong plough and harrow were made in the blacksmiths' shop. To further work and prepare the ground, I borrowed a set of disc harrows from the Model Farm.

During the year fifteen male and two female prisoners were released under the Jubilee Grant of remission of sentences.

The Gaol was visited by the Comptroller-General of Prisons on the 25th and 26th of February, and on the 22nd, 23rd, and 24th October, and by the Deputy-Comptroller of Prisons on the 18th, 19th, and 20th February, and on the 20th December.

Industries.—While there has been a decrease in the tailors' value of labour of about £23, the Government stores have been supplied with various articles not made in 1896, such as:—131 buckskin coats, 8 aboriginals' coats, 61 grey woollen coats, 187 jumpers, 92 pair coloured mole trousers, 254 pairs white mole more than in 1896, 31 pair buckskin tweed trousers. There has been, therefore, a useful extension of the business.

In shoemakers' earnings there has been also a decrease—about £68; but 228 pair more Blucher boots for Gaol and Government stores were turned out in 1897 than in 1896, and 95 pairs elastic side females boots were made in 1897; none in 1896. There were also 208 pairs more prison shoes made last year than in 1896.

The bookbinding business largely increased; an average per day of one prisoner more was in the shop in 1897 than during the previous year.

Comparing the two years there has been only a decrease in 1897 of about £65 as regards the entire trades value of labour, while the number of prisoners received in 1896 was 512, and in 1897, 443. The daily average number in 1896 was 268·0; in 1897, 239·0.

In December, 1897, there were 6 officers less employed than in the corresponding month of 1896, the salary for former month being £582 8s. 8d., as against £507 2s. 10d. for December, 1897.

G. H. STACE,
Governor.

5. BERRIMA GAOL.

Extract from the Governor's Report.

DURING the year tenders were called for the erection of new quarters outside the walls for the Officer-in-charge of the Prison, the tender of Mr. A. Stephens, Bowral, being accepted. The building was commenced about the 1st of October last, and at the present time the roof is on and the floors laid, but will yet take a considerable time before being completed, and, when finished, will be a substantial structure and an ornament to the outside portion of the Prison.

Other additions were also applied for and recommended by the Comptroller-General, namely, the erection of a new tower and platform on the south-east corner of the outer wall, and, in the event of it being erected, it is contemplated to withdraw the Warder from No. 2 post, at present in charge of the second entrance gates, and place him on the tower, making it an armed post (there being no armed posts in the Gaol for years past), and with the assistance of a lever and adjuncts to mechanically open and close the gates when required. Besides being stationed on the tower, he will have full view of three corners inside the walls, also full command of the prisoners employed on the wood-heap, which is the most dangerous post inside the walls.

Alterations.—The following was applied for and, I understand, approved of, namely, the iron flue from boiler in cook-house connecting with chimney stack, in consequence of so many sharp angles in the flue which cause a defective draught, and do not allow the smoke to get away quickly enough; so far, nothing has been done towards carrying out this alteration.

Improvements.—In the early part of the year the yard in front of the office and school-room was tar-paved, thereby giving it a tidy appearance.

Some few months ago several of the pipes of the steam-cooking plant, which the steam and hot water passed through, became defective and dangerous; all the defective pipes were taken out and replaced by new ones; this work was done by a prisoner, a mechanical engineer, who has now the plant in better order, or as good as when taken over from the contractor who erected it, thus saving the Government at least £10 if the work had to be done by free labour. Several minor improvements in connection with the electric-light were also carried out by this prisoner, and the lighting-plant is now in perfect working order.

The whole of the exterior wood and iron work of the prison has been painted, and necessary minor repairs have been attended to, both inside and outside the buildings, which are now in a good state of preservation.

Occurrences.—In the month of August last the new system of night duty was introduced, dividing it into watches, with a responsible Warder in charge of each watch; at the same time two tell-tale clocks were received, one of which has been in use since 11th August last. The new arrangement is a decided improvement on the old system, and secures a constant vigilance throughout the night, which is strictly carried out. By this improved system or alteration of duty, Warders are allowed seven days annual leave, a day off duty each month, and an occasional Sunday in their turn. This, when added to the time they have off when on night duty for a month, after coming off first watch, gives them a considerable number of days off duty during the year. Refreshment, in the shape of tea or coffee, bread, butter, and cheese, was recommended by the Comptroller-General for those Warders performing the first watch, from 11 p.m. until 6·30 a.m. following morning.

A new departure in the system of restricting the association of prisoners on the works was initiated in this Gaol under the personal direction of the Comptroller-General on the 13th of October last; prisoners, instead of having their meals together in messes in their yards as formerly, now have them in their cells by themselves, and are only allowed to associate whilst at work, at church and school, and at present whilst washing themselves in the mornings and afternoons, on account of the cell furniture not being complete until the new tables and stools are made, and then it is intended that they shall wash in their cells.

The new departure is working very satisfactorily so far; the better disposed class of prisoners prefer it to the old system. The language which before obtained at the mess tables, and which got so many of them into trouble, is now a thing of the past. This restriction is a step in the right direction—and when introduced into the larger prisons, and once in working order, will, I have no doubt, be productive of much good.

The concession of allowing prisoners on the works light in their cells in the evenings until 8·30 p.m., as also a tri-weekly issue of books (102 new books being added to the library), is very much appreciated.

The old system of calling prisoners by their names has also been discontinued, and they all now answer cheerfully to their numbers, which is conspicuous on their clothing and their cell doors.

Employment and Conduct of Prisoners.—The prisoners in "A" division, or those in separate treatment at present, and those who have passed out of separate during 1897, were kept steadily employed tailoring and shoemaking; knitting was carried out but discontinued, and the majority are now tailoring, which industry has advanced last year in consequence of the Comptroller-General ordering that Berrima Gaol should have a fair share of the orders for making up clothing required by the Stores Department, and, so far, the work turned out in Berrima Gaol appears to give satisfaction to the Stores Department, and to the Institutions to which the clothing was supplied.

The conduct of the prisoners in separate has been exceptionally good. Several prisoners received from other gaols for misconduct have been employed tailoring, and have conducted themselves satisfactorily. Prisoners on the works or in ordinary treatment—mechanics, tradesmen, cooks, labourers, sweepers, and cleaners—were all usefully employed during last year; and, with a few minor exceptions (no punishment having exceeded four days), their conduct has been good.

Agriculture.—

Agriculture.—A working party of four prisoners was almost daily employed at agricultural work in gaol garden, which is only a small area, about an acre fit for cultivation. The prisoners employed gardening like the work, and prefer it to working inside the walls. The great drawback is there is not enough land to operate upon, and what there is unsuitable for growing vegetables without plenty of stable manure, and rain every week. This industry, though on a small scale, is conducive to the health and morals of those employed, and when agriculture work can be carried out on a large scale it is a great factor towards reformation, which should be the principal object looked for in gaol discipline, not punishment.

The few industries carried out in this gaol—tailoring, shoe-making, and carpentering—are advancing.

Officers, Visiting and Executive.—In the early part of the year C. L. Nicholson, Esq., J.P., was appointed Visiting Justice, on probation for six months, *vice* Caswell, relieved, and has since been appointed permanently. He has been very regular in his attendance. The Visiting Surgeon has attended almost daily throughout the past year. The Chaplains have also been very attentive to their duties, and by their advice and counsel are a great help in maintaining the discipline of the gaol.

A change of Deputy-Governors took place in the early part of the year; Deputy-Governor Rowley transferred to Parramatta, *vice* Deputy-Governor Fitz-Gibbon, transferred to Berrima. The position of Clerk and Schoolmaster becoming vacant in December, 1896, in consequence of the transfer of Mr. M'Namara to Trial Bay as Clerk and Storekeeper, Foreman Geo. Steele, from Darlinghurst Gaol, was appointed Acting Clerk and Schoolmaster *pro tem.* until a successor to Mr. M'Namara was nominated; Mr. Arkins, a teacher in the Department of Public Instruction, was appointed on probation for twelve months, and commenced his duties on the 13th February last; at the same time Foreman Geo. Steele was promoted Senior-warder to Goulburn Gaol.

Several changes have also taken place among the subordinate Staff in the shape of promotions, transfers, appointments, dismissals, and one death. One 3rd-class Warder, Shepherd, promoted to 2nd-class in charge of cook-house and electric-light, not satisfied with his position, asked to revert back to ordinary warder; 3rd-class Warder Ritson being appointed 2nd-class, *vice* Shepherd; one 2nd-class Warder, Orr, from Biloela Gaol, appointed 1st-class, *vice* Cahill, deceased; 3rd-class Warder Tierney promoted to 1st-class, on transfer to Goulburn Gaol, *vice* Donworth, promoted to Senior-warder, and transferred to Berrima Gaol; Senior Warder Smyth, transferred to Goulburn Gaol, *vice* Steele, transferred to Berrima and since transferred to Darlinghurst Gaol; 3rd-class Warder Clegg was transferred to Deniliquin Gaol.

Five probationary warders were appointed, viz.:—Burgess, Cunningham, Ryan, Toohey, and Bailey. Two 3rd-class warders were dismissed for gross misconduct. The death of 1st-class Warder Cahill occurred in September last.

The conduct of the subordinate officers, with exception of the two dismissed, was good; and they have performed their duties in a satisfactory manner.

Clothing and Bedding:—The quantity of clothing and bedding in store was sufficient to meet all requirements.

The contractor's supplies have been good, and punctually delivered.

Dates of Inspection of Officers from Head Office.—Comptroller-General, 15th July, 12th, 13th, 14th, and 15th October, 1897; Deputy-Comptroller, 11th June, and 29th September, 1897.

The Regulations and General Orders were strictly carried out.

There has been a saving in salaries for the year of £226 8s. 8d.

T. KEIRNAN,
Governor.

6.—BILOELA GAOL.

Extract from the Governor's Report.

Visits of inspection :—The Comptroller-General visited the gaol on the 3rd February, 22nd March, 2nd July, 9th and 28th October ; the Deputy-Comptroller and Inspector of Prisons on the 5th May, 12th August, 5th and 6th October.

Officers :—The conduct of the subordinate officers has been good, with the exception of that of five of the third-class warders who were reported to you and dealt with.

Resignations :—Two—First-class Warder Allen, Female Warder Robinson.

Promotions :—Mr. Phelan, to gaolership at Hay, succeeded by acting-gaoler from Wollongong, Mr. M'Kowne ; second-class Warder Orr, promoted to first-class rank and transferred to Berrima, succeeded by second-class Warder Cowley from Darlinghurst Gaol ; first-class Warder Huer was transferred here from Darlinghurst on promotion, *vice* Allen, resigned.

Two additional female warders were added to the staff in October on account of the increased number of prisoners.

Drill :—The drill for warders has been carried out in accordance with the instructions laid down in the handbook of drill compiled by you, and the discipline and bearing of the staff has been much improved thereby.

The peg-clock system was started at this gaol by your instructions in July last, and has proved itself to be most effective in enforcing the warders to visit all parts of their posts frequently during the night.

Prisoners :—The number of prisoners received and discharged during the year were :—Receptions, 1,232 males, 1,162 females ; total, 2,394. Discharges, 1,229 males ; 1,094 females ; total, 2,323. In gaol on 31st December, 117 males, 138 females ; total, 255.

No deaths occurred during the year.

The conduct of the prisoners as a whole has been good.

Employment of prisoners :—Male division : quarrying stone for new buildings, making prisoners' clothing, picking oakum, shrinking cloth, &c., for Government Stores, keeping buildings in repair, and in the ordinary service of the prison. Female division : needle-work for Government Stores Department, laundry work, picking oakum, and in ordinary service of the prison.

Under your instructions in October last an alteration was made in the class of female prisoners located here. This necessitated a revision of the accommodation in the female department. It has now had three months' trial, and is found to work well, with an average of 130 prisoners daily. The female department during the past year has been efficiently managed by the Superintendent, who was ably assisted in the sewing-room by Miss Kelly.

Buildings, &c. :—An increased water supply has been laid on during the year, and the fire engine put in order and fitted with new hose in case of fire.

The steam-cooker, which has been in course of erection in the new kitchen, is near completion, and will be an acquisition ; it was badly needed.

The sewing-room in the female division has been enlarged in order to accommodate the increased number of prisoners.

A sufficient quantity of clothing is on stock to meet ordinary requirements.

The contractor's supplies have been good, without the exception of the meat, which, on being referred to him, he has invariably rectified ; they have, with one or two exceptions been punctually delivered.

The Rules and Regulations, as laid down, have been observed during the past year.

House and grounds lately occupied by Mr. Cowper, the late Sheriff :—These grounds having been handed over at the end of August, an immediate start was made to clear and trench the ground, and in September about $\frac{2}{3}$ of an acre was planted with potatoes, but, owing to the late planting and the dry season, only a medium return can be looked for ; but, it is hoped, when the grounds are fenced in, which, I understand, will shortly be done, that in their season, with judicious planting and a fair supply of manure, that sufficient vegetables will be obtained to meet the consumption in the prison.

Referring to the house situated in the grounds,—when it is repaired and divided, the single male warders and the female warders will be comfortably housed, and more accommodation will be available for the married warders living in the gaol.

Cost of Gaol.—The decrease in salaries of £466 18s. 2d. is caused by reduction of staff and salaries, which took effect from 1st July, 1896 ; consequently, the total cost of salaries and contingencies is £220 9s. 1½d. less than the previous year.

The male prisoners have been drilled as far as possible in accordance with the instructions laid down in the handbook of drill, which has caused a marked improvement in their discipline and bearing at all musters.

EDWARD JACKSON,
Governor.

7.—MAITLAND GAOL.

Extract from the Governor's Report.

The conduct of the subordinate officers has been good.

The conduct of the prisoners, with a few exceptions, has been good.

Employment has been found for the prisoners at the following industries, viz. :—Bootmaking, tailoring, hatmaking, bookbinding, stone-cutting, lithography, blacksmithing, painting, plumbing, carpentering, gardening, washing, in addition to the ordinary service of the prison.

The condition of the buildings is good, with the exception of the stairs in "B" wing.

The quantity of clothing and bedding has been found sufficient to meet all requirements.

The contractor's supplies have been good and punctually delivered.

The regulations and orders have been complied with.

Changes of Staff.—Deputy-Governor Stumbles, retired, and the office abolished; Senior Warden Thomas Blake, promoted to Chief Warden; Trades-foreman Thomas Cole, promoted to Overseer at Darlinghurst; 3rd-class Warders Alexander M'Bean and William O'Connor, promoted to 1st-class at Darlinghurst; 3rd-class Warden Benjamin Jeffries, transferred to Grafton.

Alteration in Routine Work.—The new routine of night duty was commenced in May last, and the check-clocks were first introduced in June. There has been ample time to form a sound judgment as to the effect of the new system, and it is in every way most satisfactory. Not only is the new system a great improvement on the old one as a system, but it also increases the vigilance of the warders, and renders their duties more satisfactory to themselves, as well as promoting the welfare of the service. The check-clocks work admirably. The officers are drilled every morning in saluting and squad drill, and a general drill, consisting of manual and firing exercises, is held every Monday evening. In consequence of this system and systematic drill a marked improvement is noticeable in the general smartness and efficiency of the men.

Inspections were made by the Comptroller-General of Prisons on the 21st of May, and by the Deputy-Comptroller of Prisons on the 10th of May and 23rd of June.

Alteration of Routine Work and its effect on Prisoners.—The prisoners are regularly and thoroughly drilled at "standing at ease," "dressing in the ranks," and "saluting," and I find that after a few instructions the good results are very marked; better order is observable in the general demeanour of the prisoners, and good discipline is more easily maintained. In November a new system of mustering by numbers was introduced, and it is already working well. Under this system all prisoners are called by numbers only, except those serving sentences of less than one month. Prisoners serving sentences of six months and less have the distinguishing letter "A," in addition to a number as, "A 16," "A 17," &c. I have been unable to proceed with the next steps in the system, viz., the making of cell furniture, through want of material (timber).

In August last I placed under cultivation $\frac{1}{2}$ acre of land, and planted different kinds of vegetables, with the result that I have obtained from it 737 lb. of potatoes; and of cabbages, parsnips, and carrots, 387 lb. in all. The yield of potatoes and carrots is for the present exhausted, but I am still getting some parsnips and cabbages, and I am still supplying a small quantity of green vegetables three times a week. Besides the vegetables mentioned as being supplied, I have also onions and pumpkins growing; from the former I anticipate 168 lb., and from the latter a yield of half a ton at the smallest computation. The work of preparing the land and of gardening is most excellent for the prisoners, and they like it and enter into it zealously. The work of trenching the remainder of the land is being carried on with all the despatch I am able to use, and next month I shall have another portion in a fit condition to sow and plant in.

The female warders' new quarters are complete as far as the masonry is concerned, and are now ready for roofing. A new slate staircase and landing leading to work-room and hospital, have been made, and also good progress in a considerable quantity of internal fittings.

A portion of the foundation for the dividing-wall (new female division) is finished, and the work is still being continued.

A new shelter-shed has been put up in No. 1 yard, and a stone sentry-box at the northern end of the yard.

Expenditure.—In consequence of the reorganising of the staff in this gaol, about £356 has been saved in salaries, as compared with 1896 return. Contingent expenses have been about £113 less than in 1896.

CHAS. GRAHAM,
Governor.

8.—TRIAL BAY PRISON.

Extract from the Superintendent's Report.

The conduct of the staff as a whole has been very good. The Deputy-Superintendent has carried out his duties with zeal and tact. He is a steady, hard-working, officer.

Mr. M'Namara, clerk and storekeeper, who joined the staff late in December, 1896, has proved himself to be a steady, hard-working, and zealous officer. Conduct of the other officers generally satisfactory.

Changes in Staff.—The Rev. C. M. Thomas, Church of England chaplain, took up duties on 17th April, *vice* Rev. R. H. Kelly; Mr. T. H. Davies, P.M., Visiting Justice, was relieved by Mr. Austral Verge, 24th July to 21st August; Mr. A. Verge by Mr. F. P. Meares, P.M., 9th September to 4th October; Mr. A. Verge, from 16th October to 6th November; and Mr. C. K. M'Kell, P.M., 11th December; 11th February, Warder Davis promoted to foreman of matmakers at Darlinghurst, vacancy filled by Warder Neil M'Kay, who had re-entered the Service; 28th February, Chief Overseer Ellis to Grafton, to H. and R. Department, vacancy filled on 6th May by Mr. W. J. Moxham; 3rd-class Warder Cluett to Armidale, in exchange with 3rd-class Warder Eichler; 3rd-class Warder Bannon from Biloela, *vice* Searle, resigned; 3rd-class Warder Lynch exchanged with 3rd-class Warder Wyllie, of Bathurst; 3rd-class Warder Bannon to Hay, *vice* 3rd-class Warder Irvine to Trial Bay.

Considerable alterations have been made in the routine, with the sanction of the Comptroller-General, which tend to greater efficiency.

On the 24th of January mounted an additional armed post on Sundays and holidays outside boundary, and two warders on afternoons, in plain clothes and armed, patrolling some considerable distance beyond boundary, and on the hills, where they can obtain a good all-round view. On the 9th February an additional post at head of quarry was posted, being necessary owing to works having extended considerably during previous twelve months.

In the month of September the tell-tale clock system was introduced here, and has worked admirably.

Refreshments for officers on night-watch duty, from midnight to 6 a.m. following, were also supplied and much appreciated.

Prisoners' conduct as a body has been very good with a few exceptions.

Health of prisoners has been good, with the exception of an epidemic of influenza, which attacked both free and bond.

Employment.—In addition to work on breakwater and quarry, prison artificers have been employed variously—repairing machinery, attending tools, steam winches, steam drills, blacksmithing, tinsmithing, carpentering, painting, &c.

Prison.—The grounds inside prison wall are still in a very unsatisfactory state; the concrete floor in wing and dining-hall requires repairing; also the roofs throughout require attention. I understand this is to be taken in hand. I cannot therefore report prison buildings in first-class condition.

Visits from Head Office.—On the 20th of August the Comptroller-General visited Trial Bay, remaining until the afternoon of the 22nd; visited and inspected prison and works, and prison generally; interviewed the staff individually and heard all complaints, grievances, &c.; also interviewed all prisoners with grievances.

The Anglican Bishop of Grafton and Armidale visited 2nd January, also 18th of September, and held service for prisoners.

The Roman Catholic Bishop of Grafton visited and held service for prisoners on 8th October.

The Hon. J. H. Want, Attorney-General, visited on the 24th September. Inspected prison and works and expressed himself pleased with what he saw.

The

The number of modified servitude prisoners at Trial Bay on 1st January, 1897, 105; number received during the year, 99; number discharged (81 discharges, 11 transfers), 92; in gaol on 31st December, 1897, 112.

Daily average number confined during the year.....	116
Quantity of stone put in breakwater.....	21,452 tons 8 cwt. 2 qr.
From 1st Jan. to 31st Dec., 1897	8,834 tons 9 cwt. 1 qr. to spoil tip.
Daily average number of prisoners—breakwater	4·37
Employed at the above.....	73·70
Daily average number of prisoners—other work	5·50
Employed in prison service (exclusive of above named)	31·93
Amount paid to prisoners on discharge, earned while at other gaols.....	£274 14s. 4d.
Amount paid as rewards to prisoners released from prison during the past year.....	£1,207 19s. 7d.
Amount of salaries paid officers during 1897	£4,070 2s. 9d.
Amount paid as contingencies (embracing all other expenses) during the year 1897.....	£2,271 3s. 1d.
Cost per head per prisoner per annum	£67 0s. 4½d.
Number of officers on strength, excluding those not in receipt of salaries	28
Number of prisoners to officers	3·878

There is a saving in salaries of £111 14s. 8d., and in contingencies £469, making a total of £580 14s. 8d. during the year.

CECIL HORNE,
Superintendent.

9.—ALBURY GAOL.

Extract from the Gaoler's Report.

Warders.—Two have been dismissed for breaches of gaol discipline, and one other fined for carelessness by which a prisoner was allowed to escape. With these exceptions the conduct of officers has been uniformly good, and their duties have been efficiently discharged.

Prisoners.—On the whole, their conduct and general demeanour have been very satisfactory.

Drill.—Warders are exercised in a course of squad drill twice daily, with excellent disciplinary results.

Labour.—Prisoners have been employed at shoemaking, bookbinding, carpentering, hatmaking, tailoring, woodcutting, gardening in the gaol reserve, work at police barracks, and in cleaning, sweeping, and light labour.

Vegetable Garden.—This is a special feature of prison labour. We find that the prisoners work at it cheerfully and with interest; and I am of opinion that it has a distinctly salutary effect, irrespective of its being undoubtedly remunerative to the Department. The amount of vegetables consumed from the gaol garden during the last two months of the year was 13 cwt. 1 qr. 8 lb.

Buildings.—Condition good; no alterations or improvements have been made.

Official Visits.—The Comptroller-General visited this gaol on 26th July and the 3rd September, and the Inspector of Prisons on the 2nd April.

Clothing and Bedding.—Sufficient for all requirements.

Contractor's Supplies.—Of good quality and punctually delivered.

Regulations and General Orders.—Have been faithfully carried out.

There has been a saving in salaries for the year amounting to £198 10s.

JAS. THOMPSON,
Gaoler.

10.—ARMIDALE GAOL.

Extract from the Gaoler's Report.

From the land now under cultivation within the gaol reserve, vegetables of excellent quality, to the value of £17 4s. 2d. (contract rate) have been grown and issued for gaol use since April last.

The cultivation suffered considerably the latter part of the year from the flow of water over the land (which is on a slope), quantities of young plants and seeds having been washed from the ground during the rainy weather. Provision has now been made to prevent this in future, a trench having been dug across the higher part of the land, by means of which the water is carried to a reservoir, which has been dug for that purpose, and by the aid of which a constant supply of water will be available for purposes of irrigation.

The reservoir in question is now being fenced in so as to be within the area of the land under cultivation.

The conduct of the subordinate officers has been good.

The conduct of the prisoners has been good.

The labour at which prisoners have been employed at this gaol, viz., bookbinding, carpentering, shoemaking, tailoring, blacksmiths, tinsmiths, painters, agricultural and other work, has been well performed, and given satisfaction to all concerned.

The condition of the buildings is fair.

The police station and Visiting Surgeon's quarters have been connected by telephone with the gaol, the result being satisfactory.

The quantity of bedding and clothing in store has been sufficient for all requirements.

The contractor's supplies have been good, and were punctually delivered.

The rules laid down by Regulations and General Orders for the government of the prison have been complied with.

There has been a saving in salaries for the year amounting to £120 11s. 6d.

W. JAY,
Gaoler.

11.—BROKEN HILL GAOL.

Extract from the Gaoler's Report.

A yard for the separate accommodation of prisoners for trial or remand has been made by enclosing a part of the men's exercise yard with a dwarf stone wall and 7-ft. upright rails spiked at top. The yard is fitted with a shelter-shed, table and seats, lockers, and other conveniences.

A large gate has been removed from the wall of the exercise yard, as it had been found useless and had become in an insecure condition. The space has been built up with bricks and mortar, leaving a doorway 3 feet wide and 7 feet high, with an iron door fitted in, locked on outside and inside.

The offices of Gaoler and Matron, which had been vacant for many months, were filled from 1st July by the appointment of Senior Warder M'Kenzie and Mrs. Regina M'Kenzie. 1st class Warder Willots, from Bathurst Gaol, was appointed senior warder here in October; 3rd-class Warder Godfrey resigned at the end of January, and his place was filled by the appointment of probationary Warder Spalding; 3rd-class Warder Waite was transferred to Goulburn Gaol, and replaced here by Warder Broadbent, who resigned in June; the vacancy was filled by the appointment of probationary Warder Jeffrey; 3rd-class Warder George Grant was transferred to Bathurst Gaol in October, and he was succeeded here by Warder Burns from Deniliquin. With two exceptions (Reilly and Olson) the whole staff of warders has been changed during the year.

The gaol was visited by the Comptroller-General of Prisons in September, and by the Inspector of Prisons in March.

In September, various changes were effected in the routine of duty. A handbook of drill was issued by the Department for the exercise of officers and prisoners, and drill of a suitable character is now daily practised. All the warders having been previously in drilled service fall into it readily.

The

The prisoners are more orderly and obedient since drill was introduced. The drill-book also contains a section by which the rules of night-watch are regulated, so as to make them uniform in all Gaols, so far as is practicable. Stations have been established at different parts of the Gaol for checking the visits of the night-watch by means of tell-tale clocks; the system is carried out here, and proves suitable. The system of designating prisoners by numbers instead of their names, is also carried out with success. Employment for female and 7th-class prisoners has been provided by sending material from Darlington for making almost all the prison clothing required for this Gaol. All prison clothing, except hats, boots, and socks, for the current summer has been made here.

Agriculture or gardening work is impracticable, but sufficient outside work can be found making roadways, trenching ground, and digging dams on the Gaol premises.

The buildings are in good order, with the exception of the two urinals in the exercise yard, which required renovation as reported.

The stores are sufficient for all requirement.

The supplies from the contractors have been very satisfactory, both as to quality and service.

The Regulations and General Orders have been very fairly complied with.

There has been a saving in salaries for the year amounting to £48 14s. 3d.

J. McKENZIE,
Gaoler.

12.—DENILQUIN GAOL.

Extract from the Gaoler's Report.

DURING the year one warder was transferred for misbehaviour, and another fined for gross neglect of duty; with these exceptions the conduct of the subordinate officers has been good.

The system of duty performed by warders has been rearranged so as to secure a more even distribution of the hours of attendance.

The conduct of the prisoners was good, with the exception of one man who was transferred to another gaol.

Prisoners were employed trenching, gardening, painting, bricklaying, sewing, and making cabbage-tree hats.

The buildings are in a fair state of repair.

The repairs and alterations carried out are :—Erection of shed at the rear of the Gaol; new picket-fence erected at the rear of the Gaol; entrance passage and a portion of labour yard paved with bricks; water service laid on to cook-house, and an oven and sink erected therein; well in confine yard filled in, and a rotary pump removed; trees removed from the garden and the space trenched; wooden borders fixed all round the garden; the Gaol painted throughout.

The cabbage-tree hat-making was successfully initiated, and also the making of clothing required for prisoners' use.

During the year visits were paid to the establishment by the Comptroller-General on 6th and 7th September, and by the Inspector of Prisons on 18th March.

Gardening operations have been carried out with vigour; from 1st April to 31st December 13 cwt. 1 qr. 11 lb. of vegetables were supplied for prisoners' use.

The

The Gaol routine has been considerably altered during the past year, and a system of discipline introduced similar to that pursued in the large gaols

The system of designating prisoners by numbers instead of calling them by their names was introduced on 8th September, and has worked very satisfactorily. Several of the prisoners when questioned expressed themselves gratified at the change, which they regard as a humane concession. It is undoubtedly a strong move in the direction of criminal reform. Persons desirous of reforming have, on discharge, suffered under the serious disability of risking recognition by unscrupulous criminals to whom they have become known by name while in prison, thanks to the new order of things this evil will be greatly minimised. Personally, I have great hopes of beneficial results. With reference to the actual difference in calling prisoners by number or name there is none. For the first few days we had some little difficulty in accommodating ourselves to a new system, but since then there has been no difficulty whatever.

I am pleased to add that the Gaol has been thoroughly painted, and now presents an appearance creditable to the Department.

The contractor's supplies have been good and punctually delivered.

The rules laid down by Regulations and General Orders of the government of the prison have been strictly complied with.

J H MANSELL,
Gaoler.

13—DUBBO GAOL

Extract from the Gaoler's Report.

I HAVE received every assistance from my subordinate officers, whose duties have been creditably performed.

The prisoners have been orderly and industrious as a body. They have shown willingness and intelligence in performing their allotted tasks; the punishment therefore is a light one. They have been employed making grey cloth jackets, vests, trousers, plaiting cabbage-tree sennet, and making hats, bookbinding, cutting firewood, and sharpening axes, &c., for private persons.

One attempt at escape was made at the beginning of the year by a trial prisoner, who was, however, promptly captured by myself, a warder having been dismissed through neglect of duty in this matter.

The prison buildings and premises are in the highest state of order and cleanliness. The room formerly used by me as an office has been thrown into my quarters, a new and convenient office and guard-room have been erected on the opposite side of the gateway.

By prison labour the prison kitchen has been refloored; a new stove set in my private quarters, the old repainted, and all the paths, roadways, and drains about the prison are in good order.

The

The supplies upon the whole have been good and punctually delivered.

The clothing and bedding in stock have been found sufficient to meet requirements.

Under the direction of the Director of Labour new industries have been established, namely, the manufacture of hats and clothing by prisoners for prison wear.

The limited space here available for cultivation has been utilised to supply the prison hospital with green vegetables when ordered.

The system of numbering prisoners, instead of distinguishing them by name, is working very satisfactorily; and I am certain, from personal knowledge, that it is hailed with gratitude by the better class of prisoners.

All rules laid down by Regulation and General Orders for the government of the prison have been, to the best of my belief, carried out.

Number of visits of officers during the year:—Comptroller-General Prisons, 9th December; Deputy Comptroller-General Prisons, 21st January; Inspector of Prisons, 3rd June, 8th July; Director of Labour, 3rd June.

There has been a saving in salaries for the year amounting to £120 1s. 4d.

J. BOYDEN,
Gaoler.

14.—FORBES GAOL.

Extract from the Acting Gaoler's Report.

NIGHT duty has been carried out since 31st January, 1897, with satisfactory results.

Discipline very good.

Gaol visited and inspected by Comptroller-General of Prisons, 2nd June, 1897.

The conduct of subordinate officers has been good.

The conduct of the prisoners has been very good.

The prisoners, who are all under short sentences, are employed in the following trades and works:—Carpentering, painting, tinsmiths, shoe-making (repairs), tailors, sweeping and cleaning, servants, cooks, wood-cutting, and general labouring.

The condition of the prison buildings is good.

Tower platform has been covered in, wrought-iron night cart has been received, and speaking tube erected from Acting Gaoler's office to tower.

The quantity of clothing and bedding in store is quite sufficient to meet all requirements.

The contractor's supplies have been good and punctually delivered.

The rules laid down for the government of the gaol have been complied with.

There has been a saving in salaries for the year amounting to £329 0s. 2d.

J. THOMSON,
Acting Gaoler.

15.—GRAFTON GAOL.

Extract from the Gaoler's Report.

THE labour return has been carefully and accurately prepared, and, comparing it with that for 1896, it will be seen that, although the daily average number of prisoners for the year was one-third less, the amount as shown by the actual earnings at remunerative work in the gaol was very much greater than in the previous year. The expense of repairs and additions to buildings is much less for the year.

The area of land under cultivation was about 4 acres. The result is shown on a separate balance-sheet; but, in consequence of the continued dry weather throughout the year, the produce did not come up to my anticipations or wish.

Work has been found for the whole of the prisoners during the year.

Two most important events of the year have been the visits of the Inspector of Prisons, on the 14th May, and the Comptroller-General of Prisons, on the 2nd and 3rd of August.

The previous visit of the late Comptroller-General was on the 31st December, 1895.

I attach very great importance to the two visits of this year, for through them my endeavours in the maintenance of discipline have been greatly strengthened. I do not mean that the discipline was so materially changed, but, by the visits of the Comptroller and Inspector the officers and prisoners saw that my endeavours to work the gaol closely to the written orders met their approval and acquiescence.

The Comptroller-General's visit was an extended one. He directed a new system of drill for both officers and prisoners, which has been continued since with very satisfactory results, both as regards efficiency and as bearing upon the discipline of the establishment.

The Comptroller-General also conducted the inauguration of a new system of night-duty in the gaol, and by dividing the night between two warders instead of one, has augmented the strength of supervision, and its completeness is assured by the warders being obliged to visit and mark different stations at stated periods throughout the night, with a peg or tell-tale clock. Subsequent to the Comptroller-General's visit he gave directions for the numbering of prisoners instead of calling them by their names. No difficulty was experienced by the change, and I believe it is deservedly appreciated by the prisoners.

The contractor's supplies have been good, and regularly supplied.

The stock of bedding and clothing has been found sufficient.

The general discipline of the officers has been very good. One warder has been retired through failing eyesight. He was replaced by a warder from Maitland. One warder was withdrawn, and promoted to the position of Overseer of Trades at Darlinghurst, and he was succeeded by a warder from Biloela.

The order and discipline of the prisoners have been satisfactory, if I except the slight disorderly conduct of a batch of prisoners received from Parramatta. The offenders were punished, and at the present time everything is quiet and orderly in the gaol.

S. F. POLLACK,
Gaoler.

16.—HAY GAOL.

Extract from the Gaoler's Report.

Changes.—On 14th December, 1897, I was relieved, and the position of Gaoler was taken up by Mr. P. Phelan.

Buildings.—The only new building erected for the year was a wash-house for Gaoler's quarters, which was built by contract (free labour).

Repairs.—All the drains inside the gaol, and the main sewer leading from gaol to the river, were opened up and the pipes taken out, cleaned, and relaid. A new system of drainage was adopted, which was working very satisfactorily when I left.

Prisoners.—The prisoners were employed during the year on the different works set opposite their trades, viz. :—

Carpenters.—Making new furniture for lodge-room, office, cook-house, surgery, and general repairs to gaol.

Shoemakers.—Repairing officers' and prisoners' boots and shoes.

Painters.—Painting gaol generally.

Bricklayers.—Pointing gaol walls, cementing around sinks in yards, repairing cell-floors, &c.

Tinsmiths.—Repairing tinware.

Tailors.—Making and repairing prisoners' clothing.

Hatmakers.—Making cabbage-tree hats.

Working outside.—Cutting firewood for gaol and police; working in gaol garden.

Vegetable Garden.—The following vegetables were planted during the year :—Cabbages, turnips, carrots, onions, parsnips, and potatoes, all of which grew fairly well with the exception of potatoes. Cabbages can be grown in the winter, and turnips do fairly well for a couple of months in the year.

Officers.—The conduct of the officers during the year was good, with the exception of one warder, who was reported for neglect of duty.

Conduct.—The conduct of the prisoners was good; no serious breaches of prison discipline occurred during the year.

There has been a saving in salaries for the year amounting to £60 19s. 9d.

BEN. SHAW,
Gaoler.

17.—MUDGE GAOL.

Extract from the Gaoler's Report.

THE conduct of the subordinate officers has been generally good, with the exception of one third-class warder, who was reported for gross disobedience of orders, for which he was fined.

The conduct of the prisoners has been good.

The prisoners have been employed during the year at tailoring, making and repairing prison clothing for the gaol, and jobbing carpentering, blacksmithing, painting, repairing prison shoes, plastering, and white-washing walls and buildings, wood-cutting for police, Post and Telegraph Office, Court-house, and lock-up, and chopping wood for the gaol.

The prison buildings are in good order and condition.

The front entrance gate was made effective by the Government Architect's Department.

The quantity of clothing and bedding is sufficient to meet all requirements.

The contractor's supplies have been good and punctually delivered.

The Rules and General Orders for the government of the prison have been complied with.

No change or promotions have taken place in the staff during the past year.

The industries in connection with the gaol have advanced in manufacturing prison clothing, and starting agriculture for the purpose of growing vegetables for the use of the prison, which I have no doubt will prove successful.

The alteration in the routine of discipline, which has taken place, was the numbering of prisoners and their clothing, and calling them by such numbers on all occasions; this rule is found to work satisfactorily.

The gaol was visited during the year from the Head Office by the Comptroller-General on the 7th December last, on inspection, and by the Inspector of Prisons on the 4th June.

There has been a slight increase in the expenditure, having to employ a special warder over the condemned prisoner, and the Church of England and Roman Catholic chaplains being allowed their former salaries of £20 per annum each.

JOHN COTTER,
Gaoler.

18.—TAMWORTH GAOL.

Extract from the Gaoler's Report.

No change in the duty of the warders at this gaol has taken place, except the relieving at noon of the tower sentries. No promotions have taken place amongst the staff. Two warders were removed; one was allowed to exchange, and the other was transferred at his own request.

The building of 20 additional cells was commenced here in May last, and since then great care and precaution were found necessary to ensure the safe custody of the prisoners, but I am happy to say, so far, we have managed successfully.

The brickwork of the additional cells is nearly completed, and I trust that in a few months' time the roof will be on and the gaol fairly safe again.

The gaol was visited by the Deputy-Comptroller and the Director of Labour on the 11th May, and by the Comptroller-General on the 19th of same month. The Comptroller-General and the Deputy-Comptroller gave many instructions and directions, which have been of great benefit in the management of gaol matters generally, and amongst them were the better arranging of prisoners in rank, saluting and marching to and from their various destinations. This is an improvement, and conducive to good order and discipline.

The concession made to short-sentenced prisoners with regard to receiving library books is much appreciated by them, and is also conducive to good order.

The introduction of the system by which prisoners are known by numbers instead of names is sure to be a great benefit to prisoners after discharge. I attach the Senior Warder's report:—"The clothing, &c., of prisoners was branded in accordance with circular memo. dated 7th October, and each prisoner was told that in future he would be known by the number assigned to him. The prisoners since received were told not to divulge their names to other prisoners, and that there would not be any chance of their being known after leaving the prison if they kept their own counsel. All the prisoners since received seemed to fully appreciate this advantage, and many of the others express their gratitude for the kindness and thoughtfulness of the Comptroller-General of Prisons in thus providing them with the means of keeping their past a secret. The prisoners were quite taken with the system from the very onset, and never once has a warder or prisoner had to be reprovved for calling by name. I have no hesitation in pronouncing the new system an unqualified success, and which must unquestionably minimise the evils encountered under the old system."

The trenching and preparing the gaol grounds for agricultural purposes has been introduced during the year. An acre and a half of land has been prepared and sown with various vegetables; and although the extremely hot weather, which came in November, did great injury to the crop, still, I believe, we will have sufficient vegetables to supply the gaol for the year. I believe this kind of work is about the best a prisoner could be employed at to enable him to make an honest living after discharge.

The making-up of cut-out clothing has also been introduced during the year, and works well, as it helps to find employment for prisoners unable to perform hard labour.

The principal occupation of the hard-labour prisoners has been trenching and preparing ground for growing vegetables, building 20 additional cells, pumping water, cutting up firewood for gaol and police use, painting and repairing the gaol buildings, knitting socks, making and repairing clothing and boots, and at the various other occupations incidental to all gaols; and all sentenced prisoners, except those exempt by the Visiting Surgeon, have been kept fully employed.

The conduct of the officers has been good and efficient.

The conduct of prisoners has been good, with a few exceptions. Six were punished for minor breaches of the Regulations.

No escape or attempt at escape took place during the year.

The gaol buildings are now in a state of good preservation, having been all painted and repaired recently.

The clothing, bedding, and stores have been found sufficient to meet all requirements.

The contractor's supplies have been good and punctually delivered.

The Regulations and General Orders have been complied with to the best of my knowledge and ability.

There has been a saving in salaries for the year of £25. 13s.

M. COONAN,
Gaoler.

19.—WAGGA WAGGA GAOL.

Extract from the Acting Gaoler's Report.

The general conduct of officers has been good. One married warder was transferred, and replaced by an unmarried warder who resides at the gaol.

The conduct of prisoners has been good.

The prisoners were employed sweeping and cleaning, cooking prisoners' rations, cutting firewood, otherwise employed, and working for police.

Buildings in fair order.

Speaking tubes were fixed from tower to office, and from male wing to Acting Gaoler's bedroom, which are very useful; a new trellis was placed in front of gaol, and bricks were laid as a border for flower-beds; stores, &c., have been removed from cells formerly used, which allow two more for the accommodation of male prisoners.

Clothing and bedding were sufficient to meet requirements.

Contractor's supplies good and punctually delivered.

Regulations and General Orders have been complied with.

Decrease in expenditure of £362 9s. 5d., caused by reduction in staff.

Official inspection by Comptroller-General of Prisons on 27th July, 1897, and by the Inspector of Prisons on 27th May, 1897.

E. D'ARCY,
Acting Gaoler.

20.—WILCANNIA GAOL.

Extract from the Gaoler's Report.

THE conduct of the subordinate officers has been good.

The prisoners have behaved well, and have been constantly employed at wood-cutting, painting, tailoring, repairing shoes, digging Court-house and gaol garden, and usual routine work of the gaol.

The buildings are now in good order, except one wall and arch that need repair. Tenders closed on the 8th ultimo for this work. Several small items still unfinished, which have received approval.

The alterations completed during the year are:—Brick walls in lieu of 10 feet iron fence at north-east and south-west corners of the gaol; new iron entrance gate; new offices, surgery, balcony to quarters, bath-room, closet, and weather-shed in the female yard; parapet wall in trial yard, adding much to its security.

The chief repairs by gaol labour consist of raising levels of the yards and floors of sheds, repairing sheds and out-buildings, painting of gaoler's quarters, &c.

The clothing and bedding quite sufficient.

The contractors have delivered good articles, and very punctually.

All Regulations and General Orders have been complied with.

The gaol was visited by the Comptroller-General of Prisons on the 13th September, 1897; Inspector of Prisons on the 29th March, 1897; by Mr. Green, Inspector of Public Revenue, on 26th July, 1897.

The only change in the staff during the year was the Rev. J. Rawling being appointed Church of England Chaplain, *vice* Rev. H. Bradshaw, resigned.

The new system of numbers for prisoners in this gaol has been in operation for one complete month, with satisfactory results. At first a few slight difficulties had to be met, but now it is working well, and I feel convinced that the longer it is in force the better will be the results.

ARTHUR G. LEER,
Gaoler.

21.—WOLLONGONG GAOL.

Extract from the Gaoler's Report.

THE working of Wollongong Gaol during the past year has been very satisfactory. There was no unusual occurrence, and everything worked well.

The prisoners were continuously employed at remunerative work, but I regret there was no land available for agricultural training.

The conduct of the officers has been good.

The conduct of the prisoners has been good.

The labour at which the prisoners were employed is as follows:—Manufacturing hammocks; cabbage-tree hats; shirts, Scotch twill; braces and clothes-bags. Also repairing boots and shoes; cutting firewood for gaol use; painting, and keeping buildings in repair; cleaning, gardening, &c.

Canvas hammocks have been erected in all the cells, to replace the bunks which were in existence.

Telephone communication between the gaol and police station has been effected. This small outlay has proved very beneficial, and the value of the telephone cannot be too highly estimated in cases of emergency.

The quantity of clothing, &c., in store is sufficient for all requirements.

The Rules and Regulations have been complied with.

The contractor's supplies have been good and punctually delivered.

There has been a saving in salaries for the year amounting to £357 1s. 2d.

J. MCKOWNE,
Acting Gaoler.

22.—YASS GAOL.

Extract from the Acting Gaoler's Report.

THE conduct of the officers has been good.

The conduct of the prisoners also has been very good, there being only one punished during the year.

The buildings are all in very good repair.

The quantity of bedding and clothing in store is sufficient to meet all requirements.

The contractor's supplies have been of good quality and punctually delivered.

The Regulations and General Orders have been complied with.

There has been no change in the staff, promotions, or alterations in the duty during the year.

The Comptroller-General of Prisons paid a visit of inspection to the gaol on the 15th June last.

There has been an all-round decrease in the expenditure as compared with 1896, the expenditure for that year being £869 6s. 2d., as against £398 2s. 10d. for 1897, making an all-round reduction of £471 3s. 4d., which was caused through reduction in the staff and less prisoners.

The prisoners were all kept fully employed during the year at sweeping, cleaning, painting, wood-cutting, and agricultural work.

The new system of numbering prisoners was brought into operation at this gaol on the 10th October last, and has, up to date, worked very well.

The new industry, agricultural work, was commenced in August last, the season prior to then proving unsuitable owing to drought. This industry has, so far, turned out very satisfactorily, providing an educational employment for prisoners, who appear to take a great interest in it. The product was not as good as it would have been had the season been at all favourable; as it was, the early potatoes planted in August were 1 cwt. of seed to 1½ chain of land, and produced 3 cwt. 2 qr. 8 lb. of potatoes, the best that were grown in the district. There is at present under cultivation a quarter of an acre of late potatoes and pumpkins, which look very well, and only need rain to ensure a good crop of each. The ground where the late potatoes were grown is now ready for sowing Swede turnips, this being the proper month for sowing here. There is not quite half an acre of spare land attached to the gaol altogether.

G. CALVIN,
Acting Gaoler.

23.—YOUNG GAOL.

Extract from the Gaoler's Report.

Since the 4th January all the prisoners have been regularly drilled (elementary) at evening muster, and all musters and movements of prisoners conducted in a thorough disciplinary manner.

On the 9th October the latter part of clause 15, Regulation 35, as to numbering of prisoners, was given effect to, and it has worked satisfactorily.

During the year the new and old cells were all completely furnished and fitted up with electric light, one light of eight candle power being in each cell, and allowed to burn until 8·30 p.m.

All being in readiness, the Comptroller General of Prisons visited and initiated the new system on the 15th December (Regulation 35, clause 15) of non association of prisoners, under rather disadvantageous circumstances, both as regards climatic conditions and the class of prisoners dealt with. The evil resulting from the association of prisoners in the yards has been for the first time abolished. Each prisoner is now fed in his own cell, where he is confined except when at labour, exercise, and religious instruction. One hour's walking exercise is allowed on Saturday afternoons, and one hour each in the forenoon and afternoon is allowed on Sundays and holidays. The exercise is carried out silently.

The Comptroller-General approved tentatively of "time tables," routine, and disciplinary orders for the new system.

The drilling and the non-association of prisoners respectively have been inaugurated and carried into effect in their entirety without a single prisoner having been punished, or any hitch occurring in any of the arrangements.

The Comptroller-General closely observed the working of the new system for four days, at all hours, and it has worked remarkably well since its initiation.

In consequence of the foregoing reforms, the discipline and conduct of the prisoners have improved very much, and the prisoners have now greater opportunities for reforming. The prisoners are now commencing to feel that they are being dealt with individually, instead of collectively.

The staff can now be reduced by one warden without increasing the work of the remainder of the warders. The warders now enjoy seven days' annual leave, and sick pay, and are allowed forty-five minutes clear for breakfast and dinner respectively. The conduct of the officers has been good, and they now take a more intelligent interest in their duty. With one or two exceptions they own their houses, and have their lives insured.

The nineteen additional cells were entirely finished during the year, and they add to the usefulness and efficiency of the gaol.

Many minor improvements and repairs were carried out by prison labour, and mostly all of the new cell furniture was made at the gaol.

A telephone was erected, connecting the gaol with the Police and Visiting Surgeon.

The Visiting Surgeon, at request of the Comptroller-General, kindly arranged his visits to the gaol to suit the working of the new system.

The prison library has been much improved by the addition of a better class of literature.

The stock of clothing and bedding was found sufficient. The Comptroller-General granted one extra blanket to the prisoners for sleeping purposes.

Hammocks were substituted for bed boards and mats, which was a great improvement.

The provisions have been good and regularly supplied.

The Regulations and several orders have been complied with to the best of my ability.

The Inspector visited 27th May. The Comptroller-General visited 14th June, and 15th to 18th December, inclusive.

T. G. ADAMSON,
Gaoler.

APPENDIX II.

Labour and Industry.

Report of Director of Labour

Summary (No 1) showing the value of work performed by prisoners at the different gaols in the Colony during the year 1897

Summary (No 2) showing the earnings of the various trades at the established gaols, during the year 1897.

EXTRACT from Director of Labour's Report on Gaol Industries for year 1897.

At the beginning of the year I had special instructions from the Comptroller General of Prisons to use all possible efforts to provide work for the prisoners under sentence in the various gaols, and with that object in view to wait upon the officers in charge of departments in order to secure from them orders for as much of their supplies as could be made by prison labour.

In accordance with these instructions I interviewed the Inspector General of Insane, Inspector-General of Police, Director of Charitable Institutions, Controller of Railway Stores, Architect for Public Instruction Department, Officer in charge of Ordnance Stores, Officer in charge Post and Telegraph Stores; and, as many of the public departments obtain their supplies through the Controller-General of Stores, I have been in almost constant communication with Mr Hopkins on the subject, explaining to him in the first instance the particular desire of the Comptroller General, that all prisoners should have some useful employment provided for them.

Upon ascertaining the requirements of the departments mentioned, and selecting such lines as could be made in prison, I had samples of these articles prepared and submitted for inspection. In most instances the officers concerned suggested some alterations. These were attended to, and ultimately the samples were accepted, and the orders for these lines placed with us.

In the past, frequent complaints were received from the manufacturing gaols that there were no orders on hand upon which to employ the prisoners, and it was necessary to make up articles for stock in anticipation of orders being forthcoming, which frequently led to large stocks of articles being on hand for a long time before they were required; or it was necessary to take prisoners out of the workshops and put them to some unproductive work in order to prevent idleness. I am glad to be able to report that this trouble has completely disappeared, and that there are orders now placed with the manufacturing gaols upon which all the prisoners can be constantly employed.

In addition to the articles usually made in the prisons we have received the following additional orders—1,200 d-b coats for Government Asylums; 1,100 tweed jumpers for Lunacy Department; 2,000 pairs mole trousers for Lunacy and Asylums Department; 170 suits (coats and trousers) for aborigines (male); 112 costumes for aborigines (female), 112 skirts for aborigines (female), 232 shirts for aborigines (male), 250 pairs boots (woollen) for Lunacy and Asylums; 700 pairs leggings for Police; 1,200 pairs bag leather slippers for Lunacy and Asylums; 2,500 pairs boots for State Charities; 225 pairs boots (water tight) for Lunacy; 100 pairs magazine shoes for Ordnance, 200 pairs boots (constables) Police; 300 pads (new pattern) for G P O; 140 mattresses (hair and kapok, with pillows and bolsters) for Police, Hospitals, &c.; 140 pairs woollen and canvas slippers for Lunacy and Asylums; 362 fire buckets for Lunacy; 600 boxes (oval) for State Charities; 1,000 demy boards for Income Tax, and numerous smaller lines, such as stable lanterns, cedar book-rests, pine boxes for weights and measures, &c.

As the result of the action of the Board now dealing with the subject of Government contracts, upon which the Deputy Comptroller and Inspector of Prisons represents our Department, the Public Works and the Mines Departments have, during the latter half of the year, placed their orders for galvanized ironware and bushware with us. These have also considerably increased our industries during the period mentioned. The Works Department alone ordered 958 brooms and brushes, and 441 large buckets.

The whole of the articles named in the foregoing list, with the exception of mole trousers, may be called new industries.

The Government Printer has very kindly given us an old fashioned printing press. We have obtained a small supply of printer's requisites and commenced to print forms, general orders, and books for prison use. The Controller General of Stores has given us work in this branch also. The introduction of bread baking is also under consideration. It is thought that bread for Biloela, Parramatta, and Darlinghurst Gaols could be baked in Darlinghurst.

Owing to the increase in our orders for brushware it was found necessary to introduce brush making into Parramatta Gaol.

The subject for providing employment for prisoners in the minor gaols, where there are no trades overseers, was considered, and it was decided to cut out prison clothing in the large gaols, and to have the garments sewn up in the small gaols, this was found to work very well, 500 pairs of trouses, besides other articles, being made during last season. The minor gaols are now engaged in making up grey clothing for the approaching winter.

During the year 30½ acres of land were cultivated, and vegetables for prison use, weighing 46,887 lb., were produced. 111 bushels of maize were grown at Grafton. The agricultural work has made satisfactory progress notwithstanding the severe drought prevailing.

A separate return shows the value of prisoners' labour in Darlinghurst Gaol for the year under the heading of manufactures.

An additional boiler has been built in the engine house, and the brickwork of the old boiler repaired. A new copper for dyeing yarn and bays for builders' materials have been erected, hexagon blocks have been laid round the cook house, new accommodation has been provided for searching, clothing, and bathing prisoners upon their reception. The landings of "B" wing have been cemented. Water has been laid on to the female division. The iron ceilings have been removed from the wings in the male division, also the perforated iron from the eaves, which has been replaced by galvanized iron network.

WM URQUHART,
Director of Labour

NOTES.—No corporal punishment was inflicted during the year. Only 4·8 per cent. of the total number of prisoners during the year were punished. The number of offences committed and the number of punishments awarded do not, of course, agree, it being the practice in most cases to award one form of punishment for several offences, while in others the offence is met by admonition without punishment. In consequence of transfers the same prisoner may be punished in more than one prison during the year, so that the totals do not exactly agree with the total prison population of Form No. 1. 4 prisoners escaped during the year, 3 of whom were recaptured, and were committed to the Higher Courts, 2 received terms of imprisonment and the other was awaiting Trial at the end of the year.

STATEMENT of Accommodation for Prisoners in the Prisons of New South Wales during the year ended 31st December, 1897, and of the Daily Average and the Greatest Number of Prisoners.

APPENDIX V.

Miscellaneous.

- A. Reformatory Treatment and Classification.
- B. Labour and Industry.
- C. Discipline and Organisation.
- D. Expenditure.
- E. Proposed further steps in Prison Reform.
- F. Regulations issued.
- G. Letters explanatory of introduction of new system for restricting association.
Explanatory address to prisoners.
- H. Circulars issued to various officers in connection with the reformatory treatment of young prisoners.

A.—Reformatory Treatment and Classification.

1. A new system is being gradually brought into general operation by which the contaminating influences arising from association will be greatly restricted. Up to the present the majority of the prisoners are assembled together during the periods allowed for meals and for leisure, in various large yards according to their classification; and little or no restriction or supervision can be exercised over their companionship or conversation during such times. No doubt this system allows of contamination to take place. The new plan will lessen the chances of corruption by association, while, at the same time, it will carefully avoid treatment by solitude. Each one will have his own cell by night and will take his meals therein, while he will work, and exercise and attend religious instruction in company. The preliminary work of fitting each cell with a light for night use, and with suitable furniture, necessarily occupies much time and labour, but the work is getting well ahead, and by the close of the year 1898, most of the large gaols will be under the new plan, which has already been brought into successful operation at Berrima and Young.

2. The large gaol at Goulburn has been set aside for the special treatment of first offenders serving sentences of twelve months and upwards, and the officers have instructions to carefully watch and assist in every possible way to bring about the prisoners' reformation.

3. Reformatory treatment of young prisoners between the ages of 16 and 25 serving sentences of twelve months and under, has been made to include physical drill. Two new Regulations, which explain themselves are as follows:—

Physical Drill for Seventh Class Prisoners.

Regulation 34.

Paragraph 24. Upon the completion of fourteen days of his sentence any prisoner may be selected by the Comptroller-General (unless there are medical reasons to the contrary) for special exercise in physical drill. This training may continue during the remainder of the sentence or may be determined at any time by the Comptroller-General or by the Visiting Surgeon. The exercise shall occupy at least one hour in the morning and one hour in the afternoon of every working day, and during the course of training, notwithstanding the foregoing rules, each prisoner shall wear a flannel undershirt, shall bathe daily unless there are medical reasons to the contrary, and shall receive the highest ration allotted to seventh class prisoners, viz.—No. 9.

Paragraph 25. In the cases of well-conducted prisoners who have served three months and upwards, the Comptroller-General may relax any of the foregoing rules during the seven days immediately preceding the date when they become due for discharge, and may, where he thinks it desirable or necessary, communicate with the parents or guardians of such prisoners, notifying them of the date of discharge, and inviting them to take measures to obtain employment for such prisoners, and to meet them on discharge. Such discharges may take place in special cases at any time on the day preceding the date of discharge at the Comptroller-General's discretion. He may also, during the last seven days of their sentences, allow such well-conducted prisoners to write a letter to their parents or guardians daily, and to receive letters from them, and he may further allow daily visits from such parents or guardians, being persons of good repute, the object being to arouse interest in the prisoners and to afford opportunity to their relatives to obtain employment for them prior to discharge.

It will be seen that very great alterations have been made in the existing treatment as regards exercise, diet, bathing, &c. A vigorous effort will be made to turn these young people out mentally and physically sound, and the Visiting Officers, including the Chaplains, have been specially and individually invited to assist in aiding their reformation.

4. Classification of female prisoners.—Important alterations are now going on in Darlinghurst, Bathurst, and Biloela, in order to allow of a more complete separation of young from old offenders, and of first convicted from those who have been in gaol before. The prostitute class will be kept apart from others. To a great extent the classification has already been accomplished.

5. Two important Regulations dealing with prisoners awaiting trial were brought into operation at the commencement of the year. They provide—firstly, that "Prisoners awaiting trial who have not been previously convicted shall be kept apart, wherever practicable, from prisoners awaiting trial who have been previously convicted"; and secondly, that "Convicted prisoners awaiting trial on further charges are to be kept separate from other prisoners until such charges are dealt with, unless instructions to the contrary are issued by the Comptroller-General." Much good is hoped for from the operations of this new departure in procedure.

6. In order to stimulate habits of good order and of industry, a considerable concession has been made to prisoners serving sentences of 12 months and under by the extension of the Scale of Remission. It will be observed that a distinction has been made between the privileges earnable by first, second, and third offenders. Probably, New South Wales is more liberal in this matter than any other country; but there can be no doubt about its being a step in the right direction.

7. Lights are being fixed in all cells for the first time, and the gaol libraries now contain the works of Thackeray, Dickens, Scott, and other standard authors. A light will be allowed to 8.30 p.m., and three issues of books granted weekly. Misconduct will cause a suspension of these privileges. In connection with the libraries, it may be pointed out that the Government has this year doubled the usual grant for the purchase of books.

8. To minimise the risk of recognition by former fellow-prisoners after leaving gaol, a plan is being brought into operation whereby prisoners will be called by numbers instead of being named. This has already been attended by good results.

B.—Labour and Industry.

9. The industries have been, so far as possible, placed upon a business footing, and a strong effort has been made to secure work from the various Government departments. This has led to a large increase in work, and the gaol industries are busier than they have been for years. At present we have more orders in hand than we can possibly accomplish for some time.

10. The labour schedules have been revised in the direction of increasing the work allotted to each person. This has decreased idleness, while it has added to the good order of the gaols. The old offenders have, of course, not welcomed the change, which has been made more unpleasant to them by the reduction in the scale of labour gratuities. Every man has a weekly task to accomplish. Upon its completion there is placed to his credit a sum decreasing in value according to whether he is a first, second, or third time offender. If he has had more than three convictions, he receives nothing for his task, but is allowed (in common with all classes) to earn a small remuneration by working overtime. This, with deprivation of various dietary privileges for laziness, prompts the old offender to habits of industry.

11. The waste grounds of the different gaols have, wherever practicable, been placed under cultivation with good results from both moral and economical points of view. It is hoped that in time nearly all prison-used vegetables will be prison-grown.

C.—Discipline and Organisation.

12. An entirely new system of night watch was brought into operation, ensuring the proper vigilance of the night guards. In connection with this the hours of night-duty were materially shortened, the old system of twenty-four hours of continuous duty was abolished, and check clocks were placed so as to provide for the various posts being frequently visited.

13. Possibly in no respect was reform more required than improving the procedure by which admission to the subordinate ranks of officers was gained. A system of examination has been instituted which provides for the entrance to the service of only fairly educated men of good character, and the promotion of those really deserving advancement by reason of their educational attainments, their personal qualifications, and their knowledge of penological matters, including the routine of prison work and the humane treatment of prisoners. A regular system of holiday leave has been made applicable to all grades of warders, who have also been granted, when necessary, four weeks' sick leave annually on pay. Formerly a warder absent sick had to pay for a substitute. In other directions, such as the provision for refreshments while on night watch, the pecuniary allowance to drill officers, Sunday leave, leave prior to the retirement of deserving members of the staff, &c., the officers have benefited. A Regulation will shortly be issued materially reducing the charge for quarters, which means an increase in pay to those warders occupying quarters. On the other hand, discipline has been tightened up, drill has been enforced, dirty uniforms, slovenly methods, and grumbling incapacity have been strictly dealt with, and anything like favouritism or harshness to prisoners has been discountenanced. Very naturally the old order of warders has not appreciated these changes.

14. A handbook of Drill and Procedure has been specially compiled for the information and instruction of all classes of gaol officers.

15. Inspectorial visits from Head Office increased.—Last year every prison was inspected at least once by the Comptroller-General, while many were visited more frequently. In addition, the Deputy-Comptroller and Inspector made numerous visits. These inspections were all made at uncertain periods, and occasionally (to test the night watch) between midnight and early morning.

16. Prisoners are drilled to move orderly and in rank when going to and from various parts of the prisons. Silence is required on these occasions.

17. Considerable reduction has been made in the number of sweepers, cleaners, and other domestics about the gaols. Old hands have been disallowed the privilege of easy billets on re-entry into gaol. Indulgences are only allowed where earned and after strict inquiry. Attendances at bathing have been doubled, and untidiness, dirty boots, or uncleanness have been rigorously dealt with. Loafing in lavatories has been effectually checked by the introduction of the check system. Greater cleanliness and order in the yards have been insisted upon.

18. On the other hand, unnecessary discomforts have been put a stop to, in the shape of cold meals, the publicity in bathing, the non-setting apart of separate baths for diseased persons, insufficient towelling, bedding, and clothing (especially in the cases of the female prisoners who were most badly off in the latter respect), and of other irritants. In this matter of towelling, bedding, and clothing, the expense in providing the extras last year amounted to over £1,000 in Darlinghurst alone. As pointed out before, the libraries have been considerably added to by the introduction of literature hitherto disallowed, but which is calculated to exert a wholesome influence.

19. All of these changes, with the prospect of many more to come, would very naturally tend to irritate the prisoners, yet their conduct generally has been very satisfactory. The bulk of the prisoners conformed to law and order, and really appreciated the changes, which were plainly made in the cause of reform and good order. Over 95 per cent. of those committed underwent no punishment; while for the first time for many years, not one single case of corporal punishment, for offences committed in prison, occurred.

20. Decrease in the number of committals to gaol.—During the past two years the committals have greatly decreased. In 1896 there were 1,540 less than in 1895, and 1896 showed a further drop of 2,275, making a total decrease of 3,815 in the two years. The committals during 1897 were considerably less than they have been for many years, while, on the other hand, the general population of the country has largely increased. Without claiming too much for the penal administration, the improved methods before referred to have no doubt had some share in checking the growth of the gaol population. Elsewhere a chart is attached showing the progress of crime as compared with the increase of the general population since 1880.

D.—Expenditure.

21. Since June 1896, a careful reorganisation of the different prisons has taken place. Inquiries were also directed as to the possibility of reducing the staff, and so decreasing the expenditure without lessening the efficiency. This occupied much time and careful inquiry, but the result has been to effect a large saving in cost, without in any way impairing security and good order. No dismissals took place for purposes of retrenchment, but, as situations became vacant from various causes, they were not refilled. The reduction being gradually brought about has not yet made itself entirely felt in the accounts for the yearly expenditure, the decrease month by month since June, 1896, being brought about by instalments of more or less importance. Up to the close of 1897, the regular staff was reduced by 56, the salaries thus saved representing a considerable sum. The rearrangement of the female prison; and possibly the abolition or reduction in status of some of the country gaols, will admit of a still further reduction in the future. But what has so far been done in the direction of economy

economy will be gathered by comparing the salaries for June, 1896 (£6,794), with those for March, 1898 (£5,574), showing a saving on salaries at the rate of nearly £15,000 per annum. The Contingency Vote for the year ended June, 1896, was £35,400. As the financial year does not end until next June, our expenditure in this direction cannot be accurately put down, but it is not likely to exceed £30,500, which will, of course, show a further saving.

Notwithstanding the saving effected, certain of the changes made have not been carried into operation without a large expenditure. The numerous improvements in sanitary matters, provisions, lighting, &c., the increase in the number of prisoners transferred in order to carry out certain new methods of classification, have swelled the expenditure; while the concessions to the warders' staff, in annual leave, sick leave, refreshments to night watch, and so forth, have caused a charge against the salaries vote at the rate of over £1,200 per annum.

E.—Proposed further steps in Reform.

In the future it is proposed to gradually carry out the following plans, amongst others, as circumstances permit:—

1. Separate prison for females to be constructed on modern lines, so as to admit of the segregation, within its walls, of the different classes who need to be kept apart; and of their special treatment by a carefully selected staff on humane and up to date ideas. When this is done, a further saving will be effected by the withdrawal of the majority of the prisoners with their attendant staffs of warders, who are now scattered all over the country. This removal will afford more room for the classification of the male prisoners.

2. Penitentiary for misdemeanants, for the reception of the casual drunk, vagrant, and petty offender who now have to be housed imperfectly and dealt with more or less unsuitably at Biloela and Darlinghurst. The proposed plan for building the place shows that it would not be costly to construct; and its design would be altogether different to that of the present prison buildings. By its establishment we should be able to do away with Biloela, which is only used now as a makeshift, and to relieve Darlinghurst from its overcrowded state, and its large expenditure; and, at the same time, remove from Darlinghurst a large army of habitual misdemeanants who now seriously embarrass the discipline and administration in very many ways.

3. Inebriate Asylum.—This will substitute more rational treatment for habitual drunkards than is now the case. Prison life is no good for these people, as is generally admitted. The institution will be an asylum or hospital, rather than on prison lines, and it is suggested that the control be placed in the hands of a medical specialist, supervised by a Board of Visitors composed of the Comptroller-General of Prisons, the Chief Medical Officer, and the Inspector-General of Insane. Commitment should be for an indefinite term, but in no case would an inmate remain for more than three years. Penalties would be provided to punish persons illegally interfering, communicating, or otherwise molesting the inmates, or assisting or inducing them to escape, or harbouring them after escape; and inmates improperly absent without leave would be liable to arrest and extra detention. After a sojourn of twelve months, the Board should have the power to liberate any inmate on license by finding of sureties, or on his own recognizance, or absolutely. Where not released absolutely, a relapse into drink would insure further institutional detention. The asylum should be a pleasant place, amidst pleasant surroundings, and should contain within its grounds ample opportunities for cheerful outdoor work, vegetable and floral gardening, various industrial occupations, gymnasias, swimming and other baths, library and recreation hall, church, refectory, and the necessary quarters, sleeping accommodation, and offices. Where the patients' friends were persons of good repute, visits should be freely allowed, and there should be every facility for letter-writing. In some cases leave might be allowed, and there would be no reason why inmates might not be allowed to send a portion of their earnings—derived from occupations in the asylum—to their families. Where persons were found to be able to contribute, the committing magistrate would make an order on their estate for such payments, but no difference would be made in their treatment. Such latter persons might, however, be handed over to any private inebriate retreat which might be established for paying patients; but all such patients would come under the provisions of the Act and the supervision and control of the Board of Visitors.

4. A Board is now dealing with the whole question of the treatment of lunatics in gaol, and it is hoped that the result of their conference will be to remedy the present unsatisfactory system, and to remove from the prisons a class of unfortunates who cannot be treated properly therein, and who now cause the penal administration much embarrassment and expense without beneficial results.

5. The removal of the classes referred to in the preceding four paragraphs would clear the prisons of great obstacles to successful work. It will also afford greater scope for reformatory treatment of the more legitimate class of prisoners, and will bring about that most desirable result, the separate confinement of each prisoner at night. This is now impossible because of the lack of accommodation. Opportunity will also be afforded for the complete extension of the new Restricted Association System before alluded to.

6. Proposals have also been made to build on the gaol grounds, but without the walls, detached cottages for the accommodation of the prison officers and their families. These dwellings would be comfortable places fitted with baths and the most modern sanitary appliances; and arrangements would be made by which a common hall, fitted up with books, papers, &c., would afford chances for recreation, self-improvement, and so on. The various classes of warders would be decently housed in close proximity to their work and they would be able to easily reach home for meals. The prison authorities would also derive advantage from the fact of having a reserve force close at hand, instead of as is now the case, scattered about in different parts of the towns where the prisons are situated.

7. It is also proposed at an early date to bring about an improvement in the methods of instructing illiterate prisoners. There is no very clear principle pursued at present and women are not taught at all. It is a matter, however, which will require careful and delicate handling.

8. Considerable alterations will shortly be carried out at Darlinghurst Gaol in the direction of affording more space to the male division; a readjustment of the female portion of the prison so as to allow of classification of those prisoners deemed suitable for detention there; and the construction of bathing, reception, and attiring rooms, fitted with sanitary appliances enabling the proper cleansing and purification of prisoners on arrival to be undertaken. At present this cannot be done, and the cleanliness of the gaol naturally suffers.

There are other important matters which present themselves for future consideration—notably the introduction of a modified system of Bertillonage to bring about a more perfect system of identification of criminals—but what has been stated will show that considerable progress has of late been made to introduce improved methods in our prison system, and that further progress is aimed at in the future. The whole question of penal administration is a most trying one. It is fraught with tremendous difficulties, and is by no means to be solved in such an offhand way as is sometimes proposed. It is easy for irresponsible persons to condemn and criticise, but it is plainly not at all easy to propound remedies. As has well been said “The *vox populi* is by no means necessarily the *Vox Dei* in penal matters any more than in general politics and there should exist an ever vigilant hesitation as to the acceptance of fashionable dogmas or popular conclusions.”

Any step taken in prison procedure needs to be taken slowly and after great consideration. Progress must necessarily proceed with caution. In this country a careful watch is kept upon the system pursued abroad with a view to introducing, if practicable, any points which prove successful elsewhere. But there are many disadvantages to contend against. Old buildings of unsuitable construction, want of accommodation, the scattered population rendering centralisation impossible, and other great disadvantages, all offer obstacles to complete success. Possibly, nearly as much is done as can be done, taking all the difficulties into consideration, and perfection is clearly one of those unattainable things which cannot be looked for.

F.—Regulations issued.

Department of Justice, Sydney, 16th June, 1897.
His Excellency the Governor, with the advice of the Executive Council, has been pleased, under the Acts 4 Victoria No. 29 and 37 Victoria No. 14, to approve of the following Regulations being substituted for Gaol Regulations Nos. 60 and 70.

ALBERT J. GOULD.

VISITORS TO GAOLS.

60. No persons shall visit the Gaols without an order from the Minister of Justice, the Comptroller-General, or the Visiting Justice, except the Ministers of the Crown and the Judges (who may personally introduce visitors), and Magistrates of the Colony.

Children under sixteen years of age shall not be admitted unless specially authorised by the Minister of Justice or the Comptroller-General.

Visitors shall not be allowed access to those parts of any prison where they are likely to meet with prisoners of the opposite sex, unless specially authorised by the Minister of Justice or the Comptroller-General.

Visitors wishing to inspect the Metropolitan Gaol at Darlinghurst will be admitted on Mondays and Fridays only, between the hours of 10 a.m. and 12 noon, and 1 and 3 p.m., if warders can conveniently be spared to accompany them, but not more than three full parties will be admitted at one time.

Visitors wishing to inspect Country Gaols will be admitted at reasonable hours on any working day, at the discretion of the Visiting Justice.

Parties of persons visiting any gaol must not exceed six in number. No prisoner shall be allowed, under any circumstances, to speak to, or to hold any communication with, such visitors without the authority of the officer-in-charge.

No officer of a prison or gaol shall at any time receive a fee, or gratuity of any kind, from visitors, or from any prisoner, on any pretext whatever.

PRISONERS TO BE DISCHARGED.

70. Prisoners will be discharged, as having completed their sentences, upon the following rules, viz:—

In sentences exceeding three days, at 6.30 o'clock a.m.; days of admission and discharge each counting as one day.

In sentences of three days, at 5 o'clock p.m. on third day. When the sentence expires on a Sunday, the prisoner will be discharged, if his sentence exceed seven days, on the Saturday previous.

In the lesser sentences, he will be detained until the Sunday.

The Gaoler may, in his discretion, permit any prisoner, at his own desire, to remain in the gaol over the night, or until he shall have had his breakfast, or in the case of sickness, and by his own wish, until he can be disposed of.

In the cases of prisoners completing their sentences at the intermediate prison at Trial Bay, the Comptroller-General shall have power to order the release from custody of any prisoner at a time not exceeding seven days previous to the date upon which he would otherwise become eligible for discharge to enable him to travel by steamer, in the event of such steamer leaving Trial Bay during that time.

Department of Justice, Sydney, 28th September, 1897.

His Excellency the Governor, with the advice of the Executive Council, has been pleased, under the Acts 4 Victoria No. 29 and 37 Victoria No. 14, to approve of the following Regulation being substituted for Gaol Regulation No. 35.

ALBERT J. GOULD.

GENERAL RULES FOR CONDUCT.

35. Prisoners will strictly observe the following rules of conduct:—

- (1.) They are required promptly to obey all orders they may receive from their officers. Though they should consider themselves aggrieved by such orders, they must nevertheless obey, but may afterwards complain to the Gaoler or the Comptroller-General. No complaint on any matter will be taken notice of unless made within one week after the occurrence to which it has reference.
- (2.) Using improper language, quarrelling, making false statements or giving false replies to questions either verbally or in writing, gambling, disrespectful conduct or inattention at muster or at drill, smoking without authority, or in any but the place appointed, trafficking, damaging or defacing the wards, cells, books, fittings, or furniture of the prison, shaping the spoons as knives, cutting on the tables, walls, or forms, or tattooing the body or altering existing marks thereon, are strictly prohibited, and offenders will be liable to punishment for every such offence. No scratching or marking, however slight, on the walls or furniture will be overlooked.
- (3.) Prisoners are never to light pieces of paper, rags, or other articles, either in their cells, airing yards, or any other part of the prison; and they are strictly prohibited from having in their possession tobacco, money, sharp instruments, or any other article not issued to them by the prison authorities.
- (4.) Prisoners are not allowed to alter their clothing. They are held responsible for its being kept in repair, properly marked, and clean. They are not to leave any article of their clothing on the works.
- (5.) Should any prisoner be dissatisfied with the quantity or quality of his rations, he must state his complaint as soon as the meal has been given to him. No complaint respecting quantity will be attended to afterwards. No rations are to be taken out of the mess-room. Refuse food is not to be thrown or left on the table or floors, but it is to be put into an empty plate or dish, which is to be placed in the centre of the table. No defect in the rations, either as to quantity or quality, will justify prisoners in refusing to go to their work, or in any other act of disobedience.
- (6.) Prisoners are not to leave School or Divine Service before being regularly dismissed, nor are they to leave the ranks at muster, nor their places of work during labour hours, without permission of the officer in whose charge they may be at the time.
- (7.) At all musters, prisoners are required to be in their places in the ranks immediately after the bell rings.
- (8.) Prisoners will preserve strict silence at all musters, at meals, in the dormitories and cells at night, while undergoing solitary confinement, and while marching to and from their place of labour, which they will do in regular and orderly manner.
- (9.) Prisoners will invariably touch their hats when passing or addressing an officer, and will always stand up (except when at meals) when any of the principal officers or visitors enter the messrooms or yards.
- (10.) Prisoners are to be attentive and diligent in performing whatever description of labour may be assigned to them. They are on no account to be idle during the authorised hours of labour, but must continue to devote themselves actively to the work during the day. They will, when requisite, apply to the Overseer for instruction as to the manner of performing their work. Any wilful or negligent mismanagement of work will subject the offender to punishment.

(11.)

- (11.) Prisoners desirous of seeing the Comptroller-General or Visiting Justice must apply to the Officer under whose charge they may be to have their names placed on a list to be kept for the purpose. The same rule will apply in case of visits of Ministers of the Crown, or other gentlemen in a public position, visiting the Gaol. Prisoners are warned against making frivolous or groundless complaints. For making such complaints they are liable to be punished.
- (12.) No prisoner shall, on any pretence, leave his work or allotted place of labour without the permission of the Officer.
- (13.) All games, jumping, wrestling, singing, or conduct of a like description are strictly prohibited.
- (14.) Prisoners are prohibited from lounging on their beds, unless by permission, which will only be given in case of illness.
- (15.) Notwithstanding anything in these Regulations or General Orders, prisoners of the 1st and 2nd classes serving sentences of over twelve months will only be associated for labour, exercise, and religious instruction, under close supervision, wherever the circumstances of the prison may render such treatment practicable. And to minimise, as far as possible, the risk of being recognised by former fellow-prisoners after leaving gaol, such prisoners may be designated by numbers in place of being called by their names. Seventh-class prisoners may also be subjected to the operations of the latter part of this Regulation.

Department of Justice, Sydney, 21 December, 1897.

His Excellency the Lieutenant-Governor, with the advice of the Executive Council, has been pleased, under the Acts 4 Victoria No. 29 and 37 Victoria No. 14, to make the following additional Regulation, to stand as No. 8A of the Gaol Regulations, viz. :—

8A.—RULES GOVERNING THE APPOINTMENT AND ENGAGEMENT OF WARDERS.

(A.)

Candidates for employment.

1. No person will be accepted as a candidate for employment as warder who is unable to produce satisfactory references, and who does not fulfil the following conditions, viz. :—Age, from 25 to 35 ; height, 5 feet 10 inches or upwards, of proportionate build, and physically sound. Possessed of a fair degree of education. Excepting in special cases, experience in some disciplinary service from which good references must be produced. Applicants with the foregoing qualifications must fill in (in their own handwriting) forms of application to be obtained at the office of the Comptroller-General.

(B.)

Probationary Warders.

2. If selected for employment a period of twelve months will be served as probationary warders, during which term their services may be dispensed with at any time, and no leave will be allowed. Warders are paid for every day, including Sundays and public holidays.

3. It must be distinctly understood by probationary, in common with all other classes of warders, that appointments are not to any particular gaol, but to the service generally, and that transfers from one establishment to another may take place at any time. Implicit obedience must be given to the Rules, Regulations, and General Orders.

4. During the probationary service, it will be necessary to pass an examination to the satisfaction of the Comptroller-General in the following subjects :—

	Full mark value.
(a) Handwriting. } To be tested by writing from dictation, an extract from a newspaper }	50
(b) Spelling } containing not less than 50 words. }	50
(c) Arithmetic ... First four simple rules	50
(d) Duties of a warder, including the writing of reports, the system of drill and night-watch as laid down in the Handbook, and the general Rules and Regulations	100
Total.....	250

Not less than 125 will constitute a pass.

5. While the passing of such examination will be obligatory, no person will be placed on the permanent staff who does not show fitness in other respects.

(C.)

First and Second Class Warders.

6. After three years' service in the lower grade, warders will be eligible for promotion to the ranks of Second and First Class, but in selecting men for promotion, ability, special aptitude, and exemplary conduct will be considered as greater qualifications than seniority. Warders should therefore endeavour to acquire a general knowledge of the Gaol requirements for the higher grades in order to obtain promotion. First-class Warders should possess a thorough knowledge of drill as laid down in the Handbook, and should be able to drill a squad of seventh class prisoners in the physical exercises.

(D.)

Senior Warders.

7. First-class warders of one year's standing only are eligible for vacancies in this grade. No one will be appointed until he has satisfied the Comptroller-General of his ability to pass an examination in the following subjects :—

	Full marks.
(a) Arithmetic to Simple Proportion.....	50
(b) Handwriting and Dictation, tested by copying and correcting manuscript	50
(c) Gaol Book-keeping—writing of reports and statements of evidence—the duties of various posts—the General Regulations	100

Extra subject.

Criminology—Du Cane's Punishment and Prevention of Crime; Howard Association Penological Principles; N.S.W. Prison Report, 1896

100 will constitute a pass in the first three sections, 50 marks in the extra subject.

(E.)

First-class Warders.

8. First-class warders must obtain the sanction of the Comptroller-General prior to undergoing examination as above, and such leave will be withheld where unsatisfactory conduct sheets or other disabilities present themselves.

(F.)

Chief Warders, Senior Warders (or Acting Gaolers) in charge of Minor Gaols.

9. Senior warders showing special ability in the humane management of prisoners, and in gaol discipline generally, are eligible for these posts without further educational examination, but it is expected that they should possess a fair knowledge of the theoretical as well as of the practical principles of prison treatment and procedure.

10. Promotion beyond the foregoing ranks will be in accordance with the conditions of the Public Service Act.

(G.)

General Rules applicable to all grades

11. While passing in the foregoing subjects will be considered obligatory, no one will be eligible for promotion who does not possess the necessary personal qualifications. Any expense in connection with the examination, &c., must be borne by the officer concerned. Examinations will be held at such times and places as may be convenient to the Department, and it will be the duty of the visiting and other superior officers of prisons to render the Comptroller-General such assistance in the conduct and holding of such examinations as he may require.

12. Refreshment.—All warders on night guard after midnight in gaols where the system of watch is in operation, as defined in section 5 of the Handbook, will be provided with refreshment, as laid down in the scale sanctioned by the Minister of Justice.

13. Second and third class warders showing special proficiency in the management and drilling of prisoners are eligible for selection as instructors in physical exercise to seventh class prisoners, as laid down in the Handbook, section 2, for which they will receive extra pay at an authorised scale.

14. Sick leave.—After three years' service, sick leave may be granted by the Comptroller-General to a warder of any rank upon production of a certificate from the Visiting Surgeon or Government Medical Officer (where there is no regular Gaol Surgeon) that illness unfits him for duty, and that such illness has not been brought about by misconduct or fault. A recommendation must also be forwarded in such a case by the Governor. Such leave may be with full pay during the first fortnight, and on half pay during the second fortnight. When sick leave beyond a week is allowed on pay in any one year the next annual leave may be proportionately deducted. Sickness must be immediately reported, and where warders are prevented from attending the gaol at the opening thereof, a messenger must attend on his behalf to explain the reasons, otherwise a fine may be inflicted. In cases of extended absence, fresh medical certificates must be furnished whenever required, and in cases where no visiting surgeons are attached to the gaols, any expense attendant shall be paid by the person concerned.

15. The foregoing Rules will come into operation on the 1st January, 1898, but probationary warders in the service prior to that date will not be affected by the operations of clauses 4 and 5

ALBERT J. GOULD.

[Extract from Public Service Regulations]

PRISONS DEPARTMENT.

166. (1.) The following shall be the rates of salary per annum, inclusive of pay for Sundays and Public Holidays, of Acting Gaolers, Acting Matrons, Warders, Overseers, and other subordinate officers of the Prisons Department who have been appointed or promoted to any of the positions mentioned since the 31st October, 1897 :—

Position	Rate of Salary per annum		Yearly Increment
	Minimum	Maximum	
	£	£	£
Chief Warders, after 3 years' service	192	..
Chief Warders	184	..
Acting Gaolers, 1st Grade.. . . .	168	174	6
Senior Warders	162	174	6
First-class Warders	144	156	6
Second-class Warders	134	138	4
Third-class Warders	117	129	6
Probationary Warders	110
Principal Female Warders	132	150	6
Forewomen	104	110	6
Female Warders	76	100	6
Probationers	70	..
Chief Overseers	168	180	6
Overseers	154	160	6
Foreman of Works	138	150	6
Acting Gaolers, 2nd Grade	20	..
Acting Gaolers, 3rd Grade	15	..
Acting Matrons, 1st Grade	10	..
Acting Matrons, 2nd Grade	5	..

The increments shall not be allowed unless the Comptroller-General is satisfied with the efficiency or conduct of the officer concerned.

At Trial Bay Prison the Chief Overseer shall receive a salary of £210 per annum, the Overseers £186, and the Foremen £170 per annum, without deductions for quarters where such are allowed.

Probationary Warders in the service prior to the 30th September last shall be eligible for promotion to the position of Third-class Warder on the full pay of that grade, in accordance with the old rules, subject to good conduct and ability.

(2) To meet the extra cost of living or other special circumstances, all classes of warders stationed at the undermentioned places shall receive extra payments at the following rates per annum :—

Wilcannia, Moree, Walgett	£20
Trial Bay	£12
Broken Hill, Bourke, Hay, Cobar	£10

(3.) Warders and other persons mentioned in clause 1 of this Regulation who are provided with quarters, &c., shall be charged the following rates therefor :—

Married—Quarters, fuel, and light only, £18 per annum.
Single— do do £15 do.

Exceptions to this rule will be made in the cases of Third class Warders who are required for special reasons to sleep on the Gaol premises at Bathurst, Forbes, Maitland, and Wagga Wagga, and who will be charged at the rate of 10s. monthly for the quarters provided for them.

Acting Gaolers of all grades at present holding such positions shall not be charged for quarters. But all such officers of the 1st grade who may be hereafter appointed will be charged for married quarters.

Where rations are provided a further charge of £15 per annum in addition to the above rates will be made.

(4) The salaries specified in these Regulations, after making the deductions therein mentioned, shall be taken in substitution for the salaries and allowances specified in page 4180 of the Gazette dated the 17th June, 1896.

Department

Department of Justice, Sydney, 10 January, 1898.

His Excellency the Lieutenant-Governor, with the advice of the Executive Council, has been pleased, under the Acts 4 Victoria No. 29 and 37 Victoria No. 14, to approve of the following Regulation being substituted for Gaol Regulation No. 31.

ALBERT J. GOULD.

PRISONERS OF THE 4TH CLASS.

31. Prisoners awaiting trial shall have the privileges above defined for prisoners of the 3rd Class:—

- (1.) They shall be permitted, at all reasonable times, to see their legal adviser, being a certified attorney or solicitor, or his clerk, authorised in writing, as also any relations or friends requiring to see them in reference to their trial. They may see other relations and friends twice in each week, or more frequently if there be special reason. The Governor of the Gaol may, if he see fit, decline to admit any such visitors, the persons refused admission having, however, the right of appeal to the Sheriff, and, if necessary, to the Minister of Justice.
- (2.) They will be allowed sufficient air and exercise consistently with safe custody.
- (3.) Prisoners under examination will be allowed no communication in the prison, nor with any persons except their legal advisers, unless specially sanctioned by the Justice conducting the examination.
- (4.) The Gaoler will exercise a discretion to prevent any communication to or by prisoners under committal, whereby the ends of justice may be frustrated; but he will, at the same time, see that such prisoners are not deprived of the fair and proper means of organising their defence.
- (5.) Prisoners awaiting trial who have not been previously convicted shall be kept apart, whenever practicable, from prisoners awaiting trial who have been previously convicted.
- (6.) Convicted prisoners awaiting trial on further charges are to be kept separate from other prisoners until such charges are dealt with, unless instructions to the contrary are issued by the Comptroller-General.

Department of Justice, Sydney, 6 April, 1898.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulations (2), with regard to the treatment of prisoners of the seventh-class, being made under the provisions of the "Prisons Regulation Act," 4 Victoria No. 29, and the "Prisons Act of 1874," 37 Victoria No. 14, and of such Regulations standing as paragraphs 24 and 25 of Gaol Regulation No. 34.

ALBERT J. GOULD.

(24.) Upon the completion of fourteen days of his sentence any prisoner may be selected by the Comptroller-General (unless there are medical reasons to the contrary) for special exercise in physical drill. This training may continue during the remainder of the sentence, or may be determined at any time by the Comptroller-General or by the Visiting Surgeon. The exercise shall occupy at least one hour in the morning and one hour in the afternoon of every working day; and during the course of training, notwithstanding the foregoing rules, each prisoner shall wear a flannel undershirt, shall bathe daily unless there are medical reasons to the contrary, and shall receive the highest ration allotted to seventh-class prisoners, viz., No. 9.

(25.) In the cases of well-conducted prisoners who have served three months and upwards, the Comptroller-General may relax any of the foregoing rules during the seven days immediately preceding the date when they become due for discharge, and may, where he thinks it desirable or necessary, communicate with the parents or guardians of such prisoners, notifying them of the date of discharge, and inviting them to take measures to obtain employment for such prisoners and to meet them on discharge. Such discharges may take place in special cases at any time on the day preceding the date of discharge, at the Comptroller-General's discretion. He may also, during the last seven days of their sentences, allow such well-conducted prisoners to write a letter to their parents or guardians daily, and to receive letters from them; and he may further allow daily visits from such parents or guardians, being persons of good repute, the object being to arouse interest in the prisoners, and to afford opportunity to their relatives to obtain employment for them prior to discharge.

Department of Justice, Sydney, 25th April, 1898.

His Excellency the Governor, with the advice of the Executive Council, has been pleased, under the Acts 4 Victoria No. 29 and 37 Victoria No. 14, to approve of the following Regulation being substituted for Gaol Regulation No. 80.

His Excellency the Governor, with the like advice, has also been pleased to approve of the operation of the provisions contained in paragraph 1 of this Regulation taking effect in the cases of prisoners who, at the time of the notification of this Regulation in the *Government Gazette*, may be undergoing sentences exceeding three months and not exceeding twelve months, only in respect of so much of those sentences as will be served after the date of such notification.

ALBERT J. GOULD.

REMISSION OF SENTENCES.

80. Prisoners will, by continuous good conduct and industry, become eligible to a remission of sentence in proportion to the term served by them in accordance with the subjoined scale. In cases of cumulative sentences, the united period shall be deemed the term of sentence, but any sentence that may be imposed upon a prisoner for escaping or attempting to escape from lawful custody, or from any prison or place of detention, shall not be included in the period upon which the remission is to be calculated, but shall be added to the term a prisoner is required to serve under this Regulation.

Scale.

- (1.) Sentences exceeding twelve months, but not exceeding five years, a service of five-sixths.
Sentences beyond five, but not exceeding ten years, a service of four-fifths.
Sentences of more than ten years, a service of three-fourths of the term.
Prisoners in gaol for the first time, undergoing sentences of over six months and not exceeding twelve months, a remission of four days for each month.
Prisoners in gaol for the second time, undergoing sentences of over six months, and not exceeding twelve months, a remission of three days for each month.
Prisoners in gaol for the third or more times, undergoing sentences of over six months and not exceeding twelve months, a remission of two days for each month.
Prisoners in gaol for the first time, undergoing sentences of over three months and not exceeding six months, a remission of three days for each month.
(The definition of a "First time imprisonment" is any prisoner who has actually served a sentence of or exceeding forty-eight hours, whether in default of paying fine or otherwise.)
But this Regulation shall not be applied to sentences commuted from capital convictions. Prisoners under such sentences shall not, however, be debarred from having the circumstances of their case taken into consideration. This Regulation also shall not be applicable to prisoners serving sentences not exceeding three months.
- (2.) By good conduct is meant not merely the prisoner's obedience to all prison and penal rules, but a readiness to assist in maintaining order, and a willingness, as well as steady industry, in every employment of work which may be required of him.
- (3.) Any prisoner who may be placed in the cells as a punishment for misbehaviour, shall forfeit from his prescribed period of remission three days for each day he is in such punishment. For each disorderly mark recorded against him he will lose two days from his remission, and one day will be deducted from his remission for each idle mark recorded against him.

- (4.) Before the tenth day of each month the Gaoler will forward to the Comptroller-General, in a form prescribed, a return of all prisoners in his custody becoming eligible by servitude for remission during the following month, with the necessary information in each case, for decision by the Governor; and such information shall include the returns of orderly and industrious or idle and disorderly marks, as the case may be, earned or incurred by the prisoner, as also of his punishments and general conduct.
- (5.) In dealing with the cases sent in for remission, when the conduct of the prisoner is returned as "good," and he has earned the whole number of ordinary and industrious marks obtainable, the full remission will be recommended.
- (6.) Any prisoner will be allowed, at the commencement of each week, to be informed as to the marks allotted to him for the week preceding; and the Gaoler will investigate any complaint that the prisoner may make upon the subject.

*G.—Letters explanatory of introduction of new system for restricting association.—
Explanatory address to prisoners.*

Sir, Department of Prisons, Comptroller-General's Office, Sydney, 7 August, 1897.

Adverting to the suggestions contained in Article 3 of the Appendix IV of the last Annual Report of this Department, I have the honor to ask the Minister's approval to initiate, wherever practicable, the principle of separation for meals and rest with limited association under all possible supervision for work and exercise. All the cells at Berrima can now be lighted and the system can at once be introduced there. The other gaols can be similarly dealt with as the Government Architect completes the arrangements for providing the prisoners with artificial light at night. The proposed alteration in system will—if approval be given—be brought about gradually, and this will enable me to personally supervise the operation at each prison where it may be considered desirable to introduce the new plan. Some trouble and disorder will probably occur for a time, but this will be confined to the old-timers and worst characters, as I am quite sure that the better-disposed men will welcome the change.

Attached are submitted photographs showing new furniture and arrangement of cell. It is proposed to widen the hammocks generally, the present article being too narrow. Each photograph has, at the foot, an explanatory note describing the use of the various utensils.

I have, &c.,
FREDK. W. NEITENSTEIN,
Comptroller-General.

The Under-Secretary of Justice.

Approved by the Hon. A. J. Gould, Minister of Justice.

Minute Paper.

Copy. Subject: Berrima Gaol; new system of restricted association.

Department of Prisons, Comptroller-General's Office, Sydney.

THE new system of restricted association was, with the approval of the Minister, personally initiated by me at Berrima Gaol on the 14th ultimo. At 5 p.m. of the date mentioned, the prisoners were assembled as they left the works and were addressed by me. The objects and intention of the new departure were explained to them, and a condensed summary of my remarks was afterwards exhibited for general information, together with a copy of revised Regulation 35, section 15. I spent a few days at Berrima watching matters, and was pleased to find that no trouble of any kind occurred. The men seemed to appreciate the change, and I hope that this will be the feeling in the other prisons as the system is extended. The works prisoners at Berrima do not amount to a large number—there are usually thirty or so—but the experience gained by their reception of the new treatment may be of value when the system is being extended to the more populous gaols. As the Government Architect lights up the cells of the different prisons the extension will be gradually carried out.

I directed Mr. Keirnan to report to me how the system was working after it had been a few weeks in operation, and his report is now submitted for the Minister's information.

The grant of £100 for books will not be enough to supply the whole of the establishments. At Portland Prison the chaplain states that there are considerably over 10,000 volumes for 900 prisoners, and four issues of books are allowed weekly. The proportion of books to prisoners in our gaols is nothing like this, and it would be very desirable in the interests of the new reformatory treatment indicated by section 15 of Regulation 35 that a larger grant be made.

FREDK. W. NEITENSTEIN,
Comptroller-General.

The Under Secretary of Justice, B.C., 3/11/97.

Minute Paper.

Copy. Subject: Inadequacy of Grant for Prison Libraries.

Department of Prisons, Comptroller-General's Office, Sydney.

ON former occasions I have invited attention to the fact that £100 is not a sufficient yearly grant to maintain the gaol libraries in proper condition. That sum is not enough to repair the wear and tear of twelve months' use of books by the prisoners, and the libraries will necessarily go from bad to worse. Moreover, under the new rules approved by the Minister, the class of prisoners eligible for books has been largely extended, and the restriction of association will cause a still further demand on the resources of the libraries. It will be absolutely impossible to work the new system laid down in clause 15 of Regulation 35 with much measure of success unless we have an ample supply of wholesome literature. A vital principle of the system is to take away from a prisoner as much as possible the contaminating companionship of his fellows, and to substitute for it the wholesome companionship of good books.

It is therefore respectfully urged upon the Minister that a further sum of £200 be placed upon the Supplementary or Additional Estimates for the current financial year, in order to put the libraries in fair condition.

FREDK. W. NEITENSTEIN,
Comptroller-General.

The Under Secretary of Justice, B.C., 15/11/97.

Application since granted by the Right Honorable the Premier at the request of the Minister of Justice.

COPY of Remarks addressed to Prisoners by the Comptroller-General of Prisons at Berrima and at Young when initiating the new Restricted Association System.

General Notice.

It has been decided to alter the system of associating prisoners in yards. Such a system works badly in the interests of the prisoners generally. It associates well-meaning men with some of the worst characters, and so prevents reformation. It presents opportunities for quarrelling, bullying, and all sorts of tyranny. It forces men who have earned indulgences to share those rewards with undeserving prisoners, and in various other ways it contributes towards misconduct and discomfort. The prisoners, of course, know all these things quite well, and it is certain that only a very few, and those of the worst class, will regret the introduction of the new plan, which has for its object the reformation and protection of the well-disposed.

Cells

Cells will be lighted up at night so as to admit of men reading to a reasonable hour. Books will be provided of a more interesting character than has hitherto been the case, and it is hoped that these privileges will conduce to the comfort, instruction, and improvement of the prisoners. Misconduct will, of course, lead to their withdrawal. The men will take their meals in their cells, and will only associate at work, religious instruction, and at exercise.

This is a modification of the system pursued in England, Victoria, and elsewhere, and it has been thought right to bring the New South Wales prisons under similar treatment, with not quite such rigorous restrictions. A man who honestly desires to reform will now have fewer obstacles placed in his way, as he need not fear contamination by association. He will have the companionship of his fellows while at work, but he will secure a wholesome privacy at meals and at all other times.

I have thought it well to take the prisoners into my confidence, so that they may clearly understand the reason for the new departures.

FREDK. W. NEITENSTEIN,
Comptroller-General.

H.—Circulars issued to various Officers in connection with the Reformatory Treatment of young Prisoners.

Circular Letter.

Sir, Department of Prisons, Comptroller-General's Office, Sydney, 6 April, 1898.
The officer-in-charge of Gaol has been instructed to hand to you a copy of a circular memo. which I have issued relative to seventh-class prisoners.

It will be observed that not only has a new departure been made in the treatment of such prisoners, but provision has been made for frequent intercourse between them and their parents or guardians (being persons of good repute) during the seven days immediately preceding the date of their discharge. This is limited to well-conducted prisoners who have served three months and upwards; the object being, as the regulation states, to arouse interest in them, and to afford opportunity to their relatives to obtain employment for them prior to liberation.

I shall be glad if you will be so good as to assist me by your hearty co-operation.

I have, &c.,

FREDK. W. NEITENSTEIN,
Comptroller-General.

The Visiting , H.M. Gaol,

Circular Letter.

Rev. Sir, Department of Prisons, Comptroller-General's Office, Sydney, 6 April, 1898.

I enclose for your information a copy of a circular memo. which I have issued to officers in charge of gaols, relative to seventh-class prisoners. It will be observed that not only has a new departure been made in the treatment of such prisoners, but provision has been made for frequent intercourse between them and their parents or guardians (being persons of good repute) during the seven days immediately preceding the date of their discharge. This is limited to well-conducted prisoners who have served three months and upwards, the object being, as the regulation states, to arouse interest in them, and to afford opportunity to their relatives to obtain employment for them prior to liberation. I feel sure that this provision will commend itself to your good judgment, and I shall be glad if during the last seven days of their sentences, you will be so good as to take a special interest in such prisoners, and to exercise over them those good and reformatory influences appertaining to your sacred offices. It needs no words from me to convince you how essential such a step is to the reformation of the prisoners.

I have, &c.,

FREDK. W. NEITENSTEIN,
Comptroller-General.

The Chaplain, H.M. Gaol,

Circular memo.

Department of Prisons, Comptroller-General's Office, Sydney, 6th April, 1898.

THE very careful attention of officers in charge of gaols is invited to the two proposed additional paragraphs to Regulation 34, which in all probability will come into operation on 1st May proximo. An intelligent interest, and a ready effort to carry out the terms of the regulation are expected from every officer. Much will depend on the tact and energy displayed, and the Comptroller-General hopes that these will be shown in a marked degree. On the entry of a seventh-class prisoner into gaol you should use every endeavour to ascertain the address of his parents or relatives, and in those cases where the addresses are not in the vicinity of the gaol, you should report the fact to this office, so that the prisoners may be transferred to the nearest gaol before liberation.

As regards paragraph 24, the physical exercises will be seen in the Handbook of Drill. Provision has been made for the granting of a monetary allowance not exceeding 9d. per diem to the drilling officers. Should, however, only one physical drill be given during the day, the rate will be 6d. per diem. Payment will only be made for the actual days when the routine of drill is carried out, and when at least six prisoners are exercised. The allowance will be restricted to such of the second and third class warders only as may be able to satisfy the Comptroller-General as to their ability in this direction, and who may be selected by him. In this connection, the officers in charge will submit, for the Comptroller-General's approval, the names of the warders whom they consider best adapted for the work. They will also select the prisoners to undergo the physical drill, after having consulted with the visiting surgeon in reference to the matter. The names of the prisoners need not be furnished to this office unless any special cases comes under notice.

It is confidently hoped that the provisions of paragraph 25 will tend towards the reformation of those prisoners who come under its operation. It applies only to well-conducted seventh-class prisoners who have served three months and upwards. A sample of a suitable communication to be forwarded to the parents or guardians of such prisoners is attached, and some days (not less than seven) preceding the date when they become due for discharge, these memoranda should be sent. It will be observed from the terms of the regulation that only in those cases where the parents or guardians are of good repute is the privilege of letter-writing and daily visits during the last seven days of the sentence to be encouraged. In cases where such persons are known to be of ill-repute, such action must not be taken, as the object of the regulation would be defeated if such were allowed. A delicate responsibility is placed on the officers in charge in this matter, which they must be prepared to bear. It is not expected that any great difficulties will present themselves. Common sense and tact must, however, be exercised. In those cases where arrangements have been made for the prisoners to be met, they may be released on the day preceding the date of discharge, but in no instance must a prisoner be so liberated unless his parents or relatives are present to receive him. In their absence he must be detained until the following morning, and released at the usual hour.

A copy of this circular memo. should be given to the Visiting Justice and the Visiting Surgeon, whose hearty co-operation should be solicited in the matter.

FREDK. W. NEITENSTEIN,
Comptroller-General.

The , H.M. Gaol,

Sample

Sample communication.

Memorandum to

Permit me to bring under your notice that the sentence of [*Name to be filled in*] will expire on . . . The Regulations of this Department provide that during the last seven days of his sentence he may write a letter to you daily and receive such letters as you may send. You may see him daily during that period during the usual visiting hours, and he may be released to your care on the day preceding the date of his discharge, should you be present to receive him. It will doubtless be to his interest if you should avail yourself of these privileges, and in the meantime endeavour to obtain employment for him prior to his discharge. I need hardly point out how such action will tend towards his reformation.

H.M. Gaol , (*Date*)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE DEPARTMENT OF PUBLIC WORKS.

(ANNUAL STATEMENT—1896-7.)

Printed under No. 3 Report from Printing Committee, 6 July, 1898.

The Under Secretary for Public Works and Commissioner for Roads to
The Hon. James Henry Young, M.P., Secretary for Public Works.

The Department of Public Works, 24 January, 1898.

Sir,

I do myself the honour to submit, for your information, the Annual Statement relating to the operations of this Department during the year ended 30th June, 1897.

The gross expenditure for the year amounted to £1,739,872 14s. 11d., of which the sum of £883,203 6s. 9d. was provided from the Consolidated Revenue, and £856,669 8s. 2d. from Loan Funds. This expenditure was distributed as under:—

SUMMARY OF EXPENDITURE, 1896-7.

Head of Service.	Revenue.	Loan.	Total.
	£ s. d.	£ s. d.	£ s. d.
Establishment*	28,308 15 10	28,308 15 10
Railway Construction	9,940 2 4	175,426 12 7	185,366 14 11
Tramway Construction	10 11 9	12,129 9 7	12,140 1 4
Harbours and Rivers and Water Supply ...	57,687 8 7	267,462 16 6	325,150 5 1
Dredge Service	79,255 15 0	79,255 15 0
Country Towns Water Supply	21,930 9 10	21,930 9 10
Water Conservation and Irrigation	129 6 5	32,518 2 10	32,647 9 3
Government Architect	83,969 6 8	166,183 0 0	250,152 6 8
Roads and Bridges	621,948 17 3	54,261 1 11	676,209 19 2
Sewerage Construction	1,953 2 11	126,757 14 11	128,710 17 10
TOTALS	£ 883,203 6 9	856,669 8 2	1,739,872 14 11

* This includes the Ministerial Office and the General, Clerical, and Accounts Staffs.

Comparing these figures with the expenditure of the preceding year, there is a net decrease for this year of £32,612 17s. 7d. The year's expenditure was spread over 34,492 vouchers, and the actual payments were made as follows:—

	£	s.	d.
By the Department, direct	975,997	2	6
By the Treasury	763,875	12	5
Total	£1,739,872	14	11

The following tabulated statement is interesting as showing the distribution of the expenditure under the heads of Contracts, Wages, Salaries, Materials, &c. :—

SUMMARY of Expenditure, showing Distribution under Contracts, Wages, Salaries, and Materials, &c.

Head of Service.	Contracts.		Wages.		Salaries.		Materials, Miscellaneous and Incidental.		Totals.

The number of contracts entered into during the year was 3,587, of an estimated value of £892,172.

RAILWAY AND TRAMWAY CONSTRUCTION.

Railways.

From the report of the Engineer-in-Chief (Mr. Deane), hereto appended, it will be seen that the following extension lines have been completed and opened for traffic during the year:—

Line.	Length.	Opened for Traffic.	Cost to 30th June, 1897.
	m. ch.		£
Jerilderie to Berrigan	21 65	14 Nov., 1896	38,781
Parkes to Bogan Gate	23 38	15 Dec., 1896	50,396
Narrabri to Moree	63 72	1 April, 1897	131,850
Rookwood Cemetery Branch	— 68	20 Feb., 1897	6,563

With the exception of the Rookwood Cemetery Branch Line, all these extensions are of the "pioneer" class, and are intended to afford railway communication in those tracts of level country where the amount of traffic procurable is not sufficient to justify the heavy expenditure entailed by the construction of a thoroughly equipped railway. These pioneer lines have been designed and carried out in the most economical manner, with the result that the average cost per mile is only about £2,028, being some £1,700 per mile less than the cost of the cheapest "light line"—namely, Nyngan to Cobar—hitherto constructed in the Colony.

It is gratifying to be able to report that the benefits accruing to the country from these lines have surpassed all anticipations. In each case the estimate of traffic has been exceeded, while the cost of maintenance has been remarkably low. They have proved to be of great advantage to the development of those areas through which they run, and their success fully warrants your decision for the further extension of similar lines into all suitable districts.

Lines of a like description were in course of construction at 30th June, 1897, as follows:—

Bogan Gate to Condobolin—length, 39 m. 22½ ch.

Nevertire to Warren—length, 12 m. 34 ch.

The first-mentioned is a continuation of the Parkes to Bogan Gate Extension, and its completion may be looked for at an early date.

The Nevertire to Warren Line, which has now (24th January, 1898) been completed and opened for traffic, is the first experiment on a comparatively large scale of the construction of a Railway Line by the Department on the day-labour system without the intervention of a contractor.

This work was begun and carried on under somewhat adverse conditions. The weather for a considerable period was unfavourable, the ground at one time being so hard that the ploughs could not be used, and afterwards becoming so sodden in consequence of heavy rains that operations were brought to a standstill. There was also considerable difficulty experienced by the Department in procuring the skilled labour required for some portions of the work, owing, it is believed, to the exodus of the better class of railway men to the West Australian Goldfields.

These difficulties have delayed the completion of the line, and slightly added to its cost, but, notwithstanding these hindrances, the experiment has proved satisfactory. It has conclusively shown that the Department is not entirely dependent upon contractors, but that it is capable in itself not only to design, but also to execute, works of considerable magnitude.

It may be freely admitted that a contractor possesses several advantages over the Department, as, for instance, in the profitable employment of his working plant. A contractor has the chance of securing other contracts either in this or the neighbouring colonies, and so getting the best possible return from the continuous use of his plant, whereas the Department, after purchasing a costly plant and using it on one job, may have afterwards to allow it to lie idle for a lengthened period, when it becomes a dead loss. Again, the Department, having to work under hard and fast regulations, is not allowed equal facilities with a contractor as regards the supply of materials, and the engagement and dismissal of employees.

On

On the other hand, under the day-labour system, the Department is saved from the many vexatious complications and claims which are so liable to crop up under the contract system. Once the work has been completed by day-labour, its exact cost is definitely known, and there is no possibility of demands for extra payments being brought against the Department. This is a very important aspect of the question, as the Department has had, in the past, to face not a few very heavy claims on the part of contractors. For this reason alone, if for no other, the Engineer-in-Chief is prepared to recommend that, wherever practicable, the day-labour system should be adopted in preference to giving the work out to contractors.

