*Outlay in fighting the Pest.*

It is estimated that the Government have, up to the 30th ultimo, expended for salaries of inspectors and assistant inspectors, travelling expenses, fencing, experiments in inoculation, and in other ways, not less than £20,000 in preventing the introduction of ticks and tick-fever.

*Report by Dr. Tidswell.*

A very valuable report on Protective Inoculation against Tick-fever, and an account of an experimental inquiry into its effect on cattle, and on meat and milk, together with some notes on protective measures other than inoculation, by Frank Tidswell, M.B., Ch.M., D.P.H., Principal Assistant Medical Officer of the Government, was published in December, 1898.

*Initiation of Inoculation for Tick-fever by J. D. Stewart, M.R.C.V.S., Veterinary Surgeon to the Stock Branch.*

Mr. Stewart gives at considerable length the details of the initiation of inoculation against tick-fever in the Grafton, Casino, and Tweed-Lismore Districts. He held his first meeting at Murwillumbah, in December, 1898, and devoted the whole of his time to this work till he returned to Sydney early in May last.

The course he adopted was to arrange for meetings at the more important centres, at which he gave lectures on the cattle-tick and its life history; on tick-fever, its symptoms and pathology; and on the protection afforded by inoculation with blood from an animal that had recovered from the fever, occurring naturally or induced by inoculation. These lectures were accompanied by demonstrations illustrating and confirming the statements made in his lectures. Owners or superintendents who intended to practice inoculation on their own stock had practical lessons given them in performing the operation.

Owing to the risk of spreading tuberculosis through using blood from a diseased beast, the tuberculin test becomes a necessary portion of the process of inoculation. Consequently, Mr. Stewart also delivered lectures on tuberculosis, and the proper mode of using tuberculin, and conducted practical demonstrations on diseased carcasses.

At these meetings he arranged for the establishment, at the most suitable centres, of "salting depôts"—that is, places where the cattle, from which a supply of blood for inoculating was to be taken, were collected and carefully inoculated on two occasions, and afterwards tested with fevered and virulent blood, when, if the result was satisfactory, they were termed "salted," and their blood may be used for the general inoculation of other cattle.

Of these depôts six have been established, and from which a good supply of salted cattle has been distributed throughout the districts, and the inoculation will be proceeded with as soon as the weather and pasture are in such a state as will make it advisable to commence.

In the case of the larger herds the owners or superintendents will inoculate their own cattle, but in that of the farmers and dairymen the work will be done by trained officers of the Department who will charge a small fee for the service.

---

INOCULATION FOR TICK FEVER AND APPLICATION OF TUBERCULIN TESTS.

Sir,

Stock Branch, Sydney, 4 August, 1899.

I have the honor to submit the following reports on the initiation, according to instructions received, in the North-Coast Districts of—

- (a) The protective inoculation of cattle against Texas or tick fever; and
- (b) The application of the tuberculin test.

Although these subjects are dealt with in separate reports, they were brought under the notice of stock-owners conjointly, by means of holding public demonstrations and by the establishment of "salting" depôts or centres for the treatment of cattle.

During the conduction of the series of operations, about two thousand (2,000) inoculations were made on forty-five different occasions, and the tuberculin test was applied to two hundred and sixty-six (266) head of cattle.

Strictly speaking, each occasion cattle were treated might be termed a public demonstration, as a number of stock-owners were invariably present. The term is, however, restricted to those occasions on which lectures were delivered, inoculations, tests, and *post-mortem* examinations conducted, by special arrangement with the various Stock Boards, Agricultural Societies, and Dairyman's Associations, who afforded us the necessary conveniences.

Stock-owners were informed by announcements in the local Press that public demonstrations were to be held at certain central places on stated dates, comprising two consecutive days.

Eighteen public demonstrations on the protective inoculation against tick-fever, and fourteen on the application of the tuberculin test were held.

On each occasion lectures were delivered, usually in the local Council Chambers, by invitation of the mayor of the town where the demonstrations were being held, or in some large hall kindly placed at our disposal. The Mayor of the town, or the President of the Local Board or Society, as a rule, occupied the chair. The practical part, such as inoculating, applying the test, and the holding of *post-mortem* examinations, was usually conducted at a neighbouring station or farm on cattle supplied by various owners.

The demonstrations were always well attended. On many occasions over 100 stock-owners were present, some of whom came long distances. The great interest which was manifested on each occasion clearly indicates that owners fully realise the calamitous consequences likely to befall them from an outbreak of tick-fever in their unprotected herds on the one hand, and to the danger their cattle and mankind in general are exposed to from the prevalence of tuberculosis on the other. The fact that thirty-five persons have qualified to hold licenses to practise protective inoculation against tick-fever accentuates these remarks. Apart from their direct practical benefit to stockowners, these demonstrations had an educational value, which was participated in by the general public. Moreover they constituted convincing proof of the vigilance of the Department to protect and conserve the interests of stockowners.

During

During the series Mr. A. A. Devlin, Inspector of Stock for the Tweed-Lismore and Grafton districts, and Mr. C. J. Vyner, M.R.C.V.S., Inspector of Stock for the Armidale district, were instructed with a view to their conducting operations in their respective districts. Mr. Inspector Devlin completed the salting treatment of the cattle stationed at Alstonville and Lismore, and is inoculating the young cattle of the dairy herds in the Tweed-Lismore district, while Mr. Inspector Vyner commenced operations in the New England district.

To the members of the Lismore, Casino, and Grafton Stock Boards and the local societies, and especially to Messrs. C. F. Tindal of Ramornie, T. Campbell of Murwillumbah, A. Campbell of Woorooloolgen, J. Campbell of Comira, Hindmarsh and Dunn of Lismore, and S. MacNaughton of McLean, for the assistance, conveniences, and accommodation afforded us during the conduction of operations, our best thanks are due.

Finally, it is desired to record the untiring aid and assistance rendered by Messrs. Inspectors Devlin and Vyner to our effort in expediting this important work, which necessitated lengthy journeys and incessant duties.

I have, &c.,  
JAS. DOUGLAS STEWART, M.R.C.V.S.,  
Veterinary Surgeon to Stock Branch, N.S. Wales.

Alexander Bruce, Esq., Chief Inspector of Stock.

#### REPORT ON THE INITIATION OF PROTECTIVE INOCULATION OF CATTLE AGAINST TEXAS OR TICK FEVER IN THE NORTH COAST DISTRICT.

The protective inoculation of cattle against tick-fever was initiated in the above district by a series of eighteen public demonstrations, and by the establishment of salting depôts or centres for the treatment of cattle.

Public demonstrations were held at the various chief dairy and cattle centres, including Murwillumbah, Lismore, Casino, Alstonville, Rous, Woodburn, Wollongbar, McLean, Ulmarra, Upper Copmanhurst, and Grafton.

At each demonstration an address on tick-fever and its protective inoculation was given. The history, etiology, symptoms, and pathology of the disease were fully dealt with, an avoidance of technical language being duly observed. The part played by the ticks in the transmission of the fever to cattle was carefully delineated. The adopted method of protective inoculation, and its effects on cattle were minutely described. The utility of dipping, smearing, and other preventive measures were discussed at length. The apparatus and appliances used in connection with inoculation were exhibited and explained in detail. The method of withdrawing blood from a "salted" animal, its preparation and injection into others, were practically illustrated.

Moreover, stockowners and others holding responsible positions in connection with stock who were desirous of acquiring a practical knowledge of inoculation were instructed at each demonstration. Every facility was offered, and many took advantage of these opportunities to learn. Those who, by training, rendered themselves competent inoculators received certificates which permitted licenses to inoculate being granted to them. In all thirty-two licenses have been granted, the holders of which have a knowledge of tick-fever and protective inoculation, and are familiar with the application of the tuberculin test.

Six "salting" depôts or centres were established throughout the district. Stockowners who desired to have a few head of cattle thoroughly salted (or highly protected), to furnish blood for the inoculation of other animals were requested by circular, and by announcements in the local papers to forward them to the most convenient centre. On their arrival at the depôts the names of the owners and a description of each animal were entered in the record book. Each animal was allotted a certain number and was branded numerically according to that number. Their identification was thus assured. The cattle which went through the complete treatment were branded I on near forearm.

Three centres or depôts were established on the coast to meet the requirements of the dairy herds, and three inland to provide for the station herds.

Forty-three (43) head of cattle were treated at Lismore, twelve (12) at Alstonville, four (4) at Murwillumbah, seventy (70) at Woorooloolgen, twenty-seven (27) at Camira, thirty-four (34) at Ramornie, and eight (8) at Wollongbar Experimental Farm.

The last lot of cattle was purchased and treated on behalf of the Department of Mines and Agriculture.

The treatment which the cattle at each depôt were subjected to, consisted in—

1. The application of the tuberculin test to ascertain their freedom from tuberculosis. The fact that about 5 per cent. of the apparently healthy young animals forwarded for treatment reacted to the test, alone justifies this precautionary measure.
2. A first inoculation of 5 c.c. of recovered blood.\*
3. A second inoculation of 10 c.c. of recovered blood.
4. A third inoculation of 10 c.c. of virulent blood.\*

An interval of from four to six weeks was allowed to elapse between each inoculation for recovery to take place in.

At each inoculation two or more quiet animals which had not been previously inoculated were treated in a similar manner to those being "salted" and held back as "test animals." By taking their temperatures daily until the fever set in, then twice daily (morning and evening) throughout the febrile period, "the reactional value" of the blood used was tested, or, in other words, its strength to produce a reactional fever was ascertained. According to the accepted view that the protection conferred against tick-fever is diverse to the degree of reactional fever produced, the efficacy of each inoculation was in this manner determined. The test animals were kept in some convenient place while the remainder of the cattle treated were allowed to rest undisturbed in well-grassed and watered paddocks.

In order to further ascertain the degree of protection conferred by each inoculation, a few of the inoculated animals were kept back and treated in a manner similar to the test animals. The temperature records obtained gave an indication of the protection conferred by previous inoculations.

---

\* Virulent blood is blood taken from an animal that has the fever. Recovered blood is that taken after the fever.

From records so acquired, valuable comparisons may be made. Those obtained during the above series might be summarised as follows:—

- A. A reactional fever always followed the first inoculation.
- B. Aged cattle which reacted to a first inoculation did not react to subsequent inoculations with blood, which produced reactional fevers in "test" or clean cattle.
- (c) Young cattle invariably reacted to first and second inoculations of recovered blood, but suffered a milder fever on the second inoculation than that manifested by the "test" animals.
- (d) The final (3rd) inoculation, with virulent, had little or no effect on the cattle (young or old) previously twice inoculated, while it produced high fever, viz., from 106.6° F. to 108° F. in test animals.

On several occasions the infectivity of the blood of animals treated at the depôts was tested and found to be of high reactional value.

Consequently as the cattle which have been treated at these depôts are free from tuberculosis, and as their blood is infective, they may be regarded as desirable animals to inoculate from.

The blood used for the first inoculation at Murwillumbah was supplied by the Queensland Stock Institute. That used for the remainder of the series was furnished by five of the experimental cows which had been specially prepared by a series of injections with blood obtained from Queensland during the conduction of the North Head experiments by Dr. F. Tidswell, P.A.M.O., of the Head Department. Before commencing operations in the North Coast, these cows were ascertained to be free from tuberculosis by the tuberculin test, and the infectivity of their blood was demonstrated by inoculating clean cattle.

JAS. DOUGLAS STEWART, M.R.C.V.S.,

Veterinary Surgeon to N.S.W. Stock Branch.

#### REPORT ON THE APPLICATION OF THE TUBERCULIN TEST IN THE NORTH COAST DISTRICT.

The application of the tuberculin test as a means of diagnosing the presence of tuberculosis in cattle was, according to instructions, popularised by holding a series of public demonstrations at the various "salting depôts," and at the principal dairy centres within the North Coast District.

During the whole series the tuberculin test was applied to two hundred and sixty-six (266) head of cattle on twenty-six (26) different occasions, fourteen (14) of which took the form of public demonstrations.

The demonstrations extended over two days, and the test was applied in accordance with the printed instructions issued by the Stock Branch. The tuberculin was usually injected at 8 o'clock in the evening, and from 6 o'clock on the following morning, at intervals from one to three hours up to the eighteenth or twentieth hour after injection, the temperatures of the cattle under test were taken. Those that reacted were separated.

During the second day an address on bovine tuberculosis and its eradication was delivered. The preparation, application, and diagnostic value of tuberculin were also minutely described.

The numerous questions which were invariably asked after each address having been answered, an adjournment was made to some convenient place, where *post-mortem* examinations were held on the carcasses of animals that had reacted to the test, and the presence of the disease demonstrated. The significance of the diseased parts, and the danger to which the remainder of the herd had been exposed to, together with other important features, were as fully commented on as the circumstances justified.

At the initiation of the demonstrations, a considerable amount of prejudice was publicly proclaimed against the use of tuberculin by certain stockowners. Among other assertions they alleged that tuberculin produced or excited tuberculosis. This hypothetical objection received questionable support from certain publications in the Press at this particular time. In order to refute all assertions as to the alleged ill-effects following the use of tuberculin in healthy cattle, not only were the nature and preparation of this agent minutely described, but special attention was drawn to the fact that before tuberculin was sent out from the laboratories as a commercial article, it was subjected to a temperature exceeding that of boiling point on several occasions, and then filtered through porcelain. By this procedure, all germ-life within the fluid was destroyed, and all solid matter, such as dead micro-organisms and their spores, absolutely removed. To practically illustrate that the introduction of tuberculin into the system of healthy cattle had no exciting influence, the cases of the "salted" cows then in the district were cited. Each of these cows had received injections of tuberculin on several occasions at long intervals, and at no time have any of them given the slightest indication of a reaction, or been other than healthy. As the series of demonstrations advanced, and stockowners became more familiar with the test, all prejudice was overcome. They had opportunities of observing healthy cattle subjected to the test without the occurrence of any immediate harm, or the development of ill-effects subsequently. Moreover, they saw unhealthy and also apparently healthy animals react to the test, and the presence of tuberculosis demonstrated by *post-mortem* examinations. They also witnessed *post-mortem* examinations being made on carcasses of evidently unhealthy cattle who did not react to the test, without a trace of tuberculosis being revealed.

Notwithstanding the opposition that was first manifested, the tuberculin test gradually established itself, and towards the end of the series was received with favour, and its dictum accepted.

In the following *resumé* of the public demonstrations held in connection with the tuberculin test, certain cases which are of more than ordinary interest to stockowners are specially dealt with.

At Murwillumbah, on the Tweed, two demonstrations were held. The first took place on the 2nd and 3rd December, 1898, when seven head of cattle, including two cows, which were condemned by many stockowners as being tuberculous, were submitted to the test without a reaction occurring. Consequently the accuracy of the test was questioned. On the owner being approached, he willingly consented to have the two cows slaughtered, so that *post-mortem* examinations might be made to ascertain whether or not the animals were affected with tuberculosis. A carefully conducted examination of the organs and glands failed to reveal the slightest trace of this disease.

As a number of stockowners expressed a desire to witness a reaction, followed by a *post-mortem* examination, arrangements were made to hold another demonstration on our return to the Tweed River to conduct some inoculations. Consequently on the 6th and 7th December, 1898, the tuberculin test was applied to two cows and one bull. The bull was apparently healthy while both cows showed evidence of ill-health,

ill-health, and were in low condition. One had a persistent and painful cough, while the other had an enlarged posterior mammary gland, which discharged purulent material containing calcareous particles by means of a fistula opening. The diseased gland resembled a tuberculous gland more than an actinomycotic one. The former cow reacted, while the latter remained normal. The bull gave a slight transient rise in temperature which was not indicative, and doubtless due to excitement. A *post-mortem* examination was conducted on the cow which reacted, and lesions of tuberculosis were found in the glands of the throat, liver, and lungs, and in the structure of the lungs. The fact that the cow with the diseased mammary gland did not react to the test cannot be admitted as evidence of failure on the part of tuberculin in its specific diagnostic action. The significance is rather to be translated as indicative of either that the diseased condition was not due to tuberculosis, or if so, the cause was no longer an active process; the conditions presented being in keeping with Nature's method of recovery.

Two demonstrations were also held at Lismore, the first on the 6th and 7th of December, 1898, the second on the 13th and 14th of the same month.

At the first demonstration some difficulty was experienced in obtaining cattle for the purpose; eventually six head were obtained. No reactions followed the application of the test.

At the special request of the Lismore Agricultural Society approval was obtained to hold a second demonstration, on our return from inoculating on the Tweed River. On this occasion over 100 stock-owners attended. Four cows were subjected to the test, one of which reacted.

A *post-mortem* examination was held, and the presence of the disease demonstrated in the region of the throat.

On the 16th and 17th December, 1898, the fifth demonstration was held at Irvington, where eight head of cattle were subjected to the test, without a reaction occurring. It is worthy of note that the herds to which these cows belonged were kept under favourable conditions, being depastured in open paddocks carrying sufficient timber to afford shelter, while the cows were milked in a structure, perhaps, best described as consisting of bails and a cement floor covered in by a roof, the height of which permitted the sun's rays exercising their purifying effects unimpeded.

On the 22nd and 23rd December, 1898, four bulls were subjected to the test at Casino. An aged bull, though in good condition, was apparently tuberculous, having a typical cough and enlarged glands; one in the region of the right flank, and another situated in the scrotum above, and in front of the right testicle. Two of the young bulls were progeny of the aged bull, while the other one had occupied the same stable, which was a well-ventilated one. The result of the test was that the aged bull reacted, while the three 2-year old bulls remained normal. A *post-mortem* examination on the former revealed the presence of tuberculosis in throat and lungs, and at those positions where external manifestations of the disease were evident. While the tuberculous lesions were all typical of their kind, they possessed certain features which indicated that the animal's constitution had strenuously opposed the spread of the disease throughout its system for a considerable period. One can readily accept that little or no hereditary predisposition to the disease would be transmitted to the progeny of such a sire. Unfortunately such a case as the above is rarely met with.

The seventh demonstration was held at Alstonville on the 16th and 17th February, 1899. Ten head of cattle, consisting of two bulls, two aged cows, and four heifers, were submitted to the test.

Two heifers and the two bulls reacted. The former were manifestly tuberculous, and were brought forward so that *post-mortem* examinations would be assured. Tuberculosis was found present in both cases in the glands of the throat and lungs, and extensively throughout both lungs.

The case of each bull proved of more than ordinary interest for demonstration purposes. The older bull was a valuable animal, and a prize-taker. Some time ago he developed a lump in the throat, which was then thought to be caused by an injury from the horn of another bull. Subsequently the bull was operated on, and the lump removed. For some time the animal did well, but this condition was transitory, as other enlargements appeared in the region of the throat. Consequently the bull was brought to the demonstration, so that a professional opinion might be obtained. On examination the animal was found to be in good condition, and, with the exception of the throat affection, to be free from evidence of disease. In the throat several glands were found to be enlarged. The largest of the involved glands discharged purulent matter which matted the hair about the openings of small sinuous canals. On the owner being informed that the enlargement of the glands were most likely of tubercular origin, he desired the animal to be submitted to the test. A reaction having followed, the owner desired to know whether there was any chance of complete recovery if the enlarged glands were skilfully removed. On being informed that even if all evidence of the disease were removed the chances were that other glands, though then normal in size, were involved and would increase as time went on, and also that the disease probably existed in other structures, he decided to have the bull slaughtered.

A careful dissection of the throat revealed the glands of that region to be extensively affected with tuberculosis. As was anticipated, some of the affected glands were almost normal in size, and others were so deeply seated as to render their complete excision impossible without endangering the life of the animal. Moreover, the disease was also found to be present in the glands of the lungs.

The other bull was a young animal that had been recently purchased to improve the owner's herd. On learning that the demonstrations were to be held in the locality, the owner availed himself of the opportunity to have the animal tested. When informed that the bull had reacted, he requested that a *post-mortem* examination should be made. This was carried out with the result that tuberculous lesions were discovered in the glands of the throat and lungs in an early stage. The owner expressed himself pleased that the diseased condition of the animal had been thus timely detected.

The eighth demonstration was held at Woodburn on the 20th and 21st February, 1899, when seven head of cattle were subjected to the test, two of which reacted. *Post-mortem* examinations revealed the presence of tuberculosis in the glands of the throat, lungs, and liver in one heifer, and in the lungs, liver, and glands of throat, lungs, liver, and stomach in the other heifer.

The ninth demonstration was held at Upper Copmanhurst on the 6th and 7th of March, 1899, when seven cows and one bull from a select herd of dairy cattle were submitted to a test without the reaction occurring.

The tenth demonstration took place at Grafton on the 10th and 11th March, where the test was applied to two aged milch cows and seven heifers. Both of the cows had "lumpy throats," one having been under treatment (?) for a considerable time without success. The result of the test was that while the

the heifers remained normal both cows reacted. *Post-mortem* examinations demonstrated lesions of tuberculosis in the glands of throat, lungs, and liver, and in the structure of lungs and liver in one cow, and in the glands of throat and lungs in the other cow.

The eleventh demonstration was held at Rous on 26th and 27th April, when seven cows and one bull were tested. One cow reacted. The cow was in good condition although she was suffering from an enormously enlarged gland in throat which interfered considerably with her breathing. This enlarged gland was of tubercular origin, and the disease proved to be localised to the throat on *post-mortem* examination.

The twelfth demonstration took place at Maclean on the 5th and 6th May, where four dairy cows and one bull were tested. No reaction occurred. These cattle were highly bred and had been imported from Victoria and New Zealand by a gentleman who insists on only buying cattle that have withstood the tuberculin test.

The thirteenth demonstration was conducted on the 9th and 10th May at Ulmarra, where six head of cattle, consisting of two aged cows and four bulls, were submitted to the test. One cow had an enlarged throat, but the remainder of the animals were apparently healthy. This cow and two yearling bulls reacted to the test. *Post-mortem* examinations were carried out on the cow and one of the young bulls. In the cow the disease was localised in the throat, but in the bull tuberculous lesions were found in the glands of throat, stomach, liver, and lungs. The sire of the young bulls was slaughtered on account of tuberculosis, and they had been reared as poddies. Two significant facts.

The final demonstration of the series took place at Harwood Island, Clarence River, on the 23rd and 24th May, when a valuable bull was tested. The animal had been suffering from a difficulty in breathing for a considerable period, but recently the throat had increased in size. A decided reaction followed the injection of tuberculin, 107.2 degrees F. being registered on the 16½ hour. A *post-mortem* examination conducted on the following day in the presence of a large number of farmers demonstrated the presence of the disease in the glands of the throat and lungs.

The animals which reacted to the test constituted a fairly representative lot as regards age, sex, and condition to prove the efficacy of tuberculin as a diagnostic agent.

From the above *resumé* it will be noted that on no occasion did tuberculin give an erroneous positive indication as in each of fifteen cases which reacted to the test; the presence of tuberculosis was demonstrated by *post-mortem* examination. On two occasions the negative indications of the test were challenged, but a careful dissection failed to reveal a trace of the disease.

The disease was found in all its characteristic stages. In some cases the tuberculous lesions were small and confined to one or more glands, while in others it invaded whole organs and groups of glands.

Of the fifteen *post-mortem* examinations held in connection with these demonstrations, the presence of the disease was demonstrable in the throat in every instance; in the glands of lungs in 12 cases; of liver, 5; of stomach, 2; of scrotum, 1; of flank, 1; in the structure of lungs, 6; in liver, 2.

The fact that most of the animals had reacted, and in which tuberculous lesions were found in connection with the alimentary tract, were poddy reared, clearly points to the necessity of keeping milkers' calves separated from adult cows, and feeding them only on milk that has been boiled. Moreover, they should be allowed to live as much in the open pastures as is practicable.

JAS. DOUGLAS STEWART, M.R.C.V.S.,  
Veterinary Surgeon to N.S.W. Stock Branch.

## APPENDIX E.

TABLE 1.

RETURN prepared by the Board of Health showing the number and proportion of Cattle condemned out of all those slaughtered at the Abattoir, Sydney, 1898.

Description of animals.	Number slaughtered.	Condemned diseased.		Condemned or bruised or unfit for food.	
		Number.	Percentage.	Number.	Percentage.
Bulls .....	193	32	17.09	5	2.6
Bullocks .....	51,941	2,093	3.8	3	.005
Calves .....	13,372	5	.03	3,467	25.9
Cows .....	22,198	1,022	4.6	13	.05
Pigs .....	52,443	2,559	4.8	12	.02
Sheep .....	1,140,697	187	.01	12	.001
	1,283,849	5,903	.....	3,512	.....

Quarters condemned as bruised or unfit for food, 9; tongues, 5. "Cattle" means all kinds of animals killed for food.

TABLE 2.

SHOWING the total number of Cattle condemned under the Diseased Animals and Meat Act, and the Noxious Trades and Cattle-slaughtering Act, at various Slaughter-yards, and for the Colony of New South Wales generally, 1898.

Abattoir .....	9,415
Flemington .....	260
Other Sale-yards and places (dairies included) .....	14,481
	<u>24,156</u>

"Cattle" means all kinds of animals killed for food.

	Decrease on previous year ... .. -2,711,893

## APPENDIX G.

CAUSES OTHER THAN DROUGHT TO WHICH THE LOSSES IN STOCK HAVE BEEN ATTRIBUTED AND WHICH ARE TO SOME EXTENT PREVENTABLE.

The returns of sheep for the last five years show the severity of the all but continuous general drought from which the Colony has suffered. In 1894, we had 56,980,000 sheep; in 1895, there were 47,617,000; in 1896, in which the drought was not so general, we had 48,318,000; in 1897, there were 43,953,000; and in 1898, the number was 41,241,004.

This exceedingly serious decrease in the number of our sheep has been attributed to several causes besides the drought; and as undue weight is given to some of these causes, I will here point out where I think this has occurred, and offer some suggestions for preventing such heavy losses should the Colony unfortunately again suffer from such a protracted drought.

*(1.) Overstocking.*

A good deal has been said about this cause, and it has been set down by not a few writers on the subject as being next to the drought the chief cause for the losses in sheep. A little consideration will, however, I think, remove this impression, for if we turn to the returns of the four years preceding 1895, when the drought commenced, but excluding 1891, an exceptionally favourable year,—to make the comparison a thoroughly fair one,—that is 1890, 1892, 1893, and 1894, we find that during that period the average number of sheep was 55,288,000, while for the last four years the average number of sheep in the Colony was 45,546,000, which shows that the pasture lands of the Colony carried a higher number of sheep by about 10,000,000 in fair average years than during the four years, 1895 to 1898, that the drought prevailed; and that owners could not be fairly charged with overstocking, at any rate to any great degree, seeing they did not in stocking up put on more sheep than their previous experience had led to believe their holdings can carry.

*(2.) The Rabbit Pest.*

Next to the drought the rabbit pest in the greater part of the Colony where the drought prevailed was the principal cause of the losses in sheep.

The rabbits have had a most disastrous effect on the western and a large portion of the central divisions of the Colony; and if effective and simultaneous measures are not promptly taken now that the pest is reduced by the drought to a minimum in these parts of the Colony the rabbits will speedily increase

Now, therefore, would be the time to make a determined general attack upon the rabbits; and with that view, instead of waiting for the passing of the comprehensive Rabbit Bill which has been framed (and which should, nevertheless, be passed as soon as possible), the recommendation made by the Stock Boards Council of Advice to the Honorable the Minister should, I think, be acted on, and a short Bill of one or two clauses re-declaring rabbits noxious animals under the Pastures and Stock Protection Acts be passed. This would enable Pastures Boards in all parts of the Colony to take the necessary measures for compelling defaulting owners to destroy the rabbits on their holdings, and bring about simultaneous action, without which any attempt at coping with the pest is utterly futile. One female rabbit killed now would do far more good than the killing of twenty would six months hence, and there is no reasonable expectation that this lengthy new measure will become law within that time. The owners in the eastern portion of the Colony, where the pest is only just beginning, view this matter in the same light as those in the older infested districts, and are anxious to have rabbits restored to the Pastures Act so that they may cope with them before they become numerous. It is illegal for them, as the law now is, to expend Pastures moneys in destroying rabbits. If nothing is done till that Bill is passed, it is to be feared that the effect of the drought on the rabbits would have completely disappeared, and that they would soon be nearly as numerous as ever if, as we trust, we are entering on good seasons.

One of the most difficult questions which has to be faced with regard to the public lands is how the comparative fertility of what is termed the saltbush country, which has been lowered by at least a half by drought and rabbits, is to be restored; seeing that, although an owner here and there may have set himself systematically at work to effect this by regularly spelling portions of his run, the great majority will never adopt that course unless they are obliged; and it is suggested for consideration whether the Government, in order to restore the saltbush country to something like its pristine capacity as pasture land, should not systematically withdraw, say, one-fifth or one-sixth of the run for two years from lease, and not allow a hoof upon it; the portion withdrawn being allowed to fall back again, at the end of the two years, into the tenant's lease on the condition that he keeps it completely free from rabbits and other noxious animals while it is thus spelled.

### (3.) *The want of sufficient Water for the Stock.*

This is an almost universal want, for, even where a run is spoken of as well watered, and the season a fairly good one, the sheep will, perhaps, in the autumn, have to travel 5 to 6 miles to water, and in doing so lose to a large extent their condition as fast as they put it on, travelling to and from the watering-place, and take double the time they ought to do to fatten.

Then, again, in dry or drougthy times, the sheep have to go farther and farther out for feed, and as the tanks or dams dry up, or the wells fail, the distance the sheep have to travel for a drink becomes greater and greater between the part of the run where the feed is and the watering-place, and the sheep eventually perish; whereas, if there had been more permanent watering-places, they would have been able to reach the pasture and been saved. Want of water is, therefore, the primary cause of their death. No doubt in many cases, during the long and protracted droughts from which the Colony has suffered, the pasture and the scrub likewise failed; but still, with plenty of water, sheep would frequently pull through, while, when poorly provided with water, they are certain to perish.

It is scarcely necessary, therefore, to say that the want of water, notwithstanding the immense sums which have been laid out in making dams and tanks, sinking wells, and putting down artesian bores, has been one of the great causes of losses in sheep, and that one of the greatest possible improvements which could be made on a run would be to make it so thoroughly well watered as that the sheep would not in any season, not even during a drought, have to travel more than, say, 2 or 3 miles for a drink. For if this could be done, not only would every acre of pasture land then be turned to the best possible account, and water found to consume the whole of the pasture, but no better step could be taken to help on the permanent settlement on the land.

These advantages could, it is believed, where there is an artesian bore, be in a large measure secured by turning the water from the artesian bores (which are bound to be put down in considerable numbers, and to do so much for all the colonies) to better account than they have hitherto been in watering stock. So far as yet it is not known that any attempt at distributing the water over the run except by open drains has been made; and although very great benefit has been conferred by even this primitive and comparatively wasteful mode of distribution, it will be seen that the water could be taken to a very much greater number of places on the run, and turned to very much better account, if the bore could be put down at a point where there was sufficient elevation (it need not be much) to distribute the water in pipes to all parts of the run where it was required, so that the sheep would not have to travel too far for a drink.

In any such scheme of distribution the great desideratum is, of course, a description of piping which would answer the purpose and at the same time be comparatively light and the price per mile moderate.

A light steel patent piping, made by a manufacturer in the city, Mr. S. Zollner, of 443, Kent-street, tapering from 4 in. to 1½ in. bore, is of this description; and, although the cost is too high (£209 per mile) to admit of a proper system of distribution by pipes being adopted over the whole of a run so as to sufficiently water the different parts of it, a partial adaptation, say 3 or 4, or even 5, miles of this pipe-system might, in some cases, be used to force the water to where there was sufficient elevation from which it would find its way by gravitation at a comparatively small cost to points on a run at which it was wanted and which it could not otherwise reach.

### (4.) *The want of Railway Accommodation in the Drought-stricken Districts.*

If railway-carriage had been available in the Western Division of the Colony, and more particularly in the middle and southern portions of that division, and in the middle and southern portions of the Central Division, owners could have put their sheep on the train when they could no longer keep them on their runs, and removed them to where they could either have rented country or sold them to those who have pasture to keep them.

For instance, if the Cobar railway-line were extended to Wilcannia, the Condobolin line to Hillston, and the Hay line to Balranald, millions of sheep which perished during the late protracted drought could, with the concessions considerably granted by the Commissioners for starving stock, have been saved; and this, as well as the general benefit which railways would confer on the inhabitants in the districts through which they pass, the extent to which they would secure the trade to this Colony, and the return they make, should be kept prominently in view in deciding whether or not the extensions of railways to outlying portions of the Colony should be carried out; and it is hoped that, in the interest of what is the great producing industry of the Colony, ways and means will, at an early date, be found to carry the railways in the directions indicated.

### *Insufficiency of the Pasture on the Travelling Stock Reserves.*

It is well known that through the leasing and entailment of the travelling stock reserves and the difficulty of protecting them, there has not of late years been sufficient grass for *bona fide* travelling stock in ordinary favourable seasons; and, as this is the case, it can easily be conceived what state these reserves were in after a four years' drought. No doubt in such seasons it was impossible to have kept sufficient pasture on them for travelling stock; but if there had been anything like sufficient to meet their requirements at the commencement of the drought, a great many more owners would have removed their sheep to where there was pasture, and either rented country or sold them to those who had grass. Instead of that, as the reserves were almost from the first denuded of pasture, they had to allow their sheep

sheep to remain and perish. Even those that did leave their runs in quest of grass suffered considerable loss in reaching it, through the want of grass on the way, although in a good many cases assisted by the railway.

With some 6,000,000 or 7,000,000 sheep, and perhaps some 230,000 cattle, including both fats and stores, changing hands during the year, reasonable provision ought to be made for, say, two-thirds of the whole, which are not, and cannot, from their position or at the present railway rates, be carried by rail, by reserving from lease sufficient Crown lands for depasturing travelling stock on the leading driving roads of the Colony; and, as recommended by The Stock Boards Council of Advice, placing their practical management in the hands of the stock boards of the districts through which these roads pass. Then to provide the necessary funds for the protection and improvement of the reserves, a charge should be levied on all travelling stock, which the owner would pay to the inspector on obtaining a permit for the stock at a light rate per mile, calculated from the starting point to their destination. This charge, as collected, would be remitted to the Treasury, from which it would be returned to the boards for the districts through which the stock passed according to the extent of the mileage of the driving road in the respective districts, to pay the cost of protecting and improving the reserves through which they passed. In making their recommendation the Council of Advice stipulate that no rent be paid for the land contained in those reserves, otherwise the travelling charge would be higher than the owners of the travelling stock could pay, and besides, there would, in that case, be no funds available for ringing and scrubbing and clearing the reserves of noxious weeds.

It will thus be seen from what has been said that the deficiency of pasture on the travelling stock reserves is accountable, not only for a constant heavy loss to owners in ordinary seasons through the deterioration of their stock for want of grass on the way to market, but also in times of protracted droughts for the loss of hundreds of thousands of sheep which perish largely through the letting of these reserves. The revenue from this source is said to amount to £30,000, and is a considerable sum; but it is not necessary that very much of the reserves in the Western Division of the Colony, or in some parts of the Central, should be withdrawn from lease. When the reserve is not fenced off from the run, and the paddocks are moderately large, as they are in the portions of the Colony alluded to, travelling stock are fairly treated, and the existing system answers the purpose. Supposing then that in the case of one-half of the area now included in the reserves no alteration was required to be made, that would reduce the loss of rent to £15,000, and I think the question might fairly be put, What is this to give up in order to enable the pastoralists to take their produce in the shape of stock to market compared with the sum of over £500,000 voted annually for the construction and maintenance of roads and bridges almost wholly expended in the Central and Eastern Divisions to enable the producers in these divisions to take their produce to market.

All that the owners of stock, on whom the prosperity of the Colony mainly depends, ask for is the temporary use of the land, on which they may, at a comparatively trifling cost to the Colony, obtain some food for their stock as they travel to market. Stock require no macadamized roads, culverts, and bridges; and to either charge rent for the use of the land contained in the reserves, or to let them where the whole of the pasture is needed for travelling stock, and have them constantly "skinned" by the tenants as they now are in the greater part of the Central and the whole of the Eastern Divisions, is treating stockowners, compared with the other producers for whom so heavy an expenditure is incurred, to say the least, unfairly.

Besides this, it is to be recollected in dealing with the question of travelling stock reserves that a large proportion of the persons using these reserves are Crown tenants, and that, of course, if they continue to suffer loss as they now do in getting their stock to market, or, what is a more serious matter, lose them altogether during the drought through there being no feed on the reserves, these tenants will be unable to pay their rent, and what is made by rent of the travelling stock reserves will be more than lost in the reduction of that received for Crown lands. A good landlord, it has been properly stated, takes an interest in his tenant's well-being, and this should apply equally to the Crown as to a private individual.

## APPENDIX I.

## VACCINATION for Anthrax.

So long as there is no legislation with regard to anthrax, and therefore no obligation on the part of owners or the experts operating to give details as to the result, all that can be done is to accept the returns on the forms here given, but it may be added, if a serious failure had occurred in any case, it would have been known to the inspector and reported to the Department.

## STATEMENT showing the Extent of the Vaccinations for Anthrax.

*Vaccinated by Messrs. McGarvie Smith and Gunn.*

## APPENDIX J.

## FOOT-ROT.

DRESSINGS recommended by Mr. E. Stanley, Chief Veterinary Inspector. (For further details see *Agricultural Gazette*, July, 1891):—

*Arsenic Dressing.*

Arsenic, from 1 to 2 oz.; potash, from 2 to 4 oz.; water, 1 gallon.

To be used in troughs for the sheep to walk through. The mixture to be boiled slowly for half an hour at least, till the arsenic is thoroughly dissolved.

*Sulphate of Copper (Bluestone) Dressing.*

Sulphate of copper, from  $\frac{1}{2}$  lb. to 1 lb., dissolved in a gallon of water, may be used instead of arsenic.

The following healing dressings may be used by hand after the above caustic applications:—

*Tar Dressings.*

Stockholm tar, 20 parts; carbolic acid, 1 part; or, Stockholm tar, 8 parts; bluestone in powder, 1 part; or, oil of tar, 10 parts; carbolic acid, 1 part; olive oil, 1 part.

*Lime Dressing.*

Quick-lime, sprinkled on a dry surface, and the sheep walked through it frequently, will be found very beneficial. Before any dressings are used, the whole of the loose horn should be pared carefully from the diseased feet. It is of the greatest importance that the sheep's feet should, on the dressing being applied, be kept thoroughly clean and dry for at least three hours afterwards. They should, therefore, on leaving the troughs, or being dressed, be passed directly on to a battened or wooden floor, if it can be got; and where neither of these is obtainable, they should be passed into a dry yard, in which there is a good coating of straw, cut grass, or dry bark taken from trees which have been rung, or, in fact, any other thing which will keep their feet clean and dry.

The following are the remedies reported by the Inspectors to have been used and the results:—

Application.	Result.	Application.	Result.
Arsenic in troughs .....	Good.	Corrosive sublimate and bluestone .....	Good.
„ bluestone and carbolic acid .....	Not given.	Carbolic acid .....	Good.
„ and bluestone.....	Good.	„ and oil and butyr of antimony .....	Good.
„ and lime .....	Fair.	„ acid, bluestone, and arsenic ...	Not given.
„ and saltpetre .....	Not given.	Kerosene.....	Good.
Bluestone and corrosive sublimate .....	Satisfactory.	„ and bluestone.....	Good.
„ and arsenic .....	Good.	Lime and tar .....	Not given.
„ and kerosene .....	Good.	„ and arsenic .....	Not given.
„ and lime .....	Good.	Sulphur and bluestone .....	Good.
„ and sulphur .....	Good.	Saltpetre and arsenic.....	Not given.
„ arsenic and carbolic acid .....	Good.	Tar and turpentine .....	Not given.
Butyr of antimony .....	Good.	„ and quick-lime .....	Good.
„ „ carbolic acid and oil... ..	Satisfactory.	„ and bluestone.....	Good.
Corrosive sublimate .....	Not given.		

*Specifics.*

Cooper's Dip .....	Satisfactory.	Quibell's Foot-rot Cure .....	Good.
Hayward's Dip.....	In some cases.	Graham's Foot-rot Powder .....	Not very satisfactory.
Little's Dip .....	Satisfactory.	Payton's Foot-rot Specific.....	Very satisfactory.
Pottie's Specific .....	Not stated.		

## APPENDIX K.

## NEW MODES OF BRANDING.

DURING the year two new modes of branding, each covered by a patent, have been brought under notice, and demonstrations given to show their efficiency and the little injury they do the hide. The one was termed "Clemor's Patent Steam Brand," and the other, "Gibson's Patent Brand Composition."

*"Clemor's Patent Steam Brand."*

His branding instrument consists of a small portable steam-boiler, heated by kerosene, to which is attached a flexible piece of piping, and at the other end a hollow brand of the required design, with a comparatively fine face, along which a narrow slit runs for emitting the steam, and the brand is imprinted in the usual way by applying it to the portion of the stock intended to be branded on.

The plant is small and convenient, both when used in a stationary position and on cattle in a crush, but this brand takes longer to make the impression than an ordinary hot fire-brand, and it is seldom made without blotching through the escape of the steam, caused by the movement or shrinking of the animal immediately it feels the effect of the steam.

This brand was put on cattle at Randwick in September last, is still quite legible, but it is a very plain one—the horseshoe—and it is questionable if a two-piece or conjoined letter brand had to be imprinted whether it would be legible on account of the steam escaping as described.

*Gibson's Liquid Brand.*

This is not properly speaking a new brand, but a liquid chemical preparation, which is imprinted on stock with a branding iron of the ordinary construction, but with the face somewhat wider, *i.e.*,  $\frac{1}{4}$  to  $\frac{3}{8}$  in., which is dipped in the liquid and pressed firmly and evenly on the beast.

While claiming that the brand made by this process is both legible and permanent, the patentees state that it possesses the following other advantages:—

1. A strong case to hold the stock is not necessary.
2. The fire is dispensed with.
3. The difficulties of wet coats and cold brand do not arise.
4. Fewer hands are required.
5. The value of the hide is no longer depreciated.
6. The application of the brand is painless.
7. It is easily and quickly imprinted; 128 cattle were branded in sixty-five minutes.

The claims as to the legibility and permanency of this brand are supported by testimonials from stockowners in New Zealand, who had used it on both horses and cattle some twelve and eighteen months previously. In regard again to the claim that the brand does not injure the leather, there are several testimonials from tanners given in that colony that it does not affect it.

The brand was tried at the Hawkesbury Agricultural College on 3 cows, 3 calves, 2 sheep, 3 lambs, 3 pigs, and 1 dog, with the result that so far the brand (a very plainly-shaped one) shows well on two of the cows, only fairly on the third, very well on two of the calves, only fairly on the third, and it has left no impression on the sheep, pigs, or dog.

While this is the case, Mr. P. R. Gordon, Chief Inspector of Stock, Brisbane, where a rather extensive test was made, writes that at first the result was not so satisfactory, but by strengthening the composition the branding appeared to be a success.

It will, however, be some time before the two most important points in this matter are set at rest—the claim that the process makes a permanent legible brand, and that it does not deteriorate the leather. If experience confirms these two claims there can be no question as to the value of the process.

APPENDIX L

STATEMENT of the number of the different kinds of noxious animals killed during years from 1881 to 1898; the amount of assessment collected, the amount of Government subsidy paid; and the total expenditure for each of these years.

		To Balance, 31st December, 1898.....					1,183 18 8	£24,675 18 8
							£24,675 18 8	£24,675 18 8

P.S.—From the above Statements it will be seen that the Treasury and Mines Department Accounts do not agree, for the reason that the Treasury Account shows the actual amount disbursed, while that of the Mines Department represents amount of vouchers charged to the Vote, all of which, however, were not paid until after the 31st December, 1898.

\* This amount is charged to the sum of £2,600 voted on the Estimates for 1897-8.

## APPENDIX R.

REPORT ON REGULATIONS *re* FOREIGN DOGS, AND HOW THEY ARE CARRIED OUT IN THE SEVERAL COLONIES.1. *Why Special Regulations were issued for Dogs.*

IN 1882 the opinions of Dr. Burdon Sanderson and Veterinary Professor Fleming, at that time among the leading authorities in the United Kingdom in Human and Animal Pathology, were obtained through the Agent-General, London, as to the risk the Colony ran of rabies being introduced if the unrestricted importation of foreign dogs—that is, dogs from places outside the Australasian colonies—was allowed to continue, and the length of quarantine they considered safe; and they reported that the only real guarantee was absolute prohibition, but that if the Colony would not take such a decided course, their opinion was that the quarantine, in addition to the time occupied by the voyage, should not be less than six months, as authenticated cases of eight, ten, and even eleven months' incubation of the disease had occurred. Indeed Dr. Fleming puts the period of the incubation at twelve months, and he was supported in that view by Mr. Consulting-Veterinary Surgeon John Atkinson and Professor W. Hill, who were examined with him by a Select Committee of the House of Lords on Rabies in Dogs in 1887.

Acting upon this opinion the colonies of Queensland, New South Wales, Victoria, South Australia, Tasmania, New Zealand, and afterwards Western Australia, adopted a six months' quarantine for foreign dogs, and they still adhere to that term, but there has, as regards some of the colonies, been, and still is, a great difference as to the manner in which the quarantine for dogs is carried out.

2. *How the Regulations are now carried out by the different Colonies.*

For instance, while in New South Wales, Queensland, Tasmania, New Zealand, and in Western Australia foreign dogs are sent to the regular Government quarantine grounds, to which cattle, sheep, and pigs are taken, Victoria, and afterwards South Australia, adopted a system of private quarantines—that is, they placed that portion of the premises of the owner of the imported dog where he was kept in quarantine, and allow the dog to be kept there in his owner's charge.

The system thus followed by Victoria and South Australia has been, and still is, strongly objected to by all the other colonies, because it is opposed to the true principles of isolation and quarantine, and attended with serious risk of allowing hydrophobia to be introduced, and if it were introduced into either of these colonies the disease would soon spread to all the other colonies. The consequence has been that remonstrances have frequently been made by the other colonies against the course followed by Victoria and South Australia, but hitherto, unfortunately, without effect.

(3.) *Application by Kennel Club of New South Wales for Private Quarantines and review of the question.*

The question of private quarantines for foreign dogs was, several years ago, fully discussed, and supposed to be finally settled, but has recently cropped up again through the accompanying application by the President of the Kennel Club for private quarantines for foreign dogs on the grounds—

- (1.) Of their value.
- (2.) That private quarantine lines would be strictly maintained.
- (3.) That they would entail no risk.

At one time, in Victoria, importers of foreign dogs had only to make application to the Stock Department to get their places, if considered fit, notified as quarantines for foreign dogs; but the risk attending what may be termed a general notification of quarantines was brought under notice by questions in Parliament, and for some years, as Mr. Thompson, the President of the club, points out, these dogs have been quarantined at the residences of importers and owners of pedigree dogs. The same course is, I believe, followed with respect to foreign dogs in South Australia, and Mr. Thompson, on behalf of the members of the Kennel Club in this Colony, asks, in the application which he here makes, that the same privilege be granted to the importers of pedigree dogs in this Colony.

This is, no doubt, a privilege and saving of expense to the importers of foreign dogs; but why such a privilege should have been granted in the colonies mentioned to the owners of dogs and not the importers of horses, cattle, sheep, and other animals, no one has, so far as I am aware, offered any valid reason, and it is not only very inconsistent and unfair as regards the owners of other and far more valuable and useful animals, but the practice is highly dangerous.

As, therefore, the question is a most important one, and has, of course, a direct intercolonial bearing, I will deal with it at some length, and, in doing so, will consider the subject under the following heads:—

- (1.) The value and usefulness of the dogs compared with other domesticated animals.
- (2.) Whether private quarantines would be strictly maintained; and
- (3.) The consequences which may ensue should the quarantine not be strictly maintained;

and the slightest consideration will, I think, show that the arguments are overwhelmingly in favour of foreign dogs being sent to the regular Government quarantines, and that the dangerous practice of granting private quarantines should be at once stopped in all the colonies.

(1.) *The value and usefulness of dogs compared with other domesticated animals.*

As regards the value or usefulness, so far as the Colony is concerned, of foreign dogs as compared with other domesticated animals, such as horses, cattle, sheep, or pigs, dogs stand very low indeed; and on that score their owners can claim no consideration which is not bestowed on the owners of other imported animals.

As a rule horses, cattle, and sheep are more than ten times as valuable as dogs, and we never hear of the owners of horses, cattle, or sheep, on the plea that their stock are so very valuable, making the request that they should be allowed to quarantine them on their own or their friends' premises. The dogs while in quarantine in this Colony have good accommodation provided for them,—they are well-fed—get sufficient exercise—are carefully and cleanly kept—and are examined every week by a duly qualified veterinary surgeon.

No doubt the collie or sheep dog is a very valuable and useful animal, and the importation of the best specimens of the breed is to be encouraged; but while that is the case there is not a sheep-owner in the Colony who would not be glad to go to double the expense he now does in importing collies, if that would

would prevent the sporting men from importing and keeping sporting dogs, or dogs with sporting blood in them, which are in many parts of the Colony worrying and killing the sheep in such large numbers, and many of them pure-bred studs. Last year the returns from the inspectors showed that the enormous loss of (over 74,000) sheep was caused by tame dogs, in the large majority of cases attributable to sporting dogs or their get.

Such dogs as kangaroo dogs, pointers, setters, and several other breeds are doubtless of value, and are in some degree useful, but to compare them with horses, cattle, or sheep in value and usefulness is out of the question, and it is still more so for their owners to claim special privileges for them because they are sporting dogs, and the claim ought not, in my opinion, to be for a moment entertained. But to do so in a way to increase the risk of the introduction of an exceedingly painful and deadly disease is most inconsistent and reckless.

(2). Can we rely on Private Quarantines for dogs being strictly carried out?

As to the question whether private quarantines for dogs would or would not be as strictly maintained as Government, the slightest consideration will show that the chances of the regulations being broken where the dog is in a private quarantine is very much greater than in that of the Government quarantine; for not only are the position and surroundings in the case of the former such as to be likely to lead to a breach of the regulations, but the inducement is very much greater. To show this, I will take the case of the only private quarantine of the nature here asked for by Mr. Thompson granted in this Colony since, if even before, 1882. This private quarantine was granted to a gentleman who lived in one of the suburbs of Sydney, and who had several well-bred dogs. A portion of his place, with a building on it to accommodate the dog, was duly set apart as a quarantine on the clear understanding that the imported dog was to be kept strictly isolated for six months from every other dog. Instead of this, the inspector, on visiting the place some short time after the term of quarantine had commenced, found the imported dog running with the owner's (other) Australian dogs, contrary, of course, to the regulations, and the conditions of the bond the owner had given. Upon discovery his dogs were at once sent to Shark Island Quarantine, and the special quarantine cancelled.

Now, even if the importer had not been guilty of the very serious breach of the regulations in allowing the imported dog to mix with his other dogs, it is plain that the risk of the infection spreading from the private quarantine is twenty times as great as in the case of the Government quarantine; for, what with the owner's other dogs being allowed to run about his premises, and about the enclosure in which the imported dog was kept, ready if they got a chance of joining him, with the friends of the owner of the imported dog visiting him to see the dog, and their bringing their dogs with them which would be anxious to make acquaintance, if they got the chance, with the stranger, and with the risk of the quarantined dog getting out, it is plainly to be seen that, even if the owner were anxious to adhere strictly to the regulations, the risk of their being broken and of the disease being introduced ought not on any account to be run. If, again, this dog had been sent to the Government quarantine, a brief statement of the course adopted in that case will show how very much more complete the isolation is, and how exceedingly slight the chances are of any breach of the regulations being committed under that system:—

- (a) The quarantine ground is an island.
- (b) No dogs except those to be placed in quarantine are allowed on the island.
- (c) Visitors, unless in the company of the inspector, or with his permission in writing, are not allowed to see the dogs.
- (d) They are not allowed to handle them.
- (e) Any signs of disease, or any other suspicious symptoms, are at once reported to the Chief Inspector, who communicates with the Government Veterinarian.

And these precautions are strictly maintained until the six months quarantine has expired, when the dog is specially examined by the veterinary surgeon and the inspector, who, if they find him free from infection join in a certificate to that effect. On receipt of that certificate the Chief Inspector grants an order for the dog's release.

From what has been stated it will, I think, be seen that, while private quarantines, even when carried out with all fidelity, are surrounded by innumerable risks of the regulations being broken, and especially by the risk of wandering or visitors' dogs getting into contact with the imported dogs, the system of quarantine for these dogs followed by the Department is free from all these risks, and that, under that system, the isolation—with exception, of course, as regards the other dogs in quarantine—may be said to be as complete as the circumstances will allow.

In making these statements I have, for the sake of argument, taken it for granted that the owners who obtained private quarantines would endeavour to faithfully adhere to all the requirements of the regulations, and make such arrangements as would ensure that they would be fully carried out by every one else who obtained access to the quarantined dog. But there is a probability, if private quarantines were generally granted, that the regulations would be so perfunctorily observed as to allow Australian and imported dogs to come into contact, and there is little doubt that, where private quarantines have been granted, such breaches of the regulations have occurred.

It is here that the very great superiority of the Government quarantine over the private comes in; for, while I have said wrong-doing may often go on without risk of detection in the case of private quarantines, there is very little opportunity and less inducement for it to do so in that of the Government quarantine; and, as has been said, the granting of private quarantines is, to a large extent, making a farce of the regulations; and the practice is, as regards hydrophobia, nothing less than a standing menace to the whole of the other colonies, seeing that if the disease gets a footing in any of them it is bound to spread to all the rest.

(3.) The consequences which may ensue if the Quarantine be not strictly maintained and rabies were introduced.

If, either through neglect on our part to issue the regulations which some of the highest authorities in the United Kingdom have told us are absolutely necessary for our protection from rabies, or if, through any carelessness or neglect in the mode in which we enforced or carried out these regulations, we allowed hydrophobia to be introduced into the Colony, we would be guilty of a crime against humanity, for, of all the diseases which affect men or animals, hydrophobia is, perhaps, the most terrible; and if it obtained a footing in Australia, with the swarms of domesticated dogs in all the colonies, the large number of wild

wild dogs still to be met with in most of them, the manner in which domestic animals belonging to different owners intermix, more or less, throughout the colonies, and the way in which the rabid animals attack and bite each other, not only would the disease be spread in all directions, but there would be little or no prospect of its ever being eradicated.

If, therefore, there is the slightest risk of the disease being introduced through any relaxation of the regulations, the relaxation should not on any account be allowed, considering the dreadful consequences which might ensue, unless the reason for which the alteration is asked is of the very highest importance, and then only if some other safeguard is substituted for the alteration asked for, and the additional risk entailed; and I think it will be seen on reference to the representation made by the President of the Kennel Club, that it utterly fails in both these respects, for the only reasons which it adduces for the request he makes are, that he would enable the members of the club to import dogs at somewhat less inconvenience and cost, reasons which it is submitted ought not for a single moment to weigh with those charged with the protection of the people in these colonies from the risk of introducing hydrophobia.

Now that we are happily free from that disease, why should we run the slightest risk of hearing the dread and appalling cry of "Mad dog" in our towns and villages?

I might, perhaps, in concluding this paper, be allowed to notice that the President of the New South Wales Kennel Club, in his communication to the Minister terms what he applies for a privilege; and as the request he makes is put in that form, it will, I presume, be for the Minister to consider whether the applicants deserve that their request should be granted; and if the application for private quarantines is to be dealt with in that way, I am afraid it would not be granted, for it is to sporting men that we owe the introduction of rabbits, hares, and foxes, which has cost the Colony a good many millions of money, destroyed many millions of acres of our pasture land, through the pastures being completely eaten out, starved and killed millions of sheep, and ruined thousands of our pastoralists and selectors. Nor is this all for the destruction and loss here noticed must continue for many years; if, indeed, it ever can be stopped.

ALEX. BRUCE,  
Chief Inspector of Stock.

4th March, 1899.

Department of Public Health, New South Wales,  
Sydney, 18 July, 1899.

Sir,

I have the honor to return herewith papers relating to the quarantining of imported dogs, which were referred to the President by direction of the Minister for Mines and Agriculture, and to inform you that they were laid before, and discussed by, the Board at its meeting of the 11th instant.

2. I am directed to say that the Board was unanimous and unhesitating in its opinion that the present method of quarantining dogs should not be departed from, and in reaffirming the opinion expressed in my letter to you dated 28th October, 1896, when it was proposed to alter that method to suit a particular owner. The Board strongly recommends that no variation from the present practice should be allowed, either in the case concerning which application has lately been made, or in any future case.

3. I am to add that the bearings of dog-quarantine against rabies on the general public welfare are so well shown in the accompanying papers that it appears unnecessary to go over them again, or to say more than that the Board entirely agrees with the condemnation expressed therein, and by the Stock Conference, of the relaxations allowed by Victoria and by South Australia, which followed the example of that colony.

I have, &c.,

C. A. SIMMS,  
Secretary.

The Under Secretary for Mines and Agriculture.

#### APPENDIX S.

##### CAN OWNERS OF STORE AND BREEDING STOCK AFFORD TO PUT THEM ON THE RAILWAY INSTEAD OF TRAVELLING THEM ON FOOT?

THE statement frequently made that owners could make use of the railway, instead of travelling their stock on foot, is a most erroneous one so far as regards store and breeding stock making for market, of which it was estimated there were in 1897 some 230,000 store cattle and upwards of 4,000,000 store sheep.

This is borne out by the following, among other reasons:—

- (1.) The railways are not extended to all parts of the Colony, and in the majority of cases railway carriage could not be got in the direction the stock have to go. This is especially the case as regards those portions of the Colony from which store stock as a rule come, and where they suffer most from drought.
- (2.) Supposing railway carriage was procurable, owners of store stock could not use it at the rates now charged by the railway, as these rates would, taking an average distance and an average price for store stock, amount to about one-third of the value of the stock.

The proposal, therefore, to force store stock on the railways by curtailing the travelling stock reserves before the rates of carriage are reduced, as the selling and letting of the reserves is doing, is inflicting a serious injury on stock-owners, and has to account for the loss of large numbers of stock during the late disastrous drought.

If the rates charged for the carriage of live stock were as low as they are in America, there might be some grounds for the proposal to compel owners to send even their store stock by rail as they now do their fat; but this is not the case, as will be seen by the following comparison between the freight charged on cattle from Kansas City to Chicago with that charged from Bourke to Flemington. The distance in each case is about 500 miles:—

By the Atchison, Topeka, and Santa Fe Railroad—

From Kansas City to Chicago, 500 miles, @ 23½ cents. per 100 lb., (say) 1s.

From Bourke to Flemington, 500 miles, per truck of ten bullocks, each 1,000 lb. live weight (say) £9 7s. 9d.; or, 1s. 8½d. per 100 lb., being an increase of about 71 per cent. over the American rate.

SYDNEY: WILLIAM APPLGATE GULLICK, GOVERNMENT PRINTER.

## COMMISSION.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

The Honorable SYDNEY SMITH, President.  
ALEXANDER BRUCE, Esq., J.P., Chief Inspector of Stock and Registrar of Brands.  
The Honorable GEORGE HENRY COX, M.L.C.  
ALBAN GEE, Esq., J.P.  
JOHN JAMES, Esq.  
GEORGE MAIDEN, Esq., J.P.  
JOHN ASHBURTON THOMPSON, M.R.C.S., Eng., Chief Medical Officer of the Government.

Greeting :—

KNOW YE, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any four or more of you, as hereinafter mentioned, to make a diligent and full inquiry into the prevalence of tuberculosis among animals, the effects on man of consuming the meat or milk of tuberculous animals, and into the administrative measures which are available and which might be taken towards prevention of tuberculosis in animals; also into the effects produced on the meat and milk of cattle affected by Tick-fever, and the protective measures which are available and which would be desirable for preventing the spread of Tick-fever; and further into the administrative agencies existing and desirable to cope with the diseases in general which affect stock: And We do, by these presents, grant to you, or any four or more of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And Our further will and pleasure is that you do, within three months after the date of this Our Commission, certify to Us, in the Office of Our Chief Secretary, under your or any four or more of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony that they be assistant to you and each of you in the execution of these presents: And We appoint you, the said SYDNEY SMITH, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria No. 1, intituled "*An Act to regulate the taking of evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Right Well-beloved Cousin, WILLIAM, EARL BEAUCHAMP, Knight Commander of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this thirty-first day of May, in the year of Our Lord one thousand eight hundred and ninety-nine, and in the sixty-second year of Our Reign.

BEAUCHAMP.

By His Excellency's Command,  
JAMES N. BRUNKER.

ENTERED on Record by me, in Register of Patents, No. 20, page 427, this twenty-second day of June, one thousand eight hundred and ninety-nine.

For the Colonial Secretary and Registrar of Records,—

CRITCHETT WALKER,  
Principal Under Secretary.

ROYAL COMMISSION ON TUBERCULOSIS, TICK FEVER, AND DISEASES  
IN STOCK.

INTERIM REPORT ON TICK PEST.

To His Excellency the Right Honorable William, Earl Beauchamp,  
Knight Commander of the Most Distinguished Order of Saint Michael  
and Saint George, Governor and Commander-in-Chief of the Colony  
of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,

We, the Commissioners, appointed by your Excellency on the 31st May, 1899, to make a diligent and full inquiry into the prevalence of Tuberculosis among animals, the effects on man of consuming the meat or milk of tuberculous animals, and into the administrative measures which are available and which might be taken towards prevention of tuberculosis in animals; also into the effects produced on the meat and milk of cattle affected by Tick fever, and the protective measures which are available, and which would be desirable for preventing the spread of Tick fever; and, further, into the administrative agencies existing and desirable to cope with the diseases in general which affect stock, have the honor to submit the following Interim Report on questions arising out of such inquiry, which your Commissioners deem of sufficient importance to place before your Excellency without delay.

One of the subjects to which the Commission refers is the preventive measures which are available, and which would be desirable, for preventing the spread of Tick fever.

Your Commissioners, in order to deal with the matter as promptly and effectively as possible, decided to invite the attendance of Dr. Sidney Hunt, Government Pathologist, Queensland, and Mr. C. J. Pound, Director of the Stock Institute, Queensland, two gentlemen who have given great attention to the subject of Tick fever and its only known transmitter—the cattle tick.

In addition to obtaining valuable evidence bearing upon the question from the gentlemen named, your Commissioners also examined Mr. Alexander Bruce, Chief Inspector of Stock of this Colony, Dr. Frank Tidswell, Principal Assistant Medical Officer, Mr. R. D. Stewart, Government Veterinary Surgeon, Mr. J. B. Christian, pastoralist, Mr. H. R. Pockley, station inspector to the Commercial Banking Company of Sydney (Limited), Mr. Froggatt, Government Entomologist, and Mr. Hill, Demonstrator of Biology at the Sydney University.

Your Commissioners have been advised of the serious losses that have followed the spread of Tick fever in Queensland; and they have been informed of its gradual extension in dangerous proximity to our Border, notwithstanding the large sum of money expended by the Queensland Government in establishing and carrying out preventive measures.

In this Colony the sum expended annually with the object of preventing the introduction of ticks now amounts to upwards of £10,000.

Quarantine regulations have been made by the Government of Queensland to control the movements of stock from infested areas, and the Government of this Colony has appointed inspectors, not only on the Border of this Colony, but also on certain quarantine lines within the Colony of Queensland, besides fencing about 120 miles of the Border line between the two Colonies.

Your

Your Commissioners are aware that attempts have already been made to evade the regulations, which, when discovered, have been followed by prosecution; and the necessity of maintaining a rigid inspection will be admitted when it is understood that the relaxation or evasion of the regulations now in force, or insufficiency of the same, will have the effect of rendering futile the expenditure already incurred, and now being continued, and will result in the early spread of the disease to the clean herds of this Colony.

Notwithstanding the proximity of the ticks to our Border, it is pleasing to your Commission to state that it is considered by some of the witnesses that strict enforcement of efficient regulations will have the important effect of arresting for a considerable time the spread of the disease.

Your Commissioners, realising the ruinous effect which might result to this Colony from the introduction of infested animals, deem it their duty to submit at this early stage of their inquiry an interim report dealing with some of the measures they think desirable to lessen the threatened danger, although the evidence necessary to effectually deal with the question of Tick fever is incomplete.

The evidence taken shows that there is no law in force in this Colony to enable the quarantining of stock, should any part of our territory unfortunately become infested. If stock were permitted to travel from infested parts to clean country, your Commissioners believe there would be great danger of spreading the disease to large areas of country, and of causing serious loss.

Although it is not proposed at this stage of the inquiry to deal fully with all the evidence submitted, your Commissioners deem it necessary to direct attention to that tendered by Mr. Pound, which is to the effect that sheep and horses exhibited this week at the Brisbane Show—which is within an infested area—will be permitted to return to clean country. This evidence is also borne out by the following paragraph in the *Australasian* of 8th July last:—“Several inquiries have been made in reference to exhibits of stock from the Darling Downs; and in reply thereto, it may be stated that no objection will be offered by the Department of Stock to sheep and horses being sent from that district to Brisbane, and returning thence. Cattle can likewise be forwarded from the Darling Downs to Brisbane, but will not be allowed to return after the Show, and must therefore be disposed of in the capital. This precautionary measure is of course in accordance with the Tick Regulations.”

Further, the evidence submitted shows that ticks in the Colony of Queensland have matured on both horses and sheep; while their appearance on the Island of St. Helena (Queensland) in November last is attributed to sheep which have been allowed access to the island conveying ticks to the dairy herd. Up to the present time the introduction of ticks to this clean district has not been accompanied by any outbreak of Tick fever. The evidence so far adduced does not enable your Commissioners to decide whether this is due to non-pathogenic properties of the ticks; whether ticks when matured through the medium of the sheep lost their destructive properties, or whether sufficient time has been allowed since the appearance of the ticks for an outbreak of fever to take place.

It is clear from the evidence that the ticks can be carried mechanically by any object, alive or dead, to which they have an opportunity of attaching themselves; but by sheep and horses they can also be carried parasitically, a much more important matter.

It will, therefore, be seen that in allowing sheep and horses to be taken from infested to clean areas there will be considerable risk of spreading the disease, and your Commissioners, therefore, suggest that the Government of Queensland be asked to direct that sufficient safeguards be adopted to prevent the possibility of sheep and horses carrying the ticks to clean areas. It may be difficult under the arrangement arrived at by the Queensland authorities to prevent the removal of these show animals to various parts of Queensland; but if this cannot be done, it is hoped that their removal will be accompanied by such restrictions as will guarantee that they are entirely free from infestation.

Evidence

Evidence has also been adduced as to the insufficiency of the inspection on the prohibited line in section A 1. Sheep, it is stated, have been permitted to pass from quarantine area A 1, across Schedule M, to clean country, and the inspection on the prohibited line near Brisbane, A 1, Schedule J, has been found inadequate to prevent the possibility of the movements of doubtful stock to the clean areas adjoining our Border.

To recapitulate, your Commissioners recommend—

1. That immediate steps be taken to introduce a short legislative measure to empower the Government to quarantine infested areas or suspected stock within the Colony.
2. That the attention of the Queensland Government be drawn to the advisableness of taking effective steps to prevent the danger of infection from horses and sheep as well as cattle being permitted to pass out of quarantine lines described by Schedules J, N, M, of the Queensland proclamation.
3. That steps be taken to insure a more efficient system of inspection on the quarantine lines within Queensland by adding to the number of inspectors now acting on behalf of the Government of this Colony.

Important evidence has also been taken bearing on inoculation, quarantine, dipping, and other matters; but, before dealing with these different phases of the question, your Commissioners deem it advisable to call additional evidence in order to obtain sufficient data to guide them in their deliberations.

We have the honor to be  
Your Excellency's most obedient servants,

SYDNEY SMITH, President.

ALEXANDER BRUCE.

SYDNEY: WILLIAM APPLGATE GULLICK, GOVERNMENT PRINTER.

## COMMISSION.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

The Honorable SYDNEY SMITH, President.  
ALEXANDER BRUCE, Esq., J.P., Chief Inspector of Stock and Registrar of Brands.  
The Honorable GEORGE HENRY COX, M.L.C.  
ALBAN GEE, Esq., J.P.  
JOHN JAMES, Esq.  
GEORGE MAIDEN, Esq., J.P.  
JOHN ASHBURTON THOMPSON, M.R.C.S., Eng., Chief Medical Officer of the Government.

Greeting :—

KNOW YE, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any four or more of you, as hereinafter mentioned, to make a diligent and full inquiry into the prevalence of tuberculosis among animals, the effects on man of consuming the meat or milk of tuberculous animals, and into the administrative measures which are available and which might be taken towards prevention of tuberculosis in animals; also into the effects produced on the meat and milk of cattle affected by Tick-fever, and the protective measures which are available and which would be desirable for preventing the spread of Tick-fever; and further into the administrative agencies existing and desirable to cope with the diseases in general which affect stock: And We do, by these presents, grant to you, or any four or more of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And Our further will and pleasure is that you do, within three months after the date of this Our Commission, certify to Us, in the Office of Our Chief Secretary, under your or any four or more of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony that they be assistant to you and each of you in the execution of these presents: And We appoint you, the said SYDNEY SMITH, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria No. 1, intituled "*An Act to regulate the taking of evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Right Well-beloved Cousin, WILLIAM, EARL BEAUCHAMP, Knight Commander of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this thirty-first day of May, in the year of Our Lord one thousand eight hundred and ninety-nine, and in the sixty-second year of Our Reign.

BEAUCHAMP.

By His Excellency's Command,  
JAMES N. BRUNKER.

ENTERED on Record by me, in Register of Patents, No. 20, page 427, this twenty-second day of June, one thousand eight hundred and ninety-nine.

For the Colonial Secretary and Registrar of Records,—

CRITCHETT WALKER,  
Principal Under Secretary.

## ROYAL COMMISSION ON TUBERCULOSIS AND DISEASES IN STOCK.

WHEREAS it is necessary to extend the time within which the Commissioners are to make their report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such report for a period of three months,—to take effect from the 31st ultimo.

Given under my hand, at Government House, Sydney, this sixth day of September, one thousand eight hundred and ninety-nine.

BEAUCHAMP.

By His Excellency's Command,  
JAMES N. BRUNKER.

ROYAL COMMISSION ON TUBERCULOSIS, TICK-FEVER, AND DISEASES  
IN STOCK.

SECOND INTERIM REPORT ON TICK-PEST.

To His Excellency the Right Honorable William, Earl Beauchamp, Knight  
Commander of the Most Distinguished Order of Saint Michael and  
Saint George, Governor and Commander-in-Chief of the Colony of  
New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, the Commissioners, appointed by your Excellency on the 31st May, 1899, to make a diligent and full inquiry into, among other matters, the protective measures which should be adopted for preventing the introduction and spread of tick-fever, have the honor to submit our second interim Report, in which we desire to emphasise our previous recommendations, and to make some further suggestions which we deem of such importance as to justify us in strongly urging upon your Excellency that they be carried out without any unnecessary delay.

Since making our first interim Report, on 10th August, five of your Commissioners, viz., the Hon. Sydney Smith, President; the Hon. G. H. Cox, M.L.C.; Messrs. Alexander Bruce, John James, and Alban Gee, J's.P., accompanied by Dr. Frank Tidswell, Principal Assistant Medical Officer to the Government, paid a visit to Queensland for the purpose of seeing the tick-infested area in Queensland, and observing the methods adopted by the Government and pastoralists for coping with the disease.

During our stay in Queensland we were treated with the utmost courtesy by the Government, who afforded us every facility for prosecuting our inquiries, by authorising the officers connected with the Department of Agriculture to furnish us with information and assistance. The leading pastoralists and others interested in the subject of our inquiry also unreservedly placed all the information at their command at our disposal.

Your Commissioners, accompanied by Mr. P. R. Gordon, Chief Inspector of Stock for Queensland, and Mr. C. J. Pound, F.R.M.S., Director of the Stock Institute, Brisbane, visited the Quarantine Station near Brisbane, and were shown several tick-infested animals, as well as the methods of drawing their blood and injecting the same for the purposes of inoculation. We were also shown over the Stock Institute by the Director, who explained the process used in the manufacture of tuberculin for detecting the presence of tuberculosis in cattle, and directed our attention to numerous specimens of tuberculous growths. We then proceeded to Rockhampton, and, on the day of our arrival, visited Mr. Black's station, where several tick-infested cattle were put through the best known dip. Three days later two of your Commissioners revisited the station for the purpose of ascertaining the result, when it was found that although most of the ticks were killed, some remained alive. We subsequently visited the stations of Gracemere, in the neighbourhood of Rockhampton, and Gin Gin, near Bundaberg, at both of which places severe losses have been sustained through tick-fever and tick-worry, and numerous experiments have been carried out in connection with the same.

The large meat-works at Lakes Creek, near Rockhampton, as well as those at Gladstone and Brisbane, were also visited by your Commissioners, and valuable information was obtained as to the methods adopted at each of those places for the inspection of meat and for its condemnation when affected with tuberculosis or other diseases.

During

During our stay in Queensland, which lasted a fortnight, we examined the following witnesses, viz.:—J. E. Smith, Provisional Inspector of Stock, Rockhampton; William Black, grazier, near Rockhampton; James Henry McConnell, station owner, part proprietor of the Gladstone Meat Works, and a member of the Queensland Stock Board; J. Sidney Hunt, M.R.C.S., Pathologist to the Queensland Government, whom your Commissioners had previously examined in Sydney; Charles Dallon, stockowner, North Rockhampton; William Toft, dairyman, of Oakwood, near Lakes Creek, near Rockhampton; A. W. Barnes, M.R.C.V.S., Government Inspector of Meat at Rockhampton; W. L. Bell, grazier, at Knowe, Mt. Headlow; Henry Beck, grazier and dairyman, Pennard, near Rockhampton; James Armstrong, manager of Mr. R. S. Archer's dairy farm, Gracemere, near Rockhampton; Montague Beck, grazier, near Pennard; R. S. Archer, grazier, Gracemere, near Rockhampton, and Chairman of the Central Queensland Stock Owners' Association; Fanshawe Gostling, manager, Gin Gin Station; Markham, Stock Inspector, Bundaberg; W. C. Quinnell, M.R.C.V.S., Inspector of Meat at Brisbane; E. T. Hancock, Metropolitan Inspector of Stock, Brisbane; W. Collins, grazier, of Mundoolun, near Brisbane, and member of the Queensland Stock Board; C. J. Pound, F.R.M.S., Director of the Queensland Stock Institute (whom your Commissioners had already examined in Sydney); Acting Inspectors Sabine and Coleman, who are doing duty on the buffer-line south of Brisbane, the greater part of which was inspected by one of your Commissioners.

On leaving Queensland we proceeded to the Tweed Heads, Murwillumbah, and Lismore for the purpose of seeing how the system of inspection was carried on at the Border, and of making ourselves personally acquainted with the country which is likely to be first attacked by the tick. At the Tweed Heads, where Acting Inspectors Whitty and Cowley were examined, a horse was smeared in our presence to enable us to judge of the efficacy of that process for destroying ticks. During this part of our trip we examined the following witnesses, viz.:—Patrick Quinn, Inspector of Nuisances under the Dairies Supervision Act, Lismore; P. W. Melhuish, F.R.C.V.S., District Inspector to the Department of Public Health, residing at Lismore; W. J. Tippett, Police Inspector at Lismore of Meat, Slaughter-houses, and Dairies; and J. J. McIntyre, dairy farmer at Lismore. Inspector Sinclair and Assistant Inspector Scott were also examined in regard to the proposed additional fencing at Wallangarra.

It is difficult to realise the serious losses and ruin which followed the introduction and spread of ticks in some of the tick-infested parts of Queensland. In several cases whole herds have been destroyed, while many owners have lost as high as 50 per cent. One owner admitted having a shortage of 17,000 out of 26,000 in fourteen months, and a diminution in his increase from 6,000 to 200.

The first serious outbreak occurred in 1895, and the official returns show that while in 1894 there were 7,012,997 cattle in Queensland, that number was gradually reduced to 5,571,292 at the end of 1898, or a total decrease in four years of 1,441,705. After taking the average increase on the basis of the returns for 1893-4, and allowing for the increased trade in meat-preserving and export, the estimated loss for the four years, 1895 to 1898 inclusive, would amount to about 1,600,000. While the shortage shown by these official returns cannot altogether be attributed to ticks, but is partly accounted for by drought, the fact still remains that by far the greater proportion of the loss would appear to be due to tick-infestation.

As a result of the serious losses arising from Texas fever, many owners in their alarm in the early stages of the invasion, gave up all hope of being able to combat its ravages, and sold their stock at ruinous prices. The experience recently gained, however, has somewhat restored confidence. Though they are still anxious, as we are, to keep the ticks at a distance, the Queensland pastoralists now have good grounds for the belief that inoculation and dipping will largely aid them in preserving their stock. We also believe that their bitter experience and the increased knowledge we have gained as the result of their loss, together with the further knowledge we hope to gain from experiments now being conducted and suggested, will help us to lessen the effects of the pest, should it unfortunately obtain a footing here. We, nevertheless, believe that much yet remains to be learnt, both in regard to the life history of the parasite, inoculation and dipping, and that the best interests of this Colony will be served by taking every possible precaution to prevent or retard the introduction of the cattle-tick.

As

As the result of our visit to Queensland we desire to strongly emphasise the recommendations contained in our first interim report, firstly, as to the urgent necessity of a short Bill being introduced into Parliament empowering the Government to quarantine infested areas or suspected stock within the Colony; secondly, as to the equally urgent necessity for the maintenance by the Queensland Government of the western boundary-line of the quarantine buffer area, known as "M," so as to prevent the danger arising from sheep and loose horses as well as cattle passing from that area into the clean part of Queensland, from which stock are now admitted into this Colony, only horses in actual work to be allowed to do so under strict inspection and dipping; and thirdly, as to the importance of retaining such a quarantine line between the very badly-infested and slightly-infested country, now starting from the north-east corner of the Walloon Run and extending to the seaboard near Gladstone, known as "K" on the Queensland map, but altering it as indicated by the following description, in order to include the Gin Gin and other badly-infested portions of the Coast country, viz. :—Commencing at the north-east corner of Walloon Consolidation, and bounded thence by the southern and eastern watershed of Callide Creek and tributaries to the junction of the southern watershed of the Calliope River and tributaries; by that watershed and the watershed dividing the tributaries of the Burnett River to Mount Perry; thence by a line to Woonoona; and thence by the railway line to Maryborough; and thence by the Mary River downwards to the coast, as indicated on the accompanying map.

We understand from evidence tendered by Mr. W. Collins, a leading pastoralist and member of the Queensland Stock Board, which was confirmed by the authorities in Queensland, that it is intended to abolish the last-mentioned quarantine line. We fear that the opening of this line would be the means of greatly increasing the infection in the suburbs of Brisbane and the surrounding country, and would before long lead to outbreaks of tick-fever there. If this occurred, it would be most difficult to stop the ticks from crossing the Logan buffer-line and coming right to our Borders, bringing the tick-fever with them. In support of this view, we quote the following extract from Mr. Collins' evidence :—

I understand that a proposition has been made to alter the quarantine line marked Schedule K? The proposition is to abolish Schedule K altogether, and to allow all stock to go to Brisbane. Known tick-infested cattle would not be allowed to travel over clean parts; but reputedly clean cattle north of that line could come down, and would, in my opinion, be a great source of danger. These cattle might take up virulent ticks as they came along, and increase the infestation near Brisbane. It would be a means of increasing the ticks above Brisbane, and of bringing disease-producing ticks nearer.

What would you recommend to safeguard the interests of Brisbane, the Downs, and our own Colony in connection with this proposal? I would maintain Schedule K a little further south than its present position.

You are aware that there are ticks at Gin Gin? Yes, and a little south of Childers. Running from Schedule K down the range to Woonoona Railway, and thence by the railway to Maryborough is, I think, the best line that could be adopted. There are no virulent or fever-producing ticks south of my suggested line, so far as I know.

You think that the abandonment of Schedule K quarantine line would prove a serious source of danger to our Colony? A very great danger indeed to Southern Queensland, and consequently to New South Wales, by enabling large numbers of ticks to be brought down.

The evidence taken by us in Queensland confirms our belief, as expressed in our first interim report, that in allowing sheep and horses (which at one time were not considered a very serious source of danger there) to be taken from infested to clean areas, there would be considerable risk of spreading the disease. Several witnesses—notably Mr. C. J. Pound, F.R.M.S., Mr. A. W. Barnes, M.R.C.V.S., and Mr. E. T. Hancock, who was recently sent by the Queensland Government to investigate the tick outbreak in Western Australia—had seen ticks mature on horses and sheep. Mr. Hancock gave several apparently well-authenticated instances coming under his own observation in Central Queensland—notably that of Carmulla, near Mackay—in which horses have spread the ticks. The fact that unattached larval ticks are frequently found on horses rather adds to the danger arising from that source, since every time a tick-infested horse rolls on the ground, some of the larval ticks would probably fall off and might be picked up by passing cattle to subsequently mature on their true host.

As regards sheep, the infestation of the St. Helena herd and other recorded instances show the danger from that source.

It is true that your Commissioners were unable to obtain any well-authenticated case in which ticks maturing on horses or sheep have produced tick-fever, the supposition being hazarded by several of the experts that the pathogenic qualities

qualities of the tick might possibly have been destroyed by feeding on an uncongenial host, such as the horse or the sheep; but whether this be true or not—and we think the utmost endeavours should be made to test the correctness of this theory—there is considerable danger from the tick-carrying capabilities of the horse and sheep. The evidence also goes to show that the introduction of inoculated or fever stricken cattle amongst uninoculated stock infested with non-pathogenic ticks has caused the latter to become pathogenic, resulting in the spread of the disease. All this points to the importance of greater care being exercised in the examination of both horses and sheep. In the first place, every avenue by which horses and sheep, as well as cattle, can enter our Border from doubtful or infected country should be rigorously guarded. Our line of Border fence, which already extends about 120 miles from the seaboard, and which has proved of great service, should be extended in a westerly direction. Taking advantage of the existing fence and impassable mountains, this could be accomplished for about 70 miles at a cost of about £600. The system of smearing working horses, which has been hitherto adopted at the Border, does not, in the opinion of your Commissioners, effectually provide for the destruction of the ticks, as, even if the greatest care were exercised, which certainly would not always be the case, it would be practically impossible to depend upon it; whereas, if the dip were properly constructed, effective medicaments used, and the immersion a thorough one, although not of such duration as to injure the animal, the risk would be very much lessened. When originally put in force, smearing may have been, perhaps, the best precaution that could at that time have been adopted; but since then the methods of destroying ticks have greatly improved, and the evidence of numerous witnesses, the practice of large numbers of pastoralists, and our own observations leave no doubt in our minds that the smearing system should be at once discarded in favour of dips. When dipping was originally introduced into Queensland an oily preparation was almost universally used, on the recommendation of some American authorities; but the oily dip has since been found, both in Queensland and in America, to do serious injury. It has, therefore, been generally discarded in favour of some other preparation, that known as Christian's Dip—composed of arsenic and soda, with a little tar, or some modification thereof—being most frequently used, and has, there is no doubt, lessened the infestation of cattle. The dip (or bath) in which the horses should be immersed ought to be about 40 or 45 feet long, and about 3 feet wide, and of sufficient depth to ensure complete immersion, with an incline at either end for the horse to walk comfortably in and out, and its cost would be about £50.

Your Commissioners recommend that one of these dips should be erected at each of the eleven crossing-places on our Border, where working horses are now smeared; that the preparation used should in the meantime be some modification of the dip mentioned.

While admitting that the dip will be much more efficacious than smearing, we nevertheless think it right to point out that the experiments conducted by your Commissioners, supported by a number of witnesses, have proved to our satisfaction that every tick would not be destroyed by a single immersion, unless a more effectual preparation, or a more effective mode of administering it, be discovered.

In view of the important part that dipping will take in the ultimate destruction of the ticks, we do not consider that this question has been sufficiently investigated, and therefore suggest that careful and exhaustive experiments should be carried out on a sufficiently large and practical scale to ascertain (*a*) the best form of dip; (*b*) the most suitable preparations for dipping; (*c*) the period of immersion; (*d*) the duration of its efficacy against re-infestation of ticks; (*e*) whether it should be repeated; and, if so, at what intervals; and (*f*) the best mode of carrying it out.

Another and still more important result of our visit to Queensland is, that we are able to make certain recommendations for the benefit of the pastoralists and dairy-farmers of this Colony, and especially to those on the Border, who are naturally extremely anxious as to the course they ought to adopt. Our first recommendation is that it is unnecessary for cattle-owners to continue inoculating their cattle until the ticks approach very much nearer than they are at present. Your Commissioners would refer to the example of Mr. W. Collins, the owner of several station properties on the Logan, within the buffer area adjoining our Border, carrying at present about 9,000 head of cattle. Mr. Collins was deputed by the Queensland Government in 1896 to visit America with Dr. J. Sidney Hunt, for the purpose of making inquiries into the tick

tick question. The following extract is from the evidence given before the Commission by Mr. Collins:—

What action would you recommend us to take in New South Wales? I would not recommend inoculation till you get the ticks right up to the Border. I would recommend delay. During the process of inoculation the cattle are knocked about, and there are a few losses from it. If you can stave the ticks off for two years it would be well to avoid all the trouble, expense, and loss of inoculation during that period.

Would there be any danger of setting up fever in uninoculated cattle by inoculating others? I think the risk is very slight. I am interested in a large number of cattle between Brisbane and the Border. We have inoculated a few, and the loss is not one per cent. We do not intend to inoculate generally on the Logan until we get ticks right alongside. We have everything ready, and we will inoculate them when the ticks come. We could inoculate the whole lot in a week or two.

We draw special attention to this evidence, as it comes from a pastoralist of exceptional experience, who is keenly alive to the danger arising from the tick, having lost 17,000 cattle out of a herd of 26,000 in fourteen months, on a tick-infested run near Townsville.

The advice to discontinue inoculation till the ticks are in close proximity to our Border was given by many witnesses of practical experience. Your Commissioners are prepared to indorse the recommendation in view of the rapidity with which immunity can be produced, and for other reasons. If the cattle were inoculated before the ticks came, there is no evidence to show how long the immunity might last. The conditions existing in Queensland are altogether different to those in our Colony. There they have the cattle-tick, which we have not, and have not only made up their minds to depend upon inoculation and dipping, but the continued infestation of inoculated animals, it is said, maintains the immunity; whereas, in our Colony we must depend upon the artificial inoculation to protect our cattle against Texas fever, and we have no certain knowledge as to how long the effect of artificial inoculation would last. In June, 1898, an experimental inquiry was undertaken by Dr. Tidswell, at the instance of the Minister for Mines and Agriculture, and a preliminary experiment was made in September and October, 1898, by inoculating a number of cows at the Quarantine Station, Sydney. About four months after inoculation three of these cows were sent to the tick-infested area in Queensland for the purpose of testing the duration of the immunity; but although Dr. Tidswell considers that they took a second attack of fever, Dr. Hunt was of opinion that the death of one of the cows, and the sickness of the others, was attributable to tick-worry. We are hopeful, however, that further tests, now being made by the Principal Assistant Medical Officer (Dr. Tidswell), at Rockhampton, will elucidate this point.

A considerable amount of evidence was adduced to show that, although in some cases the fever rapidly followed an attack of ticks, the general opinion entertained in Queensland was that ticks may infest cattle without giving them the fever, at any rate, for from four to twelve months, or even, as in the extraordinary Boolburra case—where fever has not even yet broken out—for several years. It is generally considered that there is ample time after the first appearance of the ticks on an adjoining run to inoculate cattle, provided the means of inoculation were available. There would be considerable danger of spreading fever to other herds, both north and south, if a few here and there inoculated their herds while others did not, should the cattle in the locality become infested with ticks. The moment a cow is inoculated, she has the fever parasite in her veins; and, therefore, if subsequently infested with ticks, whether pathogenic or non-pathogenic, she may be the means of spreading the disease.

To more clearly illustrate our remarks on this head, we would refer to what has occurred at Boolburra and Mount Cornish. At both of these places the cattle were tick-infested for years without fever breaking out, although many died from tick-worry. The ticks were believed to be non-pathogenic, for which various reasons were assigned, the most plausible one being that they were conveyed thither by horses or sheep, and the fever organism thereby deprived of its virulence. But several instances were given in evidence in which Boolburra cattle, when placed on infected country, immediately took the fever. Dr. Hunt's evidence is as follows:—

1709. Therefore, as far as you know, at the present time you believe that the ticks can only take up this parasite from diseased cattle or cattle containing the parasite? I would rather not say that; I believe they can only acquire it so; I would rather say we have only evidence of their doing so.

1710. Have you made any experiments with a view to prove whether they can take it up in any other way? I have made experiments to test the two hypotheses. If some ticks are non-virulent, and subsequently become virulent, they must acquire virulence in some way. The question is, how do they acquire it? I made experiments to ascertain if they acquired it from antecedent bovine infection, and, as a kind of collateral to that experiment, to ascertain if they obtained it from external nature. Briefly stated, the experiments

were

were of this character: To ascertain the first point,—whether ticks acquired virulence from antecedent bovine infection,—a piece of perfectly clean country was fenced in with a double-ringed fence, with a minimum space of 30 chains between the two fences. Ticks were obtained from Boolburra. That is the place where there have been ticks for some three and a half years without Texas fever, where a great many experiments have been carried out, and where we knew a great deal about the ticks and their condition. Into this double-fenced area of clean country we brought down a large number of Boolburra ticks, and we heavily infested the paddock with them. Then we brought down by rail a certain number of the Boolburra cattle with ticks on them. We put them into the double-fenced enclosure, and there we left the Boolburra cattle and the Boolburra ticks to worry at each other for a certain number of months. We allowed nothing to go in or come out, so that there was absolutely no communication. Subsequently I inoculated those Boolburra cattle.

1711. How long after they had been in? At a period varying from four to eight months. I inoculated them in this way: I got blood from an outside source, and did the first bullock. As soon as he reacted, I inoculated a second with his blood, and as soon as he reacted, I inoculated a third, and then a fourth, and so on, until I had completed the lot. As a matter of fact, there were nine bullocks, and I did them one from the other. The time occupied in the inoculation spread over a considerable period, because a beast inoculated to-day would not be in the height of fever until ten days; and when his blood was used the next would not be in the height of fever until another ten days. All these Boolburra cattle reacted. The next step was to get perfectly clean cattle by rail up from the west, and put them straight into this paddock with the Boolburra cattle. Clean cattle railed from the west had been tested in two previous experiments, and found not to contract Texas fever when exposed to the ticks at Boolburra, but to become intensely eaten up by the ticks and impoverished in condition. The ten head now brought down and put into the paddock with the inoculated Boolburra cattle all contracted the fever, and eight of them died within three weeks. So that I thought I was fairly justified in forming the opinion that previously non-pathogenic ticks, by maturing on the animals which were inoculated, become distinctly virulent, inasmuch as every animal exposed in this enclosure afterwards caught the fever, and eight out of ten died. As a kind of complement to that experiment, at the same time that I enclosed this piece of clean country, I shipped a dozen head of cattle to an island off Gladstone—a low-lying island, surrounded by mangroves—just such a place as you would think ought to be a happy hunting-ground for the tick, and a sort of place which our traditional ideas of malaria would lead us to believe would be favourable for the development of micro-parasites of this class. On to this island, which was perfectly clean, I sent a dozen head of perfectly clean cattle. I also sent down large supplies of Boolburra ticks similar to those put into the enclosure mentioned in the previous experiment. This was in order to see whether the humid coastal conditions of this low-lying island would endow the previously non-virulent ticks from Boolburra with any pathogenic powers—in other words, whether the ticks on such country and in such conditions would be able to pick up the micro-parasite as, we will say, the mosquito may be supposed to pick up the malarial organism. The outcome of it is that, so far, those cattle have remained perfectly well. Some of them have been a good deal eaten up and worried by the ticks, but though they have been very carefully examined and looked after there has not been a sign of Texas fever amongst them. So that, as far as my experiment goes, I have no evidence to offer that ticks acquire virulence, except from bovine animals. Of course that is only as far as one experiment goes, and one experiment must not be relied upon to prove a case of that kind. Under some other climatic conditions, or in some other low-lying places—the Gulf of Carpentaria, Sydney Harbour, or some place of that sort—the ticks might possibly acquire the parasitic contamination.

1712. Your experiments go to prove pretty conclusively, as far as such experiments can do, that previously non-pathogenic ticks become pathogenic as soon as they come into contact with animals that have the parasite? That is the view, which the evidence I have to offer, would establish.

1713. Therefore, non-pathogenic ticks from a clean area, such as Boolburra, may go to any other clean part of Queensland, and infest cattle without causing Texas fever? That is so.

Dr. Hunt also reported that the uninoculated cattle on a paddock at Mount Cornish took the fever shortly after some inoculated cows were placed there, although none of the other Mount Cornish uninoculated cattle, except those on that particular paddock in which the inoculated cows were placed, took the disease. The following is the evidence on this subject:—

In your evidence before the Commission in Sydney, you stated that, from experiments carried out with the Boolburra ticks, you found that non-pathogenic ticks became pathogenic by maturing on inoculated cattle. You also said that you considered the outbreak at Mount Cornish was explainable on this hypothesis. Can you give us any further particulars? The particulars of the outbreak at Mount Cornish were, as far as I remember, briefly as follows:—About the month of November last two recovered cows were obtained from Townsville. These cows were very carefully and thoroughly cleansed of ticks. They were taken to Mount Cornish for inoculation purposes. A few weeks afterwards about twenty head of young stock were inoculated from these Townsville cows. In the month of April following Texas fever was reported among the cattle running in the same paddock as that in which the two Townsville cows and the twenty inoculated young stock were depastured. Texas fever appeared in no other paddock on the run except that mentioned, that is to say, the paddock in which the two cows and the inoculated cattle were running. Some of the cattle in this paddock died; but, I think, not many. I am in a position to assert positively that the disease then present in the paddock was acute Texas-fever, inasmuch as I had the opportunity of opening and examining one of them. In view of the fact that this run, including this paddock, had been tick-infested between two and three years, that no Texas fever had appeared before then, and that it only appeared after certain contaminated cattle were brought there, and then only among the cattle in the one particular paddock in which these contaminated cattle were running, it appears to me justifiable to assume that the previously non-pathogenic ticks acquired the germs of the disease from the contaminated cattle, and transmitted those germs to susceptible cattle running in the same paddock.”

All this tends to show the danger likely to arise to uninoculated cattle if inoculation is only partially carried out. A further reason which influences us to recommend the discontinuance of inoculation is that we believe it will give time,  
without

without any great risk, provided proper precautions be adopted, for the carrying out of much-needed experiments on the lines hereinafter laid down, which we recommend should be made in connection with the disease-bearing properties of ticks, &c.

The Commission has obtained considerable evidence bearing upon the most suitable blood for inoculating—whether from a fevered beast (known as virulent blood) or from an animal recovered from fever caused by ticks, or from an animal which contracted fever from inoculation, or from an animal the progeny of a fevered beast, which itself had suffered from fever; as to the period of effectiveness of the blood for inoculation purposes after having been taken from the salted beast; the period of effectiveness of a salted beast as a source for the supply of blood for inoculation purposes; and also as to the best age of animals used to supply blood for inoculation. These and other questions relating to effective inoculation, might also receive further attention by our experts, and we purpose dealing more fully with this phase of the subject in our final report.

Your Commissioners are also of opinion that more attention should be paid to the condition which in Queensland is called tick-worry, with the view to ascertaining to what exactly it is due—whether to gross infestation with ticks, and their mechanical effects, or to some defined form of disease.

While, however, we recommend discontinuance of inoculation for the present, we would also suggest to your Excellency to cause such steps to be taken as will enable our stock-owners to obtain suitable blood in case special circumstances should arise, which would render it necessary to proceed with inoculation before the presentation of our final report; and further, to provide a sufficient number of experienced men ready to carry out inoculation and to give demonstrative lectures on the subject, as was done in Queensland with such success by Mr. C. J. Pound and by Mr. R. D. Stewart, M.R.C.V.S., in the North Coast country in our own Colony.

When your Commissioners left Queensland the ticks were supposed to be at least 50 miles from the Border, and to be advancing at a very slow rate. Very few ticks were believed to be in and around Brisbane, and these were apparently not of a very virulent kind, only three cases of Texas fever, with respect to which there was considerable doubt, having been reported, although it should be borne in mind that non-virulent ticks may become virulent the moment they get on inoculated stock. Eight months have elapsed since they reached Brisbane, and they are only known to have advanced 12 miles further south since then. The severity of the winter is thought by some to have checked their onward march.

Another interesting point in connection with this part of the subject is whether the ordinary scrub-tick of New South Wales, of which there are several varieties, is capable of becoming pathogenic after being attached to inoculated animals, and of transmitting the disease. Several expert witnesses who gave evidence before the Commission recommended that experiments in this direction be conducted. In the Mackay district, where scrub-ticks are said to be very plentiful, Mr. Hancock, who was stationed there for some time, frequently found cattle-ticks and the ordinary scrub-ticks side by side, attached to the same host. This point—whether the scrub-tick is capable of acquiring and transmitting the organism in the same way as the cattle-tick—is one which should certainly be cleared up as soon as possible.

Although some experiments have been carried out with the view of ascertaining whether it is possible to obtain an anti-toxin which would take the place of infected blood for inoculation purposes, they have not so far been attended with success.

Your Commissioners reserve for their final Report, which they purpose submitting on an early date, any further remarks on this branch of their inquiry, particularly with regard to inoculation and dipping, about both of which, and especially the former, much still remains to be ascertained. In the meantime, your Commissioners recommend that advantage be taken of the present temporary lull in the advance of the ticks to carry out much needed experiments for the purpose of throwing light on several problems which require clearing up.

Evidence was given during the course of our inquiry that swine-fever had broken out in certain parts of Queensland. In view of the great loss which might be incurred by farmers in this Colony if swine-fever spreads into New South Wales, your Commissioners recommend that, pending further inquiries, the importation of pigs from Queensland into this Colony should be prohibited.

## SUMMARY OF RECOMMENDATIONS.

To recapitulate, your Commissioners recommend :—

1. That the Queensland Government be respectfully asked to maintain the northern quarantine line, marked "K," with the modification suggested in the body of this Report, and to retain the services of the inspectors of this Colony and Victoria in guarding the Logan buffer-line, marked "J"; that the quarantine line from Dalveen to Chinchilla, and thence northward to Auburn, marked "M," be strictly maintained against sheep as well as cattle and loose horses; that horses in actual work be inspected and dipped before leaving that or any other doubtful or infected area.
2. That the fence on our boundary-line be extended in a westerly direction for an additional 70 miles from the neighbourhood of Stanthorpe (Q.)
3. That loose horses, as well as sheep and cattle, from infected or doubtful areas should not be allowed to cross the Border or quarantine line.
4. That, in future, working horses be dipped instead of smeared.
5. That a dip be erected at each of the eleven crossing-places along the Border.
6. That it is unnecessary to continue inoculation in this Colony until the ticks approach very much nearer than they are at present for the reasons stated.
7. That a short Bill containing the necessary provisions for empowering the Government to quarantine infested areas or suspected stock within the Colony (as already recommended in our first interim Report) be at once introduced into Parliament.
8. That further information on the following points be obtained :—(a) whether ticks matured on horses and sheep are pathogenic or non-pathogenic; (b) whether the ordinary scrub-tick of New South Wales is capable of acquiring and transmitting the fever organism; (c) as to what cause the condition called tick-worry is due, whether to gross infestation with ticks, and their mechanical effects, or to some defined form of disease; (d) as to the best blood for inoculation; (e) the number of ticks necessary to produce tick-fever; (f) the difference between fever-producing and non-pathogenic ticks; and other experiments referred to.
9. That experiments should also be carried out to ascertain (a) the best form of dip; (b) the most suitable preparation for dipping; (c) the period of immersion; (d) the duration of its efficacy against reinfestation of ticks; (e) whether it should be repeated, and, if so, at what interval; and (f) the best mode of carrying it out.
10. That the importation of pigs into New South Wales from Queensland should be prohibited, pending further inquiries into the prevalence of swine-fever in the latter colony.

We have the honor to be

Acting Secretary.

54, Bridge-street, Sydney,  
17th. October, 1899.

I AGREE unreservedly with Recommendations 1 to 5, 7, 9, and 10; I also agree with Recommendation 8 as pointing out that many matters concerning the origin and diffusion of tick-fever still remain undiscovered, knowledge of which is necessary to establishment of a rational scheme of prevention. But, while concurring in Recommendation 6, I feel it necessary to define the sense in which I understand it.

It is quite certain that inoculation affords the best protection against the fatal effects of tick-fever acquired in the natural way. To refer merely to the evidence before the Commission, Dr. Sidney Hunt and Mr. C. J. Pound, of the Stock Department of the Government of Queensland (whose testimony is of high value) are those witnesses whose business it has been to observe the facts in Queensland during about four years past, and who have consequently had the widest opportunities of becoming acquainted with them; they are also qualified by training and by practice for the difficult task of accurate observation. Their evidence is that inoculation of herds ahead of the invading tick is the best safeguard against otherwise disastrous losses. They are also of opinion that while the ticks which first reach a herd appear occasionally to be not virulent, they are almost certain to become so sooner or later.

The two points concerning tick-fever thus far ascertained are that there can be no epizootic occurrence of this disease without intervention of the tick (*Ixodes bovis*), and that artificial inoculation affords a very important degree of protection against the losses this epizootic invariably causes at first. Beyond them, it seems very probable (on grounds apart from experience, as well as on those which experience has furnished) that all ticks (*Ixodes*) are not capable of conveying the disease; and, secondly, that non-virulent ticks (*Ixodes*) can acquire virulence by feeding on animals which have had tick-fever either naturally or by artificial inoculation. If these two latter views are correct, then, it is the case that inoculation of cattle before the tick arrive would make sure that all the ticks should speedily become virulent, if they were not so at arrival. But I do not think that this militates against adoption and practice of precautionary inoculations. When virulent ticks have begun to take effect on a herd, inoculation then merely reinforces them, and virulent cannot be distinguished from non-virulent ticks, except by their effects. This being the case, and uncertainty being fatal to preventive schemes, it appears to me to be practically advantageous to make sure that all the ticks shall be virulent. As regards protective inoculation, then, the only necessary recommendation is that it must be practised by all of the graziers on any tract of clean country on which it is resorted to by any of them as a prudent, and the only available, protective measure.

Secondly, the protection afforded by artificial inoculation is transitory, and its duration is for the present not known. The Commission hopes that the experiments which, by direction of the Hon. the Minister for Agriculture, have been going on in the laboratory of the Board of Health for nearly a year past, and which are now on the point of being brought to a conclusion, may enable the minimum duration to be nearly fixed. In the meantime, it has already been ascertained that conferred protection does not always last as long as three and a half months (interim report by the Principal Assistant Medical Officer of the Government transmitted by the Right Hon. the Premier and Colonial Treasurer to the Hon. the Minister for Mines and Agriculture, June, 1899; see *Agricultural Gazette* of New South Wales, August, 1899). Hence repeated inoculations are in the necessities of any case in which the tick do not follow the first inoculation within a few months.

Under all these circumstances, the aim of every stockholder should be to so inoculate, that recovery of his cattle from that operation may immediately precede arrival of virulent ticks. The question, therefore, on which it may be expected the Commission should now (or later) advise, is as to the distance from any clean herd to which the tick may be safely allowed to approach before beginning to inoculate. In my opinion, the answer depends in every case on circumstances, nearly all of which  
are

are variable, and some of which cannot be foreseen. The tick do not advance by crawling over the ground, but by attaching themselves to animals which transport them. Hence their rate of progression cannot be closely calculated; hence, also, the need for the elaborate precautions against their introduction by travelling animals adopted, or now recommended for adoption, at the border. It should be the aim of stockholders, therefore, not to inoculate until the tick have approached within some distance at which it may be reasonably thought danger is imminent; but I do not think that a distance applicable in all cases can be fixed.

I am, therefore, of opinion that the ascertained value of protective inoculation done before arrival of the tick should be impressed on stockholders, and that attention should at the same time be drawn to the transitory character of the protection afforded by it.

J. ASHBURTON THOMPSON.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

AGRICULTURE.

(REPORT ON, TO 31ST DECEMBER, 1898.)

*Printed under No. 4 Report from Printing Committee, 24 August, 1899.*

The Under Secretary for Mines and Agriculture to The Honorable the Secretary for  
Mines and Agriculture.

31 December, 1898.

Sir,

With an enormously-increased area under cultivation and anticipations of a general break-up of the drought prevailing almost throughout the Colony during the two previous seasons, the year just closed promised to be a record one in the output of agricultural produce. Unfortunately, however, as the Government Astronomer has pointed out, the rainfall of 1898 proved a series of hopes and disappointments. The total rainfall for the twelve months did not exceed 20 inches. When it is remembered that the average rainfall for the Colony during the past twenty-three years was 25 inches, and that during that period in only six years has the average annual downpour registered less than 20 inches (one year, 1882, having totalled but 13·40 inches), the severity of the drought will be understood. Despite such unfavourable conditions, the number of recruits to the ranks of agriculturists in no way diminished; indeed, the area of their operations became so extended that when favourable and fairly general rains fell in June and the two following months an increased area of nearly half a million acres of wheat alone encouraged the hope of prosperity and an unprecedented output of breadstuffs. The reports coming in from all parts of the Colony during the flowering stage of the crops were so encouraging that it seemed to be the duty of the Department to be on the alert to assist the growers to find outlets for the surplus of grain above Colonial requirements that was likely to result. But just at the critical stage, nearly everywhere alternative frosts and scorching winds of weeks' duration wrought havoc among the crops. The extent of the loss may be realised when it is seen that of the 1,605,000 acres sown with wheat nearly 305,000 acres were cut for hay. As the losses from rust, probably owing to the nature of the season, were quite immaterial, the low average of 7·2 bushels may be fairly attributed to the many unfavourable climatic conditions which doubtless prevailed to the greatest extent against crops sown in land that, for the same reasons, it had been impossible to properly make ready. In the face of this national calamity, and as a happy augury of the ability of our agriculturists to ultimately overcome the inequalities of season, it is pleasing to observe that many wheat-growers, in correspondence with the Department, express the conviction that their losses have been minimised by the adoption of some of the methods of advanced culture advocated by the Departmental experts. For instance, farmers have found that where their land has been worked deeply, and the seed has been selected and sown early, the crops so far withstood the drought as to yield a most satisfactory return, ranging in isolated cases up to 26 bushels per acre. Although I am well aware that after so prolonged a succession of bad times agriculturists can ill-afford to embark largely in the purchase of modern machinery, or to do all in the way of thorough cultivation that they might wish, I cannot allow this opportunity to pass without expressing the hope that such demonstrations of the practical utility of good culture may be borne in mind, and that our farmers will do all in their power to protect themselves against the ravages of drought by the practice of methods calculated to prove of such benefit.

In order to provide a wide field for the practical instruction of students at the Agricultural College, the area under cultivation has been extended by several hundred acres, and, as opportunity has occurred, the equipment of the farm has been augmented by the addition of the most approved modern implements.

\*155—A

The

[1,435 copies—Approximate Cost of Printing (labour and material), £77 5s. 10d.]

The accommodation for students is taxed to the utmost, and it is worthy of mention that amongst the 100 odd young men undergoing the full course are several from England, Cape Colony, the neighbouring colonies, and Japan. Almost, without exception, the students are of fine stamp, and when allowance is made for the buoyancy of spirit that is but a natural outcome of the close association of so large a number of hearty young fellows, their conduct is a credit to themselves and the staff of the College. A well-equipped gymnasium is now completed, and should prove a splendid acquisition.

The educational attainment from an agricultural point of view is very satisfactory, and although the Principal wisely recognises that it is not possible in the limited duration of the College course to make every one of his charges an all-round expert, he is able to so direct their attention to the practical side of the curriculum as to turn out young men who are well fitted to make a fair start in whatever branch of agricultural industry their inclination or circumstances may lead them.

In connection with the fruit-growing industry, the most important event during the year was the inauguration of a system of inspection of imported fruit under the provisions of the Diseases in Fruit Act. Work at the wharves was commenced in February last, and several inspectors have been kept busily engaged during the year. At first, so bad was the quality of fruit received here that it was quite a common occurrence for from 50 to 80 per cent. of the shipments to be condemned. As time went by, however, and the vigilance of inspection was not relaxed, the class of produce improved, and now the percentage of fruit that it is found necessary to reject through the presence of disease is comparatively small. The discovery of the grubs of fruit fly in a wide variety of imported fruit, but more especially in bananas, showed in a most unmistakable way the advantage of the Department being empowered to control the traffic in pest-infested fruit. There is probably no class of fruit that is carried so widely throughout the Colony as the banana, and had even one-twentieth the number of bunches condemned by the fruit inspectors been allowed to come into stock without restriction, the fruit-fly pest, bad enough already, would have been scattered far and wide in such numbers as to in all probability annihilate the fruit-growing industry. The same thing, though perhaps in a lesser degree, applies to other fruit enemies. The enactment of this measure simply brought New South Wales into line with the other colonies so far as restrictive action against the traffic in diseased fruit and plants is concerned; and in order that the export trade, particularly in connection with citrus fruits, should not suffer from reciprocal action on the part of the authorities in other places, arrangements were made to conduct a series of experiments in the fumigation of fruit for export. The tests were carried out under the direction of the Departmental Chemist, and it was found the treatment effectually destroyed scale insects without in any way injuring the appearance of the fruit, and that by taking proper precautions there was absolutely no danger to be apprehended that the fruit would be harmful to persons consuming it. Regulations were accordingly passed and authority issued to a number of exporting firms to erect fumigating chambers where fruit could be treated under the supervision of officers of the Department, who would furnish a certificate as to freedom from infection.

The Chemist has been actively engaged in the analysis of soils, waters, fodder plants, manures, and miscellaneous substances. The advances made in the use of manures for all kinds of crops are noteworthy, and this can certainly be attributed in no small measure to the facilities the Department places in the way of agriculturists to determine any questions affecting the value of fertilisers on the market. Moreover, with increased consumption, manure merchants find it worth their while to work hand in hand with the Department by placing before their customers fertilisers of unquestioned merit, and in spreading a knowledge of the benefits to be derived by the judicious application of manures. It is also worthy of note that farmers are every day becoming alive to the necessity of utilising all the manure produced on their holdings instead of, as was the almost universal practice not so long ago, allowing tons and tons of valuable matter to go waste. In my last report I drew special attention to the excellent work being done by Mr. Guthrie in the determination of the milling qualities of wheat. This branch of the Department's operations may safely be said to have passed the experimental stage, and the commercial utility of the tests is now generally recognised by all engaged in the production of flour in New South Wales as well as in the other colonies, where arrangements have been made for the introduction of mills similar to ours.

In connection with the improvement of our wheats as regards milling qualities, the Department has been fortunate in securing the services, as Wheat Experimentalist, of Mr. W. Farrer, who for many years has devoted himself entirely to cross-breeding and hybridising wheats with the object of producing varieties that will not only be especially adapted to withstand disease and drought, but at the same time yield a flour of high milling quality and attractive appearance. Mr. Farrer will pursue his investigations at the different experimental farms, and there is every reason for expecting that before long the Department will be in a position to introduce into general cultivation several new varieties of wheat superior in every respect to the standard sorts now grown. Arrangements have also been made to obtain from the principal cereal-producing countries of the world samples of the best wheats, &c. On arrival, the seed will be sown at the farms, and approved varieties will be propagated on a large scale for distribution.

The

The establishment of a Corn Trade Section in conjunction with the Sydney Chamber of Commerce, to which, at the invitation of that body, Messrs. Guthrie and Valder have been appointed as representatives of the Department, has brought our work into closer touch with those immediately engaged in the manipulation of wheats, and it is anticipated that, with the advent of good seasons, producers will derive much benefit from the steps such a body will be able to take to place our corn trade with other countries on a sound commercial basis.

The dairy industry, notwithstanding inclement seasons, is expanding by leaps and bounds. As Mr. O'Callaghan points out, so firm is the belief in the future of the industry becoming, that wherever there is sufficient milk produced to warrant the establishment of a separating station, people, representing either private or co-operative capital, are ready and willing to erect the necessary plant and buildings.

The feature of the Department's work this year has been the importation of a number of high-class dairy stock from England, Ireland, and Holland. All the well-known dairy breeds are represented; and there can be no question as to the benefit the industry will derive in a few years from the introduction of so much new and varied blood. A number of the imported bulls have been stationed in various districts, under the supervision of local agricultural societies, and farmers are allowed to make use of them at a nominal fee. So great has been the desire to secure these animals, that it has been found impossible to comply with more than about one-fourth the applications made. A Departmental breeding farm has now been established at the Kirkham Estate, near Camden, where cattle will be raised from the imported stock, enabling the Government to keep up a constant supply either for sale or loan to dairy farmers.

An officer has been appointed to visit factories and afford practical instruction in the matter of pasteurising and other modern processes. Arrangements have also been made for the appointment of a laboratory assistant, and it is proposed to prepare for distribution to butter-makers pure cultures of lactic acid to further the production of butter of uniformly high quality for export.

The special dairy section at the Hawkesbury Agricultural College has done good work, and a large number of young men, as well as experienced dairymen, have attended the course of instruction. In Mr. O'Callaghan's opinion, however, it is desirable that some arrangements be made to enable students before they are granted a certificate to have some experience in handling large quantities of milk, cream, and butter—a thing which, of course, is not possible where the herd is limited, as at the College. This is a matter of importance if the students trained at the College are to be properly fitted for the control of large establishments.

A good deal of the Dairy Expert's time has been devoted to lecturing in different parts of the Colony on dairy matters and in giving practical demonstrations in the tuberculin test for the detection of tuberculosis. It is worthy of remark that the authorities of some of the Agricultural Societies are earnestly seconding the efforts of the Department in coping with this disease, and for the first time in the Colony a prize has been awarded for dairy stock that had passed the test. This was at Berry, where were exhibited twenty animals, which Mr. O'Callaghan had subjected to the test. The Dairy Expert refers to the necessity for amended legislation dealing with tuberculous stock. The present law, which provides for the destruction of diseased animals without the use of tuberculin as a means of detection, means the removal of only the tuberculous parents, while the young, apparently vigorous stock are left behind to perpetuate the crop of disease in all favourable places, or, in other words, to infect healthy animals. It is also necessary that steps should be taken to render compulsory the pasteurisation of the skim milk, which forms the principal food of, and very often the vehicle of infection of the dairy calves and pigs.

Feeling the necessity of bringing under the personal notice of fruit-growers the various methods of combating insect pests, the Entomologist has spent as much time as possible in visiting orchards and farms throughout the Colony, and giving practical demonstrations of the preparation and application of sprays. These expositions have invariably proved attractive to the surrounding orchardists and farmers, whom Mr. Froggatt has always found eager to learn all they could about the life-history of the various pests, and the most effective ways of destroying them. In conjunction with such visits, and at the invitation of Horticultural Societies, the Entomologist has delivered, in fruit-growing centres, a number of lectures illustrated by lantern views of the principal enemies. Everywhere increased attention is being paid to spraying, and if, as it is shortly to be hoped will be the case, growers will take concerted action for a couple of seasons, many of the worst pests will be either exterminated or so reduced as to make future control of them comparatively easy. The inability of the Department to eradicate or otherwise deal with neglected orchards, which form a safe refuge for the propagation of pests, is, however, a severe handicap.

Arrangements have also been made to test the efficacy of fumigating trees with hydrocyanic acid gas. As soon as opportunity offers the Entomologist and Fruit Expert will visit scale-infested orchards with tents and all necessary appliances for the instruction of those concerned. The

The Fruit Expert has been principally engaged in supervising the Departmental orchards at Richmond, Wagga, Bathurst, and Wollongbar, and in visiting various districts to give practical instruction in orchard-culture, pruning, canning, drying, and handling of fruit. At the Wagga and Hawkesbury Agricultural College orchards canneries have been erected, and quantities of fruit have been treated on a scale sufficiently large to demonstrate the commercial utility of the methods practised. The exhibits of fruits preserved in various ways at the principal Agricultural Shows have attracted great attention, and have shown growers, in an unmistakable way, the possibilities of this branch of the industry. Wherever Mr. Allen has been he has found new orchards being planted out; indeed, during the year, fruit-growing appears to have attracted more attention than ever before. With such an increased area under trees, and by reason of the care that is being more generally exercised in the selection of varieties and in the treatment of the orchards, it is merely a question of time when the output will justify the establishment of canneries and packing-houses, co-operative or otherwise, to deal with the immense quantities of fruit that will be available for preservation and export. It is to be regretted that the shipments of oranges despatched to London were not a success. It has, however, been the direct means of bringing down to bed-rock several matters of doubt as to the causes of failure, and with increased care on the part of the orchardists and those handling the fruit, and improvements in the ventilation of the storage chambers on the steamships to provide for the withdrawal of dense gases evolved by the fruit, which interfere with the ingress of pure air, it is confidently expected that large quantities of our fruit will find its way to London in first-class condition.

Further outbreaks of phylloxera in the Counties of Cumberland and Camden have caused considerable anxiety to local vignerons. Prompt measures have been adopted to eradicate the disease, and although the uneasiness of those whose interests are intimately associated with the scenes of outbreak has, naturally enough, not abated, there is no reason to fear that the pest will get beyond control. Meanwhile, the Department cannot too strongly urge upon growers the necessity of introducing, with as little delay as possible, the American resistant stocks as the surest measure of prevention that, up to date, it has been possible to suggest. The attention paid to wine-making has been satisfactory, and the more general adoption of improved system of fermentation and treatment has resulted in the production of liquors of a very high standard of quality and appearance. With the co-operation of the Agricultural Societies, improvements in the system of adjudicating upon wines submitted in competition at exhibitions have been introduced and steps have been taken to make such shows of greater educational influence.

Professor Blunno's further acquaintance with the wines of the Colony has confirmed the opinion expressed in last year's report, that they possess so many inherent good qualities, that New South Wales vignerons need have no fear when the output has reached sufficient dimensions to maintain a uniformity of bulk shipments, of placing their wines before the European and English public purely on their own merits, because he is convinced that the lighter wines of the northern and the heavier types of the southern districts possess characteristics which must win for them a very high place in the regard of consumers anywhere.

In the course of his visits, the Travelling Instructor in Agriculture, who has journeyed during the twelvemonth some 26,000 miles by rail, steam, and coach, has been able to observe the progress being made in all branches of agricultural industry throughout the Colony. Everywhere he has visited, Mr. Thompson has found the farmers and pastoralists eager for information as to improved methods, and ready to put into practice any advice he could offer as to more profitable production of crops or management of live stock. Mr. Thompson also finds that the idea that scientific knowledge and practical farming could not go together is passing away, and farmers throughout the Colony are endeavouring to introduce better systems of husbandry. The great trouble, however, is that many agriculturists are trying to cultivate more land than can be thoroughly and systematically handled.

In almost every place visited Mr. Thompson has urged the members of local Agricultural and Farmers' Progress Associations to have meetings at least once a month during moonlight for the discussion of topics of agricultural interest. It is pleasing to see that in several instances, notably at West Maitland, the idea has been carried out. Several papers read at the Maitland meetings have been of such general interest as to justify their publication in the *Agricultural Gazette*.

Mr. Thompson has taken the opportunity to collect much interesting data concerning the yields of different varieties of wheats and the system of culture practised.

Work of importance to the cultivation of the sub-tropical districts has been carried out at the Wollongbar Farm. To meet the requirements of dairying, which is expanding apace and is destined to become the main industry of the North Coast, as it is in the South Coast, arrangements have been made to test the suitability of grasses and fodders to afford settlers instruction as to the best means of laying down and maintaining pastures and raising crops for ensilage.

The

The principal disadvantage under which the northern dairymen suffer is insufficiency of cattle of the most profitable type for the dairy purposes; and to assist them in building up herds on the best lines, several of the imported bulls have been stationed at the Farm and other centres in the district.

Early in the year arrangements were completed to inaugurate an experimental farm in the Bogan Scrub. A large tract of land was secured at Coolabah, and on the 30th March, Mr. R. W. Peacock, the manager, turned the first furrow in soil that is typical of millions of acres now lying practically waste, but which with anything like decent seasons and scientific treatment may confidently be expected to constitute one of our principal sources of future wheat supply. A number of experiments have already been undertaken and several hundred acres prepared for future operations, but until the drought breaks it will not be possible to do much, as there is absolutely no water on the estate. However, it is proposed to test the area for artesian water, and in the event of good supplies being struck, it will be possible to test the efficacy of a modified system of irrigation in connection with wheat-culture in arid country.

At the Wagga Farm, like nearly all the rest of Riverina, the adverse season was severely felt. The rainfall for the year reached 14.33 inches, as, compared with an average of 22 inches for the past twenty-five years. The orchard, in consequence of continual cultivation, was not much affected by the dry weather, and the trees are looking splendid. A number of students have passed through the course of practical instruction, and the area under cultivation has been extended and made ready for several new lines of experiments.

Early in the year the export of hares, rabbits, poultry, and miscellaneous products, under the direction of the Board for Exports, had reached such dimensions as to necessitate increasing the storage accommodation from 7,600 to 17,000 cubic feet, and during the busy season further space had to be temporarily obtained. The success attained in the storage of eggs for long periods has led to fresh development in the use of the cool chambers, and many dealers and producers have availed of the accommodation to the great benefit of local markets. The Government prizes offered under the auspices of the Board at the Royal Agricultural Society's Annual Show have been continued, awards to the amount of £140 being made for exhibits of butter, poultry, cereals, fruit, &c. Competition for these prizes was keener than in the previous season, and the £50 prize offered for butter under export conditions has practically become the "Blue Ribbon" of the butter industry. Wheat and barley were shown in larger quantities, and it is anticipated that increasing interest in these classes will be aroused next year.

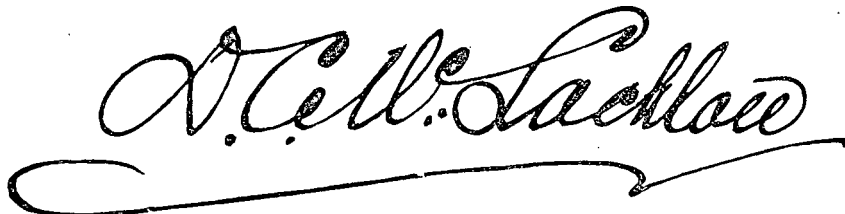

To meet the constantly-increasing demand for information on all branches of agriculture, it has been found necessary to greatly enlarge the *Agricultural Gazette*. The extent of this development, so far as space is concerned, may be seen from the fact that articles published in 1898 covered 1,463 pages, as against 937 pages in the previous twelve months. The subjects dealt with cover almost every topic of agricultural interest—both scientific and practical.

The sound knowledge and unremitting enthusiasm of the staff of the Department in furnishing reliable information have won for the *Gazette* a firm footing in the appreciation of all engaged in the development of agricultural resources, and it is evident that the publication is regarded by both the experienced farmers and beginners as an indispensable work of reference.

Much of the success achieved is due to the excellent illustrations prepared by the Departmental artists, Messrs. Grosse, Burton, and Chambers, whose technical knowledge of the subjects treated, no less than the faultless execution of their drawings, does much to enhance the value and attractiveness of the *Gazette*.

To the Government Printer and his staff are also due the best thanks of the Department for assistance they willingly render to maintain the excellence of the publication and punctuality of issue.

I have the honor to be,  
Sir,  
Your most obedient servant,

Under Secretary for Mines and Agriculture.

## Report of The Chief Inspector of Agriculture.

Sir,

In submitting the accompanying annual reports of officers connected with the Department of Agriculture, I may state that the work performed by them, so far as it was possible to come under my observation, has been carried into effect with the one great desire to bring credit on the Department by applying their best endeavours to their several duties; and I may state that neither time nor trouble has been spared, nor has the limit of official hours been considered, when special efforts were needed.

Owing to the exceeding dry seasons experienced, chiefly at the Experimental Farms at Wagga and Bathurst, for the last four years, the farm-work has been very disappointing and heart-breaking to the managers; and the work of initiating the Coolabah Farm in the dry West Bogan country has been most difficult and arduous, such as only those who have experienced some of the drawbacks there can possibly understand. Should success attend future experiments to be carried out at Coolabah, numbers of settlers and future settlers will be greatly benefited. Keen interest has been aroused in the operations at this farm, and the experience already gained will, I think, be productive of good results in the future.

The Bathurst Farm is gradually developing satisfactorily, notwithstanding unfavourable seasons, and the fact that the best portion of the farm has not been available for cultivation in consequence of its continual use by the public as a training ground for racehorses. I may state that this is the particular portion originally selected for the purposes of an experimental farm. I am of opinion that in the course of a year or two the results of the work of this farm will prove valuable as demonstrating the uses to which such land as this can be put, for it is typical of a vast area of country in the district. I think the orchard will prove highly satisfactory, as, at present, the fruit-trees are making good progress. If successful, it will show the value of such land as that on which the trees are planted and the climate for the production of fruit of high quality.

At Wagga the drought affected the crops most disastrously. It was most unfortunate for Mr. M'Keown to be placed in charge at such a time, and coming direct from the Wollongbar Farm at the Richmond River, the best-watered and most luxuriant district in the Colony.

Notwithstanding the drought at Wagga it is gratifying to mention that the orchard there has, throughout the season, proved highly satisfactory. The fruit-trees and grape-vines have been most healthy, with good foliage, and some show of fruit. The crop of sultana raisins will, probably, prove a remarkable one, and will show how well suited this grape is for the district. The excellent condition of the orchard is due to perfect cultivation and good management.

By constant cultivation and attention, the numerous varieties of wheats which have been sown in connection with Dr. Cobb's experiments, which have been carried on here for several years, have been kept growing as satisfactorily as possible under the trying conditions of an unpropitious season.

The wheat experiments for the future will be under the management of Mr. W. Farrer, and will be conducted in such a system as should prove of inestimable value to this and, I think, to the other wheat-growing colonies. In making or breeding new wheats with a view to improving the strength of flour, Mr. Farrer will also endeavour to obtain wheats suitable for dry climates which will resist a considerable degree of drought; and he considers the Coolabah farm to be well suited for carrying out valuable experiments with such varieties.

As, in all probability, we may soon have a large surplus of wheat for exportation, the value of growing wheats of the best quality must be obvious; so the more our wheats are improved, not only are we more likely to be successful in competing against the world, but the better the food will be for our own consumption.

It may be inferred from this that the work Mr. Farrer is now engaged upon is about as important and valuable as any work which the Department can take in hand.

At Wollongbar, the semi-tropical experimental farm, the progress is satisfactory, and of great interest to the farmers of the district. Here numerous tropical fruits, sugar-canes, grasses, fodder plants, cereals, pulses, fibre plants, coffee, and, indeed, any plants likely to prove useful, are sown or planted to test suitability of soil and climate for their requirements. As the dairying industry in this district is becoming more and more prominent, the experiments with fodders will prove of great interest and benefit to the settlers. As it is not unlikely that the fruit industry may in the course of time develop to some extent, the trials with pineapples, bananas, oranges, mangos, and other tender fruits should prove of considerable value.

At the Hawkesbury College farm considerable improvements have been effected, and the area of land cultivated very much increased, and thus giving the students there an opportunity of obtaining a thorough acquaintance with practical farm work. The orchard has been also much improved, as well as the vegetable garden. Extensive areas of the bush land to the east of the College buildings have been cleared, thinned out, and fenced into paddocks for stock, chiefly sheep, which are likely to succeed better here, being dry and elevated, than on any other part of the farm. The farm stock has been much improved, but the dairy herd is still capable of further improvement. The collection of pigs of various breeds is a magnificent one, probably second to none anywhere; and as pig-rearing is likely to become of great dimensions in the Colony, the instruction and information to be obtained here is of considerable value. The progeny of the pigs is eagerly bought up, and thus highly improved stock will be distributed throughout the Colony.

The crossbred sheep reared here are thriving well, and are giving great satisfaction; and when the new paddocks are quite ready they are likely to prove even more satisfactory.

The students whose privilege it is to study here have extraordinary facilities presented to them for gaining knowledge, that must be of vast benefit to them in the future when they settle on their own farms. Even the most indifferent learn something useful in spite of themselves. I have met old students who went to this College with apparently no other object than passing the time, but who, finding it to their benefit afterwards to settle on the land, are thankful indeed for the object lessons they might have made more use of than they did at the time, and who now take every opportunity of visiting the farm to keep in touch with improvements that may be going on.

So

So far, the work on our various experimental farms has, to a great extent, been pioneer work, and thus necessarily purely scientific experiments have, to only a very slight extent, been entered upon; but the necessity for original investigations is only too apparent. There is an enormous field open for this work, which must only be carried out with very great exactness and care. At present we know but little about our soils, and I think I am safe in saying we know nothing about the temperatures of our soils; little about evaporation from various kinds of soils, or how best to prevent and overcome it; little or nothing about soil nitrification, or how to improve it;—indeed, the questions to be determined seem almost endless. However, as soon as Mr. Guthrie, our Chemist, can obtain the assistance he needs, he will take in hand the working out of many unsolved problems, the solution of which may prove of incalculable benefit to the Colony.

The initiative administration of the Vegetation Diseases Act proved most arduous and difficult work, owing to opposition on the part of fruit and plant importers; but by firmness on the part of the Department to carry the law into effect, supported by public opinion, all opposition and misunderstanding soon melted away, until the greatest harmony prevailed, and those who were most bitter, and who suffered losses, soon understood that the necessity for such an Act existed. Should the Act be amended so as to enable the Department to take action with affected orchards and gardens in the Colony, so as to prevent the spread of plant diseases, and protect those who are endeavouring to rid themselves of pests without avail, it is not improbable that immense benefit to our fruit-growers will result.

The action taken in administering the present Vegetation Diseases Act has effected a vast amount of good in directing attention throughout the colonies to the enormous development of plant diseases, and the necessity to make vigorous efforts towards stamping them out.

The Inspectors under the Vegetation Diseases Act are much indebted to the Collector of Customs, Mr. N. Lockyer; the Chief Inspector, Mr. Baxter; and all the officers connected with imports, for their obliging assistance on all occasions of fruit inspection, and for advice which has proved most useful.

Efforts have been made towards encouraging the establishment of Farmers' Institutes, or Clubs, throughout the farming districts; but owing either to want of full information showing the value of such institutions, or else to apathy, so far but little progress has been made; but I have no doubt that in time, and when more information can be spread, the farmers, especially in the most thickly settled districts, will take up the matter warmly.

In conclusion, I beg to invite attention to the departmental medium for distributing a great deal of valuable information throughout the Colony—the *Agricultural Gazette*, edited by Mr. W. H. Clarke—a publication which, I think, would reflect credit on any Agricultural Department in the world. The demand for this journal has increased largely, and, judging from the replies received from recipients, the information supplied has been largely availed of, and where advice has been faithfully followed satisfaction has been the result.

The Under Secretary for Mines and Agriculture.

I have, &c.,

WALTER S. CAMPBELL.

Mr. Principal George Valder to The Under Secretary for Mines and Agriculture.

Dear Sir,

Hawkesbury Agricultural College, 31 December, 1898.

I have the honor to submit the Seventh Annual Report, together with the reports of the outside Examiners to the College.

Since I accepted the appointment as Principal, a large number of improvements have been made, and I have to thank you for your hearty co-operation and able assistance in this direction.

The College is full, and the outside branches are in a very efficient state. Provided we have a fair season, there is every prospect of a very successful year.

Yours, &c.,

GEORGE VALDER.

#### VISITORS TO THE COLLEGE.

The number of visitors to the College and Farm has greatly increased during the year, and one and all have expressed appreciation of the valuable work being carried on at the Institution.

#### CORRESPONDENCE.

The correspondence on all subjects has also very much increased during the year. From all parts of the Colony, and outside it also, we receive inquiries of the most urgent and earnest nature, and in all cases these have had my prompt and best attention.

#### OFFICE WORK.

The work in this department has so much increased that it was found advisable to appoint a junior clerk as assistant to our Registrar, Mr. S. F. Adams.

The work entailed in checking the operations of the various branches is very trying; but, notwithstanding this, the books, etc., have been brought up to date, and the work is carried out in a most efficient manner.

#### MEDICAL OFFICER'S REPORT.

I have the honor to report that, from 1st July, 1897, to 31st December, 1898, the general health of the students has been good. During the summer of 1898, a mild epidemic of measles occurred, apart from which only minor ailments came under notice.

The utility of the new hospital was made apparent during the measles epidemic, when each case, as soon as discovered, was removed to hospital for isolation and treatment. In my opinion, the early removal and isolation of the infected cases, and the thorough disinfection of their clothing and rooms, served successfully to keep the epidemic in check. No death occurred.

In this connection I would beg to urge the installation of the electric light and an efficient hot water supply to the hospital, as well as telephonic communication between the hospital and the main College building, as the absence of these caused much inconvenience to the nurse in charge of the patients.

I have, &c.,

JOHN GIBSON, M.D.

THE

## THE COLLEGE.

Acting partly on suggestions made by a Board appointed by the Department, by the officers of the College, and partly by my own ideas of how the class work should be conducted, I made a number of alterations in the system in vogue when I took charge of the College. With the permission of the Minister the main lecture-hall was lengthened, and the lower part of the room utilised as a botanical laboratory, and the lecture-hall used by the Science Master was also lengthened and converted into a chemical laboratory. This permitted of the students receiving more practical work in connection with their studies, demonstrations and laboratory work being given in conjunction with the lectures.

*Science Master's Report.*

The Science Master, Mr. E. C. Wood, M.A., B.Sc., B.E., reports as follows:—

The most important event to chronicle has been the extension and reorganisation of the Chemical Laboratory, whereby its sphere of usefulness will be greatly increased, and it will become better adapted for the instruction of the students.

The Chemical Department, as now arranged, includes the students' laboratory—a room about 60 feet x 25 feet—the Science Master's laboratory, an office and balance room, a room for preparing samples, as well as provision for stores, preparation of reagents, &c. The large room serves the double purpose of lecture-hall and laboratory, but in designing the alterations I have considered the practical bench work to be of first importance. There are thirty-six benches, and although this number is unduly large for one instructor, and will probably be always filled by the class of first-year students, the appointments are fairly good. Each student has a set of about twenty of the most common reagents, a drawer with lock, and a bench area of 3 ft. 9 in. x 2 feet, there being one sink and water tap and one acid pot between two students. Behind each student is a shelf for larger pieces of apparatus. At present spirit lamps are being used, but great improvement will shortly be effected by the installation of a gasolene plant, when each bench will have a Bunsen burner, the flame of which can be regulated very advantageously.

Along one side of the room are arranged six draught chambers for acid fumes and nauseous gases, and on the other provision is made for six students' chemical balances, whilst four sets, fairly replete with reagents not so often used, are located at intervals in the room. A large quantity of chemical apparatus is expected at an early date from London.

Provision is made for the training of students in the analyses of a good variety of chemical substances. After passing through a short general course, in which they acquire some manipulative skill in the use of apparatus, and become conversant with the properties and uses of chemical reagents and processes, they may turn their attention to soils, manures, dairy products, fodders, and many other subjects, which will afford the student a wide field of choice for any particular work he may wish to take up.

The laboratory notes made by each student throughout the session are handed to the Science Master on alternate Saturday mornings for award of marks as part of the fortnightly class examination.

It is important to note that the two years' laboratory practice is designed as a regular course in chemical analysis; nevertheless, the exercises by which such a training is imparted will always be chosen when possible to bear directly upon agricultural practice. Above all, the student will be required to understand the reasons for all his manipulations, and not to expect the attainment of useful results by mere mechanical routine.

There are at present thirty-two students of the first-year going through the practical course, and nineteen of the second. It has been somewhat difficult to obtain the requisite number of sets of apparatus for the students, each providing his own. Durable pieces of apparatus, such as tripods, retort stands, Bunsen burners, &c., as well as the more expensive instruments, occasionally are lent by the laboratory.

The system of teaching agricultural chemistry now being adopted is that which I planned and commenced at the inauguration of the College in 1891, but which, after some twelve months trial, had to be abandoned for want of better accommodation for a laboratory.

The reorganisation of the Chemical Department of the College was decided upon two years ago, valuable assistance being rendered by Mr. F. B. Guthrie, F.C.S., and my designs—the working drawings of the necessary extensions and appointments of the laboratory—were submitted forthwith, the improvements being commenced last August; and though several of the appointments are yet incomplete, a very good beginning has been made at the bench work.

The courses of lectures and experimental demonstrations on Theoretical Chemistry have been delivered on the same general lines as formerly, many geological matters being included in addition. Much the same may be said of Applied Mechanics.

The instruction in surveying has been as usual almost entirely field work, including many important improvements to the College Estate, viz.:—

1. Levels for construction of Avenue-road in front of College—the plotting, grading, and quantities, being also carried out by students.
2. Setting out lines for several miles of alterations of fences.
3. Drawing plans for swamp localities.
4. Main drain, 87 chains in length, from swamp in front of College through calf paddocks to the Glebe.
5. Level section for widening main drain from Glebe towards Ricaby's Creek.
6. Level section for continuation of same.
7. Drainage of low land near entrance gate into Raleigh Swamp.
8. Level section from Raleigh Swamp to Glebe.
9. Various trial levels for the general drainage system of the estate.
10. Surveys for improvements of a minor nature, measuring up of clearing contracts, &c.

Working sections of the above levelling were made, and contracts have been let for the construction of most of them. The total length of level sections done was upwards of 4 miles.

My thanks are due to Mr. E. H. Gurney, of the Department of Agriculture, for his able assistance in carrying on the lectures in Chemistry, &c., during the absence of the Science Master from the College through illness.

*The English Master's Report.*

The English Master, Mr. C. T. Musson, F.L.S., reports as follows:—

*Lectures—Laboratory Work.*—Consequent upon instructions received during 1897, my method of work has, during the past session, been somewhat changed. The class-room having been enlarged, the south end is now used as a laboratory.

Fifteen students' microscopes were provided early in the session, a number increased to thirty during May. I have consequently been enabled to devote a considerable amount of students' time to the examination of crop-plants and their diseases, the amount of lecturing being reduced. A good deal of work has also been done out of doors.

I propose to give students full advantage of this increased practical laboratory work, and continue Botany and Vegetable Pathology into the second year instead of, as heretofore, confining it to the students' first year; whilst Entomology, instead of coming only during the second year's residence, will be taken during both years.

It must always be remembered that for each subject a considerable time is taken up in working through the necessary elementary matter, students coming to us quite unprepared for the Biological subjects. It is also greatly to be deplored that almost without exception students have but a very remote idea how to describe and draw the simplest objects, as observed under microscope. How to observe and describe correctly is one of the chief objects aimed at.

The classes are large; therefore, it is well nigh impossible for one person to give full attention to all students. It is easy to lecture to a large number, but when it comes to individual attention, only a limited number can receive proper attention, or the greater number will not receive enough. It may also be remarked that, owing to there being no entrance examination, a certain proportion of our students are really not able to cope with the inside course for lack of early schooling.

Notwithstanding the above ever-present drawbacks, steady work has been done, and students generally, I believe, take more interest in it than when consisting more largely of lectures.

*General—Seed Testing.*—A commencement has been made with the systematic examination and testing of all seed used on the farm. Carried out with the help of students, this work, whilst emphasising the absolute necessity of using clean, pure, and fertile seed, gives ample opportunity for the study of plants during extreme youth—a critical time, the details of which should be thoroughly understood.

*Teaching Collection.*—For want of proper conveniences we have not yet been able to form a permanent teaching collection of objects in Economic Botany and Entomology. Our working collections are however renewed from time to time. It is proposed to fit up with as little delay as possible store and exhibition cases for the reception of necessary objects, e.g. :—Weeds, seeds, economic plants and their products, models, injurious and useful insects, and other objects useful for demonstrating to students.

*Pulping Machine.*—A small pulping machine, such as would be suitable for extracting starch from arrowroot, is being obtained.

*Lantern Work.*—A few lantern lectures were given during the last session of 1897. Some botanical slides have been obtained by purchase, together with fittings, for the Biological Laboratory.

*Photography.*—A dark room has been fitted up for photographic work.

All appliances in my charge are in good order.

*Meteorology.*—The meteorological observations have been extended. Early in the present year the Government Astronomer supplied us with—

- (a.) An Anemometer, which has been fitted on a 25-foot revolving pole.
- (b.) An Evaporimeter for taking daily observations on evaporation from a water surface.
- (c.) Minimum grass thermometer.

In addition to the above and the old instruments, four thermometers are in use for taking soil temperatures at depths of  $\frac{1}{2}$  inch, 6 inches, 1 foot, 2 feet. Observations are taken at intervals every day. The results will be prepared for publication as soon as the records cover a complete year. The observations lead up to matters of considerable interest—for instance, the giving of correct information as to when it is time to plant tobacco, melon, maize, and other seed requiring more heat than is necessary for cereal germination, and the relation of rainfall to soil temperature. Below are the yearly tables of temperature and rainfall made up to end of 1897.

It will be seen that the summer of 1896–1897 was the driest we have experienced since 1893. The past summer also commenced dry; but December gave good rains, which were followed by good falls early in the present year. The winter of 1897 was warmer and the summer of 1896–1897 cooler than those of the preceding year, the yearly mean temperature, however, working out a little higher than any of the years tabulated.

## THE FARM.

The area of the land attached to the College is 3,430 acres. During the past year some 300 acres were cleared by contract, making a total cleared of 2,180 acres. The 1,250 acres uncleared land was fairly heavily covered with green timber, and the greater portion of it densely covered with undergrowth. In order to make use of this land, it was decided to remove the scrub and ring the worthless timber, at the same time leaving shelter belts at exposed points. Some 300 acres have already been done, with the result that the grass is rapidly improving. When the whole of this land is scrubbed and rung, it will be utilised for rearing cattle and sheep for the use of the College, which will mean a considerable saving. With this object in view, flocks of Romney Marsh and Shropshire sheep have been started; the former numbers about 300 animals and the latter about 200. This number will be gradually increased to about between 500 and 600 ewes of each breed. Arrangements have been made to hurdle these sheep on various fodder crops on a small scale on the experimental plots, and on a larger scale on the farm crops. As a rule the native herbage, which largely consists of couch grass, will carry sufficient sheep, and if "topped off" in the manner described above we can turn out first-class mutton sheep. Besides this, it is proposed to keep a small herd of beef cattle, such as the "Devon," for breeding steers, which will be fattened in a somewhat similar manner to the sheep. This breeding, rearing, and fattening of sheep and cattle will not only mean a considerable saving in our meat bill, but will give the students much more extensive training in these important sections of their work. Besides this, a small high-class stud of each breed will be kept, and will furnish some few animals which can always be sold at remunerative prices. It will also allow of exhaustive experiments being carried out as to the feeding value of many of our best known forage plants.

With the view of improving our pastures, the grass paddocks are gradually being ploughed up and sown with various crops for a few years; and they will then be laid down to introduced grasses and fodder plants, such as lucerne, sheep's burnet, &c. As soon as the grasses or fodder plants show signs of wearing, they will again be ploughed up and cropped. This system of alternating crops with pasture, and feeding off both crops and pasture with cattle, sheep, and pigs, is a very suitable one for our poor sandy lands and should do much to improve their carrying capacity. The grass on the uncultivated land is almost worthless, the soils being very poor and sour. After about four year's cultivation, however, the soil vastly improves in feature and quality, especially if crops have been fed off on it, and if then sown with grasses it yields a really good herbage for some few years.

The Farm Foreman, Mr. George Cobb, reports as follows regarding the various crops:—

Wheat, 1897 Harvest.—107 acres cut for hay averaged slightly over  $1\frac{1}{2}$  ton per acre. The season being a good one, it was decided to leave a small portion and cut it for grain with the following result:—8 acres White Lammas averaged 31 bushels per acre; 14 acres Steinwedel averaged 17 bushels per acre.

The latter crop was sown very late and did not fill out well; hence the comparatively low yield.

Wheat, 1898 Harvest.—The season was not quite so good, and the yield was therefore light. 196 acres cut for hay averaged 25 cwt. per acre; 14 acres cut for grain yielded 18 bushels per acre. Twelve picked varieties were under trial, and of these, Steinwedel and Allora Spring were the only ones that were fit to cut for grain. For hay, these two varieties, with Blount's Lambrigg and White Lammas, gave the best results.

Oats, 1897 Harvest.—A very good hay crop was obtained, nearly equal to the wheat hay, 66 acres being cut for an average of nearly  $1\frac{1}{2}$  ton per acre. White Tartarian, Potato, Dun or Grey, and Algerian proved the most suitable varieties.

Oats, 1898 Harvest.—The dry weather much affected the crop, 65 acres cut for hay only yielding about 1 ton to the acre. Another paddock of 52 acres did not grow very strongly, and it was, therefore, grazed off by the milch cows.

Barley.—Fairly large areas of Cape Barley were grown, the greater portion being mixed with tares and cut for feeding to the milch cows, the average yield being from 6 to 8 tons per acre. One crop of 11 acres was cut for seed and averaged 27 bushels per acre.

Maize, 1897 Harvest.—The season was a good one for this crop and the following yields were obtained:—

56 acres,	Hawkesbury Champion,	averaged 35 bushels per acre.
30 "	White Horse Tooth	" 31 " "
36 "	Early Mastodon	" 40 " "
23 "	Red Hogan	" 32 " "
14 "	Golden King	" 37 " "

The seed was sown with the "Farmer's Friend" corn dropper, using about 8 lb. of seed per acre. The soil being very poor, a fairly heavy dressing of manure was applied as follows:—1 cwt. bone-dust, 1 cwt. Sugar Co.'s No. 2,  $\frac{1}{2}$  cwt. kainit,  $\frac{1}{2}$  cwt. blood manure; cost, 14s. 3d.

About 60 acres of maize was cut for green food and ensilage.

The 1898 season was an exceptionally dry one, and nearly all the maize crops had to be cut for green fodder and ensilage, the only variety that matured well being Early Mastodon. This gave a yield of 30 bushels per acre. The early sown crops again proved by far the best.

#### FODDER CROPS.

18 acres Early Amber cane cut for ensilage.

10 acres Kaffir corn cut and fed green to milch cows.

9 acres Empie or "Planters Friend," cut and fed green to milch cows.

10 acres *Sorghum saccharatum* cut and fed green to milch cows.

Seed, 6 lb. per acre, sown with "Farmers Friend" double row Steel Beauty.

Manure, same proportions as for maize; sown broadcast. These gave an average yield of 15 tons per acre, Early Amber cane topping the list. 250 tons lent for silage; balance chaffed and fed to milch cows green.

Water-melons.—This crop did remarkably well. 10 acres sown; 1,300 dozen sold, averaging 2s. 3d. per dozen. In addition to this, a great quantity were used for home consumption, &c., many single melons turning the scales at 48 to 54 lb. each.

Preserving Melons.—14 acres of this crop yielded well. A quantity sold at 18s. per ton, and the balance used for feeding to cattle, sheep, and pigs.

Pumpkins.—35 acres turned out light. 150 dozen sold, at 2s. 6d.; remainder used for feed.

The number of working horses has been increased by purchasing, and also by breaking-in some of the foals bred and reared on the Farm. These latter have turned out so well that it has been decided to breed sufficient for our own requirements and a few for sale.

A number of improved farm implements have been obtained, including multiple and rotary ploughs, drills, and maize harvesting machinery.

Thanks to the blacksmith, our implements are all kept in good condition, although the wearing action of our soils necessitates constant repairing. I am pleased to state that the diligence and conduct of the students has been satisfactory, with very few exceptions.

#### EXPERIMENTAL PLOTS.

Some very important changes were made in this section of the Farm, the greater portion of the old plots being abandoned, and a large area in front of the College being utilised for experimental work. This admits of the experiments being carried out on a very much larger scale, the total area of the plots being now increased from 14 to 120 acres.

A road was constructed from the College to our boundary opposite the railway gates, and passing right through the centre of this area. On each side of this road the land has been laid out in 1-acre blocks, and behind these into 4-acre blocks. The whole of these have been utilised for experiment work, the greater number of the blocks being sown with different varieties of fodder crops. The land is mostly of very poor quality, and was swampy and uneven. By cutting large surface drains, however, the surplus water has been drawn off; and by using the soil taken out of the drains to fill up the holes the land has gradually become fairly level. Thanks to a heavy fall of rain we were enabled to give the whole of this land a good ploughing. It was then laid off in plots, and crops were sown as rapidly as possible. It was some time, however, before we could make much headway, as the soil was in a very sour condition, and most of it was full of couch-grass.

By sowing the crops in drills, and cultivating well between the drills during the summer months, the couch-grass has become nearly eradicated, and the soil sweetened.

The laying out and planting of these plots has greatly improved the view, both from the College and the town; and when the trees which have been planted on each side of the new road grow up, the approach to the College should be a very pretty one. Besides this, the numerous plots on each side, clearly labelled with the name of the crop in each, will prove instructive to visitors, etc. The whole of this portion of the Farm is in charge of the Experimentalist, Mr. Percy Wicken, who reports as follows regarding the various experiments:—

#### Maize.

In the acre, four of the best varieties were tried. They were sown in drills 4 ft. 6 in. apart by 16 inches in the drill, using the "Farmer's Friend" maize drill. They were manured with a mixture of bone-dust, superphosphate, blood manure, and kainit, using 4 cwt. per acre, at a cost of 18s. 2d. This manuring is rather heavy, but on poor soils it pays well, as will be seen by the results obtained—

Golden King	...	...	...	...	58	bushels per acre.
White Horse Tooth	...	...	...	...	52 $\frac{1}{2}$	" "
Ninety-day	...	...	...	...	46	" "
Golden Drop	...	...	...	...	41	" "

In the small plots, seventeen varieties imported from the United States were tried, and some few of them gave very satisfactory results. Seed of these has been saved, and will be tried in the larger plots, during the coming season. Many of the imported varieties are unsuitable for our market, as they are shallow grained, whereas the long grains are preferred here.

Sweet or Table Corn.—Several varieties were under trial, and gave heavy yields; but in consequence of rather slow growth, the cobs were not considered of good quality as a vegetable. In most seasons very fair table corn is grown here, but it requires forcing.

Pop-corn.—Three varieties were under trial, and yielded well; but at present the demand is very limited.

Maize for Ensilage.—A number of the best varieties were under trial, sown in drills at different distances apart, those at 3 feet giving by far the best results. The yield varied but little, the average being about 7 $\frac{1}{2}$  tons per acre; but the crops sown 3 feet apart gave the best quality fodder.

*Sorghum.*

*Sorghum.*

A large number of varieties of sorghums have been grown for the purpose of testing the most suitable varieties for this district, and also to test which varieties are most suitable for cattle. For this purpose I have supplied to the dairy 135 tons of sorghum, etc., during this season, of which a large quantity was made into ensilage. The large circular silo was filled with sorghum from the experimental plots, and contains 86 tons of sorghum, which was chaffed before being put into the silo. Owing to the dry weather experienced during the spring months we were unable to harvest the sorghums early enough to obtain a second crop, the frost cutting it down before it was sufficiently advanced, the only exception being the Early Amber cane, which yielded a second crop of 5 tons to the acre. It was the first one cut.

As will be seen, the saccharine varieties yielded a much heavier crop than the non-saccharine, and they are much preferred by stock. The following are the yields per acre:—

Saccharine Varieties.						tons	cwt.
Early Amber Cane	...	...	...	...	...	16	10
Black Sorghum	...	...	...	...	...	15	16
Planters' Friend	...	...	...	...	...	7	17
Early Orange Cane	...	...	...	...	...	7	14

Non-Saccharine Varieties.						tons	cwt.
Red Dhourra	...	...	...	...	...	11	8
White Kaffir	...	...	...	...	...	8	2
Red Kaffir	...	...	...	...	...	8	1
Jerusalem Corn	...	...	...	...	...	4	5
Egyptian Corn...	...	...	...	...	...	4	1
Brown Dhourra	...	...	...	...	...	3	8
White Dhourra	...	...	...	...	...	3	7

*Millet.*

One acre each of the following were grown:—White, yellow, and red French Millet, Pearl Millet, Panicum Italicum, Golden Wonder Millet, Japanese Millet, Saltzer's Dakota Millet, and Black Hungarian Millet.

The Hungarian Millet is the most suitable for fodder. It can be used either as a green fodder or be made into hay and chaff, and is a large yielder of seed. We obtained 650 lb. seed per acre, in addition to a large quantity of straw.

The French Millet, comprising the white, yellow, and red varieties, did fairly well, the white giving the heaviest crop. They are not profitable to grow for fodder, as the yield per acre is very light; but heavy crops of seed are obtained.

Pearl Millet has done very poorly this year, only growing about 2 feet high, although last year we had some 16 feet high. The new land does not seem to suit it. The stock prefer the finer-stalked millets, and do not take to Pearl Millet nearly as well as to maize or sorghum.

Panicum Italicum yields a very large and showy seed head. Would be worth growing for seed, but is not suitable for green fodder.

Golden Wonder Millet, Saltzer's Dakota, and Japanese are improved varieties of millet, and yield very large seed heads. They are much heavier yielders than the ordinary Hungarian Millet, but not so good for hay, being too coarse. We were fortunate in being able to save several hundred pounds of this seed for distribution.

Black Hungarian Millet.—This was sent to us from South Australia. It is a very dwarf variety and not worth growing.

Johnston Grass or Evergreen Millet.—A 1-acre block of this has been laid down during the season, and several cuttings were taken off it during the summer. By cutting or feeding off just as the flower heads develop, we find no difficulty in keeping it in check, and it is useful to us for cattle and sheep feed in times of drought.

*Root Crops.*

Potatoes.—Forty-five varieties were under trial. The only varieties that seem to yield a crop about here are Early Rose, Brownell's Beauties, and Beauty of Hebron; but on our poor sandy soil we do not get satisfactory potato crops. A piece of the better class of red land is being prepared for potatoes, and on this we expect to get much better results.

Jerusalem Artichokes.—An acre-plot was sown in a rather poor piece of soil, and although the season was a dry one a yield of about 3 tons was obtained. The tubers were principally used for feeding to pigs, and gave very satisfactory results.

Sugar Beets.—An acre-plot of beets was sown, half each Rich French and Rich German sugar beets; but in consequence of the dry weather, the roots obtained were small and not suitable for sugar extraction. They proved, however, suitable for feeding to dairy cattle.

Mangels.—An acre-plot of these was sown, half each Long Red and Yellow Globe. They did fairly well, and, yielding 9 tons to the acre, were used for feeding to dairy cows, which do well on them. The seed was sown on ridges, and the young plants kept as clean as possible, by cultivating between the ridges with Planet junr. horse-hoes. Had the land been subsoiled, the yield would no doubt have been much increased. Mangels are worth 30s. per ton, and constitute a good payable crop, and cannot be excelled for dairy use.

Turnips.—An acre of turnips was sown with twenty-seven varieties of white and Swede turnips. A quantity of Swedes were sent to market and realised high prices. Turnips occupy the ground for a very short time. Ours were sown in February and harvested in May. Of the cattle turnips, White Pomeranian Globe came at the head of the list, yielding 14 tons 6 cwt. to the acre. Of the table turnips, Early Snowball was first with 10 tons 13 cwt. per acre. The Swedes were a very even crop, yielding from 8 to 10 tons per acre, Anderson's Imperial and Champion Purple-top doing best. Kohl

Kohl Rabi.—A row each of the two varieties, green and purple, were grown and used as vegetables.

Chicory.—An acre of this was sown, but did not do well, and was ploughed in.

Sweet Potatoes.—A small piece of land, about a quarter acre, was sown with sweet potatoes, and they did remarkably well. Next year I hope to be able to plant a much larger area with this crop, as they take the place of ordinary potatoes, and give a heavy yield. We dug  $2\frac{1}{2}$  tons of potatoes off the  $\frac{1}{4}$  acre of land. The land was almost pure sand, and was ridged up into hills by means of the corn-hilling disc, the hills being 3 feet apart. The cuttings were planted in the top of the hill, and took root and commenced to grow immediately. The cuttings were planted out during December, and some as late as 3rd January, and the first potatoes were dug for the Show on 1st April, and after that we had a regular supply. They were the white variety. The later sown cuttings did not do nearly so well as those sown earlier.

#### *Pumpkins and Squashes.*

A 4-acre block of pumpkins and squashes was sown, and contained forty different varieties, the results being highly satisfactory. Pumpkins are an easy crop to handle, as they can be taken straight from the field to the train, and require no storing or after handling.

I am glad to say that, in spite of the poor soil, we have cleared a profit of £19 6s. 8s. from the 4 acres, after paying all expenses in connection with the crop. The total weight of pumpkins, &c., was 47 tons. The results are as follows:—

Cost of ploughing, discing, harrowing, rolling, manure, striking out drills,	£	s.	d.
working holes, seed, and after cultivation, 4 acres	...	...	...
Harvesting and carting to station	...	...	...
Freight	...	...	...
	£23	1	4
Value of pumpkins sold—net returns	...	...	...
Less cost of crop	...	...	...
	£19	16	8

The land has since been ploughed up and subsoiled ready to lay down with lucerne.

The following are the varieties of pumpkins and squashes grown:—

Pumpkins.	Squashes.
Cattle Rios.	Hubbard squash.
Large cattle pumpkins.	Chinese Scarlet Sugar squash.
Turk's Head pumpkin.	Sugar squash.
Ironbark pumpkin.	Ohio squash.
Small Button pumpkin.	Pike's Peak squash.
Golden Oblong pumpkin.	Brazil Sugar squash.
Mauled Prize Pot-iron pumpkin	Warren squash.
Crown pumpkin.	Mexican Banana squash.
Calhoun pumpkin.	Chicago Warty Hubbard squash.
Connecticut Field pumpkin.	White Pineapple squash.
Hundredweight pumpkin.	Prolific squash.
Sutton's Mammoth pumpkin.	Fordhook squash.
Japanese pumpkin.	Delicata squash.
Banana pumpkin.	
Large Cheese pumpkin.	
Vert a Gris pumpkin.	
Vert d'Espagne pumpkin.	
Olive pumpkin.	
Portugal pumpkin.	
Jam pumpkins.	