A short extension designed to connect Darling Island with the Darling Harbour Line was commenced towards the end of the year. In order to meet the ever-growing demand for wharf accommodation in the Port of Sydney, it was decided to utilise the extensive and valuable water frontage of Darling Island, and it thus became necessary to connect it with the Darling Harbour Line. The extension will consist of a double line of railway, and a contract for the formation of the first length of 21 chains is now in progress.

The construction of the undermentioned lines has been authorised by Parliament :—

	Length	Estimated Cost.
Berrigan to Finley ...	13 miles 62 chains £27,250
Tamworth to Manilla ...	29 miles 45 chains 73,170

The necessary plans and working drawings have been prepared for the Berrigan to Finley Extension, which it has been determined to construct on the day-labour system. The commencement of the work has, however, been delayed, pending compliance with certain conditions specified in the Act authorising its construction.

Influenced no doubt by the exorbitant claims frequently made on the Government by owners of lands resumed for railway purposes, Parliament deemed it advisable to insert the following proviso in the Berrigan to Finley Railway Act :—

Provided that the said works shall not commence to be constructed unless the private lands required for the construction of the line (except town allotments) have been contracted, by instrument in writing, to be conveyed by deed of gift, transfer, or exchange from the owners to the Crown, or there has been paid to the Constructing Authority a sum equal to, or greater than, the amount estimated by the said Authority to be required for the resumption of land for the said work, and the money so paid shall be applied for the purpose of the said resumption.

Similar provisos appear in the Jerilderie to Berrigan and the Nevertire to Warren Railway Acts.

The effect of this proviso has in each instance been to delay the commencement of operations. The work of obtaining the proper transfers from the owners and others interested in the lands required for the construction of the railway is intricate, and has occupied some considerable time, and inasmuch as the value of the private lands required for the above-mentioned lines has been insignificant, it is doubtful whether the savings effected by the operation of the proviso in question are not counterbalanced by the delay thus incurred in carrying through the works. So far there have been two refusals on the part of owners to transfer the required lands without compensation, and in each case the persons directly interested in the construction of the line have subscribed the amount of compensation asked for.

In

In the Tamworth to Manilla Railway Act, Parliament has provided that the work shall not be commenced if the compensation to be paid for the land required to be resumed is estimated to exceed the sum of £2,000, unless there has been paid to the Constructing Authority a sum equal to or greater than the amount estimated in excess of that sum.

Proposed extension of the Railway into the City of Sydney.—The consideration of this important undertaking, which has been so frequently and urgently advocated by the Railway Commissioners, has engaged much of the time and attention of the Branch during the past year.

The Parliamentary Standing Committee on Public Works having been appointed a Royal Commission to inquire into the whole question, the Railway Construction Branch was called upon to furnish voluminous plans and estimates of cost of the various proposals brought before the Commission. After a most exhaustive investigation, the Royal Commission reported, almost unanimously, in favour of the extension of the railway into the city by the route and according to the plan described as the St. James' Road Scheme. At a later date the question was referred by Parliament to the Parliamentary Standing Committee on Public Works, who, after a second and thorough inquiry, endorsed the recommendation of the Royal Commission.

The services and assistance rendered to the Royal Commission and to the Public Works Committee in this inquiry by Mr. Deane and his staff were most valuable and much appreciated.

Permanent-way Material.—In August, 1896, the Government invited tenders for the manufacture within the Colony of 150,000 tons of steel rails, but no satisfactory tender was received. The offer made by Messrs. G. and C. Hoskins, of Sydney, afforded proof, however, that they were prepared to take in hand the risk of erecting the necessary plant for the manufacture of steel rails, but the price asked for by them was so considerably beyond the cost of imported rails that the Government could not see its way to accept their tender.

Tramways.

Mosman's Bay Extension.—During the year the extension from Spit-road to Mosman's Bay of the Military Road Electric Tramway, a length of 1 mile 37 chains, has been completed and handed over to the Railway Commissioners. The heavy gradients on this extension afford a severe test of the suitability of electric traction to the more rugged and uneven districts met with in this portion of the Metropolitan Area, and although these have demanded the supply of extra power, the working of the line has so far proved satisfactory.

The total expenditure on this extension up to 30th June, 1897, was £6,484.

Willoughby Electric Tramway.—This further extension in the North Sydney district of electric traction on the overhead-wire system was authorised in December, 1896, and its construction is being rapidly proceeded with. The extension starts from the present terminus of the cable tramway in Falcon-street and ends at Victoria Avenue, Chatswood, a length of 2 miles 45 chains.

In connection with this line, the section of the existing cable tramway between Ridge-street and the terminus in Falcon-street will be converted into an electric line, the motive power for the whole distance from Ridge-street to Chatswood being supplied from generators placed in the Ridge-street engine-house. The total cost of this extension, including an additional generator and a necessary enlargement of the car-house, is £19,600. The completion of this work may be expected about March, 1898.

Rose Bay Electric Tram.—Another extension on the same system as the preceding is the line which has been authorised to be constructed from the present cable tramway terminus at Ocean-street to Rose Bay—a distance of 1 mile 23 chains of single track. The motive power will be supplied from generators placed in the cable tramway engine-house at Rushcutters' Bay. The same generators will be availed of to provide the power required to work the pumps in connection with the Double Bay Low-level Sewerage Scheme.

George-street and Harris-street Electric Tramway.—This tramway, the construction of which at an estimated cost of £130,500 was authorised by Parliament in September, 1896, will be the most prominent instance of electric traction in the Colony. The line will start from the eastern side of Circular Quay, run along George-street to the Redfern Railway Station, and then continue along Harris-street to the intersection of John-street, Pyrmont. It will consist of a double track throughout its whole length of 3 miles 20 chains. Including cross-over roads and junctions, this is equal to a length of single track of about 7 miles.

The overhead-wire system has been adopted for this tramway after a very careful examination into the merits of the various methods of electric traction in use throughout the world. It was found that the overhead-wire system was being almost everywhere adopted in preference to all others, inasmuch as it possesses the advantages of comparative lowness in initial cost with a proved efficiency and cheapness in working.

Contracts for most of the materials required for the construction and equipment of the line are now in course of execution. The contract for the steam-engines and generators has been placed with an American firm who have a world-wide reputation for the manufacture of this special class of machinery.

HARBOURS AND RIVERS, WATER SUPPLY, BRIDGE CONSTRUCTION, WATER CONSERVATION.

As Mr. Darley's report, as well as those of the several Assistant Engineers, furnish details of the various works completed and in progress during the year, I need only draw particular attention to a few of the larger undertakings.

Improvement of Northern Rivers Navigation.

The various schemes for the improvement of the entrances to the seven principal northern rivers, by means of the construction of guide-banks, training-walls, and breakwaters, have made good progress during the year.

Tweed

Tweed River.—The training-walls at the entrance to this river have now a total length of 28,700 feet, the additions made during the year being as follows :—

No. 5 wall...	240 feet.
No. 2 wall...	2,520 feet.

The total expenditure for the year in connection with this river was £6,151.

Richmond River.—Steady progress continues to be made with the extension of the breakwaters, 460 feet having been added to the northern and 574 feet to the southern, during the year. The many tributaries of the Richmond River have also been the subjects of improvement works in the way of snagging operations and the construction of fascine banks where necessary. The North Creek Canal, which has a length of $2\frac{1}{4}$ miles, was formally opened for traffic on 20th July, 1896, and that section of it lying between Tintenbar Road Bridge and North Creek is now being enlarged to a width of 60 feet. The amount expended on the Richmond and its tributaries during the year was £26,137.

Clarence River.—With the exception of extending the north training-wall a further distance of 60 feet, the work carried on at the entrance to the Clarence River has been principally of a preparatory nature. It has comprised the work of getting the plant, roads, &c., into proper order, making a new cutting into the quarry, and erecting a wharf on Freeburn Island for loading stone into the punts, together with a coal wharf and bunker. When these preparatory operations are completed, the work of extending the north training-wall will be continued, and a start made with the construction of the Goodwood Island guide-bank. The expenditure for the year in connection with the Clarence and its tributaries was £13,840.

Satisfactory progress was made in extending the various training-walls at the entrances to the Bellinger, Nambucca, Macleay, and Manning Rivers. The breakwater designed to form a harbour of refuge at Trial Bay has been extended a further distance of 60 feet, making the total length now constructed 600 feet, out of a proposed ultimate length of 2,000 feet. The average number of prisoners employed on this work was 116, and the year's expenditure amounted to £4,331.

In the Appendix will be found plans of the entrances to all the above-mentioned rivers, showing the entire schemes as proposed and the sections carried out up to 30th June, 1897. The total expenditure incurred in connection with these various works up to that date has been £720,000.

It is scarcely necessary for me to point out here that the improvement of these rivers, by making them serviceable and convenient for purposes of navigation, is a matter of vital importance in the development of the Colony. They form the natural highways of some of the richest and most fertile portions of the Colony, and for many years to come must constitute almost the sole outlets for the trade and commerce of the Northern districts. The moneys expended on their improvement may fairly be considered as analogous to the large amounts yearly spent on the construction and maintenance of roads in the other parts of the Colony.

Newcastle District.

The regular work of maintaining and improving the efficiency of Newcastle Harbour by removing reefs, dredging, reclamations, alterations and additions to the wharfage accommodation, &c., has been steadily pursued during the year. Extensive preparations have also been made for the construction of the Southern Breakwater and guide-wall.

A long-felt want in the proper working of the port has been met by handing over to the local Marine Board the Government steamer "Ajax," which has been converted into a pilot-steamer of the first class, and will no doubt prove to be a valuable addition to the equipment of this important harbour. The work of conversion was wholly carried out at the Fitzroy Dock Workshops. A photograph of this handsome steamer is given as an illustration in the Appendix.

Sydney Harbour.

A reference to Mr. Darley's report will show that a very large amount of work has been accomplished during the year in connection with the various wharfs, jetties, berthing facilities, and reclamations in Sydney Harbour. A notable addition to the wharfage accommodation has been begun at Darling Island, in order to meet the constant demand for shipping-berths. The proposed new wharfs in Woolloomooloo Bay have already been bespoken, and it has, therefore, been found necessary to utilise the water frontage of Darling Island for wharf purposes. It has been decided to build a quay-wall, composed of monolithic blocks of concrete, round the island, a length of about 2,500 feet, and the construction of the first section of 450 feet has been commenced. All the wharfs hitherto constructed have been formed of timber, but the site round Darling Island is specially suitable for the building of a concrete wall, as the bottom is all sound rock at a depth of about 28 feet from low water. The initial cost of such a structure will be considerably greater than that of a timber wharf, but the permanency of the wall and the consequent saving in the matter of renewals and repairs will, it is thought, in the course of a few years more than compensate for any excess in the first cost of the work.

Proposed South Coast Harbour.

A scheme for the construction of a deep-water harbour at Port Kembla has occupied a good deal of Mr. Darley's time and attention during the past year. The want of a sheltered coast harbour where vessels might safely load and unload in all states of the weather has long been held to be a serious obstacle to the development of the coal trade and commerce of the Illawarra district, and the general consensus of opinion pointed to Port Kembla as the most suitable and convenient site for the construction of such a harbour.

The scheme designed by the Department provided for the construction of two breakwaters—one, the eastern, to be 2,800 feet in length, and the second, or northern, to be 3,530 feet in length—which would enclose an area of 260 acres, having a depth of 24 feet and over at low water, and 30 feet over half the area when dredged out. The estimated total cost of the proposed works, exclusive of the purchase of land and private rights to existing jetties and Railway lines, was £440,000.

The scheme was in due course referred to the Parliamentary Standing Committee on Public Works who, after an exhaustive inquiry, recommended the construction of the eastern breakwater only, as being sufficient for present requirements, at an estimated cost of £200,000. The matter has now to come before Parliament for a final decision.

Dredge Service.

The total dredge plant possessed by the Department at the present time comprises 14 ladder dredges, 8 sand-pump dredges, 7 grab and sand-pump dredges, 12 grab dredges, 25 tugs, and 76 silt-punts. As will be seen from the tabulated statements attached to the report of the Superintendent, the work accomplished during the year has been of a highly satisfactory character. More especially has
 mention

mention to be made of the results achieved by the sand-pump dredges. Through their agency there is every year brought into existence a large area of reclaimed land—principally in Sydney and Newcastle Harbours—which constitutes a most valuable asset in the public estate of the Colony.

In order to more expeditiously deal with the shallow bars existing at most of the Northern River entrances, the Department has now in course of construction on the Clyde, Scotland, a twin-screw dredge of 700 horse-power, designed to load herself when steaming slowly over bars, and to draw, when laden, not more than 5 feet, yet powerful enough to contend with heavy seas. This vessel will carry on the work of deepening the river entrances by means of a suction pump worked while she is slowly steaming in or out over the bar; the spoil will then be deposited at sea or some other suitable place. Judging from American experience with a similar kind of dredge, this new vessel should prove a valuable addition to our existing dredge-plant.

Fitzroy and Sutherland Docks Establishment.

In addition to the large amount of general repairs and renewals effected in connection with the dredge service and other divisions of the Harbours and Rivers Branch, as detailed in the report of the Principal Assistant Engineer, this establishment has during the past year satisfactorily carried out the work of converting the s.s. "Ajax" into a pilot steamer for service at Newcastle, and the grab dredges "Delta," "Eta," "Theta," and "Gamma" into combined grab and sand-pump dredges.

The facilities here afforded for the docking of the war-ships and the huge merchant steamers that visit Sydney are yearly becoming more appreciated, and help considerably to bring trade to the port. During the year fifteen war-ships, nineteen merchant steamers (some of them, such as the German mail-boats, being of immense size), and two sailing vessels,—the aggregate tonnage being 121,713 tons,—made use of the Sutherland Dock for the purposes of overhaul and repairs.

Metropolitan Water Supply Construction.

A new high-level covered reservoir, capable of holding 17,000,000 gallons of water, is being constructed on a site in Centennial Park. It is intended as a substitute for the existing Paddington reservoir, which has been found to be too small, and at an elevation too low to give a proper supply of water to the important and thickly-populated portions of the city and suburbs now fed by it. The new reservoir will occupy an area of about $3\frac{1}{2}$ acres, will be oval in form, and a special feature in its design will be a groined coke-concrete roof. An intersecting wall will divide the reservoir into two compartments, so that at intervals the one can be cleaned while the other maintains the water supply. The reservoir is to be finished in April, 1898, and when all complete the top of the roof will be grassed over so as to form a promenade or be used for other recreation purposes. The total cost of the work, including the expenditure on the necessary new mains, valves, &c., will be about £65,000, of which the sum of £22,941 had been spent up to 30th June, 1897.

Country Towns Water Supply.

During the year water supply works were completed for the towns of Armidale and Parkes, and the construction of water supply works for Tamworth was in progress. These are all gravitation schemes, and in each case the concrete dam for the storage reservoir has been carried out by day labour.

At Tamworth the great fall available will be utilised for the purpose of furnishing power for the lighting of the town by electricity.

The additional scheme now completed for the Parkes municipality was rendered necessary by the failure of the original drift-bed pumping scheme. Owing to a similar cause, additional sources of supply will require to be provided for Cootamundra and Bathurst, and in both cases it is proposed to adopt gravitation schemes.

Plans and estimates have been prepared for gravitation schemes for Tenterfield, Mudgee, Picton, Wollongong, and Wellington.

Bridge Construction.

During the year, 124 new bridges (including 53 renewals) were completed and opened for traffic, aggregating 13,483 feet in length, and consisting of 357 plain timber beam spans, 20 timber truss spans, one steel lift span, and 4 masonry and brick arch spans. With the exception of the steel lift span at Swan Hill and the three steel spans at Wallis Creek, Maitland, all these bridges are constructed of timber, though in many cases iron or concrete piers and abutments have been used.

The most important of these new bridges were the following :—

Swan Hill Bridge over River Murray, which has been erected at the joint expense of this Colony and Victoria. At this point on the river there is a large amount of live-stock traffic, which hitherto was carried by a hand-power punt, and the want of a bridge has been long and severely felt. Counting from the river source, it is the tenth bridge spanning the Murray, and is the most westerly point on the river touched by the Victorian railway system. It has a total length of 381 feet, and the cost of the structure, excluding incidental expenses, has been £7,626, half of which is defrayed by the colony of Victoria.

Inverell Bridge over the M'Intyre River was completed and opened for traffic in July, 1896, replacing the old and very narrow bridge which formerly crossed the river at this town. Its total length is 440 feet 9 inches, with a 24 feet roadway, and its cost, excluding incidental charges, has been £8,939.

At 30th June, 1897, contracts were in progress for the erection of sixty-one new bridges, having an aggregate length of 10,970 feet, and the total estimated cost being £73,462. Chief amongst them may be mentioned the suspension bridge over the Kangaroo River at the point where the Moss Vale-Nowra coach road crosses the gorge in which the river flows. This is the first suspension bridge erected by the Department, the site being admirably suited for this description of bridge. The formation is of solid sandstone, offering an excellent anchorage for the cables as well as an unlimited supply of excellent stone for the masonry piers. The depth of the gorge, too, renders the suspension type of bridge the most economical. The work is well advanced, and its completion may be expected in March, 1898; the estimated cost is £8,000.

Another important bridge now in course of erection is the bridge over the Hunter River at Morpeth, which will take the place of the hand-power ferry at present carrying the traffic. It will have a total length of 815 feet 9 inches, with an 18-foot roadway, and is estimated to cost £9,000.

Water Conservation and Irrigation.

The most important event in connection with this branch during the past year has been the passing of the Water Rights Act. Successive Governments have admitted the necessity for legislation dealing with water rights, as it was recognised that British enactments did not meet the requirements of this Colony, more especially
of

of the Central and Western Divisions. The utility and importance of the Water Rights Act, which became law on 1st November, 1896, were strikingly exemplified by the fact that, before 1st February, 1897, 471 applications for licenses for dams, pumping engines, &c., had been received. In connection with these applications it is satisfactory to note that the security afforded by the Act is inducing landowners to construct a better class of work than they were formerly willing to undertake, as the circumstances now warrant a greater outlay on account of water conservation purposes.

The completion of the lock and weir in the River Darling, near Bourke, marks an important advance towards the better utilisation of our western rivers. Owing to the unstable character of the channel of the River Darling, and to the great diversity of conditions, ranging from an almost dry bed to high floods, it was a matter of considerable difficulty to decide on a design for lock and weir which would be sufficiently substantial to withstand the varying conditions, and yet keep within reasonable limits as regards cost. The class of weir constructed at Bourke is an entirely new departure in the Australian colonies, and may be regarded as partaking largely of the nature of an experiment. The reports received from time to time since the lock and weir were brought into operation tend to show that so far the works are a thorough success.

The investigation by Colonel Home, R.E., of the whole question of water conservation and irrigation throughout the Colony was completed by that gentleman within the year for which his services were specially engaged. Briefly stated, the effect of Colonel Home's report is that there is only one large scheme of water conservation and irrigation which merits immediate attention. This is the proposal to divert the waters of the Murrumbidgee through the plains which extend between that river on the north and the Billabong Creek and Edwards River on the south. Colonel Home, however, was of opinion that irrigation settlements, such as are being created at Hay and Wentworth, gave fair prospects of proving successful. Such works would also help to popularise irrigation, and to introduce improved methods of cultivation. The development of irrigation is, in the opinion of Colonel Home, a comparatively slow process, and, being a new industry in the Colony, a little caution in expanding it can do no harm, and may save a good deal of money and trouble.

In regard to the irrigation scheme at Wentworth, the Trust created under the provisions of the Wentworth Irrigation Act has been dissolved, and the powers conferred by the Act assumed by the Government. The pumping plant has been erected, and the channels completed. It is intended that the administration and future extension of the works shall be retained in the hands of the Government until satisfactory arrangements can be made for management by the settlers themselves.

GOVERNMENT ARCHITECT'S BRANCH.

It will be seen from the report of Mr. Vernon, attached, that the expenditure for the year in connection with this Branch reached the amount of £250,152 6s. 8d., the number of separate structures dealt with being 583.

The new buildings completed during the year comprised:—

4 Post and Telegraph Offices, costing	£6,362
3 District Lands Offices, costing	11,184
6 Court-houses, costing	34,833
5 Police Stations, costing	7,897
6 Lock-ups, costing	10,165

Special

Special mention may be made of the handsome and commodious court-houses erected at Parramatta and West Maitland. Both buildings have been carefully designed to meet all possible requirements as regards the accommodation and convenience of the Judges and others who have to transact business therein, and they may fairly be held to be in advance of previous efforts in this description of building. Photographs are given in the Appendix of the Parramatta court-house, the Dubbo and East Maitland lands offices, and of the Mount Victoria post-office, the last named being recognised as a model type of building suitable for the Mountain districts.

Several extensive additions and improvements to existing buildings have been completed during the year. The Supreme Court has been enlarged by the addition of two fully-equipped court-rooms and a range of chambers and offices for the accommodation of the Judges and their Associates. Additions have also been made to the Chancery-square Court and the Custom House, the latter being required to accommodate the staff connected with the Land and Income Tax branch. A new and extensive hospital building, fitted with all modern appliances, has been added to the Rydalmere Hospital for Insane, and will greatly increase the efficiency of that large establishment.

The more important works in hand at 30th June, 1897, were the following :—

Building.	Description of Work.	Expenditure to 30th June, 1897.
		£
Kenmore Hospital for Insane	New Building	88,940
Redfern Court-house	New Building	7,306
Health Board Offices	New Building	4,810
Art Gallery... ..	Additions	9,579
Government Printing Office	Additions and improvements	18,774
Royal Mint... ..	Additions and improvements	6,612
Treasury	Additions	2,642

The Kenmore Hospital for Insane, which was commenced in 1894, will be a very prominent addition to the public buildings of the Colony. The final completion of the whole scheme of buildings will not be accomplished for some considerable period. In the meantime, however, such divisions of the institution as are finished are at once utilised and occupied by patients.

The additions being made to the Government Printing Office, the Royal Mint, and the Treasury are in each instance required to meet the urgent necessity for increased accommodation.

Mr. Vernon, in his report, reiterates his previous warnings as to the danger of allowing public buildings in the country districts to drift into a state of dilapidation through want of periodical attention. The Branch has now under its care close upon 1,000 separate buildings and structures scattered all over the Colony, and Mr. Vernon's observations with respect to the insufficiency of the sum taken on the annual Estimates to keep existing buildings in a proper state of repair are deserving of serious consideration.

The preparation of designs and plans for the proposed new Houses of Parliament for the Colony has during the year occupied much of the time and close personal attention of Mr. Vernon and of a special staff of assistants.

The inadequacy of the present building in respect of accommodation and convenience has long been admitted. So far back as 1860 competitive designs for new Houses of Parliament were invited by the Government of the day, but, beyond receiving

receiving the designs and awarding the premiums, no further action was taken in the matter. A portion of the present building was brought into use as a Legislative Chamber in the year 1829, and since that date it has continued to be repaired and added to as circumstances demanded. Some of the more recent additions are in every respect satisfactory; but, taken as a whole, the building is unsuitable for present requirements, is a constant source of heavy expense for repairs, and, owing to the greater portion of it being constructed of wood, is subject every day to the imminent risk of destruction by fire.

The designs and plans submitted by Mr. Vernon for consideration by the Parliamentary Standing Committee on Public Works provided for a Council Chamber with accommodation for eighty members or more, and an Assembly Chamber for 182 members, with a capacity for increase of accommodation suitable for 294 members. They also provided for additional special accommodation for His Excellency the Governor, the President, the Speaker, the Ministry, and the members of both Houses. Much improved accommodation was also made for the *Hansard* staff, reporters of the Press, Parliamentary officials, and the general public. Compared with the existing building, Mr. Vernon's scheme showed an increase of thirty-three in the number of rooms and of 32,648 feet in the superficial area.

At the request of the Committee, Mr. Vernon prepared two additional designs, one for altering and improving the accommodation in the present building, at a cost of from £10,000 to £15,000, and the other for a new building which could be erected for about £250,000. Since the close of the year under review the Committee has completed its inquiry, and has recommended the adoption of the scheme submitted by Mr. Vernon providing for alterations to the present building at a cost not exceeding £15,000. In the opinion of the Committee, the existing building, with the proposed alterations, should suffice for the business of Parliament for many years to come, and, therefore, the erection of new Houses of Parliament may be deferred.

ROADS AND BRIDGES.

The Principal Assistant Engineer for Roads (Mr. Scarr), in his report, attached, gives a succinct statement of the ever-growing volume of operations carried on by his branch. He also furnishes a large amount of statistical information respecting the roads mileage, the number of bridges of different kinds, culverts, &c., under the charge of the Department, together with details of the expenditure incurred thereon during the year.

The following statement summarises, in tabulated form, the roads mileage, the number and length of bridges and culverts, and the year's expenditure at 30th June, 1897 and 1896, respectively:—

Date.	Roads. Mileage.	Bridges.		Culverts.		Total* Branch Expenditure for year.
		No.	Length in feet.	No.	Length in feet.	
1897—30th June	39,874	2,842	267,964	32,671	486,907	£ 676,210
1896—30th June	38,952	2,771	260,519	31,073	461,578	776,400
Increases during past year ...	922	71	7,445	1,598	25,329	£100,190 (Decrease.)

* Includes expenditure on new bridges completed and in progress.

It will be seen from this table that, while the roads mileage and the number of bridges and culverts show a very considerable increase over the preceding year, the total expenditure of the branch for the year has decreased to the extent of £100,190. On this point, Mr. Scarr remarks that expenditure has been strictly confined to the most urgent requirements, and the cost of maintenance reduced to the lowest possible limits, compatible with efficiency.

Notwithstanding this diminished expenditure, the state of the roads generally is fairly good, due, in a great measure, to the fair weather conditions prevailing during the year.

The serious injury done to our roads by the carriage of heavy loads on waggons with narrow tyres, shows that legislation in connection with the regulation of the width of tyres is urgently required. The expenditure upon repairs rendered necessary from this cause is a heavy burden on the resources of the Department, and deserves prompt attention.

During the year, 1,038 miles of roads were cleared, and 666 miles wholly or partially constructed; also, about 5 miles of culverts and 6 miles of causeway were constructed, and 5,008 rods of fencing erected. Four hundred bridges were repaired, and 53 wholly renewed at a cost, respectively, of £29,298 and £36,850.

There were also under the charge of the branch 97 punts, 1 steam-launch, 4 horse-boats, 69 flood-boats, and 120 other boats, generally used for ferry purposes.

The monthly average number of men directly employed by the branch was 1,504, while contractors and their men averaged 5,200, making a total of 6,704 men constantly employed in connection with the roads and bridges of the Colony.

The system hitherto in force in connection with the collection of tolls upon the ferries worked directly by the Department has, for some time past, been regarded as unsatisfactory. A method of registering the number of ferry passengers, by means of tickets, was therefore brought into operation during the year, and it is anticipated that the new system will tend to stop the leakage in revenue, and thus help to mitigate the considerable yearly loss incurred in the working of the ferries.

In the report of the Assistant Engineer for Bridges, reference is again made to the desirability of more freely using stone and iron in the construction of bridges, with a view of diminishing the frequency and, as a consequence, the cost of repairs. I am still of opinion, however, that, although in some cases it may be advisable to build masonry or iron piers, it is on the whole more economical to make use of the unrivalled native timbers at our disposal in the erection of bridge structures.

SEWERAGE CONSTRUCTION.

The very complete report furnished by the Engineer for Sewerage Construction, which will be found in the Appendix, renders it unnecessary for me to refer in detail to the many important works which have been in progress during the year now under review.

This Branch was placed under the direction of Mr. J. Davis, M. Inst. C.E., formerly Principal Assistant Engineer, on 1st July, 1896, and since that date it has been carefully reorganised, a number of competent officers added to the staff, and energetic efforts made to grapple with the urgent requirements of the metropolis and

and some of the larger country towns. During the year thirty-two contracts were got out, the value of the work designed amounting to £329,015, while, in addition, the plans and drawings for works valued at £70,560 were in course of preparation.

The result of the year's efforts has been to bring within measurable distance the completion of the scheme for sewerage of the Metropolitan area. The works as authorised by Parliament in the year 1888, subject to some slight modification in the original plans, may now with some confidence be reckoned upon to be completed in about three to four years from this date.

Included in the appendix will be found a map of Sydney and Suburbs showing all the main sewers constructed and in progress, and also the proposed sewers which are required to complete the general scheme.

The total expenditure incurred in connection with sewerage works during the year amounted to £128,710 17s. 10d.

Among the works undertaken during the year calling for special mention are those in course of construction for the treatment of sewage at the main outfall of the North Shore sewerage system. They are situated at Willoughby Bay, an arm of Middle Harbour, and are the first of their kind attempted in the colonies. They embrace screening and mixing chambers, settling tanks, sewage filter presses, refuse destructors, and sand filters. They have been designed on the most modern system, and it is anticipated that when finished they will be the means of treating the sewage most completely.

Recent experiments on a large scale have been very successfully carried out in the city of Exeter during the year, which will probably be the means of simplifying the treatment of sewage.

Briefly stated, the system is as follows:—

The sewage is run into large covered tanks called "Septic tanks," and then is allowed to decompose. This decomposition is carried on, as all other fermentation or decomposition is, by the aid of micro-organisms which break up the sewage from complicated organic matter to more simple forms, which are readily acted upon and further decomposed whilst passing through the filters forming the second portion of the process. The effluent, after passing through the tank and filters, is stated to be sufficiently purified to be allowed to flow away without the slightest danger of any nuisance being created.

It will thus be seen that one of the greatest difficulties encountered hitherto (except in such cases as where sufficient area of land for broad irrigation is available) namely, the disposal or destruction of the sludge, has apparently been overcome, as in the "Septic" system, there is practically no sludge, all solids being so finely broken up that the filter can readily deal with them. Therefore it becomes no longer necessary to deposit the sludge in settling tanks, with all the after trouble attending its final disposal. The experiments have been followed with much interest, and so impressed is the Department with their importance that the construction of similar works is now under serious consideration.

During the year the question of how best to deal with the sewage from the low-level areas on the foreshores of the harbour has been considered; and, after having been very carefully investigated, it was decided to lift this sewage by means of sewage-pumps, driven by electrical motors.

Comparative

Comparative estimates were made, taking compressed air, hydraulic, and electrical power, respectively, throughout the system. These were fully reported upon by the Engineer for Sewerage Construction, and the matter was then placed before the Board of Reference, who concurred with the Engineer for Sewerage Construction, and finally decided that electrical power would be the cheapest and most satisfactory.

Twenty-four collecting stations will be required to deal with the foreshores from Balmain to Woolloomooloo, and these stations will be electrically controlled from one central station at Darling Harbour, where a very extensive generating plant is being erected to provide motive power for the tramways. It is on account of the large nature of the works from which power for sewerage purposes will be procured, that this method can be introduced, it is believed, more economically than any other; New South Wales being the first country in the world to undertake such a system.

The power will be supplied by the Railway Commissioners to the Sewerage Department at 1d. per electrical Board of Trade unit; and it is calculated, after taking into consideration the more or less intermittent nature of the work, that we could not procure compressed air or hydraulic power more cheaply.

More than ordinary interest has been attached to the aqueducts carrying the sewage across White and Johnston's Creeks; these structures being built on the "Monier" system, and being the first works of an extensive nature to be carried out on this system in the colonies. They are a pronounced success, and in every way have fulfilled the expectations of the Department.

A special class of work which has been carried on by the branch during the year is the detail survey of the Metropolitan area, Newcastle and suburbs, and other large centres of population, where it is likely that sewerage works will in course of time have to be constructed.

This extensive undertaking was originally commenced in the year 1877 on the recommendation of Mr. William Clark, C.E., who pointed out its absolute necessity as regarded the correct and economical carrying out of sewerage works. Its execution was placed under the administration of the Minister for Lands, who continued to control the same up to 1st July, 1896, on which date it was transferred to this Department. At the same time a number of officers—namely, four surveyors and four draftsmen—who had been employed on this particular duty, were taken over from the Lands Department. Although, owing to the pressure of other urgent demands for their services, these officers are not continuously employed on the detail survey, the branch has been able to keep the work in advance of requirements. The results of their labours, though primarily intended for sewerage purposes, are available for, and utilised by, other Departments of the Government.

Before concluding this review of the year's work of the Sewerage Construction Branch, I deem it a duty owed to the Department generally, and to this branch in particular, to draw attention to the report, dated 21st November, 1896, of the Royal Commission appointed by the Governor-in-Council to investigate certain charges made in the Legislative Assembly affecting officers of the Department, in their dealing with and control of the sewerage contracts held by Carter & Co., and certain other persons.

The charges to be investigated were of serious moment to all concerned, inasmuch as they alleged acts of collusion between officers of the Department and the
above-mentioned

above-mentioned contractors with a view to defraud the public Treasury—such as advancing to the said contractors sums of money improperly, without sufficient security, and in violation of the terms of the contract; incompetency in carrying out and administering the contracts; placing documents on the Table of the House in a form calculated to mislead Members of the Assembly; and allowing defective work to be put in the contracts.

The Commission was appointed on 21st May, 1896 (His Honor Judge Murray being sole Commissioner), “to make a full and diligent inquiry touching all questions in any way raised in the Legislative Assembly of the Colony of New South Wales, whether specifically or in course of debate, as to any improper conduct in connection with the contracts, past and present, of Messrs. Carter, Gummow, & Co.; John Carter, D. G. Snodgrass, George Maddison, Peter Ewing, F. M. Gummow, George Forrest, and James Gillan, with the Department of Public Works, and touching the truth of any charges so, as aforesaid, made in connection with the performance or variation (if any) of such contracts, or the conduct of any public officer, or of the said contractors, their agents, or workmen, in relation thereto; and to make the fullest investigation into any charge or matter in relation to the said persons or contracts.”

The Commissioner, after a patient and exhaustive investigation which occupied 66 sittings and included the examination of 114 witnesses, furnished a very careful and elaborate report, summing up in these words:—

“Finally, in your Commissioner’s opinion, none of the charges brought against Mr. Hickson have been proved by the evidence that has been produced. Your Commissioner has failed to discover in that evidence any grounds for further inquiry; and, in your Commissioner’s opinion, Mr. Hickson and the other responsible officers of the Works Department stand exonerated from all suspicion of improper conduct in relation to the matter into which your Commissioner has been instructed to inquire.”

It cannot but be gratifying to you as Administrator of this large and important Department, and to the public generally, to find that, after undergoing the most searching scrutiny, the officers of the Department have achieved such an effective vindication from the grave and serious charges brought against them.

LAND VALUATION.

An important change took place in the administration of this Branch, in November, 1896, Mr. J. B. Thompson, formerly valuator, having retired in accordance with Section 68 of the Public Service Act, after thirty-four years’ faithful and efficient service. Mr. E. J. Sievers, the present valuator, was appointed to take his place from 15th November, 1896.

Mr. Sievers’ report, attached, gives a resumé of the numerous resumptions, valuations, and claims that have been dealt with during the year, the total amount expended in connection therewith being £38,361 3s. 3d.

WATER SUPPLY AND SEWERAGE BOARDS.

The Metropolitan Board of Water Supply and Sewerage has already presented to you its Report for the year, and has therein furnished a full and detailed statement of its operations and financial position. It is accordingly unnecessary for me to do more than draw attention to one or two of the more notable items, which serve to show the magnitude of the interests entrusted by the Government to the Board.

The total capital cost of the Metropolitan Water Supply and Sewerage Works stood, at 30th June, 1897, at £6,262,670. In addition to the head works and trunk mains, the Board has under its jurisdiction $946\frac{3}{4}$ miles of reticulation mains, supplying water to a population numbering some 418,000; 256 miles of sewers, and $18\frac{1}{2}$ miles of stormwater drains. The extensions carried out by the Board during the year comprised $55\frac{1}{2}$ miles of new water mains, and $25\frac{1}{2}$ miles of sewers, while existing works received every care and attention, and are reported as being maintained in a thoroughly efficient condition.

In the Appendix will be found a brief report from the President of the Hunter District Water and Sewerage Board of its operations during the year. New water-mains to the extent of 6 miles 517 yards were laid down by the Board, bringing the total length of reticulation mains up to 134 miles 1,098 yards, the estimated population supplied with water being 31,655. The Board also carried out some important improvements and additions to the machinery and buildings at Walka Pumping Station, and these, it is anticipated, will enable the Board to meet the increasing consumption of water. The whole of the works were maintained in good order throughout the year.

GENERAL.

In conclusion I desire to bear testimony to the zeal and efficiency which have been displayed by the staff in every branch, and to express my obligation to all the officers for their willing co-operation in dealing with the diversified and complicated business of this large Department.

ROBT. HICKSON, M. INST. C.E.,
Under Secretary for Public Works and Commissioner for Roads.

Railways and Tramways.

(I.)

Report of the Engineer-in-Chief for Railway Construction.

Department of Public Works, Railway Construction Branch,
Sydney, 8 October, 1897.

I HAVE the honor to make the following report on the work carried out in the Railway Construction Branch during the year ending 30th June, 1897 :—

RAILWAY SURVEYS.

The following work was carried out by the Railway Survey Staff, between the 1st July, 1896, and 30th June, 1897.

Explorations over projected railway routes have been made, and reports furnished thereon, as under :—

Armidale to Trial Bay.
Armidale to Macleay River Heads, *via* Taylor's South Arm.
Bogan Gate to Trundle and Bullock Creek.
Condobolin to Cudgellico.
Glen Innes to South Grafton, *via* The Henry, the Little, and Nymboi River.
Hillston to Mossgiel.
Koorawatha to Grenfell and Wyalong.
Narrandera to Colinroobie and Barrellan.
Tenterfield to Casino, *via* Acacia Creek and Richmond River Valley.

During the year ten trial and seven permanent surveys were completed. Four trial surveys and one permanent survey were in hand, but not finished at the close of the year. Particulars in detail are shown in the Table below.

In order to comply with the instructions of the Minister and the requirements of Parliament, plans and sections of the following lines have been under review, and in many cases entirely new estimates prepared, others being revised where found desirable :—

Belmore to Liverpool.
Belmore to Cabramatta.
Braemar to Mittagong.
Byrock to Brewarrina.
Casino to Lismore.
Colo Vale to Braemar.
Coolamon to Ariaiah.
Condobolin to Euabalong.
Condobolin to Cudgellico.
Dubbo to Coonamble.
Galong to Burrowa.
Glen Innes to South Grafton.
Grong Grong to Ariaiah.
Guyra to South Grafton.
Hill Top to Colo Vale.
Mount Kembla Coal Company's Railway, in connection with the proposed Port Kembla Harbour Scheme.
Moree to Inverell.
Mudgee to Coonamble.
Narrabri to Pilliga.
Necropolis Railway, Loop at Rookwood Station.
Pearce's Creek to Ballina.
Singleton to Jerry's Plains.
Tenterfield to Casino.
The Rock to Green's Gunyah.
Warren to Coonamble.
Wollongong to Port Kembla.
Woolabra to Collarenebri.

The proposed railways, Berrigan to Finley and Moree to Inverell, have been under consideration by the Public Works Committee; a large number of wall maps, plans, books of reference, sections and compilations of lithographs have been furnished for their use. Similar information was supplied to the Royal Commission on the projected Railway Extension into the City of Sydney. Plans, &c., have been partly prepared in connection with the following railway proposals, which have since been referred to the Public Works Committee :—

Byrock to Brewarrina.
Condobolin to Euabalong.
Coolamon to Ariaiah.
Narrabri to Pilliga.
The Rock to Green's Gunyah (now Lockhart).

In

In anticipation of reference to the same Committee, some drafting work has been done in regard to the following lines:—

Gundagai to Tumut.
Rosehill to Dural.
Singleton to Jerry's Plains.
Warren to Coonamble.

The following drawings in connection with the undermentioned authorised lines have been prepared, viz.:—Working plans and sections, proclaimed plans, police district plans and notice tracings, as well as heliographic copies of latter, to accompany notifications of resumptions of land for railway purposes. The photo-lithographic copies of the working plans and sections of the greater number of these lines have been completed:—

Berrigan to Finley.
Braemar to Mittagong.
Colo Vale to Braemar.
Hill Top to Colo Vale.
Darling Island Connection.
Nevertire to Warren.
Tamworth to Manilla.

The usual quantity of work, which is always very large, has been done in calculating the bearings and distances for descriptive purposes of the boundaries of land resumptions and connections to same, many of the former being very irregular.

The customary amount of office work, including plans, &c, for the use of the Railway Commissioners, when reporting on proposed lines, deciding on station sites, &c., for the use of the Minister when replying to deputations and Parliamentary questions, and inquiries from the Lands and other Departments, has been carried out.

The office staff has been during the time under review barely sufficient for the current drafting and clerical work, and, consequently, the arrears of drafting work have been very slightly diminished.

The staff employed in connection with the Railway Surveys consisted on an average of 30 officers, divided as follows:—1 Supervising Engineer, 14 surveyors, and 15 draftsmen.

The following tables show the trial and permanent field operations carried out during the year:—

RAILWAY CONSTRUCTION.

The following works have been in progress during the year ended 30th June, 1897:—

Narrabri to Moree Railway.

This line is an extension of the north-west branch of the Great Northern Railway from Narrabri in a northerly direction to Moree. The extension commences at Narrabri West Station, crosses the Namoi River and Narrabri Creek on timber bridges, and skirts the northern side of the town of Narrabri, a new station being located at 2 miles 25 chains from the commencement of the extension. The line terminates at Alice-street, Moree, 315 miles 15½ chains from Newcastle.

The length of this extension is 63 miles 72 chains 20 links.

The principal contract was let to Messrs. Smith, Finlayson, and Timms, on 10th July, 1895, the time given for completion was eighteen months, but the opening for traffic did not take place until 1st April, 1897.

The works have all been designed and carried out in the most economical manner. The bridge over the Namoi River comprises three timber trussed spans of 60 feet, with fifty-two additional timber flood-openings of 14 feet each in the approaches. The Narrabri Creek bridge has one span of 60 feet, with twenty-three additional flood-openings of 24 feet span and twenty-seven of 14 feet span each. The piers of both bridges are of timber piles.

The permanent-way of the main line is laid with 60-lb. steel flat-bottomed rails spiked to ironbark sleepers. In the sidings old iron rails have been used. All the sleepers for this line were supplied and delivered at Narrabri before the works were commenced, under contract with the Sleeper-getters' Association.

Fencing has for the most part been dispensed with, being used only in the immediate neighbourhood of the stations.

Straying and trespass by stock is controlled by cattle-stops at intersections of roads and boundary lines of fencing.

The level crossings have no gates, but are provided with warning-boards.

The formation of the line is taken as near as possible to the surface in most places, giving a few inches only of embankment, but there are lengths aggregating about 5 miles where the undulations of the surface are too great for the adoption of this method, and the line is carried through a succession of low cuttings and banks.

Station and siding accommodation have been provided at Narrabri North, Edgeroi, Woolabra, Gurley, Tycannah and Moree. Trucking-yards have been provided at Edgeroi, Woolabra and Moree.

Water supply has been obtained from the artesian bores at Woolabra and Moree, which automatically fill the 10,000-gallon wrought-iron tanks that have been erected on brick towers at these places, but the artesian water, which contains from 30 to 40 grains per gallon of sodium carbonate, is not satisfactory, as it causes priming.

The works have been carried out in six contracts.

The expenditure in connection with this line has been as follows:—

Construction of line, including earthworks, bridges, and culverts, permanent-way, and Station Yards	...	£126,064	1	3
Water Supply at Woolabra and Moree	...	925	3	6
Station Buildings and Station Appliances...	...	3,644	7	1
Trucking Yards	...	1,036	14	10
Land Resumption	...	180	2	9
Total cost to date	...	£131,850	9	5

Parkes to Condobolin Railway.

The first section, from Parkes to Bogan Gate, was opened for traffic, 15th December, 1896. The second section, from Bogan Gate to Condobolin, is under construction.

The line passes through country in which the average annual rainfall is about 22 inches. The surface is for the most part flat, and the undulations of the ground are of such a character as to admit of a ruling gradient of 1 in 100 throughout.

The works are of an inexpensive character, and the formation has been kept as near the surface of the ground as possible.

There are no works of any magnitude on the line, the principal difficulty met with having been in the provision of a supply of water for the locomotives.

The permanent-way has been laid with 60-lb. flat-bottomed steel rails, spiked to ironbark sleepers, which were provided by the contractor for the construction of the line. In the sidings old iron rails have been used.

Fencing has been erected only in the immediate neighbourhood of stations. Cattle-stops have been placed at intersections of roads and boundary fences to prevent straying and trespass by stock.

The level crossings have no gates, but are provided with warning-boards.

The first section—Parkes to Bogan Gate—has a length of 23 miles 38 chains.

The contract for its construction was let to Messrs. Smith, Finlayson and Timms on 18th February, 1896, for completion within nine months, or by 18th November, 1896, but it was not opened for traffic until the 15th December, 1896.

Station and siding accommodation have been provided at four points, viz., at Brolgan, Nelungaloo, Gunningbland and Bogan Gate.

Trucking-yards for sheep have been erected at Bogan Gate.

The works were carried out in two contracts, viz., one for the construction of the line, and one for the Station Buildings.

The following is the expenditure to date:—

Construction of the line	£49,113	14	6
Station Buildings	979	9	1
Land Resumption	2	10	4
Total cost	£50,395	13	11

The second section—Bogan Gate to Condobolin—has a length of 39 miles 22½ chains.

The contract for its construction was let to Mr. John Falkingham, on 20th July, 1896, for completion within fourteen months, or by the 20th September, 1897, but the opening for traffic will probably be delayed till a few weeks later.

The terminal point at Condobolin will be 329 miles 62½ chains from Sydney.

Station and siding accommodation are being provided at three points, viz.:—At Burrawang, Derriwong and Condobolin.

Trucking-yards for stock are being built at Burrawang and at Condobolin.

On this length provision is being made for a supply of water at two points, viz.:—At Gunningbland Creek—one of the few suitable places for such work—at a point 27½ miles from Parkes, and 35¼ miles from Condobolin. A tank has been excavated near the creek which will contain a supply of 2,800,000 gallons of water when full—sufficient for a two years' supply. A pumping plant and a 20,000-gallon wrought-iron tank, supported on a brick tower, will also be provided.

At Condobolin it is proposed to obtain water from the town supply, arrangements for the carrying out of which have been made. A brick tower supporting a 20,000-gallon wrought-iron tank will be erected on the station ground.

The following are the contracts that have been let for construction of works on this length:—

Contract No. and Work.	Contractor.	Amount of Contract.			Expenditure to Date.		
		£	s.	d.	£	s.	d.
No. 2.—Construction of line	J. Falkingham	33,819	16	1	25,171	18	2
No. 5.—Excavation of tank	Thomas Lees	1,066	11	8	637	6	9
No. 6.—Brick tower, Gunningbland Creek	C. Baker	205	0	0	206	3	3
No. 7.—Wrought-iron tank, Gunningbland Creek	G. Norman	230	0	0
No. 9.—Station buildings	J. Allibone	3,276	0	0	250	0	0
No. 10.—Brick tower, Condobolin	C. W. Muller	136	10	0	37	18	0
No. 11.—Wrought-iron tank, Condobolin	G. Norman	270	0	0

The total expenditure on this section to date has been £54,337 12s. 4d.

Jerilderie to Berrigan Railway.

This line is an extension of the Narrandera-Jerilderie branch of the South-Western Railway. A description was given in last year's report.

A triangle has been laid down at Berrigan for turning locomotives, instead of a turntable.

Water for locomotives is obtained from the existing supply at Jerilderie.

A contract was let to Messrs. Smith, Finlayson, and Timms, on 25th January, 1896, for the construction of the line; the time for completion was six months, but considerable delay occurred in carrying out the works, and the opening for traffic did not take place until 14th November, 1896. Length of the line, 21 miles 65 chains.

The total cost to date is as follows:—

Construction of line	£37,420	2	6
Station buildings and trucking yards	1,138	7	8
Land and compensation	222	11	10
Total	£38,781	2	0

Berrigan

Berrigan to Finley Railway.

This is an extension in a westerly direction of the Berrigan Railway; it has been authorised by Act of Parliament, and a sum of £27,250 has been voted for its construction.

Plans have been prepared and arrangements are being made for putting the works in hand as soon as the conditions as to transfer of the land required by the Act—which is to be without cost to the Government, except in the case of town allotments—have been complied with by the persons interested.

The length of the extension will be 13 miles 62 chains.

The terminal point at Finley will be 447 miles 69½ chains from Sydney.

Finley is situated on the travelling stock route between Jerilderie and Tocomwal, and is surrounded by a tract of country very suitable for cereals, so that the traffic is expected to be of importance.

Station and siding accommodation is proposed for three points on the line, including the terminal station at Finley.

Contracts have been let for the supply of about 40,000 sleepers of ironbark and redgum.

The permanent-way will be laid with 60-lb. steel rails, spiked to the sleepers.

Nevertire to Warren Railway.

This branch line leaves the Great Western Railway at 341 miles 20 chains and terminates at 353 miles 54 chains from Sydney, a length of 12 miles 34 chains.

The direction of the line from Nevertire is north-easterly, and it chiefly follows the Warren road.

A very large traffic is anticipated from and to the extensive country on the north-east. The construction of this line was strongly advocated by the Railway Commissioners.

The works are being carried out by day labour, under the supervision of an officer of this Branch.

The sleepers have been provided partly under a contract with Mr. Thomas Border, of Dubbo, and partly by purchase from the Railway Commissioners.

The works are of a light and inexpensive character, as the country is level, but, as after heavy rains water lies over the greater part of the surface, the formation has been raised higher than is the practice with the other country lines of the same class. There are but two timber bridges of any magnitude on the line, viz., those over Beleringar and Gunningbar Creeks.

The permanent-way is to be laid with 60-lb. flat-bottomed rails, spiked to ironbark sleepers. Old iron rails will be used in the sidings.

Fencing will not be used except in the immediate neighbourhood of stations.

To prevent straying and trespass of stock cattle-stops will be provided at the intersection of boundary fences.

Water for locomotives will be provided at Warren by pumping from the Gunningbar Creek, where permanent water exists. A line of pipes will be laid from the creek to Warren Station, a distance of 40 chains, and a brick tower, carrying a 20,000-gallon tank, will be erected in the yard.

Station accommodation will be provided at Warren only, and, as this may not remain a terminal station for any great length of time, a triangle for turning the engines will be laid down instead of a turntable.

The estimated cost of this extension is £32,730.

The total expenditure charged to date has been £3,180 16s. 10d.

It is anticipated that the line will be completed and opened for traffic about Christmas.

Tamworth to Manilla Railway.

The construction of this line, which branches off the Great Northern Line at West Tamworth, has been authorised by Parliament, and working drawings are in course of preparation.

The country traversed is of undulating character, and the Peel River is crossed at 12 miles 73 chains from the junction with the main line.

The length of the line will be 29 miles 45 chains, and the estimated cost is £73,170.

The works on the line will be of a light character, as the surface of the ground will be followed as nearly as the exigencies of the grade and other circumstances will admit.

The most important work on the line will be the Peel River Bridge, which will consist of steel girders in three spans of 66 feet each, supported on concrete piers, in addition to which there will be seven timber spans of 24 feet each in the approaches.

Station and siding accommodation will be provided at four points on the line, including the terminal station at Manilla.

The permanent-way will be laid with 60-lb. steel flat-bottomed rails spiked to ironbark sleepers.

The line will, for the greater part of its length, remain unfenced.

It is anticipated that the works will be completed in about eighteen months from the date of their commencement.

Railway connection with Darling Island.

As it has been decided to utilise the large valuable water frontage of Darling Island, steps have been taken to extend the Darling Harbour line in that direction.

A contract was let to Messrs. Bromley and Holloway on 29th May, 1897, amounting to £4,348 5s., for the construction of the first portion of this extension which commences at a point 1 mile 17 chains 9 links from Redfern tunnel, and is 21 chains in length.

This contract provides for excavation and formation of a double line as far as Edward-street, for a permanent steel bridge with concrete jack arches to carry Union-street over the railway the full width of the street, and for a timber bridge of a temporary character to provide for the traffic along Murray-street.

The time provided in the contract for completion of these works is twenty-six weeks.

The works are now in progress.

Extension of Rookwood Cemetery Branch.

This is an extension of the branch line for about 68 chains beyond the original receiving-house, and it has been constructed in compliance with the wishes of the Trustees.

The end of the original receiving-house has been altered to allow of the line being extended beyond it, and the platform accommodation has been considerably added to.

A second receiving-house and platform have been built at the far end of the extension.

The general work has been carried out by day labour, but the buildings by contract.

The full cost of the works has been :—

Works carried out by day work	£4,810	0	9
Works carried out by day contract	1,752	19	9
Total cost			...	£6,563	0	6

The sum voted for this work was £6,700. The balance remaining after completion of the works, viz., £136 19s. 6d., will be utilised for the purpose of improving the water supply.

The works were completed and handed over to the Railway Commissioners on 20th February, 1897.

Water Supply at Mowra, on the Orange to Forbes Railway.

This work was decided on, as was pointed out in last year's report, to supplement the supply of water for locomotive purposes, as the town supply at Parkes had proved unreliable.

The works comprised the excavation of a tank and the formation of a dam, which will impound, when full, 893,000 gallons of water; also a brick tower carrying a wrought-iron tank of 20,000-gallons capacity.

The pumping plant has been provided and fixed complete by the Railway Commissioners.

The works (excepting the pumping plant) were carried out in three contracts, particulars of which are given below :—

No. 1.—Excavation of tank	£236	1	4
No. 2.—Wrought iron tank	278	0	0
No. 3.—Brick tower	77	0	0

The total cost, as charged to date, has been £645 12s.

Considerable delay took place before this supply could be made use of by locomotives, as the weather continued dry during the whole summer; they were, however, practically completed by August of 1896.

Proposed Railway Extension into the City of Sydney.

The plans and estimates for the proposed extension of the railway from Redfern to Park-street, as recommended by the Railway Commissioners, and urged in their letter dated 28th April, 1896, were prepared and submitted to a Royal Commission appointed on 22nd December, 1896, to inquire into and report on the whole subject.

The Royal Commission commenced their duties on the 16th February, and made their report on 1st June, 1897, recommending the adoption of a modification of the Railway Commissioners' scheme, by which the Railway would be extended to St. James' Road.

This proposal has been submitted to the Parliamentary Standing Committee on Public Works for report, and is very shortly to be dealt with by that body.

Manufacture and Supply of 250 tons of Iron Spikes for 60 lb. Rails.

A contract was let to Mr. William Sandford, of the Eskbank Ironworks, on 9th January, 1897, for the manufacture and supply of 250 tons of iron spikes for 60 lb. rails to meet the requirements of lines in progress, and for others authorised.

The contract rate is £12 9s. per ton; the full supply to be completed in sixty-six weeks.

Manufacture and Supply of 12 Jib Water Cranes.

A contract has been let for the manufacture and supply of twelve Jib Water Cranes, to meet the requirements of lines in progress, and for stock.

The contract was let to Messrs. Pope, Maher, & Co. on 25th May, 1897, for completion in thirteen weeks, for the sum of £636.

Tenders for Permanent-way Material.

In August, 1896, an advertisement appeared in the *Government Gazette* inviting tenders for the manufacture within the Colony of 150,000 tons of steel rails. The tenders to be received by the Secretary for Public Works in Sydney, and the Agent-General for New South Wales in London, on 30th December, 1896.

No satisfactory tender was received.

Staff.

The field staff employed in the supervision of the above works during the year under review has consisted of the following :—Three supervising engineers, four field assistants, two cadets.

For the construction of the Rookwood Extension the services of the Supervising Engineer of the Railway Survey Branch were utilised.

One engineer has been employed during the whole of the year on the case of *M'Sharry v. the Railway Commissioners*, now under arbitration.

Inspectors and sub-inspectors for the various classes of work carried out have been employed as required during the progress of the work.

The office staff has consisted of one Supervising Engineer, one Chief Draftsman, and ten Draftsmen.

TRAMWAYS.

TRAMWAYS.

Works in connection with the following are in progress:—

	Miles.	Chains.	
Willoughby Electric Tramway	2	45	Single track.
George-street and Harris-street Electric Tramway	3	20	Double track.
Rose Bay Electric Tramway	1	23	Single track.

Trial surveys with report and estimate have been made of the following tramway proposals:—

	Miles.	Chains.	
Tighe's Hill to Waratah... ..	1	5	Single track.
Extension to St. Leonards Railway Station	0	50	Single track.
Ocean-street Cable—Extension to Double Bay	0	52	Double track.
Newcastle to Cockle Creek, and Lake Macquarie	6	40	Single track.
Bridge-street to Circular Quay	0	37	Single track.

Willoughby Electric Tramway.

The construction of this tramway was authorised in December, 1896. The starting point is the terminus of the existing cable tramway in Falcon-street, thence the line runs along the North Sydney Road, Mowbray-road, and Penshurst-street to the intersection of Victoria-avenue, Chatswood, a distance of 2 miles 45 chains from the point of commencement.

This being an electric tramway it has been decided to substitute electric traction for cable on the cable tramway between the power-house and the terminus in Falcon-street, a distance of 60 chains.

An additional generator for the Willoughby tramway, together with the necessary driving gear, is being erected in the power-house at Ridge-street, and will be driven by belts off the main cable engines.

The overhead construction will be similar to that used on the Mosman's Bay Electric Tramway; an accumulator house will be erected on a Government Reserve at Park-street, Willoughby, and will contain 215 cells and a motor-booster. The estimated cost of this tramway is £16,978.

Owing to the additional rolling stock required for this tramway, it became necessary to increase the accommodation in the car-house at Ridge-street. The necessary alterations are being carried out by day-labour, the switches and crossings for the entrance being manufactured at Cockatoo Island. The estimated cost of the alterations to the car-house and necessary track work is £2,600.

The following list shows the number and particulars of contracts in connection with the construction of this tramway:—

- Contract No. 1.—Plastic bond contract completed. Material at power-house, North Sydney.
- Contract No. 2.—Poles and brackets. Contract let, work in hand.
- Contract No. 3.—Generator, &c. Contract let, work in hand.
- Contract No. 4.—Accumulators. Contract let, work in hand.
- Contract No. 5.—Overhead wiring. Tenders under consideration.
- Contract No. 6.—Permanent-way, &c. Tenders invited—due 19th July, and since let to Mr. A. Johnston.
- Contract No. 7.—Motor-booster and switchboard. Tenders recommended for acceptance.

George-street and Harris-street Electric Tramway.

The construction of this tramway was sanctioned by Act of Parliament assented to 14th September, 1896.

The tramway commences at the eastern side of the Circular Quay and following the curvature of the Quay passes the wharves of the various ferry companies; thence by way of Queen's wharf to George-street, and along that street to its junction with the existing tramway opposite the Benevolent Asylum, running parallel with the existing steam lines to a point opposite Terminus-street; following the existing steam lines for a few chains it branches off at Harris-street, on which street the line will run until John-street is reached, where it terminates. A junction is provided for with the existing steam tramways running to the Redfern Railway Station. The distance from Circular Quay to John-street is 3 miles 20 chains, and is double track all the way—the length of single track, including cross-over roads and junctions, to be constructed being about 7 miles. Estimated cost, £130,500.

The following list shows the number and particulars of contracts in connection with the construction of this tramway:—

- Contract No. 1.—Plastic bond. Contract completed; material in Government store.
- Contract No. 2.—Mannesman Poles. Tender accepted; poles should be here in about six weeks.
- Contract No. 3.—Steam engines and generators. Tender accepted.
- Contract No. 4.—Permanent-way, George-street } Specification practically completed; tenders to be
- Contract No. 5.—Permanent-way, Harris-street } invited shortly.
- Contract No. 6.—Points and crossings. Under consideration.
- Contract No. 7.—Boilers. Tenders close on 12th July. Since let to Messrs. G. and C. Hoskins.
- Contract No. 8.—Boiler settings and mountings. Not yet decided.
- Contract No. 9.—Switchboard, station wiring and lighting. Under consideration.
- Contract No. 10.—Accumulators. Under consideration.
- Contract No. 11.—Overhead wiring. Plans now ready.
- Contract No. 12.—Power-house. Under consideration.
- Contract No. 13.—Brackets and poles, mountings. Drawings being prepared.
- Contract No. 14.—Car-house. Sketch plan approved by Railway Commissioners.
- Contract No. 15.—Travelling Cranes. Drawing in hand.
- Contract No. 16.—Feeder cables and junction boxes. Tenders invited.
- Contract No. 17.—Circulating and feed pumps, piping, &c. Not yet decided.
- Contract No. 18.—Sea-water supply for condensers. Under consideration.

Of the contracts let up to date, the most important is that for the Steam engines and Generators' contract, No. 3, for which Messrs. H. H. Kingsbury and Co.'s tender has been accepted. Now that this tender has been accepted the contracts for buildings will be pushed on, the sketch plans for the arrangement of power-house and offices being well advanced. The contracts let for boilers, engines, and generators include provision for future conversion to electric traction of existing tramways. The Mannesman poles, which it has been decided to use for carrying the overhead work, will be ornamented in neat design of wrought and cast iron work. The steam-boilers, for which tenders have been invited, are of the same type as those in use at Rushcutters' Bay, which have proved to be so satisfactory in working and economical in consumption of fuel. Land has been resumed between Mary Ann Street and William Henry Street, Ultimo, for the erection of the power-house and car-house required for not only the George and Harris Streets Tramway, but also for the conversion of the whole existing system.

Rose Bay Electric Tramway.

The construction of this tramway was authorised during January, 1897, the point of commencement being the terminus of the King-street to Ocean-street cable tramway at Ocean-street, thence along the New South Head Road to Rose Bay, a distance of 1 mile 23 chains single track. The generators, of which there are two, together with the necessary driving gear, will be placed in the cable tramway power-house at Rushcutters' Bay, being driven by belts off the main cable engines, the current being carried by armoured cables to the terminus of the cable tramway.

Provision has also been made for working the pumps in connection with the Double Bay sewerage pumping station, the current being carried by an overhead wire attached to the bracket poles from the feeder-pillar at the Ocean-street terminus.

The overhead construction will be similar to that intended to be used for the George-street and Harris-street electric tramway, the poles, however, being of wood similar to those used for the Mosman's Bay and Willoughby electric tramways.

The following list shows the number and particulars of contracts in connection with the construction of this tramway:—

- | | | | |
|--------------|-----|-----------------------------------|--|
| Contract No. | 1. | Plastic bond. | Material ordered. |
| " | 2. | Generators. | Delivered at power-house. |
| " | 3. | Driving gear. | Now being manufactured at Hudson's Bros. |
| " | 4. | Accumulators. | Tender accepted. |
| " | 5. | Overhead wiring. | Drawing prepared. |
| " | 6. | Poles and brackets. | Tender accepted. |
| " | 7. | Permanent-way. | Survey in hand. |
| " | 8. | Switchboard and connections. | Tenders under consideration. |
| " | 9. | Accumulator-room and benches. | Tenders invited. |
| " | 10. | Feeder cables and junction-boxes. | |

Office Staff.

The staff employed during the year under review on tramway construction, inclusive of the office work, comprised one assistant engineer, one surveyor, one engineering assistant, and three draftsmen. Arrangements are being made for increasing the staff, which is at present very insufficient, to cope with the work.

H. DEANE,
Engineer-in-Chief for Railway Construction.

(III.)

Report of the Engineer-in-Chief for Public Works.

Sir,

Department of Public Works, Sydney, 22 October, 1897.

I forward herewith reports of the Principal Assistant Engineers and Superintendent of Dredges on the various works under control of this Branch of the Public Works Department for year ending 30th June, 1897.

The following are the heads of the reports which are attached :—

1. Harbours and Rivers Navigation.
2. Metropolitan Water Supply Construction.
3. Country Towns Water Supply.
4. Bridge Construction and Renewals.
5. Water Conservation and Irrigation.
6. Dredge Service.
7. Surveys, Soundings, and Borings.

Harbours and Rivers Navigation.

Mr. H. R. Carleton, Principal Assistant Engineer for Harbours and Rivers, in his report gives full particulars of the progress of the various works during the last twelve months.

Satisfactory progress has been made with most of the Harbour works; in some cases, as at the Clarence River and Newcastle, the works are more of a preparatory nature, so that there is not much to show for the year's operations. At the former entrance the south training wall was completed under contract, and it has proved most successful in fixing and maintaining a deep water entrance to the river. Such a thing as a steamer being bar bound at the Clarence River never occurs now,—indeed, the steamer can enter day and night at all states of the tide. Preparations were being made for starting the Goodwood Island training bank.

At Newcastle no actual progress was made with the breakwater, but the new quarry was being opened up, the various railways and tramways constructed for carrying stone to the breakwater, cranes and gantries erected for lifting the stone to and from punts, and special punts were being constructed for carrying the stone across the harbour. All these preparations being now in a forward state, the actual work of construction will be commenced immediately.

Authority has been given to commence the construction of a quay wall round Darling Island in Sydney Harbour, with monolithic blocks of concrete, instead of a timber wharf as has hitherto been our universal practice. The site is specially suitable for such a structure, as the bottom is all sound rock at a depth of about 28 feet from low water. The necessary plant is being prepared, and the actual work of constructing the 30-ton blocks has been commenced. A large punt to carry a 30-ton steam crane is being built at Cockatoo Island, so that it will not be long before block-setting can be commenced.

The total expenditure connected with Harbours and Rivers Navigation Works along the coast during the year was as follows :—

	£	s.	d.
1. Tweed River Improvements	6,151	0	3
2. Richmond River Improvements	26,137	5	8
3. Clarence River Improvements	13,839	17	8
4. Bellinger River Improvements	5,546	0	2
5. Nambucca River Improvements	3,214	14	0
6. Macleay River and Trial Bay	13,564	4	0
7. Manning River Improvements	10,812	18	1
8. Hunter River and Newcastle Harbour	40,486	6	8
9. Sydney Harbour	46,622	16	5
10. Reclamation Works, Cook's River and Shea's Creek	37,943	6	5
11. Darling River Improvements	642	12	9
12. Camden Haven Improvements	97	6	8
13. Micellaneous Works at various Ports and Rivers, and for other Departments	87,668	12	5
	292,727	1	2
Expenditure on account of Dredge Service	79,255	15	0
	£371,982	16	2

The Government workshops at Fitzroy Dock were busily employed throughout the year at new work and repairs and alterations to dredge plant, steamers, harbour works plant, and sundry work for other Departments.

The most important work of alteration undertaken was the conversion of the tug "Ajax" into a suitable pilot steamer for Newcastle Harbour. This boat has been fitted with a hurricane deck throughout, the old main deck fitted up with cabins for the crew and pilots, electric light laid on all over the vessel, steam steering gear supplied, and the fittings generally made suitable for a first-class pilot boat.

The total expenditure at the Dock, most of which is for wages, amounted to £57,479 1s. 10d.

Metropolitan

Metropolitan Water Supply.

The Centennial Park Reservoir—a covered reservoir, designed to hold 20,000,000 gallons, in connection with the Metropolitan Water Supply—is in course of construction. The walls are nearly finished, and a commencement has been made with the groined coke-concrete roof, which is a special feature in the design of this reservoir. When all complete, the top surface will be grassed over to a nearly true level, affording an area of about $2\frac{1}{2}$ acres, which, being part of the City Park, can be used for tennis grounds or other such purposes.

Country Towns Water Supply.

Concrete storage reservoir dams were in course of construction at Armidale, Tamworth, and Parkes, all by day labour, this system being found cheaper and in every way more desirable than by contract for important works of this class. Surveys and plans were in progress for a number of other water supplies, all of which are detailed in Mr. Price's report.

The total expenditure on Water Supply Works during the year amounted to £54,353 13s. 9d.

Bridge Construction and Renewals.

Mr. E. M. de Burgh, Assistant Engineer for Bridge Construction, gives a full report on progress of bridge construction.

One hundred and twenty-four new bridges, with a total length of 13,483 feet, were completed and opened to traffic during the year, while contracts were still in progress for sixty-one others, with an aggregate length of 10,970 feet.

The principal bridges in course of construction were those over the Hunter River at Morpeth, Kangaroo Valley Suspension Bridge, Murray River at Albury, and timber approaches to Gundagai Bridge.

The total expenditure in bridge construction during the year amounted to £158,704 15s. 9d.

Water Conservation and Irrigation.

Mr. H. G. M'Kinney, Principal Assistant Engineer for Water Conservation and Irrigation, reports on works under his charge. Mr. M'Kinney's time has been fully occupied with Colonel Home, R.E., who had been appointed by the Government to examine and report on the various schemes that have been proposed from time to time, and to deal with the question generally. Pending completion of his report, no important work was undertaken, but the contracts in hand were completed.

The total expenditure connected with water conservation works for the year amounted to £32,647 9s. 3d.

Dredging Work.

Mr. A. B. Portus, Superintending Engineer of the Dredge Service, gives a complete report of the Dredging operations.

The sand-pump dredges, of which we now have fifteen at work, continue to give every satisfaction, as an economical and effective class of dredge for dealing with the sand which obstructs most of our harbour and river entrances.

An attempt was made during the year to make a cutting into the Macleay River from the sea where the new entrance is being formed, and the self-propelling sand-pump "Jupiter" was sent to undertake the work. Owing to a long continuance of very bad weather, during which time the dredge had to stand out to sea and ride out two heavy gales, the experiment was only partially successful. Some very useful work was, however, accomplished; but it demonstrated clearly that a dredge, to be suitable for work of this nature, must have wholly independent propelling and pumping engines, and must be a light draft handy vessel with twin screws. Such a vessel has been designed, and a contract entered into for its construction. Some of our ladder-dredges lay idle through the year, the sum available for dredging not being sufficient to keep all the plant at work; the most efficient portion was retained in commission.

Surveys, Soundings, and Borings.

Shortly after the beginning of the year under review the whole of the survey work of the Department, with the exception of the detail work of the Sewerage Construction Branch, was combined and placed under the control of Mr. G. H. Halligan as Chief Surveyor. The change has proved satisfactory, and full details of the surveys, &c., carried out during the year will be found in Mr. Halligan's report.

General.

The whole staff of officers employed under my direction worked most zealously and efficiently throughout the year; without their hearty co-operation the amount of work passed through this Branch could not have been accomplished.

I have, &c.,

C. W. DARLEY, M. Inst. C.E.,

Engineer-in-Chief for Public Works.

(IV.)

Report of the Principal Assistant Engineer for Harbours and Rivers.

I FORWARD herewith for the information of the Engineer-in-Chief for Public Works my report on the principal works carried out by this branch of the Works Department during the year 1st July, 1896, to 30th June, 1897, classified as follows:—

Works for the Improvement, Maintenance, and convenience of Navigation.
Miscellaneous Works.

North Coast District.

Tweed River.

Training-walls at Entrance.—The total length of these walls is now 28,700 feet with an output of 239,808 tons of stone, at a cost of £26,353, or 26·37d. per ton. The length constructed during the year was 2,760 feet, with 47,338 tons of stone costing £4,352, or 22·06d. per ton.

No. 5 Wall was extended 240 feet to 10,890 feet from Cave Point seawards, its total length, including portion above Cave Point, being 19,010 feet. The total stone used has been 180,154 tons, costing £19,007, or 25·32d. per ton. This has, therefore, taken 9·47 tons of stone and cost £1 per lineal foot.

No. 2 Wall.—This wall was extended 2,520 feet, a total length of 6,320 feet. The total stone used has been 36,097 tons, costing £4,545 or 30·23d. per ton. This wall has taken 5·71 tons of stone and cost 14s. 4½d. per lineal foot.

No. 3 Wall.—1,120 tons of stone was placed on this wall to make up for subsidence, but no additional length was built. The length of this wall is 3,370 feet, having taken 23,557 tons at a cost of £2,701, or 27·53d. per ton, or an average of 7 tons of stone at a cost of 16s. per lineal foot.

The s.s. "Chindera" was wrecked on the bar on 9th September. On 5th October the wreck was blown up with dynamite, only a small portion being left, and up to the present this has not proved an obstruction to navigation.

A small wharf was constructed at Boyd's Bay, six piles for mooring were driven at the Spit, near Government wharf, and sundry small repairs were done to Murwillumbah and Tumbulgum wharfs at a cost of £55.

Byron Bay.

A contract was let for repairs to jetty and fair progress has been made. £1,200 having been paid to date.

One of the mooring buoys having carried away it was replaced, and all anchors, chains, &c., were overhauled and put in good order.

Richmond River.

Northern Breakwater.—This breakwater has been extended 460 feet, being now 2,590 feet from high-water mark. The stone used was 48,983 tons, costing £8,997, or 44·08d. per ton.

Southern Breakwater.—This wall was extended 574 feet with 51,776 tons of stone, costing £8,899, or 41·25d. per ton. The total length is now 5,926 feet from high-water mark.

Riley's Hill Quarry.—100,759 tons of stone was quarried and loaded into punts, at a cost of £9,325, or 22·21d. per ton, for use on the above breakwaters.

North Creek Canal.—This canal was formally opened for traffic on July 20th, 1896. The grab dredge "Zeta" has been employed widening the waterway between the Tintenbar-road Bridge and North Creek, and has completed 2,740 feet from the bridge to a width of 66 feet.

Two New Punts for Harbour Works.—These punts, which are being constructed for conveying stone from the Riley's Hill Quarry to the breakwaters, are of wood, and are to carry 200 tons each. One is almost completed and the other should be in a month's time.

South-arm Improvements.—A ti-tri wall, composed of old rails driven 5 feet apart and interlaced with ti-tri, has been built on the left bank of the river, opposite Oakey Creek. The length completed is 360 feet. A small groin of ti-tri saplings driven close together has been put in on the right bank of the river at Oakey Creek, to direct the water from the creek down stream, and another of ti-tri and rails has been put in on the same bank about 100 yards higher up to direct the water on the first-mentioned wall.

At Irvington 235 feet of ti-tri and rails has been put in above the wharf, and a continuation of 565 feet on the same line is now being constructed below the wharf.

Snagging Richmond River and Tributaries.—Work has been done at the following places to the amount set opposite them:—

	£	s.	d.
South Arm... ..	1,737	13	6
North Arm	313	3	7
Leycester Creek	135	11	8
Wilson's Creek	330	6	5
Emigrant Creek	342	12	11
Teven Creek	311	7	6
Sandy Creek	43	2	3
Bungawalbyn Wharf	67	5	5
	£3,281	3	3

A jetty has been in course of construction at East Wardell and is now nearly completed.

Clarence

Clarence River District.

South Training-wall.—The contract for this wall was finally completed in November, 1896. There was, however, no advance made, as the stone was all used for strengthening the tip head, and other parts, where found necessary. The total length of wall is 12,177 feet, for which 330,768 tons of stone was used, costing, including staging, £69,852, or £5 14s. 9d. per lineal foot of wall. The result of this work has been very satisfactory, there being over 30 feet of water along a good portion of the wall, the bar carrying very seldom less than 12 feet at low water.

North Training-wall.—The work of removing the old wall to low water, and depositing the stone in the new wall, was again carried on by day labour, and a further quantity of 14,305 tons removed, extending the wall 60 feet, making the total length 2,607 feet, with 72,078 tons, costing 23'73d. per ton. The available stone was all used up in November, 1896.

Goodwood Island Training-wall.—The work of getting the plant, roads, &c., into proper order for carrying out this work, which it was decided should be done by day labour, was commenced in February. A new cutting into the quarry was made to improve the grade, locomotive shed removed, line at weighbridge lifted; wharf at Freeburn Island for loading stone into punts, and a coal wharf and bunker, are being built, and it is expected that the output of stone will begin very shortly.

Removal of Court House Rocks, Maclean.—The work of blasting and removing this rock was continued, and the total quantity removed to 30th June was 11,740 tons, leaving 13 feet at low water.

South Arm Rocks.—This reef is about three-quarters of a mile from the main river, near Maclean, and a hundred feet channel is being cut through it to a depth of 8 feet at low water. The stone removed was 4,775 tons.

Repairs to Wharfs.—Ulmarra Wharf was repaired, and the approach to Upper Southgate Wharf was protected by ballast, at a cost of £98.

Macleay River District.

Bellinger River Improvements.

No. 1 wall was extended 204 feet, making its total length to date 3,014 feet; the stone used was 24,216 tons. No. 2 wall was extended 214 feet, to a length of 1,384 feet, with 638 tons of stone. No. 5 wall was commenced, and 1,600 feet of it constructed, with an output of 2,957 tons.

The total length of these walls is now 5,998 feet, and stone used 109,002 tons, or about 18 tons per lineal foot, costing at contract rate £3 7s. 6d.

The result of these works has been very satisfactory, considering their unfinished state, the channel being now straight out from end of No. 1 wall, with 7 feet at low water on the bar.

Nambucca River Improvements.

North Training-wall.—This wall has been extended 634 feet, with 22,047 tons of stone; the total length is now 968 feet, for 25,025 tons of stone, or about 26 tons, costing £3 10s. per lineal foot of wall. This work is not yet advanced sufficiently to cause any improvement in the depth of water in channel or on the bar.

A new wharf at Bowra was erected at a cost of £507.

Macleay River, New Entrance.

The new channel was dredged to a depth of 10 feet at low water, or an average of about 14 feet depth of excavation, over an area of 10·7 acres; length of channel, 2,000 feet, by 250 feet wide.

South Wall.—447 feet of this wall was made with 15,587 tons of stone.

North Wall.—457 feet was constructed, and 1,980 feet of facing was completed, on north bank. This, with the stone deposited on north side for future use, took 41,625 tons of stone.

The expenditure to date was £9,452, or 3s. 0·75d. per ton on the 57,212 tons deposited.

Twenty-five tip trucks were built, locomotive got ready for work, and a shed erected for it.

The bar has not improved much yet, but all the steamers use this entrance, portion of their cargo being however transhipped into droghers under the shelter of the Trial Bay Breakwater. The average depth on the bar at low water has been 3 feet 9 inches.

A wharf is in course of construction at the end of South Training-wall, and is nearly completed; its dimensions are 50 feet by 15 feet.

A new wharf was erected at Summer Island on the Macleay River at a cost of £216.

Trial Bay Harbour Works.

17,751 tons of stone were deposited in the breakwater, which was extended from 537 feet to 600 feet, or 63 feet, which included making a washback of 55 feet, which took place during the gale of 5th November, 1896; the depth of water at end at low water is 28 feet. The cost for the year was £3,908, or 4s. 4·85d. per ton. The 600 feet of breakwater has taken 191,303 tons, costing £49,610, being 5s. 2·23d. per ton, or £82 13s. 8d. per foot of breakwater. This price includes running over 29,000 tons of stone under 4 tons in weight to spoil, and also removing nearly 109,000 cubic yards of stripping.

The average number of prisoners has been 116. In addition to the actual work on breakwater, two new quarries have been opened up ready for work when required, and all plant, gaol, quarters, &c., kept in repair.

Repairs to District Wharfs.

Greenhills, Belmore, Gladstone, Maxville, and Long Reach Wharfs were repaired at a cost of £190.

Newcastle District.

Hastings River.

A new wharf 46 feet by 20 feet with landing-stage and shoot from cargo-shed was completed at a cost of £432.

A wharf was erected near the entrance to Morton Creek costing £322.

A wharf at Rawdon Island was commenced.

Camden Haven.

A wharf was erected at Kendall costing £259.

Some rock was removed from the channel near the heads at a cost of £90.

Manning River.

North Training-wall.—This wall was extended 587 feet, with 30,833 tons of stone, costing £5,652; total length of wall is now 1,162 feet. The coating in front of wall was completed in October; stone deposited 6,887 tons; expenditure £1,550. The wall has therefore cost, altogether, £11,685 to date, or £10 1s. per lineal foot, and taken 62,169 tons, or 53½ tons per lineal foot.

River Training-wall, North Side.—This wall was extended 414 feet, with 23,000 tons of stone, costing £2,799, and is now 834 feet long, for 32,689 tons, or 39·2 tons, costing £4 10s. 3d. per lineal foot of wall.

Ghinni Ghinni Wharf was repaired at a cost of £206.

Small repairs were done to Taree Wharf.

Cape Hawke and Wallamba River.

Repairs were done to Tuncurry and Forster Wharfs, and a small wharf was constructed at Wallamba.

Myall River.

A wharf was constructed at Tea Gardens at a cost of £158.

Newcastle Harbour.

The Rock-breaker "Poseidon" removed a portion of the 12-foot rock near Stony Point, excavating 4,400 tons, at a cost of £1,592, or 7s. 3d. per ton.

The Rock-drill "Cliona" was engaged removing rock at the entrance to the new basin, an area of 1,285 feet by 25 feet was blasted to a depth of 4 feet, but none of it was lifted as no dredge was available.

Newcastle Wharfs.

General repairs to the wharfs, which are 11,800 feet long, were done at a cost of £642.

Extensive alterations and repairs to a portion of the Queen's Wharf were carried out, 760 feet being reconstructed and widened 10 feet, making two commodious berths for vessels to load wool and frozen meat, with a depth of 24 feet at low water: cost £5,094.

Two ballast jetties and seven mooring dolphins were constructed at Stockton on the reclamation line above Callen's Slip.

Breakwaters and Guide-wall.

The railway line from quarry to Wallsend Junction was completed, the quarry was opened up, a 40-ton weigh-bridge erected, shear-legs and other lifting gear fixed, quarry reserve fenced, gantry and sidings in connection with the southern breakwater and guide-wall constructed, railway line from the harbour across Stockton to the northern breakwater partly laid; 17 old waggons were fitted with new wheels, axles, &c., to bring them up to the Railway Commissioners' standard; 20 new tip-trucks were built; a wharf for gantry at Stockton was being constructed; 2 locomotives, 2 30-ton cranes, and other plant were purchased; expenditure, £30,943.

Hunter River.

A new wharf was built at Tomago for the convenience of settlers, at a cost of £443.

The Waratah Wharf was repaired, costing £130.

Paterson River.

A small wharf was erected at Woodville, costing £97.

Lake Macquarie.

A small jetty was erected near the Railway Station at Dora Creek for the convenience of fishermen and others, at a cost of £62.

Coal for Northern Rivers.—Arrangements were made for the purchase and despatch of 162 cargoes of coal, weighing 9,538 tons, for the use of dredges, tugs, harbour works, &c., on the northern rivers.

Repairs Shop, Bullock Island.—A large amount of work was done in connection with repairs to dredges, tugs, punts, and other plant at the workshop at Bullock Island.

Sydney

Sydney and South Coast District.

Broken Bay and Hawkesbury River.

A boat channel was cut between Riley's and St. Hubert's Islands, Woy Woy. Small repairs were done to wharfs at junction of Mangrove Creek, Wiseman's Ferry, Wiseman's Ferry Passenger Landing, junction of Colo River, Sackville Reach, and Careel Bay, Pittwater. Snagging was done at Mangrove Creek and the Macdonald River. Two wooden punts to carry 200 tons each were constructed at Woy Woy for conveying stone across the Harbour at Newcastle to the Northern Breakwater.

Port Jackson.

Wharfs and Sheds.—No. 2 Berth, Circular Quay, west side.—The masonry retaining wall, and ballast filling at the back of this wharf were completed, 1,026 cubic yards of masonry and 16,400 tons of ballast being used. A cargo shed of timber, with a tiled roof, was erected, at a cost of £1,619. Its dimensions are 200 feet by 40 feet. An office was also erected, costing £223.

Altering No. 3 Berth and Construction of No. 1 Jetty.—This contract, which is for replacing one of the old A.S.N. Co.'s jetties, was commenced in May, and is expected to be completed ready for the wool season.

No. 3 Berth.—A cargo shed was erected, length 100 feet, width 30 feet, costing £508, and a wharfinger's office for £50. 1,140 tons of material were excavated from the front of this berth, giving 26 feet at low water.

Prince's Stairs.—The necessary alterations to this jetty to fit it for receiving a pontoon were carried out, and pontoon placed in position.

Woolloomooloo Bay.

Alterations and Additions to Cowper Wharf.—This work was finished in August, 1896, and the cargo shed, 175 feet long by 35 feet wide, was also finished during the year.

East Side.—The work of levelling off the resumed land and reclaiming at back of wharf was continued. 8,190 tons of rock was excavated, and disposed of at Rusheutters' Bay, Circular Quay, and other places, as well as 3,850 tons put into the local reclamation, and 2,289 cubic yards of masonry in retaining wall at back of wharf.

The work of completing Nos. 1 and 2 berths, portion of which had previously been erected, was finished in May. The decking of No. 1 berth has been extended on a pile foundation as a floor for the cargo shed, and the shed of timber with a tiled roof, is now being erected. A similar shed is also being constructed on Berth No. 2. A road is also being formed and metalled along the back of these berths.

The Victoria-street Steps were finished during the year, and an iron railing put up.

Darling Island Wharfage.—A contract was let for a new ferry landing to replace one which has to be removed owing to the erection of the new concrete wharf round the Island, which is just being commenced.

Deepening at Pymont Wharfs.—The work of deepening the eastern berth of these wharfs, north from Pymont Bridge, was continued, and 1,980 tons of hard material was removed.

Deepening at Messrs. Geddes and Co.'s Berth, south of Pymont Bridge.—This was commenced in November, and during four months 2,990 tons of rock were blasted and lifted; a considerable quantity still remains to be lifted, but no dredge has been available.

Erskine-street Ferry Wharfs.—An awning was erected over the pontoon at this wharf.

Painting and Repairing all Passenger and Cargo Sheds at Circular Quay, Woolloomooloo Bay, and Erskine-street.—This work was carried out at a cost of £721.

Latrines on Circular Quay and Woolloomooloo Wharfs.—Four blocks of latrines were erected on these wharfs at a cost of £230.

Pontoon for 6-ton Crane.—A wooden pontoon, 54 feet long, 35 feet wide, and 4½ feet deep, is being built for carrying a 6-ton crane for general use in Sydney Harbour.

Fort Macquarie.—A small wharf was built, which is to be used by the Mercantile Explosives Department.

Wharf Repairs.—The following wharfs have been repaired:—Orient and Messageries Berths; Pymont; pontoon, Erskine-street Ferry; Cove-street, Balmain; Blackwattle Bay, Cockatoo Boat Landing, Rodd Island, Cabarita, Mortlake, Admiralty Wharf, Garden Island, Manly Old Wharf, Watson's Bay, and Long Wharf, Botany.

Botany Bay.

Two dolphins were constructed at the Long Wharf, Botany, for the convenience of vessels using that wharf.

Shea's Creek.

The excavation of the lower section above Rickety-street, which started in March, 1896, was finished; 110,777 cubic yards were taken out dry in trucks, and used for levelling the Government property. The pitching of the sides of the canal was continued, 9,300 lin. feet by 20 feet of stone work having been done. The Munni-street sewer was continued to the canal, according to the plans of the Sewerage Construction Branch. A concrete bed was put in at the head of the canal to conduct the waters of Shea's Creek into it. 180 trees received from the Botanic Gardens were planted.

Cook's River.

The banks have been repaired and faced with fascines for a length of 32,648 feet wherever it was found necessary.

Muddy Creek.

This reclamation was carried on by grab dredge, 68,915 cubic yards of material having been spread to formation level. A new bridge was constructed across Bestic-street to replace one damaged by flood water. The banks were repaired with fascines where necessary.

Wollongong

Wollongong Harbour.

Portion of the breakwater which had been damaged by heavy gales was repaired. General repairs to wharfs, coal staiths, cranes, &c., were done.

Kiama.

Wharfs, &c., kept in order.

Ulladulla Breakwater.—Retaining wall to protect the eastern side of breakwater has been constructed, and repairs done to breakwater.

Port Kembla.—Shafts were sunk to prove the existence of the necessary stone for constructing the proposed harbour works.

Dredge Dock, Shoalhaven.—Repairs to this dock and a small extension were carried out during the year.

Greenwell Point Wharf.—A contract was let for this work, but such slow progress was made that it was taken out of the contractor's hands and finished by the Department.

Moruya Wharf.—This wharf was extended, and a derrick crane erected on it.

Eden Jetty.—Stockyards, 5-ton crane, and latrines, were erected on this wharf.

Narooma, Bermagui, Tathra, and Bateman's Bay wharfs were repaired.

Fitzroy Dock Establishment.

Work carried out from 1st July, 1896, to 30th June, 1897 :—

Fitzroy

Lighthouses, Beacons, Leading Lights, &c.

The annual inspection of the lighthouses of the Colony was made by an officer of the Department accompanying the members of the Marine Board on their usual tour, and a report made on the condition of the various buildings.

South Solitary Island.—A crane was made at the Fitzroy Dock and erected on the Island for landing stores, &c. The revolving gear of lantern was overhauled and repaired.

Tacking Point.—Repairs were done to the light-keepers' quarters at a cost of £60.

Newcastle.—Repairs to quarters were carried out, costing £118. The leading light towers were painted and repaired; cost, £106. A pile beacon to replace the lightship near the pilot boat harbour was erected at a cost of £450. A new tide-gauge house was erected at the pilot station, costing £49.

Macquarie Lighthouse, South Head.—General repairs and painting were done to quarters and lighthouse at a cost of £203.

Hornby Light.—Water was laid on from the city mains, vane and ventilator on lantern, electric bells, and keeper's quarters were repaired, costing £40.

New Lighthouse, Point Perpendicular, Jervis Bay.—The light on George's Head having been found not to be in the most suitable position, it was determined by the Marine Board to have a new lighthouse erected, and Point Perpendicular was selected as the best site. A contract was let at the close of the year for the erection of the lighthouse, lantern, three keepers' houses, stables, and a jetty. The walls of buildings are to be of concrete. Contract price is about £11,000. The lantern and revolving apparatus—a first order dioptric—was manufactured in England by Messrs. Chance Bros., at a cost of about £4,000, and is now in Sydney ready for erection.

(c) North Coast District.

Richmond River.

Tuckombil Flood Escape.—This work having been abandoned by the contractor was completed by the Department at a total cost of £5,213.

Newcastle District.

Reclamation at Stockton.—The retaining walls were extended 420 feet with 6,225 tons of ballast; total length of wall is now 2,570 feet. Seven acres of reclaimed land were covered with 20,531 tons of ballast from ships.

Reclamation at Bullock Island.—Retaining walls on Throsby's Creek were constructed—one from Hargrave-street south 644 feet, and one from the railway bridge north 706 feet, partially finished. 104,312 tons of ballast was discharged from 210 vessels at the ballast jetties, averaging 519 tons per ship. It was used for reclaiming Crown lands at the north end of Carington. Reclamation was also carried on by sand-pump dredge, north of Cowper-street, where a valuable area is being reclaimed.

Sydney and South Coast District.

Rushcutter's Bay Sea-wall and Reclamation.—The wall, which is 2,510 feet long, was completed with the exception of the parapet, a boat-slip was constructed, the space behind wall reclaimed, and all drains extended to the water.

Long Cove Reclamation.—The ground has been levelled where reclaimed by the "Groper," and grass planted. The driving of piles along the sides of canal has been completed, 1,230 feet of piles having been driven, making a total of 21,068 feet.

Rozelle Bay.—Ground has been levelled and grassed as filling was completed.

White's Creek.—Banks have been formed to protect private property from overflow of water, tram embankment strengthened, drain-pipes laid along Gordon-street, and drains cut to carry off water from dredge's pipes.

Coogee Bay Sea-wall.—The roadway and footpath at back of this wall were completed.

Naval Station, Garden Island.

The contract for the erection of the boat-repairing shop was completed in September.

The electric lighting of the island, shops, and different houses, which was let by contract and included the supply and erection of three high-speed Bellis engines, coupled direct to Siemen's dynamos, 24 arc lamps of 2,000 candle power, and 628 16 candle power incandescent lamps. The installation was successfully completed on May 18th, at a cost of £4,193. A tile floor was placed in dynamo room at a cost of £101.

Spectacle Island.—A contract was let for the construction of a swimming-bath, the erection of a dressing-shed and recreation-room, the alteration of the sanitary arrangements, including a windmill for pumping saltwater. Total cost was £472.

H. R. CARLETON,

Principal Assistant Engineer for Harbours and Rivers.

Dredge Service.

(V.)

Report of the Superintendent of Dredges.

Sir,

Department of Public Works, Sydney, 30 September, 1897.

As it has been decided that the annual reports of dredging operations shall be submitted at the middle instead of the close of each year, I have had a six months' statement compiled, covering the period from 1st January to 30th June of the present year, and also, for the purpose of comparison, a table showing the cost of work from 1st January, 1896, to 30th June, 1897. The reason for showing in one statement eighteen months' work is, that it would be somewhat misleading if the cost of the first six months of a year were compared with that of the whole of the preceding year, as extensive repairs are generally effected during the first months of each year. As future returns will be from the middle of one year to the middle of the following one, the usual comparisons of consecutive years' dredging can, after 1897, be made as heretofore.

Since my report of April last but few changes have taken place in the working localities of the dredges. The double-ladder dredge "Hunter" was again put in commission in May last and sent to Newcastle to take the place of the sand pump "Jupiter," it having been determined to send the latter vessel to the Macleay Bar to try if it was practicable to work inwards from the sea. An attempt to do this would have been made before had there been any port, within reasonable distance, at which coaling could be effected and shelter obtained during easterly gales. Sufficient progress it was thought had been made with the Trial Bay Breakwater to effect these objects, and the "Jupiter" left for Trial Bay on 23rd June. A start was made with pumping at sea outside the bar at the new entrance, and while reasonably fine weather lasted most satisfactory progress was made; but on 25th July a furious easterly gale arose which swept away part of the breakwater, and the "Jupiter" had to go to sea and to encounter the full force of the storm, returning afterwards to the bay. The tender "Mikado" unable either to cope with the gale or cross the bar sought shelter behind the breakwater, and foundered soon after the outer part of the structure carried away. The boiler and engines of the little vessel have been recovered and a new hull for them has been recommended. Continuous rough weather and the early setting in of north-east winds caused the temporary withdrawal of the "Jupiter" and resumption by that dredge of pumping work at Sydney.

Much difficulty has been met with in arranging for a suitable sand-pump for dealing with very shallow bars, the chief obstacle being the designing of a vessel powerful enough to contend with heavy seas and of light enough draft to carry a cargo of sand over a shallow bar. Self-loading and self-propelling bar sand-pumps have for some time been working in the United States, but there 9 feet is considered a shallow bar. Here only 5 feet is available, but by taking advantage of the latest improvements for lessening weight in boilers, engines, and pumps, the Department has succeeded in obtaining a tender in Scotland for a twin-screw dredge of 700 horse-power, designed to load herself while steaming slowly over bars and to draw when laden not more than 5 feet. At such bars as those at the entrances to the Richmond, Bellinger, Nambucca, Macleay, Hastings, Manning, Moruya, &c., this vessel will carry on the work of deepening by steaming slowly in, turning inside, and crossing out to dump her hopper-load at sea. The two sand-pumps on board, with suction pipes trailing on the bottom, are driven by special engines, so that propelling and pumping go on simultaneously. The new dredge will steam out by way of the Suez Canal, and should be here by August next year.

Reclaiming work at Rozelle Bay, referred to in my last report, has been temporarily suspended to permit of storm-water channels being constructed, and the suction-dredge "Groper" has been employed reclaiming about 9 acres of land at Folly Point, Middle Harbour, in connection with sewage disposal for North Sydney. The "Groper" is now reclaiming land at Rushcutters Bay, and before returning to Rozelle Bay will undertake similar work at the entrance to Tarban Creek.

The "Castor" is being fitted with a very large centrifugal pump, suited for 800 horse-power, to be used for pumping on to reclamation areas at Newcastle the silt lifted by the ladder-dredges which is now deposited at sea. The sand-pump "Theta," recently sent to the Bellinger, is working near the river heads satisfactorily, and a similar dredge, the "Eta," just completed at Fitzroy Dock, will be towed in a few days to Port Macquarie. It is contemplated recommending that two ladder-dredges of the "Minos" type be fitted with sand-pumps, so that they may be used with buckets and shore-delivery pump working at the same time or separately as either a ladder-dredge discharging into punts or as sand-pump only delivering sand on to reclamations.

The whole of the plant is being kept in good working condition.

I have, &c.,

A. B. PORTUS.

The Engineer-in-Chief, Public Works.

STATEMENT of Ladder Dredge Expenditure and Work, 1st January to 30th June, 1897.

Country Towns Water Supply.

(VI.)

Report of the Assistant Engineer, Public Works Department.

Sir,

Department of Public Works, Sydney, 12 October, 1897.

I have the honor to furnish the following particulars of the works completed or commenced, and schemes investigated and reported on, during the year ending 30th June, 1897.

Owing to the re-arrangement of duties, I have, during the latter six months, been relieved by Mr. Wade, of the supervision of water-works in progress which, in future, will be described by him.

Water Supplies in progress or completed.

Armidale.

These works were finally completed and have since been handed over in full working. The storage reservoir on Dumaresq Creek, about 8 miles from the town, is formed by a concrete and rubble dam of the usual gravity type, 37 feet high, the capacity being about 110,000,000 gallons, and catchment area $8\frac{1}{2}$ square miles. The supply main is of riveted steel, 9 $\frac{3}{4}$ " diameter, $\frac{1}{8}$ " thick, and conveys the water by gravitation to a concrete service reservoir on the highest hill in Armidale. The streets are reticulated with about 16 miles of cast-iron pipes. Owing to difficulties with the contractor the dam had to be built by day labour.

The water is soft and of an excellent quality, and in every way the works have justified the substitution of this for the Duval Creek scheme originally passed by the Public Works Committee.

Junee.

These works, though actually completed during the previous year, could not, owing to the prolonged drought, be made use of to any extent, and it was not till January, 1897, that sufficient rain fell on the water-shed to cause the dam to partially fill and allow the town and railway to be supplied. It is hoped that heavy rain will soon fall and fill the reservoir, as there is now a severe drain on the comparatively small quantity stored. With a view of adding to the efficiency of the scheme, plans were prepared for bringing in an additional watershed area of 3 square miles. The works as now handed over to the Municipal Council comprise a very large storage reservoir on the main branch of Ulandrie Creek, near Bethungra, formed by a concrete and rubble dam 42 feet high, of the usual gravity type, the capacity being 137,000,000 gallons, and catchment area $5\frac{1}{4}$ square miles; 18 $\frac{1}{2}$ miles of 7 $\frac{3}{4}$ " steel and iron riveted main leading to a service reservoir of concrete 2 $\frac{1}{2}$ miles from Junee; and about 7 miles of wrought and cast iron supply and reticulation pipes. The scheme is a gravitation one, and was selected in preference to the proposal to pump from the Murrumbidgee.

Owing to its unfavourable situation, Junee is a most difficult town to supply with water, and the cost could not be borne by the ratepayers except for the assistance of the Railway Commissioners who use the water not only at Junee but also at Bethungra, and guarantee a minimum contribution of £1,500 per annum.

Tamworth.

Further investigations were made during the year of sites for dams on Moore Creek, in order to increase the storage capacity to 50,000,000 gallons, with the result that the first proposed site was reverted to, and an arch dam designed. The works, which are now being carried out by day labour at the special request of the Council, will in other respects be in accordance with the details submitted to the Public Works Committee. These comprise a storage reservoir on Moore Creek in the Moonbi Ranges, about 11 miles from the town; a steel supply main, of 7 $\frac{1}{4}$ in. diameter; a concrete service reservoir of 500,000 gallons capacity, near the hospital in Tamworth, and about 19 miles of reticulation. The supply is by gravitation, and owing to the great fall available it will furnish power for electric lighting, and in this and other respects should prove a great improvement on the originally proposed pumping scheme.

Parkes.

Owing to the continued drought, and the consequent failure of the existing drift-bed pumping scheme, it became necessary to provide a gravitation supply. The additional works just completed consist of a concrete and rubble arched dam, of 250 feet radius, and 25 feet high, built across the Billabong Creek, about 11 miles from the pumping station, and connected with the town mains by a steel riveted pipe, 7 $\frac{1}{4}$ inch in diameter. The storage capacity is 63,000,000 gallons, and provision has been made for raising the dam when required. The catchment area is 50 square miles, and the quality of the water is everything that could be desired.

Moss Vale.

Alterations were made to the pumping engines, and an additional boiler provided.

The following schemes were investigated, surveys made, and plans and estimates prepared.

Cootamundra.

This scheme, work on which is about to be commenced, has been rendered necessary by the late drought, which caused the water stored in the drift bed to fail. It will consist of a large storage reservoir on Hardy's Creek, about 2 $\frac{1}{2}$ miles from the present pumping station. The dam will be arched, 200 feet radius, and 30 feet high, and will conserve 136,000,000 gallons. The water will gravitate into the existing service reservoir, through 7 $\frac{1}{4}$ inch steel pipe. By means of branch mains and small "pipe-head" dams, the flow of Coghlan's and Rocky Creeks will be conveyed to the storage reservoir, thereby increasing the catchment area to 4 square miles, which, with the immense storage provided, should be sufficient to keep the town permanently supplied. The estimated cost is £9,130.

Tenterfield

Tenterfield.

This will be a gravitation supply from Curry's Gap Creek, which rises in Mount Mackenzie, close to the town. The dam will be a concrete and rubble arch of small radius, and the storage capacity 47,000,000 gallons. The catchment area is 6 square miles, and the creek a permanent one. The scheme will also provide power to light the town by electricity. Estimated cost, £7,900.

Mudgee.

This work, which is about to be commenced, will also be a gravitation supply, and will be obtained from a storage reservoir formed by a large arched dam on Redbank Creek, close to the town. The total catchment area which it is at present proposed to make use of is $2\frac{1}{4}$ square miles in extent; but as it is very steep it should prove sufficient, in conjunction with the proposed storage of 42,000,000 gallons. Estimated cost, £14,190.

Picton.

This town will be supplied by gravitation from the Bargo River, the storage dam being below the junction of Horne's Creek, about 8 miles away. It has been necessary to go this distance to gain sufficient head to cross the intervening high hills. The dam will be a concrete and rubble arch of small radius, and will store sufficient water to not only supply the town and railway, but also to provide power for electric lighting. Estimated cost, £13,860.

Wollongong.

This scheme, "The Cordeaux," was again modified, in order to bring it within the means of the ratepayers, and, having been approved, will shortly be commenced. The works, which are at present intended to supply Wollongong alone, will comprise an arched dam across the Cordeaux River, forming a storage reservoir of over 60,000,000 gallons capacity; a tunnel, nearly half a mile long, through the range, to "Andrews' Lookout"; a 5-inch steel main to Wollongong, with a relief tank on Garden Hill, and the usual reticulation. Estimated cost, £19,470.

Wellington.

This question was further investigated, and a new gravitation supply surveyed and designed from Bushranger's Creek, where an arched concrete and rubble dam will be constructed, to hold a year's supply. The water will gravitate to the town through $2\frac{1}{4}$ miles of 7-inch pipe, and be distributed through the usual reticulation pipes. Estimated cost, £8,700.

Temora.

Investigations were made, and a scheme recommended which comprises the improvement of the existing Government dam, 3 miles from Temora, and the conveyance of the water, through an earthenware pipe to a service reservoir, whence it will be distributed through reticulation pipes.

The following schemes were investigated and preliminary reports furnished:—

Inverell.

Further investigations were made, and a new site for a dam selected higher up Middle Creek, from which the water will gravitate to the town. The scheme is now about to be surveyed.

Bathurst.

Owing to the exhaustion of the Macquarie drift-beds during the late drought, it was necessary to look for a new source of supply. On investigation a promising source was discovered on Foster's Valley Creek, near Rockley, at sufficient elevation to gravitate over the intervening hills. The Gulf country was also investigated, and a possible source found. Surveys are about to be made of both schemes.

Tumut.

A further examination was made at the request of the Council, and the scheme from Waterfall Creek again recommended. Surveys are about to be made so that accurate estimates can be furnished.

Kiama.

After a careful examination of the country a report was furnished recommending the Fountaindale Creek as the best source of supply. No surveys were however made.

Works not connected with Water Supply.

Hunter River Flood Prevention.

A scheme for the mitigation of floods on the Lower Hunter was devised, and a report presented with plans and estimates. This scheme will consist of a large dam across the Hunter, 10 miles below the junction of the Goulburn, whereby 40,000,000,000 cubic feet of water can be held back till the lower river has time to fall. A geological examination was afterwards made with favourable results, and additional surveys are shortly to be commenced.

EDWD. B. PRICE,
Assistant Engineer, Public Works Department.

Bridge Construction and Renewals.

(VII.)

Report of the Assistant Engineer for Bridges.

I HAVE the honor to report that during the year ended June 30, 1897, 124 new bridges were completed and opened for traffic, the details as to length, &c. of each being given in Appendix "A." With the exception of the lifting span at Swan Hill and the three steel spans at Wallis Creek, the whole of these new bridges are constructed of timber, though in many cases iron or concrete piers and abutments have been used.

The total length of these bridges is 13,483 feet, consisting of 357 plain timber beam spans, 20 timber truss spans, 4 steel spans, 1 steel lift span, and 4 masonry and brick arch spans, the total cost being £85,243 4s. In my last report I referred to the Swan Hill and Inverell Bridges as being in progress, and they are perhaps the most important of those opened for traffic during the year.

Swan Hill Bridge over River Murray has a total length of 381 feet, consisting of four spans of 35 feet each, 2 spans of 91 ft. 6 in., and one steel lifting span (to admit of passage of steamers in flood-time), of 58 ft. 4 in. The cost of this work was £7,625 18s. 11d. (half of which is defrayed by the colony of Victoria), and the bridge is, from a traffic point of view, a very important one, Swan Hill being the most westerly point on the Murray touched by the Victorian railway system.

Prior to the erection of the bridge the traffic was carried by a hand-power punt, owned by a private individual; and, when we consider that upwards of 105,000 sheep and cattle a year crossed at this place, it will be seen how necessary the bridge was. It may be of interest to remark that Swan Hill Bridge is the tenth spanning the Murray, counting from the source. It was opened for traffic in November, 1896.

Inverell Bridge, over the McIntyre River, has three timber truss spans of 110 ft. 3 in. each, on iron cylinders, with four timber beam approach spans, the total length being 440 ft. 9 in., with a 24 feet roadway. It is of the type built in the previous year at Wagga Wagga, and replaces the old and very narrow bridge which carried the traffic at this place. The cost of the bridge was £9,938 18s. 11d., and it was opened for traffic in July, 1896.

In addition to the bridges referred to as completed, contracts were in progress during the year for the erection of sixty-one new bridges, which are not yet completed, particulars of which are given in Appendix "B."

The total length of these bridges is 10,970 feet, and they are made up of 265 plain timber beam spans, twenty-three timber truss spans, and one suspension span, the total completed cost being estimated at £73,461 11s. 9d.

Of these uncompleted bridges the most important are:—

Bridge over Kangaroo River at Kangaroo Valley, consists of one suspended span of 252 feet 9 inches, having a roadway of 18 feet.

The bridge has very fine towers of sandstone, and the span is carried by fourteen steel wire ropes on each side of the bridge, formed into two cables of seven ropes each. The ropes are $4\frac{1}{2}$ inches in circumference, made of plough steel, galvanised, and are each capable of sustaining a tensile strain of 78 tons without fracture.

The work is well in hand, the towers being complete and the ropes in position.

The site is admirably suited for a suspension bridge, for here, where the Moss Vale-Nowra coach road crosses the Kangaroo River, the formation is solid sandstone, offering an excellent anchorage for the cables of the bridge, as well as an unlimited supply of fine stone for the masonry towers. The depth of the gorge in which the river flows also renders the suspension type most economical. The road here is at present carried by a timber truss bridge of considerable age, and now decayed. The new bridge is estimated to cost £8,000.

Bridge over Hunter River at Morpeth consists of three timber truss spans of 110 feet 3 inches each, on iron cylinder piers, thirteen timber beam spans of 35 feet each, and one of 30 feet, making a total length of 815 feet 9 inches, with a roadway of 18 feet. The trusses in this bridge are of a similar type to those at Inverell, but lighter, on account of the comparatively narrow roadway.

The bridge, when completed, will take the place of the hand-power ferry at present carrying the traffic, and is estimated to cost £9,000.

Miscellaneous.

A work of some importance carried out during the year was the protection of the right bank of the Macquarie River at Bathurst above the Denison Bridge, where the river made such inroads as to threaten the line of the Main Western Road. A bank of ti-tri fascines has been completed here, 1,700 feet in length, at a cost of £1,591, and with most satisfactory results.

A new and powerful steam ferry punt for the George's River (Tom Ugly's) is in hand, and will be launched shortly. The principal dimensions are 64 feet long and 32 feet 6 inches in width, and many improvements have been effected in the general arrangements, which will add to the safe and speedy working of the ferry. This punt is estimated to cost £2,366 10s.

Hand-gearred punts were also constructed for the Hawkesbury River, Windsor, Tweed River, and approaches, and caretaker's cottage for the Raymond Terrace punt, at a total cost of £1,829.

It will be seen, then, that taking the number of works completed, and adding the number of those in progress, the total contracts dealt with was 188, representing an expenditure of £163,328 5s. 1d.