The above pumpkins, &c., comprise all shapes, colours, and sizes. A large number were shown at the various shows at which the College exhibited, and excited much favourable comment.

Specimens of Sutton's Mammoth pumpkins were shown at the Sydney Show, weighing 116 lb. and 124 lb. each; several varieties were shown weighing less than 1 lb., and the balance varied between the two.

The vines were attacked by caterpillars early in the season; and just as we were going to spray them the rain came and killed the grubs, and we were not troubled any further.

The bed was sown on October 1st, and the first ripe ones—the pineapple squash—were pulled on January 19th, and used on the table.

#### *Marrows and Bush Squashes.*

A few rows of the following varieties were grown for Show purposes and for table use; these are apart from the 4-acre block of pumpkins:—

Yellow-Indian marrow.	Custard squash.
Green Bush marrow.	Summer Crookneck squash.
	Delicata squash.

*Melons.*

*Melons.*

Water-melons.—I planted a 4-acre plot of water-melons containing the following varieties :—

The Dixie.	Jaffah melon.
Red-seeded Sugar melon.	Ruby and Gold melon.
Cuban Queen melon.	White Gem melon.
Green Round melon.	Grey Monarch melon.
Kolb's Gem melon.	Red-seeded Vauclase melon.
Volga melon.	Kleckley's Sweet melon.
Indian water-melon.	Cole's Early melon.
Green and Gold melon.	Wonderful Sugar melon.
Ice Cream (white-seeded).	Monte Christo melon.
American Champion melon.	Florida Favourite melon.
Black Spanish melon.	Flinderwain melon.

The Cuban Queen proved the best for market purposes, as it is a good carrier and sells well. Other good sorts which paid well were the Ice Cream, Dixie, and Kolb's Gem.

The Volga and White Gem, which are white skin round varieties, are good carriers, and can almost be peeled and eaten like fruit. They contain very small black seed, and are splendid quality melons.

*Preserving Melons.*

An acre plot of these were grown with highly-payable results. They are very little trouble to plant and soon take possession of the ground, and when ripe have only to be loaded and carted to the station. I simply planted these like maize, as it is not necessary to work holes, &c., the same as for melons and pumpkins. The drills were struck out 14 feet apart by the drill plough, and two seeds were dropped in the drill every 6 feet and covered with hoes.

The land was disced twice between the rows before they started to run, and this was all the treatment they received.

I carted 33 tons melons to the railway from this acre block, and there were plenty of damaged ones which were used for pigs or cattle.

	£	s.	d.
The cost of ploughing, discing, harrowing, rolling, striking out drills, manure, and sowing seed, was ... ..	1	7	6
Cost of harvesting and carting to station—33 tons @ 2s. ... ..	3	6	0
Freight ... ..	6	12	0
	11	5	6
Actual cash received from 33 tons, @ 18s., was ... ..	29	14	0
Less—cost of production... ..	11	5	6
Profit per acre ... ..	18	8	6

Considering that they were grown on a very poor sandy soil, this is a most satisfactory result.

The following were the varieties of preserving melons grown :—

Colorado Gem.	Red-seeded Preserving.
Snow Preserving.	Large Green Preserving.
White Round.	

A large number of melons were also used to exhibit at the various Agricultural Shows, and a quantity of seed saved for future use.

*Rock Melons.*

The following varieties were grown on a small scale :—

Mango melon.	Japanese Rock melon.
Osage Musk melon.	Banquet Rock melon.
New Tip-top Musk melon.	Emerald-green Musk melon.
Nutmeg Musk melon.	Banana Rock melon.
Shamman melon.	Perfection Musk melon.
Jenny Lind Musk melon.	Sutton's Eureka Musk melon.
Calabash Rock melon.	

The Banquet, Banana, and Nutmeg, give the best returns, producing firm fleshy fruits, which sell well on the market.

*Cucumbers.*

A few were grown of the following varieties :—

Market King.	Sutton's Progress.
Early Frame.	King of the Ridge.
Giant Pera.	Chicago Pickle.

Market King gave the best crop. There was a good demand for cucumbers this season, and good prices were realised.

*Leguminous Crops.*

Soy Beans.—An acre of these were sown on September 14th, and as they were not doing well they were ploughed in for green manure on March 7th.

Lupins.—An acre of white lupins was sown on October 7th, but they only grew about 6 inches high, and were ploughed in for green manure. We intend sowing a crop of these during the winter months.

Mung Beans.—Half an acre each of black and green mung beans were grown for educational purposes. A quantity of seed was harvested, and the straw ploughed in for green manure.

Cow-pea.

Cow-pea.—Eight acres of Cow-pea were grown, viz. :—

3 acres of Black.	2 acres of Whip-poor-will.
2 acres of Clay-coloured.	1 acre of White.

The vines do remarkably well, and cover the ground with an enormous mass of foliage. They do not make much headway until the ground gets thoroughly warm, and then they grow very rapidly, and yield a great number of pods.

The great drawback to the extensive cultivation of this crop is the amount of labour required to harvest it, as the growth is so tangled together that it has to be cut with sickles and rolled over into heaps.

It would be decidedly advisable to use a small peg-drum thrashing machine on the farm for peas, beans, lupins, and other crops which cannot be thrashed by the ordinary wheat-threshing machine.

#### *Climbing Beans (Sown on Trellis).*

Madagascar or Tongan Bean.—This plant does very well. It is a great climber, and yields large quantities of green pods; but in this district the frost generally cuts it down before we are able to obtain much seed. The seed may possibly ripen earlier next season, as the roots, being established, the vines should make an earlier start.

Red or True Madagascar Bean.—This is a much later plant than the Madagascar bean, and, although it bears well, very little seed was obtained, as the frost cuts it down before it ripens. The seed is a large-size red, or mottled red and white seed.

Lab-lab Bean.—This is a brown-seeded Madagascar bean, but does not grow as well as the black-seeded.

Black Pole Limas.—This is one of our best Limas. It is a great climber, and a very heavy yielder. The pods are small, but well filled, containing three or four black and white seeds.

Willow-leaf Limas.—A small white-seeded Limas; small, well filled pods; a good climber. The leaves of the vines are similar to those of a willow tree.

King of the Garden Limas.—A large podded and large white-seeded bean; four to five beans in each pod; a heavy yielder, as the beans are very large, and the vine very prolific.

Mammoth-podded Limas.—Similar to King of the Garden.

Japanese Limas.—A small podded Lima, with a mottled brown and fancy-coloured seed; very prolific, does not climb as much as the other varieties; is very bushy.

Horticultural Limas.—This bean, although it has done well in other parts of the Colony, has not been a success with us. Most of the seed came up and grew about 1 foot high, and then died off. I hope to make some further trials of this plant during the year.

Zebra Runner Bean.—A good climbing bean, with a brown and black striped seed.

Sutton's Best-of-All Runner Bean.—This bean did not come up to expectations. We saved some seeds, and hope it will do better when the seed is naturalised.

#### *Fibre Plants.*

The following fibre plants were procured and grown for educational purposes:—

Sisal Hemp.—The plants were obtained from Queensland and South Australia, and were put out in drills 9 feet apart, and the plants 9 feet apart in the drills. They stood the transplanting well, and are all alive at the present time. They have grown to about 1 foot in height.

Ramie or Rhea Fibre.—Twelve rows of cuttings of this plant were put out and did very well, the canes growing to between 3 and 4 feet high, and a great number to each root.

New Zealand Flax.—A few plants of this flax have been planted out; but they have not made much headway at the present time.

Musa Textilis.—One of the banana species; grew about 1 foot high during the summer, and was cut down by frost in May. I am afraid our climate is not warm enough for this class of plant.

Mexican Flax Lily.—A large quantity of the bulbs of this plant were obtained from North Queensland. They were planted out 8 feet apart each way; but during all the summer they only grew about 6 inches high, and were cut down by the first frost. Our climate is not warm enough for them.

#### *Starch-producing Plants.*

Arrowroot.—Plants grew and stood out well. The tops were killed by frost during May, but a large quantity of bulbs was obtained.

White Arrowroot.—A small white root and much smaller plant. Does not yield nearly as well as the purple variety.

Sweet Cassava.—The cuttings of this plant were obtained from the Experimental Farm at Wollongbar, and did fairly well, and yielded some very long but rather thin roots.

A quantity of starch has been made from each of these varieties, and also from sweet potatoes. They will be shown at the Agricultural Shows during the coming season for educational purposes.

#### *Fodder Plants.*

Tagosaste or Tree Lucerne.—About  $\frac{1}{2}$  an acre of this has been planted out, and is doing very well. No cutting has been taken off this yet, but we expect to do so in the spring. I hope very shortly to be able to complete planting the acre.

Old-man Saltbush.—About  $\frac{1}{2}$  an acre of this valuable plant has been put out, and I have another seed-bed ready to put out now, and I hope to increase the area to 1 acre as soon as possible.

Saltbush, *Rhagodia hastata*.—We have been very unfortunate with this plant, and although we have planted out several lots of cuttings and rooted-plants, they all seem to die off.

*Atriplex holocarpa* Saltbush.—This is an annual saltbush. A small quantity of this plant was grown and shown at the Agricultural Shows.

*Paspalum dilatatum* Grass.—About  $\frac{1}{4}$  acre of this fine grass was put out. It was planted by dividing the roots of the small plot, and planting them out in rows 3 feet apart. It soon started to grow, and a cutting was taken on 4th March which yielded 9 cwt. of good fodder. This grass seems to be one of the best for this district, and I hope to be able to lay down an acre block of it this year.

*Miscellaneous*

*Miscellaneous Crops.*

Japanese Buckwheat.—One acre of this was sown for the bees, who are very thick on it while it is in flower. As soon as the flowers died off it was ploughed in, as it seeds very irregularly, and is not profitable to harvest for seed.

Spurry.—One acre of this was sown. It only grew about 1 foot high, and being considered of little value it was ploughed in for green manure.

Indigo.—Does very well with us. A small plot was grown for educational purposes.

Okras.—Useful for vegetables and pickles. A quantity of these were grown, and used to exhibit at the various shows; they are very prolific.

Tomatoes.—A small area of land was planted with a number of varieties of tomatoes, and a quantity were supplied for kitchen use during the summer.

Rice.—Two varieties of rice were grown, viz., Upland Rice and Lowland Rice; they grew about 2 feet high, but did not mature their seed.

Cotton.—About  $\frac{1}{2}$  acre of cotton was sown altogether, containing several varieties; it grew to nearly 4 feet high, and was promising a good crop, but being sown late it was cut down by the frost before the pods ripened.

Tobacco.—A few plants of the following sorts were grown. It was intended to put out a larger area, but owing to the dry spring we were unable to get an opportunity to put many plants out:—

Sterling Tobacco.	Yenidjek.
Primus Broad Leaf.	Big Frederick.
Orinoco.	Fly River.
Baseilbah Persoccian.	

## SUPPLEMENTARY REPORT TO END OF 1898.

The following are the crops harvested since the last report:—

*Cereals.*

Canning Downs Wheat.—Two acres of this were sown on May 5th, and were cut for grain on November 3rd, being the first to ripen; it stood the dry weather very well, and the yield of grain and straw was 5 tons from the 2 acres, the yield of wheat being  $16\frac{1}{2}$  bushels per acre; the seed was drilled in at the rate of  $\frac{3}{4}$  bushel per acre.

Belatourka Wheat.—A 4-acre plot of this wheat was sown, and did remarkably well, the land having been previously subsoiled. A total of  $13\frac{1}{2}$  tons of straw and grain was carted from this plot, and when thrashed yielded 73 bushels of grain, or at the rate of  $18\frac{1}{4}$  bushels per acre. The seed was drilled in at the rate of  $\frac{3}{4}$  bushel per acre on May 19th, and harvested on November 18th; it nearly all grew 6 feet high; manure used, 4 cwt. per acre; value, 16s.

Bearded Quartzlee Wheat.—Two acres of this variety were sown; they grew very strong, but suffered from the dry weather; it began to wither up and was cut for hay, yielding 4 tons from the 2 acres. Sown May 20th, and cut for hay November 2nd; seed sown at rate of  $\frac{3}{4}$  bushels per acre.

Algerian Wheat.—Two acres of this variety were sown, and promised very well, having a very healthy appearance and vigorous growth until the hot winds came, and then the heads all turned quite white and perished; there being no grain in them at all, the crop was cut and made into hay. Sown May 20th, and cut for hay October 24th; seed drilled in at rate of  $\frac{3}{4}$  bushel per acre; this a very heavy and solid straw, and yielded 5 tons hay from the 2 acres.

French Bearded Wheat.—Two acres of this were sown; it did not grow so tall as most of the other varieties, but still yielded well, the weight of straw and grain from the 2 acres being 4 tons, and the yield of wheat 40 bushels, or at the rate of 20 bushels per acre. It was sown on May 23rd, and harvested on November 19th; the seed was drilled in at the rate of  $\frac{3}{4}$  bushel per acre.

Medeah Wheat.—This variety stood the dry weather better than any other sort, and all grew over 6 feet high, with the usual large black bearded heads. An acre block of this was sown, and 4 tons of straw and grain were carted from it. The yield of wheat was 23 bushels. It was sown on May 23rd, at rate of  $\frac{3}{4}$  bushel per acre, and harvested on November 17th.

Poland Wheat.—An acre of this was sown for grain, and did very well at first; it grew about 3 feet 6 inches high, but soon after it broke into head the hot winds completely dried the heads up and it had to be cut and made into hay. Sown May 30th, and cut for hay October 24th; yield of hay per acre, 1 ton 15 cwt.

*Oats.*

The following varieties of oats were grown, but owing to being sown late and to the poorness of the ground they did not do so well as the wheat:—

Algerian Oats, cut for green feed for cows.

Black Tartarian Oats, yielded  $1\frac{1}{4}$  ton of hay.

White Tartarian Oats, yielded  $1\frac{1}{2}$  ton of hay.

Dun Oats, yielded 1 ton of hay.

Potato Oats, cut for green feed for cows.

Skinless Oats—These were put in to secure seed for future sowing, but owing to the dry weather they had to be cut and made into hay.

*Barley.*

One acre each were sown of the following varieties, but owing to the dry weather they were not worth saving for grain, and were cut for green feed and sent to the cows.

Skinless Barley.

Cape Barley.

English Barley.

Algerian Barley.

*Leguminous*

*Leguminous Crops.*

One acre each of Sulla and Scarlet Clover were sown, and grew very well as long as the weather remained cool, but directly the hot weather set in they commenced to wither, and we ploughed them in for green manure.

Bokhara Clover has also again failed. It just came up and then died off.  
Chick Pea came up and grew about 6 inches high, and then died off.

*Peas.*

Four acres of peas were sown and cut while green, a load each day, and carted and fed to pigs. Half an acre of each of the following varieties were sown:—

Telephone.	Pride of the Market.
President Garfield.	Stanley Pea.
Black-eyed Susan.	Field Pea.
Trophy.	Dr. McLean Pea.

*Lucerne.*

A 4-acre plot of Tamworth lucerne was sown on July 25th, the land being previously subsoiled and well worked. The crop did very well, a good start being obtained and several cuttings made during the season.

*Potatoes.*

An acre of potatoes were planted, but owing to the dry weather the yield was poor.

## ORCHARD AND VINEYARD.

Operations in this branch were somewhat upset through the death of our popular orchardist, Mr. G. Waters, who died early in the year. For some few months we were without the services of an orchardist, but eventually Mr. James Alford was appointed to the position, and commenced his duties on May 6th, 1898, and he reports as follows:—

"I immediately proceeded with the cleaning up of the College grounds, roads, &c., which had fallen into rather a neglected condition, and then went on with the preparation of 10 acres of land which has been selected as a nursery for growing all kinds of fruit-trees for supplying the different Government farms with fruit-trees true to name. As soon as the land has been properly cleaned and prepared it will be planted with stocks, pits, pips, cuttings &c., for budding and grafting purposes. There have been raised from pips in the orchard this season about 20,000 orange seedlings for budding and grafting purposes; about 10,000 apricot and peach stock for budding and grafting. We have also several thousands of imported stock of the following varieties for budding purposes—Mussel Plum, Nonsuch Apple, Black Mazzard Cherry, Myrobolan Plum, and seedling pear stock.

*Pruning.*

The pruning of deciduous fruits was done in June, the students taking very great interest in their work. The pruning of the vines then followed in July, and after the prunings had been cleared off, winter spraying, painting of stems and larger branches of the trees, and vine-swabbing were carried out.

*Planting*

Is being carried on both for shelter and refills in orchard, and for ornamental purposes; also the cleaning up of rubbish and weeds from fences and dirty corners.

*Hares.*

Hares have given some trouble in the orchard, but we have prevented their doing much damage by painting the stems of the trees with a mixture of blood and lime.

*The Fruit Crop.*

Grape-vines carried a very heavy crop, especially the White Sherry, Doradillo, Black Hamburg, and Gordo Blanco. Very good prices were obtained for grapes that were put early on the market. Oidium appeared in a very mild form, chiefly amongst the Black Hamburg. The crops of summer fruits were of good size and quality. In peaches the following were very good:—Brigg's Red May, Waterloo Nonpareil, Cooper's Seedling, Early Crawford, Susquehanah very fine, some weighing over  $\frac{3}{4}$  lb., and carrying heavy crops, Fulton, Grand Admirable, Lemon Cling. These trees also carried good crops the previous year. The nectarines were very fine, Lord Napier, Albert Victor, Violet Hative, Hunt's Tawny, and Irrewarra being best.

Good prices were obtained for peaches and nectarines.

Japanese plums did remarkably well, much better than the English varieties, on our light sandy soil. The Japanese plums seem to thrive in almost any soil, more especially in hot, dry districts. The following are the names of a few of the best bearing varieties grown here:—Satsuma "Blood," Suika Momo, Botan, Hattaukio, and Burbank. The *Prunus Simmonii* is a beautiful plum, also known as the apricot plum, but rather a shy bearer with us.

Pears have made good growth and showing a few fruit-buds. Pears take a long time to come into bearing, especially when worked on the seedling pear stock.

Apples do not thrive well here on the light sandy soil.

The persimmons gave a heavy crop and very fine fruit; trees thriving well.

Walnuts grow exceedingly well here, and gave a few nuts last season for the first time.

Thorny mandarins carried a heavy crop for young trees.

*Dried Fruits.*

A few raisins and peaches were dried for educational purposes, and jam made for use of College.

*Budding.*

A few peach-trees of useless varieties were budded with other varieties of better quality. A few peach and apricot seedling stock were budded.

The peach aphid was very troublesome this last season, but was kept in check by the use of resin and soda-wash.

The trees growing on the very light sandy soil show signs of weakness, and made very little growth during the last season.

*Sewage Farm.*

During the year the sewage farm has again been greatly extended.

Vegetables have been very successfully grown, but with few exceptions. Cauliflowers, carrots, parsnips, beet, broad beans, French beans, onions, cabbage, rhubarb, excellent; peas, fair. Lettuce, radish, eschalots, cucumbers, bush and other marrows, and asparagus do very well here; turnips, fair. Potatoes do not thrive well.

## THE DAIRY.

The Dairy Instructor, Mr. C. R. Cassidy, reports as follows:—

During the year there has been a good attendance of students. As a rule, the students who enter for a dairy course are those who have gained the highest position in the diploma examination. This is sufficient proof that they are deeply interested in the work. In addition to those students who have taken up dairy work after the two years' course of instruction at this College we have other students from various dairying centres throughout the Colony, and it is most gratifying to see with what interest and appreciation they take up the work as taught here. The course is now fixed at six months, and ten students are admitted each term; but, owing to the high standard of the examination, some of them often find it necessary to remain longer than the six months before presenting themselves for examination. The sessions commence on the 1st January and 1st July respectively. Briefly, the work done during the course is as follows:—Milking, feeding, and management of dairy stock, cheese-making, butter-making, milk and cream testing, pasteurising, separating, cultivation of lactic ferments—in fact, all the branches of dairy-work which would or is likely to occur in combined cheese and butter factories, or in a butter or cheese factory separately. The arrangement for two terms in a year enables each batch of students to get a full insight into the testing of cattle for tuberculosis, and some experience in other diseases affecting dairy-stock. The lectures are given in a practical way in cheese and butter making, pasteurising, dairy bacteriology, and other subjects appertaining to dairy-work; and by this system of teaching the student not only learns how to do the work, but also learns why it is necessary to do it in such and such a manner.

Considerable instruction has been afforded the students by visiting the dairy factories in Sydney. It is most pleasing to note the interest expressed by the gentlemen connected with these establishments in showing and explaining matters of dairying to the students. It has been arranged for an occasional visit to be made to some of the most important dairying districts, and one such visit has been made to the South Coast district. This excursion proved of great educational value to the students. They were enabled to criticise the work done by others; and, by inspecting some of the best dairy herds in the Colony, were able to note the points, in a number of instances, which a good dairy cow should possess. These visits further enable the students to see the handling of large quantities of milk and cream, also the working of different makes of churns, separators, &c.; and this, to a large measure, atones for the limited material at our disposal.

The students undergoing the general course of the College receive such instruction as will fit them to deal in a general way with dairying. For the examination of these students the Department were fortunate in securing the services of Mr. H. Wilson, of the Fresh Food and Ice Co. Mr. Wilson, who put the students through a most practical examination, was highly pleased with the results.

The quantity of raw material that we have to deal with is not sufficient to teach the students how to handle large supplies of butter and cheese; but, notwithstanding this fact, a large percentage of students are engaged in working fair-sized creameries, others making cheese, and some are dairy-farming or managing dairy farms with more than ordinary success. All that can be done with our limited supply of milk is being done.

Dairy Herd.—The dairy herd consists principally of Ayrshire, Ayrshire and Jersey crosses, a few Jerseys, and South Coast cattle. A number of the imported bulls have been used, and it will be interesting to watch how the various crosses with these animals turn out. The work of building up a dairy herd is extremely slow, and takes years to complete—thus it should be done on strict dairy lines so that the work will ever tend toward perfection. It is necessary that we should experiment with different crosses, making use of the imported bulls; but, at the same time, definite lines should be laid down for the general work of building up the herd, and for this I would recommend the use of a Shorthorn bull or Ayrshire or Ayrshire crosses. It is true that the progeny would be somewhat heavy and bulky for the College land; but in the course of a few years the increase in the amount and quality of fodder-crops grown and the laying down of pastures will do away with such an objection.

In the course of time more stock will be raised than is needed for the College use. Thus there will be a surplus for sale, and it is important that the stock should be of the best dairy type, so as to establish a name for our stock, and in this way command a ready sale, which would also have the advantage of distributing good dairy stock throughout the country. All the herds are tested for tuberculosis at least once a year, and any diseased animals destroyed. Unfortunately, in a large number of cases, it is the best milkers which are affected with this disease, proving that the more hardy, but less profitable, cows are not so subject to it. All young stock are subject to the tuberculin test before they are allowed to run with the bull, and by this means the herd is kept comparatively free from tuberculosis.

Almost all the young stock are dehorned with the caustic potash treatment, which process may be regarded as painless. The stock when grown up are much quieter to handle, drink and feed more contentedly together, and the risk of many valuable cows becoming almost worthless through another one horning her in the udder is done away with. If the horns are properly removed, or, rather, the growth of the horn prevented at the right time, then the appearance of the animal will not be objectionably altered to any great degree.

The

The work of testing the percentage of butter and taking the weight of the milk-yield of the herd is carried out, and from time to time inferior cows are being got rid of. The culling out of inferior cows from the herd is very important, and is deserving of more attention than the average dairyman is disposed to give it. Owing to the inexperienced work of students in the early part of their training, it is somewhat difficult to carry out this work with the greatest success, but the lesson taught is so firmly impressed that the students will not readily forget it.

Fodder.—Among concentrated foods coco-nut oil cake has been used largely for calf feeding, and also cattle-molasses. Cattle-molasses is, without doubt, valuable as a food for dairy-feeding purposes, mainly, because, when mixed with a food, it makes it—the food—more palatable, and in this way cattle eat more of the food treated with molasses, and although the percentage of the digestible part of the food is not increased the total amount of the digestible matter consumed is considerably increased. Some unpalatable foods are readily eaten when fed with molasses. Regarding fodder crops, roots, such as beets, mangels, and artichokes, are grown. These, fed with other foods, or alone, have no bad effect upon the milk either for butter or cheese making. Such crops as Swedes, turnips, and rape, which taint the milk, are grown and mixed with other foods for the dry cows and calves. Oats and vetches and barley and vetches make the best green crops for cows in milk. For ensilage, maize has always given us a far better result than sorghum. In fact, it is useless to grow sorghum where maize can be handled as profitably. Maize alone does not make a perfect food for milch cows, and a mixture of several varieties of crops gives better results. A mixture of cow-pea or horse-beans, corn and sun-flower seeds have been proved to give very good results in ensilage-making. And when chaffing maize for immediate use it would be an advantage to have cow-pea, lucerne, or some such fodder rich in protein mixed with it. Lucerne should be extensively grown, both as a green food and for making hay. It combines well with almost any food, and is better than oat chaff or hay in making up milk rations.

The lines on which we teach are made as practicable as possible, and with the use of new tests and improved methods of working a student is now able to learn the art of cheese-making, and turn out a good article after six months' instruction, which, under the old methods, would have taken several years of practice to acquire.

#### *Dairy Examiner's Report.*

I have the honour to report as follows:—During the year 1898 four examinations in dairy work and dairy-farming were held, when the following students presented themselves for examination:—

Student E. A. Hamilton,	Student S. C. Cowleshaw,
„ W. G. Marks,	„ H. A. Flashman,
„ J. P. Rogers,	„ F. J. Brient,
„ H. C. Stehning,	„ H. O. Busby,
„ J. C. See,	„ H. Cunningham,
„ J. M. Trotter,	„ S. E. Furness,
„ L. F. Uther,	„ A. E. Moore,
„ S. Wilson,	„ W. P. Smith,
„ R. S. Scholes,	„ H. P. Chapman.
„ S. Scarrell,	

These students succeeded in obtaining a certificate for proficiency in one or all of the following subjects:—Dairy-farming, butter-making and creamery management, and cheese-making. Among those obtaining extra high marks, and who passed in all subjects, should be mentioned Students H. O. Busby, S. E. Furness, and A. E. Moore. Six other students went up for examination, but failed to qualify in any of the three subjects specified. The examination was divided into two sections, viz., theoretical and practical.

I have to recommend that in future students who have not had previous experience in a creamery or factory should go through at least a six months' course at the College dairy before presenting themselves for examination. Also, that examinations be held only every six months.

I should strongly urge that students be also given an opportunity for taking part in dairy operations on a larger scale than that afforded them at present. To do this it will be necessary to increase, either by purchase or production, the amount of milk now available for converting into butter and cheese. If this be done, the education which students would then receive should fit them for taking immediate charge of the management of a creamery. At the present time students who pass through a course here should put in a term at some factory where dairy work is carried on on a large scale before attempting to undertake the management of a factory or the manufacture of butter in very big quantities. The practical instruction now given is of a good character, and the local instructor is doing good work. All that is required is practice on a much larger scale, and if this cannot be arranged at the College, the Minister might with advantage to the Colony consider the question of arranging with some of our large factories, whereby instruction might be given to students there after they finish their dairy course at the college.

M. A. O'CALLAGHAN,  
Dairy Expert.

#### PIGGERY.

Mr. George Daley reports that owing to the addition of a large number of stud animals imported from England and America, and also from the neighbouring colonies, there has been a very great demand for young boars and sows of the best strains. The increased number of stud pigs necessitated the erection of additional buildings and pens. A large shed, divided into compartments, has been erected for using to fatten baconers in, and six small houses have been erected for the breeding sows. We now have a very complete stud of each of the following breeds:—

Improved Berkshire.	Small Yorkshire.
Large Yorkshire (large white).	Poland-China.
Middle Yorkshire.	Tamworth.

Distinct

Distinct strains of each are kept so that farmers can obtain young boars and sows of each breed and unrelated to each other. This is, of course, a very great advantage for breeding purposes. So far we have been able to sell all the young pigs from these strains as soon as they are ready to send out, and at the present time I have upwards of 100 orders on hand.

The imported pigs were all high-class animals, and of far better quality than our old stock. The shipment has been very successful, as they were all landed in good condition and proved good breeders. The progeny promise well, and I consider that by putting the imported boars to our old sows we shall obtain some excellent strains.

During the year we not only raised a large number of pure bred, but also raised and fattened a great many porkers and baconers. Forty-three of the latter were killed and cured by the students under my supervision.

Several students took a special course on pig-farming, lasting from three to six months. This appears to me to be a very good arrangement, as they obtained a good general knowledge of the work. Nearly all the students take great interest in this branch of the farm; their conduct has been very satisfactory, they are punctual, and the majority of them work well and learn all they can.

Paddocks are being netted-in so that arrangements can be made to grow a variety of crops and graze the pigs upon them. This will lessen the cost of raising, and will, I consider, do much to improve the constitution of the animals. Now that we have such good specimens of the different breeds, we have commenced comparative trials. First of all exhaustive feeding trials with the different breeds will be carried out, and these will be followed by trials of various crosses. It is also intended to test the market with bacon from the different breeds. From these trials we shall then be able to gather which breed gives the greatest weight per pound of food and which produce the most marketable bacon.

The young stud animals are carefully weighed and any that do not increase at a standard rate are rejected for breeding purposes. In view of the great demand for early-maturing pigs this precaution is very necessary.

Thanks to the new blood our piggery is now proving one of the most profitable branches of the farm, and there is every prospect of a largely increased income during the coming year.

#### POULTRY FARM.

The Poultry and Bee Expert, Mr. J. J. McCue, took charge of this department on 1st February, 1897, and started at once to get the necessary buildings, pens, &c., erected.

At present we have 7 acres divided into runs, and fitted with every convenience in the way of houses, &c. Another 5 acres is being laid out for a duck farm, and when the accommodation is completed we shall have ample room to produce ducks in numbers for placing on the English market, &c.

At present there are over twenty-five different thoroughbred varieties of poultry on the farm, as follows:—

Fowls.	
3 pens Black Minorcas.	1 pen Plymouth Rocks.
2 „ Brown Leghorns.	1 „ Brahmas (L).
2 „ White Leghorns.	1 „ Cochins (B).
3 „ Wyandottes.	1 „ Dorkings (S.G.).
1 pen Langshans.	5 pens Game varieties.
1 „ Andalusians.	2 „ Orpingtons.
1 „ Houdans.	4 „ Experimental.
Ducks.	
3 pens Pekins.	1 pen Cayuga.
2 „ Rouens.	1 „ Aylesbury.
2 „ Muscovies.	1 „ India-runner.
Turkeys.	
1 pen Bronze.	
Geese.	
1 pen Toulouse.	

During the year upwards of thirty head of pure-bred birds were purchased to add to breeding pens. Among the late purchases were a few imported birds—splendid specimens of their variety.

The incubator room contains six 100-egg machines, all of which work well and give fair results.

The students attending this department have taken a great interest in their work, attended to their duties, and were well-behaved. Eight students went through special poultry courses during the year, some of which have commenced poultry-farming on their own account.

The financial returns for the year were satisfactory, considering how late it was in the breeding season before the expert had pens, &c., completed, and all in going order.

The monthly articles on poultry that appeared in *Agricultural Gazette* during the year have brought many inquiries asking for information on different subjects relating to fowls, turkeys, and ducks.

#### BEE FARM.

The bee farm is still progressing satisfactorily, the honey yield being a good one in spite of the bad season. Mr. McCue reports that the six pure-bred Italian queens which we purchased have turned out very well.

#### FOREMAN CARPENTER.

The Foreman Carpenter, Mr. A. Brooks, reports as follows:—

The increased accommodation provided in the workshop has given the utmost satisfaction, the arrangement of double working-benches in place of the side-benches we previously had making a vast improvement. In fact, the only thing required to make our carpenters' shop complete (and which I hope to be able to obtain approval to purchase) is a small turning lathe and a circular saw bench, both of which

I feel sure would pay for themselves in the first year's work. The main object of increasing the size of the workshop was to provide more opportunity for students to practise the work. Considering that the greater part of my time has been occupied in the supervision of the building work that has been going on almost throughout the year, the value of the work done will show that the students' labour has been very profitable.

I must here refer to the advantage I have had from the services of what are called "special course" students. I have had three of them during the session, each of whom have done well, and proved that what I have always contended (viz., that any of our students who have a liking for mechanical work can be taught as much in three months' continuous instruction as an ordinary apprentice could be in two years) is quite correct.

I hope, sir, that this system will be continued so that I may be able to have three more this coming session. Another very highly commendable feature in the work during the past session, and one I hope to have the honour of continuing, has been lectures on carpentry. Although this was not done until towards the close of the session, and only to first-year students, it had a very beneficial effect, in such a way that when they came into the workshop they were so very much more able to put into practice the lessons taught in the classroom. It also saves a lot of time, as I can explain to the whole class just as easily as I can to two or three in the shop.

It is my intention in future to make drawings of the various necessary buildings and implements that we construct or design, and strike off sufficient copies to give one to each student, and if the lectures are to be continued, to do the same for any subject that we may be considering.

During the past year I have carried out by "day-labour" the following work:—

- Extension of both classrooms.
- Fittings to chemical laboratory.
- Alterations to dormitory block.
- Gymnasium hall.
- Two-storey building in orchard.
- New blacksmith shop and fittings.
- Extension of carpenter shop.
- Additions poultry expert's cottage.
- New shed for dairy.
- Repairs to orchardist's cottage.
- Erection of a 100-ton circular silo.

I have also on hand at present, and nearly completed, the construction of tanks for the conservation of roof water and air-tight corn-bins for storing shelled maize.

I have also on various occasions prepared rough plans and specifications in answer to inquirers about buildings, &c., for farms. Included among these was a plan and detail drawing, together with a full descriptive specification of the 100-ton silo, to the Department of Agriculture at Brisbane.

In the workshop the usual varied description of work has been carried on, from fine joinery to rough carpentry, plumber, and painters' work. Included in the latter branch there has been the painting of no less than sixty gates, the surface measurement being 680 square yards.

The several students who have been under my charge have been very attentive, and invariably diligent and of good behaviour.

In conclusion, sir, I may state that all tools and appliances under my charge are in good order, and all book entries up to date.

#### BLACKSMITH.

The Blacksmith, Mr. Irwan Shaw, reports as follows:—

During the past year there has been erected a large and convenient blacksmith's shop, containing three forges, with necessary tools and appliances for doing the work of the farm, also for instructing the students.

I have been kept busily going in effecting repairs to machinery and implements, and making iron-work for new buildings.

The students have always taken great interest in this branch, and are very willing and obedient in assisting me to carry out my work.

#### ENGINEER'S BRANCH.

The Engineer, Mr. C. H. Ausburn, reports as follows:—

In submitting my report for year just ended, I am pleased to say that everything has been fairly satisfactory. Nothing of any great importance has occurred in my branch. Although many additions and alterations have been carried out in the electric lighting plant, I have had to extend circuits on lecture hall and laboratory, and put in new branch circuit to gymnasium. I have added fifty new lamps to the plant, making in all 380 lamps in circuit. The plant is still giving every satisfaction, but bids fair to soon become too small. One slight defect occurred, causing the light to be cut off for two nights during winter vacation.

I have also fitted up a telephone service, connecting the dairy and farm buildings with the office, which has proved a very great benefit.

Repairs during the year have been small, the largest item being the overhaul and repairing of boilers—which was carried out by the Government Architect's Department. (this being the first overhauling the boilers have received since the College was instituted).

I have overhauled the farm engines twice during the year, repaired the hydraulic stump-extractor, &c., and assisted the blacksmith in repairing a number of other machines.

During the past year I have been largely occupied with clearing contracts, we now having completed 300 acres, off which we have taken about 1,000 cords of firewood for use on the farm.

I have had one or more students with me daily during the session, and have much pleasure in reporting that they have given me every satisfaction. With very few exceptions they have taken much interest in the work, and several of them have made themselves capable of relieving me, while away, on repairs, &c. Altogether they have been very attentive to their work.

In conclusion, I have to say that the machinery in my charge is now all in good order.

#### FENCING

## FENCING AND ROADMAKING.

In order to obtain better facilities for communication of the various branches of the farm with the College buildings it was decided to construct a road facing the College, with an outlet opposite the railway crossing, and another at right angles to this leading to the dairy, piggery, &c. This necessitated a rearrangement of the paddocks adjoining these roads, and the consequent pulling down of some 3 miles of fencing, which was afterwards erected on other parts of the farm.

Mr. George Stead, the Farm Fencer, reports that in his branch the year was an exceptionally busy one, upwards of 6 miles of fencing being put up. Most of this was single rail with six wires. Smaller paddocks for bulls, pigs, &c., were also fenced in, the ordinary three-rail fence being used for the bulls, and for the pigs a low three-rail fence with a barbed wire running below the rails to keep the animals from rooting underneath the fence. Timber culverts were also put in on several of the roads, logs and heavy rails being used for the purpose. A number of shelter-sheds for calves, pigs, &c., were erected, slabs being used for the walls and bark for the roof. Fourteen pairs of large farm gates were taken down and re-erected in more convenient positions; three pairs of new farm gates and seven pairs batten gates were also put in position. Thirty-six chains of trellis, made of saplings and fencing wire, was erected in the experimental plots for training climbing beans, &c., on. A 36-acre paddock was netted in with marsupial netting for the pigs, 95 chains of 24 x 4 x 14 being used. Placed on the inner side of the paddock, it is found to be quite pig-proof. Mr. Stead also did a considerable quantity of rough carpentering, and assisted in harvesting, &c., in his spare time.

## PRIZE FUND DONATIONS.

I am indebted to the following ladies and gentlemen for their liberal donations to the Prize Fund, which enabled me to present valuable book prizes to all deserving students:—

The Hon. Joseph Cook, M.P.,	Mr. Heane.
Mr. Sydney Burdekin.	Mr. Hellicar.
The Farmers and Fruitgrowers	Mr. Smith.
Co-operative Society.	Mr. Petersen.
Rev. T. Moore.	Mr. Capp.
Dr. Gibson.	Mr. Haviland.
Dr. Cameron.	Mr. Allan.
Mr. Worboys.	Mr. Pepper.
Mr. Stening.	Mr. Faviell.
Mr. Wilson.	Mr. Rigg, M.P.
Mr. Foy.	Mr. Gibson.
Mr. Busby.	Mr. Ramsay.
Mr. Morley.	Mrs. Alderson.
Mr. Abbott.	Mr. Naylor.
Dr. Roberts.	Mr. Houghton.
Dr. Florence.	Mr. Brient.
Mr. Hunt.	Mr. Stevenson.
Mr. Coles.	Mr. Froome.
Mr. See.	Mr. Kevin.
Mrs. Ritchie.	Dr. Macky.
Mr. Bulkeley.	Rev. J. H. Price.
Mr. Dobbie.	Mrs. Murray-Prior.
Mr. Furness.	Mr. Gregory.
Mr. Joubert.	

## PRIZE LIST.

*Diploma Students, 1897.*

Mr. Principal Thompson's Gold Medal—Dux of College, Student Moore.  
Special prize (Mr. S. C. Pottie), case of instruments—Veterinary Science, Student Moore.

## Book Prizes.

Best all-round student at general farm work, Brown.  
„ carpenter, Morley.  
„ at orchard, Furness and Moore.  
„ at dairy, Rogers.  
„ at blacksmith, Brown.

*First-year Students, 1897.*

## Book Prizes.

Best all-round student at general farm work, G. Marks.  
„ carpenter, G. Marks.  
„ at orchard—equal: A. Naylor and G. Marks.  
„ at dairy, G. Marks.  
„ at blacksmith, G. Marks.

*Diploma Students, 1898.*

Mr. Principal Valder's Gold Medal—Dux of College, Student G. Marks.  
Special prize (Mr. S. C. Pottie), case of instruments—Veterinary Science, Student J. T. Tod.

## Book Prizes.

Best all-round student at general farm work, G. Marks.  
„ carpenter, A. S. Abbott.  
„ at orchard—equal: J. T. Tod and W. B. Foy.  
„ at dairy, G. Marks.  
„ at blacksmith, G. Marks.  
„ ploughman, G. Marks.  
„ engine-driver, G. Marks.

*First*

First-year Students, 1898.

Book Prizes.

Best all-round student at general farm work—equal: A. H. Haywood and R. F. Weir.  
 „ at orchard, F. G. Pepper.

DIPLOMA STUDENTS, 1897.

## DIPLOMA PAPERS, 1897.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Agriculture.—Diploma Students.*

Examiner: F. B. Kyngdon, M.R.A.C.

Three and a half hours allowed. Marks—100, being 10 to each question.

Introduction.—Answer each question in the order given. Begin an answer on a fresh sheet, and each section of an answer as a fresh paragraph.

- (a) By what means has "soil" been formed? (b) Classify soils. (c) Name the constituents of soils in order of value as plant-food. (d) What are the advantages of drainage? (e) What are the disadvantages of too much water applied by irrigation?
- (a) State briefly the general principles of manuring. (b) Name the commercial fertilisers obtainable in New South Wales, with their market price and percentage of dominant elements of plant-food. (c) For what crops are the fertilisers named by you most suitable, and in what quantities per acre should they be applied? (d) Name crops suitable for "green manures." (e) Describe the procedure of making "farmyard" manure, and of what manurial matter may a "compost" heap be formed.
- (a) What are the peculiarly adverse influences of the New South Wales seasons? (b) What steps should be taken to prevent the losses they occasion to (1) dairy farmers; (2) producers of wheat or other cereal crops?
- (a) Describe the position of maize in New South Wales agriculture, giving the chief centres of its production. (b) Name varieties most suitable for (1) ensilage; (2) maize, hay, or fodder-making; and for (3) corn. (c) Detail the cultivation of each of the two first methods, with cost of production per ton of silage or of maize fodder, that a crop estimated to go 50 bushels per acre would yield.
- (a) Enumerate the most suitable grasses, native and introduced, for the various soils and climatic conditions of New South Wales agriculture. (b) Show how a farmer can select seed for laying down native grasses. (c) Describe the treatment of rich Italian rye-grass pasture over a number of years, commencing with the sowing; quantity of seed per acre; first year's treatment; when to be shut up for a crop of hay; how grazed; how to take crops of grass-seed; number of years it can run; signs of deterioration; what crops to sow on breaking up worn out rye-grass pasture, preparatory to again laying down rye-grass for another term of years.
- Give a detailed list, with cost against each item, of the implements, rolling stock, and live stock necessary for a dairy farm of 200 acres in the Hawkesbury district, of which 30 acres are in rich pasture and lucerne, 70 acres are pasture of average quality, 50 acres are cultivated with various fodder and grain crops, 2 acres are the homestead, garden, fruit, and vegetables, the rest being a bush run for dry stock. The cultivated area is cropped half with maize, the rest with cereal hay. The milk is carted to a factory. (a) Implements of tillage. (b) Hand-tools. (c) Food-preparing plant. (d) Barn implements. (e) List of tools for effecting general repairs. (f) Waggon, carts, harness. (g) Plough-horses, light horses. (h) Cattle—cows in milk, springers, dry, heifers, yearlings, calves, bull. (i) Swine—boar, sows, stores. (k) Head of poultry.
- (a) Contrast a "beef" type with a "milch" type of cattle. (b) Name the various breeds of cattle represented in New South Wales, classifying them as to beef and milk. (c) State the country and district of their origin, with its climatic and general features, such as rich or poor, hill or flat land. (d) What is meant by early maturity, and how is it arrived at? (e) What causes prevail in New South Wales to bring about deterioration in the ordinary run of cattle?
- In breeding horses state (a) the duration of gestation; (b) treatment of mare prior to or during parturition; (c) weaning, feeding, and breaking-in of the foal; (d) procedure in castration. (e) Describe the features required in army remount horses, and the price on the farm at which their breeding would prove remunerative.
- In connection with foods and feeding, what do you understand by a "maintenance diet"? Explain "nitrogenous," "carbonaceous," and "mineral" elements of food. Name a class of food in which "fibre, digestible and indigestible," predominates. Upon what does the "assimilative" value of food depend, and compound a ration for a working plough-horse and a cow in milk?
- Write a description of wheat-growing in Western New South Wales. (a) Soil, climate. (b) Varieties to be sown, and where to be got. (c) Procedure of cultivation, with cost per acre of each operation of husbandry, seed, and harvesting. (d) Give the number of bushels to constitute a poor, an average, and a good yield. (e) What features within the last few years have characterised the expansion of the wheat industry in New South Wales?

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Chemistry.—Diploma Examination.*

- Give a short account of the different classes of micro-organisms affecting the fertility of soils.
- Describe the changes which farmyard manure undergoes during storage.
- Describe the preparation of fermented and of dissolved bones, and explain the difference between the resulting products.
- Distinguish between an organised and a soluble ferment. Give some examples of each.
- Compare nitrate of soda and sulphate of ammonia as manures. How many litres of ammonia gas can be obtained from 10 grammes pure sulphate of ammonia? (1 gm. hydrogen = 11.2 litre.)
- Describe the occurrence, composition, and properties of starch and gluten. How would you extract and separate them from wheat?
- What is an albumenoid? What elements are present in the bodies of this class? Distinguish between gluten, egg-albumin, and casein.
- Describe the preparation of oxalic acid, mention its principal properties, and state what happens when it is heated (1) alone, and (2) with sulphuric acid.
- Describe the preparation of diethyl ether and the chemical changes that occur in the continuous etherification process.
- How are the following substances prepared, and what are their chemical formulæ:—Cellulose, vegetable parchment, gun-cotton, artificial silk?

Department

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Physics.*

Examiner: Mr. S. H. Barraclough, B.E., M.M.E.

Time—Three hours. All questions are of the same value.

1. State Newton's three Laws of Motion. Explain carefully the meaning of any technical terms you may employ.
2. A stone is thrown horizontally from the top of a cliff 100 feet high, with a velocity of 30 feet per second. Find (a) how long it will be before it strikes the earth, (b) how far the point where it strikes the ground is from the foot of the cliff.  $g = 32$ .
3. Give a brief account of the doctrine of the conservation of energy, illustrating your remarks by reference to the College electric plant.
4. Describe exactly the steps you would take in order to determine the specific gravity of a sample of Portland cement.
5. A rectangular beam is 20 feet long, 12 inches wide, and 6 inches deep, and weighs 58 lb. to the cubic foot. It floats on the surface of some water; to what depth will it be immersed?
6. State Boyle's law. A diving bell 7 feet high and 5 feet in diameter is sunk until the pressure of the air inside it is 2 atmospheres. How far is the top of the bell below the surface of the water? Assume any necessary data.
7. What is meant by the term "coefficient of linear expansion"? A sheet of iron is exactly 5 feet long and 3 feet wide at 60° F. What will its area be at 100° F.? Given the coefficient of linear expansion of iron to be .0000067.  
Describe carefully the changes that take place in the *volume* of a certain mass of water as it changes from the state of ice at a temperature of 10° F. to that of steam at 212° F. Illustrate by a diagram, if possible.
9. What do you understand by the terms *unit of heat, specific heat, latent heat, conduction, convection, radiation*?

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Applied Mechanics.*

Examiner: Mr. S. H. Barraclough, B.E., M.M.E.

Time—Three hours. All questions are of the same value.

1. Explain the terms "energy," "work," "power." A shaft is 70 feet deep, and has a square section 6 feet each way. Find the amount of work done in emptying the shaft of water, supposing it to be quite full to begin with.
2. Describe precisely how the indicated horse-power of the College steam-engine could be determined. What is the probable *mechanical efficiency* of such an engine?
3. Sketch some form of hydraulic press. If a force of 10 lb. be applied at the end of the hand-lever, find the total force that can be exerted by the press, neglecting all frictional losses. Assume all necessary dimensions.
4. State the average ultimate tensile and compressive strengths of cast-iron, wrought-iron, and steel. Explain the term "temper" as applied to steel.
5. Define the terms "elasticity," "modulus of elasticity," "limit of elasticity." State Hook's law, and illustrate it by reference to practical examples.
6. What is Portland cement? Describe the tests you would apply in order to determine the quality of a particular sample of cement.
7. A vertical crane-post is 10 feet high, the jib 30 feet long, the stay 24 feet long. Find the stress in the jib and stay caused by lifting a load of 2½ tons. Sketch the winding-gear of such a crane.
8. Enumerate some of the more important Australian timbers, giving a short account of the constructive purposes to which each kind of timber is put.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Veterinary Science.*

By John Stewart, V.S.

Time allowed—Three hours.

Marks.

- 2 1. Describe the difference in the attachment of the fore and hind limbs to the body or trunk.
- 4 2. Name the joints and the parts forming them located at the stifle.
- 4 3. Name the joints and the parts forming them located at the fetlock of the horse.
- 4 4. Name the joints and the parts forming them located in the foot of the horse.
- 2 5. Name the organs contained in the *thoracic cavity*.
- 5 6. Name the organs contained in the abdominal and pelvic cavities of the *cow*.
- 5 7. Describe the circulation of the *heart*.
- 3 8. What effect has respiration on the *blood*?
- 4 9. Name the organs and structures which purify the blood.
- 10 10. Describe the appearance and qualities of sound, healthy flesh.
- 10 11. State symptoms and *post-mortem* appearance of pleuro-pneumonia.
- 10 12. State causation, symptoms, and *post-mortem* appearance of tuberculosis.
- 10 13. State causation, symptoms, and *post-mortem* appearance of anthrax.
- 10 14. Given a back-to-back presentation, with the two fore legs well projected, in what position may you expect to find the head, and how would you proceed to accomplish delivery in the mare or cow?
- 3 15. Before applying force to effect delivery, what must you be very careful to ascertain?
- 5 16. Describe the means used to *hand-rear* a one-day old foal.
- 5 17. State your treatment of lacerated wounds.
- 5 18. State the dose and the best purgative to administer to the horse, ox, sheep, and dog.

Maximum, 100; pass, 60; with credit, 80.

Department

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Book-keeping.—Examination for Diploma.*

Examiner: Alfred Armstrong.

Time allowed—Three hours. Marks, 100.

Journalise, enter in cash-book and ledger the following transactions. Draw up a trial balance profit and loss account and balance-sheet. All payments over £5 to be made by cheque, under that amount from petty cash:—

On the 31st December, 1896, Samuel Thompson commenced business with a capital of £3,000 in the City Bank. On the 1st January, 1897, he purchased the business with the assets and liabilities of Thomas Williams, for which he pays £2,000. The balance-sheet of Thomas Williams on the 31st December was as follows:—

			£	s.	d.				£	s.	d.
To Stock	...	...	500	0	0	By Union Bank	...	...	54	10	0
„ Crops	...	...	350	0	0	„ Bills payable	...	...	173	4	6
„ Plant	...	...	100	0	0	„ A. Thompson	...	...	27	10	6
„ Bills receivable	...	...	130	0	0	„ Capital	...	...	1,604	15	0
„ A. Jackson	...	...	450	0	0						
			<hr/>						<hr/>		
			£1,860	0	0				£1,860	0	0
			<hr/>						<hr/>		

January 2.—Sold to George King, sheep, valued at £45.

January 4.—Sold to F. Carey, horses, valued at £75.

January 6.—Drew cheque for petty cash, £30.

January 7.—Consigned to M'Kenzie & Co., of Adelaide, per s.s. "Rockton," to sell on my account and risk, stock valued at £200.

January 7.—Paid shipping charges on above, £30.

January 7.—Cash sales from dairy, £3 2s. 6d.

January 9.—Received from A. Jackson cheque for £250.

January 12.—M'Kenzie & Co. advise having effected sales for part of consignment ex s.s. "Rockton" for £95, and enclose their draft at sight for £70.

January 14.—Paid wages, £12 12s.

January 14.—Cash sales from dairy, £4 10s.

January 16.—Thomas Williams, acceptance to Arthur Thorne, paid this day by cheque, £174 3s. 6d.

January 17.—Sold to W. Langley, for bill at one month, 200 bushels maize, £20.

January 18.—Paid A. Thompson, by cheque, £27 10s. 6d.

January 19.—M'Kenzie & Co. advise they have sold the balance of consignment for £215, and enclose draft at sight for net proceeds after deducting their commission at 5 per cent.

January 20.—Received from P. Malone cheque on account, £130.

January 21.—Bought of F. Lassetter & Co., for cash, 1 cornsheller, £4.

January 21.—Cash sales from dairy, £4 12s. 6d.

January 23.—Sold to George King—4 calves at 12s. 6d., £2 10s.; 14 sucking pigs at 5s., £3 10s.—£6.

January 25.—Attended a meeting of P. Malone's creditors, and agreed to a composition of 5s. in the £.

January 27.—Paid Union Bank—T. Williams' overdraft, £54 10s.; interest charged, 9s.—£54 19s.

January 28.—Paid wages, £13 10s.

January 30.—S. Thompson drew for private use, £25.

January 30.—Received from P. Malone first and final dividend of 5s. in the £.

January 31.—Stock on hand valued at £240.

January 31.—Crops on hand valued at £335.

{ Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Entomology.*

Time—Three hours. Each question 10 marks.

1. Give a description of the hydro-cyanic acid process of fumigation, with its action upon insects. Describe any other form of fumigation for insect pests.
2. What foliage (other than pear-tree) does "Pear slug" (*Selandria cerasi*) attack? Give its life-history, and when it is most plentiful. Mention remedies for its destruction.
3. Give the names, with short account, of six common Australian insects that have deserted their native food-plants to attack cultivated or introduced ones.
4. Describe the "San Jose scale." Where did it originally come from? Name some of the trees attacked by it, and mention how you would detect its presence in an orchard.
5. What is the method for using arsenate of lead as an insecticide, and for what mixture can it be substituted? State the reason that causes kerosene emulsion to sometimes spot the foliage of plants. Why does Bordeaux mixture sometimes burn the foliage?
6. Describe the general appearance on the tree of "Olive or brown scale" (*Lecanium oleae*), "Mussel or apple scale" (*Mytilaspis pomorum*), "Red scale" (*Aspidiotus aurantii*), and "Mealy bug" (*Dactylopius adonidum*).
7. Describe the action of the different ingredients on the scale when sprayed with lime, sulphur, and salt wash. What is bisulphate of carbon used for? What pests are successfully treated with tobacco?
8. Give the names and brief description of six beneficial insects which feed upon scale and other pests.
9. What is the best method of destroying crickets and cockroaches; also plant-eating grasshoppers and locusts among the crops?
10. Give the life-history of the codling moth in Australia, with the most approved methods for its destruction; also the date of the first emergence of the moths in spring.

## FIRST-YEAR PAPERS, 1897.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Agriculture.—First year.*

Examiner: George Valder.

Time allowed—Three hours.

1. In selecting a site for a farm, how would you judge as to the value of the land?
2. Give full particulars of the methods employed and the machinery used in the cultivation of the following crops:—(a) Wheat; (b) Tobacco; (c) Cow-peas?
3. What are the best means of conserving and applying the following manures:—(a) Farnyard; (b) Bones?
4. Write a short report on the "Rotation of Crops."
5. Give full particulars regarding the best grasses (indigenous and introduced) that would be valuable for use in connection with the laying down of permanent pastures.
6. Describe the methods you would adopt in the conservation of water for the use of stock, and also how you would apply it to small areas for irrigating vegetables in dry districts.
7. Give full particulars of the cultivation of the following vegetables:—(a) Onions; (b) Potatoes.
8. State what are the best root crops to grow for stock, giving a few notes on the cultivation of the same.
9. What crops would you sow, and when would you sow them, in order to obtain a continuous supply of green fodder for milch cows in the Hawkesbury district?
10. Write a short report on the cultivation of medicinal and perfumery plants.

Department of Agriculture, New South Wales, Hawkesbury Agricultural College, December, 1897.

*Agricultural Chemistry—First Year.*

Examiner: Mr. E. Clarence-Wood, M.A., B.Sc. B.E., &c.

Three hours allowed. Chemical equations and diagrams must be given where necessary.

Marks.

- 11 1. Explain the chemical composition and physical properties of water. What are the chief impurities found in water in nature, and how do they affect its physical properties? How would you purify the water in each instance?
- 11 2. How is carbon-dioxide made? Describe its properties. Indicate its importance in agriculture.
- 11 3. Describe the preparation and properties of ammonia. Where and how is sulphate of ammonia obtained, and what is it used for? Do you know of any valuable applications of the physical properties of ammonia?
- 11 4. What will occur if you pour sulphuric acid upon common salt? Carefully describe the chemical and physical properties of the substance formed. Would the presence at the same time of black oxide of manganese have altered the result?
- 11 5. Describe "superphosphate of lime," and how it is made, including an account of the various raw materials that are used, and the qualities of the products severally resulting therefrom.
- 11 6. Compare Thomas' phosphate and bone-meal with superphosphate manure, quoting experiments in support of your views, and explaining carefully how you would proceed to detect the phosphoric acid in each case.
- 11 7. Give a succinct account of the relations of the calcium compounds to agriculture, &c. What is the nature of common mortar and of Portland cement? Explain the manner in which the "setting" of each occurs. Do you know of any similar chemical action that may occur in certain soils?
- 11 8. Explain how you would make the following dry tests:—
  - (1.) Flame colouration.
  - (2.) Borax bead test.
  - (3.) Reduction of metallic bead.
  - (4.) Film on cold porcelain.

Note as fully as you can all the results you should expect to obtain in applying dry tests for—Copper, arsenic, manganese, potassium, sodium, cobalt, iron, and lead.

- 12 9. Describe wet tests for the following:—
  - (a) Calcium in limestone.
  - (b) Potassium in wood ashes.
  - (c) Ammonium sulphocyanate in sulphate of ammonia.
  - (d) Lead in town water supply.
  - (e) Organic matter in water.
  - (f) The sulphuric acid in gypsum.
  - (g) The chloride in kainit.
  - (h) The nitric acid in nitrate of soda.

100

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Surveying and Mensuration.*

1. The following is a traverse or survey of the outside boundaries of a paddock. Draw a plan of the field to a scale of 20 feet to 1 inch:—

		Feet.
1	354° 30'	30
2	52° 30'	23
3	84° 35'	15
4	151° 30'	12
5	113° 30'	26
6	212° 0'	25
7	243° 0'	35
8	310° 0'	20

2.

2. Compile field-notes of a survey made with a prismatic compass and chain of a field (as per Diagram), and calculate area :—

3. Give dimensions of a rectangular field containing 40 acres, the sides being in the proportion of 3 to 2. Answer required in links and feet.
4. In a square field an orchardist wishes to plant a row of trees along a diagonal, AB, but cannot see from one corner to the other; how can he do it by the aid of a chain?

#### Levelling.

5. Compile a specimen set of field-notes representing twelve or more readings of the staff, and plot out a section from the notes to a scale of 10 feet to an inch vertical and 20 feet to an inch horizontal.

#### Mensuration.

6. The dimensions of a circular haystack are as follows :—Diameter of base, 15 feet; circumference at eave, 60 feet; height of eave, 12 feet; roof, conical, and 10 feet high. Find contents in cubic feet.
7. A tank is 20 feet x 40 feet at the surface of ground, and 6 feet deep, the batter of two sides and one end being  $1\frac{1}{2}$  horizontal to 1 vertical, and the batter of the other end being 4 horizontal to 1 vertical. Find quantity of excavation in cubic yards.
8. What is the weight of a stack of hay cube-shaped, the edge being 16 feet, and weight of a cubic foot 4 lb.-3 oz.?

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

#### Geology.

Examiner: J. E. Carne, F.G.S.

Three hours allowed.

1. Distinguish between *chemical* and *mechanical* denudation; give instances, and mention some of the agencies by which they are effected.
2. Name the constituents of the atmosphere, and explain their effect upon animal and vegetable life.
3. Briefly describe the origin of coal and limestone, and state the effect of their accumulation on the earlier atmosphere of the earth.
4. Explain the following terms :—*Unconformability, Oolitic, dip, strike, false-bedding, syncline, porphyritic, brecciated, faulted, pseudomorphic.*
5. Name the accompanying five rocks, and give their composition.
6. Name the accompanying five minerals, and give their composition.
7. Name the principal geological divisions of the stratified portion of the earth's crust, and mention two fossils characteristic of each division.
8. Define the origin of *sedentary, transported, and organic* soils, and state the most essential elements of fertility in soils.
9. Name and give the composition of five minerals of value for manurial purposes.
10. Name six of the most abundant elements of the earth's crust.

Department

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Botany.—Elementary and Economic.*

The value of each question is the same. Credit will always be given for intelligent diagrams illustrating an answer.

1. Explain the structure of a flower of Rosaceæ: likewise of a quince-fruit.
2. What are the functions of roots? Describe four types of roots. What do you mean by the "growing point" of a root-fibre?
3. What are epidermis, parenchyma, and fibro-vascular bundles? Show how these bundles are differently disposed in the two principal groups of plants.
4. Explain what is meant by rotation of crops. What are the principal considerations which should influence a farmer in regulating the order in which his crops should follow one another?
5. What are the objects of grafting? Explain the various methods of grafting known to you.
6. State what you know about the Darling pea and its effects on stock. What is the nature of the disease it induces?
7. Tell me what you know about the following weeds, and how would you cope with them:—Bathurst burr, Noogoora burr, Cape weed, Paddy's lucerne, and Lantana?
8. What is the difference between a gum and a resin? Describe an ideal gum-arabic. Name any Australian gums and resins of commercial value known to you.
9. Describe the appearance and cultivation of the Canaigre plant. What is sumach, and how is it prepared?
10. What do you know about osiers or *basket-willows*?

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*Vegetable Pathology.*

The value of each question is the same. Credit will always be given for intelligent diagrams illustrating an answer.

1. Describe the structure of the spray-pump in use at the College. What are the chief forms of spray-pump in use in this Colony?
2. How would you prepare Bordeaux mixture?
3. What are the principal fungous diseases affecting the peach, and how would you cope with them?
4. Give an account of the principal fungous pests to which the Citrus tribe is particularly liable to attack in this Colony, and state your mode of treatment in each case.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1897.

*English and Arithmetic.—First-year Students.*

Examiner: Chas. T. Musson, F.L.S.

Three hours allowed.

1. Describe clearly and briefly the various kinds of hoes you have seen in use.
  2. Show a proper use of the words *shall* and *will*, giving four sentences in each case.
  3. What is a synonym? Explain and give examples.
  4. Write an essay on "Climate" (not less than 30 lines nor more than 60).
  5. Find the cost of material for 200 gallons Bordeaux mixture, winter strength:—Lime, 2s. 9d. per cwt.; sulphate of copper, 22s. 6d. per cwt.; water, 1s. 6d. per 1,000 gallons.
  6. One side of a square paddock measures 182 yards 3 feet: Find the diagonal.
  7. Find the compound interest on £150 at  $3\frac{1}{4}\%$  for 2 years 7 months.
  8. The diameter of a wheel is 4 feet: How many revolutions will it make in travelling  $1\frac{1}{4}$  mile?
  9. Four men do a piece of work in 13 days of 10 hours; in how many days of 8 hours will 5 men do it?
- (Answers to 4 places of decimals. All work to be shown up.)

DIPLOMA PAPERS, 1898.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1898.

*Agriculture.—Diploma Students.*

Examiner: F. B. Kyngdon, M.R.A.C.

Three and a half hours allowed. Marks, 100.

Introduction.—Answer each question in the order given. Begin an answer on a fresh sheet, and each section of an answer as a fresh paragraph.

1. Write a paper on manures.
  - (1) Name the fertilisers generally available on an Australian farm, or that can be purchased in the Colony.
  - (2) Give percentage of nitrogen, phosphoric acid, and potash in five of the most useful fertilisers for general farming.
  - (3) State the special crops for which each of the three abovenamed dominant factors are most suited.
  - (4) How is farmyard manure best made; name the two general defects in its treatment.
  - (5) With what agent of inducing fertility can a soil be inoculated, and upon what does its action depend?
2.
  - (1) A deep sandy soil like that of the College farm has the drawback of a poverty of fertilising constituents, yet it has compensating virtues: Name them.
  - (2) Enumerate what particular crops will thrive best on such poor sand.
  - (3) What precautions are necessary in applying mineral fertilisers to very porous, sandy soil?
  - (4) Give percentage of sand and clay in a typical sandy soil, a soil of medium texture, and a stiff clay loam.
  - (5) How would you improve the texture of a heavy clay so as to make it more easy of cultivation?

- A spring bursting out half-way down a moderate hill-slope, yields a steady flow of 500 gallons per hour ; the problem is to determine the most economical appliance to raise water to a reservoir 80 feet higher up the hill so as to command a vegetable garden :
- (1) Name the various water-lifting appliances available in the Colony.
  - (2) Enumerate the motive powers that can be applied to lift water.
  - (3) Select the most economical one for this spring, remembering that only that 500 gallons per hour can be dealt with.
  - (4) If the reservoir holds 175,000 gallons, in how many hours will the apparatus you select fill it?
  - (5) Give an approximate estimate of the cost of this apparatus, with iron tubing to reservoir, so that it be in complete working order.
4. A crop of 10 acres of potatoes is grown in an average season on fair land, with a good yield : Give the following particulars :—
- (1) Sequence of operations in preparing laud for planting, with cost of each operation per acre.
  - (2) Preparation of sets for planting, the operations of planting and completing the seed-bed, with costs of each item per acre.
  - (3) Operations of cultivation till crop is ripe, with detailed cost per acre.
  - (4) Method of lifting the crop, yield, grading, cleaning, and bagging of whole 10 acres.
  - (5) Prepare a balance-sheet for the 10 acres, placing to credit at current Sydney prices the potatoes marketed, and allow value for the small potatoes kept for farm use. On debit side, carry out the cost of production as detailed in questions Nos. 1, 2, 3, 4, and adding, to cover rent, taxes, and deterioration,  $12\frac{1}{2}$  per cent. on the capital of £15 per acre invested in the farm. Show the profit or loss on the 10 acres.
5. Describe dairy-farm management with 80 cows actually in milk :
- (1) Your ideal farm ; locality, area, proportion of river-flat, hill-side, and cultivation land.
  - (2) Approximate cost of buildings, bails, sheds, shelters, and yards for this farm.
  - (3) The breeds you prefer, with number of bulls, milkers, springers, drys, and head of young stock.
  - (4) The total milk yield per annum of this farm.
  - (5) Your profit, when all outgoings are paid.
6. You farm 3,000 acres of good holding in the Central Division of the Colony, and combine wheat-culture with the production of fat crossbred sheep for export :
- (1) Enumerate your farm horses and implements necessary to put in work, harvest, and deliver to rail the crop off 500 acres under wheat.
  - (2) Name varieties of wheat you would grow for grain and fodder, with reasons.
  - (3) What type of crossbred sheep would you prefer ? Would you breed or buy ?
  - (4) If breed, what number of breeding ewes would you require to supply the annual output of fat sheep ? Estimate how many fats would be turned yearly, taking into consideration the wheat stubbles and specially-grown crops.
  - (5) The wheat land would need a rest : How many consecutive seasons would you crop the same land with wheat, and what would your rest-crops be, before wheat came round again ?
7. You keep 100 head of laying hens :
- (1) How many eggs per annum would you expect if one-half be laying breeds and the rest a good all-round fowl ?
  - (2) Name breeds you would keep ?
  - (3) State your opinions as to cross-breeding in reference to egg-production and to an export bird.
  - (4) How would you manage to get data as to the egg-record of each hen ?
  - (5) Describe the rapid raising of ducks for table, mentioning breed, nature of food, and diseases to be feared.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1898.

*Sheep and Wool.*

Examiner : A. Hawkesworth.

Time allowed—Three hours.

1. What is wool ?
2. What is combing wool ? What is the difference between combing and clothing wool ?
3. What breed of sheep produces the finest wool, and what the coarsest ?
4. What do we mean by the following terms :—
  - (a) A staple of wool ?
  - (b) Lustre in wool ?
  - (c) Crossbred wool ?
  - (d) Shafty wool ?
5. How do you tell the age of a 2-year, 3-year, and 5-year old sheep ?
6. What are the main objects to be observed in :—
  - (a) Breeding ?
  - (b) Shearing ?
7. Having a swampy, cold country, what kind of sheep would you keep ? Give your reasons.
8. What kind of land would you select for Lincoln sheep ?
9. For early maturity, what two English breeds would you select for crossing with the merino ?
10. What crosses would you select for exporting ?
11. About what weight for a dressed sheep is required for the English market ?
12. About what age would you cut and mark lambs ?
13. How many ewes would you put to a ram ?
14. What is the best time of the year for lambing ?
15. What effect has dipping upon sheep and wool ? How much mixed dip does it take for a sheep ?

Department

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1898.

*Chemistry.—Diploma Examination.*

1. Describe the preparation and principal properties of chlorine.
2. Describe two ways of preparing ferrous sulphate, and write the equations representing them. By what qualitative tests would you prove its composition?
3. Given 10 litres of oxygen at 0°C. and 760 mm. pressure; calculate its volume at 15°C and 710 mm. pressure. What is the weight of this quantity? (1 litre hydrogen = 0.0896 gm.)
4. What volume of gas at normal temperature and pressure will be obtained by decomposing 10 grams pure calcium carbonate with hydrochloric acid?
5. What are the principal wet and dry reactions for zinc?
6. The following reagents are added separately to a solution of copper sulphate:—Potassium hydrate, barium nitrate, ammonium sulphide: Describe what happens in each case, and represent the changes by equations.
7. Explain why gypsum (calcium sulphate) is specially adapted for application to clover crops.
8. Describe the chemical and mechanical changes produced by burning clay soils.
9. Explain why, in general, granite soils are poor, and soils of trap origin are fertile.
10. Describe the functions of food in the growth of an animal, and classify the different kinds of food.

*Practical Chemistry.*

Three simple salts are supplied for analysis. The student is required to find the base and the acid in each, and to describe the tests that establish the results arrived at.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1898.

*Applied Mechanics and Heat.*

Examiner: S. Henry Barraclough.

Not more than nine questions to be attempted.

1. What do you understand by the terms "Acceleration," "Force," "Momentum," "Work," "Power," "Inertia," "Moment of a force?"
2. Prove from Newton's Second Law of Motion that the kinetic energy of a body of mass  $M$  moving in a straight line with a uniform velocity of  $V$  units per second is  $\frac{1}{2} M V^2$ .
3. Explain the term "centre of gravity of a body." How would you determine experimentally the centre of gravity of a three-legged stool? Give examples of stable, unstable, and neutral equilibrium.
4. The section of a stream is 12 square feet, the average velocity of the water is 2 feet per second; there is an available fall of 25 feet; what is the horse-power available; A turbine placed at the bottom of the fall drives a dynamo which sends electric power to a motor at a distance. The efficiency of the turbine is 70 per cent.; of the dynamo, 87 per cent.; 10 per cent. of the energy from the dynamo is wasted in transmission, and the efficiency of the motor is 72 per cent. How much power is given out by the motor?
5. Make a neat sketch of some form of the Bramah press.
6. Explain clearly the principle of Weston's differential pulley-block.
7. Define the terms "density" and "specific gravity." A rectangular punt is 12 feet long, 6 feet wide, and 2 feet deep, and is observed when empty to float with 9 inches out of the water. Find the weight of the punt.
8. Why is it necessary to have compensated pendulums in clocks and compensated balance-wheels in watches? Describe some form of compensated pendulum or balance-wheel.
9. Write a short essay on "The mechanical equivalent of heat."
10. How is it that on a cold day a piece of iron feels much colder than an adjoining piece of wood?
11. Describe the phenomena which occur when water is heated in an open vessel. On what circumstances does the temperature at which water boils depend?

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, 1898.

*Entomology.—Diploma Examinations.*

Students may answer any 10 of the 12 questions. Time allowed—Three hours. Each question 10 marks.

1. Give the scientific name of the pear mite; where does it live in winter? Give a general account of its habits, and the remedies for its destruction.
2. Explain the best method of mixing Bordeaux mixture: give formula. Name the six diseases for which it could be used.
3. Give a brief description of the chief pests which attack the orange-tree.
4. Mention an effective remedy for each of the following pests:—Peach aphid, red scale, cut worms, pear slug, Rutherglen bug, and crickets.
5. Why does the Agricultural Department inspect all fruit and plants coming into the Colony? What precautions do exporters take when sending oranges to other colonies?
6. Give the life-history of the codlin moth. What fruits does it attack? How does it spread from place to place, and what methods would you take to destroy it?
7. Give examples of three different forms of insect mouths, and describe the different manner in which they feed.
8. What kind of day would you choose to spray a tree with Paris green? When would you use lime, salt, and sulphur mixture? Under what conditions could pure kerosene be used to spray a tree without killing it?
9. What is meant by the metamorphosis of an insect? Give a brief account of the metamorphoses of a grasshopper and a butterfly.
10. Give an account of the effects of San Jose scale in an orchard. How would you recognise it on an apple, and what means would you take to check it?
11. Define "Friendly" insects. Give examples of six belonging to different orders of insects?
12. What are the chief points of difference between a locust, a grasshopper, and a cicada? On what do they feed?

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College, December, 1898.

*Book-keeping.—Examination for Diploma.*

Examiner: Alfred Armstrong.

Time allowed—Three hours and a half. Marks, 100.

Enter in cash-book, journal, and ledger the transactions as stated below, making the closing entries, and draw up a "Trial Balance," "Profit and Loss Account," and "Balance-sheet."

William Morris and James Archer carry on business as farmers in partnership, having £1,430 16s. 8d. and £1,230 10s. respectively standing to their credit in capital account on January 1, 1898.

Partners' capital and drawings are to be subject to interest at the rate of 5 per cent. per annum, and the net profits or losses to be equally divided.

The following is a statement of their affairs at the beginning of, and their transactions during the month of, January :—

Dear Sir,

Spring Hill, 19 December, 1898.

I have the honor to append herewith the result of my examination of the twenty students in Practical Agriculture. The report, I think, will speak for itself, which to me is very satisfactory. I beg to tender my very best thanks to yourself and all the officers over the various branches of work for their courtesy and kindly assistance rendered during the examination.

With best wishes to yourself personally, and to all your assistants,

I remain, &c.,

THOS. C. WORBOYS.

To the Principal, Hawkesbury Agricultural College, Richmond.

On December 15 I commenced the examination of the twenty students which came up for examination in Practical Agriculture numbering 1 to 17 and 50, 51, and 52, the examination lasting three days. It gives me great pleasure to report:—

First.—The conduct of the students throughout the examination was all that could be desired, although the work expected from them was very trying, especially that part in working horses, both in ploughing, mowing, hay-raking, carting, &c., not a bad word was used from any of them.

Secondly.—The work performed by the whole of the students was very satisfactory throughout, showing great improvement since last year, owing no doubt to the increased area being under cultivation which allows the students to have more practical work. I was pleased to see a much larger increased number of stock, such as horses, sheep, pigs, &c., which I consider very necessary, in order to give the students a proper training in the management of farm stock. I was very glad to see that a start has been made in the right direction with stock, namely, the breeding, rearing, and fattening for the use of the College, &c., and also the breeding for stud purposes, which is a splendid example for the students, and gives them a thorough practical training in this branch of farm stock. I was also pleased to see such a general improvement in the appearance of the farm all round. In addition to the large hay-shed full of hay, I noticed six stacks of wheat, barley, and oats, and, considering the season, I think it turned out very well. The maize and other fodder crops are looking well, which is a strong evidence of good cultivation, as the season is a very trying one. The students all round seemed to take a deep interest in all branches of their work, and answered all questions very readily, besides taking every opportunity to obtain information from me with regard to settling on the land, and inquiring for the best localities for certain branches of farm work. The work of the students was very even in character, as will be seen by the marks awarded. In some cases it was very difficult to decide which was the best workman, the whole of the students doing very good work, and only varying a very trifle—the highest obtaining 82 and the lowest 70 marks.

THOS. C. WORBOYS,

Examiner.

Department of Agriculture,

Sydney, 20 December, 1898.

Sir,

It affords me the greatest pleasure to have to report on the improvement in the work of the students this year in every branch of orchard work, and in the readiness and intelligence of the replies to questions, and also in the method with which the practical part of the work was carried out.

I put the eighteen students through a severe test, the examination lasting three days; and those students who made eighty or more marks out of a possible 100, did very good work indeed.

In grafting, budding, and summer pruning the work was neatly and well done. In team work, comprising cultivation, ploughing, and single horse work, harnessing horses, &c., everything was carefully and well done, and with due expedition. The conduct of the students during examination was everything that could be desired, and the results reflect great credit on the Principal, and also on Mr. Alford, the orchardist, who has done his best to teach students the practical part of the work.

I have, &c.,

W. J. ALLEN.

Geo. Valder, Esq., Principal H. A. College, Richmond.

Department

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College.—December, 1898.

*Agriculture.—First year.*

Examiner: Mr. George Valder.

Time allowed—Three hours.

1. What are the physical properties of the following soils:—Sandy, clay, and those containing a heavy percentage of humus?
2. Describe the method of laying a tile drain?
3. What is the action of lime on different soils? For what crops is it most beneficial?
4. Why do we fallow land?
5. Name the principal nitrogenous fertilisers, and state from what sources they are obtained.
6. Describe the systems adopted for the improvement of cereal crops.
7. Which soils are generally found the most suitable for irrigation purposes in this Colony?
8. What is the effect of deep cultivation?
9. Mention some of the chief exotic grasses, and state in what districts of the Colony they can be successfully grown.
10. Describe fully the cultivation of the following crops:—
  - a. Maize.
  - b. Sugar Beet.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College.—December, 1898.

*Practical Chemistry.—First Year.*

Examiner: Mr. E. Clarence-Wood, M.A., B.Sc. B.E., &c.

Three hours allowed.

You must describe fully all the experimental work from which your conclusions are drawn. Preliminary examinations should always be confirmed.

Marks.

- |    |   |
|----|---|
| 15 | 1. Examine the substance ( <i>A</i> ) for one acid and one base.                                      |
| 15 | 2. Examine the substance ( <i>B</i> ) for one acid and one base.                                      |
| 15 | 3. Show the difference in the substances ( <i>C</i> ) and ( <i>D</i> ).                               |
| 20 | 4. Examine the phosphatic manures ( <i>E</i> ) and ( <i>F</i> ), and compare their actions in a soil. |
| 15 | 5. What is the nature of the manure ( <i>G</i> )?   |
| 20 | 6. What manurial substances are contained in the sample ( <i>H</i> )?                                 |

100

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College.—December, 1898.

*Agricultural Chemistry.—First Year.*

Examiner: Mr. E. Clarence-Wood, M.A., B.Sc., B.E., &c.

Three hours allowed.—Diagrams and chemical equations must be copiously supplied.

Marks.

- |     |   |
|-----|---|
| 12  | 1. Explain what is meant by chemical action, and the statement that matter is indestructible. Cite experiments in illustration of your remarks.   |
| 12  | 2. Describe the preparation, properties, &c., of oxygen.  |
| 12  | 3. What is sulphate of ammonia used for in agriculture? Where do our supplies come from, and how is it manufactured?  |
| 12. | 4. Write an account of carbonic acid. How is it concerned in the chemistry of agriculture? Name several carbonate minerals.   |
| 20  | 5. How is superphosphate of lime made? Mention various raw materials used in the manufacture, and point out their respective merits or demerits as influencing the quality of the manure.   |
| 20  | 6. Mention various substances having a manurial value for potash. In what classes of soils would you expect potash to be abundant? State why. Write an account of the distribution of potassium in Nature. What percentage of potassium sulphate would be equivalent to 20 per cent. of potassium chloride in a manure? |
| 12  | 7. Explain the chemical nature of the following:—Glass, brass, gun-metal, felspar, quartz, hæmatite, steel, Paris green, Condyl's fluid, humus, sal-ammoniac, iron pyrites, gypsum, copperas, and kaolin.   |

100

Department of Agriculture, New South Wales, Hawkesbury Agricultural College.—December, 1898.