Comparing

Comparing the year's work with that of 1895-6, we find the following:—

	1895-6.	1896-7.
Bridges, completed, cost... ..	£64,287 19s. 10d.	£85,243 4s. 0d.
Number	125	124
Length	10,218 feet	13,483 feet
Truss spans	7	20
Beam spans	296	357
Iron or steel spans	4	5
Masonry and brick arches	4
Bridges, in progress, cost	£71,201 3s. 0d.	£73,461 11s. 9d.
Number	81	61
Length	9,191 feet	10,970 feet
Truss spans	14	23
Beam spans	234	265
Iron or steel spans	5	1

From these figures it will be seen that the payments for completed works, and estimated cost of those in progress this year exceed that in 1895-6 by £23,215 12s. 11d., while the length of bridge-work exceeds that of the former year by 5,044 feet. Generally it is difficult to make any comparison of cost from one year to another, owing to the great variety of structures dealt with, but in the two years under consideration practically all the bridges are of timber, and a rough comparison of cost may be made, which shows the average cost per foot run in 1895-6 to be £6 19s. 7d. as against £6 6s. 6d. per foot run in 1896-7, a difference probably due to the large number of beam spans (78) in the Gundagai Viaduct.

E. M. DE BURGH,

Assistant Engineer for Bridges.

NOTE—The figures given in the above Report, as also in the Returns attached, represent the cost of bridge structures without engineering and incidental expenses.

(VIII.)

BRIDGES completed during the year ending June 30, 1897.

Water Conservation and Irrigation.

(IX.)

Report of the Principal Assistant Engineer.

The Water Rights Act.

About the beginning of the official year under review the Water Conservation Branch was transferred from the Department of Mines to the Department of Works. By far the most important matter connected with this branch which was then being dealt with was the Water Rights Bill. This Bill was then being considered in Parliament and it was subsequently passed, the date on which it came into operation being 1st November, 1896. In regard to the importance and utility of the Water Rights Act, it may be mentioned that a return specially prepared by the Stock Department showed that the total outlay by private enterprise on dams in creeks and rivers throughout the colony has been considerably over six and a half millions sterling. Previous to the passing of the Act these dams existed on sufferance only, but the charge of all rivers and creeks is now vested in the Minister, who has power under the Act to license dams and other works after due inquiry, or to order their removal if their existence is objectionable. Persons who object to works in creeks or rivers cannot now take the law into their own hands and destroy the works as has frequently been done hitherto, but must appeal to the Minister or state their objections at the inquiries regarding applications for licenses.

The number of applications for licenses under the Water Rights Act which have been received, examined, and registered is 471, but in addition to these, 47 applications for licenses for existing works were received too late to be dealt with. The Act specified that applications for such licenses should be submitted to the Minister before 1st February, 1897. This limit proved too short for applicants in distant localities, and it had the effect of causing a temporary block in the office, as the applications had all to be examined and noted on the maps before being forwarded for inquiry.

A considerable number of the applications received relate to pumping engines. In the Hay Land Board District, the total number of applications received within the prescribed time was 136, of which 11 were for pumping plants. The corresponding numbers for the Bourke District are 94 and 5; for the Dubbo District, 65 and 1; for the Forbes District, 45 and 3; and for the Wagga Wagga District, 56 and 5. In addition to applications relating to existing works, several have been received for proposed works of considerable importance.

Inquiry by Colonel Home, R.E.

During the greater part of the year under review my time has been almost entirely taken up with the administration of the Water Rights Act and attending on Colonel F. J. Home, R.E., who, as mentioned in the official report of the Public Works Department of last year was specially engaged by the Government to inquire into and report on water conservation and irrigation throughout New South Wales. The value of the comprehensive surveys which were made in connection with possible schemes for water conservation has been strongly in evidence in the course of Colonel Home's inquiry. All the rivers in the western river system, and all the important lakes have been included in the great network of levels, and a series of gaugings have been made to show the discharge of the principal rivers. Colonel Home has visited all the places of special interest in regard to his inquiry, and it is probable that these inspections, and his examination of the results of the surveys, will enable him to complete his report within the twelve months for which he was specially engaged. Only a few surveys and investigations had to be specially made for Colonel Home, among the more important being the detail survey and plan of the Tantangara Reservoir site on the Upper Murrumbidgee, the completion of the detail survey and plan of the Lake Coolacumpama Reservoir site on the Lower Murrumbidgee, the detail survey for a new offtake for the proposed Murrumbidgee Southern Canal, and approximate surveys of proposed sites for storage reservoirs on the Murray, Murrumbidgee, Lachlan, and Macquarie Rivers.

Miscellaneous Works.

As the consideration of all important projects had to stand over till after Colonel Home's inspection, no large works were entered on during the year. My time being almost entirely divided between attending on Colonel Home and dealing with questions under the Water Rights Act, Mr. Wade was entrusted with the chief supervision of works under construction, the principal of which were the Bourke Lock and Weir, the Middle Billabong Weir, and the Wentworth Irrigation Works. The first of these works, of which a photograph is appended, has been completed, and acts very satisfactorily. The completion of the works at the Middle Billabong Weir, as at the Gin Gin Weir on the Macquarie, has been delayed owing to the desirability of bringing them under the provisions of the Water Rights Act. The Wentworth Irrigation Works are the first of their kind carried out by the Government in this colony. On their completion the irrigable area will be let in suitable blocks, and there is good reason to anticipate that the work will be remunerative.

The minor works completed in the year under review were the tanks for the water supply to the mining settlements at Fifield and Gilgunnia, the weir and crossing at Angledool, the improvements of the channel of the Middle Billabong, and the cutting for conducting the water diverted by the Warren Weir into the Gunningbar and Cookamurra Creeks.

Among matters investigated and reported on were proposals for irrigation works at Narromine, the practicability of irrigation from Lake Cudgellico, the drainage of the Araluen Valley, a proposed weir at Hillston, the modified scheme for irrigation at Hay, the improvement of effluent creeks below Warren, and the drainage of the Tuckian Swamp, Richmond River.

Staff

Staff Employed.

The regular field staff in connection with the branch includes, in addition to Mr. Wade, Mr. Blomfield, Assistant Engineer, and Mr. Granter, surveyor. Two of the office staff have been employed on field duty for some time—Mr. Seaver in connection with information required by Colonel Home, and Mr. Amphlett in assisting Mr. Wade and in taking river discharges.

During the greater part of the official year, Mr. Marshall, the chief draftsman, had eight draftsmen under him, including Mr. Seaver and Mr. Amphlett; but at the end of April an additional draftsman was appointed. The preparation of plans and marking on levels in connection with Colonel Home's inspections, and the noting of sites of works for which applications for licenses were received, involved a large amount of work for the office staff. In addition to the plans of works already referred to, the staff have had during the year the preparation of plans relating to a number of works and proposals for water supply and drainage, including subdivision for the Wentworth irrigation area, lands which will be affected by the Middle Billabong weir, drainage of the Gwydir District, lands required for resumption in connection with various water supply works, diagrams showing heights and discharges of rivers, &c.

Expenditure.

The amount expended from the Water Conservation Vote during the year under review was £32,647 9s. 3d., the two most important items being the Bourke lock and weir and the Middle Billabong weir.

H. G. MCKINNEY,
Principal Assistant Engineer, Water Conservation Branch.

Surveys, Soundings, and Borings.

(X.)

THE work of the surveying staff of the Public Works Department during the financial year 1896-97 has been to a large extent interfered with by the alterations necessitated by the reorganisation of the Service, but towards the end of the term matters began to settle down to their normal condition, and work is now progressing satisfactorily. This desirable state of affairs is largely due to the energy and ability shown by the whole of the staff, who have succeeded in keeping pace with the work of the Department under exceptional difficulties.

The opportunity was taken, while the reorganisation proceeded, to introduce some radical changes in the methods of carrying out the surveying work and recording the results, and, so far as it is possible to judge, the new system works satisfactorily. In August, 1896, the whole of the survey work of the Department, with the exception of the detail work of the Sewerage Construction Branch, was placed under the control of the present Chief Surveyor, and it has thus become possible to introduce a more complete and harmonious system of working. The nature of the duties pertaining to this branch has prevented my devoting much time to the more scientific questions demanding attention, but one or two important matters have been commenced and carried to a successful issue. The most important of these was the conference of representatives of the Government departments to determine upon a standard datum for levels in New South Wales, which was called by the Minister for Public Works in December, 1896. A report of this conference has already been printed, and it is perhaps sufficient to say that, as a result, all levels in future taken by Government officers will be referred to one common datum. The advantages of this reform will be more apparent as years roll on.

A sum of £400 has been placed on the Estimates for 1897-8 to provide and fix a number of tide-gauges at various places on the coast. This fulfils a long-standing want, not only from a hydrographical standpoint, but the data provided will be of material assistance to the engineer in the designing of new harbours and improving the entrance to our rivers.

In November, 1896, the sum of £50 was appropriated for the purpose of fixing standard benchmarks in Sydney Harbour to facilitate the work of surveyors in defining mean high-water, which, by the common law, is the boundary of all land having a frontage to tidal water. This work is being carried out as opportunity offers, but progress has necessarily been slow on account of the limited time at our disposal.

During the year the following surveys have been carried out:—

Harbour Surveys.

Darling Island soundings and borings.	Clarence River entrance (plan drawn).
Newcastle, from entrance to Fullerton Cove (plan drawn).	Moruya River, from Malabar Creek to Moruya.
Spectacle Island (plan drawn).	Camden Haven Inlet, from entrance to Laurieton.

Wharf Surveys.

Tuggerah Lake.	Bourke.	Brooklyn.
----------------	---------	-----------

Water Supplies.

Wollongong.	Tenterfield.
Parkes.	Junee (supplementary supply).
Tamworth.	Picton.
Cootamundra.	Temora.
Mudgee.	

Bridges.

North Shore (Dawes' Point to McMahon's Point).	Patterson River at Hinton.
Tom Thum Lagoon.	" " Vacy.
Wheneey Creek.	Narromine.
Blaxland's Crossing (Nepean River).	Borambil Creek.
Wyong Creek.	South Creek.
Stone Quarry Creek, Picton.	Moruya River at Moruya.
Parramatta River at Newington.	Patterson River at Murwillumbah.
Patterson River at Dunmore.	Queanbeyan River at Queanbeyan.

Water Conservation.

Tuckian Swamp, Gin Gin Weir.

General Surveys.

Roselle Bay resumptions.	Fitzroy Dock.
Pymont	Admiralty House grounds.
Bourke flood prevention.	Port Macquarie.
Parramatta Road (levels for wood-blocking).	Cook's River improvements.
Shea's Creek resumptions.	Berry's Bay.
Ryde to Concord Punt.	Port Macquarie—quarry site.
Tom Ugly's Point Punt.	

Reclamation Limit Line Inspection.

One hundred and two cases have been inspected and reports sent in.

GERALD H. HALLIGAN,

The Engineer-in-Chief for Public Works.

Chief Surveyor,
Public Works Department.

30 November, 1897.

RETURN

Government Architect.

(XII.)

Report of the Government Architect.

Department of Public Works, Government Architect's Branch,
Sydney, 17 November, 1897.

I HAVE the honor to present the following report on the work carried out in this branch during the twelve months ending 30th June, 1897.

	£	s.	d.
The sum voted on Revenue for expenditure in connection with repairing, furnishing, and improving existing buildings, and fulfilling the many services rendered by this Branch amounted to £64,780.			
The expenditure for the same period, including liabilities brought forward from the previous year, amounted to	60,249	2	10
And expenditure, the means for which were provided for by other departments, amounted to	23,720	3	10
The expenditure from the Loan Account upon sites, new buildings, and additions to existing buildings amounted to	166,183	0	0
Making a total expenditure for the year of	<u>£250,152</u>	<u>6</u>	<u>8</u>

The unexpended balance at the end of the financial year on Loan Account, granted under the several Acts, is estimated amounted to about £400,000.

The expenditure already mentioned has been incurred in connection with 583 buildings, of which the following list comprises the most important completed within the year:—

	£	s.	d.
Chancery Square Court—Additions	1,671	15	5
Custom-house—Additions	2,209	18	10
Darlinghurst Police Station—Erection	1,119	0	8
Museum—New roof	1,277	6	10
Supreme Court—Additions	13,244	19	2
Callan Park Hospital for Insane—Attendants' Quarters	3,225	1	3
Five Dock Post Office—Erection... ..	1,009	14	2
Parramatta Court-house—Erection	13,985	9	5
Parramatta Post Office—Additions	1,179	10	0
Rydalmere Hospital for Insane—Additions	7,480	9	9
Surry Hills Lock-up—Erection	3,045	17	1
Broken Hill Police Barracks—Erection... ..	2,704	0	0
Dubbo Lands Office—Erection	3,573	12	11
Forbes Police Barracks—Erection	1,549	8	0
Glen Innes Post Office—Erection	2,661	9	6
Greta Court-house—Erection	1,221	14	3
Hay Lands Office—Erection	2,859	11	3
Junee Police Station—Erection	1,521	2	5
Katoomba Court-house—Erection	2,350	10	3
East Maitland Lands Office—Erection	4,750	18	10
West Maitland Court-house—Erection	12,157	12	2
Mudgee Gaol—Additions... ..	1,174	2	6
Murrumburrah Police Buildings—Additions	1,003	1	0
Macleay Lock-up—Erection	1,666	11	0
Mount Victoria Post Office—Erection	1,603	18	5
Minmi Post Office—Erection	1,086	18	7
Newcastle Hospital for Insane—Additions	2,069	0	0
Nowra Court-house—Erection	3,792	19	4
Milton Court-house—Erection	1,324	10	1
Parkes Court-house—Additions	2,127	0	2
Rylstone Lock-up—Erection	1,473	13	0
Singleton Lock-up Gaol—Erection	1,262	18	10
Sofala Lock-up—Erection	1,198	15	3
Tumut Lock-up—Erection	1,516	15	0
Walgett Public Buildings—Improvements	2,563	5	6

The Chancery Square additions consist of additional offices to meet the increasing legal business there conducted. As the whole of the Chancery Square building is of an obsolete character, and should sooner or later be demolished to form a portion of the site of the new Law Courts, the expenditure upon the additions has been confined to the barest necessities, and the buildings must be considered as of a temporary character only.

The addition to the Custom House was necessitated by the adoption of land and income taxes as a new source of revenue, this Department requiring the accommodation for a very considerable new staff of officers.

The Museum roof—that is, the portion over the central building—owing to the ravages of white ants, which found their way from the streets up through the interstices of the stone wall to the roof and rendered it unsafe, has been entirely reconstructed, mostly in iron with copper covering, while every effort has been made to eradicate this expensive and dangerous pest.

The expenditure at the Supreme Court has provided two additional fully equipped court-rooms, fitted in the most modern style with all the accommodation necessary for the proper discharge of the duties of the higher Courts of justice. They are lighted from the top and ventilated by mechanical means, and present

present a handsome and substantial appearance. The accommodation for the public, as distinct from that of the legal profession, is purposely limited to seating for about fifty persons in each court. Attached is a range of chambers and offices in which His Honor the Chief Justice and the Judges of the Supreme Court and their Associates are accommodated, in lieu of the old and inconvenient rooms which for many years did duty for the same purpose.

The expenditure at Callan Park Hospital for the Insane covers new buildings erected to accommodate the increased staff of attendants.

The Court-house at Parramatta is one of the most important works carried out during the year. Its erection had long been delayed owing to a variety of reasons, one of which was the difficulty in determining as to its site. This, however, being got over, the new buildings have been erected in brick with stone dressings, with an elaborate and handsome stone portico. The court-house proper contains full accommodation for all the legal business likely to be transacted at Parramatta, and extensive ranges of police buildings are attached in the rear. These comprise general lock-up, Inspector and Sergeant's quarters, barracks for constables, and a range of stabling for mounted troopers; the whole forming, probably, the most complete establishment of the kind in the Colony. The design, both externally and internally, is based on less stereotyped lines than is usually the case, and may be considered successful.

An almost similar expense has been incurred in the erection of a Court-house and extensive police establishment at West Maitland, and in this case also the building was delayed until the site was finally settled upon. It is roomy and convenient, carefully designed, and has an imposing clock tower at the corner of the two public streets against which it stands. The lock-up and police buildings are very complete in all respects; stabling has yet to be provided.

The Post Office, at Parramatta has been considerably improved, much needed accommodation being provided for the public, and better quarters for the Postmaster.

The expenditure at Rydalmere covers the erection of an extensive hospital, partly by the conversion of existing buildings, but principally by the erection of new ones. The buildings have been designed with all modern appliances in order to provide for the efficient working of this large establishment.

The new buildings erected for the Police Department are mainly represented by the following:— Surry Hills, Broken Hill, Fernmount, Forbes, Junee, Murrumburrah, Maclean, Rylstone, Singleton, Sofala, and Tumut; those for the Postal Department, by Five Dock, Summer Hill, Mount Victoria, Minmi, and Robertson Post Offices.

New offices have been erected for the Lands Department at Dubbo, Hay, and East Maitland.

The works carried out for the Justice Department are mainly represented by the erection of the New Court Houses at Greta, Katoomba, and Nowra, and the additions to the existing buildings at Parkes and Milton.

A considerable expenditure has been incurred on buildings in progress but not completed during the year. Prominent amongst these is the Kenmore Hospital for the Insane, on which no less than £47,103 have been expended during the year, in accordance with the general scheme adopted in the first instance, and for which an annual vote is taken until such time as the accommodation meets the requirements of the Inspector-General of Insane.

Amongst other buildings of an important character in course of erection during the year were the following:—

	Year's Expenditure.
	£
Redfern Court House	7,299
Health Board Offices	4,684
Art Gallery (additions to)... ..	8,213
Government Printing Office (additions and alterations)... ..	8,258
Royal Mint (additions to)... ..	3,563
The Treasury (additions to)	2,489

It is again my urgent duty to draw attention to the state of dilapidation into which a large number of country buildings have necessarily fallen, owing to the want of periodical attention. Since 1893 the Vote for repairs has been very seriously diminished, so much so as to be below the degree of efficiency. The Votes are not only lower in amount, but have been, to a considerable extent, owing to the annual increase in the business carried on in the several buildings, and to the latter becoming in many instances somewhat obsolete, absorbed in expenditure undertaken for improvements and additions, as distinct from repairs, making the Vote itself still more inadequate. The average annual sum available since 1893 for this purpose has been about £30,000, whereas it should be at least £50,000. If the latter sum were granted for four succeeding years, I believe it would be possible to place every building in a fair state of repair, and to arrange future periodical works according to a table, giving attention by rotation to all the buildings.

I am aware that the Branch has been undeservedly criticised by other Departments for the delay in fulfilling requisitions for repairs and improvements, but when it is pointed out that no sooner is a year's Vote available, than nearly the whole of it is at once appropriated for requisitions brought on from previous years, the reason of the delay as regards newer requisitions will be at once apparent.

During the year I was instructed to prepare preliminary sketches for an Exhibition proposed to be held in 1899, and I accordingly prepared some for submission, applicable to the outer Domain as a site and at an estimated cost of about £183,000. The matter was brought under consideration, but for various important reasons it has been indefinitely postponed.

I was further instructed to prepare designs for a new House of Parliament at an estimated cost of £500,000, and to provide accommodation that would be suitable and ample for all future eventualities. I accordingly organised a staff of able assistants, and, with close personal attention, prepared plans and designs, including a plaster model of the design. These were subsequently brought before the Parliamentary Standing Committee on Public Works for investigation, but the labours of the Committee in this matter were not completed by the end of the current year.

A considerable part was taken by this Branch in the decoration and illumination of the Public buildings of Sydney, commemorative of the Jubilee of Her Majesty.

A Schedule of the expenditure on the various buildings and services is hereto attached.

W. L. VERNON,
Government Architect.

(XIII)

Roads and Bridges.

(XIV.)

Report of the Principal Assistant Engineer for Roads.

30 November, 1897.

I HAVE the honor to present, for the Minister's information, a report upon the work carried out by this branch, during the year ended 30th June, 1897, together with tabulated statements of the expenditure for the year, the lengths of roads and bridges of various classes directly or indirectly under the charge of the branch, and other statistical information.

From these returns it will be seen that the expenditure for the year, on roads and bridges, was £676,209 19s. 2d.* Of this sum £621,948 17s. 3d. was derived from Revenue, and £54,261 1s. 11d. from Loan Funds. Expenditure was, with a view to economy, restricted to the most urgent requirements, and the cost of maintenance reduced to the lowest possible limit, compatible with efficiency. The expenditure on roads, &c., from Revenue only, fell £1,794 7s. 4d. short of the sum made available by Parliament; this amount lapsed. Seeing that authority to proceed with the full expenditure was not given to the local officers until December, and that, consequently, they had only seven months in which to expend the full years vote, this result may be considered satisfactory. A sum of £226,249 0s. 11d. remained unexpended from Loan Votes, and was carried forward.

To give some idea of the work involved in administration at head office, it may be stated that 23,293 papers were registered and dealt with; 17,078 vouchers received and examined; and 3,139 contracts let, amounting to £322,022.

Rents of district offices, ferrymen's quarters, &c., amounted to £1,620, and cost of cleaning to £347. The ferries leased were 45 in number. Forty-three others were subsidised, and nine worked by the Department. The total revenue from all sources under this head was £5,112 6s. 1d., while the cost of working, &c., was £10,162 3s. 10d.

Since last year's report was made, an entirely new system has been adopted in connection with the collection of tolls upon the ferries worked directly by the Department. Upon these ferries a system is now in force whereby every passenger receives a ticket showing the value of the fare paid, the date of issue, and the progressive number. It forms a check, first upon the collectors, and (as all tickets entitle the holder to return free within two days), upon the passengers as to the time of their return. This system has, so far, proved satisfactory, and it is anticipated that a substantial increase in the collections will result, by preventing passengers returning free after the two days allowed has elapsed.

Summarising the figures given in the tabulated statement attached, it will be seen that there are 39,874 miles of roads under the direct or indirect charge of the Department. Of that length, 27,404 miles are on schedule, 1,099 miles of municipal roads are subsidised by the Department, and 11,371 miles are unclassified. Of the total length, 12,631 miles are bush tracks, practically untouched, leaving 27,243 miles of cleared, formed, or metalled roads.

There are 2,812 bridges in the Colony, having 7,878 spans, with a total length of 267,964 feet, or 50 miles 60 chains. The culverts number 32,671, and have a total length of 486,907 feet, or 92 miles 17 chains; and there are 15,534 causeways, measuring 377,298 feet, or 71 miles 36½ chains.

There are 97 punts, 1 steam launch, 4 horse-boats, 69 flood-boats, and 120 other boats in use; also 10 punt-slips for execution of repairs. Ferrymen's, bridge caretakers', and other houses and buildings, the property of the Department, number 51.

During the year, 1,038 miles of new roads were cleared, and 666 miles wholly or partially constructed. Four miles 63½ chains of culverts and 5 miles 77½ chains of causeways were also constructed, and 5,008 rods of fencing erected.

The repairs and renewals of bridges are referred to in the report of the Assistant Engineer for Bridges appended.

Eight new punts and 9 boats were built during the year, and 60 punts and 56 boats overhauled and repaired.

The average number of men employed was 6,704, of whom 1,504 were employed directly by the Department, and 5,200 were contractors and their workmen.

The distance travelled by the district officers and their assistants, overseers, &c., in the execution of their duties, was 507,316 miles, 405,948 miles being by road, and 101,368 miles by rail; the total cost under this head being £6,820 14s. 11d.

With regard to repairs to bridges, the ASSISTANT ENGINEER FOR BRIDGES reports as follows:—

"During the year, continued attention has been paid to repairs, a sum of £29,297 19s. 11d. being expended for that purpose on 410 structures.

"It must be understood that these repairs are independent of renewals, where, owing to decay, it becomes necessary to entirely replace an old bridge. These renewals have been dealt with in my report on bridge construction, but it is not out of place to mention here that 53 bridges were totally renewed during the year at a cost of £36,850 4s. 7d.

"Occasion was taken in my last year's report to draw attention to the advantages which might be gained by the adoption of permanent substructures of stone, steel, or iron, when practicable, and the Under Secretary and Commissioner for Roads touched upon the matter in his report, pointing out that the great strength and durability of our timbers rendered their use the more economical in a majority of cases.

* This amount includes the expenditure, at 30th June, incurred in respect of new bridges completed and in progress.

cases. This is undoubtedly the case, but I think we should not lose sight of the fact that timber for bridge purposes is every year becoming more costly, while cement and labour, the two chief factors in the price of masonry, are cheaper than heretofore, and steel and iron are obtainable in a greater variety of forms, and at rates in marked contrast to those ruling twenty years ago. Although the better classes of timbers are well distributed upon the coast north from Sydney, there are large areas inland where bridge timber is impossible to be obtained, and to which it must be carried at great cost.

"It is surprising how few masonry piers are to be found in bridges throughout the Colony, situated as some of them are in districts where timber is exceedingly difficult to obtain, while stone is often plentiful; presumably this is due to timber having been more plentiful formerly, when skilled labour was more costly.

"In the case of the renewal of the Fish River Bridge at O'Connell, and in the repairs to the Abercrombie bridge, we have had this year, however, the advantage of admirably constructed masonry piers and abutments, which will outlive the superstructures now placed upon them, and doubtless others again, after these are decayed.

"At Berrima, also, masonry piers built thirty-seven years ago are receiving a new superstructure, and also being raised 8 feet.

"It is, of course, difficult to lay down any definite rule, but I think it may be taken that on an established route likely to remain permanent, and when timber is not available locally, given a good foundation and stone adjacent to the site, an additional expenditure of at least 25 per cent. in the first cost of the bridge would be fully justified, with the object of gaining a permanent substructure.

"The increasing use of truss spans, and the increasing length of those spans, now being built up to 154 feet each, are naturally increasing the demand for ironbark timber of a special class, viz., sawn flitches free of heart, of considerable size and length, and necessarily of the highest quality. These flitches are becoming difficult to obtain outside certain comparatively small areas on the coast, and it may become more economical, at no distant date, to substitute steel for such as are used in tension. These large spans, also, have a bearing upon the question of permanent substructures, as the piers used in connection with them being fewer, require greater strength, while the reduction in their number also reduces the proportion of their cost, as compared with the total cost of the bridge.

"Allusion has been made to the unequal distribution of timber in the Colony, and in that connection I may refer to the system of storing a quantity of timber in Sydney for use for repairs. The advantages claimed for that system in the last report are still evident, and upwards of 408,000 super. feet of timber have passed through the yard at Cockatoo Island during the year. The cost of this timber, though, as already stated, prices have advanced, still compares favourably with that obtaining under the old system, when timber was procured from the annual contractor as required, a system causing great delay.

"It is natural that out of the sum of £29,297 expended on repairs, a large proportion should have been spent on the decks of bridges, where actual wear reduces the life of the planking more than does decay. It is to be regretted that while we obtain such excellent results in wood-paving by placing the grain of the timber vertical, it has not yet been found feasible to lay the timber decks of bridges otherwise than with the grain horizontal. Doubtless to do so necessitates a double deck, the lower to carry the load, and the upper as a wearing surface only; still ultimate economy may yet be gained in this direction when heavy traffic has to be dealt with.

"Few of the repairs undertaken during the year need to be particularised; perhaps the most important is the repair and raising of the low-level bridge over the Hawkesbury River at Windsor. This is a timber-beam bridge on iron cylinders, having a total length of 403 feet. It was placed at a height of 11 feet above ordinary water level, and was frequently submerged. While repairing the superstructure, which was much decayed, occasion was taken to raise the bridge 8 feet, a course which was decided on after some hesitation, as it was feared that the additional leverage afforded to the flood-waters might cause the destruction of the bridge. The work was, however, accomplished at a cost of £4,409 3s. 3d., and a flood which has since passed over the deck caused no damage.

"The conversion of the Belabula River bridge at Carcoar from a truss to a beam bridge, a work which was finished early in the year, is of interest as showing an economical method of dealing with a bridge the trusses of which were decayed, while the deck system was owing to previous repairs in good order.

"At Brewarrina the machinery for lifting the span was removed and replaced by gear similar to that erected last year at Bourke, the result being that one man can easily lift the span, instead of two being required as heretofore. Arrangements have been made to carry out a similar alteration to the gear at Balranald.

"The system of carrying out repairs by means of skilled gangs was continued during the year with success, and on the whole I feel justified in stating that the improvement in the general condition of the bridges referred to in the last report has been sustained.

"Before closing this report I think it necessary to draw special attention to the operation of the regulation which makes municipalities responsible for the maintenance of the superstructures of bridges within municipal limits. In the case of large structures the Councils do not appear to be in a financial position to keep up the repairs, which are allowed to stand over while the Department is approached for a special grant. Ultimately it often becomes necessary for the Department to carry out the work under conditions much more unfavourable than would have been the case had the bridge been solely under the Department."

With respect to the remarks of the Assistant Engineer for Bridges in the above quoted report:—

(1.) As to the use, under certain conditions, of stone for the substructure of bridges, I quite concur. There can be no doubt that under certain circumstances where stone is cheap and timber scarce, and only procurable from distant places, it would be true economy to use the more lasting material at even a considerable increase in first cost. There is room for the exercise of discretion as each case crops up.

(2.) As to the increasing use of truss bridges of extreme spans. This tendency is one to be watched, and for several reasons to be restricted: The cost per foot run of bridge is, in ordinary cases, much in excess of the beam or smaller truss span; the ordinary maintenance is more costly; repairs are more costly and difficult in execution; the difficulty of getting the special lengths of first-class timber referred to by Mr. De Burgh is increasing, and will, in the future, more rapidly increase.

Accordingly,

Accordingly, not only does the necessity of obtaining these special pieces for the larger trusses add very materially to their cost at the present day; but, as time goes on, this cost will become still greater, and when the day comes for the renewal of these special pieces in the trusses, the cost of repairs will be immensely greater than they would be to-day. It might almost be predicted that, when that day arrives, it may be found impossible, or almost impossible, to obtain the necessary pieces in quantities sufficient to meet the requirements of the Department. For although the area of the Colony from which the supply of hardwood timber for bridge building and other works appears at the present day to be very large, this area exists on paper only. The localities from which really first-class hardwood of special class or character can be now obtained may almost be counted upon the fingers of one hand, and, when these places have been denuded of this kind of timber, it is difficult to see where it is to be procured from.

In the matter of the hardwood timber supply, it may be remarked, the Colony is burning the candle at both ends; increasing the consumption of the natural supply, and providing nothing in its place by plantation.

(3.) The life of truss bridges has been proved to be shorter than that of substantially constructed beam span structures.

(4.) It may also be kept in view that in the event of a comprehensive system of Local Government being adopted throughout the Colony, whereby each locality will be charged with the control of its own works, the maintenance of these bridges will fall to the respective municipal bodies. The result of past experience in this direction does not encourage the hope that this duty will be efficiently performed by these local bodies, where large or intricately constructed works, such as these larger truss bridges, are concerned.

Under all these circumstances the conclusion is, I think, a fair one that, where possible, and all other things being equal, it is desirable as a rule to adopt either beam span or the smaller truss span bridges, the exception being where the foundations are so bad or difficult (for instance, where the piers would be high) as to make piers more costly in proportion than the increased length of span.

PERCY SCARR,
Principal Assistant Engineer, Roads.

RETURN of Expenditure on Public Works carried on by Roads and Bridges Branch, from 1st July, 1896, to 30th June, 1897.

Work and where situated.	Whether Constructing or under Repair.	Fund from which the Expense is defrayed.	When Commenced	If Unfinished, amount of Expenditure to 30 June, 1897.	Amount expended from 1 July, 1896, to 30 June, 1897.

Sewerage Construction.

(XVII.)

Report of the Engineer for Sewerage Construction.

Department of Public Works, Sewerage Construction Branch, Sydney, 1 September, 1897.

Sir,

I have the honor to submit the following report of the operations of this Branch during the year ending 30th June, 1897.

I have classified my report as follows:—

1. High-level Sewers.
2. Low-level Sewerage.
3. Eastern Suburbs Sewerage.
4. Double Bay Low-level Sewerage.
5. North Sydney and Mosman Sewerage.
6. Storm-water Channels.
7. Drainage of Country Towns.
8. Detail Survey of Cities, Towns, and Suburbs.
9. Summary of work executed in the drawing offices.

1. Western Suburbs Sewerage.

Outfall Sewer and Sewage Farm.

The main carrier on the sewage farm at Botany is now completed. This work, constructed at a cost of £19,000, is an open concrete channel 8 ft. 8 in. wide by 5 ft. 3 in. deep, extending from the outlet end of the triplicate outfall sewer, for about 40 chains across the Botany sewage farm, on a series of concrete arches of 50 feet span. The passage over Muddy Creek is effected by a wrought-iron trough bridge, and a straining chamber is introduced at each end of the line.

The preparation of filtration areas for dealing with the discharge from the western suburbs has been pushed forward. When these areas are completed, which will be in a few months, the disposal of the sewage can be commenced, and the whole system put into operation. This work is being performed by day-labour.

Main Eastern Branch.

This sewer, extending from Premier-street, Marrickville, passing along the Illawarra-road to the Parramatta-road, near Stanmore station, is now ready for the reticulation connections, the last section to Annandale, 1 mile 15 chains in length, consisting of an oval sewer varying in size from 4 ft. 3 in. x 3 ft. 3 in. to 3 ft. 3 in. x 2 ft. 2 in., and subsidiary pipe lines, having just been completed. An outlet has thus been provided for the sewage of an extensive portion of the Boroughs of Annandale, Leichhardt, Petersham, and Marrickville.

Main Northern Branch.

This sewer, from the Illawarra-road, Marrickville, to the northern end of Leichhardt, is in course of construction. Contracts have been let for the three sections of the main line, consisting of an oval sewer of brick and concrete, length 3 miles 35 chains, decreasing in size from 5 ft. 6 in. x 4 ft. 6 in. at the Illawarra-road, to 3 ft. 3 in. x 2 ft. 2 in. at its head near the Leichhardt Park. This sewer will drain the higher portion of Marrickville, Petersham, and the western side of Leichhardt. A tender has been accepted for the construction of the Dobroyd Branch, which leaves the main branch at Fraser-street, Petersham, a few chains south of the suburban railway line, and extends to Sloane-street, Summerhill, passing under the railway embankment on the Sydney side of the Lewisham railway viaduct, and over the Long Cove Creek Storm-water Channel by means of steel tubing supported by stone piers, the aqueduct being 280 feet long. The size of the sewer is 4 ft. 6 in. x 3 ft. 6 in. at the junction with the main branch, and 3 ft. 6 in. x 2 ft. 4 in. at Sloane-street, and the length is about 58 chains. A line of sewer has been set out leaving the Dobroyd Branch near the aqueduct over Long Cove Creek, and running up the valley almost parallel to the storm-water channel as far as Pigott-street. This sewer will be partly in 3 ft. 3 in. x 2 ft. 2 in. concrete, and partly in 21-inch pipe. These two sewers are designed to drain the whole of Summerhill and portions of Ashfield and Petersham.

Main Western Branch.

This sewer is now in course of construction from the Illawarra-road, Marrickville, to Arthur-street, Ashfield, the work comprising a length of 2 miles 51 chains, being let in two contracts.

The sewer ranges in size from 7 ft. 8 in. x 6 ft. 8 in. to 6 ft. 6 in. x 5 ft. 6 in., and is constructed of brick and concrete, the lining varying considerably in thickness with the different strata passed through. It is chiefly in tunnel through sandstone rock and shale, most of the latter having to be timbered. Immediately west of the Illawarra-road, owing to low ground being met with, land had to be resumed for the purpose of carrying the sewer through in embankment. Tenders are invited for an extension from Arthur-street to Brand-street (a point about half-way between Croydon and Burwood railway stations), with branches extending north and south along the Iron Cove Creek valley. When this sewer is constructed, provision will have been made for the sewerage of portions of Ashfield, Enfield, Croydon, and Burwood. When extended the sewer will drain Strathfield, Homebush, and a portion of Concord. Five Dock and Drummoyne will also eventually be connected with it. Owing to the large number of sewers in course of construction, the contractors have experienced a difficulty in obtaining experienced miners, and if further works of this character are placed on the market, the cost must necessarily be excessive ;

in

in the interest, therefore, of the ratepayers the extension of the branch to Homebush has been delayed. The survey of this extension has, however, been proceeded with to the completion of the preliminary work, including the location of the proposed lines of sewer and the necessary levels and borings. In order to ensure the construction of the western branch sewer at the necessary level to deal with the sewerage of Five Dock and Drummoyne, preliminary schemes for dealing with the higher areas of these municipalities were prepared.

Main Northern Sewer.

The length of this sewer from Johnston's Creek, Glebe, to Catherine-street, Leichhardt, including the "Monier" aqueducts, is now completed, and the contract extending onwards to Cook-street, Balmain, is so far advanced that the lining of the tunnels is being proceeded with. A contract has been let during the year for the drainage of the eastern slopes of Balmain, the branch leaving the main sewer at Cook-street, and extending through the area fronting White's Bay, thence passing through the ridge, to the vicinity of Waterview Bay, whence it turns southward and terminates in Stephen-street.

A branch has been designed to drain the western slopes of Balmain; this sewer also leaves the main northern sewer at Cook-street, and passing under the ridge near the eastern boundary of the Callan Park Asylum grounds to a point not far from Long Cove, will skirt the shore of the harbour and proceeding northward will terminate near Cove-street. A branch from this sewer will intercept the sewage of the Callan Park Asylum, which at present runs directly into the harbour.

2. Low-level Sewerage.

Marrickville.

An amended scheme has been prepared for the sewerage of the low-lying parts of Marrickville, St. Peters, Macdonaldtown, and Newtown, which shows a considerable saving in cost and a more effectual way of collecting the sewage than originally propounded.

A site at Marrickville adjoining Meek's-road and the Burwood railway line has been selected for a pumping station, and tenders have been invited in England and the colonies for the supply of the necessary pumping engines to raise the sewage into the western outfall. A contract for the main sewers to drain the area north and easterly of the pumping station is now being prepared, and comprises 2 miles 5 chains of concrete and brick sewer, varying in size from 3 ft. 9 in. by 2 ft. 6 in. to 3 ft. 3 in. by 2 ft. 2 in., and 1 mile of pipe branches.

Woolloomooloo, Circular Quay, Darling Harbour, Pyrmont, Glebe, Annandale, Leichhardt and Balmain East.

Preliminary plans have been made for the drainage of these areas, collecting stations and pumping plant being included in each scheme, in addition to the intercepting sewers. After careful consideration it has been finally decided to lift the sewage by means of centrifugal pumps driven direct by electric motors. The pumping stations, nineteen in number, will be controlled from a central station at Darling Harbour, arrangements having been made with the Railway Commissioners for the supply of the necessary power from the installation shortly to be established for working the electric-tram motors.

The surveys for the pumping stations and sewers in Balmain, from Leichhardt to Waterview Bay along the eastern slopes of Balmain, have been completed, and the detail drawings including designs for the necessary machinery are being prepared. This work includes the construction of a collecting sewer from near the east end of Darling-street to Stephen-street, with a branch sewer to Waterview Bay. These sewers are chiefly in tunnel through sandstone rock, and will be commenced forthwith so as to be in readiness when the electric power is available for pumping operations.

Considerable difficulty has been experienced in the preparation of designs for the low-level sewerage of Woolloomooloo, owing to the large extent of level area near the Quay, and to the number of existing sewers which it will be necessary to intercept. It is the intention to leave the present main sewers, which are of substantial construction as carriers for the storm-waters. It is proposed to lift the sewage at a pumping station near the end of Forbes-street, to which point will also be brought the sewage from the buildings of the Botanical Gardens.

3. Eastern Suburbs.

Waverley and Bondi.

To meet the requirements for sewerage for the rapidly increasing population on the seaward slopes of Waverley and Bondi a survey has been made of this area. It is proposed, in order to avoid any contamination of the beaches, that an intercepting sewer, connecting with the Bondi sewer about half a mile from its outlet, and in the neighbourhood of Sophia-street, should be constructed along the coast from the Bronte Estate. This sewer will pass under two high ridges, which will have to be pierced by tunnel. Owing to the great depths of the shafts, and to the construction of the sewer through running sand near its junction with the Bondi sewer, the work of necessity will be a costly one; no other scheme, however, can be devised to adequately serve the requirements of the area.

Randwick and Kensington.

It is proposed to deal with the drainage of the Randwick and Kensington Estate by a sewer connected with the present ocean outfall at Coogee. Leaving the outfall sewer at Beach-street, it follows up the Coogee Creek to Melody-street. It then strikes south-westerly under a high ridge to the intersection of Avoca and Howard Streets. From this point the sewer will be continued westerly to the Bunnerong-road, and thence along that road to the Randwick-road. A contract for the first portion of the sewer, from the outfall to Avoca-street, a length of 85 chains, has been let, and will be built of concrete and brickwork, of oviform section, varying in size from 5 ft. 3 in. by 4 ft. 3 in. to 4 ft. 6 in. by 3 ft. 6 in.

A considerable length of the sewer will be constructed in tunnel through sandstone rock. The time for the completion of the work is June, 1899, when it will provide an outfall for the more thickly populated portions of Randwick.

4. Double Bay Low-level Sewerage.

The sewers for draining this area have been constructed, and the pneumatic ejectors, on the Shone system, fixed in position. Arrangements have been made with the Railway Commissioners for the supply of electric power from the cable tramway engine house, at Rushcutters' Bay, for lifting the sewage. A contract for the erection of the building at Double Bay for containing the electro motors is almost completed, and tenders have been invited for the supply of the machinery and electric connections.

5. North Sydney Sewerage.

At the outfall works, Long Bay, the excavations for the sewage tanks, power house, and filter beds have been completed; a sea wall, built of the excavated stone, has been thrown across the bay for the retention of the sand for filter beds, and a concrete storm-water channel and sewerage carrier has been constructed along the north-west side of the resumption. The site for the power house has been levelled, and a contract is now in progress for the erection of this building, the settling tanks, and the machinery necessary for the treatment of the sewage. Upon the completion of these important works, the contract time for which expires April, 1898, such of the reticulation pipes as are laid will be connected with the main outfall sewer, and the disposal of the sewage will be commenced forthwith.

The sewer draining the southern shore of Berry's Bay and the northern shore of Lavender Bay has been pushed forward, and will be completed in a few months.

Mosman Sewerage.

A scheme has been prepared for intercepting the drainage of the suburb of Neutral Bay and Mosman by a sewer connecting with the main North Sydney Outfall Sewer at McLaren-street, and following along the harbour coast as closely as the intersecting gullies will allow of cover being obtained. The preliminary survey has been made for the first division, the contract which it is proposed to terminate at Wickham-road, to which point a large portion of the drainage of the slopes of Neutral Bay can be collected.

6. Storm-water Channels.

Double Bay.

The open storm-water channel along Double Bay Creek, for a length of about 55 chains to the bay, is almost completed, including the trough girder bridge at William-street.

Willoughby.

At Willoughby Creek, North Sydney, near Falcon-street, a closed storm-water sewer, 3 feet in diameter, and 35 chains long, has been built.

Homebush.

A branch of the Homebush Creek Storm-water Channel has been finished near Russell-street, comprising 15 chains of 2 ft. 9 in. circular sewer.

Another branch of the same channel, extending from Clarendon-street to Albyn-street, along the old watercourse, consisting of 62 chains of closed sewer, is in course of completion.

Euroka Creek.

The specification and designs have been made for a closed storm-water channel at Euroka Creek, North Sydney, about 20 chains in length.

Johnston's Creek.

Designs have been made for the extension of Johnston's Creek Storm-water Channel from Booth-street upstream to Parramatta-road, with branches.

Plans were completed, and tenders will shortly be invited, for continuing the present Johnston's Creek Storm-water Channel to the waters of Rozelle Bay. The channel designed is 51 feet wide, by 5 feet 4 inches deep, and the length is 16 chains.

Callan Park.

The Specification and Plans for a storm-water sewer, to drain Callan Park to Long Cove, have been completed; and a branch of Long Cove Creek Storm-water Channel to Park-road, Petersham, is being designed.

7. Country Towns.

Newcastle Pasturage Reserve Drainage.

In connection with the main channel, now under construction, and consisting of some 2 miles 63 chains of open cutting, designs were made for a bridge at the crossing of the Waratah Coal Co.'s Railway, as well as for traffic bridges at the crossing of Lambton and Glebe Roads.

On the Adamstown branch, a steel girder bridge was designed for carrying the Great Northern Railway over the channel. A tramway and road bridge at Lambton-road, and bridges to carry the Waratah Coal Co.'s Railway, and the Lambton Colliery Railway, over the Lambton branch channel, and several bridges for ordinary road traffic, were designed.

The whole of this work is being satisfactorily carried out by day-labour.

Newcastle.

The open concrete channel at Cottage Creek, 20 feet wide, by 5 feet in depth, for a distance of 14½ chains, between the G.N. Railway and the A.A. Co.'s Railway, was finished.

A branch of this channel, extending to Hannell-street, has been surveyed, and the plans and specifications are in course of preparation.

Orange.

At Orange, along the Blackman's Creek, a length of about 35 chains of open channel has been completed, providing a proper outlet for the storm-waters.

Byron

Byron Bay.

A channel in earth cutting at Byron Bay Village, 1 mile 50 chains in length, and, on an average, 12 feet wide, has been designed. This work, which will be of great benefit to the locality, is being carried out by day-labour.

Kiama.

A survey has been made for a closed channel along the course of the creek, through the centre of the town, to drain away the storm-waters.

Parramatta Sewerage.

The Departmental scheme for Parramatta has received the approval of the Public Works Committee, and the storm-water channel at Brickfield Creek has been extended to Grosce-street, a length of 9 chains of open concrete channel, draining the rainfall from an additional area of 490 acres.

8. Detail Survey of Cities, Towns, and Suburbs.

Sydney and Suburbs.

The surveys of the Municipalities of Drummoyne and Five Dock were completed during the year.

The standard survey of the Illawarra suburbs was brought to a conclusion, and the filling in of the detail sheets has been proceeded with in the Municipality of Rockdale.

In response to applications from the Municipal Councils in the Willoughby District for a sewerage scheme, a standard survey has been made, embracing the populated areas, and the detail will be proceeded with when a surveyor is available.

The detail survey of Granville has been suspended, owing to the removal to the country of the officer who was carrying on the work.

Newcastle and Suburbs.

The detail surveys of the municipalities of Adamstown, Waratah, Lambton, and Merewether have been completed, and levels are now being taken for preparing a contour map of the city of Newcastle and the more adjacent suburbs.

East and West Maitland.

The survey of West Maitland was brought to a conclusion in the beginning of the year. The Municipal Council of East Maitland have asked that a scheme for sewerage the town may be prepared; levels are now being taken to aid in preparing a scheme that will deal with the sewerage of both East and West Maitland.

9. Summary of Work Executed in the Drawing Offices.

During the year, 32 contracts were got out, for which 220 drawings and 1,737 heliographs were prepared, the value of the work designed amounting to £329,015. In addition to this, drawings for works valued at £70,560 are now in progress.

Fifty-five sheets of the detail survey of Sydney, Newcastle, and their suburbs were drawn, and 33 tracings prepared for heliography. Eighty-four sheets were published, and 758 heliographs were issued to the Water and Sewerage Board and Government Departments, &c.

One hundred and twenty drawings of resumptions and indemnity plans, &c., were prepared; and 537 heliographs of miscellaneous plans published.

A compilation of Newcastle and suburbs, on a scale of 8 chains to an inch, and a revised index map of Sydney and suburbs have been prepared. These maps will be of general use throughout the Government Departments.

J. DAVIS,

Engineer for Sewerage Construction.

The Under Secretary for Public Works.

Land Valuation.

(XIX.)

Report of the Land Valuer.

Department of Public Works, Valuation Branch, Sydney, 12 November, 1897.

IN compliance with your B.C. Minute of 7 September, I have now the honor to submit my report upon the operations of this Branch from 1 July, 1896, to 30 June, 1897, which may appear, perhaps, a little voluminous, as not recently has a similar report been called for or furnished.

It will be known to you that all land resumed for any purpose (save the Public Instruction Department) is acquired by the Valuation Branch. So soon as a railway line is approved by Parliament, the Draft Proclamation is issued from this office, *Gazette* notices prepared, advertisements issued and written, and all necessary formalities are prepared and checked by my officers, duplicate notices of taking, and plans drawn and attached; when completed these are served, and notices of claims filed. The abstracts of title having been delivered, my draftsmen report upon the dealings as affecting the title, and, having given the certificate of identity, the valuation is made,—if accepted, description is prepared for conveyance and certified to.

The work of this Branch is of a very diversified nature, embracing as it does:—

1. Valuations of land resumed for Railways, Sewerage, Water Supply, Reclamations, Post Offices, Police Stations, Bridge approaches, &c.
2. Compensation for temporary occupations.
3. Estimates of costs of resumptions.
4. Sales of surplus lands.
5. Exchanges of lands.

Summarising the work done, it may be noted that during the period under review,—97 valuations have been made, the amounts ranging from a few pounds up to £37,000; 86 cases standing over from previous years have been settled; 62 cases have been prepared for valuation, involving very large sums, including the preparation of data for combatting the Darling Harbour claims; 56 cases of temporary resumptions; 22 estimates of proposed resumptions of railways, &c., have been prepared; 5 court cases have been set down for hearing, 2 of which have been settled amicably, 2 won by the Department, and 1 lost. All these cases were worked up by this Branch.

Besides this regular work, all sorts of miscellaneous questions are submitted to this Branch for consideration with the Crown Solicitor, and questions of procedure frequently advised upon.

A number of long-standing cases, involving disputed titles hung up for years, have engrossed attention, such as Ramsay's, Long Cove, Rozelle Bay reclamations, &c.

Notifications of resumptions and long descriptions have been prepared in the following cases:—

Balmain Sewerage.	Bungwall Wharf.
Bourke Lock and Weir.	Bega Bridge.
Billabong Weir.	Canterbury approaches.
Coutts Crossing.	Inglewood approach.
Cockle Creek Extension Drains.	Kempsey Bridge.
Darling Harbour Wharfs.	Liverpool Water Supply.
Deep Creek approaches.	Marrickville Sewerage.
Greenridge Wharf.	Menindie Ferry.
Gin Gin Weir.	Morpeth Bridge.
Parramatta Court-house.	Ryde Punt approach.
Parkes Water Supply.	Shea's Creek Extension.
Picton Bridge.	Tamworth Water Supply.
Parkes Water Supply.	Woolway Creek.
Quirindi Bridge.	Wyalong Post Office.
Potts Hill Pipe line, &c.	

Proclamations have been issued for—

- Parkes to Condobolin Railway.
- George and Harris Streets Tramway.
- Railway connection, Darling Harbour.
- Nevertire to Warren Railway.

Localities visited and reported upon extend over the length and breadth of the Colony.

During the year reports have been furnished, amongst other things of a minor nature, upon—

- 3 routes of City Railways.
- 22 sites for Police Stations.
- Sites for Fire Stations.
- Proposed Sewerage resumptions at Johnston's Creek, Shea's Creek, Glebe Island, Double Bay, &c.
- Berrigan to Finley Railway, exchanges negotiated.
- Commissioners for Taxation supplied with details of lands resumed from various grants.
- Returns of lands resumed prepared for Government Statistician.

The office is divided into two branches, clerical and professional.

In

In the clerical branch, where all proclamations are prepared, sales faithfully recorded, correspondence conducted and records kept, valuations and offers written, are three officers and one messenger.

The professional staff consists of a chief draftsman, an assistant, and cadet, who write descriptions, certify to correctness, identify for Crown Solicitor all lands resumed, prepare and check notices of resumption, collect date of transfers, consideration money paid, &c. This staff of three have dealt with over 300 cases necessitating searches at Registrar-General's Office. When claims and abstracts of title are received, these are forwarded to the Crown Solicitor for examination, who returns them with a search paper showing dealings, and as only Register Nos. are given, searches have to be made to protect the Crown against claims for lands not affected by resumptions. Indicative of the precision of their work, in no single case has the wrong owner been treated with, though attempts are frequent to claim for land outside the titles submitted. In addition to this work, good progress has been made in preparing copies of railway plans for the guidance of the Commissioners.

My branch at the present time has a large amount of work in hand, including the following important cases :—

Darling Harbour resumptions, aggregating claims of £325,000.
 Moree to Inverell Railway.
 George-street Tramway.
 Newcastle Drainage.
 Rickettson Wyalong cases.
 Tamworth to Manilla Railway, &c.

In submitting this report I should like to emphasise the necessity for appointing to this branch only officers of proved integrity ; the work is of a very confidential nature, necessitating absolute secrecy, and probity is of paramount importance. It is my pleasure to congratulate you upon the personnel of the staff at the date of this report.

EDWARD J. SIEVERS,
 Government Land Valuer.

The Under Secretary for Public Works.

Hunter District Water Supply and Sewerage Board.

(XXI.)

Report of the President.

Newcastle, 1 December, 1897.

IN compliance with your wire of yesterday, I beg to hand you herewith a short report on the operations of the Board for the year ended 30th June last.

Water Supply.

The total quantity of filtered water pumped from Walka to the service reservoirs during the year was 266,979,533 gallons, giving an average daily supply of 731,451 gallons.

The estimated population supplied was 34,655, and the average consumption per head per day was 21.10 gallons.

There were 685 premises connected during the year, making the total number supplied 6,931.

During the year 6 miles 517 yards of new watermains were laid, the principal extension being a main to supply the works of the Sulphide Corporation (Ashcroft's Process), Limited, at Cockle Creek, Lake Macquarie.

In addition to the supply of water for street watering and gutter flushing, the Board granted free supplies to public hospitals, charitable institutions, and parks of slightly over one million gallons for the year.

The system of hiring out meters continues to give satisfaction to the public, and is found to be in the interests of the Department, as repairs to such meters are made by the Board and can be executed without delay. During the year 156 meters were issued, making a total of 182.

Ratepayers have also taken advantage of the Deferred Payment System for the laying on of water; 87 houses were connected under the system during the year, making a total of 435. The Board allow ratepayers to select any licensed plumber to do the work whose price suits them, and the cost is repaid by quarterly instalments bearing interest at 5 per cent., and extending over a period not exceeding three years.

Of the 11,555 premises liable for water rates only 6,925 are connected. Owing to the depression the Board have not considered it advisable to exercise their powers under the Principal Act to compel the owners or occupiers to connect. Every facility is, however, afforded by the Deferred Payment System whereby the poorest ratepayer may have his premises connected, and repay the cost by easy quarterly instalments.

Regular inspections of the catchment area of the Hunter River, for a distance of 20 miles above the intake at Walka, have been made. The area was found, with one or two minor exceptions (which were promptly dealt with), to be free from pollution of any kind.

Samples of the water from the Hunter River storage reservoir, settling tank, and clear water tank at the Walka pumping station and from the reticulation mains are forwarded monthly to the Board of Health for analysis. The Government Analyst's reports have been favourable, and show that the water is fit for all domestic purposes.

Every effort has been made by the Board to improve the filtration and aeration of the water, and the results obtained are very satisfactory.

The improvements to the buildings and machinery at the Walka pumping station, commenced last year, have been completed and are giving satisfactory results. In conjunction with the new duplicate suction and rising mains, now being carried out by the Department of Public Works, these improvements to the machinery will place the Board in a position to cope with the increased consumption of water.

The cost of pumping 1,000 gallons 100 feet high was 45 pence.

Financial.

An Amending Act is now before Parliament. Amongst other amendments a new ratable area has been fixed, under which properties having a frontage to the street in which a main is laid will be ratable for a distance of 440 yards. The provisions of the Principal Act, under which Crown properties have hitherto been rated, have been extended so as to render ratable the properties of the Railway Commissioners.

The Act further provides for the revision of the capital indebtedness of the Board to the Government, and the Gazetting of same to the 30th June, 1897, and thenceforward annually.

The following figures show the result of the operations of the Board for the year ending 30th June, 1897:—

Revenue.			Expenditure.		
	£	s. d.		£	s. d.
Rates, Special Fees, Meter Accounts, and Miscellaneous charges	22,518	0 9	Interest on Capital Debt, at 3½ % per annum, on £428,025	14,980	17 9
Balance (Deficiency)	1,466	14 4	Management expenses	4,382	16 5
			Working expenses	4,211	7 3
			Maintenance	409	13 8
	£23,984	15 1		£23,984	15 1

The result of the year's operations was a deficiency of £1,466 14s. 4d. Only the actual expenditure on maintenance is shown, but to this must be added the difference between the amount actually expended during the year and the proper instalment which the Amending Act directs shall in future be set aside annually from revenue to build up a proper sinking fund for the reconstruction of renewable works. This difference amounts to £2,025. The year's deficiency may, therefore, be fairly taken as £3,491 14s. 4d.

The Board have given serious consideration to the heavy amount of their capital indebtedness to the Government, and intend asking the Honorable the Minister to extend the same consideration to the Hunter District as he has already given to country towns, by reducing the capital debt to such an amount as will enable them to meet the obligations of the Amending Act on the present maximum rate of 1s. in the £.

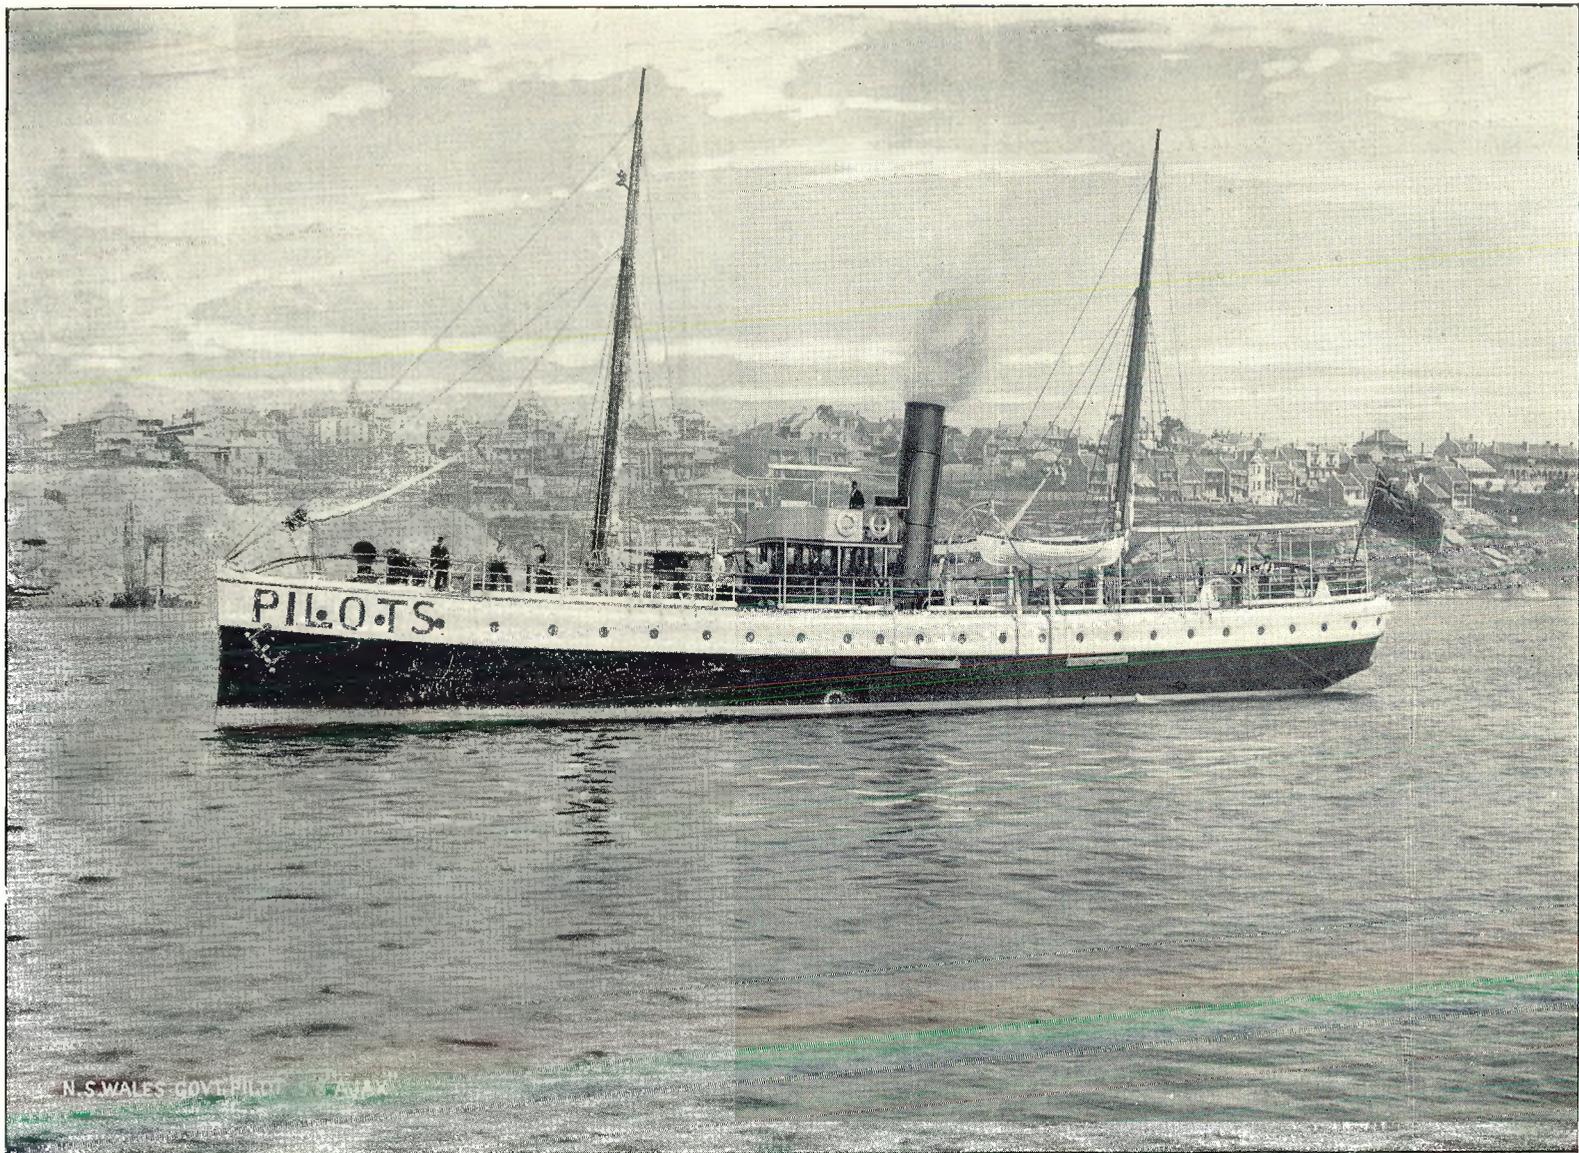

The Board had hoped that, with the additional revenue which the Amending Act will enable them to collect, the present rate of 1s. in the £ might have been reduced, but in view of the heavy reduction of the capital debt which the Minister will have to be asked to make to enable them to pay their way on the 1s. rate, the Board realise that no larger reduction in the debt could be reasonably asked for, and the reduction of the rate must, therefore, be reluctantly postponed until the revenue improves. The consumption of water is increasing, and new mains are being extended wherever a return of 5 per cent. on the outlay can be obtained. With this additional revenue, and when values of property improve, the Board hope to be able to make a reduction in the rate.

The percentage of management expenses to revenue was 19·46, and of working expenses 18·70. Taking into consideration that every gallon of water has to be pumped, the Board regard these percentages as satisfactory.

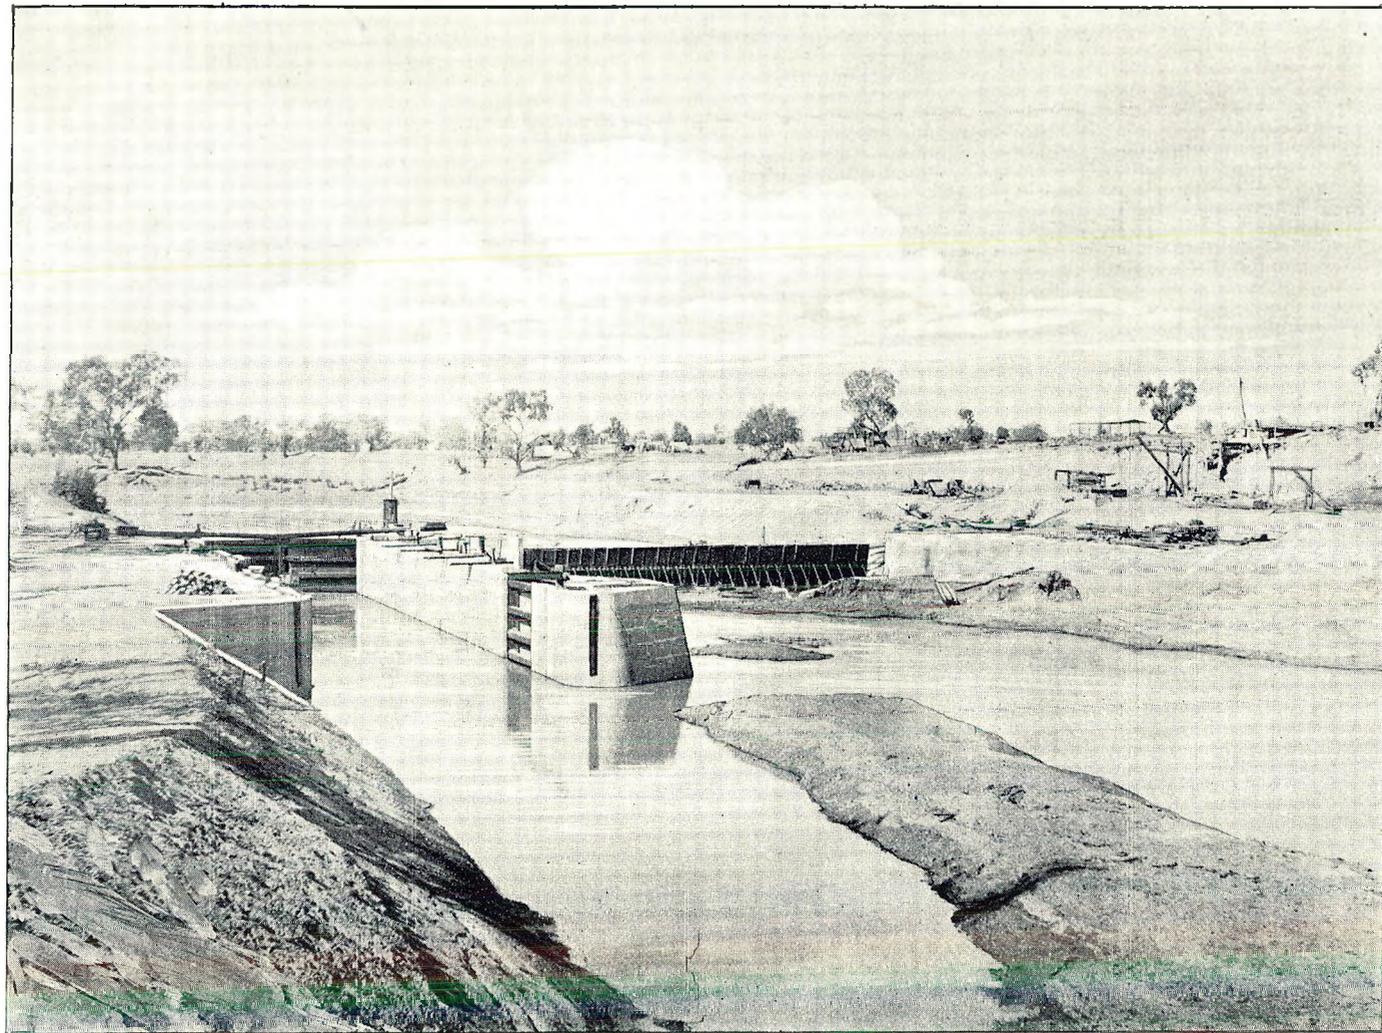

The Under Secretary for Public Works.

H. D. WALSH,
President.

 *FRANK FARNELL, Esquire.

[*Since the appointment of the present Committee, the Honorable John Davies, C.M.G., and Angus Cameron, Esquire, died, thus causing two vacancies, which were subsequently filled by the appointment of the Honorable Daniel O'Connor, and Frank Farnell, Esquire.]

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

THIRTEENTH GENERAL REPORT.

To His Excellency the Right Honorable HENRY ROBERT, VISCOUNT HAMPDEN, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

The Parliamentary Standing Committee on Public Works, appointed during the first session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, and the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, have the honor to submit, in accordance with clause 8 of the Public Works Act, the following General Report of their proceedings:—

Since the date of their last General Report, the Committee have had before them twenty-one proposed works, involving an expenditure of £4,159,707. Inquiries with regard to two of these works, were proceeding when the Committee last reported, and since that time nineteen other works have been referred to them by the Legislative Assembly.

Inquiries proceeding at date of last Report.

The two works mentioned were:—

	Estimated Cost.
New Houses of Parliament for the Colony ...	£533,484
Duplicate Main from Prospect to Potts' Hill...	109,317

In the case of the proposed New Houses of Parliament the Committee made careful inquiry with a view, not only to investigate the proposal as it was represented by the plans, model, and description submitted by the Department of Public Works, but also to ascertain whether a less elaborate and costly building would meet requirements, or whether all that was really necessary for some years could be provided by comparatively inexpensive alterations and additions to the present building. They found that the proposed large expenditure on new buildings could be avoided, the design being shown by the evidence to be much beyond what is necessary in both accommodation and cost, and that while the present building will, in the course of a few years, have to be replaced by a new structure its condition is such as to justify the opinion that it can be repaired, where it is now defective, and made to afford fair accommodation for some years. They, therefore, recommended improvements estimated to cost £15,000, and submitted with their report plans showing how the improvements could be effected.

New Houses of Parliament.

The proposal to construct a Duplicate Main from Prospect to Potts' Hill was changed in the course of the inquiry to one for enlarging the capacity of the canal between Prospect and the Pipe Head basin, generally strengthening the canal, and duplicating the pipe line between the basin and Potts' Hill reservoir; and this amended scheme, the estimated cost of which is £109,317, the Committee recommended.

Duplicate Main from Prospect to Potts' Hill.

The

Nineteen
works referred
to the Com-
mittee.

The nineteen other works referred to the Committee comprise one bridge, eleven railways, six harbour works, and one work of river improvement. They are as follow :—

	Estimated Cost.
New Bridge at Glebe Island	£89,100
Railway from Redfern to St. James' Road	650,000
Railway from Condobolin to Euabalong	108,225
Railway from Narrabri to Pilliga	128,650
Railway from Byrock to Brewarrina... ..	146,350
Railway from The Rock to Green's Gunyah	67,000
Railway from Coolamon to Ariaah	91,770
Railway from Warren to Coonamble	150,000
Railway from Koorawatha to Grenfell	89,250
Railway from Woolabra to Collarendabri	207,978
Railway from Maitland to Taree	982,283
Railway from the Terminus of the Rosehill Railway to Dural	57,000
Harbour Works at Tweed River	43,600
Harbour Works at Bellinger River	36,500
Harbour Works at Nambucca River	73,000
Harbour Works at Macleay River	93,000
Harbour Works at Hastings River	79,200
Harbour Works at Manning River	114,000
Weirs on the River Darling between Bourke and Wilcannia	310,000
	£3,516,906

The Com-
mittee's inqui-
ries.

Of these nineteen works the inquiries respecting eighteen have been completed, the one remaining for consideration being the proposed Weirs on the River Darling between Bourke and Wilcannia. This work, the Committee have been informed by the Under Secretary for Public Works, cannot be placed before them in a way to enable them to proceed with their inquiry concerning it, for the reason that the Department has found it impossible to obtain the necessary information. Extensive surveys require to be made to fix suitable sites, prepare designs, and make up the estimates, and as this will occupy several months, it is suggested by the Engineer-in-Chief that the inquiry be postponed.

Works passed.

Of the works dealt with the following five have been passed as proposed :—

New Bridge at Glebe Island	£89,100
Railway from Redfern to St. James' Road	650,000
Railway from The Rock to Green's Gunyah	67,000
Railway from Koorawatha to Grenfell	89,250
Harbour Works at Tweed River	43,600

New bridge
at Glebe
Island.

The question of erecting a new bridge at Glebe Island was before the Committee in 1894, on which occasion it was decided that it was not expedient to replace the existing bridge by a new structure. The bridge had recently been strengthened, and it was considered by the Committee to be in a condition sufficiently satisfactory to serve the traffic passing over it for a considerable length of time. In the present inquiry, three years after the date of the former decision, it was found that the condition of the bridge now justifies the erection of a new structure, and the Committee recommended the erection of a stone causeway, with central steel swing span, covering two openings of 60 feet in the clear, and two side spans each 80 feet long, at a cost of £89,100.

Railway from
Redfern to
St. James'
Road.

The reference to the Committee of the proposed Extension of the Railway from Redfern to St. James' Road was consequent on the report of the Committee as a Royal Commission on City Railway Extension, in which they recommended that the railway should be brought to this point. The evidence given before the Royal Commission, with the appendices to that evidence, was adopted by the Committee and attached to the record of proceedings in their inquiry, and the further evidence taken was such as made essential parts of the evidence given before the Royal Commission more complete, or such as opponents of the scheme entitled to be heard

wished

wished to put forward. This further evidence strengthened the recommendation of the Royal Commission, and the Committee passed a resolution affirming that the scheme as proposed should be carried out.

In the case of the proposed Railway from The Rock to Green's Gunyah the Committee were of opinion that the line should be constructed for reasons based on the suitability of the land in the district for agriculture, the extent to which cultivation is now carried on and will probably progress, and the increased value that will be given by the line to Crown lands in the district.

The Railway from Koorawatha to Grenfell the Committee came to the conclusion should be passed, as the district through which it would run was a good one and there was every prospect of the line proving profitable in the near future.

With regard to the proposed Harbour Works at Tweed River, the Committee considered that in order that the works already constructed shall be duly effective the extensions referred to them for inquiry should be carried out.

Four works the Committee considered it to be inexpedient to construct. These are :—

	Estimated Cost.
Railway from Condobolin to Euabalong	£108,225
Railway from Coolamon to Ariaah	91,770
Railway from the Terminus of the Rosehill Railway to Dural	57,000
Railway from Warren to Coonamble... ..	150,000
	£406,995

In the inquiry concerning the proposed Railway from Condobolin to Euabalong, the Committee were of opinion that the Railway from Parkes to Condobolin should not, for the present, be extended beyond its present terminus, and they therefore decided that it was not expedient the proposed line should be carried out. At the same time they recommended that, in connection with any proposal for a railway towards Hillston, a survey be made for a line from Koorawatha, with a view to its consideration in conjunction with existing surveys.

Similarly, in the case of the proposed Railway from Coolamon to Ariaah, the Committee considered that the development of that part of the Colony intended to be served by the line could be brought about more advantageously by a railway in another direction. Since the Committee's decision in this matter the Minister for Public Works has approved of a survey of the route recommended by the Committee.

The proposal to construct a railway from the Terminus of the Rosehill railway to Dural was negatived on the grounds that the traffic would not be sufficient to make the line profitable, that whatever the traffic might be, a large portion of it would be traffic withdrawn from the Great Northern Railway, and that the district was so situated in regard to road communication with, and distance from, existing railways, that fruit-growers could without further railway expenditure find reasonable transit for their fruit to market.

In the case of the proposed Railway from Warren to Coonamble, the Committee considered that a line to Coonamble from Dubbo, through the best country between those two places, was preferable to one from Warren, and in their report they recommended that a survey be made of a route from Dubbo. The only matters that appeared favourable to the adoption of the Warren to Coonamble proposal were the shorter length of line and the smaller total cost, but against these were the considerably longer distance to Sydney and the inferiority of the route for settlement and production in comparison with that from Dubbo. After investigation, the Committee are satisfied that a cheap line through good country can be obtained.

The Committee have yet to come to a decision with regard to a number of the works which they have had before them, but this will be done without delay, and the reports upon the proposals will be laid before the Legislative Assembly at an early date.

Appended

Returns
appended to
Report.

Appended to this Report are returns completed to the present date containing a record of the inquiries by the several Committees appointed under the "Public Works Act," and also a copy of the Committee's Minutes of Proceedings. From the returns it will be seen that the total number of proposals for public works inquired into involves an aggregate expenditure of £18,411,252, but, allowing for repeated references in some instances, £15,320,970. The results from the inquiries, up to the present, show a saving of expenditure, consequent upon the Committee's recommendations, amounting to £5,600,755.

THOS. EWING,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 17 June, 1898.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RECORD OF INQUIRIES.

List of Proposed Public Works inquired into by the several Committees, with the results of their inquiries, from 27 August, 1888, the date of the first sitting of the first Committee appointed under the Act, to 17 June, 1898.

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1888. 4 Sept. to 22 Oct.	Improvements to the Circular Quay.	£ 120,000	£ 125,000	£ 5,000	£	The Committee recommended an alteration in the plan of these improvements, by which the total estimated cost would be increased to £125,000.
26 Sept. to 22 Oct.	Storage reservoir at Potts' Hill, and second line of pipes to Crown-street.	120,000 165,000	} 285,000	Recommended as proposed.
13 Sept. to 22 Oct.	New Central Police Court	48,000	48,000	Recommended as proposed.
4 Oct. to 22 Oct.	Drainage works, Manly...	34,114	22,000	12,114	The Committee recommended the adoption of a modified plan of these drainage works, by which the total estimated cost would not exceed £22,000.
10 Oct. to 22 Oct.	Drainage works, North Shore.	77,062	107,000	29,938	The Committee recommended the adoption of the complete scheme proposed in relation to this work, and the estimated cost of which, as shown by the evidence, is £107,000.
31 Aug. to 22 Oct.	Harbour improvements at Newcastle.	112,000	112,000	Recommended as proposed.
19 Sept. to 22 Oct.	Wharfage accommodation, Woolloomooloo Bay.	42,000	42,000	The Committee were of opinion that the proposed expenditure was not justified either by the requirements in connection with the wharfage accommodation of the port, or by the nature of the proposal if regarded as a scheme for the improvement of a very valuable Government property.
16 Nov. to 1889. 11 Jan.	Bridge at the Spit, Middle Harbour.	62,000	62,000	The Committee decided that the proposed expenditure was not justified by the evidence, and that a steam-punt would meet the requirements of the district in the vicinity of the proposed work for some years to come.
1888. 7 Dec. to 1889. 27 Aug.	Drainage works for the Western Suburbs.	830,304	830,304	Recommended as proposed.
26 June to 30 Sept.	Improvements to the entrance of the Richmond River.	326,000	326,000	The Committee recommended that the proposed works be carried out in a certain order, so that the results from the works first constructed might be ascertained before others were proceeded with.
9 Oct. to 11 Dec.	Railway to connect North Shore Railway with Port Jackson, at Milson's Point.*	262,000	262,000	The Committee considered, for various reasons stated in their report on the subject, that the work as proposed should not be carried out.
29 Aug. to 12 Dec.	Railway from Culcairn to Corowa.	197,300 (or £4,184 per mile.)	164,500 (or £3,500 per mile.)	32,800	The Committee were of opinion that this line should be constructed at a cost not exceeding £3,500 per mile.
22 Aug. to 19 Dec.	Railway from Goulburn to Crookwell.	198,300 (or £5,984 per mile.)	148,500 (or £4,500 per mile.)	49,800	The Committee considered that the cost of this railway should not exceed £4,500 per mile and that a saving should also be effected by utilizing a certain portion of the present main line instead of taking the proposed railway through a part of the city of Goulburn.
1890. 22 Jan. to 6 Feb. 1889.	Dredge and plant for Sydney Harbour.	30,000	30,000	The evidence showed that this class of dredge was not required.
25 Sept. to 1890. 18 Feb.	Railway from Nyngan to Cobar.	207,360	207,360	The Committee recommended the construction of this railway as part of a line which should be extended to Wilcannia and Broken Hill.
14 Jan. to 11 Feb.	Offices for the Board of Water Supply and Sewerage.	50,000	50,000	Recommended as proposed.
14 Jan. to 6 Feb.	Reticulation of the Western Suburbs Drainage Scheme.	713,592	713,592	Recommended as proposed.
14 Jan. to 11 Feb.	Extension of Sydney Water Supply to Southern Suburbs—Hurstville and Rockdale.	66,000	66,000	This expenditure was rendered unnecessary by reason of a temporary water-supply scheme being sufficient to meet requirements for some years.
19 Nov. to 2 April.	Railway from Marrickville to the Burwood Road.	90,250	90,250	Recommended as proposed.
	Carried forward.....£	3,751,282	3,229,506	34,938	556,714	

LIST of Proposed Public Works inquired into by the Committee, &c.—*continued.*

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
		£	£	£	£	
1890.	Brought forward ...£	3,751,282	3,229,506	34,938	556,714	
23 Oct. to 24 April.	Improvements to the entrance of the Clarence River.	580,900	211,900	369,000	In this case the Committee recommended the construction of only a portion of the works proposed, as they were of opinion that when this portion had been constructed it might be found that the remainder would not be required.
31 Oct. to 15 April.	Breakwater at Byron Bay.	241,723	241,723	The original estimate for this work was £162,000; the increase was due to a difficulty in obtaining stone.
4 Dec. to 24 April.	Railway from Kiama to Nowra.	381,390	381,390	In this case there was an original estimate of £441,663. The reduction was due to an amended estimate made by the Acting Engineer-in-Chief for Railways since the railway was referred to the Committee.
12 Nov. to 24 April.	Railway from Grafton to the Tweed.*	1,728,100	800,000	928,100	The Committee recommended that this railway should be constructed from Lismore to Murwillumbah, instead of from Grafton to Murwillumbah, the Committee's recommendation involving a length of about 60½ miles as compared with 140 miles 76 chains, the length of the line as referred to them by the Legislative Assembly.
15 Jan. to 24 April.	Railway from Cootamundra to Temora.	138,000 (or £3,656 per mile.)	125,400 (or £3,300 per mile.)	12,600	The Committee considered that the cost of constructing this railway should not exceed £3,300 per mile.
23 Jan. to 24 April.	Railway from Moss Vale to Robertson.	84,900	84,900	The Committee negatived this proposal because they considered another route, described in their report, was preferable.
23 Jan. to 25 Mar.	Railway from Mudgee to Gulgong.	109,330	109,330	The Committee decided against this work, on the ground that any extension of the Mudgee Railway should form part of a more comprehensive proposal, the consideration of which should be deferred until after the suggestion for the connection of the Northern and Western systems, by a line between Dubbo and Werris Creek, has been dealt with.
12 Feb. to 24 April.	Bridge over Tarban Creek, Parramatta River.	26,000	26,000	The Committee considered this bridge to be unnecessary.
20 Feb. to 15 April.	Bridge over the Hunter River, at Jerry's Plains.	20,000	20,000	The Committee considered that a less expensive bridge would be sufficient to meet requirements.
25 Feb. to 24 April.	Bridge to connect Bullock Island with the mainland at Newcastle.	33,000	33,000	The Committee considered that this proposed expenditure was premature, pending certain reclamation works.
12 Feb. to 21 May.	Iron Bridge at Cowra ...	26,537	26,537	The original proposal represented an expenditure of £69,971, which amount was afterwards reduced to £26,537, as the result of a revision of the system of bridge-building in the Colony.
22 Jan. to 21 May.	Railway from Molong to Parkes and Forbes.	433,000	433,000	Recommended as proposed.
28 May to 8 July.	Hospital for the Insane upon the Kenmore Estate, near Goulburn.*	120,000	120,000	This proposed work, after being partly considered, was withdrawn from the Committee by resolution of the Assembly.
28 May to 21 Aug.	Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.* (Second Reference.)	231,156	231,156	This proposal was before the Committee on a previous occasion (estimated cost, £262,000), when it was negatived; but having been referred to the Committee for further consideration, and circumstances appearing in the second inquiry which justified the construction of the railway, the Committee approved of the proposed work.
10 Dec. to 13 May, 1891.	Hospital Buildings, Macquarie-street.	140,000	56,000	84,000	In this case, two sets of plans for the buildings were submitted to the Committee, one representing a design that was estimated to cost £140,000, and the other a design to cost £56,000, and the Committee approved of the latter.
1891.						
11 Feb. to 25 Mar.	College for the Training of Teachers of Public Schools.	37,500	37,500	Recommended as proposed.
1 Feb. to 21 April.	Extension of the Kiama to Nowra Railway into the town of Nowra.	75,000	75,000	Recommended as proposed.
24 Feb. to 14 May.	Railway from Cobar to Cockburn.	1,168,000	1,018,000	150,000	The Committee recommended the construction of this railway as far as Broken Hill only, which would reduce the proposed expenditure by £150,000.
22 Jan., 1890, to 19 May, 1891.	Cable Tramway from King-st., via William-street, to Ocean-street.	80,000	80,000	Recommended as proposed.
25 Nov., 1890, to 3 June, 1891.	Cable Tramway through George, Pitt, and Harris Streets, Sydney.	120,000	120,000	The Committee considered that it was not expedient at present, for reasons stated in their report, that this tramway should be constructed.
	Carried forward£	9,525,818	6,947,112	34,938	2,613,644	

LIST of Proposed Public Works inquired into by the Committee, &c.—*continued.*

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1892. 5 May to 2 June.	Brought forward .. £ Improvements at Darling Island.	9,525,818 142,000	6,347,112	£ 34,938	£ 2,613,644 142,000	The Committee considered that the proposed works might be postponed for the present without inconvenience, and that a more suitable design might be submitted.
7 June to 12 July.	Stormwater sewers discharging into Johnstone's Bay.	51,352	51,352	Recommended as proposed.
15 June to 4 Aug.	Reservoir at Centennial Park for Sydney Water Supply.	83,000	83,000	Recommended with an alteration of site.
14 July to 24 Aug.	Water Supply for Wollongong and the surrounding districts.	66,000	30,000	36,000	The Committee found that the Water Supply proposed for the surrounding districts was not needed, and that the estimate of cost for supplying Wollongong might be reduced to £30,000.
28 July to 24 Aug.	Second pipe-line from Walka to Buttai, for Hunter River District Water Supply.	50,000	50,000	Recommended as proposed.
26 July to 9 Aug.	Sewerage works at Cottage Creek.	25,000	13,000	12,000	The amount of £25,000 provided for a covered sewer; but the Committee found that a cover was not necessary at present, and that by constructing an open sewer the cost could be reduced by £12,000.
21 April, 1891, to 27 May, 1892.	Railway from Glen Innes to Inverell.*	427,400	427,400	The evidence in this case showed that the estimated cost of constructing the railway was excessive, and indicated the probability of a serious annual loss in the working of the line. In addition to this, the Committee were not as fully informed as desirable with regard to connecting Inverell not only with the Great Northern Railway but with the coast, a matter of considerable importance in the inquiry.
31 May to 18 Aug.	Railway from Jerilderie to Deniliquin.	148,000	148,000	The Committee were of opinion that the consideration of this proposed work should be postponed until it should be determined by Parliament as a matter of public policy to purchase the Deniliquin to Moama Railway.
12 July to 24 Aug.	Lunatic Asylum at Kenmore, near Goulburn.* (Second Reference.)	150,000	150,000	Recommended as proposed.
14 June to 28 Sept.	Railway from Grafton to Lismore.*	662,000 (or £8,000 per mile.)	108,000 (or £6,000 per mile.)	554,000	The Committee decided that, for the present, only the Lismore to Casino section of the proposed railway should be constructed, that the cost should not exceed £6,000 per mile, and that the betterment principle be applied to the land to be served by the proposed line.
10 July to 26 Oct.	Railway from Eden to Bega.	564,000 (or £15,350 per mile.)	564,000	The Committee considered that the present resources of the district did not warrant the construction of such an expensive line, but they were of opinion that a cheaply constructed railway might be favorably considered.
22 June to 4 Oct.	Sewerage Works for Parramatta.*	75,926	75,926	The Committee were of opinion that the sewage farm included in the scheme was too small for the purpose, and that the sewage should be dealt with by precipitation and filtration or other effective modern process at a proposed pumping station at Clay Cliff Creek.
12 Oct. to 21 Dec.	Water Supply for Tamworth.	22,500	22,500	Recommended as proposed, with a provision as to the quantity of water obtainable, and the resumption of land surrounding the well in the drift forming the source of supply.
14 Sept. to 16 Nov.	Water Supply for Lithgow	15,000	15,000	Recommended as proposed.
15 Sept. to 16 Nov.	Water Supply for Armidale.	43,500	43,500	Recommended as proposed.
17 Nov. to 10 Jan. 1893.	Railway from Glen Innes to Inverell.* (Second Reference.)	421,400 (or £7,975 per mile.)	369,862 (or £7,000 per mile.)	51,538	The Committee considered it expedient this railway should be constructed, provided that the cost did not exceed £7,000 per mile, that special local rates were charged until the railway paid working expenses and interest on cost of construction, and that the betterment principle was applied to the land served by the railway.
14 Feb. to 8 Mar.	Waterworks for the town of Junee.	45,000	45,000	The Committee recommended that these works should be carried out, conditionally upon the Railway Commissioners undertaking to enter into an agreement for a period of not less than ten years to pay a minimum of £1,900 per annum for water supplied for railway purposes at Junee and Bethungra.
14 Nov., 1893, to 11 Jan., 1894.	Railway from Narrabri to Moree.	153,000	153,000	Recommended as proposed, with the condition that the work be not undertaken until a Betterment Act is passed.
	Carried forward.....£	12,670,896	8,081,326	34,938	4,624,508	

LIST of Proposed Public Works inquired into by the Committee, &c.—*continued.*

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1894. 7 Feb. to 22 Mar.	Brought forward ... Sewerage Works for Parramatta.* (Second reference.)	£ 12,670,896 75,926	£ 8,081,326	£ 34,938	£ 4,624,508 75,926	The Committee decided that it was not expedient the proposed works should be carried out, for the reasons that the scheme had not been adequately considered, and that, according to the evidence, Parramatta was neither willing nor able to pay the rate necessary to provide the interest on the expenditure, and did not want the proposed works.
6 Mar. to 16 April.	Deviation to avoid the Lithgow Zigzag.	181,072	181,072	The Committee were of opinion that as the professional evidence, as well as much of the evidence generally, indicated that the proposed deviation was not a matter of urgency it was not expedient the work should be carried out.
9 April, to 22 May.	Railway from Temora to Wyalong.*	104,430	104,430	The Committee were of opinion that the decision upon the proposal should be deferred for six months.
11 April, to 20 June.	Removal of Pymont and Glebe Island Bridges.*	296,500	296,500	The Committee recommended that when renewal becomes necessary the existing bridges at Darling Harbour and Glebe Island should be replaced by timber structures of a kind specified in their report, which report, however, in consequence of the sudden dissolution of Parliament was not presented to the Legislative Assembly.
3 Oct. to 14 Nov.	Removal of Pymont and Glebe Island Bridges.* (Second reference.)	296,500	82,500	214,000	The Committee recommended that the Pymont Bridge be replaced by a timber bridge with steel span, to cost £82,500, and decided that the Glebe Island Bridge did not at present require renewal.
19 Dec. to 27 Feb., 1895.	Railway from Jerilderie to Berrigan.	43,543	43,543	The construction of this railway was recommended, with the condition that the estimated cost, £2,000 per mile, should include goods and grain sheds, engineering charges, and all contingencies.
7 Mar. to 10 May.	Railway from Parkes to Condobolin.	127,000	127,000	In this inquiry the Committee, while considering it expedient the railway should be constructed, resolved that the cost should not exceed £2,100 per mile, including the cost of land resumptions.
17 May to 28 June.	Railway from Temora to Wyalong.* (Second reference.)	92,000	92,000	The Committee, in deciding against this proposed work, were of opinion that at the present time there is no justification for its construction, and the prospects of Wyalong's future are not such as to lead them to conclude that the line should be built in anticipation of what may be the condition of the gold-field and the district some years hence.
20 Mar. to 7 May.	Harbour Improvements at Newcastle.	141,000	141,000	In this inquiry the Committee recommended a modification of the works proposed by the Department and an additional work, the cost of the works as recommended by the Committee being about the same as that of the works proposed by the Department.
26 June, to 4 July.	Tramway from Woolwich to the Field of Mars Common.	19,300	19,300	This proposed work was referred to the Fifth Committee who, at the termination of their existence, had inquired partly into it. A motion in the Legislative Assembly to refer the proposal to the Sixth Committee was, however, negatived on 11 December, 1895.
12 Dec. to 14 Dec.	Deviation at Locksley, Great Western Railway.	47,500	47,500	The Committee considered this work to be an urgent and necessary one, and recommended that it be carried out without delay.
17 Dec. to 24 Jan. 1896.	Water Supply for the Town of Tamworth.	32,824	32,824	The Committee recommended that this work be carried out, with the proviso that the capacity of the storage reservoir be increased from 35,000,000 to 50,000,000 gallons.
18 Mar. to 8 May.	Electric Tramway from Circular Quay, Sydney, to the Redfern Railway Station; and also along Harris street to the intersection of John- street.	130,500	130,500	Recommended as proposed.
	Carried forward.....	£14,258,991	8,686,193	34,938	5,607,736	

LIST of Proposed Public Works inquired into by the Committee, &c.—*continued.*

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
		£	£	£	£	
1896.	Brought forward.....	14,258,991	8,686,193	34,938	5,607,736	
1 Jan. to 10 Mar.	Erection of Buildings at Rookwood for Infirm and Destitute Persons.	118,285	62,900	55,385	The Committee decided that it was not expedient the proposed works should be carried out, deeming it inadvisable, for reasons stated in their Report, to concentrate the infirm and destitute at Rookwood. The Government estimate for the proposed buildings was £108,350 without, and £118,285 with, provision for sewage. The Committee recommended that the inmates of the Parramatta Asylums be removed, the healthy patients being housed at Rookwood and Liverpool, provision for the chronic and acute sick to be made on Crown lands near Campbelltown.
9 Jan. to 17 July.	Additions to the Treasury Buildings.	21,500	21,500	Recommended as proposed.
20 Feb. to 1 Oct.	Railway from Tamworth to Manilla.	72,150	71,875	275	The Committee's recommendation provided for an amended route, the cost of the railway not to exceed £2,500 per mile.
21 April, to 20 May.	Railway from Nevertire to Warren.	32,730	32,730	Recommended as proposed.
12 May, to 31 July.	Construction of Locks and Weirs on the River Darling.	121,100	121,100	The Committee negatived this proposed work.
5 June, to 19 Aug.	Railway from Berrigan to Finley.	27,250	27,250	The Committee recommended that this proposed railway should be constructed, the cost not to exceed £2,000 per mile.
16 June to 24 July.	Improvement of Cook's River.	36,400	15,000	21,400	As recommended by the Committee the construction of the proposed works would involve an expenditure of £15,000—a reduction on the Departmental estimate of £21,400—which, in the opinion of the Committee, would meet the requirements of the case.
1 Sept. 1896. to April, 1897.	Railway from Moree to Inverell.	279,500	279,500	The Committee resolved that it was expedient this railway should be constructed as proposed.
28 Oct. 1896, to 10 Feb., 1897.	Construction of a Deep-water Harbour at Port Kembla.	440,000	200,000	240,000	The Departmental estimate of cost provided for the construction of two breakwaters, known respectively as the northern and eastern, and the necessary equipment of the port for coal-shipping and general commercial purposes. The Committee were of opinion, however, that the proposed harbour would be rendered sufficiently secure to meet present requirements if the eastern breakwater only were carried out, and the estimated cost reduced by £240,000.
5 Aug. to 10 Dec., 1896.	Railway from Condobolin to Broken Hill.	955,063	955,063	The Committee, while having regard to the various aspects of this proposed work, and considering also that the annual loss on the working of the railway would amount to £60,000, were of opinion that it should not, at present, be proceeded with.
11 Feb., 1897, to 13 April.	*Sewerage Works for Parramatta. (Third Reference.)	60,000	60,000	This work was passed by the Committee with the provision that the cost should not exceed the Departmental estimate, and that the carrying out of the work should be subject to a guarantee (by the Municipal Council of Parramatta) of the annual payment required to cover maintenance and interest, and redemption of the principal outlay.
1897. 4 May to 8 June.	Duplicate Main from Prospect to Potts' Hill.	109,317	109,317	The Committee recommended the amended scheme submitted by the Engineer-in-Chief for Public Works, by which the sides of the canal between Prospect and the Pipe Head Basin would be raised, the canal strengthened, and the 6-foot pipe-line between the Basin and Potts' Hill Reservoir duplicated.
14 April to 6 Dec.	New Houses of Parliament.	533,484	15,000	518,484	The Committee recommended the adoption of the scheme submitted by the Government Architect, providing for alterations to the present Parliamentary Buildings, at a cost not exceeding £15,000.
16 June to 15 Sept.	New Bridge at Glebe Island.	89,100	89,100	The Committee recommended that there be substituted for the existing structure a stone causeway, with a central, steel swing-span.
13 July to 25 Aug.	Railway from Redfern to St. James' Road.	650,000	650,000	Recommended as proposed.
	Carried forward.....£	17,804,870	10,320,365	34,938	7,519,443	

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
	Brought forward.....	£ 17,804,870	£ 10,320,365	£ 34,938	£ 7,519,443	
1897. 31 Aug. to 7 Dec.	Railway from Condobolin Euabalong.	108,225	108,225	The Committee negated this proposed work, but recommended, in connection with any proposal for a railway towards Hillston, that a survey be made for a line from Koorawatha, with a view to its consideration in conjunction with existing surveys.
16 Sept. to 25 Nov.	Railway from The Rock to Green's Gunyah.	67,000	67,000	Recommended as proposed.
5 Sept. to 18 Nov. 1897.	Railway from Coolamon to Ariaah.	91,307	91,307	The Committee negated this proposal.
20 Dec. to 1 April, 1898.	Railway from Koorawatha to Grenfell.	89,250	89,250	Recommended as proposed.
5 Jan. to 13 April, 1897.	Railway from the Terminus of the Rose Hill Rail- way to Dural.	57,000	57,000	The Committee negated this proposal.
14 Dec. to 29 April, 1898.	Railway from Warren to Coonamble.	150,000	150,000	The Committee negated this proposal, but recommended that a survey be made of a route from Dubbo to Coonamble.
15 Mar. to 26 April.	Harbour Works at Tweed River.	43,600	43,600	Recommended as proposed.
		£ 18,411,252	10,520,215	34,938	7,925,975	

* Works marked with an asterisk have been referred to the Committee more than once, and allowing for these repeated references, and for the expenditure recommended in two instances in excess of that proposed, the actual saving effected amounts to £5,600,755.

WORKS RESPECTING WHICH THE EVIDENCE IS COMPLETE, BUT UPON WHICH THE COMMITTEE HAVE NOT YET DECIDED.

Railway from Narrabri to Pilliga	£128,650
Railway from Byrock to Brewarrina.....	146,350
Railway from Woolabra to Collarenebri.....	207,798
Railway from Maitland to Taree	982,283
Harbour Works at Bellinger River	36,500
Harbour Works at Macleay River	93,000
Harbour Works at Hastings River	79,200
Harbour Works at Manning River	114,000
Harbour Works at Nambucca River	£73,000

WORK RESPECTING WHICH THE INQUIRY HAS NOT YET BEEN COMMENCED.

Weirs on the River Darling, between Bourke and Wilcannia ...	310,000

[* Shortly after the first meeting of the third Committee, John Sutherland, Esquire, died, and his place was filled by the appointment of Charles Alfred Lee, Esquire. Subsequently the Honorable James Watson resigned his seat on the Committee, and the Honorable George Henry Cox was appointed in his place. On 22nd October, 1890, Mr. Joseph Palmer Abbott, having been appointed Speaker of the Legislative Assembly, resigned his position as Chairman and member of the Committee. The Honorable John Lackey, who at that time was Vice-Chairman of the Committee, was appointed Chairman in Mr. Abbott's place, and Mr. Jacob Garrard was chosen as Vice-Chairman. Mr. William McCourt was appointed a member of the Committee on 16th July, 1890, in the place of Mr. John Hurley, whose seat became vacant by reason of his resignation from the Legislative Assembly; and Mr. James Patrick Garvan was appointed a member on the 6th November, 1890, in the room of Mr. Joseph Palmer Abbott.]

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Dredge and Plant for Sydney Harbour.	23 July, 1888	22 Jan., 1890	6 Feb., 1890	The evidence showed that this class of dredge was not required.	Not dealt with.
Improvements to the Entrance of the Richmond River.	23 ,, ,,	26 June, 1889	30 Sept., 1889	The Committee recommended that the proposed works should be carried out in a certain order, so that the results from the works first constructed might be ascertained before others were proceeded with.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—28 Aug., 1890—Bill read third time; 3 Sept., 1890—Assent reported.
Improvements to the Entrance of the Clarence River.	23 ,, ,,	23 Oct., ,,	14 Nov., 1889	28 Jan., 1890	2 April, 1890	In this case the Committee recommended the construction of only a portion of the works proposed, as they were of opinion that when this portion had been constructed it might be found that the remainder would not be required.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—17 Sept., 1890—Bill read third time; 1 Oct., 1890—Assent reported.
Drainage Works for the Western Suburbs.	23 ,, ,,	7 Dec., 1888	27 Aug., 1889	Recommended as proposed.	Passed.	Legislative Assembly—26 Sept., 1889—Bill read third time. Legislative Council—26 Sept., 1889—Bill read third time; 30 Sept., 1889—Assent reported.

THIRD COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
C-Of* Railway from Goulburn to Crookwell.	31 July, 1889	22 Aug., 1889	29 Aug., 1889	17 Sept., 1889	19 Dec., 1889	The Committee considered that the cost of this railway should not exceed £4,500 per mile, and that a saving should also be effected by utilizing a certain portion of the present main line instead of taking the proposed railway through a part of the city of Goulburn.	Negated by the Legislative Council.	Legislative Assembly—25 Sept., 1895—Bill read third time. Legislative Council—12 Nov., 1895—Second reading resolved in the negative.
Railway from Nyngan to Cobarr	1 Aug., "	25 Sept., "	24 Sept., "	31 Oct., "	18 Feb., 1890	The Committee recommended the construction of this railway as part of a line which should be extended to Wilcannia and Broken Hill.	Passed.	Legislative Assembly—10 July, 1890—Bill read third time. Legislative Council—17 July, 1890—Bill read third time; 23 July, 1890—Assent reported.
Railway from Kiama to Nowra	1 ,, "	4 Dec., "	14 Jan., 1890	30 Jan., 1890	22 April, "	In this case there was an original estimate of £441,663. The amount recommended by the Committee was £381,390. The reduction was due to an amended estimate made by the Acting Engineer-in-Chief for Railways after the railway was referred to the Committee.	Passed.	Legislative Assembly—10 July, 1890—Bill read third time. Legislative Council—7 Aug., 1890—Bill read third time; 13 Aug., 1890—Assent reported.
Railway from Marrickville to the Burwood Road.	1 ,, "	19 Nov., "	2 ,, "	Recommended as proposed.	Passed.	Legislative Assembly—11 Dec., 1890—Bill read third time. Legislative Council—18 Dec., 1890—Bill read third time; 19 May, 1891—Assent reported.
Railway from Culcairn to Corowa.	6 ,, "	29 Aug., "	29 Aug., 1889	11 Sept., 1889	12 Dec., 1889	The Committee were of opinion that this line should be constructed at a cost not exceeding £3,500 per mile.	Passed.	Legislative Assembly—10 July, 1890—Bill read third time. Legislative Council—31 July, 1890—Bill read third time; 6 Aug., 1890—Assent reported.
Breakwater at Byron Bay	6 ,, "	31 Oct., "	14 Nov., "	28 Jan., 1890	15 April, 1890	The original estimate for this work was £162,000. The estimate placed before the Committee, which they adopted in their recommendation, was £241,723. The increase was due to a difficulty in obtaining stone.	Negated by the Legislative Council.	Legislative Assembly—17 July, 1890—Bill read third time. Legislative Council—15 Oct., 1890—Bill negated in Council on motion, "That it be read the second time this day six months."
Railway to connect North Shore Railway with Port Jackson, at Milson's Point.	7 ,, "	9 ,, "	11 Dec., 1889	The Committee considered, for various reasons stated in their report on the subject, that the work as proposed should not be carried out.	See second reference.	See second reference.
Railway from Grafton to the Tweed.	27 Sept., "	12 Nov., "	14 Nov., "	28 Jan., "	15 April, 1890	The Committee recommended that this railway should be constructed from Lismore to Murwillumbah, instead of from Grafton to Murwillumbah, the Committee's recommendation involving a length of about 60½ miles as compared with 140 miles 76 chains, the length of the line as referred to them by the Legislative Assembly.	Passed.	Legislative Assembly—17 July, 1890—Bill (Lismore to the Tweed Railway Bill) read third time. Legislative Council—10 Sept., 1890—Bill read third time; 24 Sept., 1890—Assent reported.
Railway from Cootamundra to Temora.	27 ,, "	15 Jan., 1890	16 Jan., 1890	11 Feb., "	23 ,, "	The Committee considered that the cost of constructing this railway should not exceed £3,300 per mile.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—17 Sept., 1890—Bill read third time; 1 Oct., 1890—Assent reported.

THIRD COMMITTEE—*continued.*

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Railway from Mudgee to Gulgong.	27 Sept., 1889	23 Jan., 1890	12 Mar., 1890	26 Mar., 1890	6 May, 1890	The Committee decided against this work on the ground that any extension of the Mudgee Railway should form part of a more comprehensive proposal, the consideration of which should be deferred until after the suggestion for the connection of the Northern and Western systems, by a line between Dubbo and Werris Creek, had been dealt with.	Not dealt with.
Railway from Moss Vale to Robertson.	1 Oct., "	23 " "	30 Jan., "	12 Feb., "	29 April, "	The Committee negatived this proposal because they considered another route, described in their report, was preferable.	" "
Railway from Molong to Parkes and Forbes.	1 " "	22 " "	12 Feb., "	19 Mar., "	21 May, "	Recommended as proposed.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—21 Aug., 1890—Bill read third time; 27 Aug., 1890—Assent reported.
Bridge over Tarban Creek, Parramatta River.	1 " "	12 Feb., "	15 April, "	The Committee considered this bridge to be unnecessary.	Not dealt with.
Bridge over the Hunter River, at Jerry's Plains.	1 " "	20 " "	4 Mar., "	11 Mar., "	15 " "	The Committee considered that a less expensive bridge would be sufficient to meet requirements.	" "
Bridge to connect Bullock Island with the Mainland at Newcastle.	1 " "	25 " "	4 " "	11 " "	29 " "	The Committee considered that this proposed expenditure was premature, pending the carrying out of certain reclamation works.	" "
Iron Bridge at Cowra	1 " "	12 " "	18 Feb., "	19 " "	21 May, "	The original proposal represented an expenditure of £69,971, which amount was afterwards reduced to £26,537, as the result of a revision of the system of bridge-building in the Colony, and the construction of the bridge at the reduced cost was recommended by the Committee.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—21 Aug., 1890—Bill read third time; 27 Aug., 1890—Assent reported.
Hospital for the Insane upon the Kenmore Estate, near Goulburn.	1 " "	28 May, "	Inquiry not completed.	This proposed work, after being partly considered, was withdrawn from the Committee by resolution of the Assembly.	Rescinded.	Legislative Assembly—2 July, 1890—Resolution passed rescinding previous resolution referring proposed work to the Committee.
Offices for Board of Water Supply and Sewerage.	1 " "	14 Jan., "	11 Feb., 1890	Recommended as proposed.	Passed.	Legislative Assembly—7 Nov., 1890—Bill read third time. Legislative Council—20 Nov., 1890—Bill read third time; 27 Nov., 1890—Assent reported.
Reticulation of Western Suburbs Drainage Scheme.	1 " "	14 " "	6 " "	" "	" "	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—24 Sept., 1890—Bill read third time; 8 Oct., 1890—Assent reported.

THIRD COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Extension of Sydney Water Supply to Southern Suburbs—Hurstville, Rockdale.	1 Oct., 1889	14 Jan., 1890	11 Feb., 1890	This expenditure was rendered unnecessary by reason of a temporary water-supply scheme being sufficient to meet requirements for some years.	Not dealt with.
Cable Tramway from King-street, via William-street, to Ocean-street.	1 ,, ,,	22 ,, ,,	2 June, '1891	Recommended as proposed.	Passed.	Legislative Assembly—8 March, 1892—Bill read third time. Legislative Council—10 March, 1892—Bill read third time; 17 March, 1892—Assent reported.
Cable Tramway through George, Pitt, and Harris Streets, Sydney	1 ,, ,,	25 Nov. ,,	4 ,, ,,	The Committee considered that it was not expedient, for reasons stated in their report, that this tramway should be constructed.	Not dealt with.
Railway to connect North Shore Railway with the deep waters of Port Jackson, at Milson's Point (second reference).	8 May, 1890	28 May, ,,	21 Aug., 1890	This proposal was before the Committee on a previous occasion when it was negatived; but having been referred to the Committee for further consideration, and circumstances appearing in the second inquiry which justified the construction of the railway, the Committee approved of the proposed work.	Passed.	Legislative Assembly—12 Nov., 1890—Bill read third time. Legislative Council—20 Nov., 1890—Bill read third time 27 Nov., 1890—Assent reported.
College for the Training of Teachers of Public Schools.	21 Nov., ,,	11 Feb., 1891	19 Mar., 1891	Recommended as proposed.	Not dealt with.
Hospital Buildings, Macquarie-street.	3 Dec., ,,	10 Dec., 1890	12 May, ,,	In this case two sets of plans for the buildings were submitted to the Committee, one representing a design that was estimated to cost £140,000, and the other a design to cost £56,000, and the Committee approved of the latter.	Passed.	Legislative Assembly—9 March, 1892—Bill read third time. Legislative Council—17 March, 1892—Bill read third time; 29 March, 1892—Assent reported.
Railway from Cobar to Cockburn.	19 ,, ,,	24 Feb., 1891	14 ,, ,,	The Committee recommended the construction of this railway as far as Broken Hill only, thereby reducing the proposed expenditure (£1,168,000) by £150,000.	Legislative Assembly—25 June, 1895—Motion to go into Committee to bring in a Bill.
Railway from Glen Innes to Inverell.	19 ,, ,,	21 April, ,,	23 April, 1891	2 June, 1891	See Fourth Committee.	See Fourth Committee.	See Fourth Committee.
Extension of the Kiama to Nowra Railway into the town of Nowra.	19 ,, ,,	19 Feb., ,,	21 April, 1891	Recommended as proposed.	Not dealt with.

FOURTH COMMITTEE—FROM 31 MARCH, 1892, TO 25 JUNE, 1894.

MEMBERS OF THE COMMITTEE.

LEGISLATIVE COUNCIL.

The Honorable WILLIAM HENRY SUTTOR, Vice-Chairman.
 The Honorable JAMES HOSKINS.
 The Honorable FREDERICK THOMAS HUMPHERY.

* The Honorable ANDREW GARRAN, LL.D.
 The Honorable JOHN DAVIES, C.M.G.
 * The Honorable WILLIAM JOSEPH TRICKETT.

LEGISLATIVE ASSEMBLY.

JACOB GARRARD, Esquire, Chairman.
 THOMAS THOMSON EWING, Esquire.
 WILLIAM CHANDOS WALL, Esquire.
 WILLIAM McCOURT, Esquire.

JOHN CASH NEILD, Esquire.
 EDWARD WILLIAM O'SULLIVAN, Esquire.
 CHARLES COLLINS, Esquire.
 HENRY DAWSON, Esquire.

* The Honorable Andrew Garran, LL.D., on 5th October, 1892, resigned his seat as a member of the Committee, and on 12th October, 1892, the Honorable William Joseph Trickett was appointed to fill the vacancy.]

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Improvements at Darling Island	29 Mar., 1892	5 May, 1892	2 June, 1892	The Committee considered that the proposed works might be postponed for the present without inconvenience, and that a more suitable design might be submitted.	Not dealt with.
Water Supply for Tamworth...	29 ,, ,,	12 Oct., ,,	12 Oct., 1892	15 Nov., 1892	21 Dec., ,,	Recommended as proposed with a provision as to the quantity of water obtainable, and the resumption of land surrounding the well in the drift forming the source of supply.	Passed.	Legislative Assembly—29 May, 1894—Bill read third time. Legislative Council—31 May, 1894—Bill read third time; 5 June, 1894—Assent reported.
Storm-water Sewers discharging into Johnstone's Bay.	29 ,, ,,	7 June, ,,	12 July, ,,	Recommended as proposed.	„	Legislative Assembly—7 June, 1894—Bill read third time. Legislative Council—7 June, 1894—Bill read second time and passed through all stages; 7 Aug., 1894—Assent reported.
Reservoir at Centennial Park for Sydney Water Supply.	29 ,, ,,	15 ,, ,,	Recommended with an alteration of site.	„	Legislative Assembly—20 Dec., 1894—Bill read third time. Legislative Council—21 Dec., 1894—Bill read third time; 26 Feb., 1895—Assent reported.
Water Supply for Wollongong and the Surrounding Districts.	29 ,, ,,	14 July, ,,	4 Aug., ,, 24 ,, ,,	The Committee found that the Water Supply proposed for the surrounding districts was not needed, and that the estimate of cost for supplying Wollongong might be reduced to £30,000.	Not dealt with.
Second Pipe-line from Walka to Butta, for Hunter River District Water Supply.	29 ,, ,,	28 ,, ,,	16 ,, ,,	Recommended as proposed.	Legislative Assembly—2 Oct., 1895—Bill read third time. Legislative Council—12 Nov., 1895—Bill read third time; 9 Nov., 1895—Assent reported.
Sewerage Works at Cottage Creek.	29 ,, ,,	26 ,, ,,	9 ,, ,,	The estimated cost of this work was £25,000, which provided for a covered sewer; but the Committee found that a cover was not necessary, and that by constructing an open sewer the cost could be reduced by £12,000.	Passed.	Legislative Assembly—2 May, 1895—Bill read third time. Legislative Council—30 May, 1895—Bill read third time; 25 June, 1895—Assent reported.
Water Supply for Lithgow ...	29 ,, ,,	14 Sept., ,,	22 Oct., ,,	24 Oct., ,,	16 Nov., ,,	Recommended as proposed.	„	Legislative Assembly—5 April, 1894—Bill read third time. Legislative Council—18 April, 1894—Bill read third time; 1 May, 1894—Assent reported.
Sewerage Works for Parramatta	29 ,, ,,	22 June, ,,	4 Oct., ,,	The construction of this work the Committee did not recommend, as they were of opinion that the sewage farm included in the scheme was too small for the purpose, and that the sewage should be dealt with by precipitation and filtration, or other effective modern process, at a proposed pumping station at Clay Cliff Creek.	See second reference.	See second reference.

FOURTH COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Water Supply for Armidale ...	29 Mar., 1892	15 Sept., 1892	12 Oct., 1892	20 Oct., 1892	16 Nov., 1892	Recommended as proposed.	Passed.	Legislative Assembly—22 May, 1894—Bill read third time. Legislative Council—31 May, 1894—Bill read third time; 5 June, 1894—Assent reported.
Railway from Eden to Bega ...	29 ,, ,,	10 July, ,,	11 Aug., ,,	7 Sept., ,,	26 Oct., ,,	The Committee considered that the resources of the district did not warrant the construction of such an expensive line, but they were of opinion that a cheaply constructed railway might be favourably considered.	Not dealt with.
Railway from Grafton to Lismore.	29 ,, ,,	14 June, ,,	15 June, ,,	10 Aug., ,,	28 Sept., ,,	The Committee decided that, for the present, only the Lismore to Casino section of the proposed railway should be constructed, that the cost should not exceed £6,000 per mile, and that the betterment principle be applied to the land to be served by the proposed line.	,, ,,
Railway from Glen Innes to Inverell.	29 ,, ,,	6 April, ,,	23 April, 1891 (See Third Committee.)	2 June, 1891 (See Third Committee.)	27 May, ,,	The evidence in this case, which was partly inquired into by the Third Committee and partly by the Fourth Committee, showed that the estimated cost of constructing the railway was excessive, and indicated the probability of a serious annual loss in the working of the line. In addition to this, the Committee were not as fully informed as desirable with regard to connecting Inverell not only with the Great Northern Railway but with the coast, a matter of considerable importance in the inquiry. The Committee therefore did not recommend that the railway should be constructed.	See second reference.
Railway from Jerilderie to Deniliquin.	29 ,, ,,	31 May, ,,	2 June, 1892	23 June, 1892	18 Aug., ,,	The Committee were of opinion that the consideration of this proposed work should be postponed until it should be determined by Parliament as a matter of public policy to purchase the Deniliquin to Moama Railway.	Not dealt with.
Lunatic Asylum at Kenmore, near Goulburn (second reference).	31 ,, ,,	12 July, ,,	24 ,, ,,	Recommended as proposed.	Passed.	Legislative Assembly—18 October, 1894—Bill read third time. Legislative Council—1 November, 1894 Bill read third time; 14 November, 1894—Assent reported.
Railway from Glen Innes to Inverell (second reference).	27 Oct., ,,	17 Nov., ,,	23 Nov., ,,	13 Dec., ,,	10 Jan., 1893	The Committee considered it expedient this railway should be constructed, provided that the cost did not exceed £7,000 per mile, that special local rates were charged until the railway paid working expenses and interest on cost of construction, and that the betterment principle was applied to the land served by the railway.	Negatived.	Legislative Assembly—18 April, 1894—Bill read third time. Legislative Council—7 June 1894—Bill negatived on motion for second reading.
Waterworks for the town of Junee.	2 Feb., 1893	14 Feb., 1893	15 Feb., 1893	28 Feb., 1893	14 Mar., ,,	The Committee recommended that the proposed works should be carried out, conditionally on the Railway Commissioners entering into an agreement for a period of not less than ten years to pay a minimum of £1,900 per annum for water supplied for railway purposes at Junee and Bethungra.	Passed.	Legislative Assembly—4 April, 1894—Bill read third time. Legislative Council—18 April, 1894—Bill read third time; 1 May, 1894—Assent reported.

FOURTH COMMITTEE—*continued.*

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Railway from Narrabri to Moree.	1 Nov., 1893	14 Nov., 1893	15 Nov., 1893	5 Dec., 1893	12 Jan., 1894	Recommended as proposed, with the condition that the work be not undertaken until a Betterment Act is passed.	Passed.	Legislative Assembly—20 March, 1895—Bill read third time. Legislative Council—4 April, 1895—Bill read third time; April—Assent reported.
Sewerage Works for Parramatta (second reference).	1 Feb., 1894	7 Feb., 1894	22 Mar., "	The Committee decided that it was not expedient the proposed works should be carried out, for the reasons that the scheme had not been adequately considered, and that, according to the evidence, Parramatta was neither willing nor able to pay the rate necessary to provide the interest on the expenditure, and did not want the proposed works.	See Sixth Committee.
Deviation to avoid the Lithgow Zigzag.	25 Jan., "	6 Mar., "	16 April, "	The Committee were of opinion that as the professional evidence, as well as much of the evidence generally, indicated that the proposed deviation was not a matter of urgency, it was not expedient the work should be carried out.	Not dealt with.
Railway from Temora to Wyalong.	29 Mar., "	9 April, "	9 April, 1894	24 April, 1894	28 May, "	The Committee were of opinion that owing to the uncertainty of the permanence of the Wyalong goldfield, the decision upon the proposed Railway should be deferred for six months.	See Fifth Committee.
Removal of Pyrmont and Glebe Island Bridges.	25 Jan., "	11 " "	25 June, "	The Committee negated the Departmental scheme, but recommended that when renewal becomes necessary the existing bridges at Darling Harbour and Glebe Island should be replaced by timber structures of a kind specified in their report, which report, however, in consequence of the sudden dissolution of Parliament was not presented to the Legislative Assembly.	" "

FIFTH COMMITTEE—FROM 19 SEPTEMBER, 1894, TO 5 JULY, 1895, TO 17 JUNE, 1898.

MEMBERS OF THE COMMITTEE.

LEGISLATIVE COUNCIL.

The Honorable FREDERICK THOMAS HUMPHERY, Vice-Chairman.
The Honorable WILLIAM JOSEPH TRICKETT.

The Honorable JAMES HOSKINS.
The Honorable JOHN DAVIES, C.M.G.

The Honorable CHARLES JAMES ROBERTS, C.M.G.

LEGISLATIVE ASSEMBLY.

* VARNEY PARKES, Esquire, Chairman.
* THOMAS THOMSON EWING, Esquire, Chairman.
JAMES HAYES, Esquire.
ROBERT HENRY LEVIEN, Esquire.

JOHN MOORE CHANTER, Esquire.
CHARLES ALFRED LEE, Esquire.
JAMES GORMLY, Esquire.
EDMUND WILLIAM MOLESWORTH, Esquire.

* On 15th November, 1894, Varney Parkes, Esquire, resigned his seat on the Committee, and on 20th November, 1894, Thomas Thomson Ewing, Esquire, was elected Chairman.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Removal of Pymont and Glebe Island Bridges (second reference).	27 Sept., 1894	3 Oct., 1894	21 Nov., 1894	The Committee recommended that the Pymont Bridge be replaced by a timber bridge, with steel span, to cost £82,500; the Glebe Island Bridge, they decided, did not at present require renewal.	Legislative Assembly—8 May, 1895—Motion in Committee to bring in a Bill.
Railway from Jerilderie to Berri-gan.	18 Dec., ,,	19 Dec., ,,	8 Jan., 1895	22 Jan., 1895	28 Feb., 1895	The construction of this railway was recommended, with the condition that the estimated cost, £2,000 per mile, should include goods and grain sheds, engineering charges, and all contingencies.	Passed.	Legislative Assembly—7 May, 1895—Bill read third time. Legislative Council—12 June, 1895—Bill read third time; 25 June, 1895—Assent reported.
Railway from Parkes to Condobolin.	6 Mar., 1895	7 Mar., 1895	19 Mar., ,,	3 April, ,,	21 May, ,,	In this inquiry the Committee, while considering it expedient the railway should be constructed, resolved that the cost should not exceed £2,100 per mile, including the cost of land resumption.	,,	Legislative Assembly—27 June, 1895—Bill read third time. Legislative Council—3 July, 1895—Bill read third time; 14 August, 1895—Assent reported.
Railway from Temora to Wyalong (second reference).	7 ,, ,,	17 May ,,	5 June, ,,	19 June, ,,	27 June, ,,	The Committee negatived this proposed work, being of opinion that at the present time there is no justification for the construction of this railway, and that the prospects of Wyalong's future are not such as to lead them to conclude that the line should be built in anticipation of what may be the condition of the gold-field and the district some years hence.	Not dealt with.
Harbour Improvements at Newcastle.	14 ,, ,,	20 Mar. ,,	28 Mar., ,,	9 April, ,,	16 May, ,,	In this inquiry the Committee recommended a modification of the works proposed by the Department and an additional work, the cost of the works as recommended by the Committee being about the same as that of the works proposed by the Department.	Passed.	Legislative Assembly—17 September, 1895—Bill read third time. Legislative Council—6 November, 1895—Bill read third time; 13 November, 1895—Assent reported.
Tramway from Woolwich to the Field of Mars Common.	20 June, ,,	25 June ,,	Inquiry not-completed.	Withdrawn.	Motion to refer work to Sixth Committee negatived—11 December, 1895.

SIXTH COMMITTEE—FROM 11 DECEMBER, 1895 (STILL IN OFFICE.)

MEMBERS OF THE COMMITTEE.

LEGISLATIVE COUNCIL.

The Honorable FREDERICK THOMAS HUMPHERY, Vice-Chairman.
 *The Honorable JOHN DAVIES, C.M.G.
 The Honorable WILLIAM JOSEPH TRICKETT.

The Honorable JAMES HOSKINS.
 The Honorable CHARLES JAMES ROBERTS, C.M.G.
 *The Honorable DANIEL O'CONNOR.

LEGISLATIVE ASSEMBLY.

THOMAS THOMSON EWING, Esquire, Chairman.
 HENRY CLARKE, Esquire.
 CHARLES ALFRED LEE, Esquire.
 JOHN LIONEL FEGAN, Esquire.

* ANGUS CAMERON, Esquire.
 THOMAS HENRY HASSALL, Esquire.
 GEORGE BLACK, Esquire.
 FRANCIS AUGUSTUS WRIGHT, Esquire.

*FRANK FARNELL, Esquire.

* Since the appointment of the Committee vacancies were caused by the decease of the Honorable John Davies, C.M.G., and Angus Cameron, Esquire. These were subsequently filled by the appointment of the Honorable Daniel O'Connor, and Frank Farnell, Esquire.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Deviation at Locksley, Great Western Railway.	11 Dec., 1895	12 Dec., 1895	13 Dec., 1895	14 Dec., 1895	17 Dec., 1895	Recommended as proposed	Passed.	Legislative Assembly—17 December, 1895—Bill passed through all its stages. Legislative Council—18 December, 1895—Bill passed through all its stages.
Water Supply for the Town of Tamworth.	11 Dec., 1895	17 Dec., 1895	8 Jan., 1896	16 Jan., 1896	30 Jan., 1896	The Committee recommended that the proposed work should be carried out, with the proviso that the capacity of the storage reservoir be increased from 35,000,000 to 50,000,000 gallons.	Passed.	Legislative Assembly—27 October, 1896—Bill read third time. Legislative Council—4 November, 1896—Bill read third time; 11 November, 1896—Assent reported.
Electric Tramway from Circular Quay, Sydney, to the Redfern Railway Station; and also along Harris-street to the intersection of John-street.	11 Dec., 1895	18 Mar., 1896	8 May, 1896	Recommended as proposed	Passed.	Legislative Assembly—2 September, 1896—Bill read third time. Legislative Council—10 September, 1896—Bill read third time; 16 September, 1896—Assent reported.

SIXTH COMMITTEE--continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
10—E* Erection of Buildings at Rookwood for Infirm and Destitute Persons.	11 Dec., 1895	21 Jan., 1896	13 Mar., 1896	In this case the Committee deemed it inexpedient that the proposed buildings should be erected, but they recommended that the inmates of the Asylums in Macquarie, George, and Harris Streets, Parramatta, be removed as speedily as possible, and that the healthy destitute be housed at Rookwood and Liverpool; and further that suitable accommodation be provided near Campbelltown on available Crown lands for the chronic and acute sick.	Not dealt with.
Additions to the Treasury Building.	18 ,, ,,	9 ,, ,,	17 July, ,,	Recommended as proposed	Passed.	Legislative Assembly—2 September, 1896—Bill read third time. Legislative Council—16 September, 1896—Bill read third time; 22 September, 1896—Assent reported.
Construction of Locks and Weirs on the River Darling.	19 ,, ,,	12 May, ,,	15 June, 1896	7 July, 1896	31 ,, ,,	Negatived	Not dealt with.
Railway from Tamworth to Manila.	11. ,, ,,	20 Feb., ,,	17 Mar., ,,	31 Mar., ,, 19 June, ,,	1 Oct., ,,	Passed.	Legislative Assembly—4 November, 1896—Bill read third time. Legislative Council—11 November, 1896—Bill read third time; 13 November, 1896—Assent reported.
Railway from Nevertire to Warren.	11 ,, ,,	21 April, ,,	6 May, ,,	14 May, ,,	20 May, ,,	Recommended as proposed	,,	Legislative Assembly—13 August, 1896—Bill read third time. Legislative Council—27 August, 1896—Bill read third time; 9 September, 1896—Assent reported.
Railway from Berrigan to Finley.	28 May, 1896	5 June, ,,	14 July, ,,	28 July, ,,	19 Aug., ,,	The Committee recommended that this work should be carried out, with the proviso that the cost should not exceed £2,000 per mile.	,,	Legislative Assembly—27 October, 1896—Bill read third time. Legislative Council—4 November, 1896—Bill read third time; 11 November, 1896—Assent reported.
Improvement of Cook's River..	28 ,, ,,	16 ,, ,,	24 July, ,,	As recommended by the Committee the construction of the proposed works would involve an expenditure of £15,000, a reduction on the Departmental estimate of £25,000, and which, in their opinion, would meet the requirements of the case.	Not dealt with.

Supplementary Report.

SIXTH COMMITTEE—*continued.*

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Railway from Moree to Inverell	26 Aug., 1896	1 Sept., 1896	29 Sept., 1896	15 Oct., 1896	21 April, 1897	The Committee resolved that it was expedient this railway should be carried out.	Passed.	Legislative Assembly—11 August, 1897—Bill read third time. Legislative Council—21 October, 1897—Bill read third time; 27 October, 1897—Assent reported.
Construction of a Deep-water Harbour at Port Kembla.	20 Oct., ,,	28 Oct., ,,	13 Jan., 1897	25 Jan., 1897	10 Feb., ,,	The Committee were of opinion that the proposed harbour would be rendered sufficiently secure to meet present requirements if the eastern breakwater only were carried out, and the estimated cost reduced by £240,000.	Not dealt with	Legislative Assembly—2 December, 1897—Bill read third time. Legislative Council—8 December, 1897—Second reading moved; Debate adjourned.
Railway from Condobolin to Broken Hill.	1 July, ,,	5 Aug., ,,	19 Aug., 1896	15 Oct., 1896	10 Dec., 1896	The Committee, while having regard to the various aspects of this proposed work, and considering also that the annual loss on the working of the railway would amount to £60,000, were of opinion that it should not, at present, be proceeded with.	„
Sewerage Works for Parramatta (third reference).	10 Nov., ,,	11 Feb., 1897	13 April, 1897	This work was passed by the Committee with the provision that the cost should not exceed the Departmental estimate, and that the carrying out of the work should be subject to a guarantee (by the Municipal Council of Parramatta) of the annual payment required to cover maintenance and interest and redemption of the principal outlay.	„
New Houses of Parliament for the Colony.	„	14 April, ,,	6 Dec., ,,	The Committee recommended the adoption of the scheme submitted by the Government Architect, providing for alterations to the present Parliamentary Buildings, at a cost not exceeding £15,000.	„
Duplicate Main from Prospect to Potts' Hill.	11 Nov., ,,	8 June, ,,	The Committee recommended the amended scheme submitted by the Engineer-in-Chief for Public Works, by which the sides of the canal between Prospect and the Pipe Head Basin would be raised, the canal strengthened, and the 6-foot pipeline between the Basin and Potts' Hill Reservoir duplicated.	Passed.	Legislative Assembly—1 December, 1897—Bill read third time. Legislative Council—7 December, 1897—Bill read third time.

SIXTH COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
New Bridge at Glebe Island ...	9 June, 1897	16 June, 1897	15 Sept., 1897	The Committee recommended that there be substituted for the existing structure a stone causeway with a central steel swing-span. Recommended as proposed.	Passed.	Legislative Assembly—2 December, 1897—Bill read third time. Legislative Council—9 December, 1897—Bill read third time.
Railway from Redfern to St. James' Road.	30 ,, ,,	13 July, ,,	25 Aug., ,,	Not dealt with
Railway from Condobolin to Euabalong.	5 Aug., ,,	31 Aug., ,,	17 Sept., 1897	26 Oct., 1897	7 Dec., ,,	The Committee negated this proposed work.	,,
Railway from Narrabri to Pilliga.	5 ,, ,,	19 Oct., ,,	22 April, 1898	19 May, 1898
Railway from Byrock to Brewarrina.	5 ,, ,,	1 ,, ,,	11 Feb., ,,	5 April, ,,
Railway from The Rock to Green's Gunyah.	5 ,, ,,	16 Sept., ,,	7 Oct., ,,	26 Oct., 1897	25 Nov., 1897	Recommended as proposed.	Not dealt with
Railway from Coolamon to Ariaah.	5 ,, ,,	23 ,, ,,	7 ,, ,,	26 ,, ,,	18 ,, ,,	The Committee negated this proposed work.	,,
Railway from Warren to Coonamble.	9 Dec., ,,	14 Dec., ,,	14 Mar., ,,	21 April, 1898	29 April, 1898	The Committee negated the proposal for a railway from Warren to Coonamble, but recommended that a survey be made of a route from Dubbo to Coonamble. Recommended as proposed.	,,
Railway from Koorawatha to Grenfell.	9 ,, ,,	20 Dec., 1897	11 Feb., ,,	10 Mar., ,,	1 April, 1898	,,
Railway from Woolabra to Col-larendabri.	9 ,, ,,	9 Mar., 1898	22 April, ,,	19 May, ,,
Railway from Maitland to Taree.	9 ,, ,,	22 Feb., ,,	*14 June, ,,
Railway from the Terminus of the Rosehill Railway to Dural.	9 ,, ,,	5 Jan., ,,	13 April, 1898	The Committee negated this proposed work.	Not dealt with
Harbour Works at Tweed River.	9 ,, ,,	15 Mar., ,,	22 Mar., 1898	2 April, 1898	26 April, 1898	Recommended as proposed.	,,
Harbour Works at Bellinger River.	9 ,, ,,	30 ,, ,,	12 May, ,,	7 June, ,,
Harbour Works at Nambucca River.	9 ,, ,,	14 April, ,,	12 ,, ,,	7 ,, ,,
Harbour Works at Macleay River.	9 ,, ,,	8 Feb., ,,	12 ,, ,,	7 ,, ,,
Harbour Works at Hastings River.	9 ,, ,,	27 April, ,,	*14 June, ,,
Harbour Works at Manning River.	9 ,, ,,	22 Mar., ,,	*14 ,, ,,
Weirs on the River Darling between Bourke and Wilcannia.	9 ,, ,,

* In this instance, the main Committee visited the district, but subsequently resolved themselves into a Sectional Committee.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF PROCEEDINGS.

TUESDAY, 27 APRIL, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.	
The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of erecting New Houses of Parliament for the Colony.

Frederick William Webb, C.M.G., Clerk of the Legislative Assembly, was sworn, and examined.

Francis Walsh, Parliamentary Librarian, was sworn, and further examined.

The Committee adjourned at twenty minutes to 4, until 2 o'clock p.m. on Wednesday, the following day.

WEDNESDAY, 28 APRIL, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.	
The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Tuesday, 1st June.

TUESDAY, 1 JUNE, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Henry Clarke, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from Mr. J. M. Smail, Engineer, Metropolitan Board of Water Supply and Sewerage, with reference to the pressure of water available in connection with any outbreak of fire at Parliament House, and to the water supply at the Lands and Survey Office.

The correspondence was received.

The Committee further considered the expediency of constructing a Duplicate Main from Prospect to Potts' Hill, in connection with the Sydney Water Supply.

William Douglas Bear, Superintendent, Metropolitan Fire Brigades, was sworn, and examined.

Mr. Trickett gave notice that he would move, at the next meeting of the Committee:—"That the Committee proceed to consider the evidence on the proposed construction of a Duplicate Main from Prospect to Potts' Hill, with a view to reporting on the subject to the Legislative Assembly."

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Wednesday, the following day.

WEDNESDAY, 2 JUNE, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., Chairman.	
The Hon. Frederick Thomas Humphery,	Henry Clarke, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Frank Farnell, Esq.	

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letter from Mr. W. D. Bear, Superintendent, Metropolitan Fire Brigades, with reference to appliances in asylums and warehouses for extinguishing fire.

The correspondence was received.

The Chairman reported that the Honorable the Speaker had made a request for a copy of the evidence given by Mr. W. D. Bear, in the Committee's inquiry respecting the proposed new Houses of Parliament for the Colony.

Mr. Wright moved,—“That a copy of such of the evidence as refers to the safety of the Parliamentary Buildings from fire be supplied as requested.”

The motion was seconded by Mr. Humphery, and passed.

The Committee further considered the expediency of erecting new Houses of Parliament for the Colony.

Clarence Backhouse, Architect, was sworn, and further examined.

Mr. Trickett's notice of motion for the consideration of the evidence in the Committee's inquiry relating to the proposed Duplicate Main from Prospect to Potts' Hill, in connection with the Sydney Water Supply, was postponed.

The Committee adjourned at a quarter to 4, until 2 o'clock p.m. on Thursday, the following day.

THURSDAY, 3 JUNE, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., Chairman.	
The Hon. Frederick Thomas Humphery,	Henry Clarke, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Frank Farnell, Esq.	

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a Duplicate Main from Prospect to Potts' Hill, in connection with the Sydney Water Supply.

Henry Richard Carleton, Principal Assistant Engineer, Harbours and Rivers Branch, Department of Public Works, was sworn, and examined.

Mr. Trickett moved,—“That the Committee proceed to consider the evidence on the proposed Duplicate Main from Prospect to Potts' Hill, in connection with the Sydney Water Supply, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Wright, and passed.

Mr. Trickett moved,—“That, in the opinion of the Committee, it is not expedient the proposed Duplicate Main from Prospect to Potts' Hill, referred to the Committee by the Legislative Assembly, be carried out, but they recommend that the amended scheme submitted by the Engineer-in-Chief for Public Works, by which the sides of the canal between Prospect and the Pipe-head Basin shall be raised, the canal strengthened, and the 6-foot pipe-line between the Basin and Potts' Hill reservoir duplicated, be adopted, at a cost of £109,317.”

Mr. Hassall seconded the motion.

The debate was adjourned.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Friday, the following day.

FRIDAY, 4 JUNE, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., Chairman.	
The Hon. Frederick Thomas Humphery,	Henry Clarke, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Frank Farnell, Esq.	

The minutes of the previous meeting were read, and confirmed.

The Secretary laid before the Committee diagrams showing increase in pumped water, 1888-1896, forwarded by Mr. J. M. Smail, in relation to his evidence in the Committee's inquiry, respecting the proposed Duplicate Main from Prospect to Potts' Hill, in connection with the Sydney Water Supply. The document was received.

The Committee further considered the expediency of constructing a Duplicate Main from Prospect to Potts' Hill, in connection with the Sydney Water Supply.

The adjourned debate upon Mr. Trickett's motion—"That, in the opinion of the Committee, it is not expedient the proposed Duplicate Main from Prospect to Potts' Hill, referred to the Committee by the Legislative Assembly, be carried out; but they recommend that the amended scheme submitted by the Engineer-in-Chief for Public Works, by which the sides of the canal between Prospect and the Pipe-head Basin shall be raised, the canal strengthened, and the 6-foot pipe-line between the Basin and Potts' Hill reservoir duplicated, be adopted, at a cost of £109,317"—was resumed.

The motion was passed.

The Committee proceeded to consider their Report to the Legislative Assembly on the proposed Duplicate Main from Prospect to Potts' Hill.

Clauses 1 and 2 were passed, and the further consideration of the Report was adjourned.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Tuesday, 8th June.

TUESDAY, 8 JUNE, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee proceeded to consider the expediency of constructing a New Bridge at Glebe Island, to replace the existing structure.

Robert R. P. Hickson, Under Secretary for Public Works, and Ernest Macartney de Burgh, M.I.C.E., Assistant Engineer for Bridges, Department of Public Works, were sworn, and examined.

The Committee adjourned at five minutes past 4, until 2 o'clock p.m. on Thursday, the following day.

THURSDAY, 17 JUNE, 1897.

The Committee met at Prince's Stairs, Circular Quay, at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. Charles James Roberts, C.M.G.,	John Lionel Fegan, Esq.,
The Hon. William Joseph Trickett,	Thomas Henry Hassall, Esq.,
The Hon. Daniel O'Connor,	George Black, Esq.,
Henry Clarke, Esq.,	Francis Augustus Wright, Esq.,
	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

Accompanied by Mr. E. M. de Burgh, Assistant Engineer for Bridges, and Mr. P. Allan, Draftsman-in-Charge, Roads and Bridges Branch, Department of Public Works, the Committee proceeded by steam launch on a visit of inspection to Glebe Island, where, in connection with their inquiry respecting the expediency of constructing a New Bridge at Glebe Island, to replace the existing structure, they examined the condition of the present bridge, and witnessed the kind of traffic passing over the structure; in this manner, as far as practicable, ascertaining the defects in the bridge. They visited also Blackwattle, Roselle, and Johnstone's Bays, and by observation and the aid of charts, showing soundings, acquainted themselves with the facilities offered in that part of the harbour for a shipping trade, connected with which a suitably-constructed bridge between Pyrmont and Glebe Island is regarded as necessary.

FRIDAY, 18 JUNE, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,

Mr. Lee's notice of motion was postponed.

The Committee adjourned at ten minutes to 4, until 2 o'clock p.m. on Tuesday, 24th August.

TUESDAY, 24 AUGUST, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letter from Mr. Norman Selfe, with reference to his evidence before the Committee in their inquiry respecting the proposed extension of the Railway from Redfern to St. James'-road.

Newspaper extract describing a scheme for city railway extension by A. Geoffrey Eager, forwarded by him to the Department of Public Works, and referred by that Department to the Committee. The correspondence was received.

The Committee further considered the expediency of extending the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road.

John Cash Neild, Esq., M.P., and Stephen Edward Perdriau, Surveyor, Department of Lands, were sworn, and further examined.

Mr. Lee moved,—“That the Committee proceed to consider the evidence on the proposed extension of the railway system from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Humphery, and passed.

Mr. Lee moved,—“That, in the opinion of the Committee, it is expedient the proposed extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road, as referred to the Committee by the Legislative Assembly, be carried out.”

Mr. Humphery seconded the motion.

Mr. Black moved,—“That the motion be amended by the omission of all the words after the word ‘expedient’ with a view to the insertion in their place of the following words :—

- ‘(a) for the safety of the public and railway officials that the Redfern station should be altered by removing the railway workshops and carriage-sheds to some more convenient position, by a deviation of the Darling Harbour traffic, by the resumption of land on the western side of the line between Redfern and Eveleigh, or by such other means as may afterward suggest themselves ;
- ‘(b) for the convenience of the public an extension to the city should be made by means of viaduct and tunnels to some site which would permit, when necessary, of a connection with the Milson's Point line, providing in this way an entrance to the City for the northern traffic, and a loop-line to Redfern.’”

Mr. O'Connor seconded the amendment.

The debate was adjourned.

The Committee adjourned at five minutes past 4, until 12 o'clock noon on Wednesday, the following day.

WEDNESDAY, 25 AUGUST, 1897.

The Committee met at 12 o'clock noon.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letter from William Arthur, Balmain, offering to send to the Committee a rough sketch plan of a railway extension into the City.

The correspondence was received.

The Committee further considered the expediency of extending the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road.

The adjourned debate on Mr. Lee's motion,—“That, in the opinion of the Committee, it is expedient the proposed extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road, as referred to the Committee by the Legislative Assembly, be carried out,”—

Upon

Upon which Mr. Black had moved,—“That the motion be amended by the omission of all the words after the word ‘expedient’ with a view to the insertion in their place of the following words:—

- ‘(a) for the safety of the public and railway officials that the Redfern Station should be altered by removing the railway workshops and carriage sheds to some more convenient position, by a deviation of the Darling Harbour traffic, by the resumption of land on the western side of the line between Redfern and Eveleigh, or by such other means as may afterwards suggest themselves ;
- ‘(b) for the convenience of the public an extension to the city should be made by means of viaduct and tunnels to some site which would permit, when necessary, of a connection with the Milson’s Point line, providing, in this way, an entrance to the city for the northern traffic and a loop line to Redfern’”—was resumed.

The amendment was negatived on the following division upon the question,—“That the words proposed to be omitted stand part of the question” :—

Ayes, 11.	Noes, 2.
Mr. Ewing, Mr. Humphery, Mr. Hoskins, Mr. Roberts, Mr. Trickett, Mr. Clarke, Mr. Lee, Mr. Fegan, Mr. Hassall, Mr. Wright, Mr. Farnell.	Mr. O’Connor, Mr. Black.

The motion was passed in the following division:—

Ayes, 11.	Noes, 2.
Mr. Ewing, Mr. Humphery, Mr. Hoskins, Mr. Roberts, Mr. Trickett, Mr. Clarke, Mr. Lee, Mr. Fegan, Mr. Hassall, Mr. Wright, Mr. Farnell.	Mr. O’Connor, Mr. Black.

The Committee then proceeded to consider their Report to the Legislative Assembly on the proposed Extension of the Railway from Redfern to St. James’-road.

The Report was adopted on the following division:—

Ayes, 9.	Noes, 1.
Mr. Ewing, Mr. Humphery, Mr. Hoskins, Mr. Roberts, Mr. Clarke, Mr. Lee, Mr. Fegan, Mr. Hassall, Mr. Wright.	Mr. Black.

The Chairman was authorised to sign the Report for presentation to the Legislative Assembly. The Committee adjourned at a quarter-past 4, until 2 o’clock p.m. on Thursday, the following day.

THURSDAY, 26 AUGUST, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O’Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a New Bridge at Glebe Island, to replace the existing structure.

William Henry Wilks, Esq., M.P., and Sydney James Law, Esq., M.P., were sworn, and examined. Stephen Edward Perdriau, Surveyor, Department of Lands, was sworn, and further examined.

Mr. Black gave notice that he would move at the next meeting of the Committee,—“That the Committee proceed to consider the evidence on the proposed construction of a New Bridge at Glebe Island to replace the existing structure, with a view to reporting on the subject to the Legislative Assembly.”

The Committee adjourned at 4 o’clock, until 2 o’clock p.m. on Friday, the following day.

The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a New Bridge at Glebe Island, to replace the existing structure.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, was sworn, and further examined.

Charles Ulick Carruthers, L.R.C.S., Irel., and John Musson, Civil Engineer, were sworn, and examined.

Mr. Black moved,—“That the Committee proceed to consider the evidence on the proposed construction of a New Bridge at Glebe Island, to replace the existing structure, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Wright, and passed.

Mr. Black gave notice that he would move at the next meeting of the Committee,—“That, in the opinion of the Committee, it is not expedient that a new bridge should be constructed at Glebe Island, to replace the existing structure, as referred to the Committee by the Legislative Assembly; but they recommend that there be substituted for the present bridge a stone causeway, having a steel swing-span in the centre, as proposed by the Engineer-in-Chief for Public Works.”

The Committee adjourned at 1 o'clock, until 2 o'clock p.m. on Friday, the following day.

FRIDAY, 10 SEPTEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.	
The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the proposed Railway from Condobolin to Euabalong.

William Henry Hall, Sub-editor of Statistical Publications, Government Statistician's Office, was sworn, and examined.

The Committee further considered the expediency of constructing a New Bridge at Glebe Island, to replace the existing structure.

Mr. Black moved,—“That, in the opinion of the Committee, it is not expedient that a new bridge should be constructed at Glebe Island, to replace the existing structure, as referred to the Committee by the Legislative Assembly; but they recommend that there be substituted for the present bridge a stone causeway, having a steel swing-span in the centre, as proposed by the Engineer-in-Chief for Public Works.”

Mr. Farnell seconded the motion.

Mr. Wright moved,—“That the motion be amended by the omission of the word ‘not,’ and of all the words after the word ‘Assembly.’”

The Amendment was negatived, and the motion was then passed.

The Committee adjourned at half-past 3, until 2 o'clock p.m. on Tuesday, 14th September.

TUESDAY, 14 SEPTEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.	
The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,

WEDNESDAY,

WEDNESDAY, 17 NOVEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the proposed New Houses of Parliament for the Colony.

Walter Liberty Vernon, Government Architect, was sworn, and further examined.

The Committee further considered the proposed Railway from Coolamon to Ariaah.

Mr. Black moved,—“That the Committee proceed to consider the evidence on the proposed Railway from Coolamon to Ariaah, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Humphery, and passed.

Mr. Black moved,—“That, in the opinion of the Committee, it is not expedient the proposed Railway from Coolamon to Ariaah, as referred to the Committee by the Legislative Assembly, be carried out; but they suggest that a line be surveyed from Temora towards Gunbar.”

Mr. C. J. Roberts seconded the motion.

The debate was adjourned.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Thursday, the following day.

THURSDAY, 18 NOVEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The adjourned debate upon Mr. Black's motion,—“That, in the opinion of the Committee, it is not expedient the proposed Railway from Coolamon to Ariaah, as referred to the Committee by the Legislative Assembly, be carried out; but they suggest that a line be surveyed from Temora towards Gunbar”—was resumed.

With concurrence, the motion was amended by the omission of all the words after the word “out,” and it was then passed.

The Committee proceeded to consider their Report to the Legislative Assembly upon the proposed Railway from Coolamon to Ariaah.

The Report was adopted, and the Chairman was authorised to sign it for presentation to the Legislative Assembly.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Friday, the following day.

FRIDAY, 19 NOVEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the proposed Railway from The Rock to Green's Gunyah.

Mr. C. J. Roberts moved,—“That the Committee proceed to consider the evidence on the proposed Railway from The Rock to Green's Gunyah, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Black, and passed.

Mr. C. J. Roberts moved,—“That, in the opinion of the Committee, it is expedient the proposed Railway from The Rock to Green's Gunyah, as referred to the Committee by the Legislative Assembly, be carried out.”

The debate was adjourned.

The Committee adjourned at ten minutes to 4, until 2 o'clock p.m. on Tuesday, 23rd November.

TUESDAY, 23 NOVEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.	
The Hon. Frederick Thomas Humphery,	Henry Clarke, Esq.,
The Hon. James Hoskins,	Charles Alfred Lee, Esq.,
The Hon. Charles James Roberts, C.M.G.,	John Lionel Fegan, Esq.,
The Hon. William Joseph Trickett,	Thomas Henry Hassall, Esq.,
The Hon. Daniel O'Connor,	George Black, Esq.,
Frank Farnell, Esq.	

The minutes of the previous meeting were read, and confirmed.

The following account was passed for payment:—

J. H. Shennen—Reading and correcting printer's proofs of evidence taken before the Committee	£4 10 0
--	---------

The adjourned debate upon Mr. C. J. Roberts' motion,—“That, in the opinion of the Committee, it is expedient the proposed Railway from The Rock to Green's Gonyah, as referred to the Committee by the Legislative Assembly, be carried out”—was resumed.

Mr. Black seconded the motion.

Mr. Lee moved,—“That the motion be amended by the insertion of the word ‘not’ before the word ‘expedient.’”

The debate was further adjourned.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Wednesday, the following day.

WEDNESDAY, 24 NOVEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The following account was passed for payment:—

Fredk. Pinkstone (<i>Cootamundra Herald</i>)—Advertising	£0 13 0
--	---------

The Committee further considered the proposed Railway from The Rock to Green's Gonyah.

The adjourned debate upon Mr. C. J. Roberts' motion,—“That, in the opinion of the Committee, it is expedient the proposed Railway from The Rock to Green's Gonyah, as referred to the Committee by the Legislative Assembly, be carried out,”—upon which Mr. Lee had moved, “That the motion be amended by the insertion of the word ‘not’ before the word ‘expedient’”—was resumed.

The Chairman ruled the amendment to be out of order, on the grounds that its object could be attained by voting against the motion, and that any further amendment could be put before the Committee subsequently as a direct motion.

The motion was then passed on the following division:—

Ayes, 8.	Noes, 5.
Mr. Ewing,	Mr. Humphery,
Mr. Roberts,	Mr. Hoskins,
Mr. O'Connor,	Mr. Trickett,
Mr. Clarke,	Mr. Lee,
Mr. Hassall,	Mr. Fegan.
Mr. Black,	
Mr. Wright,	
Mr. Farnell.	

Mr. Lee moved,—“That it be a condition, if the railway be constructed, that the landowners guarantee the amount per acre recommended by the Railway Commissioners.”

Mr. Wright seconded the motion.

The debate was adjourned.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Thursday, the following day.

THURSDAY, 25 NOVEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the proposed Railway from The Rock to Green's Gonyah.

The

The adjourned debate upon Mr. Lee's motion,—“That it be a condition that, prior to the railway being constructed, the landowners guarantee the amount per acre recommended by the Railway Commissioners,”—was resumed.

The motion was negatived on the following division:—

Ayes, 5.	Noes, 8.
Mr. Humphery,	Mr. Ewing,
Mr. Hoskins,	Mr. Roberts,
Mr. Trickett,	Mr. O'Connor,
Mr. Lee,	Mr. Clarke,
Mr. Wright.	Mr. Fegan,
	Mr. Hassall,
	Mr. Black,
	Mr. Farnell.

The Committee proceeded to consider their Report to the Legislative Assembly on the proposed Railway from The Rock to Green's Gunyah.

The preamble and clauses 1 to 8 were passed.

Clause 9.—The land in the district.

Mr. Lee moved,—“That the clause be amended by the omission of the words: ‘As the construction of the railway must enhance the value of land in the district, an increase in the rentals charged by the State cannot be regarded as unjustifiable.’”

The amendment was negatived on the following division:—

Ayes, 3.	Noes, 7.
Mr. Trickett,	Mr. Ewing,
Mr. Lee,	Mr. Humphery,
Mr. Fegan.	Mr. Hoskins,
	Mr. Roberts,
	Mr. O'Connor,
	Mr. Clarke,
	Mr. Hassall.

The clause was then passed.

Clauses 10 and 11 were passed.

Clause 12.—The Committee's recommendation.

Mr. Trickett moved,—“That the clause be amended by the omission of the words: ‘(3) the belief that the traffic on the line will from the first be satisfactory.’”

The amendment was passed on the following division:—

Ayes, 6.	Noes, 5.
Mr. Humphery,	Mr. Ewing,
Mr. Hoskins,	Mr. Roberts,
Mr. Trickett,	Mr. O'Connor,
Mr. Lee,	Mr. Clarke,
Mr. Fegan,	Mr. Black.
Mr. Hassall.	

The clause was then passed.

The Report was adopted on the following division:—

Ayes, 6.	Noes, 5.
Mr. Ewing,	Mr. Humphery,
Mr. Roberts,	Mr. Hoskins,
Mr. O'Connor,	Mr. Trickett,
Mr. Clarke,	Mr. Lee,
Mr. Hassall,	Mr. Fegan.
Mr. Black.	

The Chairman was authorised to sign the Report for presentation to the Legislative Assembly. The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Friday, the following day.

FRIDAY, 26 NOVEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the proposed New Houses of Parliament for the Colony.

Walter Liberty Vernon, Government Architect, was sworn, and further examined.

Mr. Roberts gave notice that he would move at the next meeting of the Committee,—“That the Committee proceed to consider the evidence on the proposed New Houses of Parliament for the Colony, with a view to reporting on the subject to the Legislative Assembly.”

Mr. Roberts gave notice that he would move at the next meeting of the Committee,—“That, in the opinion of the Committee, it is not expedient the proposed New Houses of Parliament for the Colony, estimated to cost £533,484, as referred to the Committee by the Legislative Assembly, be carried out; but the Committee recommend the adoption of the amended design submitted by the Government Architect, at a cost, without a dome, not exceeding £257,000.”

Mr.

Mr. Wright gave notice that he would move at the next meeting of the Committee,—“That, in the opinion of the Committee, it is not expedient the proposed New Houses of Parliament for the Colony, as referred to the Committee by the Legislative Assembly, be carried out; but the Committee recommend the adoption of the scheme submitted by the Government Architect, providing for alterations to the present Parliamentary Buildings at a cost not exceeding £15,000.”

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Tuesday, 30th November.

TUESDAY, 30 NOVEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery, The Hon. James Hoskins, The Hon. Charles James Roberts, C.M.G., The Hon. William Joseph Trickett, The Hon. Daniel O'Connor, Henry Clarke, Esq.,	Charles Alfred Lee, Esq., John Lionel Fegan, Esq., Thomas Henry Hassall, Esq., George Black, Esq., Francis Augustus Wright, Esq., Frank Farnell, Esq.
--	--

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the proposed New Houses of Parliament for the Colony.

Walter Liberty Vernon, Government Architect, was sworn, and further examined.

The notices of motions by Mr. C. J. Roberts and Mr. Wright, with reference to the proposed New Houses of Parliament for the Colony, were postponed.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Wednesday, the following day.

WEDNESDAY, 1 DECEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery, The Hon. James Hoskins, The Hon. Charles James Roberts, C.M.G., The Hon. William Joseph Trickett, The Hon. Daniel O'Connor, Henry Clarke, Esq.,	Charles Alfred Lee, Esq., John Lionel Fegan, Esq., Thomas Henry Hassall, Esq., George Black, Esq., Francis Augustus Wright, Esq., Frank Farnell, Esq.
--	--

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the proposed New Houses of Parliament for the Colony.

Mr. C. J. Roberts moved,—“That the Committee proceed to consider the evidence on the proposed New Houses of Parliament for the Colony, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Farnell, and passed.

Mr. C. J. Roberts moved,—“That in the opinion of the Committee, it is not expedient the proposed New Houses of Parliament for the Colony, estimated to cost £533,484, as referred to the Committee by the Legislative Assembly, be carried out; but the Committee recommend the adoption of the amended design submitted by the Government Architect, at a cost, without a dome, not exceeding £257,000.”

Mr. O'Connor seconded the motion.

The debate was adjourned.

Mr. Hassall gave notice that, in the event of Mr. C. J. Roberts' motion for the erection of New Houses of Parliament, at a cost not exceeding £257,000, being carried, he would move,—“That, after hearing the evidence of a number of the principal architects of this city on the original design submitted, it is expedient to invite competitive designs on the basis of the amended scheme submitted by the Colonial Architect.”

Mr. Hassall gave notice that he would move at the next meeting of the Committee:—

“That the Committee proceed to consider the evidence on the proposed Railway from Condobolin to Euabalong, with a view to reporting on the subject to the Legislative Assembly.”

“That, in the opinion of the Committee, it is not expedient the proposed Railway from Condobolin to Euabalong, as referred to the Committee by the Legislative Assembly, be carried out; but they recommend that a permanent survey be made of the explored route for a line of Railway from Koorawatha to Hillston, with a view to its consideration in conjunction with existing surveys.”

The Committee adjourned at half-past 3, until 2 o'clock p.m. on Thursday, the following day.

THURSDAY,

THURSDAY, 2 DECEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.

<p>The Hon. Frederick Thomas Humphery, The Hon. James Hoskins, The Hon. Charles James Roberts, C.M.G., The Hon. William Joseph Trickett, The Hon. ---	---

Mr.

Mr. Hassall moved,—“That the Committee proceed to consider the evidence on the proposed Railway from Condobolin to Euabalong, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Farnell, and passed.

Mr. Hassall moved,—“That, in the opinion of the Committee, it is not expedient the proposed Railway from Condobolin to Euabalong, as referred to the Committee by the Legislative Assembly, be carried out; but they recommend that a permanent survey be made of the explored route for a line of Railway from Koorawatha to Hillston, with a view to its consideration in conjunction with existing surveys.”

Mr. Farnell seconded the motion.

The motion having, with concurrence, been amended so that it should read,—“That, in the opinion of the Committee, it is not expedient the proposed Railway from Condobolin to Euabalong, as referred to the Committee by the Legislative Assembly, be carried out; but they recommend, in connection with any proposal for a railway to Hillston, that a survey be made for a line from Koorawatha, with a view to its consideration in conjunction with existing surveys,”—was then passed.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Monday, 6th December.

MONDAY, 6 DECEMBER, 1897.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., Chairman.

The Hon. Frederick Thomas Humphery,	Charles Alfred Lee, Esq.,
The Hon. James Hoskins,	John Lionel Fegan, Esq.,
The Hon. Charles James Roberts, C.M.G.,	Thomas Henry Hassall, Esq.,
The Hon. William Joseph Trickett,	George Black, Esq.,
The Hon. Daniel O'Connor,	Francis Augustus Wright, Esq.,
Henry Clarke, Esq.,	Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee proceeded to consider their Report to the Legislative Assembly on the proposed New Houses of Parliament for the Colony.

The preamble and clauses 1 to 11 were passed.

Clause 12.—Conclusions to be drawn from the inquiry.

Mr. Black moved,—“That the clause be amended by the omission of the words, ‘Few persons will be disposed to say that this is not excessive and unnecessary.’”

The amendment was passed on the following division, upon the question,—“That the words proposed to be omitted stand part of the clause” :—

Ayes, 3.	Noes, 7.
Mr. Hoskins,	Mr. Ewing,
Mr. Trickett,	Mr. Humphery,
Mr. Fegan.	Mr. Roberts,
	Mr. O'Connor,
	Mr. Hassall,
	Mr. Black,
	Mr. Wright.

The clause, as amended, was passed on the following division :—

Ayes, 8.	Noes, 3.
Mr. Ewing,	Mr. Roberts,
Mr. Humphery,	Mr. O'Connor,
Mr. Hoskins,	Mr. Fegan.
Mr. Trickett,	
Mr. Lee,	
Mr. Hassall,	
Mr. Black,	
Mr. Wright.	

Clause 13 was passed.

The Report was adopted on the following division :—

Ayes, 8.	Noes, 3.
Mr. Ewing,	Mr. Roberts,
Mr. Humphery,	Mr. O'Connor,
Mr. Hoskins,	Mr. Fegan.
Mr. Trickett,	
Mr. Lee,	
Mr. Hassall,	
Mr. Black,	
Mr. Wright.	

The Chairman was authorised to sign the Report for presentation to the Legislative Assembly.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Tuesday, the following day.

TUESDAY,

TUESDAY, 7 DECEMBER, 1897.

The Committee met at 2 p.m.

WEDNESDAY, 18 MAY, 1898.

The Sectional Committee met to finally deal with the matter referred to them.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., Chairman.
John Lionel Fegan, Esq., | Thomas Henry Hassall, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered and concluded their Report, which the Chairman was authorised to sign and present to the General Committee.

The Sectional Committee arrived at Sydney on Thursday, 19th May, at noon.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.**SECTIONAL COMMITTEE.****Harbour Works at Bellinger River.****MINUTES OF PROCEEDINGS.**

MINUTES of Proceedings of the Sectional Committee of the Parliamentary Standing Committee on Public Works appointed on Thursday, 12th May, 1898, to inspect, take evidence, and report with reference to the proposed Harbour Works at Bellinger River.

The Sectional Committee left Sydney by the North Coast Company's steamship "City of Grafton," at 9 p.m. on Tuesday, 17th May, and arrived at Grafton at 3:30 p.m. on Thursday, 19th May.

THURSDAY, 19 MAY, 1898.

The Sectional Committee met at the "Crown Hotel," Grafton, at 4 p.m.

MEMBERS PRESENT:—

The Hon. Charles James Roberts, C.M.G., | Charles Alfred Lee, Esq.,
Henry Clarke, Esq., | Frank Farnell, Esq.

On the motion of Mr. Clarke, seconded by Mr. Roberts, it was resolved "That Charles Alfred Lee, Esq., be the Chairman of the Sectional Committee."

FRIDAY, 20 MAY, 1898.

The Sectional Committee met at the "Crown Hotel," Grafton, at 10 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.
The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee, accompanied by Mr. Blomfield, Resident Engineer, left Grafton by the Clarence River Company's steamer "Woolwich," and proceeded to Yamba to inspect the harbour works in progress there for the improvement of the entrance to the river.

The Sectional Committee reached Yamba at 5 p.m.

SATURDAY, 21 MAY, 1898.

The Sectional Committee met at "Coyle's Hotel," Yamba, at 9 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.
The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee, accompanied by Mr. Blomfield, Resident Engineer, visited the southern breakwater at Yamba, and then proceeded by ballast train to Green Point, where they witnessed the quarrying and the loading into the trucks of the stone used in the construction of the training-bank at Goodwood Island, now in progress.

Leaving Green Point, the Sectional Committee inspected the southern training-bank, and saw the operation of transferring stone from the ballast-trucks to the barges upon which it is carried to the Goodwood Island bank. At 11.30 a.m. the Sectional Committee took the steamer to Grafton, and inspected *en route* the work at the Goodwood Island training-bank.

The Sectional Committee reached Grafton at 4.40 p.m.

MONDAY, 23 MAY, 1898.

The Sectional Committee met at the "Crown Hotel," Grafton, at 8 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.
The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee proceeded to South Grafton, and from there took special coach to Woolgoolga.

The Sectional Committee reached Woolgoolga at 5 p.m. They inspected the jetty and the appliances for loading and unloading timber there, and made inquiries as to the extent of the foreign, intercolonial, and coastal trade.

TUESDAY, 24 MAY, 1898.

The Sectional Committee met at the "Woolgoolga Hotel," Woolgoolga, at 9 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.
The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee proceeded by special coach to Coff's Harbour, where they arrived at noon. The Sectional Committee visited the jetty at Coff's Harbour, 2 miles from the township, and inspected the arrangements for transacting the inward and outward business of the port.

The Sectional Committee returned to the township at 5 p.m.

WEDNESDAY, 25 MAY, 1898.

The Sectional Committee met at the "Cricketers' Arms Hotel," Coff's Harbour, at 10 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.
The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee proceeded to consider the proposed Harbour Works at Bellinger River. The following witnesses were sworn, and examined:—James Gill, caretaker of the Government jetty at Coff's Harbour; James Marles, storekeeper, Coff's Harbour; William Crabb, mining manager of the Beacon Gold Mine, Bucca Creek; Eugene Frederick Rudder, farmer, Coramba; and Henry Boulwood, journalist, Fernmount.

The Sectional Committee adjourned at 1 p.m.

THURSDAY,

THURSDAY, 26 MAY, 1898.

The Sectional Committee met at the "Cricketers' Arms Hotel," Coff's Harbour, at 9 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee proceeded by special coach to Bellingen *via* Raleigh and Fernmount.

The Sectional Committee reached Bellingen at 3 p.m.

FRIDAY, 27 MAY, 1898.

The Sectional Committee met at the Court-house, Bellingen, at 10 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the proposed Harbour Works at Bellinger River.

The following witnesses were sworn, and examined:—John Thomas Greer, farmer, Bellinger River; David Anderson, farmer and maize-buyer, Bellingen; and Edward Raymond, wheelwright and coach-builder, Bellingen.

The Sectional Committee at 12:40 p.m. adjourned until 2:30 p.m., when Frederick Doepel, ship-builder and drogher-master, and local agent for the North Coast Steamship Company; James Edward Tyler, farmer and grazier, Guy Fawkes; Robert Taylor Thorburn, Nowra; and Frederick Thomas Matthews, storekeeper, Bellingen; were sworn, and examined.

The Sectional Committee adjourned at 5 minutes past 5 o'clock p.m.

SATURDAY, 28 MAY, 1898.

The Sectional Committee left Bellingen at 8:30 a.m. and proceeded to Fernmount.

The Sectional Committee met at "Black's Hotel," Fernmount, at 10 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the proposed Harbour Works at Bellinger River.

The following witnesses were sworn, and examined:—William Richard Spillett, farmer, South Arm, Bellinger River; Andrew Black, hotelkeeper, Fernmount; F. R. H. Baker, auctioneer, Fernmount; Robert Stuart M'Dougall, Fernmount; and John Pollock, cordial and aerated water manufacturer, Fernmount.

The Sectional Committee adjourned at 12:30 p.m. At 2 p.m. the Sectional Committee continued their journey to the Bellinger Heads, where they arrived at 3:30 p.m.

MONDAY, 30 MAY, 1898.

The Sectional Committee left Bellinger Heads at 9 a.m., and voyaged up the South Arm of the Bellinger as far as Picket Hill Creek, where they inspected the quarry from which the stone for the proposed Harbour Works is to be obtained. Returning, they proceeded up Back Creek to its junction with the North Arm, and thence down the North Arm to the Heads, viewing *en route* the site of the proposed training-walls, and inspecting the temporary bank now in progress.

The Sectional Committee met at "Barrett's Hotel," at 2:30 p.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G., | Henry Clarke, Esq.,
Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the proposed Harbour Works at Bellinger River.

The following witnesses were sworn, and examined:—David Houson, District Engineer; Walter Darwin Higgins, Inspector of Works, Bellinger Heads; Alfred Edwin Ellis, saw-mill proprietor and storekeeper, Bellinger Heads; and Thomas Key Ratcliffe, pilot and telephone master, Bellinger Heads.

Robert Stuart M'Dougall, Fernmount; and Andrew Black, hotel-keeper, Fernmount, were sworn, and further examined.

The Sectional Committee adjourned at 5:30 p.m.

THURSDAY,

THURSDAY, 2 JUNE, 1898.

The Sectional Committee left the Bellinger Heads at 9 a.m. on Tuesday, 31st May, and proceeded by way of Nambucca and Macksville to Clybucca, where they arrived on Thursday, 2nd June; at 1 p.m.

The Sectional Committee met at the "Traveller's Rest Hotel," Clybucca, at 2 p.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,		Henry Clarke, Esq.,
The Hon. William Joseph Trickett,		Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the proposed Harbour Works at Bellinger River. On the motion of Mr. Roberts, seconded by Mr. Clarke, it was resolved:—"That the construction of the proposed Harbour Works at Bellinger River, at a cost not exceeding £36,000, be recommended." The Sectional Committee adjourned at 3 p.m.

TUESDAY, 7 JUNE, 1898.

The Sectional Committee met at the "Victoria Hotel," Kempsey, at 10 p.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,		Henry Clarke, Esq.,
The Hon. William Joseph Trickett,		Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the proposed Harbour Works at Bellinger River.

The Chairman submitted a draft report, which was read.

On the motion of Mr. Roberts, seconded by Mr. Clarke, it was resolved:—"That the report be adopted."

The Sectional Committee adjourned at 10:30 p.m.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

Harbour Works at Nambucca River.

MINUTES OF PROCEEDINGS.

MINUTES of the Proceedings of the Sectional Committee of the Parliamentary Standing Committee on Public Works, appointed on Thursday, 12th May, 1898, to inspect, take evidence, and report with reference to the proposed Harbour Works at Nambucca River.

The Sectional Committee left Sydney by the North Coast Company's steamship "City of Grafton," at 9 p.m. on Tuesday, 17th May. The Sectional Committee arrived at Grafton on Thursday, 19th May, and proceeded by way of Woolgoolga, Coff's Harbour, and the Bellinger to the Nambucca Heads, where they opened their inquiry on Tuesday, 31st May. Mr. Trickett left Sydney by steamer at noon on Saturday, 28th May, and arrived at Jerseyville on Sunday at 1 p.m. On Monday he inspected the Harbour Works at the Macleay, and left by steamer for Nambucca at 11 a.m., arriving at 1 p.m. He then inspected the Harbour Works at the Nambucca, and then joined the other Members of the Sectional Committee in a further inspection on Tuesday.

TUESDAY, 31 MAY, 1898.

The Sectional Committee met at the "Victoria Hotel," Nambucca, at 2 p.m.

The Sectional Committee proceeded to consider the proposed Harbour Works at Nambucca River.

The following witnesses were sworn, and examined:—David Houison, District Engineer; John Eichmann, saw-mill proprietor and storekeeper, Nambucca; William John Whaites, pilot, Nambucca Heads; David Mitchell, dredge-master, Nambucca; and William Bragg, bee-farmer, Lower Nambucca.

The Sectional Committee adjourned at 5 p.m.

The

The Sectional Committee left Nambucca Heads at 8:30 a.m., and arrived at Macksville at 10:30 a.m.

The Sectional Committee met at the "Star Hotel," Macksville, at 2:30 p.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,		Henry Clarke, Esq.,
The Hon. William Joseph Trickett,		Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the proposed Harbour Works at Nambucca River.

The following witnesses were sworn, and examined:—Thomas Bolton, President, Macksville Progress Association; Edward Hitchins, auctioneer, Warrell Creek and Macksville; Angus M'Kay, storekeeper, Macksville; William Ezold, storekeeper, Macksville; Frederick Notley, storekeeper, Macksville; Robert Quayle, first-class constable, Macksville, and William Woods, Secretary, Macksville Progress Committee.

The Sectional Committee adjourned at 5:45 p.m.

THURSDAY, 2 JUNE, 1898.

The Sectional Committee left Macksville at 10 a.m., and arrived at Clybucca at 1 p.m.

The Sectional Committee met at the "Traveller's Rest Hotel," Clybucca, at 3 p.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,		Henry Clarke, Esq.,
The Hon. William Joseph Trickett,		Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the proposed Harbour Works at Nambucca River.

It was proposed by Mr. Clarke, seconded by Mr. Farnell,—“That the construction of the proposed Harbour Works at Nambucca River, at a cost not exceeding £72,500, be recommended.”

Upon which Mr. Trickett moved, as an amendment—“That all the words after ‘That’ be omitted, with a view to the insertion of the following words:—‘on the present evidence, and until the further opinion of the Engineer-in-Chief is obtained, it is advisable that the construction of the following works be recommended, viz. :—

Northern breakwater, at a cost not exceeding	£27,675
Northern wall extension, at a cost not exceeding	1,687
Warrell Creek diversion, „ „	7,245 ’ ’

The amendment was negatived upon the following division:—

Ayes, 4.		Noes, 1.
Mr. Lee,		Mr. Trickett.
Mr. Roberts,		
Mr. Clarke,		
Mr. Farnell.		

The motion was agreed to.

The Sectional Committee adjourned at 4 p.m.

TUESDAY, 7 JUNE, 1898.

The Sectional Committee met at the "Victoria Hotel," Kempsey, at 10:30 p.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,		Henry Clarke, Esq.,
The Hon. William Joseph Trickett,		Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the proposed Harbour Works at Nambucca River.

The Chairman submitted a draft report, which was read.

Upon the motion of Mr. Clarke, seconded by Mr. Farnell, it was resolved,—“That the report be adopted.”

The Sectional Committee adjourned at 11 p.m.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

Harbour Works at Macleay River.

MINUTES OF PROCEEDINGS

MINUTES of the Proceedings of the Sectional Committee of the Parliamentary Standing Committee on Public Works, appointed on Thursday, 12th May, 1898, to inspect, take evidence, and report with reference to the proposed Harbour Works at Macleay River.

The Sectional Committee left Sydney by the North Coast Company's steamship "City of Grafton," at 9 p.m., on Tuesday, 17th May. The Sectional Committee reached Grafton on Thursday, 19th May, and proceeded by way of Woolgoolga, Coff's Harbour, the Bellinger, and the Nambucca, inspecting and taking evidence *en route* with reference to the proposed Harbour Works on those rivers, to the Macleay, arriving at Kempsey at 1 p.m., on Friday, 3rd June. At Kempsey, they were met by Mr. David Houison, District Engineer, and they discussed with him the arrangements to be made for their inspection of the river and its entrance. They also had interviews with the Mayor of Kempsey, the District Surveyor, and the Local Crown Lands Agent regarding the evidence to be produced at the inquiry on Monday.

FRIDAY, 3 JUNE, 1898.

The Sectional Committee met at the "Victoria Hotel," Kempsey, at 7 p.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,		Henry Clarke, Esq.,
The Hon. William Joseph Trickett,		Frank Farnell, Esq.

On the motion of Mr. Roberts, seconded by Mr. Farnell, it was resolved "That Charles Alfred Lee, Esq., be the Chairman of the Sectional Committee."

The Sectional Committee deliberated as to their procedure.
The Sectional Committee adjourned at 7:30 p.m.

SATURDAY, 4 JUNE, 1898.

The Sectional Committee met at the "Victoria Hotel," Kempsey, at 7:45 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,		Henry Clarke, Esq.,
The Hon. William Joseph Trickett,		Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

At 8 a.m. the Members of the Sectional Committee, accompanied by Mr. David Houison, District Engineer, left Kempsey, and proceeded by river to the new entrance. Here they were met by Mr. Goodsir, Assistant Engineer-in-Charge of the works, and were taken out to the quarries from which the stone for the training-walls is obtained. On their return, they inspected the work now in progress, visited the sites of the proposed training-banks, and made themselves thoroughly acquainted with the scheme of improvement recommended by the Harbours and Rivers Branch.

From the new entrance the Sectional Committee proceeded to the old entrance at Grassy Head, where they were met by the pilot, and taken out to the bar.

Returning by river, the Sectional Committee reached Kempsey at 6:15 p.m.

MONDAY, 6 JUNE, 1898.

The Sectional Committee met at the Court-house, Kempsey, at 10 a.m.

MEMBERS PRESENT:—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,		Henry Clarke, Esq.,
The Hon. William Joseph Trickett,		Frank Farnell, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee proceeded to consider the proposed Harbour Works at Macleay River.

The following witnesses were sworn, and examined:—David Houison, District Engineer; Samuel Sheppard, farmer, Rainbow Reach; and Frederick William Cox, farmer, Rainbow Reach.

At 12:45 p.m. the Sectional Committee adjourned until 2:30 p.m., when Timothy Rafferty, farmer, Central Kempsey; William Thomas Ryan Sinclair, river pilot, Kempsey; John Anderson Jamieson, pilot, Macleay Heads; and Alexander Ferguson, agent, North Coast Steam Navigation Company, Kemps r, were sworn, and examined.

The Sectional Committee adjourned at 5 p.m.

TUESDAY,

TUESDAY, 7 JUNE, 1898.

The Sectional Committee met at the Court-house, Kempsey, at 10 a.m.

MEMBERS PRESENT :—

Charles Alfred Lee, Esq., Chairman.

The Hon. Charles James Roberts, C.M.G.,	Henry Clarke, Esq.,

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

HARBOUR WORKS AT TWEED RIVER.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, and the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, to whom was referred the duty of considering and reporting upon "the expediency of constructing Harbour Works at Tweed River," have, after due inquiry, resolved that it is expedient the proposed Harbour Works should be constructed; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

THE PROPOSED WORKS.

1. The proposed Harbour Works are an extension of works commenced at the entrance to the Tweed River in 1891, and continued, at intervals, up to the present time.

Money for the carrying out of what has been done and for continuing the work has been voted by Parliament to the extent of £40,600, in sums varying from £3,000 to £10,000, and, of the total amount, £30,685 has been expended. For this expenditure 28,960 feet, or something over five miles, of training-walls have been constructed—6,320 feet on the north side of the river entrance, 3,400 feet on the south side of the entrance to Terranora Creek, and 19,240 feet on the east side of the river, extending from the river entrance to the village of Chindera.

ESTIMATED COST OF THE WORKS.

2. The scheme under which these works have been carried out is one prepared by the Engineer-in-Chief for Public Works, for the construction of 53,000 feet of breakwaters and training-walls at an estimated cost of £112,000; and it is now proposed that 4,050 feet of the work yet to be done shall be constructed, and a patch of indurated sand near the river entrance removed, at an estimated cost of £43,000.

For this sum the north training-wall will be completed at a further cost of £1,200; a north breakwater extended round to the extreme south-east corner of the Point Danger headland at an expenditure of £14,900; the eastern training-wall completed up to the point where the southern breakwater will commence, for £8,087 10s.; and a southern breakwater constructed at a cost of £14,377 10s. These amounts make a total of £38,565, and the balance of the £43,000 will be absorbed in supervision and plant. It is intended to have the works carried out by day labour, and the expenditure will be distributed over a period of three or four years, the time it is expected the construction of the works will occupy.

NECESSITY FOR IMPROVING THE TWEED RIVER.

3. The necessity for improving the Tweed River entrance has been before the Department of Public Works since 1872, when attention was first drawn to the unsatisfactory condition of the river and the inconvenience experienced by trading vessels

vessels through the shallow and uncertain nature of the bar. Ten years later, the official papers show, steamers drawing no more than from 4 feet 6 inches to 4 feet 9 inches grounded at the bar, and no vessels drawing more than from 3 feet to 3 feet 6 inches could cross the flats within the entrance.

This condition of affairs led to urgent requests from the residents for the construction of works which would improve the navigation of the river; and, in response to these, officers were sent to the Tweed to survey the navigable portion of the stream, and report as to the best method of dealing with the difficulties complained of. In 1884, the late Captain Howard reported that the bar was constantly shifting its position, and, though fairly navigable at times, vessels could only get inside the Heads, to which place cargoes had to be lightered up and down the river in punts. As far as Cudgen, there are extensive sand flats, the water being shallow and the navigation very intricate.

To the residents of the district (which has an important future) these impediments to trade were a serious drawback to their prosperity and progress, and the representations to the Department were continued until, in 1889, the matter was inquired into by the present Engineer-in-Chief for Public Works, and a recommendation made that a sum of £10,000 should be placed on the Loan Estimates for the construction of fascine dykes, &c., along the lower channel of the river. The idea of constructing fascine dykes was subsequently abandoned, but the money being voted by Parliament in 1890, the work of building the training-walls was commenced, a sand-pump dredge being used to remove the sand from the channel to the back of the walls, by which method land was reclaimed at the same time as the channel was improved.

THE COMMITTEE'S INQUIRY.

4. In dealing with the additional works referred to them for inquiry the Committee feel that the works already constructed practically commit them to recommending those now proposed, in order that the full benefit from the expenditure may be obtained. The extent to which the works have been carried out renders it inadvisable to recommend any material alteration in the design. The Committee have, however, fully acquainted themselves with the details of the design; they have inquired as to the effect which the existing works have had upon the river and its entrance, and as to whether the additional works are necessary to make the others more effective; and they have endeavoured to ascertain whether the present condition and future prospects of the district justify the proposed expenditure.

EFFECT OF THE WORKS CONSTRUCTED.

5. The effect of the works already carried out, upon the navigation of the river, appears to have been very beneficial. The channel along the eastern training-wall has been deepened by dredging and the scour created by the wall to 20 feet, and widened to about 100 feet. Now, there is a channel from 12 to 20 feet deep, from nearly opposite Chindera, where the training-wall on the east side of the river commences, to the river entrance, a distance of $3\frac{1}{2}$ miles. Previously, for more than half this distance, there were, the Committee are informed, frequently not more than 2 feet, and, in some parts, only 10 inches, of water. When the works now proposed shall have been constructed, and some dredging in the river carried out, it is confidently expected that steamers of fair draught will be able to enter the river and proceed to Murwillumbah wharf. The last reports concerning the bar show there were 12 feet of water upon it. It is claimed by the Department that this results from the works already constructed; but as previous to the commencement of the works, there was, at times, a similar depth it is not certain that the present satisfactory bar is entirely attributable to this cause; still there is little doubt that the works in progress have contributed to the improvement.

NECESSITY FOR THE ADDITIONAL WORKS.

6. The proposed additional works the Committee find to be necessary, in order to prevent those already constructed from falling into a defective state through want of the support which the additional works will give them, and to make the scheme as effective as possible,

From

From the evidence of the Engineer-in-Chief for Public Works, and that of the District Engineer, it will be seen that during the whole time the walls now in position have been under construction the bar at the entrance to the river has shown a tendency to improve and the river to deepen. In their opinion, the work done has proved entirely satisfactory, and they have no doubt that the additional works proposed will also prove a success. By concentrating the water between the breakwaters and the training-walls a great scour will be created, and the stream shot out of the river straight on to the bar, which must in this way be permanently improved. A certain amount of dredging will always be necessary in the river, but on the completion of the works contemplated the cost of it will be less by one-half what it is now.

The Sectional Committee who visited the river, and inspected the training-walls which have been constructed, endeavoured to ascertain whether the results desired could be obtained by building the southern breakwater, and allowing the rocks on the north side of the river entrance to act as a northern breakwater, by which method the expense of constructing the proposed northern breakwater would be avoided; but such a reduction of the Departmental proposal did not appear to be desirable. The northern breakwater, it was explained, is as necessary as the southern to impart to the water the requisite power to act beneficially on the bar. Without the northern breakwater much of the force of the out-flowing current would lose itself in a bight inside the Point, and the influence upon the bar be correspondingly lessened.

THE BREAKWATERS.

7. The plans submitted show the two breakwaters as it is intended to construct them under the proposal referred to the Committee, and as they would be if carried out to the extent contemplated in the complete scheme. As proposed now, they will be carried seaward to a point almost in a line with the coast on the north and south sides of the river entrance. Point Danger, it is explained, projects well out on the coast, so that the littoral current sweeps close by; and, a scour in the river being assured, as fast as the sand is swept out of the river it will be caught by the ocean current and carried southward. Under these circumstances a good entrance should be maintained, and a further extension of the breakwaters will probably be unnecessary. If the expectations from the proposed works should not be realised, then the additional length of breakwaters can be constructed as intended, and the scheme carried out to completion.

THE TWEED RIVER DISTRICT.

8. The district around the Tweed River is very fertile, with a large extent of good land and an abundant rainfall. Within the area represented by the watershed of the river there are, according to the information supplied to the Committee by the Chief Draftsman of the Department of Lands, 87,400 acres of alienated land; 68,260 acres of reserves; and 130,290 acres of Crown land.

The alienated land is principally in the hands of selectors who are engaged in sugar-cane and maize-growing, to which are added the ordinary productions from farming, dairying, and timber-cutting. Cane-growing has been the principal industry, and has been carried on in connection with the Colonial Sugar Refining and other Companies, who have erected mills on the river. Maize is grown on the river banks in large quantities. The pig and bacon industry is fairly large and profitable. Dairying is a comparatively new industry in the district, but the establishment of creameries indicates that it is developing. Timber is an important article of export from the river, and is sent away in considerable quantities. The reserves mentioned in the land statistics are forest reserves.

Of the unalienated Crown land about 51,400 acres are held under occupation license.

All the witnesses examined agree as to the importance of the district and the prosperous future it should have, and the Sectional Committee were impressed by its great fertility.

RESULT

RESULT OF THE INQUIRY.

9. From the evidence, and the opinion expressed by the Sectional Committee, it is advisable, the Committee consider, in order that the works already constructed shall be duly effective, that the extensions referred to them for inquiry, should be carried out. No harbour entrance works such as these, in connection with a river having a northern headland, have, up to the present, been completed by the Department, but similar works are in progress at the Richmond River, where the headland is also on the north side of the entrance, and so far as the works there have been constructed, they promise to be successful.

The decision arrived at by the Committee is shown in the following extract from their Minutes of Proceedings, of Thursday, 23rd April:—

“Mr. Lee moved,—‘That, in the opinion of the Committee, it is expedient that the proposed Harbour Works at Tweed River, as referred to the Committee by the Legislative Assembly, be carried out.’

“The motion was seconded by Mr. Trickett, and passed on the following division:—

Ayes, 12.

Mr. Ewing,
Mr. Hoskins,
Mr. Roberts,
Mr. Trickett,
Mr. O'Connor,
Mr. Clarke,
Mr. Lee,
Mr. Fegan,
Mr. Hassall,
Mr. Black,
Mr. Wright,
Mr. Farnell.

Noes, 1.

Mr. Humphery.”

Sydney, 26th April, 1898.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

HARBOUR WORKS AT TWEED RIVER.

TUESDAY, 15 MARCH, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).	
The Hon. JAMES HOSKINS.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	THOMAS HENRY HASSALL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	GEORGE BLACK, Esq.
HENRY CLARKE, Esq.	FRANCIS AUGUSTUS WRIGHT, Esq.
FRANK FARNELL, Esq.	

The Committee proceeded to consider the expediency of constructing Harbour Works at Tweed River.

Robert R. P. Hickson, Under Secretary and Commissioner for Roads, Department of Public Works, sworn, and examined:—

1. *Chairman.*] You have a statement with reference to the proposed improvements to the entrance of the Tweed River? Yes.

R. R. P.
Hickson.
15 Mar., 1898.

THE entrance to the Tweed River is 372 nautical miles north of Sydney. The river flows through rich country, having a semi-tropical aspect, the alluvial flats being particularly fertile; the total area of the watershed is about 420 square miles. From its source to the sea, the river has a length of about 46 miles and is navigable by small craft on the Main Arm as far as Byangum, a distance of 23 miles from the entrance, and on the North Arm as far as Boat Harbour, 24 miles from the entrance.

The official papers show that in 1882, the entrance and lower portion of the river were in a much more shoal condition than they had previously been—steamers drawing only 4 ft. 6 in. to 4 ft. 9 in. had grounded at the bar, while craft drawing from 3 ft. to 3 ft. 6 in. only could cross the flats within the entrance. Urgent requests were consequently made by the residents for the construction of some works for the improvement of the navigation.

The following extracts from the report of the late Captain Howard (who made a very complete and careful survey of the navigable portion of the river) give an idea of its condition in 1884:—

- “The bar is constantly shifting in position, but during the survey retained about the same depth, viz., 6 feet at high water.
- “As will be seen on the plan, the opening at the inner head is very narrow, in comparison with the great extent of water inside; consequently the tidal streams are very rapid and the range of tide in the river small.
- “As the channel curves sharp round to the northward at the entrance, very careful navigation is required to keep a vessel off the rocky shore inside, on to which the eddy sets. It has been represented to me that a stone-dyke run out from the Head to the Sawmill Jetty would keep a straight channel, assist navigation, and very likely add to the depth of water on the bar, by giving increased scour in a nearly straight line. Vessels could then be towed in at high water, whereas at present they have to wait till the full strength of the stream has abated—from two to three hours after high water, by which time the depth on the bar has decreased considerably.
- “I have heard that since I left the Tweed the swashway round the South Spit has deepened sufficiently to be navigable, but it is liable to silt up again rapidly at any time.
- “The great want of this river is water-carriage on the river itself. Vessels drawing 6 feet are towed over the bar with much difficulty; but are compelled to moor at the Heads, and cannot sail up the river to deliver cargo, as they do at the Clarence, Richmond, and other rivers. All cargo has to be taken up or down in flat-bottomed punts, and in consequence of the shoal-winding channel through the flats there is frequently much delay. If a steam-dredge were sent to the Tweed she would easily cut a straight channel through the flats. A depth of 6 feet at low water would enable any vessel that could cross the bar, to proceed right up to Murwillumbah, the principal town, distant 17½ sea miles from the Heads by the river.
- “After passing the flats there is a good clear channel up to Stott’s Island, at each end of which the obstruction could be cleared away in a day or two. The river is very shoal in the long reach between Congong Mill and Murwillumbah, there being a gravelly bar with not more than 3 feet at low-water for over 2,000 feet. Above Murwillumbah the flats are stony, and could be best dealt with by a ‘Priestman’s’ grab.
- “On the North Arm are extensive flats of sand and gravel up to the bridge, just below which is the old crossing, over boulders. The Sugar Company’s punts manage to get a mile or two above the bridge.
- “On the Main River, the head of navigation for punts, may be said to be the junction of the South and Middle Arms at Byangum, which is as far as the survey was carried.”

During 1885 and 1886 numerous complaints were made as to the inconvenience and constant loss sustained by the residents through the impediments to navigation. It was represented that the Tweed embraced a most fertile district, the full development of which was retarded for want of carriage facilities—goods had to be lightered between the Heads and the various settlements, and the expense of this was so great that ordinary cultivation did not pay; and further, the want of these facilities also discouraged direct trading between Sydney and the Tweed. Large sums of private money had also been spent on the river, the venture of the Colonial Sugar Refining Company alone representing over £100,000; and it was urged that some consideration should be given to the residents by improving the navigation of the river.

In 1889, urgent requests were made by the residents that a sum of £10,000 might be placed on the Estimates for the construction of training-walls at the Heads. The work of improving the entrance was represented to be a matter of absolute necessity—the river was becoming a very important place and the shipping trade assuming large dimensions, but unless the

R. R. P.
Hickson.
15 Mar., 1898.

entrance were improved and better facilities given for the trade of the port, the business would be lost to this Colony and go to Brisbane, as the Queensland railway was close to the Tweed district and was being pushed forward to the Border. The matter having been referred to Mr. Darley for report, he recommended that a sum of £10,000 be placed on the Loan Estimate for the construction of fascine dykes, &c., along the lower channel of the river.

As to the possibility of obtaining suitable material for the walls, Mr. Keele, District Engineer reported as follows:—“Neither ti-tree nor clay, so far as I could ascertain, can be obtained within a reasonable distance of the proposed works to enable fascine banks so be cheaply constructed. There seems, however, to be plenty of good stone. The headland at Point Danger is a basaltic formation, which should come out in very large blocks, if the boulders lying at the foot of the cliff can be taken as any indication of its quality; many of these were from 10 to 20 ton weight. It is probable that sufficient stone could be obtained from this place to construct the north breakwater. I also examined a hill at the back of the town about ½ mile from the river bank, which contained basalt. There is also columnar basalt in considerable quantities on both sides of the river about 1½ mile from Terranora Point. A quarry could be opened at Cave Point which would probably be sufficient to supply all the stone required for the training-wall.”

A complete scheme for the improvement of the entrance and lower portion of the river having been prepared, and a sum of money made available, the work of constructing the training-walls with stone was commenced, and as the walls progressed the pump-dredge “Actor” followed, removing the sand from the channel and pumping it to the back of the walls, thus reclaiming land and improving the channel at the same time.

In October, 1893, a request was made that a further vote might be taken for the Tweed works, as the portion already constructed had been very cheaply done, and very successful in opening up the river for traffic. On this, Mr. Darley reported that very little more could be done towards dredging the river until the walls were extended, and as the work so far completed had proved so beneficial and the cost so small, he considered that a further expenditure was well warranted. He therefore recommended that a further sum of £10,000 should be taken.

On the vote becoming exhausted the works were temporarily stopped, but were recommenced on 11th June, 1894, and continued until July, 1897, when Mr. Darley reported as follows:—“During my recent visit to the north I inspected the work now in progress on the Tweed River. So far as the training-walls are complete they promise to fulfil their purpose in a satisfactory manner, and the channels dredged along them are maintaining their depths. I came to the conclusion, however, that it may be advisable to stay further progress with the training-walls until a good deal more dredging is performed, as it is desirable to draw the channel across to the northern training-wall, and let it pass along that wall out towards the entrance. When this is accomplished the southern training-wall can be extended, as the water will then be shallower, and also the northern or No. 1 wall might then be commenced and extended as far as the eastern limit of the North Head. But, as I said before, I do not think it necessary to proceed with these walls until a good deal more dredging is performed. I therefore recommend that the harbour works, as regards construction of walls, be temporarily stopped, and the plant carefully stored.” The works were consequently stopped on 16th July, 1897.

On 26th July, 1897, the Murwillumbah Progress Association wrote, urging on the Minister the necessity of immediately doing something towards improving the river entrance, which was stated to be in anything but a satisfactory condition; but Mr. Darley pointed out that while the Tweed bar, like all other river bars at the time, was in an unsatisfactory state for navigation, the temporary stoppage of the training-walls was in no way to blame for this, nor would they, if proceeded with, prove of any benefit for a long time. The dredging of the channel was being pushed on with, and this was what was really needed now and for some time to come.

On 1st November, 1897, the Member for the district drew the attention of the Minister to the necessity of providing on the 1897 Estimates a sum of money for continuing the harbour works. If provision were not made it might be eight months before work could be commenced, whereas if proper provision were made the work could be commenced when it was found desirable to do so. A further sum of £10,000 was thereupon taken on the Loan Votes 1897-8.

The scheme now before the Committee consisted of northern and southern breakwaters, 500 feet apart at the entrance, and training-walls on either side of the river, extending upstream as far as the village of Chindera, and also a short distance up Terranora Creek. The total length of breakwaters and walls in the complete scheme is about 53,000 feet, the original estimate being £129,185. Of the above-mentioned length, 28,960 feet have been constructed at a cost of £30,685 8s. 4d. The whole of this work has been carried out by day-labour. Of the remainder of the scheme it is now recommended that 4,050 feet of breakwater and training-wall be constructed and the patch of indurated sand near the entrance removed at an estimated cost of £43,000.

The amounts voted for the works have been as follows:—

1890.	54 Vic. No. 33	£10,000
1894.	57 Vic. No. 17	3,000
1895.	58 Vic. No. 17	5,000
1895-6.	59 Vic. No. 6	6,600
1896.	60 Vic. No. 32	6,000
1897.	61 Vic. No. 43	10,000
Total		£40,600

and the balance on 31st December, 1897 was £9,914 11s. 8d.

The walls constructed, together with the dredging, have proved exceedingly satisfactory, there being now from 10 ft. to 20 ft. of water where previously there had been a tortuous channel having stretches with only from 2 ft. to 6 ft., and it is considered that the extension of the walls now proposed, together with the removal of the patch of indurated sand would provide a permanent entrance of sufficient depth for all present requirements.

The resolution recommending that this matter be referred to the Parliamentary Standing Committee on Public Works was submitted to the Legislative Assembly by the Minister for Works, and passed on the 9th December, 1897.

WEDNESDAY, 16 MARCH, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JAMES HOSKINS.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

The Hon. WILLIAM JOSEPH TRICKETT.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

FRANK FARNELL, Esq.

The Committee further considered the proposed Harbour Works at Tweed River.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, sworn, and examined:—

C. W. Darley.
16 Mar., 1898.

2. *Chairman.*] I presume that the statement handed in by the Under Secretary for Works was prepared under your supervision? Yes.

3. And it may therefore be regarded as a true statement of the facts of the case? Yes.

4. *Mr. Hoskins.*] Have you a party now working at the Tweed River improving the navigation? Not now; we ceased work in July last.

5. Have you any objection to make a statement as to what has been done and what is proposed to be done? I will explain the matter to the Committee by reference to the map. Attention was first drawn to

to the condition of the Tweed River in 1872. There was very little known in Sydney then about the river, where there were only a few settlers. The trade consisted chiefly of cedar export. Subsequently attention was called to the state of the river, and Captain Sydney was sent up to survey and report, and afterwards Captain Howard. The latter gentleman showed by his report that while the bar was fairly navigable at times, vessels could only get immediately inside the Tweed Heads as far as the township, and the cargo had to be lightered down the river in punts. There were flats opposite the township, and all the way up to Cudgen the navigation was very intricate, and the water very shallow. In fact from nearly opposite the entrance up to Cave Point, where the present channel is, there were only about 10 inches of water. I myself have stuck there in a boat drawing about 10 inches. The channel winding through the flats was very intricate, and it passed round behind the little island north of Chindera, and nothing but small punts and boats could get up past the entrance. We first sent a dredge there in 1891, and in 1894 a grab-dredge was sent. The grab-dredge was employed in trying to deepen the passage near Chindera Point, so as to let the punts get by, there being at that spot only about 10 inches of water. Parliament voted a sum of money for the work in 1890, and in 1891 operations were commenced by opening a quarry. The Minister called upon me to prepare a scheme for improving the river, and I laid down a scheme which is practically that now submitted to the Committee. We have never departed from it. Having submitted the scheme, I was authorised to commence work. I started to open a quarry at Cave point, where there was suitable stone for making a training wall, and the first stone for the wall was deposited in January 1892. The first vote of £10,000 became exhausted, and we had to cease work in April, 1893. We worked for sixteen months and had to cease again, and we stopped work then for fourteen months until a further sum of money was voted, and from the 11th June, 1894, until we stopped in July, 1897, the work was in continual progress. The work shown on the plan as marked by black lines is all carried out. The wall on each side of the entrance to Terranora Creek is also completed, and the wall leading down—what is called the northern training-wall—towards the sea entrance is all complete. As we were running out this wall we put the dredge at work with the result that we deepened the channel to 12 or 14 feet. We dredged it about 100 feet wide. Once the wall was provided it guided and directed the current, and the channel became widened and deepened; so that the work done so far has been successful, and nature is now improving and widening the channel.

C. W. Darley.
16 Mar., 1898.

6. What is the distance between the two walls? 700 ft. Although we have only dredged to a depth of 12 or 14 feet, we have now from 22 to 27 feet of water. It is a good 20 feet channel right through. The scour has deepened and widened the channel.

7. There are steamers now regularly trading from Sydney to the Tweed? Yes.

8. There were two, were there not? Yes; one was lost a few months ago.

9. What was the size of those steamers carrying passengers and goods? They were small boats.

10. What is the draught of water? The draught of water on the bar is very good now. The last reports from the bar showed 12 feet. Last year, the time when the "Chindera" was wrecked, it was only 8 feet 6 inches.

11. What length do you propose to have the training-wall, when you complete your work? The total length of walls constructed to date is 28,960 feet, or something over 5 miles.

12. Will you have training-walls on each side of the river? The plans show where the walls are now erected. The wall on the east side is 19,450 feet long, or over 3 miles; the wall on the south side of Terranora is 3,200 feet long; and the north training-wall is 6,320 feet long.

13. Would there not be a danger of the water from the creeks and the tributaries of the river carrying down the silt, and so filling-up your channel? No; Terranora Creek is the outlet from an inland basin, with no very great amount of creek water coming into it. It is a good tidal area, and stores a great quantity of water. I have purposely left a wide entrance to let the tide run freely in. In fact, it is proposed by dredging to further improve the entrance up Terranora Creek.

14. Is there not this danger that if the tide is allowed to go up that creek, all the land there being rich alluvial soil, in time of great floods the action of the tide will bring the sediment down to the mouth of the creek, and thus tend to shallow up the river? No; there is such a large area. It is simply tidal action, and excepting in flood the water has no great velocity; and of course in a flood the velocity is sufficient to carry it on.

15. Is it long since you were at the Tweed? I have not been there since last June.

16. Are you of opinion from the experience you have acquired since the works were commenced, that the Tweed River can be made navigable for good-sized vessels, if your scheme is carried out? It can be made navigable for vessels drawing 14 or 15 feet of water.

17. Even over the bar? Yes.

18. Is there not a spot inside where the water is shallower than it is on the bar? In the new channel which we propose making there is a patch of indurated sand, but we hope to have that dredged away long before the works are completed; it is part of the scheme to dredge it away. There is a patch of indurated sand in the bight at the north side, but it is simply sand cemented together by a little iron, and we can get it away by the dredge.

19. You have not travelled much about the district to which the Tweed supplies a natural port? I have not been up to the head waters. I have been to Murwillumbah. I have been a good deal over the district.

20. The district has a much smaller area than the Richmond district? Yes; but the rainfall is greater.

21. And the soil very rich? Yes.

22. Has there been a rapid increase of settlement in the district? There has been a very large increase. It is capable of carrying a large population.

23. The settlers are engaged principally in growing sugar and in dairying? Yes, and maize-growing.

24. Do they send their maize and other products out to sea through the mouth of the river by steamers? Yes.

25. Is it not a fact that the Government of Queensland purpose running a branch from their railways so as to connect Brisbane with the Tweed River? I cannot say it is a fact; I have heard rumours to that effect. On the other hand, I have heard it stated by a member of the Queensland Parliament—a member of the Ministry—that he did not think it would be done unless New South Wales continued her railway to the border, so that the two systems might join. If the river were open for navigation all the trade would come to Sydney.

26. How long do you anticipate it will take to carry out the work you contemplate? Between three and four years.

- C. W. Darley. 27. How much has been expended on the work up to the present time? The expenditure to date has been £30,605 8s. 4d.
- 16 Mar., 1898. 28. How much do you calculate it will cost to complete the work according to your designs? £43,000.
29. Do you think that will complete it to your satisfaction? It will complete all that will be required there for many years.
30. If the New South Wales railway were extended from the Richmond down to the banks of the Tweed, and in addition extensive improvements were made at the entrance to the harbour, would not one means of communication be in opposition to the other? The railway, I think, would get the passenger traffic, but I do not think it would carry a large quantity of goods. Even if there were a market for our produce in Brisbane, the trade would go by sea instead of by railway.
31. Although the area of land watered by the Tweed and its tributaries is less than in the case of the Richmond River, do you think that the land in the Tweed River district is quite as good as that in the Richmond River district? There is more good land on the Tweed than on the Richmond in proportion to the respective areas.
32. *Mr. Trickett.*] What is the size of the training-banks that you have constructed—the width at the base and at the top? The banks are made 6 feet wide on top. The stone is simply tipped in and allowed to find its own slope, which is about 1 to 1, and the wall is about 3 feet high over high water.
33. And is the wall constructed of local stone? Yes, stone from Cave Point. Then, as it gets lower down, the wall rises until near the entrance it is nearly 4½ feet over high water. The breakwater, coloured red on the plan, and which it is proposed to construct, will be 15 feet wide on top, rising from 6 ft. up to 16 ft. over high-water as you get out near the entrance.
34. What is your experience as to putting stone in that way on a sandy bottom;—does it keep on settling down, or does it find its own resting-place after a short time? It does not sink into the sand. If the channel scours out in front, as the channel has done in this case, then the stone on the face will slide down, and that checks any further scouring action. Of course, the stone being all loose, we make it up again from time to time; but the effect of the stone being loose and sliding down is to check the scouring action on the sides and to protect it, so that the back of the wall will be standing on the original surface, while the front of the wall will slip down to the bottom of the channel. The stone slides down so that the face of the channel is practically covered with stone.
35. When we were considering the proposed training-wall at the Manning River a fear seemed to be expressed that the deposit of stone on a sandy bottom would keep subsiding and subsiding, and that when a heavy rush of flood-water came there would be a danger of undermining the training-wall;—do you think that is likely to happen in this case? No, I do not anticipate any trouble from that. Of course, if you have a subsidence, you can make it up again during the progress of the work, and while the change is going on. It is not like a settlement.
36. It would not be likely to tear away to any extent? No.
37. As far as the present wall has gone, has it stood well? Very well indeed. We have had some very heavy floods there, and when a great part of the wall was made north and south from Cave Point the water was comparatively shallow. Then we dredged alongside, so that the stones on the slope kept rolling down and following the deep water. Only the stones on the slope, and not the whole of the wall, stand on that depth of water. The back of the wall is standing on the original bottom. In other words, the stone does not sink into the sand at all. We find it never sinks into the sand. I have been able to observe that in many places along the coast, and particularly at Newcastle. As the scour takes place the front is deepened, and the stone rolls down the slope, and protects it from under-pinning.
38. What you mean is that on the outside bank of the wall the stone is much deeper than on the inside? Yes.
39. And that in place of the sand or mud which you dredge out, there is a gradual subsidence of the stone which forms a kind of solid wall? Yes; we have a tramway along the top, and if any subsidence takes place, it is only a matter of dropping a few stones over at that spot.
40. Where is the bar at the harbour entrance? Nearly opposite the extreme point—just near the spit on the south side—it moves about very much. I have known the South Spit to run up and overlap the North Head, so that a vessel had to go up north, and then turn out to sea. In that case the bar was away some distance out; but usually the bar is nearly opposite the North head. It changes after every storm.
41. Has not the rapid scour created by the long training-wall and the sweeping out of so much sand, had the effect of decreasing the water outside the entrance? No; on the contrary, the water has been steadily deepening. Every year the bar is improving, although we have done nothing to it. It tends to steadily improve naturally.
42. I suppose Point Danger is a projecting point, and the sand has a chance of getting swept well away? Yes; I think it is scoured right away. The current takes it away down the coast.
43. And no sand has been deposited at the entrance? No. All the time we have been extending that work there has been a tendency for the bar to improve.
44. In estimating the amount it will cost to complete the work at £43,000, have you gone carefully into the matter;—and will you give us details showing how you arrived at that estimate? In the first place there is a little work necessary in order to complete the north training-wall. It will be necessary to raise and complete that wall, and finish the head of it, and that work will cost £1,200. For extending the north breakwater, the amount put down is £14,000; to complete the eastern training-wall up to the point where the breakwater commences, the cost will be £8,087 10s.; and to carry the southern breakwater out to the point where I propose to take it, will cost £14,377 10s. This makes a total of £38,865. Then adding £4,435 for supervision and plant, some heavier cranes being required, that will make a total of £43,000.
45. Will the stones at the entrance be of a very massive character? Yes, large stones. We shall have to open a quarry at Point Danger for that purpose. We can get stone on the New South Wales side of the Border; but I think the best quarry would be found on the Queensland side, and I have no doubt the Government can obtain permission from the Queensland Government to open a quarry there. The highest point of the headland is in Queensland, and that is where I would like to get the stone.
46. Then the stone for the southern breakwater would have to be punted across? Yes; I have provided for that in the estimate.
47. How far would the quarry be from the works? About 900 or 1,000 feet.

C. W. Darley.

16 Mar., 1898.

48. I suppose you would run a short tram-line? Yes.
49. Is it proposed to carry out this work by day labour? Yes.
50. Has that system been satisfactory so far with regard to other works? This has been the cheapest harbour work we have ever done in the country.
51. I suppose the work is of a character which is more suitable for day labour? I think so. There is always a difficulty in making a contract for work of this class. There are so many contingencies and so many ways by which a contractor can take points. You cannot foretell everything, and by day labour you can put the stone exactly where you require, and meet every contingency arising from storms and otherwise. When you are tied to a contract it is very hard indeed to depart from the fixed lines of that contract. In every case where we have had a contract for work of this kind there has always been a liability to misunderstanding and trouble with the contractor. You cannot anticipate difficulties that may occur. The total cost of the stone on the Tweed, including everything up to date, is about 2s. 2d. a ton in place.
52. Who has been in charge of the works up there? They have been under the direction of Mr. Keele, the district engineer. Mr. Brooks was the resident engineer on the spot.
53. Has all work ceased there at the present moment? Yes.
54. Dredging and all? No; we are still dredging.
55. Is it not from necessity that you are dredging? We are furthering the work.
56. In July, 1897, you reported that you did not think it necessary to proceed with the training-wall until a good deal more dredging was done;—is sufficient dredging now done to allow you to go on with the training-wall? Not immediately; but there will be in a few months. I want to see the channel taken right over to the north wall, and I want to see a little of the indurated sand removed.
57. Are you depositing the silt behind the training-wall? Yes.
58. *Mr. Wright.*] Why is there an opening left between the northern training-wall and the end of the proposed northern breakwater? We are leaving that open because in the first place it will act as a wave-trap, and in the next place it is necessary as an entrance for the pilotboats and tugboats to pass in and out. The township is inside.
59. Do you propose to deepen that channel? No. I have not closed the tide out from Terranora Cr ek, so that the ebb-tide still passes through behind the north opening of the wall, and preserves the channel. If that place should fill up at any future time so that the tugboat and pilot-boat cannot lie there or get in and out, we shall have to make a road from the township to the river across the training-wall.
60. *Mr. Trickett.*] Captain Howard reported that vessels had to be towed into the entrance and could not sail in:—can they sail in now? There is a tugboat, and they do not risk sailing in.
61. Is that big eddy, which takes place at flood tide, still in existence? There is a considerable eddy just north of the point at South Spit. It is brought about by conflicting currents; the currents are not confined to one channel.
62. The report, to which I have just referred, states that goods have to be lightered between the Heads and the various settlements. When your scheme is carried out how far will the steamers go up to avoid the lighterage? I hope the Sydney steamers will go right up to the Murwillumbah wharf. There is still some dredging to be done. It could have been done before, but there was more important work to do at the Heads. The moment the more urgent work is done, the dredge will go up to the Condong Flats. There are now only two flats on the river preventing a steamer from going right up to Murwillumbah. Long before this work is finished steamers will be running to the Murwillumbah wharf.
63. Is all the plant that you have used there from time to time still at the Tweed? Some of it is there, but I removed a good deal of it to Camden Haven, because it was too light for the class of work we next enter upon. There has been a transfer in the books and the vote has been credited with the plant so disposed of, which is only suitable for small work. I have included in my estimate a sum of money for heavier plant.
64. You seem to speak very confidently in your report as to the effect of the work submitted for the consideration of the Committee. I suppose you look upon the scheme as necessary and one that will largely benefit the districts, and you consider from your experience of the work already accomplished that it is likely to be of a very effective character? Yes; I think it will be found to be thoroughly successful. I do not know of any river on the coast that, in my opinion, warrants expenditure more than the Tweed.
65. *Mr. Clarke.*] The original estimate for this work was about £129,000? Yes.
66. And £30,685 has been already expended? Yes.
67. And a sum of £43,000 is required to complete the work now before the Committee? Yes.
68. Has the work already done been satisfactory? Entirely.
69. I see by the report handed in by Mr. Hickson that it is proposed to expend about £10,000 on a fascine dyke? That was the first proposal. When I found that I could get good stone I abandoned the fascine work.
70. You think a fascine dyke not suitable? Not suitable where there is a sandy bottom.
71. You have had a little experience of that in some other rivers? Yes.
72. Particularly at Moruya? At Moruya it failed entirely. At that time there was a good deal of pressure brought to bear to use fascines everywhere.
73. There is a railway now from Murwillumbah to Lismore? Yes.
74. In the event of the improvement of the Tweed River proving satisfactory, do you think the bulk of the produce would go by sea or by rail? The railway at Murwillumbah does not affect the question either way, because it only goes to Lismore, and no produce from the Tweed to Sydney would go by railway.
75. If a railway were extended into New South Wales by the Queensland Government, what would be the effect on the trade of the Tweed River? I do not think it would seriously interfere with the trade by navigation. The railway, no doubt, would take many passengers, but it would not take any traffic off the river. If there were a market in Queensland for the Tweed produce, it would still go out of the river by water, that mode of transit being cheaper than by rail.
76. Do you think the proposed work will be beneficial to the people of the district as well as to the country at large? I do.
77. You think that the expenditure is necessary? Yes; I think it will be fully justified.
78. And you have every reason to believe the work will be successful? I have.

- G. W. Darley. 79. *Mr. Lee.*] Has the £10,000 last voted been all spent? No; it was voted last session when the work was stopped.
- 16 Mar., 1898. 80. The present proposal will not affect the navigation above Chindera Point? No; above that point it is only a matter of dredging, and that work will be paid for out of the dredging vote.
81. The idea is that if a certain depth of water can be given at the entrance at low water, then the vessels that trade there will be able to go up the river? Yes.
82. If the entrance were made certain, then the ordinary steamer could trade up as far as Murwillumbah and distribute stuff along the banks of the river the same as on the other rivers? Yes.
83. What depth of water do you think you can safely depend upon at the entrance? I think we can easily obtain a 14-foot entrance at low water.
84. It occurred to me that the extremity of the proposed breakwater would be almost on a line with the coast, both of the south and the north side? Yes.
85. Would that be sufficiently far out to admit of a proper disposal of the sand? I think so.
86. I am speaking of the terminus of the breakwater as you propose it? I propose that the breakwater should stop at present as shown on the map. What guided me in coming to that decision was this: a great quantity of sand must have gone out of the river. The scour has been very strong, and the channel we have dredged has deepened and widened. In fact, a great deal more sand has gone out of it by natural scour than by dredging. This sand has gone away and has not been deposited at the entrance. Point Danger projects well out on the coast, so that the littoral current sweeps close by the point, and I think all the sand going out is swept away and carried down south rapidly. Under these circumstances, I think that if you extend the breakwater as far as the point shown on the plan, it will be found sufficient to maintain a permanent entrance.
87. In the event of its being discovered when you get that distance that the breakwater has not effected its purpose, could it be extended on the same principle? Yes, it could be extended. The whole scheme could then be completed; but I have only recommended so much of the work at present. The wall can be extended hereafter if found necessary.
88. In other words, your proposal is designed so as to admit of the breakwater being extended a very much longer distance with greater safety? Yes.
89. But you are of opinion that when it is carried out to the point at present proposed it will be found sufficient? Yes.
90. If it should be found before you get to that point that you can obtain the object in view you will stop there? I do not think you could make sure of obtaining the object by a short breakwater.
91. Experience has told you that you must, at all events, get a little beyond the level of the sand? Yes; well out on the edge of the sand, at any rate. But the channel is straightening. Since we constructed the north wall the channel on the bar has straightened and deepened, according to the reports of the pilot. The north wall is already acting on the bar beneficially.
92. The entrance is very much exposed to an easterly gale? Yes; it is open to an easterly gale.
93. Perhaps more so than any other port on the northern coast? They never seem to feel the weight of an easterly gale there anything like so heavily as they do on the Richmond, and further south.
94. The Tweed River is very heavily flooded at times, is it not? Yes. There is a very heavy rainfall on the Tweed. The average rainfall is about 92 inches.
95. The largest rainfall in New South Wales occurs in the vicinity of the Tweed, and consequently that river is very heavily flooded at times;—what would be the condition of things with a heavy flood and an easterly gale;—would not navigation be entirely suspended? Only just for the time. Ships, of course, would never think of taking the entrance in a gale. They would have to wait until the gale was over.
96. Criticising the work from the most severe point, would you anticipate that with a heavy flood passing down the river, and a severe easterly gale running on the breakwater, there would be any danger of the work being carried away? Some of it might slip in, but I think we need not anticipate any serious damage.
97. Do you think the channel you have provided there would be sufficient for the discharge of the large volume of water that must pass down? I do.
98. And you think that under normal conditions it will not interfere with navigation? Under normal conditions the navigation will be safe and good.
99. Having already completed the training-walls as far as Chindera Point, have you received any complaints from the Sugar Company who use the river and who appear to be cut off from their water frontages? I have heard no complaint. On the eastern side of the training-wall it is all Crown property, and the Sugar Company has no interest there. Our works do not go near private property.
100. And no frontage interests are interfered with? No.
101. Are you quite satisfied with the results obtained from the construction of the training-wall? Yes; I consider the results entirely satisfactory.
102. Having done the preliminary work, you are satisfied that if the remaining portion—that is, the entrance to the river—is carried out then all your works from beginning to end will be effectual? I think so.
103. The fact of your creating a greater scour at the entrance, I presume, will not in any way deteriorate from the passage you have already created alongside the training-wall? No.
104. *Mr. Wright.*] What is your experience in constructing harbours on the coast with a northern headland. You have a southern headland in Newcastle, a northern headland at the Richmond, a southern headland at the Clarence, and a northern headland at the Tweed? We have not completed any work with a northern headland as yet; but at the Richmond, so far, the work promises to be satisfactory.
105. The Richmond is the most difficult case you have of a northern headland? It is the heaviest case, and the most difficult one, and so far it promises to be successful.
106. In reference to the extension of the breakwater, have you satisfied yourself as far as you can that the proposed work will answer at present? I think it will answer at present.
107. Do you think that a breakwater carried out on the direct line between the northern headland and the sand on the southern shore will be sufficient to give you a thorough scour there? I think the current will be sufficient.
108. What is the set of the tide along there? We get the littoral current very close there. The main south current runs close by Point Danger.
109. That carries away the silt scoured out of the river? Yes.