*Mensuration and Surveying.*

Examiner: S. R. Dobbie.

Mensuration.

1. An iron tank, 4 ft. x 4 ft. x 5 ft. is full of water: How many gallons are there in it, and what is the weight of the water?
2. A tank is 50 ft. x 25 ft. at the surface of ground, and 8 feet deep; the batter of two sides and one end being 1 horizontal to 1 vertical, and the batter of the other end being 4 horizontal to 1 vertical: Find quantity of excavation in cubic yards?
3. Calculate the number of cubic feet in a haystack with gable roof, dimensions being 20 ft. x 10 ft. at base, 20 ft. x 14 ft. at eave, height of eave 10 ft., and height of gable 5 ft.
4. In an orangery of 500 trees it is proposed to top-dress each tree with loam 6 inches deep for a radius of 5 feet from trunk: How many cubic yards of loam are required?

Surveying.

## Surveying.

1. A, B, C, D, is a farm of 100 acres, and in shape is a trapezoid. The farmer wishes to divide it into 3 paddocks of 20, 30, and 50 acres respectively. Find dimensions of paddocks from data given. H G is parallel to A D, and E F is parallel to B C.

2. A, B, C, D is a square paddock containing 160 acres. Corner A is 30 chains higher than corners B, C, and D. What length of fencing would be required to enclose the land?

3. It is proposed to lay out 3 ac. 3 rds.  $19\frac{1}{2}$  per. of land as an orchard. The trees are to be 25 feet apart, and the shape of the land is rectangular, the sides being in the proportion of 2 to 1: How many trees will be required, the rows being parallel to and distant 25 ft. from the sides?

## Levelling.

COMPILE field-notes of a section of levels comprising at least ten readings of the staff, and plot the section, giving the grade from end to end.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College.—December, 1898.

*Botany and Vegetable Pathology.*

The value of each question is the same. Credit will always be given for intelligent diagrams, illustrating an answer.

1. Give a full account of the functions of roots.
2. What is a seed? What do you mean by exospermous and endospermous seeds? Name any commercial "seeds" that are really fruits, and give a reason for your answer.
3. Describe the process of germination of a pea.
4. Give an account of the life-history of the maize-plant. State what are the conditions most favourable to its development.
5. What do you mean by hybridisation? How would you set about the process, choosing any kind of plant you like? Give some account of practical advantages of the process to the farmer.
6. Give an account of the chemical properties and microscopical characters of starch. How would you set about making it from potatoes or maize?
7. Compare and contrast the characters of the Leguminosæ, Viniferæ, and Graminacæ.
8. A damaged leaf is brought to you, and you cannot tell at first sight whether the injury is to be attributed to fungi or insects. Explain (with the aid of drawings) how you would set the matter at rest.
9. Give a full account of any fungus disease affecting maize, and state how you would combat it.
10. What are the fungus diseases affecting any part of an apple-tree? Give an account of any one of them.

Department of Agriculture, New South Wales.—Hawkesbury Agricultural College.—December, 1898.

*English and Arithmetic.—First-year Students.*

Three hours allowed.

1. Write a letter to an insurance office, giving full particulars as to effecting an insurance on certain farm buildings.
2. Explain the meaning of—Forecast, renovate, instigate, progressive, tangible, obligatory, indurated, diagnosis, consolidate, appellation, adventitious.
3. Write an essay on "Fruit Growing." Not more than 60 lines.
4. Give the meaning of a "A cord of wood," "One point of rain." Give the weight of 1 cubic foot of water. What is meant by the statement, "That milk tests 4.1 for butter fat"?
5. A rectangular paddock measures—diagonal, 820 feet; end, 350 feet: Find its value, at £7 18s. 6d. per acre.
6. If 13 men can do a piece of work in 21 days, working 8 hours a day, how many hours a day would 19 men, working 16 days, have to work to do it?
7. Find the compound interest on £371 for 5 years, at  $3\frac{3}{4}\%$ .
8. Find the square root of 11111111 (5 places of decimals).
9. Find the cost of ploughing 171 ac. 3 r. 13 p., at  $3/8\frac{1}{2}$  per acre.

Memo from the Director to G. Valder, Esq., Principal Hawkesbury Agricultural College,  
Richmond.

Botanic Gardens, Sydney, 2 January, 1899.

THE examination paper in Botany and Vegetable Pathology was, in my opinion, a little less difficult than any of the preceding papers I have set College students. At the same time, I do not hesitate to say that the quality of the answers was much more satisfactory than at any previous examination. I am pleased, not only with the high standard reached by many of the students, but also with the more even quality of the papers. It seems to me that the students, as a body, are more uniformly paying attention to the teaching they receive in Botany and Vegetable Pathology.

Yours, &c.,  
J. H. MAIDEN.

### Report of the Chemist.

1 January, 1899.

I HAVE the honour to submit herewith a condensed report of the work done in the Chemical Laboratory of the Department during the year ending December 31st, 1898.

The routine analytical work includes:—

Soils .....	86
Fertilizers.....	130
Waters .....	22
Wheats and flours .....	118
Miscellaneous .....	95

Under "Miscellaneous" is included analyses of all kinds of agricultural products, such as beet-roots, milk, butter, fodders and fodder-plants, ensilage, honey, preservatives and insecticides, tobacco, &c., &c.

There is in addition a large amount of unrecorded work, such as replies to inquiries, personal interviews and advice, analyses and investigations for other officers of the Department, &c.

The number of official papers dealt with during the year was 589.

#### *Soil Analysis.*

As in previous years, analyses of soils are made for farmers who forward samples taken in accordance with directions. In forwarding the result of the analysis a report is furnished explaining technicalities, and advising, as far as possible, as to the best treatment for the crops it is intended to grow, suggesting appropriate manuring, and replying to any special points on which information is required.

In addition to the estimation of the chemical ingredients and their availability, special attention is directed to determine those physical characteristics which directly influence the soil's fertility, such as the capillary power, absorptive power for water and salts, &c.

In future I hope to be able to add to these the determination of the power of promoting nitrification, thus furnishing what is, in my opinion, the most important indication of the fertility or non-fertility of the soil.

On account of the large area from which these soils are obtained, a much greater number will have to be examined before we are able to speak definitely as to the characteristics of the soils of New South Wales. A commencement has been made with the soils obtained in County Cumberland and the neighbourhood of Sydney, and the results published, together with an explanatory map, in the *Agricultural Gazette*. The results point unmistakably to the fact that the Cumberland soils are poorly supplied with plant-food compared with soils under cultivation in other parts of the world, being notably deficient

in lime and mineral plant-food, and to the advantage to be derived by the application of lime and more thorough methods of cultivation in order to increase and maintain their fertility. I hope very shortly to be able to discuss the soils from County Cook in the same way, and thus in time include the whole of the Colony.

The examination of soils occupies a considerable amount of time, as each examination involves fourteen or fifteen distinct determinations, and the time of one of our staff (Mr. Barker) is almost exclusively taken up with this work.

#### *Fertilizer Analysis.*

Analyses of fertilizers are performed gratis for farmers, and on payment of a small fee for manure agents and buyers.

There is, consequently, no excuse for a farmer who allows himself to be deceived by the appearance of a manure, as by forwarding a sample to the Department he can always have an analysis made without cost, and can easily protect himself in this way from purchasing inferior articles.

A list of the principal fertilizers purchasable in Sydney, showing their composition as determined by analysis, is issued by the Department, and revised each year. All manures appearing in this list have been sampled by officers of the Department and analysed in the laboratory, and every care is taken that only reliable firms and vendors are represented.

#### *Fertilizers Bill.*

A short time ago you instructed me to draw up the draft of a bill to regulate the sale of fertilizers in New South Wales. Such a bill is in force in the other colonies, and is found to ensure protection to the farmer in the purchase of manures. I have carefully compared the bills in force in the neighbouring colonies, and have drawn up a set of regulations which, I think, will suit our requirements. This draft has been submitted to you, and is now in the Minister's hands. The usefulness of such a bill in protecting the farmer from unscrupulous dealers will be very great, and I trust that the bill will soon become law, making it penal to offer for sale any manure without a statement as to its composition as determined by analysis.

#### *Wheat Testing.*

The work already done in this connection, of which I had the honour to lay before you a short sketch in my last annual report, has been continued on a more extensive scale than heretofore. The rollers, hitherto driven by hand, have now been attached to a machine which is driven by a small water-motor, thus enabling a considerably larger number of wheats to be examined than formerly. A description of this mill, and the work claimed for it, appeared in the *Agricultural Gazette* for July.

Since it has been erected, it has been kept almost constantly at work till the end of the year, and it is being largely availed of by practical millers who desire information as to the probable behaviour of samples of wheat with which they are unfamiliar, as well as by farmers, and as a means of awarding prizes to wheats competing at shows.

I am glad to be able to report that this branch of work, which was commenced in a small way, and in the nature of an untried experiment, has passed the experimental stage.

The results obtained are recognised as being reliable by all millers, who have seen the machine at work, and we have been able, on several occasions, to furnish millers with information which enabled them to decide upon the desirability of purchasing costly appliances or of otherwise modifying their methods.

I am further pleased to be able to report that the operations of the testing-mill have obtained considerable recognition outside the Colony, and have everywhere received favourable comment. The desirability of erecting similar testing-mills has been urged upon the Governments of the other colonies by millers and others who have seen this one in operation, and inquiries have been made of our Department by the Agricultural Departments of Victoria, South Australia, and Queensland as to the fitting-up of such a mill; so that it is only a question of time for this method of testing wheat to become universal throughout Australia.

#### *Corn Trade Section, Chamber of Commerce.*

In connection with this work, the Minister nominated me in conjunction with Mr. Valder as a member of the above body.

The work performed by this section has been of a preliminary nature. A circular letter has been drafted inviting farmers, through the local Agricultural Societies, to furnish samples of grain grown in their district, with the object of establishing a fair average quality standard as a basis for exporting. It will be possible to furnish with each average sample so obtained a certificate as to its milling qualities.

In connection with this matter, I found that no official method was recognised for ascertaining the weight per bushel of wheat in any of the Australian colonies. As it is of great importance in view of the contemplated action of the Chamber of Commerce, that some uniform method be adopted for fixing the standard, I am giving this matter attention, and am examining the methods adopted in wheat-buying countries, with the object of laying before the Chamber of Commerce the details of a scheme which, if it meets with their approval, may be submitted for adoption by the other colonies, so as to ensure a uniform standard throughout Australia. In this I am working in conjunction with Mr. Evans, Government Inspector of Weights and Measures, and propose that when the details of the method are finally decided on, the necessary apparatus and appliances for taking the standard shall be lodged in the office of Weights and Measures, so that all similar apparatus may be tested against these standards, and certified by Mr. Evans.

#### *Fumigation of Fruit.*

Owing to the reciprocal action of the Governments of the different colonies in prohibiting the introduction of fruit infested with scale within their border, inquiries were made into the efficacy of different methods of treating such fruit, with the object of destroying the vitality of the scale without injury to the market value of the cargo. Under your instructions, I conducted a series of experiments, with the object of testing the efficacy of fumigation with hydrocyanic acid in this direction.

The

The result was to show that such treatment effectually destroyed the scale without in any way injuring the appearance of the fruit, and that by taking proper precautions there was absolutely no danger to be apprehended that the fruit would be injurious to health if eaten.

I suggested that, if private shippers were allowed to erect fumigating chambers, they should be obliged to follow certain instructions as to their construction and method of fumigating, and have visited several such chambers in Sydney and found them to comply with all requirements.

#### *Hawkesbury Agricultural College.*

Early in the year Mr. E. H. Gurney temporarily acted for Mr. Wood as lecturer at the Hawkesbury Agricultural College during the absence of the latter on account of illness. In addition to his ordinary duties as instructor, Mr. Gurney superintended the equipment of the newly erected laboratory and helped to get it into working order.

I am glad to be able to report that the Principal of the College furnished Mr. Gurney with a letter expressing his appreciation of the efficient manner in which he had carried out his duties.

#### *Export of Fruit, &c.*

Late in the year I was appointed member of a board to carry out experiments in connection with the best method of exporting fruit to England. The failures of recent shipments of fruit have rendered it advisable to investigate the conditions under which fruit is shipped, with the object of ascertaining the causes of recent failures, and the suggestion of a method which shall ensure success in future.

The committee have held a preliminary meeting, at which it was decided to obtain floor space in one of the cool chambers at the cold storage works at Darling Harbour.

#### *Miscellaneous Work.*

During the year I have been engaged in examining a number of applications for letters patent dealing with chemical subjects, for the Department of Justice, and have acted on sub-boards appointed by the Public Service Board in the matter of the appointments of a Demonstrator in Metallurgy at the Technical College, and of two assistants to the Dairy Expert of the Department of Agriculture.

#### *Future Work.*

In the coming year, with the help of the additional assistance provided for in the Estimates, I look forward to being able to commence the carrying out of a scheme involving several lines of experimental research, an outline of which was submitted to you early in the year. I have long felt that the Department has neglected this most important side of its usefulness.

There are many problems connected with the treatment of the soil and the choice of crops the solution of which is a matter of the greatest importance to farmers, and which can only be satisfactorily dealt with by such a Department as ours which is well qualified to undertake the work. The large amount of routine and official work and the small size of our staff has hitherto prevented my undertaking work of the kind.

The lines of research which I consider would be of the most immediate practical benefit to the community and which could be undertaken with advantage at first are—

1. Study of nitrifying organisms and soil-bacteria under Australian conditions.
2. Best methods of treatment of wheat lands in the dry districts.
3. Study of native grasses and fodder-plants, in respect to their feeding qualities and resistance to drought.
4. Manure experiments, both in the field and in pots.
5. Study of wheat grain.
6. Systematic examination of plants reputed to be poisonous to stock.

#### *Publications.*

The following is a list of articles, dealing with chemical matters, published during the year in the *Agricultural Gazette* :—

	1898.
“On the Constitution of Wheat gluten” .....	April.
“Notes on the Soils of County Cumberland” .....	May.
“Wheat Testing—Description of Mill” .....	July.
Chemical Notes—	
“Fumigation of Fruit with Hydrocyanic Acid” .....	} October.
“Products of Dry Distillation of some N.S.W. Timbers” .....	
“Composition of Tobacco Leaf from Government Experiment Farms” .....	
“Analysis of Plants and Fodders” .....	
“Note on the Adulteration of Oatmeal” .....	} November.
“Soil Moisture” .....	

In conjunction with Mr. E. H. Gurney :—

“Table of Analyses of Commercial Fertilizers” .....	April.
---	--------

In conjunction with Messrs. Allen, Blunno, and Froggatt :—

“Insect and Fungus Diseases of Fruit Trees and their Remedies” .....	{ June, September, October, December.
--	--

A third edition of the “Farmers’ and Fruit-growers’ Guide” appeared during the year, which involved my revising and largely re-writing the articles on “The Soil” and “Manures and Manuring” contributed by me to that publication.

*Australasian Association for the Advancement of Science.*

At the meeting of the above Association, held in Sydney early in the year, a considerable number of papers on agricultural subjects was read before the Agriculture Section, of which I acted as Secretary. Although this formed no part of my official work, I think a brief review of what was done is not out of place in the Annual Report of the Department, whose officers contributed largely to the success of the Agriculture Section of the Association. The papers read were all of considerable interest to farmers, and were in nearly all cases followed by discussions of even greater interest. Most of the contributions were published in newspapers and journals, several of them being reproduced in the *Agricultural Gazette*.

The following is a list of the papers read before the Agriculture Section, which will furnish an idea of the nature and scope of these meetings :—

- |                            |   |
|----------------------------|---|
| 1. Wm. Farrer .....        | “ On the making and improvement of Wheats for Australian conditions.” |
| 2. M. A. O’Callaghan ..... | “ Bacteriology in relation to Dairying.”                              |
| 3. A. H. Benson .....      | “ On the Propagation of Fruit Trees.”                                 |
| 4. F. Turner .....         | “ On the Gramineæ of West Australia.”                                 |
| 5. Do .....                | “ On the Salsolacæ of West Australia.”                                |
| 6. Do .....                | “ On the Poison Plants of West Australia.”                            |
| 7. C. Fuller.....          | “ Applied Entomology in West Australia.”                              |
| 8. W. W. Froggatt .....    | “ Economic Entomology.”   |
| 9. H. T. Baker .....       | “ On the Pine Trees of New South Wales.”                              |
| 10. H. W. Potts .....      | “ Milk Analysis.”   |
| 11. F. B. Kyngdon .....    | “ Wine Culture in New South Wales.”                                   |
| 12. A. Gale .....          | “ On the Colour of Flowers, and its Influence on Bee Life.”           |
| 13. D. M’Alpine .....      | “ Experiments in Fodder Plants.”                                      |
| 14. T. Steel .....         | “ The Mesquit Tree and its Pods.”                                     |
| 15. A. N. Pearson .....    | “ Notes on Soil Analysis.”  |
| 16. T. U. Walton .....     | “ Economic Feeding of Working Horses.”                                |
| 17. J. P. Dowling .....    | “ The Queensland Tick—How its progress southward may be prevented.”   |
| 18. H. Lord .....          | “ The Farmers’ Weights and Measures.”                                 |
| 19. W. S. Campbell .....   | “ Conservation of Forests.”   |
| 20. Do .....               | “ Farmers’ Unions.”   |
| 21. R. Helms .....         | “ Note on <i>Emex Australis</i> .”                                    |

In conclusion, I wish to express my high sense of the value of the assistance rendered to me by Messrs. E. H. Gurney and C. R. Barker. In addition to their assistance in carrying on the general routine work of the laboratory, Mr. Gurney has specially occupied himself with the milling of wheats, and Mr. Barker with the analysis of soils, both of which are special lines of work requiring considerable skill and efficiency. Their work has always been thoroughly reliable and willingly undertaken. Mr. Gurney contributed a paper on the colouring matter and wax of certain scale insects to the Science Congress (Sydney Meeting, 1898), and Mr. Barker has carried out some experiments into the retentive power of soils for moisture, which were published in an article on “ Soil moisture ” in the *Agricultural Gazette* for November last.

I have, &c.,

F. B. GUTHRIE.

---

### Report of the Dairy Expert.

I have the honor to report as follows :—Statistics show that there is a steady and large increase both in the number of people taking up the dairy industry, in the cattle used for dairying purposes, and the amount of dairy products manufactured. The number of factories also shows a considerable increase, and so firm has the belief in the future of the industry become, that whenever there is sufficient milk produced to warrant the establishment of a separating station, people, representing either private or co-operative concerns, are ready and willing to erect the necessary building and plant. Since the Government has shown that it means to support and encourage the industry without in any way hampering those engaged in the commercial side, the development of dairying has been remarkable. When I first came to the Colony there seemed to be a great fear among farmers and large land-owners that the industry would be overdone, and that they would be unable to sell their produce except at a very low rate. An explanation of the conditions under which dairying has to be carried out in the Northern Hemisphere for five or six months of the year went to show that it should be possible for the Australians to produce butter to sell at a profit in England during the late autumn, winter, and spring at a lower rate than producers in the Northern Hemisphere could possibly do, and this, together with satisfactory present prices, went far towards reassuring people of the stability and growing possibility of the industry. There is still very great room for development, and, were it not for the cost and difficulty of procuring skilled labour, the industry would develop even more rapidly and among people who are now only prevented from embarking in it by this labour question alone. If a milking machine is ever perfected and introduced, the industry will make unthought-of progress. Referring to this point, it might be mentioned that

the report of the Highland Agricultural Society of Scotland relating to their recently-conducted trials of milking machines is most encouraging, and it seems as if the Murchland machine was worthy of a trial in these Colonies.

The feature of the year's work of this department has been the importation of a goodly number of dairy stock from the British Isles and from Holland. All the well-known dairy breeds are represented in the importation, and there is no doubt whatever but the introduction of this new and varied blood into the colony will mean an immense benefit to our dairy farmers, and a great stimulus to the dairy industry. A number of these imported bulls have been loaned out to the Agricultural Societies throughout the Colony, and there has been evidenced the greatest desire among farmers to procure one of these animals for their district, so much so that the department was unable to supply one-fourth of the number of animals required. However a breeding farm has been established near Camden where cattle will be raised from these imported stock, and thus the Government will be able to keep up a constant supply, either for sale or loan to the farmers, and when necessary a new change of further imported blood in the shape of bulls can be introduced.

*Pasteurising.*—An officer has been appointed for the purpose of teaching those interested how to correctly apply this process to milk and cream with a view to making a better article of commerce in the shape of butter, especially as regards the English market. Experience has proved in European countries most notably in Denmark, that this system of Pasteurising milk or cream so as to destroy the micro-organisms that produce injurious flavours, and afterwards adding pure "starters" of lactic acid so as to bring about a correct and uniform ripening of the cream, have revolutionised the system of butter-making for the better, and it is only a question of time when all butter-making countries will thus utilise pure cultures of lactic acid bacteria, just the same as breweries employ only pure yeast cultures. This department has given me space and fitting for a laboratory, and now pure cultures of lactic acid bacteria can be, and are being sent out free of charge to those factories desiring to use them. It takes considerable time, as a rule, to generally introduce any new methods, and no doubt some time will elapse before all our factory owners see the wisdom of adopting these methods. Cultures of lactic acid and bacteria can be imported from Europe; but owing to the time that must elapse before they reach here, and the method in which they have to be put up for such importation, render it impossible to rely on their purity. I have examined a good many of these preparations, and have never found them to be a pure culture. One sample of ferment handed to me for report was most inferior, and would be injurious wherever introduced, yet this article was being placed on the market at a high price. The establishment of a laboratory has also enabled me to make bacteriological examinations of all samples of milk, cream, or butter in any way tainted or inferior, and, no doubt, as time progresses, these examinations and reports will be taken due advantage of by butter and cheese-makers. Only recently I received eight samples of inferior cream for examination. Hitherto it has been the custom in this Colony to ascribe nearly all injurious taints and flavours to some weed or weeds in the pastures, but I have proved this theory to be fallacious, and have shown that taints which the factory manager had for years ascribed to the cows eating some weeds, were entirely due to some species of unfriendly micro-organism which got access to the milk or cream. When the correct cause is known, these evils can be remedied, and I have great hope that this system of bacteriological examination will prove of unlimited benefit to our dairy industry, especially as regards the keeping quality of our butter, which is the main feature we have to look to for our export trade.

The great defect in the year's progress has been the spread of the private separator system, to the detriment of the factory system of separating milk, and to the uniformity and quality of our butter. To save labour principally, farmers have taken to running their own separator; but, unfortunately, every farmer does not understand the ripening of cream, hence a large number of inferior and varied creams reach the central factory, resulting in the production of a bad butter, which would be useless as an article for export to England, with the result that it is placed on the home market, and conduces to lower the price of good butter.

A great deal of this mischief would be overcome if the farmers who separate their own milk would see that the cream is cooled down immediately after separating. This can be done by means of a cream cooler through which cold water passes. If the cream was cooled down even to 70° F. great good would be done. Besides this, the farmer should send this cream to the factory every second day at least. Some steps will have to be taken to regulate this system of dairying, or the amount of butter that the Colony will produce of a quality sufficiently uniform and sufficiently good to command fair prices in England will seriously diminish.

#### *Educational.*

The dairy section of the Hawkesbury Agricultural College is doing good work, and the answering of the dairy students at the last half-yearly examination was very creditable. Students get there a good knowledge of butter and cheese-making on a small scale, but in order to perfect this I am of opinion that the State should have a training factory where students, after they leave the college, could get experience in dealing with large quantities, which would enable them to take over and manage with success a commercial dairy factory. If the State will not have its own factory, than I am of opinion arrangements ought to be made with some existing factory, so that students could, after they leave the college, go there and acquire that knowledge so necessary if they are to successfully control a factory which manufactures butter in large quantities for export to England.

During the past six months I have delivered lectures and given demonstrations in various centres, all of which have been well attended and well received. I find the interest which dairy farmers are taking in the prevention and detection of bovine tuberculosis is increasing rather than diminishing. For the first time at any show in the Colony a prize has been awarded for dairy stock that have passed the tuberculin test. This was done in connection with the last Berry Show, when there were exhibited twenty animals I had subjected to the test. I am of opinion that the law relating to this disease in the Colony will require amending if farmers are to be got to test all their dairy cows with tuberculin. It is my opinion that any law which asks a farmer to destroy his best-looking young cows without giving compensation therefor will be either unsuccessful in its aims or will be an unfair hardship to the dairy farmers of this colony when compared with those of other colonies and other countries. A law which would compel the treating of all separated milk to a temperature sufficient to destroy tubercle bacilli (say

185 F. for five minutes); the testing of all dairy cattle with tuberculin; the *isolation* of all reacting animals where the disease is not evident, and the destruction of all animals that appear in an advanced stage of the disease, as well as those whose udders are not above suspicion, would after some time bring about an almost total disappearance of the disease. The present law, which provides for the destruction of tuberculous animals without the use of tuberculin as a means of detection, means the removal of only the dying trees, while the young, vigorous seeds are left behind to guarantee a continuance of the crop in all favourable soils; or, in other words, to infect the healthy animals.

Yours, &c.,  
M. A. O'CALLAGHAN.

### Report of the Government Botanist.

IN compliance with your request, I have the honor to submit a Report of the work during 1898 done by me for the Department of Agriculture.

My work for the past year has, as in previous years, been of a miscellaneous character. A very large number of plants have been identified for various correspondents, who usually desire to know whether they are of economic importance, or poisonous to stock, or belong to the category of weeds. Some correspondents desire plants to be named, as they are interested in them simply for botanical reasons. Assistance of this character has also been freely given to those in charge of the various experiment farms wherever it has been sought.

Following form the subjects of specific reports:—The so-called Burnet Grass, and its value as a Fodder Plant; Fasciation in Plants; Salt-bushes and Perfumes; Collections of Native Grasses; Report on a Weed introduced into the Colony in Dirty Flower-seeds; Issuing a Solemn Warning on the spread of the cockle-burr (*Xanthium strumarium*); The usual batch of replies to inquiries in regard to *Euphorbia Drummondii* as a supposed poison-plant, and the weed *Stachys arvensis* reputed to cause "staggers" in horses; Australian gums and resins, particularly Sandarach and Grass-tree Gum; Answering inquiries in regard to Natal Red-top Grass (*Tricholæna rosea*); Reporting on *Eremophila maculata* as a supposed stock-poison; Observations on the trees which pass under the name of Quinine in New South Wales; Reporting on Stinking Roger (*Tagetes glandulifera*); Notes on plants reputed to collect sand in their leaves or inflorescence, and hence cause Sand-binding in horses; Report on *Cymbonotus Lawsonianus*, reputed to have medicinal properties, at Uralla; Report on the Cape Weed (*Crypostemma calendulacea*); Notes on *Swansonias*, with remarks on their fodder value; On the utilization of *Dolichos lignosus* as fodder; Remarks on the Doubah (*Marsdenia Leichhardtiana*) and the use of the fruits as food for the blacks; Reporting on specimens of Darnel (*Lolium temulentum*); Urging attention to the danger of the Water Hyacinth *Pontederia crassipes* becoming a hindrance to navigation on the northern rivers.

I have to report that Mr. P. Corbet, in charge of the Government tank at Mt. Browne, has been most assiduous in the collection and investigation of the flora of the interesting botanic region in which he lives. This has resulted in the record of several plants not hitherto known from this particular locality. In addition, Mr. Corbet has made useful observations on salt-bushes and plants which induce sand-binding in horses. I wish that more employees of the Department, particularly those in the western division, would follow Mr. Corbet's excellent example.

The new Caves House at the Jenolan Caves having been completed, the grounds and adjacent slopes have been planted under my personal supervision. I venture to express the opinion that the grounds are now a credit to the Department.

I attach a list of articles I have contributed to the *Agricultural Gazette* during the year. The subjects have been made as varied and as interesting as possible.

J. H. MAIDEN,  
Government Botanist, 8/2/99.

#### List of Articles published in the *Agricultural Gazette* of New South Wales during 1898.

- Useful Australian Plants.—No. 49.—The Pigmy Panic Grass. (*Panicum pygmaum*, R.Br.) No. 50.—The Stringybarks of New South Wales.  
Some Food Plants of the Aborigines.  
Botanical Notes.—A new Indigenous Food-plant; a sand-holding plant, dangerous to horses; Spotted Medick; *Trifolium incarnatum*, increasing around Corowa; Wild Orange as a Fodder-plant.  
The Weeds of New South Wales, No. 5.  
Sheep's Burnet.  
Mount Seaview and the way thither.  
The Flora of Mount Kosciusko.

Botanical Notes.—A sand-holding plant, dangerous to horses; of what value as a Forage-plant is the Grass *Eragrostis Brownii*; abnormal Colours of Native Flowers; a large White Honeysuckle; the Cockle Burr.  
Some Exotic Grasses.—No. 1.—Prairie Grass.  
New South Wales Weeds.—Nut-grass.  
Botanical Notes.—Wentworth Falls and Burragorang Valley; some plants in the Botanic Gardens interesting to the Farmer and Grazier; supposed Poisoning of Sheep by the Native Fuschia Plant (*Eremophila maculata*, F.v.M.).  
Botanical Notes.—Note on two Solanums reported to be poisonous to stock; Prickly-pear.

J. H. MAIDEN.

## Report of the Entomologist.

I HAVE the honor to submit herewith a general report of work done during year ending 31 December, 1898.

*Fumigation and Inspection under the Vegetable Diseases Act, 1898.*

During the months of July and August a good deal of time was taken up in the superintendence of the fumigation of oranges for the Sydney exporters, as well as the fumigation of nursery stock, and afterwards samples of a great number of different cases were tested by microscopical examination to see if all animal life was destroyed by the fumes generated by the hydrocyanic acid gas process, and in no case where the fruit or plants were properly treated, was a single live larval scale discovered, though much of the fruit before treatment was covered with living scale insects in all stages of development.

Since this Act came into force, I have taken an active interest in its administration, and am glad to see that fumigation and preventive measures, which were advocated by me from the first, are now being more generally adopted, so that the export and import will be greatly facilitated, and at the same time less danger accrue from the introduction of injurious pests, some of which, upon the roots or among pot-plants, so easily escape detection under the most careful inspection.

Our Act has already done a great deal of good, but our own growers should be protected at home, first by the registration of all plant nurseries, an annual inspection of them, and a guarantee of their fumigation to the buyer. It would be a very good thing if power were given to the inspectors under the Act, to condemn all badly-diseased fruit exposed for sale in our City Markets; and I hope to see a Codlin Moth Act introduced in the near future.

*Some of the Chief Insect Pests of the Season.*

The well known introduced Indian Wax Scale (*Ceroplastes ceriferus*) that has been common in our gardens and several allied bush shrubs for some years, has now commenced to attack the Citrus family, and is particularly bad upon the Thorny mandarin, in several orchards in the County of Cumberland. I have also seen it upon Persimmon trees near Manly, but a much more serious pest to the persimmon has been found near Ryde, in an American Mealy Bug (*Pulvinaria innumerabilis*) which is very destructive in its native country. A small black beetle belonging to the Scolytidæ (*Hylesinus sp.*), that bores down the centre of the young branches killing the limb, seems to be increasing in our suburban gardens and will be a serious pest to fig trees. San Jose Scale (*Aspidiotus perniciosus*) is spreading over most of our warmer districts and many new localities have been recorded this season. The fruit fly (*Tephritis Tryoni*), has not appeared in any great numbers as yet, but will be probably more or less in evidence later in the season. Though reports are always being circulated that Queensland Cattle Tick has been discovered in New South Wales, among all the specimens sent to me through the Chief Inspector of Stock, I have found no species closely allied to the true cattle tick (*Böophilus bovis*). A new pest to poultry-men has been found near Sydney in the Fowl Mite (*Dermanyssus gallinæ*) which is very destructive in America, but has not been recorded from this Colony until now, so far as I know.

*Visiting and Inspecting Orchards.*

Towards the latter part of July, in consequence of the report that San Jose Scale had been found in the Wollongong district, I spent four days going round the chief orchards and gardens on Cordeaux River, Mount Keira, Bulli, Sherbrook and Thurrol; later in the month I visited several orchards at Ourimbah and Gosford. In August, I travelled through the Goulburn district visiting the chief orchards and nurseries, and spent two days at Barber's Creek. In the middle of September I left Sydney for the western districts, spending a fortnight among the orchards of Orange, Molong, Cumnock, Parkes, and Forbes, and returned *via* Wellington, about 1,000 acres of orchards having been gone over in the fortnight. A special request was made to the Minister that I should again visit Goulburn, and in October I visited that town, Crookwell, Yass, Bowning, and Murrumburrah. On the 3rd November, in conjunction with Mr. Allen, I visited Collector to report on Mr. Robjohn's orchard, and inspected others in that district.

On the 16th November, left for Armidale in consequence of San Jose scale being forwarded from several gardens in that district; from Armidale went on to Uralla, and then to Walcha. I believe that a great deal of good has resulted already from these general inspections in which I have been greatly aided by the Secretaries of the different Agricultural, Pastoral, and Fruitgrowers' Associations, and in no single instance have I been refused permission to enter and examine an orchard; if my visits have only caused the destruction of a number of scale infested trees and the treatment of others, it means thousands of pounds to the fruitgrowers in a very short time.

The Codlin moth and most of the common introduced scale insects are widespread in New South Wales, but the orchardists are beginning to take up arms against them; and our business is to warn them how to keep a clean district clear of pests, and how to fight pests in the cheapest and most effective manner in infested districts. At the present time the Codlin moth destroys fully 25 per cent. of all the apples grown in this Colony. With combined action the fruit-growers could reduce this to 5 per cent., if not eradicate the pest altogether in a few years, as has been done in several districts in Tasmania; but to be successful the orchardist must have a knowledge of its habits and life history, and it is here where the Economic Entomologist comes to their assistance. Besides these extended visits, I am frequently away from town on short trips, such as Camden, Gosford, Beecroft, Ryde, Penrith, &c.

*Lectures.*

Since the department has furnished me with a lantern and outfit for lecturing, I have had a number of lantern slides prepared by our artists, which have greatly enhanced the value of my addresses on the different phases of Economic Entomology, as most persons can grasp the characteristics of pests under discussion when it is accompanied with an accurate figure thrown on a screen. At the request of Secretaries of Pastoral and Agricultural, Fruitgrowers', and Progress Associations, I have lectured during the last six months at the following centres:—Kenthurst, Marsfield, Dundas, Smithfield, Goulburn, Crookwell, Ryde, Parkes, Yass, Toronto, and Largs. After the address I have always invited a free discussion, answered questions, and examined specimens, as this appears to me to be one of the most important functions of a lecturer to a practical audience. That these lectures have been of interest is proved by the fact that I have seldom lectured in a district without an application being forwarded soon after from an adjoining neighbourhood to the Department asking me to visit them as well.

*Correspondence*

*Correspondence and Exchanges.*

A large amount of correspondence and specimens for report and identification have been submitted to me, and, as a direct result of my travelling and lecturing, is still daily increasing. Some of these deal with the naming of specimens, the remedies for well-known or obscure pests, and, since Dr. Cobb's departure, a great number of those dealing generally with the diseases of plants and their remedies are also attended to by me.

All specimens of ticks and animal parasites received by the Stock Branch are forwarded to me for identification, as well as the insects received by the Forest Branch; and if the Inspectors and Foresters only knew how interesting their sendings are they would probably preserve many more specimens.

Of course these letters do not represent one tithe of the office work, with its reports and routine work, as well as the many visitors who come to see the specimens and receive advice.

Among the exchanges received and forwarded to other parts of the world were—A collection of Scale Insects (*Coccidae*), from U. S. America; another from Ceylon; live ladybird beetles, from South Africa; Beetles from Indiana, U.S.A.; and another collection from Russia. Specimens of San Jose Scale have been sent from here to New Zealand, South Australia, and Austria; Fruit Fly to Victoria, South Australia, and New Zealand; live ladybird beetles to New Zealand; Hymenoptera and Hemiptera to Austria; collection of injurious species pinned insects to the United States; and co-type collections of white ants (*Termitidae*), in spirit tubes, to the Museums of Adelaide, Queensland, Victoria; Royal Museum, Austria; and Cambridge Museum, England.

*Mounting and Registering Specimens.*

All entomological specimens in good condition, and those collected by me during my visits to the country, as well as the foreign collections, are named, labelled, mounted or pinned, and placed in the departmental collections. The collections of micro specimens, mounted on glass slips in a permanent manner, have also been largely added to and recorded.

*The Study of Life Histories.*

This important branch of the entomological work has been carried out under great disadvantages, on account of the want of an insectarium, or large room, that could be fitted up so that the many curious larvæ and obscure insect pests could be fed and watched under natural conditions upon living plants. The primitive manner in which I have to carry out my investigations, either in the office or my private laboratory at Croydon, is very disheartening, when one reads of the splendid results in American and Continental Insectariums.

*Assistance.*

As the entomological work has increased so rapidly, and other duties spring up, I would suggest that it be advisable that a cadet be appointed as an assistant, to take over some of the routine office work, the care of the collections, and other duties that would fully occupy all his time. I would point out that on my appointment as Entomologist, I had an assistant (Mr. Fuller) who resigned shortly afterwards, and this position remains unfilled.

*Original Papers in the Agricultural Gazette.*

During the last six months I have written up all the entomological part of "Insect and Fungus diseases of fruit trees and their remedies," parts I, II, and III.

- (4.) The Plague Caterpillars, Climbing Cut worms.
- (5.) Insects attacking dried fruit, seeds, and vegetable matter.
- (6.) The spread of San Jose Scale in N.S.W.

WALTER W. FROGGATT.

**Report of the Fruit Expert.**

I HAVE the honor to submit herewith a report on the work accomplished under my branch during the past year.

Outside of my especial duties as Fruit Expert, which have entailed a great amount of travelling all over the Colony, I have devoted a large percentage of my time to a personal supervision and direction of the work being carried on at the various Government orchards, and I am pleased to be able to report that, in spite of the continued droughts which we have had to face during the last three seasons, the orchards, without any exception, are in a highly creditable and flourishing condition, owing to the thorough and regular system of cultivation practised, which is the only means of retaining sufficient moisture in dry countries where irrigation is impracticable. At the many lectures and practical demonstrations which I have given throughout the year, I have again and again advocated this system to the growers, sometimes, I fear, without successfully converting them to my views, and to these doubters, or those who consider that it is possible to over-cultivate the orchard, I would point to these orchards as an object lesson.

At the various orchards, many of the young trees have fruited for the first time, but reliable information as to their productiveness from year to year, their adaptability to particular districts, and their commercial value cannot be given until the trees have borne for at least two or three seasons.

In the beginning of the year a quantity of bottled fruits was put up at both the Hawkesbury and Wagga orchards, and a fair quantity of fruit was dried at the latter orchard, sufficient to at least demonstrate what can be done. These, with a number of jams and jellies which I put up at my own place in Bathurst, were exhibited at the Royal Agricultural Show in Sydney, and I can fairly say that this exhibit was not by any means the least attractive in the section allotted to the Department of Agriculture. Around this exhibit there was always to be found a number of interested inquirers seeking information as to the different processes, and both in the Metropolitan and Country Press, where this exhibit was afterwards sent to the various shows, very favourable attention was drawn to it, and to the good work being done by the Department in instructing the growers thus to deal with their fruits.

As the crops last year were small, only a few of the trees having come into bearing, it was not deemed warrantable to erect a plant for handling same, so that the work was done under rather unfavourable conditions, the only building which was adapted to the purposes of the work being the fumigator erected

erected at the Wagga orchard. This year, however, anticipating the handling of larger crops, which will naturally increase from year to year, it was deemed advisable and warrantable to provide a permanent building for processing same, and also to afford those students who wish to do so ample opportunity to learn how to handle the fruits in all their stages and branches. On 23rd May I therefore recommended the erection of buildings at both the Hawkesbury Agricultural Farm Orchard and Wagga Orchard which would serve the purpose of a combined cannery and packing house, and I am pleased to say that these are now nearing completion and will be in readiness to process at least a portion of this season's fruit.

Owing to the death of Mr. Waters, the orchardist at the Hawkesbury Orchard, as much time as I could spare from my other duties was spent at this orchard, directing the work, until the transfer here of Mr. Alford, then orchardist at Wagga; his place being filled by Mr. S. A. Hogg, who took charge of the Wagga orchard early in May. Of the intelligence and efficiency of these two officers in carrying out my directions I cannot speak too highly.

Early in March I visited Victoria for the purpose of securing a collection of the best apples grown in that colony, and I also secured a collection of the best grown in Tasmania, in order that we might compare these two with the same varieties as grown in this Colony, and from the three samples the best were chosen with a view to preparing as correct and complete a collection of models as possible, for purposes of identification. Considerable time was spent over this matter, and models were prepared at the Technical College, but owing to pressure of other work the painting was neglected until the fruit had gone off in appearance, and in consequence I will be under the necessity of securing another collection of fruits, with, I trust, more satisfactory results. This is a most important work, as with the ever-increasing varieties of the different fruits it is absolutely necessary to have a reliable collection of models of this kind for purposes of identification.

In order to introduce new and improved strawberry plants and to give this industry a much needed impetus, I recommended in July last that some of the best American varieties should be imported and the Departments of Agriculture at Washington, D.C., and Ottawa, Canada, were communicated with, with the result that both Departments forwarded a supply of plants, but I regret that these were found on arrival to be quite dead and useless.

The Vegetation Diseases Act having come into force early in the year, I assisted in examining some large shipments of fruits, and also visited many of the Customs officers on the borders for the purpose of instructing them in detecting the diseases proclaimed under the Act.

#### *Wagga Experimental Orchard.*

Although the past three seasons have been the driest on record for some years, the past season in particular being the worst of the three, we have, in spite of such adverse circumstances, kept the trees growing, and the few which are bearing are producing the best samples of fruits of their respective kinds.

Apricots.—Contrary to what might have been anticipated, these have borne only a light crop, but this is due to the damage done by the grasshoppers last season, they having eaten the greater part of the best fruit-producing wood out of the centres of the trees. I am pleased to say, however, that the fruit which we have produced from these trees is of the very best quality. Many varieties have fruited, of which the following are some of those which have done best, viz.:—Moorpark, Hemskirke, Alsace, Newcastle, Suizet, Blenheim, Peach, Warwick, Kaisha, and Mansfield Seedling (which produced the largest fruit of any this season). Already some excellent samples of fruit have been cured, the quality being even better than last year—the average time required to dry the fruit in the sun was about two days. Some very good bottled fruits have been put up also; so that, notwithstanding the small crop, there will be a sufficient quantity to show what can be done in this branch of the work. We are also putting up some pulp; and I consider that drying, canning, and pulping will, in the near future, develop into very profitable industries.

Peaches are bearing a very good crop this season, but most of those which are ripening are purely dessert varieties and not suitable for canning or drying—the sorts most suitable for the latter purpose not ripening for some weeks yet.

Cherries.—Many of these have also fruited for the first time this year, and, judging from the appearance of the trees, several of the varieties will be found profitable in this district, but no reliable information can be given this year.

Plums.—There are many varieties fruiting this season for the first time, and, from present indications, this district is well adapted for this fruit. Experiments are being made with all varieties which are at all suitable for drying, and the results will be made known in a future number of the *Agricultural Gazette*.

Prunes are growing well, but are too young yet to bear crops; however, with the few which we have found on some of the trees, we hope to make a test of their drying quality this year, but it will be at least three years before anything reliable can be published as to their commercial value in this district.

Apples.—The young apple trees are growing exceedingly well, but only a very few are carrying any apples, and these are only allowed to carry three or four each, as the trees are too young yet to be allowed to carry a crop.

Figs.—So far the figs have proved a failure here on account of the dry seasons, and I fear that unless we have more favourable seasons these will not fruit much.

Olives are doing exceedingly well, and this season are carrying quite a crop sufficient to enable us to make samples of pickled olives and oil.

Pears.—These are doing as well as can be expected, and a few trees are carrying some fruit this year, and in the course of a year or two we shall be able to give very valuable information as to the best varieties to grow in this hot dry climate.

Grapes.—There is a large assortment of table grapes, many of which are bearing, but the dry season is very much against them. The following are a few of the varieties which did the best last year, viz.:—

Gros Guillaume	Black Champion	Late White	Black Tokay
Golden Queen	Doradillo	White Prince	Quirk's Seedling
White Nice	Mrs. Pearson	Blue Imperial	Aramon
Duke of Buccleugh	The Pierce	Flame Tokay	Catawba
Waltham Cross	Iona	Rose of Peru	Goethe.
Wortley Hall			

The

The Zante Currants promised well in the spring, but the hot winds of November have reduced the crop by half; we will, however, turn out some good currants this season.

Sultanas are cropping well again this season, and from present indications these will prove an exceedingly paying crop in this district, and the quality of the dried fruit is equally as good as the imported and commands just as high a price.

So far the raisin grapes have not done well here, partly owing to their having been badly attacked with Powdery Mildew, the dry seasons also being against them.

The cannery and packing house, now nearing completion, will be a very valuable addition to the orchard. In this we will carry on pulping, canning, pickling olives, and making oil, and packing all fruits. There is a specially-built cool-room in which to keep all preserved fruits as also to hang the bunches of grapes. The building is a substantial wooden structure, with a cement floor which is easily kept clean, is cool, and does not harbour vermin, moths, &c.

Mr. Hogg, who succeeded Mr. Alford in May last and who is responsible to me for the carrying out of all work connected with the orchard, is a thoroughly practical and reliable orchardist.

Great interest is evinced by visitors in the system followed in all branches of the work in connection with the orchard, and good educational work is being carried on here. My only regret is that many are kept from visiting it on account of the expense in reaching there. If cheap excursions were run, say once in three months, one of which would include the fruit-processing season, I am convinced that the amount of good derived by those interested would be incalculable.

Owing to the dry seasons nursery work had to be abandoned here.

#### *Hawkesbury Orchard.*

During the past year this orchard has improved wonderfully, and although goods results can never be expected on the poorer portion of the orchard which is composed of poor white sand, the trees are doing as well as could be hoped for, while on the better soils the trees and vines are growing and cropping well, producing first-class fruit.

Grapes are carrying a good crop of fruit. Some of the vines were grafted to better varieties last spring, and eventually, in place of having chiefly Black Hamburg, we hope to have some good varieties of table grapes for the late as well as the early market, as also more of the drying varieties—Sultanas and Gordo Blancos.

Peaches do very well on this sandy soil and many of them are carrying good crops of good fruit, some of which are being dried and bottled.

Japanese Plums.—Many varieties of these are growing here, most of which are cropping well.

Persimmons are carrying a good crop of fruit this year and are doing well in this sandy soil.

Apples.—I do not consider will ever be a success here, however they are doing as well as could be expected and are bearing some fruit.

Citrus Fruits are looking much better than they did a year ago, and some of them are carrying a little fruit; these trees are planted on very poor white sand, on which such trees never do their best.

Pears are doing fairly well but not carrying fruit.

There are twenty thousand young orange seedlings set out in nursery rows and more coming on in the seed-bed. These are all doing very well considering the fact that no water was available for irrigation purposes. The land which is being prepared for a nursery could not be prepared in time for this year's planting, and in consequence the stock which should have been planted there had to be held over. Some of the best varieties of orange trees were imported, and from these we will take buds to be used in budding the young orange seedlings.

Mr. Alford, who took charge here early in May, has, since his installation, been successful in almost completely cleaning the trees from the different scale insects and fumagine with which they were almost smothered at that time.

A cannery and packing house, similar in every respect to the one at the Wagga orchard, has been erected here, where the students will be taught how to process fruits, and which will be an additional attraction to the many hundreds of visitors who yearly visit this farm and orchard.

Much loss and damage is occasioned from the ravages of the fruit thief who frequently honors this orchard by a visit, and I fear that to save the fruit the Department will be compelled to erect a high netting fence with three or four rows of barbed wire as a heading.

#### *Bathurst Orchards.*

This orchard is doing very well and will, I predict, prove of great value as an apple, pear, cherry, and plum orchard. Although the apple trees are young many of them are carrying two and three apples. Some of the trees would have had a good many had I not pulled all but two or three, as it is not desirable that they should bear fruit just yet, while so young.

I regret that there have not been horses enough on the farm to give this orchard the cultivation which it should have had, and it has had to be neglected in order that other work might be carried on. Sufficient horses are I believe being arranged for so that the work will receive the same attention as the other orchards.

#### *Pera Bore.*

This orchard, on my last visit, was, with the exception of a few peach trees, looking well and the trees putting on good growth. The few trees which were suffering were those for which the manager was unable to get a sufficient supply of water, the supply having run short during the last few months. There will be little, if any, fruit this year on any of the trees.

Citrus trees are growing very well, there being a good assortment of the best varieties in this orchard. Some imported varieties were planted last spring, and from these buds will be taken to bud the young seedling orange trees now being grown in the nursery. There are also planted in the nursery fig cuttings, vine cuttings, apricot and peach pits, a fair percentage of which Mr. Gorman has been successful in striking.

Apricots.—These, with the exception of a few planted this year, have made good growth.

Peaches.—These also, with exception of a few which did not get a good watering, are making good growth.

Prunes are only doing fairly well.

Figs.

Figs.—Something resembling the *mal di goma* has attacked the roots, and I consider that it is only a matter of time until they all go with this disease. I have never seen fig roots rot away in this manner before.

All the orange and lemon trees which took last year are doing well, but there will be a great loss among the seedlings planted this season, owing, I consider, to an insufficient supply of water.

Olives.—The trees planted this year are not taking very well, also owing to an insufficient supply of water.

The orchard is in a good state of cultivation, and all trees planted and alive before this season are at present doing well and looking as well as they did last year, but this year's planting, including trees and cuttings, have suffered for lack of water.

#### *Wollongbar Orchard.*

Some of the best varieties of imported oranges were sent to this orchard last spring and arrived there in good condition. These will be grown and the buds used in budding young trees, and any surplus buds will be used for distribution among the fruit-growing districts, as also for use in departmental nurseries.

Pineapples were looking well, as also some orange trees planted in the orchard. Citrons do exceedingly well here, and the manufacture of candied citron peel should prove a profitable industry in this district. Many varieties of trees have been planted in this small orchard, but I am of opinion that the orange, citron, and pineapple will prove the most profitable.

#### *Export of Fruit.*

During the months of June and July, acting under instructions from the Hon. the Secretary for Mines and Agriculture, I managed the packing arrangements of certain shipments of oranges and also, for the Board for Exports, passed all fruits which I considered fit for export during these two months. Of the 30,000 cases exported, not more than half the number received the brand of the Board, owing to various causes, some being carelessly packed, in some cases the fruit was inferior, in others it was too damp (not having been properly sweated), and there were many other reasons why fruits were rejected; while on the other hand, some shippers who had good fruits did not wish them inspected. Between the first and last shipments I could see a great improvement in the packing, and many of the exporters, acting on my suggestion, branded plainly on the outside of each case the number of fruits in each—this step being highly commended on the London market.

While some of the best fruits which were grown in the Colony were exported, the results were far from satisfactory, as most of the fruit arrived in London in a very damaged condition; and I fear that until there can be a guarantee that the fruit will be carried in perfectly dry, cool chambers the export trade in oranges will be practically abandoned. I may say that the packing and quality of some of the fruit exported were equal to some of the best Californian; the greater part, however, could only be classed as second-grade fruit, but was of such quality that it should have carried to the Old Country if accorded anything like fair treatment.

Much has been written concerning the failure of these orange shipments, but nothing reliable has been placed before the public; and I consider that much harm is done by indiscriminate writers who rush into print with suppositions and hearsays. The causes of the failure are many and are well known to many of the exporters, but until some satisfactory system for handling and carrying has been arrived at, there is little use dealing in conjectures. One thing is clear—that the loss to the growers might have been greatly lightened had the consignees sorted the fruit, repacking the good before placing them on the market.

During the year I was asked to judge at many of the largest shows, and while the fruit receives a fair amount of consideration, I think that better and larger displays would be made if larger prizes were offered.

Fruit drying and canning are attracting the attention of a great many growers, and during the year there have been many inquiries as to how best to carry these operations into effect—not a week passing in which I do not receive letters written direct to myself asking for information on this and kindred subjects. Some of these letters call for lengthy replies—to keep up with which and the official papers necessitates working early and late while at head quarters.

Much of my time has been spent in visiting different parts of the Colony in order to give demonstrations in practical orchard work. In some instances, I have been specially asked to deliver lectures in public halls, but I do not consider that nearly as much good is done in this way as by a lecture and demonstration in the orchard, as in the former case, one does not meet the fruit-growers, so much as a class, who may be interested in fruit culture, but having no practical interest at stake, whereas in the case of the orchard demonstrations only those who desire to learn and are in need of specific information are likely to turn up and they can then be shown what they wish to learn by making known their needs.

I have noticed in my many visits that many new orchards are being planted in the best fruit-growing districts of the Colony and I may say, and correctly so, that fruit-growing is attracting more notice than it has for many years. Those orchardists who have been most careful in the selection of land and suitable fruits to plant on same are all doing well, and while some believe that fruit-growing is already overdone, I predict that it is only in its infancy. This Colony still imports thousands of pounds worth of fruit annually and while it is known that we have an area of over 40,000 acres under fruit trees, still 15,000 cases of apples, pears, &c., are imported weekly during the season. All of our dried fruits such as raisins, sultanas, currants, prunes, apples, apricots, &c., &c., are imported, most of which could, under irrigation, be grown on the banks of the Murray and its tributaries were care exercised in the selection of the soil. Others could be grown in any part of the Colony, so that in place of being importers we should be principally exporters.

During the year I have written the monthly orchard notes for the *Agricultural Gazette*, and also from time to time articles on different subjects relating to fruit culture, and answers to inquiries from all over the Colony as well as some from the adjoining colonies.

Last month I examined a number of the students at the Hawkesbury Agricultural College in the different branches of the work, and I am pleased to say that the standard this year was far and away ahead of the work done last year, which reflects credit on both the Principal and Orchardist.

W. J. ALLEN.

Report

## Report of the Viticultural Expert.

## PHYLLOXERA.

THE year 1898 will be marked as one during which the greatest anxiety was aroused through a succession of outbreaks which followed with startling rapidity. In fact, no sooner was a case disposed of than a fresh one was reported.

Those who would only judge by the number of fresh discoveries made during the year 1898 might come to the conclusion that there is a recrudescence of this plague. Such conclusion, however, would not be correct.

We did not dissimulate the existing danger in the Central Cumberland, and, personally, I was of opinion that, though for nearly five months before the outbreak at Canley Park, no outbreak had been reported.

Phylloxera was still to be found, and it was only a matter of carrying on a simultaneous examination of vineyards over a large area to be able to locate the possible infections.

When phylloxera was found in Mr. Eli Beckingham's vineyard at Canley Park, and a deep agitation started among the vine-growers of the Canley Vale and Cabramatta district, two additional inspectors were appointed, thus, with a staff of five, the examination of vineyards was thus extended to a larger zone, and six fresh discoveries were reported from July to December, while it took five months at the time when there were only three inspectors engaged.

That is the reason why I refute the possible opinion which may be advanced of any recrudescence of this plague. In fact, the infections were over two years old, and none of them originated since this service has been reorganised on a thoroughly scientific footing.

From January to December, 1898, the following outbreaks were reported and dealt with:—

*Canley Park.*

One acre of vineyard; owner, Mr. Eli Beckingham; 49 vines actually found with the disease on. The whole area was eradicated. The infected vines were found in one section of the vineyard; the second section was, however, destroyed too—there having been communication between them, as well as the general use of some implements. This drastic measure was suggested by the fact that this outbreak is the first one ever reported in that district.

It is surrounded by many vineyards, to which any stock left, and likely to be found infected in a very near future, would have been a continual danger, and a large seat of infection thus caused in a district placed on the outskirts of the acknowledged zone of old infections.

*Glenfield.*

1. Three acres, and 1,300 rooted vines in a nursery bed; owner, Mr. W. H. Hosking; tenant, H. L. Sanderson; vines actually found infected, 150; all the vineyard and the rooted vines have been destroyed.

2. Three adjoining vineyards respectively owned by Messrs. M'Gory, S. Loftus, W. Davis. Total acreage, about 17 acres. About 9 acres have been destroyed, phylloxera having been found scattered on different sides.

3. Five acres, owned by G. Groat, Esq.; 25 vines were found actually diseased and located in one of the extreme corners of the vineyard; 1 acre was destroyed.

*Liverpool.*

A small vinery of about 120 vines; owner, J. Hindes; 25 vines were found infected. The whole vinery was eradicated.

On the whole, no less than 14 acres have been uprooted, and the ground located with bi-sulphide of carbon.

The trenching in every instance has been omitted—the rational use of the said insecticide making it unnecessary. A saving of £2,000 has thus been effected.

*Inspection of Vineyards.*

The staff of the inspectors, acting under the Vine-Disease Act, was raised to five through the temporary appointment of two additional officers.

All inspectors had two men for root digging since June, thus making a double amount of work, and being just as reliable as when they had only one man, such being a great improvement over the system of one inspector one man, which did not fully utilise the time and activity of both.

Since the outbreak at Canley Vale, and the first at Glenfield, the whole staff of inspectors, except one, has been concentrated in these two places—thus having to work within short distance from centre of infection, the examination was carried very closely. Over 30 acres, where disease was found, every vine had to be examined in order to ascertain the extent of the infection, so as to be able to take the proper step accordingly, while a greater part of the whole inspected zone was examined, one in four being always within a short distance from recent or new outbreaks. Tentative examination of one in nine have also been made in vineyards rather away from the seat of the plague in order to be sure that at least no old infections were left undetected.

It was a cause of great anxiety to this office, the delay interposed between the time of the discovery of the pest and that when the proposed measures were sanctioned by the competent authority.

The Minister, fully realising the danger involved in such delay, gave instructions to this office to take the necessary steps to check the disease soon after the discovery of phylloxera was reported, thus rendering such measures much more effective and more consistent with the urgency of the case.

I have, &c.,

M. BLUNNO.

## Report of the Travelling Agricultural Instructor.

I HAVE the honor to submit my report for the year 1898.

Early in January, at the request of Sir Joseph Abbott, and the approval of the Minister, I proceeded to Balranald, Euston, and Wentworth, and lectured, and conferred with the farmers on agricultural subjects at those places. It is surprising to note the enthusiasm of the cultivators of the soil in those dry distant parts of the colony.

They have, indeed, much to put up with, and are deserving of every possible assistance the Department of Agriculture can give them.

It was pointed out that, on two pieces of land, with only a wire fence dividing them, the wheat in one instance yielded 16 bushels to the acre, and in the other it was not worth harvesting. A reason for this extraordinary discrepancy was asked, and it was found that on the land which yielded 16 bushels to the acre, the soil had been deeply cultivated and thoroughly pulverised, sown with suitable seed and at the correct quantity per acre. The land that produced next to nothing was simply scratched, the seed sown too thickly, and moreover the wrong kind of wheat for that district used.

The Wentworth Irrigation Area is now fully established, and with good soil, heat, and moisture, the best vegetable results may be expected. My next trip was to the northern rivers district, in order to give practical demonstrations as to the making of ensilage. When visiting this part of the colony in July and August, 1897, complaints were made that I had come at a time when there was no fodder fit to operate upon. With the approval of the Minister this second visit was made, and ample opportunities were afforded the residents to obtain the latest information on this subject, I also gave several practical demonstrations in the field. The supply, however, of fine succulent herbage is generally so abundant that the dairymen are not so enthusiastic as they might be, with regard to the conservation of fodder by this method.

Dairying in the North Coast, is making rapid strides, and there is no doubt that in a few years will far surpass the South Coast. It is the South Coast men and the South Coast cattle, however, which have made dairying the success it now is. Dairy stock do much better in the North than in the South Coast; maize, potatoes, and other crops do remarkably well in this district. My next trip of importance was to the Karuah, Manning, Hastings, Macleay, Nambucca, and Bellinger Rivers. These districts have also a grand future before them, so far as agricultural and dairying prospects are concerned. Vegetation flourishes here most luxuriantly and dairying is making rapid strides; maize, potatoes, pigs, poultry, and eggs are produced in large quantities. The methods of cultivation of the soil are somewhat behind the times, but there is an earnest desire for improvement. My lectures were well attended and well appreciated.

After attending several important shows and acting as sole judge at same, I made a visit to the South Coast where I inspected farms and lectured at the following places:—Albion Park, Kiama, Dapto, Berry, Kangaroo Valley, Wollongong, Robertson (most), Cooma, Nimitybelle, Bungendore, Queanbeyan, Duntroon, Bombala, Delegate, Pambula, Eden, Canelo, Bega, Cobargo, Tilba Tilba, Bodalla, Moruya, Braidwood, Milton, and Nowra. At all these places I was well received, and the people seemed grateful for the information obtained. During my visit this part of the Colony was suffering from want of moisture, and vegetation was very scarce. In some instances, however, advantage had been taken of conserving large quantities of fodder in the shape of ensilage. Where this had been done the stock were looking well and giving a full supply of milk. On the whole, however, there was a lamentable deficiency of any kind of suitable food for dairy stock and many of the animals were very poor, and the milk supply seriously reduced. At Bega several stockowners were obtaining lucerne, bran, cocoanut-oil cake, and other fodders from Sydney to keep their stock alive.

I have spent a considerable time in the wheat-growing areas of the Colony, and visited Crookwell, Albury, Wagga, Corowa, Young, Moama, Jindera, Temora, Yass, Burrowa, Taralga, Tenterfield, Murrurundi, Singleton, Inverell, Muswellbrook, Warialda, Moree, Narrabri, Deniliquin, Jerilderie, Hay, Hillston, Berrigan, Finley, Mulwala, Carcoar, Lyndhurst, Molong, Cummoock, Cudal, Cargo, Manildra, Parkes, Forbes, Urana, Narrandera, and Bolero.

I lectured at most of the places mentioned, and answered many questions pertaining to all subjects in connection with agriculture. During the earlier part of the season, the prospects for a bountiful yield were all that could be desired. The area put under wheat was nearly 1,500,000 acres, but owing to the excessive drought, and the comparative failure of a large area, about 350,000 acres have had to be cut for hay, or not harvested at all. This will leave about 1,125,000 acres for wheat production, which with an eight (8) bushel yield should give about 9,000,000 bushels, which will just supply sufficient for our own requirements for food and seed, and a little for exportation.

Until the harvest is more advanced in the later districts, it is impossible to say if there will be any exportable surplus. In some places, such as Albury, Carcoar, Cargo, Cudal, Germanton, Gulgong, Gundagai, Goulburn, Inverell, Mudgee, Manildra, Molong, Millthorpe, Orange, Narromine, Rylstone, Singleton, Scone, Tenterfield, Wellington, and Yass, there are undoubtedly some very good crops, and the samples of new wheat are excellent, but at such places as Bingara, Cowra, Deniliquin, Hillston, Narrandera, Nevertire, Narrabri, and Temora, they have proved a partial failure.

During the last fortnight, under approval 7932, I have been trying to find out what methods of cultivation, quantity of seed per acre, and the varieties of wheat which give the best results. There is great diversity of opinion with regard to the methods of cultivation; but, on the whole, there is a decided consensus of opinion that deep cultivation, thorough pulverisation, thin seeding, and harrowing of the growing crop, have given by far the best results. It will be seen by the tabulated returns herewith that the three leading wheats are Steinwedel, Purple Straw, and Allora Spring; White Lamas and Australian Talavera come next. Early sowing in most instances has given the best results. It is a fallacy to expect early wheats to produce satisfactory crops if sown late. Early wheats should be sown early, whilst a late wheat may be sown somewhat later with a fair amount of success.

None of the new wheats brought into existence by cross fertilization and hybridization show any superiority in the way of drought-resisting or prolificacy to those in existence for many years, but it is hoped that they will do so by and by. I am certain that the steps taken by the Department of Agriculture for improving the methods of cultivation are producing good result. In parts of the Colony which I have been able to visit a second time, I find there is a vast improvement in this respect; and, throughout the whole Colony, those who have been guided by my advice with regard to deep cultivation and

and thorough pulverization of the soil, notwithstanding the severity of the season are reaping fair crops. If we could increase the average yield of wheat by 1 bushel it would mean an extra £125,000, and maize by 2 bushels, would produce over £50,000 increase; but if the farmers would only take my advice and cultivate and sow their land as it ought to be done, it would not be an increase of 1 bushel of wheat and 2 of maize, but five times that amount at least, which would mean an increase of hundred of thousands of pounds.

In the first development of the wealth of the soil in a newly peopled country, emergencies are generally such as to compel the cultivator to confine himself to those ready and cheap methods which bring him in a rapid return. The time has arrived in New South Wales when the more primitive methods must be abandoned, the consideration of systems of cultivation, by which the fertility of soils might remain unimpaired becomes imperative; and the solution of this problem is necessary to the vitality of successful farming. It is satisfactory to know that a general improvement in our system of husbandry is now being realised. The time has passed away when it was supposed that scientific knowledge and practical farming could not go together, the practical man did not like to be dictated to about his own calling.

Further research and more moderation have resulted in a better understanding, the scientific man acknowledging the importance of practical experience, and the practical farmer recognizing truth in the general deductions of science. Science as pertaining to agriculture is what has been proved by a long series of practical experiments. There is too great a desire among our farmers to cultivate too large an area, irrespective of how the work is done. In many instances it would be much more profitable to cultivate one-half, and perform the work in a better manner. I am a strong believer in the old adage, "A small farm well tilled means large barns well filled."

In almost every place I have visited I have urged the members of the Agricultural Societies, Farmers' Progress' Associations, and other organisations, to meet together once a month during moonlight, one of the number to read a paper on some subject of importance to the particular district, and then those present to discuss it. A vast amount of valuable information could be obtained by this means. I am glad to say that in several instances, particularly at West Maitland, my advice has been carried into effect. Several papers have been read of sufficient merit to warrant their insertion in the Government *Agricultural Gazette*. The Societies are beginning to realise that something more is required of them besides the annual show. I believe that the offering of prizes for the best cultivated farms would prove beneficial. Having become acquainted with so many persons in the various parts of the Colony, my correspondence has increased to an alarming extent; and on my return from short trips to the country there is an accumulation of sometimes thirty or forty letters, asking for information on almost every subject pertaining to agriculture. This I have always given without stint, but it leaves me very little time to read, and prepare myself for the lectures, and keep myself abreast of the times in all that pertains to advanced agriculture. It will be necessary during the coming year to devote an occasional office day, as the matter is of too much importance to be lightly passed over.

I have contributed numerous articles to the *Agricultural Gazette*, more particularly with regard to ensilage up to date, labour-saving implements and appliances, the Angora or wool-bearing goat, &c.

It will be seen from the attached list that during the year I have travelled 26,823 miles by rail, sea, coach, and private vehicle (had one capsized), gave 103 lectures of an average of over two hours duration each, attended and judged at seventeen shows, held 122 conferences, and made 136 inspections, and sundry practical demonstrations.

I have tried to curtail my travelling as much as possible; but it is utterly impossible to meet the conveniences of the people at the various centres without a good deal of zig-zagging.

This year I am making arrangements to stay longer in each district, address meetings at small centres, where a fair number of intelligent men can be got together, and also give practical demonstrations when required.

Thanking you for your kind assistance in enabling me to carry out my duties,

I have, &c.,

J. L. THOMPSON.

### Report of the Wheat Experimentalist.

I have the honor to report, in reference to the work of my office during 1898, that, inasmuch as I only entered upon my duties on 1st September, I have little to report of work actually done.

In order to get a knowledge of the different Experiment Farms, and the conditions under which I shall have to carry on my work at them, during the months of September and October I visited all of them at which it is possible to grow wheat with any prospect of success. The Hawkesbury, Wagga, Coolabah, and Bathurst farms were visited in the order named, the first three in September, and the last early in October. For the purpose of observing the conditions under which cultivation can be carried on at them, I also, when I was in the west, took advantage of the opportunity to inspect the bores at Pera and Tenandra.

I found that experimental wheats were being grown to a greater or less extent at all the farms I visited. At the Hawkesbury College Farm only a few sorts were being tested, but all on a comparatively large scale. Mr. Valder, however, has special objects in view in testing wheats there. His aims are to find varieties which (1) will give abundant yields of grain of such a character as is specially suitable for feeding poultry, and (2) to see what varieties are the most suitable for growing for hay in the coastal counties for sale in the Sydney market. A third object of experimenting with wheats at Richmond might, I think, to be (3) to find out whether it is possible to grow macaroni wheats in the coastal counties, and if so, what varieties are the most suitable for their climate. I have long thought that these wheats might be grown with advantage in places near the coast, where bread-wheats are destroyed by rust. When I was in South Australia, about six years ago, I found that some of these wheats were being grown for hay by some of the farmers in the neighbourhood of Adelaide, and that they were liked for this purpose (1) by the farmers who grew them, because the straw is, in general, much taller and more solid than that of the bread-wheats, and the hay weighs well; and (2) by the consumers, because the hay which is made from these wheats is supposed to be peculiarly sweet. I was told that the beards, which are carried by all the macaroni wheats, were not considered very objectionable. This, I can only think, is the case when the hay is cut not later than when the plants are in flower. The beards would not then have had time to become hard. The unfortunate prejudice which exists in the Sydney market in favour of hay with grain in the ears, and, consequently, with relatively hard, woody, and innutritious straw, over that which has been cut before grain has been formed, and, in consequence, is green, soft, digestible, and more nutritious, will, I fear, prevent the merits of hay made from macaroni-wheats from selling for its true value for some time. If it be found that macaroni-wheats can be grown successfully in the coastal counties, they might also be grown there for the production of grain, at least as profitably as bread-wheats are grown for grain in the interior; for although the flour made from these wheats is inferior for the making of bread, mainly because it is of a grey colour, it is, on the whole, even more nutritious than bread-wheat-flour, and these wheats find a ready sale at excellent prices in France and Italy; the macaroni-making industry might then, also, be established in the Colony with the highly desirable result that we should then be able to purchase our macaroni fresh, and would enjoy it the more from knowing that it had been made under the eyes of sanitary inspectors. With the above objects in view, I am proposing in the immediate future

future to test experimentally the growth of macaroni-wheats at the Hawkesbury Farm, and for this purpose am growing at Lambrigg some new wheats, which are the results of crosses between macaroni wheats and between these wheats and *Triticum polivicum* (mammoth rye), seed of which I shall be able to send to Mr. Valder this autumn. I have also this summer made a few fresh crosses between these wheats for this special purpose.

It is at the Wagga Farm, however, that I am hoping to do much experimental work with wheats—with bread-wheats. I have already paid two visits to this farm, one of nearly a fortnight, in September, and a second towards the end of November. I found that a considerable number of wheats had been planted in the paddock which is devoted to wheat experiments, and that when I visited them in September they were, considering how late many of them had been planted, growing exceedingly well. In this paddock I found a collection of over 300 varieties, which Dr. Cobb has been growing for many years for educational purposes, and calls the Nomenclature wheats. This collection was made originally (and largely by myself) with the object of discovering varieties which are specially suitable for our climate. As the collection contains representatives of most of the types which are in cultivation in any part of the world, and Dr. Cobb has increased their number, he has continued to grow them because he considered that so representative a collection could not but possess an educational value for the visitors to the farm. While I agree with him that this collection is valuable on that account, I think that the growing of the whole of it every year takes more valuable time and space than is commensurate with the practical value of the educational benefits it affords. I propose, therefore, to reduce the collection considerably by rejecting many inferior varieties, which for all practical purposes are of the same types as other more desirable sorts in the collection. I propose, also, only to grow the whole of the reduced collection once in three years by growing a third of it each year. In this way the collection will be kept together, and good seed of any variety in it will be accessible at any time. In the wheat-experiment paddock I also found a collection of what Dr. Cobb calls his "stud" wheats. This collection consists of twenty-seven varieties, which have been grown for a succession of generations from selected seeds taken from selected plants. I am proposing to continue the growth of a stud-plot, but for a different purpose. The stud-plot I propose to grow each year will consist of not more than six selected varieties, and will not be the same each year. I propose to grow in the stud-plot about one-sixth of an acre of each of the varieties selected for the year. These wheats will be planted by hand in drills about 16 inches apart, the seeds being placed about 6 inches apart in the drills. Each plant can then be examined by itself. Repeated examinations of the drills will be made, and any plants which are not of the variety, or are in any respect departures from its type or for any reason inferior representatives of it, will be pulled up and rejected. In this way it is hoped that sufficient absolutely pure seed of each sort will be harvested and handed over to the Farm-manager for planting a plot of 3 or 4 acres in drills, in such a manner that they can, as before, be examined easily for stray as well as for bunted plants. In this way the main crops of the farm will, it is hoped, be grown each year from fresh and pure seed, and that the farms can be made to raise for sale stocks of seed which is both pure, true to name, and free from bunt-spores, of such varieties as trial in the Wagga climate and by Mr. Guthrie's mill have shown to be likely to suit the district and to do credit to the colony. I may here give expression to an opinion of my own, that in selecting varieties for selling to the farmers for seed purposes, regard ought not to be paid entirely to the preferences of the farmers themselves, who usually value the quality of productiveness alone, whether or not it be associated with good milling quality; but that the interests of the colony as a whole ought to be consulted for, and only varieties disseminated which are likely to cause by their high-milling excellence the wheats of New South Wales to be looked upon as the very best in the markets of the world. In addition to the "Nomenclature" and "Stud" plots, I found growing in the wheat-experiment paddock two other series of wheats. These consisted of (1) cross-breeds which I sent to Dr. Cobb several years ago, and he has since been growing. This series consists almost entirely of crosses I have rejected at Lambrigg, in some cases because, like most of my earlier crosses, they were too late for our climate; and in others because Mr. Guthrie's milling tests have led me to think they are not likely to be up to the mark for flour-making; a few of the best of this series will be retained for further trial. The second (2) series consists of fixed and partially-fixed cross-breeds I sent from Lambrigg last autumn. This, the most important series of all, was unfortunately planted the last—near the end of July—and too late to judge of the value, or probably even of the relative value at Wagga, of the sorts included in it. I found when I visited the farm in November that Mr. Hurst had marked the earliest and best plants of each sort, and he is now harvesting them separately in accordance with the system I follow with my own experimental wheats at Lambrigg.

#### *The Bathurst Experiment Farm.*

Since I entered upon my duties I have paid two visits to this farm also—the first at the beginning of October, and the second at the end of November. I find that the Nomenclature wheats are being grown at this farm, as well as at Wagga. I think that, as at Wagga, a considerable reduction of their number ought to be made, and that it would be well to continue to grow this reduced collection at Bathurst every year. The Bathurst Farm is situated quite close to the town, and I am told that the townspeople are in the habit of pausing in their Sunday afternoon walks and looking at the present collection, which contains some curious-looking varieties. Although I feel no great amount of confidence in the value of the educational benefits it is likely to bestow in this manner, as I think that everything ought to be done to make the farms interesting and attractive to the public, I am proposing to grow the reduced collection at Bathurst every year.

The other experimental wheats I found growing at this farm consisted of seventeen fixed and partially-fixed cross-bred varieties I had sent from Lambrigg. I find that the work of marking selected plants of them for the purpose of securing strains to suit the climate of Bathurst was being well done by Mr. Dovey. Beside these wheats, I saw growing collections of varieties of oats and barley which Mr. Dunningcliff had secured.

#### *The Coolabah Experiment Farm.*

My visit to this farm was made towards the end of September. The drought on the west of the Bogan had been so severe and so protracted at the time of my visit that the wheats which had been grown on the farm were rapidly dying off, and all hopes of a harvest disappearing. I saw enough, however, to form the opinion that this farm is most favourably situated for carrying on experiments for the purpose  
of

of discovering what can be done in the direction of making agriculture, and especially wheat-growing, possible in our dry interior. It is at this farm that the problem of discovering whether special methods of managing the soil can be devised, and to what extent they can be made to take the place of irrigation in counteracting the effects of drought ought to be worked out. This, apparently, is a very formidable problem to attack; but I think that the measure of success which is likely to follow eventually, if the attempts to solve it are intelligent, will quite justify the expenditure they will entail in view of the large extent of the territory which would be benefited by them, I think that the institution of these experiments is urgently required. I am strongly of opinion that for the present the Coolabah Farm should be carried on for experimental purposes alone, and that the experiments made on it should be not only agricultural, but pastoral also; and that on it extensive trials should be made of exotic and selected native grasses and forage plants which are likely to be of value to the pastoral industry in our dry country.

With regard to the wheat experiments which are being carried on at Lambrigg, I may state that I am growing there this season 64 old-named varieties, 122 named and fixed, or partially fixed, cross-breeds or varieties which have originated in my hands, and 390 unfixed cross-breeds. Of most of the new varieties and cross-breeds, I have more plants than one—in one case at least a dozen—representing either different strains of the variety or different selected types of the cross-bred. I find that in consequence of this I have at present growing in the experiment paddock no less than 1,478 separate plots. When it is considered that I harvest at least six selected plants from each plot, and that each plant has to be threshed by itself, and the seed it yields placed in a separate envelope, on which a description of the plant and of its peculiarities is recorded, it must be plain that the work of planting, watching and taking notes of the peculiarities, not only of the different sorts, but of individual plants of each sort, marking the selected plants of each plot, harvesting and thrashing, together with all the manifold details connected with these operations, conjoined with all the book-keeping, making records, correspondence, the work of cross-breeding, and the precautions which have to be taken at every stage to prevent mistakes and the mixing of seeds—that all this keeps me fully occupied the year round and, more than that, exceedingly busy. It is quite plain, therefore, now that I have undertaken the work of superintending or directing the experimental wheat-work at the farms, that I must next season very gently curtail the work at Lambrigg if I am in any degree to do justice to the work at the experiment farms.

Since I have entered upon my office, and my work at Lambrigg has been carried on in the interests of the Department, I have departed somewhat from my former policy in cross-breeding of aiming for results of a somewhat abstract character, such as increasing to an indefinite extent the flour-strength and the gluten content, and have rather directed my aims to the making of improved varieties which are likely to be of immediate and practical value; and from this time, or in the immediate future, I shall hope every year to introduce into general cultivation through the experiment farms at least one or two varieties which are, in some respects at least, improvements on the old standard sorts we have hitherto been growing.

WILLIAM FARRER.

### Report of Mr. Martin, Fruit Inspector.

I HAVE the honor to submit the attached schedules of particulars shewing the duties performed by me under the Vegetation Diseases Act, from February 19th to December 31st, 1898. 583 steamers carrying fruit and plants to Sydney were attended to, and 704 inspections were made on those steamers. Mr. Campbell, the Chief Inspector of Agriculture, was with me during 47 of the inspections, and Mr. Chomley rendered valuable assistance from the 10th of May, while he was not engaged in supervising the packing of citrus fruits for export and spraying operations.