110. So that you have every reason to believe that no matter what quantity is carried out of the river it will all be taken away by the ocean current? That has proved to be the case so far. C. W. Darley,
16 Mar., 1898.
111. Will you be prepared to submit to the Committee a schedule showing the watershed of each of the northern rivers from the Hunter to the Tweed, with the average rainfall and the width of entrance in each case? Yes.
112. Did I understand you to say in reply to Mr. Trickett, that as the water deepened on the inner part of the training-wall, the face sank down and protected the under portion of the main body of the wall? The stone keeps slipping down and prevents under-cutting.
113. It prevents, in fact, the slipping away of the stone-wall by the sand being washed from under? Yes.
114. *Mr. Roberts.*] Would you mind pointing out what work has already been done? It is shown on the plan by black lines. The southern limit of the eastern wall is opposite Chindera Point. It extends northward past Cave Point nearly up to the Heads. All that work is completed. Then on the western side we have a stone barrier for dividing the current at the entrance to Terranora Creek, and on its south bank, part facing the Tweed, and two-thirds facing the creek. Then the north training-wall commences at Terranora Creek, forming a wall on its north bank, continuing on and forming an eastern and northern wall towards the mouth of the Tweed River. That is all completed.
115. And what work remains to be done? First, the completion of the north training-bank, and then the construction of the north breakwater, commencing near the township, and extending it round towards Point Danger.
116. How far do you contemplate going away from the mainland? It starts from the mainland at the root, and terminates when we get round again at the end cutting off the bay. At present it runs into a bay in Point Danger.
117. But it appears to go some considerable distance out seaward? Where it goes out seaward the point is really on a reef. The point terminates on the extreme south-east corner of Point Danger. That is where we propose to stop.
118. What about the lines shown on the map further to the east? That is part of my original scheme, and is not now before the Committee. I prepared a scheme showing the probable ultimate amount of work likely to be required; but we have only put before the Committee a certain portion of it as necessary to be done for the present.
119. If this should be sanctioned by Parliament, and carried out, then it will be a matter of consideration whether you go further eastward or not? Yes. Reverting again to the work still required to be done, on the southern side it consists in extending the present eastern wall northward, and curving, to the entrance to a point which we may call the commencement of the breakwater. Then the breakwater proper commences opposite Point Danger, and it goes out to a point opposite the proposed present terminus of the north wall. That is work that has to be done.
120. Very little work has been done yet on the south side? None on the breakwater—only the training-wall. We have done nothing to either of the breakwaters yet.
121. And until the breakwaters are constructed you cease dredging the river? No; dredging is now proceeding.
122. Is that with a view of getting over the flats? The dredging at present is with a view of carrying the current from the eastern training-wall across to the north training-wall. The dredging is completed up to the mouth of the Terranora Creek.
123. You have discontinued working the training-wall pending the completion of the dredging? Yes.
124. Is the part of the river from the entrance down to Chindera Point the most shallow and the most difficult for navigation? It was; but it is now the best.
125. It still requires a great amount of dredging does it not? There is a good deal of dredging to be done still along the north training-wall, and there is a patch of indurated sand to be removed.
126. When you get pass Chindera Point the object is to get to Murwillumbah;—are the obstacles very great then? There is only straightforward dredging work. There is one place near Stott's Island, which perhaps will require a month's work; but the chief obstruction is at Condong Flats on the reach south of Murwillumbah.
127. How far is it from the entrance to Chindera Point? Five miles.
128. And thence to Murwillumbah? It is $18\frac{1}{2}$ miles from the entrance to Murwillumbah.
129. If the proposed works are carried out, when do you think steamers will be able to get right up to Murwillumbah? I think we ought to have enough dredging done to get up to Murwillumbah within a couple of years.
130. *Mr. Black.*] How far does the tide run up towards Murwillumbah? The tidal action goes past Murwillumbah.
131. Then you have the influence of the tidal scour all the way? Yes.
132. And of course the tide runs in Terranora Creek? Yes.
133. Is that known as the North Arm? No, the North Arm is further up the creek, as shown on the plan.
134. That of course is not navigable? It is for small craft. Cane punts go up there.
135. *Chairman.*] How far does the northern breakwater, as shown on the plan, go southward from the present foreshore of the headland upon which Point Danger is situated? It terminates on the point of the reef.
136. Then you have an effectual North Head without your breakwater, although not quite so good? No; it is very bad at present. If I were obliged to confine myself to one work I should choose the north in preference to the south.
137. Will the current follow the northern breakwater? Yes. At present it goes across the channel into a bay on the northern shore, and is then shot out of the bay across the channel again. I look upon the first portion of the northern breakwater as absolutely essential.
138. As far as the harbour works at the Tweed are concerned the area of water lying to the west of the northern training-wall and between the township and the Tweed Heads is simply a matter of local importance? That is all.
139. If the entrance keeps open it will still furnish a sort of port for the pilot boat and tug boat, but if it does not keep open you can consider the question again? If it does not keep open we shall give the townspeople access to the river by a road across to the training-wall.
140. You mean at the southern end where the indurated sand is? Yes.

- C. W. Darley,** 141. What would be the effect of keeping an opening there in order to give access to the township, and going around in a semi-circular way by the other opening? You could not keep such an entrance open. The entrance will keep open where it is. I do not think there is any necessity for making an opening where you suggest, because we shall get the water in from the Terranora Creek.
- 16 Mar., 1898. 142. In your opinion, would it be safe for the ordinary river boats to pass round the northern end of the western training-wall in order to approach the present wharfs? I believe when the work is completed the work will be perfectly satisfactory and safe—safer than at present. Therefore, in my opinion, there is no necessity to leave any interval in the wall further to the south. I do not think you could keep an opening there—it would all silt up. By allowing a portion of the Terranora Creek to pass in behind the northern training-wall and along in the direction of the township amongst the indurated sand, the effect is that the water sweeps round and keeps the passage at the end of the northern breakwater open. The same action would close any channel in the training-wall.
143. *Mr. Black.*] Would it be difficult to remove the indurated sand? We could not remove it by our present sand-pump dredges; but I am providing for applying gutters to one of the sand-pump dredges for dealing with the indurated sand.
144. *Chairman.*] How much water is there over the indurated sand? At the outer point about 12 feet, and it slopes in to about 4 feet.

THURSDAY, 17 MARCH, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JAMES HOSKINS.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

The Hon. WILLIAM JOSEPH TRICKETT.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

FRANK FARNELL, Esq.

The Committee further considered the proposed Harbour Works at Tweed River.

Joseph Bede Kelly, Esq., M.P., sworn, and examined:—

- J. B. Kelly,** 145. *Chairman.*] You represent the Tweed Electorate in the Legislative Assembly? Yes.
- Esq., M.P.** 146. You desire to make a statement concerning the proposal before the Committee? Yes; although the whole area of the Tweed waters is in New South Wales, it runs northerly and empties into the sea just south of the Border, and 80 miles south of Brisbane. Formerly, trading-vessels could only just get in the Heads, when they could get in at all. Now they go up to Cave Point, about 5 miles, and tranship into punts and barges. When the works are completed the ocean steamers can go up to Murwillumbah, the chief town of the River, 18 miles. The district is a wonderfully fertile one. There is much good land on the Tweed—Crown lands, vast forest-reserves of timber, and rich agricultural land—but, with the water-carriage as it has been, the handicap has been too great to admit of settlement, as far back as it might go. Some of the finest dairying-lands in the Colony are still available for settlement on the Tweed—on the south, north, and middle arms and their tributaries. When the river is made navigable, and these lands opened up by roads, they will carry more population and be more valuable than the lands already occupied. I have surveyed most of the tributaries, and in addition to the block to settlement caused by the unnavigability of the river, settlement is blocked by the huge forest reserves intervening between present settlement and the lands further back that would be settled if proper facilities were afforded. The Tweed will grow almost anything—maize, potatoes, fruits of almost all descriptions, tropical and sub-tropical; sugar-cane as well as any part of Queensland; tea, coffee, lemons, oranges, guavas, pineapples, and bananas. The land is exceedingly rich and the rainfall abundant; and now that the climate has been overcome by refrigeration butter is produced in large quantities, and as grasses and green-stuff grow almost all the year round the dairy industry will be a vast one on the Tweed. The present population is but a fraction of what will be there in a few years if proper development of the river and its tributaries takes place. The Tweed has been called the “Australian Garden of Eden”—it is a veritable land flowing with milk and honey. The expenditure on this river has very much facilitated settlement and development; and the proposed expenditure is, in my opinion, not only justifiable, but should have taken place before this. I have never seen a public work in the Colony more justified by results, as far as it has gone. The works have been eminently successful so far, and I believe the cheapest of the kind carried out in the Colony. Their completion is more justified, I believe, than perhaps any other work now proposed in the Colony. Nature has done much for the district. The pioneers have had an arduous time of it. The richer a district the more difficult it is to subdue and develop. Heavy brush lands, rich soils, good rainfall, mean expensive roads and heavy outlay all round before any return is obtained. Most of the river work is done by droghering and punts, but there is no sufficient reason why the Tweed should not be made navigable to Murwillumbah for ocean-going boats. The “Augusta” and “Wollumbin,” making weekly trips, and vessels partly steam and partly sailing, as well as many sailing vessels, trade there. Some of these vessels at the present time only just get inside, and steamers such as the “Augusta” go as far as Cave Point. Besides the steamers I have mentioned, Messrs. Corrigan & Co. have steamers running to the Tweed, and there are also a great number of sailing vessels trading there. I can say from my own knowledge, and I have had a long acquaintance with the district, that the harbour works at the Tweed, as far as they have gone, have helped the river very considerably, and helped also the people of the district. At one time vessels had sometimes to lie out as long as a fortnight, and I think in one or two cases for a month. Now, however, vessels have seldom to lie out for more than a day, and very often are able to come in straight away. I believe, and it is the general belief of practical men, that if the harbour works are completed as proposed there will be no difficulty whatever in the navigation of the Tweed. I believe, as I said before, that the work on account of the beautiful little district, and its splendid climate will, perhaps, be more justified than any other similar work undertaken in the Colony.
- 17 Mar., 1898.

J. B. Kelly,
Esq., M.P.
17 Mar., 1898.

147. *Mr. Trickett.*] What is the extent of your Electorate? It commences at Point Danger, the north-eastern portion of the Colony, and is bounded then by the border between the two colonies, and the McPherson Range; thence south from where that range meets the Dividing Range between the waters of the Richmond and the Tweed; thence by that range southerly, continuing along, and embracing the waters of the Brunswick. That is all we call the Tweed proper; it embraces the Tweed and the Brunswick; but my district extends further in towards Lismore. The boundary is about half-way between Lismore and Byron Bay. The distance between those two places is 30 miles, so that my electorate extends to within about 15 miles of Lismore.
148. Which of the ports are in your electorate? The Tweed, the Brunswick, and Byron Bay, naming them in the order in which they go down the coast.
149. How long have you been connected with and an observer of this district? From about fifteen to seventeen years. I may mention that I was one of the pioneer surveyors of the Big Scrub.
150. You spoke just now about there being a large quantity of Crown land in the district;—have you any idea what is the extent of unoccupied Crown land? I could not tell you with proper definiteness without the map, but the information will be easily available.
151. Are the Crown lands much larger in area than the lands taken up? I believe they are, and they are better lands.
152. What is the course of procedure on the part of a person taking up land in the district;—after he has taken up his land, what has he to go through before he makes it suitable for his purpose? The experience of a man who knows the district well is different from that of a stranger. Unfortunately, those taking up land do not generally know the district when they go there; they just go there and see the district. Say a man takes up land in a haphazard sort of way; then he has to wait for the felling season in order to commence clearing his land.
153. When is that season? The best time to do that is in the months that are now coming on—May, June, or July; say, the fall of the year. Then he has to wait until he can get a fire. It is very much better, ordinarily, to allow the scrub to lie for from three to six months; some people let it lie for twelve months. This depends a good deal upon the season. Sometimes a man is lucky enough to get a fire, and in some years he will not get a fire. To get a proper fire through brush-land there is sometimes only one good day in the season, and sometimes even one good day does not occur, and they have to let it go sometimes to the following year. I have known cases, and I have had a case myself, where I have had to let it go again after that for another year; and of course in the meantime the scrub grew up afresh, and I had to get it brushed again. So that a man must have a lot of judgment, and not only a lot of judgment, but also a lot of good fortune in getting a burn immediately after the felling.
154. And that is the only mode of clearing? Yes. Any other method would cost a fortune, and it would not be worth it. Time must be an element in the clearing.
155. Then if the settler has the luck to have a fire and to have his timber burnt off, what about the roots and the stumps;—does all that timber die? In time the greater portion of the roots would die, especially if the settler could put the land under grass, and run stock on it. Then you could let time do the greater portion of the clearing of the roots; but of course there are a great number of stumps and roots that will not die.
156. That is the tree growth? Yes; particular kinds. For instance, the bean will never die; it has to be grubbed out. Other woods burn very readily, such as teak. Nearly every tree and stump has to be got rid of in its particular way. Some you leave to time, as in the case of the fig-tree, and also the boyong, or ironwood. If you leave this timber to time, you can almost kick it out of the ground in three or four years, although the stump originally would perhaps be almost as large in circumference as half this room.
157. Then the work of clearing is a pretty expensive process? Very expensive, no matter how you go about it, and no matter how favourable may be the conditions.
158. Under the most favourable conditions can you say what it would cost to clear the land? I could give my own estimate. I paid £2 10s. an acre for falling the land originally. You can get it done now for less than half that price. The cost depends to a great extent on the character of the season, and also whether labour is plentiful or otherwise.
159. When the settler has cleared his land, what does he do next? Originally it was difficult for him to know what to do. Sometimes he would put in sugar-cane, and sometimes he would put the land under grass and run stock upon it; but now, if he is within the range of a sugar-mill, he puts it under cane, because now the company take contracts they would not take years ago—that is on the high land. Then again, on account of the establishment of central creameries in the district the settler can now go in for dairying straight away, or as soon as he gets his land under grass.
160. Is the growing of cane decreasing in the district? Although a great number have gone out of cane-growing, taking it altogether it has not yet decreased. I believe there will be as much cane to be cut on the Tweed this year as ever there was. In fact, one of the officers up there told me he thought there would be more. At the same time a lot of people have gone out of cane. Of course, some people have gone into cane so much that they cannot get out, but must go on whatever happens.
161. Why? Well, they have a certain area planted, and they must follow it out. It would cost them a fortune to change from cane to anything else.
162. The land is too extensively ploughed and harrowed to think of converting it into mere grazing-land? They could not do it. It would mean their extinction.
163. Without wishing to go into the political question, if the Colonial Sugar Company took their mills away, would that have a disastrous effect on the cane-growing industry? Most of the people are depending on the Colonial Sugar Company. At Cudgen, there is another mill—Robb's mill—but that only deals with a limited area. The Sugar Company deals with cane-lands all up and down the river, and back also. If they took their mills away, it certainly would have a fearful effect; there would be no knowing where the end of it would be.
164. It is rumoured that a large number of people are going in for dairying in the Tweed District, with the result that it pays them better than growing sugar-cane;—is that a fact? As far as I can make out, dairying will not pay them as well as sugar-growing. Of course, a large number are going in for dairying. Some men were settled on land which is not suitable for cane-growing; others never were cane-growers—they were waiting for the dairying industry to develop. The industry has developed now, because central creameries have been established throughout the district.

- J. B. Kelly,
Esq., M.P.
17 Mar., 1898
165. *Chairman.*] Why not put it this way—that sugar-growing is intense culture? I was coming to that. I was going to say that there are a great number of people there who could not possibly go in for anything else, because they have limited holdings. Some of them have rented as small an area as 15 acres. I know men with 15 acres, and they have made a really good living out of cane-growing. It would be ridiculous for a man like that to think of going in for dairying, and others have 20 and 25 acres and so on. These are the class of men who must throw up their holdings. There are some favoured individuals who possibly would be strong enough to stand the strain, and be able, perhaps, to go in for something else. I know some who are going in for the two industries. They were cane-growers, and now they are afraid that something will happen, and they are gradually working in the other industry as well. But such cases will be very rare.
166. They are taking up extra land, I suppose? No, they are using the same land, but they were using it before merely for ordinary grazing purposes, while now they are turning it into dairy farms, and running the two things together.
167. When we hear it said that men are talking of giving up cane-growing and going in for dairying, that, as you have already explained, does not mean that they will convert highly-cultivated land used for cane-growing into grass land for the purpose of running cows on it? No, they could not do it.
168. To do that would mean a tremendous sacrifice of capital? Of course it would; it would simply mean their ruin. It might be done in a few cases, but no man could stand that. The growers have gone to great expense to put in their cane, which is a very expensive crop to grow.
169. The land is well suited for dairying purposes, is it not? I should say that the river-bank farms are not well suited for dairying, because they are not well watered, and also are liable to floods. No lands that are liable to floods, and are not naturally well watered, can be good dairying lands.
170. A great many dairymen from the Southern districts of the Colony are now located in your electorate, are they not? Yes; partly in my electorate, and partly in the adjoining electorate.
171. Is that emigration from the South to the North the result of their having got on well where they formerly were, and obtained sufficient money to enable them to go north and enlarge their operations in the Tweed district;—is not that generally the idea? No; as a rule, the men who come up from the South Coast are men with not very much capital; they have been crowded out in one way and another down South. Some of them come up with sufficient capital to buy farms, but the majority who are coming there now are men who prefer to take farms on the half system, or in any way they can get them. Under the half system, which has been lately introduced, the owner of the land supplies the stock and the working implements, and the dairyman takes charge of the cattle and runs the dairy, and the profits are divided.
172. Has that system been found, so far, to answer pretty well? Yes, as far as I can learn, and I have had some practical experience of it, it answers very well.
173. That shows, then, that the district is suitable for dairying purposes? Undoubtedly it is suitable for dairying.
174. Does this land require any expenditure for draining? There are two classes of lands in the district—the table-lands and the low lands. Of course, the up-lands are naturally drained; but the very fact of there being up-lands and low lands shows that the low lands want draining; they generally get the drainage from the table-land.
175. What class of crop are the low lands used for? The low lands are on the river banks. That is where the cane farmers went originally, and I have always contended that unfortunately they went in the worst position. They commenced growing cane on the river banks, and in places that were subject to floods and frost, and they ignored the best growing lands in the district. The cane-growing on the Tweed, within the last few years, has really been in a transition state, the growers have been going gradually away from the low lands on to the high lands. It is only within the last years that the Colonial Sugar Company have seen how much better the high lands are for sugar than the low lands, and they are now encouraging the change from the low lands to the high lands. I would put it this way—the high lands are suitable for dairying and cane; the low lands are only suitable for cane—at least they are not suitable for dairying, though I consider they are not so suitable for cane-growing as the high lands.
176. What has been the general experience of the district with regard to the cane-grower;—has he been a successful man? I should say yes, he has been successful. In very many cases, however, he has, if I might say so, been too successful. He did not spend the whole of his time cane-growing, as he would have done in any other crop. He was quite content to put the crop in and leave it, to a certain extent, to chance.
177. It is an easy crop to cultivate, is it not? It is a very difficult crop, properly looked after, but a good many of the growers have made an easy crop of it.
178. The whole of the labour employed is white labour, is it not? Not the whole of it, we wish it were; but the black labour has come down from Queensland, and on the plantation I mentioned just now—that of Robb & Co.—black labour is used.
179. The white man is able to work the cane in that district, is he not? Oh yes, it is a beautiful climate; there is nothing wrong with the climate.
180. The Colonial Sugar Company do not employ any black labour? No; some of the farmers employ black labour for stripping, but only for stripping, I think.
181. Are you able to say, from your general observation of the district, whether the sugar industry is likely to continue, or whether it is being gradually supplanted by the dairying industry? It is certainly not being supplanted so far; but of course that is a big question. As to whether the sugar industry will be able to continue or not will depend altogether on circumstances. I myself think that the industry is too big and too important for one man, or any set of men, to wipe it out.
182. Besides sugar growing and the dairying industry, what other sources of income have the settlers on the Tweed? Some of them are fruit-growers. They grow bananas, pine apples, tomatoes, passion fruit, and other fruits.
183. And they also grow maize? Yes; they grow maize to a large extent on the river banks. They also grow potatoes, pumpkins, and other things of that kind.
184. Are pigs bred there to any large extent? Yes. The pig and bacon business is a big industry on the Tweed.
185. There is also timber? Yes, some magnificent timber.

186. What are the chief kinds? There is still a good deal of cedar left back on the forest reserves and in the gorges. There is also pine—not the knotted pine—and teak, and there is also cudgery, which is a splendid timber for lining purposes, and there are the white beech and the brown beech. Besides these there are really good timbers for inside purposes, such as the black bean and the red bean, as well as the burgunyon, a timber something like cedar. The ordinary hardwoods are also obtained here. J. B. Kelly,
Esq., M.P.
17 Mar., 1898.
187. How many sawmills are there in the district? There is one at Mullumbimby, and one at Crab's Creek. The latter is such a large one that it supplies the whole district. In addition to these there are some smaller mills on the Tweed River.
188. Is timber exported to a considerable extent to Sydney and other places? Yes; though I understand that lately such a development has taken place in the district that the mills are kept going pretty busily supplying the local demands.
189. How do all these products you have named find their way to market—by steamer from the Tweed? Yes, by steamer and by sailing vessel; they all come that way.
190. You have a railway running from Lismore to Byron Bay? Yes. That brings timber into the Tweed, and brings the cane to the Quondong Mill, and it brings the cream into the creamery at Murwillumbah. It also brings cream to Byron Bay.
191. Is the district always likely to be dependent upon the port for sending away its products by steamer? Undoubtedly.
192. No railway could possibly come into competition with the navigation? No. The traffic must all find its way to the ocean.
193. Therefore this case is not like many others where if the country spent a large sum of money on harbour works, and also on the construction of a railway, the latter would have the effect of taking the trade away? No. The railway cannot possibly take the trade away from the river.
194. Your opinion is that the products of the district must always go away by vessel? Yes. My opinion is that the railway must be a feeder to the river—like a main road going into it.
195. What is the population of Murwillumbah, the principal town up the river? It is not a municipality, and the population would depend upon the area embraced. It will, however, give you an idea of the population when I tell you that the public meeting I held there the other day was attended by from 250 to 275 people.
196. Are there many other small towns in the electorate that use the river? Yes, there is Tumbulgum, and then there is Cudgen, on the Tweed. The branches of the river, including Terranora, the South Arm, the North Arm, and the Middle Arm, are also well settled with population.
197. What would be a fair area that a man would require for himself and family if he wished to take up some of these good Crown lands you have referred to? A good deal would depend upon what he was going in for. If he were going in for cane growing he could earn a very good living on 40 or 50 acres. Cultivating it properly, if things go on as they are going, he could earn a very good living on that area. But with dairying it is different—he would want very much more; and not only that, but on the 40 or 50 acres in growing cane he would have to employ other men besides himself; while in dairying, although requiring a very much larger area, he would do all the work himself.
198. I suppose, owing to the moisture there, it is a splendid grazing country? There is growth all the year round nearly. There is just about one month when the grass does not grow.
199. How many cows could you grass to the acre there? Though it may seem absurd, I really believe you could grass two or three cows to the acre. I mean, if you conserved all the surplus food of one month for any deficiency in another month. A great number of the farmers let the surplus feed of the summer go to waste. If there was a drought I do not say that the land would carry the stock I have mentioned. But I am convinced that if a man went systematically to work, and conserved the surplus feed of the best growing months for times of drought—if you can call it drought; sometimes if there is no rain for a few days the local people say there is a drought on—I say if you conserve the surplus feed I believe the land will carry two or three beasts to the acre comfortably.
200. *Mr. Wright.*] Of course you are speaking of the river flats now? No; I include also the chocolate ridges—the undulating country. I do not think there is much difference in the richness of the two classes of land.
201. *Mr. Trickett.*] Could you give us any idea of the value of land in this district? The value was very much greater four years ago than it is now.
202. What is the cause of the depression? I do not know. Some people say one thing, and some say another.
203. *Chairman.*] The general depression and the instability of the sugar industry? The latter has a good deal to do with it, no doubt. Some of the settlers think the sugar industry will go down.
204. *Mr. Trickett.*] What is recognised as about the value of uncleared brush land in the district? You could get it from £2 to £5 an acre. It depends of course upon the position as is the case with other lands. Sometimes a farm may be worth £5 an acre and the farm adjoining it may not be worth half that money.
205. But I mean a farm in a fair situation with easy access to the river where the settler can put his produce on the lighters. Land of that kind, I suppose, would be worth £2 or £5 an acre? Where you would be able to do that the land would be cleared, and of course more valuable. Where the land is not cleared, as a rule, it is further back.
206. And it is worth from £2 to £5 an acre? Yes.
207. If this work is carried out and the river becomes navigable as far up as Murwillumbah, will the lightering of produce be then done away with? Yes, on the main river.
208. And as regards the tributaries? Something of the same sort would have to go on.
209. How do they manage for roads up there—are they pretty good? Yes, considering the richness of the soil and the rainfall, the roads are not bad.
210. But I suppose it would be very difficult to travel over the natural surface of the country with a load? It would be impossible. Every bit of road there must be formed before it is at all passable, and that is a very expensive item.
211. But as population increases I suppose the roads will extend further back? Yes.
212. Whatever may be the fate of the sugar industry, do you consider that the Tweed is likely always to be a large agricultural district? Decidedly; there is nothing to rub it out.

- J. B. Kelly, Esq., M.P.
17 Mar., 1898.
213. As you said just now, it is too good a district to be destroyed by the checking of one industry? Individuals might be destroyed, but not the district.
214. It is, as you say, one of the most fertile in Australia? It would be impossible to destroy a place like the Tweed. Nothing short of an earthquake would do it.
215. Coming to the works under consideration, you are aware that the Queensland Government are building a railway down towards the New South Wales border? Yes, I believe they are inclined to do that; in fact, I understand they have promised to do it.
216. What effect will that have upon the trade of the Tweed? Undoubtedly it will divert some of the trade of the district to Brisbane.
217. What kind of trade? Possibly the importers' trade. Goods sold in the district will possibly come to a large extent from Brisbane.
218. How far is it from Brisbane to the border? About 80 miles. The Queensland railway extends about 60 miles from Brisbane, leaving only 20 miles intervening between the terminus and the Tweed.
219. Do much goods come down from Brisbane? Not a great deal, and principally light goods. When I was up there on the last occasion a number of commercial travellers from Brisbane were taking good orders for light goods.
220. With no Border duties. I suppose there would be a certain amount of rivalry on the part of the railway if it were brought down to our Border? There would be a certain amount of trade done along the railway undoubtedly.
221. But you think that would only apply to imports? I think so. Take the butter industry. All the dairyman's produce is sent to a central creamery, and there are agencies in Sydney with access to the London market for the surplus. The butter and also the sugar would continue to come to Sydney, and also the pig production of the district, no matter what other means of communication existed.
222. *Chairman.*] There is no market in Queensland for farming stuff? I do not think there is.
223. *Mr. Trickett.*] It would naturally come to our own Colony? I have not the slightest doubt it would all come to Sydney, and, of course, that would mean that the great bulk of the business would be done with Sydney.
224. You have watched the construction of the eastern training-bank for some time? Yes.
225. And you are able to say it has answered satisfactorily? Undoubtedly. The work that has been done has acted very well indeed. I look upon it as eminently satisfactory as far as it has gone.
226. And in consequence of the work that has been constructed, the steamers are now always able to get inside the river? Yes; they are nearly always able to do so. When they cannot get in there, they cannot get in at other places.
227. Therefore, if the work is carried out as proposed by Mr. Darley, you think, from your engineering experience and your local knowledge and observation, that it is likely in every way to be a success? I feel satisfied it will be a great success.
228. *Mr. Lec.*] How does the produce of the Tweed get to market at present? By means of steamers and sailing boats.
229. All by the river? Yes.
230. Has the construction of the railway to Murwillumbah deprived the Tweed of any of its legitimate trade? None whatever. In fact, it is the other way—the railway is acting as a feeder to the river.
231. Has it been the practice there to ship a certain class of goods by rail from Murwillumbah either to Byron Bay or Lismore for shipment in ocean steamers? No; it is the other way about sometimes. I saw some goods that might have gone in by the Tweed, but which went by the railway, the shippers paying extra freight, because the storekeepers wanted the goods very badly.
232. They would be goods coming from Sydney to your district? Yes.
233. In the case of dairy produce, and principally butter, would not that be more likely to be forwarded by train to Byron Bay, to be shipped thence by steamer, than to be sent by the smaller steamers that trade from the Tweed? As a matter of fact, the steamers that go to the Tweed are about the same size as those that go to Byron Bay.
234. The larger boats go to Richmond River? Yes; those boats are larger, but not a great deal.
235. If the Queensland Government carry out their promise to extend the railway down to Coolangatta, which is right alongside our own township, do you think there is a strong probability of passengers taking that route to Brisbane and going thence by the larger steamers to Sydney in preference to taking the small steamers that would trade to the Tweed? I fancy that the passengers of the future will go *via* Byron Bay. I do not think they would go to Brisbane and then come back again. I do not see how the Brisbane route could compete with the direct service. You would have, in the first place, to go 80 miles north from the mouth of the river, and from Murwillumbah you would have to go 20 miles further, and from the other tributaries of the Tweed further south a still greater distance.
236. But are there not other considerations, such as greater comfort and safety? Yes; but we hope that eventually we shall have just as much comfort as they have, or pretty nearly as much.
237. You are aware that at the best you cannot hope to get any steamer up the river which will draw more than 6 feet of water? We hope to get steamers up there drawing 10 and 11 feet of water.
238. Suppose that in the future the railway at present at Murwillumbah is extended down to Point Danger for the purpose of meeting the Queensland line, what effect will that have upon the trade of the Tweed? It will be a very good thing for the district. It would cause developments in directions that are present lying dormant. It would create a class of traffic which at present does not exist.
239. But would it not detract from the importance of the river? I do not think so. The river and the railway will scarcely be in competition. A different class of traffic goes by water from that carried by rail. The two modes of transit would work together, and not in competition.
240. Are you of opinion that the class of produce that can be raised in your fertile district can be carried as cheaply on a railway, no matter from what point, as it can by water? That is a very debatable point. They have not solved the question in America yet.
241. If the railway just referred to were completed, do you think you would be able to compete with it? Speaking generally, certainly. But a class of trade and traffic would grow up on the railway that would not grow up on the river.
242. At present we know the staple products of your district;—those, no doubt, will be the staple products for many years to come? For some years, yes. We have tea and coffee, for instance, that grow excellently there.

243-4. But at present you have certain staple products? Yes.

245. They are of a heavy character, are they not? Yes.

246. If you had a railway connected either with Brisbane or Sydney could you forward the products of the district by that railway as cheaply as you could forward them by water? No. Our railways can scarcely compete with our main roads in some cases. Under the present system they certainly would not compete with water carriage.

247. Then if you are satisfied upon that point, I presume, you are of opinion that, irrespective of any railway extension in the future, the necessities of the district demand that the port of the Tweed should be kept open? Yes.

J. B. Kelly,
Esq., M.P.
17 Mar., 1898.

The Hon. Alexander Kethel, M.L.C., sworn, and examined:—

248. *Mr. Clarke.*] You are a Member of the Legislative Council of New South Wales? Yes.

249. I believe you have been a long time connected with the Tweed district? Yes, for forty-five years. I lost a ship on the Tweed bar nearly forty-five years ago.

250. Have you considered the difficulties which people have to put up with in not having proper water communication with Sydney and other parts of the Colony? I have remarked it and discussed it frequently.

251. And you consider that some plan such as that proposed is necessary in the interests of the people living in the district? Yes, I think so.

252. Can you give us any opinion as to the proposed improvements? As far as I can judge, they seem in accordance with common-sense and experience. The only thing is this: I have heard some of the captains there discuss the possibility of sending the river out straight in a north-easterly direction through the neck of sand shown on the plan, coming out to the north of Point Danger. But the objection to that is, I think, that it would be within the Queensland territory, and we should lose control of the mouth of the river.

253. Can you inform the Committee what is the depth of water on the bar at the present time? No, I cannot.

254. What was the depth when you left the country some twelve months ago? I think from 7 to 8 feet was the average depth on the bar at high-water.

255. That is hardly a sufficient depth of water for vessels of any size to go in and out safely? No, because to conduct a shipping trade with any profit you should be able to send a good-sized vessel. The larger the vessel, as a rule, the lower the rates of freight, and the result of the bar being as bad as it is and has been of late years is that the freight from the Tweed to Sydney is from 50 to 75 per cent. higher than the freight from the Richmond to Sydney at the present time.

256. That is entirely caused by the shallowness of the bar and the inability of vessels of any size to go in and out? Yes. There are two causes—first, because only small vessels can go into the harbour; and secondly, after they get in they have to lie at the Heads and engage droghers and other boats to deliver their cargoes to the various places on the river, whereas if these improvements were carried out vessels of fair tonnage could not only enter the river but could proceed up at least as far as Chindera, or perhaps Murwillumbah, and deliver the goods at the wharfs where required. They would thus be able to dispense with the use of punts or droghers, and it would make a difference of from 25 to 50 per cent. in the rate of freight.

257. About £35,000 has been expended during the last few years on the improvements to the harbour, and it is now proposed to spend about £40,000 more; it is supposed that there will then be about 10 feet of water as far as Murwillumbah, or nearly as far;—that you think would be a very judicious proceeding? I think so, because so far as they have been carried out, judging by what I saw when I was last there, they have been decidedly effective, and have met all the objects for which they were constructed, and I believe a continuation of the same scheme will have the result you anticipate.

258. Would the improvement of the river interfere with the railway from Murwillumbah to Lismore? I think not. I think it would rather increase the traffic from the intermediate parts of the line to the Tweed. Lately I have had to have my timber from the Buringbar taken by rail nearly 50 miles to Lismore, and there is a great quantity of material in and about that part of the country which it will not pay to carry so far. But if the freight at the Tweed were reduced it would pay us to send considerable quantities by rail from these intermediate portions of the district into the Tweed to be shipped from Murwillumbah to Sydney.

259. Do you ship any at Byron Bay at the present time? I have not done so for several years.

260. If the Queensland Government carried a railway to the New South Wales border do you think that would militate against the trade from the Tweed to Sydney? It might to some extent, but I do not think it would to any great extent, because it will not pay to send any heavy traffic by train. Perishable articles might be sent to the Brisbane market. We may as well acknowledge the fact at once that Brisbane is the natural market for perishable produce from the Tweed. But inasmuch as Sydney must always remain the great shipping port of eastern Australia, and as the cold storage system is becoming more and more perfectly developed, it is certain that the introduction of this system will enable us to have the most perishable products of the Tweed brought to Sydney; and I believe that, as there is a wider market and, I believe, better prices in Sydney, the small drainage of traffic to Brisbane will not to any extent affect the volume of trade with Sydney.

261. Do you think any great quantity of goods would come from Brisbane to the Tweed for the supply of the people there? I do not think so. The greater part of the capital invested in the Tweed is invested by Sydney people, and their communications and connections are to a very large extent with Sydney.

262. And I suppose the Sydney market as a rule is the cheapest from which to get supplies? Yes.

263. So far as you have heard, having been out of the country for some time, this expenditure as far as it has gone has been successful? I believe so. From my personal observation I should say that the navigation of the Tweed has been wonderfully improved by the works already constructed.

264. Can you say whether the works are being carried out by contract or by day labour? I cannot say. I know that the officers in charge of the works have been most conscientious, painstaking, and capable men.

265. What are the products of the district independently of timber? As far as I am aware the principal products have been sugar and maize. The maize, however, except in a few isolated instances, is not a success. The weevil is frequently found in the cob before it matures. The temperature at the Tweed in summer is specially favourable to the development of the weevil, and I think the maize trade, except for local purposes, will never be much of a success at the Tweed.

266.

Hon.
A. Kethel,
M.L.C.
17 Mar., 1898.

Hon.
A. Kethel,
M.L.C.
Mar., 1898.

266. Is there any cedar now left at the Tweed? Very little. The cedar trade is a thing of the past almost. The only cedar coming from the northern rivers to Sydney is cedar that has been felled for a number of years. Some has been down for from twelve to twenty years, and we have men scratching away out in the far back district cross-cutting and sending in such portions of this timber as are fit for the market.

267. The principal products, then, are sugar, maize, and, I suppose, butter? Dairying has lately taken a start there, and there is no question about the Tweed as a dairying district. When the rest of the Colony has been barren from drought, I have seen in the North clover paddocks up to your knees with rich succulent herbage.

268. Can you say whether the sugar-growing will pay as well as or better than dairying? That is a question on which even experts disagree. I believe for my own part, that, duty or no duty, sugar-planting carried on thoroughly will pay. The results from the co-operative companies in Queensland show that they can produce sugar at something like £7 or £8 a ton.

269. *Mr. Wright.*] With black labour? No; down between Bundaberg and Brisbane—and if they can turn it out at £7, £8, or £9 per ton we ought to be able to turn it out at £10, which would allow an ample margin; but my opinion is that the district is more suitable for dairying than any other district in the Colony.

270. On what area of land do you think a family could make a living at sugar-growing alone? I could not risk an opinion on that. It depends a great deal upon the man and the situation of the farm.

271. We have it in evidence that a family could subsist on from 40 to 50 acres by sugar-growing;—do you think that is correct? I question that, because the cane has to be renewed every four or five years, and that means that for two years a portion of the farm must remain unproductive.

272. Could dairying be carried on successfully on an area of 40 or 50 acres? Yes; if they did the same as our South Coast farmers are doing now—not depending simply on natural grasses, but growing green feed. By such a method you can feed a cow to the acre—two cows to the acre, I believe.

273. Is it not more expensive to go into dairying, requiring the purchase of cattle and other appliances, than sugar-growing? That is a question I would not care to venture a positive opinion upon. If a man starts with fifty head of cows, and has to pay £5, £6, and £8 a beast, that runs into a good deal of capital. On the other hand, his returns begin immediately, whereas when he clears away his farm for sugar he has to wait two years. Sometimes he may be fortunate enough to get a return within a year after he puts his plants in; but, as a rule, he has to wait two years for his first crop, and before he can put that crop in he must have two or three burnings off to get rid of his heavy timber. Where a man goes in for dairying however, as soon as he has got a good running fire on his farm he can put on his grass and green crop at once, and commence to operate, and get his return within three months from the commencement.

274. I understand that the expense of clearing land on the Tweed and the Richmond arises from the fact that it is heavy brush land? Yes; I have had some land cleared for about £5, and other land again has cost me £10 an acre to clear.

275. Was the average cost about £8? I should say from £5 to £8 an acre to clear it right out.

276. A good many farmers have come up lately from the South Coast;—can you say whether they have come up to select land, or whether they have purchased land from those who previously held it? I have known several instances where they have purchased farms from the original selectors who had not the knowledge necessary to carry on the work successfully. The South Coast men have come in with their experience, and entered upon the farms, which they have rented, and in many cases purchased.

277. I suppose they must have brought some capital with them before they could do that? Yes, and dairy stock also.

278. A large quantity of pigs are reared in the Tweed district, and I believe a bacon factory has been erected at Byron Bay? It was being erected when I was there. Wherever they have butter factories and creameries, unquestionably they have pig-feed, and can rear pigs successfully.

279. On the whole, so far as you can give an opinion, you think that the proposed expenditure on the improvement of the Tweed is justifiable? I believe so—most justifiable. Around the head-waters of the Tweed, especially on the South Arm, the Middle Arm, and the North Arm, there is a very large extent of unalienated Crown lands, which I believe would soon be taken up by free selectors, if facilities were afforded to get their produce to market.

280. *Mr. Lee.*] You have known the district for a long time, and have seen its rise and progress? Yes. 281. Are you of opinion that the time has arrived when permanent improvements should be made to the Tweed River at a cost, in addition to what has been already spent, of £43,000? I believe it is both expedient and desirable that the proposed further improvements should be carried out in order to get the full benefit resulting from what has been already done.

282. That is the work from Chindera Point down to the Heads? Yes.

283. From your long intimate knowledge of the district, and what you believe will be its future, do you think it is in the interests of the country to make such improvements to that river as will permanently open it for navigation? I emphatically believe so.

284. Notwithstanding the fact that we are threatened with railway communication on the north, and with a possible extension from Murwillumbah to join that, you still hold the opinion that the waterway should be maintained? The railways, I believe, will have to start from the Heads. As far as Queensland is concerned, I do not believe they would attempt to construct a railway over the McPherson Range to Murwillumbah. It would be a most costly work, and as they will construct their railway to the Heads, and have the terminus at Coolangatta, it would not affect the question as to the necessity for a navigable water-way on the river. It would rather accentuate the necessity for such a work.

285. In other words, the district is improving at present and there is a possibility of still greater improvement in the future? Yes.

286. That is to say it is a part of the country that should carry a very large population? Yes.

287. If the country expends a large amount of money in permanently keeping the river open, will not that be detracted from in the future if railway extension is taken in the locality from Queensland, or from Lismore? The extension of the Queensland railway cannot in any way affect the question as to the usefulness of this water-way or the desirableness of making it. If we construct a railway from the upper waters of the Tweed down to the Heads, running more or less parallel with the river banks, that may affect the water-way slightly, but, I believe, very slightly indeed.

288. Do you believe that even under those extreme conditions it would be possible to send the heavy produce raised on the Tweed River to market by railway when it could be carried so much cheaper by water? Certainly not.

289. Under those circumstances, are you of opinion that if a permanent navigable river is maintained it will hold its own against any railway that may be extended there? Yes; I believe it will more than hold its own as far as the heavy traffic is concerned.

290. Do you think it is a work which should be undertaken now, or which might be left to some time in the future? I would rather see it carried into effect at once.

291. Do you know the northern entrance just at Point Danger;—is it a rocky entrance? Yes; studded with basalt boulders.

292. It is proposed to build a breakwater along there;—do you think that is necessary? I do. All the wrecks that have taken place at the Tweed since it has been navigated have occurred on those boulders. A training-wall carried out in an easterly or east-north-east direction, as indicated on the map, would send the scour of the tide out clear of that treacherous North Head, and make the navigation of the river far safer and easier.

293. Do you think an entrance 500 feet wide would be sufficient? I think so. I think it ample for any vessel that will seek to enter there.

294. It has been a most difficult and dangerous port? Yes, next to the Manning I think it has been one of the worst on the coast.

295. And communication by water has been very irregular? Yes.

296. Do you think the immediate result of the completion of these works would be the lowering of freights to the river? I do.

297. Do you think that course would be adopted? I am almost certain it would, and this is one reason:—At present the insurance companies are very backward in taking a risk for any steamer of decent size going to the Tweed. I was commissioned by a gentleman to get estimates for a steamer when I was in England last year. I obtained estimates, and plans, and specifications for a steamer from several builders, and after going to all the trouble it was found that none of the insurance companies in Australia would cover a boat of that class to run to the Tweed. Hence as an owner must take greater risk than he would running to any other port, he must make up for that risk by an additional charge for freight and passage money.

298. You are aware that it is not proposed to make any special port charge? I was not aware of that.

299. While the State does not derive any revenue towards interest and expenditure it will be giving the residents of that part of the country advantages they very much require in the shape of cheap freights? Yes, and in addition to that the work will, in my opinion, cause an immediate and a very large increase in the population of the district, and consequently an increase in its products. At present only those on the immediate banks of the river are able to produce anything, because of the difficulty of getting the produce to market at a price that would leave a margin of profit to the grower.

300. Have you, in the course of your experience either in this country or in any other part of the world, found it to be the policy of any country to close waterways for the purpose of advancing the extension of railways or any other means of communication? No; I have never heard of any man having the power to do such a thing being so largely tainted with insanity as to make such a proposition.

301. Is it not the policy of every country in the world to keep open its waterways, notwithstanding that other means of communication may exist? Yes.

Bartholomew Martin Corrigan, shipowner, sworn, and examined:—

302. *Mr. Lee.*] You are a shipowner trading to the Tweed River? Yes.

303. What is the name of your steamer? The "Friendship," with a tonnage of 142 tons.

304. Does she carry passengers as well as cargo? No, only cargo.

305. What is her draught? Heavily laden, about 8 ft. 6 in.

306. What is about the draught of the sailing vessels you send to the Tweed? Something about the same.

307. How long have you been trading there? About twenty years.

308. Consequently you are well acquainted with the bar? No; I cannot speak of it from personal knowledge.

309. But you know about it from the captains of your boats? Yes, I know a good deal in that way.

310. And I suppose you have been so unfortunate to have a wreck or two up there? I had only one wreck, and that was years ago.

311. Was that at the Heads? Yes.

312. What were the freights twenty years ago? From 15s. to 16s. per ton each way, and now they are about 10s.

313. What special difficulties have you to encounter in trading to the river at the present time? After getting over the bar you cannot go more than a few miles with your cargo, but have to employ lighters to carry it up the river. This means an additional expense of from 1s. to 2s. a ton. That is one difficulty. Then, again, you cannot take a vessel in of a large size. You cannot take a vessel in with safety drawing more than from 8 feet to 8 feet 6 inches.

314. You are aware that the object of the proposed works is to improve the entrance to the river, and up as far as Chindera Point? Yes.

315. Would not your remarks apply to the improvement of the whole of the river as far as Murwillumbah? Yes; it would be necessary to improve the river as far as Murwillumbah to give any benefit to the people in the shape of cheap freights. Unless the river is improved as far as Murwillumbah it will still be necessary to employ punts.

316. Do you find any great difficulty at the present time in entering the Heads, and getting as far as Chindera Point? Not much difficulty. The bar has been very good lately for vessels with a draught of about 8 feet or 8 feet 6 inches.

317. Has not this improvement been the result of the works already carried out in the river? I think so, because I recollect that on one occasion a little vessel was detained behind the bar for something like three months. You could walk across the bar at low tide without wetting your boots. The improvements have been of great advantage and the bar has been very fair now for some years.

318. Would that lead you to the opinion that if the works were carried out in full they would be effective as far as the entrance is concerned? Yes.

319.

Hon.
A. Kethel,
M.L.C.

17 Mar., 1898.

B. M.
Corrigan.

17 Mar., 1898.

B. M.
Corrigan.
17 Mar., 1898.

319. I suppose the advantage to you personally would be that you would be able to get cheaper insurance for your ships, or possibly would be able to insure them where you cannot do so at all now? Well I do not know that it would make any great difference in that respect.

320. Would you be able to carry the stuff to and from the river at a cheaper rate? Yes. Two shillings a ton at least, which would represent the difference between taking the vessel up the river and the present system of lighterage.

321. What quantity of stuff do you bring down and take up to the Tweed in the course of a year? My vessels do not run there all the year round, but only in the sugar season. They take up from 2,000 to 3,000 tons and bring the same quantity back.

322. *Chairman.*] That would be about 5,000 tons both ways? Yes.

323. Therefore on your trade 2s. a ton would represent a saving of £500 a year? Yes; the people would gain that in the reduction of freights.

324. *Mr. Lee.*] The freight is now 10s., but it would be brought down to 8s.? Yes.

325. Would you be able to carry on your business profitably at 8s. a ton? Yes, it would pay me fairly well at 8s.

326. And I presume that if you had a greater depth of water all the way up to Murwillumbah you would put on bigger vessels with larger cargoes? It would all depend upon the depth of water you would get all the way up the river to Murwillumbah. If there were sufficient water of course there would be larger vessels; but I do not know that the freight would be much less than 8s., because we get something like that freight for the Richmond River where the bar is better and the river is better.

327. If at the present time under the disadvantages that exist you are able to carry on the trade profitably at a charge of 8s. a ton, I presume you do not fear the extension of railways into the district? I could not say anything with reference to railways.

328. Since the training-walls have been carried out you have had a very fair bar, and consequently you have had none of the detentions you used to have? No; the improvements have been a great benefit.

329. Your trouble now is in getting up the river? Yes.

330. Then, is it your opinion that even if these works are carried out it will be necessary before they can give full benefit to the district to have the whole of the river dredged or otherwise attended to right up to Murwillumbah? Yes; I am of that opinion. Before we shall be able to have those cheap freights I spoke of we shall have to get right up to the head of the river, and then it will be a benefit to the whole district.

331. Then you look upon the improvements at the Heads as being only part of the necessary work? That is all.

332. You believe they are good? They are good, inasmuch as they enable us to go in and out of the river. But the improvement does not extend to the head of the river.

333. Do you find the quantity of stuff carried increasing? Yes.

334. What class of goods? The principal goods at the present time are sugar and timber. They have lately started creamery works, but that industry is very young at present.

335. Do you bring any potatoes from there? Very little.

336. Any maize? Very little.

337. How is that? I do not know. They do not go in for maize as much as sugar. It seems to be a great district for sugar, the trade in which is improving every year.

338. You carry raw sugar for the sugar company? Yes.

339. You have charters with the Sugar Company? Yes; and with Mr. Robb, who is another large sugar-grower. At Cudgen, he grows from 1,500 to 2,000 tons of sugar a year. I think the Sugar Company grow about 6,000 tons.

340. What other vessels are trading to the river? Mr. Langley has sailing vessels.

341. And steamers also? No.

342. Are they kept constantly employed? No; only in the sugar season.

343. The sugar is carried in the sailing vessels, as well as in the steamers? Yes; sugar is the principal freight, and there is a little timber.

344. There are some passenger steamers running there? Yes; the "Augusta," the "Wollumbin," and the "Friendship."

345. It has been the sugar chiefly that has increased? Yes.

346. And in consequence of the sugar industry you have carried coals, stores, and things of that kind? Yes; for every ton of sugar there is a ton of coal carried or thereabouts.

347. Has there been a large increase in general store goods? Yes, a very fair increase.

348. I suppose you carry all classes of stores? Yes.

349. I suppose that is the class of goods you have a difficulty in distributing on the river, at the proper centres? Yes; you have to distribute them at the different wharfs as you go along, in the punts.

350. I suppose the Sugar Company have their own punts;—they punt the sugar down, and punt the coal back? They have their own punts, and we work them. We have a launch, and we tow the punts up, and tow them down.

351. Do you find any difficulty with your vessels in the river in time of flood? Not a great difficulty. Of course there is a good rush of water, but we have to provide for that. We have never had any losses, and have always taken the necessary precautions. I only know of two vessels being lost on the Tweed bar—the "Chindera" and the "True Blue."

352. Do you trade to any other port on the north coast? Yes; I do a great deal of business on the Richmond River in connection with the Sugar Company.

353. Do you think the Tweed River has shown as much progress in proportion as the other rivers? I think it has shown more progress.

354. What is your idea of the future of the Tweed? If the duty is knocked off the sugar I do not know what the consequences will be, because the Sugar Company tell us that if the whole of the duty is abolished they will close their mills and take them away from the district. I do not know what will be the future of the Richmond River and the Tweed River if the Sugar Company take away that industry, as they say positively they will do.

355. If the Sugar Company close their sugar-mills there will be a very serious loss in trade? There will be a terribly serious loss in everything.

356. Suppose, for a moment, that the sugar industry wholly stopped on the Tweed, do you think there is sufficient produce from that district to justify the State in making a perfectly safe port there? As far as a safe port is concerned, I suppose it would be required in any case. It would be necessary if only one or two vessels traded there.

B. M.
Corrigan.
17 Mar., 1898.

357. Do you incline to this opinion: That the land in that district is so good and the rainfall so large that it is bound to be settled upon—if not for sugar, then for some other purpose? I think it will be bound to be settled upon, from what I can learn from different people as to its capabilities; but, in my opinion, if the sugar industry is done away with, it will be a considerable time before they will be able to have sufficient produce from whatever industry they may adopt to carry on a trade equal to that carried on at present. The Sugar Company sends from the Richmond River about 12,000 tons a year, and takes about 12,000 tons of coal back again, besides general goods required from Sydney, to support from 30,000 to 40,000 people carrying on the industry. In the case of the Tweed River, the trade amounts to from 6,000 to about 8,000 tons each way. It would be a long time before they were able to send that quantity of produce to the market from any other source.

358. Still, you hold that the country is of such a character that it is bound to improve? I cannot say otherwise. It must go ahead, because I believe the land is of excellent quality.

FRIDAY, 18 MARCH, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JAMES HOSKINS.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

The Hon. WILLIAM JOSEPH TRICKETT.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

FRANK FARNELL, Esq.

The Committee further considered the proposed Harbour Works at Tweed River.

Lawrence Tulloch, master of the steamer "Augusta," sworn, and examined:—

359. *Mr. Wright.*] What water does the "Augusta" draw when loaded? When fully loaded, she draws 8 ft. 6 in. That would be with 200 tons. L. Tulloch.

360. Have you any difficulty in getting in or out of the bar now when the steamer is fully loaded? We never load her as deeply as that. 18 Mar., 1898.

361. What is your usual draught? About 7 ft. 6 in.

362. Can the bar be crossed at all times with a draught of 7 ft. 6 in.? No, not always. At the present time you can cross with 8 feet, but there have been a considerable number of freshets lately.

363. You are acquainted with the works which have already been carried out in the river? Yes.

364. Have they effected much improvement in the entrance? Not in the entrance; but they have made a great improvement in the river itself.

365. Have the works not had the effect of deepening the bar? I do not think so. They are too far away from the bar to improve it.

366. What has been the effect of the existing works? You can get right up to Cave Point loaded now.

367. How far could you get up before the construction of the works? We could only get up to Cave Point drawing 3 ft. 6 in. at high water. At places you could walk across the river at low water before the existing works were constructed.

368. What effect do you suppose the additional works now proposed will have upon the river? I think that if the breakwater on the northern side is carried out as far as the outlying rocks it will improve the bar a great deal.

369. What is the nature of the current on the coast;—has it a northerly or southerly set? It has a southerly set half a mile off from the shore, but there is a northerly set along the beach, and the heavier the sea is the greater is the northerly set there.

370. With the southerly current, and with the works constructed out as far as the rocks to which you have referred, do you think the sand taken out of the river would be carried away? Yes.

371. So that the effect of the works will be to deepen both the bar and the river itself? Most certainly.

372. You do not go above Cave Point now? Not drawing over 7 feet.

373. Do you think the river will gradually deepen above Cave Point if the proposed works are carried out? I do not know that it will deepen more than it has deepened at present. At Cave Point there is enough water for the vessels trading there.

374. We are told that the construction of the existing works has deepened the river considerably by increasing the scour;—is not the inference that the deepening process will continue up further if the works are extended? In the course of time it might.

375. If you remove the bar by scour, and the river scours upwards, the navigation must be improved? Quite so; but I should not like to say to what extent the proposed works would deepen the river beyond Cave Point.

376. The existing works have affected the river as far as Cave Point without any dredging? Yes.

377. If the bar is further deepened by scour, the natural inference is that the upper portion of the river also will be deepened? It might be so.

378. Have you been long trading to the Tweed? Twelve years.

379. You know the river well? Yes.

380. You know that before the construction of the existing works the river was practically useless for navigation purposes? Quite useless.

381. You see the little opening in the western training-wall for pilot-boats and tugs;—do you think it will be wise to leave that opening? I do not think it would do any harm.

382. It is left to form a kind of wave-trap;—do you think it would be of any use for that purpose? I cannot say that it would be of much use for that purpose.

- L. Tulloch.
18 Mar., 1898.
383. You think it would be no detriment to the work to leave it there? No detriment whatever; the current will rush straight past that point.
384. You think the construction of the northern breakwater, as far as the point shown by the red and white lines, will be enough for the time being? Yes; but the works are not carried far enough on the southern side. The principal sand which blocks up the bar comes from the southward with the inset of the current.
385. In heavy weather there is a northerly set inshore, and you think that will fill up the mouth of the harbour, unless the southern wall is carried out quite as far as proposed? Yes.
386. You think that the southern breakwater should be carried out to the full limit shown? Yes; to make a permanent channel.
387. But you think there is no necessity to carry the northern breakwater beyond the rocks? No.
388. How long have you been able to go up to Cave Point with your boats? About six or nine months.
389. Before the construction of the works you could not get into the river at all? No; we were down to 3 feet 6 inches on the top of high-water.
390. Is 7 feet 6 inches the greatest depth you can get up with now? At times we can load down to 8 feet.
391. If it is said by the Department that when the works are completed as shown on the plan vessels will be able to draw up to 15 feet, would you say that was feasible? No; they might take 12 feet.
392. But you think that would be the maximum? Yes.
393. In general terms, I understand that you approve of the works that have been carried out so far, and that you think that the completion of those works will make a good harbour of the Tweed? Yes.

John Pugh, master of the steamer "Wollumbin," sworn, and examined:—

- J. Pugh.
18 Mar., 1898.
394. *Mr. Hassall.*] You are master of the steamer "Wollumbin," trading to the Tweed River? Yes; but we call at other ports.
395. Do you go into any other rivers besides the Tweed? I go into the Clarence occasionally when weatherbound.
396. How long have you been trading at the Tweed? I first went there fifteen years ago.
397. Was the river then in its natural state? It was in a very bad state then.
398. No improvement had been effected to navigation at that time? No. Since then a number of alterations have been made.
399. What draught of water had you when you first entered the river? When I was in command of the schooner "Liffey" we drew about 7 feet 6 inches when loaded.
400. Could you get into the river then? At spring tides.
401. How far up could you go? Only just inside the heads.
402. Since then improvements have been carried out, and you are now in command of a vessel drawing how much? About 8 ft. 6 in. or 8 ft. 8 in. when loaded. We do not load fully on the Tweed, as a rule.
403. How far can you run up the river now? Three or four trips ago I went up to Cudgen wharf.
404. Where does the main traffic from the river come from? We take sugar, timber, and hides.
405. How is it brought down? By lighter. The timber is rafted down.
406. How far up do you go, as a rule? To Cave Point.
407. Have you any difficulty in navigation now? At the bar, principally.
408. If the bar were improved, you would be able to get in and out almost at any time to load or unload, as the case might be? If the bar were improved.
409. With regard to the improvements which have been carried out during the time you have been trading to the river, have they been beneficial to navigation? Yes.
410. Training-walls have been erected? Yes.
411. What has been the result? We can go to Cave Point now, whereas the Sugar Company's punts could not get over the flats years ago.
412. The training-walls have had the effect of making a good channel as far as Cave Point, and at spring tides further? Yes. I have been up there drawing 8 ft. 6 in. Near where the dredge is working now there were sand-flats fourteen years ago.
413. How far, in your opinion, should the proposed breakwater at the northern head run out? I do not think it would require to run out much further than where the rocks extend.
414. Is there deep water just outside the rocks? Not exactly outside. The principal difficulty at the entrance to the heads is the south-east weather.
415. That drifts the sand up and shallows the bar? Yes.
416. In your opinion, how far should the southern breakwater be carried out? The further out that breakwater goes the better it will be for the place.
417. You think it should overlap the northern breakwater to some extent? Yes, if you are going to prevent the accumulation of sand on the bar.
418. If the southern breakwater were carried out some distance would it, with the set of the current outside, give sufficient scour to keep the entrance pretty clear? I think it would greatly assist in keeping it clear.
419. By the flowing of the tide in and out? Yes; and with the operation of freshets in the river.
420. There is a good deal of water coming down the Tweed? At times.
421. What is the current in flood-time? About 7 or 8 miles an hour.
422. It would scour everything away at the entrance? Yes.
423. Is there much trade on the Tweed now? There is a considerable trade in sugar and timber.
424. There are a good many boats trading there? The "Augusta" and "Wollumbin" trade there regularly. There is another steamer going there occasionally. As a rule, the "Augusta" and "Wollumbin" make one trip a week each, but they are not always fully loaded.
425. Is the trade increasing? Yes; I believe it has been. Fifteen years ago there was a steamer running there from Brisbane, but none from Sydney until Captain Tulloch went there.
426. Do you think there is a prospect of much further increase in the trade of the place, taking into consideration the character of the country? From what I have read and seen, I should think there is every likelihood of the trade increasing largely.

427. In your opinion the Government would be justified in expending a sum of money in making the entrance as good as it admits of? Of course, the better the entrance, the better for the trade of the river.

J. Pugh.

18 Mar., 1898.

428. And the greater inducement offered for people to settle in the district and develop its resources? Yes.

429. Do you find that after a flood in the Tweed the entrance is sometimes improved? Sometimes—not always.

430. I presume it would be improved after a high flood? After a high flood the bar is generally better. In the case of the Richmond River that is always the case—that is, generally good after a high flood.

431. You think that with the training-walls carried out further, and with the breakwaters, the channel would be good at all times? That is my opinion.

432. Would it be necessary to go to any expense in dredging to keep the channel clear? I do not think so. The southern training-wall left as it is there now will not do any good.

433. You think the work already done requires completion? Yes. I notice whenever I go in and out that there is sand scouring right out across from the termination of the southern wall. I have often noticed the water there thick with sand-scouring across to the opposite wall. The sand is spread all over the channel.

434. In order to keep the channel clear you think it would be necessary to extend the southern training-wall, as shown on the plan? That is my opinion.

435. *Mr. Lee.*] You are aware that the entrance to the Tweed, if the proposed works were carried out, would be 500 feet in width;—do you think that would be sufficient? Yes. I have been into places with a narrower width than that, where there were two breakwaters such as those proposed.

436. Do you think you would be able to take the entrance under a heavy south-easterly gale with the proposed width? There might be circumstances under which you could not take it with safety.

437. Admitting that there were sufficient depth of water, with the entrance 500 feet wide, could you, under the extreme conditions I have named, take it? It would depend a good deal upon the trim of the ship. There is a place called Bilboa, on the Bay of Biscay, with a narrow entrance, and steamers take it with very heavy gales of wind in winter-time. It is a very bad place, but I do not think it is 500 feet wide.

438. There is a good heavy surf on the coast here under a heavy south-easterly gale? Sometimes.

439. If the proposed works were carried out, there would be a heavy break, just outside the entrance? Yes, with a heavy swell.

440. Could you, under ordinary conditions, take your steamer in during a heavy gale? I would not attempt it in a very heavy gale with 15 feet of water.

441. You think there would be occasions when it would be advisable for steamers to stand off? Yes; but that would not occur often.

442. To which do you attach the more importance, getting in or getting out? Getting out is the worse.

443. As a rule, then, you are fully loaded? No; we are never fully loaded. Sometimes we have been loaded with timber, but we are not very deep in the water when we are loaded with cedar and pine.

444. Why is it more important that you should be able to get out than in? It is always easier to get in than to get out of any bar harbour. You are going against the sea coming out, and you are going with the sea coming in.

445. Have you been on the river with your steamer during heavy floods? I was there during the last Christmas holidays, when there was a pretty strong fresh in the river. You could not call it a heavy flood.

446. Do you know whether steamers have difficulty in lying in the river when it is in a state of flood? There is no difficulty as long as they have good anchors and chains.

447. The effect of the training-walls so far constructed has been to make a current under the wall? Yes.

448. The bulk of the channel is against the wall? Yes.

449. About how wide would the channel be? At Cave Point there would be between 300 and 400 feet between the spit and the wall.

450. With an average depth of how many feet? About 8 or 9 feet at low water.

451. You remember that point years ago, before the training-wall was built? Yes.

452. Do you remember what the depth of water there was then? No.

453. You are satisfied that the training-wall has had the effect of making a good channel—of keeping the channel open? There is no doubt about that.

454. That has been the effect obtained from one wall? Yes.

455. You see that at the junction of Terranora Creek there are two walls; both the creek and the river there are between two walls;—what has been the effect at that point? There is a long spit running out there now, but I do not think that that is owing to the two walls.

456. Where is the channel there? It is well over on the eastern side, and it follows that side down.

457. Assuming that the current has formed at that point the bank to which you have referred, do you not think it likely that a similar bank may be set up near the heads when that portion is brought between two training-walls? There seems to be pretty good water there.

458. But there is only one wall there at present;—do you think the erection of a second wall would cause a bank to form near the heads? I do not think so. I do not think the sand-bank at Terranora Creek is the result of the two walls. I think it is rather the result of the two waters meeting there. If Terranora Creek were not there, and the training-wall were carried right on past that point, I do not think there would be any sand-bank.

459. You do not anticipate any such thing nearer the heads if the southern training-wall is extended? No. My opinion is that the extension of that wall will improve the entrance.

Robert Langley, shipowner, sworn, and examined:—

460. *Mr. Roberts.*] You own some vessels trading to the Tweed River? Yes, the “Cooloon,” the “Sea Flower,” the “Gwendoline,” and the “Alfred Fanning.” I am owner, or part owner, of those vessels.

R. Langley.

461. Are they all sailing vessels? Yes.

18 Mar., 1898.

462. Do you command any of the vessels yourself? No; I do not go to sea myself, but I am a good deal on the river.

463. You have a good knowledge of the Tweed? Yes; I have been going backwards and forwards for the last fifteen or sixteen years. I am not a professional navigator, but I understand navigation thoroughly.

464.

- R. Langley.
18 Mar., 1898.
464. For how many years has your capital been employed in vessels trading to the Tweed? About eighteen years.
465. Have you vessels running anywhere else? Yes; at times we go to the Manning, to Cape Hawke, and Camden Haven.
466. You frequently visit those rivers? I visit the Tweed once or twice a year, and I stay there two or three months at a time.
467. What draught of water have your vessels? The biggest one draws 8 ft. 10 in. or 8 ft. 9 in. loaded.
468. What would the minimum be? About 7 ft. 6 in.
469. Have you been always able to take vessels of that draught into the Tweed? Not always. It has been only since the improvements were made that we have been able to take in vessels of that draught. Occasionally we have been able to get a vessel over the bar drawing 10 feet, but when we first went to the Tweed we had vessels lying out a fortnight or three weeks unable to get in. I remember that we had machinery for Robb & Co.'s mill waiting fourteen days. There was not enough water on the bar to get it in.
470. Since the improvements have been made have you experienced any difficulty of that kind? No.
471. Have you been detained outside at all? Not unless there has been too heavy a sea for the tug-boat to get in and out.
472. Which is the worst gale you have to encounter? North-east or due east. It is only seven months ago since we lost a vessel in Danger Bay.
473. What was the immediate cause of that? It had nothing to do with the river. She was lying there. She could not get over the bar at the time on account of the heavy sea, and she dragged her anchors and went ashore.
474. She had to keep to sea on account of the heavy sea on the bar? Yes.
475. How far up the river do your vessels go now? From 3 to 4 miles—to Cave Point.
476. About 2 miles from Chindera? From $2\frac{1}{2}$ to 3 miles. They have now altered the name of Cudgen to Chindera.
477. Your vessels are towed up directly they get inside the bar? Yes.
478. Do they not go further up the river than Cave Point? Yes; they often go to Chindera. We have several vessels which have been right up to the Sugar Company's mills, about 18 miles up the river. They did so last year. The place is about 2 miles on this side of Murwillumbah.
479. What is your principal freight? Sugar, cedar, and pine.
480. Any maize? Very little maize is grown on the river.
481. What is the freight to Sydney of sugar? I think last year we got 10s. on sugar. We generally have coal down and sugar back. It is about £1 a ton all round for both trips.
482. Is freight lower since the improvements have been made than it was previously? Considerably lower. We have had as high as 30s., but there was not the quantity of stuff to go then that there is now.
483. Were there as many vessels trading to the river then as now? No. When we first went down we took goods for the lighthouse—bricks and other material.
484. Since the carrying out of improvements the number of vessels trading to the river has increased? Yes; and the output of sugar has been bigger every year. There were six vessels of ours trading there last year, and there were three steamers belonging to other people.
485. What number were there previously? There was only one steamer there ten years ago, now there are three—two making regular and one occasional trips.
486. Has the number of sailing vessels been doubled? They are doubled in the sugar season, that would be for six months of the year.
487. Do not the residents of the Tweed get their supplies from Sydney? Chiefly from Sydney. They get them occasionally from Brisbane.
488. What percentage of the stores do they get from Brisbane? I do not suppose that it would amount to 5 per cent.; they nearly all come from Sydney.
489. When the goods go from Sydney do they go by steamer? Yes. We took only 300 tons of general cargo last year. We fetched away 4,300 tons of sugar, and we took 2,800 tons of coal. That was our trade for the six months from July to January.
490. You do not carry much merchandise from here? No; we do not court that trade. We get only a small quantity of it, the steamers run so regularly.
491. Do the steamers get a better price from Sydney than you get? Yes; for general cargo on account of the risk.
492. What is the average duration of one of your trips? We are lucky if we do the trip there and back in a fortnight or in sixteen days. Sometimes we are a month over it. In fine weather, with favourable winds, we do the trip in from fourteen to sixteen days.
493. What is the distance from Sydney Heads to the Tweed? It is within a shade of 400 miles.
494. How many vessels have you lost since you have been trading there? I have lost none on the bar. I never had a loss there. We have had one or two ashore, but we have always got them off.
495. How is the freight brought down from Murwillumbah to meet your vessels. Until last year it was all brought down in punts. Last year, occasionally on spring tides, we got the vessels up as far as the company's works.
496. But, as a rule, you go only to Cave Point, and the produce is brought there in punts? Yes.
497. What do the punts draw? Three feet or 3 ft. 6 in.
498. Have you had an opportunity to familiarise yourself with the scheme submitted to the Committee for the improvement of the river? Yes.
499. Do you think the river would be greatly benefited by the projected work? The works which have been carried out so far have done a great deal of good.
500. Do you think the additional improvements will have much influence upon freight from the Tweed to Sydney? I do not think that it will be cut any lower than it now is.
501. How does the freight from the Tweed compare with that from other rivers to Sydney? It is not as heavy as the Macleay. Freight is also dear on the Manning. There is not much of it, and the company have a monopoly of the trade.
502. You do not get the same price from the Tweed which steamers obtain from the Macleay and Manning? It is something similar. The freight from those places is, if anything, a little higher.

503. Which breakwater do you think ought first to be carried out? The southern one.
504. On what ground do you say that? I am judging from the effect of the existing training-wall on the southern side in improving the channel.
505. Do you regard the northern breakwater as absolutely necessary? Yes.
506. What do you think of the proposal to cut a canal through from the river to the north of Point Danger? No doubt it would answer very well. In Danger Bay you would always be sheltered from the south and south-east winds.
507. Do you think it would be a better way of spending public money than that proposed? It would cost a good deal more money than the other scheme, and if you carried it out the work already carried out on the river would to a great extent be thrown away.
508. Do you think the result would be more satisfactory? I think so.
509. On account of the shelter from the south and south-east winds which would be afforded in the bay? Yes. I may also say that there is a bed of sand through Cooloon and Coolangatta. It may originally have been one of the entrances to the Tweed River. All through there the neck of land is not more than 5 or 6 feet above high-water.
510. Are there indications that it ever was the entrance to the river? Well, it is all sea-sand right through, and there is a lot of pumice-stone among the sand.
511. You regard the works submitted to the Committee as one that ought to be carried out in the interests of the community? Yes.
512. *Mr. Wright.*] Do you insure your vessels? Yes.
513. Have you insured any recently? I always keep them insured.
514. Have you paid any insurance since the improvements have been made upon the Tweed River? Yes.
515. Have you found any abatement of the premiums? They have never made any yet.
516. Do you contemplate receiving any abatement? I hope to do so.

R. Langley.
18 Mar., 1898.

The Hon. Samuel Charles, M.L.C., sworn, and examined:—

517. *Mr. Farnell.*] You have had a knowledge of the Tweed River for many years past? From thirty to thirty-five years, I suppose.
518. You have had a long connection with agricultural pursuits? Yes.
519. Will you give us your opinion of the capabilities and general characteristics of the Tweed district? The land there is of a very superior quality. I have been over most of the ranges, and I have found on the top of the heights as fine soil as you would find anywhere in New South Wales. On the flats the soil is black, on the ranges it is chocolate. The district is principally volcanic.
520. The district has soil which will produce almost anything? It will produce almost anything to which the climate is suitable.
521. Do you know to what use the land is now put? I was over it a few months ago. The principal part of the flat land has been planted with sugar, but they have found that the flats are subject to frost, and they are therefore abandoning the growth of sugar there, and are planting it on the hills, which are not affected by frost to the same extent. At the present time they are clearing large areas of the land, and preparing it for dairy purposes.
522. Do you think the dairying industry will be a success there? From what I have seen of the land, I do not think you could do anything better with it.
523. Do you think the natural grasses are sufficiently good for dairying purposes? They are not so succulent, and they do not produce the same quantity of milk and butter as do artificial grasses.
524. Still the growth of vegetation is very prolific? Very.
525. The district is pretty closely timbered? The greater part of it. There are a few plains with scarcely any growth but grass. The land, as a rule, is very difficult to clear.
526. What do you estimate that it costs per acre to clear the land for dairy purposes? Not less than £10 an acre.
527. Would that be a fair price for clearing the land and grubbing it, or would it be a price for clearing the land, and allowing the stumps to rot in the ground? If you grubbed the land it will cost a great deal more. That would be a very expensive process. You must allow some time to elapse for the stumps to be burnt or rotted out.
528. Comparing the land in the Tweed district with that of the southern district,—would an acre of the Tweed land, cleared, and laid down with artificial grasses, be equal to a couple of acres of land in the southern district? I do not think so, but it would produce a larger quantity of grasses, taking the seasons all round.
529. What is retarding the progress of the district? I may mention an incident which came under my notice many years ago, which, I think, retarded the progress of the district considerably. The first settlers tried to grow corn, but they had a difficulty in getting it away. One settler chartered a small vessel to take his cargo to Brisbane. He loaded it in the river, and the vessel was so long detained inside the bar that the whole cargo heated and spoiled to such an extent that when the vessel arrived in Brisbane it had to be taken down the river, and the unfortunate grower of the corn had to pay £3 for the labour expended in digging the corn out of the hold and throwing it overboard. That prevented a number of the earlier settlers from attempting to grow corn. They have always had a difficulty in getting it away.
530. You think that if proper facilities were afforded to the district it would progress? Yes; it would always have the Sydney and Brisbane markets opened to it.
531. Can you tell us what was the state of the entrance to the river twenty-five or thirty years ago? The bar was pretty much as it is now. Sometimes it would be pretty good, and sometimes it would be nearly closed altogether. I remember an occurrence before the improvements were started, which will show you how bad the lower part of the river was. There was a launch drawing only 2 feet of water. She was in charge of a competent man, and the passage was so bad that it took her many hours to make a few miles up the river.
532. Is there a shifting bar at the entrance? Yes; it has been shifting at intervals since I first knew it. It depends a great deal upon the body of water which happens to be coming down the river.
533. What is your opinion of the effect of the works already carried out? They have made a great improvement. Within the last few months I went up the river in a launch drawing 4½ feet. We went up

Hon.
S. Charles,
M.L.C.
18 Mar., 1898.

- Hon. S. Charles, M.L.C.
18 Mar., 1898.
- up at dead low water as far as Murwillumbah, and they told me on the way up that, excepting in one or two spots, they had 8 or 9 feet of water along the training-wall.
534. There is no doubt in your mind as to the permanence of the good which has been effected by the work? No doubt whatever.
535. Do you think the Government would be justified in continuing the works with a view of making the entrance to the river more secure? Decidedly; but if I might be allowed to express an opinion as to the best means of effecting a permanent improvement in the river I would suggest that a canal should be cut through to Danger Bay. There is deep water there, and a small breakwater would be sufficient to keep the sand from working round the mouth of the entrance. It would always be sheltered, and there would be smooth water. I would not express an opinion as to the cost.
536. What is the nature of the country through which the canal would have to be cut? As far as I know, it is all sand. It is a very low neck of land, not more than 7 or 8 feet above the level of the sea or river.
537. Do you think it possible that at one time the river may have found an outlet there? I think it is quite possible.
538. If the project is carried out, will it have a permanently good effect? I think so. I speak from what I have seen of the Gippsland Lakes, where extensive works have been carried out. Those works have greatly improved the entrance. I do not think the northern breakwater should be carried out as far as the southern breakwater. There is always a heavy current coming up which would have a tendency to block the entrance, unless the southern breakwater were extended a good way out. I would carry out the northern breakwater as far as the rocks.
539. Providing these works are carried out, it would be necessary to make the river navigable to do a great deal of dredging? Yes; but if the upper part of the river were once dredged I do not think it would silt up again.
540. Suppose the river were fitted for the navigation of vessels drawing 6 or 7 feet of water, do you think that would meet the circumstances of the trade of the district? I think it would be necessary to provide for a draught of at least 8 or 9 feet.
541. You would suggest, then, that dredging should be carried out in addition to the proposed works? Yes; as long as the dredging is done in a straight line, giving the current a fair run.
542. You think the resources of the district justify the proposed expenditure? Yes. I think that if proper facilities were afforded there would be a great increase in the shipment of goods and of agricultural produce.
543. Do you know upon what terms land can now be obtained for dairying purposes? I know that partially-cleared farms can be rented at a very low rent. Land can be purchased cheaply now, although some years ago it was very hard to get. A good many people burnt their fingers in purchasing land there years ago, and it can now be obtained at a reasonable figure.
544. I suppose there would be no difficulty in the way of cutting up large estates for the purpose of closer settlement? No; it is a thing which most persons there would be anxious to do.
545. Of late years there has been a great rush for land in the northern district? The rush has been supplied to a certain extent in the Richmond River district; but I think that it will spread to the Queensland border.
546. I believe that some of the Illawarra farmers have gone to the district to take up areas? Yes; a great many have gone, and I believe that more are going.
547. *Mr. Wright.*] You think the country would be justified in spending £45,000 in the improvement of the Tweed River? I certainly think so.

MONDAY, 21 MARCH, 1898.

Present:—

CHARLES ALFRED LEE, Esq. (TEMPORARY CHAIRMAN).

The Hon. JAMES HOSKINS.

The Hon. WILLIAM JOSEPH TRICKETT.

HENRY CLARKE, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

FRANK FARNELL, Esq.

The Committee further considered the proposed Harbour Works at Tweed River.

Walter Scott Campbell, Chief Inspector of Agriculture, Department of Mines and Agriculture, sworn, and examined:—

- W. S. Campbell.
21 Mar., 1898.
548. *Mr. Clarke.*] Can you tell the Committee what kind of produce is grown in the Tweed district, at the present time? Sugar-cane is the chief product, at present. I think a good deal of dairying is likely to go on there. With regard to the district itself, I think it is one of the most productive in the Australian colonies.
549. The land there is very fertile? Exceedingly fertile; it is very heavily timbered. There is a great deal of timber of very good quality which could be cut there, if there were greater facilities for its shipment than at present exists.
550. What descriptions are there? Teak, cedar, hardwood, pine, and various other brush timbers.
551. You are aware that in the earlier days the chief valuable timber there was cedar? Yes.
552. Has not that to a certain extent been worked out? Yes; I think the greater part of it has been cut down. Still there exists a great deal more in rather inaccessible places.
553. If greater facilities for getting timber away were given, you think that some of it would be brought down to the river for shipment? I think so. There is also the timber they call beech, although it is not a true beech. That is one of the chief timbers, and there is a good deal of it in the district. There is also some black-bean, but I do not think they get much of that.
554. Is the timber easily removed, to render the land fit for cultivation? Yes; I think it can be removed for from about £1 to 30s. per acre,—that is cut down. It is cut down and burnt off, and then grass is sown in among the logs and stumps, which are gradually got rid of.
555. It must be soft timber to allow that to be done? It is brush timber.
556. I suppose that where timber is hard it is much more difficult to remove than where it is soft? Unquestionably.
- 557.

W. S.
Campbell.

21 Mar., 1898.

557. It is the hard timber which generally comes to market? I do not know that much hardwood timber comes from the Tweed. I think the trade is pretty well confined to beech, cedar, and pine; but there is hardwood there, and not very far from the river.

558. What likelihood is there of other products than those you mentioned coming from the district? They could grow fruits there. They have grown admirable oranges. Some of the best in the colonies were grown there. I think it is very likely that there would be a good trade in early oranges by-and-bye. They could also grow pine-apples and bananas there. They grow equally as well as in Queensland, and the district should be able to compete with that colony. Coffee grows there admirably.

559. Owing to the present state of the river, it is not so easy to get produce way from it as it is from Queensland? That, unquestionably, is the great drawback to the district.

560. You think the Government would be justified in spending a considerable amount of money upon the proposed improvements? I think so. The larger steamers could get down in quicker time, and could bring the fruit in a riper state. I may also state that potatoes, French beans, and other tender vegetables, could be grown there all the year round. For instance, we might keep up a constant supply of tomatoes to Sydney. I have seen tomatoes growing wild there in winter-time, and ripe.

561. Is maize grown to any extent? Not to any great extent.

562. Is the land not suitable for growing maize? It is fairly suitable, but they have paid more attention to sugar-cane than anything else. It took the place of maize.

563. The maize grown on all the northern rivers is more or less liable to weevil? Yes; but they can get over that difficulty, I think.

564. How? By keeping the maize in air-tight tanks. The weevils are destroyed in that way. They can also be destroyed by bi-sulphide of carbon.

565. You are aware that in the Bega district maize has been known to be kept for two years entirely free from weevil? Yes.

566. Cannot that be done by keeping the maize in the cob in large sheds with plenty of ventilation? The weevil lays its egg in the field. I do not think the precaution you suggest would prevent it.

567. You think that in the Northern districts the weevils are in the cob before they are pulled? Yes.

568. You think the expenditure hitherto made upon the improvement of the Tweed River has been justified? Yes, it has had an extraordinarily good effect. It is a new river. Before the improvements were carried out, I tried to get down in a pulling-boat, and I got stuck every five minutes. Last time I went down in a steamer without any impediment whatever. There seemed to be a wonderful transformation.

569. You think the improvements already effected have made a great improvement both on the bar and inside? I do not know about the bar; I can speak only about the river. The improvement in the river is very marked.

570. It is proposed to spend £40,000 upon the further improvement of the river;—do you consider that that expenditure would be justified? If it would deepen the bar to 11 feet, I should unhesitatingly say that it would be a good expenditure.

571. I believe the Queensland Government intend to extend the railway from Southport to the Tweed? I have heard so.

572. In that case, do you think fruit and vegetable grown upon the Tweed would find a market in Queensland? I should not be at all surprised to find that it was so.

573. On the whole you are of opinion that the proposed expenditure is justifiable? Yes.

574. *Mr. Trickett.*] I suppose you regard the Tweed district as eminently suited to the growth of sugar? It is very well suited for that.

575. What is the term for which land can be used for sugar there? It should be fallowed every four or five years. They can afterwards grow the cane again.

576. How many crops do they get a year? They get a crop in about eighteen months. They could have three good crops, and then they should plough the cane out and grow something else. They can cut cane annually, but it would not be wise to do so. They generally cut it in eighteen months, and sometimes two years.

577. How do you estimate the cane crop? So much cane per acre taking the tops off. They get so much a ton for the cane. The Company takes nearly all the cane and pays so much a ton for it, the Company taking the risk. They know that certain canes are very likely to yield a certain amount of sugar, and they tell the people what kind of cane they will take if it be grown. There is a fast-growing big cane—the Black Java—which they would not permit them to grow at first, but when the disease broke out on the Clarence and Richmond it was permitted, and I think it is permitted now.

578. With regard to the sugar land, what is its productive capabilities? It varies very much—from 25 tons to about 60 or even more to the acre.

579. Which is the better class of land for growing sugar—the swampy land or the land away from the swamps? It will not do in swampy land. The land must be drained. I presume you are referring to the brush land; that is generally supposed to grow the best cane.

580. Do you know how much per ton the cane is worth at the mills? It varies—I think from 10s. to 13s. 6d.—I am not sure what the present price is. I think the Colonial Sugar Company has made some alteration since the duties have been gradually taken off.

581. I am asking the question with a view to ascertain what area would be required by a person in order to make a living? You may reckon about 10s. a ton, and 30 tons to the acre. I have seen some yields go as high as 70 tons. Down on the Richmond they were giving 13s. 6d. a ton at one time; but I think that now the contracts are much lower than they used to be.

582. Is the cane delivered by the growers to the mill? They cut it, and take it to some depôt on the river. I think they have to take it to the bank of the river. They are taking cane now by the railway to the river. I do not know how far they have to cart it; but I presume to the railway.

583. Your information would seem to show that a small area would be sufficient for a man to live upon if he grew cane? Yes, at present prices; but they are lowering them, and they are to be lowered every year until the duty is taken off altogether. Then, of course, they will not do so well.

584. Is the cane a very expensive crop to produce? No; it is not expensive. There is nothing to do after planting and keeping the cane free from weeds for three or four months. It then shades the land, and the growers can sit down for the rest of the time.

585. Have you been to the Tweed lately? I was there a year ago.

W. S.
Campbell.
21 Mar., 1898.

586. Did you notice whether, at that time, a change was coming over the face of the country as regards its occupation—whether cane-growing was giving place to dairying pursuits? I believe that is so.
- 586½. Did you hear the reason of it? They anticipate, I believe, that it will not pay when the duties are taken off, in many instances, to grow cane. Then, again, many persons are coming to the district who never grew cane, and who never thought of growing it. They have come there merely to carry on the dairying industry. I am speaking now of the district generally, not merely of the Tweed. The Richmond and the Tweed districts run into one another, and you can hardly define the boundary between them.
587. A number of persons have come to the district from the dairying districts of the south? Yes; it is the best dairying district in any of the colonies, without exception.
588. Is it suitable for artificial grasses? Yes.
589. I suppose they are chiefly grown? Yes; because there are no indigenous grasses in the scrub.
590. What grasses are grown? Rye-grass, cocksfoot, couch-grass, prairie-grass; white clover is also grown.
591. Owing to the great rainfall the grass is kept growing all the year round? Yes.
592. The carrying capacities of the country are very heavy? Very heavy indeed.
593. I suppose a great deal of the land adjoining the river is subject to flood? I believe that a great deal of the brush land is more or less subject to flood.
594. But the flood would not do much harm to the grasses? No. In regard to a great deal of land upon the Tweed, the banks of the river rise pretty high, and they are growing some of the best cane on that land.
595. From your general knowledge, you look upon the district as a permanent agricultural district? Yes.
596. One of the best in the Colony? Yes.
597. And, as far as you can see, the only means of getting produce to the big markets from it is by steamer? That is all I can see at present. The want of shipping facilities has always been a great hindrance to the district.
598. The country about the Tweed River is only sparsely populated? The population is comparatively sparse.
599. Is there much available Crown land in the district? I do not think there is.
600. The land is held privately in considerable blocks? In large areas.
601. There is some good land on the McPherson Range? Yes; even at the top of Mount Warning I found good land.
602. You think there would be a good future before the district if the river were so improved as to admit boats of 400 or 500 tons? In that case, I think, the future of the district would be very satisfactory.
603. There would be a large access of population? There should be, undoubtedly. The larger areas are sure to be subdivided. A man with a family ought to live, as regards a great portion of the country, upon 40 acres.
604. You think that a man with 40 acres, combining agriculture with dairying pursuits, could do well? He could make a comfortable income and raise a family. Of course, there are some poor portions of land in the district, but the major portion of it is good.
605. The country is not altogether suitable for maize-culture? It is not so suitable as are some other places.
606. Is not the maize often weevily in the field before the cobs are pulled? I have heard that, but I do not think it often occurs. It occurs in flood-time.
607. I believe that none of the maize grown in Queensland can be kept for more than two months? Oh, yes; the maize grown upon the Darling Downs is all right.
608. As to the method you suggested, of keeping maize in hermetically-sealed tanks, that would be an expensive process, beyond the means of the ordinary cultivator? I do not think so. They fill the tank, put a candle in, and then cover up the tank. The candle burns up all the oxygen, and in the absence of oxygen the insect cannot live.
609. You think the district will excel in dairying and in semi-tropical products? Yes.
610. There is a number of immigrants in the district from other parts of the Colony now? Yes.
611. And I suppose that immigration may be expected to largely increase as the river entrance is improved? Yes.
612. If the river were made navigable, there would be no want of shipowners to send vessels there, you think? I do not think so.
613. Suppose the Queensland Government constructed a line from Southport to the Tweed, what effect do you think that would have upon the trade of the district? That is a hard question to answer. If they grew only early fruits for market they would not be wanted in Queensland—they would all come to Sydney; but I think it likely that Queensland would take a large quantity of our butter.
614. You think that Queensland would become a competitor with the Sydney market, still further enhancing the importance of the district? Yes.

Charles Edward Rennie, Chief Draftsman, Department of Lands, sworn, and examined:—

- C. E. Rennie. 615. *Mr. Trickett.*] You have some information to give the Committee as to the Crown lands available in the Tweed district? Yes; the portion of map I produce, shown within the red band, is approximately the watershed of the Tweed River. Within that area the land alienated is shown by a blue tint, the Crown lands by a brown tint, and the reserves by a green tint. The part immediately adjoining the entrance I have shown on the second map, on a large scale. On that map also the different classes of land are shown in the way I have just described. Upon the first map the respective areas are as follow:—Alienated land, 87,400 acres; reserves, 68,260 acres; Crown lands, 130,290 acres. The total of those figures will be the total area of the watershed.
616. Are the reserves in use at the present time? The two large reserves are forest reserves.
617. Is the timber being conserved? I presume so, that being the object of the reservation.
618. The land has been pretty fairly selected? Yes; the best land appears to have been taken up.
619. Is selection still going on in the district? Not to any extent.
620. Will you supply us with details of the different classes of land shown upon the smaller plan? Yes. [*Vide Appendix.*]
621. *Temporary Chairman.*] How is the Crown land held? About 51,400 acres are under occupation license. The balance is practically untenanted; there may be annual leases here and there. 622.

622. Would that indicate that the land is of an inferior character? The presumption is that it is inferior for agricultural settlement. C. E. Rennie;
623. In what direction does the bulk of that land lie? There is an unbroken stretch of it from the Queensland Border right down to the Dividing Range, where it forms the southern watershed of the Tweed. 21 Mar., 1898.
624. Is your Department dealing with any land in that district at the present time? Not that I know of. The district surveyor may have something in contemplation; but there is nothing that we know of at the present time.
625. Is the land which has been alienated in the vicinity of the river ordinary conditional purchase or under special areas? The presumption is that the bulk of it is ordinary conditional purchase.
626. Have there been any special areas offered in the district? Yes; in the parish of Terranora, close to the Queensland Border, and near the entrance. The areas range from 100 to 320 acres. There were altogether 1,840 acres. The land was not taken up; it is open now.

Henry Spondly, Compiler, Government Statistician's Office, Chief Secretary's Department, sworn, and examined:—

627. *Mr. Wright.*] What information can you give the Committee as to the population of the Tweed River district? I should explain that, according to direction, we have divided the Northern Rivers districts as far as possible according to the direction of their trade; there has been some difficulty in getting accurate information as regards two or three of the districts. H. Spondly.
628. Would you give us the information you have as to the Tweed? The population from the district the trade of which actually goes to the Tweed Heads is 1,630. 21 Mar., 1898.
629. Have you included in that estimate any portion of the Brunswick River? We have gone down to a few miles south of Cudgen—say about 10 miles. The district further on would be affected by the railway.
630. You have not included the population who trade with Byron Bay? No.
631. The Committee desire to know the population which would be affected by the improved navigation of this river? That would be a different return altogether from that which we were asked to furnish. The following are the particulars I can give you at present in regard to the Tweed:—The total area affected is 185,040 acres, of which 119,979 acres are occupied, consisting of 51,074 acres of Crown land and 68,905 acres alienated land, of which 58,347 are freehold and 10,558 are private leasehold. The area under various crops, for the year ending 31st March, 1897, is as follows:—Maize, 1,444 acres; other grain crops, 168 acres; lucerne and sown grasses, 30 acres; sorghum, 154 acres; root crops, 36 acres; sugar-cane, 2,311 acres; vineyard and orchard, 43 acres; market-gardens, 7 acres; minor crops, 14 acres. Total area under crops, 4,207 acres. In the same year there were produced 41,787 bushels of maize, 73 tons of hay, 83 tons of potatoes, 25,802 tons of sugar-cane, 337,392 lb. of butter. There were also 1,572 horses, 2,907 dairy cattle, 10,080 head of ordinary cattle, 40 sheep, 1,450 swine. In regard to the Byron Bay district, the estimated population at the end of 1897, was 1,980; the total area of land affected is 148,032 acres, of which 95,983 acres are occupied, consisting of 40,859 acres of Crown land and 55,124 acres of alienated land, of which 46,678 acres are freehold and 8,446 acres are held under private leasehold. For the year ending 31st March, 1897, the area under various crops was as follows:—Maize, 1,145 acres; other grain crops, 134 acres; lucerne and sown grasses, 24 acres; sorghum, 123 acres; root crops, 29 acres; sugar-cane, 1,849 acres; vineyards and orchards, 34 acres; market-gardens, 6 acres; minor crops, 11 acres. Total area under crop, 3,355 acres. For the same year there were produced 33,429 bushels of maize, 58 tons of hay, 66 tons of potatoes, 20,642 tons of sugar-cane, and 269,914 lb. of butter. For the same year there were in the district 1,258 horses, 2,326 head of dairy cattle, 8,064 head of ordinary cattle, 32 sheep, and 1,160 swine.
632. Will you prepare for the Committee particulars of the land holding and production for the electoral district of The Tweed? Yes.

THURSDAY, 24 MARCH, 1898.

Present:—

THE HON. FREDERICK THOMAS HUMPHERY (VICE-CHAIRMAN). The Hon. JAMES HOSKINS. The Hon. WILLIAM JOSEPH TRICKETT. The Hon. DANIEL O'CONNOR. HENRY CLARKE, Esq.		CHARLES ALFRED LEE, Esq. GEORGE BLACK, Esq. FRANCIS AUGUSTUS WRIGHT, Esq. FRANK FARNELL, Esq.
--	--	--

The Committee further considered the proposed Harbour Works at Tweed River.

George Wallace Nicoll, steamship-owner, sworn, and examined:—

633. *Mr. Black.*] You are a shipowner, residing at Sydney, trading with the Tweed and other places on the coast? Yes; the Tweed is the only river that I have steamers going to at the present time. But we trade also to ocean jetties and open roadsteads. G. W. Nicoll.
634. How long have you been engaged in that trade? Some thirteen years, I think. 24 Mar., 1898.
635. Have you been trading to the Tweed continuously? Yes, with some small interruptions resulting from the loss of ships, or accidents.
636. Have you had many wrecks at the Tweed Heads? We have lost two steamers at the entrance, and one at Byron Bay a few miles further south.
637. What was the cause of your wrecks at the Tweed? The first wreck was that of a steel steamer which was built for that trade. There was a sharp turn in the current at the mouth of the river, and the entrance was very narrow. In crossing in the vessel did not answer her helm, as it was necessary she should do in the peculiar circumstances. She was driven on to the rocks by the sea getting on her broad-side after the helm did not do as much for the ship as it was hoped it would do. She had a tug-boat in front of her at the time she was wrecked.
638. The narrowness of the entrance had something to do with that wreck also? Yes; the entrance was so narrow that it was not possible for the tug-boat to go alongside the steamer as is sometimes done. There had to be a towline in front, and the tug-boat would turn independently of the steamer following.

- G. W. Nicoll. 639. What was the width at the entrance at that time? Probably from 50 to 70 yards. It is difficult to know the width with a uniform depth of water, but I should think that what might be called the channel would be from 50 to 70 yards at that time.
- 24 Mar., 1898. 640. What width should there be consistent with navigable safety? I think 100 yards would be the maximum width to give safe navigable conditions to vessels of the character which might reasonably be expected to go there. Large steamers would need more, but they would not be expected to trade at such a small harbour.
641. You think 70 yards would be the minimum? Yes; I think that vessels would need that. The range of the conditions and the sea-way with which the captains have to cope would necessitate there being room to spare.
642. Then, if it were proposed to maintain an entrance with a width of 500 feet would you think that satisfactory? If there were a definite channel which might be hoped to continue in one position, and if the uncertainty as regards the depth of water were minimised, I should say that it would be enough.
643. I infer from your remarks that one of the dangers of navigation there is the lack of knowledge and want of confidence upon the part of captains as to what are the conditions out of sight;—there is a shifting bar? Yes; and you are exposed to the sea-way. The captain requires that the water should be reasonably smooth, at all events, and he must know from the pilot that there are 8 or 9 feet of water before he can determine that it is wise for him to navigate the bar.
644. How many vessels have you trading to the Tweed River? One now. But when the district had more business, I had three coasting steamers trading there at the same time.
645. What would be the draught of your steamers? From 7 ft. 6 in. to 8 feet. I am referring now to the "Wollumbin." She is equal to 220 or 230 tons, if the bar be favourable.
646. How long have you been running only one vessel to the Tweed? For about a year and six months. The business has become so small that one vessel is more than enough to do my Tweed River business.
647. Is the declension in the inward or outward traffic? Principally inward. The decline is greater in the inward traffic, but there is a considerable decline in the outward traffic also.
648. How do you account for it? There are many reasons. One is, that the timber industry has been considerably destroyed by the present tariff. Another is that there has been a temporary population. There was a large population there who have now left. Persons were employed there during the construction of the railway, and others were employed upon Government works which are not now there. It was a temporary population.
649. While the population was there, there was a large consumption of goods which were principally supplied from Sydney? Yes. I think some families have also left the district, but I think that would be made up by persons since securing dairy farms there. They are reducing the growth of sugar-cane there now.
650. What do you carry principally to Sydney? Pine and cedar logs.
- 651-2. Can you give the Committee any idea as to what is the traffic per annum both ways? Yes.
653. What is your principal port in the river? We only anchor inside the river. It is not navigable for my steamers. I have steam droghers and punts with which I deliver the cargo from Sydney up the river and the creeks.
654. How many tons per annum are there inwards from Sydney? I am in the habit of taking away about 30 tons per trip, and we do not average more than two and a half trips per month. That is to say, if I had 50 tons at one time I should not have more than 20 the next. The trips are erratic, from a variety of conditions. In February last I made one trip and a portion of a trip only. At another time I might make three trips a month, according as favourable conditions at the bar give despatch.
655. But you average about thirty trips per annum? Yes.
656. Therefore, there are about 900 tons per annum inwards? Yes.
657. How many tons would there be outwards? The cargo outwards is heavier. It is more valuable—that is to say, the freight earned coming from the river is greater than going to it. I think 100 tons would be quite equal to the freight which my one steamer at present carries.
658. About 3,000 tons per annum? That would be quite as much as I can feel sure of the steamer averaging in her thirty trips.
659. If there were an improved entrance, if there were a scouring of the river and a deepening of the channel, enabling your steamer to go further up, do you think there would be any increase in the annual tonnage carried? Yes, for this reason—that I create my freight. It is my own timber. I go into the forest, pay a license, and have the timber hewn and drawn by teams. I should increase that timber business in proportion to the increased number of trips made.
660. It would be a great saving to you if you could at once put the timber on to the vessels without having to tranship it from the droghers? Yes, for this reason; it has become a question as to whether I should continue the trade at all. It is at present comparatively unprofitable. We make long trips, and the timber has a miserable market, because the imported timber has taken its place since the duty of 1s. a 100 feet super. came off. Generally speaking, the trade appears to be becoming more and more unprofitable. If I had a certainty that I could get in and out, as in the case of the Clarence, I could make a greater number of trips, and I could work the vessel at the same yearly expenditure, and she would earn a great deal more money.
661. You think that the extra cost of handling is a considerable item? Yes; but that is a small item compared with the greater cargoes and the greater number of trips in the course of a year. I could cross the bar with half as much again as we now do, because we are never full, and I should make a greater number of trips. The gross earnings would be greater, whereas the cost would not be materially greater. There might be a little more coal used, but that would be all. I may mention that there is a difficulty at this particular entrance with which we have not to contend at the other bar harbours on the coast. The Tweed is the furthest north of our bar harbours, and during the season of the year from December, until April or until the equinox of the sun, there is a considerable difficulty in navigation, not so much on account of the gales of wind as on account of the heavy roll from the south-east, which obtains about Cape Moreton and further north. The Tweed River is far enough north to cut into the southern limit of this very heavy roll, and if we are to have any training-wall, dyke, or mole to shelter the place, it should be on the south side, and at such an angle that the south-east roll will come up at right angles to it and be checked by it. I saw the proposed breakwater for the Manning River pointing in a south-easterly direction. Such a work would not help us at the Tweed at all, because it would be directly on to the swell. The dyke, or mole, should point to the north-east. 662.

662. You think that the proposed entrance is too open to the south? Yes; all my captains are anxious on this point. They all say that if the time should ever come when protection is afforded to the Tweed Harbour the mistake should not be made which has been made in connection with other rivers, that is to say, that the angle of the dyke should be of such a nature as to afford protection against the south-east roll, which the Tweed experiences above all other rivers during the equinoctial season. Whether it is due to the fact that the place is near the southern limit of the south-east trade or not we cannot say; but there is the fact that we have rain and south-east gales there when it is comparatively fine on the other rivers on the coast further north. This is very severe to shipowners trading to the place.
663. You think the southern mole instead of being to the south should be turned somewhat to the north? I do. It would prevent the south-east roll from breaking into the entrance to the extent it now does.
664. If a channel were made to Murwillumbah, preserving throughout a depth of not less than 7 feet at low tide, would you be able to get right up the river? Yes, readily; in fact, we can get up 6 miles, occasionally, since the dyke has been formed. The bar shifts within a radius of possibly half a mile. At times the bar is fairly east, at other times it is a little south of east, at other times it is about north north-east, going right along the northern rocks. Under some circumstances of the bar my steamers have been able to get right up to Cudgen. That is the first wharf higher up than the Heads wharf. We have landed cargo there on several occasions, but the bar shifted again soon afterwards, and the channel again became blocked.
665. It would be possible to keep open the channel by further improvements, so as to avoid the use of droghers at any point? I consider that if the training-walls were carried out to a reasonable distance beyond the present mouth of the river, or sufficiently beyond it to check the south-easterly roll, which is the invariable cause of detention, the ebb tide would secure and keep the channel open in such a way that small steamers or vessels would be able to make regular voyages.
666. If those conditions were preserved, would you be likely to increase the number of your ships? I should.
667. Of course you cannot say to what extent? No. The population is likely to considerably increase in time, and that would mean that the general business would be greater and more valuable.
668. Is there any other vessel trading to the river? Yes, there is another steamer besides mine.
669. Who is the owner? He was an employee of mine—Captain Tulloch. He bought a small steamer, and has been running in opposition to me for four or five years. He has been running to the river continuously.
670. Is it a large steamer? No; it is smaller than mine.
671. I suppose you have made frequent trips to the Tweed? Very frequent. I am nearly as much up and down as I am in Sydney.
672. What is your opinion of the locality? I think it is one of the most fertile spots in New South Wales, and that it is capable of a great advance in trade and increase in population.
673. In what direction do you think the development of the district is likely to extend? At the present time it can only be in the direction of dairy produce and agriculture. The sugar people are likely to abandon their industry. When I had three steamers running there two of them were always carrying sugar.
674. Has the district any peculiar adaptation to dairy pursuits? It has on its higher lands. The land which grows the best sugar lies comparatively low, and gets silted up when the flood comes. It there were grass there it would at times be greatly injured, whereas the land is not often injured for the purposes of cane-growing. The grass and clover affected by the floods on the flats would take some time to recover themselves, and it would, therefore, generally be the hilly or back country which would be specially adapted to dairying. That is not very extensive. While it is a good dairying district, I would not call it an extensive one. It is in my opinion a district which would be best used for mixed products—so much sugar, so much mixed agriculture, and so much dairying.
675. We have been told that some of the high ground is superior to the flats in quality? There is high ground superior in this respect—that the frost does not injure cane so much there as on the flats. As against that, the land on the hills which grows cane can never be replenished until it has been fertilised, whereas there would be no occasion to fertilise the flats.
676. Is there any trade to the north from the Tweed? Yes; there has been a ketch running to Brisbane off and on. She used to get enough to do, and when the railway works ceased and that population went elsewhere she was removed. She used to bring down kerosene, sugar, and a few articles which fitted in with the Queensland tariff.
677. Is there any considerable traffic by the railway? Very little. The railway, I think, is not paying. A few days ago I was a passenger both ways, and there were only five or six people in a train of several carriages.
678. There is not much goods traffic? Not much. The railway carries the sugar-cane for a part of the year, and during the other part I am its best customer. I have a big timber business at Byron Bay, and the railway brings timber logs from different districts to that point.
679. Have you ever considered the question of the north coast railway? I have never given it special consideration.
680. Do you think such a line would be likely to be payable? I cannot see any hope of it.
681. It would not be a cheap line to construct? No; and it would plunge the country almost into insolvency. We could carry produce for about 7s. or 8s. a ton if we had a good harbour, and it is, roughly speaking, 400 miles from the Tweed to Sydney.
682. What are your rates now? Ten shillings and sixpence and 12s. 6d. for cargoes inwards and 15s. for measurement lines. Then, again, the return cargoes average about 10s. The timber trade, as you will have gathered from my former remarks, is an erratic trade according to our market here.
683. *Mr. Hoskins.*] You frequently visit the Tweed district? Yes.
684. Have you seen the works which have been carried out there by the Harbours and Rivers Department? Yes; I brought all their appliances away recently. I was walking on the dyke looking at the works a short time ago.
685. Do you think the works constructed there a short time ago by the Government have greatly improved the river and its navigation? I am perfectly sure of it, because never since have we had such shoal water there as we formerly had. I have seen the bar with no more than 5 feet at high water. On several occasions there have been 5 feet, 5 ft. 3 in., and 5 ft. 6 in. Now, for the last two years, there has been nothing less than 7 feet and 7 ft. 6 in.
686. The improvements have, therefore, been a great advantage? Yes.
- 687.

G. W. Nicoll.
24 Mar., 1898.

- G. W. Nicoll. 687. You were one of the first persons to start steam navigation to the Tweed? Yes; I went up in 1880. I interviewed the pilot, and had the river sounded right up to Byangum, in order to give myself a general idea of the prospect of laying on steam communication to the district.
- 24 Mar., 1898. 688. What was the tonnage of the first steam-vessel which started the trade? 150 net, with a carrying capacity of 240 tons.
689. What is the carrying capacity of the steamer you are now running? Some 10 or 15 tons smaller.
690. How do you account for that? I have had several steamers in the interval. The pioneer steamer which went there was wrecked on the North Head. I thought at that time that it would be practicable to get a steamer 4 or 5 feet longer. The next steamer I built was about 140 feet in length, but soon after she began to trade there she became a total wreck also, so that owing to the obstructing spit, I had to build my present trading steamer "Wollumbin" some 10 feet shorter. Immediately inside the Tweed River entrance there is a very wide spit, and there was a channel on each side of it. These channels are very difficult to navigate. Before the harbour works were constructed the channel seemed to be spreading itself in such a way as to form a miserably-narrow gutter immediately inside the seaway. The spit divided the river into two parts. On the northern side there was a Government wharf, and where we moored the ship it became so narrow that we could not turn her. We had the greatest possible difficulty in getting the vessel round to come out without getting out into the heaving water. We had to even lighten the droghers carrying cargo across certain parts in order to get up. There was the greatest difficulty in getting cargo up, but it does not now exist.
691. You have only one steamer trading to the Tweed now? Yes. As I explained, I have had three in the interval.
692. Has the population of the Tweed River increased? I do not think there has been any increase in the population for the last twelve months, or more.
693. Do you anticipate that it will increase? It is increasing now—just lately. But we have not had the benefit of the trade yet. A lot of the families are just reaching the place. I hear that several are taking up the land for dairy farming.
694. Has the quantity of trade to and from the district increased lately? No; it has not. I have manifests and some figures to prove that.
695. Has not the railway constructed from the Tweed to Byron Bay diverted a lot of trade from the Tweed River? It has diverted some. The position of the matter is this—that the people nearest The Tweed send their produce there, and the people nearest Byron Bay send their trade to the bay.
696. Seeing that the trade of the place is not increasing, do you think the Government are justified in spending £50,000 or £60,000 upon the improved navigation of the river? I feel satisfied that if the people had a better entrance to the river, they would be better off. I attribute as one reason for the diminution of trade the comparative poverty of the people. They have not the spending power they used to have.
697. I suppose that the resources of the district are so great, that if an industrious population were settled upon the soil, the trade must inevitably increase? I believe distinctly that if there were improved conditions at the entrance to the Tweed River, there would be more encouragement to people to lay out money and make homes for themselves.
698. The Government propose to improve not only the entrance to, but also the navigation of the river? That also is an advantage, but it is not so considerable as is the improvement of the entrance. It would always be possible to get droghers and lighters up. There would not be anything like the proportion of loss to me that would result from detention at the bar.
699. But if the quantity of water in the river were increased, so that your vessels could take the produce higher up, would not that have a tendency to cheapen freight? It would unquestionably to some extent, but not to the extent that the better bar would cheapen it. Since the dredges have been there, it has been possible to get ordinary steam lighters up the river, but there was a time when you could not get lighters up.
700. Suppose you could dispense with lighters altogether? It would take 10 per cent. off my working expenses.
701. You think the Government, in the public interest, therefore are justified in incurring the proposed expenditure upon the improvement of the navigation of the river? I certainly do.
702. *Mr. Clarke.*] Does the other steamer trading to the river carry as much cargo as you do? I cannot say, but mine is the largest steamer.
703. Do you not occasionally fill up at Byron Bay? Not now. I have steamers going direct to Byron Bay. When the bar at the Tweed River will not allow a vessel to draw more than 7 ft. 6 in. or 7 ft. 9 in. she fills up at Woolgoolga and at Coff's Harbour, where I have saw-mills. Suppose for instance a vessel going out, owing to the state of the bar, has only 40 or 50 tons, she can arrange to take more in on her way to Sydney by calling elsewhere.
704. Does the "Augusta" take in cargo at Byron Bay? No; she does not go anywhere but to the Tweed.
705. *Mr. Lee.*] You are aware that £30,000 has already been spent upon the works at the Tweed? Yes; it has been a very satisfactory expenditure.
706. There is something to show for it? Yes; we used to have trouble with the Terranora waters, but they are now regulated by the works at the dyke. They have had a wonderful effect.
707. It is now proposed to expend about £43,000 more, and there is no provision for revenue to recoup the Government portion of the interest upon that expenditure;—are you prepared to show why port dues should not be charged, with a view to recoup the Government at least part of the interest on the outlay? I could not honestly say that I am prepared to advance a reason why dues should not be charged. I pay dues at Byron Bay, Coff's Harbour, and Woolgoolga.
708. There is no charge at the Tweed River? No. I will mention one anomaly to you. If you go to the Government wharf on the Richmond River—the wharf built at the expense of the Government—you receive cargo free of any expense. If your steamer goes afterwards to Byron Bay, a few miles away, it has to pay dues, and the residents all round have to pay wharfage on every package to and from the district. That is an anomaly in the arrangements of the Government.
709. If the entrance to these rivers were to be improved, the vessels would be able to carry more freight? Yes. I do not think that any shipowners would object to pay reasonable dues at any of the improved ports.
710. If the settlers in the localities are to derive benefit from the improved entrances, in the shape of reduced freight, do you think it would be too much to ask them to return a portion of the interest on the outlay in the shape of dues? I do not.

711. Do you think it would be in the public interest to make a charge? I do, undoubtedly; if it should be a very reasonable charge. G. W. Nicoll.
712. Upon the main question of ports versus railways, you know the northern coast better than do most people;—do you think it possible, under any conditions whatever, that a railway would be ever able to compete with water-carriage? There is no possibility of it if the line is worked upon commercial lines. 24 Mar., 1898.
713. If you admit that to be a commercial impossibility, do you think the ports on the north coast should be kept open for the purposes of trade? I consider that the ports on the north coast at such a distance from Sydney should be kept open as much as possible for navigation.
714. Would the freight be sufficient to warrant the Government in keeping open the ports? Yes; there has been a fair trade up to the present time, and, in my humble opinion, there is no spot in New South Wales which has such good prospects from the fertility of its soil and from its rainfall as Tweed and Byron Bay districts.

FRIDAY, 25 MARCH, 1898.

Present:—

|---|-------------------------------|
| THE HON. FREDERICK THOMAS HUMPHERY (VICE-CHAIRMAN). | |
| The Hon. JAMES HOSKINS. | CHARLES ALFRED LEE, Esq. |
| The Hon. WILLIAM JOSEPH TRICKETT. | GEORGE BLACK, Esq. |
| The Hon. DANIEL O'CONNOR. | FRANCIS AUGUSTUS WRIGHT, Esq. |
| HENRY CLARKE, Esq. | FRANK FARNELL, Esq. |

The Committee further considered the proposed Harbour Works at Tweed River.

Henry Spondly, Compiler, Government Statistician's Office, Chief Secretary's Department, sworn, and further examined:—

715. *Chairman.*] You have prepared for the Committee some statistics relating to the Tweed River? Yes; they are as follows:— H. Spondly.
25 Mar., 1898.

TWEED ELECTORATE.	
Estimated population on 31st December, 1897	5,500
Total area of district	450,000 acres.
Occupied area—	acres.
Crown lands	115,000
Alienated lands—	acres.
Freehold	131,000
Private leasehold	24,000
	155,000
Area under crop—	270,000
Wheat
Maize	3,240
Other grain crops	380
Lucerne and sown grasses	70
Sorghum	350
Root crops	80
Tobacco
Sugar-cane	5,200
Vineyards and orchards	100
Market gardens	20
Minor crops	30
	9,470
Under permanent artificially-sown grasses	27,000
Production—	
Wheat
Maize	94,020 bushels.
Hay	165 tons.
Potatoes	185 tons.
Sugar-cane	58,060 tons.
Live stock—	
Horses	3,540
Cattle—	
Dairy	6,540
Ordinary	22,680
	29,220
Sheep	90
Swine	3,260
Production of butter	760,000 lb.

FRIDAY, 1 APRIL, 1898.

Present:—

THE HON. FREDERICK THOMAS HUMPHERY (VICE-CHAIRMAN).	
The Hon. JAMES HOSKINS.	JOHN LIONEL FEGAN, Esq.
The Hon. DANIEL O'CONNOR.	FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Harbour Works at Tweed River.

Robert Craig, Tweed River Creamery and Butter Company, sworn, and examined:—

- R. Craig.
1 April, 1898.
716. *Mr. Hoskins.*] Do you live in Sydney? Yes.
717. You occasionally visit the Tweed? Yes; in connection with the factory there in which I am interested.
718. Where is your factory situated? A little above Murwillumbah.
719. How long have you known the Tweed River district? Only since we started the factory there.
720. Are there many new settlers coming to the Tweed? We know from the reports of our manager there that new families are coming into the district.
721. Are there many people engaged in butter-making there? Our factory is situated upon the north side of the river, and is the only factory on that side. We make about 100 boxes of butter, or about 2½ tons, per week.
722. Is your business increasing? Gradually. When we started we made about fifty boxes a week.
723. The settlers upon the Tweed are mainly engaged in growing sugar, in dairying, and in timber getting? Yes, those are the principal industries.
724. How did you go to the Tweed—by steamer from Sydney? No; I went to the Clarence, and from there by coach to Woodburn, on the Richmond. From Woodburn I went to Lismore, and from Lismore I took the train to Murwillumbah.
725. Have you been up and down the Tweed River? I went down the river about half way to the mouth, in order to gain a little knowledge of the country; but I do not come here because of my knowledge of the district. I simply appear before you to report the interests of the farmers there, and the interests of the factories.
726. The interests of the district? Yes.
- 726½. Is your factory near the river? Yes. There is a tramway about 200 feet long, leading from the factory to the river bank.
727. How do you send your butter to Sydney? We have an arrangement with the captain of the s.s. "Augusta." The steamer cannot get up the river, although she can cross the bar, and we pack our butter into an insulated room upon a launch which takes it from the wharf at the end of the tramway to the steamer. The butter is then transferred to the steamer, and removed into a similar chamber on board the steamer. Both in the launch and upon the steamer there is an apartment above where the butter is packed which is filled with ice. Last Saturday we put about 100 boxes of butter on board the steamer; but the vessel is still lying within the bar, so that when the butter comes down here it will only be second-class butter, and we shall only be able to pay the farmers for it as such.
728. Why is the steamer still lying within the bar? Because she cannot get out.
729. Is there not enough water on the bar? I think so, and I know that if there were any possibility of getting out, the captain is not the man to hang back; but I think it is the heavy sea outside that is detaining the vessel.
730. Will not the vessel always be liable to a detention from that cause? I have never been down to the Heads, so that I cannot speak exactly as to the conditions prevailing there; but I think the state of the bar and the heavy sea outside prevent the vessel from moving.
731. You send all the butter produced at your factory by steamer to Sydney? Yes.
732. Is there not a steamer called the "Wollumbin" trading to the river? Yes.
733. Does she take butter from your factory? No; she does not take any butter from the Tweed, unless she is running in place of the "Excelsior," which trades to Byron Bay. The butter made on the south side of the river is shipped at Byron Bay.
734. Then you do not make all the butter that is made on the river? No. From the Tweed down half-way to Lismore most of the butter is sent to Byron Bay; but it is too expensive to send it to the railway from the northern side of the river.
735. On the northern side of the river how far are you from the terminus of the railway? The people on the northern side of the river are from ½ mile to 10 miles from the railway.
736. Can the butter be taken over the railway without being damaged by the heat? No. We should have used the railway if we could have done so; but the weather is too hot.
737. Is there not a large butter factory at Byron Bay? Yes.
738. Larger than your factory at the Tweed? Much larger. When it started it was about the same size as our factory; but they are now making five times as much butter as we are making.
739. Their business is increasing? Yes. I daresay that if it were impossible for the steamer to come to the Tweed we should have to punt our butter across the river and put it into the railway train, so that it could be taken down to Byron Bay; but in the summer it would be like oil before it got to its destination. We make ice at our factory to enable the butter to be kept cool when it is on the steamer.
740. The improvement of the navigation of the Tweed River would materially benefit the industry in which you are interested? Very much. It would be of great service to us if the steamer could make a regular trip once a week. When there are westerly winds blowing, and little or no sea, she can make a weekly trip.
741. How long has your factory been at work? We started work in November last; but this has been such an unusual season, easterly winds having been so prevalent, that upon only two occasions have we been able to get our butter into Sydney fresh, because the steamer has been detained so frequently. Sometimes it has been as long as ten days before we could get our butter to Sydney.
742. Taking into consideration all the difficulties with which you have to contend, do you or do you not propose to extend your factory if the trade increases? We are prepared to extend our business, and we have sent up a very large separator to deal with the milk supplied by people living within 4 or 5 miles of the factory.

743.

743. Despite all these delays, I suppose you can dispose of all the butter you make? Yes; we have no trouble in doing so, but we get from 1d. to 2d. a lb. less than we should get if it were not for these delays, and, of course, we have to pay the farmers less. R. Craig.
1 April, 1898.
744. Do you think that the dairying industry will develop in the Tweed District? I am sure of it, from what I have heard by mixing with the people there. I was there for some weeks while the factory was being completed, and I met a great many of the people there. They wanted us to help them in getting more cattle, and they are all determined to go on with the dairying.
745. Have those people come from Illawarra or from Victoria? A good many of them have come from the Illawarra district. Many of them were previously engaged in the sugar industry, and half of them have still an interest in sugar. Part of their land is under cane; but they are trying, as the duty is taken off sugar, to go in for something else, and each year they are putting more of their land under grass.
746. The Government have already spent a great deal of money in improving the navigation of the Tweed, and it is our duty to ascertain whether there is a reasonable prospect of the district becoming still more productive and better settled? I might mention to you that the manager of our factory came from Victoria, where he had been connected with similar factories. We sent him up north, and told him to spy out a good situation for the factory. He went to the Clarence and then on to the Richmond and to the Tweed, and, after looking at the country, and being shown all over the district, he came to the conclusion that the Tweed was the best place in which to establish a factory. When he came back, we asked him if he was prepared to take an interest in the venture, and he said, "Certainly," because he thought that there was every prospect of the place succeeding. It is a district where there is grass all the year round, and the people only want a little more money in order to be able to buy more cattle. He told us, "I have been all over Australia; but I never saw a better dairying district than that between the Richmond and the Tweed."
747. Always provided that you can get over the climatic difficulties in summer? There is such a splendid rainfall there that they have natural feed nearly all through the season. They have only to make provision for feeding their animals for a month or two.
748. You think that the district will progress, and that its resources will be still further developed? I am sure of it. One or two of the people who have come down here have come to us to see if we could assist them in securing more cattle, and I never heard any of them raise any objection to the district. Every one of those I happened to meet in the district said that it was the best district they knew of in New South Wales.
749. Do you know if the upper part of the river has been settled? The people live back on the various arms. The scrub there is something enormous. I would not take a hand in clearing it upon any account; it is such a difficult job. The trees are so interlaced with creepers as to make a very dense forest; but everyone is satisfied that nowhere could we get better soil. The soil there is much better than that in the southern districts.
750. The Illawarra farmers know how to deal with the scrub? Yes.
751. *Mr. Fegan.*] You think that dairying will pay very well in this district? Yes. We should be able to get good prices for our butter if we could get it down regularly once a week. We can make as good and almost better butter than they can make down south.
752. You believe that if the proposed works are carried out it will give you an opportunity to get butter down regularly? Yes. The prevalence of easterly winds of late has given the sea no chance to go down, so that upon the average the steamer has not made one-half the number of voyages she would have made if the wind had been northerly or westerly, or even southerly. Whenever the wind is east or south-east the sea gets up.
753. Will the improvements which are contemplated enable the steamer to come up the river? I do not know.
754. At any rate, these improvements will assist the dairying industry? Yes, because they will enable the steamer to go backwards and forwards more regularly. At the present time very often goods going from Sydney, instead of taking two days to reach their destination, sometimes take a week. A little while ago the steamer was three or four days outside the bar, and then had to go on to Moreton Bay.
755. That takes away the profits of the trade? Yes, and deteriorates whatever is being sent.
756. Have you been to the district very often? No; only twice.
757. How far have you gone up the river? I have only been down the river. I think the river could be very much improved. I know that when I was in the China trade deep-sea vessels could not get up what is called the Francis Channel near Brisbane; but they have now cut a straight channel, and the largest vessels can get up there.
758. Do you get a better price for your butter on the Tweed than you get in Sydney? No; we charge the same price for it there as we charge here. We have Victorian butter-makers on the Tweed, and people who have examined our butter say that it is equal to any Victorian butter.
759. But not equal to any New South Wales butter? The people of New South Wales have a good deal to learn, so far as butter-making is concerned.
760. Do you mean to say that the Victorian butter is superior to the New South Wales butter? That is my experience, extending over a good many years.
761. Then your butter is superior to the New South Wales butter, including the "Rosebud" butter? No; the "Rosebud" butter, the Berry butter, and some of the other butters are better than ours.
762. Some of the New South Wales butters are better than the Victorian butters? Yes; but 50 per cent. of our butter-makers have not taken the interest in their work which they should take, though the quality of the butter made in the Colony is improving. What they require here are refrigerators. It is of no use to try to make butter in New South Wales without having refrigerators to keep the butter products cool.
763. Do you think that in the near future New South Wales butter will hold a good position in the markets of the world? I am sure of it. I have been connected with the trade for fifteen years.
764. What area is under dairying in the Tweed? I could not tell you. We are getting cream from places 8 miles down the river, and perhaps further away. It is brought up by the launch from as far down as Terranora.
765. How many butter factories are there there? We have the only factory upon the north side of the river. On the south side, at Byron Bay, there is a large factory. They make sometimes as much as 600 boxes a week there.
- 766.

- R. Craig. 766. Are any of those who are supplying you with cream turning their holdings from sugar-cane to dairying? Very few of them have given up cane-growing entirely. The land has been so long under cane that it will take some time to change it all, and some of the people are under contract with the Sugar Company to grow cane.
- 1 April, 1898. 767. And I suppose some of them are still holding out for cane? Yes; but they are all going in gradually for dairying.
768. Desolation has not yet overcome the district? No. If I were a young man, and wanted to go farming, that is where I should go.
769. Even with the threat respecting the removal of the sugar duties hanging over your head? Yes; in my opinion there is no better soil in any part of the world than that between the Richmond and the Tweed.
770. There is a great depth of soil there? Yes. In some of the railway cuttings you can see 12 and 14 feet of pure chocolate soil.
771. *Mr. Wright.*] You know nothing about the entrance to the river? No.
772. You say that you have had a vessel bar-bound there for a week? Yes, since last Saturday. The "Wollumbin" went up there yesterday from Sydney, but she cannot get in. She is lying at anchor in the bay.
773. But we are told that there are 10 feet of water upon the bar? Yes; but a breakwater is required to prevent the sea from breaking there. The mouth of the river is about due east. If the southern breakwater were extended, it would give the steamers a better chance of getting into the river.
774. But it is not proposed to carry out the breakwaters at all, so that even if this scheme were carried out there would still be a break? I think that if the southern wall were continued, as proposed, vessels would be able to enter the river without being interfered with much by the weather.
775. Do you think it likely that the sugar industry will ultimately die out on the Tweed? The farmers there say that there is a living in it now; but that if there is any further reduction they must go in for dairying.
776. The Sugar Company has announced that, as the duty is taken off, their prices will go down? Well, the farmers have told me that if there were a further reduction they would have to drop cane-growing, and go in for dairying altogether.
777. Suppose they go in for dairying instead of sugar-growing, how much freight will they produce? It is almost impossible to say, because it is such a large district.
778. Will they be able to do more than to half fill a steamer every week? I think so. Three acres is generally spoken of as being the area required to feed a cow; but there 1 acre is sufficient.
779. Even if your output of butter were increased fifty fold it would not require many steamers to carry it away? Well, the Byron Bay factory, which was about the same size as ours when it started, now turns out as many as 700 and 800 boxes of butter a week. Then, too, as population increases, there is a larger demand for goods.
780. But if the district becomes solely a dairying district, not many steamers will be required to carry the butter? Well, there is fair employment for two steamers now, and as the district develops more will be required.
781. Are not these steamers required to carry the sugar and the maize that is grown? They grow maize very well there in the early part of the season.
782. But it is not a good district for maize? The maize grows fast enough; but you have to dispose of it quickly, because the weevil is so bad there.
783. Do you think that the importance of the district, and its possible development, justifies the Government in spending more in improving the river? That is my opinion; it does. If any one asked me my advice as to where to take up land for farming, I should say, "Go to the Tweed."
784. *Mr. Fegan.*] You say that it will pay the Government well to carry out these improvements? I did not say that it would pay the Government well.
785. Is there much Crown land in the district? I think there is a very large area of Crown land there yet.
786. If the river is improved, and producers are given better means of communication with the metropolis, land there will sell at higher prices? Yes.
787. In that way it will pay the Government to make these improvements? Yes.
788. But if a railway were made you would have to pay the Government directly for the cost of the work in the shape of railway rates? Yes.
789. *Mr. O'Connor.*] How far are you from the railway? I should say about $\frac{3}{4}$ mile. When the bridge is made our factory will be about 1,000 yards above it, and we shall have good access to the line. At the present time to get to the river you have to go up a very high incline—an incline almost as steep as William-street—and then descend on the other side into the punt. All these charges increase the cost of the butter.
790. *Mr. Fegan.*] You will not use the railway in preference to the river? No. Water carriage is always cheaper than land carriage.
791. Is it not strange for you to ask for these improvements to the river when you have a railway only $\frac{3}{4}$ mile away, and when you do not intend to recoup the Government for the expenditure? Well, the climate is a very hot one, and produce of a perishable nature does not carry well on the railway there. Besides the railway only takes it to Lismore, where you have to put it upon the steamer again.
792. You think it better to send the butter direct from the Tweed, so as to avoid second handling? Yes. There is no other way of getting it out of the district.
793. If the greater part of the land there has been alienated, the Government has very little chance of getting much return for this expenditure? I do not know that all the land has been alienated. The land there upon the tops of the hills is as good as the flats. It is all volcanic soil.
794. *Mr. O'Connor.*] Although the land has been alienated, may there not be evidence forthcoming to show that for want of facilities for getting to market it has not been put to its proper use? That may be so. At the present time the people are only working in a small way because they have not these facilities. There are about twenty people who find it too far to send to the factory on the southern side of the river, and who therefore send to us.
795. Your acquaintance with the district is due to your commercial interests there? Yes. I have been driven round it by personal friends.
796. In your opinion it is absolutely necessary for the success not only of your industry but of other industries that these improvements should be made, so that the people may be able to use the land which they

R. Craig.

1 April, 1898.

- they have purchased from the Crown? Yes. I do not want the Government to spend more money than is necessary, but some effort should be made to improve the river, so that vessels may get in and out with less trouble.
797. What is the tonnage of the vessels going to the river? About 140 tons.
798. How far up the river do they go? Not very far.
799. How far is the river navigable from the mouth? Murwillumbah is more than 20 miles from the heads.
800. How far is the river navigable for coasting vessels? The steamers could come up to Murwillumbah if it were not for a flat nearly opposite the Sugar Company's works, about 3 or 4 miles further down. I think, however, that by the expenditure of a little money a channel 100 or 200 feet wide could be cut there. This would enable the steamers to come right up to Murwillumbah.
801. And the expense would be insignificant? The expense would be very little. Schooners drawing as much water as the ordinary trading steamers come to within 6 miles of Murwillumbah.
802. If the steamers came right up to the town it would save you the expenses of transshipment? Yes. At the present time everything going into or coming out of the river has to be first put upon the lighters, and then transferred to the steamers. If a channel were cut through the Condong Flat this handling would not be necessary.
803. What is about the width of the river? I should say about one-eighth of a mile. In some places the river is wider than the Richmond.
804. Is there good land on both sides of it? Yes. Down towards Cudgen the country is a little flat; but on the left bank of the river, going up, there is beautiful land.
805. Is there anything you would like to add to your evidence? No. I am very glad to have had an opportunity to express my opinions in regard to the requirements of the district. I do not want to urge the expenditure of more money than is required to improve the navigation of the river, so that vessels will not be so constantly bar-bound. It will be a great advantage, both to the people on the river and to the people at this end, if the steamer could make a regular weekly trip.
806. *Vice-Chairman.*] Are you aware that it was urged as a reason for constructing the railway from Lismore to the Tweed that the producers of the Tweed would send their produce by rail to Byron Bay, and ship it from there to Sydney? I was not interested in the Tweed before that railway was constructed, so that I do not know what reasons were urged in favour of its construction.
807. Are you of opinion that the railway does not give relief to the producers of the Tweed? It gives relief to the producers living from about 10 miles south of the Tweed on to Lismore. A great deal of the cream that goes to the Byron Bay factory comes from the direction of Alstonville.
808. Does the railway serve any of the settlers on the Tweed? I do not think so.
809. It has absolutely failed to serve the Tweed River settlers? It is not of much use to them. To go from here to the Tweed, if you cannot get a direct steamer you take the steamer to Ballina, and then go from there to Bangalow by coach, and on from Bangalow by train. The Byron Bay factory gets most of its cream from the district between Ballina and Byron Bay. There are no creameries at Ballina.
810. Is most of the settlement of the district close to the navigable part of the river? Yes. A great deal of our cream is brought up by the launch. The launch leaves the heads in the morning, and picks up the cream as she comes along.
811. Do the steamers take any passengers to the Tweed? Very few. The "Excelsior" takes most.
812. Do the residents take the train to Lismore, or do they come direct by steamer? The "Excelsior" is supposed to leave Byron Bay every Saturday night, and wait for the train from Murwillumbah.
813. Do most of the people use the train, or do most of them use the direct steamer? The railway is used to a certain extent. A great many people travel between Lismore and the intermediate stations.
814. But I am referring to the Tweed River people. Do they use the railway much, either to travel on it themselves or for the carriage of produce? It is not used much by them for the carriage of produce; but they travel on it sometimes.
815. Are goods sent to Murwillumbah from Lismore by rail or direct to the Tweed by steamer? All goods are sent direct to the Tweed by steamer.
816. Practically the railway traffic to the Tweed is not of any importance? It is principally passenger traffic. There is but little cargo carried.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS,

SECTIONAL COMMITTEE.

HARBOUR WORKS AT TWEED RIVER.

REPORT.

THE Sectional Committee appointed on Tuesday, 22nd March, 1898, to inspect and take evidence with reference to the proposed Harbour Works at the Tweed River, left Sydney by the 6.15 p.m. train on Friday, 25th March, and arrived at the Tweed Heads on Monday, 28th March, at 4.30 p.m.

The Committee were met on arrival at the Tweed Heads by Mr. T. W. Keele, the District Engineer, and the plans of the proposed works were carefully examined and compared with the *locus in quo*. Next morning the completed works were carefully inspected from Flagstaff Hill, also the quarry whence the large boulders for the breakwaters will be procured. The stone appeared to be very suitable. The examination of witnesses commenced at the School of Arts at 11 a.m. on the same day.

The Committee left Tweed Heads at 7 a.m. on 30th March, by steam ferry, examining *en route* the training-walls and also the sand-patches which require dredging. They arrived at Murwillumbah at 11 a.m., and, on that and the following day, examined a number of witnesses.

The following witnesses were examined at Tweed Heads:—Mr. T. W. Keele, District Engineer; Mr. C. D. Whitty, Sub-Collector of Customs and Stock Inspector; Mr. T. H. Smith, pilot; Messrs. N. J. Ivory and J. Kirkwood, master mariners; Mr. F. J. Davey, President of Tweed Heads Progress Association; Mr. W. H. Wilson, storekeeper; and Mr. W. M. Charles, farmer. At Murwillumbah the following witnesses were examined:—Mr. W. R. Isaacs, landowner; Mr. R. Dowling, manager of the Colonial Sugar Refining Company's mill at Condong; Mr. G. Pettigrew, cane-grower; Mr. W. Wardrop, storekeeper; Mr. E. H. Johnstone, licensed surveyor; Mr. I. McIlrath, managing director of the Tweed River Creamery Butter Company; Mr. J. E. Burke, butcher; Mr. W. J. Collier, sugar-mill owner; Mr. R. P. Charles, storekeeper; Mr. P. McMahon, cane-grower; Mr. G. Dinsey, farmer; and Mr. T. W. Keele, District Engineer.

The Committee sought for evidence, in the first place, as to the entire scheme, and the testimony seemed to prove conclusively that the training-walls already constructed, and the dredging so far carried out, had effected a great improvement in the depth of water both in the river and on the bar at the entrance. The scientific and local witnesses expressed a strong opinion that the completion of the scheme, and the dredging of the sand-patches near Murwillumbah, would make the river navigable up to that town by such vessels as will probably trade to the Tweed River, and would also render the entrance negotiable in almost any weather. Evidence was also sought as to the capabilities of the soil, and the relative merits of the sugar and dairying industries. The witnesses seemed to agree that sugar-growing had hitherto been the staple industry of the district, and that a much smaller acreage under cane is sufficient to maintain a family than by dairying; but the short time which the latter industry has existed prevented the Committee from making an absolutely reliable comparison of the two occupations. The fact, however, remains that

that sugar-growing has undoubtedly built up the present position of the Tweed, and the prevailing opinion is that its extinction, however caused, would, until other industries are substituted, prejudicially affect the district.

The Committee could not fail to be impressed by the great fertility of this part of the Colony, aided as it is by a liberal rainfall. They were, however, unable to obtain statements and statistics so exact as to aid them in forming a definite opinion as to the future development of the district; but in general terms the witnesses expressed their belief in its future advancement.

Recognising that the improvements already carried out at very great expense have been highly successful, and would in time be destroyed and useless unless completed, the Committee recommend that the works as proposed be carried out.

From the evidence obtained, the Committee are of opinion that the imposition of a charge, in the form of a tonnage rate or port dues, to cover the interest upon the outlay would not be objected to by the residents. In view of the great benefits, including the saving of time and a lowering of freight that a safe entrance and deepened river would confer upon the inhabitants and the shipping visiting the port, the Committee are of opinion that such a charge should be imposed.

2 April, 1898.

CHARLES A. LEE,
Chairman.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

HARBOUR WORKS AT TWEED RIVER.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

TUESDAY, 29 MARCH, 1898.

[The Sectional Committee met at the School of Arts, Tweed Heads, at 10 a.m.]

Present:—

CHARLES ALFRED LEE, Esq., (CHAIRMAN).

The Hon. WILLIAM JOSEPH TRICKETT. | HENRY CLARKE, Esq.
GEORGE BLACK, Esq.

The Sectional Committee proceeded to consider the expediency of constructing Harbour Works at Tweed River.

Thomas William Keele, M. Inst., C.E., District Engineer, Ballina, sworn, and examined:—

1. *Mr. Trickett.*] How many years have you been in the Public Service? Thirty years next month.
2. Have you had considerable experience in harbour works and river improvement? Yes.
3. Is that your particular branch in the service? Yes.
4. How long have you been in charge of the works at Tweed Heads and in the river? About six years—since their commencement.
5. Has the original scheme of improvement been adhered to from that date up to the present time? Yes.
6. Are you consulted with regard to them by Mr. Darley? The scheme was designed in the Sydney office, and whenever Mr. Darley visits here he consults with me. Of course, I have provided him with a great deal of information to enable him to formulate the scheme.
7. Were these works begun in 1890? Yes.
8. Will you briefly describe the present state of the works? The length of the walls constructed to date is 28,500 feet. There are 18,700 feet in the No. 5 wall. That is the eastern wall from which we will start the southern breakwater. There are 6,320 feet on No. 2 wall. That is the wall to the west from Terranora towards the headland. There are 3,480 feet in No. 3 wall. That is on the south point of the Terranora entrance.
9. Do these training-banks consist of small stones obtained from the quarry? Yes; obtained from one quarry at Cave Point.
10. What was the size of the stone? On an average, less than half a cwt. The stones were thrown out of punts.
11. Have you been working to a gauge—so much at the top and so much at the bottom? No; the walls have been constructed about 6 feet wide on the top, and the stone took its own batter. In some places the water was very shallow. There were only 3 to 4 feet from Woomin Point to Cave Point, and from there down there was an average of about 4 or 5 feet.
12. Did you put in the walls a width of 6 feet at the top? Yes; 6 feet on top and 3½ feet above high-water mark.
13. Did the stones spread out? In this river the training-walls are not knocked about to a great extent by the waves. The walls are about 32 feet on the base and about 6 feet on top when in 5 feet of water.
14. Is that about the uniform size of the training-walls right along? Yes; for the last mile of the No. 5 wall—that is the eastern one—it is only about 3 feet on top. That is where it has a straight run. We did not lay rails on the top of that wall. We just threw the stone out of punts. The wall from Cave Point for about a mile down was constructed by means of a tramway, and the waggons were run out.
15. Are there not curves in this training-wall? There is one very large curve from Woomin Point to Cave Point, and then a sharper curve into the straight which extends right down to the present end of it.
16. There must be certain points in your training-walls where they have to resist a greater force of flood-water by reason of their being at certain angles; is the training-bank of the same thickness there as at other places? It would be deeper there, as the flood would scour out the toe and the stone would drop down, and the thickness of the wall would be greater. There would be a slope on the foot of the wall.
17. Is any part of the training-bank built on the mainland? No; it is all in the water. The whole of the wall has been deposited in the water except a small portion where we pass through a sand-spit.
18. Is there water on both sides of the walls? Yes.
19. Have you found the work which you have carried out so far of a sufficiently substantial character to resist damage by floods? Yes; we have had very little trouble with the walls. Floods have not damaged the work. A considerable sea gets up occasionally in a long stretch of water, and the walls seem to resist the action of the waves well. The specific gravity of the stone is great, and it hangs together well, being very angular. After a time the stones seem to get locked together.

T. W. Keele,
M.I.C.E.

29 Mar., 1898.

- T. W. Keele,
M.I.C.E.
29 Mar., 1898.
20. The bed on which these stones rest is of a solid character, so that they do not force themselves through? Yes; the stones do not sink in the sand for any distance.
21. That being the experience with regard to the portion of the wall which has been longest constructed is it likely that the walls will remain as they are? Yes.
22. Will the same character of training-bank be constructed for the whole length of the works now contemplated? No; we shall not be able to go on with the same system at all. It is not contemplated to extend the walls any further up the river.
23. Is there not yet a lot of work to do in the river? Yes; but that will be dredging work. We will not carry on any more training-walls up the river until all the rest of the work is finished.
24. Have you had any breaking away of the training walls to any extent? There has been a slight wash-away about half-way between Woomin and Cave Points. The waves broke over the beach terrace, and then swept right over the wall carrying a certain amount of sand into the channel. That was the cause of its being so shallow before the works were commenced between the training-wall and the ocean, and in fact it extended right over to the opposite shore. The result was that the channel came down at the back of the small island a little below Chindera. We had to keep it open with a dredge. We had to go round the back of that island and keep it open; all the other portion of the river being shallow.
25. Do you think there is any danger of such a thing happening again? No; we have made up the breach in the beach terrace with brush fencing, which has caught the sand and raised it 4 or 5 feet. I believe we will be able to make that portion of the beach terrace level with the other portions.
26. Do you think that in time that particular place will be filled up with sand? Yes; there is no doubt that eventually that place will fill up with drift sand.
27. Will that be all the better, and will it protect the wall from damage by the waves? Yes.
28. Did that damage occur on the occasion of an exceptional storm? It occurred twice during the progress of the works; I forget the exact date. The waves during two severe easterly gales broke through the beach terrace for a space of 600 feet, and swept sand in thousands of tons into the space opposite to it, showing how the upper portion of the river between Woomin and Cave Points was kept continually shallow before we started our works. Since we constructed the wall the channel has been kept open and very deep.
29. With regard to the damage done by the ocean, do you think that will be prevented by the brush fencing? Yes; it has been raised very high.
30. Do you think it is not likely to open again? I do not think so.
31. Are you aware what amount of money has been spent on this work? Yes.
32. Is it not £30,635? I make it more than that, because there are vouchers up here which have not yet reached the head office. The total cost is £31,297.
33. Has that money been expended on the works you have described? Yes; entirely so.
34. Has it been economically spent? Yes.
35. Have you got good results? Yes; very good results. The walls have cost 21·96 shillings per lineal foot. The total amount of stone used was 242,212 tons, or equal to 31·01 pence per ton. That is the cheapest work that I am aware of, constructed on the coast.
36. Have they been the most effectual works? They have certainly been very effectual.
37. Have you made any allowance in those figures for plant and supervision? It is all included in the amount of £31,297.
38. Have you the details? No; that is the total cost with supervision and all other expenses included.
39. *Chairman.*] Can you give us the details? They are as follows—stone loaded into punts at Cave Point, 21·39 pence; towing from Cave Point to No. 5 wall, 7·93 pence; discharging, loading, hauling, and tipping stone, 3·45 pence. These are the details of the cost of No. 5 wall during July, 1897. The details of the other walls would be slightly different.
40. *Mr. Trickett.*] Having described the work which you have carried out, will you briefly tell us what has been the effect of that work? It has opened up a channel from 12 to 20 feet deep from Woomin Point where we commenced the training-wall to the entrance, a distance of 3½ miles, where previously for more than half the distance, that is from Woomin to Cave Point, there was frequently not more than 2 feet, and in some instances only 10 inches of water. It was sometimes impossible to get through in a skiff unless you knew the channel.
41. Can any vessel now coming into the Tweed Heads go up that distance? Yes.
42. What has been the effect further up the river? The effect has not yet been appreciable. No doubt improving the entrance tends to improve the upper river, but we have not taken particular note, and we have not got soundings regularly to assure ourselves what has been the actual change.
43. One of the great arguments in favour of this work is that vessels may ultimately be able to go right up as far as Murwillumbah, and take up the goods without using droghers;—have you considered that view of the question? Yes; we contemplate putting on the dredge to do that work as soon as she has finished at the entrance.
44. Will that dredging be an additional item to the £40,000 which it is now proposed to spend? Yes; that will be paid out of the Dredge Vote.
45. Have you made any estimate as to what that is likely to cost? It would run fully into a year's work to open up the channel to Murwillumbah. It would run into about £3,000 for the dredge.
46. Where would she have to deposit the silt? In some places we could deposit it on the shore where the owners make no objection. On the Richmond they do not object, but here, unfortunately, they do so. On one or two occasions when we had to do dredging up the river the owners of the land have objected to our depositing material on the bank, so that we have had to withdraw the dredge. We are now waiting until they agree amongst themselves.
47. If you had to bring down the silt in punts and shoot it behind the walls, would that increase the cost? Yes; for about half a mile or three quarters of a mile below Murwillumbah we are arranging to pump the sand right over the bank into the swamps on private land.
48. Where that improves the land the owners do not object? No.
49. Would that be only a small portion? No; that is the heaviest portion of the dredging; that would take fully a year. There are a few shoals between that point and the Heads, but it would not take the dredge very long to cut through them.
50. Then with regard to the other portion, it will possibly be a matter for arrangement with the owners hereafter? Yes.

T. W. Keele,
M.I.C.E.

29 Mar., 1898.

51. Will you now describe the works which are contemplated to be done? I have not been in communication with Mr. Darley about the proposed extension of the work, and until the Committee arrived, and I saw the plans, I did not know exactly how far he intended to go out with the walls.

52. If you look at question 44 of the evidence you will see that Mr. Darley gives a detailed account of the work and its probable cost. Having read that portion of the evidence does it indicate works which you agree should be carried out? Yes.

53. And that agrees with the plan before the Committee? Yes; but I am rather uncertain as to the height of the walls. I do not know exactly where Mr. Darley intends to rise up to the breakwater level of 16 feet above high water. You must make your incline such as horses can travel easily—that is 1 in 100; but I do not know exactly where Mr. Darley proposes to start, and that may make us differ in our estimate. I think that is where we do differ. In making out an estimate, of course, it causes all the difference, according as you make your breakwater 6, 10, or 16 feet.

54. It would be better if you gave your figures as to the size and then as to the cost. The first item in Mr. Darley's evidence is for extending the north breakwater £14,000? I cannot make that more than £10,195.

55. What dimensions do you provide for? I propose to start at 6 feet above high water, at the root of the breakwater, and to run up to the 16 feet level over high water at 1,000 feet from there. That is a gradient of 1 in 100, and then to run for 70 feet at the 16-foot level to the end of the breakwater. There would be really only 70 feet of actual breakwater on the 16-foot level.

56. That would give you 16 feet on the outer end of the breakwater? Yes; rising from 6 to 16 feet. I provide for the breakwater going right down to the rock. At present the water is led round No. 2 wall, and it impinges against the point. It will scour out the sand, leaving the rock bare. On the line of the breakwater the rock will be from 12 to 14 feet below the water. The borings show 16 feet to the rock, 14 feet, 15 feet, 16½ feet—that is, starting from the root and running out to where the breakwater would terminate. I anticipate that the sand there will be scoured out. At present it is filled with sand. I anticipate that when the dredging is completed around No. 2 wall the current will scour out all the sand. In that case provision would have to be made for the stones going right down to the rock. I estimate that 74,150 tons will be required for this breakwater.

57. Will you now give us the size of the breakwater? I find that Mr. Darley, in his evidence, mentioned that the breakwater will be 15 feet wide on top, rising from 6 feet up to 16 feet over high water as you get near the entrance. In the case of our breakwaters on the Richmond River we find that 11 feet is sufficient. Fifteen feet was the width originally estimated by Sir John Coode, and that width is generally estimated in getting out the cost of a work, but I have used here 11 feet, because I know from experience on the Richmond it does not require a greater width.

58. Is that as exposed a position as this? Yes; the north wall on the Richmond is quite as much exposed as this one will be.

59. Would that make up the difference between your estimate and Mr. Darley's? No; I do not think so. I fancy he has provided for a 16 feet level right through on that breakwater. He must have done so, owing to the difference in the figures. He makes it £14,000—I make it £10,195.

60. As far as your experience goes, do you think it will be necessary to make the north wall 16 feet high all through? No; I think it might be commenced at 6 feet at the root, rising to 16 feet, the same as the other breakwaters. It is very easy to raise it afterwards if necessary.

61. Would that make a considerable difference in the estimate? Yes; that would make the difference between us. The south breakwater I estimate at £28,376; the wall to be constructed as follows:—For 1,150 feet the wall to be 6 feet over high water, then to rise on a gradient of 1 in 100 to 16 feet over high water for a distance of 1,000 feet, or 2,150 feet from the start. Then you will have reached the breakwater level, and you will continue that for 350 feet, making a total length of 2,500. That will run into 162,150 tons, assuming that the breakwater is 11 feet wide on top, with side slopes of 1½ to 1, and that it sinks to 10 feet below low water. I notice that Mr. Darley in his estimate states that the inner toe would be scoured down, and the outer toe would be on the original surface. That is true where you tip stone on a shoal or on the edge of a sand-spit, but I think it would scarcely be so at this place, where you would be tipping stone from the commencement into about 13 feet of water. My experience on the Richmond has been that on such ground as that there is a swirl always around the end of the breakwater which keeps it deep, and we are always tipping into a hole even when we are crossing a spit.

62. But has not Mr. Darley some means of preventing that by tipping out stone in advance of the work? You cannot do that in a breakwater. That is for a training-wall. You can scarcely do that out in rough water unless you construct piling in advance. That is such work as they carried on at the Clarence with timber in advance of the tip. I think that is the reason why our estimates differ so much. Then there is No. 2 wall from Terranora Creek to the Heads. Already a certain amount of stone has been placed there which has been knocked down by the seas, and we shall have to raise it for a length of 2,300 feet. I estimate that 11 tons per foot run will be required to do that piece. That will amount to 25,300 tons, and the cost will be £3,478. In estimating for that work I think Mr. Darley is not aware that the wall has been knocked down in the way in which it has been. When he was here last it was 2 feet or more higher than it is at present. I consider that we shall have to raise that wall 6 feet over high water. There will be heavy seas occasionally coming in through the entrance and training around that wall. If the wall is not sufficiently high green seas will overtop it and knock it down. Sand that we might put behind it would tumble into the river. All these items make up a total cost of £42,050 12s. 6d. The estimate is as follows:—

	£	s.	d.
North breakwater	10,195	12	6
South breakwater...	28,376	5	0
No. 2 wall...	3,478	15	0
Rails, sleepers, and fastenings	2,500	0	0
Waggons	1,800	0	0
Cranes	3,000	0	0
Bridge	1,000	0	0
Supervision	1,200	0	0
Total	£51,550	12	6

63.

- T. W. Keele,
M.I.C.E.
29 Mar., 1898.
63. That is £8,550 more than Mr. Darley's estimate? Yes. I notice that on page 2 Mr. Darley states that the remainder of the scheme will consist of 4,050 feet of breakwater and training-wall. In the figures I have submitted I estimate that the total will be 5,870 feet of such work in the three walls. My own opinion is that Mr. Darley has not included 1,820 feet of No. 2 wall. That is the wall from Terranora to the Heads—what is called the western wall. I do not think he has included that in his estimate of 4,050 feet. He takes it as a complete wall, and he only considers that it requires to be made up.
64. Independently of that portion of No. 2 training-wall which is to be repaired to the extent of 2,300 feet, the new training-wall, and the breakwater, what would that provide for? 2,500 feet for the south breakwater and training-wall. Then, on the north breakwater, I make it 1,070 feet. That is a total of 3,570 feet. There is a difference between Mr. Darley and myself in the length of the No. 2 wall. I do not know exactly how that occurs. Of course, I do not know exactly where Mr. Darley proposes to place his wharfs for fixed cranes. There is no information given either in the evidence or plan, and I have not been in communication with him, so that I am a little in the dark about the matter. I have been working on my own ideas here. The stone will have to be taken from a quarry on Point Danger and carried to form the north breakwater, and also to form the No. 2 wall crossing at the point by a bridge, I presume, with a lift span. At a point 2,300 feet along that wall a wharf will be constructed on which a fixed crane will be erected. Another wharf with a fixed crane will have to be constructed on the opposite side—that is on No. 5 or the eastern wall. The stone would then be punted across and raised by the crane, and run out to the tip. Another way of reaching the first wharf would be to carry the line on by side cutting round the headland.
65. From Point Danger quarry? Yes; by side cutting from the root of the north breakwater; thence round the flats near the town, and then through the main street to the Customs office, and thence by a small bridge across the channel and an embankment from there to the wharf. These are the only two ways in which the stone can be carried to the wharf.
66. What would be the size of the large stones that would be required for the breakwater, and what capacity would you recommend for the crane to be erected there? In view of the fact that we can get very large blocks out of the quarry, I think it would be advisable to provide cranes capable of putting out stone of not less than 15 tons, otherwise you will have to break up a quantity of the stone. I believe a large quantity of it will come out that size and over.
67. Would it not be a pity to break them up? Yes.
68. For breakwater purposes the larger the stone the better? Yes.
69. Are not the boulders which we inspected this morning eminently suitable for breakwater purposes? Yes.
70. As the quarry is on the Queensland side, would an arrangement have to be made with the Queensland Government? It is only partly on the Queensland side. There is a considerable amount of stone on the New South Wales side; probably as much as we shall require. If we find we are short, I presume there will be no difficulty in getting what is wanted on the Queensland side. Of all the quarries I have had to do with on this coast I think this is likely to be the best. I never saw larger stone in basalt.
71. Is the breakwater portion of the work the most critical and expensive? Yes.
72. Would it have to be carried out by contract or day-labour? I should recommend day-labour.
73. Would that also apply to the training walls? Yes; all work in connection with harbour works should be carried out by day-labour.
74. Is it a species of work in connection with which day-labour is more practicable than contract? Yes; it is very difficult to foresee everything in connection with contract work. You would require to have a very good specification to enable you to avoid litigation with the contractor.
75. *Mr. Black.*] Is there any reason why the stone required should not be obtained from Cave Point, or some other place within the river which would be more accessible? The stone there is too small.
76. *Chairman.*] Has all the stone previously used for the training-walls been obtained from Cave Point? The bulk of it was obtained from there. We obtained a small portion from Chindera.
77. *Mr. Trickett.*] With regard to the length of these breakwaters, you see on the plan that there is a possible length shown in dotted colours, and the projected length is marked in other colours;—what is your opinion about the length of the two breakwaters—should they stop as indicated by Mr. Darley, or should either of them be carried out any further? Of course, if it were within our means, it would be a good thing to carry out the walls to the points shown, but I have no doubt at all that the scheme as proposed by Mr. Darley will very much improve the entrance.
78. Would the dotted lines carry the breakwaters out beyond the bar? They would carry the breakwaters out to the bar.
79. Do you know of any work of a similar character where breakwaters have been erected that are effectual when they stop short of the bar or stop some distance inside of the bar? The Richmond River breakwaters were recommended by Sir John Coode, in the first instance, to stop in about the same position as these will be with regard to the headland. That is to say, he recommended that the first section of the work should be cut short 2,000 feet from the extreme end; but we have determined to go on there to completion.
80. For what reason? The Committee inquired into the matter, and decided to recommend the carrying out of the works to the full extent.
81. *Chairman.*] Did not the Department move the Minister to send the proposal on to the Committee? The principal reason was that the breakwaters would have been very much embayed; that is to say, they would be within a line drawn from the north headland along the coast. I think that, if possible, it is desirable to carry out breakwaters beyond the influence of the headland. That would necessitate these breakwaters being projected 500 feet more. They are slightly embayed now.
82. *Mr. Trickett.*] Would not that very greatly increase the cost? Yes.
83. Have you made an estimate of the increased cost of carrying out the breakwaters to the full length shown on the plan? I consider it would cost about £30,000 to complete these two breakwaters.
84. Is that merely a rough estimate? Yes.
85. Do you think it is worth the experiment to try to construct the breakwaters as far as is now suggested for the consideration of the Committee, having regard to the result of the work already done? I certainly think so.
86. Do you think that if that is done there will be any risk of a quantity of sand, which will possibly be scoured down the river, banking up at the bar entrance? I do not think so. It will be carried out and swept by the current away south from the entrance.

87. At present we are told that the bar at the entrance shifts very much;—if these proposed works are carried out, and a greater scour is created, with a great rush of water directed on to the bar, do you think it will possibly have the effect of keeping the bar in one position? There is no doubt it will shoot the water straight on to the bar. At present the water spreads in a fan shape. The current will be concentrated in one channel.

T. W. Keele,
M.I.C.E.
29 Mar., 1898.

88. So that having regard to the largely increased cost of carrying out the complete scheme, do you, as a practical engineer of large experience, think that this is a scheme worthy of being carried out as far as it is suggested? I do.

89. At the present time, are there any other works, except dredging, being carried out here? No.

90. Is dredging part of the scheme, or is that work which necessarily has to be carried out on these rivers? In a river like this we must depend upon the dredge to remove the sand from the middle of the channel where it has accumulated in such large quantities. The walls would in time do that work without the help of a dredge, but dredging is required to do it in a short time. The dredging opens up the channel and it subsequently remains deep.

91. Do you think this is a river where the services of a dredge will be constantly required after the works are completed? It is very difficult to say. On all these rivers dredging is required either in the main channel or in the various tributaries. A sand-pump dredge will not necessarily be required, but a Priestman grab-dredge or a small dredge will be required to keep the river and its tributaries in a navigable condition.

92. Can you give us any idea as to the comparative cost of dredging before extensive harbour improvements are carried out, and afterwards? It is a difficult thing to say. No good results accrue from dredging an entrance like this without training walls. The channel would fill up immediately after the dredge cuts one.

93. What would be the cost of a dredge service after the proposed works are completed? Very considerably less; fully one-half.

94. Where is the patch of indurated sand which it is proposed to remove? It is situated on the western side of the channel opposite No. 2 wall, and it extends for a length of about 1,500 feet along that wall, projecting into the channel some 400 feet, with a depth ranging from about 4 feet to 15 feet.

95. What would the dredging of that patch cost? Mr. Darley is now providing cutters for the sand-pump. These appliances will cut the indurated sand in front of the pipe and it will be sucked up. It might be dealt with in another way, by putting down holes with a water-jet, and blasting. It is light material when it is broken up, and the current very easily shifts it.

96. Have you estimated that in the total cost? I have not dealt with that. I have regarded it as a portion of the dredging. When the dredge is fitted with these cutters it will be able to deal with the material nearly as fast as with ordinary sand.

97. Would it be absurd to carry out these works, and leave that patch of sand untouched? Yes; I should say that about £1,000 or £1,500 would get rid of it. That would be about six months' work for the dredge.

98. Having been here so long, and having regard to your general experience, is there any other scheme which suggests itself to you which would be as good as or better than this one for improving the river and its entrance? I do not. I think this is a very good scheme indeed, and that if carried out as proposed, it will be very effective.

99. What depth of water will it provide at the entrance? From 12 to 15 feet, I think; I am speaking of the bar. We will make it much better inside by dredging. We can carry anything that will come over the bar up the river. I think these works will give from 12 to 15 feet of water on the bar.

100. What will be the width of the entrance between the breakwaters? 500 feet.

101. What will be the width between the walls? 700 feet. There are about 550 feet at the ends of the breakwaters proposed by Mr. Darley.

102. Do you think that is a desirable width for breakwaters? Yes; it requires to be choke-bored to concentrate the current. A width of 550 feet will cause a concentration of the current.

103. Will the erection of these breakwaters for a considerable length affect private property in any way, or do they chiefly pass in front of Government property? It will affect private property very little indeed. In fact, I am not aware of any place where private interests will be affected.

104. With regard to the Terranora Creek, will those works affect any private property? Not the training-walls.

105. With regard to the little township at the Heads, will the wall be so constructed as not to affect private rights? It is very difficult to say whether the channel would keep open. Of course we can keep it open by allowing a certain quantity of water to flow in from the upper end from the Terranora Creek. I have no doubt a small channel would exist there after the works are completed.

106. If that portion of shallow water in front of the hotel and the houses here could be reclaimed and filled in right up to the channel, would not that be a great advantage, and would it not settle a great deal of difficulty? No doubt that would be the case; it would be a valuable area.

107. *Chairman.*] If you had that point determined at the present time, and if you came to the conclusion that it would be possible to close up the little channel now used to the wharf, and up to the hotel, would not that lessen the cost of these works considerably by enabling you to start your northern training-walls from the foreshore underneath the head, and thus save the cost of a bridge? There is no doubt if we were able to tip stone on to the north wall without making a bridge, it would lessen the cost considerably.

108. *Mr. Trickett.*] What time do you think it would take to carry out the proposed works? Between three and four years.

109. Having regard to the figures which you have given us as to the total probable cost of the work, are you prepared to stand by those figures? The levels, gradients, widths, and batters, which I have given, are right.

110. Unless there is some difference between your and Mr. Darley's estimates, which you cannot quite understand at present, do you think your estimate is likely to be the one which will be required? I would much prefer to undertake the work on my own estimate than on Mr. Darley's, knowing, as I do, the cost of this class of work. I should like to explain that the difference between us, no doubt, occurs through Mr. Darley considering that the bottom of the wall would not be level. That is to say that the stone would be tipped on a shallow bank, and that the inner slope would run down as the channel deepened, and that the

back

T. W. Keele, M.I.C.E. has evidently made out his estimate on the assumption that the wall would be constructed in that way. My idea is that that would be correct if the water were likely to be shallow, or if we were tipping on a sloping bank. I think it would be safer to estimate that the wall would be founded on a level bottom 10 feet below low water, and that is what I have done, and that is the difference between us.

29 Mar., 1898.

111. *Mr. Black.*] Which is the more essential of the two breakwaters, if it were only possible to construct one, or if money were only voted for one? I should certainly say the south wall. You want to trap the sand, and that is the side from which the sand comes. It would be very advisable to have that breakwater to trap the sand, and prevent it from spreading over the entrance. At the present time the south spit extends during heavy gales well into the channel, and the sand is carried up into the river. If the southern wall were constructed it would stop that state of affairs. If I were confined to one wall, I should prefer to make the south wall. The No. 2 wall would be very necessary.

112. Would the restriction of the channel have any tendency to hold back the storm-water, or delay its passage? No; for the reason that we know, from borings which we have made all over the entrance, that there is no rock within 24 feet, and consequently the sand can scour down. That will be quite sufficient to pass out all the floods.

113. Do you think it is necessary to make the southern breakwater of greater length than the northern one? It would be preferable. Under the present conditions, you could not stop the northern breakwater back from where it is now shown. Supposing that the proposed end of the south breakwater is the proper position for it, you could not set back the north breakwater short of that point; but you could extend the south breakwater from where it is shown to end, leaving the north breakwater where it is, and no doubt that would be very effective. If you think of extending either of the walls it would be better to extend the south wall.

114. Would that make the entrance safe? Yes.

115. Would it be protected from the south and south-east gales? Yes.

116. *Chairman.*] Have you been in charge of these works from their commencement? Yes.

117. What was the state of the river and the state of the bar at that time? The state of the river was exceedingly bad, and it could not possibly be worse; it was completely choked.

118. What was the depth of water? The depth of the water from opposite Chindera Point to Cave Point was not more than 2 feet, and sometimes it was less. The average bar at that time was about 6 feet or 7 feet; it was rarely 8 feet.

119. Where did you first commence work? Opposite Chindera, and we gradually extended the walls past Cave Point to their present limit.

120. What was the immediate result? To deepen the channel from 2 or 3 feet in the worst places to nothing less than 12 to 20 feet along the line of the wall.

121. Did you notice that as the works progressed they had any marked effect on the bar? Yes; the bar has certainly improved ever since we started these works.

122. Did the bar improve by deepening or shifting? The bar improved by deepening. It shifted, as all these bars do over a certain radius. The effect has been more noticeable in the depth. The bar has been gradually getting deeper, according to the pilot's reports.

123. Would that be one matter for observation in connection with your work? Yes.

124. Did you notice that as you got down towards the end of the southern training-wall that it had a more marked effect on the bar than when you had only one-half of the work completed? Yes; the bar has been lately improving faster than it did originally.

125. Do you judge from that that if you could continue the southern wall so as to exclude the sand brought in by south-east gales and the tides, you would have less material to remove, and you would be more capable of maintaining a uniform depth of water? There is no doubt about that. All the trouble comes from the south spit.

126. Do you not think it would be advisable to carry out the south breakwater in the first instance, completing the work on the southern side first, so as to see what the effect of that would be? You would want something to hold up the current or something for it to impinge against on the western side.

127. On the northern side have you not a natural breakwater, with a stony point, and would not that answer your purpose in resisting the water if you had a southern breakwater? No; for the reason I have already given—that the current, being now trained to impinge upon that point, it will scour out the sand that at present exists in the little bight which is there, and the strength of the current would be lost to a considerable extent. The water would not then have the same power on the bar.

128. That is to say, that inside the bar you would not have sufficient control over the stream, and the water would have too great a width to spread over? Yes.

129. Supposing the northern training-wall were carried out as proposed, as well as the southern training-wall and breakwater, while the northern breakwater was not carried out, would that give you all that you desire in order to create a scour? I do not think so.

130. The present proposal on the northern side will terminate just about the shore-level, or very little beyond the beach-level;—does not the headland there actually create a scour up to that point at the present time? It directs the current out to a certain extent, but unless the current is trained by the north wall it will run into the bight that exists there. I think you will find that all the old hands here will tell you that when the water runs into that bight and scours out the sand which is there they always have a bad bar, and that when the beach is filled up with sand there, they have a good bar. That is a proof that there is so much friction there that it interferes very materially with the current.

131. But inasmuch as the proposed north breakwater will not extend beyond the influence of the present headland, how is it going to affect the current then more than it does now? You must have the northern breakwater in order to direct the current, otherwise the current would, after leaving No. 2 wall, shoot over into the little bight, and it would scour all the sand out of it, leaving the rock bare, and the influence would then be lost.

132. The northern breakwater is so constructed as to catch the water from the southern shore direct on the wall, and so get a scour through the choke bore? Yes, if the northern breakwater were not there the water would run into the bight and lose its velocity.

133. The northern breakwater would be cheaper than the southern one, and in any case it would be desirable to make it? Yes.

134. Where you propose to spill the sand at the extremity of your works will be, if not immediately on the bar, at any rate inside of it? No; I think the sand will be carried out straight over the bar.
135. But where it leaves the mouth of your works, will it not be immediately inside the bar? Yes.
136. From there out to the present bar line is it a considerable distance? Yes.
137. Take this position: you are spilling your sand inside the bar;—you have a strong tide, and if a heavy gale is blowing in will there not be a danger of an accumulation of sand there? With heavy gales we generally get heavy rains which bring down a flood. The consequence is that whatever sand is brought in by the gale is swept out by the flood. We very rarely have dry gales.
138. If it were outside the bar the danger would not be so great, but inasmuch as you propose to spill the sand inside the bar, what is likely to be the condition of affairs under adverse circumstances;—is there no danger of the sand piling up there, and again giving you, if only temporarily, 6 or 7 feet of water? I do not think so. It might be that for a day or so, after a very heavy blow, the sand might be piled up, but the effect of these proposed walls would be to direct the current in one particular line, and it would soon scour its way out.
139. Looking at the question from an extreme point of view, would this be a fair assumption, that inasmuch as works of an incomplete character up the river have had the effect of deepening and lengthening the bar, is it reasonable to suppose that if the training walls on both sides were completed, and breakwaters were constructed, the bar would be very much deeper than at present, and would be very much more extended from the entrance? Yes; we have a right to come to that conclusion.
140. Is it your opinion that that will be the case? Yes.

T. W. Keele,
M.I.C.E.
29 Mar., 1898.

Charles Dowling Whitty, Sub-collector of Customs and Inspector of Stock, Tweed Heads, sworn, and examined:—

141. *Chairman.*] How long have you been stationed here? Since 19th October, 1891.

142. *Mr. Black.*] Have you any statistics which you can supply us with? I have the tonnage of vessels which have come here since 1891. It is as follows:—

C. D. Whitty.
29 Mar., 1898.

Year:	Tons.	Year.	Tons.
1891	21,204	1896	20,906
1892	24,350	1897	29,326
1893	27,486		
1894	23,970	Total	173,214
1895	25,972		

143. When the Tweed railway was being constructed, was there not a great stimulus to trade? Yes.
144. Then; in spite the fact that the Tweed railway was completed, and that the men employed in constructing it removed from the district, the inward and outward traffic for 1897 was larger than it was in any other year? Yes.
145. Have you any reason to believe that there has been any falling-off in the trade? Not in the Sydney trade.
146. What about the trade from the north? That trade has fallen off. We have no communication there now.
147. Do not your figures include vessels, no matter where they come from? Yes.
148. How do you reconcile that with your statement that there has been a falling-off in the trade with Brisbane? We have had no tonnage from Brisbane.
149. Then there must be an increase in the tonnage from Sydney? Yes.
150. Has it increased to the detriment of the Brisbane trade? Yes.
151. Since when? Since 1896 and 1897. In 1894 there was a falling-off in the Brisbane trade. In 1895 there was the largest tonnage from Brisbane.
152. Might that not be owing to the change in the fiscal policy? No; it is simply because we have no communication between Brisbane and here.
153. Why have the Brisbane merchants ceased to trade with this port? I suppose they could not compete against the Sydney freights, which are very low.
154. Are goods carried cheaper from Sydney than from Brisbane? Yes.
155. Have you any figures to tabulate with the tonnage statistics, showing the amount of duty collected during those years? Yes; they are as follow:—1892, £691; 1893, £1,499; 1894, £1,427; 1895, £746; 1896, £38; 1897, £28; the average comes to £738 per annum.
156. Is there any Customs officer stationed here to defend the Queensland border? Yes; I defend the Queensland border.
157. What proportion of these goods go over the border? That is duty collected for New South Wales.
158. During any year was there any system of drawbacks in existence? No.
159. What are the character of vessels which come here? The following is a table showing the character of the vessels:—1891, 54 steamers, 55 sailing vessels; 1892, 77 steamers, 43 sailing vessels; 1893, 95 steamers, 63 sailing vessels; 1894, 82 steamers, 45 sailing vessels; 1895, 88 steamers, 51 sailing vessels; 1896, 62 steamers, 38 sailing vessels; 1897, 90 steamers, 50 sailing vessels.
160. What is the relative tonnage of the vessels? The largest boat coming here is 147 tons.
161. Have you divided the tonnage into steam and sailing tonnage? No.
162. I suppose the steam tonnage is on the whole the larger? Yes.
163. What is the nature of the export trade? Timber, maize, sugar.
164. Are the values only taken when there is a clearance of vessels for foreign ports? Yes.
165. The inward traffic consists of the ordinary consumption goods? Yes; general cargo and coal. Some coal comes from Newcastle, and some from Wollongong. The Sugar Company use southern coal.
166. Is there a large trade in stock? Only the home consumption trade with Queensland. Some dairy cattle come in.
167. Is there any stock route through the district from Maitland or Sydney? No; this is not the Richmond River stock route. They come in at the Mount Lindsay Crossing.
168. Then there is not a large amount of cattle crossing the border? No.
169. Is there any importation of stock for fattening from Queensland? No.

- C. D. Whitty. 170. *Chairman.*] What are the boundaries of your stock district? Only as far as Murwillumbah.
- 29 Mar., 1898. 171. *Mr. Black.*] Is the character of your district antagonistic to the tick pest? Judging from my experience in Queensland, it is favourable to the tick pest, but it has not yet made its appearance. All this bladey-grass country along the east coast is the home of the tick.
172. Has this district so far been immune? Yes.
173. Have you observed any large increase in the number of dairying cows in the district during the last few years? The import of dairy cattle from Queensland has been large lately, but only in small mobs for sale.
174. Have you noticed any development of the dairying industry in the district? Yes.
175. Where do the cattle come from? They are bred locally, and some have come from the South Coast.
176. Is the district suitable for dairying? Certainly.
177. Is it as suitable for dairying as it is for sugar-growing? It is suitable for sugar-growing and dairying combined.
178. Would one be a good alternative to the other? Yes; I have just come from the Murray district, and I think the men in this district could live on half the area which is required in the Murray district, although the Berrigan district to which I refer is one of the best in the Colony.

Thomas Hamilton Smith, Pilot, Tweed Heads, sworn, and examined:—

- T. H. Smith. 179. *Mr. Clarke.*] How long have you been Pilot? Six months.
- 29 Mar., 1898. 180. Have you been connected with vessels coming to the Tweed? For 12½ years I was master of the subsidised tug, and for two years previously I was master of a sailing vessel.
181. During that time had you considerable experience in the Tweed trade? Yes.
182. Until recently was the water on the bar and in the river very shallow? Of late years it has been fairly good.
183. What was it like previous to the commencement of the existing works? Previously we have had good bars, which would gradually shoal until we had freshes to deepen the chanel again.
184. Until the present training-walls were made was the depth of water uncertain? Yes.
185. Do you consider that what has been already done has greatly improved the navigation of the river? Yes.
186. What was the depth of water on the bar at high tide before the improvements were made? Five feet, 6 feet, 7 feet, 8 feet, 9 feet.
187. Did the depth of water depend on the weather? Yes; with a good fresh we would have 11 feet and perhaps 12 feet.
188. Would a heavy easterly gale open the bar? Yes; with freshes.
189. But that is only of a temporary character? Yes.
190. What is the depth of water on the bar now? On Friday last there were 12 feet at high water. I reckon that with a low sea the true sounding would be 13 feet.
191. Are you acquainted with the proposed scheme for further improving the harbour? Yes.
192. Are you aware that a large amount of money will have to be spent to complete the work? Yes.
193. From your experience as a sea-faring man, and as a pilot, do you consider that the improvements are desirable? Yes.
194. Would they improve the navigation of the river? Yes; and the improvement would be of a permanent character.
195. Do you think there is any probability of any portion of the training-walls being carried away by eastern gales? The only part affected has been the part opposite the bar, what some people call the western wall.
196. What has been the cause? The heavy seas.
197. Would not there be some reason for the wall carrying away on account of the small size of the stone? Yes; the stone is too small there.
198. Are you aware that it is contemplated to get stone from Point Danger? Yes.
199. Will there not be great difficulty and expense in getting stone from there? As far as I know the cheapest way would be to have a bridge at the entrance of the west channel, and to run the stone on to the breakwater.
200. Would not that stop the entrance of vessels to this part of the river? Yes.
201. Is it your idea to have a tramway carried to the edge of the point and to commence the work from this end? The only other way is to bring it through the township.
202. Has the trade during the last few years increased or decreased? As far as the number of vessels is concerned, I should say it has increased. Sailing vessels generally bring coal and steamers general cargo.
203. Is there a larger number of vessels now in the trade than there were two or three years ago? Yes; they have been making better trips lately, the bar being better than formerly.
204. Has there been a larger quantity of produce? I think it has been chiefly sugar; the steamers have been carrying timber in the slack season.
205. Is sugar the only product which goes away from the port? Yes; after the sugar season they carry pine, cedar, or anything they can get.
206. Is there much butter sent away? I do not know. The only vessel that I know of taking butter is the "Augusta."
207. Do you think that upon the whole, judging from the fact that more steamers than sailing vessels come here that the trade has increased rather than decreased? I do not know what the steamers carry away, but the sailing vessels during the season go away full of sugar.
208. Have you a return showing the depth of water on the bar from the year 1870 to the 25th March, 1898; also, the rise of the tide, the state of the east channel, and remarks for the same period? Yes;

MINUTES OF EVIDENCE—HARBOUR WORKS AT TWEED RIVER.

I may not be exactly correct as to the number of vessels per year, as that is approximate, but the soundings are correct; they are records taken from the daily log. The return is as follows:— T. H. Smith.
29 Mar., 1898.

* 7 ft. 9 in. upper, 8 feet lower. † Nine feet in north channel and eight feet in south channel.
*30 (a)—B

- T. H. Smith. 209. When did the harbour improvement works first commence? In 1891. Up to October, 1897, the figures in my return are taken from the late pilot's log. I have continued his work since then.
- 29 Mar., 1898. 210. According to these reports, excepting the present year and a part of 1897, there does not seem to be a great deal of improvement in the depth of water. It is only since the wall reached a certain distance down the river that the improvements in the depth of water on the bar was in any way noticeable.
211. In what state was it in 1896, and how far had the wall been constructed in that year? I cannot say exactly, but it must have been close down where it is now.
212. Have not the works been going on since 1896-7? I cannot say. I think they knocked off working in 1896.
213. Up to June, 1897, the depth of water on the bar was 7 feet, 8 feet, 9 feet; since June, 1897, it has steadily improved to 9 feet, 10 feet, 11 feet, 12 feet, and sometimes 13 feet;—do you think that is due to the training-walls and other improvements? Yes; they have caused the tide to run in a different course.
214. Has the position of the bar become more stable since that time? It is always liable to shift about in twenty-four hours or a couple of days. Wind and weather greatly affect it.
215. Since the training-walls have been made has the depth of water been more regular, and has there been a better channel? Yes.
216. Is there a tendency for the sand to pile up at the entrance to the heads? In strong easterly weather it may block, but it soon scours away.
217. How does the current generally set on the bar? According to the wind. In southerly and south-east winds the current sets on to the North Head; with north-east winds it sets to the southward.
218. Do you think that any sand which accumulates in the river, and finds its exit at the mouth, would be cleared away by the current? Yes, because we have had proof of that lately when there were freshes. Large quantities of sand passed out of the channel, and were taken to sea, or at any rate there was no sign left of it.
219. When these training-walls and breakwaters are erected, with easterly gales will there continue to be a bar there, and in such a state that vessels will not be able to enter? I think with easterly weather we generally have freshes which would carry anything away.
220. Do you think there is no danger of these channels shallowing as in former years before the training-walls were commenced? I do not think it will ever be like that again. It might be for a few days.
221. Do you think the bar will be always an open one? Yes.
222. Do you think there is justification for spending £40,000 more on these works? I think it would be justifiable to spend the money in order to make the bar safe, and I think it would be a success.
223. How many wrecks have there been since you have been trading here, and since you have been pilot? Only three—one sailing vessel and two steamers.
224. To what do you attribute those wrecks? In the case of the sailing vessel I think a wrong depth of water was given. When the "Tweed" was wrecked the channel was away south, which is always a dangerous position for the channel to be in.
225. Is it not usual for the pilot to signal when the bar is safe or otherwise? Yes, the pilot was in charge of the steamer. The "Tweed" was the first steamer that was lost; the "Chindera" was the last; both belonged to Mr. Nicoll.
226. What about the "Chindera"? She was drawing more water than there was on the bar.
227. How did the vessel take the bar when there was not sufficient water? The pilot warned the "Chindera" not to take the bar. The pilot was not on board the steamer. The pilot was on board the "Tweed." The master took the bar on his own responsibility, although he was warned that there was not sufficient water for him.
228. *Mr. Trickett.*] Have you studied the plan of the proposed improvements? Yes.
229. Do you think that the breakwaters will go out sufficiently far as at present designed? I think the original plan which I have is suitable for the place as far as the breakwaters are concerned. I think they go out far enough.
230. Which do you look upon as the best breakwater? It was always considered that the north breakwater would be most useful to shut off the tide from the bight between the two heads—the outer and inner heads. Whenever the bight is filled up with sand the bar is good; but whenever it is scoured out by the tide the water spreads.
231. You look upon the breakwater at the north entrance, which will straighten the course of the current, and prevent the water from getting into that bight, as being of very great importance in making the work effective, because it will prevent the current from losing its force over the rocks? Yes; there are shallow rocks running under the water there.
232. What are your duties with regard to vessels coming in during bad weather? We have to give them signals as to whether we consider the bar favourable. We know the soundings, and we give them the depth of the water. We tell them the sets of the current, and caution them if necessary. If there is a sea on the bar we give them a signal to stand north, and they go into Danger Bay. It is far better than Byron Bay in a south-easterly. In an easterly gale they are not sheltered. I have known a vessel to ride out an east-south-east gale.
233. Have you frequently to order vessels off? We have had bad weather lately, and vessels have had to keep out.
234. How often do you take soundings on the bar? Sometimes two or three times, and sometimes oftener. We always take soundings when we go out. We took the last sounding on Friday last.
235. At present you cannot say what is the depth of water, because on account of the weather you cannot take soundings? You can form an idea of where the channel is, but not of the depth.
236. If the weather kept on as it is at present, and a vessel wanted to enter, would she have to be warned off? Yes; it would not be safe for a vessel to come in or to go out in this weather.
237. Do you think that when the proposed works are completed the effect of these breakwaters only going to a distance somewhat short of the location of the bar will be to pile up the sand on the bar more than it is at present? I think the current will carry all the sand away, according to the winds.
238. With regard to the work so far completed, and seeing that they have had the effect of deepening the bar, do you not think the completion of these works will in all probability have the effect of still further deepening the water? I do not see what is to prevent us from having 13 or 14 feet of water on the bar when the works are completed.
239. *Mr. Black.*] What is your opinion as to the extension of the breakwater into deep water, and do you think it could stand the fury of the elements? I think it could if the weight of the stone were sufficient.

240. Would it not require to be a very stable structure? I do not think we get such heavy seas here as we do at the Richmond River, because we are protected very much in south-easterly weather by the reefs which extend from the island 3 miles out; that breaks the water on the bar.
241. Have vessels to come round to avoid them? They can come between the reef and the shore; there is a good channel.
242. Is there not a tendency to divert the current on to the breakwater? The outside current is generally south.
243. You say there is a passage between the reef and the shore along which the vessels can come; would there not be a strong sea in the channel and on the breakwater? The reefs are a long way off.
244. You say the reefs break the force of the gale, and the vessels come inside; would not that afford an opportunity for strong seas to break on the breakwaters? I think the reefs save this harbour a great deal when there are heavy seas.
245. Do you think the breakwaters are a necessity? Yes.
246. Do you think that the same construction as has been carried out in the training-walls would be sufficient? No; I think we want a breakwater, not only on the north side for the current, but also on the south side, to stop the south-easterly and northerly sets.
247. Do you think the breakwaters on the plan are carried out sufficiently far? I think so, as far as my judgment goes.

T. H. Smith.
29 Mar., 1898.

Norbert James Ivory, master mariner, Tweed Heads, sworn, and examined:—

248. *Chairman.*] What are you? Master of the tug-boat stationed at Tweed Heads.
249. How long have you occupied that position? Five months.
250. Where were you before? I was trading here in a sailing vessel eighteen years ago.
251. What knowledge have you of the entrance to the Tweed at the present time, and of the eastern channel? I see a vast improvement.
252. How has that improvement come about? By the construction of the training-wall.
253. Was a good deal of that work done before you came here? It was almost completed.
254. Then you found the port in a good state when you came? Yes; but I had been trading here a year before that, and I found it in a much better state when I came here.
255. Have you seen any marked improvement as the works approached completion? I have seen far more improvement since they have left off the work. The improvement was beginning to take place at that time.
256. How far do you take vessels up the river? As far as Chindera.
257. Are all sailing vessels coming to this port brought in by the tug? Yes, and taken out.
258. What class of sailing vessels come here? They range from a registered tonnage of 66 to a little over 100, with a draught when loaded of 7 ft. to 8 ft. 6 in. They average from 84 to 175 tons burden.
259. Since the preliminary works have been completed, have you known any of these vessels to be bar-bound for any time? Owing to the sea they have been detained, but rarely owing to the want of depth of water. It has occasionally happened.
260. How many of these vessels come here in the course of a month? From four to six.
261. Are they generally from Sydney? Yes; you might say all of them.
262. How many instances have you known during the time you have been in the tug service when vessels have been delayed through stress of weather? Half a dozen, perhaps, but only for a day or two.
263. Have they been detained in consequence of the floods? Yes; through the freshes running out of the river.
264. Have you known many vessels to come up to the offing, and having to lay off in consequence of the bad bar? Yes, for a short time.
265. Has that been frequent? Only on account of the sea, and not for want of depth of water on the bar.
266. Your argument is that there is always water enough on the bar? I do not say that, but it is very seldom that there is not sufficient water if the sea is smooth.
267. These vessels draw about 8 ft. 6 in., and for the last two years there has sometimes been only 7 feet of water on the bar? Eight feet 6 inches is the heaviest draught, and there are only one or two vessels of that kind. They generally draw 7 feet to 7 ft. 6 in.
268. For the last two years has the bar been sufficiently deep to admit of ordinary vessels drawing 7 feet? Yes; except in very rare times after a heavy sea when the bar may shoal up for a day or so.
269. Do you find any difficulty in the vessels crossing the bar, and being unable to go up the channel or over the crossing? Not recently.
270. Since the works have been carried out? No.
271. Do the vessels come in as heavily laden as they go out? About the same.
272. Then you are unable to tell us of any great delay that has taken place? Not lately.
273. The delay has taken place in the case of sailing vessels owing to stress of weather, and not in consequence of a bad bar? No; it shoals up for a short time, but it does not remain so very long.
274. Would not that lead one to suppose that the improvements already made have been sufficient for the purpose? I consider the improvements that have been made so far have been the cause of this change.
275. But if they have brought about that good result, and have caused no delay to the shipping, would not that be sufficient to meet the requirements of the port? The question is, will it be permanent. We have had several freshes which have helped us on.
276. What do you think is required, in addition to the present works, to give the port a permanent entrance? I think the works will have to be carried out as now proposed. I have seen the plans.
277. Are you familiar with what is proposed to be done? Yes, and I think it is necessary.
278. What has been your experience of the port itself as tug-master, and what do you think is necessary in order to remove the existing difficulties? Even during the short time I have been here the bar has shifted considerably, but as a rule it has not shoaled up for any length of time.
279. Have you any difficulty in taking the bar if there is a sufficient depth of water, no matter where the wind may come from? Yes; there is a difficulty with a heavy sea; if the bar shifts north, then there is great difficulty and risk.

N. J. Ivory.
29 Mar., 1898.

- N. J. Ivory. 280. Why is there great risk? Because you get the sea broadside on, and therefore you cannot keep the vessel to windward.
- 29 Mar., 1898. 281. What do you estimate is a safe width of water on the bar when you are towing? We consider that 200 feet is safe enough if the channel is straight out.
282. If you had an entrance of 500 feet, would that be sufficiently wide to take a vessel in in safety with any wind? Yes, quite sufficient.
283. Would you be able to take that entrance if the bar were good, and if there were a heavy fresh in the river running against you? It all depends upon the force of the current. If it were running very rapidly we might not be able to stem it.
284. Would you be able to take that entrance, and take in a vessel, in spite of a strong flood? I do not think we could with a strong flood; in fact, I am positive we could not.
285. I suppose that then, as now, all sailing vessels would have to be towed in? I cannot say that. With a favourable bar they might sail in. If the wind is fair there is nothing to prevent them, but as a rule they do take the tug.
286. Do you take the state of the bar from the pilot? We have a man sounding the bar as well as the pilot.
287. What is your opinion of the sandspit lying between the two heads? I think it is very necessary that a wall should be constructed across there.
288. Do you mean that the northern breakwater should be constructed? I do not think the result would be good without it.
289. Has it been your experience that when the bight has been swept clean to the rock you have had a bad bar? Yes; that has been my experience during the past six months. When the bight is filled up with sand we have a better and straighter bar.
290. There is a channel to the wharfs on the town side of the entrance; do you know any reason why it should be kept open? It is very convenient for us as well as for people landing at Tweed Heads. We can lie in shelter there.
291. Is there not an abundance of shelter elsewhere? We would have to go further up, and we should not be so near the bar in case of emergency.
292. What is the tonnage and horse-power of your tug-boat, the "Terranora"? Forty-two tons and about 25 horse-power.
293. *Mr. Clarke.*] Do you tow out steamers? Occasionally; but not always. Generally, when there is any sea on, we tow the steamers.
294. Do you say that 8 feet 6 inches is the extreme draught on which vessels can come in here? Yes.
295. Have not vessels drawing more than that come in and gone out? Not to my knowledge.
296. Does not the "Merlin" come here? Yes; but she only draws 6 feet 10 inches. She took away about 100 tons of sugar once or twice.

Joseph Kirkwood, master mariner, Tweed River, sworn, and examined:—

- J. Kirkwood. 297. *Chairman.*] What are you? I am a master mariner in charge of the drogher steamer the "Murwillumbah," which is 32 tons burden, and about 12 horse-power.
- 29 Mar., 1898. 298. *Mr. Trickett.*] What is her draught of water when loaded? Five feet.
299. Do you trade from Murwillumbah to the Heads? Yes; we do all the droghering for the sailing vessels; we take all the cargo up the river, and load them.
300. What goods do you take? Sugar, in the season, and at present, pine, cedar, or anything we can get.
301. Do you take up supplies to the town in your vessels? Yes; from the Heads up to Murwillumbah.
302. Do you get any loading between Murwillumbah and the Heads? Yes; our loading is principally from the Condong mills. Our trade is principally with the Colonial Sugar Company. If we have goods for anybody along the banks of the river we deliver them. From Condong to Murwillumbah there is no public wharf.
303. With a draught of 5 feet, are you always able to get up and down the river? There is one place called Condong Flat, about 16 miles from the Heads, where there is only about 3 feet 9 inches at low water, and we sometimes get stuck there, and have to wait for the tide. That is the only place of the kind.
304. How long have you been running on the river? Steadily for the last twelve years.
305. Has the river improved of late? Yes, very much; from Murwillumbah right down.
306. Has it improved in patches, or generally? It is a general improvement. Since there has been a deepening of water on the bar there has been a larger body of water on the river and there is a greater rise of tide at Murwillumbah by 6 inches than we had before the improvements were carried out.
307. What is the present rise of the tide? The mean tide is about 3 feet.
308. Until the harbour improvements were made was it only 2 feet 6 inches? Yes.
309. Is the place where you get stuck up in the river very wide? About 40 chains.
310. Would the dredge soon get rid of that? Yes.
311. Excepting that shallow part, what is the average depth of water? The shallowest part of the river outside of that is 5 feet 6 inches.
312. Is that for any great length? No.
313. What is about the general depth of the water in the river? There is another place which carries 6 feet. I should say that outside of that there would be from 7 to 9 feet of water.
314. If those two places which you mention were dredged, would the rest of the river be navigable for the steamers which ply here at present? Yes.
315. What is about the draught of the ships which come here? Eight feet 9 inches is the greatest.
316. Can you always get in now? Since last August we have had no trouble.
317. How far up the river can they go now? At present as far as Cudgen, about 6 miles from here. Since last August they have been able to go to the Caves, where they had a quarry. It is only within the last few weeks that these vessels have been able to go to Cudgen. I believe that is in consequence of the late floods.
318. Do you bring cargo to the Caves instead of to the Heads? Yes.
319. If vessels could go right up the river so that cargo could be put on board, would that be a saving of expense? Yes; because there would be less handling.

320. Is it your experience that the work so far carried out has been an advantage to the river? Yes. J. Kirkwood.
321. Are there many droghers on the river? Three—about the same size as my own.
322. Has the droghering trade increased or fallen off during the last few years? During the last few years more vessels have come to the river, but there were other causes than the improvements in the river for that. A great deal of cane was put under cultivation by the farmers, who thought that the protective duty would be retained, and the Colonial Sugar Company had to crush it. More vessels came to carry the sugar away. Now the farmers are not planting cane, because they are afraid of losing the duty, so that during the coming season the trade will not be so great. We cannot send pine and cedar away without a protective duty. We cannot sell it in Sydney as cheaply as American timber.
323. Are not other industries growing up? Yes, dairying is taking a firm hold.
324. Will the dairying industry provide as much freight for export as the other industries? Nothing like it. The butter goes into a much smaller compass.
325. Is it a fact that they are not planting as much sugar-cane as before? Yes. I for one knocked off planting, and so have many others.
326. Have many vessels been bar-bound or detained lately? Not since last August. Before that there was a shallow bar and various other things which stopped the vessels, but since last August we have done remarkably well.
327. *Mr. Black.*] In spite of the duties coming off? The people had to cut their cane, and the Sugar Company had to carry the sugar to Sydney.
328. *Mr. Trickett.*] Are there any port dues here? They are paid in Sydney.
329. Are there any tonnage dues here? No.
330. Are there any dues on goods coming in or going out? No.
331. Do you think the people here would like to pay any tonnage duties if this heavy expenditure were made? I do not think so.
332. If you had an absolutely safe bar, so that vessels could come in and go out uninterruptedly, would not freight and insurance be reduced? I am certain that goods would be carried for less money than at present.
333. Ought not the people to pay a little extra to meet the interest on outlay? They would not look at it in that light.
334. Do you think the river has considerably improved since the works were commenced; and do you think they will continue to improve if they are carried out in their entirety? Yes.

Frederick John Davey, President, Progress Association, Tweed River, sworn, and examined:—

335. *Mr. Black.*] Are you the President of the Tweed River Progress Association? Yes; I am also secretary of the Terranora Cane-growers' Association. F. J. Davey.
336. What is the object of the Progress Association? Generally to help on the progress of any public works, and to touch up our Member when requisite. 29 Mar., 1898.
337. What is the object of the Cane-growers' Association? When you get to Murwillumbah you will get statistics with regard to the main river. It is rather with regard to Terranora that I wish to speak. It is shown on the map as a mere creek, but Terranora is really a lake. It is a tidal broadwater a mile square. Then there is Coppokoi Broadwater, and the two together are the outcome of a very large watershed. The waters would have a considerable effect on the use of the walls. They are tidal lakes, rather shallow, and only fitted for pulling boats. At Terranora we can fetch cane punts and droghers drawing 5 ft. 6 in. of water at low water. The influence of the work already done has been very manifest there. We have a much better channel for getting out the cane.
338. What is the depth at high water? It varies. In some places there are 30 and 40 feet of water. In other places there are only 2 inches of water sometimes. Terranora itself will be a great cane-growing country. If the cane lands up the river were put to other uses, we could take the company's mill and find use for it. The other broadwater, Coppokoi, is capable of carrying on a very large dairying industry.
339. How long have you been in the district? About nineteen years. I was for about two years at Tumbulgum. Latterly I have been at Terranora.
340. Is all the land in your locality taken up? Yes; all the land immediately fronting the river.
341. What about the land further back? Some of it is still in the hands of the Government; nearly all of it is good land.
342. How do you account for so much of it being idle? We had 2,700 acres prepared for cane in 1894, but the company finding themselves rather overborne with cane in other portions of the river desired to fix a limit, so that there should only be 200 acres. They enlarged it to 250 acres afterwards. We had over 800 acres ready to plant at that moment. It is for that reason that we are rather in the cold.
343. Could you not have had a co-operative mill? We made an attempt in that way; but we did not succeed. With regard to the state of the river near the island, between Chindera and Cave Point, I was stuck there with an empty boat, about eighteen years ago, for the whole of the night. About this time twelve months I went up in a steamer, over the same place, as far as Cudgen. This shows the very great improvement which has been made.
344. What is your opinion about the dairying industry? I am a fruit-grower.
345. Where do you find a market? Partly on the river and partly in Sydney. I have friends there, who like to get their fruit pure and wholesome, and I send my fruit to Sydney. I grow pines, bananas, mangoes, strawberries, and a good many other fruits, in small quantities.
346. Have you any trouble in getting your fruit away? Yes; I would do better if I were certain of getting it away.
347. How many acres do you cultivate for fruit? About 20 acres. I get most returns from bananas and pineapples. I have crops all the year round from those two fruits. I grow the Queensland pineapple.
348. How are your neighbours utilising the land? Such as are left are growing cane; but when the company put on a limit the great majority of them went out. They spent all their money in preparing land for cane.
349. When was this limit put on? In 1894. The railway line had been completed a year or so before, and they were getting a large influx of cane from along the line, and it was cheaper to get it from there than from Terranora. 350.

- F. J. Davey. 350. *Chairman.*] Did such a state of things actually exist;—the mill-owners suppressed an area that came under cultivation, or, in other words, was their capacity only sufficient to treat a certain quantity of cane? They had only a certain capacity in the mill, and that capacity was fulfilled.
- 29 Mar., 1898.
351. *Mr. Black.*] Do you know the date of that? About April, 1894.
352. The Dibbs Ministry was still in power? Yes.
353. This notice was given to the sugar-growers in consequence of the company being aware that their mill only had sufficient capacity to deal with the cane produced on a certain number of acres, and any quantity produced in excess of that would necessitate the duplication of their machinery? Yes; it was intended at that time to duplicate it.
354. Is there another mill situated at Cudgen? That mill belongs to Robb & Co.
355. Are they more liberal? A large proportion of Robb & Co.'s cane is produced by themselves. They take a certain quantity of cane from the farmers immediately surrounding them; but they do not have any influence over the cane districts on the whole of the river. It is more of a local concern. The company only allowed the Terranora growers 200 acres out of 2,717 acres.
356. Was that the proportion which they preserved in their ultimatum to the cane-growers throughout the district generally? Yes; with regard to the districts which came newly into cultivation.
357. Did they put any limit on the older growers? No; they had their contracts with the older growers, and they had no legal right to make a limit there. These were new lands just coming into cultivation.
358. What labour do they employ in cane-growing? All white labour with the exception of the men who thresh the cane, which is a work only fitted for coloured races.
359. Whom do they employ? A certain number of kanakas, and a good many Assyrians and other Asiatics. I think there are too many of them. The whole of the cane work, with the exception of threshing, is suitable for white men.
360. What about chipping? That can be done by white men. I have done a good deal of it myself, and I am not a strong man.
361. Do they employ kanakas and Asiatics because they are physically strong? No; but they can stand the vapour bath which exists in damp weather amongst the cane.
362. You see the plans on the wall in connection with this scheme;—as far as your judgment as a layman carries you, do you think they are so designed as to prove a benefit? I think so. In New Zealand I was an assistant in the drafting office of the Auckland Harbour Board for some years, and I had experience in this sort of work, and had to read up on the subject, and I think these plans could not be bettered.
363. The timber-growing industry is not what it used to be here? No.
364. Is that caused largely by the fact that the best of the timber is cut out? Undoubtedly.
365. Will it only be a matter of time before all the marketable timber, cedar especially, will be gone? Yes.
366. Has there been nothing done to conserve timber or to make plantations? Not on this river. There was a forest reserve here, but I think it has been broken into.
367. What is a sufficient area for a farmer to live on apart from fruit-growing? 100 acres would keep a man in a very good position. He would want 40 or 50 acres for cultivation and about 50 acres for grass land.
368. What is the area necessary for cane-growing? A man working by himself with a pair of good horses can attend to 15 or 20 acres of cane land, and that will take him all his time in the growing season.
369. Will that support him and his family? Yes; it is nearly all first-class cane land. The farmer is paid by the weight, not by the return.
370. Where do you grow the cane with the greatest density? On the hills. There you have no frost, and that is the greatest advantage.
371. Is it a fact that the policy of the Sugar Company encourages the production of inferior cane;—if they pay by weight does it not encourage the growth of heavy cane of greater size on the average, but yet inferior in sugar-producing capacity? Their inspectors are autocrats, who compel you to grow certain sorts of cane just as they please. They select those varieties to produce density. After you have got a cutting or two you may be compelled to plough it up. That was in the days of the contracts; now there are none.
372. Which is the land that grows the best sugar-cane? The hill land.
373. What is your idea about the dairying industry here? That it has been quite a god-send at a time when the sugar-cane disease, and the loss of the duty, and various other causes, put the cane industry back.
374. Where is the market for the dairying produce? There is a creamery at Murwillumbah, and another at Byron Bay.
375. Where is the butter sent? To Sydney chiefly.
376. In producing sugar, has not the land to be rested? No, that is very rarely the case. It may be the case on the river.
377. Have you any idea as to what number of years you could produce cane without resting? I saw cane on the river, where they had been growing cane for eighteen years on the same land, and there never was better cane.
378. Is not that exceptional? The soil seems to have wonderful capacity for taking up after a set back. The place I refer to was on a river flat.
379. In dairying, do they chiefly graze the cattle, or do they feed them? They feed them. They would not be able to keep the cattle during the winter time without food. They generally put the food in small plantings and cut it fresh; they have successive crops.
380. Have you mild winters here? Yes.
381. You have frosts on the flats, but not on the hills? Yes.
382. Is this a pig industry which is flourishing here? Yes; where corn and milk are cheaply produced, pigs will pay.
383. *Mr. Clarke.*] Did you say that the Sugar Company refused to take cane, beyond what was planted on a certain area? Yes.
384. What was the reason? Because their mill was already rather over-supplied.
385. Did they intend to duplicate the machinery? They spoke about doing so.
386. Do you think the removal of the duties had any effect on their action in that case? It is very hard to say. I think the company are very deep, and I would not presume to enter into their minds.

387. *Mr. Trickett.*] You spoke of black labour;—does the Sugar Company employ black labour? I have seen the Sugar Company employing black labour; whether they do so now, I cannot say.
388. When did you see them do so? It was perhaps five or six years ago. They had some blackfellows chipping.
389. You do not know if they employ them now? No.
390. Do the settlers employ black labour? Yes; most of them.
391. Do you go near the Sugar Company's mills sometimes? No; not recently.
392. As a man living on the river, and as President of the Progress Committee, I should think you ought to be able to state at the present time whether they employ black labour at the Sugar Company's mill? All I know is that I have not heard of their employing black labour recently.
393. Do they carry out any operations here under the halves system? Some of the small dairymen, I believe, have been in charge of their dairies on the halves system, but that has been a mere private business.
394. Under the system by which the owner of the land supplies the stock and working implements and the dairymen take charge of the dairy, the profits being divided? To a certain extent.
395. Is it successful? Sometimes. It is the owner of the land who generally gets tired of it first.
396. As President of the Progress Association, you must be aware that a large sum of money has been already spent on these works, and that it is proposed by the scheme submitted to us to spend a further sum of £40,000;—as a man in a public position, can you tell us in what way the Government are to get any benefit from the expenditure? We have been accustomed to think that the opening up of the far away lands and the back-blocks was in itself conducive to the welfare of the whole country. With regard to tonnage dues, I do not think the people here would make any objection if they saved something appreciable in the cost of freight and insurance.
397. That would not amount to much under the present state of affairs;—what is the prospective advantage to be derived by the community generally from spending this large sum of money in this district? For instance, there would be an advantage to Sydney in getting supplies as far as we could give them. Sydney is as much interested in this question as we are. It is not a purely local business.
398. Will there be a large population here? The population has been increasing largely within the last few years, and I do not see why it should stop doing so.
399. There is a plan on the wall showing the alienated land;—where is the large population to live, seeing that all the land near the river has been already sold? Although the land has been sold, it is still capable of carrying a very much larger population. Much of the land will be cut up and sold or leased.
400. Have you worked out any figures or statistics to guide the Committee in that direction? No; I considered that you would get better statistics at Murwillumbah.

William Henry Wilson, storekeeper, Tweed Heads, sworn, and examined:—

401. *Mr. Clarke.*] Have you any statement to give to the Committee as to the advisability of further improving the navigation of the Tweed River? I can say that the improvements already carried out have benefited us very much. I have been benefited myself directly by getting cheap freights and better communication.
402. You do not experience so much delay in getting vessels in and out as you did before? Not nearly so much. I think that now one steamer will average about seven trips in two months. At one time it used to be about four or five.
403. What has that been caused by? The training-walls have made the entrance so much better.
404. Has it been the means of reducing the rate of freight to and from Sydney? Yes. When I started here between six and seven years ago the freight was 25s. and 30s. a ton; now it is 15s. 6d. by steamer.
405. Is it not less than that at present? No; flour is carried for 12s. 6d. If you got 200 or 300 tons of coal, I suppose you would get it cheaper.
406. We have had some evidence that the rate was from 10s. to 12s. 6d.? I have not got it for that.
407. If the navigation of the river were improved, would not the natural result be that freights would be much cheaper than at present? Certainly; and we could get faster steamers. Steamers have had to be built so that they would not draw much water, and you could not get speed.
408. What are the products generally grown on the river in this neighbourhood? The greatest is sugar-cane; then comes dairying, which is in vogue now.
409. Is any maize grown on the river? Not a great quantity. Although it grows well, I believe the farmers do not go in for it. The reason they give is that the freight to Sydney is too high, and it is not always a certainty that the steamers will get out when the corn is brought down. Of late years I do not think they have tried it. The land is capable of producing good maize, as good as on the South Coast.
410. Is it more affected with weevil than the South Coast maize? Yes.
411. Is that one of the principal reasons for not growing it? The farmers told me that they had to keep the maize so long that weevils got into it, but now they could get it away much better.
412. Is the timber trade carried on to any great extent? Not nearly so much as when I came here. They do not seem to be able to get the same price for the timber as they used to. I do not think it is so easily obtained.
413. Is the cedar extinct? It is very far back, and the price is much lower than it was when it was plentiful.
414. Has the population increased very much in this district? It has increased a great deal since I came here twelve years ago.
415. Are you aware of people coming from the southern part of the colony? Yes; several people have come here from Illawarra looking for dairy farms.
416. Are they generally engaged in dairying pursuits? Yes; they bring up cattle of their own.
417. Do you think dairying is as profitable as other industries, particularly sugar-growing? It all depends upon whether you have the best land for growing cane. On the river banks the frost touches the cane sometimes, and the land there is more suitable for dairying. The high land is better for sugar-cane.
418. Could a family make a decent living on 40 acres of good land growing cane? Yes; at the price cane has been, provided, of course, that the land is good.
419. Can a family live as comfortably on 40 acres of dairying land? I think it requires more land for dairying.

- W. H. Wilson. 420. Does it not also require more capital? Yes, and more hands to work it. One man could work 40 acres for cane where it would take two or three for dairying. Forty acres is too small for a dairy farm.
- 29 Mar., 1898. 421. Then if the sugar industry fails the population would not be likely to increase? There is plenty of land available yet for dairying.
422. Do you think it is likely to increase? I think it is almost sure to.
423. Is dairying carried on to any great extent on shares or halves? I do not think it is to any great extent; I know of a few cases by hearsay.
424. What is the value of land per acre in this district in its original state, and also when cleared within a reasonable distance of a river or railway? The land is all taken up about the river, but in the back there is land available. That shows that the land near the river is the most valuable. In the hilly country there is land available, say, 3 miles back. I am speaking of Terranora to the west of the Broadwater. Any available would be taken up readily.

William Mackay Charles, farmer, Terranora, sworn, and examined:—

- W. M. Charles. 425. *Chairman.*] Where do you reside? At Terranora, 5 miles from here.
- 29 Mar., 1898. 426. How long have you been a resident? Sixteen years.
427. Do you think there would be any justification for carrying out the proposed works? Yes; for the reason that the works so far carried out have effected a great improvement. At Terranora we could not get cane away until the upper part of the wall was erected. Before the works were carried out, I had ridden over a portion of the Terranora Creek, where there is now 9 feet of water. The works from Rocky Point down to the island close to the mouth of Terranora Creek have benefited us. When we approached the Colonial Sugar Co. first, and asked them to take the cane from Terranora Creek, we were told they could not do so, that there was no way of getting it across the flat, but that when sufficient dredging was done they would take it.
428. Are we to understand that the construction of the training-wall on the eastern side, down as far as, and below the junction of Terranora Creek, and the works at the mouth of Terranora Creek, has had the effect of deepening the water which has admitted the Sugar Company's barges and steamers, and enabled them to go there for cane, and that in that respect it has been a benefit to the growers in Terranora Creek? Yes.
429. Have you not derived all the benefit you require? No; in this way:—The Colonial Sugar Company promised to take a certain area of cane, and if they had carried out that promise, instead of taking only the quantity grown on 200 acres they would have taken what was grown on over 2,000 acres.
430. What bearing had the refusal of the Sugar Company to take the cane on the question of harbour improvement;—did they refuse to take the cane on account of the imperfect navigation of the river? No; but at that time they intended to duplicate their mill, and they promised certain farmers that they would take their cane.
431. How many acres are there in that locality capable of growing cane? Over 2,000 acres; quite enough to keep a large mill going.
432. As a matter of fact, has there ever been more than two sugar-mills in the district? Yes; there was one at Tumbulgum, but it has been closed for a few years. There is another at Cudgen. That makes four altogether. Collier's mill closed the year before last.
433. For what reason? I think Robb's mill at Cudgen agreed to crush the cane. Collier got into difficulties.
434. Is Robb's mill large, and is the company's mill at Condong large? Yes.
435. Have they superseded all others? Yes.
436. If there were more mills would there be more cane grown? Yes; I daresay that is the case.
437. At the present time there are two sugar mills in existence, and they are not capable of dealing with the cane that could be grown in the district? Yes, that is true.
438. The product of the sugar-cane, together with all other products from this district, are at present conveyed from the river to Sydney by about forty-eight trips of a sailing vessel and eighty-one trips of a steamer in the course of a year? Yes.
439. That produce is able to find its way to market by the river at present;—does not that imply that the capacity of the entrance and the suitability of the river at present are sufficient for the produce? Not at all.
440. Would you point out to the Committee what, in your opinion, would be the result if the works were carried out and larger steamers were to ply here? If a better state of things prevailed we should have a far larger number of boats trading to the river. There are often delays even now, which are caused by the river being in a bad state.
441. It has been put before us that the sugar going out and coal coming in are the large items of trade;—unless the sugar trade develops how is the shipping business to increase? I think myself a compromise will be made in connection with the sugar industry. I do not think the sugar industry is going to fail. I think we can grow cane with a duty of (say) £3 per ton. I think there has been a good deal of bluff about the Sugar Company.
442. It is held by some that if the duties come off the produce of the district will go down;—are you of opinion that sugar will continue to be grown here? Yes; because we have good land on the hills where we can grow cane equal in density to that grown 100 miles further north.
443. Is the Tweed country looked upon as more suitable for the growth of cane than the Richmond? This country is better than the Clarence, but on the Richmond the land is very similar to the land on the Tweed. I have heard that the density is much higher on the hills than on the flats. It is only within the last few years that they have started to grow on the hills (say) five years.
444. What inconvenience do the farmers suffer from at the present time;—are they handicapped by heavy freights or by the bad entrance? Take the case of maize; there will be a good deal of maize sent from here this year. If the sugar industry went down, the flats would be all cultivated with maize, and would be used for dairying.
445. Do you remember that some years ago, when the Government contemplated making a railway from Murwillumbah to Lismore, it was urged then by the residents of the Tweed that if the railway were made maize-growing would be largely entered into;—has that been the case? Yes, to a certain extent, because there was a very large local consumption here while the line was being made.

W. M.
Charles.

29 Mar., 1898.

446. Now that the line has been completed is maize grown for the market? Yes.
447. In a largely increased quantity? Yes; this year alone, I think, a very large quantity will be sent to Sydney. The consumption on the river is very great in connection with the sugar industry, because horses have to be fed.
448. Do you think you could compete with such rivers as the Manning, the Macleay, and others, which are closer to Sydney? Their freights are cheaper, but we shall have to do something for a living.
449. Do you hold the opinion that the quality of the land in this district and the normal rainfall are such that the land can be cultivated profitably in growing anything which is capable of being grown here? Yes; we have everything in our favour.
450. Has the district made much progress, or has it been a fight and a hand to mouth existence for most of the settlers? It has made great progress.
451. Beyond giving the settlers a certain outlet for their produce, how would the construction of these works contribute to their advancement? Cheap freights would be a means of settling people on the land. We have a good many acres of unalienated land, which would be utilised for dairy purposes.
452. Supposing that in the course of time there might be federation between all the colonies, and you had railway communication from Southport here, joining with our system, would not a large proportion of your trade be likely to find its way to Brisbane for sale or shipment? A certain amount of trade would go to Brisbane. We would then be placed in a corresponding position to Illawarra with regard to Sydney. We would be able to do a large milk trade with Brisbane.
453. Supposing you were large exporters of butter, would you not adopt that route? No; our freights would be cheaper.
454. What would be the distance by rail from Murwillumbah, *via* Tweed Heads, to South Brisbane? Seventy-two miles to South Brisbane.
455. From the Tweed to Sydney by steamer, and from the Tweed to Brisbane by rail, which would be the cheapest freight? From the Tweed River to Sydney.
456. Do you think that that will determine the route for produce, and that consequently it is likely to go to the metropolitan market? Yes.
457. You are aware that everything will hinge upon the cheapness of transit? Yes.
458. Do you see any danger to the country, in the course of years, if we should expend a large sum of money on this port, and from any cause it may be divested of its usefulness? No.
459. The nearest you can think of would be a railway to Brisbane, and you are sure that will not have such an effect? Yes.
460. Would you approve of the construction of a railway from here to Sydney by the North Coast? Yes.
461. Would you send your produce by that line? No; we might send perishable produce.
462. If you could send your produce more cheaply by water than by rail, would you send it by water? Yes; it would be the cheapest and best for certain products.
463. Which would you prefer, a good port or a long-distance railway? I should prefer to have a good port.
464. Do you think that is the general opinion of the residents of the Tweed district? Yes.
465. Is there any trade between Brisbane and here by water? No.
466. Are there times when maize and other products in this district are bought for the Brisbane market? No.
467. Is there any reciprocity between yourselves and the large market in Brisbane? We get our fat stock from Queensland; they are driven by road.
468. Do you feel that your interests are identical with the metropolitan market of your own Colony or with Queensland? With our own Colony, and the desire is to keep up that connection.
469. Do you think that your market can be best maintained by giving you water carriage by means of a good port? Yes.
470. Do you speak confidently as to what would result from making a good port? Yes.
471. Do you think there is room for the population to increase tenfold in this district? Yes.
472. Do you think there will be a larger population here? Yes; we have large areas held by people who are doing nothing with the land.
473. Is it impoverishing them? Yes; those areas are being cut up.
474. Are people taking advantage of the provision of the Land Act which enables selectors to sell portions of their conditional purchases? Yes; and a lot of land which is in the hands of the banks is being sold.
475. Are these sales bringing in new people, or are the old selectors increasing their holdings? It is being taken up by new people.
476. Do you think that will go on to any extent? Yes; the only thing that would stop the increase of population to a great extent would be the fall of the sugar industry.
477. Supposing that the growing of cane absolutely stopped, would it follow that the production of the district would have to stop also? It would impair it to a great extent. It would be a terrible check to it.
478. Until something else took its place? Yes.
479. But owing to the great fertility of the soil something is sure to take its place? Yes.
480. Is dairying the next thing? Yes; but it is not equal to sugar-cane.
481. Are you growing sugar-cane? I started to grow cane. The company promised to take cane from me, but they afterwards refused.
482. What price were you to get? 12s. 6d. per ton for two-year old cane delivered into the punt.
483. Would that pay? Yes, handsomely.
484. What is the lowest price you could take to-day? I could grow it at Terranora for 9s. per ton.
485. Is that one reason why you think the sugar industry will not die out here? Yes.
486. That is to say, the sellers could afford to take less and still make a profit? Yes, in favourable places.
487. *Mr. Trickett.*] Do I understand from your answers that the prosperity or otherwise of this district is held in the palm of the hand of the Sugar Company? There is a great deal in that.
488. Although there are two or three other mills held by other people? There is only one other mill. It is some distance from the river, and is working to its full capacity.
489. How long have the Sugar Company had mills on the river? Before my time.
490. Did they go on without any trouble, as to price or otherwise, until recently? Yes.

W. M.
Charles.
29 Mar., 1898.

491. Is there any prospect of the company enlarging their operations, and did they assign any reason for not taking your cane? Yes; they assigned as a reason at the time that the duty was coming off sugar.
492. Have they made any overtures to you to go on growing cane? I saw a letter by Mr. Knox, published the other day, in which they offered to give the same price for cane if a duty of £3 per ton is retained. That was a circular letter. That is provided the cane is equal to the density of a certain year. I think it was 1893.
493. What became of your cane which the company would not take? I cut it for my cows.
494. Was that a great loss to you? Yes; but it was very good fodder for the cows.
495. Who employs black labour in the district? The farmer employs black labour for stripping.
496. Does the Sugar Company employ any black labour? No.
497. How long have you been engaged in farming? Sixteen years.
498. What has been your experience as to its prosperity? When I came here I felled the scrub, with the intention of going into sugar-cane growing; but at that time there were a number of small mills in existence, and after being here twelve months I foresaw the failure of that process with the open-pan system. I then decided to have nothing to do with the small mills. I then went on clearing land, in the hope of growing cane for the Colonial Sugar Company. I then went in for grazing.
499. Has that been successful? Yes, fairly; dairying has paid me very well.
500. Would not the company take your cane? No; they had no means of taking it away at that time. but the harbour improvements have opened up the creek.
501. Do you look upon yourself as a successful man in the district? No; because I have made several mistakes. If I were starting again I would know better what to do; but I think that I am now doing fairly well. I am now dairying combined with the buying and selling of cattle. I have 700 acres, which has been too much. If I had had less land I should have been in a better position to-day. My land is conditional purchase, with about 8s. or 9s. per acre to pay to the Crown on it.
502. Is the process of clearing the land very costly? About £3 or £4 per acre. That is to fell and plant with grass, and let time help to clear it. The scrub trees decay rapidly. It is thrown down and fire run through it. If you have a wet season it may have to stand over for a year, and then it is rebrushed.
503. A settler coming here in a wet season might have to wait for two years before he could do anything with his land? Yes; you require capital.
504. Yet you think it is a district that will progress? Yes; I came here ten or twelve years too soon. Those coming here now are reaping the benefit of the work done by the pioneers. There are now better facilities. When I came here there was no way of getting produce to market. Now we have creameries established.
505. But, seeing that sugar is the staple product of the district, how can you reconcile your views as to the progress of the district with the falling off in the sugar industry? The two things would work together easily, that is, sugar-growing and dairying.
506. But you say that the sugar industry is falling off? It will fall off if the price goes down, and if the Sugar Company cannot afford to pay a certain price.
507. Comparing the result of an acre of land under sugar and an acre of land used for dairying, what would be the difference? It would be greatly in favour of the sugar industry.
508. What does sugar land produce per acre? Thirty to forty tons of two-year old cane. Roughly speaking that would be about 5s. per ton net profit after deducting all expenses. That was when the company's price was 12s. 6d. per ton.
509. *Chairman.*] Presuming that the present mills remain, does it not follow that they will not be able, unless they increase the capacity of their mills, to deal with more than 2,700 acres of cane land, and if the cane industry is to increase very largely, is it not clear that there must be an increased number of mills, or that the present mills must increase their capacity? Yes; the present mills must increase their capacity.
510. You may have 10,000 or 20,000 acres suitable for cane-growing, but if you can only get 3,000 acres of cane crushed will not that limit the production of the district? Yes.
511. But your argument all through seems to be that the cane industry will stand, and will be profitable if all the available sugar lands are put under sugar-cane? Yes; but there must be a certain amount of duty.

WEDNESDAY, 30 MARCH, 1898.

[The Sectional Committee met at the Court-house, Murwillumbah, at 2 p.m.]

Present:—

CHARLES ALFRED LEE, Esq. (CHAIRMAN).

The Hon. WILLIAM JOSEPH TRICKETT. | HENRY CLARKE, Esq.
GEORGE BLACK, Esq.

The Sectional Committee further considered the proposed Harbour Works at Tweed River.