The number of cases of citrus fruits fumigated with hydrocyanic acid gas for export to the other colonies were 121,128, and 1,694 certificates were issued for West Australia *re* Fiji bananas.

The work in connection with fruit and plant inspection, seed distribution, supervision of the six fumigators, inspection and classification of timber, also work in connection in the Agricultural and Forestry Museum has kept me fully employed—in fact, I have been engaged on public duties overtime to the extent of 678½ hours during the year, also on eight public holidays, to keep in touch with the various work allotted to me.

I have inspected fruit and plants on thirty wharves in Sydney, but principally attended to Intercolonial, the Islands, and San Francisco boats.

J. MARTIN, Junr.

### Report of the Manager, Experimental Farm, Wollongbar.

I have the honor to state I took charge of the Wollongbar Experimental Farm in November, 1897. The total area of the farm may be stated at 263 acres, more or less. At the time of my arrival there was a cultivated portion of some 27½ acres, which had been laid out partly as an orchard, in which citrus trees in variety had been planted, also a few olives, persimmons, and deciduous fruits. A small plot was under grape vines on trellises; other parts had been planted with bananas, pineapples, sugar-cane, and experimental grass plots. There were 6 acres also of land only recently opened up, on which maize in varieties was being grown, and also specimens of pumpkins, squashes, melons, &c. There was also an old grass paddock, of some 6 or 7 acres in extent, and a newly-sown grass paddock of some 20 acres. Men were busy clearly and burning off some 26 acres, which they had to plough and subsoil, the balance of the area of the farm being in various stages of standing timber, fallen timber, and felled and fired portions. In January, 1898, the 26 acres by this time available for cultivation was pegged out into acre blocks, in order to enable experiments to be made with crops in bulk portions or areas, thereby enabling us to obtain actual results from stated areas in preference to estimated yields from narrow strips or rows.

#### *The Soil.*

This manner of laying out good-sized experimental portions brought into evidence the variable nature of the soil on this red volcanic upland. Such variability has frequently been brought under my notice by visiting farmers, who were anxious to know the cause of the sterility in certain rings or patches of their paddocks under cultivation. I therefore, in due time, forwarded to Mr. Guthrie, F.C.S., Chemist to the Department of Agriculture, some specimens of top soil and lower soil from an area bearing good crops, and specimens of top soil and lower soil from within a few feet of the previous mentioned area, in which whatsoever crop was planted made poor growth and was miserable in appearance. That gentleman kindly furnished me with his report and analysis, which went to show that the general characteristic of the soil was a tendency to sourness or acidity with a low percentage of lime constituents. In the good soil the quantity of lime was indifferent, the amount of potash was also indifferent, whilst phosphoric acid was stated to be very good, and the proportion of nitrogen good. On the other hand, in regard to the soil in which plants do not thrive, Mr. Guthrie said his investigation showed the soil to be strongly acid. Lime was very deficient; potash indifferent, but the amount of phosphoric acid was very good, and the amount of nitrogen good. He recommends a dressing of not less than 1½ tons of lime to the acre on soil of the quality of the sterile plots, together with deep cultivation. In some portions of the Farm the soil is a deep, red, friable loam under cultivation; in other parts it is the same soil but exceedingly stony, and one of the peculiar features is, that the best crops of cane, maize, etc., are obtained from off such stony land. There is also some alluvial soil which we have not yet tested, on the low lying and less steep portions of the Farm bordering Marom Creek. This latter portion of the Farm will probably eventually be found the most suitable for agricultural operations, the soil being of a more loamy nature, and, owing to the drainage from the hills above, there is a moisture pervading the soil not obtained on the high lands. Owing to the initial clearings of the Farm having been made on the higher ridges where water is only obtainable by artificial means, an effort is being made to get this 40 acres of land cleared of timber and rubbish in order to give the Farm the benefits of its water frontage.

#### *The Climate and the Crops.*

One hears so much of the Richmond River and its wonderful fertility that it was with some surprise when I arrived here to find the locality suffering from what was called a dry spell. This dry spell, though of very short duration, extending from part of September through October to about November 14th, was sufficient to check the progress of various experiments, including experiments that were being made with varieties of onions and potatoes, and when the rain did come, it was so heavy and prolonged that the onions never came to a satisfactory crop. Very nice specimens were obtained for the shows, but the bulk for market was insignificant. Some seventeen varieties of potatoes that had been sown in August did better in point of yield in some cases than I anticipated; the marketable quantity, however, was very small, nearly the whole of the crop being infested with nematode worms, and consequently they had to be destroyed. These potatoes were planted in newly-cleared virgin land.

Varieties

Varieties of maize had also been planted in another portion of the same area. These varieties were grown in rows, and the estimated yields are as given below:—

Hickory King ... ..	17.2 bushels per acre.
Yellow Flint ... ..	20.5 " "
White Meal ... ..	32.5 " "
Iowa Silver Mine ... ..	36 " "
Thousandfold ... ..	19.6 " "
No. 1 D. Clark ... ..	29.9 " "
Hadfield No. 1 ... ..	53.4 " "
No. 2 D. Clark ... ..	32.03 " "
Hadfield No. 2 ... ..	25.9 " "
No. 3 D. Clark ... ..	35.8 " "
Monaghan ... ..	44.9 " "
Big Yellow ... ..	39.5 " "
Leaming ... ..	56 " "
Mastodon ... ..	57.75 " "
Chester County ... ..	35.8 " "
Pedrick's Golden Beauty ... ..	42.3 " "
White Cap ... ..	34 " "
Golden Beauty ... ..	44.3 " "
King of the Earlies ... ..	32 " "
Iowa Gold Mine ... ..	41 " "
Large Hawkesbury ... ..	49.6 " "
Red Core ... ..	33.6 " "
Conqueror ... ..	Heaviest grain, but not sufficient yield to estimate.
Golden King ... ..	55.7 bushels per acre.

A considerable quantity of coffee seed was sown, and gave promise of yielding a fine nursery stock of young coffee trees. The bleak winds experienced in the early winter, and later on occasional frosts, played havoc with the crops. By careful nursing under shaded seed beds, some of these may turn out satisfactory; but towards the close of the year the droughty condition of the district generally has been against the growth of the coffee. A few coffee trees growing in the shade of adjacent bananas, bore fair crops of berries, but coffee trees in the open acquired a wilted and unhealthy looking appearance, resulting mainly from dry, hot winds.

A small plot of ginger did not give a satisfactory return.

A quantity of arrowroot was made from the *Canna edulis*, particulars of yield, &c., being published in the *Agricultural Gazette*. The plot of Bermuda or White Arrowroot made very good growth, and about half an acre has now been sown with this variety, and next season it is intended to manufacture arrowroot from these bulbs, and so compare the yield with that obtained this season from the *Canna edulis*.

Some upland rice was sown, but at the present time there is no cultivated land available on the farm suitable for growing rice, and consequently the result has not been encouraging. It has held its own during the dry weather, but the stalks are light and short. Some rice had also been grown in a low-lying portion of the town, somewhat moist from soakage, and here it made great growth of stalk. Later some of the lower land will be cultivated. Some two acres of pineapples were planted out, the varieties being Smooth Cayenne and Queen. Considering the dry weather experienced in the latter part of the year the plants look exceedingly well. The papaw trees growing at the farm have fruited fairly well, but do not look particularly robust in this climate. The most satisfactory tropical plants so far experimented with on the farm appear to be the banana, pineapple, and the mango tree. Several of these latter show signs of bearing heavily this season. In the orchard the deciduous fruit trees, such as Japanese plums, peaches, &c., in some instances have never fruited; therefore during the fruiting season they were "root pruned," in order to check the root action, and thereby if possible throw them into fruit. In one or two instances the operation has proved successful. The oranges and lemons produced fair crops, very fine specimens being on exhibition at the Royal Agricultural Show in Sydney during Easter. The gall worm, fruit fly, and borers, and also the bronzy orange bug are the chief troubles to contend with in the orchard.

The early crop of tomatoes was practically a failure. A late crop turned out much better, and the standing crop, growing on trellises, notwithstanding the dry weather, looked very well indeed in December. Cucumbers, pumpkins, squashes, and melons have been grown in variety, and, considering the porous nature of the soil, and the fact that it is yet slightly acid, the growth of some of the varieties was very good, and as the land becomes sweetened through tillage there is no doubt these and other crops will improve.

The investigation into the growth and qualities of new varieties of New Guinea sugar-canes, as also the varieties that have been long established on the northern rivers, has been continued, and the result of such investigation, analysis, &c., published in the *Agricultural Gazette*. The manner of giving the information in a tabulated form is much appreciated by those interested. Some 12,000 sets of cane have been distributed to cane farmers. In order to follow out the life history of these cane plants in their various stages, a new planting has been made covering an acre in extent, while two or three of what are now considered best varieties have been planted in half-acre or quarter-acre sections, so as to arrive at a yield in bulk.

In the matter of pulses—beans, &c., the heavy rains of December, January, February, and March made it difficult to satisfactorily harvest such crops. Only a small quantity of Black Cow Pea seed and Wonderful Cow Pea seed was saved, while the crops sown later in the year languished and gave poor results in consequence of the droughty conditions. Of table peas, the Duke of Albany and Heroine were undoubtedly the best. In beans, the Canadian Wonder and Governor Denison are the heaviest croppers, while Davis's Wax, Horticultural, and Startler are very good yielders.

In cereals, rye is the most satisfactory grain raised here, for the simple reason that it is free from rust. The crop was sown in May and harvested in November. The yield was 20.18 bushels per acre of grain and 2 tons 8 cwt. 1 qr. per acre of straw. A late sowing was made of Allora Spring Wheat; 30 lb.

of seed was sown in drills per acre, the seed being obtained from the Wagga Experimental Farm. The sowing met with dry weather, and it was fairly dry all through to harvesting. It was sown on new land, on which there proved to be a good deal of sour soil, on which there was stunted growth. However, taking the plot as a whole—good, bad, and indifferent—the yield obtained from the acre was  $5\frac{1}{2}$  bushels of grain and 7 cwt. 3 qrs. 3 lb. of straw. There is sufficient acclimatised seed, therefore, to make a proper early sowing in the coming season, it being exceedingly satisfactory to have raised this seed free of rust.

The farmers of the locality grow oats largely as green fodder for stock, and one of their troubles is loss arising from rust. A small parcell of Algerian Seed Oat, received through the courtesy of Mr. Albert Benson, of the Queensland Agricultural Department was sown on June 16th and harvested in November. The crop was free from rust, and the yield was equivalent to 40 bushels of grain and 2 tons 8 cwt. 2 quarters of straw per acre. With the seed thus obtained a further experiment will be made, and it is intended to try two or three other varieties that may possibly answer in this locality.

Of pasture grasses—Cocksfoot, Prairie, *Paspalum Dilatatum*, Guinea Grass (*Panicum maximum*), and Natal Red Top have so far shown the most hardihood during the severe weather experiences in the latter part of the year. From the close of the winter Prairie Grass held out fairly well for a time, the Cocksfoot dried up considerably but did not actually burn off with the sun and drying wind, while the *Paspalum dilatatum* and the Guinea Grass may be said to have kept green all through a dry time, the like of which is said not to have been experienced on the Northern Rivers for some ten or twelve years. The Natal Red Top is a prolific seeder, and is a valuable addition to a grass paddock. It will not stand frost, however.

As some farmers appeared anxious to take up the making of ensilage, a small model tub silo was made and exhibited at the Lismore Agricultural Show. A temporary square wooden silo was also erected on the farm for making silage of whole stalks of Maize, Planter, &c. The ingredients used were Amber Cane, Planter's Friend, Maize, Guinea Grass, Red Top and Teosinte. At the expiration of three months the silo was opened, and was found to contain about 12 tons of very excellent ensilage. At this time I never anticipated it possible we should have such a dry spell as that experienced later, otherwise I should have husbanded this feed stuff more carefully. I had heard of cattle having to be removed from the locality for want of grass in November, and must admit I was somewhat sceptical. I have now realised, however, to what an extent this sort of country suffers during a drougthy time in consequence of the excessive evaporation and the wonderful porosity of the soil. While in other parts the farmer may lay up his store of silage for use in cold winter months, here the store is apparently required for the early summer onwards, say October and November, perhaps December,—this, of course, only applies to such an exceptional season as recently experienced. While it is a vexed question as to whether the destruction of forests causes a diminished rainfall, I am of the opinion the gradual destruction of the scrub causes a dry time to be felt more keenly than it was a few years ago. Though the rainfall may be just as heavy throughout the year, it has not the same permanent effect during months of a light fall; the winds have fuller play, and sweep across hill and dale where, in former times, they were deflected by the tall belts of scrub. The silage was served out to the horses of the farm in a chaffed condition, at first only in small quantity mixed with bran and maize. As they became accustomed to the fodder the bran and maize was reduced, and finally discontinued when it was apparent that the horses relished the silage alone. The animals put on condition, and threw off their winter coat of hair very quickly when put on the silage ration. Farmers were allowed small quantities of the silage, as samples with which to try their stock, &c.

In December, 1897, in point of quantity, the crop of grapes in variety was a very promising one, but the rain spoilt a good deal of it. This season there is also a very excellent crop, and in the early part of December the varieties Early Chasselas, Golden Chasselas, and Madeline Royal were fit to market.

A winter crop of potatoes, consisting of Brownell's Beauties, Early Rose, and Ruby Red, gave fairly good results, particulars of which were published in the *Gazette*.

About an acre was sown with onion seed obtained from Queensland—variety, Brown Spanish. They were sown in the latter part of April, and made most excellent growth until the dry season overtook them, since when they have not made the bulbs they would otherwise have done. The harvesting of this plot has to be done from time to time in consequence of the unevenness of the crop, and the total yield cannot at present be stated. Though uneven, there are some very fine samples of onions on the plot.

In order to be able to make a bulk estimate of the production of fibre from the Ramie plant, 5 acres have been sown with root cuttings from time to time, and 1 acre is lying fallow waiting for favourable weather to plant, so that we shall have a total of 6 acres under ramie. Since planted, there has not been weather calculated to promote the vigorous growth desirable for manipulation by machinery. One of Faure's Ramie decorticating machines has been imported from France, and the necessary driving power is being supplied and fitted. With the machine ready and suitable rain to bring on the crop, it is hoped to make a trial for fibre production in February or March next. Per medium of the *Agricultural Gazette*, an effort has been made to give every information possible about this plant and its fibre.

Exhibits of farm produce were made at the Royal Agricultural Society's Show in Sydney, at Lismore, Bangalow, Alstonville, and Murwillumbah.

The particulars of temperature and rainfall are as follows:—

	Maximum.	Minimum.	Rainfall.
January.....	82·9	65·5	points. 2,617
February.....	80·9	65·01	1,740
March.....	76·7	63·03	1,614
April.....	73·49	56·8	300
May.....	64·29	47·1	396
June.....	63·8	47·2	911
July.....	61·9	44·9	426
August.....	64·4	49·38	420

*Cattle.*

In response to a desire expressed by various Agricultural Societies, an Ayrshire bull, imported from New Zealand, was received at the farm, where he remained some six months. During that period, the animal was not extensively patronised by the local farmers, and consequently he was removed to Coraki, in response to representations made by the Agricultural Society of that place. There was some dissatisfaction locally upon the removal of the Ayrshire bull, as some dairymen were disappointed in not being able to obtain his services when they were in a position to make use of him. In this connection there has been some little difficulty, some farmers contending they cannot travel their cows long distances, and consequently the various Societies scattered over the district, and others interested, keep asking for any bulls at the farm to be sent into their own particular neighbourhood. It is of course impossible and unreasonable to expect the services of bulls located at the Wollongbar Farm can be available beyond a certain radius, nor is it possible even when removing the bulls to another centre to please all parties. On the low-lying country of the Richmond, many of the dairy farmers work their cattle in such a way as to bring their cows in in the spring; on the other hand, in the higher country the dairy farmers mostly work their cattle in such a way that they come in in the winter months, to attain which object they paddock their own bulls from January up to the second week in May. It appears, therefore, from investigations I have made that it will be advisable to hold any stud bulls depastured at the farm for a full term of twelve months, at the expiration of which, perhaps, other arrangements may be made for service elsewhere in the Richmond River District. In October two of the recent importations from England were received at the farm, namely the Durham bull "Cornish Boy," and the Guernsey bull "Nutcracker." Very much interest toward the Durham strain of dairy cow; and secondly, the Guernsey, in consequence of his representing a breed hardly known here, and a type of dairy animal a great many of the farmers had never before seen. From the time of the arrival of the bulls they met with just as much patronage from local breeders as was, perhaps, good for them. Feed was scarce, the weather was very hot and dry, and the bulls, being somewhat high in condition, they appeared to feel the change of climate somewhat acutely. Proper bull paddocks and housing accommodation has been provided for these animals, and, in order to meet the convenience of farmers at a distance, matters are so arranged that a cow may be cared for and milked, if it is necessary that she should be paddocked for a day or two.

Paddocks are being fenced, and clearing and burning off the fallen scrub and sowing of grass seed to make pasture is progressing, so that in course of time it will be possible to carry a small milking herd of pure bred cows of whatsoever breed may be decided upon.

H. V. JACKSON.

---

### Report of the Manager, Coolabah Farm.

EARLY in 1898 the Department commenced clearing the land set apart for the Coolabah Farm.

The country was very thickly timbered, comprising red and white box, pine, mulga, iron-wood, and many other small trees and shrubs. As this area was a portion of the West Bogan scrubbed lands, the trees had, previous to clearing operations, been ringbarked and the scrub felled.

Two hundred acres were cleared for cultivation, and fenced in with a substantial 6-wire fence.

The first furrow was turned on the 30th March, and the ploughing was carried on under adverse conditions, it being virgin soil and no rain to soften it. The first wheat was sown on the 9th April, but did not germinate until the 11th June, it not having sufficient rain until that date. The following wheats were sown in large areas, viz.:—Hudson's Early Purple Straw, Australian Talavera, Blount's Lambrigg, Zealand, Steer's Purple Straw, Rattling Jack, Steinwedel, and Allora Spring.

Experiments were carried out with these as regards the depths of ploughing, viz., 5 inches, 6 inches, and 7 inches; light and heavy sowing, ranging from 20 lb. to 60 lb. of seed per acre; drilling and broadcasting, and harrowing after the crop was well above ground, to conserve the moisture after each fall of rain of consequence. The results, as far as they went, being in favour of 7-inch ploughing, light sowing, drilling, and harrowing the crop after rainfall. The varieties withstanding the drought best being Hudson's Emly Purple Straw, Steer's Purple Straw, and Zealand. The results respecting the drought-resisting qualities of the varieties cannot be relied upon, as the crops grown upon the land which was cleared first withstood the dry weather very much better than those upon the land which was cleared later; the trees on the latter having absorbed all moisture, it also not having time to sweeten before winter.

It is to be regretted that the many experiments could not have been followed further, owing to the prolonged drought which, coming after a year such as 1897, with its rainfall of 13.13 inches (the observations were taken at Coolabah Station), proved too dry for successful wheat-farming.

The rainfall in February last being the last fall which caused any appreciable growth in the natural and indigenous grasses of the adjoining country. The rainfall for 1898 up to the present (12th December) being about 8 inches. Since farming operations were commenced here only 5½ inches have fallen, it raining on 26 days, the heaviest on one day being 76 points. In addition to the wheats above mentioned, 236 other varieties were sown, and I was surprised to note that amongst these the Manitoba (Hard Duluth), obtained from F. Crago, Esq., Newtown, came into ear, but did not mature seed, proving that this wheat, which is considered by many to thrive only in the cooler districts, might do well in this climate under ordinary conditions. Also, 6 acres of Nepaul barley were sown, but did not do as well as the adjacent wheats.

Thirty

Thirty acres were subsoiled to the depths of 14 inches and 16 inches for vegetable and spring crops. A great variety of vegetables was sown, those withstanding the dry weather being onions, snake-beans, tomatoes, melons, and pumpkins. The spring crops were comprised of potatoes, four varieties of maize, several sorghums, millets, Kafir corn, cotton, rice, soy beans, lucerne, cowpeas, and four varieties of salt-bushes. Amongst the grasses sown were Mitchell, Prairie, Cocksfoot, and Kentucky Blue Grass. Owing to insufficient moisture great difficulty was experienced in getting the smaller seeds to germinate, the percentage in many instances being very low. Amongst the grasses germinating the Mitchell has done the best. Of the salt-bushes, one variety alone came up, viz., Old Man Saltbush, and the plants are weathering it splendidly, again proving the excessive hardness of this plant and its value in the arid districts. Of the many sorghums and millets, the broom-millet succumbed first, the others are still alive, but are making no growth. The cowpeas look the best of all, showing no signs of wilting, although impossible to make any growth. The lucerne, also, is alive, which proves that this plant will, with proper cultivation—under reasonable conditions—hold its own in the dry districts.

A number of plants of the Purslane tree were obtained from Mr. Maiden, of the Botanic Gardens, and, although transplanted in very hot dry weather, are doing remarkably well, and should prove very valuable as a fodder plant in such a climate as this.

Notwithstanding that the results of these experiments are remuneratively unsatisfactory, some were decidedly interesting and of no small value, and will prove helpful in the choice of seeds in the future.

The improvements consist of a four-roomed cottage, a commodious stable, machine and fodder sheds, as well as a tank which has not yet been filled.

The plant is comprised of eight draught and one light harness horse, five ploughs, disc and ordinary harrows, seed drill, and cultivators.

The number of men employed will now be reduced to three, irrespective of manager; the number employed previously being greater as the most of the improvements were completed by day labour. Notwithstanding the disastrous effects of the drought, the Department has decided to give it a fair trial by continuing operations for another year, as nothing could be expected under the conditions obtaining here last season. The experiments, nevertheless, have proved what might be done under ordinary and reasonable conditions.

R. W. PEACOCK.

### Report of the Bathurst Experimental Farm.

THE Bathurst Experimental Farm contains 596 acres of Crown lands, with 196 acres leasehold adjoining, consisting very largely of granite and poor, stiff clays. Fully 700 acres, including all the cultivated area, may be so described; and, as the farm is strictly typical of large areas in this and other districts of the west, the present object of bringing these uncongenial soils into profitable work with the least possible expenditure of capital and labour is one which is already attracting considerable attention amongst holders of similar lands hitherto considered worthless.

Our difficulties have been accentuated by the very adverse conditions which have existed throughout the year, this being the fourth year of drought, and one of great hardship to agriculturist and stockowner alike. Notwithstanding these and other drawbacks, our crops have been better in quantity and quality than others grown on the good lands of the district, and the farm all through has made definite and substantial progress.

#### *The improvements for the year*

may be briefly summarised as follows:—

The area under cultivation has been increased from 200 acres to 350 acres, nearly all being faithfully ploughed to a depth of 8 or 9 inches some twice, thrice, or even more times in the year. A number of subdivision fences have been erected, for the more efficient and economical working of the crops and live stock, and about a mile of rabbit-proof netting has been put up to protect the experimental crops.

The large creek which runs through the length of the farm, with its branches, has been improved by the construction of a series of flood-gates, and the smaller watercourses have been checked by small weirs or dams. Six culverts have also been constructed. A large amount of work has been done, and which does not make much show, in grubbing, grading, and bringing into good mechanical condition about 130 acres of land, which had only been taken into rough cultivation by my predecessor.

The large dam has been completed, fenced, and planted, whilst several long races through the catchment area have been made, with the necessary reservoir, to feed the said dam. A smaller dam has also been excavated and finished, and has proved invaluable for all our stock.

Several hundreds of shelter and ornamental trees have been planted, a portion of which, however, have failed through the severity of the season.

A sheep dip, with its necessary adjuncts, has been constructed, and a shearing-floor has been laid, together with the tables, gates, and other fittings.

Also a shed for roots and other crops, &c., 120 feet long, together with a separate room for a watchman.

Two sheds have been built and fitted for the stud bulls, and four styes with houses for pigs, and copper for cooking food. A substantial floor of brick and cement, 30 feet by 30 feet, has been laid in the ground of the seed and implement store.

A temporary nursery for the propagation of vines and fruit-trees has been fenced, ploughed, and planted, with the accompanying work of grafting, &c.

Six propagating frames have been built, and prove really valuable additions to our appliances.

Twelve large farm gates have been made, fixed, and painted; a useful farm roller in three sections, drawn by two horses; a water truck, carrying 350 gallons; three large garden barrows; three long stack ladders; twenty-four long troughs, for sheep feeding; six smaller ones; improvements and additions have been made to the chaff-cutting, threshing, and seed-cleaning plants; and a large number of other matters too numerous to particularise.

The

The whole of the foregoing works have been done by the hands employed on the farm, and the outlay beyond current wages has been for material only.

The irrigation scheme which has been carried out during the past year consists of a well, 6 feet in diameter and 39 feet deep, being 18 feet below the summer level of the Macquarie River, with a cross-cut drive at the bottom, running towards the river. A "Blake" pump, driven by a Tulloch "Colonial boiler," lifts the water, and forces it a further 28 feet into the high-level tank, at the rate of 20,000 gallons per hour. The water is then distributed through about 16 acres of small plots, by 4 inch and 5 inch galvanised iron mains, with the necessary delivery valves. The pump, boiler, and well are covered under a neat building, containing also a smith's bench and appliances for repairs. The average cost of pumping is about 1d. per 1,000 gallons. The bulk of this work also has been done with our own labour.

#### Farm Crops.

One hundred and ten acres of various wheats were grown for seed purposes, consisting of Australian Talavera, White Lammas, White Tuscan, White Naples, Berthond, Golden Drop, Farmers' Friend, Hudson's Purple Straw, Steer's Early Purple Straw, Steinwedel, Rattling Jack, King's Jubilee, Allora Spring, Manitoba, and Tardent's Blue. The average yield may be stated at 9 bushels per acre; but to give a tabulated statement of the various varieties would be misleading as to their relative productiveness, because whilst some gave a return of 12 and 14 bushels per acre on our average soils, other prolific sorts had to be planted on lands which, had the seasons been fairly moist, would have given large yields; but during this dry one have given the least returns of any. One valuable fact, however, stands out distinctly: that Australian Talavera and White Lammas are better adapted to our circumstances than any of the others. The former gave 12 bushels of clean grain per acre off 27 acres, and the latter returned 11½ bushels per acre off poor land.

Twenty-two and a half acres of oats, for seed, in four varieties, viz., Carter's Royal Prize Prolific, Algerian, Dun, and White Tartarian. These crops, owing to their location, suffered severely from the hot, drying winds of early harvest-time, and their yields were, consequently, very trifling, except Carter's lot, which gave 18 bushels per acre, off 16 acres.

One acre of skinless barley suffered under the same conditions as the oats, and yielded only 8 bushels.

Rye, 11 acres, in three varieties, viz., 8 acres Common Black, on particularly poor land, returned 6 bushels per acre; 1 acre, Mammoth, on fair land, gave 3 bushels; and 2 acres of Arctic Rye, on better land, and drilled in with 2 cwt. of Sugar Company's No. 3 manure, 7½ bushels per acre. This latter sort seems better adapted for grazing purposes.

For hay we had 70 acres, of oats and wheat chiefly, grown on our poorest lands, and under most unfavourable conditions; return—an average of half a ton per acre.

The early crops of potatoes, beet, mangolds, carrots, parsnips, and turnips, covering 21 acres, were all total failures owing to the drought.

At present we have also 72 acres of miscellaneous farm crops, consisting of lucerne, maize in varieties, sorghums, broom millet, tomatoes, onions, and potatoes, all suffering severely by reason of the drought.

Amongst the experiments which attracted the most attention from all classes of visitors was a series of 330 selected varieties of wheat, all planted the same day, and grown under exactly the same conditions. A similar lot of forty selected varieties of oats adjoining, and also under like conditions, were equally interesting. The experiments in connection with the new hybrid and cross-bred wheats for Mr. Farrer covered 7 acres, and entailed a considerable amount of labour, the results of which will be, no doubt, embodied in Mr. Farrer's report. The experiments with grasses and clovers, &c., were not particularly successful, owing to the adverse season; but some useful knowledge has been obtained as to what plants may be cultivated on these dry hills. The following were tried:—*Trifolium incarnatum*, *Alexandrinum*, \*Prutense, \*Repens, and \*Hybridum, with \*Yellow or Trefoil, Japanese Clover, \*Lucerne, \*Sanfoin, \*Sheep's Burnet, Sheep's Fescue, Purple Fescue, \*Meadow Fescue, Meadow Foxtail, Timothy, \*Rib-grass, \*Crested Dogtail, Poa Prutense, and \**Paspalum dilatatum*. Those marked \* have grown and withstood the drought; the others either died off after germination or did not germinate at all. It is suspected that the seed was old in each case, as I have had considerable experience with these varieties elsewhere, and anticipated success here. Three acres laid down with Prairie, Cocksfoot, and Perennial Rye-grass, although sown rather late in the spring, caught well, and withstood the fierce heat of summer. Salt-bushes, *Atriplex nummularia* and *Atriplex semibaccata* have done very well from seed, and are thoroughly established.

#### Orchard.

Containing 30 acres of land, and planted with 2,600 choice fruit-trees, has been ploughed 6 inches deep, and well cultivated five (5) times during the year. Other details will appear in Mr. Allen's report.

#### Sheep.

For the purpose of continuing former experiments in the cross-breeding of sheep, a small flock of two hundred (200) selected merino ewes was purchased at the commencement of the year; but, owing to the severity of the drought, these were not only sent elsewhere, but the whole of the sheep of the place had to be removed. The flock of ewes mentioned was brought here in May, and put to eight pure rams, viz., Shropshire, Southdown, Border Leicester, Lincoln, Romney Marsh, Dorset, English Leicester, and Cheviot.

The number of lambs was reduced by accidents to two of the rams at an early period of the season; and a considerable number were lost at the lambing through surreptitious visitors and depredations by the town dogs, although every possible care was bestowed. Very few lambs were lost through natural causes. The percentage saved was 64 per cent. It is too early yet to give any details of the results of these experiments. The whole of the sheep have done pretty well since being brought here, as, notwithstanding the dryness of the season, sufficient food has been available about the farm.

The greatest trouble we have had to contend with has been the visits of the town dogs to the flocks of both ewes and lambs, numbers of which have been killed; and it will be necessary for their protection, and also of the crops, to close in with netting a considerable portion of the farm before the next season.

#### Cattle.

*Cattle.*

The imported Ayrshire bull, "General," has been stationed here for service throughout the past year, in the hope of improving the herds of the small dairy farmers. He has been well patronised, and his value is very noticeable in the handsome lot of young stock which have followed his services. He attracted much attention when exhibited at the Royal Agricultural Society's Show last Easter, and also at Bathurst Show. The young Jersey bull, "Corall's Lad," from imported parents, was purchased from Dr. Hay, of Coolangatta, after taking first prize at Royal Agricultural Society's last Show, and has also been stationed here for service. Since his arrival in April last, he has developed into a very symmetrical and showy beast, and consequently his services are in request. Our other horned stock merely consists of the cows for College use, and their calves. The conditions of the farm are not sufficiently advanced for keeping dairy stock; but it is hoped that we may be ready for this work in the course of another year.

*Horses.*

The whole of the farm work—ploughing, sowing, harrowing, discing, cultivating, rolling, mowing, harvesting, and drawing, besides constant spring-cart work—has been done with an average of nine draught horses. Two light horses are kept for College use.

*Students.*

We have had for this year an average of nine students in residence, and are here to learn practical farming. They are put by turns through all the details of farming operations throughout the different seasons, made expert with the various implements and machines, and taught the most improved methods in agriculture, horticulture, orchard and nursery work, with the care and management of the several kinds of live stock. They work with the carpenter, blacksmith, and farrier, the fencers, and have a hand in almost everything which is going on about the place; so that when they leave here they should be able to go and manage profitably their own property, or for others.

We have had a good stamp of youths, and their conduct, both on the farm and in the College, has been generally satisfactory. Two have left us to commence for themselves, and one has gone to a station for more experience. In two other cases the parents are so well pleased with their sons' progress that they have asked permission for them to have an extended term.

*Machine Trials.*

During the year we have had several public trials of agricultural implements and machines, by request sometimes of farmers, and again by wish of makers. The tests have comprised single and double ploughs for all kinds of work, and also three, four, and six furrow ploughs, new and improved cultivators, harrows, seed drills of various sizes and types, &c., &c.

They have been found very interesting and useful, and were well attended by the farmers, who in many instances adopted new implements thus presented to their notice, and avoided purchasing in others.

*Commercial farm.*

The late Minister for Mines and Agriculture, the Hon. Sydney Smith, several times expressed a wish that someone of his officers would take a low-class farm, and endeavour to work it under the same conditions as the average small farmer, only employing better methods. With this object in view, a small farm of 156 acres was leased for one year, at a rental of £50. The farm had been under constant cultivation for thirty years, and was so far impoverished and dirty that the owner was leaving it, and going out west to new lands. Possession was obtained in May, and during May and June 80 acres were cleaned, ploughed, and sowed to various crops. These received frequent attention, and before harvest the cereals were pronounced by experts to be well grown, exceptionally clean, and fit for sale for seed purposes. The grains and hay crops, at close of year, have all been harvested; but as they are not all threshed, the actual results cannot be all given. Enough, however, has been seen to show a very fair return for the labour, which is the chief item. The total outlay for the season, including rent, £50, and charging current rates for all the different operations, such as ploughing, sowing, rolling, reaping, mowing, carting, threshing, with repairs to fences and fixing a new gate, amounted to £95 2s.; and the yields of crops, carefully estimated where as yet unknown, and calculated at prices below what has already been offered for them, or at low market rates, amount to £154 10s., showing an apparent profit at present of £59 8s. To this should be added the advantages of a comfortable cottage, with garden, ample stabling, milking shed, and many other conveniences, with two large dams of water. These accommodations were well worth, and indeed saved an expenditure of fully £30 per year. Time and space will not admit of giving fuller details; but enough has been said to show that a large number of our farms might, in other hands, be worked to much greater advantage to the community.

In conclusion, I may say that our experimental and farm crops, with the various other operations, have attracted a constant stream of visitors, both from the farmers out west, when they visit Bathurst, who spend hours here seeking information, sometimes repeating their visits, and latterly amongst the more local people.

During the year the number of men employed on the farm has been curtailed, and the expenditure thereon reduced at the rate of fully £1,000 per annum. At the same time, the money returns for products sold have doubled those of the preceding year. Taking into consideration the present conditions of the farm, notwithstanding the terribly adverse season, I see a hopeful outlook, and am sanguine of the future.

A. A. DUNNICLIFF,  
Manager.

## Report of the Manager, Wagga Experimental Farm.

DURING the year just closed the farm, with a large portion of the Riverina district, has again suffered severely from drought, consequently crops are light and in some cases they have proved failures.

During four successive years drought has prevailed here, no good season having been known since 1894 to 1898.

The rainfall recorded during the past year is 14.33—the average for twenty-five years being 22 inches.

During the month of September sharp frosts were experienced, and towards the end of the month hot winds set in, continuing at intervals to the end of November to the great detriment of all growing crops.

Wheat.—Early in January threshing of the 1897 crops of wheat, &c., was commenced and carried out without delay, the yield in most cases being light.

The lowest yield was that of Stienwedel—9 acres producing only 10 bushels; the best yield having been obtained from Marshall's No. 3, viz.,—13½ bushels per acre. The late sown Allora Spring yielded at the rate of 4 bushels 26 lb. per acre.

The farm foreman's field-book for the previous season (1896) shows the lowest yield to have been 1½ bushel and the best a little over 9 bushels per acre.

The whole of this season's crops have been cut and stacked, and threshing will be carried out when the students return from vacation.

Owing to the failure of moisture in the months of September and October—a critical period in the life of the early sown crops—some of the varieties which were sown for grain production had to be cut for hay, and the grain of other varieties will be limited in quantity.

Allora Spring, Canning Downs, Velvet Pearl, and King's Jubilee failed completely and will not pay to harvest in any form.

Crops cut for hay returned from 5 cwt. to half a ton per acre.

Experiments have been carried out in the application of manures and in the comparison of subsoiling with ordinary ploughing for wheat production.

The results of these tests will be published as early as possible.

The whole of the cereal crops have been remarkably free from disease.

Oats.—135 acres sown for hay yielded from 6 cwt. to 9 cwt. per acre.

Barley.—40 acres sown; crop light, not yet threshed.

Sorghum.—1897 crop maturing in this year was too poor to harvest. Thirty acres sown in October last thriving well.

Maize.—31 acres sown in September making rapid growth.

Millet.—4 acres, making fair growth.

Mangels.—8 acres sown; growth unsatisfactory.

Rape.—It was intended to sow an area in last autumn to be fed off by sheep but drought prevented.

A spring sowing proved a failure.

Buckwheat.—A nominal yield only.

Lupins.—1 acre sown. Failed.

Beans.—18 varieties sown, but all were destroyed by hot winds.

Peas.—6 varieties sown, but all failed to give satisfactory results.

Potatoes.—15 varieties were planted in an area of about 4 acres for experimental purposes. The crop has not yet been harvested, but some of the varieties promise fair yields.

Pumpkins, Squashes, &c.—50 varieties have been sown, and many are making rapid growth.

Tomatoes.—16 varieties are being tested, and results will be published when available.

Onions.—5 varieties are under trial, with fair promise.

Cow Pea.—1897 crop failed; 22 acres now growing.

Cotton.—Failed.

Vineyard—25 acres was planted in the spring, with cuttings of the following varieties, viz.:—Muscat, Hermitage, Malbec, Madeira, and Cabernet. The season having proved most unfavourable for work of this description their survival is doubtful.

Orchard.—During the early part of the year a quantity of fruit was preserved by the process of bottling and drying respectively, and good samples of raisins of several varieties, and of dried apricots were with the first-named fruits exhibited at a number of shows, where they attracted much inquiry and favourable comment.

The work of this season will consist of preparing raisins and currants, and the preserving of all varieties of fruit available by canning, bottling, &c. In this work the orchardist will be assisted by the students.

The cannery is fast approaching completion, and will shortly be in working order.

Other orchard improvements comprise the erection of a plant-shed, trellises for grape vines, &c.

Working Staff.—During the early part of the year I reduced the permanent labouring staff by four men; but the addition of the wine vineyard to the area to be worked necessitated the employment of another man.

A few extra temporary hands have been employed for special work, such as harvest, pruning, &c., but the cost of this extra labour has been light in comparison with the saving effected by the reduction in the permanent staff.

All the work of the farm has been thoroughly carried out with the reduced staff, and in addition about 250 acres of new land has been ploughed, and 80 acres of it placed under crop, the rest being almost ready for sowing in next autumn.

A new cottage for the blacksmith has also been erected and completed by farm labour.

Increased Area.—The whole of the recently added portion of the Common—790 acres—has, under contract, been enclosed by substantial fences, the area of the farm now being 3,217 acres.

Students.—The year opened with fourteen on the roll, the number now registered being eleven, inclusive of three new students. There are several others negotiating for admission.

The progress made by the majority of students has been satisfactory. Some of the lads have not perhaps taken so much interest in their work as would seem desirable, but our conditions have been very trying, and it is only to be expected that a considerable time must elapse before young fellows unused to back-country farming get inured to the discomforts inseparable from a prolonged season of drought.

The system carried out by me is that of assigning students to the respective departments of the farm for a fortnight at each department. Thus they have an opportunity of getting a better insight into the various kinds of work carried on than would be the case if they were more frequently transferred, and consequently their work is of more value to the farm. Lectures or lessons have been given twice a week in the evenings when practicable.

Agricultural Shows.—Exhibits consisting of general farm produce, dried and preserved fruits, &c., were displayed at the following places, viz.:—Sydney, Maitland, Orange, Bathurst, Corowa, Wagga, Albury, Hay, Narandera, Jerilderie, Forbes, Cowra, Gundagai, and Moama.

Much interest was evinced in these exhibits which were fully explained to all who desired information regarding them.

G. MAURICE McKEOWN.

### Board for Exports.

I HAVE the honor to report that during the current year the operations of the Board have increased in magnitude as much as could be expected in such a drought-stricken season.

Early in the year it was found, as anticipated, that the cold storage accommodation provided would prove inadequate to the increasing trade in hares, rabbits, and poultry, and, on the Board's recommendation, the Government decided to increase the accommodation by the addition of one freezing-room and 4,000 feet cold-storage space, thus giving a total space of about 17,000 cubic feet instead of 7,600, the rent being increased from £500 to £1,200 per annum.

Notwithstanding the extra space available, it was found that during the busiest portion of the season great difficulty was experienced in properly freezing the large quantities of carcasses handled, and it was necessary to engage further space at a total cost of £20.

The following quantities were handled during the current year:—

Fowls ... ..	9,500
Ducks... ..	5,320
Turkeys ... ..	1,366
Geese ... ..	651
Pigeons ... ..	470
*Eggs ... ..	9,658 dozen
Hares ... ..	79,460
Rabbits ... ..	19,848
Kangaroo tails ... ..	2,000
*Hams ... ..	156
*Tongues (ox)... ..	280

Exclusive of those rejected, totalling about 20 per cent. of the above figures.

The items marked \* were stored for local consumption.

It was found that during the busy season the charges made covered all expenses, including store rent, cases, labour, cartage, and sundries, and it is estimated that during the coming season the accommodation will again require extending; while, should a fair share of the butter exported be handled by the Board, the stores would be practically self-supporting throughout the year.

Besides the items handled in cold stores, the Board was instrumental in having exported over 36,000 cases of oranges, in relation to which I regret to report that a financial loss of considerable magnitude was sustained. On receiving the London reports announcing the partial failure of the orange shipments, the Minister for Mines and Agriculture convened a meeting of those concerned, with the result that the blame was attributed to some carelessness on the part of shippers, and the failure of the shipping companies to keep to the range of temperature considered best for carrying citrus fruits. On both these points, the directions issued by the Board were full and explicit, and it is satisfactory to find that no blame was attributed to its management.

Experiments

Experiments were also made in Passion Fruit and Mandarin Oranges, but both proved valueless on account of careless handling in transit and want of knowledge on the part of the salesmen.

From the Easter Exhibition of the Royal Agricultural Society's Show were exported the prize exhibits in Fowls and Ducks, and although arriving late in the London market, the prices realised—3s. and 2s. 6d. each respectively—are eminently satisfactory, showing not only a handsome margin over cost, but quite 50 per cent. over local rates.

The information obtained had been widely disseminated and from present appearances a large quantity of poultry will during the coming season be exported to this most favourable market.

The trade of poultry-rearing has been much stimulated by the circulation of pamphlets on "Poultry-rearing for profit," and monographs of the various types of fowls, &c., from the pen of Mr. George Bradshaw, the Poultry Expert of the Board. This work will continue during the coming year and is expected to largely increase the knowledge and success of poultry breeders.

The sheep exhibited at the Annual Show of the New South Wales Sheepbreeders' Association were exported to London under the auspices of the Board, after careful selection by competent judges, and the returns just to hand are of a highly reassuring character as to what can be done with our mutton under proper conditions, although the butchering and general get-up of the carcasses was commented on rather unfavourably by the experts.

Some small experiments in fruit storage have been conducted, and the Minister for Agriculture has directed that during the coming season exhaustive experiments ashore and afloat should be undertaken, with a view to establishing scientific bases of temperatures, ventilation, packing, &c., and to prove the possibility or otherwise of landing our various fruits safely in Europe.

The success attained in keeping eggs in cool storage unimpaired for twelve months has led to fresh development in the use of the stores, which have been taken advantage of by a number of people, who see a handsome margin of profit in storing when prices are low and marketing in the dearer season. The small charge at which they can be stored, *i.e.*, 1d. per gross per week, and the fact that after three months' storage there is no appreciable change in the egg, would imply that in coming seasons much of the available store space will be utilised for this purpose.

A portion of the cool store has been set aside for the use of the Board of Health for the purpose of storing such samples of perishable products as may from time to time be submitted for analysis.

The Government prizes offered under the auspices of the Board at the annual Royal Agricultural Society's Show have been continued, awards to the amount of £140 being made for exhibits of butter, poultry, wheat, barley, fruit, &c. The competition for these prizes was considerably better than in the preceding season, and the £50 prize offered for butter under export conditions has practically become the blue ribbon of the dairy industry. Wheat and barley were shown in larger quantities, and as all the prizes are continued for next year it is anticipated that increasing interest in these classes will cause a further considerable increase.

During the year the Board has made several important recommendations to the Government, and has reiterated its advice as to the necessity for providing increased facilities for handling and shipping perishable products, grain, &c.

The splendid facilities offered by Darling Island for shipping grain and frozen produce have been strongly emphasised; and a scheme has been submitted providing for the erection of grain elevators and cold stores on a scale commensurate with the anticipated demand for space.

Other recommendations of the Board have from time to time been made on the subjects of more efficient inspection before shipment of all food products, better supervision of shipment and conditions of carrying, and the appointment of resident experts at the centres of distribution, to watch the interests of producers and secure for our produce such careful attention as is now being bestowed on the products of other countries.

Naturally, projects of such an extensive character have been received with caution, but the Board is firmly of opinion that the future success of our export trade depends to a great extent on the carrying out of its recommendations.

The opposition with which the Board has had to contend from its inception still exists to a modified extent, but gradually the producers are becoming alive to the fact that its operations are entirely in their interests, and it is anticipated that in the near future a much larger share of the exports of the Colony will be handled at the export depôt. This particularly applies to butter, of which, up to the present, scarcely any has passed through the stores, owing to the action of the export merchants.

In October, the prospect of the Colony exhibiting largely at the Greater Britain Exhibition in London caused inquiries to be made as to what refrigerated produce the Board could arrange for, and it is gratifying to report that a fully representative supply of the Colony's perishable products could have been kept up during the progress of the Exhibition, at which, however, it was ultimately decided not to exhibit.

Early in the season, the Secretary submitted a scheme for the establishment of standards of quality for wheat, as a basis on which business might be transacted between buyer and seller; and while this was under consideration, the New South Wales Chamber of Commerce put forward a claim to the arranging for such standards, with the result that the committee appointed by that body was supplemented by two nominees of the Department of Agriculture; but, although the season is now well advanced, no definite steps appear to have been taken, which is to be regretted, as the necessity for a common basis of qualities has long been recognised and, in view of the large dimensions to which the export of this cereal must soon attain, no time should be lost in laying a proper foundation at first.

It is undoubted that growers here have to suffer heavy losses annually on account of no standard of quality being available to check values.

Throughout the year, as opportunity offered, the Secretary has visited several country districts at the request of the members of Parliament and agricultural societies, and has lectured on the export question at the following among other places:—Peak Hill, Forbes, Parkes, Condobolin, Molong, Paterson, Dungog, Gresford, Maitland, Singleton, Grafton, Ulmarra, Lismore, Alstonville, Byron Bay, Murwillumbah, &c., &c.

These lectures have created a considerable amount of interest, and daily inquiries from all parts of the Colony point to an awakening interest on the part of producers, whose previous ideas of export were of the haziest description.

As will be seen by the appended list of meetings, the Board has not met so frequently as in former years, the reasons being that the executive part of the work is carried out without a hitch, and most of the recommendations for further extension having been kept under consideration for long periods before being dealt with, the members were not asked to sacrifice their valuable time by attending for merely routine purposes. It is hoped, however, that the opening of the New Year will see some action being taken in the direction of the Board's past recommendations, when any necessary effort on the part of members to further the interests of the producers by their advice and experience may be fully counted on.

During the year there have been twenty-five meetings of the Board, which the members have attended as follows—

G. S. Yull, Esq., Chairman ..	10
Hon A Kethel, Vice-Chairman	21
Thos. Jessep, Esq., M L A	9
J. L. Thompson, Esq ..	4
Geo. Maiden, Esq ..	19
C. F. Lindeman, Esq ..	8
John Wildridge, Esq ..	19
H. W. Lee, Esq. .	2
T. C. Worboys, Esq. .	16
Secretary ..	25

NOTE.—During the latter part of the year the Chairman has been absent in Europe on private business, and Mr. J. L. Thompson has spent most of his time in his professional work as travelling Instructor in Agriculture

Income and Expenditure—	£	s.	d.
Incidental expenses, including cold store rent, office rent, prizes at shows, travelling expenses, members' fees, experiments in shipping, storing, &c, &c. . . . .	1,304	3	6

	<u>1,921</u>	<u>9</u>	<u>7</u>		<u>1,921</u>	<u>9</u>	<u>7</u>
To balance down .. . . .	1,364	0	2				

From the foregoing balance sheet it will be seen that the total cost of the operations during the year has been under £1,400, and when this sum is compared with the large amounts expended in other colonies in encouraging the export trade, considering the results attained, it may fairly be claimed that the service has been efficient and inexpensive.

Much still remains to be done, and larger sums must be expended to place us on an even footing with our competitors; but the foundation has now been laid and the rest is but a matter of time.

I have &c.,  
JAS. STEPHENSON,  
Secretary.

1899.  
(THIRD SESSION).

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

VINE DISEASES ACT OF 1893.

(RETURN RESPECTING THE NUMBER OF VINEYARDS DESTROYED UNDER.)

*Printed under No. 11 Report from Printing Committee, 24 November, 1899.*

[Laid upon the Table in answer to Question No. 10, Votes No. 38, 8 November, 1899.]

Question.

- (10.) Vineyards destroyed under the Vine Diseases Act of 1893:—*Mr. Carroll*, for *Mr. Dacey*, asked the Secretary for Mines,—How many vineyards have been destroyed under the Vine Diseases Act of 1893, together with the areas, owners' names, and amount of compensation given in each case?

Answer.

*Mr. Fegan* answered,—A return, giving the information referred to, will be prepared, at the earliest possible date, and laid upon the Table of the House.

TWENTY-TWO (22) vineyards have been destroyed under the Vine Diseases Act of 1893, as follows:—

Owner.	Area.	Situation.	Amount of Compensation.
1894.			
	Acres.		£ s. d.
H. Knox ... ..	2	Cross Roads ... ..	135 0 0

1898.

## REPORT OF THE MINISTER OF PUBLIC INSTRUCTION.

To His Excellency The Honorable SIR FREDERICK MATTHEW DARLEY,  
Knight Commander of the Most Distinguished Order of Saint  
Michael and Saint George, Lieutenant-Governor of the Colony of  
New South Wales and its Dependencies.

May it please your Excellency,—

I have the honor to submit to your Excellency the Report  
of the Department of Public Instruction for the year 1898.

### SCHOOLS.

In 1898 there were 2,602 schools, containing 2,817 departments, as compared with 2,577 schools and 2,790 departments open in 1897. During the year, 89 schools were established, comprising 12 Public, 42 Provisional, 19 Half-time, 1 House-to-house, and 15 Evening Schools. In addition to these, 25 schools were reopened, 33 Provisional and 10 Half-time Schools were raised to the rank of Public Schools, and 21 Half-time and 2 House-to-house Schools to the Provisional rank; while 11 Public and 15 Provisional Schools were reduced to Half-time Schools. Eighty-nine of the schools in operation during the whole or some portion of 1897 do not appear on the list of schools open in 1898, and of those actually in operation in that year 51 were closed before the last quarter. The number of schools open at the close of 1898 was 2,551, containing 2,766 departments.

The following table shows the classification of the schools open in 1898 :—

1. <i>High Schools</i> :—						Schools.	Departments.
Unclassed	...	...	...	...	...	5	5
2. <i>Public Schools and Half-time Schools</i> :—

5. <i>Evening Public Schools</i> :—							
Unclassed	...	...	...	...	...	29	29
Total	...	...	...	...	...	2,602	2,817

Of the 16 applications for the establishment of new schools which were under consideration at the close of 1897, 13 were granted, 2 were declined, and 1 remained unsettled. In addition to these, 197 applications were received during 1898, namely, 30 for Public Schools, 106 for Provisional Schools, 40 for Half-time Schools, 5 for House-to-house Schools, and 16 for Evening Schools. Of these, 119 were granted, 56 were declined, and 22 were under consideration at the end of the year. The total number of children to be accommodated in the new schools when established is 2,682.

The number of applications dealt with, and the action taken with regard to them, is shown in the following table:—

*Applications for the establishment of Schools.*

Schools.	Number received.	Number granted.	Number declined.	Number still under consideration.
Public Schools ... ..	30	14	12	4
Provisional Schools ... ..	106	60	34	12
Half-time Schools ... ..	40	31	6	3
House-to-house Schools... ..	5	2	2	1
Evening Public Schools... ..	16	12	2	2
Total... ..	197	119	56	22

Full details respecting these applications will be found in Appendices I, II, III, IV, V.

The number of schools in operation in 1881, the first full year during which the Department was under Ministerial control, as compared with the number open in 1898, is given in the following table:—

Schools.	Number of Schools or Departments in operation.		Increase, 1881-1898.
	1881.	1898.	
High Schools ... ..	.....	5	5
Superior Schools ... ..	58	252	194
Primary Public Schools ... ..	1,042	1,750	708
Provisional Schools ... ..	246	313	67
Half-time Schools ... ..	93	431	338
House-to-house Schools ... ..	.....	37	37
Evening Schools ... ..	57	29	28*
Total ... ..	1,496	2,817	1,321
Seats provided ... ..	98,721	252,791	154,070

\* Decrease.

In addition to the schools established and maintained under the Public Instruction Act, the following State supported or aided schools are still in operation, namely, the Sydney Grammar School, the two Industrial Schools, the School for the Deaf and Dumb and the Blind, and the Carpenterian and Shaftesbury Reformatory Schools.

*School*

*School Premises and Sites.*—The number of school sites acquired during the year was 72. Of these, 49 were Government grants, 17 were resumed under the Public Works Act, (51 Vic. No. 37), 5 were purchased, and one was a free grant to the Department. The cost of the purchased sites amounted to £315, and the sum of £45 11s. 2d. was paid on account of those resumed. In the case of 6 of the latter no claim was made by the original holders for compensation. The balance to be paid on the others, when all claims have been settled, is £1,187 4s. 2d. Full particulars as to the sites will be found in Appendix XX.

*Buildings.*—At the close of 1898, existing school premises afforded room for 252,791 pupils. Of the school-places counted in 1897, 3,853 were lost in 1898 by the closing of schools and by the giving up of old buildings. The net increase was 7,532. Taking the building-work done in the last two years, it may be observed that, in 1898, 33 new schools and residences and 12 weather-sheds were erected under the supervision of the Department's professional officers, as compared with 37 built in 1897; while the additions numbered 33, as compared with 32; the premises repaired, 554, as compared with 300; and the places provided, 6,331, as compared with 4,869 for the same period. The number of small school-buildings, residences, and weather-sheds erected under the Inspectors' supervision was 115, as compared with 98 put up in 1897; 31 school-buildings were enlarged, as against 29 in 1897; the number of places provided was 4,634, as compared with 3,551; and the buildings repaired numbered 1,245 in 1898, as against 1,053 in the previous year.

At the close of 1898 the following additional works were in progress:—49 new buildings and 18 additions, the whole to provide for about 5,041 children. Two new weather-sheds were in course of construction, as well as 16 teachers' residences. Repairs and improvements were being carried out in 215 existing buildings.

Full particulars respecting the building-work completed in the year, and that in progress at its close, are given in the following tables:—

1898	...	...	...	...	105,054

*School Attendance.*—The returns for the year show an improvement as regards enrolment, the gross enrolment at Primary schools being 258,592 pupils, as compared with 256,996 in 1897, an increase of 1,596. Deducting 12 per cent. on account of multiple enrolments, the number of individual pupils under instruction was 227,561, an increase over the preceding year of 1,404.

The gross aggregate enrolment and the aggregate enrolment of distinct pupils for the last five years appear below :—

Years.	Gross Aggregate Enrolment.	Corrected Aggregate Enrolment of Distinct Pupils.	Increase.	
			Gross Enrolment.	Corrected Enrolment.
1894	234,392	206,265	4,559*	4,012*
1895	245,904	216,396	11,512	10,131
1896	251,821	221,603	5,917	5,207
1897	256,996	226,157	5,175	4,554
1898	258,592	227,561	1,596	1,404

\* Decrease.

In addition to the 227,561 pupils enrolled in schools under the Public Instruction Act, there were 1,491 in attendance at other State-aided Schools, namely :—

The Sydney Grammar School	...	...	...	587
The Industrial Schools	...	...	...	661
The School for the Deaf and Dumb and the Blind	...	...	...	116
The Reformatory Schools	...	...	...	127

Total ... .. 1,491

Estimating

Estimating the mean population of the Colony for 1898 at 1,334,850, the population between 6 and 14 years of age was 251,256. Of this number, 196,756, or 78·3 per cent., attended State Schools, and 54,500, or 21·7 per cent., received instruction in Private Schools or at home, or else remained untaught. From the latest returns of Private Schools' attendance it is estimated that the total enrolment was 57,515. As of this enrolment 43,735 pupils were between the ages of 6 and 14, it will be seen that of the total statutory school population of 251,256, 240,491, or 95·8 per cent., were enrolled at State and Private Schools, while 10,765, or 4·2 per cent., were taught at home, had left school after satisfying the standards of the Act, or remained untaught. In addition to pupils of the statutory school age, 18,582 under 6 years of age, and 27,493 over 14 years, were also enrolled for school attendance—32,295 at State Schools, and 13,780 at Private Schools. Thus, of 353,479 children in the Colony between the ages of 4 and 15 years, 229,051 attended State Schools, and 57,515 attended Private Schools; while the remainder, 66,913, received instruction at home, had completed their education, or were untaught.

The average quarterly enrolment was 203,910, and the average attendance 141,723. In the first half of the year 138,860 pupils, and in the second half 147,245 pupils, attended the ordinary day-schools 70 days or more. The percentage of the quarterly enrolment attending the compulsory number of days was, in the first half-year, 62·7 per cent., and in the second, 69·2 per cent.

The percentages of the net yearly enrolment attending 70 days or more in each half-year, since 1893, are as follow :—

Year.	70 days or more in first half-year.	70 days or more in second half-year.
1894 ... ..	69·1	75·8
1895 ... ..	67·1	72·0
1896 ... ..	67·1	72·4
1897 ... ..	64·7	72·6
1898 ... ..	61·0	64·7

The enrolment and average attendance are shown in the following tables :—

(a) *Quarterly Enrolment and Average Attendance for 1897 and 1898.*

Quarters.	Number enrolled.		Average Attendance.			
			Number.		Percentages.	
	1897.	1898.	1897.	1898.	1897.	1898.
March quarter ..	200,902	203,362	147,839·4	143,256·2	73·5	70·4
June quarter ...	201,902	205,881	147,356·3	143,380·2	72·9	69·6
September quarter ...	203,335	204,350	151,432·3	140,436·5	74·4	68·7
December quarter ...	201,652	202,048	146,896·2	139,820·1	72·8	69·2
Year's average...	201,947	203,910	148,381·0	141,723·2	73·4	69·5

*(b) Enrolment and Average Attendance for the last five years.*

Years.	Year's Enrolment.	Quarterly Enrolment.	Average Attendance.		
			Number.	Percentage of Year's Enrolment.	Percentage of Quarterly Enrolment.
1894 ... ..	206,265	181,678	130,089	63·06	71·60
1895 ... ..	216,396	192,075	139,978	64·68	72·87
1896 ... ..	221,603	197,025	142,192	64·16	72·17
1897 ... ..	226,157	201,947	148,381	65·60	73·47
1898 ... ..	227,561	203,910	141,723	62·27	69·50

It will be observed that while there is an increase of 1,404 in the yearly, and of 1,963 in the average quarterly, enrolment, the mean average attendance has decreased by 6,658, or 4 per cent. This falling off is wholly attributable to the epidemics of measles, influenza, whooping-cough, typhoid, and scarlatina, which were prevalent over the Colony during the greater part of the year, and which in many cases rendered necessary the closing of schools for weeks together.

The main facts relative to school attendance may be summed up thus:—240,491, or 95·8 per cent. of the statutory population, were enrolled for school attendance; 196,756, or 78·3 per cent., at State Schools; and 43,735, or 17·5 per cent., at Private Schools. Of the school population between 4 and 15 years—286,566, or 81·1 per cent., were at school; 229,051, or 64·8 per cent., at State Schools; and 57,515, or 16·3 per cent., at Private Schools. 227,561 children attended schools under the Public Instruction Act; 196,053 being of the statutory school age, and 31,508 either above or below it. The mean quarterly enrolment was 203,910, or 89·6 per cent. of the year's enrolment; and the average attendance was 141,723·2, or 69·5 of the quarterly enrolment. Of the average enrolment, 62·7 per cent. attended school 70 days or more in the first half-year, and 69·2 per cent. in the second half-year. The percentage of the population enrolled quarterly and the corresponding percentage in average attendance in 1898 were respectively 15·3 and 10·6, as compared with 15·4 and 11·3 in 1897.

*Compulsory clauses of the Act.*—69,788 children between the ages of 6 and 14 years failed to complete the minimum attendance of 70 days during the first half of the year; but in 597 cases only was the law set in motion. The parents of 3,860 were cautioned, while in the remaining cases satisfactory explanations were furnished, or the circumstances were not such as to render any action necessary. In a large number of instances, pupils had obtained certificates by examination, and were thus legally exempt.

For the second half-year, the number between the compulsory ages who did not attend 70 days was 62,156. In 973 cases legal action was taken, and cautions were sent to parents in 2,641 cases.

As in previous years, my acknowledgments are due to the police authorities for the active and effective assistance rendered by them in carrying out the provisions of the compulsory clauses of the Act.

SCHOOL

## SCHOOL FEES.

Great forbearance was shown during the year in the matter of the collection of school fees. Debts to the amount of £2,541 1s. 4d. were cancelled, and free education authorised in the case of 30,385 pupils. In 453 cases only was recourse had to legal process for the recovery of arrears of fees. The amount of fees collected and paid into the Consolidated Revenue was—for Primary Schools, £70,630 9s. 10d., and for High Schools, £2,462 15s. 6d., making a total of £73,093 5s. 4d. These figures show a decrease in the amount paid in Primary Schools, as compared with the payments of 1897, of £913 13s. 11d., and as regards High Schools an increase of £322 17s. 6d.

## INSPECTION.

In April last it was deemed necessary to appoint an additional inspector, and Mr. Thomas Walker was selected for the office. Mr. Walker holds, as a teacher, the highest classification by examination, and had rendered highly meritorious service. Since his appointment as inspector, he has been employed principally in the Metropolitan and Mudgee Districts. During the year, Mr. G. H. Hunt was permanently appointed to the Dubbo district to take the place of Mr. J. W. E. Baillie, who after some years service at that centre had been removed to Braidwood. The inspectorial staff now comprises 36 officers—Chief Inspector, Deputy Chief Inspector, 9 District Inspectors, and 25 Inspectors.

The amount of inspection accomplished in each district, and the manner in which the schools were apportioned, are shown in the table appended :—

District.	No. of Inspectors.	No. of Schools.	No. of Schools inspected.	No. of Schools not inspected.	No. of Pupils examined.

Drill ... ..	146,104	115,975	79
Natural Science ... ..	7,934	6,238	78

These results show that the proportion of passes, as compared with the work of 1897, is 4 per cent. higher in mensuration, 2 per cent. in English History, music, and French, and 1 per cent. in writing, Australian history, object lessons, drawing, and needlework. In dictation, arithmetic, grammar, geography, and natural sciences the percentage is the same for both years, while there is a falling off in reading, Scripture, and moral lessons, Euclid, algebra, Latin, drill, and trigonometry.

The

The following table summarises the progress in efficiency made in the different classes of schools during the past five years :—

Class of Schools.	Percentage up to or above the Standard.				
	1894.	1895.	1896.	1897.	1898.
Public ... ..	96	97	97	98	98
Provisional... ..	88	82	86	92	84
Half-time ... ..	87	89	89	91	90

Evening Schools ... ..	100	93	93	95	100
All Schools... ..	93	94	95	96	95

### HIGH SCHOOLS.

The total enrolment at these schools was 527, and the average daily attendance 376, as against 516 and 370 respectively for 1897. The attendance at each school is shown below :—

School.	Total enrolment.	Average quarterly enrolment.	Average daily attendance.
Sydney (Boys) ... ..	162	130	119·3
„ (Girls) ... ..	187	147	126·7
Maitland (Boys) ... ..	104	83	77·1
„ (Girls) ... ..	61	48	42·9
Bathurst (Girls) ... ..	13	12	10·3
Totals ... ..	527	420	376·3
Totals for 1897 ... ..	516	399	370·2

407 pupils, or 97 per cent. of the average quarterly enrolment, were present at the annual examination, the percentage of results averaging nearly 80 per cent. At the University Examinations these schools took a good position, as will be seen from the table following :—

School.	No. of Passes, Junior Examination.	No. of Passes, Senior Examination.	No. of Passes, Matriculation Examination.
Sydney (Boys) ... ..	18	5	24
„ (Girls) ... ..	19	4	9
Maitland (Boys) ... ..	14	2	8
„ (Girls) ... ..	6	1	2
Bathurst (Girls) ... ..	...	...	...
Totals ... ..	57	12	43

Of those who qualified for matriculation, 12 did so at the Junior and 5 at the Senior Examinations.

The total expenditure on High Schools was £6,200 9s. 1d., being £197 less than in 1897, and the amount of fees received £2,462 15s. 6d., an increase of £322. The actual cost to the State was £3,737 13s. 7d., or at the rate of £7 1s. 10d. per head of the total enrolment, as against £8 5s. in 1897.

*State Scholarships and Bursaries.*—At the examinations held under the Scholarship and Bursary scheme, 107 candidates were successful. Of these, 25 males and 30 females obtained scholarships for High Schools and Superior Schools; 22 males and 18 females, bursaries for High and Superior Schools; 4 males, bursaries for the Sydney Grammar School; and 4 males and 4 females, University Bursaries.

Of the 55 successful competitors for Scholarships, 16 boys and 16 girls have since attended the Sydney High Schools, 9 boys and 10 girls the Maitland High Schools, 3 girls the Bathurst High School, and 1 girl attends a country Superior School. Of the 44 who succeeded in gaining State School Bursaries, 13 boys and 8 girls attend the Sydney High Schools, 8 boys and 5 girls the Maitland Schools, 4 boys the Sydney Grammar School, 5 girls the Fort-street Model School, and 1 boy the Leichhardt Superior School.

This year only 8 of the University Bursaries available were awarded. Five were obtained by High School pupils, 1 boy and 4 girls; and 3 by male pupils of Fort-street Model School.

The total number of candidates examined for admission to the High Schools was 599; of these 574, or 95·8 per cent., were successful.

#### SUPERIOR SCHOOLS.

Two schools—Neutral Bay and Wingham—were promoted to the rank of Superior Schools, which at the end of the year numbered 101, comprising 252 departments. The number of pupils enrolled and in average attendance for December quarter was 71,775 and 50,233 respectively.

#### EVENING PUBLIC SCHOOLS.

Sixteen applications for the establishment of Evening Schools were received; 12 were granted, 2 were refused, and 2 had not been finally dealt with at the close of the year. The total number of schools in operation was 29, but 3 collapsed before the end of the year. On 31st December there were 26 schools in existence, having an enrolment of 751, with an average attendance of 392·8.

Twenty of these Evening Schools were inspected, and, in all of them, the results proved to be up to or in excess of standard requirements.

#### TECHNICAL EDUCATION IN PUBLIC SCHOOLS.

*Drawing.*—147,455 pupils were examined in this subject, of whom 121,741, or 82 per cent., satisfied the standard. In 210 departments in the Metropolitan and Sub-metropolitan districts visited by the  
the

the Superintendent of Drawing, 42,093 pupils were present at examination. 90 per cent. of these were found to reach the standard, an improvement of nearly 10 per cent. upon the results of 1897. Detailed information upon this subject will be found in Appendix XIII.

*Manual Training.*—Nine workshops were in existence in 1898, which afforded instruction to the pupils of 27 schools. The total enrolment of these classes, including students in training, was 759. Of these 396 presented themselves for examination, and 324 passed.

*Cookery.*—The number of schools in operation in 1898 was 10, with an enrolment of 864 pupils. Of this number 736 presented themselves for examination, of whom 715, or 97 per cent., were successful.

*Needlework.*—53,806 female pupils were examined in needlework, of whom 48,602, or 90 per cent., passed the standard. In the Metropolitan district, 88 schools, representing 14,029 children, were examined by the Directress, who reports that the instruction given continues to be thorough and effective. [See Appendix XV.]

#### PUBLIC SCHOOL SAVINGS BANKS.

Six hundred and forty-nine Banks were in existence at the beginning of the year; 7 new ones were established and 26 closed, leaving 630 in operation on 31st December. The credit balance brought forward from 1897 was £7,404 0s. 1d., which by the end of the year amounted to £8,103 13s. 8d., showing an increase of £699 13s. 7d.

The deposits and withdrawals during the year, amounting to £14,579 15s. 5d. and £13,880 1s. 10d. respectively, also show a large increase on the previous year's transactions, the former of £1,589 18s. 7d., and the latter of £1,623 2s. 5d. The amount withdrawn for deposit to the credit of pupils in the Government Savings Bank was £4,101 17s., as compared with £3,653 2s. 9d. in 1897.

Since the establishment of these Banks in 1887 the deposits have totalled £139,118 14s. 10d., and the withdrawals £131,015 1s. 2d. Of this latter sum, £38,053 12s. 3d. was withdrawn for the purpose of being placed to the credit of children's own accounts in the Government Savings Bank.

#### TEACHERS.

4,759 teachers of all classes were actually employed on 31st December, 1898, being 133 more than at the end of the previous year. 3,040 were classified teachers, 572 unclassified, but certificated for small schools, 41 were training-school students, 1,020 pupil-teachers, 62 work-mistresses, and 24 High School teachers. Of the whole number, 52·3 are males and 47·7 females; and of the teachers in charge of schools, 76·4 per cent. are males and 23·6 females. As regards assistants, the percentages are 30· males and 70· females.

The

The following table gives full information respecting the several classes into which teachers are divided:—

	I A.		I B.		II A.		II B.		III A.		III B.		III C.		Unclassified.		Totals.		Grand Total.
	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	
Principal Teachers .....	49	1	72	1	305	6	155	6	696	146	173	82	74	53	246	251	1,770	546	2,316
Mistresses of Departments.	0	32	...	39	...	137	...	3	...	2	...	...	...	...	...	1	...	214	214
Assistants .....	...	...	24	1	137	130	91	128	61	343	6	68	1	18	5	69	325	757	1,082
Students in Training ...	...	...	...	...	...	...	...	...	...	...	...	...	...	...	...	...	16	25	41
Totals .....	49	33	96	41	442	273	246	137	757	491	179	150	75	71	251	321	2,111	1,542	3,653

	Class I.		Class II.		Class III.		Class IV.		Probationers.					
	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.				
Pupil-teachers .....	26	102	60	109	89	127	161	259	30	57	.....	366	654	1,020
Work-mistresses .....	.....										.....	62	62	
High School Teachers...	.....										.....	14	10	24
Total Teachers of all ranks .....												2,491	2,268	4,759

Of the total number of classified teachers, 7·2 per cent. are in Class I, 36·1 per cent. in Class II, and 56·7 per cent. in Class III. Only 15·6 per cent. of our teachers are unclassified, and the majority of these had, before appointment, served four years at least as pupil-teachers.

The teachers whose connection with the Department ceased during the year numbered 174. Of these, 144 resigned, 18 retired under the Public Service Act, 2 were transferred to other Departments of the Service, 3 were dismissed, and 7 died.

During 1898, 1,036 applicants for appointment to the office of pupil-teacher were submitted to competitive examination, of whom 274 were accepted. Of those awaiting employment, 288 were appointed to schools.

*Fort-street Training School.*—The number of students in training was 16; 15 held full scholarships, 1 a half-scholarship.

Instruction was given during the year in professional subjects, in the principles and practice of teaching and class management, and in manual training. Systematic test and criticism lessons were given every week. The examination with a view to the classification of the students was held in December and resulted as follows:—

II A.	II B.	III A.	Total.
5	4	7	16

The results of the examination in manual training were :—

Honors.	First Grade.	Second Grade.	Total.
3	6	6	15

At an examination held under the auspices of the St. John's Ambulance Association, all the students qualified for the "first aid" certificate. The students, moreover, received instruction in drill every week, and, once a month, target practice was carried out at Randwick.

*Hurlstone Training School for Female Students.*—Twenty-five students were in residence, of whom 15 held full scholarships, and 10 half scholarships.

In addition to instruction in the usual professional subjects, each student had four weeks actual teaching and practical training in the Practising School, besides being required to give criticism lessons in various subjects, and to conduct drill, music, and drawing lessons under the respective tutors. All the students attended a course of practical cookery, and examinations were held in drill and cookery, as also a certificate examination in connection with the St. John's Ambulance Association.

The results of the examination for classification, held at the end of the year, are given below :—

II A.	II B.	III A.	Total.
4	12	9	25

*Teachers' Examinations.*—The total number of examinees of all classes during 1898 was 3,083. The percentage of passes of teachers was 58·5 and of pupil-teachers 97·5. The total number of pupil-teachers reported on was 778, as against 608 in 1897. The male and female examinees who obtained the highest number of marks at the first-class pupil-teachers' examination for admission to training were Mr. Thomas Taylor Roberts, of Erskineville Superior Public School, and Miss Minnie Hughes, of the Public School at Parramatta North. Each of them will be presented with the Jones Memorial Medal.

In

In the following table the results of the several examinations are given in detail:—

Persons examined.	Results.		
	Passed.	Failed.	Total.
Teachers and Assistant Teachers ... ..	297	210	507

High School Candidates ... ..	559	40	599

\* In addition to these, 13 female ex-pupil teachers were examined, by special concession, for admission for a twelve months' course of training. All passed the test. † This examination is now competitive.

*Teachers' Mutual Assurance Association.*—During the year 14 teachers joined the Association, and 3 died. In the last ten years 43 deaths have taken place, at the rate of 4·3 per annum. The average amount paid annually by each member has been £1 1s. 4d. For this payment a sum of about £70 is assured, being at the rate of £1 10s. 5d. per £100. There is no legacy duty, nor have nominees of deceased members to wait for probate of will, as payment is made immediately on proof of death.

#### LOCAL SUPERVISION.

Three sub-districts were formed during the year, and a Public School Board appointed in the case of each. The number of persons so appointed was 12. In addition, 67 members were added to Boards already in existence. The total number of Boards in operation was 299. On 56 of these, ladies to the number of 115 held seats. The resignations of 31 members were accepted, and 29 were reported as deceased, or having left the locality.

#### SCIENTIFIC AND TECHNICAL EDUCATION.

A comparative statement of the total enrolment of students at the colleges and branch schools for the years 1897 and 1898 is given below:—

	1897.	1898.
Sydney Technical College ... ..	3,678	4,052
Suburban classes ... ..	726	686
Country classes ... ..	2,342	2,336
Classes connected with Public Schools	912	1,444
	<u>7,658</u>	<u>8,518</u>
		Deducting

Deducting from this enrolment all cases where students were members of more than one class, the number of individuals attending the classes was 6,291, as against 5,848 for last year—an increase of 443. The average weekly attendance was 5,678, giving an increase over 1897 of 1,695.

The total number of classes in operation was distributed as shown below :—

	Under salaried Teachers.	Teachers paid fees only.	Total.
Sydney Technical College ... ..	63	5	68
Suburban classes ... ..	16	12	28
Classes in country towns ... ..	103	10	113
Classes from Public Schools ... ..	22	.....	22
	204	27	231

The students examined at the end of the year numbered 2,956, of whom 2,246, or 76 per cent., were successful; in 1897 there were 2,702 examined, 1,923 of whom, or 71.1 per cent., passed. At the technological examinations of "The City and Guild of London Institute," held in May last, 26 students of the Technical Colleges were examined, of whom 22 passed.

The teaching staff comprises 98 persons, viz., 12 lecturers in charge of departments, 6 resident masters in charge of branch schools, 49 teachers, 13 assistant teachers, and 18 teachers of classes who are remunerated by pupils' fees only. Several changes in the staff took place during the year. Detailed information of an interesting character will be found in the Superintendent's report (Appendix XIX). The new college at Bathurst was completed early in the year, and was officially opened by the Honorable Jacob Garrard on the 29th June. Manual and woodworking classes were inaugurated with fair success. The classes at Broken Hill were reopened after a lapse of some years and promise to be very successful. Already the attendance exceeds the accommodation. A new school at Albury will be opened early in 1899. A resident master has already been appointed, and the necessary arrangements are being pushed forward.

The Technological Museum and branches were visited by 238,792 persons, an increase of 13,808 over the visitors of the previous year. The subjoined table gives the attendance at each.

	1897.	1898.
Technological Museum, Sydney ... ..	100,680	106,179
Branch Museum, Newcastle ... ..	49,068	45,942
"    Goulburn ... ..	24,586	22,497
"    Bathurst ... ..	22,278	32,597
"    West Maitland ... ..	24,054	23,263
"    Albury ... ..	4,318	8,314
	224,984	238,792

The total expenditure on technical education during 1898, including £3,873 8s. 11d. spent on the Technological Museums, amounted to £29,527 14s. 4d. Of this sum £23,495 15s. 7d. was a Parliamentary grant, £2,327 19s. represented payments by the Treasury from the Loan Vote for the erection of buildings, &c., and £35 2s. 11d. London payments by the Treasury; while the balance, £3,618 16s. 10d., shows the amount of students' fees paid to the teachers.

#### PUBLIC SCHOOL CADET FORCE.

For the last quarter of 1898 the total enrolment of the Cadet Force was 3,280. The amount expended for cadet purposes was £3,706 3s. 10d., as against £3,782 8s. 11d. in 1897.

Details of the year's work appear in Appendix XVIII.

#### FINANCE.

The sum available for expenditure under the Public Instruction Act was £748,866 12s. 9d., made up as follows:—

	£	s.	d.
Balance from 1897 ... ..	9,115	16	6
Do of Petty Cash in hand ... ..	1	19	2
Amount received from Treasury on account of Vote for 1897-8 ... ..	303,912	0	0
Amount received from Treasury on account of Vote for 1898-9 ... ..	339,000	0	0
Amount received from Loan Vote—(new buildings) Do from Public School Buildings Account ... ..	4,000	0	0
Amount of Minister's salary ... ..	1,336	17	1
	<u>£748,866</u>	<u>12</u>	<u>9</u>

The total outlay was £729,922 0s. 3d., namely, £105,054 6s. 2d. on school premises, £578,533 4s. 3d. on maintenance of schools, and £46,334 9s. 10d. on administration, &c., leaving a balance at the end of the year of £18,944 12s. 6d.

#### *General Statement of Expenditure for 1898.*

##### I. On School Premises:—

	£	s.	d.
For sites, new buildings, additions, repairs, &c., including High Schools £528 12s. 6d. ... ..	105,054	6	2

##### II. On Maintenance of Schools, &c.:—

	£	s.	d.
1. Teachers' salaries and allowances in Primary Schools ... ..	538,237	8	7
Other maintenance expenses in such schools ...	31,559	7	7
2. High School salaries and maintenance expenses	5,671	16	7
State Scholarships and Bursaries ... ..	3,064	11	6
3. Administration, including Training Schools and enforcement of school attendance ... ..	46,334	9	10
	<u>624,867</u>	<u>14</u>	<u>1</u>
	<u>£729,922</u>	<u>0</u>	<u>3</u>

The amount of school fees collected and paid into the Consolidated Revenue was £73,093 5s. 4d., namely, £70,630 9s. 10d. from Primary Schools, and £2,462 15s. 6d. from High Schools. Deducting this sum from the total expenditure, there will remain £656,828 14s. 11d. as the net school expenditure derived from State funds.