William Rodgers Isaacs, landowner, Murwillumbah, sworn, and examined:—

W. R. Isaacs.
30 Mar., 1898.

512. *Chairman.*] What is your occupation? I am late manager of the Colonial Sugar Refining Company; I am also a large landowner in the district, and I have retired.
513. How long have you been in the district? Twenty years.
514. During that time have you been always engaged in the sugar industry? Yes; up to the present time in the employ of the company.
515. Therefore, you are thoroughly acquainted with that industry? Yes.
516. Will you tell us how many acres of sugar were under cultivation when you came here, and how many there are at the present time? Having retired, I do not think it is advisable for me to give evidence in connection with the sugar industry at all. I will give evidence of a general character and particularly with regard to the dairying industry.
517. What can you tell us about the dairying industry in the Tweed? I can give information as to the area of registered dairies, the number of registered dairies, the cows, and with reference to the extension

of

- of the industry. The figures I have are taken out for the present year. The area of registered dairies at present is 13,760. That is all practically centered in the Tweed for purposes of business. I do not mean to say that the whole of that land is clear, and it is being used for dairying. As you know, under the Registered Dairies' Supervision Act, you have to state the area of land you are dealing with. The number of cows milking at present is 1,370, and the number of dry cows connected with these dairies is 780. The number of registered dairies is 62; the carrying capacity of the 13,760 acres would be one cow to an acre. The return per cow per month would be from 8s. to 10s. I consider that the extension of the industry, which is only at present in its infancy, would, within the next three years, be 50 per cent.
518. On what do you base that belief? Because, practically speaking, the industry has only been in existence for about two years. At the beginning of that period I do not suppose 300 cows were being milked; now there are 1,370.
519. Then the dairying industry is entirely a new one as a means of livelihood in this district? Yes; quite new.
520. Has it started since the duties on sugar have been reduced? I cannot say that. I think it was only last July that the duties came off, and the industry is about two years old.
521. That was when it was known that the duties would be taken off? I do not say that for a moment. Duty or no duty, I believe the industry would have started, and I speak from personal knowledge.
522. Do you think the removal of the duties has had nothing whatever to do with the starting of the dairying industry? Yes.
523. How do you know that that is a fact? Because I am personally interested in the dairying industry. I would have started dairying, duty or no duty.
524. You are quite sure that 1,370 cows would have been milked at the present time if the sugar duties had remained as they were? I would not like to go so far as that, although I think I might do so.
525. Who are the people who have come here and started the industry? I do not suppose the industry would have been started at all had it not been for the construction of the railway, because the farmers would not otherwise have had an outlet for their produce. The first start given to the industry was the fact that the farmers were able to send their milk to Byron Bay.
526. Where does it go now? A large proportion goes to the factory in the neighbourhood of this town, but the railway started it in the first instance.
527. Does it go by way of the railway now? Not the bulk of it; we now have a factory in the town which has been put up within the last few months.
528. Where does the butter go to? To Sydney by steamer, and by a very roundabout way, because the butter has to be droghered down in the first instance with a great deal of delay from Murwillumbah to Cave Point, where it is put on board the steamer, and it is then taken to Sydney. That necessitates having cooling chambers on the drogher and the steamer, whereas if the steamer could come up to Murwillumbah a great deal of that delay could be avoided.
529. When you speak of the industry starting at the same time as the railway, you do not indicate that as the outlet for the produce? If the railway had not been made to Byron Bay, where there was a factory, the industry could not have been carried out here. That was a means of outlet. Now, however, we have a factory in this district.
530. Is there only one? Yes; in Murwillumbah.
531. Is all the cream sent to that factory? The bulk of it is. A few people send their cream to Byron Bay still.
532. Are the men who are carrying out the dairying industry people who were formerly on the river engaged in any particular occupation, or are they new-comers? Some are new-comers, but I think the majority are old hands. Some have been working men, and some farmers. They have been engaged in various occupations.
533. Are they men who were sugar-growers, and who have now become dairymen? I think some of them have been sugar-growers. Some are combining the two things.
534. Before we came here, we were told that the people were abandoning sugar-growing and going in for dairying;—can you give us any idea as to the extent of that transition? There is no doubt that the area of cane has been greatly restricted owing to the threats.
535. We do not want that, we want the facts? The possible extinction of the sugar industry might induce some to go in for the dairying industry.
536. Have they gone from sugar-growing to dairying to any great extent? I cannot say that there has been a great number—there might have been only a few. There is a large area of country on the Tweed which is climatically not suitable for cane-growing, where the company has absolutely refused to take cane. Therefore, these people are forced to go into some other industry.
537. Did the people who went into the dairying industry own the land, and had they to clear it for themselves, or did they lease it? In the majority of cases I think the men owned the land. Some are leasing it.
538. What were they doing with the land before they began dairying? In most instances they could do nothing with it—there was no outlet.
539. If we have been informed that there has been a great falling off of sugar-growing for some time past, and that dairying has been substituted for it, that is not your belief? It has fallen off to some extent, but I cannot say whether great or small. It may have been to a greater extent than I am aware of.
540. Are the dairying people doing well? From what they tell me I think that on the whole they are very well satisfied.
541. What area do they occupy as a rule? The registered dairies vary very much, from as low as 30 acres up to about 1,000 acres.
542. What area do the small holders occupy? I should think from 50 acres to 150 acres.
543. Would a man with 100 acres, carrying 100 cows, earn £600 a year? Yes; he would upon my figures.
544. Do you think that a man with 100 acres does earn that? No. I am only giving a sort of general idea, because he has to depend on climate to a great extent.
545. The amount you gave us would be the gross return? Yes; expenses would have to be taken from it.
546. What is dairying land worth per acre? That is a very hard question to answer, because it is almost impossible at the present time to either sell or lease.
547. Why? Because, I suppose, there are not people to take up the land.
548. Is it not a fact that most of the good land near the river has been already alienated? Yes.
549. Are the people who have large areas trying to sell their land? I think so. 550.

W. R. Isaacs.
30 Mar., 1898.

- W. R. Isaacs. 550. Do you ever have any auction sales? There have not been any of late, but there may be plenty of properties in the hands of people for private sale.
- 30 Mar., 1898. 551. You have made a bald statement that in three years the dairying industry will increase by 50 per cent.;—does that apply to people coming to the district, or to people who already have land? It may apply to some who will come to the district and those who are already here.
552. If a man came to the district what would he have to pay for 100 acres suitable for dairying? He ought to get it at from £4 to £5 per acre, partially cleared.
553. And sown with grass? With the ordinary grass on it.
554. What does it cost per acre to partially clear and fence it and sow grass? £5 an acre.
555. That would be another £5 an acre, and a house would cost £50 or £100? Yes.
556. Are many of these people coming here at present? No.
557. This Committee is making an inquiry involving the expenditure of a very large sum of money;—we want to know how the Government is to be recouped for the outlay; as this is not a revenue-producing work we want to see how the district is going to build up these industries which you say will increase to such a large extent;—can you tell us, beyond the mere expression of opinion, how the district is going to improve to such an extent as to increase the population and the products, which will be an indirect means of helping the country? I can only answer the question by saying that my experience of the district has been that it has gone ahead to a great extent, and I do not think the class of people who are here will stop short in future, because it will not pay them to keep their land idle.

Russell Dowling, manager, Colonial Sugar Refining Company's Mill, Condong, sworn, and examined:—

- R. Dowling. 558. *Mr. Black.*] Can you state the area now producing cane which is under contract to the Sugar Company? There are no contracts with the Sugar Company just now; they have been all cancelled.
- 30 Mar., 1898. 559. Can you give me the area under sugar in the district? Quoting from memory, the area is something over 4,000 acres.
560. Is that the total area in the district? No; that is as far as the company is concerned.
561. Do you arrive at that area only because that amount of cane was previously cultivated under contracts of the company? Yes; there were contracts existing last year for that quantity of cane.
562. Is that an increase on previous years? No; it is a decrease.
563. What is the greatest area you have known to be under cane in this district? Something over 5,000 acres.
564. What is the greatest area of cane that could be treated by your mill? About 5,000 acres.
565. Then you have reached your maximum? Yes; at present.
566. In order to treat a greater quantity it would either mean an increase of power at your present mill or a duplication? A duplication.
567. Then, so far as you are at present concerned, it is not likely that you will offer such inducement to the cane-growers as would lead them to increase the area under crop? I think that question is not altogether in the company's hands. It is a question of the policy of the Government.
568. Do you mean that unless the sugar duties are retained it will not be part of the policy of the Sugar Company to extend their operations? They will not be extended at all, as far as the company is concerned.
569. In the course of your dealings with the cane-growers have you observed any tendency to substitute dairying for cane-growing? Only in cases of necessity where they cannot do anything else. They prefer cane-growing as far as I can understand them. There are certain low-lying lands not suitable for cane which suffer from frosts, and they might do better with that land by dairying. My dealings with the farmers lead me to think that they wish to keep on cane-growing.
570. Do you think that the lower lands, because of their being subject to frost, are not so well adapted for cane-growing as the higher lands? It depends upon the season. Last year we practically had no winter at all, and the crops on the flats did exceptionally well. The previous year they were frosted badly.
571. Speaking from average experience, are the low-lying lands which are subject to frost as suitable for cane as the higher lands? No; but the proportion of low-lying lands is small compared with the higher levels. There is a larger area of land which is not frosted than there is of low-lying land which is subject to frost.
572. What is the relative proportion? One-third low lying, and two-thirds high land free from frost.
573. Then there is only one-third of the area now used for cane-growing on low-lying land? Yes; but the one-third is not all subject to frosts, only the upper portion of the low-lying land is subject to frost—that is to say above Tumbulgum. Above that point there is more danger of frost than nearer the sea.
574. What proportion of the low-lying lands are in the frost area? I should say, roughly speaking, about one-sixth of the total. That is one-half of the low-lying land.
575. Is it fair to assume that those lands would, under any conditions, be devoted to dairying? Not in all cases. Some of the low-lying land is subject to flood, and dairying would not be a success even there. Floods do not hurt the cane very much, but they would destroy grass and green feed for cattle.
576. How many years have you been on the Tweed? About twelve years.
577. Have you been connected with the company all that time? Yes.
578. During your experience has there been any delay in the transit of your sugar or in the arrival of steamers so as to seriously interfere with your trade? Of course on the bar there have been many interruptions and the shipping has been delayed. In bad weather ships can neither enter nor get away.
579. Prior to the improvement of the river, was there any obstruction to your operations in the collection of cane? Yes, decidedly. At present we can navigate the creeks and rivers better than we ever could before. Last year was the best we ever had with reference to the navigation of the river and creeks.
580. Do you put that down to the improvements made in the river? Decidedly.
581. Is the river sufficiently improved now for your purposes? Not altogether.
582. In what way does it lack improvement? The deepening of shoals, for instance, about Condong.
583. Are there two shallows between here and the Heads? Yes; one is at Condong Flat, and navigation has been stopped by it.
584. Apart from the removal of the shoals, as far as the Sugar Company is concerned, further improvement is not required? I should not say that. The creeks are not yet as good as they might be.

585. Do you think any improvement of the river would improve the creek? Yes; it would give a better scour.
586. Do you think that the deepening of the river would cause a scour in the creeks? Yes.
587. You do not ask for the dredging of the creeks? The creeks are being dredged now, and I should like to see the work finished. The dredge has been in Terranora Creek, and there is a dredge now in the North Arm.
588. Do you think that the construction of breakwaters and training-walls at the entrance would in any way benefit the sugar industry? Yes, because the shipping would be very much improved.
589. Do you think that is necessary for the sugar industry? I know that at the present time the shipping is delayed, and that affects the company to a large extent. The company are the largest shippers, and it affects them principally when a vessel remains in port for a week.
590. Do you think that further improvement of the river at the expense of the State, all things being equal, would be beneficial to the district? Decidedly, for the district as a whole; that is in connection with the sugar industry.
591. Do you think that the benefit would be in any way commensurate with the expense? That is a point I cannot answer.
592. Do you think that freights would be lowered if the river were so deepened that vessels of a larger tonnage could enter and could make trips with speed and regularity? Decidedly.
593. Do you think freights would be lower? Certainly; it is the insurance on account of the bad bar which causes a great deal of trouble.
594. What percentage do you think there would be in the lowering of freights and insurance? I cannot give figures; it would depend altogether on the nature of the improvements.
595. *Chairman.*] The nature of the proposed improvements is to construct a north breakwater and to continue the north training-wall almost to a junction with it, leaving an opening to get into the present northern channel, and also to continue the eastern training-bank for a certain distance, and then to extend it as a southern breakwater in anticipation of giving from 18 to 20 feet of water constantly at the entrance? With that knowledge, I should say the freights ought to be reduced by more than one quarter.
596. *Mr. Black.*] There would be a sensible reduction? Yes, a distinct reduction.
597. If there were such a reduction, do you think there would be any objection on the part of consignees of cargo to pay out of pure patriotism a tonnage rate for a partial recoupment of the Treasury? I think if there are cheaper rates they could be asked to do so, but I do not know how they would take the proposal.
598. If there were a reduction of 40 per cent., would they object to pay back 5 per cent. of that to the Treasury? I do not think they ought to object, but people sometimes do object when they ought not to.
599. Would there be any public outcry? I do not think so.
600. *Mr. Clarke.*] You say that the area of land under cane a year or two ago has considerably decreased;—can you give the Committee any idea as to the cause? Yes; the change of policy. The fall in price of £1 per ton last year was the chief reason why the area decreased. The people could not afford to grow the cane at the reduced price.
601. Is that the reason why your company is inclined to discontinue any further expenditure? Yes; on account of the reduction in the duty.
602. *Mr. Trickett.*] What do you regard as the staple industry of The Tweed? Sugar-cane.
603. Not dairying? The two can be combined successfully, but there are certain portions of The Tweed River, which are better for cane-growing than for dairying.
604. Have you noticed any increase in dairying lately? Yes; since the advent of the creamery at Byron Bay and the establishment of one here.
605. Have operations been satisfactory to the dairymen? There is a very mixed feeling. Some succeed and some do not. Some men take up dairying when they are not ready. They hire cattle, or get them on the part payment system, bad weather sets in, and they lose everything.
606. Still this is a district eminently suitable for dairying? Decidedly.
607. Which do the people prefer, cane-growing or dairying? There are two classes. There is the class that cannot grow cane because they are not near the water, and they prefer dairying. They have no alternative. Those who can grow cane would prefer that to anything. You passed hilly country coming up. On both sides of that there is a large quantity of cane, and there are many blocks of land on the high levels that are suitable for cane-growing. It grows amongst the stones. Cane-growing would be better than dairying at a certain price on that land.
608. At per acre, I suppose that cane-growing is far more profitable than dairying? Yes; cane-growing yields on an average 20 tons per acre, which would give a man in favourable times 10s. per ton.
609. What would be a first-class crop? At one time 70 or 80 tons per acre could be obtained, but we call 45 to 50 tons per acre a good crop now-a-days.
610. Is that because the land is impoverished? No; it is because the sweetest class of cane is cultivated, and it does not give such a heavy yield as the rank class of cane.
611. Is coloured labour necessary for growing cane? Not for planting it or chipping it, but white men do not care for thrashing the cane; it is very hard work. The cane lies down a great deal, and white men will not do the work.
612. And consequently coloured labour has to be employed for that? Yes.
613. Does the company employ black labour? No.
614. We were shown as we came along a large shallow patch opposite the company's property; it was stated that the dredges were brought up for the purpose of deepening that part of the river, but that the people on either side, including your company, objected to the silt being shot on to the banks;—is that so? I do not know the exact nature of the arrangement at the time. Mr. Isaacs, I think, could speak more fully about that. He had control of the matter in those days. As far as I can judge, I do not see why the company should object to the shore being built up.
615. It occurs to one that the deepening of that long shallow patch would be such a great benefit to all concerned, the company included, that one can hardly see why it should be objected to? I cannot see myself why there should be any objection to it.
616. It will be necessary to have that shallow part removed to enable the steamers to come up from Murwillumbah? Yes; that is the principal block now between Murwillumbah and Tweed Heads.

R. Dowling.
30 Mar., 1898.

R. Dowling. 617. In bringing up the large steamers, one of the principal items of economy would be in doing away with the droghers? Yes; the result of improving the harbour was experienced by us last year. Schooners came up to the wharf, although at one time you could scarcely get a sailing boat across the flats.

30 Mar., 1898.

618. In the transit of goods, who pays the drogher? The shipping firm makes a round charge which includes the drogherage.

619. *Chairman.*] How long has the Condong Mill been built? In 1880.

620. How many other mills are there on this river? There are two working and one idle. There are the Condong and Cudgen mills.

621. Does the sugar area which you gave us comprise the whole of the sugar grown or only that treated by your mill? Only what we are interested in. That is now 4,390 acres.

622. You said that you looked upon sugar as the staple product. In the event of all other things being equal, if the policy of the country be such as you urge to be necessary to maintain this industry, what do you think will be the ultimate output of cane on this river? I cannot say exactly. I can tell you what would have been the result if the duty had not been interfered with, and what were the arrangements before the duty was touched. That was, that the Condong mill was to be doubled, and that there was to be a largely increased area under cane.

623. If the mill were doubled, what increased area would you require for cane? We have manipulated 5,000 acres of cane with the one mill. I would not like to say that we would double that, but we would treat the cane from 7,000 or 8,000 acres. I cannot say now what the company will do. But we had arrangements with the people that they should grow up to a certain area two years ago. They, however, never reached the limit owing to the interference with the duty.

624. Your mill was built seventeen years ago, and it has taken that time to produce 5,095 acres of cane; that was prior to the remission of the duty? Yes; I think that can be explained. For a very long time it was considered that cane-growing on mountainous country would not be a success to the manufacturer. It was unknown whether it would be payable to the grower. It is only in recent years that cane-growing has gone ahead on the hills. That is the cause of the sudden increase. The river flats have given their full output all the time. The increase is all from the high country where the output can be still further increased if necessary.

625. Is there much of the hilly country which is capable of being brought under sugar? Yes.

626. That is within the next year? Yes.

627. Would there be sufficient there to keep your increased capacity going? We would have no trouble in finding a sufficient area.

628. Would there be sufficient virgin soil there to keep another mill going? I cannot say. As far as the company is concerned it has people growing all over the district where it would be very difficult for a separate mill to "chip in." Another mill would have to take a district for itself.

629. Your figures show that there would be a very considerable increase if certain things were done;—large as that increase might be it would be hardly sufficient to justify the Government in spending an additional £50,000 on improving the river;—is there scope to go outside even the large increase you have mentioned? We have not tapped all the cane-growing country in the neighbourhood of the railway line, and that country could furnish two or three times the area that we require for the increase I have mentioned. We have taken cane 10 miles from Lismore.

630. Can you deal with cane profitably at such a distance? Yes; but the price is reduced to the grower.

631. In the event of the sugar industry increasing, is there a likelihood of your company erecting mills in that direction or will they make arrangements to bring the cane here? I cannot speak as to what the company will do. I can only say what they were prepared to do before the duty was touched.

632. If the company treated cane grown near Lismore it would be within the influence of the Richmond River or Byron Bay;—our immediate duty is to inquire what is likely to be taken on this river? The duplication of the mill would be at Condong. The only proposal was that the area should be increased on the railway line, and that the cane should come to the Condong Mill.

633. Up to the present time, with some slight inconvenience, you have been able to send all the produce of the mill by ordinary sailing vessels and steamers to Sydney;—since the training-walls have been built has the delay been minimised? Yes.

634. We know the number of sailing-ships and steamers that come to the river; the question put before the Committee is whether the works which have been constructed are sufficient to enable you to carry on your business, or whether, if better facilities were given, very much larger business would ensue;—can you satisfy us upon that point? I am afraid an answer would lead to complication, owing to the fact that the present state of the industry is very uncertain. The prospect now before the people on the river is that we are going away in 1899. The mills cease crushing in 1899 on the fall of the duties. How that will affect the river generally I cannot say.

635. You are not prepared to offer an opinion that will in any way bind your company, for whom you are not authorised to speak? I could not bind them at all.

636. Are you clearly of opinion that in the event of the sugar industry being continued the exports from the river are likely to be largely increased, and that if the increase takes place, with the improvement of the port, the rate of freight will be considerably less? I certainly think so.

637. Then, if your company were the sole manufacturers of sugar on this river, and they obtained the direct advantage of a decreased rate of freight on exports and coal, would you not be in a position to offer some further consideration to the sugar-growers? I do not think that would be sufficient to enable us to take it up seriously in that way.

638. Your freight must be a very heavy item? It is.

639. And as you say, insurance is also heavy;—if you obtain a considerable reduction in freight, would it not be very important to your company? Yes; but, of course, in all these matters I am not familiar with their ideas, and I could not speak about it with any certainty.

640. Are you of opinion that the present prospects of the district, and the district immediately surrounding this river, and their future prospects are such that, in your opinion, the country would be justified in carrying out the proposed works to improve the harbour? That depends a good deal upon the future of the industry. I am not prepared to give an opinion. I should say that if the industry is continued the money would be well spent.

641. *Mr. Black.*] When do you crush the cane? From July to January.

642. You have been crushing the product of 4,000 acres? Yes.

643.

643. From how many thousand acres were you crushing in the period ending January, 1894? I am afraid I cannot quote it from memory. I should like to say that, in crushing and dealing with 4,000 acres, that is not crushed every year. Some of the crops are stand-over cane. We might crush the cane from 3,000 acres, and a certain portion might stand over for the 2-year-old crop. Last year we crushed a 3,200-acre crop. We crushed three-fourths of the crop for that period. R. Dowling.
30 Mar., 1898.
644. Were you dealing with a greater quantity of cane in the period ending January, 1894, than you are now? A much less quantity than now. The crop last year was the second largest we ever took off, the largest being in 1896.
645. You have not made any increase in the capacity of your mills since 1894? Yes; improvements have been made, but nothing to do with the actual crushing of the cane. The machinery in connection with the manipulating of the juice has been increased.
646. Is the capacity of your mill greater for turning out sugar than it was in the January period of 1894? Yes; it is greater now; it is greater by the increase of a boiler or two and various additions to machinery.
647. Then there has not been a great increase? No; not as far as the machinery is concerned. The reason why the crops have been taken off more promptly is that we have been working on a different scheme. We work twenty-four hours out of the twenty-four, instead of working twenty hours out of the twenty-four; we work in shifts.
648. You told Mr. Clarke that it was the removal of the duty which had caused the reduction of the area under crop? Yes.
649. Having made that statement, is it correct that early in 1894—say April, 1894—you sent a circular letter from the Sugar Company to the cane-growers, informing some of them that it would be necessary for them to put a limit to their supply, because the company was unwilling to duplicate its plant? I cannot remember a circular of that nature, but I can say that the people were told there would be a limit. That was in connection with the duplication of the mill; after we had agreed to duplicate the mill. I cannot recollect any time in 1894.
650. If you were not, at the beginning of 1894, working up to the full producing power of your plant by a very large percentage, was there any necessity at that time to limit the cane production of the district? We had to look ahead, so that we should not grow too much cane for the capacity of the mill. The company were prepared to have a double mill working up 100,000 tons a year, but the company were not prepared to take more at that time, and therefore they had to limit the area.
651. But you had not overshot the capacity? It takes a long time to prepare for cane-growing. In the first year nothing is done except to clear the land. Then it is planted, and there is no result for two years. A man has to wait three years before he gets a crop to the mill.
652. When you issued that circular letter, however it might have been worded, I believe the Dibbs Government was in power? I cannot say.
653. In April, 1894, or about that time? I cannot remember exactly.
654. At all events, there was no danger at that time of the sugar duties being removed? All I can say is, that the company were prepared to go further and to have a double mill.
655. Is it fair to say that the reduction of the duty has reduced the area? The people were not able to grow up to that limit owing to the fall in duty. They have been 1,000 acres short of what was agreed upon. At that time we said we would take 6,000 acres; that is three years ago; but they never reached the limit; they never went further than 5,000 acres.
656. According to your statement you have treated more sugar during your last period of dealing with it—that is, the period ending January, 1898—than in the period ending January, 1894? That was the production of 5,000 acres. But you must understand that 5,000 acres, and all that was to follow, was being planted for the double mill. We have been forcing the machinery to work up the cane from 5,000 acres, which was to have been dealt with partly by the double plant. We have been forcing the mill to do too much.
657. I thought you said that the mill was equal to dealing with the product of 5,000 acres? We have taken all we could take off except in a few cases. We would have taken more this year than last year, but heavy rain fell, and we could not cart the cane. It is only on the 5,000 acres that we have been taking the cane.
658. Is any reduction of area under crop due to climatic forces? That may be the case on certain areas, but not to any large extent.
659. *Mr. Trickett.*] It was stated yesterday in evidence that owing to the mill refusing to take cane, or having intimated that it would not take cane, one gentleman had to cut down his cane and fed cattle with it;—have you ever heard of a case of that kind? I do not know who that gentleman is.
660. It was sworn to yesterday, and another witness swore generally that, owing to the action of the company, the cane-growers had cane left on their hands, and could not get rid of it to the company? Unless it was damaged, or not a marketable crop, we have practically not left any cane behind. We have left no good cane.
661. If it was marketable cane you would take it? Yes; last year was the first time we did not take cane.
662. Did you state that your increased treatment of cane has been owing to working double hours? No, we have had longer shifts; we have worked continuously right through the week to increase the crushing.

Gavin Pettigrew, cane-grower, Stott's Creek, made an affirmation, and was examined:—

663. *Mr. Clarke.*] I suppose you are well aware of the capabilities of the Tweed district? Yes; I took G. Pettigrew. up land in 1868, and I have been interested in the district since then. 30 Mar., 1898.
664. What are the principal articles of produce? The staple is sugar-cane.
665. Are there not other industries? We have grown a little maize, and some potatoes occasionally, and latterly there has been some dairying.
666. Is there any timber industry? That is a vanishing quantity. They have been taking cedar from here for fifty years, and I understand it is getting scarce. The industry is not reproductive. Cane is reproductive; you can grow cane on the same land for 100 years, but you cannot do that with timber.
667. Can you grow cane for ten years on the same land without manure, or change? Yes; I have grown it for twenty years without any manure, and it is pretty well as good-looking a crop now as at the beginning.

- G. Pettigrew. 668. Must not the land be very rich? When you understand how the land has been formed, it is no mystery.
- 30 Mar., 1898. 669. A large amount of money has been spent on training-walls on both sides of the river. There is a proposal before this Committee to expend a further amount of more than £40,000 to complete the improvements;—do you consider that if that were done, the navigation of the river would be much better? I am not engineer enough to pass an opinion with regard to that, but on the general principle that if you start a job, you have to finish it, I should say it is better to finish this one.
670. Seeing that a large amount of money will have to be spent, and in the event of any of these industries failing, particularly the sugar industry, or if they become less important than at present, is it not probable that there will not be so much produce sent away in future, as there is now? If you put it in that light, and if I owned the whole district, I should say that I would not spend a penny more if the sugar industry were to go down. I would save all the money I had.
671. Do you really think that the sugar industry is likely to go down? It all depends on Parliament. I have gone into this business, and I can demonstrate from the Statistical Register that it is to the interests of the Colony to keep this industry going. If people cannot see on which side their bread is buttered I cannot help it.
672. You heard me ask Mr. Dowling as to the probability of the sugar industry failing; you heard his reply;—do you agree with that? Not altogether.
673. What would you say on the question? Mr. Dowling explained from his standpoint; I speak from the other standpoint. When the mill was willing to take all the cane it could get, it was given out that the Colonial Sugar Company intended to duplicate the mill. It was to their interest to have more cane grown. I was one of the committee which at one time got up a movement to increase the area in order to get more money for the cane. It would pay the company better to work their mill on a double shift than on a single shift, with the same cost of management. You must understand that this question is hedged all round with conditions. There was no use in our going on increasing the area unless we had some assurance from the company that they would take the cane after it was grown, because, as Mr. Dowling has shown, it takes three or four years before you get the first crop. We wanted some assurance that the Sugar Company had sufficient plant to take the cane before we increased the area. We increased the area, and had a promise that the company would be able to deal with a further increase of area. It was at this unfortunate time that there was a change of Government, and the sugar industry was threatened with the removal of the duty. Naturally we were afraid to increase the area, and the company countermanded the order to increase their machinery in consequence of the threatening attitude. Since then we have been trying to make the best of a bad job by working into each other's hands. In that way a certain amount of trouble arises, because, if we went on enlarging cane-growing operations there would probably be more cane than the mill could take; at the same time the company were not justified in spending any more money on machinery until they saw how things would result, and whether the industry would live or die. That is the position up to the present time. No doubt if there were any certainty about the industry going on, the company would have duplicated their mill before now. As they say, they have spent half a million of money on machinery on these rivers, and it is not likely that any sane person would increase expenditure under present circumstances.
674. According to your statement, you agree to a certain extent with Mr. Dowling's evidence? I do; but I do not agree literally with what he has said.
675. Are the lands now under cane capable of being worked as dairy farms? No. My experience here extends over thirty years. We have been told to take to something else. That is freetrade talk. I have been trying a lot of other things, and I find there is nothing will succeed like cane on the lower lands in the Tweed district.
676. Are not some of the lower lands which are not close to the sea liable to frost? I hold some original ideas with regard to that. In some parts of the world the cane is frosted every year, but still the business is run at a profit. The Colonial Sugar Company have ideas of their own, and we cannot at present prevail upon them to believe that it is possible to carry on the business where cane is frosted; yet two years ago they carried on the business with frosted cane, and succeeded very well, according to all accounts. The great question is as to the capacity of the land to grow cane. Cane is liable to be frosted, but the difficulty is overcome in other countries. You can raise a crop inside of twelve months, and even if it is frosted, if of early maturing varieties, you can deal with it. In Louisiana the cane is frosted ten times more than it is here, and yet the business is carried on profitably. There the frosting is a dead certainty every year. On that account I reckon that the frost is only a bugbear. The main point is the capacity of the land to grow cane. We have land which will grow cane, and will continue to grow cane for a century if required.
677. Does the railway to Byron Bay interfere in any way with the traffic of the Tweed district;—does any of the sugar or butter produced here go to Byron Bay, or does the great bulk of it go to Tweed Heads? As far as I understand, all the cane grown on this side of Byron Bay comes to the Condong mill, and the sugar is shipped through the Tweed Heads. That was one of the reasons why they built the railway, in order to develop that country which is capable of growing cane.
678. Is not the best land in the district taken up under conditional purchase or otherwise? There is a lot of land at the head of the river which is not taken up. I suppose all the cane lands are taken up, but they are not utilised.
679. Would they be likely to be utilised if the harbour were made? The more important thing to be sure about is the sugar industry. We can increase the area two or three times beyond what it is, independently of the harbour improvements, if the sugar industry is permitted to live.
680. Is the greater portion of the alienated land of good quality? I have been pretty well all over the colonies and round the world, and I reckon that we have better land for growing cane here than anywhere about that I have seen.
681. Can you give us any reason why the unalienated land has not been taken up? People cannot get it, because it is reserved.
682. What area of good land would support a family by growing sugar? About 10 acres is enough for any man to cultivate by his own labour, and using the best implements.
683. What area would a dairy-farmer require? About 100 acres, if he has a large family, and pays nothing for labour outside his own family.
684. The production under dairy-farming would not be equal to sugar-growing? No. We consider that dairying in this district is right enough when we cannot do any better. Where you can do any better growing cane you would not think of it.
- 685.

685. Have any of the South Coast farmers come here? I believe a few have.

686. Do they go in for dairying or cane-growing? They would not pay much attention to their own interests if they went into cane-growing at present. With regard to dairying, they know what they can get; that is 6d. a lb. for cream, lately, which does not amount to much.

687. *Mr. Trickett.*] Supposing a man had a small holding here, on which he was getting a living by sugar-growing, how much an acre do you think that land would stand him in;—what would it cost him per acre to get it ready for sugar-growing? I have land myself that I put under cane, and it cost me £20 per acre before I could put in cane.

688. Is that a fair average price? No; I am speaking of my own experience. It was not cleared then; large stumps were left.

689. Is that an excessive or a fair price? It was extra heavy timber.

690. What would be the average cost? Nearly £10 an acre on an average, if you count everything. It is heavily timbered, and if you clear it so that you can work it with horse-power it will cost that. If you are not in a hurry, and have money, you can give nature a chance of working for you.

691. It being very expensive to get land ready for sugar-growing, would any man in his senses convert that sugar-growing land into grazing land for the purpose of getting a living? Not if he were sane.

692. What would it cost to get land ready for dairying purposes? It would cost about the same for dairying as it would for cane if the land were to be worked with labour-saving implements.

William Wardrop, storekeeper, Murwillumbah, sworn, and examined:—

693. *Chairman.*] How long have you been here? I have been twenty years on the river, and during that time I have been seventeen years storekeeping here. From 1894 to 1897 I was out of business.

694. When you first began business, how did you get your store goods? I chartered a vessel in Sydney; the freight came to about 22s. 6d. per ton.

695. Did the rates remain at that amount for some years? No; they were considerably higher. When vessels did run to the port they charged 30s. for dead weight and 35s. for measurement.

696. How long did that last? From four to five years.

697. Do you remember when the training-walls and other works were commenced? Yes.

698. In consequence of the increased depth of water has there been a decrease in the rate of freight? No.

699. What is the rate of freight at present? There is no regular rate—they charge 12s. 6d. for some articles and £1 for others. They reserve the right to charge packet rates.

700. How much per ton do they charge for ordinary goods by steamer? They reserve the right, and invariably charge packet rates. If you had 10 tons they would not bulk it.

701. Supposing you were getting salt, how much would they charge per ton? Twelve shillings and sixpence.

702. And general oilmen's stores? They come as packets. Drapery comes at packet rates also.

703. What does that come to per ton? I have had a great many years' experience, and I cannot puzzle it out, but I think it comes out at about £3 or £4 per ton for parcel rates.

704. Do you consider the present rates too high? No.

705. Do you suffer much inconvenience or loss in consequence of delays in getting goods by steamer? Yes; the greatest loss is through not getting the goods up the river, and having to trans-ship them at the Heads. A steamer came in last Friday morning, and we are only getting our goods to-day.

706. The greatest inconvenience arises from the ocean boats not being able to come up to Murwillumbah? Yes.

707. Are you of opinion that the river should be made navigable, so as to admit of the ocean boats delivering and receiving their cargoes all the way up the river? Certainly.

708. So as to avoid the droghering? It would prevent great delay.

709. If there were greater facilities for entering and leaving the port do you suppose it would have any marked influence on the district? Yes; by inducing farmers to grow more produce. They would be able to produce more pigs, poultry, and other things than they are able to do at present. That would be the case even with potatoes and maize. The want of quick communication is a drawback with regard to all produce. If there is a rise in price in Sydney we cannot avail ourselves of it.

710. Have you not communication by steamer five and six times a month? Yes, at times; but lately it has not been so often. We have been unfortunate of late with regard to weather. In ordinary seasons they average three trips a month.

711. Do not a portion of the store goods used here come by way of Byron Bay? Very little; there may be an occasional package. If a steamer is missed the merchant may send the goods that way; but it is too expensive as a rule.

712. Then it is not the custom of Murwillumbah storekeepers to get their goods from Sydney by way of Byron Bay? Certainly not; they are brought by way of Tweed Heads. I ordered some barbed wire; but the steamer was missed, and it was sent by way of Lismore. There is 4s. 6d. difference in the freight to Lismore. It is only 15s. 6d. to Lismore, whereas it is £1 to this river; but 22s. 6d. was charged for trainage from Lismore up here.

713. The freight by the port is much cheaper for both inward goods and exports? Yes.

714. You have shown us that you get all your goods and that you send away all your produce by way of the river, and that you have two steamers and a certain number of sailing-vessels engaged in the trade;—if the Government improve the entrance to the river, so as to admit of other steamers coming here, will there be any marked improvement in the district? That will depend upon the life of the sugar industry. It is the staple product of the district at present, and we must take that into consideration.

715. Would it be considered a great boon to this district if larger vessels could trade to the port, and could come up as far as Murwillumbah, and would freights be reduced? It would certainly be a great boon.

716. Can you tell us what has been the general rate of progress in the district for, say, the last ten years? I should think the trade must have improved at least 400 or 500 per cent.

717. Has the population largely increased? Yes.

718. What effect has the opening of the railway had upon the place? I think it has caused more settlement.

719. Do you know whether it has had the effect of drawing the trade between Byron Bay and here to this place as a port of shipment? Yes; it has brought more trade in this direction.

- W. Wardrop. 720. What is your opinion as to the future? If you could give me an opinion about the sugar duty I could answer that question.
- 30 Mar., 1898. 721. Sugar or no sugar, I presume that in a district of this character, with such favourable conditions, there must be settlement, and hence produce of some sort? Yes; but it is the sugar that caused the settlement in the first instance. In fact, it was sugar that caused settlement on all the northern rivers. Thirty years ago I started on the Clarence, and the Clarence was then nearly as dull as this is now. It was the same on the Richmond.
722. If, as one of the residents, you are so doubtful about the future of the district in consequence of the alleged jeopardy of the sugar industry, do you as a citizen think it would be wise for the country to incur the additional expense of £50,000 on harbour improvements? I did not say I was doubtful about the prosperity of the district, and I am not; but I cannot give you an answer as to what the result is going to be when this staple industry is killed. It must take time to get anything else under weigh.
723. *Mr. Trickett.*] You mean, I presume, that independently of any risk, if the sugar industry were to cease on the Tweed River, it would be a very serious thing for the district? It certainly will be for a time, until people get into other pursuits.
724. What other pursuits would they go in for? Dairying is one at present. It has made rapid strides since they talked about taking the price off the cane. It has progressed very much during the last two and a half years, and it will continue to do so.
725. Will it continue to increase side by side with the cane industry if that goes on? Yes; they would work together admirably. Land not fit for cane is well fitted for grazing. Many men have 12 or 15 acres fit for cane while the balance is not; they could work both well together.
726. Can you state, as a business man, what is the financial position of the district so far? Fairly sound.
727. And the people living on the soil have been able to make a fair living? Yes.

Edwin Hill Johnson, licensed surveyor, Murwillumbah, sworn, and examined:—

- E. H. Johnson. 728. *Mr. Trickett.*] Are you working privately or for the Government? Both.
- 30 Mar., 1898. 729. Have you ever seen a map of the kind exhibited on the wall indicating the alienated land, the Crown land, and reserves? Yes.
730. Looking at that map, can you say that it is so far correct? Yes.
731. Can you tell us what quantity of unalienated land there is available? I saw a statement that there are about 60,000 acres; it seemed to me to be correct.
732. I think it is between 50,000 and 60,000 acres; will you describe those lands? There is a great deal of unalienated land in the district yet which is fit for settlement.
733. For what kind of settlement? Mostly for dairying.
734. Not for cane-growing? I think a great deal of the cane land is already selected.
735. Is the most of it? There are some reserves which it would do to cut up for cane land.
736. What is the location of the unalienated land;—is it easily accessible from the river? Some of it is. There is good land within 6 or 7 miles of Murwillumbah.
737. To a large extent? There are about a couple of thousand acres of really good land.
738. Is the other land more remote? Yes.
739. How far away? There is unalienated land within a mile of the river.
740. Is that suitable for dairying purposes? Yes.
741. There is a very large area of alienated land;—how is it that so much of that land is not improved? It was taken up at the time that land was being obtained for cane-growing. Most of the people who took it up found that they did not require a large area for cane-growing. In fact, they could not put it under cane.
742. What did they do with it? Some of it is leased, and other portions are gradually being put under cane.
743. If there is such a lot of land already alienated, and not used for cane-growing purposes, why should people take up other land when there is no certainty that cane-growing will continue? They are not taking up land now for cane-growing; they are taking it up for dairying.
744. Give us an idea of the extent of the land that is being taken up for dairying? I consider from what I hear of the Illawarra district that pretty well all this district is fit for dairying. Latterly, people have been going in for dairying very fast in the adjoining districts, but the movement has not spread so far here. They are taking up the Big Scrub first, and the movement is spreading over here. Latterly, there has been a good inquiry for dairying land.
745. Have you been called upon lately to make surveys of any land for dairying or sugar-growing purposes? Yes.
746. To what extent? I am cutting up a reserve for the Government to be leased for agricultural purposes in about eight blocks of small size, varying from 15 acres to 50 acres.
747. Has the Government lately offered land for sale or selection? Yes; at Terranora land was offered to be leased for cane-growing. I believe they had a ballot. I think a great many put in for each portion, and there was a very large ballot.
748. How many portions were there? Three of 100 acres each.
749. Were they all over-applied for and taken up? Yes.
750. Have the people started to improve that land? I believe so; I have not seen the land since.
751. Can you give us any figures or facts to indicate any recent development of the district? The Government has been petitioned several times to throw open the land at the head of the river by the Progress Association and other public people. The probability is that there would be a large demand for that land if it were thrown open.
752. *Mr. Rennie*, Chief Draftsman of the Department of Lands, stated that there were 130,290 acres of Crown Land in the watershed of this district;—can you point that land out on the map? It is the land tinted brown shown on the large plan.
753. Do you know those lands? Yes.
754. What is their character? They are a good deal broken, but not too broken for dairying and other agriculture.
755. Looking at this locality, it seems to be rather hilly; is it the hilly country that is not alienated? There is land now used for dairying, steeper and rougher than the majority of the unalienated lands. It is

E. H.
Johnson;
30 Mar., 1898.

- is exceedingly suitable for agriculture. I could mention some of the land owned by Mr. Charles of Terranora.
756. Do you think the best of the land has been alienated? Only for cane-growing.
757. Not for agricultural purposes? I do not think so.
758. When you say that the best of the cane-growing land has been alienated, do you mean the best, by reason of its accessibility or by reason of the character of the soil? By its proximity to the sea for one thing, and by the character of the table-land.
759. Do you think the best of the cane-growing land has been picked out? Not the whole of it, but a great deal of it.
760. What is your opinion of the future of the district? I think it will be the best district in the Colony for dense settlement.
761. For agriculture? For dairying; there are no large, flat areas for growing maize.
762. How long have you been here? Sixteen years.
763. Has the progress of the district been marked in those sixteen years? Yes; and of late years very marked. During the last two or three years there has been even a greater rate of increase.
764. What have the people gone in for chiefly? The last arrivals have chiefly gone into dairying.
765. Before the Committee in Sydney, Mr. Rennie was asked, "How is the Crown land held?" He answered, "About 51,400 acres are under occupation license, the balance is practically untenanted; there may be annual leases here and there." "Would that indicate that the land is of an inferior character?" He replied, "The presumption is that it is inferior for agricultural settlement." Do you agree with that statement? No; I do not agree with that.
766. Do you state from personal observation that those Crown lands are not unsuitable for agriculture? Yes; if you include dairying in agriculture. I have been over the whole district.
767. Do you think it is good agricultural land? Yes; I know it is.
768. Are there any farms at present at a considerable distance from the river? You cannot get a considerable distance from the river. There are three arms, and all the farms must be within 10 or 15 miles of the river. I am a licensed surveyor in charge of the district.
769. Mr. Rennie was asked, "Is your Department dealing with any land in that district at the present time?" His reply was, "Not that I know of. The District Surveyor may have something in contemplation, but there is nothing that we know of at the present time." Have you heard of any probable sale of land? Yes; there is the land I am cutting into small areas. That is at Byangum.
770. To what extent? Seven or eight blocks, from 15 to 50 acres.
771. There was another question asked of Mr. Rennie,—“Have there been any special areas offered in the district?” The answer is, “Yes, in the parish of Terranora, close to the Queensland border, and near the entrance. The areas range from 300 to 320 acres. There were altogether 1,840 acres; the land was not taken up; it is open now.” Do you know that land? Yes.
772. Why was not that land taken up? A good deal of it was swampy and is not good land. It is very difficult of access; people would have to go over a mud flat; they could not get to the river.
773. Is the other land which you mention—the hilly land—fairly accessible? Yes; a great deal of it is accessible.
774. If that were thrown open do you think it would be taken up? It is open; a great deal of it has not been taken up.
775. Do you notice any other kind of farming in the district except dairying? There is maize growing.
776. To any extent? Latterly, there have been some fairly large flats put under maize.
777. Is maize growing undertaken to any large extent here? No.
778. Is there any reason for that? No; everyone has been going in for cane growing until late years. I could not even get vegetables here a few years ago, because everyone was growing cane.
779. Has cane-growing been the favourite and staple occupation of the district? Yes.
780. Is there any other detail which you could give us tending to show the progressive character of the district? There is a large increase in dairying, which is shown by the quantity of cream sent away.
781. Are you able to say, as a licensed surveyor, that you have had more work to do within the last year or so than you had formerly, in cutting up land and in connection with land transactions generally? Yes; I have had more to do in that way within the last twelve months than during the previous two years.
782. *Chairman.*] Do you happen to know whether the original holders of the conditional purchases are subdividing their holdings under that section of the Crown Lands Act which enables them to dispose of an area not less than 40 acres? No.
783. Have you made any survey? No; not under that section.
784. In your opinion, has the best land for agricultural purposes been alienated, and is there not much more Crown land left which is suitable for sugar-growing? I have said that the whole of the lands in the district are suitable for agriculture.
785. The whole of them? Very nearly; except the extremely broken land. I have seen worse land now used for dairying than the majority of that unalienated.
786. Are we to understand that there is still a demand for land in the district? Yes; the demand is just beginning again; it is growing.
787. Inasmuch as all the frontages and best pieces are gone, are the people now taking up land which they despised a few years ago? Yes.
788. As far as you can see, are they doing so with the object of combining a little agriculture and dairying and other purposes? Yes.
789. Except sugar? Yes.
790. Do you know the country between here and the Brunswick and Byron Bay? Yes.
791. Is it in your district? Yes.
792. Is there much available land there suitable for sugar-growing? I think so.
793. The line passes through the scrub for some distance;—is that land suitable for sugar-growing? They have sent a good deal of sugar-cane from it by the railway.
794. Is there much land in a virgin state which is fit for sugar-growing? Yes; a great deal.
795. Are there 20,000 acres? I should think there is much more than that.
796. Is that likely to be influenced by the large mill here? The cane will have to come to this mill.
797. How many miles would it be from there? 25 or thirty miles.

- E. H. Johnson.
30 Mar., 1898.
798. Do you think cane produced 20 or 25 miles from here is almost certain to come here? Yes.
799. If they went in for agricultural produce, would that come here for shipment? It would not be as near this place as it would be to Byron Bay. It is only 30 miles from here to Byron Bay.
800. It would only be the sugar-cane that would be influenced by the existence of the mill here? Yes; and the timber which comes here.
801. Why would it come here in preference to Byron Bay? I do not think they can always load timber at Byron Bay.
802. Are there any settlement leases or large areas being provided for here? No.
803. Is it the policy of your Department to offer the remaining lands in this district in small areas? Yes; I think they prefer to dispose of the land in small areas.
804. You have already said that you anticipate that there will be a large population in this district eventually;—first of all, seeing the best lands are alienated, how is this large population to be obtained? The dairying land is not alienated. The best land I consider to be the sugar-cane land. That to a large extent has been alienated.
805. You say the Crown lands not yet alienated are fit for dairying purposes, but they will not carry a very large population;—where is the large population going to settle in the district? Of course, when I made that statement, I assumed that cane-growing would be likely to continue. It takes a very small area to support a family at cane-growing.
806. You intend to convey that, if the sugar-growing as an industry is continued, there is more than sufficient land already alienated to settle a very large population? Yes.
807. And that that, together with the unalienated Crown lands of inferior quality, but suitable for dairying, together with the alienated lands which are inferior, but which are also suitable for dairying, will support a very large population? Yes.

Russell Dowling, manager, Colonial Sugar Refining Company's Mill, Condong, sworn, and further examined:—

- R. Dowling.
30 Mar., 1898.
808. *Mr. Black.*] I asked you the area of land under cane which was dealt with by your mill, and you said 4,000 acres;—what would be the number of holders of that land? From 225 to 250.

THURSDAY, 31 MARCH, 1898.

[The Sectional Committee met at the Court-house, Murwillumbah, at 10 a.m.]

Present:—

CHARLES ALFRED LEE, Esq. (CHAIRMAN).

The Hon. WILLIAM JOSEPH TRICKETT. | HENRY CLARKE, Esq.
GEORGE BLACK, Esq.

The Sectional Committee further considered the proposed Harbour Works at Tweed River.

Isaac McIlrath, managing director, Tweed River Creamery and Butter Company, Murwillumbah, sworn, and examined:—

- I. McIlrath.
31 Mar., 1898.
809. *Mr. Black.*] How long has the factory been opened? Since 25th November, 1897.
810. How long have you been in the district? I came to the district in May last year.
811. In what were you engaged before? I was in the same line of business in Victoria.
812. Do you wish to make a general statement? Yes. I am not in a position to give statistics, as I have not worked them up. I was asked by two firms in Sydney to come up to the northern rivers to report on the prospects of dairying in the district. I went to the Clarence first, and then to the Richmond, and from there on to the Tweed. I travelled pretty well all over the district when I first came, and I was so impressed with the possibilities of this district for dairying purposes that I reported to the people in Sydney recommending them to start here and to establish the dairying industry on this river. I backed my opinion of the capabilities of the district by contributing one-fourth of the capital to the enterprise, which shows that I had some faith in its future prospects. The Members of the Committee saw the factory yesterday. I may state that what we are doing at present does not pay us, but we are carrying on in view of the future development. The industry has increased very much since we started. A number of dairy farmers who had not been engaged in the industry previously have started since the factory was opened here. I think, without exception, every one supplying us at the present time is increasing his herd. The farmers are clearing their land, and every available pound they can spend they are putting into this industry. That has been my experience. I have travelled over the best dairying districts in Victoria (the western district), and I have seen the development of the dairying industry there. I am perfectly satisfied from what I have seen of the Tweed River that it is equal to the best they have in Victoria, when brought into proper cultivation. I have no hesitation in saying that the Tweed district is quite as good as the western district of Victoria, and that it has more natural advantages in the shape of rainfall. They can dairy all the year round better than they can in the most favoured districts of Victoria. As far as the harbour works are concerned, it is a matter of vital importance to us that something should be done; it is of vital importance to the dairying industry. Under the present system we have to ship our butter on to a drogher and send ice with it, and that has to be transhipped at the Heads again. There is a great amount of waste with the ice. The boats at present trading to the river have no refrigerating machinery, and we have to keep the butter in proper condition to send it to Sydney. Since we have started there have been several instances where the boat has been bar-bound nearly a week with butter on board. That does not increase its value on its arrival in Sydney. We sent a shipment of butter away last Saturday and it is still lying in the river, because the boat cannot get out. If the channel in the river were improved so that boats could come up direct, we could load the butter on our wharf, which would be a saving of nearly 25 per cent. in freight; we pay at present at the rate of £2 per ton, and I should say that that would be reduced 25 per cent.

813. What was the supply to the butter factory when it first opened? Our first churning was 95 lb. of butter; we are now doing about 2 tons per week. I. McIlrath.
31 Mar., 1898.
814. Do you say that the improvement of the river is vitally necessary to your industry? Yes.
815. You mean that if your trade grows? I do not think there is an "if" about the dairying industry at all. If I did not entertain perfect faith in the future, the plant which you saw yesterday would not be here.
816. You think apparently that, if the river were deepened so that more powerful steamers could be used and could come direct to Murwillumbah, and if you had a safer bar, there would be no delay in the transhipment of butter to Sydney? The delays would be minimised.
817. Do you think steamers might be used which could go out in all weather? Yes, if there were an entrance to admit larger steamers.
818. In the event of such accommodation being provided, with the result that the rates of insurance would be lowered, with a consequent lowering of freight, do you think your industry would stand the imposition of a tonnage rate? To be collected in what way—as harbour dues.
819. To be paid by the owners of vessels, of course? I certainly think they would not object to it; with the dairying industry, quick transit is everything.
820. Do you think that in dairying the natural grasses here are well qualified to produce good butter all the year round? On the best of the land there are no natural grasses at all. The best of the land has to be planted.
821. You say the best of the land has no grass;—it must have been denuded of its grass in order to plant some other crop, which I suppose is cane? I am not speaking of what has been planted with cane; I am speaking of the country not opened yet—the new country.
822. Do you mean the virgin land? Yes; there are thousands of acres of that well adapted for dairying which have never been touched.
823. Suppose you scrub virgin land, and expose it without planting or sowing anything, would not natural grasses spring up? Weeds would grow that are of no use, and very little grass.
824. Will not some of these weeds be eaten by cattle? Some of them, but most are useless.
825. Then the artificial grass is the best food for the dairy cattle? Most decidedly, except on some of the hilly country. What grass is there is very good.
826. Is not the Buffalo grass good herbage? Yes, but that is not a natural grass; it has to be planted.
827. *Mr. Trickett.*] What do you regard as the staple industry of the Tweed River district? At present sugar is the largest product, but I think that the dairying industry will develop into a very large business in the future. With the natural facilities here there is nothing in the world to prevent both sugar and dairying being combined.
828. Which industry tends to promote the larger population? Practically I know nothing about the sugar industry, and I cannot answer the question.
829. Do you know how many acres of land are necessary for a man to get a living on, growing sugar-cane? No.
830. On how many acres can a man get a living on the Tweed River by dairying? From 50 to 100 acres. I would not recommend a man to have much less than 50 acres of good land; a man can live well on that.
831. How many cows will it be necessary for him to have? By growing a little green feed he can run a beast to the acre on the average river land.
832. How much is a cow worth a year? I cannot give you an exact figure, but I should say £5 to £6 a year in produce.
833. Is that gross? Yes.
834. What would a man's expenses be? It depends on the labour employed. A man with a family who do the work for themselves has a much better chance of making dairying pay.
835. If you say a man can make £5 gross per cow, what is he going to have out of it suppose he has two or three in his family? A man on a dairy farm could do other things besides milking his cows. I should say that a man would make from £50 to £75 a year clear from 50 acres of land. I am speaking of the best of the land brought properly under cultivation.
836. Under the most favourable circumstances a man dairying on 50 acres of land would make from £50 to £75 a year clear? Yes.
837. Can you tell us what could be made out of the same area of sugar land? No.
838. *Mr. Clarke.*] Is this one of the best dairying districts in the Colony? Yes.
839. Your output at present is small, but you expect an increase? We have made provision for turning out from 20 to 30 tons of butter per week.
840. Have many people come here from other districts and settled? From what I hear there seems to be a greater inquiry for land in this district now than there has been for years.
841. Is the best of the land in its natural state of very little use until it is cleared and laid down with grass? Yes.
842. *Chairman.*] Have you been in the Richmond River district and at Lismore? Yes.
843. Has the dairying industry assumed very large proportions there? Yes.
844. How does that district compare with this? We have not the same extent of country; but this is quite as good.
845. What is the output at Lismore? The two factories, between them, are turning out nearly 50 tons per week.
846. After having had experience of that district, and the results there, do you think that you have a favourable prospect of being able to turn out 30 tons of butter per week? I have no doubt that in a very short time 30 tons of butter per week will be produced on the Tweed.
847. Did you hold that opinion before you built the factory? Yes.
848. Hence your provision for treating that quantity? Yes.
849. Are your works of a very modern and complete character? Yes.
850. Have they cost a considerable sum of money? Yes.
851. Have you gone into the question of sending your butter by any other route than the river? There is no other route by which we could send it profitably. The charges by rail to Byron Bay or Lismore would be more than we pay by river to Sydney.
852. Would the railway rate and the river freight to Sydney be too much to allow of any profit? Yes; we could not profitably engage in the industry if we had to send the butter by any other route except the river.
853. Whether these harbour works are carried out or not, you will not be able to send your produce by the railway? No; unless there is a considerable reduction made in the charges. 854.

- I. McIlwraith. 854. What freight do they charge from here to Sydney? £2 per ton, forty boxes to the ton.
855. You get your stores back by the same way that you send your produce? Yes.
- 31 Mar., 1898. 856. Have you a shipment of butter lying in the stream now, and has it been on board the steamer since the 26th instant? Yes.
857. Have they cool chambers on the steamer? They have an insulated chamber, and we supply the ice.
858. If the steamer is delayed more than a week, have you to send a second supply of ice? Yes.
859. If you were working the factory to its full capacity of 30 tons per week, I presume you would have to ship twice a week? Yes.
860. There are three steamers running, and you get about two trips a fortnight? We have averaged, until last month, about a trip every ten days; we only send by one steamer.
861. If you had to put 30 tons of butter in a steamer, and it was delayed for several days in the hot weather, would not that seriously affect your butter? Yes; if it were not kept cool.
862. Would not that be a large quantity for the steamer? No; the butter is chilled before it goes there, and the ice keeps the chamber cool. What has been delayed has all arrived in fair condition; but that is because we sent a second supply of ice.
863. We have proof at present of a delay of six days in this case, and it will be two or three days before the steamer reaches Sydney? Yes.
864. What would be the value of 20 tons of butter? About £75 a ton on the average.
865. That would be £1,500 worth of butter, and in the ordinary course it would be shipped and sold in four days? Yes.
866. If you put a large quantity of butter on board, and there is a delay of several days, that would involve a great loss? Yes.
867. That fairly represents the present state of affairs? Yes.
868. It might as well have been 20 tons of butter as 2 tons? Yes.
869. Is that the point of view from which you look at it—that your article is perishable, and that its quality and high price depend very largely upon its freshness and upon its being landed quickly? Yes.
870. For these reasons do you think that arrangements ought to be made so that you would have more certain communication? Yes.
871. Having already inquired into the advisability of other routes of transit, do you think you cannot adopt them? There is nothing else practicable.
872. Do you get your cream from various portions of the river, from Terranora Creek upwards? Yes.
873. If the tributaries were also improved, and if an improvement were brought about indirectly by carrying out these harbour works, would it facilitate the getting of large quantities of milk to your factory with more certainty? I cannot speak about the creeks. I do not know whether we would derive any great benefit from the creeks being deepened, or anything of that kind. The principal thing we want to see is the main river improved. The bulk of the cream that we receive, except by the launch, is all carried in.
874. Can dairymen down the river send cream to you at a profit? Yes.
875. Are you aware that there is very fine country down the river? Yes; very suitable grazing country.
876. Is your factory looked upon as the central factory for the Tweed River district? Yes.
877. Do you expect milk to come to you from all directions? Yes.
878. And the more facilities that can be given for bringing milk up the river the better for you and for the producers? Yes.
879. If the river between Murwillumbah and the Heads were deepened so as to admit of regular communication by the ocean steamers right up to the township, thus taking your butter from your cool-stores into the boats, and landing it into the cool-stores in Sydney, would not that necessarily be a wonderful advantage to you? It would be a very great advantage indeed.
880. Would it, if necessary or profitable, admit of your sending cream down to Sydney? No; the distance is too great.
881. Do you see any prospect of your industry growing into an adjunct of bacon-curing? Yes; we have that in view.
882. Is that also a large industry in the district? Yes; it is inseparable from profitable dairying.
883. Has it grown into large proportions in the Richmond River district? Yes, in a very short time.
884. Do you anticipate the same thing here? Yes.
885. Is bacon also a perishable article? It is not so perishable as butter.
886. Would bacon stand being kept seven days in the hold of a steamer in hot weather? I cannot say; but I would not like to chance it.
887. The nature of your business is to produce a perishable article? Yes.
888. There must be some certainty of getting the produce to market? Yes; your view is quite correct.
889. Whether the port is improved or not will these industries increase, and increase quickly? I have already stated my opinion that I have not the slightest doubt of the future prosperity of the district from a dairying point of view; at the same time it is of very great importance to us to have quick transit, and to have as little handling as possible of the produce from the time it leaves the factory until it is delivered in Sydney.
890. Has the dairying development in the North Coast of this Colony been extremely large during the last few years? Yes.
891. Taking the whole of the North Coast district, is it one of the largest butter-producing districts in the Colony? Yes.
892. Therefore, whatever may be the fate of cane-growing, it must be accepted that dairying is so profitable that it is bound to progress, and the output will be large? There is no doubt of that.
893. Underlying the whole thing is the certainty of direct and quick transit to the market? That will be one of the greatest factors in increasing the industry.
894. Supposing you wanted to ship to England instead of to the Sydney market, would you be able to take advantage of any other route than the one to Sydney? I cannot at present say that. It would not pay us to send our produce by rail to any other port.
895. Is there any direct shipment from any of the North Coast ports to the Old Country? No.
896. Therefore, if your industry grows, as you have every reason to believe it will, even if you wanted to take advantage of any of the foreign markets, your produce must still go to Sydney? Yes.
897. Do you see any prospect in future of this trade being diverted by any side track? No.

John Edmund Burke, butcher, Murwillumbah, sworn, and examined :—

898. *Mr. Clarke.*] How long have you been on the River? About twelve years. I was previously J. E. Burke.
contracting.
899. Are you acquainted with the capabilities of this district, and with the produce grown on the river? 31 Mar., 1898.
Yes.
900. Has sugar been considered for a long time the principal article grown here? Yes.
901. What are your ideas as to the value of the sugar-growing industry in this district in comparison with other industries? I think that notwithstanding all the talk we shall still go on growing sugar on the suitable land.
902. What are your reasons for thinking so? Because the land is so well adapted to it. The soil and the climate is quite as good as in Queensland.
903. Is there much maize grown in the district? Not to any great extent. One farmer has started growing maize, and I think he is doing as well as any one else.
904. Is maize as profitable as sugar-cane? No.
905. Are there many pigs reared in the district? Two or three years ago there were very few, but every-one is now inquiring for pigs and buying them.
906. Is there a bacon factory at Byron Bay? Yes.
907. Where do they get their pigs? Partly from here, and partly all round the district; it is a co-operative affair.
908. Have you had an opportunity of judging the quality and quantity of the bacon made there? Yes; but I cannot state what quantity is made.
909. Is it a good article? Yes; one of the best in the Colony. They have taken several first prizes.
910. Can you give us any idea of the cost of clearing the rich scrub land? I think about £5 per acre.
911. Would that be sufficient to enable a man to put in crops? I should imagine that £5 an acre would be sufficient for cane; they do not plough the land for ten or fifteen years.
912. In what way do they proceed? They fell the scrub, put a fire through it, and plant the cane with a hoe.
913. Does that method answer? Yes; whatever timber is left after the first fire, when they burn the trash, the stumps are generally burnt out with a second fire.
914. Have you any knowledge of the dairying which has recently come into existence? Yes; I have a fair general knowledge of it.
915. Does it require as much labour to clear the land for dairying purposes as for cane? Yes; the only difference generally is that they allow a longer time to elapse. They fell the scrub, burn it, and sow grass after the fire, and it clears itself by degrees. That might make it a little cheaper, but it is practically the same.
916. The land is valueless unless it is put under grass such as buffalo, prairie, rye-grass, or clover? Yes; that is the case with the brush lands—that is, the bulk of it.
917. Is the brush land better than the level flats? All the flats were originally brush lands.
918. Is this different to other districts? Yes; you would not see any other district like it in Australia.
919. In other parts of the Colony most of the level lands are almost clear? Yes.
920. It has been asked what area of land will be sufficient to support a family growing sugar-cane;—what is your opinion? Numbers of men have done well here with only 20 acres.
921. What area, in your opinion, would be fair to support a family? About 20 acres of cane.
922. Would a man want a larger area for keeping a few head of cattle or pigs? No; I think the bulk of the cane-growers had not more extra land than was sufficient for a small yard, and they did not even use a horse.
923. What area of land would be sufficient to support a family by dairying? Fifty or 60 acres, perhaps 100 acres; the fact is often lost sight of that when you are milking fifty or sixty cows, about the same number will be running dry, and they must have a run for which 50 or 75 acres of good land would be required.
924. If you milk fifty cows continuously you would require to have double that number? Yes.
925. Which system employs the greatest number of hands, sugar-growing or dairying? Sugar unquestionably; it requires a great deal more labour, but there is rather a misapprehension about the matter. In dairying, the bulk of the work is done by families; in sugar-growing you could not put a child or a girl to do work in the cane-field, but at the same time, I should say that on the whole more labour is required to grow cane.
926. More hands would be employed in cane-growing than in dairying? Yes, a considerably larger number.
927. In the event of the sugar industry being in any way interfered with, do you think that dairying would come into existence, and be as profitable as growing cane? No. I think that both would work very well together, people getting a living on 10 or 15 acres would require twice or three times the area of land if they devoted themselves wholly to dairying.
928. Before the training-walls were completed, what was the state of the river and the bar? It was very bad.
929. Has the work already done improved the navigation? Yes; I have been travelling up and down the river for many years, and it was usual for the little river boats to get stuck between Cudgen and Tweed Heads. At one time there was a contract made to carry the mail across the flat as the boats could not get along. I went with the pilot on the tug, and there were 8 feet of water on an average from the bar to Cudgen, and I attribute that to the improvement in the river. Condong Flats is, however, a shallow place.
930. Would dredging improve that? Yes.
931. Would it be a great benefit to the whole community if the river were improved so as to admit vessels of 10 feet draught coming to the township? Yes; some evidence was given yesterday that the Colonial Sugar Refining Company gives 6d. a ton less for cane here than on the Clarence and the Richmond. They say the reason is the extra freight to and from the mill at Condong. If the obstructions were removed, and the boats could come up to Condong mill, I think the price would be the same as on the other rivers.
932. On the whole, has the company treated the settlers very fairly? Yes.
933. Have they employed a large number of hands in cutting cane, and have they distributed a large amount of money in the district? Yes.

- J. E. Burke. 934. Is the sugar manufactured at their mills shipped direct? Yes; by sailing vessels principally, but lately steamers which have brought coal from the mill have, I think, taken back large quantities of sugar.
 31 Mar., 1895. 935. Is there any dairying or sugar-growing done under the halves system? There is some.
 936. In some cases, near Byron Bay, is dairying done on the halves system? Yes, and it will be here. A dairy farm is expensive, and a man requires to be a capitalist to carry it on. A man requires to have some money to buy forty or fifty cows at £9 a head. The trouble is not the want of land, but the want of stock, and that will have to come slowly.
 937. And does not a man want a larger area of land for dairying than for sugar-growing? Yes.
 938. Has the population increased very much of late years? I should say that within the last ten years it has more than doubled.
 939. Are there many people coming here from other parts of the Colony, particularly the South Coast? Yes.
 940. Can you say whether they have been successful in comparison with what they were doing on the South Coast in dairying operations particularly? Yes; they seem to think the change is a marked improvement. People who come here think it is a very much better dairying district than the South Coast.
 941. From what cause? Our general rainfall and the better class of land. It is well-watered country and it can carry a great deal more stock than the country in the south.
 942. Is the winter milder, and is it possible to carry on dairying operations in winter as well as in summer? Yes; we often have a very good spring in the clover towards the end of July.
 943. *Mr. Trickett.*] You do not look upon this as a poor man's district? Yes; I do.
 944. I thought you said that a man would want capital to start? I said that, as to dairying, there is a great deal of misapprehension. To start a dairy-farm in a pretty large way, the cattle would cost £300. You require cows to start with, and they cost about £7 per head. You cannot get that amount of money to be put into the district all at once. These things will come slowly. Everybody in the district is breeding a few cattle and they will soon breed up.
 945. What are they living on at the present time while they are building up their industry? Everything pretty well. Where I was reared in the Hunter District we had to depend on maize, pigs, and whatever we could do, and it is pretty well the same here.
 946. What do you regard as the staple industry of this district? At present, the sugar industry.
 947. What has been the industry that has built up this district, and which has made it what it is at present? The sugar industry, certainly.
 948. When did this change come about of seeking to substitute dairying for sugar-growing? It has been going on for years. It has been very profitable in the south. A number of South Coast people came to the Richmond River, took up land, and went into dairying very extensively, by the old process of making butter by hand. The industry has grown ever since, and I think it will keep on growing.
 949. We were informed yesterday by the first witness that, there are 1,370 dairy-cows in the district at present—is that a very large number for a district of this kind? No; it would carry 7,000.
 950. What kind of steamer would be required to take away the produce of the present number of cows? I am not prepared to state.
 951. You must know that it would be very small? Yes.
 952. You have a railway running through to Lismore,—where does the freight that is paid to the Government for that railway come from? I think carrying cane has been the most profitable during the last couple of years.
 953. Is not that a very large percentage? Yes.
 954. If cane-growing were discontinued on the line of the railway, what kind of freight would there be for that railway? I do not think it would get very much.
 955. What would it be? A little butter.
 956. Not enough to grease the wheels of the engine? It is certainly not a very large item.
 957. As a long resident in the district, and one who has its interests at heart, are you of opinion that if a transition does come from the staple industry of sugar to some other industry, it will be of gradual growth, and must not the district in the meanwhile stagnate considerably? I do not think it would, in any marked way. I think these things come about slowly. If one thing has to supersede the other it will take some time, but it will not be felt to any great extent.
 958. How many men are employed in sugar-growing on this river and the surrounding districts? I do not know; I should say that there are 600 or 700 actually employed, and perhaps more.
 959. Would they all take up those nice little farms you speak of, each requiring a capital of £300 to start with? I am afraid not.

William George Collier, mill-owner, Dungay, near Murwillumbah, sworn, and examined:—

- W. G. Collier. 960. *Chairman.*] What is your occupation? At present I am out of business. Until 1896 I was manufacturing sugar. I have been in the district about twenty years.
 31 Mar., 1898. 961. *Mr. Trickett.*] Have you given up your occupation at present? I have shut down, pending a law-suit in Sydney.
 962. Have you abandoned your sugar plant? No.
 963. Are you growing cane? Yes; the plantation is still growing cane.
 964. Who used to treat your sugar? I have a mill of my own.
 965. Did you crush for other people? Yes; for tenants on the plantation and also outside tenants. The only reason for discontinuance is this law-suit.
 966. Are your tenants still growing cane? Yes.
 967. What are they doing? Last year Robb, on the adjoining plantation, crushed the tenants' cane.
 968. Are they still going on with cane-growing? Yes.
 969. When did they have their last crushing at Robb's mills? Last season. In previous seasons I crushed the cane myself.
 970. Are they so far prosperous? Yes; on the whole.
 971. What rent do they pay per acre? Some have a five years' lease and some fourteen years. The place was selected by a man named Cazala. He gave some of the tenants a fourteen years' lease on clearing leases, at a rent of £1 per acre. Some of these leases are still in vogue. Then I gave a fresh five years' lease at 30s. per acre rent.

W. G. Collier.
31 Mar., 1898.

972. Is that not a very good rent for you? Yes.
973. What would the freehold be worth? I value it at about £20 per acre. Adjoining land has been sold at £25 per acre.
974. Having been interested in cane-growing so long, what is your opinion of it with regard to this district? I think that sugar-cane, as an industry, can live. The profits are quite sufficient to allow the cane industry to live.
975. No matter what happens? Yes.
976. Duty or no duty? Yes.
977. What is the size of your mill? It crushed upon an average about 40 tons per day.
978. How many hands did you employ altogether? In the crushing season about fifty hands.
979. Do you use wood for fuel? Yes.
980. Has it been a profitable concern to you? Yes.
981. You have done well? Yes; pretty well, considering all the circumstances.
982. Did you crush for anyone except your own tenants? Yes, outside tenants. There were 250 acres held by other tenants under agreement from me for five years.
983. Did you get sugar land at a low price originally? No. For 350 acres the price was £2,300.
984. When cleared, is that land worth £20 per acre? There were only 50 acres cleared when I took it. It is on the rising ground. It is the first place where it was proved that cane-growing on rising ground would pay. When the company first came on the river they would not touch cane grown on the hills. Cazala's mill proved to them that the high grounds were preferable to the low grounds for cane-growing, and gave a safer crop. Since then the farmers have developed the ridges.
985. Does it give better weight? A better average yield. The average yield is 20 tons per acre of annual cane. I have got cane not quite thirteen months old which yielded 33 tons to the acre.
986. What is the extent of the tenants' holdings? The smallest is 16 acres, and the largest 35 acres.
987. Did the men and their families do the work, or did they employ labour? They employed labour when required.
988. What kind? For chipping or threshing cane. Sometimes they employed coloured labour; they pleased themselves.
989. It has been stated here that the white labourer is not suitable for clearing the cane? For everything else, except threshing the cane, white labour is preferable to black. White men can do that work too, but they do not like it. It is very hard work on the hands, and the blackfellow's hands are naturally harder than the white man's.
990. Have these men who have been living on small areas of 16 acres been fairly successful? Some of them have been. It depends on the class of tenant. Some work hard, and others do not care. They really only require to work about four months in the year in the cane. For the other eight months there is really no work to do on the farm with regard to the cane. I refer to ordinary seasons. Sometimes it takes them five months to keep the weeds down. During the other eight months of the year they would perhaps cut timber for firewood for the mills and make improvements. That would help to keep them.
991. So that they could not live entirely on their holdings? No; the areas would be too small for them to depend entirely on the cane. They can do odd jobs in the meantime.
992. Would 20 acres be enough for a man to live on? He would have to live like a blackfellow.
993. As a gentleman who has a number of tenants, will you tell us what is the smallest area a man could live on;—what is the smallest area requisite for a man who does nothing else? Nothing less than 50 acres, and then he would be half his time idle. When you have the weeds killed, the cane requires nothing to be done to it. On an average, a man would have about £3 per acre a year clear money for himself, which would be £150 a year.
994. Are there many holdings as large as that, or are they mostly smaller? There are some larger holdings, but I should say the average is about 30 to 40 acres right through the district. That would mean about £100 a year profit.
995. You state after considerable thought and experience that a man would have £3 per acre per year, after expenses and rent are paid? Yes; I am allowing £1 an acre.
996. And a man would be half his time idle? Yes; I am charging the cane at 10s. a ton for the farmers. Last year I think it was about 9s. for the company. They deducted from the price on account, as they said, of the policy of the Government.
997. Was cane at a better price a year or two ago? Yes; I think they gave 12s.
998. The grower then did better? Yes; the cane-grower had 10s. If he had been growing cane five years, he would make more during the following five years. He is then at a smaller expense. During the first year it is very expensive. The first year he has to clear and plant, and it costs about £9 an acre. That is the average price. Then in the following years it will cost him about £3 an acre.
999. What are the other mills in the district? The one adjoining me belongs to Robb & Co. It is in full work.
1000. Is there any other mill in the district which is not in use? No; there was only the Colonial Sugar Company's mill and Robb & Co.'s mill. There was one at Tumbulgum, but it only worked about a month in the year. The owner only crushed his own cane. It was a small concern, but it was capable of doing more than one month's work.
1001. Have you done well out of your sugar industry? Yes; I cannot complain.
1002. What are your views as to dairying? I think dairying is a great industry, and that it will grow rapidly in this district. I am not a dairyman myself, but I am going by the results of the first creamery in the Tweed district. The Byron Bay creamery distributed £200 a month among the farmers at the beginning. They are now paying £7,500 a month. That is an enormous stride in two years. Twelve or eighteen months ago we had not a registered dairyman; now, I think, we have ninety-six. That is all within eighteen months. Judging from these strides there will be a greater increase in future. What retards the farmers now is that they have not capital to extend their operations. They are only breeding cattle themselves. In five years they must double or treble what they are doing now.
1003. Will the growth of the dairying industry be slow? It is in its infancy; it has not commenced if we judge by what has taken place at Byron Bay.
1004. Would you exchange your sugar-growing for dairying? I know nothing about dairying, but I flatter myself that I do know something about sugar-cane. It is like going from the blacksmith's to the watchmaker's business.

- W. G. Collier. 1005. Which do you think is the best industry for a district of this kind? I do not think there is any difference. A great drawback on the river has been that a person might hold 100 acres of land, and out of that there would be only 20 acres fit for sugar-cane. The rest would be fit for dairying purposes.
- 31 Mar., 1898. 1006. Do you think that the two industries could go on side by side? Yes.
1007. What industry do you think employs the greater number of persons? I think dairying would make closer settlement, because in dairying the whole of the money earned stays in the district and is spent. That is not the case with sugar. Take the Colonial Sugar Company's employees. They work perhaps the whole of the season; when they get their money they go straight to the metropolis and perhaps spend it all there. Whereas in the dairying, if the money is ever so little, it remains in the district. The farmer and his family develop the farm, and the profits remain in the district.
1008. As a means of supplying freight, which is the best industry? I can speak as to what I have paid for freight to Sydney on sugar for ten years up to about 1896. I paid about 22s. per ton freight to Sydney. When the training-walls were finished as they are now, I got freights to Sydney for 12s. per ton. If the work were completed, and we could get bigger vessels which would come right up the river—thus doing away with the expense of droghering—I think we would get freight at 8s. per ton, or less.
1009. I suppose the inhabitants are all prepared to hand over the difference to the Government in order to pay interest on the cost of the work? I do not say that; but I think the Government will get a good return from the people who will take up land. They ought to be satisfied with that, considering the hardships undergone by a pioneer in this district.
1010. Has there been any talk in the district about paying any port dues? No; but I have no doubt they are prepared to pay a fair thing. The district has been retarded owing to its being so far away from a market, and because it had worse facilities than any other place on the coast. What we ought to receive in profits we have had to pay in freight. The Richmond River district has progressed rapidly, because the people there can get cheap freights. That district will soon be taken up by settlers, and then they must come over here.
1011. Has this district a splendid rainfall? Yes; there have been 49 inches this year up to the present date.
1012. Does the cane suffer very much from disease? No.
1013. Not even on the river banks? One year the disease played havoc, but the fearfully wet season had something to do with that.
1014. Would you like to see the sugar industry fall through? Decidedly not. I think there is no reason why the sugar industry should fall through. My experience is that we can hold our own with any part of the world. I have known crops which I think formed a record in any part of the world. A crop was cut for nine consecutive times, and then the average crop was 16 tons per acre. That was without replanting.
1015. A witness at the Heads told us that he thought that practically the interests of this district were held under the control of the Colonial Sugar Refining Company; suppose they cleared out to-morrow with their mills, do you think that the industry of the district would still go on? Yes.
1016. Do you think there would be no trouble in getting the cane threshed, and that everything would go on? Not the slightest.
1017. What have their mills' cost? A very large sum has been spent here in mills, punts, &c.
1018. Do you think there would be sufficient machinery forthcoming at once to deal with all the sugar grown here if they were to shut up to-morrow, and that the district would not suffer any check? For my part I do not think the Colonial Sugar Company has the slightest idea of leaving. If they had I think there is any amount of private capital which would come forward. If I had £50,000 to speculate with I would not be at all afraid to speculate at the present prices. I do not see any prospect of prices coming down to zero.
1019. *Mr. Clarke.*] You stated that the hands employed by the Colonial Sugar Refining Company went away at the end of the season? Most of them do.
1020. Do not some of them remain in the district and take up farms? Yes; some of them have done so.
1021. Then, as a rule, they do not all go away? Not all of them, but the majority go away.
1022. If the district is such a fine one as you say, surely some of those working men would remain here and take up farms? They have done so.
1023. *Chairman.*] Do you make raw or marketable sugar? I make both. One season I made raw sugar for the Company.
1024. What do you do, as a rule? I make it for the open market. It is sold by auction by Harris and Ackman, and Gibbs, Bright, & Co.
1025. What is about the average of your output? About 300 tons.
1026. Does that all go away to the outside market? Yes; except what is used locally.
1027. Is that a large percentage? About 15 tons.
1028. What about your tonnage inwards from Sydney? I should say that in the season it is about 100 or 150 tons.
1029. Do you know anything about Robb's mill? Yes; I have been through it.
1030. As there is no witness here from that Company I would like to know what is about the gross output of sugar from Robb's mill per year? I was never through their books, and they did not tell me, but judging from the amount of cane grown, I should think it is about 1,400 or 1,500 tons.
1031. What do they use for fuel? Both coal and wood.
1032. Therefore, there is an importation of coal? Yes; latterly they have used all coal.
1033. About how many tons in the year? About 100 tons of coal per week.
1034. What is the length of their campaign? Generally about four months. They use a lot of coal. I should say about 2,000 tons.
1035. Do they manufacture a marketable article? No; they manufacture raw sugar for the Company.
1036. Do you punt any of the cane to your mill? No; it is all carted; it is grown within an easy distance.
1037. Is there any other point on which you wish to give us any information? I think the Government is retarding the district by not completing the harbour works. It makes a great difference to the inhabitants of the district.
1038. Has not the Government already spent £30,000 on the training-walls? Yes; but it is like building a house without a roof.
1039. But will not these walls be practically the foundation of the work, as the works will have to be carried out according to an original design, in which the training-walls were the preliminary portion;—are you of opinion that these training-walls have already given a certain amount of relief? Certainly.
1040. Do you offer any objection to the design? No. 1041.

1041. Making it a question of a port *versus* the railway, which will be of greater value to the district—the railway which is called the North Coast Railway, or a good port at the Tweed Heads? For the district itself, a good port in connection with the river would be preferable to a railway, but the proposed railway would also be a great improvement. W. G. Collier.
31 Mar., 1898.

1042. But which, in your opinion, would be the most advantageous to the people of the district? A good port in connection with the Tweed River.

1043. If the North Coast Railway were made, could you send your raw sugar, butter, maize, and so on by railway to Sydney, as against water-carriage? Decidedly not.

1044. Does not that, in your opinion, answer the question? Yes; railway freights could not compare with water freights.

Richard Painter Charles, storekeeper, Murwillumbah, sworn, and examined:—

1045. *Chairman.*] Where do you reside? I have resided for fourteen years in Murwillumbah. R. P. Charles.

1046. *Mr. Black.*] How do you obtain your goods from Sydney? I obtain them now by steamer. 31 Mar., 1898.

1047. Are they transhipped on the way? Yes; at the Tweed Heads, into lighters.

1048. Do you get any goods-by way of Byron Bay? No.

1049. Have you any trade with Brisbane? No.

1050. How many storekeepers are there in the town? Four.

1051. Do they all trade as you do? I think so.

1052. What freight do you pay all round? Fifteen shillings per ton by steamer, with the exception of flour, which is 12s. or 12s. 6d.

1053. That is about 16 per cent. on your goods? Yes; except on some goods.

1054. Less on groceries, and more on drapery? Yes.

1055. How far are you from the metropolis by water? 372 miles.

1056. Then your freight for that distance is much lower than the inhabitants of country towns a similar distance from Sydney have to pay for railway carriage? Yes.

1057. Then the element of delay in receiving your goods would form a percentage on the cost? Yes, a very large one.

1058. Which in the case of extreme delay might counterbalance the saving in freight? Yes.

1059. Have you ever had any very great delay in receiving goods from Sydney? Yes.

1060. Have vessels been compelled to stand off the entrance? Yes.

1061. What is the greatest delay you have ever known in obtaining goods from Sydney? I have known a ship to be four or five days outside the Heads. Then the cargo is transhipped, and it is five or six days before the lighter gets up here.

1062. In a case like that it takes you about a fortnight to get your goods from Sydney? Sometimes, and at other times it is less. We sometimes have them delivered in ten days.

1063. What is your yearly import from Sydney? Approximately, 700 or 800 tons a year.

1064. Do you buy produce on the river? Yes.

1065. Do you sell that locally or send it outwards? We sell it locally; we cannot get it to Sydney; it would be a loss, owing to the uncertainty of the shipping. We cannot foretell our market.

1066. If you had speedy transit and a sure market would you do as other storekeepers do, and take in kind from those who deal with you? Yes; we do that now, but we could do it more largely, and, if possible, we would ship to Sydney.

1067. Does the uncertainty of the market and the delay in shipment prevent you from dealing with Sydney, and does it also militate against other people doing so? Yes.

1068. Therefore it retards the productiveness of the district? Yes.

1069. Have you been engaged only in storekeeping? Yes.

1070. What is your idea of the future of the district? I have always had very great hopes of it, and it has gone ahead considerably since I have been here.

1071. Do you think its future lies solely in the sugar industry? No.

1072. Do you think its welfare is so bound up in the sugar industry that it could not live without it? No.

1073. Do you think the district is so thickly populated now that it could not support its present population without the sugar industry? It would make a very great deal of difference to the district if the sugar industry were crushed.

1074. Do you think the district is so thickly populated that with the sugar industry its population would be lessened? Yes.

1075. Do you think that the population would not be absorbed by other methods of employment? No.

1076. But you think that that decline which would result from change of occupation would not be permanent—that it would only be a retardation? Yes.

1077. If there were any interference with the present industries it would only be a matter of time for the people, or for those who may take their place, to revert to other occupations? Yes.

1078. Is there any other great industry besides dairying which could be developed, such as fruit-growing? I think so.

1079. We have been told that it pays to grow strawberries, oranges, bananas, pines, passion fruit, lemons, and some of the stone fruits;—is that correct? Probably. The climate is adapted for fruit-growing, but in my experience many pests have taken away the fruit—bird and insect pests.

1080. Would not that be diminished by closer settlement? Yes, and then perhaps more attention would be paid to the subject.

1081. As you have an early summer here and practically very little winter, with your facilities for producing fruit early in summer, and with speedy transit, might you not realise good prices in the Sydney market? Yes, if you could get it away to Sydney.

1082. Is there any other point on which you would like to give evidence? No; except that we are unable to get produce away to Sydney, which is our only market. We grow good corn here, and if we could get it to Sydney we would obtain a good price.

1083. Do you think it would be readily marketable in Sydney if you could get it there? Yes.

1084. I thought the maize grown here was subject to weevils? No. Some of it may be, but we can get as good maize here as any sold in Sydney. We have here the same in regard to eggs; there has been a very large consignment of eggs to Sydney from the district, but we have great difficulty in carrying on that

R. P. Charles. that trade. If it were not for the small launches running backwards and forwards we would not be able to get the eggs on to the ship. When we do send a consignment of eggs to Sydney the ship may not be able to get out of the river. There may be a six days' delay, and probably we will strike a bad market, or the eggs will be bad. The South Coast eggs always bring a better price on that account in the Sydney market.

31 Mar., 1898.

1085. You have stated that the double handling of your goods and the droghering to and from the Heads increases the cost of freight? Yes.

1086. In spite of that there is no other method of bringing goods here as cheaply? Not as cheaply as by water carriage. If the communication from here to the Heads were good, I should say the freights from Sydney by steamer would be for dead weight not more than 8s. or 9s. per ton. There would be that difference in freight if the ships could come right up here.

1087. That would be saving the cost of droghering, the shorter passage, and lighter insurance? Yes.

1088. In such a case the goods could easily bear the imposition of a small tonnage rate? Yes.

1089. *Mr. Trickett.*] Having been a resident here for twelve years, what do you look upon as the industry which has built up the district? Sugar.

1090. *Chairman.*] Are you of opinion that the railway between here and Byron Bay would influence produce that might be raised midway between these points for export by the river? Yes.

1091. What is your conviction on that matter? It would influence traffic from any place this side of Byron Bay.

1092. Would the produce raised, say, half-way between here and Byron Bay gravitate to the river to be transported to Sydney, or would it gravitate to the Richmond? No; it would gravitate to the Tweed; it could be done equally as cheaply here.

1093. We have been told that there is a large quantity of land lying at the back of this town; if that country develops in future as anticipated, will there not necessarily be a large tonnage from there? Yes.

1094. If that is to find its way from the railway station by steamer, does it not follow, as a matter of necessity, that the steamers must be able to load that cargo as close to the railway station at Murwillumbah as possible? Yes; the ship must be able to come right up.

1095. Would it pay to cart it from the railway station to the river to put it on droghers and drogher it down the river? No; there must be one handling, and the ship must be at the wharf to receive it.

1096. Would it be possible to extend the railway or a tramway to the bank of the river? Yes.

1097. Under conditions of that kind would it make possible the shipment of produce from the upper portion of the river? Yes.

1098. At present is the railway of very little use to you? Yes.

1099. If this port is made, if the river is dredged, and the steamers are brought into the vicinity of the railway with a proper connection made between them, do you think that would be the means of increasing the freight, thereby giving increased employment to the railway, which at present earns very little, and that it would also increase the development of the country generally? Yes; that is undoubtedly the case.

1100. Have you thought of this matter before? Yes, for years. The railway is of no benefit to a man in business.

1101. Are you strongly of opinion that the port must always be the means of outlet for this district? Yes.

1102. If proper facilities are given for a better class of vessels to trade here, and there is a cheap connection between the railway station and the river, are you of opinion that the railway between here and Byron Bay will increase its traffic, that the export by way of the river would be largely increased, and that the district generally will be benefited? Yes.

Patrick McMahon, cane farmer, Chindera, sworn, and examined:—

P. McMahon. 1103. *Chairman.*] How long have you resided in this district? I lived two and a half years at Chindera, and I have been ten and a half years in The Tweed River district.

31 Mar., 1898.

1104. *Mr. Clarke.*] What benefit will it be to the district if the proposed improvements in the river were carried out? It would do a great deal of good.

1105. Hitherto, have you had great difficulty in getting your produce to and from Sydney in consequence of the bad state of the bar? Yes; freight here has been much higher than on any of the other rivers. Until recently, it was 25s. ton and 30s. per ton; now it is 15s. per ton.

1106. Do you think that if the river were improved the charge for freight would be much lower? Yes. I suppose the freight will be the same as it is on the Clarence.

1107. Do you consider it would be a further advantage to have the river navigable right up to Murwillumbah? Yes.

1108. Is the cane industry best suited for the district? Yes; the cane industry is the principal thing; it is more profitable than anything else.

1109. Have you cultivated on the high land? Yes.

1110. What area? Sixty acres.

1111. Have you low land also? Yes; but I have not planted that.

1112. Has it paid you well of late years on the hills? Yes; I would not touch the low land.

1113. Why? In the first place it is not so easy to clear the low land; furthermore, the low land is always subject to rain, and you cannot work the low land after heavy rain.

1114. Do you suffer from frost on the low land? I do not think so. It is not the frost that is frightening me.

1115. Do you consider the high land is the best? Yes, it is superior land altogether.

1116. Are there not other articles of produce grown in the district besides cane? Yes, maize and potatoes; pigs are reared, and there is dairying.

1117. Do you consider that cane is the principal industry? Yes; that seems to be everybody's opinion.

1118. Does it require a larger population than the other industries? Yes.

1119. Is there a large area of land not yet alienated? Yes.

1120. Is there much of that land suited for farming purposes? A good deal of that land is mountainous, but other portions are adapted for dairying purposes.

1121. Is that the reason why it has not been taken up? I think it is only suitable for dairying purposes. I daresay most of it will be alienated during the next ten years. If it were made available under some

some other form of tenure than the present tenure it might be taken up. For example, there are no settlement leases in this district, and I think they would be suitable to that part of the country. The Government seems to make the area too small. The Government seems to think that a man can live on 100 acres, which would be impossible on that description of land. P. McMahon. 31 Mar., 1898.

1122. Have you heard that it is anticipated that a railway will be made from Queensland to the Tweed? Yes.

1123. Would it give you greater facilities for obtaining a market in Queensland? No.

1124. Do you think the produce would still go to Sydney? Yes; there is a protective tariff in Queensland which prevents anything from going across.

1125. *Mr. Trickett.*] Have you prospered on your 60 acres? Yes.

1126. Do you work yourself or do you employ labour? I work myself, and, of course, I employ a good deal of labour. I see that others work.

1127. Are you more an overseer than a worker on those 60 acres? Yes.

1128. You have heard several people give their opinions as to the number of acres of cane land which are required to keep a man and his family;—what is your opinion? About 40 acres of good land. A man can live very comfortably on 40 acres of sugar-cane.

1129. Would he have to work all the year round? He would only have to work in the spring and harvest time, but he would probably, then, have to work twenty hours in a day. During a great part of the year there is a good deal of slack time.

1130. Which do you think is the better industry for the district—dairying or cane-growing? I have said that the sugar industry is the staple industry. If the sugar-cane dies out dairying must take its place. The people must do something for a living.

George Dinsey, farmer, Tumbulgum, sworn, and examined:—

1131. *Chairman.*] How long have you been in the district? Thirty-one years. G. Dinsey. 31 Mar., 1898.

1132. *Mr. Trickett.*] What sort of farm have you got? Cane-growing and mixed farming.

1133. What area have you under cane? Not a great deal; since the duty came off, I have let it run out.

1134. What area have you had regularly growing sugar? My son has been employed with me growing cane; we have jointly looked after about 60 acres; that is with a few acres of maize besides. It is nearly all maize this year. We have grown about 60 acres of sugar and 15 or 20 acres of maize.

1135. Have you and your son made a fair living on that area? Yes.

1136. Latterly, have you slacked off growing cane? Yes; I only planted 6 acres last season, until I saw how the sugar duties were dealt with.

1137. Did you send your cane to the Colonial Sugar Company under contract? Yes.

1138. What do you do with the corn you grow? I sold some on the river, and I generally used to send it to Sydney.

1139. Are you putting in a good crop of maize now? Yes; I am now pulling some.

1140. How will maize-growing compare with sugar-growing with regard to profit? The profit on maize as compared with sugar-cane is hardly worth speaking about.

1141. Do you carry on dairying? I believe I was the first to start dairying on the Tweed, twenty years ago. I carried on dairying with farming, and I sold the produce at the Company's mill. People used to pay 1s. a lb. for butter, but others started afterwards and brought down the price so low that I went in for growing sugar-cane, which was the most profitable.

1142. If the sugar-mill ceased to work here, what would you do with your land? If the Sugar Company left the river I would leave the river too. I would not go into dairying.

1143. Why? It is not suitable for an old man. I believe it might pay where there is a large family of small children.

1144. Do you think the district is suitable for dairying? Yes, parts of it; but a man would be mad to go in for dairying where he can grow cane.

1145. Is there any other point on which you would like to give evidence? Two years ago last month I had a nice lot of corn, which was very early. There was a good price to be obtained in Sydney, and at a good deal of expense I got the corn pulled and got it on to the steamer. The price in Sydney at that time was 3s. 6d. a bushel. The steamer was bar-bound for four or five days at the Heads, and when the vessel got to Sydney the price of corn had fallen to 2s. The corn got heated on board the steamer, and I only got 1s. 8d. a bushel for it. If I could have got it to Sydney at first it would have realised 3s. 6d.

Russell Dowling, manager, Colonial Sugar Refining Company's Mill, Condong, sworn, and further examined:—

1146. *Chairman.*] Can you give us any idea as to the gross tonnage that leaves the mill for export, and the gross tonnage that comes to the works? I cannot say definitely. I have not looked up that question, but I think that between 9,000 and 10,000 tons come and go both ways. R. Dowling. 31 Mar., 1898.

1147. What number of hands are employed? About 300 during the season.

1148. Then you have a permanent staff? Yes; from thirty to thirty-five.

1149. Have you given us the train freight of cane which you receive at the mill? Yes; I took a few notes this morning, and they deal with various points as far as the rivers are concerned. They are as follow:—As the question of the future of the Tweed district is now a matter of some importance, especially as your Committee are engaged in taking evidence with regard to the advisability of spending a large sum of money in connection with the harbour works, a short statement from me may assist in explaining the position. Mr. Black asked me yesterday about a certain circular which was sent to the farmers in 1894 in respect to the limitation of area, but I cannot find any trace of such circular. Head office letters notified me exactly how I should deal with the area, and when the limit fixed by them was reached I had to decline further contracts.

1150. *Mr. Black.*] Was there a date to that document? It was about July, 1894. Mr. Pettigrew drew your attention to the efforts made by the farmers to grow more cane, and when a certain area was reached we paid 1s. 6d. a ton more. It is quite true that with a larger tonnage to crush we could afford to pay a higher price for it. In those days very little cane was grown, comparatively speaking. With the opening up of the railway line a great number of people were attracted to this district, and some of the line workers

R. Dowling. workers settled down as residents. We had not up to that time limited the area; farmers naturally thought that unlimited areas could be grown, but unfortunately just about the time of the sugar boom there was trouble in the air, and the company instructed me not to take more cane than could be crushed in a double mill. In 1895, about the winter time, the company issued a manifesto warning the farmers as to the position in the event of the sugar duties being removed, and then when the news was spread abroad it was natural to expect that the workers would be disheartened, and from that time the business commenced to fall away. Of course it was useless for the company to talk about erecting the extra mill as promised. Since that time we have crushed the cane by working long hours, in fact twenty-four hours per day, and the seasons lasting for twenty-eight weeks.

31 Mar., 1898. 1151. *Chairman.*] What is the limit of the campaign? 65,000 tons for a period of about twenty-eight weeks. Last year you may remember that £1 of the duty was taken off, and the price of the cane was reduced 1s. 8d., and this year a further amount comes off, under the present understanding that the industry will cease at the end of 1899. The company have renewed their offer to the farmers which is practically the same one that was made when Mr. Reid visited Lismore in 1896, and we are willing to carry out the arrangement from this season provided the duty is left at £3. From this you will see, therefore, that Parliament has more to do with the matter than anyone else. In my opinion the failure of the sugar industry simply means ruin to the Tweed, for I hold that when no cane is grown land will depreciate fully 50 per cent., and it will become unsaleable as it is in many cases at present, owing to the uncertainty of the business. It is all very well for the dairyman to say that the sugar industry does not interest him; of course it does. The fact of high values for land being kept up for cane-growing is of interest to him. For such purposes land has been sold at £15 to £18 per acre, that must necessarily help to keep up the value of the land at the heads of the creeks, which is naturally cut off from cane-growing, owing to its distance from navigable water. This is a matter which does not affect the Tweed only, for the Richmond and the Clarence are included in the sugar districts. The failure of the sugar business generally means the loss of the staple industry. Then we have to consider the loss there will be in the employment of labour if we shut down at Condong. We employ during the season, including the cane-cutters and mill hands, some 300 workers, and these men are not the class who would carry on dairying. Then again the shipping will be a small matter in the future. You should now have a good idea as to the business done in connection with the sugar industry, viz.: freight on coal, sugar, and other merchandise, and the balance of trade, if 50 per cent. were added, would fairly represent the prospect of trade in a few years to come. In dealing with the Company's workers it must not be forgotten that although we import a certain amount of rations, yet they and their families live on the river, and are supplied with other goods by the general business people. Then again Mr. Black asked me how many farmers dealt with the Company. Speaking from memory I rather understated the number. In 1896 we had 285, but of course since then they are gradually going out of the business. Those farmers also have their families to bring up; they employ labour to work the cane, the cane has to be stripped, chipped, and it has to be hauled to water, which means the employment of many horses and men. In round figures I should say that each farmer employs from two and a half to three men which means roughly the employment of 855 men; they have to be maintained and fed by the business people. Then, again, leaving the Tweed, the coal miners who hew the coal for our mills need not do so, and the shipping which works the cargo can be laid up, then surely the merchants in the city must see that there will be a loss of business in the north. There is yet another matter, that is our railway line, that was built essentially for cane-growing; the area allotted to that district, even with a limit, was 2,000 acres. 1,037 acres was the highest acreage reached. At the present time it is 843, which shows a loss of 200 from last year. The railway receipts came to £2,333 in 1896; £1,798 in 1897; and, say, £1,500 in 1898. Then it will fall to nothing. If the area of 2,000 acres were maintained, I estimate that it would have yielded £5,000. I do not know what business the railway does outside cane business, but it is very evident that it cannot amount to much. The loss on interest and working expenses on this railway is known to be very bad at present, but when the sugar industry comes to an end it will be very much worse. The Tweed district is a most valuable part of New South Wales; it has an abundant rainfall which is good for cane-growing, and droughts are unknown. With cane-growing, maize, and pig rearing, together with dairying in full swing, I feel sure that harbour improvements would be a necessity. As I have said before, dairying and sugar-cane growing can be well carried on side by side, and with such a combination a large population would be assured.

1152. *Mr. Black.*] You said that during the season you employed 300 workers;—where do they come from? As far as the work of the mill is concerned I wish to make it clear that every available man in this district gets a job if he is fitted for the work. Local men get the preference over any men from other districts.

1153. Do not the bulk of them come from Sydney? I would not say that that is the case. A lot of them come from the Richmond.

1154. At one time did not the bulk of them come from Sydney? More of them came from Sydney in former days than have come here since. Some of the farmers who consider that their profits are not so great at sugar-growing, owing to the reduced prices, are looking for something to make up the loss. In cases of that kind they get work, and cut cane for us in the cane-fields. Many get the offer of work in their own paddocks, thereby reducing their loss. The proportion of working men who come to us from Sydney is smaller than it used to be in former days.

1155. *Mr. Trickett.*] With regard to the freight on the railway from Lismore to this place, what do the goods which are carried chiefly consist of? The sugar-cane.

1156. Is it brought to this place to be crushed? Yes; I should say that two-thirds of the business done on the railway is the carriage of cane. Mr. Black asked me some questions yesterday with regard to areas. I then gave the figures from memory; but I now give them accurately. The area under cane with which the Company dealt was, in 1895, 3,771 acres; in 1896, 5,097 acres; and in 1897, 4,390 acres.

T. W. Keele,
M.I.C.E.

Thomas William Keele, M. Inst. C.E., District Engineer, Ballina, sworn, and further examined:—

31 Mar., 1898. 1157. *Chairman.*] There is a matter in connection with the cost of the proposed harbour works on the Tweed River with regard to which we should like you to give us additional information; are you prepared to do so now? Yes. Since I gave my estimate at the Tweed Heads I have gone further into the question.

My

My estimate on that occasion, as you know, was based on the assumption that the walls would be started almost immediately, and before the indurated sand-patch was removed. I find, however, that Mr. Darley in his evidence provides means for removing that patch before the southern wall is commenced. That being so, the estimate can be reduced considerably. In going into the figures, I find that with regard to the north breakwater the number of tons would be the same as I have already given, and for No. 2 wall the same, but for the south breakwater 118,650 tons would be the quantity, making a total of 218,100 tons, which would cost £34,438 2s. 6d. The other figures remain the same, viz., rails and sleepers, £2,500; waggons, £1,800; cranes, £3,000; bridge, £1,000, making a total of £8,300 for plant; supervision, £1,200, making a total of £43,938 2s. 6d., that is assuming that the indurated sand-patch is completely removed. If it remains there then you must take my previous estimate.

1158. Then, approximately, your figures, if worked out on the same basis as Mr. Darley's, are the same; the difference is this: that if the indurated sand-patch remains there, of course the cost must be increased? Yes, that is really the point of difference. The total cost on the whole of the work would be 4s. and a fraction per ton, and it certainly could be done for that. We are doing the work on the Richmond under the estimate of 4s. 6d. per ton, and the work could certainly be done on this river for 4s. per ton.

T. W. Keele,
M.I.C.E.

Plan I —Proposed entrances

Plan II —New entrance to the Macleay River

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

HARBOUR WORKS AT MACLEAY RIVER.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, and the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, to whom was referred the duty of considering and reporting upon "the expediency of constructing Harbour Works at Macleay River," have, after due inquiry, resolved that it is expedient that the proposed harbour works, to cost £95,000, should be constructed; and, in accordance with the provision of subsection IV of clause 13 of the Public Works Act, report their resolution to the Legislative Assembly:—

DESCRIPTION OF THE RIVER.

1. The Macleay is one of the principal of the coastal rivers, and drains an area of 4,600 square miles, much of the upper portion of which is described as rugged and precipitous country; but along the lower reaches of the river there are large areas of rich alluvial soil, eminently suitable for cultivation.

Navigation can be carried on up to 36 miles from the entrance, for vessels drawing from 8 to 9 feet of water. The total length of the river is 200 miles, but at a distance of 43 miles from the heads tidal influence ceases. Like most of the rivers on the north coast, the Macleay is visited periodically by heavy floods, causing deposits of sand at various points in the river, and rendering constant dredging necessary.

SIR JOHN COODE'S SCHEME.

2. In 1885, when Sir John Coode visited New South Wales, advantage was taken of the visit to obtain from him a report as to the best method of improving the Macleay entrance, and four schemes were dealt with by him. These are marked and numbered on the map published with this Report. No. 1 scheme, which he recommended, consisted of:—

1. South breakwater, commencing at the north-west angle of the South Spit, extending thence northerly and easterly 4,000 feet, with an extension of 500 feet, when funds are available. Total length, 4,500 feet.
 2. North breakwater, commencing on the southern face of North Head, and extending in a south and easterly direction 1,000 feet, terminating at a point 700 feet distant from the south breakwater, with an extension of 500 feet, if found desirable hereafter. Total length, 1,500 feet.
- He believed that this width (700 feet) would sufficiently restrict the entrance to produce a navigable depth of 12 feet at low water, or 16 feet 6 inches at h.w.o.s.t., which is equal to the navigation of vessels drawing, say, 12 feet.
3. Training-bank, 11,000 feet long on the eastern side of channel at Fisherman's Reach, to obviate the escape of water through the old channel, and also prevent the river breaking through the sand spit during the floods.

(4.)

4. Training-bank, 5,600 feet long, to close the old channel (Spencer Creek), which skirts the west side of Shark Island.
5. Leading lights and buoys.
6. West training-bank, 7,000 feet long, to prevent fluctuations in the depth of channel through the disturbance of the sand within the entrance in times of flood and gale; the outer end to be 300 feet from the north breakwater to form a wave-trap.

The estimated cost of the works was as follows :—

First instalment of the works.

South breakwater, 4,000 feet	£133,000
North breakwater, 1,000 feet	48,700
Training-bank, Fisherman's Reach, 11,000 feet ...	62,800
Training-bank, Shark Island, 5,600 feet	21,800
Buoys and lighting channel	2,000
	268,300

Extension works required to complete design.

West training-bank, 7,000 feet	£48,400
South breakwater (additional length), 500 feet ...	39,000
North breakwater (additional length), 500 feet ...	27,000
	114,400

Total £382,700

THE DEPARTMENTAL PROPOSALS.

3. Subsequently, and up to the year 1895, representations were made as to the necessity for doing something to improve the entrance to the river, and examinations with a view to doing what was required were made by an officer of the Department of Public Works. In 1893 a flood occurred in the river and made a new channel where it is now proposed to construct the permanent harbour works. This channel enters Trial Bay, at a point $1\frac{3}{4}$ mile north of the South-West Rocks, and a recommendation was made that as Nature had produced this outlet, and it appeared to remain unaltered, measures should be taken to make it permanently navigable. It was, therefore, proposed that the sum of £10,000 should be made available for the construction of a training wall, and that a temporary barrier should be thrown up on the northern side of the new channel between Shark Island and the coast sand-ridge, so that the tidal flow might be diverted into the new channel. The advantages from fixing the entrance at the place suggested were represented as :—

- (1) A much more sheltered entrance than the present one.
- (2) At least 10 miles less steaming on the round trip, Sydney to Kempsey.
- (3) The saving in dredging in consequence of the unstable portion of the river not being required in the new scheme.
- (4) The saving of about 10 miles of training-walls over the above length.
- (5) Increased scour on the new bar due to tidal flow and flood discharge in consequence of the decrease in length of river channel.
- (6) The saving in haulage of all stone used in the work.
- (7) A smaller and cheaper class of stone required in the breakwaters in consequence of the sheltered position, and a less length of breakwaters than that required at Grassy Head.

It was pointed out at the time that one of Sir John Coode's chief objections to fixing the entrance at this point was the loss of the Clybucca Creek waters, but this it was stated could be overcome by diverting the creek.

The matter was referred to a sub-committee of the Board of Reference connected with the Department of Public Works, and they approved of what was proposed. In nearly all cases, they pointed out, where a channel has broken out under abnormal circumstances, such as a heavy flood, it has only remained open so long as these special circumstances have existed, and when these have disappeared the rivers have gone back to their normal channels; but in this case it is not so. The channel that was opened by the flood, 1893, had apparently become permanent, and remained

remained open under the normal circumstances of the river during a dry season. They believed that if the whole of the water that at present leaves the river and enters the new channel were concentrated and passed out over the bar, it would open up and maintain a permanent channel which could be used by ocean steamers.

The sum of £10,000, it was considered, would be sufficient not only for the closing of the Spencer's Creek channel, but for the protection of the banks to further assist in fixing the new channel. It was also explained that in the event of any large scheme for the permanent improvement of the entrance to the river being undertaken in the future, it would cost very much less to carry it out at the channel it was now proposed to improve than at the old main channel as recommended by Sir John Coode, inasmuch as there would be a saving of over 10 miles of training-wall while the breakwater at the main entrance would cost no more if it cost so much.

In December, 1895, a scheme for training-walls and breakwaters was prepared.

WORKS CARRIED OUT.

4. Works already carried out at the entrance to the Macleay River comprise the construction of training-walls; the dredging of a channel in Spencer's Creek about 250 feet in width, with a depth of from 12 to 14 feet, which has been cut through the tongue of land formed by a sharp bend in the course of the creek; the protection of the sides of this channel with a facing of stone; and the construction of a barrier-bank across the creek to the north of the entrance. Up to 31st December, 1897, the expenditure according to the evidence of the Under-Secretary for Public Works, amounted to £14,953 9s. 4d, which has some bearing upon the completion of the works.

THE PROPOSED WORKS.

5. It is now proposed to extend the northern training-wall from its present terminus at Shark Island down to the entrance, and to continue the southern training-wall to the same point; and this, it is contended by the officers of the Department, will, by allowing the free ingress and egress of tidal and flood waters, result in the scouring out of the channel so as to produce a safe and easy entrance for navigation.

The complete scheme designed by the Department provides, in addition to those now put forward, for the construction of a northern and a southern breakwater and the extension of the training-walls at a lower level up stream to the junction of Spencer's Creek with the main river, and the straightening and deepening of the channel by dredging. These further works are, however, not at present considered to be necessary.

ESTIMATED COST.

6. The estimated cost of the works now projected is as follows:—

Continuation of the training-wall at the point of Shark Island to the portion already constructed	£17,000
Continuation of northern training-wall	38,200
Continuation of southern training-wall	36,000
Supervision, &c.	3,800
Total	£95,000

The Committee understand that suitable stone for the construction of the works can be obtained close to the site, and in large quantities; and providing that the work is carried out with reasonable economy, they have no reason to fear that the estimated cost stated by the Department will be exceeded.

TRADE OF THE DISTRICT.

7. According to the various witnesses qualified by their knowledge of the locality to speak with regard to the trade of the Macleay, it appears to be considerable. Maize is exported in large quantities, while pigs, poultry, timber, and other produce comprise important and valuable items of export.

SECTIONAL

SECTIONAL COMMITTEE'S REPORT.

8. A Sectional Committee visited the river, and carefully inspected the localities at the entrance where it is proposed the works recommended shall be constructed, the bar, the old entrance at Grassy Head, and the quarries from which the stone for the works is being obtained. They were much impressed with the appearance of the river, its magnitude and navigable area, and the extensive and fertile lands adjacent to it. The capabilities of the district are beyond doubt, and the one thing required to advance its interests appears to be more reliable means of communication. The Sectional Committee came to the conclusion that, although for some reasons it might have been better had their investigation taken place before the works for the improvement of the river had been commenced, so far the scour created had done good work, and delays to shipping had not, since the improvement, been frequent or prolonged.

Having regard to the fact that the conditions are quite changed since the date of Sir John Coode's recommendation in favour of the entrance being at Grassy Head, they were of opinion that the works at the new entrance had been beneficial, and should be completed at the estimated cost of £95,000.

OBJECTIONS TO THE PROPOSED WORKS.