The

The total expenditure during the last five years is shown in the following table :—

	1894. Expenditure.	Per- centage of total expen- diture.	1895. Expenditure.	Per- centage of total expen- diture.	1896. Expenditure.	Per- centage of total expen- diture.	1897. Expenditure.	Per- centage of total expen- diture.	1898. Expenditure.	Per- centage of total expen- diture.

Information is furnished in the following summaries respecting educational establishments connected with this Department, but not carried on under the provisions of the Public Instruction Act:—

THE SYDNEY UNIVERSITY.

465 students, including 64 women, attended lectures during 1898. The total number qualified for Matriculation was 228, of whom 75 passed the ordinary Matriculation Examination, 83 the Junior Public Examination, 15 the Law Matriculation Examination, 47 the Senior Public Examination, and 8 the Entrance Examination for Law, Medicine, and Science. The number actually admitted to Matriculation was 106.

At the Senior Public Examinations, 110 candidates presented themselves, and 96 passed. At the Junior Examination, 698 were successful out of 1,079.

The degrees conferred during the year were 103, viz.:—M.A., 4; B.A., 44; LL.B., 7; M.B., 22; Ch.M., 17; B.Sc., 4; and B.E., 5.

The University Staff consisted of 14 Professors and 34 Lecturers and Demonstrators, of whom 7 Professors and 3 Lecturers are paid out of the Challis Fund; and 6 Teachers from the P. N. Russell Fund.

The year's expenditure was £32,869 0s. 9d., of which sum £11,200 was granted by the Government. £4,771 17s. 9d. was derived from private foundations for the payment of scholarships, bursaries, prizes, &c., for the Fisher Library, and for maintenance of the P. N. Russell School of Engineering. The total income for the year was £32,562 11s. 2d.

## THE SYDNEY GRAMMAR SCHOOL.

The total enrolment of pupils for 1898 was 587, of whom 222 were under and 365 over the statutory age of 14 years. 164 new pupils were admitted, 99 being under and 65 above 14 years of age. The mean quarterly enrolment was 466, and the average attendance 431.

The income and expenditure for the year were as follows :—

			<i>Income.</i>	£	s.	d.
From State grants	...	...	...	1,500	0	0
„ School fees	...	...	...	7,853	17	8
„ Special prizes, &c.	...	...	...	133	15	0
„ Balance in hand, 1897	...	...	...	4	8	0
				<hr/>		
				£9,492	0	8
			<i>Expenditure.</i>			
By expenditure	...	...	...	9,126	17	2
„ balance in hand, 1898	...	...	...	365	3	6
				<hr/>		
				£9,492	0	8

The cost per pupil in average attendance was £21 3s. 6½d., being 19s. 2½d. less than in 1897. The expense to the State was £3 9s. 7¼d. per head, as against £3 14s. 9¼d. in the previous year.

## THE OBSERVATORY.

*Astronomical Work.*—Regular work with the transit circle was carried on during the year. 1,866 observations were made, together with the necessary computations. With the equatorial telescope, 997 observations were made and computations completed. 247 photographs of stars were taken, of which 152 were long exposures for the chart of the heavens, and 95 were catalogue plates.

*Meteorology.*—Weather charts and forecasts were issued twice daily—at 1 p.m. and at 9 p.m. These are based on telegrams from New Zealand, New Caledonia, and all the Australian Colonies. Over 600 are received daily, discussed, and combined into the charts. Monthly returns of rain and weather were received from 1,610 stations in New South Wales, which were combined into the annual rain report.

The daily time-ball service at Sydney and Newcastle was satisfactorily maintained.

During the year, the Government Astronomer issued many publications, including the Rain Report for 1897, and pamphlets on double stars, icebergs, water-spouts, periodic waves, and the Aurora Australis. Altogether, 23,122 documents were transmitted to correspondents and to other Observatories.

The Observatory was open to the public every Monday afternoon, a privilege of which 1,207 visitors took advantage.

The

The staff numbered 13 persons, in addition to the Government Astronomer. The expenditure for 1898 was:—

	£	s.	d.
For salaries ... ..	3,405	0	0
„ maintenance ... ..	695	5	6
	<hr/>		
	£4,100	5	6

#### THE PUBLIC LIBRARY.

The total number of volumes in the Library at the end of 1898 was 124,401. During the year new books to the number of 7,174 were added, and 17,253 books sent out on loan to country libraries. 176,879 persons visited the reading rooms as against 174,887 in the previous year; 162,170 the newspaper room as compared with 154,669 in 1897; and 85,436 visits were paid to the Lending Branch, an increase of 4,005 over the number in 1897. The total number of visits, therefore, paid to the institution during the year was 424,485.

Thirty-seven persons were employed on the staff of the institution. The expenditure for the year was:—

	£	s.	d.
On buildings, repairs, &c. (under Government Architect) ...	101	0	0
On books, periodicals, newspapers, binding ... ..	1,554	0	0
On salaries ... ..	5,077	0	0
On maintenance ... ..	502	0	0
	<hr/>		
	£7,234	0	0

#### THE AUSTRALIAN MUSEUM.

The number of visitors to the Museum was—On week-days, 88,332; on Sundays, 28,629; total, 116,961. Twenty-six persons were employed on the staff of the institution. The Trustees report that the year's expenditure was as given below:—

	£	s.	d.
On salaries and allowances... ..	4,492	10	5
On specimens (purchase, collection, and carriage) ... ..	189	5	7
On books and binding ... ..	284	4	3
On catalogues ... ..	385	11	9
On cases and bottles ... ..	472	10	11
Expedition to coral reef—Publication of results continued ...	12	7	2
“Thetis” trawling expedition—Expenses of Museum representative ... ..	17	11	7
Purchase of “Dobroyde collection”	500	0	0
Miscellaneous ... ..	290	18	0
	<hr/>		
	£6,644	19	8

## NATIONAL ART GALLERY.

During the year 247,339 visits to the Gallery were registered. The attendance on Sundays averaged 1,805; on week-days, 497. Fifteen additional students were admitted, making the total number 281. Five persons were permanently employed, with four extra assistants on Sundays and holidays.

The following is a statement of the year's expenditure:—

	£	s.	d.
For works of art purchased ...	3,411	0	0
For maintenance (frames, freight, fittings, repairs, insurances, &c.)	602	0	0
For salaries and wages ...	1,399	0	0
	<hr/>		
	£5,412	0	0

NEW SOUTH WALES INSTITUTION FOR THE DEAF AND DUMB  
AND THE BLIND.

The number of inmates during the year was 116 as compared with 118 for 1897. Of these 79 were under and 37 were over 14 years of age. The new admissions were 8, of whom 7 were under and 1 over 14 years. Two inmates were discharged—1 under 14 years, and 1 over that age.

The income of the institution was £13,751 7s. 9d., including legacies to the amount of £9,882 13s. 7d., of which £9,740 19s. 6d. was placed to the credit of the Perpetual Subscribers' Funds. The following statement shows the income was:—

	£	s.	d.
From State grants ...			
From other sources ...	13,751	7	9

Not received until after close of year.

The expenditure for the year was:—

	£	s.	d.
For maintenance ...	1,903	9	4
For salaries and wages ...	2,190	4	4
	<hr/>		
	£4,093	13	8

The number of teachers employed was 13, and the average cost per pupil £36 12s. 8d., as against £36 16s. 6d. in 1897.

## INDUSTRIAL SCHOOL FOR GIRLS, PARRAMATTA.

The enrolment for the year was 186, of whom 57 were under and 129 above the age of 14 years. There were 60 new admissions—24 under and 36 over 14 years old. Seventy-six inmates were discharged during the year, as follows:—

To Boarding-out Officer ...	15
As apprentices ...	40
On attaining age of 18 years ...	10
By order of Governor-in-Council ...	11

The

The number remaining in the institution on 31st December was 110. Compared with 1897, there was a decrease of 3 in the enrolment, and an increase of 6 in the new admissions.

The expenditure for the year was :—

	£	s.	d.
For maintenance ... ..	1,708	1	9
For salaries ... ..	980	2	6
	<hr/>		
	£2,688	4	3

Calculated on the enrolment, the cost per inmate was £14 9s., as compared with £14 2s. 1d. for the previous year.

The Superintendent reports :—

“The work of the institution for the year has progressed satisfactorily. Special attention has been directed to the systematic teaching and training of the inmates in every branch of domestic duty likely to prove useful to them in everyday life.

“As in the preceding year the work of the industrial classes has been of a practical character, but with a wider range. The classes in the institution include—

“*The Laundry Class.*—All the girls over the age of 12 years are members of this class in turn, and attend two hours or more daily, according to age and physical strength, and are trained in the work of washing, folding, mangling, and ironing. During the year upwards of 196,000 pieces of clothing were dealt with, including 31,000 articles from Hurlstone College. The estimated value of the work thus done is £1,200.

“*The Sewing Class.*—This class undertakes the making of all dresses, skirts, underclothing, aprons, cloaks, and jackets worn by the inmates, and its members are also well-instructed in mending, patching, darning, and knitting. All girls are members in turn. The value of the work done during the year for use in the institution exceeded £120.

“*The Cookery Class.*—Every inmate is in turn trained in cookery, and the majority of the girls take great interest in their work, and some of them become excellent cooks.

\* \* \* \* \*

“*The School Class.*—Good work has been done in all sections of this division. The youngest of the inmates attend daily, and, as a great number of the elder ones are, upon admission to the institution, lacking in school knowledge, they too attend this class for at least one hour daily.

“The health of the inmates during the year has been very good. There have been no deaths, nor has there been any serious illness.”

NAUTICAL

## NAUTICAL SCHOOL-SHIP "SOBRAON."

In this institution, 475 boys were enrolled, 304 of these being under and 171 over 14 years of age. The new admissions numbered 158, of whom 104 were below and 54 above the age stated. The number discharged was 173, made up as follows:—

For apprenticeship ... ..	114
On attaining 18 years of age ... ..	9
Transferred to Boarding-out Officer ... ..	15
Discharged to mercantile marine service ... ..	4
By order of the Governor-in-Council ... ..	26
Illegally committed ... ..	1
Transferred to Permanent Military Force ... ..	3
Death ... ..	1
	173

305 boys remained on the "Sobraon" at the end of the year. As compared with 1897, a decrease of 73 is shown in the enrolment, of 56 in the discharges, and of 57 in the number of new admissions.

The total expenditure was £8,033 15s. viz. :—

	£	s.	d.
For maintenance ... ..	5,461	12	5
For salaries ... ..	2,572	2	7
	£8,033 15 0		
Deducting parents' contributions to the Treasury ... ..	387	9	0
	£7,646 6 0		

Calculated on the net expenditure, the cost to the State per head of the enrolment was £16 2s., as compared with £13 10s. 6d. for 1897.

## CARPENTERIAN REFORMATORY.

At this institution the enrolment for the year was 106, 34 of the inmates being under and 72 over 14 years of age. The new admissions numbered 24, while 20 were discharged :

By order of Governor-in-Council ... ..	9
By expiry of time ... ..	10
By death ... ..	1

Of the 24 admissions, 9 were under and 15 above the age of 14. Eighty-six boys remained in the institution at the expiration of the year.

Except

Except for the death of one boy from influenza, the health of the inmates has been very good, and their conduct is well reported of. The boys show steady progress in school, and in the various workshops. Industrial work was carried out to the value of £2,349.

The net expenditure in connection with the reformatory was £2,068 3s. 6d. Calculated on the year's enrolment, the cost to the State per head was £19 10s. 2d.

#### SHAFTESBURY REFORMATORY.

At the commencement of 1897, there were 18 girls enrolled at this institution. During the year, 5 were admitted, and 4 discharged through the expiry of the term of their sentences. On 31st December, the number of inmates was 19, of whom 6 were under and 13 over the age of 14 years.

The conduct of the girls was very good throughout the year, and there was no sickness of any moment. Every girl attends school regularly, besides helping in the work of the institution. The whole of the needlework and dressmaking required is done by the inmates.

J. A. HOGUE,  
Minister of Public Instruction.

Department of Public Instruction,  
Sydney, 28th April, 1899.

---

## APPENDIX XII.

## THE CHIEF INSPECTOR'S REPORT, WITH ITS ANNEXES.

THE year 1898 has been the most unfavourable year for school work in the educational history of the Colony. Epidemics of typhoid, diphtheria, scarlatina, measles, and whooping-cough swept over the country, and in one form or other raged all through the year. In consequence of these diseases, and the enforcement of the Regulations under the Health Act, scores of schools were closed for periods varying from two weeks to three months, hundreds of teachers were absent from duty for weeks and even months, and tens of thousands of children were kept from school for long periods. Notwithstanding this state of things, the statistics furnished in this Report show a healthy growth in our school system. The steady advance in population necessitates an annual increase in the number of schools and teachers, and the work of the Department keeps well abreast of the needs of the Colony. Of the 2,572 schools in operation in 1897, 89 were closed during that year, or were allowed to lapse in December; so that 2,483 were carried on to 1898. These, with 114 new schools, and 2 new departments brought into operation, gave 2,597 schools, representing 2,812 departments, as the record for 1898.

The following is the return of schools for the last five years :—

Year.	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
1894	1,667	302	449	71	14	2,503
1895	1,685	317	483	57	16	2,558
1896	1,698	310	497	44	30	2,569
1897	1,755	294	457	41	25	2,572
1898	1,787	313	431	37	29	2,597

Arranged in classes according to the average attendance at the end of the year, they are :—

Year.	Class I.	II.	III.	IV.	V.	VI.	VII.	VIII.	IX.	X.	Small Unclassified.	Total.
1894	38	36	23	64	116	209	206	311	762	209	529	2,503
1895	39	36	27	64	124	198	214	370	796	165	525	2,558
1896	40	36	26	62	127	198	185	335	860	193	507	2,569
1897	43	38	29	59	124	226	202	362	862	141	486	2,572
1898	45	39	28	62	121	233	227	365	840	133	504	2,597

This return shows, not only a net increase of 25 schools, but also a steady improvement in the grading.

*Buildings.*

The funds derived from the Church and School lands have enabled the Department to erect new buildings, and to effect long-needed repairs, enlargements, and improvements. The new buildings are of excellent design, and contain all modern improvements. It would be difficult to improve upon the building for girls recently erected at Armidale. The more liberal grants to Provisional Schools have put it in the power of the Inspectors to build a larger and better type of school-room than that hitherto in vogue, and teachers and pupils are much more comfortable than in former years. These improvements could not be carried out without increasing the expenditure; but such increase is more than justified. Every precaution is taken to keep down expense; and with this view, the Under Secretary, the Chief Inspector, and several Inspectors, who have had large experience in building matters, met the Chief Clerk of Works and several of his officers in conference during the recent Christmas vacation. Uniform plans and specifications for the smaller classes of schools, sufficiently elastic to admit of being adapted to the circumstances of each district, were agreed upon. These will be printed and supplied to each Inspector. It is expected that in this way the Inspectors will be relieved of a great deal of clerical work, and a good class of school building erected at a very reasonable cost.

The works carried out during 1898 under the supervision of the Chief Clerk of Works were :—

New school buildings .....	20
Buildings enlarged .....	33
Buildings repaired .....	554
New residences .....	13
Residences enlarged .....	34

The Inspectors have been kept very busy in attending to building matters, as may be seen from the following return :—

New school buildings .....	103
Buildings enlarged .....	31
Buildings repaired .....	993
New residences .....	8
Residences enlarged or repaired .....	252

The cost of these works exceeded £30,000.

As explained in previous Reports, the works under the Chief Clerk of Works are in the Metropolitan District and the principal country towns, the Inspectors taking charge of those in the remote or out-of-the-way places.

*Accommodation.*

At the end of 1897, the schools provided places for 245,283 scholars. During 1898, after making good the loss of 8,018 caused by closing schools and abandoning old buildings, 7,508 additional places were provided, raising the number of places to 252,791.

The following table shows the accommodation in each district :—

District.	Number of places at end of 1898, reckoned at 8 square feet for each child.	Number of places at end of 1898, reckoned at 100 cubic feet of air space for each child.
Armidale .....	20,804	19,213
Bathurst .....	17,274	17,171
Bowral .....	20,129	19,584
Goulburn .....	20,337	18,060
Grafton .....	20,173	20,037
Maitland .....	26,277	27,826
Metropolitan .....	59,855	72,289
Sub-metropolitan .....	18,379	17,321
Wagga Wagga .....	26,219	25,806
Wellington .....	15,378	15,484
Totals .....	244,825	252,791

As the highest quarterly enrolment was 205,881, it is evident that the accommodation, taken as a whole, is ample. There are, however, some cases of overcrowding, especially in the Metropolitan District, but these are remedied as speedily as practicable.

The

*Water Supply.*

The serious drought that prevailed during the latter half of the year placed many teachers in great difficulties from want of water-tanks and wells dried up, and water had to be carted from a great distance. In every instance authority was given for the purchase of water at the expense of the Department.

*Enrolment and Attendance.*

The gross enrolment of pupils at all schools in 1898 was 253,592.

Deducting 12 per cent. for multiple enrolments, the number of individual pupils on the books of the schools was 227,561.

The following table gives the enrolment and average attendance for each quarter of 1898, together with the rates of increase and decrease :—

Quarter.	Enrolment in 1897.	Enrolment in 1898.	Increase for 1898.	Average daily attendance for 1897.	Average daily attendance for 1898.	Decrease in average daily attendance for 1898.	Per-centage of increase of enrolment.	Per-centage of decrease of average attendance.
March .....	200,902	203,362	2,460	147,839·4	143,256·2	4,583·2	1·22	3·1
June .....	201,902	205,881	3,979	147,356·3	143,380·2	3,976·1	1·97	2·7
September.....	203,335	204,350	1,015	151,432·3	140,436·5	10,995·8	·49	7·2
December.....	201,652	202,048	396	146,896·2	139,820·1	7,076·1	·19	4·8
Average.....	201,947	203,910	1,963	148,381·0	141,723·2	6,657·8	·97	4·4

The percentage for each quarter was :—

Quarter.	Enrolment.	Average Attendance.	
		Number.	Percentage.
March .....	203,362	143,256·2	70·4
June .....	205,881	143,380·2	69·6
September.....	204,350	140,436·5	68·7
December.....	202,048	139,820·1	69·2
Year's average.....	203,910	141,723·2	69·5

Compared with 1897, there is an increase in the gross enrolment of 1,596, and in the average quarterly enrolment of 1,963, and a decrease on the average daily attendance of 6,657.

The decrease in the average daily attendance is satisfactorily explained by the prevalence of epidemics. The regularity of the pupils has been wonderfully good, considering the amount of sickness.

*Compulsion.*

Of the children who failed to attend school for the 70 days each half-year, as prescribed by law, it was found necessary in the first half year to caution the parents or guardians of 3,860, and in the second half-year those of 2,641. Prosecutions on account of 1,570 defaulting children were authorised. In carrying out the compulsory provisions of the Public Instruction Act, the Department has received the earnest and loyal co-operation of the police, who have done all in their power to make compulsion a reality; but in many cases the magistrate adjudicating shows that his sympathies are with the defaulting parents. The flimsiest of excuses, such as "I teach my child at home," "I send my boy to a night-school," "My girl was sick," are accepted without inquiry, while the Department and the police officers, who are endeavouring to carry out the law, are treated as though they were the culprits. Even when no excuse is offered, the nominal fines inflicted are so paltry that parents are practically encouraged to go on violating the law by utilising children of a tender age as wage-earners. The Act regulating labour and industry has, however, effected some improvement in this respect.

*School Fees.*

The total amount of school fees collected and paid into the Consolidated Revenue was £73,093 5s. 4d. Cautions to pay were issued during the year to 1,193 debtors, and it was found necessary to prosecute in 453 cases, with the result that the sum of £230 10s. 3d. was recovered. Free education was granted to 30,385 pupils, as against 31,200 in 1897. In addition to the grants for free education, the sum of £2,541 1s. 4d., arrears of fees, was cancelled. In all these cases full inquiry was made, and concessions were granted as the circumstances warranted.

The collection of school fees is one of the most trying of a teacher's duties, and more frequently than any other brings him into conflict with the parents.

The Public School at St. Ives has a very honorable record in the matter of fees. It was established ten years ago, and during its whole existence it has not had one free pupil nor lost one penny as unpaid fees. I do not suppose this is the only case; but it is the only one that has come under my notice. I shall be glad to learn of others.

*Inspection.*

The following changes in the inspectoral arrangements were made during the year :—Mr. Baillie, who had been in charge of the Dubbo district for several years, was removed to Braidwood; and Mr. Hunt, Acting Inspector, was stationed at Dubbo. Mr. T. Walker, Head Master of the Stanmore Superior Public School, was selected to fill the vacancy caused by the retirement of Mr. Inspector Pitt. Mr. Walker entered the service as pupil-teacher, and steadily worked his way up to a I A classification and the charge of a First-class Superior School. Mr. Walker's eminently successful career as a teacher marked him out as one well qualified for the office of Inspector, and his efficiency in that office has fully realised expectations. Mr. Walker has been employed principally in the Metropolitan and Mudgee districts, where the illness of Messrs. Thompson and Rooney rendered special help necessary.

The number of schools inspected was 2,793, an increase of 30 on the work of 1897; but the number of pupils examined was only 152,459, a decrease of 7,726 from the previous year, and the smallest number examined since 1894. The prevalence of epidemics fully accounts for the decrease.

The uninspected schools numbered 19, 6 of them Evening. The non-inspection was caused by the collapse of the school before the Inspector could arrange to visit.

The following are the details of inspection :—

Year.	No. of schools.	No. of schools inspected.	No. of schools not inspected.	No. of pupils examined.	No. of Inspectors.
1896	2,780	2,763	17	154,868	33
1897	2,785	2,763	22	160,183	33
1898	2,812	2,793	19	152,457	33

The particulars for each district stand thus :—

District.	No. of Inspectors.	No. of schools.	No. of schools inspected.	No. of schools not inspected.	No. of pupils examined.
Armidale .....	4	354	353	1	12,148
Bathurst .....	3	255	254	1	9,744
Bowral .....	3	258	255	3	10,542
Goulburn .....	4	396	390	6	10,772
Grafton .....	3	324	324	...	12,290
Maitland .....	3	253	248	5	17,041
Metropolitan .....	4	212	212	...	46,080
Sub-Metropolitan .....	2	161	161	...	11,819
Wagga Wagga .....	4	339	336	3	13,619
Wellington .....	3	260	260	...	8,902
Totals .....	33	2,812	2,793	19	152,457

The inspected and uninspected schools were :—

	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
Inspected .....	1,997	313	426	36	23	2,795
Uninspected .....	3	3	5	1	6	18
Totals .....	2,000	316	431	37	29	2,813

Of the 2,793 schools inspected, 2,665 reached the standard, or exceeded it, while only 129 were below the requirements.

The following tables show the proficiency of all schools inspected :—

	Below Standard.	Up to Standard.	Above Standard.	Total.
Public—				
1. In operation a full year at time of inspection.....	29	67	1,878	1,974
2. Not do do do .....	5	1	19	25
Provisional—				
1. In operation a full year at time of inspection.....	21	22	201	244
2. Not do do do .....	26	4	36	66
Half-time—				
1. In operation a full year at time of inspection.....	28	20	351	399
2. Not do do do .....	12	1	13	26
House-to-house—

Totals .....	129	121	2,543	2,793

Or summarised—

Class of School.	Above Standard.	Up to Standard.	Below Standard.	Total.	Percentage up to Standard in 1898.	Percentage up to Standard in 1897.
Public .....	1,896	68	33	1,997	98	98
Provisional .....	238	27	48	313	84	92
Half-time .....	365	21	40	426	90	91
House-to-house .....	26	2	8	36	77	77
Evening .....	19	4	...	23	100	95
Totals .....	2,544	122	129	2,795	95	96

Many of the schools above the standard maintain a very high degree of efficiency. No fewer than thirty were awarded the mark "excellent" for general efficiency.

The organisation of our schools steadily improves. Defects in records and lesson guides are pointed out to the teacher by the Inspector, and, with very few exceptions, are remedied at once. At every vacation a few teachers, generally ladies, cause much trouble, and delay the compilation of the departmental statistics, either by inaccurate compilation of the necessary returns, or by neglecting to post them punctually.

The appearance of some of the school buildings and grounds could, by the exercise of a little taste and industry, be much improved, though, taken as a whole, teachers are good tenants. A matter calling for special notice is the conspicuousness of the water-closets. It would not be difficult to plant trees round these structures, and thus make them less in evidence to passers-by. A case where the teacher deserves "honorable mention" for making his school remarkably attractive and useful, the Hillgrove Public School, is fully described by District-Inspector Bradley. Mr. Bradley's report is well worthy of perusal. Several instances of highly meritorious work by teachers in improving school-grounds have come under my own observation—notably South Goulburn, Blayney, and Elsmore, though none approaches Hillgrove in all-round excellence.

The disciplinary condition of our schools is deservedly rated high. As a rule, the pupils are very clean and tidy. All the school operations are carried out with order and decorum. The government, without being unduly harsh, is strict and effective, and secures quietness, obedience, and sustained attention. Complaints are sometimes made that the good behaviour of children is confined to the school premises. There is, doubtless, some ground for such complaints; but, though his influence should be, and very often is, sufficiently thorough and far-reaching to secure orderly conduct on the way

way to and from school, the authority of the teacher does not go beyond the school boundaries. Too frequently Public School pupils are blamed for offences committed by children who go to other schools, or by those who are old enough to know better. Further, it is too much to expect that the restraining power of school for five hours a day will counteract the bad influences of the street and the home.

*Attainments of Pupils.*

The following table gives the number of pupils examined in each subject, and the number and percentage of passes :—

Subjects.	Estimated Proficiency.		
	Total number examined.	Number passed.	Percentage up to or above Standard.
Reading—			
Alphabet .....	8,837	6,441	72
Monosyllables .....	34,087	27,557	80
Easy narrative .....	47,475	40,562	85
Ordinary prose.....	62,058	54,750	88
Totals.....	152,457	129,310	84
Writing—			
On slates .....	56,585	48,022	84
In copy books and on paper .....	95,679	81,623	85
Totals.....	152,264	129,645	85
Dictation .....	123,596	100,024	80
Arithmetic—			
Simple rules .....	88,741	68,459	77
Compound rules .....	38,277	27,234	71
Higher rules.....	23,300	16,626	71
Totals.....	150,318	112,319	74
Grammar—			
Elementary .....	32,465	24,359	75
Advanced .....	29,946	21,675	72
Totals.....	62,411	46,034	73

Needle-work.....	53,806	48,602	90
Drill .....	146,104	115,975	79
Natural science .....	7,934	6,238	78

The results disclosed in the above table are in the highest degree creditable to our teachers, inasmuch as they shown not only superior teaching ability, but most careful and painstaking work. A clever teacher, by working at high-pressure for a short time just before the examination, may succeed in gaining good marks for what are known as the oral subjects; but only well-sustained industry, and skilful teaching from day to day, can gain high results in reading, writing, dictation and arithmetic.

Reading is steadily improving as regards fluency and expression, though undue rapidity and wrongly placed emphasis are occasionally met with. The Colonial drawl and twang, though still in evidence on the roads, are not often met with in the school-room.

The new Reading Books came into use during the year, and have been welcomed by both teachers and pupils. They are brighter, more varied, and better graded than those formerly in use, and will doubtless be the means of improving the quality of the reading.

Writing comes out well in the results. The Inspectors report that it is carefully taught. Several series of Copy Books have been authorised, but those apparently most in favour are the Australian, the New Graphic, and Jackson's Upright. The teachers in remote country places experience great difficulty in procuring approved Copy Books for the pupils.

Some pupils write very well in Copy Books where they have a model to imitate, but fail in writing rapidly on ordinary paper. With the view of remedying this defect, it is provided in the new standards that writing from dictation shall carry 50 marks.

I am pleased to find that in several schools paper is used instead of slates in working arithmetic. I shall be glad when this is generally done. Slates, even with the utmost care, are not clean things to use, and may sometimes be the means of spreading disease. Out of school they are rarely used, and their banishment from the school-room will be attended with many advantages.

Arithmetic is perhaps the most difficult subject in the school curriculum, as success depends so largely upon the co-operation of the pupils. It is well taught as far as mechanical processes go, but the sums generally are worked too slowly. This is specially the case in the lower classes, and in working out the sums given in connection with the examination for exemption certificates. If greater care were taken to aim at quickness, there would be less of the pernicious habit of counting upon the fingers, a habit that is too common in the second-class, and is sometimes seen even in the third. The weak part of the instruction in the middle and upper classes is that it is not sufficiently practical and business-like. For example, I have found a third class able to work correctly all the calculations of a Bill of Parcels, but not one able to put the bill in proper form.

Attention to mental arithmetic is increasing, but rapidity is too little cultivated, and explanation of method and principles is neglected. Many teachers restrict their teaching of mental arithmetic to the application of certain mechanical rules, as prices of dozens and scores. Price of a dozen at 1s. 7½d. each is promptly answered, but the price of 7 at 6½d. is regarded as too difficult. The

The practice of examining all pupils of the fourth and fifth classes, and those who had completed two years' attendance in the third class for certificates of exemption was continued. 19,916 pupils were so examined, and 13,649, or 68 per cent., passed. This is a considerable advance upon last year's work.

Some Inspectors complain that the issue of these certificates leads to the withdrawal of children from school at too early an age. I do not think there is much force in this, as in all probability such children would be taken from school as soon as an opening for their employment presented.

It is somewhat remarkable that in Great Britain the complaint is that children attain the age at which they can legally leave school before they can pass standard for exemption.

The directions that in the lessons on Physiology and Hygiene, special reference should be made to alcohol is generally observed. These lessons cannot fail to produce good results as they are of a practical character. Many of our teachers have gained "Ambulance" certificates, and in a number of schools "First Aid" and "Life Saving" classes have been formed. •

#### Superior Schools.

Two schools, Neutral Bay and Wingham, were raised to superior rank, bringing up the total of Superior Schools to 101. These schools, distributed all over the country, bring within the reach of a large proportion of the juvenile population the means of qualifying for the Public Service or the University Examinations. From these schools, 183 pupils passed the Junior Examination of 1898. The Junior certificate, which is no longer a passport to the Public Service, or a qualification for promotion in it, has lost much of its value, and hence the number examined each year is decreasing. I shall be sorry to see these examinations discontinued, or altered in such a way that Public School pupils will cease to take part in them, because, in my opinion, they furnish a reliable and independent test of the efficiency of our schools. It is with regret, therefore, that I notice a disposition on the part of the Head-masters and Head-mistresses of the Superior Schools to discourage entrances for the Junior. The schools attaining distinction at the University examinations were :—

Fort-street .....	52 Junior, 4 Senior, 17 Matriculation.
Grafton .....	17 passes.
Petersham .....	9 "
Cleveland-street .....	8 "
Leichhardt .....	7 "
Stanmore.....	7 "

Cleveland-street succeeded in obtaining the high honor of one of its pupils winning the University prize for General Proficiency.

The Model Public School at Fort-street again secured the greatest number of passes of all schools.

Full information as to the schools at which the successful applicants for the Public Service were prepared is not at hand; but the results periodically published show that the schools under the Department more than hold their own in the competitions.

#### Infant Schools.

Infant Schools deserve unstinted praise. The teachers understand and sympathise with child nature. The instruction is solid, but made pleasant by being varied with Kindergarten occupations, musical drill, and physical exercises suitable for young children.

#### High Schools.

The High Schools in operation in 1897 were continued through 1898; but that at Bathurst was finally closed at the end of the year. That school, though always very efficiently conducted, never received the public support it merited, and for several years has had very few pupils beyond scholars and bursars, who, of course, paid no fees. By the closing of this school, the Department has lost the services of a highly-accomplished and able teacher, Mrs. S. C. Boyd. District-Inspector McCredie, in his annual report, pays a well-deserved tribute to Mrs. Boyd's efficiency.

The following is the return of the attendance :—

School.	Total enrolment.	Average quarterly enrolment.	Average daily attendance.	Fees received.
Sydney (Boys).....	162	130	119.3	£ s. d. 832 13 0
" (Girls).....	187	147	126.7	1,031 12 6
Maitland (Boys).....	104	83	77.1	431 11 0
" (Girls).....	61	48	42.9	154 7 0
Bathurst (Girls).....	13	12	10.3	12 12 0
Total .....	527	420	376.3	2,462 15 6
The figures for 1897 were .....	516	399	370.2	2,139 18 0

*Scholars and Bursars.*—The number of Scholars and Bursars in attendance at each High School during December quarter is given below :—

School.	Scholars.	Bursars.
Sydney (Boys) .....	37	29
" (Girls) .....	37	20
Maitland (Boys).....	23	26
" (Girls) .....	25	11
Bathurst (Girls).....	10	2
Totals.....	132	88

The schools were well represented at the University Examinations. The following table shows the number of passes :—

School.	Junior.	Senior.	Matriculation.
Sydney (Boys).....	18	5	24*
" (Girls).....	19	4	9†
East Maitland (Boys).....	14	2	8‡
West Maitland (Girls) .....	6	1	2
Total .....	57	12	43

\* Of these 12 matriculated at the Junior, and 5 at the Senior Examination.

† Of these 1 " " 1 " "

‡ Of these 3 " " 2 " "

*Teachers.*

### Teachers.

The number of teachers employed in the Department's service on the 31st December, 1898, was 4,759, an increase of 133 during the year.

The Inspectors concur in reporting, that with very few exceptions, they are exemplary in character, devoted to their work, and thoroughly efficient. The position of many a teacher is trying, and in some cases involves great hardship; but it has some compensations. It is safe so long as the teacher does his duty, no one can interfere with him, his work is honorable, and to the earnest highly interesting. His chief visitors are those who sympathise with his work and desire to recognise his merit. It is a matter for regret that more than half of our schools are below the eighth class, and consequently carry very low salaries. Most of the teachers of these small schools are eligible by classification for better positions; but as vacancies are very few, and claimants for promotion very many, a weary waiting for such promotion too often results.

The pupil-teachers numbering 1,020 form an inexpensive and effective portion of the teaching staff. I am aware that the employment of pupil-teachers has been unsparingly condemned by educational authorities in England and elsewhere; but as the result of a very large experience, I am convinced that not only do we get our best teachers from the ranks of pupil-teachers, but that these young persons are much more useful than those taken on at a more advanced age would be. The judicious selection from the number of applicants offering, and the careful supervision of the teachers under whom pupil-teachers are placed, make them efficient in a very short time. I shall be glad when matters can be so arranged that every pupil-teacher will be allowed a portion of each day for private study.

The great demand for schools in sparsely settled districts rendered it necessary to bring into the Service a number of young men as teachers of small schools. The plan suggested was approved by the Public Service Board, and applications were invited in the usual way. Over 100 applicants presented themselves for examination. Most of them were of superior attainments and excellent reputation. The forty-five who obtained the highest marks were declared eligible, and after a short period of training placed in charge of small schools at a salary of £72 per annum. From the number of inquiries made it would appear that there will be no difficulty in procuring as many teachers of this class as may be needed.

### Training Schools.

The arrangements of the Training Schools at Fort-street and Hurlstone were in no way changed. Sixteen students attended Fort-street, and 25 at Hurlstone. In consequence of a block in the appointment of pupil-teachers in 1892 and 1893, there were comparatively few candidates for scholarships and half-scholarships, and hence the accepted students were not equal in attainments to those of former years. They proved, however, to be well-conducted and diligent, and very promising teachers.

Details of the work in the respective Colleges, and the results of the examinations, will be found in the reports of the two Principals, who, with the assistant lecturers, have discharged their duty with marked industry, zeal, and ability.

### School Libraries.

The importance of these valuable educational agencies is year by year more fully recognised, and their number is steadily increasing. Libraries are now found in all the school districts. The necessary funds are generally raised by means of school concerts and local subscriptions, but hitherto no aid has been granted by the State. As I pointed out in a former Report, School Libraries were originated as far back as 1854, but the cost of working proved an insuperable obstacle to their general adoption. Now that books are cheaper and better, and so many teachers enthusiastically support them, I look upon School Libraries as a permanent feature of our schools.

### Manual Training and Science Teaching.

Workshops for Manual Training have been erected in Sydney at the following schools:—Crown-street, Blackfriars, and Sussex-street, each serving for the pupils of these particular schools; and Fort-street, where one workshop is used for the students in training and for the pupils of the Model Public School and North Sydney Superior School. In Sydney, also, pupils of the Boys' High School and of Cleveland-street Superior School attend for manual instruction and theoretical chemistry at the Technical College. In the country the workshops at Bathurst, West Maitland, and Newcastle Technical Colleges serve for the schools in the district; while there is a special workshop attached to the Boys' High School at East Maitland. The pupils from seven of the schools at Newcastle, from six schools at West Maitland, and from four of the schools in the Goulburn district attend for manual instruction given in the workshops.

### Art and Science Teaching at Country Schools.

Art teaching is given at the Maitland High Schools by the Resident Master of the Technical School, and courses of lessons, with demonstrations, have been given by the Resident Masters at Goulburn, Bathurst, and Newcastle, in Physics, Physiography, and Chemistry, respectively, to the pupils of the different Public Schools.

### Cookery.

The number of Cookery Schools in operation during the year was 10, a decrease of 2 on the number for 1897, due to the fact that the cookery centres established at the beginning of 1898 continued in operation throughout the year, as they served enough surrounding schools for two terms of instruction each. New Cookery Schools were opened at Ashfield, Goulburn, West Redfern, and West Maitland,

Matland, in place of those at Parramatta Bathurst, Liverpool, and Tenterfield Eight hundred and sixty four girls attended the Cookery Classes ; of these 736 were examined at the end of a term of instruction, and 715 passed the applied tests The examining Committees were composed, as before, of ladies, who gave their services voluntarily and gratuitously, for which they were thanked by the Department

The number of teachers of Cookery was the same as previously, namely, 8. There were no alterations in the staff, who worked successfully and well

The following is a list of the schools in operation during the year —

Place	Remarks	Place	Remarks
Hurlstone Training College	Open all the year.	Ashfield	Open all the year.
Parramatta Industrial School	„ „	West Redfern	„ „
Fort street . . .	„ „	Newcastle	„ „
Petersham	„ „	West Matland	„ „
Paddington	„ „	Goulburn ..	„ „

#### Cadets.

The Cadet Force has been well managed by Colonel Paul and his colleagues, and is in healthy condition The chief obstacle in the way of a large increase in the membership is the cost of uniform ; but it is probable that arrangements will be made at an early date that will partially remove this.

The Cadet Staff superintend the drill in the Metropolitan, Newcastle, and Matland schools, and give model lessons for the benefit of the teachers

In order to secure something like uniformity, as well as thoroughness in the teaching of Drill and Physical exercises, the recognised Drill Book has been supplied to every school, and the prescribed sections clearly indicated in the Standards of Proficiency

Instruction classes for teachers and pupil teachers are held in Sydney and Newcastle, and are largely availed of

The results of the widespread drill and physical training are manifest in the improved physique and bearing of our youth, and in the very attractive displays of calsthenic exercises at the meetings of the various Public Schools Athletic Associations

#### Technical Education

The work of the Technical Education Branch continues to be carried on with ability, zeal, and success ; but in Sydney want of proper accommodation is a serious impediment in the way of progress. The class rooms at the Sydney Technical College have been extended so as to utilise all available space, extra lessons have been arranged for, the times and places of lessons have been remodelled with the view of meeting the demands for positions in the various classes, and still in many classes, notably Mechanical Drawing, Fitting and Turning, Electrical Engineering, Plumbing, and Sheep and Wool-trading, scores of students have to be refused admission

The most noteworthy events of the year are the completion and occupation of the new College buildings at Bathurst, the decision to establish a branch Technical College at Albury, and the distinguished success that has attended the re-arrangement of the Chemistry and Geology Classes in Sydney

The Technological Museum continues to do excellent work, particularly in the way of original research Very great attention has been devoted to products of the different species of eucalypti, and important discoveries have been made Teachers of Public Schools have been brought into touch with this Museum and its branches, and have received much useful information as well as aided in procuring suitable specimens for object lessons

The following summary of statistics will give some idea of the work done by this branch ; but fuller information will be found in the Superintendent's Report.

#### Enrolment of Students.

	1897	1898
Sydney Technical College, Technical Classes	3,462	3,723
„ „ Classes, on fees only	216	329

ANNEX

## ANNEX A.

## INSPECTOR DAWSON'S REPORT.

DURING the year 1898 I had under my supervision 12 Superior Public Schools, 6 Public Schools, and 6 Evening Public Schools—in all, 52 schools and departments.

The Evening School at Leichhardt did not resume work this year owing to paucity of attendance. The evening school at Surry Hills South was reopened after an interval of two years. A new department (Girls') was formed at Neutral Bay.

The quarterly enrolments and average attendance were as follows:—March quarter, 16,152 and 12,084; June quarter, 16,060 and 11,336; September quarter, 15,955 and 10,535; December quarter, 15,727 and 11,240. The falling-off in the two last quarters is attributable to wide-spread sickness amongst the pupils.

The schools mentioned accommodate 15,525 pupils, allowing each 8 square feet; so that, as a whole, they provide ample accommodation for the average attendance.

A very commodious new Girls' School was opened at Leichhardt, and additional class-rooms were built at Mosman, Manly, and Petersham. Extensive repairs and improvements were made at Crown-street, including an additional exit for the pupils taught in the upper part of the school buildings. In all schools minor repairs were promptly made when found necessary. Generally speaking, the material condition of the schools has improved considerably. In most of the schools the water supply has been improved so as to provide better drinking water, and readier access to it.

All schools were regularly inspected once during the year. A regular inspection involves a close scrutiny into all matters connected with a school, the details of organisation, the system of discipline, and the methods and results of instruction, and in large schools occupies considerable time. A school of three departments of the first-class takes fully a fortnight to inspect; some take longer. These regular inspections occupied the whole of the year, and left but little time for other valuable modes of inspection.

The total number of pupils presented for examination was 12,062. The percentage of passes in the important subjects was:—Reading, 80 per cent.; writing, 81 per cent.; dictation, 84 per cent.; arithmetic, 72 per cent.

Out of 2,193 pupils tested for certificates of proficiency, 1,591 satisfied the test—a percentage of 72.

The schools are well organised, and the discipline maintained is effective. Under examination the pupils are ready, prompt, and obedient.

The teachers, 321 of all ranks, are, with few exceptions, skilful, energetic, and laborious.

J. DAWSON,  
Inspector.

31st December, 1898.

## ANNEX B.

## INSPECTOR THOMPSON'S REPORT.

DURING the year 1898, in my section of the Metropolitan District, 26 schools were in operation, viz., 22 Public Schools and 4 Evening Public Schools, comprising 52 departments, one Evening Public School, at Ashfield, being added to those previously under my supervision.

*Accommodation.*

At Gardener's-road an Infants' Department is in course of erection, and separate accommodation for girls is also contemplated in this locality. At St. Leonard's Public School the accommodation has been expanded, and it is probable that further addition will shortly be necessary.

Generally speaking, the accommodation provided may be deemed adequate to the requirements of the several localities.

*Attendance.*

The gross enrolment of pupils for the year was 20,149; the multiple enrolment, 3,564; the actual enrolment, 16,585.

*Inspection.*

All the schools and departments received regular inspection during the year. With one exception, the proficiency of the schools in my section of the district was well above the pass-standard of 50 per cent. None fell below this standard. The general proficiency of the pupils may, therefore, be regarded as thoroughly satisfactory, notwithstanding the epidemics which, during one part of the year, were so prevalent; and no little credit is due to the teachers for their earnest and generally successful efforts to combat against circumstances so detrimental to the proficiency of their several departments.

The total staff of teachers of all ranks in this section of the district amounted to 296, viz., 104 males, 182 females, and 10 work-mistresses. The teaching, as a whole, has been earnest and effective, and the general organisation and discipline well sustained.

W. F. THOMPSON,  
Inspector.

28th January, 1899.

## ANNEX C.

## INSPECTOR WILLIS'S REPORT.

At the commencement of the year there were under my supervision 19 Public Schools, 1 Evening School, and the "Sobraon" School. These are still in operation, and to them have been added the Annandale Evening School and the Nareburn Infant's Department; so that now I have 23 schools in my section, and these comprise 52 departments.

The school buildings are kept in good repair by the Chief Clerk of Works. They afford, in the aggregate, ample accommodation for the pupils in attendance, but in particular localities the buildings are too small for existing requirements.

During the year a new Infant's School has been erected at Newtown North, and arrangements are being made, with the sanction of the Minister, for the provision of new buildings at Darling-road, Marrickville, and Woollahra.

The gross enrolment in the schools of this section numbered 21,813 pupils, the actual enrolment 18,116, and the average attendance for the year was 11,377.4. This average is less than that recorded for 1897 by nearly a thousand—a reduction brought about, no doubt, during the past six months by the prevalence of measles and scarlet fever among the children of Sydney.

Of the 52 departments fully inspected, 2 reached the standard of proficiency, and the remaining 50 exceeded it.

The schools are liberally provided with the necessary books and apparatus; the pupils are, with few exceptions, judiciously classified; the government is mild, but firm and effective; and the general management of all but one of the schools was found to be satisfactory. The number of pupils present at examination reached the total of 13,390. All of these were examined in the four most important branches, the passes being:—Reading, 81 per cent.; writing, 81 per cent.; dictation, 85 per cent.; arithmetic, 65 per cent.; whilst in the following branches the worst results were obtained, viz., Mensuration, 50 per cent.; Latin, 60 per cent.; and Elementary Geography, 60 per cent.

There are 313 teachers of all classes employed in the schools of this section, viz., 21 principal teachers, 30 mistresses, 144 assistants, 107 pupil-teachers, and 11 work-mistresses. These, one and all, have endeavoured to perform their several duties to the best of their ability, and their efforts have, for the most part, been productive of results, creditable to the teachers themselves, gratifying to this Department, and beneficial to the public on whose behalf the services were performed.

With

With the year now opening, the revised standards of proficiency come into operation, and under this new and improved condition of things, the teachers will, no doubt, be able to achieve in the future even greater success than their efforts have been rewarded with in the past.

All the statistics on which this report is based were forwarded to Head Office under separate cover some days ago.

6th January, 1899.

M. WILLIS,  
Inspector.

ANNEX D.

INSPECTOR SKILLMAN'S REPORT.

At the beginning of 1898 I had under my supervision 29 schools (55 departments).

During the year, Evening Public Schools have been opened at Bexley and Burwood.

Additional accommodation has been provided at Kogarah, and new schoolrooms are in course of erection at Hurlstone, Hurstville, and Sandringham.

The quarterly enrolments and average attendances were:—March quarter, 13,096 and 9,612; June quarter, 13,190 and 9,056; September quarter, 12,807 and 8,130; December quarter, 12,641 and 8,725 respectively.

The diminution in the attendances during the last two quarters of the year was due to the prevalence of measles and whooping-cough.

All the schools were fully inspected. No school was found to be below standard, 2 satisfied it, and 55 were above it.

The percentages of passes in the important subjects were:—Reading, 84; writing, 79; dictation, 78; and arithmetic, 69.

In 1897, 10,991 children were present at inspection. This year, owing to the epidemic of measles, only 9,527 were examined.

Two hundred and fifty-two teachers of all ranks were employed in this section during the year. They have done their work well, in spite of serious obstacles, arising from illness among both teachers and pupils, and even better results may be expected in 1899.

29th December, 1898.

H. SKILLMAN,  
Inspector.

ANNEX E.

DISTRICT INSPECTOR W. DWYER'S REPORT.

THE number of schools in operation during the year 1898 was 128, containing 162 departments. Of these, 144 are Public, 6 Provisional, and 12 Half-time. All were examined in accordance with the standards, and the general results may be briefly stated as follow:—156 were found to be above the standard, 4 were up to the requirements of the standard, and 2 were below the standard.

The number of places available at the close of the year was:—Floor space, 18,379; air space, 17,321; and the enrolment of pupils last quarter was 15,104. The accommodation, therefore, appears to be abundant, and evenly distributed. A new Evening School was authorised to be opened at Catherine Hill Bay, but it lapsed, the requisite number of pupils having failed to attend.

The number of pupils examined was 11,349. The tabulated returns already furnished show the estimated proficiency of these in actual numbers, and in centesimal proportions; and the estimates so tabulated are, throughout, highly satisfactory.

The entire teaching staff comprises 340 individuals, of whom 142 are principal teachers, 15 mistresses of departments, 88 assistants, 90 pupil-teachers, and 5 work-mistresses.

Taking the experience of past years as a reasonable and practical test, the general progress and prospects of schools for the current year give promise of satisfactory development and efficiency.

16th January, 1899.

WM. DWYER,  
District Inspector.

ANNEX F.

INSPECTOR DETTMANN'S REPORT.

IN the Parramatta section of the Sub-Metropolitan District there were 90 schools or departments in operation during 1898, consisting of 5 Superior Public Schools (14 departments), 1 Industrial School for Girls, 3 Provisional Schools, 10 Half-time Schools, and the rest ordinary Public Schools.

The establishment of 2 Evening Public Schools (Arcadia and Wilberforce) was sanctioned towards the close of the year, but these were not opened.

All the schools in operation were fully inspected, and with two exceptions (Half-time Schools), were found to be above the standard—a very gratifying result.

One hundred and sixty-six teachers are employed in these schools, which had 8,875 pupils on the books for the year.

The school accommodation provided was in excess of requirements, being an increase of nearly 500 seats for the year. This was brought about by the erection of new buildings (5), new class-rooms (2), and the extension of existing buildings (3). Not only are there more seats provided, in the aggregate, than there are pupils enrolled in the school, but there is also a very fair distribution of the seats; and therefore in no instance can reasonable complaint be made that schoolrooms are overcrowded.

Two new schools were established during the year, and another approved—McGrath's Hill (Pitt-town Road)—which will be in operation in 1899.

The district is now well provided with schools, which are centrally situated.

In addition to new buildings being provided in certain cases, many existing buildings have been improved and repaired; and while the need for further improvement and repairs exists, the schools are, on the whole, in good condition, and are well cared for by the teachers, who, in most instances, take a pride in keeping their school premises in a clean and tidy condition, and in making them as attractive as possible.

In other matters connected with the organisation of their schools the teachers are equally careful, and appear to fully recognise their responsibility, not only in this direction, but also in all other duties connected with their office.

That these duties are properly attended to is apparent from the following considerations:—Nearly 98 per cent. of their schools are above the standard; no teachers have been censured during the year for neglect of duty; they are liked by their pupils, whose parents appear to be well satisfied with their efforts in school; and they are favourably regarded by the public generally.

They are well qualified for the positions they hold, and are in most instances striving for advancement in the service. Of those in charge of schools only ten are without classification, which does not necessarily imply that they are inexperienced,—as with two exceptions they are ex-pupil-teachers who have had several years' experience of teaching in large schools, and are only awaiting an opportunity under Departmental rules to obtain classification. Some of them are capital teachers.

The district is indeed fortunate as regards the teaching staff, and most of the teachers are, in addition to being capable, earnest workers in the cause of primary education, and are doing their best for their pupils and the Department they serve. The proportion of high-grade teachers in the district is large.

The discipline maintained in the schools is very satisfactory. It is generally mild and kind in its application, and while, like the organisation, it is used as a means to successful teaching results, it is made to contribute to the formation of orderly and industrious habits in the pupils. It is an uncommon thing to find a school in which the forming of the character of the pupils is overlooked; and hence the pupils are in most cases considerate towards their fellows, respectful to their elders, cheerfully obedient in school, and generally industrious and well behaved.

Corporal

Corporal punishment does not, as a rule, appear to be resorted to, except in extreme cases, and in many cases it is seldom or never used.

I have been particularly struck with the cleanliness of the pupils, and with their neat and tidy appearance, not only in those from well-to-do neighbourhoods, but also those coming from reputedly poor homes; and I cannot help the conclusion that many of the mothers owe their ability to dress their little ones so neatly and even tastefully, to the instruction in sewing which many of them received in our Public Schools.

The discipline of our schools is undoubtedly a factor in the training of the children.

The teaching results for the year have been very satisfactory, and a distinct advance has been made in the education of the children of the district.

In most of the schools the prescribed course of instruction has been followed, and lesson-guides carefully and skilfully prepared and closely adhered to.

The new standards of proficiency which will come into force at the beginning of 1899 have in several instances been anticipated. Teachers generally express themselves as being highly pleased with these standards, which they will I am sure properly interpret and diligently apply, to the advantage of all concerned.

The teachers report very few cases indeed in the district in which children are not being educated.

The largest number of the children of the district are of course attending our schools, which had a gross enrolment for the year of 8,875 pupils.

From the foregoing it will be seen that the Parramatta District is well supplied with the means of primary education, in that it is provided with a sufficient number of suitable schools, properly distributed and centrally situated, and equipped with all necessary appliances for efficient teaching. Moreover, the schools are well staffed with efficient teachers.

Existing conditions are very favourable to the continued progress of primary education in the district.

The usual statistics for the year have been furnished.

JOHN DETTMANN,  
Inspector.

#### ANNEX G.

##### DISTRICT INSPECTOR BRADLEY'S REPORT.

In my report for 1897 I stated that no marked increase or diminution in the number of schools in the district was, for some time to come, probable, and the experience of the year just closed goes to confirm such opinion. Many changes have taken place in the *distribution* of the smaller schools, mainly as the result of fluctuation, not increase, of settlement. Under the Regulations made for the establishment of Provisional, Half-time, and the smaller Public Schools, it frequently happens that the removal of a couple of families from one locality to another leads to the disrating or extinction of one such school, and either the establishment of a new school, or the revival of one that had been temporarily closed. While this condition of things creates a good deal of work for Inspectors in connection with inquiries as to the educational needs of the several localities concerned, and in a small way doubles expenditure for buildings, &c., it is at the same time unavoidable in the remoter parts of the Colony, where population is, and for some time will be, meagre and shifting. The worst phase of the matter, however, is that as affecting the salaries of the more poorly paid teachers. It is simply impossible to effect removals to fit in with capricious variations of attendance; but upon such attendance, under the strict letter of the Regulations, the rate of salary primarily depends. Under the exercise of discriminate and lenient treatment at the hands of the Department, the teachers of these smaller schools are spared, as far as possible, from the disadvantageous incidence of a fluctuating attendance for which they are not responsible; but, notwithstanding, anomalies present themselves, and cases of hardship occur, which often for some considerable time are irremediable.

During 1897, 352 schools were in operation for the whole or part of the year. Of this number, 13—all small schools—remained closed during the whole of 1898, but 15 others of similar character were established, 11 of the number being new schools, and 4 of them schools that had, from paucity of attendance, been closed for longer or shorter periods. The net increase is thus 2, and the 354 schools of 1898 are classified as follows:—Public, 216; Provisional, 57; Half-time, 72; House-to-house, 7; Evening Public, 2.

In building work, the most important item of the year has been the completion of a new and substantial brick building for the girls' department at Armidale. This, with contingent alterations and improvements, has cost about £2,300. The school-house at Nundle has been enlarged, and new class-rooms have been erected at Murrurundi, Narrabri, and Scone. New residences for teachers have been provided at Bundarra and Wallabadah, the former costing over £900. All of the foregoing have been carried out under the Chief Clerk of Works. The erection of a new Infant School at Tamworth, and of school buildings at Gunnedah, Narrabri West, and Carroll, have also been authorised by the Minister, and the carrying out of these works at the earliest possible date is very desirable.

With ampler funds at disposal, the minor works effected throughout the district by the Inspectors have passed the record of any previous year. Thirteen (13) small school houses and 2 teachers' residences have been built at a cost of £1,135; 3 buildings have been enlarged at a cost of £120; and over £2,100 has been spent on improvements to 110 schoolrooms and 25 residences. Four other schoolrooms approaching completion, and repairs in progress in connection with eight others, will cost over £400 more; so that, in all, the expenditure involved upon work planned, and, in the main, supervised by the staff of Inspectors, reaches the substantial amount of nearly £3,800. Personally, I have to acknowledge my indebtedness to the local Clerk of Works, Mr Porter, for willing help afforded by him as opportunity offered, and this obligation applies not only to the work of the past year, but to that of previous years.

With the improvements effected during the year, and the completion of others in progress and authorised, the accommodation provided will be ample for all requirements, and the condition of the school buildings generally will leave little to be desired.

At the end of 1897 the schools of the entire district afforded seating accommodation for 19,825 pupils, allowing 8 square feet of floor-space per child, and for 18,162 at the rate of 100 cubic feet of air space. A net increase of 979 seats and 1,051 places has been arranged for during the year, and the totals now stand at 20,804 and 19,213 respectively. This is liberal provision for the needs of the district, and, on the whole, it is pretty evenly distributed, although there are still a few cases of overcrowding, and of others where there is too much room to spare.

All schools in the district but one, Yarrawitch Public, received full inspection, and, in addition, 13 ordinary inspections were made. Yarrawitch, the unsuspected school, was burnt down prior to the date fixed for the Inspector's visit, and, although new buildings were erected with as little delay as possible, the school was not again brought into operation before the end of the year. Of the 353 schools examined, 322 (91 per cent.) exceeded standard requirements, 9 (3 per cent.) just met them, and 22 (6 per cent.) failed to reach them. These results are almost exactly on a par with those of last year, and are by no means unsatisfactory, when allowance is made for interruption to attendance caused by the prevalence of epidemic sickness during many months of the year.

Out of 1,428 pupils who were subjected to the examination test for exemption certificates, 1,061, or 74 per cent., passed satisfactorily. In 1897, 66 per cent. was the record reached; and in 1896 only 60 per cent. The improvement has thus been steady, and is indicative of increasing care and thoroughness in the teaching of the three main subjects—Reading, Writing, and Arithmetic.

In the sectional reports appended the several Inspectors make special reference to the schools that have passed with the greatest degree of credit at the annual examinations, and it is unnecessary, therefore, for me to repeat their remarks. In the portion of the district that comes under my own immediate supervision, Armidale Superior Boys', Armidale Superior Girls', Hillgrove, Rocky River, and Guyra stand first, and are named in the order of merit. The examination of the upper section of the boy's department at Armidale was conducted by the Chief Inspector, and, as the result, the principal teacher received promotion to IA, and the assistant teacher to IB grades, for which they had already qualified under examination in attainments. The mark awarded for the general efficiency of the school was "Excellent." In the case of Hillgrove, the general efficiency gained the mark "Very Good"; but, so far as the principal teacher is accountable for it, the organisation in this school ranks first in this district. Apart from, and beyond the mere matter of skilful construction of Time Tables, Programmes, &c., in no other instance has such zealous, constant, and intelligent effort been bestowed in improving the school in its surroundings and educational accessories. A garden of considerable size, that, under favourable conditions, forms the beauty-spot of the town, has been formed, though nothing more promising than raw sand and granite boulders constituted the basis of operations at the start. A set of gymnastic apparatus, complete in all essentials, has been obtained for the use of the boys; wands, Indian clubs, dumb-bells, and other calisthenic appliances, for the girls. The school museum contains, within suitable cases, well arranged and neatly labelled exhibits of animal, mineral, and vegetable products, readily accessible, and almost in daily use in the ordinary school work. A good library of 550 volumes, is in active operation; and an unpretentious but instructive picture-gallery, comprising excellent reprints of good photographs, with descriptive letter-press, in real oak frames, extends the full length of hat-rooms and lavatories; while, to finish up with, an American organ of attractive appearance and good quality forms much more than a pleasant feature in each of the two main schoolrooms. Not a penny towards this equipment has been asked or received from the Department, nor is it the outcome of any begging canvass of the town; teachers and children have simply wrought for and *earned the means* by concerts, entertainments, and exhibitions of work, that have both gratified the people, and impressed them with the educative value of a school of which they are deservedly proud. These facts are cited, in the first place, to give prominent and emphatic recognition of the services of a good man; and, secondly, in the hope that what he has accomplished may stimulate others to go and do likewise,—at any rate, in such greater or less degree as may be possible in their circumstances and surroundings. Brains, inclination, and energy are all that are needed; and, in comparison with school-life under such healthy, bright, and beneficial influences, the bald, perfunctory 9-to-4-o'clock discharge of duty will sink into well merited contempt. Guyra, Rocky River, Saumarez, Rose Hill, and Wollun are schools in which efforts more or less praiseworthy have been made in this right direction.

Very successful meetings of branches of the Public Schools Athletic Association have been held during the year at Armidale, Glen Innes, Inverell, and Tamworth, and these gatherings are without doubt increasing in popularity and usefulness.

The teaching strength of the district, both as regards numbers and distribution, is practically unaltered. Out of a roll of 414, 85 are unclassified; but most of these are ex-pupil teachers, whose practical skill and literary attainments are such as should enable them with but little difficulty to gain classification at the expiration of their terms of probation. Without exception, the Inspectors report in terms of commendation when speaking of the character, conduct, and efficiency of the teachers under their charge. The year just ended appears to have been exceptionally free from complaint or cause of complaint, and my own experience I am pleased to say in the main coincides therewith.

J. D. BRADLEY,  
District Inspector.

#### ANNEX H.

##### INSPECTOR BLUMER'S REPORT.

THREE (3) schools (Wombramurra Public, and Woodlawn and Wooloban Half-time) that were in operation during the last quarter of 1897, did not reopen this year. During the present year Moor Creek Waterworks Public was closed, and four (4) schools were established, viz., Hillside, Medgun Creek, Mount Drummond (Provisional), and Cooringoora (Half-time). An application for a Public School on the Moree-road, near Bingara, was also favourably entertained, and the school will probably open early next year. The following requests for new schools were declined:—Eulo, Timbri, Moor Creek, Spring Farm, Upper Nemingha (Provisional), Binnequy, Terry-hie-hie, Upper Berrigal (Half-time). At present there are in operation eighty-nine (89) schools, comprising 56 Public, 15 Provisional, 18 Half-time. These fairly meet the requirements of the district.

Ninety (90) schools were open during the whole or some portion of the year. All but one were fully inspected, and the most important four received second or ordinary inspections. The uninspected school was Yarrowitch Public. Before the proposed date of inspection, this schoolroom was burnt down, and it was found impracticable to erect new buildings and reopen the school before the end of the year.

As a rule, the schools are conveniently situated, afford adequate accommodation, and are well equipped. In some instances, however, additions are urgently required. Where such is the case, the necessary steps have been taken to remedy the defect. With this object, the Chief Clerk of Works has been instructed to arrange for an Infants' Schoolroom at Tamworth, and for extensive additions at Mungindi and Walcha. During the year the schoolroom at Nundle Public was enlarged by the Chief Clerk of Works, and that at Big Leather by the Inspector. The extra accommodation provided by erection of new premises, and by enlargement of existing ones, is as follows:—

School.	Done by—	Cost.	Additional Accommodation at—		Nature of Work.
			8 sq. ft.	100 c. feet.	
		£ s. d.			
Big Leather Public...	Inspector	26 10 0	14	10	Additions.
Crow Mount Public...	"	118 16 0	10	11	To replace old building.
Nundle Public .....	Clk. of Wks.	192 14 3	26	21	Additions.
Yarrowitch Public ...	Inspector	115 0 0	5	7	To replace buildings burnt down.
Hillside Prov. ....	"	55 0 0	30	24	A new school.
Medgun Creek Prov..	"	5 0 0	21	15	A new school.
Upper Moor Ck. Prov..	"	67 11 0	13	6	To replace old building.
Total...		580 11 3	119	94	

A new brick residence was erected at Bundarra by the Chief Clerk of Works, at a cost of £918 10s., and a wooden one at Duri, by the Inspector, for £247 16s. The further sum of £267 5s. 3d. was expended by the Inspector on repairs and improvements to buildings; and similar works, involving an outlay of £182 4s., are now in progress. A tender has also been accepted for erection of school buildings on Moree-road, at a cost of £79 14s., the contract to be executed under the supervision of the Inspector. Numerous and more or less extensive repairs and improvements have likewise been effected

effected by the Clerk of Works. Year by year it is found that an increased amount of time has to be devoted to the preparation of plans and specifications, and to the supervision of repairs to and erection of buildings. Much valuable assistance is cheerfully rendered by teachers; but it is to be feared that, despite all precautions, work of inferior quality is often passed off by unprincipled contractors, especially where a very low tender is accepted, and the work is not sufficiently extensive to warrant the expense of a special visit to a remote place.

During the present severe drought the question of water supply has been a most difficult one to deal with. In many places, where existing provisions were deemed liberal, the tanks, and what were regarded as permanent streams, have run dry.

So far as the teachers are responsible, the organisation of the schools is very satisfactory. In nearly all cases the buildings and premises are well kept, the records and returns punctually and carefully compiled, and the necessary lesson guides intelligently and neatly prepared. Much might be done, however, with little trouble to teachers and pupils, in the way of rendering the interior of schoolrooms more attractive.

School Savings Banks cannot be regarded as flourishing, the depositors being comparatively few, and the deposits small and irregular. Cadet Corps exist in two schools only—Tamworth and West Tamworth—and these would long since have become defunct were it not for the annual trips to Sydney in connection with the shooting contests. Arboriculture has been little better than a failure this year, on account of the long and severe drought. School Libraries are met with in several of the more important and in a few of the smaller schools. They are much appreciated by the pupils, and speak well for the disinterested zeal of the teachers concerned.

As in former years, the discipline of the schools is a particularly pleasing feature. Rarely are pupils otherwise than orderly and diligent. In some places, however, notably in dairying localities, children are often detained to assist on the farms. At Terry-hie-hie several children have been withdrawn from school, and are said to be taught at home, on account of the reasonable objection of the parents to the association of their children with those from a local blacks' camp. The good results of the competitions in drill held in connection with the annual school sports are plainly evident. A spirit of emulation is thereby excited in the case of the larger schools, and untrained teachers of smaller ones eagerly avail themselves of the opportunity of witnessing practical demonstrations of the instructions contained in the text-books. These reunions, furthermore, cannot fail to bring teachers and scholars into more sympathetic touch, and to develop *esprit de corps* amongst the pupils themselves.

Of the eighty-nine (89) schools fully inspected, 91 per cent. were up to or above standard, as against 94.5 per cent. for the preceding year. This falling off is more apparent than real, inasmuch as five (5) of those reported "Below Standard" had to be so regarded solely on account of unavoidable circumstances precluding the formation of a third or a higher class. The general prevalence of scarlatina and measles during the greater portion of the year also seriously retarded school work.

The results in the several subjects of instruction are compared hereunder with those for 1897:—

Subjects.	Number of Children examined.	Percentage up to or above Standard.		Increase (+) or Decrease (-) for 1898.
		1898.	1897.	
Reading .....	3,199	92	90	+ 2
Writing .....	3,199	94	93	+ 1
Dictation .....	2,467	83	78	+ 5
Arithmetic .....	3,199	78	79	- 1
Grammar .....	1,157	79	79	=
Geography .....	1,165	80	78	+ 2
History—English .....	1,165	75	76	- 1
History—Australian .....	302	88	77	+11
Scripture or Moral Lessons .....	2,972	80	82	- 2
Object-lessons .....	3,114	81	82	- 1
Drawing .....	3,121	85	85	=
Music .....	2,810	71	73	- 2
French .....	19	89	93	- 4
Euclid .....	74	59	73	-14
Algebra .....	12	92	94	- 2
Mensuration .....	31	61	65	- 4
Latin .....	12	100	93	+ 7
Needlework .....	1,128	90	82	+ 8
Drill .....	2,852	77	74	+ 3
Natural Science .....	156	81	91	-10

During 1897, 59 per cent. of pupils who had completed four half-years in third class passed the standard required for award of certificates. The percentage for 1898 is 75.3. This substantial increase (16.3 per cent.) is an indisputable proof of improvement in the elementary instruction.

Tamworth Girls', Tamworth Boys', and Barraba Public are the three schools most deserving of special mention in point of general efficiency, but eight (8) others closely approach them.

Without exception the teachers in this section of the district continue to merit the confidence and respect of the community. Ex-pupil-teachers in charge of small schools discharge their duties with exemplary zeal and success. Transferred from town schools and comfortable homes to more or less remote places, where the only available accommodation is often rough and the food coarse, they patiently labour and endeavour to render themselves eligible for better positions. It is to be regretted that many deserving young men are debarred from marrying by the inability of the Department to remove them to schools where residences are available.

In conclusion:—Schools are well distributed throughout this district, and afford, with few exceptions, adequate accommodation. Notwithstanding irregularity of attendance, consequent on epidemic sickness, the results for 1898 compare very favourably with those of any previous year. A still greater measure of success may be confidently expected for the ensuing year.

L. BLUMER,

Inspector.

28th December, 1898.

#### ANNEX I.

##### INSPECTOR BEAVIS'S REPORT.

EIGHTY-NINE schools which were in operation in this section at the close of last year recommenced work in January. In February, the Provisional School at Dundee Railway Station was re-opened; and, subsequently, by the establishment of 3 new schools, viz., Hawthorne Provisional, Trelawney Provisional, and Querra Half-time, and the reopening of Fieldside as Half-time in conjunction with the last named, the total number of schools for the year reached 94. Bukkulla School (Provisional) has been promoted to Public, and Coolootai (which up to September was worked as Half-time with Gullengutta), is now classed as Provisional. Thus, the 94 schools which have been in operation, include 69 Public, 18 Provisional, 5 Half-time, 1 House-to-House, and 1 Evening.

Three schools have been closed, viz., Blair Hill Provisional, Clearbank Provisional, and Gullengutta Half-time; the Bear Hill Provisional School cannot be longer maintained. It is often difficult to

forecast

forecast the prospects of settlement, and to locate schools advantageously. Several schools in this section, which at one time accommodated a considerable population, are now poorly attended; and a few, including some with residences, threaten to close. Nearly 90 schools, however, are still effective, and 10 new ones are in prospect. It has already been decided to establish schools at Acacia Creek Bridge, Clifton, Ten-mile, Homestead (Tenterfield), Wellington Vale, Chain of Ponds, and Auburn Vale, and to reopen the school at Airie Brake; other localities where some provision is required, are Ferndale near Inverell, and Glen Creek and Gulf, near Emmaville. The easier conditions under which a school may now be established will probably result in a further material increase in the number of schools.

The accommodation in the schools is generally satisfactory, though in several of the smaller schools somewhat meagre. Where, as often happens, the permanence of a school is doubtful, or its life can be estimated at a few years, only a small expenditure in buildings is warranted; meagre accommodation is then wise economy. In a sparsely-settled district such as this, small school-buildings are necessarily the most numerous. The work of erecting these and keeping them in repair falls usually on the Inspector, and makes a substantial addition to his already onerous duties.

The inspection work of the year embraced every school, but was practically confined to a single visit. Eighty-seven schools (93 per cent. nearly) satisfied the standard in respect of general efficiency, and 7 were below it. These results differ very little from those of last year. 3,348 pupils were examined; last year there were 3,460. The reduced numbers may be accounted for by the unusual prevalence of sickness throughout the year. The proficiency of the schools did not materially suffer, the results being similar to those of 1897. Of 418 pupils who underwent the examination test for exemption certificates, 329 passed (79 per cent.). The examination this year included those who had previously gained certificates; 192 fresh certificates were issued.

The new series of reading-books introduced in June is generally recognised to be, for teaching purposes, an improvement on the old. Teachers, however, complain that the books are weakly bound.

Athletics still command a fair share of attention. School sports at Inverell and Glen Innes, were, this year, very successful. Recently a new departure has been made by the formation of swimming classes of pupils from Glen Innes and neighbouring schools. Considerable interest has been shown by parents, who evidently consider that best preventive of drowning is to learn to swim. Lessons, drawn from information supplied by the Board of Health, on the treatment of the apparently drowned, are given as object lessons in the schools; as also, are lessons on snake-bite, hydatids, and heat-stroke. The value of such lessons cannot be questioned. A case recently came under my notice where a boy bitten by a snake saved his life by his prompt application, while alone in the bush, of lessons taught at school.

The teachers of the district command in a special degree the confidence and esteem of the people among whom they labour. With a high sense of duty they combine a degree of earnestness in their work, which, considering their sometimes discouraging surroundings, is very commendable. Unfortunately, too, promotion comes but slowly to the teacher of a small school. The advent of an additional family may give him a chance promotion; otherwise he waits long for any pecuniary reward.

#### Summary.

1898 is to be recorded as another year of sound work without exceptional features. Probably next year will be marked by considerable expansion in the number of schools.

29th December, 1898.

W. BEAVIS,  
Inspector.

#### ANNEX J.

##### INSPECTOR PARKINSON'S REPORT.

At the beginning of this year there were 96 schools in this section, and 5 more have since been opened; so that during 1898 I have had charge of 101 schools. The new schools opened were, Wingen Public, Coochooona and Cherson Provisional, Argyle Half-time, and Belltree's Evening Public. The following have been closed:—Weetalaba Public, Bando Provisional, Brigalow Creek, Cuttabri, Boheena Creek, and Therribri Half-time, Digby House-to-house, and Belltrees Evening Public. There are, therefore, now on the list 94 schools. The following new schools have been granted, and are expected to open early next year:—Ellerston and Dartbrook Provisional, both near Scone; Kelvin and The Hamlet Half-time, near Gunnedah; Gurley House-to-house, near Narrabri; and Cuttabri House-to-house, near Wee Waa. I anticipate that the number of schools in operation next year will slightly exceed that for 1898.

Last December the buildings provided accommodation for 4,718 pupils, and during the year they have been so increased as now to provide for 5,098. The aggregate enrolment is below 4,500, so that there is more than sufficient room for the attendance. Last year I stated that new buildings were required at Gunnedah, West Narrabri, Stewart's Brook, and Braefield. At the last-named place the school-room has been erected, and at the others buildings have been authorised. A new building is also to be erected at Carroll, near Gunnedah. The new class-rooms at Narrabri were opened at the beginning of the year, and others have since been completed at Scone and Murrurundi. These, with the erection of a teacher's residence at Wallabadah, have been the principal improvements carried out by the Chief Clerk of Works. Under my own supervision three small schoolrooms have been erected, and 30 schoolrooms and 9 residences improved and repaired, at a total cost of upwards of £900. A large part of this sum has been expended in adding verandahs to schools and kitchens to residences, thereby greatly increasing the comfort of scholars and teachers.

All the schools in operation received a regular inspection, and 9 ordinary inspections were made at schools to which I was called on special business. The Chief Inspector visited the district in June. He made regular inspections at Gunnedah, Narrabri Boys', and Quirindi, ordinary inspections at West Narrabri and Narrabri Girls', and incidental inspections at Somerton and Murrurundi. At Gunnedah and Narrabri he was assisted by Mr. Blumer, of Tamworth. Mr. Bridges' visit has been productive of much good. It has given the teachers and myself an opportunity of comparing our standards and methods with those approved of by the Inspectoral head of the Department, and the words of encouragement and advice given have not been without effect. Of the 101 schools examined, 96 were either up to or above standard. The 5 schools below standard were all very small—2 Provisional and 3 Half-time; and 3 of these were only a short time in operation when inspected. These results exactly coincide with those for last year. The older and more important schools, however, give higher results than for any previous year. The Superior Schools at Quirindi and Gunnedah each obtained upwards of 80 per cent. of marks, and secured from Mr. Bridges the mark "Excellent," for efficiency. Eleven (11) schools—West Narrabri, Boggabri, Curlewis, Narrabri Boys', Rotherfield, Kilphysic, Werris Creek, Scone, Parkville, Blandford, and Sparkes' Creek,—gained marks ranging from 70 to 80 per cent.; 53 schools were between 60 and 70 per cent., and 30 were from 50 to 60 per cent. Thus, 66 schools were up to or above the efficiency of 60 per cent., as compared with 59 schools last year.

At the regular inspections there were 3,216 pupils present, and these were all examined in Reading, Writing, and Arithmetic. Ten (10) subjects secured 90 per cent. or upwards of passes, viz., Reading, Writing, Scripture, Object Lessons, Drawing, French, Latin, Needlework, Drill, and Natural Science. The following nine subjects had from 80 to 90 per cent. of passes:—Arithmetic, Grammar, Geography, English and Australian History, Music, Euclid, Algebra, and Mensuration. In Dictation the passes were 77 per cent. These results are fully equal to those shown for last year. The subject in which the greatest improvement has been made is Mensuration, which has advanced about 20 per cent.

For exemption certificates 477 pupils were examined, and 347 (72 per cent.) passed. Of these, however, 164 passed the examination the previous year; so that only 183 new certificates were issued.

Many

Many teachers complain that the granting of these certificates has an injurious effect on their attendance; but it appears that in this district, about 50 per cent. of successful pupils have remained at school for several months after they were legally qualified to leave.

At the close of this year there are under my supervision 81 principal teachers, 12 assistants, and 18 pupil-teachers. One teacher holds a first-class certificate, 15 are in second class, 52 in third class, and 25 are unclassified. Of the last named, 14 have been pupil-teachers. Most of the 18 pupil-teachers employed are girls, and the 5 boys are in the lowest class. Owing to the more liberal Regulations recently passed for the establishment of small schools, the larger schools are drained of the male pupil-teachers as soon as they reach the age of 18 years. The conduct of the teachers has been exemplary. Few complaints have been made against them, and no case of serious misconduct has come under my notice.

Both teachers and pupils continue to take a lively interest in school libraries. The number of schools that have these attached is now 81, and there are upwards of 5,000 volumes in circulation. In their quarterly reports the teachers are still almost unanimous in asserting that the libraries are proving most serviceable.

This report shows—(1) That during 1898, 101 schools have been in operation; all were inspected, and 95 per cent. were found to be either up to or above standard.

(2) A substantial increase has been made in the accommodation provided, and much has been done to make existing schoolrooms and residences more comfortable for both pupils and teachers.

(3) The more liberal Regulations regarding the establishment of schools is likely to cause an increase in the number of schools and the work of inspection during 1899.

H. PARKINSON,  
Inspector.

26th December, 1898.

#### ANNEX K.

##### DISTRICT INSPECTOR MCCREDIE'S REPORT.

DURING the year just ended there were 255 schools and departments in operation in the Bathurst district. Of these, 4 have been closed, leaving 251 existing schools at the end of the year.

Besides the changes referred to in the reports upon the Eastern and Western sections of the district, there were a few in the central section, the most important being the closing of Flyer's Creek Half-time early in January, and the conversion of the Half-time School at Ingliswold into Provisional, and of the Provisional School at Winburndale into Public.

Towards the close of the year applications were received for the establishment of Public Schools at Bloomfield, Spring Terrace, and Shadforth; Provisional Schools at Wimbleton and Summer Hill Creek; and an Evening Public School at Meadow Flat.

The applications from Bloomfield and Meadow Flat have been granted. The other applications have not yet been reported upon, but will receive early attention.

The educational wants of the district are fairly met by existing schools. The sites are, with few exceptions, suitable and central, and the buildings are large enough for present requirements, and are well furnished and equipped.

Generally speaking, the material condition of the buildings is satisfactory. Substantial additions and improvements were carried out under the supervision of the Chief Clerk of Works, and 14 new schools were erected, 3 enlarged, and 112 old buildings and 26 residences repaired by the staff of Inspectors at a total cost of £2,625 10s. 3d. A few other works of a similar nature are in progress under these officers, and will be completed early in the present year.

New schoolrooms, to replace old ones at Winburndale and Dark Corner, have been sanctioned, and also new residences at Blayne and Lower Forest.

At the end of 1897 the schools of the district provided accommodation for 16,898 pupils, at 8 square feet of floor-space for each, and for 16,814 pupils, at 100 cubic feet of air-space for each. Now the numbers are 17,274 and 17,171 respectively.

Particulars of the attendance and fees for the last two years are exhibited in the following table:—

Year.	Total enrolment— no pupil being counted twice.	Average attendance.	Percentage of average attend- ance in relation to enrolment.	Fees received.	Fees in arrear.
1897 .....	15,523	10,399·9	67	£ s. d. 5,215 10 0	£ s. d. 155 17 3
1898 .....	15,631	9,399·	61	4,995 5 3	141 6 9

These figures show an increase of 108 pupils in the enrolment for last year, and a decrease of 1,000 pupils in the average attendance, and of £220 in the fees received. The falling off in the average attendance was caused chiefly by sickness in nearly every part of the district.

Except the Evening Public School at Burnt-yards, which existed for a few weeks only, all schools were regularly inspected, and 36 received a second inspection, the total number of inspections for the year being 290.

Of the schools regularly inspected, 15 were below, 3 up to, and the remainder above the standard in general efficiency. Ninety-four per cent. met or exceeded standard requirements. In the previous year the percentage was 95. The number of pupils examined was 9,744, being 1,014 less than in 1897. The decrease occurred principally in schools visited during the last half of the year, and was due to epidemics of measles and scarlet fever, which in some cases necessitated the temporary closing of schools.

Seven hundred and ninety-six pupils, or nearly 72 per cent. of 1,108 examined for exemption certificates, passed the prescribed tests satisfactorily. In 1897 the percentage of successful candidates was only 60.

The results of examination in the several subjects of instruction compare favourably with those of the previous year. In five of the subjects—Australian History, Scripture, Music, Algebra, and Needlework—the percentages of passes are slightly lower; in Dictation and French they are equal; and in all remaining subjects they are higher.

Successful sports meetings of the Bathurst and Lithgow branches of the Public Schools Amateur Athletic Association were held during the year.

Classes of the older boys in Bathurst, Milltown, and Kelso Public Schools, for manual training, under Mr. Felix Coles, of the Bathurst Technical College, were formed in Bathurst in September last. No difficulty was experienced in obtaining the necessary number of pupils for the classes, although each lad had to purchase tools for the work.

At the recent competition in Sydney for the Schools Challenge Shield, the cadets of Orange and Bathurst again secured first and second places in the contest. This makes the ninth successive victory for the Orange cadets. As in 1897, the Bathurst cadets were again a good second.

The Bathurst High School for Girls was permanently closed at the end of the year. At the time of closing there were 13 pupils enrolled, and only one of these paid school fees, the others being holders of scholarships or bursaries. The pupils who attended the schools received an excellent education

education and training, and the institution, from first to last, maintained its reputation as one of the best of its kind in the Colony. Mrs Boyd, the mistress of the school, has left the Service, and by her retirement the Department loses one of its most efficient and successful teachers.

The total number of teachers employed in all schools is 339. Of these, 218 are principal teachers, 8 mistresses of departments, 57 assistant teachers, 54 pupil teachers, and 2 work mistresses. The majority of the principal teachers are attentive to their duties, willing to carry out any suggestions and instructions given them, and anxious to maintain a satisfactory standard of efficiency in their respective schools and departments. The assistants, pupil teachers, and work mistresses are valuable helps in the schools where they are employed.

W MCCREDIE,  
District Inspector.

#### ANNEX L

##### INSPECTOR THOMAS'S REPORT.

THE year commenced with 83 schools in operation in my section of the Bathurst District. Two of these, Duroobalg and Public and Wattle Grove Half time, were closed during the year (the latter having been burnt down), and 6 new schools were opened, so that the year ends with 87 schools on my list. This number will be further increased, early in the coming year, by the opening of new schools at Wowingragong, Beargamil, Corridgery, and Gilgies, and the re-opening of the Warroo Provisional School.

The following applications for the establishment of new schools were received and dealt with during the year —

Gospel Oak	Provisional	Declined
Cardungle	} Half time	Granted, and now in operation
Rosewood		
Gilgies	House to house	Granted, to open in January
Beargamil	Provisional	do do.
Wowingragong	Public	do do.
Corridgery	Provisional	Granted
Daisy Park	do	do
East Parkes	Public	Declined

When the schools whose establishment has been sanctioned are opened, the educational requirements of this portion of the Colony will be fully met.

Every school under my supervision was fully inspected during the year, and one was reinspected. Of 89 such schools, 10 were found to be below the required standard, but it is only fair to point out that 4 of these were newly established schools under three months in operation, and 4 others were small schools without a 3rd class. Thus, out of 10 schools below standard, only 2 should, on their merits, be so classed. Making this allowance, the results compare very favourably with those of previous years.

The total number of pupils examined was 3,009, a decrease of 49 on last year's figures. In the more important subjects, the results were —

Reading	3,009 of whom	2,696 passed, or	89 per cent.
Writing	2,990	2,755	93
Arithmetic	2,891	2,346	81
Dictation	2,479	1,989	80
Grammar	981	774	79
Geography	981	776	79
History	969	701	72

On the whole, the percentages of passes are slightly higher than those for 1897, but the differences are very trifling. The premier position in point of efficiency falls, this year, to Forbes Superior Boys School, with Parkes Public and Forbes Superior Girls' next in order. Of Public Schools under one teacher, Yalgogrin Public stands first, while Boree Cabonne Provisional carries off the honours among the smaller schools.

The instruction is, in general, given on modern and approved methods, and is assisted by reasonably complete organisation, judicious classification, and firm and effective discipline.

During the year, considerable care and attention have been bestowed upon the condition of the Department's properties in the district, and no reasonable request for additions or repairs to school rooms or residences has been refused.

Under my own supervision 8 new school buildings have been erected, 2 schoolrooms have been enlarged, and repairs and improvements have been effected at 37 schools, the total amount so expended being £933 9s 5d. Works of similar character, and involving an outlay of £266 10s, are in various stages of progress.

Under the superintendence of the Chief Clerk of Works, several of the larger school buildings and residences have been enlarged, improved, and put in thorough repair, and when all contracts now in hand are completed, the general condition of the Department's vested premises in the district may be regarded as highly satisfactory.

There are 106 teachers of all grades employed in the district, 79 of whom are heads of departments, 16 are assistants, and 11 are pupil teachers. Of the 94 teachers and assistants, 24 are unclassified, but 16 of these are ex-pupil teachers.

During 1898, the sitting accommodation, on the basis of floor space, has increased from 5,301 to 5,554, and on the basis of air space, from 5,050 to 5,272. These numbers are considerably in excess of the gross enrolment.

##### Summary

Number of schools in operation during 1898	89
"    "    fully inspected	89
"    "    fully up to standard	79
"    pupils examined	3,009
Enrolment for December quarter, 1898	4,151
Average attendance	2,699
Accommodation provided (floor space)	5,554
No of teachers and pupil teachers	106
Total amount of school fees paid	£1,512 5s 9d
"    "    in arrear	£61 15s 3d
Number of free pupils, December quarter	454

The usual statistics, upon which this report is based, have already been furnished.

1st January, 1899

W GEO THOMAS,  
Inspector

## ANNEX M.

## INSPECTOR MCKENZIE'S REPORT.

THE schools in this section of the Bathurst District are sufficient in number, well distributed, and satisfactorily meet the requirements of the residents.

During the year 1898, there were in all 97 schools in operation. Of these, 2 have now been closed, leaving 95 schools on the register at the end of the year.

New schools were opened at Gilmandyke and Thompson's Creek; and an evening school was in operation for a few weeks at Burnt Yards. Megalong School was reopened, and everything is in readiness for the opening of schools at North Springwood and Mount David.

A school has been promised at Piper's Flat; applications from Eusdale Creek and Jenolan Caves are now under consideration; and an application from Malagrove has been declined.

Under the Inspector's supervision 6 small school buildings were erected, and repairs were carried out in 50 schools and 19 residences, at a total cost of £1,490. One small school building is in course of erection, and repairs are being effected in 8 schools and 4 residences at a further cost of £198.

Extensive repairs and improvements were also carried out in a number of schools and residences under the supervision of the Chief Clerk of Works.

Existing schools provide seats for 5,461 pupils, and statute accommodation for 5,255. This is in excess of requirements, as the gross enrolment for the year was 5,759; and the average attendance only 3,093, as compared with 3,459 in 1897, the decrease being due to sickness.

Ninety-six schools received a regular inspection, and 32 an ordinary inspection. As the result of the regular inspections, 92 schools were found up to or above standard, and 4 below, which is an improvement on the record for 1897 when 8 schools were below standard.

The schools taking highest rank in efficiency were Lithgow, Blackheath, Katoomba, Lawson, and Mount Victoria.

In all, there were 3,362 pupils examined, and of these 335 sat for exemption certificates, and 232 passed.

Considering the irregularity in attendance caused by sickness, the teachers are to be congratulated on the progress made. Many, however, would do well to devote increased attention, not only to the three main subjects, but also to Composition, Word Meanings, Mental Arithmetic, and Drill.

The organisation and discipline of the schools are improved; the material condition, as a rule, is good; and carelessly constructed time-tables and "sketchy" programmes are now very rarely seen.

All the more important schools possess Savings Banks, most of the schools have suitable libraries, and arboriculture receives a fair amount of attention.

The local branch of the Public Schools Athletic Association has received very satisfactory support, and the second Annual Meeting was a decided success, financially and otherwise.

The total number of teachers of all ranks employed in this section at the end of the year was 119, and, with very few exceptions, they have been diligent and conscientious in the discharge of their duties, and are deservedly esteemed in their respective localities.

A. D. MCKENZIE,  
Inspector.

3rd January, 1899.

## ANNEX N.

## DISTRICT INSPECTOR JOHNSTON'S REPORT.

THERE were 258 schools in operation in this district this year, 92 of which were in the Wollongong section, under Mr. Inspector McLelland; 72 in the Crookwell section, under Mr. Inspector Smith; and 94 in the Bowral section, under my own direct supervision. Four small schools in the Crookwell section, and one in the Wollongong section, were closed during the year in consequence of the attendance having fallen so low as not to warrant their being continued in operation; 253 schools, therefore, remained open up to the end of the school year. A public school was established at East Minto, and four small schools that had been for some time closed, were reopened. Of the 253 schools now in the district, 190 are Public, 22 Provisional, 36 Half-time, and 5 House-to-House schools. Twenty-six of the Half-time schools and all the House-to-House schools are in the Crookwell section.

New school buildings were erected at Bowral, Minto East, Colyton, Avondale, Bombo, Burraneer Bay, Otford, The Junction, and Bigga. Those at Bowral are handsome and commodious rooms, and are well fitted up with necessary appliances. They were erected by the Chief Clerk of Works, as were also those at Colyton, Minto East, and Avondale. The others were erected under the supervision of the Inspectors. A new schoolroom is being erected at Middle Arm.

Repairs and improvements were effected to 87 schoolrooms, and 20 teachers' residences by the Inspectors, at a total cost of £961 15s. 7d. Several others were repaired and otherwise improved by the Chief Clerk of Works. The condition of the school buildings of the district is now very satisfactory, and in marked contrast to that of a few years ago. Both schoolrooms and teachers' residences are more commodious, and in every way more comfortable.

With the exception of two small schools in the Crookwell section, and an evening school in the Wollongong section, all the schools of the district were fully inspected once during the year, and 7 were inspected a second time. Six of these latter inspections were made by the Chief Inspector, who also inspected Hoxton Park Public, Mittagong Primary, Moss Vale Public, and Sutton Forest Public. The 3 schools not inspected were closed before the Inspectors had an opportunity of visiting them. In point of efficiency, 233 schools exceeded the standard, 5 reached it, and 17 were below that mark. Of these last, 7 are House-to-house schools, 4 Half-time, 4 Provisional, and 2 small Public schools.

1,200 pupils were examined for exemption certificates, and 696 of these were successful. Many pupils possessing a good knowledge of the more advanced rules in arithmetic, failed in ordinary questions in the compound rules.

The pupils in attendance at the various schools of the district are provided with ample sitting accommodation, and their comfort has been carefully attended to.

There are 334 teachers of all grades employed in this district, viz., 224 in charge of schools, 10 mistresses of departments, 51 assistants, and 69 pupil-teachers. They are, as a body, highly respectable and conscientious in the performance of their duties. A few of the old-time teachers are still employed in this district; but their number is rapidly being diminished by retirement from the Service, and shortly the men and women who did such good service in the past, in spite of difficulties and discomforts which, happily, the present generation of teachers know nothing of, and without the appliances and conveniences now considered absolutely indispensable, will have wholly disappeared from the Service.

With few exceptions, the schools of the district were found to be in a satisfactory condition as regards efficiency, discipline, and organisation, and there is promise that next year's work will at least equal that of 1898.

W. H. JOHNSON,  
District Inspector.

## ANNEX O.

## INSPECTOR McLELLAND'S REPORT.

At the end of last year there were 90 schools in operation in the Wollongong section. During the present year, Budgong Vale Public was closed; Tongarra Provisional was raised to the rank of a Public School, and a new Provisional School was opened at Budgong Gap a few weeks ago. An Evening School was also opened at Yalwal in the winter; but it collapsed suddenly a short time after its establishment.

establishment. Thus, at the end of the year there are still 90 schools open, classified as follows:—Public, 80; Provisional, 8; Half-time, 2; total, 90. New buildings have been erected at Avondale, Bombo, Burraneer Bay, and Otford, the last three under my own supervision. The schoolroom at Kangaroo Valley has been enlarged, and additions are about to be made at Unandera and Wollongong. A new residence has been completed at Meroo, and another is to be erected at Yalwal. Extensive repairs and improvements have been made at various schools by the Chief Clerk of Works, and miscellaneous minor works under my own supervision have been effected at 41 schools and 6 residences, at a cost of £247 19s. 7d. The buildings generally are in good repair, and where further improvements are required the necessary action has already been taken.

Of the 92 schools open during the whole or any part of the year, all except Yalwal Evening School, were fully inspected. I have to thank Mr. Walker for the assistance he gave me during my absence from duty on account of illness. Besides dealing with correspondence, Mr. Walker inspected 11 schools, including Kiama and Woonona. Only 3 schools fell below the minimum standard required, viz., "tolerable." But the Department expects teachers to obtain, under reasonable conditions, results much higher than "tolerable" implies, a fact of which several teachers have been forcibly reminded.

Of 677 pupils examined for exemption certificates 402 were successful—that is, about 60 per cent. There is no special reason why this percentage should not be higher. In a select minority of schools the passes range from 80 to 95 per cent., a result due to sound and practical teaching.

The failures occur chiefly in Arithmetic and Dictation; but though comparatively few pupils fail to pass the test in writing, the number of really good writers is smaller than it should be. Too often it happens that the writing in copy-books is good, and on ordinary paper or on slates decidedly bad. This peculiarity arises from the fact that some teachers, while insisting upon careful work in the copy-books, allow any sort of scrawl elsewhere—a serious oversight to which attention has been called repeatedly.

Under the revised standards, some subjects will receive a much greater number of marks than formerly. This is especially the case with Reading, and it is to be hoped that teachers will take advantage of the inducement offered for achieving the best results in a subject of so much importance. Even in the reading of the best pupils there is noticeable a certain hardness, a want of sympathetic modulation of the tones of the voice. Reading is a difficult subject to teach in country schools, where so many of the children speak in a dull monotone characteristic of the class to which they belong. Some teachers, after wrestling bravely with this trouble for a time, at last give up the task as hopeless, and remain satisfied with mere fluency. A word of warning to teachers themselves in regard to the management of their voices may not be out of place here. Where the voice is used so constantly, it is apt to become harsh and strident, if great care is not taken to avoid the tendency to speak in too high a key; and if the teacher becomes insensibly accustomed to a bad voice in himself, he will inevitably cultivate a dull ear for faulty speech in his pupils. Of the remaining subjects, Grammar, Geography, and History may be mentioned as branches requiring more intelligent treatment in some schools. More common sense, less rote, and some imagination in teachers might make these and kindred subjects vastly more interesting to the children.

The condition of the great majority of schools in point of organisation and discipline is highly satisfactory.

The teachers as a body are industrious and well-conducted. Many of them work with an intensity of application that deserves the warmest praise. A few cases have been brought under notice where teachers are not respected by the people among whom they live. This is always the fault of the teacher. A good teacher may be, and sometimes is, unpopular; but no teacher ever failed to command the respect of parents or pupils without reason.

In conclusion, I am able to report that the educational work of this year has been on the whole effective in matters of primary importance, and there are not wanting indications of a better record for the ensuing year.

H. D. McLELLAND,  
Inspector.

26th December, 1898.

#### ANNEX P.

##### INSPECTOR SMITH'S REPORT.

At the end of 1897 there were under my supervision 36 Public, 9 Provisional, 22 Half-time, and 5 House Schools; total, 72 schools. At the beginning of 1898, 11 Public, 1 Provisional, 3 Half-time were exchanged for 3 Public, 1 Provisional, 4 Half-time in the Goulburn District.

Crookwell River Public was made Half-time, and worked with Five-mile Tree (reopened); Kent Grove Provisional and Pejar Provisional were also reopened; Benbengenar Provisional and Yarramoo Provisional were made Public; Hadley Half-time was made Provisional; and Little Narrawa Provisional and Leighwood Half-time, and Meryla and Meryla Valley Half-time were closed; so that my list comprises at the close of the year 29 Public, 9 Provisional, 26 Half-time, 5 House Schools; total, 69 schools.

Two new schoolrooms were erected during the year under my own supervision for £155 0s. 10d.—the Junction Public, to replace a small rented room, and Bigga Half-time, a most dilapidated building. Thirteen schools were repaired and improved for £63 12s. 9d., and one teacher's residence for £18 12s. Two more schools are under repair, but unfinished, to cost £36 6s. 6d.—Mount Costigan Public and Kent Grove Provisional School.

Under the supervision of the Clerk of Works, Kialla Public was repaired for £92; and three weather-sheds were erected—one at Cottawalla and two at Crookwell, for £101 8s. The old school buildings at Crookwell were disposed of to a purchaser in the town for the small sum of £15; but their removal has greatly enhanced the appearance of the playgrounds.

The erection of two small schoolrooms at Hadley and Junction Point have been sanctioned by the Minister, as well as the removal of the schoolroom at the Diamond to Station Hill, a locality considered far more central to a majority of the residents.

In the 70 schools at the present time in operation in the Crookwell section of the Bowral District, there are over 3,000 seats provided, reckoning 8 square feet to each child, and under 2,000 children enrolled; so that the accommodation is quite sufficient. The attendance at some of the long-established schools has shown a little decrease, on account of there being no new scholars to take the places of those grown up, or the old settlers have found it necessary to spread out to fresh fields and pastures new.

Most of the schools are in good condition, and well furnished, as their size and importance warrant, with every convenience for carrying on the good work of education.

Fifty-three candidates for certificates of being educated up to a required standard presented themselves for special examination during 1898, and 27 out of that number were successful.

The discipline and organisation of the schools continue to be satisfactory. Not a charge of any kind was laid against a teacher, nor by teacher against pupil, for misconduct during the past year. The teachers are much respected in their several positions, and the children under their care have made fair progress in every respect.

Seventy schools were examined by me during 1898. Of this number, 13 were below the required standard, viz., 1 Public, 1 Provisional, 4 Half-time, and 7 House Schools; 1 up to and 56 above standard. Jellore Provisional and Leighwood Half-time were not examined, because the opportunity offering for the immediate removal of the teachers to other places being taken, it was impossible to do so; in fact, at the last visit of the teacher to the Leighwood School there were no children at all present, and he found the building and tank riddled with bullets by some miscreants never discovered by the local police.

The

The number of pupils examined in the various subjects and the percentages of passes are shown hereunder :—

Subjects.	Number of pupils examined. 1897.	Passes.	Number of pupils examined. 1898.	Passes.
		per cent.		per cent.
Reading .....	1,584	86	1,316	84
Writing .....	1,584	91	1,316	93

Total .....	57

JOHN LESLIE SMITH,  
Inspector.

#### ANNEX Q.

#### DISTRICT INSPECTOR COOPER'S REPORT.

THERE were 371 schools in operation in the Goulburn District at the close of 1897. Some of these were either not reopened after December of that year, or were closed during 1898, and some were transferred to other districts. The losses thus occasioned were, however, more than compensated for by the establishment of new schools, the reopening of certain schools which had formerly lapsed, and the addition of schools from other districts; so that the list now includes 386 schools, or departments. These are distributed in the four sections of the district as under :—

Section of District.	Schools.	No. of Places, allowing for each Pupil—		Highest Quarterly Enrolment.
		8 square feet.	100 cubic feet.	
Goulburn .....	102	5,701	5,354	4,162
Braidwood .....	90	4,739	4,115	3,174
Bega .....	111	5,852	4,995	4,244
Yass .....	83	4,081	3,621	3,076
Totals .....	386	20,373	18,085	14,656

The existing schools afford sufficient accommodation for the available children, and the cases are now rare in which the rooms are overcrowded. Under the supervision of the Inspectoral Staff, 18 comfortable new schools have been erected, of wood, roofed with iron, and 5 have been enlarged, at a total cost of £1,094. Additional accommodation has thus been provided for 782 pupils, at an expenditure of about £1 8s. per pupil. The average cost was lessened by the fact that a few of the schools were erected by the residents. In the case of 5 schools, accommodating 190 pupils, with which I was personally concerned, the cost was £455, or about £2 8s. per pupil.

Repairs and improvements in connection with 152 schools, and 39 residences, have also been carried out, costing £2,847. A new brick school has been put up at Gundaroo, under the supervision of the Chief Clerk of Works, at a cost, including a weathershed, of £445, or £5 14s. 6d. per pupil.

#### Attendance of Pupils and Payment of Fees.

	Goulburn.	Braidwood.	Bega.	Yass.	Totals.
Mean quarterly enrolment .....	4,096	3,133	4,182	3,040	14,451
Mean average attendance .....	2,844	2,164	2,987	2,049	10,044
Fees received .....	£1,279	£949	£1,486	£942	£4,656

Taking the mean attendances as a guide, the regularity appears as follows :—

	1898.	1897.
Goulburn Section .....	69 per cent.	72 per cent.
Braidwood Section .....	69 „	72 „
Bega Section.....	71 „	74 „
Yass Section.....	67 „	71 „
Whole District.....	69 „	72 „

There has been a marked falling off in the regularity of attendance, caused by the prevalence, throughout the District, of sickness—especially measles, scarlatina, and influenza.

#### Inspection.

Of the 386 schools or departments that were in operation during the whole year, or some part of it, 391 received a regular inspection, and 16 underwent an ordinary inspection. The three very small schools, and the two evening schools, that were not inspected, were closed on account of diminished attendance before they were due for inspection. Two of these were in the Goulburn, two in the Braidwood, and one in the Bega Section.

The Braidwood section has been under the charge of Mr. Baillie during the year, that officer having succeeded Mr. Pitt, who retired from the service in consequence of illness. The Chief Inspector undertook the principal portion of the regular inspections of the Superior Public Schools at Braidwood, Cooma, and Queanbeyan. A special inspection of the Moruya Public School, in the Bega section, was held by me. The details of the inspections are given hereunder :—

Section.	Regular.	Ordinary.	Totals.	Pupils Examined.
Goulburn.....	102	+ 6	= 108	3,150
Braidwood.....	92	+ 4	= 96	2,364
Bega.....	112	+ 5	= 117	3,006
Yass.....	85	+ 1	= 86	2,252
Totals.....	391	+ 16	= 407	10,772

The general efficiency of the schools inspected is shown in the subjoined table :—

Section.	Class of School.	Above Standard.	Up to Standard.	Below Standard.	Totals.	Percentage up to or above Standard.	
						1898.	1897.
Goulburn .....	Public .....	57	...	...	57	100	98
	Provisional .....	7	2	...	9	100	90
	Half-time.....	36	...	...	36	100	94
	Totals.....	100	2	...	102	100	95
Braidwood .....	Public .....	39	...	...	39	100	100
	Provisional .....	8	...	3	11	72	100
	Half-time.....	35	2	5	42	89	100
	Totals.....	82	2	8	92	91	100
Bega .....	Public .....	61	14	...	75	100	100
	Provisional .....	15	...	...	15	100	100
	Half-time.....	22	...	...	22	100	100
	Totals.....	98	14	...	112	100	100
Yass .....	Public .....	53	1	...	54	100	99
	Provisional .....	16	1	1	18	94	100
	Half-time.....	11	2	...	13	100	87
	Totals.....	80	4	1	85	98	96
Grand Totals.....		360	22	9	391	97	98

This table indicates improvement in the Goulburn and Yass sections, sustained efficiency in the Bega section, and a retrogression in the Braidwood section; while the efficiency of the whole of the schools of the district is about equal to the high standard of the previous year.

The proficiency of the pupils in the several subjects of examination is shown below :—

Subject.	Numbers examined in—		Percentage of Passes.				Percentage of Total Passes.

Science .....	158	231	85	100	92	100	89	79

The results in reading and writing, 92 and 94 per cent. respectively, are very satisfactory; while those in arithmetic, 84 per cent., are relatively high, although there is still room for improvement in regard to that important subject. In dictation the proficiency is considerably below the average of the other subjects; but, on the whole, the high proficiency of past years has been well maintained.

*Exemption*

*Exemption Certificates.*

At the regular inspections held after the 19th April last, those pupils who had already gained exemption certificates were, in accordance with Departmental instructions issued on that date, examined with the children due for examination for such certificates. The total number examined in the district was 1,400. Of that number, 954 were successful, and additional certificates were awarded to 531, the remainder having already obtained them. In the Goulburn section, 70 per cent. of those examined for the first time, passed, some improvement being thus manifest, as compared with the result—68 per cent.—for 1897. The data available does not permit of a similar comparison in respect to the other sections of the district. In the schools under my personal supervision, there were 238 children still on the rolls at the dates of inspection, who had previously gained certificates. It is, I think, a healthy sign that so many pupils remained at school, after having passed the exemption examination.

*Cookery Class.*

In January, a cookery class was again organised in Goulburn, and has been carried on successfully under the charge of Miss H. Rankin. The class consists of 60 pupils, each pupil receiving one lesson a week, during the half-year over which the course extends. Provision is thus made for the full instruction of 120 girls in the year. At the end of each term, the pupils were subjected to a practical test of their proficiency, and acquitted themselves admirably, all having obtained very high marks from the examining committee. The class has proved to be, as formerly, very popular, and has done much good. It will be continued after the present vacation.

*Athletic Association and Swimming Club.*

The Public Schools Athletic Association, formed in Goulburn in 1897, held a sports meeting on 4th November, which was well attended, and was, in every sense, a highly successful gathering. Too much praise cannot, I think, be given to those who, with zeal and self-denial, devoted themselves most willingly to the work of organising and carrying out that meeting, not the least pleasing feature of which was the cordial manner in which so many teachers co-operated to promote the interests of the association.

Early in the year, the teachers of Goulburn and its vicinity established a swimming club that has, so far, received good support from the boys and girls attending our schools, and will, I hope, become a permanent and useful institution.

*Teachers.*

At the close of the year, there were 401 teachers of all ranks employed in the district, namely:—

319	Principal Teachers
7	Mistresses of Departments
32	Assistants, and
43	Pupil-teachers.

Of the teachers other than pupil-teachers, 83—i.e. 23 per cent., are unclassified, but most of these have been trained as pupil-teachers.

In respect to personal conduct, attention to duty, and general efficiency, the teachers, as a body, have continued to deserve high commendation.

*Summary.*

Satisfactory work has been done, during the year, in providing additional accommodation, in improving the material organisation of the schools and residences, and in maintaining the efficiency of the instruction; and the prospects of 1899 are encouraging. Reports from inspectors Baillie, Durie, and Sheehy are forwarded herewith.

2nd January, 1898.

D. J. COOPER,  
District Inspector.

## ANNEX R.

## INSPECTOR BAILLIE'S REPORT.

At the close of the year 1898, there were in this section of the Goulburn District, 90 schools in operation, 39 were Public Schools, 11 Provisional, and 40 Half-time.

At the beginning of the year 87 schools were in operation, 4 of which have since been closed through small attendance, viz., Kalkite, Rocky Plain, Durran Durra, and Clifford. Monkitee, Eaglehawk, and Jellamatong were not reopened. Seven new schools were established to meet the growing wants of outlying portions of the district, viz., Bolaira, Burrill Lake, Little Forest, Ingebyra, Durras Lake, Runnymede, and Uradux. A Provisional School will be opened at Norongo immediately after the vacation. New schools to replace old and dilapidated structures have been erected at Corang River, Moonbah, Araluen West, and Currockbilly. The schools at Captain's Flat and Rhine Falls have been enlarged.

Extensive repairs have been carried out at the Braidwood Superior Public School, and a new and substantial residence erected at Burrill, under the supervision of the Clerk of Works.

Considerable improvements have been effected in repairing and renovating the schools in this section of the district during the past year, under Inspectorial supervision (Mr. District Inspector Cooper and myself). Mr. Cooper had made a tour of the district prior to my appointment at the beginning of the year, and had a large number of works on hand when I took charge. Thirty-eight schools were repaired at an outlay of £624 ls. 3d., 5 teachers' residences at a cost of £179 6s. 1d., and 9 new buildings, and an addition to one at an outlay of £437 7s. 6d. Four schoolrooms and 3 teachers' residences are undergoing repairs, which will amount to £112 5s.

The Public School at Captain's Flat, and the Provisional School at Buckenbour, were added to this section; and the Public Schools at Bredbo and Colinton were transferred to the Goulburn section.

The accommodation at the end of 1897 provided floor-space, allowing 8 square feet to each pupil, for 4,562 pupils, and air space, allowing 100 cubic feet to each pupil, for 3,854 pupils. At the end of 1898, the accommodation was 4,739 and 4,115 seats, being an increase of 177 and 261 places respectively.

The schools are well distributed, the accommodation sufficient, and the material condition very fair. The majority of the Public School buildings are respectable and commodious, but several of the Provisional and Half-time School buildings are small, imperfectly ventilated, and of a very primitive character as regards structure.

*Enrolment, Average Attendance, and School Fees.*

The enrolment, average attendance, and the school fees received during the year were:—

	Enrolment.	Average Attendance.	School Fees.
March quarter.....	3,127	2151·5	£201 11s. 3d.
June quarter.....	3,174	2158·9	£257 8s. 4½d.
September quarter	3,137	2164·6	£222 1s. 3d.
December quarter	3,106	2182·9	£267 15s. 9d.

The attendance was greatly reduced on account of sickness and infectious diseases, such as measles, scarlatina, &c. The whole number of pupils enrolled during the year was 3,870. Of these 403 attended more than one school. The school fees received amounted to £948 16s. 7½d., and the fees in arrear to £32 8s. 7½d.

Owing to failures in mining speculations, poor results from farming operations, and want of employment, 685 pupils had free education granted for the year or for some portion of it.

*Inspection,*

*Inspection, Instruction, and Discipline.*

During the year there were 94 schools in operation, all of which, with the exception of Kalkite and Rocky Plain Half-time Schools, closed early in the year through insufficient attendance, received a regular inspection, and 4 an ordinary inspection. Buckenbour was inspected by Mr. Inspector Durie.

Of the 92 schools inspected, 82 were above standard, 2 up to, and 8 below,—5 of the 8 below standard were new schools opened during the year.

Good, sound, and faithful work has been done in the majority of the larger schools, of which Braidwood Superior and Cooma Superior deserve special mention. The Chief Inspector examined the Fourth and Fifth Classes in both these schools, and the District Inspector assisted in the examination at Cooma.

2,364 pupils were examined; of this number 298 were examined for Exemption Certificates, and 190, or 64 per cent., passed the necessary test.

The order, discipline, and management of the schools are very fairly satisfactory; the pupils are docile, wellbehaved, and, as a rule, smart and intelligent.

School libraries have been formed in connection with several of the more important schools.

The Kindergarten System has been introduced into the larger schools, and fair progress has been made at Braidwood Superior, Cooma Superior, Major's Creek, and Milton Public.

Drill has not received the amount of attention that the importance of the subject demands, but I have reason to hope better results will be produced during the ensuing year.

*Classification of Teaching Staff.*

## Teachers and Assistants—

Class I A.....	1
„ I B.....	1
„ II A.....	5
„ II B.....	3
„ III A.....	36
„ III B.....	4
„ III C.....	4
Unclassified.....	24
Total .....	78

## Pupil-teachers—

Class 1.....	...
„ 2.....	3
„ 3.....	2
„ 4.....	4
	9
Total of all grades.....	87

With few exceptions the teachers and pupil-teachers are zealous and assiduous in the performance of their duties, and exemplary in their conduct.

The majority of the unclassified teachers served as pupil-teachers.

The outlook for 1899 is healthy.

J. W. V. BAILLIE,  
Inspector.

31st December, 1898.

## ANNEX S.

## INSPECTOR SHEEHY'S REPORT.

THIS year there were 85 schools under my supervision. The number in operation at the end of 1897 was 84, and in July a new Provisional school was opened at Five-mile Creek, near Gundagai.

The Half-time Schools at Jones' Creek and Yammatee, and the Provisional Schools at Brooklands and Tonal were converted into Public Schools, and the Half-time Schools at Ardnacloch and Bongongolong into Provisional Schools. Owing to paucity of attendance, Lang's Creek Half-time and Tarrabandra Public were discontinued. Hence, at the close of the year, there were 83 schools on my list, viz. :—

Public .....	53
Provisional .....	18
Half-time.....	12
Total .....	83

Applications were received for new schools in four localities. These were inquired into with the result given hereunder :—

Locality.	Kind of School applied for.	Result.
Prince of Wales Mine .....	Public .....	Declined.
Bongongo .....	Provisional .....	„
Wee Jasper .....	„ .....	Granted.
Bondo.....	„ .....	Under consideration.

All schools were regularly inspected. One received an ordinary inspection, and several were visited incidentally in the course of the year. Only 1 school was under the standard (50 per cent. of possible marks), 4 schools reached, and 80 exceeded it. In 38 the marks gained for general efficiency are higher, and in 37 they are lower than those for last year.

In 41 per cent. of the total number of schools the organisation is very fair, in 39 per cent. it is below that mark, and in 20 per cent. above it. The cleanliness and tidiness of the schoolrooms and premises receive, with a few exceptions, careful attention. The classification of the pupils is in general suitable, and the instruction is judiciously regulated. The

The government, as a rule, produces good order. It is, generally speaking, firm, and is rarely of a kind to disturb harmonious relations with the parents. One case of excessive corporal punishment was inquired into, and was suitably dealt with.

During the December half-year the attendance was very much affected through the prevalence of scarlatina, influenza, and measles. Four schools were closed for short periods, and some were for several weeks nearly empty.

*Proficiency.*

The percentage of passes in each subject is given in the following table :—

Subjects.	Number Examined.	Number Passed.	Percentages.	
			1898.	1897.
Reading.....	2,252	1,844	81·8	82·9
Writing.....	2,165	2,094	96·7	94·8
Dictation.....	1,881	1,358	72·1	70·5
Arithmetic.....	2,186	1,848	84·5	87·1
Grammar.....	804	460	57·2	70·9
Geography.....	905	530	58·5	68·5
History—English.....	905	514	56·8	51·9
"    Australian.....	115	94	81·7	100·0
Scripture.....	2,252	1,404	62·3	63·9
Object Lessons.....	2,242	2,011	89·7	88·1
Drawing.....	2,185	1,938	88·7	90·6
Music.....	2,252	1,194	53·0	53·8
French.....	7	7	100·0	100·0
Euclid.....	68	68	100·0	100·0
Algebra.....	16	7	43·7	100·0
Mensuration.....	25	15	60·0	74·2
Latin.....	19	19	100·0	100·0
Needlework.....	855	849	99·3	100·0
Drill.....	2,252	1,866	82·8	86·0
Natural Science.....	10	10	100·0	.....

In 12 subjects the percentage of passes is between 81 and 100 ; in 3 it is between 60 and 72 ; and in 5 it is below 60. Algebra, music, history, grammar, and geography form the latter group.

237 pupils were examined for exemption certificates. Of these 122 satisfied the prescribed test, and 78 passed for the first time.

*Teachers.*

There are 90 teachers of all ranks at present employed in this section, viz. :—77 teachers in charge of schools, 6 assistants, and 7 pupil-teachers.

The teachers as a body are conscientious in the discharge of their duties, and have worked satisfactorily during the year.

*Accommodation.*

The sitting accommodation at the end of 1897, reckoned at 100 cubic feet of air space, consisted of 3,635 places. During the year 64 additional seats were provided by the erection of two new schoolrooms, and 78 were lost by the closing of two schools, and the giving up of one old building. Hence, at the close of the year, the number of seats for pupils was 3,621.

In the subjoined table detailed information is given as to the cost, &c., of the new buildings :—

School.	Cost.	Places at 8 square feet of floor space.	Places at 109 cubic feet of air space.	Supervised by	Remarks.
Ardnaclach Provisional ... ..	£ s. d. 78 10 0	40	32	Inspector...	Erected to replace old schoolroom.
Five-mile Creek ,, .....	78 16 0	40	32	Inspector ...	Erected where no school existed before.

Under my supervision repairs and improvements were effected to 49 schools and 12 teachers' residences at a cost of £409 13s. Repairs to 6 schools are in progress which will cost £41 10s. 3d.

The erection of a school building at Wee Jasper, and of a teacher's residence at Manton, has been sanctioned.

Tenders have been accepted for the following to be carried out under the supervision of the Chief Clerk of Works :—Additions to residence and repairs, &c., to school and residence at Murrumbateman, £335 8s. 6d.; additions to residence and improvements at Jugiong, £294 10s.; additions to residence at Gundagai, £195; improvements and repairs, Murrumburrah, £220; Edwardstown, £125; and Gundagai South, £97.

*Summary.*

All schools have been fully inspected. In 38 there is an improvement in the general efficiency, and in 80 (94 per cent. of the whole) the results are above the standard. One new school was opened during the year, the establishment of another has been sanctioned, and two new buildings to replace old ones have been erected. The educational requirements of the section are well provided for, and the prospects for the ensuing year are encouraging.

31st December, 1898.

P. F. SHEEHY,  
Inspector.

ANNEX T.

INSPECTOR DURIE'S REPORT.

At the close of 1898 there were 111 schools in existence in Bega section of Goulburn district, comprising 75 Public, 14 Provisional, and 22 Half-time schools. An evening Public school was open for a short time during the year, but closed in October. New Provisional schools at Sam's Corner and Bimbimie will be opened in January, 1899, so that the new year will begin with 113 schools, consisting of 75 Public, 16 Provisional, and 22 Half-time.

The

The attendance of pupils in all schools for the year is shown in the following table :—

Quarter.	Enrolment.		Average Attendance.		Percentage.	
	1897.	1898.	1897.	1898.	1897.	1898.
March .....	4,171	4,155	3,049·2	2,928·5	73·1	70·4
June.....	4,137	4,244	3,073·4	3,001·8	74·2	70·7
September .....	4,242	4,175	3,145·9	3,121·0	74·1	74·7
December .....	4,175	4,153	3,121·0	2,898·9	74·7	69·8

The attendance throughout the year has been seriously affected by sickness amongst the pupils. Measles, bronchitis, and scarlatina have been prevalent, the first especially so. This will explain the falling off in attendance in three out of the four quarters of the year, as compared with 1897.

Of the schools in operation during the year, all except Mogilla Evening Public School received a regular inspection. This school was in operation for a little over three months, and closed before I could arrange to inspect it. Four schools received an ordinary inspection. Moruya Public was regularly inspected by the District Inspector. The inspections for the year were thus :—

Regular.....	112
Ordinary .....	5

Total..... 117

The efficiency of the schools as compared with 1897 may be shown as follows :—

Schools.	Below Standard.		Up to Standard.		Above Standard.	
	1897.	1898.	1897.	1898.	1897.	1898.
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.
Public .....	...	...	31	18	69	82
Provisional.....	...	...	...	...	100	100
Half-time .....	...	...	7	...	93	100
All .....	...	...	22	12	78	88

The schools have thus well maintained the high efficiency shown in previous years. Not one school was found to be below standard, while 88 per cent. were above. The pupils examined for exemption certificates numbered 390, and of these 280 passed the test: 165 obtained certificates for the first time. The passes this year were 72 per cent. of those examined.

During the year 5 new school buildings were erected under my supervision, 2 were enlarged, 49 schools and 10 residences were repaired and improved, and 1 weather-shed was erected. The cost of these works amounted to £1,332 10s. Four new schools are now in course of erection, and one is undergoing repair. One school building, Wellesley Public, was unfortunately burnt down in November. At a Coroner's inquiry held to investigate the cause of the fire there was no evidence to show how it originated. A new school is now in course of erection.

At the close of 1898 there were 112 teachers employed in schools under my supervision, viz., 78 males and 34 females.

#### Summary.

1. Owing to various forms of sickness prevailing throughout the year, the attendance was slightly lower than in 1897. The efficiency of all schools, however, has been well maintained.
2. The schools are well distributed, and when those in course of erection are opened they will be ample for the requirements of the district.
3. The outlook for 1899 is encouraging.

P. DURIE,  
Inspector.

29th December, 1898.

#### ANNEX U.

##### DISTRICT INSPECTOR LOBBAN'S REPORT.

At the beginning of 1898 there were 318 schools in operation in the Grafton District. During the year 1 new school was established in the Grafton section, 2 in the Lismore section, and 3 in the Port Macquarie section. The list, therefore, at the close of the year contained 324 schools, viz., Grafton 107, Lismore 100, and Port Macquarie 117. They were graded as follows :—Public 245, Provisional 39, Half-time 34, House-to-house 5, and Evening 1.

School premises at Coraki and Lismore, in the Lismore section, and at Arakoon and Gladstone, in the Port Macquarie section, are in progress under the direction of the Chief Clerk of Works, who also had several buildings repaired in these sections.

The following works were planned and supervised by the Inspectors :—11 new school buildings in the Grafton section, 7 in the Lismore section, and 3 in the Port Macquarie section. Two buildings were enlarged in the Grafton section, 2 in the Lismore section, and 3 in the Port Macquarie section. Forty-two school buildings and 24 residences were repaired and improved in the Grafton section, 54 school buildings and 14 residences in the Lismore section, and 41 school buildings and 14 residences in the Port Macquarie section. One new residence was built in the Lismore section.

Two new residences are nearly completed in the Grafton section, 1 is in progress in the Lismore section, and 2 in the Port Macquarie section. Two school buildings in the Grafton section will be ready for occupation after the vacation, and 4 will be opened in the Lismore section. The expenditure on new buildings and improvements in the Grafton section amounted to £2,515 0s. 8d., in the Lismore section to £1,967 15s. 11d., and in the Port Macquarie section to £1,781 1s. 4d. Works in progress and approaching completion in the Grafton section will cost £1,232 19s. in the Lismore section £985 3s. 6d., and in the Port Macquarie section £2,105 19s. 5d. The total expenditure under the Inspectors was £6,263 17s. 11d., and the amount still due is £4,324 1s. 11d.

At the beginning of the year there was floor space in existing school-buildings for 19,562 pupils, and air space for 19,359. By the erection of commodious new buildings to supersede old and unsuitable ones, by the establishment of new schools, and by additions to school-rooms where the seating was insufficient, the accommodation at the end of the year afforded floor space for 20,173 pupils, and air space for 20,037. Generally speaking, this is ample at present. The school premises are nearly all in good order. Much attention was devoted to the teachers' residences with the view of making them more commodious and comfortable, and a fair degree of success in this direction was achieved.

The

The schools are, as a rule, well found in furniture and apparatus, and a fairly liberal supply of books and other school requisites is usually in stock. Many of the school-houses have been provided with broad verandahs, which serve the double purpose of weather-sheds for the children and a protection to the schoolrooms from the direct heat of the sun. Lighting and ventilation have received due attention, more especially in the buildings recently erected. Iron tanks are placed at nearly all vested schools, and a liberal supply of good water is thus provided. Where the school grounds are enclosed, shade trees are planted and gardens are cultivated. The attention to arboriculture, however, is not nearly so marked now as it was a few years ago. The instructional documents prescribed are generally compiled with much care and fair judgment, and the records are, with very few exceptions, neatly and correctly kept. The returns are furnished with commendable promptness and accuracy by 90 per cent. of the teachers; the rest either make mistakes in the entries or fail to enclose some important document in the packet. If these transgressors could only see the inconvenience and delay which their neglect causes they would certainly be more careful in future.

All the schools received a regular inspection; and in 4 in the Grafton section, and 1 in the Port Macquarie section ordinary inspections were held. There were 12,290 children examined at the regular inspections—27 more than in 1897. Grafton section had 4,084; Lismore section 4,214; and Port Macquarie section 3,992. The results generally were satisfactory. In every case where a fair approach to the Standards was not reached, the result was traceable to indolence or neglect on the part of the teacher. Wherever constant, honest work is done, creditable results follow. The passes in Reading (93 per cent.), Writing (87 per cent.), Dictation (85 per cent.), and Arithmetic (72 per cent.), cannot be regarded as unsatisfactory, although the highest possible results in these subjects should be aimed at. Of the 324 schools inspected, 310 were up to or above the standard, and only 14 were below. Some of these had not been in operation a full year, and others were without a third class.

The general use of the Australian Copy Books in the schools is a decided improvement; and a clear, bold, legible handwriting is being developed. No other books are in use in the Grafton section.

In some schools too little attention is paid to English Grammar, and the teaching of Composition is not always intelligently performed in the earlier stages. The practice of giving a subject on which to write a letter is very objectionable. Instead of inducing an easy, natural style, this method produces crude, laboured, and mechanical compositions.

The excellent map of New South Wales, published by Banks, enables intelligent teachers to make their pupils familiar with the physical features, the towns, and railways of their own country. In a great many schools this is done; but there are still some in which the pupils seem to know more about America or Asia than they do about Australia. In the higher classes mapping is recognised as a valuable aid to the study of Geography.

English History is a popular subject in most schools; and, as a rule, the facts and dates in the text books are well known.

Scripture Lessons are read in all schools, and in many of them the pupils answer well on this subject.

Object Lessons are universally given, but to a large extent they have degenerated from the original plan employed. Too much, it appears to me, is now attempted in connection with these lessons.

Books with suitable copies set for Freehand Drawing would be of great assistance to many teachers in country schools. An "Australian Drawing Book" with Freehand Copies suited to the requirements of the Standards would be universally adopted.

Wherever the Tonic-Sol-Fa system of musical notation is employed, and properly applied, part singing becomes an easy matter. In many of the schools singing is a very pleasing feature.

Needlework is taught with more or less success in all schools where married teachers are in charge, or where lady teachers are employed. The standards are followed, and the results attained are very fair.

Drill is taught in all schools, as required by the Standards. In the Grafton Superior Public School the range is complete, and an efficient corps of 60 cadets, with a drum and fife band, is enrolled.

The examinations for certificates were conducted in the manner prescribed by the Department. In the Grafton section 504 were examined, and 431 passed; in Lismore section 452 were examined and 280 passed; and in Port Macquarie section 496 were examined and 322 passed.

The discipline maintained throughout the District is of a high order. The pupils are invariably clean and nicely dressed, respectful in their demeanour, and fairly self-reliant. Corporal chastisement, as an aid to teaching, is generally discredited; and severity in the matter of punishment is not nearly so common as it was in former years.

Successful branches of the Public Schools Amateur Athletic Association have been established at Grafton, Lismore, and Kempsey. At each centre the movement is popular. Arranging and directing the sports for the pupils entail a great amount of labour on the teachers who undertake these duties, but the successful results, so far, have been most gratifying to them. The Annual Sports Meeting, held on Elizabeth Island, in the Clarence River, was one of the largest and most enthusiastic gatherings of the year. The competitions in foot-racing, swimming, drill, and physical training were well arranged and keenly contested.

There are 19 School-banks in the Grafton section, with 691 depositors, who have £208 16s. 6d. at their credit; 15 in the Lismore section with 483 depositors, and £170 6s. 10d. at their credit; and 18 in the Port Macquarie section, with 493 depositors and £150 4s. 5d. at their credit. The Banks thrive best in the schools where the teachers take a special interest in them.

A comparatively large number of children continue to receive free education. They reside chiefly in the larger towns, where their parents cannot obtain remunerative employment.

Notwithstanding the prevalence of rain in the early part of the year, and the existence of a widespread epidemic of measles later on, a very fair daily average attendance was maintained throughout the year. Very few parents were dealt with under the compulsory clauses of the Public Instruction Act. As a matter of fact, people are anxious to send their children to school, and many parents make sacrifices in order to give their children a fair education.

No instruction in cookery was given in any of the schools during the year, but it is anticipated that classes will be formed in Grafton during 1899.

Special religious instruction was given in only a comparatively few schools of the district in 1898, and in still fewer was it systematically carried out. A decided falling off in this respect, on the work of former years, has to be reported.

The following schools received passes at the University examination in June:—Ballina Superior, 1; Coraki Public, 1; Grafton Superior, 17; Kempsey (East) Public, 1; Kempsey (West) (Superior) 1; Lismore Superior, 2; and Wingham Superior, 3.

The Public School Boards rendered valuable help by cheerfully supervising works in connection with improvements to school premises in their respective sub-districts, and in otherwise, as opportunities offered, efficiently discharging the duties pertaining to their office.

The School Staff comprises 300 teachers, 4 mistresses, 1 work mistress, 29 assistants, and 74 pupil-teachers. With very few exceptions the teachers realise their responsibilities, and conduct themselves in a manner becoming their position. The pupil-teachers are well behaved, dutiful, industrious, and studious.

Comparing

Comparing the district in 1838—the first year it was under my supervision—with its condition now, the following results are shown :—

	1838.	1898.
Schools in operation at close of year .....	233	324
Pupils examined at annual inspection .....	8,898	12,290
Reading :—Percentage of passes .....	85	93
Writing : .....	85	87
Arithmetic : .....	69	72
Teachers, mistresses, and assistants employed .....	239	334
Pupil-teachers employed .....	64	74
Inspectors .....	3	3
Clerk of Works and attendance officers.....	3	...

These figures show that steady progress has been made during the past ten years. The actual advancement is really much greater than the bare figures suggest, and is largely due to the constant settlement and development of new country. The only decrease is in the Departmental Staff. The Clerk of Works and the two attendant officers were retrenched some years ago ; and since then the greater portion of the work which they used to do has been done by the Inspectors, in addition to their regular duties.

Viewing the condition of primary education in the district at present, there is much to afford satisfaction ; and no reason is apparent why the steady progress of the past should not continue in the years to come.

A. LOBBAN,  
District Inspector.

Grafton, 5th January, 1899.

#### ANNEX V.

##### INSPECTOR WRIGHT'S REPORT.

Of the 115 schools in operation at the end of 1897, one (Bungay Public) was not reopened in 1898, so that the year commenced with 114 schools. Three new schools were opened, viz., Taree Evening Public, Mungay Creek Provisional, and Warrell Creek Provisional, the total number of schools open during the year being 117, classified as follows :—82 Public, 1 Evening Public, 14 Provisional, 20 Half-time.

These are all in operation now. A few small schools will probably be needed in parts of the district where the population, now sparse, is increasing ; but, speaking generally, the schools established are sufficient for the requirements.

The quarterly enrolments and average attendances were :—March quarter, 5,078 and 3,549·2 ; June quarter, 5,155 and 3,479·3 ; September quarter, 5,279 and 3,752, and December quarter 5,198 and 3,844·1.

Eight square feet of floor space is now provided for 7,300 pupils, and 100 cubic feet of air space for 7,243—a gain for the year of 180 and 212 places respectively. Ample accommodation is therefore provided in the aggregate, though in a few cases increased room will soon be required. There has been a large expenditure on the school buildings and grounds during the year. Under the Chief Clerk of Works, new brick buildings (school and residence) are in progress at Gladstone, while the erection of a new school building at Port Macquarie, new classrooms, &c., at West Kempsey and Summer Island, and a general overhaul of most of the large buildings have been sanctioned. Under my own supervision, three new school buildings and two classrooms have been erected, one school building has been enlarged, and 41 schools and 14 residences have been repaired at a cost of £1,781 1s. 4d. ; while seven new buildings, two new residences, and repairs, &c., to 12 schools and residences are in progress at a cost of £2,105 19s. 5d., of which instalments amounting to £808 15s. have been paid.

Almost without exception the property of the Department is carefully looked after by the teachers, and in many cases, notably at Oxley Island, Mitchell Island, Euroka, and Cedar-party Creek, the care and attention bestowed upon the grounds by the teachers deserve special commendation.

Every school open during the year received a regular inspection, but time would not permit of more than one ordinary inspection being held. Very few defects are noticeable in either organisation or discipline, and the attainments of the pupils speak well for the earnestness and ability of the teachers. Of the 117 schools inspected, 107 (91·4 per cent.) were above standard requirements and 10 (8·6 per cent.) below.

The results obtained in Reading, in which 84·8 per cent. of the pupils examined were up to or above the standard, and Writing (78·4 per cent.) were lower than those obtained last year by ·4 per cent. and 1 per cent. respectively, while there is a decided improvement of 5·2 per cent. in Dictation (86·5 per cent.) and of 1·1 per cent. in Arithmetic (71 per cent.). Taken collectively this year's results are fully equal to last year's, and it is not reasonable to expect any great improvement.

The teaching staff consists of 133 teachers of all grades, viz. :—105 principal teachers, 8 assistants, and 20 pupil-teachers. Of the principal teachers 20 are unclassified, but nearly all of these have served as pupil-teachers under experienced masters, and are thoroughly conversant with their work. As a body the teachers are earnest and capable, highly respected in the localities in which they reside, and doing good sound educational work. A few complaints were made by parents during the year, none, however, of a serious nature, and on investigation it was found in nearly every case that the teacher was perfectly justified in the action taken.

During the year the sum of £1,916 4s. 4½d. was collected as school fees, and at the end of the year the fees in arrear amounted to £59 13s. In many cases, where it was shown that the parents could not pay the fees owing the arrears were cancelled, and a considerable sum of money was written off in this manner ; and in addition to this, free education was granted to about 700 scholars.

There are School Banks in operation in connection with 18 schools, the total number of depositors being 493, and the amount to their credit £150 4s. 5d.

Successful work has been done during the year, the schools are in good order, the staff efficient, and the prospects for the year 1899 are promising.

S. WRIGHT,  
Inspector.

Port Macquarie, 3rd January, 1899.

#### ANNEX W.

##### INSPECTOR BOARD'S REPORT.

At the end of last year, 98 schools were in operation in this section ; this year closes with 100. Of these, 83 are Public, 13 are Provisional, and 4 are Half-time schools. New Provisional schools have been opened at Bilambil and Goolmangar, and applications for Provisional schools at Jiggi, Crabbe's Creek, Goonengerry, and Pretty Gully have been granted. The necessary buildings for these schools having been erected, they will be brought into operation immediately after the Christmas vacation. Though there are now very few families not provided with the means of education, the steady growth of settlement is likely to render extension necessary during the coming year.

During

During 1898, two new school buildings have been erected to replace old ones, and the enlargement of six others has been found necessary. Existing buildings provide accommodation for 6,160 pupils, while the highest quarterly enrolment for the year was 5,454. With such a small margin of unoccupied accommodation, and a steadily increasing population, several additions to buildings will be needed in the near future.

Except in a few cases, which are to receive attention early next year, the school premises are in good condition. Much has been done during the year towards increasing the accommodation and comfort of teachers' residences. Works have been completed, under the Inspector's supervision, at a cost of £1,967 15s. 11d., and those now in progress involve an expenditure of £985 3s. 6d. more. Under the supervision of the Chief Clerk of Works, contracts have been carried out or are now in hand at a cost of £1,628.

All the schools in this section received a regular inspection; five of them, by means of an interchange of inspections, were inspected by Mr. District Inspector Lobban. In several schools the work of instruction has been hampered during the latter half of the year by irregular attendance, caused by the prevalence of epidemics. The results of inspection show a slight advance in the percentage of passes in Dictation, Arithmetic and History, and a small decrease in Reading, Writing and Grammar. Of 452 pupils submitted to examination for exemption certificates, 280, or 62 per cent., passed. The disciplinary methods employed in the schools are suitable and effective, and the organisation is, on the whole, of a satisfactory character.

The Teaching Staffs of this section comprise 130 teachers of all ranks. They are classified as follows:—Class I., 1; Class II., 25; Class III., 64; Unclassified, 18; Pupil-teachers, 22. The teachers, as a body, are diligent and earnest, and the pupil-teachers are giving satisfaction to all concerned in their training.

27th December, 1898.

P. BOARD,  
Inspector.

#### ANNEX X.

#### DISTRICT INSPECTOR T. DWYER'S REPORT.

At the beginning of 1898, there were in operation in Maitland District 243 schools, which were distributed as follows, viz:—

	Maitland Section.	Newcastle Section.	Dungog Section.	Total.
Public Schools.....	71	60	69	200
Provisional Schools .....	6	.....	12	18
Half-time Schools .....	4	.....	14	18
House-to-House Schools .....	.....	.....	3	3
Evening Public Schools.....	1	2	1	4
Total.....	82	62	99	243

In Maitland section during the year, Black Hill Public was transferred to the section from Newcastle. Brownmuir and Sawyer's Gully were reduced to Half-time rank; and four Provisional Schools were opened, viz., Bureen (new), Castle Rock (reopened), Edinglassie (new), and Marshwood (new).

A new schoolroom was erected (to replace an old non-vested one) and opened at Baerami.

One new Provisional has been just completed at Gungal, and will be opened after the present vacation. Action has been taken to erect a vested Public Schoolroom at Dalwood to replace Marshwood non-vested, and a Provisional School at Stockrington, where no school previously existed. Forty-four schools and 22 residences were improved under my supervision at a cost of £1,028 15s. 2d. In the whole district 109 schools and 34 residences underwent repairs under the Inspectors at an expenditure of £2,100 18s. 10d. The action of J. C. White, Esq., of Edinglassie, near M. Brook, in erecting a commodious schoolroom and out offices at Edinglassie, and handing them over to the Department, at a peppercorn rental for seven years, is a noble one, and is worthy of public recognition. The Half-time School at Rouchell, has been removed to Segenhoe, and re-erected on a more central site. Its attendance of pupils is so increased by that removal as to warrant its advancement to full-time rank.

The number of schools in operation during some portion of 1898 in each section of this district, is as follow, viz:—

Maitland section .....	87
Newcastle section .....	62
Dungog section .....	104
Total.....	253

Nearly all the schools are centrally placed, and they afford more than ample floor space, for the highest aggregate attendance of pupils present on any date during the year. At the end of 1897 the floor space totalled 25,963, and the cubical spaces, 27,570. At the close of 1898 they amounted to respectively 26,387 and 27,826. Tree planting and attention to trees already planted have pretty well died out, except in the case of about 20 teachers mostly in charge of small schools.

Organisation and discipline steadily improve in the schools of this district; and the school work proceeds much more quietly and systematically than in past years.

The work of inspection is shown hereunder.

Number of schools in operation during 1898 .....	253
Number of regular inspections.....	248
Number of ordinary inspections .....	15
Total number of pupils examined at regular inspections .....	17,041

Owing to epidemics of measles, influenza, and typhoid among the children of most parts of the district throughout the whole year, the number of pupils examined for 1898 is less by 608 than for 1897.

Every school in operation in Maitland section had a regular inspection. Every school in Newcastle section but one small Evening Public received regular inspection, and all but 4 small schools out of 104 had regular inspection in Dungog section. The percentage of the inspected schools in Maitland section was 100, in Newcastle 98, and in Dungog 98, being 98 per cent. for the whole district against nearly 98 per cent. for 1897. This is a very high percentage, and speaks effectively for the intelligence, skill and intelligence of all classes of the teachers of this district.

Methods of teaching are improving, and numbers of teachers spend considerable sums of money in procuring good text books for school use.

The Cookery Classes established in West Maitland have been well attended. The work done has been very favourably reported on by the Ladies' Committees selected for that purpose. Miss Kirby has given general satisfaction as teacher of Cookery at West Maitland.

The Athletic Association formed by the teachers around Maitland has been very successful. On 4th November last it gave a public display of its efforts to advance drill and calisthenics among the Public School pupils. The results of that display were most creditable considering the short time the pupils had had practice.

The proficiency of the pupils examined in each subject of instruction, and the percentage of those who satisfied or exceeded the standard, are shown in the following table :—

Subjects.	Number examined.	Percentage	Comparison of results with those for 1897.
Alphabet .....	1,753	75	1 per cent less than for 1897.
Monosyllables .....	3,003	80	1 " " "
Easy Narrative .....	6,059	84	1 " " "
Ordinary Prose .....	6,226	86	4 " " "
Total .....	17,041	83	Same as for 1897.
Writing on Slates .....	5,897	80	3 per cent less than for 1897.
Writing in Books .....	11,143	85	3 " more "
Total .....	17,040	83	1 per cent more than for 1897.
Dictation .....	13,902	83	Omitted for 1897.
Arithmetic, Simple Rules .....	10,366	82	2 per cent more than for 1897.
" Compound Rules .....	3,870	80	2 " less "
" Higher Rules .....	2,689	82	8 " higher "
Total .....	16,925	81	2 per cent higher than for 1897.
Grammar, Elementary .....	4,156	78	1 per cent less than for 1897.
" Advanced .....	3,198	78	1 " higher "
Total .....	7,354	78	Same as for 1897.
Geography, Elementary .....	3,735	79	1 per cent higher than for 1897.
" Advanced .....	3,619	79	1 " " "
Total .....	7,354	78	Same as for 1897.
History, English .....	7,321	78	16 per cent higher than for 1897.
" Australian .....	1,424	75	3 " " "
Scripture .....	16,632	81	Same as for 1897.
Objects .....	16,838	82	2 per cent better than for 1897.
Drawing .....	16,855	82	1 " " "
Music .....	16,441	83	2 " " "
French .....	209	62	23 " worse "
Euclid .....	967	74	13 " " "
Algebra .....	198	85	1 " " "
Mensuration .....	331	86	4 " better "
Latin .....	200	85	Same as for 1897.
Needlework .....	6,531	85	4 per cent better than for 1897.
Drill .....	16,800	84	6 " " "
Natural Science .....	145	90	4 " " "

I cannot account for the falling off in French of 23 per cent. for this year; in Maitland Section for 1898 it was 89 per cent. Neither can I explain the reduction of 14 per cent. in Euclid as compared with the result for that subject in 1897. In my section the percentage for that subject for 1898 is 84 per cent. Of the other subjects of instruction 18 are better than they were for 1897, 5 subjects are equal to the results for that year, and the results in 7 subjects are not quite so good.

The results and percentages of the examinations for Exemption Certificates are shown hereunder :—

	Examined.	Passed	Per cent.
Maitland section .....	756	669	88
Newcastle section .....	1,359	842	62
Dungog section .....	228	173	76
Percentage for district .....			72

The teachers and other employees of the Department have worked successfully during the year. Numbers of the teachers received promotion by examination, and several received a higher grade in their respective classes under Article 103 of the Regulations.

#### Summary.

Eleven new schoolrooms were opened during the year. 109 schools and 34 residences were improved under the Inspectors' supervision at a cost of £2,100 18s. 10d. A class-room was added to the Public School at Bolwarra. Almost every centre of population in the district is supplied with a school. Every school in the district, except five small ones, received regular inspection, and 15 had ordinary inspection. The prospects of the district for 1899 are very encouraging.

T. DWYER,

District Inspector.

East Maitland, 6th January, 1899.

#### ANNEX Y.

##### INSPECTOR FLASHMAN'S REPORT.

In January last the school at Black Hill was removed from my supervision, and an Evening School at Jesmond opened: so that the number of departments in the Newcastle section at present is the same as last year, viz., 62.

The enrolment of pupils was as follows :—

March quarter .....	12,690 pupils.
June quarter .....	12,791 "
September quarter .....	12,935 "
December quarter .....	12,595 "

In consequence of the prevalence of sickness during the last quarter of the year, the attendance at nearly all the schools was considerably reduced. The usual average attendance of 9,500 was diminished by about 750.

During the year the property at New Lambton was much enlarged and improved. The accommodation and appointments at this school are now among the best in the district. Extensive improvements were effected in connection with the schools at Adamstown, Hamilton, Hanbury, Jesmond, West Wallsend, Dudley, Merewether, Newcastle, Plattsburg, Tremarton, Wallsend, and Wickham.

Commodious

Commodious Infant-school buildings are being erected at Newcastle South. These are expected to be available for school purposes early next year.

At Minmi seats for about 75 extra boys will soon be ready for occupation.

It is hoped that during the ensuing year new buildings will be erected at Cook's Hill, where the temporary rooms, built some years ago, have become dilapidated and out of keeping with their surroundings.

It has been decided to replace the old temporary buildings, used as a boys' school at Hamilton, by a handsome two-storied brick structure. This will be a great improvement, as the crowded state of the present building makes it very difficult to conduct school operations in a satisfactory manner.

Nearly all the property of the Department in this section is in good condition. Two or three teachers' residences are defective as regards situation and size. These have occasioned some anxiety, and will, in the near future, either be removed or enlarged.

All the schools were regularly inspected during the year.

Recognising the fact that children are impressed quite as much by what they see as by what they hear, many teachers have much improved the general appearance of their schoolroom. This is particularly the case with several boys' departments, the masters of which have made their school-room walls attractive by adorning them with diagrams and pictures of interesting historical and other events.

The lesson documents are drawn with skill, and carefully followed. The school records are almost invariably correct, complete, and neat. The general organisation shows that the work of the schools is usually conducted with a method and regularity which is highly commendable.

The discipline is still mild and effective; but few cases of unwise or excessive corporal punishment have come under my notice. The practice of the habits of punctuality, regularity, prompt obedience, industry, respect for the wishes of others, self-restraint, self-respect, which are some of the features of a well-disciplined school, must produce a beneficial influence upon the future life of the pupil.

The inspections show that the pupils have been well taught in most primary-school subjects, and that special attention has been given to Reading, Dictation, Writing and Arithmetic.

With Arithmetic considerable advance has been made. More attention has been given to the Simple and Compound Rules, and the pupils have been impressed with the value and necessity of accuracy in their work. The most disappointing results were obtained in the examination for exemption certificates. Some schools were particularly successful; others failed completely. A few teachers appear to be under the impression that it is necessary to prepare their pupils in Arithmetic only, to the neglect of Writing and Dictation; consequently, many who passed in Arithmetic failed in Writing or Dictation.

Of the 1,359 pupils who were examined, 842 passed, but 346 of these possessed certificates.

As most teachers are now fully acquainted with what is required from candidates for this examination, I anticipate for next year more satisfactory results.

The infants' departments have suffered most from the prevailing sickness during the year; many schools were for a considerable time with less than half the usual attendance, and, as a consequence, the results in these departments were not as high as usual.

Nearly 100 boys from schools situated near the Technical College, received at that place regular weekly instruction in Chemistry from the local Science Master. These lectures have been illustrated by simple experiments, which have not only been instructive, but highly entertaining to the pupils. A written examination took place at the termination of the course; the result of which has not yet been made known.

The Manual Training Class, under Mr. Jones, was attended by over 100 boys: this class is exceedingly popular with pupils and parents. There are always numerous applications for every vacancy that occurs. At the close of the year the classes are examined. The results of last year's work were particularly pleasing; every student passed the required tests; 13 obtained honors. No student from any other Manual Training Class in the Colony obtained honors.

The Cookery Classes are still well attended; 120 girls passed through the course this year; about 80 per cent. passed the final examination.

In November, Lieutenant-Colonel Paul, under instruction from the Department, inspected the Drill of the Pupil teachers' classes; these classes are taught by Captain Mulholland. The Colonel's report to the Chief Inspector speaks in flattering terms of the work done by the Pupil Teachers during the year.

The Teachers' Athletic Association is still doing good work in encouraging and fostering athletic sports and amusements among the pupils of the schools. The Minister of Public Instruction, the Chief Inspector, and various Members of Parliament honored the last Annual Festival by their presence, and expressed themselves pleased with the general appearances, exercises and discipline of the pupils.

There are employed in this section:—

34 principal teachers.  
24 mistresses.  
80 assistants.  
7 work-mistresses.  
101 pupil teachers.  
1 drill instructor.  
1 teacher of manual training.  
1 teacher of cookery.

Most of the teachers are loyal, hardworking, conscientious and effective; a few are restless and discontented.

I have been particularly pleased with the work done by many Pupil-teachers. Some of these young people have developed as teachers with more than average rapidity, and are now able to manage well a fairly large class.

The work of the past year has been done with success and considerable enthusiasm.

Newcastle, 30th December, 1898.

C. O. FLASHMAN,  
Inspector.

#### ANNEX Z.

##### INSPECTOR KEVIN'S REPORT.

THERE were 104 schools in operation during the year, and 5 of these were new, viz., New Wharf Provisional, Miller's Forest Evening Public, Glencoe and Campbell's Creek Half-time, and Weismantel's Half-time. It is probable that three more will be added to this number ere long. Some slight changes took place during the year, such as the conversion of three Half-time schools into Provisional and the reopening of others. In all other respects things are as they were last year.

Of the 104 schools on my list, all were regularly inspected except four, the inspection of which lapsed from reasonable causes. No schools were inspected regularly a second time, but 11 received an ordinary inspection, and a considerable number incidental visits.

A large number of schools and residences were repaired or improved during this and last year; so that now it may safely be said that the material condition of the buildings is satisfactory, and the accommodation both adequate and comfortable.

New buildings were erected under my own supervision at Putty and New Wharf, and new premises have been sanctioned at Merannie and Gloucester Upper.

The discipline in the schools continues satisfactory on the whole, and no case of excessive corporal punishment came under my notice during the year. Drill is well taught in some of the larger schools; but, generally speaking, it does not receive the attention it deserves. There

There were 2,607 pupils examined during the year with generally satisfactory results. Sickness, in the shape of blight and diphtheria, was very prevalent in the early part of the year, and this, together with the floods, interfered materially with the work of inspection. In the latter half of the year measles swept over the district, closing some schools (as the teachers' families were affected) and greatly reducing the daily attendance at others.

There were 228 pupils examined for exemption certificates, and of this number 173 passed. I find there were only 11 children evading the compulsory clause of the Act, but in most cases these had valid excuses for their absence.

All the schools were up to or above the required standard of attainments except two. In the more important subjects the percentages were: Reading, 72; Writing, 75; Arithmetic, 72; Dictation, 73. In connection with the first-named subject, I find the pupils generally very deficient in a knowledge of the subject matter of the lessons read, and in Arithmetic sufficient use is not made of the blackboard by way of explanation.

I am pleased to say that the school libraries continue to flourish, and are every day growing more in favour with parents and pupils. Every school in the district has now its library, and the number of books in circulation is upwards of ten thousand. Every school in the district celebrated—as they did last year—the anniversary of its library foundation and added fresh books to its stock. There can be no question now about the stability, permanency, and popularity of these institutions, and, as far as the schools are concerned, I claim for them (and the teachers willingly admit the claim) three distinct and tangible gains—firstly, an improvement in the manners and conduct of the children; secondly, an improvement in the attendance; and thirdly, an improvement in the general knowledge. These are gains to our educational system that are, I consider, worth contending and working for.

There are 104 teachers of all grades under my supervision, and I have to report of them in very satisfactory terms. They are, as a body, steady, attentive to duty, and respected by the community at large. The pupil teachers, also, have given much satisfaction. One, besides gaining a full scholarship, carried off the Jones medal last year.

To summarise. The organization and discipline are satisfactory, and the work of instruction has been marked generally by industry, skill, and care. The schools are sufficient and well distributed, and the accommodation is ample. Generally speaking, things are in a satisfactory state, and I look forward to good work being done in the coming year.

JOHN KEVIN,

Inspector.

December 29th, 1898.

#### ANNEX Z 1.

##### DISTRICT INSPECTOR LAWFORD'S REPORT.

THERE is no change either of the boundaries of the district, or of the officers engaged in the work of inspection.

339 schools have been opened during the year, as against 331 last year.

They are classified as follows :—

Public.....	249
Provisional .....	44
Half-time .....	40
House-to-house .....	6

Sixteen are new schools.

They were fully inspected, excepting three small schools, all in the Hay section.

The schools are distributed as follows :—

Wagga section .....	82
Albury ,, .....	96
Hay ,, .....	69
Young ,, .....	92

There is a slight falling off in efficiency, 91 per cent. of the schools examined being up to or above standard, as against 93 per cent. during the preceding year.

There is plenty of room for all comers, 948 new places having been added.

In the Wagga section the following work has been done under my own supervision :—

		£	s.	d.
Building	9 new schoolrooms.....	1,066	13	8
„	5 new residences.....	2,618	12	0
Enlarging	5 schoolrooms .....	1,058	0	11
Repairing	47 „ and 12 residences .....	1,625	13	4
Total	.....	£6,368	19	11

The following new schools opened during the year :—

Wagga Experimental Farm	Brungle
South Collengullie	Mair Jimmy

New buildings have been completed at :

Brookongia	Mangain
Yarrangobilly	Wilga

At which places schools will be opened on the 16th inst.

Boree, Trickett, and Pine have been closed owing to lack of attendance; but Cuddell, which was closed last year, has been re-opened.

L. E. LAWFORD,

District Inspector.

#### ANNEX Z 2.

##### INSPECTOR FRIEND'S REPORT.

The list of schools in this inspectorate for the year now closing comprises 67 Public, 12 Provisional, 12 Half-time, and one House-to-house; total 92. Two of these lapsed, as a sufficient attendance was not maintained; but one of them will re-open in January, prox. About the same time, new schools will come into operation at Ariah Park, Flixton, Trungley, and Merriganowry; and, later on, one at Combaning South, making a probable total of 96 schools for the first quarter of next year.

The

The following applications for the establishment or re-opening of schools were received and dealt with:—

Locality.	Object.	Result.
Bundawarrah	Establishment	Granted Provisional School (now in operation)
Calabash	Re-opening	Half-time School sanctioned
Bribaree	Establishment	Provisional School granted
Winderahdeen	Re-opening	" " re-opened
Pinkerton	Establishment	Declined
Burrowa Flats	Re-opening as	"
Khalangan	Half-time Schools	"
Sandy Creek	Establishment as	Sanctioned. To open when residents comply with conditions
Warangla	Half-time Schools	
Beaconsfield	Re-opening	Provisional School re-opened
Flixton	Establishment	" " to be opened
Trungley	"	" " "
Ariah Park	"	" " "
Cucumgillica	"	" " granted (now in operation)
Merriganowry	"	" " to be established
Combaming South	"	" " "

For the newly-established schools, vacant buildings were removed from places which could no longer support a school: these buildings were re-erected, repaired, and suitably stocked with the necessary apparatus.

The other works carried out under my supervision may be briefly stated as follows:—

Erection of new school buildings at Ariah Park and Trungley, to accommodate 34 and 43 pupils respectively.

Enlargement of existing buildings at Lintondale and Spring Dale, additional accommodation for 15 and 21 pupils.

49 school rooms repaired.....	Cost £251 6 8
10 residences " .....	" £40 7 10

The Chief Clerk of Works effected repairs, improvements, &c., at some of the schools in my district, notably the following:—Cowra, Young, Temora, Wallendbeen, Wombat, and Monteagle. The Department's property is in very satisfactory repair, and the school buildings, with one or two exceptions (concerning which suitable action is being taken), afford accommodation well in excess of that required by the Regulations. There is floor room for 6044, and air space for 5504 pupils; whereas the highest quarterly enrolment does not quite reach 4400.

Every school on my list at any time during the year received a regular, and four an ordinary, inspection. Of the 92 regularly inspected, 2 were found up to standard (50 per cent. of marks), 84 above, and 6 below. Four of those which failed to satisfy the standard were new schools, or schools re-opened after having been closed for a considerable time. A reference to the return setting forth the estimated proficiency of pupils, will shew that the subjects as a whole have been satisfactorily taught, and that those of primary importance (Reading, Writing, Arithmetic, Dictation and Grammar), have been carefully and intelligently treated; the passes in these latter range from 81 to 95 per cent. of the pupils examined. 440 pupils were subjected to the exemption certificate test, and 325 (or 74 per cent.) were successful: of these, 170 passed for the first time.

The teachers of all ranks at present employed in this inspectorate number 113, and in most instances they are zealous and competent.

To sum up:—

The schools are well distributed, and the teaching staff is sufficient.

The buildings are in good order; and, speaking generally, commodious.

The organisation and discipline continue to be creditable features.

The results of the year's inspection shew that sound work has been done in the bulk of the schools of the district.

The usual statistics have been forwarded.

CHAS. J. W. FRIEND,  
Inspector.

### ANNEX Z 3.

#### INSPECTOR NOLAN'S REPORT.

Of the 69 schools on my list at the close of 1897 one was not re-opened, and one was permanently closed during this year; on the other hand two new schools were established; thus at the close of the current year there are 69 schools in active operation.

Several small schools are likely to be closed at an early date on account of diminished attendance caused by the removal of families; on the other hand a few will be established to meet the demands of fresh settlements.

The existing schools are well distributed, and they reasonably meet the requirements of the district. The gross enrolment for the year was 7932, and the average daily attendance was 4279; seating accommodation is provided for 7180 children. Active steps are being taken to provide more suitable accommodation where required. During the year the sum of £222 was expended under Inspectorial supervision in repairs and improvements to school premises, and two new buildings were erected at a cost of £169 8s. 8d.; the Chief Clerk of Works expended £918 18s.; a tender has been accepted for the provision of an Infants' School building at Burke Ward at a cost of £1,975; the buildings will be ready for occupation early next year.

Of the 69 schools in operation during the year 3—Tarrowingie Public, Strathmore Provisional, and Nunnagoyt House-to-house, were not regularly inspected. Tarrowingie was permanently and Strathmore temporarily closed prior to my visits thereto; I was unable to visit Nunnagoyt. Of the 66 schools inspected 9 were below, 1 was up to, and 56 were above standard requirements; the corresponding numbers for last year, of 68 schools visited, 5 below, 4 up to, and 59 above; a falling off is thus apparent, but the declension is mainly due to the irregularity of pupils caused by long-continued epidemic illness. 4626 pupils underwent examination; the class proficiency in the several subjects is shown in the statistical information supplied on the usual forms. Of the 304 pupils presented for exemption certificates 153 passed,—a result which cannot be regarded as satisfactory, as, with thorough teaching, there should be but few, if any, failures to meet the prescribed test. The introduction of the new standards of proficiency will ensure more satisfactory results in the all important subjects—Reading, Writing, Dictation and Arithmetic. The material conditions of the schools is being gradually improved; so far as the teachers are responsible the organization may be rated at very fair; the disciplinary condition is satisfactory.