9. Some objections have been urged against the carrying out of the proposed works. Shortly stated they are:—

- (1) That the entrance to the river at Grassy Head is the natural one, and having been recommended by Sir John Coode should be retained.
- (2) That the occurrence of floods may, as shown in the case of the new entrance to the river, lead to the opening of another channel and the formation of another entrance.
- (3) That the new entrance is so close to Trial Bay that the discharge from the river will have the effect of silting up that bay.
- (4) That by fixing the entrance to the river as now proposed, the interests of residents in the vicinity of the old entrance will be materially affected.

To the first of these objections the departmental officers reply with the statement that the new entrance will be more direct, easier and safer for shipping, and permanent. With regard to the second, it is pointed out that when the proposed works have been constructed the river will be so controlled that it must pass through the training walls to the sea, and, therefore, cannot break out into any new channel. As to the third objection, it is denied that Trial Bay will be in any way affected in the manner alleged. Any discharge from the river, it is stated, will be scoured so far out that no danger is to be apprehended from its deposit. There is no accumulation worth speaking of, the Committee are informed, in the bay. Soundings have been taken by officers of the Department of Public Works from time to time, and there is no indication of permanent silting. The Committee are assured that in respect to Trial Bay there need be no apprehension whatever, and, even if a bar did form in the bay, modern appliances will in such a sheltered position readily remove it. The fourth objection is met by the report of the Sectional Committee, who, after visiting the locality, came to the conclusion that the local interests referred to were insignificant, and not such as to merit serious consideration in connection with a work of such magnitude and importance as the improvement of the entrance to the river. It is by no means certain that the people complaining will be embarrassed in the manner they state; but, if they should be, such inconvenience cannot be considered as sufficient to out-weigh the interests of so important a district as the Macleay.

CLYBUCCA CREEK.

10. The influence of the waters of Clybucca Creek upon the river entrance is a matter which has engaged the attention of the Committee, and the importance of adding this water to that of the main river stream in its passage through the training-walls to the sea formed the subject of inquiry. The Engineer-in-Chief explains that

that there will be no difficulty in arranging so that a considerable portion of the creek waters shall pass out to sea by the proposed entrance. If it should not do so naturally, it will not be difficult or expensive to construct works which will bring about the desired result.

CANAL FROM THE MACLEAY TO THE HASTINGS.

11. During the Committee's inquiry, the possibility of uniting the waters of the Macleay and the Hasting Rivers by a canal, so as to concentrate the trade of the two rivers at Port Macquarie, and thus render unnecessary the proposed work at the Macleay, was suggested, and, as far as could be done, the suggestion was inquired into. The evidence of the departmental officers shows that the matter has received attention, and to a certain extent has been investigated; and that, taking into consideration the probable cost and the results to be obtained, such a scheme, in their opinion, may be regarded as impracticable.

CONCLUSION ARRIVED AT BY THE COMMITTEE.

12. After considering the evidence given in the inquiry, and the report of the inspection made by the Sectional Committee, the Committee have arrived at the conclusion that the works as proposed, estimated to cost £95,000, in addition to the sum already expended, should be carried out; and they have passed the following resolution:—

“That, in the opinion of the Committee, it is expedient the proposed Harbour Works at Macleay River, as referred to the Committee by the Legislative Assembly, to cost £95,000, in addition to the sum already expended, be carried out.”

THOS. EWING,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 1st July, 1898.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

HARBOUR WORKS AT MACLEAY RIVER.

TUESDAY, 8 FEBRUARY, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.
The Hon. JAMES HOSKINS.
The Hon. CHARLES JAMES ROBERTS, C.M.G.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. DANIEL O'CONNOR.
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.
JOHN LIONEL FEGAN, Esq.
THOMAS HENRY HASSALL, Esq.
GEORGE BLACK, Esq.
FRANCIS AUGUSTUS WRIGHT, Esq.
FRANK FARNELL, Esq.

The Committee proceeded to consider the expediency of constructing Harbour Works at Macleay River.

Robert R. P. Hickson, Under Secretary and Commissioner for Roads, Department of Public Works, sworn, and examined:—

1. *Chairman.*] Have you any statement to make in reference to the proposal before the Committee? Yes, as follows:—

MACLEAY RIVER.

THE Macleay is one of the principal rivers of the coast, having a drainage area of about 4,600 square miles, three only of the other coastal rivers being larger, viz., the Clarence, Hunter, and Hawkesbury. Its principal tributaries are the Guyra, Apsley, and Chandler Rivers. The upper portion of the watershed, especially that through which the Apsley flows, is exceedingly rugged and precipitous, but in the lower portion there are large and rich alluvial plains. A large part of the district through which the Macleay flows is thickly timbered. From its source near Ben Lomond to the sea, the Macleay has a length of about 200 miles, and is navigable for vessels drawing from 8 to 9 feet to a distance of 36 miles from the entrance at Grassy Head, or to about 4 miles above Kempsey, and for droghers drawing 4 feet, a further distance of 3 miles, or to within $\frac{1}{2}$ mile of the rapids. At 43 miles from the entrance tidal influence ceases.

Advantage was taken of the visit to the Colony in 1885 of the late Sir John Coode, to obtain from him a report as to the best method of improving the river entrance, the navigation of which was far from satisfactory. A careful survey of the river was made by the late Captain Howard in 1887-8, extending from the entrance at Grassy Head upstream a distance of about 9 $\frac{1}{2}$ miles; soundings and borings were taken, tidal and current observations made; particulars as to rainfall, prevailing winds, &c., obtained, all of which information was forwarded to Sir John Coode in November, 1889, and in January, 1891, his report was received.

Four schemes were dealt with by him:—

- No. 1. Formation and fixing of entrance at North Head. (a) This would with certainty provide a sufficient and navigable depth, and also allow of the free discharge of all flood waters of the district. (b) Experience has shown that when the entrance has been in this position, the depth on the bar has been greater for a longer period than at the other sites. (c) Sand passing the entrance would travel unimpeded to the northward.
- No. 2. An entrance at this site (a) would also provide for the discharge of all flood waters, (b) but the northerly drift of the sand causes an element of uncertainty as regards the length of moles eventually required. (c) The diversion of the river from the existing course into a new channel would be difficult. (d) Cost would be fully equal to Scheme No. 1.
- Nos. 3 and 4. An entrance at either of these places (a) would be partially sheltered by Lagger's Point, (b) but would not provide for the discharge of all the drainage of the district, inasmuch as the waters of Clybucca Creek could not, unless at great cost, be diverted through the new fairway. (c) The cost would be fully equal to Scheme No. 1. (d) In No. 4 the curves would be inconveniently sharp.

Scheme No. 1 was recommended by him; it consists of:—

1. South breakwater, commencing at the north-west angle of the South Spit, extending thence northerly and easterly 4,000 feet, with an extension of 500 feet, when funds are available. Total length 4,500 feet.
 2. North breakwater, commencing on the southern face of North Head and extending in a south and easterly direction 1,000 feet, terminating at a point 700 feet distant from the south breakwater, with an extension of 500 feet, if found desirable hereafter. Total length, 1,500 feet.
- He believed that this width (700 feet) would sufficiently restrict the entrance to produce a navigable depth of 12 feet at low water, or 16 feet 6 inches at h.v.o.s.t., which is equal to the navigation of vessels drawing, say, 12 feet.
3. Training-bank, 11,000 feet long on the eastern side of channel at Fisherman's Reach, to obviate the escape of water through the old channel, and also prevent the river breaking through the sand spit during the floods.
 4. Training-bank, 5,600 feet long, to close the old channel (Spencer Creek) which skirts the west side of Shark Island.
 5. Leading lights and buoys.
 6. West training-bank, 7,000 feet long, to prevent fluctuations in the depth of channel through the disturbance of the sand within the entrance in times of flood and gale; the outer end to be 300 feet from the north breakwater to form a wave-trap.

R. R. P.
Hickson.

8 Feb., 1898.

Sir John Coode estimated the cost of the works as follows :—

<i>First instalment of the works.</i>	
South breakwater, 4,000 feet	£133,000
North breakwater, 1,000 feet	48,700
Training bank, Fisherman's Reach, 11,000 feet	62,800
Training bank, Shark Island, 5,600 feet	21,800
Buoying and lighting channel	2,000
	268,300
<i>Extension works required to complete design.</i>	
West training bank, 7,000 feet	48,400
South breakwater (additional length), 500 feet	39,000
North breakwater (additional length), 500 feet	27,000
	114,400
Total	£382,700

The floods of 1890 having caused extensive erosions of the river banks and a corresponding shoaling of the channel, urgent requests were made for the construction of such works as would be necessary for the maintenance of a navigable depth in the river. The unsatisfactory state of the lower channel and entrance were attributable to some extent to the existence of several openings through the narrow strip of land between the river and the ocean to the north of the point known as the South West Rocks; these openings being caused by the flood-waters taking the shortest way to the sea.

These openings were described by Captain Howard in his report on the Macleay River in 1888 as follows :—

The channel eastward of Shark Island is narrow, and was at one time the outer part of Spencer Creek, Shark Island being twenty-five years back a peninsula.

I am informed that a Mr. Salmon, seeing that the isthmus near Rudder's Hill was low and narrow, made a small cutting through it to admit his boats to the main river. The times of high and low water in the creek being earlier than in the river, caused a great scour in this opening, and now, in 1888, it is 1,800 feet wide, and what twenty-five years ago was dry land is now the middle of the ship channel, with 15 to 17 feet at low water.

The channel on the east side of Shark Island is of the average width of 700 feet; it is full of shoals, and only navigable by boats, some parts of it being less than 1 foot deep at low-water springs.

I am informed that this channel was at one time navigated by schooners, but having been constantly used as a depositing place for the silt dredged from the main channel, is now nearly blocked up. The sides of the channel are generally fronted with belts of thick mangrove, and the Shark Island side densely wooded with large timber. On the eastern side there are four shallow inlets running to within a short distance of the sea-beach, giving the impression that at some time the river has run through them into the sea. The southern of these inlets, which I call here South-West Creek, starts from the eastern channel of the Macleay River, at a point 5,000 feet below the southern point of Shark Island; it is 9,000 feet in length, and from 200 to 500 feet broad, running through swamps; its banks are mostly belts of thick mangroves, except in two places, where the points of rocky spurs of Rudder's Hill come to the water's edge.

This creek during the survey flowed into the sea, but it has not always done so. The first time I saw it, in the year 1885, the water of the creek did not reach high water on the sea-beach by 300 or 400 feet, but since then, in March, 1887, I am informed, the creek and surrounding swamps being full of flood-water, a gutter was dug through to the sea-beach to run it off, and this quickly became a wide gap, forming a good entrance. In September, 1887, it was over 200 feet wide, and 2 to 3 feet deep at low-water springs, and although during the survey it once or twice nearly silted up, it never entirely did so, and it was wider in July, 1888, than during the preceding summer.

A cutting through the mangroves was made about twenty years back, 1,000 feet inside the entrance; this at the time was 200 feet long and 10 feet wide, with a depth of 18 inches; it is now 30 feet wide, and over 5 feet deep at low-water springs. In September, 1887, the tidal stream rushed through this place at the rate of 4 to 5 knots per hour.

At the western end of South-West Creek two small islands have formed outside the entrance, and, with the shoals surrounding them, nearly block the creek, which can only be entered between three-quarter flood and one-quarter ebb. The water in the creek at low-water springs is from 3 feet at the western end to 2 feet at the eastern above low-water springs outside.

South-West Rocks Point is a double rocky head, east of South-West Creek, the bar of which is at its extreme north-west point. It rises to a height of 64 feet above low water, and is grassy, with open Banksia scrub.

A proposal having been made to construct a training wall across Spencer Creek, at the upper end of Shark Island, to deflect the ebb tide wholly into the main channel. Mr. Carleton reported—6th December, 1892—that at that time there were really three entrances to the Macleay, viz., South-West Creek, a break about 1 mile to the north of the Rocks, and the main entrance at Grassy Head. The ebb current splitting on the point of Shark Island, a large portion of the tidal and flood waters was deflected from the main channel and ran to sea by these southern entrances, thus reducing the scour in the main channel. The proposal being approximately on the lines of the scheme of Sir John Coode, he recommended that this wall should be carried out. The matter, however, was allowed to stand over.

From this time onwards, numbers of representations were made as to the shoal condition of the river, public meetings were held and petitions presented urging that river improvements should be carried out.

In August, 1895, Mr. Carleton again recommended the construction of the Shark Island training wall and the closing of the breaches in the beach, and so directing the whole of the tidal and upland waters into the main river. The Minister, however, determined that the matter should stand over.

An influential deputation then waited on the Minister (September, 1895) to urge the claims of the district and the necessity for improvement works, and amongst other things recommended the removal of a reef of rocks at Razorback, near the entrance. On this proposal Mr. Carleton reported that about £9,000 would be required for the removal of the rocks, and £7,500 for the construction of a training wall from Razorback towards Grassy Head. But as he thought a permanent entrance could be constructed at one of the openings near South-West Rocks for about £70,000 less than the Grassy Head project, he could not recommend the expenditure. The scheme referred to is that known as Sir John Coode's No. 3 scheme. The chief objection which Sir John had to this scheme was the loss of the upland waters from Clybucca Creek. This, however, could be overcome by diverting the creek into the main channel at the upstream end of Shark Island. I could not see my way to recommend the removal of the Razorback Rocks, and was doubtful as to the wisdom of expending any money on a training wall, and having always had an idea that a better entrance could be obtained in the neighbourhood of the South-West Rocks, instructed Mr. Carleton to examine this scheme.

On 30th September, 1895, Mr. Carleton reported having crossed out and in at the new entrance near South-West Rocks with a steamer drawing 5 feet, and that there was not less than 7 feet on the bar at first-quarter flood tide, and nothing less than 10 feet in channel east of Shark Island, and over 14 feet in channel above South-West Creek. He considered that every endeavour should be made to fix the entrance at this place.

On 10th October, 1895/7689, Mr. Carleton further reported as follows :—

In accordance with your instructions I made an examination of the present used entrance to the Macleay River, and found the channel so tortuous, narrow, and embayed that I could not recommend any attempt be made to fix the permanent entrance to the Macleay at or near the present route. I also saw that the suggested temporary measures for improving the present channel would be too costly for the amount of relief they would be likely to afford.

I also examined the channel on the eastern side of Shark Island which, since the flood of 1893, discharges into Trial Bay at a point at $1\frac{1}{2}$ mile north of the South-West Rocks. I found this channel carried from 7 to 14 feet, and that there was about 7 feet at low water on the bar leading into Trial Bay. Nature having so far assisted us, I think a strong effort should now be made to fix the permanent entrance to the Macleay at this point, and for this purpose I recommend that a sum of £10,000 be placed at our disposal for the construction of a training-wall, the exact position of which I am at present unable to indicate until the survey of the new channel is completed.

I also recommend as a very urgent matter that the dredge "Fitzroy" be sent to throw up a temporary barrier on the northern side of the new channel, between Shark Island and the coast sand-ridge, so that all the tidal flow may be diverted into the new channel instead of following two routes as is the case at present.

R. R. P.
Hickson.

The advantages of fixing the entrance of the Macleay at the place suggested, which I have already pointed out in a previous report, are—

- (1) A much more sheltered entrance than the present one.
- (2) At least 10 miles less steaming on the round trip Sydney to Kempsey.
- (3) The saving in dredging in consequence of the unstable portion of the river not being required in the new scheme.
- (4) The saving of about 10 miles of training-walls over the above length.
- (5) Increased scour on the new bar due to tidal flow and flood discharge in consequence of the decrease in length of river channel.
- (6) The saving in haulage of all stone used in the work. It is more than probable the stone will be obtained from Rudder's Hill, which is within a mile of the new entrance.
- (7) A smaller and cheaper class of stone required in the breakwaters in consequence of the sheltered position, and a less length of breakwaters to that required at Grassy Head.

Mr. Price was actually on the ground when a vessel was driven in at the new entrance in one of our worst gales and the ship sustained no damage.

Sir John Coode's chief objection to fixing the entrance at this point was the loss of the Clybucca Creek waters, but this can be overcome by diverting the creek.

Let me again urge the necessity for immediate action, so that the good already done may not be lost.

As to the possibility of obtaining suitable stone, Mr. Houston reported that a heavy conglomerate stone could be obtained about a mile nearer the works than Rudder's Hill, and that from appearances it could be quarried in large blocks.

On this I minuted as follows:—"I have no doubt Mr. Carleton's suggestion is the proper one, and would very strongly urge that immediate action be taken to secure the permanency of this channel. Prompt action is required, as having now two openings, a fresh might close up one or the other, and just as likely the wrong one as the right one."

On 16th October, 1895, Mr. Clarke, M.P., saw the Minister and stated that if the entrance were changed as suggested thirty settlers at Unkya and Allgomera would probably claim compensation, twelve settlers at Yarrahapinni, and the owner of the saw-mill at the Heads.

On 18th October, 95/8,009, the Minister called upon a Sub-Committee of the Board of Reference, consisting of Messrs. Darley, Deane, and myself, to report to him on the whole matter. We reported as follows:—

The Sub-Committee have carefully considered the questions in regard to this work referred to the Board by the Minister, and they now beg to submit their report.

The points on which the Minister desires to be advised are—

- (1) Whether the scheme proposed is the best to adopt under the existing circumstances;
- (2) Whether the matter is of the urgency represented; that is to say, is it necessary that something should be done at once;
- (3) How would the scheme, if carried out, affect private interests on the lower reaches of the river; and
- (4) Would the expenditure of the sum of £10,000, the estimated cost of the works, commit the Department to a probable large expenditure on works for the permanent improvement of the river.

This matter, although new in its present phase, has received a considerable amount of attention in the past; and a report on the improvement of the entrance of the river was made by Sir John Coode in the year 1890.

The channel which is now proposed to be dealt with, although it has not actually opened on the lines of any of those suggested by Sir John Coode, is very close to that referred to in his report as "No. 3," being in fact a little to the northward of it.

The circumstances of the case at the present moment are materially different to those which existed when Sir John Coode visited the river for the purposes of his report, inasmuch as at that time there was no actual channel to the sea other than that passing out by the North Head. There was a partially blind channel near the South-West Rocks, but no through connection at any point to the sea, except, as before stated, by the main channel at North Head. The channel from Shark Island, past Yarrahapinni Wharf to the North Head, was at that time fairly open for navigation, and this in all probability largely induced Sir John Coode to recommend an adherence to the then existing channel, or what he calls "Scheme No. 1," rather than to cut a new one. He was also to some extent, no doubt, influenced in his decision by what he termed the "sand travel" along the beach. He pointed out that the sand passing northward along the beach would be likely to give considerable trouble in opening a new entrance if any of the sites suggested for such in "Schemes Nos. 2, 3, and 4" were adopted. The experience of the Department, however, in dealing with the various entrances to the rivers along the coast of the Colony, leads to the belief that there is less cause for apprehension on this point than would at first sight appear. On the contrary, it is well known that the bars debouching to the sea near a south head are invariably more permanent and more easily maintained than is the case with entrances with a north head. Take, for instance, Newcastle, the Clarence, and Shoalhaven, with south heads, as compared with the Richmond, the Tweed, Nambucca, and the Macleay, with north heads. In all cases where there is a north head, the south spit has a tendency to grow and force the channel into a deep bight behind the north head, making a most tortuous and narrow channel. Then when floods occur there is a tendency for the river to straighten out and leave the north head; and that is what has really taken place on a large scale on the Macleay River, with the result that a new entrance has been made.

This new entrance was first opened by the heavy flood of 1893, and the fact that it has not since closed, but continues to improve, and now forms really the only practicable entrance to the river, confirms us in the opinion that this new channel is the proper one to fix and adopt as the permanent entrance to the river. In nearly all cases where a channel has broken out under abnormal circumstances, such as a heavy flood, it has only remained open so long as these special circumstances have existed, and when these have disappeared the rivers have gone back to their normal channel; but in this case it is not so. The channel that was opened by the flood has apparently become permanent, and continues to remain open under the normal circumstances of the river during a dry season. The report of Mr. Carleton shows very clearly the existing state of affairs; and we agree with Mr. Hickson in thinking that steps should be taken at once to fix the channel in this new position by the closing of the old Spencer Channel, as it is found that a portion of the water, after leaving the river and entering the new channel, becomes diverted down Spencer Creek. It is, therefore, highly desirable that this water should be intercepted and diverted wholly down the new channel. Mr. Hickson does not propose at present to do anything that will artificially block the original channel, nor do we think at this juncture that any action of the kind is necessary, although it will become so eventually, if the river is to be permanently improved.

We believe that if the whole of the water that at present leaves the river and enters the new channel were concentrated and passed out over the bar, it will open up and maintain a permanent channel which could be used by ocean steamers, and thus afford ingress and egress to a river which otherwise would be closed to navigation. It is to accomplish this that the closing of Spencer Creek is recommended; and we are of opinion that no time should be lost in doing this work.

The sum named by Mr. Hickson, viz., £10,000, will no doubt be sufficient, not only for the closing of this channel, but also to help in protecting the banks, to further assist in fixing the channel. It should also be pointed out that in the event of any large scheme, such as that proposed by Sir John Coode, for the permanent improvement of the entrance to the river, being undertaken in the future, it will cost very much less to carry out at the channel now to be improved than at the old main channel, as recommended by Sir John Coode, inasmuch as there will be a saving of over 10 miles of training-wall, as compared with Sir John Coode's scheme; while the breakwater at the main entrance would cost no more, if so much, as under that scheme, as the only available stone in the district is situated closely adjacent to the new entrance.

It does not follow, therefore, that the expenditure of this sum of £10,000 will necessitate entering upon larger works for the permanent improvement of the entrance. All that is proposed to be done is to improve what has already been effected by nature, and assist in her further operations.

As regards interference with private interests, we would point out that the settlers at Unkya and Allgomera, referred to in the Minister's minute of the 16th instant (95/7,868), have really no vested rights, as they have another road to the main river, although a little longer, which would lead them in the direction of the new entrance. The road

R. R. P.
Hickson.

8 Feb., 1898.

road they now use to Stewart's Point does not bring them to deep-water navigation; their goods have to be punted to the ocean steamers, and if they have to go to the new channel it will simply mean a little additional haulage. Most of the leases taken up near the river-bank, where possible claims might be maintained, have lapsed and fallen in to the Crown.

To summarise our conclusions they are, therefore, briefly as follows:—

First.—That the scheme proposed by Mr. Hickson is the proper one to adopt;

Secondly.—That the matter is of sufficient urgency to warrant immediate action;

Thirdly.—That the proposed scheme will not, to any serious extent, injuriously affect private interests; and

Fourthly.—That from the expenditure of the sum proposed, it does not follow that the Government will be committed to the carrying out of any larger scheme for permanent improvements to the entrance of the river.

On this report the Minister minuted, "Works as proposed may be carried out."

22nd October, 1895, Mr. Clarke, M.P., again urged the improvement of the river.

25th November, 1895, Mr. Houston forwarded survey of new entrance. About this time the dredge "Fitzroy" was set to work to close the channel to the north of new entrance. Subsequently (December, 1895), the sand-pump dredge "Dorus" was sent from Newcastle to the Macleay to continue this work.

On 7th December, 1895, a scheme having been prepared for training-walls and breakwater, copies were sent to the District Engineer and work commenced.

10th December, 1895, a petition was presented from residents of Yarrhapinni, urging the construction of the wall from Razorback to North Head; but they were informed that this would nullify the South-West Rocks scheme, the carrying out of which had already been decided upon.

The complete scheme designed by Mr. Darley consists of breakwaters on the northern and southern sides of the new entrance and the continuation of the walls at a lower level upstream to the junction of Spencer Creek with the main river, also straightening and deepening the channel by dredging. The total length of breakwaters and training-walls in this scheme is about 23,000 feet, the estimated cost being £218,000. The work done to 31st December, 1897, consisted in the construction of training-walls, dredging a channel about 250 feet wide and 12 to 14 feet deep through the tongue of land formed by a sharp bend in Spencer Creek and protecting the face with stone, and constructing a barrier bank across Spencer Creek north of new entrance, the total expenditure being £14,953 9s. 4d.

It is not proposed, however, by Mr. Darley to carry out the whole of this work at the present time; he thinks that in addition to the work already done a further extension, estimated at £93,000, will suffice for some time to come, making the total expenditure about £108,000.

The amounts voted for the works were as follows:—

1896 Loan	£15,000
1897 Loan	10,000
Total.....	£25,000

On the 9th December, the House, on the motion of Mr. Secretary Young, passed the following resolution:—"That it be referred to the Parliamentary Standing Committee on Public Works, to consider and report on the expediency of constructing Harbour Works at Macleay River."

2. Your statement is virtually an engineering statement? Yes.

3. Have you any statement showing the commercial basis upon which this rests—a statement showing the products of the district and the advantages of a good entrance? No; that will be obtainable in the usual way through Captain Jackson.

4. Are the breaks-away, to which you have referred, continually happening? Yes; they are liable to occur at any time.

5. In your statement you say—

Increased scour on the new bar due to tidal flow and flood discharge in consequence of the decrease in length of river channel.

What length is it from Grassy Creek to the mouth of the Clybuca Creek? I think it is about 8 miles.

6. What is the approximate width of the river? Subject to correction, I should say from 1,000 to 1,500 feet.

7. A scour depends upon two things—upon the fall and the amount of water which passes through any entrance? It depends on the grade and the width of the entrance.

8–9. The first thing that strikes one in regard to this matter is that you lose the great scouring power between Grassy Head and the mouth of Clybuca Creek—a distance of 8 miles by a width of 1,000 feet. Will you explain how you are going to have the entrance, as proposed, near to Spencer Creek, and still utilise that which will fill the space from Grassy Creek to Clybuca Creek? In one instance the distance is 8 miles, and in the other only 1½ mile. Therefore, there must be a greater rush of water through the short channel than through the long one.

10. By shortening the distance of the channel you secure a heavier scour? Yes.

11. If an entrance is preserved at North Head, as shown upon the map, it will admit a body of water which will fill up to tide water the whole of the present bed of the river, extending down Fisherman's Island and Shark Island up to Clybuca Creek; but if the entrance is made where it is at present proposed to make it, since a great body of water will be brought out at Spencer Creek, it will cease to run round North Head, and the absence of the current in the main river will cause that to fill up, and it will become a beach; then the amount of scour will be less than it would be if the entrance were at the head? No; the scour will be greater as already stated; the volume of water may be somewhat less.

12. *Mr. Black.*] How far does the scouring influence of the tide which comes in at North Head extend at the channel? The tide goes 34 miles up.

13. *Mr. Lee.*] When the flood-waters reach the southern point of Shark Island will not they divide—a portion going down Spencer Creek and a portion down the main stream? Yes; but in time the effect of making the entrance will be to silt up the old channel.

14. There are considerable floods at times in that district? Yes.

15. Will there be sufficient get-away? I think so.

16. Will there not be less get-away for flood-water under the scheme? No; the channel will be the same width.

17. But the northern arm of Spencer Creek will be shut up? Yes.

18. Is it proposed to take the spit in the main channel right out? Yes.

19. *Mr. Wright.*] Is the northern breakwater designed to stop the sand from drifting in? Partly for that, partly for protection, and partly to secure the scour.

20. I suppose the breakwaters will not be very massive? No. Very large stone will not be required. There is, however, any quantity of stone to be had.

THURSDAY,

THURSDAY, 10 FEBRUARY, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.
 The Hon. JAMES HOSKINS.
 The Hon. CHARLES JAMES ROBERTS, C.M.G.
 The Hon. WILLIAM JOSEPH TRICKETT.
 The Hon. DANIEL O'CONNOR.
 HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.
 JOHN LIONEL FEGAN, Esq.
 THOMAS HENRY HASSALL, Esq.
 GEORGE BLACK, Esq.
 FRANCIS AUGUSTUS WRIGHT, Esq.
 FRANK FARNELL, Esq.

The Committee further considered the proposed Harbour Works at Macleay River.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, sworn, and examined:—

21. *Chairman.*] Have you any statement to make? No; I handed in a statement to Mr. Hickson.
22. Then his statement is virtually yours? Yes.
23. Has the proposal before the Committee your approval? Yes.
24. Will you briefly explain the reasons why you believe it is a wise thing to make the entrance to the Macleay River 4 or 5 miles further down the coast than the present entrance? After the 1893 floods the river broke out in two places south of the entrance. Mr. Hickson was at that time Engineer-in-Chief for Public Works, and he brought a recommendation before the Minister to block up one of the entrances from what is known as the Old Spencer Creek, so as to get all the water through the one entrance. It was formerly divided between it and another entrance a little further north. He blocked up that, and then recommended a cutting to be made through the main land to straighten the channel out of the new cut at Spencer Creek. The subject was referred by the Minister to a Board consisting of Mr. Hickson, Mr. Deane, and myself. We went into the matter, and strongly recommended that the recommendation should be adopted, that is the fixing of the new entrance in its present position.
25. You believe an entrance can be more cheaply fixed as you proposed at Spencer Creek than the present entrance? Than the old north entrance.
26. Is there any other reason why you think it wise to alter the present position? I believe the channel will be more easily kept clear during floods. The old channel has never benefited much by floods. It has become spread too wide, and the floods have never improved it. A fresh passage out through the new entrance gets a shorter route to the sea, and a more effective scour than by the old entrance.
27. If you had training-banks from Shark Island to the old entrance you would have a channel? Not so good, because you would have the gradient spread over 8 miles instead of 2. We get the gradient in a distance of 2 miles, and it would be spread over 8 miles in going by the old entrance.
28. Is not the gradient usually speaking the rise and fall of the tide? Floods tend rather to fill up than to deepen. We were always dredging the old channel, and every fresh which came filled it up again.
29. What is the ordinary head on which you are depending for the scour? Just the tidal action.
30. That is $4\frac{1}{2}$ feet? A rise of $3\frac{1}{2}$ to $4\frac{1}{2}$ feet.
31. That is your power at any time except fresh? Yes.
32. Was there any other reason which caused you to believe it to be wise to move the entrance? The chief reason is economy, and bringing it to a more sheltered position.
33. Then the third reason is that the position you propose is more sheltered than the north head? There will always be difficulty in keeping a good entrance at the old place when you have a south sand spit.
34. At the south head you are under the shelter of Lagger's Point;—there is more satisfactory shelter there than at the old entrance? Yes.
35. Is there any other point which caused you to think it wise to choose a new site? No; except the great point of economy.
36. Viewed as an engineering work, is there any reason against selecting your present site? No; I see no objection against it at all. With the new entrance improved as proposed we will have a freer ingress and egress to the tide than the old entrance affords, with its sandflats and tortuous entrance. At present there is a very small tidal range at Shark Island. It is very much restricted, but through the new entrance I look for increased tidal range.
37. Do you think the lower reaches of the Macleay will not fill up beyond low-tide mark? I think not.
38. How long will it take to complete the work? About five years.
39. What is the total amount you propose to expend at first? £95,000.
40. Do you make any endeavour to bring the entrance down so that it will have the benefit of the South-West Rocks point? It will be brought down as far as it is safe to bring it down. You get a rock bottom if you come much further south. We have had borings taken over part of the area, and we get rock near the site of the quarry.
41. It would be advantageous to bring the entrance as far south as you can in order to get protection from Lagger's Point? Yes.
42. You contend you have brought it as far south as you can because you would not otherwise have the depth of water over the rock? That is so.
43. You have not shown on the map the proposal to bring the Clybucca Creek water down to the end of the proposed entrance? No; I left that an open question to come in hereafter.
44. Will you explain what the lesser works to be carried out are? There is the construction of a training-wall alongside the north side of the channel. There is the commencement of the training-wall on the south side of the channel. There is the dredging through a tongue of the main-land and the making of a channel 300 feet wide.
45. What do you propose to do to make up the proposed total of £108,000? Commencing at the point of Shark Island in the main river the training-wall will be made to the end of the work already constructed. That will cost £17,700. On the other side there will be a continuation of the wall now constructed and other work which will cost £38,200. That with the cost of supervision makes a total expenditure on the north side of £59,000. On the south side there will be an expenditure of £36,000 making £95,000 in all.
46. Where are you going to get your material for the work? We have two quarries opened at Rudder's Hill.

C. W. Darley.

10 Feb., 1898.

C. W. Darley. Hill. One quarry is turning out stone suitable for the inside training-wall—hard basaltic rock, very much broken up. The second quarry, a little further to the east, affords larger blocks of basalt for the break-water. The two are close together, and one is suitable for the inside work and the other for the outside work. We have already got the tramway and locomotive at work bringing stone from the quarry to the wharf at the end where the wall on the south side has been completed. It is then carried by punts to the wall on the north side.

10 Feb., 1898.

47. Do you say you have not yet finally approved of the scheme by which the Clybucca Creek water will be conducted straight to the new entrance? Yes, but that is a matter of no urgency.

48. *Mr. Humphery.*] Is it at all necessary? I do not think it is necessary at this juncture. If we think it will improve the work afterwards we might cut a channel across.

49. Have you seen Sir John Coode's reference to it in his report? Yes.

50. What do you say in reply to that? My reply is that it will be time enough to investigate the matter if we find we are losing any useful scour water. It will be a simple matter to make a cut across to make a discharge opposite the entrance of the new channel.

51. In your opinion the loss of the Clybucca Creek water is not material. If it proves to be material you will deal with it? That is so. Sir John Coode speaks of the flood-waters which escape into it now and come down the river. We shall get a large percentage of that still, for the land between the Clybucca Creek and the river is low, and it spills over the bank. The fact that the flood-waters themselves came down and burst through at the new entrance indicates that that is the outlet for floods.

52. *Mr. Wright.*] Have you got Sir John Coode's report? Yes.

53. Sir John Coode says:—

Entrance No. 2 would also provide for the discharge of the whole of the flood-waters of the district; but in consequence of the northerly drift of the sand, there is an element of uncertainty associated with this design, from which No. 1 is free, as regards the lengths of the sea moles, which would be eventually required for the maintenance of the requisite depth, having regard to the accumulations which would inevitably occur to the southward of the South Mole. Moreover, the diversion of a river of this magnitude, from its existing course into a new channel such as that leading to No. 2 entrance, would be a work attended with much difficulty. Again, the extent and cost of the works required, including the formation of the new channel from the moles to the point where it would join the river to the westward of Shark Island, would be fully equal to that of project No. 1.

You simply approve of a channel which is cut through by the river? The river cut itself through.

54. *Mr. Humphery.*] It happened to work itself through just at Sir John Coode's No. 3 Scheme? Yes.

55. *Mr. Wright.*] Sir John Coode also says:—

Each of the projects 3 and 4 contemplates the formation of an entrance near the South-west Rocks. Either of these positions would be partially sheltered by Lagger's Point, but each is associated with the grave defect of not providing for the discharge of the whole of the drainage from the district, inasmuch as the considerable volume of water now passing through Clybucca Creek, including also that which flows into the latter from the Macleay during floods, as described by Captain Howard, could not, unless at very great cost, be diverted through the new fairway. Further, bearing in mind the excavation and dredging of the new channel, it is not improbable that the cost of either of these undertakings would be fully as great as that of No. 1.

Sir John Coode attaches considerable importance to the question whether the new channel will convey the whole of the water through it? My answer is that the water coming down the Clybucca is so insignificant, except in flood times, that it is not worth consideration. It is a mere gutter or drain. There is nothing in it except at flood times. At a very small cost the whole of it could be diverted into the new cutting.

56. Considering that the whole of the southern portion is amply protected by Smoky Cape and Lagger's Point is there any necessity for a double breakwater? The southern breakwater is most important, but it is not in the estimate and we do not propose to go on with it at present. We only go as far as the training walls to intercept the sand moving on the beach.

57. There is a northerly set around the beach? There is not much northerly set there. Sometimes the set is southerly, and sometimes northerly.

58. According to Captain Howard's report the set seems to be northerly all round the bight? It is northerly with certain winds only.

59. What strikes me as a non-professional man is that the whole of the southern portion is amply protected by Smoky Cape and Lagger's Point? We only propose to carry the breakwater out to the end of the dotted line, and it is not likely to be required beyond that.

60. What is the sounding in the bay? 32 feet.

61. Is the bay deep all across there? Yes, there are 43 feet further out.

62. By your proposed scheme you will bring the silt and other stuff from the river to that place;—is there any likelihood of it silting up at the mouth of your breakwater? I do not think so.

63. Does the existing breakwater at Trial Bay afford you any idea as to the set of the current;—is there any accumulation of sand about there? No; within the last three years at one time the bay shoaled, and again it scoured out again. I think it is due to the action of the sea more than to anything else.

64. Sir John Coode uses these words:—

During freshes, discoloured water can be seen to trend round to the northward, well outside the bar; it has also been observed that wreckage from Trial Bay, or South-west Rocks, is deposited on the beach close to the North Head, or on the sands northward thereof. These circumstances point to the existence of a northerly eddy, shoreward of the constant south-going current which sets along the coast outside the capes.

? It is generally a south-east gale which sets it.

65. *Chairman.*] I suppose you know that the Department is building two ports within a few miles of each other—one being Trial Bay and the other the entrance in question? Trial Bay is only a harbour of refuge.

66. Are the works at Trial Bay a success? It is not yet far enough extended to be of any practical benefit.

67. Is there any urgent need for a port of refuge at Trial Bay? There is not the same urgent need now that there was when the work was started, because we have not so many small sailing ships on the coast.

68. *Mr. Lee.*] Which part of the work do you propose to carry out first? The north and south walls simultaneously.

69. What will be the effect on navigation during the construction of the work? It will improve every day.

70. What is the depth of sand there? I cannot say the final depth. We know that there are at least 30 feet of sand below low water there.

71. Is there a sandy bottom about Shark Island? Yes.

72. How far will the breakwater extend beyond the present high-water mark? The section going out C. W. Darley will not extend more than about 300 feet beyond high-water mark.
73. What depth of water will that be in? At present there are only 6 or 8 feet, but when the channel is scoured out it will be deeper. 10 Feb., 1898.
74. What will be the general depth of the channel right through when the opening is completed? There will be no difficulty in maintaining a 14-ft. channel at low water.
75. And that, I presume, will be sufficient for all purposes of the produce which can come from the river? Yes.
76. Will that entrance present any difficulties to sailing vessels? Of course it is too small for sailing vessels unless there is a very fair wind.
77. A steamer could come in during any wind? Yes.
78. There is a certain amount of trade done by the coasting craft;—would they have to use a tug to get in and out? In most cases.
79. But in the case of the Clarence River they get in and out without a tug? As a rule they take a tug. There are very few sailing vessels using the river, but those which do generally wait for a tug.
80. You are clearly of opinion that it affords no danger to an ordinary steamer? None; a steamer could come in at any time.
81. Does that remark apply to a steamer leaving? Yes. Of course, during a heavy gale or sea running they would not go out; but under ordinary circumstances they should be able to navigate it safely at any time.
82. I suppose that the conditions may exist under which a steamer cannot enter? There is no port on the coast which steamers like to take with a heavy gale of wind right on.
83. Would it be as safe as the port of Newcastle? Quite.
84. And quite as easy of approach? Yes; for vessels of proper size.
85. Do coasting vessels at present lie off the bar in bad weather, or do they go into Trial Bay? In bad weather they generally lie in Trial Bay.
86. Is Trial Bay conveniently situated for them? Yes.
87. *Chairman.*] How far is the entrance of the Macleay from Trial Bay? Barely 6 miles.
88. *Mr. Wright.*] Sir John Coode is most emphatic in dealing with the North Head. In one part of his report he says:—

Moreover, as before stated, experience has shown that when the entrance fairway has hitherto been in about the position of No. 1, the depth over the bar has been greater for a longer period than at any other site. Again, the North Head, or thereabouts, having regard to the northerly drift of the sand, would appear to be a specially advantageous position for the entrance to the Macleay, because sand passing the entrance would readily travel unimpeded to the northward, along the length of coast embayed between the North Head and Scott's Head.

? I do not think there is any evidence of any extensive northern drift of sand. Sir John Coode, of course, bases his report on that of Captain Howard. Captain Howard made a report which was sent to Sir John Coode, and subsequently to that I got Captain Howard to stream the currents in the bay, and the conclusion he came to was that there was no settled current. I think Captain Howard drew his conclusions from finding some drift weed, but there is no settled current running up the north coast.

89. You have satisfied yourself on that point? Quite.
90. *Mr. Humphery.*] I believe you have carried out extensive works for the improvement of the Clarence River? Yes.
91. What has been the effect of those works so far as they have been completed? The work recommended by Sir John Coode and passed by this Committee was the construction of the south training-wall, which has been completed. There are now 54 feet of water in the channel at one point. There are 24 or 25 feet of water all the way along.
92. What was the depth formerly? Where there are 54 feet of water now there were trees growing on one occasion. That great depth is due to special circumstances. The river comes across into Iluka bay, and is abruptly taken round, and the water shooting out to the other side causes this depth.
93. Have you 25 feet of water now inside the Clarence Heads? Yes.
94. What have you at the Heads? The bar now is about 17 or 18 feet.
95. What was it before these works were carried out? It used to vary—there were 12 feet of water at times.
96. Then there has been an improvement at the bar to the extent of 5 feet? Quite.
97. That is without carrying out the breakwaters shown on the plan as originally placed before the Committee? Yes.
98. Do you think, with the improvement which has already taken place, it will be necessary at any time to carry out the breakwaters which have been suggested? I do not think so.
99. Do you think it is necessary that the reef there should be removed? I do not. There is sufficient room for steamers to navigate between the—reef and the training-wall.
100. The effect of the works carried out inside the bar of the Clarence River having been so satisfactory, are you of opinion that if similar works are carried out at the Macleay the breakwaters there will also be unnecessary? The circumstances are somewhat different. I think the full length of the breakwater will be unnecessary, and I do not therefore put it before the Committee.
101. Then do you think the proposed expenditure will complete the whole of the works necessary in order to give a depth of 13 or 14 feet at low water in Spencer Creek? About.
102. Therefore we may look upon the amount proposed as covering all necessary expenditure in connection with the improvement of the Macleay River? Yes.
103. *Chairman.*] Do you know what Trial Bay has cost? I have not the cost with me. I may mention that prison labour is costly work—more costly than free labour.
104. Has there been a survey of a tramway from Trial Bay to the Macleay? I believe so.
105. *Mr. Hoskins.*] If a wharf were constructed abutting on the breakwater at Trial Bay, could vessels load and unload there, even supposing the weather were rather rough? We are constructing a wharf there, and in ordinary weather small vessels can use it.
106. What is the distance from Gladstone on the Macleay to the breakwater at Trial Bay? From Gladstone by river to Robertson's Wharf and then across by land to Trial Bay the distance is about 21 miles.

FRIDAY, 11 FEBRUARY, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.	CHARLES ALFRED LEE, Esq.
The Hon. JAMES HOSKINS.	JOHN LIONEL FEGAN, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	THOMAS HENRY HASSALL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	GEORGE BLACK, Esq.
The Hon. DANIEL O'CONNOR.	FRANCIS AUGUSTUS WRIGHT, Esq.
HENRY CLARKE, Esq.	FRANK FARNELL, Esq.

The Committee further considered the proposed Harbour Works at Macleay River.

Alexander Brown Portus, Superintending Engineer of Dredges, Harbours and Rivers Branch, Department of Public Works, sworn, and examined:—

A. B. Portus. 107. *Mr. Hoskins.*] Have you, within the last year or two, been to the Macleay and inspected the entrance now used and the disused entrance? I have not been there since January, 1896. I have nothing to do with the new entrance works. The District Engineer under Mr. Darley is in charge.

11 Feb., 1898.

108. Do you keep on dredging there? Yes; a dredge has been constantly stationed at the Macleay since November, 1871. After the great flood of 1893 we had two dredges there—a large sand-pump and a ladder dredge. Two dredges are working there now.

109. Where are those dredges employed? From the old entrance up to the town of Kempsey in the past. Now from the new entrance upwards.

110. Have they been employed at the proposed new entrance? Yes, for about three years.

111. What depth of water is there at the new entrance? It varies from month to month. The "Burrawong" draws, laden, about 8 feet, and there are about 8 feet available with good tides.

112. Could not a reliable depth of water be obtained at the North Head? No, because the channel immediately inside the bar is very tortuous. There are rocks there, and it is difficult to get through.

113. Which entrance is now used by steamers regularly trading to the Macleay? The new entrance. About three-fourths of the trips are through there.

114. Do you think the proposed new entrance will be more reliable and give a greater depth of water than the old entrance? Yes; because it will be possible when we get our new bar sand-pump out from England to improve the bar there always. In such a sheltered position the sand-pump will work advantageously. It can be turned round inside and come out again more readily at that entrance than at the old entrance.

115. Do you anticipate that when the works at the new entrance are finished you will have to keep on dredging permanently? No; it may be necessary for a dredge to go there occasionally.

116. Is not the trade on the Macleay River small? No; there is a considerable trade there.

117. Do you think, if the improvements suggested are carried out, the entrance will be suitable for a long time to come, if the vessels are of sufficient carrying capacity? In my opinion the improvement will effect that object.

118. Have you been to Trial Bay? Yes; I was there two years ago.

119. Is there ample depth of water there at all times? Yes, out in the Bay.

120. Has it ever occurred to you that as Trial Bay is only $4\frac{1}{2}$ miles from the Macleay River, it might be cheaper to make a permanent wharf for the loading and unloading of steamers there, and a tramway across the flat country to the Macleay River, rather than spend a large amount of money on the entrance to the river itself? I have thought the matter over, and judging from the experience of steam navigation companies elsewhere, I think that when steamers can proceed up a river, the settlers are better served than by the produce being put on a railway and then transhipped to a vessel. The experience of the Hunter River shows that.

121. If such tramway were constructed, would not very much larger vessels be used at Trial Bay;—could they not work more profitably than smaller vessels and at lower rates? It would not pay steamers like those which run between Sydney and Brisbane to call there and load. Steamers such as the "Burrawong" might engage in the trade.

122. You were speaking of vessels suitable for the navigation of the Macleay River;—if there were a tramway from the Macleay to Trial Bay, and large vessels came to Trial Bay, do you not think that freights would be no higher, and would not there be a guarantee that, in times of heavy storm and flood in the river, the navigation would not be interrupted? I do not think so. I think the double handling of the stuff would be a great difficulty.

123. Even though there may be a risk of the vessels being stuck up on account of storms and floods? I think that will be very much minimised when the new entrance is completed.

124. Do you not think that there would be less delay consequent upon floods or storms at the entrance of the river if you had a tramway from Trial Bay, and vessels could load and unload there at all times? It might certainly be more reliable from that point of view. But do you purpose shutting up the river altogether. If you withdraw the dredge from there the old condition of things of thirty years ago will be restored, and the river will block up again. When you speak of the construction of a tramway from Trial Bay to Kempsey, you must bear in mind that the Government will be subjected, in years to come, to opposition from vessels plying on the river, and the question is whether the tramway will pay.

125. *Mr. Lee.*] Supposing it were practicable to carry on the shipping from Trial Bay, and to convey the goods by tram to a point on the Macleay River, and all work was suspended on that portion of the river between Shark Island and North Head, would not that portion in a short time become quite unfit for navigation? That would depend upon floods. It would, no doubt, be restored to its natural condition in a few years, if it were not dredged. The dredge came to the Macleay River in 1871, and between 1871 and 1876 it was mostly occupied in dredging from Shark Island to Grassy Head, and afterwards to Kempsey.

126. What was the condition of the entrance in 1871? With the exception of a steamer called the "New Moon," drawing 4 feet of water, steamers at that time had not gone beyond the anchorage inside the entrance. Light-draught vessels, however, have been going up there for fifty years.

127. Have you been dredging there continuously since 1871? Yes.

128. Has that had the effect of keeping open the entrance permanently? I do not think the bar has been very much better since we started. It has been better, but not to a great extent.

129.

129. Then, really, you have only been dredging to make the water navigable within the bar, towards Shark A. B. Portus. Island? Yes; and right up the river—at Long Reach and other places.
130. What is the state of the North Head bar generally;—can it be crossed in ordinary weather by the ordinary coasting steamers? I saw the dredge-master the other day about the relative number of times the steamers crossed the old and the new bars, and he said that in nineteen cases out of twenty they used the new entrance instead of the old one. 11 Feb., 1898.
131. Why would they use the old bar the twentieth time? The difficulty of the old bar is that although it may be deep enough, immediately inside the channel it is so tortuous that it is difficult to navigate.
132. Independent of the bar at North Head, there are serious obstructions inside? Yes; rocks as well as sand.
133. Would it cost a large sum to remove that? I do not think it would require a very large amount.
134. Knowing the two localities so well, are you of opinion that the present proposal would give a more reliable entrance to the Macleay than the old one? Yes, I think so.
135. And cheaper? Yes, because you save about 12 miles in distance going to and from Sydney.
136. I believe there is a great amount of sand in some places inside the new entrance? Yes.
137. What will be the condition of things with flood-water running one way and a heavy southerly gale blowing in? The gales and floods generally come together, and, generally speaking, after a great flood the bars are better.
138. You remember what has happened at Newcastle many times after a heavy flood in the Hunter, and the great deposit of silt that has taken place;—do you think that it will be possible for that to happen here? That condition of things obtained at Newcastle before the breakwater was constructed. In this instance, the breakwater ought to have the effect of ensuring a very fair entrance after flood. We have had no shallow bar at Newcastle after flood since the northern and southern breakwaters were run out.
139. You have an entrance 700 feet wide;—what will be the length from the breakwater to the corner of Shark Island? About $1\frac{1}{2}$ mile from beach to island.
140. Under a repetition of conditions which have prevailed, do you not think that there is a danger of a heavy deposit of silt taking place in the channel? I do not think so. The flood-current should sweep it out between the walls.
141. You think that if the current is diverted direct into the channel it will be sufficient to keep it clear? I think that the fact of floods having broken out at that point indicates what the conditions will be. We generally have deep bar water after floods.
142. Has any flood which has caused the entrance to be cut through left any serious deposit of silt? What came about after the great flood of 1893 was this: all the channels right up the river were shoaled up. There was a great deposit of shingle, but it was no worse at the Heads than up the river.
143. I should imagine a large quantity of debris and heavy timber will come down the river in flood-time? I understand that it is so.
144. Supposing the whole of the water, and the debris and timber were diverted into the channel, would it not be a serious menace to the stone-work which it is proposed to put in? Hitherto, floods have not, I think, disturbed the breakwaters on the northern rivers.
145. In view of what has happened at Newcastle and other northern ports, do you think it likely that if the breakwater were extended as far as is indicated on the plan, under the conditions of a south or south-east gale, shifting sand will be likely to block up the entrance? I do not think it will. The entrance would be protected by the breakwater somewhat.
146. In view of what has happened at other ports in the north, do you think that if this work is constructed there will be any likelihood of the drift-sand piling up under a heavy gale? I do not think so. It might, to some extent; but even if it did, we shall have the appliances for very speedily removing it.
147. *Mr. Clarke.*] Is it intended to close the old entrance, or to leave it open? I presume it will be kept open until the new entrance is thoroughly completed.
148. *Mr. Wright.*] Do you think, if a railway were made from Trial Bay to Kempsey, and the proposed harbour works were abandoned, there would be much competition among the shippers for the river trade? I think there would.
149. Have you considered the fact that it would be cheaper to bring stuff from Trial Bay by that route than by the river? I do not think it would, because the material would be twice handled. Goods twice handled cannot be compared with goods put on board a steamer and taken direct to their destination.
150. Then, if a railway were constructed, there would have to be droghers in the river to collect the stuff for the railway? Yes; it would be put on the railway, and there would be a double handling at Trial Bay. In the other case the drogher would put it on the steamer, and it would go away direct.
151. It means additional handling? Yes. Even when the entrance is bad, the droghers sometimes go outside and put the stuff on the steamers under the protection of the Trial Bay breakwater.
152. What will be the effect on the navigation of the river if all the works are abandoned? The old condition of things of thirty years ago will obtain. The river will gradually fill up.
153. Therefore there would not be much competition by steamers with the railway? Probably all the channels would shoal up. Vessels drawing 5 or 6 feet might then get up to Kempsey.
154. Do you think under any circumstances there will be competition on the river? Yes; do what you will with tramways.
155. Therefore you see no benefit likely to arise to the district by the construction of the railway and the abandonment of the harbour works? I do not, from a paying point of view.
156. Have you any idea as to the feeling of the people of the district on the subject? I think opinion is pretty much divided about it.
157. *Mr. Roberts.*] When you visited the Macleay two years ago, which was the entrance in use by the river steamers? The old entrance chiefly, I think.
158. Was the old entrance given up on account of the shallowness of the water on the bar? Not so much on that account as on account of the tortuous channel inside. Occasionally it was due to the shallowness of the bar.
159. How much water was there? About 7 feet at high water, and sometimes more.
160. The difficulty was when you got over the bar? Yes, inside.
161. Since then the new entrance has been continually used? Yes, generally.

- A. B. Portus, 11 Feb., 1898. 162. What water is there at the bar now? It varies. The "Burrawong" was detained last week coming out for a day or two. It had shoaled up.
163. What do the trading steamers draw? The lowest draught is about 7 feet 6 inches.
164. Is it not a fact that on the rivers on the north coast steamers are frequently detained as long as six weeks trying to get out? I do not know of any case of that kind of late years.
165. What is the longest time a steamer has been detained at the Macleay Heads endeavouring to get out? Not more than three or four days.
166. Is the entrance to the Macleay more difficult than the entrance to the Manning? The Manning is, I fancy, the worse of the two. The shallower draught vessels go to the Manning. For instance, the "Burrawong" does not go to the Manning.
167. What is the longest time you have known a steamer to be detained at the Manning with produce on board? About a week.
168. I suppose an easterly gale would make it more difficult to get out of the Macleay? Yes.
169. With a south-easterly gale I suppose Trial Bay will afford ample shelter? It would with a southerly gale give considerable shelter.
170. Then if a gale has any easterly bearing in it, Trial Bay is hardly safe at the present time? That is so, but it will be safer as the breakwater is extended.
171. I suppose that with an easterly gale it would be almost impossible at present to get out of the Macleay? It would not be desirable to try it.
172. Will the proposed improvements render navigation more easily in easterly weather? That and the breakwater extension together.

Francis Clarke, Esq., M.P., sworn, and examined:—

- F. Clarke, Esq., M.P., 11 Feb., 1898. 173. *Chairman.*] I believe the works in question are not in the electorate you represent, but the benefit of them will be felt there? Yes. The boundary of my electorate strikes the Macleay River about 2 miles above Smithtown. It follows the Macleay River past Smithtown to opposite the mouth of Kinchela Creek. It follows Kinchela Creek upwards to the parish boundary between Aracoon and Kinchela; and thence along the parish boundary to the sea. Going back to the point above Smithtown, the boundary bears in a westerly direction to the mouth of Trial Bay Creek; thence by Trial Bay Creek upwards to where the road from Green Hills to Taylor's Arm crosses; thence it follows that road up to the Main Dividing Range between the Macleay and the Nambucca waters.
174. *Mr. Trickett.*] Your electorate is known as The Hastings and Manning? Yes.
175. What is the present mode of getting produce to market? By the Macleay River, and then by means of steamer to Sydney.
176. Do you understand the various schemes before the Committee? Yes.
177. Which of the two entrances do you think is the most advantageous? I would not like to express an opinion.
178. I do not mean as affecting the rights of particular settlers;—but are you prepared to say, from a practical point of view, which you think the better? Owing to the Spencer Creek entrance having the shelter of Trial Bay breakwater, I should be inclined to favour that scheme. It is a shorter channel, too.
179. I suppose you have been a frequent visitor to the Macleay by steamer? I have practically lived on the Macleay for thirty years.
180. Is the communication with the Macleay better by way of Spencer Creek, as now used, than it was by the entrance at North Head? I would not like to say that it is, because the works at Spencer Creek are not sufficiently far advanced to make a permanent improvement there as yet. There are times when the old entrance is used particularly after floods, or perhaps slight freshes, occur in the river, which help to clear the bar; but whenever dry weather sets in we are generally troubled with a bad bar.
181. That is at North Head? Yes.
182. Is the Spencer Creek entrance used now altogether? To the best of my knowledge it is.
183. How long has that been the case? It seems to have been used for the last two or three years alternately, sometimes the steamers going in the new entrance and out of the old one. Latterly, I think, the new entrance has been more favoured than the old one.
184. By reason I suppose of its being more reliable? I suppose so. The effect of the work going on there has improved it.
185. We are told that the commencement of the Spencer Creek channel occurred in a very simple manner by a man having made a slight cutting for his boats there;—are you aware of that? No; I do not think that is the case. I think the idea of adopting this as an entrance was brought about by the fact of the flood of 1893 breaking a channel through there.
186. That entrance has continued to improve since it has been a channel? Without the cuttings and the breakwater which have been put there I do not think it would ever have been an entrance.
187. Have not the training-banks which have been already constructed very much improved the navigation of the river? Yes.
188. Are dredges at work there now? Yes, I understand the sand-pump dredge "Doris" is there.
189. Do you think that, when the sand is well dredged out of there, the scour from the Macleay River will be sufficient to keep it open as a permanent channel? Yes.
190. I believe the steamers which trade there have a shallow draught? I believe the "Burrawong" requires 8 feet or 8 feet 6 inches.
191. How far up the river do the steamers go? The "Burrawong" sometimes goes as far as Kempsey, about 26 miles from the new entrance.
192. What is the average depth up the river? When the river is in good order about 10 feet. Of course it has to be dredged to maintain that depth.
193. So that a channel down Spencer Creek with an average depth of 10 feet would be sufficient for all purposes for the vessels which usually navigate the Macleay River? Yes.
194. About what tonnage are they? I believe the "Burrawong" is about 350 tons, and it is the largest.
195. Do you think it is a river where steamers of a larger tonnage are likely to navigate as time goes on? I think so, if the water is sufficient, because the present shallow-draught steamers are not constructed to

F. Clarke,
Esq., M.P.

11 Feb., 1898.

be fast sea-boats. The district in that respect suffers through the boats not being able to maintain a high rate of speed when they get out to sea.

196. But the work of dredging a great length of river to a depth which would enable large-sized ocean-going steamers to go up would be very expensive? I admit that. That might be overcome. If the ocean boats only entered the heads, the rest of the work could be done by boats of a shallower draught. That has been done to a large extent during the last three or four years.

197. Would a boat drawing 12 feet be able to navigate the Macleay as far as Kempsey? I think so, with dredging.

198. If the channel from Spencer Creek to the breakwater is 14 feet at low water, do you think that will be sufficient for all purposes? I think so as far as one can foresee.

199. It has been stated that on the 16th October, 1895, you saw the Minister and stated that if the entrance was changed as suggested, from North Head to Spencer Creek, a number of settlers would claim compensation? I think that statement was made by me on account of the settlers themselves having written to me on the subject. I put their views before the Department. That was before any money had been expended on the new entrance. I might point out that, if the formation of the new entrance has the effect of shallowing up the old channel, the settlers on the Allomera and the Unkya, and also the people living round Yarrapinni and the saw-mill proprietors at Stewart's Point, will be seriously handicapped in getting their produce to market.

200. That is if the river silted up to such an extent that they could not punt their goods to the steamers? Yes.

201. But it has been stated that the silting up of the Long Reach in question will be very slight indeed, and that if a waterway is kept open these people can easily punt their goods to the ocean steamers? That I could not say. At present they draw their goods to Stewart's Point near the old entrance.

201½. It is also stated that they have another road to the main river which would lead them in the direction of the new entrance? That is so. They would be able to reach the river higher up in any case, but it would make further haulage for them.

202. How much further? About 4 miles each way. They could either ship at Clybucca Creek or go on a little further and ship on the main river at what they call Summer Island Wharf. I think Summer Island would be the better. If they went to Clybucca they would have to contend with the navigation of Clybucca Creek, and it is only navigable at high tide.

203. Is it a good road? A very good road. It is really the main north coast road.

204. What stuff do they supply to the steamers? The Unkya and Allomera people are mostly maize-growers. The timber people would, I think, be most seriously handicapped, on account of having to haul their timber. There are two mills—one at Stewart's Point, right on the banks of the river, and another one a couple of miles out on what is known as the road to the "Traveller's Rest Hotel."

205. What class of timber is it? Hardwood.

206. Is there a large trade in it? I do not think the orders are very extensive as far as the Sydney market is concerned. It is more a local trade in connection with the main river.

207. Is there a large quantity of that timber? The country surrounding Yarrapinni and around the Allomera and Unkya Creeks, up to Clybucca Creek is really more of a timber country than a grazing country.

208. Then the timber industry might grow into a big thing? Yes; I look upon the timber as the most valuable product in that part of the district.

209. Therefore, by diverting this river so much to the south, it might affect that industry in the future, if Sydney is to be the market for it? Yes. Of course it could be overcome, as stated, but it would certainly handicap the industry to some extent.

210. Can you tell us what the extra 4 miles haulage of timber would mean to the timber-cutter? It would mean two-thirds of a day extra to a teamster—worth at least 10s.

211. If the entrance were at the Heads, he would have to carry his timber a good distance? Yes; in any case he would have to go a good distance further for his timber, and as years go on he will have to go further back.

212. And the further back he goes the less will the place of shipment affect him? Yes; very probably.

213. Therefore it is not a very serious matter as regards the timber industry? No; I do not think for a moment that it is a difficulty which should stand in the way of making the new entrance.

214. Is it a serious matter for the maize crop? No; the maize crops of the Allomera and the Unkya, comparatively speaking, are not very large.

215. Taking the main use of the river into consideration, those people who are nearer the North Head are in the minority. If it will suit the other people to have the other channel, those people are not so numerous that they could prevent the entrance being at the Southern Head? No; they are the smallest in number, and they have the least products to send away.

216. Seeing that this work, if carried out in its entirety, is to cost a considerable sum of money, can you tell us what quantity of produce is likely to feed the steamers which trade up the river? I can only be guided, and that to a small extent, by the exports to the Macleay during 1897:—

The following are the principal items of produce exported from the Macleay by steamer for the year ending December 31, 1897:—Butter, 3,021 boxes, 138 kegs; bones, 397 bags; calves, 132; cedar, 10 logs 3 pieces; cream, 4,040 cans; eggs, 2,697 cases; fish, 70 cases; fruit, 33 cases; hides, 3,483; honey, 171 packages; horns, 10; maize, 152,530 bags; onions, 222 bags; pigs, 7,855; poultry, 946 coops; potatoes, 5,877 bags; pumpkins, 284 bags; spokes, 2,400; tallow, 64 casks; turnips, 400 bags. Butter since January 1 is being shipped at the rate of from 6 to 8 tons per week, and the milk supply to the factories is rapidly increasing.

Most of the hardwood timber trade is done by sailing vessels, and of that we have no record.

217. Where did you get your figures from? They first appeared in the local newspapers, and were obtained from the local agent of the North Coast Steam Navigation Company.

218. How often do the steamers trade? The "Burrawong" in the busy seasons trades twice a week; but even at that she was not able at last season to keep up with the cargo. That, to a great extent, was owing to the difficulties encountered at the entrance. The droghers from the river had to come out over the bar and tranship cargo on board the "Burrawong" under the shelter of Trial Bay. That was a great disadvantage and also caused a great delay.

219. Is the passenger trade large? It is a steady one, and a fairly large one both to and from the Macleay.

F. Clarke,
Esq., M.P.
11 Feb., 1898.

220. Do the droghers call from point to point and collect goods? Yes; they call from point to point and collect the cargo as a rule, and in the busy seasons they convey it to the wharf where the "Burrawong" generally lies in the lower reaches of the river. Then, whilst the passenger steamer is taking the passengers from Burrawong up to Kempsey, the loading goes on from the cargo steamer to the "Burrawong," so that by the time the passengers return again from Kempsey, the loading is pretty well complete.
221. How far do the droghers go up the river? As far as Sydenham's Wharf; about 40 miles altogether.
222. I suppose the influence of the tide is not felt very much up the river? I should say the rise and fall is about 3 feet at Kempsey.
223. Is all the land along the banks of the river alienated? Yes; it is held in small farms. Most of the farmers are the owners of the land.
224. Is the district progressive? Yes, it is a very progressive and rich district.
225. Is there much grazing carried on? Yes, a good deal both on the Upper and Lower Macleay.
226. Is there a tendency for the grazing country to be put under agriculture? No; the grazing country, generally speaking, is not suitable for agricultural purposes. The forest land is not good enough for agriculture on the Upper Macleay, and on the Lower Macleay where the swamps exist it would require draining before it would be fit for cultivation, and even then it is questionable whether it would not be too risky to attempt agriculture on low-lying country. There is no doubt there is a great future before the district in regard to the dairying industry.
227. What scope is there for progress in agriculture and dairying? The outlook for the dairying will mostly depend on the drainage of the swamp country lying at the back of the farms on the river frontage. We have an area there of about 80,000 acres of swamp land all selected, and they are making strong efforts now in the direction of having this country drained. In fact, draining has gone on in the past on a very small scale by individual swamp-holders themselves. The intention now is to take advantage of the Water Rights Act and go in for draining on an extensive and comprehensive basis. When that is accomplished the river should not only be very productive in dairy products, but it should be able to send off a very large number of fat stock to market. At present they have to drive their fat stock overland to Maitland a distance of over 200 miles. Attempts to ship stock to Sydney by the class of steamers going there have not been satisfactory or successful.
228. Where this draining of land has gone on and it has been used for grazing purposes, has it been a success? A very great success indeed.
229. To what extent has it added to the carrying power of the land? The place has been practically converted from a swamp or marshy bog to the extent of being able to carry during good seasons of the year—from September or October up to the end of March—something like three beasts to the acre. The natural grasses seem to be very good and seem to grow most luxuriantly immediately the land is drained.
230. I notice that the export of pigs is very large;—are they fed on the swamp? No, mostly on the farms. They are mostly corn-fed porkers.
231. What are they fed on generally? Generally on what they can pick up—pumpkin, and finished off on corn.
232. Is corn grown to any great extent about the river? Corn is the principal product. The average crop there, according to statistics, is about 40 bushels to the acre. In the year I have quoted there were 152,000 bags exported, which would mean 600,000 bushels from the river alone.
233. On what character of land is that grown? On the rich alluvial lands of the river banks.
234. Above water and flood level? No. All the land on which the maize is grown is subject to floods. It is grown on the banks of the rivers, and in some cases the branches—that is, the creeks feeding the rivers.
235. Is that likely to be a continuous industry? To some extent I think it will give way to the dairying industry, but not altogether. I think farmers are likely to continue growing maize. They will combine the two together—maize-growing and dairying.
236. Has dairying been found to be more profitable than growing corn? Of late it has, owing to the low price of maize and the great losses suffered through floods. A flood means that all the crop is lost in the case of maize, but in the other case the industry is only suspended for a few months. There is also the advantage of a regular stream of money coming in. Farmers get their returns every month from the dairying industry, whereas from the maize crop they have to wait for twelve months, with a risk of losing all.
237. Are there co-operative creameries in the district, or do the producers each keep their own milk? There are no co-operative creameries. They are under the control of companies, with one exception. The Smithtown factory is a locally owned one. Some of the others are privately owned. That is to say, they have been erected by individual farmers, and some of the recent ones have been erected by Sydney companies.
238. What does the small farmer do with his milk? He sells it as a rule to one of the creameries.
239. About what sized holding would be sufficient for a family to make a living out of, if it has been drained for dairying purposes? 40 acres.
240. Would that be by mixed farming? Yes, by a little corn-growing, pigs, poultry, and dairying.
241. Is the draining of the land which you speak of done by private holders? Yes; they have formed what is called a drainage union, under the Drainage Promotion Act, but that has not been a success, on account of the large amount of capital required to put in an extensive system of drainage; but under the Water Rights Act they will not have to find such a large capital. The Government will carry out the work provided the landholders undertake to find the interest and part of the sinking fund to pay off the first cost.
242. Are they treating this 80,000-acre block in that way? No; but that is their intention.
243. Is that held by private owners? Some of it is Crown lands through selections reverting to the Crown, but most of it is held by those who first took it up.
244. Are there many selections in the district which have been forfeited? I do not think there are many, considering the hard times they have gone through, but still there are some, particularly in the swampy country where they have not been getting any return from the land on account of its swampy nature.
245. Do you think the district is likely to become such a thickly populated one as to justify the Government in going to such an expense as this scheme involves? It becomes a question at once as to whether the people can ever improve themselves if the navigation of the river is not improved.

246. Can you tell us what population now uses the river as a means of transit? I can only tell approximately, because I find that the statistics are compiled on a county basis, and that does not fairly represent the population which would make use of the river as an outlet. I find that the population of the county of Dudley was estimated at the census of 1891 at 5,795. Part of the county of Macquarie extending from Kempsey down the river to the Heads naturally goes to the Macleay River. It is thickly settled, and forms some of the richest and most productive lands of the Macleay River. Of that we have no record on account of the system of keeping the statistics on a county basis.
247. It has been suggested that as the Government are making a breakwater at Trial Bay it might be practicable to have a railway somewhere at the head of Spencer Creek to a port in Trial Bay, and thus do away with the entrance? Such a scheme has been suggested.
248. What are your views of it? It depends to a great extent on whether the new entrance can be made a success or not. If it can be made negotiable with a reasonable expenditure, I think that the water carriage would be cheaper than the railway carriage.
249. You would also avoid the two handlings? Yes; and there is no doubt that the water carriage would compete to some extent with the railway.

F. Clarke,
Esq., M.P.
11 Feb., 1898.

WEDNESDAY, 16 FEBRUARY, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.
The Hon. JAMES HOSKINS.
The Hon. CHARLES JAMES ROBERTS, C.M.G.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. DANIEL O'CONNOR.
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.
JOHN LIONEL FEGAN, Esq.
THOMAS HENRY HASSALL, Esq.
GEORGE BLACK, Esq.
FRANCIS AUGUSTUS WRIGHT, Esq.
FRANK FARNELL, Esq.

The Committee further considered the proposed Harbour Works at the Macleay River.

John McLaughlin, Esq., M.P., sworn, and examined:—

250. *Chairman.*] I believe you represent the electorate of Raleigh? Yes.
251. The county of Dudley and a portion of the Macquarie form portion of your electorate? Yes.
252. Does the entrance to the Macleay and Trial Bay come within your electorate? Yes.
253. *Mr. Clarke.*] Do you wish to make any statement? Yes. At first, when these works were commenced, a number of people at Stewart's Point, Warrahapinni, Unkya, and Allgomerá objected to the proposed work because they thought it would cut them off from the service they previously had, and would compel them to travel 8 miles further with their produce. They also contended at the time that the work would not be a success. Personally, I could not give an opinion against that of the engineers on the subject, but last September I went up there specially to look at the work. Mr. Houston took me over the work at present in course of construction, and also to the old entrance. I came to the conclusion that the work was likely to prove very beneficial to the district. The scour which was apparent satisfied me that every yard of the work which was put in would continue to improve it. At that time the steamer was not going in regularly, but Mr. Houston told me that the "Burrawong" would be able to enter at all times, within another month. I find she has been running there regularly since November. Of course there will be hardships, so far as the people who have property at Stewart's Point are concerned, such as Captain Jamieson, for instance. His property necessarily will be deteriorated through being so far from the means of communication.
254. Is he the pilot? Yes; I believe he has a very strong objection to the new entrance, but I believe the loss the property-owners will sustain will not be equal to the benefit the rest of the district will gain by the completion of the work.
255. Then you entirely approve of the proposed improvements of the river? Yes; I may say it will also be an inconvenience to some people on the Nambucca River who now come to Stewart's Point, but I think a good entrance which can be relied upon at all times will nearly compensate for their loss.
256. Where are the North Coast Company's wharves? At Stewart's Point.
257. In the event of the new entrance being opened, will they remove their wharves? Yes; they will go down to Jerseyville, where there are two wharves.
258. What distance do steamers go up the Macleay River at present? Only a few months ago the "Burrawong" stopped at Stewart's Point.
259. Do the Sydney steamers at present go to Kempsey? No, they go now to Jerseyville, which is 5 miles up from Trial Bay, or 10 miles up from the old entrance.
260. If the new entrance is opened satisfactorily, will the steamers from Sydney go direct to Kempsey? There is nothing to prevent their doing so, if two or three spots are dredged. They used to go there some time ago, and they could go there now if one or two shallows were removed. If a dredge went to work there for a few days they could do it. The traffic beyond Kempsey is worked by droghers.
261. Have you taken into consideration the question of the construction of a railway from Trial Bay alongside the Macleay to Kempsey? I think a tramway might be constructed with advantage to Jerseyville, but I do not think you will ever have a railway to Kempsey, because the land is very flat and liable to be flooded. It would also cost a lot of money to make a permanent safe railway. There is no high land after leaving Jerseyville. Both sides of the river are liable to be flooded.
262. Are there settlers on both sides? Yes, and there is rich land on both sides. If the wharf at Trial Bay is completed, I believe a great number of ocean steamers will call there and pick up goods which may be brought by a tramway from Jerseyville. Pending the completion of the new entrance, the goods might be drawn to Trial Bay.
263. Will that necessitate droghers for the upper portion of the river? It will necessitate droving or drawing by teams. Frequently there is a large quantity of maize which one steamer is not able to take away. It is kept back for a month at a time even when the market is pretty high.

J.
McLaughlin,
Esq., M.P.
16 Feb., 1898.

- J.
McLaughlin,
Esq., M.P.
16 Feb., 1898.
264. Would it be possible for drovers at Trial Bay to bring the produce of the river down? It would be brought down. A number of vessels could load there and take it away.
265. The droghers would have the advantage of calling at both sides of the river? Yes; and they would leave the stuff on the wharf at Trial Bay.
266. If the improvement at the mouth of the river is carried out, and is a success, do you think there will be any necessity for so many droghers to be employed, or that the vessels will go right up to Kempsey? The vessels will go right up to Kempsey, and farmers can see the stuff put on.
267. What is the principal product of the district? Maize hitherto. Now they are going in for dairying as well.
268. But the carriage of butter and cheese would not be so profitable to the steamers as the carriage of maize? They could grow hay too if sure of getting it to market. The farmers find it necessary to go in for something in addition to maize, because if their crops are carried away by floods the whole of their year's work is lost.
269. *Mr. Hassall.*] Where is Jerseyville? About 5 miles from Arakoon. It is also known as Pelican Island.
270. *Mr. Clarke.*] Is there a large quantity of vacant land about and near the Macleay which has not been alienated? Yes, in Allgomeria and Unkya. All the flats have been alienated.
271. Is there any room for a large population independent of what is there now? A number of people have land which they would subdivide and alienate themselves.
272. I believe that the high land away back from the flats is not fitted for the cultivation of maize? No, but it is fitted for grazing.
273. Do you think there will be a large increase of population? I am sure of it. The drawback is the uncertainty of getting to Sydney. I myself was there on one occasion for a week before I was able to get away. Eventually I had to drive to Hexham.
274. You are aware that large quantities of maize accumulate at the various stores on the Macleay River, and owing to the bad state of the bar it is impossible to get it to Sydney? Absolutely impossible.
275. And it is liable to deteriorate in consequence? It is.
276. And the producers cannot get the advantage of the prices ruling? The market is frequently down before they can get their stuff here.
277. *Mr. Lee.*] Do you wish us to understand that you would advocate a tramway in preference to a port? No, in addition.
278. Are you of opinion that the best way of maintaining the traffic on the river is by a port? Yes.
279. Is there any difference of opinion amongst the residents as to where the port should be? I do not think so, except in the case of the people I have mentioned. Of course they will be prejudiced, and something ought to be done for them. I think they will be entitled to compensation if the natural channel is interfered with.
280. But how would compensation arise, having in view the fact that nature has already made an entrance from the river to the sea in another direction? Nature has not made this new entrance. It first disclosed it; but it is now being made artificially. It would never be an entrance unless the training-walls were put there. It is now navigable; but it has been artificially made.
281. Has it been in use sufficiently long to enable the people at Stewart's Point to raise any reasonable complaint? They are sent away from the ordinary navigable stream, a distance of about 11 miles. Whether they will have to suffer for the benefit of the rest is a matter which Parliament will have to consider hereafter.
282. Was Stewart's Point a shipping place for the settlers lying at the back of it? Yes; a number of people came there from the Nambucca.
283. It has been pointed out that in the event of the new entrance being improved, people who now use Stewart's Point could use that entrance by getting to the Macleay River *via* Clybucca Creek? That is so, unless the creek shoals up; but it cannot pay a drogher to go up there.
284. But as a matter of fact the bulk of the produce and the bulk of the people are up Spencer's Creek? Yes.
285. And inasmuch as it is only possible to make one good entrance to the river, it must be made to the best convenience of all? I think so.
286. I suppose you would be perfectly prepared to accept it on that ground? I would.
287. *Mr. Roberts.*] You are aware that there is a proposal before the Committee for the construction of a railway from Maitland to Taree? Yes.
288. What is the feeling of the people with regard to that railway;—do they expect that if it goes to Taree it will eventually go on to Kempsey? Yes.
289. Would they prefer the improved entrance or the railway? They expect both; they expect a railway for passenger traffic—nine out of every ten would sooner travel by railway than by sea: the produce-boats are not good sea-going vessels. The "Burrawong" is the best, with 7 or 8 feet draught; but with such a gale as that which prevailed on Sunday last she would not be safe. Maize, cattle, hay, and so on, will always be sent by water.
290. What is the population of Kempsey? The district contains about 6,000 inhabitants.
291. How far is it from Kempsey to Port Macquarie? About 35 miles.
292. When the bar is shallow, I suppose the passengers are more likely to get out at Port Macquarie than at the Macleay? Yes; but they are often blocked at Port Macquarie.
293. Is it not a fact that it was owing to the large expenditure of money necessary to make all the northern coast rivers good harbours that the idea of constructing the North Coast Railway from Maitland, say to Grafton, first presented itself? No; they seemed to think it ought to go right through to Brisbane. I may say that fruit, poultry, and perishable goods would come down by train in ten times the quantity, if the producers were sure as to when it would arrive at its destination.
294. I suppose the present difficulty is, that they do not know when the produce will arrive at its destination? That is so.
295. Do you regard the proposed expenditure as justifiable on account of the improvements it will effect in the district? I do. Every £1,000 which is spent there makes a marked improvement, and I myself do not think the work will cost as much as has been estimated.
296. *Mr. Hoskins.*] Have you been into the district from the Heads? Yes, right through to Armidale, and from there north.

297. Have you ever seen the district when the Macleay has been in flood? Yes.
298. Have you been up the new entrance? Yes.
299. Did it ever occur to you, seeing that the river must carry a great deal of silt with it, that there would likely to be a collection of silt at the proposed bend in the channel? No, it has been pointed out to me that that will create a greater scour.
300. *Mr. Humphery.*] You say you think a railway will be desirable in addition to the permanent opening of the Spencer's Creek channel;—what prospect would there be of that railway paying working expenses, and interest on the cost of construction? Of course, it would not cost more than £5,000 or £6,000 altogether. I would not advocate a railway but a tramway. Steamers, which would not go to Kempsey, might call at Trial Bay and pick up produce there.
301. Would it not entail an additional handling of goods? Of course, if a steamer went up the river, all the goods would come by it. But it might only go on once a week. The passengers would travel by the tramway to Trial Bay, and the steamers would pick them up.
302. Assuming that Spencer Creek channel could be kept permanently open to a depth of 13 or 14 feet, is it probable that a railway from Jerseyville to Trial Bay would be used to any great extent? Not to any great extent, except for the convenience of the prison authorities, and the people about Arakoon.
303. Are you prepared to say that the district will not be sufficiently served by the maintenance of a deep-water channel in Spencer Creek? If that is a success the people will not complain.
304. Although you have remarked that a railway from Jerseyville to Trial Bay should be additional to the opening of the channel, you lay no stress upon it, and are quite prepared to waive any claim in that direction? That is so.
305. Are you satisfied, from your knowledge of the commerce and the produce of the district, that the opening of the channel will be ample for many years to come? I have no doubt of it.
306. *Chairman.*] Are the Allomera and Warrahapinni people about 8 miles from Stewart's Point? Yes,
307. Therefore, they are about 18 miles from Nambucca? Yes.
308. Do some of the Nambucca people come to Stewart's Point? Yes.
309. If the proposal before the Committee with regard to the Nambucca is successful, will not the people there use that river? Yes.
310. That will reduce a portion of the grievance of Stewart's Point? Yes; that should reduce a good deal of their grievance.
311. It will also reduce some of the inconvenience of the Yarrahapinni and Allomera people? No doubt.

J.
McLaughlin,
Esq., M.P.
16 Feb., 1898.

Charles Edward Rennie, Chief Draftsman, Department of Lands, sworn, and examined:—

312. *Mr. Lee.*] Have you any statement to make? I produce a map of the county of Dudley, showing the country on the north side of the Macleay River. Pretty well the whole of the country from the Macleay River to the coast at the entrance to North Head—to the parish of Warne.
313. Roughly speaking, how far would that be, taking the course of the river? About 60 miles.
314. Does that boundary extend to or beyond Kempsey? Well beyond Kempsey.
315. What distance? About 40 miles beyond.
316. Does your map show the land which has been alienated between the North Head and the boundary you have indicated? Yes; the red tint shows conditional purchase land, the purple tint shows freehold land, and the white tint shows the Crown land.
317. How has the settlement taken place;—is it along the river? Yes, mostly along the river. The map of the county of Macquarie, which I produce, shows the country for a short distance from the mouth to Kempsey on the south side of the river. The red tint represents conditional purchase land, the purple tint freehold land, and the white tint the vacant Crown land.
318. What is the area which has been alienated? The whole of the country in the county of Dudley shown in white, north of the river, including the large green patches which are reserved, is about 260,000 acres.
319. Would that include the old grants as well as conditional purchases? No; I am speaking of the vacant land now.
320. Nearly the whole of that land lies back from the river? Yes.
321. What is the area of alienated land? I have not taken it out. On the south side of the river, within the county of Dudley and the adjoining county of Macquarie to a range south of Kempsey, there are about 280,000 acres of Crown land. That includes the piece of land lying between Trial Bay and Koragoora Point.
322. The alienations in the county of Dudley appear to have been confined to the water frontage? Yes, largely.
323. Take the area of Crown lands on the south side of the river—you notice the margin there of the alienated lands? Yes.
324. Alienation appears to have stopped there almost entirely? Yes.
325. Is there any reason for that? Probably it is because the country is inferior, perhaps inaccessible.
326. Is that Crown land under consideration for disposal? Not so far as we know in the head office at present.
327. Then there is not likely, as far as you know, to be any increase in settlement there, except in the ordinary way, under conditional purchase? That is so.
328. Do you know whether there is any demand for land? I could not say.
329. What is the nature of the large reserve? It is a forest reserve; it is known as the Styx Forest Reserve.
330. Are there any reserves in the neighbourhood of Spencer Creek? There is a narrow reserve along the coast from Grassy Head right up to Spencer Creek.
331. What has it been reserved for? For harbour improvements. That goes up to Spencer Creek and about a mile beyond it.
332. Is Shark Island a reserve? Yes; all islands are reserves by general notice.

C. E. Rennie.
16 Feb., 1898.

Henry

Henry Spondly, Compiler, Government Statistician's Office, Chief Secretary's Department, sworn, and examined:—

H. Spondly. 333. *Chairman.*] I believe you have some figures to lay before us with regard to population? Yes; I was asked to furnish information with regard to population on either side of the Macleay River, from the mouth of the river to its sources, taking for the purpose an area north of the river, as far as midway between the Macleay and Nambucca, and south as far as midway between the Macleay and the Hastings. The estimate of the department is that in 1897 there was a population in the district mentioned of 7,550.

Henry Richard Carleton, Principal Assistant Engineer, Harbours and Rivers Branch, Department of Public Works, sworn, and examined:—

H. R. Carleton. 334. *Chairman.*] Is the same stone found at the entrance resumed for a quarry as is to be found at Rudder's Hill? No; it is of a different nature.

335. Is there any chance of a channel between the quarry and Rudder's Hill? Not the slightest.

336. Therefore you are forced, at least as far north as the brown line indicated on the plan? Yes, further. Captain Howard's survey shows rock at 13 feet in South West Creek.

337. You have a depth of 30 feet at Spencer Creek, and 30 feet at South West Creek;—have you any knowledge as to the character of the ground between the two places? It is soft, sandy and swampy.

338. *Mr. Lee.*] What is the worst wind you have on this part of the coast? An easterly gale.

339. In that event the new entrance will be largely protected? It will; it is largely protected as it is. In bad weather vessels prefer to lie in the vicinity of the South West Rocks to coming close in to Trial Bay.

340. Why is that? Because the sea commences to roll near the beach.

341. What would be the effect of an easterly gale on the extreme end of your breakwater? I think it would stand it very well.

342. You are aware that at the present time the public mind is largely exercised as to the wisdom of tipping stones into the sea, particularly on sandy bottoms, for the purpose of making coastal breakwaters? Yes; but if they saw the result of our work on some of our rivers, they might alter their views. Take the improvements at the Clarence, for instance.

343. In this instance you will have a deep sandy bed to tip your stone upon, which is a very insecure foundation, even in still water;—what with the current in and out, and the action of the strong gales upon it, will there not be extreme danger of it's commencing to crumble at the outer end, and gradually disappearing? I think not.

344. Do you know instances in which works of this character have been carried out? It is not, perhaps, so far advanced as you mention; but we have a similar work on the Richmond. We are pushing out our northern and southern breakwaters there.

345. Have they been a success? Very much so.

346. Have you had occasion to deviate from the original design? No; there has been an addition, but no deviation.

347. Have the original plans been adhered to? We cannot depart from anything which the Public Works Committee and Parliament agree to.

348. Is the Department satisfied with the result of their work? Yes, very much so, so far as it has gone.

349. You have had still further experience on the Clarence River? Yes; that is in an advanced state. It has improved in places from 2 feet to 30 and 40 feet.

350. It will be satisfactory to know whether the work that has been carried out at the Clarence River, as designed by your Department, has had the expected result of maintaining a sufficient depth of water at all times? I do not think there will ever again be a lack of depth on the Clarence.

351. Has the water once obtained by means of this work been steadily adhered to? Yes, it has maintained itself.

352. Was that one of the works which was recommended by this Committee? Yes.

353. Can you tell us whether the anticipations of the Department and the recommendations of the Committee have been fairly met by that work? They have been eminently satisfactory.

354. So much so that you have been encouraged to proceed with similar works in the other entrances? Yes.

355. I suppose you look upon that as a kind of object lesson? Yes.

356. And there could not be any entrance on the northern coast more severe than the Clarence River entrance? There could be no worse.

357. I believe there were between 17 and 18 feet of shifting sand on the Clarence? There was any depth of it. It has scoured out in one place to 53 feet, and it used to be nearly dry there before we commenced our work.

358. With regard to the southern training wall at the Clarence, one of the points of contention raised at that time both by engineers of the Department and by many local residents of the Clarence was, that at that point where there is a division of water between the water which comes down the Clarence and the Yamba—that at that point, with such an enormous depth of shifting sand, it would be impossible to obtain a foundation for the stone which was tipped in; have you found a foundation? Yes.

359. Has the training-wall subsided from time to time? Yes. From time to time it has gone in; but we have made it up. It has scoured out on the channel side, and then the stone has fallen down and coated it on the face and that has prevented further scour.

360. Since the completion of those works, have you had a large flood in the Clarence or a heavy easterly or south-easterly gale to test them? We have had plenty of heavy gales. I do not know of heavy floods, but there have been freshes.

361. Have the gales had any effect? Nothing to speak of. You must understand that there is always a certain amount of maintenance on these works. You cannot leave them alone altogether.

362. I presume you have not carried out the breakwaters yet? No; they were not passed by the Committee.

363. So far as those training walls have improved the entrance to the Clarence, do you think there is any necessity for the construction of those breakwaters? I doubt if there will be much necessity for them for some time to come. The Public Works Committee agreed to the removal of the rocks there, but we cannot do that until a breakwater is constructed.

364. You refer to the Black Boy Rock? Yes.

365. Do you not think that the points of those training walls are as much exposed to the influence of gales as the entrance to the work on the Macleay River? The end of the wall on the Clarence would be tested quite as severely, if not more, than the breakwaters at the proposed new entrance at the Macleay. The end I refer to has gone through quite as severe tests as the proposed breakwater will ever be called upon to meet.

H. R. Carleton.
16 Feb., 1898.

366. It would appear from the natural configuration of the coast that the proposed entrance to the Macleay is rather better sheltered than the entrance to the Clarence? Yes; that is one of the reasons we have been able to keep our estimate down.

367. Therefore if your works have answered their purpose, and stood the test of the weather at the Clarence, it is reasonable to suppose that they will do so at the Macleay? Yes.

368. *Mr. Humphery.*] Do you agree with the opinion expressed by Mr. Darley, that the construction of the breakwaters shown by the dotted lines will be wholly unnecessary? I think it will be many years before they are required.

369. Are you prepared to go beyond that? One never knows what the Macleay will develop into.

370. With regard to the rock referred to by Mr. Lee as being in the Clarence River, is its removal at all necessary? I think not.

371. Therefore, that work, although included in the recommendations of the Public Works Committee, may be regarded as likely to be unnecessary? It is not likely to be required.

372. The navigation at present is sufficient for all purposes? Yes. With regard to the Spencer Creek channel, I may state that the construction of the wall has caused it to scour out to a depth of 24 feet. There is abundance of water above the cut in the Spencer Creek channel for all purposes.

373. *Chairman.*] What depth is there off the bar? Between the ends of the proposed breakwaters there are 16 feet at low-water. There are 52 feet 100 feet further on.

374. Do you think the scour will hold up to remove that 16 feet? I think so. If you take into consideration the magnitude of the Macleay flood, I think you will agree that it will shift it right out. We have had a report from the district engineer recently, in which he mentions an abnormal tide which occurred on the 24th January last. The tide on that occasion rose near the point of Shark Island 6 feet 9 inches. That was an unheard-of thing before we increased the water-way. In Captain Howard's time the range considerably higher up was 2 feet 6 inches. We sent the "Jupiter" up to dredge inwards some time ago, and she must have had her pipe 18 or 20 feet down. That shows that the borings are practically continuous over the whole scheme.

THURSDAY, 17 FEBRUARY, 1898.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.
The Hon. JAMES HOSKINS.
The Hon. CHARLES JAMES ROBERTS, C.M.G.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. DANIEL O'CONNOR.
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.
JOHN LIONEL FEGAN, Esq.
THOMAS HENRY HASSALL, Esq.
GEORGE BLACK, Esq.
FRANCIS AUGUSTUS WRIGHT, Esq.
FRANK FARNELL, Esq.

The Committee further considered the proposed Harbour Works at Macleay River.

John See, Esq., M.P., sworn, and examined:—

375. *Chairman.*] Are you a director of the North Coast Steam Navigation Company? Yes.

376. *Mr. Wright.*] Are you familiar with the district of the Macleay River? Yes; I have been there several times. I am not personally familiar with the bar—in fact, I have never seen it; but I know a good deal about it. The directors have a report laid before them every week, or as often as a steamer comes in, so that we are conversant with the nature of the bar.

J. See, Esq.,
M.P.
17 Feb., 1898.

377. Have you heard anything lately as to the new entrance? I know there is a great diversity of opinion amongst practical men and experts as to the merits of the two schemes; but as far as the captains of the North Coast are concerned the preponderance of opinion is in favour of the old entrance as against the new. It is 6 miles along the coast from Grassy Head, and I think 8 miles along the river. If the new entrance were adopted and the old one were discarded there would still be a certain amount of work to be done below the new entrance.

378. Would it not seem to be more suitable to have an entrance at Spencer Creek, immediately under the protection of Trial Bay, than at Grassy Head? I thoroughly believe some considerable improvement ought to be effected at the entrance to the Macleay, but whether the new or the old entrance is the better I am not in a position to say from personal knowledge. The information I have received, however, points to the fact that the old entrance is the preferable, because you have one side of it already made. Until the flood of 1893, the old entrance was the only entrance; but in addition to the old entrance, and the one now proposed, there are two other outlets. In order to have a good entrance I think there should only be one. It will become a question for the Government to consider whether, if they adopt the new entrance, they will not close up the old one. Then the important question comes in as to whether the new entrance will be available at all times if the old one is closed. As far as I can ascertain it is nearly all sand. The question arises whether, after making the new entrance, another flood may not seriously affect it, because it is all shifting sand. There is simply an ocean of sand from Trial Bay right down to Grassy Head. I have been told by some of the captains in the employ of the company that as they extend the breakwater at Trial Bay so the sand inside banks up and follows it.

379. So that in process of time Trial Bay will, to a large extent, be silted up? To some extent, because this sand is always shifting. One night may alter the whole formation of one of these channels. Whether that will or will not be the case with the new channel I do not know. Unless you have a solid bottom to place your ballast upon there will always be a danger of the new channel breaking up.

380. The present scheme has suggested itself to the department from the fact of the river breaking through. The engineering staff say they can maintain a deeper channel there than at Grassy Head? Of course the channel

- J. See, Esq.,
M.P.
17 Feb., 1898.
- channel is not a good one at the present time. Last year was one of the worst in the experience of captains going to the rivers.
381. The new channel is what they use now? Sometimes one and sometimes the other. As long as two or three channels are open you will not have a good one at any place.
382. Do you say that whenever the captains can use Grassy Head channel they do so? Yes; they simply take the one which is the most suitable for the time being.
383. Are your captains unanimously of opinion that the Grassy Head channel should be preserved as the entrance? Captain Taplin, who has charge of the "Burrawong," is of opinion that the old entrance is the better one. He is a man of large experience in navigation. On the other hand there are experienced men who think that the new channel will be the better one.
384. Amongst the ship captains? No; amongst those who are resident on the river. Captain Taplin is the only captain I have had any conversation with in reference to the proposed work, and his unqualified opinion is that the old entrance is the safest and the best. Captain Taplin is afraid that there may be a strong possibility of the new works being affected by a flood. An enormous outrush of water alongside of sand might possibly destroy the new entrance.
385. Have you sufficient knowledge of the Macleay, or other rivers of a similar character, to enable you to form an opinion as to the debris which comes down in heavy flood? Not only does debris come down, but quantities of earth from the banks. The flood of 1893 filled up a great many of the shallow parts of the river. Prior to that time the "Burrawong" and other steamers went to Kempsey. It is only very lately that they have been able to continue to do so.
386. What do you think of an alternative scheme of turning Trial Bay into a port, and making a railway or tramway from there to Kempsey? That would not serve the people on the river, because the produce is chiefly shipped on the river banks. If you had to convey your stuff from the river bank to the railway, it would be more inconvenient and costly to the farmers generally than under the present system.
387. I understand that all that work is now done by the droghers, who bring the goods to Stewart's Point? Yes.
388. Would there be any possibility of their doing that work, and bringing that produce to steamers at Trial Bay? I think the water carriage is much cheaper. The question to be decided is, of course, which is the best scheme to adopt.
389. If a railway is constructed from Trial Bay to some point on the river, the ocean traffic will, to some extent, be reduced? That means that you would have to bring the stuff over the bar in droghers. That had to be done last year. The North Coast Company have four droghers, and last year they took, roughly speaking, 50,000 bags of maize over the bar. The bar was so bad that an ocean boat could not get over.
390. The construction of a railway from Trial Bay to Jerseyville would obviate the necessity of droghers coming outside at all? But the more you handle stuff the more costly it is.
391. Do you think it would add so much to the expense as to render it, if constructed, open to competition by steamers? I do.
392. Can you give any opinion as to the Macleay country? I should think the Macleay is equal to any other river on the coast, so far as its area is concerned. There is a population of 7,000 or 8,000 people, and it is an enormous producing district.
393. What effect would the construction of the new channel have on the people living north and west of Stewart's Point? They would still have to droghe the maize. Whatever produce is grown above the new channel will have to be taken up to it.
394. I understand your contention is that if the new entrance is made and the old entrance is left open, the volume of water at both entrances will be reduced, and the navigation thus rendered more imperfect? Yes; you must get the scour. If the works which are put in at the new entrance will be of a permanent and substantial character, probably that will be the best entrance; but as it is all shifting sand—it is hard to say how deep—to my mind it is a serious question whether the floods or the action of the water may not interfere with it. I understand that one of principal recommendations of the new entrance is that Trial Bay protects it to a large extent from the influence of the ocean. As against that you have Grassy Head on the north.
395. That offers no protection from a southerly wind? I know it does not, and this would not offer very much protection, I suppose, from a southerly wind.
396. But in a southerly wind the new entrance will be much more easily approached than the old one? To a large extent Trial Bay protects even the old entrance from a southerly wind.
397. *Mr. Hassall.*] In the event of any harbour works being carried out to make an entrance at North Head, would it not be necessary to close up the other channel, in order to keep a sufficient scour in the north channel, so that it may always be available for ships going in and out? I think so. If you adopt the old entrance you will have to close up the new one, and if you adopt the new entrance you will have to close up the old one.
398. The whole of the shore between Trial Bay and Grassy Head is practically shifting sand? Yes; I may say that the training wall on the Clarence keeps the sand always on the move, and they have a channel inside the bar in some places 20 feet deep. As they concentrate the scour on the bar, no doubt the action of the water in and out will clear it to a large extent.
399. Do you not think that it would follow that, by having a more direct channel from the main body of the river into the ocean, it would stand a better chance of being properly scoured out? Speaking as a layman, I should certainly go for the Grassy Head channel. There is nature's headland on the one side, and to some extent a rocky formation on the other.
400. You have a shifting sand on the other? Yes; but you can get rid of that by a scour.
401. Then, even after you have expended your money there, another flood similar to that of 1893, even if you closed up the channel nearer to Trial Bay, might cut a fresh channel? But I do not think that would be permanent. It would only be temporary.
402. Will the work at Spencer Creek have the effect of reducing the depth of the old channel? That is the natural inference to draw. The principal question is as to whether the new entrance can be made permanent. If you can be sure that that can be done I have no doubt there is a great deal to recommend it.
403. *Mr. Fegan.*] And you do not think it can be made permanent? I have strong doubts about it.

404. *Mr. O'Connor.*] Which do you think would be the best entrance—the old or the proposed entrance? I should certainly go for the old one. It means the expenditure of a large amount of money in either case. In view of the risk there is with the new channel I should prefer to spend the money on the old one. J. Sec, Esq.,
M.P.
17 Feb., 1898.
405. *Mr. Roberts.*] Will you explain any difference in character of the entrance to the Clarence River and the entrance to the Macleay;—have the same difficulties to be grappled with at each place? No; the Clarence was always a better entrance than the Macleay. It is a south headland, and on all rivers that have a south main headland the navigation is better and the bars are more easily negotiated than where they have a north headland and a sandy beach on the south. The Clarence River differs from the Macleay in that respect. It is a wider river too. They had great difficulties to contend with there before undertaking these works; but still it was not as bad. The Richmond also has a north headland, and so have the Tweed and the Manning.
406. Have the works which have lately been carried out on the Clarence proved satisfactory and effectual? In every respect.
407. What is the difference in the water on the bar now compared with the time to which you have referred? A wonderful difference. The bar is not so much improved as what they call the crossing. There is no crossing on the Clarence now, and there used to be 8 or 9 feet sometimes.
408. What have you now? Some 20 feet. They put a training-wall from Iluka to Freeman Island. Now they are making a training-wall on the north side, and the scour will force the sand almost to bed-rock.
409. Even at low water the bar, I suppose, is navigable? Yes; of course the river in parts is shallow, but the bar itself and the entrance have, I think, realised the fullest expectations of the promoters of the work.
410. Were those works carried out by the Department? Yes, under Sir John Coode's plan.
411. *Mr. Hoskins.*] I understand you to say that as Trial Bay is being extended a bank of sand is shelving up against it? No; there is a bay inside at the back of the breakwater, and I am told that as the breakwater is extended the sand shoals up in the bay. In other words, there is less bay now than there was when they began the breakwater.
412. Will that interfere with the usefulness of Trial Bay as a harbour of refuge? Undoubtedly.
413. The works, then, are a disadvantage? I do not think they are much good. They are not often used.
414. Do you think the serpentine course of the proposed new channel will cause it to choke up when silt comes down? Yes.
415. As the channel is a comparatively narrow one, and there is a bend in it, is not silt liable to collect? I should think so. I think there is a very serious danger.
416. Have you had any experience of an entrance to a large river being made so narrow and circuitous as this? No. Of course, the greatest security this scheme has, so far as the outer works are concerned, is the protection afforded through the proximity to Trial Bay. If they were exposed to the ordinary bed of the ocean they would disappear, perhaps, in a night.
417. If the work at Trial Bay causes sand to silt up will it not cause the flow of water at the entrance of the new channel to diminish? Undoubtedly. The deeper and the wider the channel you have, within reason, the greater the scour you will get. If you can get a channel 12 feet deep and 200 feet wide it is better than a channel 6 feet deep and 400 feet wide.
418. If the effect of extending the Trial Bay breakwater is to cause a collection of sand against it will not floods and the erection of training-walls, which must extend into the water for some distance, also cause the sand to accumulate? Undoubtedly. If much sand comes out of the new channel it will help to fill up the bay. Of course I do not give my evidence as an expert.
419. *Mr. Humphery.*] What length of breakwater has been constructed at Trial Bay? Some hundreds of feet.
420. Do you think sufficient breakwater has been constructed to seriously affect the depth of the water? I can only repeat what I have been told by captains, that, as the breakwater has extended, the water has shallowed in the bay.
421. I want your opinion? I think it is possible.
422. Have you seen the soundings before the breakwater was commenced? No.
423. Therefore, although you have been told the bar has been seriously affected, personally you have no knowledge on the subject? No.
424. We have been told by Mr. Carleton and Mr. Darley that the new channel will give a depth at the bar of 14 feet, without the necessity of constructing the breakwaters at all; and that, in their opinion, their construction would be quite unnecessary;—would 14 feet of water on the bar be ample for the work of the Macleay River? It would meet all the requirements of the Macleay at the present; but I suppose the Macleay will develop. There is an enormous area of country at the back of it, which at present is untouched.
425. What is the present depth of water? A vessel drawing 8 feet has difficulty in getting over.
426. Have you any doubt that 14 feet on the bar will be ample for the service of your company, at any rate? Fourteen feet on the bar would be ample for the present requirements of the Macleay.
427. Are you likely to send to the Macleay vessels of greater draught than vessels of 12 or 14 feet? No.
428. Are your vessels, at present, capable of moving all the produce of the district? Yes.
429. Have they done it in the past? Yes.
430. Have you any doubt of their ability to do it in the future? No. Of course the difficulty we have had on the Macleay has been the shallow bar and the shoaling of the river. They could not let even the "Burrawong" inside. Therefore she took a comparatively small portion of her cargo on board, and the balance was brought over in shallow droghers.
431. And that is an inconvenient and unsatisfactory way of dealing with the produce of the district? It is.
432. If you can get your steamers inside the bar the work of the river can be better done by droghers than if the ocean-boats go up as far as Kempsey? No. There is an enormous quantity of produce grown above Kempsey, and if you droghe the whole cargo to the heads, it means a great deal of work being done.
433. You prefer the ocean steamers to go to Kempsey? Unquestionably.
434. They have done so in the past? Yes, up to 1893.
435. And then the conditions of the river so changed that they could not go beyond Stewart's Point? They used to go just inside the heads.

- J. See, Esq.,
M.P.
17 Feb., 1898.
436. We have been told that £70,000 will be saved by constructing the proposed channel, instead of carrying out the scheme at North Head;—do you think, in view of that fact, and of the assertion of the officers of the Department that there will be no difficulty in keeping the channel open, that it would be wise to incur the expenditure which you think would be necessary at the North Head? No; if you can get as good a result by spending £70,000 less it will be foolish to incur the larger expenditure.
437. Did you take that into consideration when you expressed your opinion? Yes; I repeat that I do not think it is possible to estimate the permanency of the new work as compared with the old. To my mind there would be no risk in the old work.
438. What occasions your doubt with regard to Spencer Creek? Because it is sand.
439. We are told by Sir John Coode, that, if the necessity arises, we can connect Clybucca Creek with Spencer's Creek by a cutting just across the upstream end of Shark Island. Assuming that that became necessary, and it were carried out, do you think the objection which has occurred to you would continue? No; if the works can be made permanent. If I could be quite sure that no floods, or the action of the ocean would affect the training walls I would be satisfied that the new entrance, given the depth of water, would be the better one.
440. Would there not be an equal uncertainty with regard to the North Head entrance? You would be surprised, after completing the new works, if a flood forced its way down the river, and made an entrance at the No. 2 Scheme as shown on the map.
441. Would that prejudicially affect the proposed channel? Yes; the more entrances you have the less depth of water you have.
442. If the waters are confined within the training banks how can a fresh opening prejudicially affect the channel? Some considerable portion of the water which would go through the one channel would go through the second channel, and thereby diminish the scour.
443. But as the second channel is below the proposed channel the water will have to find its way out somehow? Then you have the ocean with its tide which will find its way in wherever there is a depth of water. If you had ten entrances at the Macleay, the tide would find its way in and out; but if you concentrate the tidal waters in the river, you will naturally establish a bigger scour and maintain a depth of water to a greater extent than you would do if you had two or three entrances.
444. Your opinion being that it would be better to carry out the North Head scheme of Sir John Coode, are you of opinion that it would be better to close the new channel? I should say "Yes", if the North Head scheme were carried out. You will not get the same depth of water at the old entrance if you keep open the new one, as you would if you closed it. The difficulty we have had during the last few years has been due to there having been two entrances, and neither bars have been good. As there used to be a considerable amount of water on the old bar, the inference is that the opening of the new one has seriously affected it.
445. You know what has been done up to the present time in connection with the proposed channel, and that a temporary barrier has been placed across so as to throw more water into the channel recently opened? I know every effort has been made to make the new channel a success.
446. Has it been a success? No.
447. In what respect is it a failure? There is not sufficient depth of water there at the present time.
448. Has the bar been improved? It is not so much the bar as the channel itself.
449. You contend that since the Government expended money upon Spencer Creek there has been no improvement? I firmly believe that if the same amount of money had been spent on the old channel, and no attention had been paid to the new one, you would have had a better result.
450. Your contention is that if the expenditure up to the present time has failed to improve the new channel, it would be better not to continue the expenditure, but to proceed with the original scheme at North Head? I favour that.
451. Owing to failures in the past, you are doubtful as to the success of any efforts towards making a permanent channel at Spencer Creek? The fear I have is that there is an enormous risk in making the new channel.
452. Are you familiar with the commerce of the Macleay district? Yes.
453. Can you give any information with regard to the tonnage and value of the produce carried by your company's boats? I have not the particulars with me. I can tell you the rates the company charge. We bring a bag of maize down, including the droghage, from any part of the river to Sydney, and putting it on a free wharf, for 10½d a bag. That is considerably under 10s. a ton. All other freights are in proportion.
454. Would it be possible for a railway to compete against that? No. I should think there are 600,000 bushels of maize grown in the district every year.
455. How many times a week do your company's boats go to the Macleay? We have one regular boat which could make two trips a week when the bar is good. We reckon to give a weekly service.
456. Do sailing vessels go there in any number? No.
457. Do you practically carry the whole of the produce of the district? Yes.
458. Do you carry many passengers? A fair number.
459. What are the passenger rates? £1 10s. single and £2 5s. return in the saloon, and 15s. single in the second cabin.
460. What is the rate for cattle? About 15s. a head. Pigs vary from 1s. to 3s., according to size. We get 1s. 6d. a box for butter. Timber is carried very cheaply. We do not carry much of it. I may state that the butter industry promises to increase considerably. They have all the advantages of abundance of grass and water in the district. The people are turning their attention to the industry, and are establishing factories. On most of our steamers we have cool chambers. To sum up, I should think the Macleay is one of the richest districts of the Colony. It is of the same richness as the Manning, the Hunter, the Clarence, or the Richmond. Of course it is smaller than the Clarence, but is larger than the Manning. It is one of the most fertile districts I have seen anywhere. There is splendid alluvial land there. There are large flats subject to floods, and they suffer a good deal from floods.
461. Are you of opinion that it is quite justifiable to incur an expenditure of nearly £200,000 in opening up a new channel, or in making the North Head channel permanent? Yes; any expenditure would be reasonable on a river like the Macleay.
462. *Mr. Trickett.*] It has been suggested that, owing to the difficulties of the channel scheme—whether at North Head or at Spencer Creek—a railway should be constructed from the junction of Spencer Creek

Creek and the Macleay to a point at Trial Bay? It would increase the expense of handling the stuff considerably. For instance, if you had 100,000 sacks, or 10,000 tons of maize, and you had to handle it two or three extra times, you could not do it under at least 6d. per ton. If we have 2,000 bags of maize on a ship the chances are that we have fifty different lots or more. Each lot must be kept separate. They have different brands, and have to be sold for the different farmers separately. You would have the same sort of thing in connection with a railway.

J. See, Esq.,
M.P.
17 Feb., 1898.

463. Therefore you think it would be far better to try and improve the channel? There is no doubt about it.

464. *Mr. Clarke.*] It has been stated that the new channel was opened by the 1893 flood—has it kept fairly open since? It has been of an intermittent character. Sometimes the companies steamers have used it and sometimes they have not.

465. Do you think that if another large flood came, the new channel would close up and some other be opened? That is very likely.

466. You contend that, under all the circumstances, it would be better not to proceed further with the new channel, but to work at the North Head channel? That is my feeling.