The teachers of all ranks employed number 132; generally speaking they, under very trying circumstances, discharge their duties faithfully; some, however, have failed to realize the dignity and importance of their office, and as a consequence they have caused trouble: in a few cases departmental censure has been incurred for unsatisfactory work done. The pupil teachers continue to give satisfaction to all concerned in their training.

W. NOLAN,  
Inspector.  
ANNEX

## ANNEX Z 4.

## INSPECTOR PEARSON'S REPORT.

THE schools in operation during the year were—Public, 63; Provisional, 15; Half-time, 16; House-to house, 2; Total, 96.

The five following schools were established during the year, viz. :—Brocklesby Public, Corowa South Public, Greenbank Public, Dighton Provisional, and Roachdale Provisional. Martindale Public, Little Billabong and Overton Provisionals, and Jellingroo Half-time were closed through diminished attendance.

The following conversions were made—Barooga, Mount Gwynne, and Redland Provisionals to Publics, and Wondalga Half-time to Public. At the close of the year 93 schools remained in operation.

It has been decided to establish schools at Elsindale, Khancoban, and Nangunia South. When these are ready the district will be liberally supplied with schools.

All the 96 schools opened during the year were fully inspected, and in addition two ordinary inspections were made.

Seventy-five schools, or 78 per cent., exceeded standard limits, 8 were below, and 13 just reached it.

Last year the percentage reached 84. The disastrous drought and prevailing epidemics affected materially the regularity of pupils and accounts for slight falling off in the percentage.

Reading, Writing, Arithmetic, Grammar, Geography, History, Object Lessons and Needlework show a slight advance notwithstanding the disadvantageous conditions. Scripture, Music, French, Euclid, Algebra, Mensuration, Latin, and Natural Science indicate retrogression; and the remaining subjects show corresponding results with last year's.

Organization and discipline are satisfactory. Again the results of the test for exemption certificates are unsatisfactory, only 46 per cent. being successful.

The teaching staff consists of 85 principal teachers, 2 mistresses, 7 assistants and 12 pupil teachers, making a total of 106.

With but very few exceptions the teachers are industrious and zealous and command the respect of the public.

School accommodation, allowing 8 square feet per child :

Accommodation existing at commencement of 1898 .. . . .	6050
Additional provided . . . . .	223
Accommodation lost by closing, &c. . . . .	174
Accommodation existing at end of 1898 . . . . .	6099

As the enrolment for the year was only 4660 it will be seen ample accommodation is provided.

The Chief Clerk of Works erected a school and residence at South Corowa, at a cost of £520, affording accommodation for 48 pupils. No school previously existed at South Corowa.

## BUILDINGS ERECTED BY INSPECTOR.

	If New.	Seats.	Cost.
			£ s. d.
Brocklesby . . . . .	New.	33	62 0 0
Mount Gwynne . . . . .	Replace Old.	44	147 0 0
Roachdale . . . . .	New.	42	100 0 0
Total . . . . .		119	£309 0 0

Forty-eight schools have been repaired at a total cost of £526 19s. 0d., and £578 4s. 6d. has been expended in renovating 15 residences.

Repairs to three schoolrooms and one residence are in progress. These will cost £82 8s. 3d.

The results of the year are satisfactory and the prospects are encouraging.

T. PEARSON,  
Inspector.

## ANNEX Z 5.

## DISTRICT INSPECTOR LONG'S REPORT.

The organization of the District in regard to inspection has remained unchanged, except that at the commencement of the year, Mr. Inspector G. H. Hunt was appointed to the charge of the Dubbo Section, in place of Mr. Inspector J. W. E. Baillie, removed to Braidwood.

At the end of the former year the schools in my District numbered 241. Of these 12 were either not re-opened, or lapsed owing to insufficient attendance, while 16 new schools were established. The total number of schools in operation during the year, or some part of it, was 260, and of these the number in existence at the end of the year was 252, of which 77 are in the Dubbo Section, 90 in the Mudgee, and 85 in the Wellington Section.

The buildings in which these schools are conducted suffice for 15,378 pupils, there being an increase of 382 places for the year. The total enrolment for the year was 14,936, including 1,728 pupils returned as enrolled at more than one school, while the average daily attendance was 8150 9. The accommodation provided is therefore, in the aggregate, in excess of requirements.

Under Inspectors' supervision, 8 new schools and 1 weather shed have been erected, 2 schools enlarged, and 85 schools, and 13 residences repaired at a total cost of £1648 12s. 11d. Works of a more extensive nature have been effected under the Chief Clerk of Works.

All the 260 schools in operation during the year received a regular inspection, and ordinary inspections and incidental visits were made as opportunities occurred. Of the 260 regular inspections, 81 were by Mr. Inspector Hunt, 63 by Mr. Inspector Rooney, 28 by Mr. Inspector Walker, who rendered temporary assistance during Mr. Rooney's illness, and 88 by myself.

Two hundred and forty-two schools, that is 93 per cent of the whole number, were found to reach or exceed standard in regard to general efficiency. In the case of most of the remaining 18 schools, whose efficiency was below standard, the unsatisfactory result was found to be due to their having been but recently established, or to some other cause beyond a teacher's control. In a few cases however, it was clearly traceable to the inability or neglect of the teacher, and these have been duly brought under notice.

The number of pupils examined at the inspections of the year was 8,897. The percentage of passes, being over 80 per cent in all the more important subjects, indicates that the teaching generally is of satisfactory efficiency. In ten subjects it is slightly lower than for the former year, but this is doubtless due to the extent to which the attendance has been affected by the visitations of drought and epidemics during the greater portion of the year. To this cause also may be attributed a small decrease of about 3 per cent in the number of schools whose efficiency is returned as reaching or exceeding standard requirements.

The organization and discipline are almost invariably found to merit high commendation, and to indicate proper knowledge of correct methods, and praiseworthy effort to efficiently apply them. The order, attention, and general deportment of pupils are, as a rule, indicative of careful and efficient training, while their uniformly healthy and well dressed appearance certainly suggests that no commercial or industrial depression has affected the general ability to secure a liberal supply of material comforts.

The total number of teachers in the district is 303, including 59 who are unclassified and 34 pupil teachers. The classifications of the remainder, and their positions in the Service, are given in the tabulated statement attached. With few exceptions they are well fitted for the honourable and responsible positions they occupy, and are favourably regarded by those amidst whom they are placed.

The schools in operation, with those whose establishment has been sanctioned or is under consideration, suffice for the present educational requirements of the district. The material condition of the existing schools, and their efficiency, so far as can be indicated in a general statement, are good. The year's work has been attended with success in regard to the objects which the Department is designed to achieve, and affords ground for anticipating satisfactory progress.

I forward with this the reports of the officers associated with me in the charge of the district, together with their and my own statistical returns.

GEORGE ED. LONG,  
District Inspector.

#### ANNEX Z 6.

##### INSPECTOR ROONEY'S REPORT.

At the end of last year there were in operation, in this section of the district, 87 schools, viz., 56 Public, 9 Provisional, 20 Half-time, and 2 House-to-house.

Early in January, the Half-time schools at Dexter Springs and Moolarban were closed, the buildings at the latter place having been burnt down.

The Half-time School at Carwell and the Provisional School at Oakborough were closed in May.

The Provisional School at Sally's Flat was closed in November.

The schools at Bocoble and Upper Meroo were re-opened as Half-time at the beginning of the year.

New Provisional Schools were opened at Bargong, Carwell, and Upper Bolobolar.

Carwell Provisional takes the place of Carwell Half-time and Oakborough Provisional.

A large class-room was added to the Boys' School, Mudgee.

A new Provisional School is almost completed at Piambong.

At the end of 1898 there were in operation in this section 90 schools, viz., 58 Public, 12 Provisional, 18 Half-time, and 2 House-to-house.

Under my supervision, 20 school-rooms and 9 residences, and, under that of the Chief Clerk of Works, 11 school-rooms and 11 residences were repaired. A new residence was completed at Hargraves, and another is in course of erection at Windeyer.

A weather-shed was erected at Burrundulla.

The accommodation at the end of the year was sufficient for 3,967 pupils. The total enrolment of pupils for the year was 4,324, and of this number 476 were returned as having attended more than one school.

Of the enrolment, only 2,016 attended for 140 days. Scarlet fever, measles, and influenza prevailed throughout the year. The average attendance for the year was 2,462.6, being 206 less than for the previous year.

The amount of fees received in 1898 was £1,199 3s. 10½d., being £58 1s. 10½d., less than for the preceding year.

The arrears of fees at the end of the year amounted to £42 11s. 3d.

There were 449 free pupils on the rolls at the end of the year, most of them being the children of miners.

#### Inspection.

All schools in this section received regular inspection.

During my illness, which lasted for more than three months, 28 schools were examined by Mr. Inspector Walker.

Carwell was examined as a Half-time, and afterwards as a Provisional School.

In all, 2,749 pupils were examined. For exemption certificates 341 pupils were examined, 251 passing the required test. Of the number who passed, 160 were for the first time.

As a result of the examinations, 85 schools were classed above the standard, 3 equal to it, and 3 below it.

The proficiency of the pupils was, therefore, very satisfactory. Although the majority of the teachers passed an examination in Music, the results in the subject were very unsatisfactory in the schools.

Under my supervision there were 86 teachers and 11 pupil-teachers.

Only two complaints, both trivial, were made against teachers during the year. As a rule, the teachers are industrious and respectable.

The organisation and discipline of the schools are good.

In conclusion, it may be stated that the present educational requirements of this section of the district are amply met by the existing schools, and the prospects for 1899 are hopeful.

JOHN P. ROONEY,  
Inspector.

#### ANNEX Z 7.

##### INSPECTOR HUNT'S REPORT.

THE number of schools in operation in the Dubbo section of the Wellington District at the close of the year 1898 was :—

Public .....	52
Provisional .....	17
Half-time.....	4
House-to-house .....	3
Evening .....	1
Total .....	77

The following is the increase for the year :—

Public .....	3
Provisional .....	3
Half-time.....	2

During the year the Provisional Schools at Coradgerie and Quambone were changed into Public, and the House-to-house School at Breelong West was converted into a Provisional.

#### New Schools.

During 1898 the following Public Schools were brought into operation :—

McPhail, near Tomingley.  
Quambone, near Warren.  
Sandy Creek, near Dubbo.

During the same period the following Provisional Schools were established and brought into operation :—

Brightling Park, near Coonamble.  
Hyandra Creek, near Dubbo.  
Marthaguy Creek, near Gilgandra.  
Modell, near Coonamble.  
Pera Bore, near Bourke.

The Schools at Euromidah and Plain Creek were re-opened as Half-time.

The

Music—Sutton's Theory of Music ; Part Songs ; Stainer's Harmony ; Voice Training.  
 Drawing—Practical, Plane, and Solid Geometry ; Perspective.  
 Manual Training—Application of Geometry to Mechanical Drawing ; Exercises in the use of common hand-tools for working in wood.  
 Drill—Squad, company, and battalion drill ; manual and firing exercise ; physical drill, with and without rifle.

*Practical Training.*

The students were regularly employed in class-teaching for about a week in each quarter. Specimen, test, and criticism lessons were given every week.

*Staff.*

The staff for 1898 consisted of the Principal ; J. D. St. Clair Maclardy, M.A., Lecturer in Languages and Mathematics ; J. Finney, B.A., Lecturer in English and English History ; Dr. Roth, Lecturer in Physiology ; Hugo Alpen, Lecturer in Music ; F. W. Woodhouse, Drawing Master ; W. Powrie, Teacher of Manual Training ; Q.M.-S. Smith, Teacher of Drill.

*Examinations.*

Written and oral examinations were conducted by the Chief Inspector several times during the year. The examination of the students' practical skill was held in the second week of December, and the final examination for certificates took place in the middle of December. The results are given below :—

II A.	II B.	III A.	Total.
5	4	7	16

*Results of Examination in Manual Training.*

Honours.	First Grade.	Second Grade.	Total.

*Results of Examination in Ambulance Work.*

The examination was conducted by the St. John's Association. Every student succeeded in gaining the "First Aid" Certificate.

*Results of Examination in Drill.*

Instruction was regularly given on Friday morning in each week, and target practice was carried on at Randwick one afternoon in the month. gained certificates.

*Health and Conduct.*

The health of the students was uniformly good throughout the year, and their general conduct most exemplary in every case.

J. W. TURNER,  
Principal.

ANNEX Z 9.

REPORT OF THE PRINCIPAL OF HURLSTONE TRAINING COLLEGE.

THE number of students enrolled during 1898 was 25, namely :—

15 full scholarships.  
10 half scholarships.

*Course of Study.*

Latin—Bradley's Arnold's Composition ; Smith's Latin Grammar ; Livy, Book XXVI.  
 French—Racine's "Athalie" ; Macmillan's Third Year.  
 English—Macbeth (Warwick's Shakespeare) ; Gray's Elegy ; Meiklejohn's Book of English.  
 History—Jose's Growth of the Empire.  
 School Management—Gládmán's School Method ; Kindergarten ; the School Records ; the Regulations ; Theory and Practice of Teaching ; Criticism Lessons and Practical Training in the Practising School.  
 Algebra—Smith's Smaller Algebra.  
 Geometry—Mackay's Euclid.  
 Arithmetic—Loch's Arithmetic ; Theory and Practice of Arithmetic.  
 Music—Sutton's Theory of Music ; Stainer's Harmony ; Voice Training.  
 Drawing—Plane and Solid Geometry ; Model Drawing ; The Art of Teaching Drawing.  
 Needlework—A Finished Garment ; Setting and Cutting out Needlework.  
 Physiology—St. John's Ambulance Course ; First Aid to the Injured.  
 Drill—Free Exercises ; Wand ; Dumb Bell ; Club Exercises ; Marching ; Class Exercises.

*Examinations.*

Periodical examinations were held during the year by the Chief Inspector. Examinations in drill and cookery were held, also a Certificate Examination in St. John's Ambulance. The certificates were presented by Lady Hampden, and the examination conducted by Dr. Vandeleur Kelly.

*Practical Training.*

Each student had four weeks actual teaching and practical training in the Practising School, besides giving criticism lessons in various subjects, and conducting drill, music and drawing lessons, under the respective instructors. All the students attended a course of practical cookery.

*The Teaching Staff.*

J. A. Nicoll, Principal.  
 E. M. Mallarky, B.A., Assistant.  
 Lecturers :—  
 J. D. St. Clair Maclardy, M.A., Latin and Mathematics.  
 Hugo Alpen, Music.  
 Reuter Roth, M.D., Physiology.  
 J. Douglas, Drawing.  
 E. Banks, Kindergarten.  
 A. Paul, Drill.  
 S. Gelding, Cookery.

*General Remarks.*

A new Practising School is in course of erection, and the old building is to be converted into a Cookery School and Recreation Hall. The outside of the College building has been recently painted, and the pathways have been gravelled. The health and conduct of the students have been most satisfactory throughout the year.

J. A. NICOLL.

## APPENDIX XIII.

## REPORT OF SUPERINTENDENT OF DRAWING.

I HAVE the honour to submit my Annual Report on the teaching of Drawing in the Public Schools and Training Colleges, and on the Examination of Teachers of all grades in that subject.

The results of my examination of 90 schools (210 departments) are as follows :—

	Above Standard.	Below Standard.	Total.	Percentage of Passes in 1898.	Percentage of Passes in 1897.	Average Class-mark.
Boys.....	13,138	1,238	14,376	91·4	79·6	7·4
Girls.....	11,391	1,280	12,671	89·9	77·3	7·3
Infants .....	13,375	1,671	15,046	88·9	83·5	7·7
Totals .....	37,904	4,189	42,093	90·0	80·4	7·5

I am glad to note a decided increase in the percentage of passes and some in the average class-mark over last year's results.

*Revised Standard.*

The revised standard, though demanding less than hitherto, should have the effect of raising the quality of the work done. The greater number of subjects taught and the smaller importance attached to this subject than in England make it generally impossible to devote so much time to it as is given there, and it is therefore a distinct gain to have a standard which is not a mere copy of that in force there or elsewhere, but arranged in accordance with what is possible here. The omission of Model Drawing in the Third Class and the making Model Drawing and Practical Geometry alternative subjects in the Fourth and Fifth are the changes now made which were most necessary. Ruler drawing is rarely made so effective a part of the course as it should be, while too many still allow an improper use to be made of measuring and ruling in work where the eye alone should be relied on. I intend to make a decided effort to cope with this abuse in the coming year.

*Examinations.*

The following table gives the result of the examinations of the various grades of teachers (including applicant pupil-teachers) :—

	Black-board.		Freehand.		Model.		Geometry.		Perspective.		Total.
	No. exd.	Pass.	No. exd.	Pass.	No. exd.	Pass.	No. exd.	Pass.	No. exd.	Pass.	
Appt. Pupil-teachers ...	...	...	1,054	57·7	...	...	...	...	...	...	1,054
Pupil-teachers .....	224	75·4	293	54·3	175	40·6	...	...	...	...	692
Students in Training ...	...	...	2	100·0	3	33·0	45	53·3	...	...	50
Teachers.....	18	85·7	40	55·0	34	29·4	56	48·2	19	52·6	167

A very small percentage indeed of teachers or pupil-teachers have any grasp of the principles of Model Drawing, or of how it should be taught. The test-lessons given by the training-students and the work sent in for examination in June and December, as well as my observation of the work done in the schools, is conclusive evidence on this point. The examination work shows conspicuous absence of study in many cases, and inefficient instruction in many others.

*Training Schools.*

Although the classes worked well and conscientiously, the results of the examinations have been disappointing. To go through a sufficient amount of Practical Geometry, to lay some foundation for Perspective, and to give some lessons in the method of teaching Drawing is, in fact, too much for the time at our disposal; yet I am loth to leave out any one of these branches of our work. I am disposed to think that time should be gained by throwing on the (male) training students the responsibility of acquiring most of the Plane Geometry by private study.

*Appliances.*

Appliances are still very much needed—wall-copies for Freehand, and wire and solid models for Object-drawing especially. Teachers might, however, exercise more ingenuity in supplying the place of models. For instance, the boxes in which the new reading-books were sent out form excellent models, and suitable things are not difficult to find for those who are on the look-out for such.

*New Syllabus.*

I am engaged in the preparation of a detailed syllabus of the course of instruction in Drawing. It will be a great advantage to teachers to know what is expected at each stage, and will save me much verbal explanation, besides rendering the standard more uniform and less subject to private interpretation.

With the revised standard, and with the guidance of an illustrated syllabus, I hope, next year, to see the progress, which should spring from the greater thoroughness, made possible by the former, and the systematic information conveyed by the latter.

FREDERIC W. WOODHOUSE,  
Superintendent of Drawing.

## APPENDIX XIV.

## REPORT OF SUPERINTENDENT OF MUSIC.

I HAVE visited and reported on all schools in the Metropolitan District on Singing and Theory of Music.

There can be no doubt that music is a favourite study with our Australian youth, and thus most schools work well above the standard in "theory," whilst the singing in several of the schools is so good that it can scarcely be measured by the ordinary standard.

During the previous year I frequently urged the teachers to pay increased attention to enunciation, and to insist upon more expression and greater refinement in singing. I am glad to be able to report a decided improvement in this respect, although the enunciation of the children (especially in the lower classes) requires still greater attention.

In

In a fair number of schools reading at sight (both notation, staff, and tonic-sol-fa) in time and pitch is really good; even in the lower classes children sing "harmonised" passages at sight. In fact, not unfrequently, young children in the lower 2nd classes sing almost any succession of intervals with a firmness that is really astonishing.

The general mark given to the schools reaches almost "very fair," which mark, considering our former high standard, is very creditable.

I notice that the standard has been considerably changed, which, no doubt, will be to the advantage of schools in the country.

HUGO ALPEN,  
Superintendent of Music.

## APPENDIX XV.

### REPORT OF DIRECTRESS OF NEEDLEWORK.

I HAVE examined and reported upon 88 schools in and about the metropolitan district. In all, 14,029 pupils were present at examination of needlework. The above numbers do not include the examinations of needlework I have attended for Public School exhibitions or for prizes and awards at public competitions.

The epidemic of measles has caused a decided falling off in the numbers present at needlework examinations in most of the schools during the past year, but the work of the absentees was retained and arranged for my inspection, and proved most satisfactory.

This fact shows conclusively that the system of instruction in needlework continues to be thorough and effective.

The encouragement and recognition extended by the ladies of the Local Boards in many suburbs to the pupils for proficiency in needlework are much to be valued, as they have the much desired effect of fostering industry and inciting emulation.

#### *Mixed Schools.*

Mistresses, teachers' wives, and infant-school mistresses in charge of needlework in mixed schools continue to do good faithful work. Many of these schools are far above standard requirements, and, judging by results, much private time must be devoted to this subject.

Dressmaking lessons given in these mixed schools are looked upon by parents as a boon. The mothers of pupils frequently send in favourable comments upon this branch of instruction, it being considered a sound preliminary training for business as well as for home industry.

The small specimen squares worked with coloured cotton in lower classes are a decided success. Young children are amused in their first attempts at sewing lessons. Their desire to improve, and to proceed from one stage of stitch to another is evident, and the pleasure they experience in this lesson is productive of the highest results, and proves a happy change and relief from mental study.

#### *Pupil-teachers.*

In my incidental visits to schools, it was noticeable that the pupil-teachers were attentive to the instruction of work-mistresses, anxious to excel, and evinced the same proficiency in the art of needlework and design as formerly.

In many schools pupil-teachers receive their needlework lesson from the work-mistress at the usual sewing lesson. This is a decided advantage, as much varied and useful experience is gained in cutting and setting, also in the management and control of sewing classes, which experience proves of good service to them at the termination of their pupil-teachership.

#### *Dressmaking.*

As stated in my last annual report, this subject receives special attention from work-mistresses, and is carried out and made general in all metropolitan schools. In some large schools, where no work-rooms are available, it is found almost impracticable to give lessons in this subject, as the fitting-on attracts attention, and disturbs the quiet and order so essential to sewing lessons.

I may add that the work-mistresses in all first-class schools have acquired the practical knowledge necessary to enable them to teach this branch of needlework.

#### *Method and Discipline.*

Method and discipline in sewing-classes are generally well maintained and time economised in giving out and receiving needlework, the head-mistresses in most schools assisting in this arrangement. Independence and self-reliance are inculcated among the pupils of upper classes by teaching them to cut out and set their own work; and though depression exists among the working classes, pupils are very rarely found unprovided with sewing material according to their attainments and class.

I am glad to be able to testify to the constant diligence and application to duty on the part of work-mistresses during the past year, and also to the encouragement and appreciation shown by head mistresses in most metropolitan schools.

ANNIE DADLEY.

## APPENDIX XVI.

### CHIEF CLERK OF WORKS' REPORT.

THE past year has been an exceeding busy one with this Branch, as will be apparent from the following figures, which show an outlay on all building works of £70,215 4s. 6d., being about £26,500 over the previous year, the highest expenditure for the last five years, and considerably over the average for the past ten years, the works completed during 1898 being as follows:—

No.	Description of work.	Accommodation.	Cost.
			£ s. d.
20	School buildings .....	2,644	18,314 15 9
13	Residences .....		6,219 8 0
12	Weathersheds .....		1,178 2 5
34	Additions to residences .....		5,763 14 10
33	Additions to schools.....	3,687	16,047 18 10
554	Sundry works .....		22,691 4 8

The above shows, that accommodation has been provided for 6,331 pupils, being an increase of 1,452 over that of the previous year, and obtained at a cost of £34,362 14s. 7d., which sum also includes two cases where play-sheds have been included, viz., Petersham and St. Leonards, and one case providing no additional accommodation. The average cost per child for the accommodation provided works out at about £4 10s. per head.

The largest works completed, were :—A Primary School at Broken Hill, New Girls' School at Leichhardt, New Infants' School at Bowral, New Infants' School at Newtown North, New Girls' School at Armidale. With the exception of Broken Hill, these schools are all of two storeys, and the last two are designed to form wings of a complete block of buildings to be carried out at some future period.

In many brick buildings I have reintroduced cavity or hollow external walls, as they make dryer and cooler rooms than solid walls. This class of work was discontinued for many years on the plea of extra cost; but, when the cost of painting, or other means taken for the protection of the walls from damp, and the duration of the internal painting and colouring, are taken into consideration, the cost in the end is really less.

Besides the above, a number of works were still in hand at the end of the year but will appear in next year's list of completed works. They are as follows :—

No.	Name.	Accommodation.	Cost.
21	School buildings .....	3,065	£ s. d. 18,969 18 0
11	Residences .....	.....	6,266 6 1
2	Weathersheds .....	.....	149 15 0
15	Additions to residences.....	.....	2,813 16 1
9	Additions to schools.....	540	3,078 13 0
92	Sundry works .....	.....	6,691 1 10
Total value of works in hand .....		£ s. d. 37,879 10 0	

It will be seen by the foregoing, that extra accommodation for 3,605 pupils will be provided for early in the new year.

Owing to the pressure of work, two additional temporary draftsmen and a temporary clerk were placed upon my staff, also three temporary Clerks of Works, one of the latter being kindly lent by the Government Architect to act as relieving officer.

The quantity of office work for the year may be estimated from the fact that 655 plans and 771 specifications were prepared, and 709 contracts entered into.

*Technical Work.*

Broken Hill Technical College—	£ s. d.
Class room for assaying ..	889 0 0
Six sundry works .....	168 5 0
Newcastle Technical College—	
Two sundry works.....	91 18 0
Sydney Technical College—	
Six sundry works .....	552 17 6
Technological Museum .....	228 16 0
Chemical Laboratory .....	274 7 7
Total expenditure in Technical College work, £1,702 0s. 6d.	

J. S. WIGRAM,  
Chief Clerk of Works.

APPENDIX XVII.

BOARD OF EXAMINERS' REPORT.

THE total number of examinations during the year 1898 was 3,083—but two short of the total for the previous year. They were made up as follows :—

Applicant pupil-teachers.....	1,045
Pupil-teachers .....	778
Training students.....	68
Teachers.....	593
High-school candidates .....	599
Total .....	3,083
Applicant Pupil-teachers—	
Eligible for employment.....	211
Ineligible .....	825
Examined in drawing or music only, passed .....	8
“ “ “ failed .....	1
	1,045
Pupil-teachers—	
Promoted from Class IV to III ..	319
“ “ III to II .....	210
“ “ II to I .....	152
“ “ I to training .....	39
Ex-pupil-teachers examined specially for training .....	13
Examined in music or drawing only, passed .....	21
“ “ “ failed .....	2
Failed to gain promotion .....	18
Deferred cases .....	4
	778
	Candidates

Candidates for training—	
Males—	
Passed.....	26
Females—	
Passed.....	13
Failed.....	1
Ex-pupil-teachers examined specially for admission to training.....	13
Students in training—	
Males—	
Recommended for classification of II A.....	5
"                    "          II B.....	4
"                    "          III A.....	7
Females—	
Recommended for classification of II A.....	4
"                    "          II B.....	12
"                    "          III A.....	9
Students examined in drawing only, passed.....	5
"                    "          failed.....	22
The examinations in drawing only were held during the students' term training.	
Teachers—	
Teachers were examined and classified as under :—	
Promoted to Class I.....	14
"          II A.....	13
"          II B.....	42
"          III A.....	152
"          III B.....	57
"          III C.....	19
Examined in drawing and music, passed.....	55
"          "          "          failed.....	27
Failed to gain promotion or classification, Class I.....	22
"          "          "          II.....	60
"          "          "          III.....	128
Retirements from examination.....	4
	593

## High School Examinations.

The total number of candidates examined in the months of June and December were 599, of whom 559 were recommended as having qualified for admission as pupils of the Public High Schools, while 40 were regarded as having failed to reach standard requirements. Scholarships and bursaries were recommended for award as stated below :—

## For scholarships—

Boys—	
Sydney.....	15
Maitland.....	10
Girls—	
Sydney.....	15
Maitland.....	10
Bathurst.....	5

## The following bursaries were given :—

Boys—	
Maitland.....	10
Sydney.....	15
Girls—	
Maitland.....	5
Sydney.....	12

The number of candidates for the office of pupil-teacher is somewhat smaller than that of the previous year. The competition among the applicants of this class is, however, very keen, and, generally speaking, there appears to be no lack of suitable young people anxious to thus qualify themselves for appointment as pupil-teachers. As explaining to a large extent the apparently large number of ineligible examinees at these sittings, I might mention that each examination is a competitive one, and only those for whom immediate employment can be found are regarded as eligible, provided, of course, that their attainments are of a satisfactory nature. It may thus be seen that large numbers, though reaching standard requirements in point of attainments, are beaten by others of higher mental calibre and greater suitability so far as the examinations show. This practice, in my opinion, tends to benefit the Department in the direction of securing the best available candidates.

The number of pupil-teachers examined is considerably in excess of that for the previous year. This is accounted for by the fact that the needs of the Department necessitated a considerable addition during the year 1897 to this branch of the teaching staff. The proportion of failures to passes is very small, and from this alone may be deduced the conclusion that the pupil teachers prosecute their studies assiduously, and endeavour in their practical school-work to render themselves eligible for further advancement from year to year.

The number of candidates for admission to training was limited, due, undoubtedly, to the policy of the Department in filling vacancies occurring several years ago in the ranks of pupil-teachers by the appointment of ex-pupil-teachers, for whom small schools could not then be found. This was referred to in my previous report. Owing to the small number of first class female pupil-teachers who qualified for admission to training, an opportunity was afforded ex-pupil-teachers to submit to a special examination, with the object of securing a twelve months' course of training at the Hurlstone School. Only thirteen availed themselves of the concession, all of whom passed the required test.

A larger number of teachers than usual sought promotion or classification by examination. An increasing desire is thereby shown on the part of the teachers to improve their positions in the Service, and where that disposition is in evidence, the Department must necessarily, to a corresponding degree, reap advantage. Examination results show, in a general way, a satisfactory measure of attainments so far as the teachers are concerned.

The results of the High School candidates' examinations indicate that the number has not diminished, and that the percentage of passes is satisfactory.

R. N. MORRIS,  
Examiner.

## APPENDIX XVIII.

## REPORT OF PUBLIC SCHOOLS' CADET FORCE.

THE past year has seen the resuscitation of several companies formerly actively associated with the Cadet Force, and a number of new corps have joined the City, Suburban and Country Battalions. Several corps have, however, disbanded, leaving the number practically the same as in the previous year.

The high state of efficiency which gained the commendation and congratulations of Lord Hampden and the Naval and Military Commanders in Jubilee year has been maintained. The admirably-executed evolutions of the two battalions at the P.S.A.A. Annual Sports Meeting were a feature of the first day's gathering. His Excellency the Governor expressed himself greatly pleased with the work, while on all sides favourable comments were made, and the Press—including the illustrated weeklies, which published excellent photographs of the various movements—spoke in high praise of the soldier-like bearing of the cadets and the smartness and precision of all their manoeuvres.

I inspected the Metropolitan and Suburban Battalions, and everywhere amongst officers and cadets the improvement in uniforms and general deportment recorded last year is continued.

No inspection, however, was made of the country corps.

The monthly half-day parades and the quarterly full-day parades were held regularly, much useful work being done, the intelligent and practical interest shown by the officers in the various movements being very gratifying.

During the hot weather I ordered the parades to assemble at Lady Robinson's Beach and Bronte in order that swimming exercise might follow the field drill, thus affording the cadets a refreshing sea-bath after the day's work, and at the same time encouraging them in the health-giving and necessary art of natation.

Target practices have been held frequently, every facility being given to improve the quality of the shooting, and considerably-increased interest has been manifested in this particular direction. Ammunition has been issued on a larger scale than usual, and notwithstanding the drawback occasioned by the large number of unserviceable rifles, a decided improvement in shooting is very evident and is most satisfactory.

Many complaints have come to hand regarding the Braendlin carbines which have been in use by the Cadet Force for a number of years. In numerous cases the barrels have worn to such an extent as to make the weapon altogether unreliable for shooting purposes.

The supply of Braendlins in the first place was limited to 12 rifles for each full corps, and as many of them have now become useless, the case of the Orange Team—who had to fire in the recent match for the Challenge Shield with only three sound rifles—is not an isolated one.

It is absolutely necessary, if this work is to be carried on in an efficient manner and kept up to the standard, that new rifles must be obtained. Steps have been taken to procure samples of rifles better suited for cadet purposes than the one at present in use, and I hope that in the course of the next few months our wants will be attended to, and that the Minister will see his way clear to place a special sum on the Estimates for the purchase of new rifles.

Great economy has had to be exercised, and during the year rifles and cadet accoutrements have been called in from corps which have ceased to exist, and these have been redistributed amongst newly established corps, or forwarded to existing companies not possessing sufficient serviceable appliances.

The Annual Rifle Meeting was held on December 17th, 19th and 20th, at the Randwick Range, forty-five teams competing for the Challenge Shield, which was again won by the Orange Team. Bathurst, for the second time in succession, ran the winners very close; Singleton obtained third place, and for the first time for many years, a city school was placed fourth—Cleveland-street obtaining but 9 points fewer than the holders of the Shield. Each year sees the competition more and more closely contested, and the interest keener.

The Highest Aggregate Championship Gold Medal, presented by Messrs. A. Hordern and Sons, was won by Color-Sergt. A. Hatfield, of Kogarah, while Cadets C. Durrance, of Surry Hills South, and K. Hinde, of Albury, each scored two points less.

In addition to the Challenge Shield, prizes to the value of £80 were competed for, several citizens generously donating valuable trophies.

A special medal has been struck for the members of the winning team, and the highest individual scorer in each of the competing teams. The design is a unique one, in silver, with a gold centre, showing a typical Public School Cadet at the "Ready."

As in past years, the Royal Agricultural Society kindly granted space for the country teams to camp, and the military authorities lent a supply of blankets.

*School Drill.*

The Cadet Staff regularly visits the Sydney and Suburban schools for the purpose of instructing the pupils and the teachers in drill, in accordance with the School Standards, and also to drill the Cadet Corps attached to various schools. One effect of these systematic visits, continued throughout the year, is seen in the marked improvement in the evolutions performed, and in the character of the calisthenic displays given at the P.S.A.A. sports' meeting each succeeding year.

Country schools are drilled weekly by the Military Staff of the N.S.W. Forces, who also take charge of the cadets at the Rifle Ranges. Thanks are due to Major-General French for allowing the Staff-Sergeants in the country districts to pay these visits, the provision made in the Cadet Force Regulations for this purpose being largely availed of.

The classes in Military Drill and Calisthenic work—held for the benefit of teachers, on Friday evenings, in the Girls' High School—have been highly successful during the year, and have been very well attended, the space available often being far too small for the numbers present. In the course of my visits of inspection to the Metropolitan and Suburban Schools, the result of the training in these classes has been frequently apparent, and a higher standard of work performed by the pupils in many instances is recorded.

The improved methods of handling a class shown by many of the pupil-teachers who have attended these drills testify to the sound work being done.

Additional space for these classes is badly wanted, and I regret that the suggestion made in my last report, that the ground outside the Girls' High School should be lighted up, has not been carried out.

I am desirous of extending the scope of these classes, and trust soon to arrange for additional classes for lady teachers.

The Public Schools' Challenge Shield for Drill was won by the Croydon Park School, Camperdown being second, and Stanmore third. The test work in this competition is part of the standard drill for boys.

*Training Colleges and High Schools.*

Regular weekly visits have been made by the Cadet Staff to the Training Colleges, &c. The students at Hurlstone were thoroughly grounded in the principles of drill, and practised in the movements and exercises essential to their conducting classes according to the various standards in the schools.

The Fort-street students were taken step by step from the first stages of squad drill to company drill in all its forms, as well as being taught how to drill a class properly. They were also exercised in physical drill with arms, the manual and firing exercises, &c., and also afforded opportunities for rifle practice at the Range.

A number of the Cadet Staff visited weekly the Sydney High Schools, the boys being put through the military movements with and without arms, while the girls were put through a complete course of calisthenic drill.

At the close of the year I subjected the students at the Training Colleges to a careful and exhaustive theoretical and practical examination, and have to report satisfactory results.

*Drill Inspection of Schools.*

I have inspected the whole of the Metropolitan schools, and many of those in the sub-Metropolitan District, and found that with few exceptions the drill was of a very satisfactory character, and well up to standard requirements. More attention is paid to details, greater care is taken to see that the pupils maintain the correct positions, and some effort is made towards the proper setting up of the pupil and forming the young constitution.

A great want is still felt by the totally inadequate supply of dumb-bells and wands for girls, and dumb bells and drill rifles for boys, without which it is almost impossible for the classes to attain to the requirements of the standard of drill. I hope that before long means will be found to furnish all schools with the proper quantity of drill appliances.

I visited Newcastle, where I inspected the pupil-teachers of the district, putting them through a thorough course of drill, with a view to testing their knowledge of standard work required. Satisfactory reports of these examinations were forwarded to the Chief Inspector.

At the instance of the District Inspector I also visited Goulburn, calling at the various schools, and explaining to the teachers the details of the new standard of drill adopted by the Department. Practical illustrations of the exercises and movements as laid down were also given.

Similar visits paid to different country centres would be greatly appreciated by the teachers and Inspectors, and result in a more uniform and thorough class of work generally being done.

A. PAUL, Lieut.-Col.,  
Chief Staff Officer and Drill Superintendent.

Sydney, 17th March, 1899.

A. E. BASSAN,  
Accountant.

APPENDIX XIX.

REPORT ON TECHNICAL EDUCATION, WITH ANNEXES.

CONSIDERABLE progress was made by the Technical Education Branch during the year, as will be seen by the following comparison of enrolments.—

	1897.	1898
Sydney Technical College	3,678	4,052
Suburban classes	726	686
Country classes	2,342	2,336
Classes connected with Public Schools	912	1,444
Totals	7,658	8,518

The number of individuals attending the Colleges and branch schools was 6,291, as against 5,848 for the previous year, being an increase of 443. The weekly average attendance throughout the year was 5,678. There were 2,956 examined, of which 2,246 passed, being an increase of 323 passes. The standard of work reached last year has been maintained, also the percentage of passes.

At the Technological Examinations of the City and Guilds of London Institute, held early in May last, 26 students of the various Technical Colleges were examined, of whom 22 passed.

There continues to be a large demand for technical instruction in new centres, and, where practicable, I have visited the localities to ascertain the needs of the districts.

The new College at Bathurst was officially opened by Hon. J. Garrard on 29th June. Manual training and woodworking classes were inaugurated with fair success. The classes at Broken Hill were reopened after a lapse of some years, and promise to be very successful; already the attendance exceeds the accommodation. A new school at Albury will be opened early next year; a resident master has already been appointed, and the necessary arrangements are being pushed forward.

TEACHING STAFF.

The teaching staff consists of 98 persons, distributed as follows:—

- 12 lecturers in charge of departments.
- 6 resident masters in charge of branch colleges and schools.
- 49 teachers.
- 13 assistant teachers.
- 18 teachers in charge of classes, and remunerated by the fees of pupils only,

Several important changes were made during the year. Mr. W. A. Dixon, the senior Lecturer, retired from his position as Lecturer in charge of the Chemistry Department. The Chemistry and Geology Departments were amalgamated and placed under the charge of the Rev. J. Milne Curran. Mr. J. M. Petrie was appointed Demonstrator in Chemistry, Mr. A. E. Perry, Laboratory Assistant,

Assistant, and Mr. Symmonds Acting-Demonstrator in Mining and Metallurgy. Mr. E. W. Warren, B.A., B.E., succeeded Mr. H. S. Barraclough, M.E., as Lecturer in Applied Physics. Mr. B. Hadley was placed upon the staff as Assistant to the Lecturer in Architecture and Assistant Teacher of Drawing. Mr. A. R. Coffey was added to the teaching staff of the Art Department. Mr. H. S. Gray and Miss Blakemore were engaged for extra lessons in the Plumbing and Art classes respectively. Mr. J. D. Fillans was employed to give instruction in Masonry and Stone and Marble Carving. In addition to this he took up Wood-carving, applications having been received for instruction in that subject. Mr. J. J. Kinross was appointed Assistant to the Lecturer in Agriculture. Mr. H. O. Jackson was succeeded by Mr. F. E. Stowe as Teacher of Quantity Surveying. In the country districts, Mr. Youll took charge of the Mine Surveying at Miami, Miss M. A. Newman Typewriting at Bathurst, and Mr. C. M. Goodyear Mathematics at Newcastle. Mr. Brackley's services were discontinued, and Mr. Yeates took up his duties.

Manual Training:—Nine workshops were in existence in 1898, which afforded instruction to the pupils of 27 schools. The total individual enrolment of these classes, including students in training, was 759. Of these 396 presented themselves for examination, and 324 passed.

#### *Agriculture.*

The enrolments for the classes in this Department were as follows:—Sydney Technical College 177, Hunter's Hill 20, and Granville 35, being an increase in each centre over the previous year. In addition to the class lectures, some forty outings for practical work were arranged, and on each occasion there was a large attendance. Good progress was made during the year, and the students evinced great interest in their work. Some special lessons were given to 29 students of the Fort-street Training College during the Second and Third Terms.

#### *Veterinary Science and Farriery.*

The progress made in these classes has been satisfactory. One student from the Veterinary class succeeded in passing the examination for Inspector of Stock. The students on the whole worked well, but found great difficulty in attending the classes regularly each week, and to devote sufficient time to their studies. The course appears too comprehensive for two years. A new syllabus has been arranged. Excellent work was done in the Farriery class.

#### *Botany.*

Some thirty students enrolled for this class, many of whom were head teachers from public and private schools. The study of this science is becoming popular and there are good prospects of a large advanced class next year. Botanical excursions were arranged during the session, and useful work was done. The attendance and attention throughout has been excellent.

#### *Sheep and Wool Department.*

During the first week of the Term the full complement of students enrolled, seventy-one being admitted. The syllabus was followed very closely, and fortnightly class examinations were held. Thirty one presented themselves for the Annual Examination and fifteen passed. All the students were engaged for the shearing season, and satisfactory reports were received from the station owners and managers who had employed them. Arrangements have been made with several large wool firms for the classing and sorting of all the wools purchased by them. This will prove a great advantage to the students. The night classes were not so well attended during the year. The students realise that artificial light is not good for the wool classing.

#### *Department of Chemistry and Geology.*

The Departments of Chemistry and Geology were amalgamated and placed under the charge of the Rev. J. Milne Curran. The year's work, whether judged by the class results or by the Examiner's report, has been the most successful since the establishment of the College.

The Geology classes reached the highest enrolment and secured the largest number of passes since its inception. In the Mineralogy class the students obtained the highest number of passes on record. During the year the Lecturer in Charge compiled a "Manual of Practical Chemistry" and published a text book on the "Geology of Sydney," primarily for the use of the students. In addition to these a text book for the Mineralogy class is now in press.

#### *Pharmacy.*

The total enrolments stand as follows:—Pharmacy 28, Pharmaceutical Chemistry 21, Dispensing 19, Materia Medica 15, Veterinary Pharmacy 8. In the majority of instances the students are from those employed during the day in chemist's shops or laboratories. Most of the wholesale drug houses in this city have sent several of their employees to the classes held, and nearly all the leading positions in Messrs. Elliott Bros' Laboratory are filled by students or ex-students of the College, as it has been found that the training imparted at the College has been the means of enabling them to employ only native-born labour instead of having to import trained labour from England or Germany as has frequently been the case in other colonies. The passing of the Pharmacy Act, and the decision of the Board of Pharmacy to only recognise the Sydney University as a recognised School of Pharmacy, will no doubt diminish the attendance at the Pharmacy lectures in future, and will at the same time prevent many lads from entering this profession in the future. The success which has hitherto attended the work of ex-students of these classes is a guarantee of the value of the instruction given.

### DEPARTMENT OF MECHANICAL ENGINEERING.

#### *Applied Mechanics.*

This class has maintained its numbers, although there was a slight falling off in the advanced section. Considerable difficulty is experienced with many of the younger students, as they do not see the necessity for a thorough course in this subject, and shun the mental effort involved. Very often they attend other classes in the engineering department before taking up applied mechanics. The theoretical portion of the instruction is apt to be sacrificed at the shrine of the practical.

#### *Mechanical Drawing.*

The accommodation was taxed throughout the year, although extra day classes were established, but the list of applicants for admission to these classes continued to be large; even with an increased teaching staff it was impossible to meet the demands. Larger rooms are urgently needed. The Examiner reported favourably on the work executed by the students, some of whom won special praise. Valuable prizes were offered by private firms for the best drawings on given subjects.

#### *Fitting and Turning.*

In spite of the increased teaching staff, some two hundred intending students are waiting admission to this class. The students have reached a high standard of efficiency. Engineering establishments are encouraging their employees to attend, and applications are constantly received for advanced pupils. Good work was done throughout the year, and the results of the examination were satisfactory.

#### *Blacksmithing.*

*Blacksmithing.*

Each Term the enrolments steadily increased, until the third, when an extra night was necessary. The work done by the students was not equal to that of the previous year.

*Boilermaking.*

Practical work is preferred by most of the students attending this class, notwithstanding that the theory is indispensable. Boilermakers, as a rule, are not well up in arithmetic; consequently they experience great difficulty in following mathematical solutions. The attendance was regular. Some of the students passed well, particularly in templating.

*Pattern-making.*

Excellent progress was made during the year, and the students showed a marked improvement. The number on the roll and the results of the examination were the best yet recorded. Unfortunately the limited shop room precludes a larger enrolment, which is to be regretted. Special visits were arranged for the pupils to engineering and other works on Saturday afternoons.

*Ironfounding.*

The largest enrolment was reached this year since the foundry work commenced. Several improvements were effected during the session, particularly in the lighting arrangements. Considerable work was done for the fitting and turning classes, as well as other departments of the College. The increase promises to continue next year.

*Slide-rule.*

Steady work was done all through the year, and the students did well at their examinations. The class is gradually growing, and many of the engineering and architectural pupils are recognising the value of the subject in their every-day work.

*Electrical Engineering.*

Both elementary and advanced sections were well attended. The lectures were illustrated, and the latest developments in the science were brought under notice. Laboratory work was continued, and as many students as possible were accommodated, but over 100 could not be admitted to the practical classes from lack of teachers. More appliances are needed. The students were well-conducted, and a good percentage passed at the recent examinations. Several were also successful at the City and Guilds of London Institute Examinations.

*Applied Physics.*

The course has been divided into five sections, which has proved a great advantage to the students, who take up such sections as are required in their particular courses of study. In the Mechanic's section the enrolment has been large; in consequence of the want of suitable apparatus the progress was somewhat limited. Students attending the Sound, Light and Heat course were able to reach greater proficiency, as the appliances for these subjects are better. The Laboratory classes were crowded, and it was found impossible to accommodate all intending students, even with the help of an assistant. These classes promise to assume large proportions in the future.

The lecturer complains of two great difficulties—the want of apparatus and the lack of mathematical knowledge on the part of the students.

*Mathematics.*

The total enrolment for the year shows a slight increase, viz., 117, as against 109 of last year. At the Algebra and Technical Arithmetic classes the attendance has shown a considerable improvement, but the Geometry and Trigonometry were poorly attended. Many of the students made satisfactory progress.

*Sanitation Department.*

The Sanitary Engineering classes are well attended, the influx of students from the Practical Plumbing classes being again noticeable. A special course of lectures was arranged for inspectors of nuisances, and the attendance was encouraging. During the year the Plumbing classes were crowded, notwithstanding that an additional teacher was appointed. The students attended regularly, and their examination work reached a high standard of efficiency. Outdoor practical lessons were arranged and visits were paid to the large city establishments, where profitable instruction was obtained. Special lectures were delivered at Newcastle and Maitland on public health in connection with the local Schools of Art. Several promising students have obtained appointments after competitive examination. The workshops are far too small, and the ventilation needs improving.

*Architecture Department.*

Classes in all divisions of this department have shown an improvement, and, compared with last year, the numbers are better. The appointment of Mr. Hadley as Assistant Teacher of Drawing has had a marked effect upon the classes, and excellent work has been turned out. The Trades Drawing class is growing more popular now its objects are being better understood. In the Carpentry classes the work did not reach the usual standard. A Wood-carving class was started during the year, and fair work was done. Candidates for examination in the Wood-working classes are few compared with the enrolments. Some, however, passed well. A great improvement was shown in the Quantity Surveying class, and the prospects for next year are encouraging.

*Art Department.*

Some 674 students enrolled, as against 636 in the previous year. All the classes were well attended. Black and White has been added to the list of subjects during the year. The course of instruction, as laid down in the calendar, was strictly carried out, with gratifying results. Particular mention should be made of the Geometrical and Perspective classes, as the number of honours gained at the last examination exceeded those of other years. A number of the advanced students availed themselves of the opportunity of receiving instruction at the National Art Gallery, and many excellent studies have been executed. The Plant Drawing and China Painting Classes were full, and a second division of the latter had to be arranged. In the modelling section the numbers kept up, and the standard of work was much higher than last year. Useful subjects were modelled by some of the advanced students, showing how their knowledge could be applied to the trades they were following. More accommodation is necessary to enable the work to develop.

*Industrial Art.*

Large numbers attended throughout the year, and satisfactory progress was made in each of the sections. The Signwriting class still retains its hold on the painters, nearly all the students being connected with the trade. The Decoration course attracts a number of journeymen, and useful work is being done. Two students were successful in passing the City and Guilds of London Institute examination. It has been found necessary to add to the Design course, and it now extends over three years. Creditable designs were executed by the students during the year.

*Department of Domestic Economy.*

During the year there was a marked increase in all the classes, and it was necessary to divide the classes and give two lessons instead of one during the day, so as to avoid overcrowding. A large number come from the country to receive instruction in plain cooking, and starching and ironing. The Domestic Economy class was reopened with a fair attendance. Many students distinguished themselves in this subject.

*Lithography*

*Lithography and Photo-Lithography.*

A demand at the beginning of the year for advanced work led to the formation of an advanced class, which was well attended. The installation of the electric light proved a boon, resulting in considerable improvement in the work. In the lithography division the aluminium process was introduced, and worked with success. Owing to the limited accommodation it is difficult to make the headway desired. The students did well at their examinations, and excellent specimens of class work were on view at the Annual Exhibition.

*Dressmaking and Millinery.*

The attendance was good throughout the year, and most of the students were able to complete the course prescribed in the calendar. The Millinery class was fairly well attended, and the pupils were able to turn out creditable work at the end of the year.

*Bookkeeping.*

Sixty-five students enrolled at the College, whilst 29 joined the class at Surry Hills. During the year, single and double entry were taught, and the usual class examinations held with good results. Many of the students were young tradesmen, who were anxious to understand bookkeeping, so as to keep their own books. One lesson per week in this subject is not sufficient to be satisfactory either to the teacher or the pupils.

*Physiology.*

Many of the pupils attending this class were teachers; consequently, the attendance and the attention were excellent. The complete course was covered, which was fully illustrated. At the Annual Examinations the students did well.

## ASHFIELD.

The attendance improved during the year, and good work was accomplished in the Art classes. One of the pupils succeeded in obtaining a first-class (A) in drawing at the Junior Examination. Most of the students are mechanics, and join the classes for special knowledge. The appliances and accommodation are sufficient for present requirements. In the Shorthand, Bookkeeping, and Penmanship classes the attendance was better than in the previous year, and a higher class of work was done.

## NEWTOWN.

During the First Term the Geometrical and Perspective Drawing classes were transferred to Sydney, and Mr. Nangle, the teacher, placed on the College staff. The Freehand and Model Drawing classes were continued upon the lines of instruction set down in the calendar. The returns show a slight falling off in the numbers enrolled, but as compensation there was a greater proportion of students who attended the courses of instruction for the whole year, and there was a better average attendance. In the Shorthand class the enrolments amounted to 89, and the total attendances to 969. Many of the pupils made rapid strides, and became proficient in the art.

## NORTH SYDNEY.

The Art classes were conducted as usual, and the students were orderly and industrious. The weekly and quarterly reports do not indicate the true amount of work, as the hours for class instruction are limited, but extra time was given during the day to meet the needs of the students. An increased number of students presented themselves for examination this year, with good results. The Shorthand classes were well attended, and satisfactory progress made.

## PETERSHAM.

Efficient work was done during the year, resulting in marked progress. The epidemic of measles prevalent in the district reduced the average attendance, but the high standard of work reached last year was maintained this year also. Most of the appliances are in good order, but up-to-date examples are needed for geometrical and mechanical drawing. There was a large enrolment in the Shorthand classes, but few students joined for bookkeeping and mathematics. Several local residents presented prizes.

## WAVERLEY.

Art classes were re-opened in April, and a good number enrolled during the year. Most of the students were beginners, but did fairly good work. The accommodation and appliances are satisfactory. There is every prospect of good classes being formed next year.

## ARMIDALE.

The progress made by the students was good, as was also the attendance; very many of the students enrolled for three lessons each week. Two students passed the Junior University Examination taking (A) and (B) respectively in drawing. Several prizes were won at the local shows. The day classes are well attended, and the improvement is expected to be maintained.

## BATHURST.

The present year has been, in some respect, exceptional in the history of the College, inasmuch as the work of the classes was transferred from the old rooms in Russell-street to the new buildings in William-street. The classes which were in operation last year have all been continued, and at the beginning of the year a class in Scientific Dresscutting was started, under Mrs. Cooper, formerly teacher of that subject at Newcastle. A class in Typewriting was commenced by Miss Newman. Mr. Felix Coles was transferred from the Technical College, West Maitland, to conduct classes in Carpentry and Manual Training. Mr. Coles personally directed the fitting up of the class rooms, and at the beginning of the third term the classes were begun. A large number of students joined immediately, so that four evenings and three afternoons have been devoted to Carpentry, Wood-carving, and Turning. In addition, four sets of students from the Bathurst Superior Public School, and set each from the Kelso and Milltown Public Schools have received instruction in Manual Training. The aggregate enrolment in all classes was 565, and the total number of individual students was 405. These numbers are a considerable increase on those of any previous year. All the teachers agree in speaking highly of the attention and general good behaviour of the students. A Students' Union was formed at the College during the Third Term. It has already 70 members, and some very successful meetings have been held. As a means of uniting students more closely with the College it is a valuable adjunct to class work. For several classes additional apparatus is urgently required. There appears to be every prospect that the College classes will be more largely attended in the future than they have been in the past.

## BROKEN HILL.

The new College was opened on the 8th August. Classes in Chemistry, practical and theoretical, Metallurgy, Assaying, Geology, and Mineralogy were formed, with a full complement of pupils, most of whom are young men resident in the district who have long felt the need of these classes. The intense heat reduced the attendance towards the close of the Third Term. A great variety of ores for the students to work upon have been supplied by the managers of the various mines, who take a lively interest in the College. Already the work is seriously handicapped through the limited accommodation.

GOULBURN.

## GOULBURN.

Some 326 individuals attended the classes during the past year. Eighteen distinct subjects were taught. The Science, Commercial, and Wood-working classes were popular, and good work was done. The exhibits from the Carving class sent to the Sydney Exhibition were really first-class. Several teachers from both Public and Private Schools attend. Several mining men have enrolled to obtain a practical knowledge of testing minerals. Carpenters and joiners attend, seeking to obtain further skill at their trades. The result of the year's work compares very favourably with that of previous years. Mr. Wilkie's classes continue to be popular, and excellent work is turned out in all the sections under his charge.

## GRANVILLE.

Last year there was an individual enrolment of 155, being an increase of 30 over the previous year. Classes in Freehand Drawing were formed, Mr. Coffee being appointed teacher, who also took over the Model Drawing class. This arrangement enabled the resident master to devote another night to Applied Mechanics. The art classes promise to become an important section. A number of outings were arranged for the engineering students on Saturdays and holidays to engineering and other works, the attendance being exceptionally large. The Annual Industrial Exhibition was a marked success. Satisfactory work was done in the Shorthand classes, 50 being enrolled.

## LITHGOW.

Shorthand Classes have now been in existence for two years. The aggregate number for the year was rather less than that for the previous year. The pupils were regular, and the individual progress was satisfactory.

## MAITLAND.

The total number of classes in operation in the district was 55, with an individual enrolment of 521 for the year. The Art classes were well attended throughout the district, and the standard of proficiency was quite equal to that of previous years. A marked improvement in the attendance in the Wood-working classes was visible, and as new buildings are being erected in connection with the dairying industry, it is expected that the numbers will keep up. Good work was done in the Dress-making classes, but the Hanbury System should now be dispensed with, as a newer and improved system is in the market. There is every prospect of the healthy condition of all classes being maintained during the ensuing year. A more suitable building for a College is needed, as the existing class-rooms are by no means satisfactory, and do not meet the requirements of the district.

## NEWCASTLE.

Compared with last year the individual enrolment is better by about 18 per cent.; the increase was common to most of the classes, but the Science, Art, Mechanical Drawing, Mining, and Plumbing classes were particularly benefited. During the year seven students from the College sat for the City and Guilds of London Institute Technological Examination, and all passed. Fourteen students from the Coal-mining classes succeeded in obtaining Mining Managers' Certificates under the Coal-mines Regulation Act. These successes have increased the popularity of the classes concerned. Science lectures were inaugurated for the pupils of the Public Schools; and one hundred attended each week. The Metallurgy and Mathematical classes did not receive the support anticipated. Applications for additional classes have been received. The apparatus and appliances are not at all equal to the requirements, though some important additions have been made during the year. The Chemical laboratory needs reconstructing, as it is badly ventilated and unsuitable. A room for a library is needed. The results for the year were very satisfactory.

## TECHNOLOGICAL MUSEUM.

THIS Museum still continues to act as an important agent in the educational system of this Colony, and by aiding the advancement of scientific knowledge in the field of the economics of nature, it is becoming an important factor in the commercial world of Colonial life.

What a Museum of this kind really depends upon for its success and usefulness is not so much its building, nor its cases, and not even its specimens, but its staff; and in respect to the latter I can speak in the highest terms, for it has worked with the greatest enthusiasm in order to maintain the Institution in a high state of efficiency in every branch.

The attendant staff has taken particular pride in keeping the Museum scrupulously clean, a feature that receives much favourable commendation from visitors.

The clerical staff has, by working late hours, ably assisted in the furthering the best interests of the Museum.

The personnel of the scientific staff has undergone some changes. Mr. A. E. Finckh, who was in charge of the animal products, resigned his position on the 31st May, in order to take charge of the Royal Society's coral-boring expedition to Funafuti.

Mr. S. J. Johnston, B.A., was appointed to the vacant position of Economic Zoologist on 1st September. He has given able assistance in carrying out the new scientific arrangements of the animal products, inaugurated last year.

The Teacher of Botany to the College (Miss S. Hynes, B.A.) was placed on the permanent staff on 10th September as Botanical Assistant, and has already rendered much assistance in this direction.

The amount of original scientific work performed was of high quality, and considerable progress has been made towards the completion of eucalyptus oil investigations.

The work emanating from this Museum has on numerous occasions been favourably reviewed by the leading scientific publications of Europe and America.

*Original Work completed during the Year.*

By R. T. Baker, F.L.S. (Curator).

- On the Pine Trees of New South Wales; Australian Association for the Advancement of Science, Sydney.—This paper, although read before the A.A.A.S., was not handed in for publication, as it is intended to very much amplify it and publish it in a book form as a Museum publication. It embraces all the species of the genus *Callitris*, giving their distribution and economics, such as camphors, oils, sandarachs, &c.
- On two well-known but hitherto undescribed species of *Eucalyptus*; Proc. Linn. Soc. N.S.W., Vol. XII, June, 1898.—By the identification of these species a very fine eucalyptus oil was shown to be present in the species, which has a wide distribution.
- On two new species of *Eucalyptus*; Proc. Linn. Soc. N.S.W., Vol. XII, September, 1898.—These two species are remarkable for producing an oil almost entirely consisting of oil of turpentine, and reference has already been made to the discovery by the *Chemist and Druggist* (Lon.), 3rd December, 1898. The timber of one species is very hard and durable, and suitable for wood-blocking, &c.
- On a new genus of the Natural Order, Myrtaceæ; Proc. Linn. Soc. N.S.W., Vol. XII, November, 1898.—This is an exceedingly pretty shrub and worthy of cultivation.

By

By Henry G. Smith, F.C.S.

On the Myrticolorin, the yellow dye material of Eucalyptus leaves; Trans. Chem. Soc. London, 1898, page 697.—This completes the chemistry of this dye material, and proves it to be a new substance, the formula being  $C_{27}H_{28}O_{16}$ .

On the Pinenes of the Oils of the genus Eucalyptus, Part I; Proc. Roy. Soc. N.S.W., Oct., 1898.—This research proves the identity of these pinenes with those of oil of turpentine, and shows that both levorotatory and dextrorotatory pinenes exist in Eucalyptus leaves; the one having left rotation is new, and has been named "Eudesmene."

Joint Paper by R. T. Baker and H. G. Smith.

On the Stringybark Trees of N.S.W., especially in regard to their Essential Oils; Proc. Roy. Soc. N.S.W., Vol. XXXII, July, 1898.—The importance of this paper to pharmacy has been favourably commented upon by the *Chemist and Druggist* (London), Sept. 24, and the *Pharmaceutical Journal* (London), Dec. 17, 1898.

In the Zoological side of the Museum the lower invertebrates exhibited have been arranged in systematic order, and the corals and sponges have been named.

A collection of Australian and Polynesian shells, comprising over 1,000 species, has been made for the Country Museums, and arranged according to the classification adopted by Cooke in the Cambridge Natural History. Many specimens of General Zoology have also been classified for the country branches.

Public School teachers in particular, and the public generally, have sent in many specimens of reptiles, fish, insects, &c., asking for identification and information respecting them.

The collections of edible fishes and economic insects have each been advanced a further stage, and are in a very satisfactory condition.

Articles, descriptive and explanatory of various exhibits in general economic zoology, have been compiled and written in order that they may be printed and hung up in the Museum.

The Zoological Library has been catalogued.

In the wool section there were 460 fleeces and samples received, and most of them were reported upon. Many samples were obtained from the best bred and most fashionable prize winners of the year, and now the Department possesses one of the most valuable wool collections in the world, which is considered historical by woolgrowers of Australasia, and is used extensively as a wool reference.

The woolgrowers, and especially stud sheep-breeders, are taking much more interest in this section than formerly, and numerous inquiries for information are made.

The Murrumbidgee Pastoral Association forwarded their Eighth Wool-scouring test for treatment, report, valuation, &c. This is a great compliment to the Department, as this test is the leading one of the world.

The new fleece cases, made by the Museum carpenters, are a decided success, making the different courts in which they are placed, together with additional wall cases, appear furnished, and the show is now more in accordance with other departments.

The members of various branches of the wool trade have asked to have prepared a collection, containing all the different spinning qualities or counts into which wool can be made, and good progress has already been made in getting this collection together.

The entire wool collection has been rearranged and placed in rotation according to districts.

The greatest improvement made in this section is the enlarging of the English Wool and Manufacturing Court, through the removal of one of the walls. This court now presents one of the finest pictures in the Museum, and visitors upon gaining the floor at once find a view equal to many in the larger exhibitions.

This alteration is a great success, giving a good light where it was most needed.

The removal of certain walls has been carried out on each floor, and is a very great improvement, especially so on the ground-floor, where previously the entrance to the Museum was dingy and depressing.

The improved light, and the increased range of vision, constitute a great improvement.

The large collection of essential oils and camphors, discovered by the staff during the last two years, are now exhibited, and fill a very large show-case, measuring 8 feet by 7 feet by 3 feet.

This collection is of the greatest economic value to science and the Colony, and advances considerably our knowledge of the Colony's indigenous vegetation.

Among the numerous exhibits placed on view during the year may be mentioned a fine collection of polished marbles from Bathurst, Orange, Molong, &c.

The collection of coal tar products and dyes is now fairly complete. A large collection of bronzes (leaf and powder) used in the decorative arts, has been added, also a very fine collection of lakes and other pigments used in decorating, printing, lithography, &c.

We have received by donations, loans, and exchanges, over 1,000 specimens, without reckoning those acquired by the country Museums.

Amongst some exhibits received from the Technical College is a very fine allegorical group in plaster of Paris, modelled by Miss D. Coghlan, a student of the modelling class for 1879.

In the engineering section a fine collection of wheels, domes for boiler, and other articles formed by hydraulic pressure, manufactured by Fried Krupp, Essen, was presented by Messrs. Noyes Brothers, the Firm's representatives in this Colony.

Amongst the exchanges, we have received a representative collection of West Australian Timbers, from the Conservator of Forests, Western Australia.

A series of Para Rubber, from J. C. Willis, Director, Royal Botanic Gardens, Peradenya, Ceylon.

Alderman John Mills, of Ashfield, donated very fine specimens of Cotton, *Gossypium vitifolium*, grown at Ashfield.

A very interesting collection of Casts of Fishes, which were cast from life by Mr. A. Murray, and coloured from life by Mr. C. Toms, at the Technical College, attract great attention from the visitors.

Duplicate Botanical Specimens, received from our Botanical Collector, have been sent to the Botanic Gardens, Sydney—in all, 173 distinct species. In return, we have received some valuable Timber Specimens; also, several additions to the Herbarium.

Attendance of visitors to the Sydney Museum was 106,179, as compared with 100,680 of the previous year, and the Country Museums as under:—

1899.  
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.  
(REPORT FOR 1898.)

*Printed under No. 3 Report from Printing Committee, 22 August, 1899.*

REPORT of the Senate of the University of Sydney for the year ended  
31st December, 1898.

1. The Senate of the University of Sydney, in pursuance of the provisions of section 22 of the Act of Incorporation, 14 Victoria No. 31, has the honor to transmit the account of its proceedings during the year 1898, for the information of His Excellency the Governor and the Executive Council.

*Matriculation.*

2. The number of persons who qualified themselves for Matriculation in 1898 by passing one of the various University Examinations was 228. Of these, 75 passed the ordinary Matriculation Examination, 83 the Junior Public Examination, 15 the Law Matriculation Examination, 47 the Senior Public Examination, and 8 the Entrance Examination for Law, Medicine, and Science. The number of students actually admitted to Matriculation, with a view to proceeding with the curriculum in one of the various Faculties, was 106.

*Annual University Examinations.*

3. The numbers of students who attended and passed the annual examinations in December, 1897, and March, 1898, after attending the prescribed courses of lectures, are shown in the following table:—

Faculty of Arts.			Candidates.	Passed.
First-year examination	...	...	71	57
Second-year examination	...	...	45	37
Third-year examination	...	...	47	42

In addition to the students passing through the regular curriculum, 17 evening students and students of special subjects passed examinations in individual subjects.

Faculty of Law.			Candidates.	Passed.
Intermediate examination	...	...	14	12
Final examination...	...	...	10	7

Faculty of Medicine.			Candidates.	Passed.
First-year examination	...	...	25	19
Second-year examination	...	...	38	25
Third-year examination	...	...	23	16
Fourth-year examination	...	...	29	21
Fifth-year examination	...	...	23	22

Faculty of Science.			Candidates.	Passed.
First-year examination	...	...	1	1
Second-year examination	...	...	2	1
Third-year examination	...	...	3	3

Faculty of Science.—Department of Engineering.			Candidates.	Passed.
First-year examination	...	...	9	7
Second-year examination	{ Civil	...	4	2
	{ Mining	...	5	3
Third-year examination	{ Civil	...	1	1
	{ Mining	...	4	4

In the Faculty of Science, three Students of special subjects passed in the final examinations in their subjects.

*Attendance at Lectures.*

4. The following table shows the number of Students attending lectures in the several Faculties:—

Faculty of Arts (day), 169 ; (evening), 40	...	...	209
Faculty of Law	...	...	34
Faculty of Medicine	...	...	154
Faculty of Science	...	...	27
„ Department of Engineering	...	...	41
Total	...	...	465

Included are 51 women who attended in the Faculty of Arts, 1 in Law, 10 in Medicine, 2 in Science; total, 64. The above also includes 31 unmatriculated students.

*Degrees conferred.*

## 5. The following degrees were conferred after examination:—

- Master of Arts (M.A.):—Enoch William Cadman, B.A.; Lizzie Cocks, B.A.; Edith Lucy Doust, B.A.; Edward Samuel Edwards, B.A.
- Bachelor of Arts (B.A.):—Catherine Anderson, Hugh de Barri Barry, Gertrude Lillian Bavin, Annie Holloway Beaumont, George Edward Brown, Lizzie Sherwood Brown, Louisa Cole, Sydney Leicester Cook, Grace Marion Cordingley, Ethel Naida de Lissa, Charlotte J. Dey, Frank Vincent Dowling, Nona Dumolo, Mary Clifton Dunnicliff, Edward Evan Edwards, David Pentland Evans-Jones, Isabel Margaret Fidler, Maude Yeomans Fitzhardinge, Walter George Forsyth, Emily Isabel Gordon, William Hilder Gregson, Frederick Guy Griffiths, Marian Harris, Marian Fleming Harwood, Ernest Charles Heden, Alice Ellen Hipsley, Andrew Holliday, Wilfrid John Holt, Stephen James Houison, William Charles Huggart, Thomas Brown Hunter, Bennie Jarvie, Elisabeth Ada Lance, Rebecca Mary McGlynn, Alexander Duncan McLaren, Ethel Robertson Mitchell, Norman George Stafford Pilcher, Cuthbert Potts, Philip Francis Purcell, Florence Annie Rossiter, Edmund Haighton Stoney, Ernest William Warren, Alfred James Williams, Ainslie Arthur Yeates.
- Bachelor of Laws (LL.B.):—Peter Joseph Clines, B.A.; James Cook Elphinstone, B.A.; John Harold Hammond, B.A.; Hugh Hamilton Mitchell Merewether, B.A.; William David Mitchell Merewether, B.A.; William Arthur Parker, B.A.; John Beverley Peden, B.A.
- Bachelor of Medicine (M.B.):—Ada Affleck, Harriett Eliza Biffin, Gustav Hall Böhrsmann, Cedric V. Bowker, Julia Carlile-Thomas, Percy Glover Cooley, Hubert Roger Cope, Robert Dey, Lawrence Edward Ellis, Edwin Cuthbert Hall, Norman William Kater, Thomas Walter Lipscomb, John MacPherson, M.A., B.Sc.; Alice Sarah Newton, John James O'Keefe, Robert Henry Pulleine, William Henry Read, Herbert Sheldon, Harold Skipton Stacy, William Woodburn Stevens, Herbert Zouch Throsby, William Bain Walton.
- Master of Surgery (Ch.M.):—Ada Affleck, Harriett Eliza Biffin, Gustav Hall Böhrsmann, Julia Carlisle, — Thomas, William Aloysius Conlon, Percy Glover Cooley, Robert Dey, Lawrence Edward Ellis, Edwin Cuthbert Hall, Norman William Kater, Thomas Walter Lipscomb, John MacPherson, M.A., B.Sc., Alice Sarah Newton, William Henry Read, Herbert Sheldon, Harold Skipton Stacy, William Bain Walton.
- Bachelor of Science (B.Sc.):—Sarah Octavia Brennan, M.A., Walter Fitzmaurice Burfitt, B.A., Agnes Marianne Davis, B.A., Walter George Woolnough.
- Bachelor of Engineering (B.E.)—Civil Engineering:—Robert James Boyd. Mining Engineering:—Reginald Austin William Black, B.A., Thomas Henry Palmer, Francis Llewellyn Piddington, B.A., Norman Reid.

6. The total number of degrees conferred during the year was thus 103, divided as follows:—M.A. 4; B.A., 44; LL.B., 7; M.B., 22; Ch.M., 17; B.Sc., 4; B.E., 5.

7. The degrees conferred by the University from its foundation to the end of 1898 are:—M.A., 263; B.A., 942; LL.D., 23; LL.B., 71; M.D., 38; M.B., 141; Ch.M., 100; B.Sc., 30; M.E., 3; B.E., 52; Total, 1,663.

*Honours at Degree Examinations.*

## 8. The following Honours were awarded at Degree Examinations:—

*Faculty of Arts—M.A. Examination.*

Modern History and English Literature—Class II:—Edith Lucy Doust, B.A.  
Modern History—Class II:—Stephen Drummond Chalmers, B.A., Edward Samuel Edwards, B.A.

*B.A. Examination.*

Latin—Class I:—Isabel M. Fidler; D. P. Evans-Jones (University Medal for Classics). Class III:—Mary C. Dunnicliff.  
Greek—Class I:—D. P. Evans-Jones (University Medal for Classics).  
French—Class I:—Isabel M. Fidler. Class II:—Ethel N. De Lissa and Marian F. Harwood, æq; Charlotte J. Dey; B. Jarvie. Class III:—Ethel R. Mitchell.  
English—Class I:—Isabel M. Fidler. Class II:—B. Jarvie.  
German—Class II:—Marian F. Harwood; Ethel N. De Lissa.  
History—Class I:—Elisabeth A. Lance and N. G. S. Pilcher, æq. Class II:—Emily I. Gordon. Class III:—Florence A. Rossiter.  
Mathematics—Class II:—F. G. Griffiths. Class III:—B. Jarvie.  
Logic and Mental Philosophy—Class I:—N. G. S. Pilcher (University Medal); Ethel N. De Lissa. Class II:—Gertrude L. Bavin, Nona Dumolo. Class III:—E. E. Edwards.  
Geology, &c.—Class II:—E. C. Heden, C. Potts.

*Faculty of Law.*

Class I:—J. B. Peden, B.A. (University Medal). Class II:—P. J. Clines, B.A., J. H. Hammond, B.A., W. A. Parker, B.A.

*Faculty of Medicine.*

Class I:—J. MacPherson, M.A., B.Sc. (University Medal). Class II:—E. C. Hall, N. W. Kater, H. Z. Throsby, L. E. Ellis.

*Faculty of Science.*

Biology (Vertebrate Zoology)—Class II:—Agnes M. H. Davis, B.A.  
Geology—Class I:—W. G. Woolnough,\* W. Poole.

*Department of Engineering.*

Civil Engineering and Surveying—Class II:—R. J. Boyd.

*Scholarships.*

\* Unmatriculated.

*Scholarships.*

9. The following Scholarships were awarded :—

(a) At the Matriculation Examination.

Aitken Scholarship for General Proficiency :—F. A. Todd.

Cooper Scholarship No. II for Classics :—P. H. Power ; G. N. Woodd and F. A. Todd, *prox. acc.*

Barker Scholarship No. II, and Horner Exhibition for Mathematics :—H. S. Mort.

Lithgow Scholarship for French and German :—Ina B. H. Armstrong.

(b) At the First Year Examination in Arts.

Cooper Scholarship No. III, for Classics :—R. N. Robson.

George Allen Scholarship for Mathematics :—W. S. Boyd.

(c) At the Second Year Examination in Arts.

Cooper Scholarship No. I, for Classics :—Gained by R. C. Teece, who was unable to retain it, being already the holder of two Scholarships. Not awarded.

Barker Scholarship, No. I, and Norbert Quirk Prize for Mathematics :—D. T. Sawkins.

(d) At the B.A. Examination.

Frazier Scholarship for History :—Elisabeth A. Lance, N. G. S. Pilcher, *æq.*

(e) At the Intermediate LL.B. Examination.

G. Wigram Allen Scholarship for General Proficiency :—H. S. Dettmann, B.A.

(f) At the First Year Examination in Medicine.

Renwick Scholarship for General Proficiency :—A. Muscio.

(g) At the Third Year Examination in Medicine.

John Harris Scholarship for Anatomy and Physiology :—W. F. Burfitt, B.A.

(h) At the Second Year Examination in Science.

Caird Scholarship for Chemistry and Physics :—G. Harker.

(i) At the First Year Examination in Engineering.

Levey Scholarship for Chemistry and Physics :—J. P. V. Madsen.

(j) At the Second Year Examination in Engineering.

Deas-Thomson Scholarship for Physics :—J. J. E. Durack.

*Prize Compositions.*

10. The awards made for Prize Compositions were :—

Wentworth Medals for English Essays—Subject: "The Origins of Mythology." Prize for Graduates—H. S. Dettmann, B.A. ; Prize for Undergraduates—G. G. Nicholson.

*First Classes at Annual Examinations.*

11. The following students were placed in the first class in Honours at the annual examinations, other than the final examinations for degrees :—

*Faculty of Arts.*

First Year Examination :—Latin—R. N. Robson, I. Mutton. Greek—R. N. Robson. Junior French—N. J. Gough,\* Margaret A. Bailey, Mary H. Uther, Caroline M. Scrutton, Catherine I. Fell. Junior German—Florence M. Rutherford, Margaret A. Bailey. Mathematics—W. S. Boyd, W. R. Horn (Engineering), H. M. Stephen.

Second Year Examination :—Latin—R. C. Teece. Greek—R. C. Teece. Senior French—G. G. Nicholson. Senior German—G. G. Nicholson. Mathematics—D. T. Sawkins. History—R. C. Teece, Elizabeth J. Read. Logic and Mental Philosophy—G. G. Nicholson.

*Faculty of Medicine.*

First Year Examination :—Biology—Eleanor E. Bourne, A. Muscio, D. Wallace, B.A. Chemistry—A. Muscio. Physics—A. Muscio, D. Wallace, B.A.

Second Year Examination :—Anatomy and Physiology—Passed with distinction, A. H. Macintosh. Organic Chemistry—A. H. Macintosh, Mabel J. Graham, J. E. V. Farling.

Third Year Examination :—Passed with distinction—W. F. Burfitt, B.A.

*Faculty of Science.*

Second Year Examination :—Chemistry—G. Harker.

*Department of Engineering.*

First Year Examination :—Applied Mechanics, Geometrical and Mechanical Drawing—L. J. Winton, J. P. V. Madsen. Physics—J. P. V. Madsen.

Second Year Examination :—Physics—J. J. E. Durack. Geology—G. A. Waterhouse, J. F. Morris.

*Annual Prizes.*

12. Annual Prizes were awarded as follows :—

University Prize for Physiography—Florence M. Rutherford, *prox. acc.*, I. Mutton. Professor MacCallum's Prizes for English Essays—First Year, N. J. Gough ; Second Year, Elizabeth J. Read and E. J. Withycombe, *æq.* ; Third Year (English), Isabel M. Fidler. Professor Anderson's Prizes for Logic and Mental Philosophy—Second Year, G. G. Nicholson ; Third Year, N. G. S. Pilcher. Professor Woods' Prize for History—Second Year, R. C. Teece, *prox. acc.*, Elizabeth J. Read. Professor Haswell's Prize for Zoology (Class Examination)—Eleanor E. Bourne and A. Muscio, *æq.* Professor Haswell's Prize for Zoology (Laboratory Notes)—A. Muscio. Dr. Dixon's Prize for *Materia Medica* and Therapeutics—G. McLean, *prox. acc.*, W. F. Burfitt, B.A. Smith Prize for Physics—L. K. Ward. Slade Prize for Practical Chemistry—L. J. Winton. Slade Prize for Practical Physics—J. P. V. Madsen. Professor David's Prizes for Geology—Second Year, G. A. Waterhouse ; Third Year, W. G. Woolnough. Collie Prize for Botany—Eleanor E. Bourne. Professor Liversidge's Prize for Chemistry amongst Evening students—C. Quaife.

*Bursaries.*

\* Evening student.

*Bursaries.*

13. The following bursaries were awarded, each consisting of a payment to the student of £50 per annum, or in the case of a half-bursary £25 per annum, for three years, together with exemption from the payment of lecture fees in the Faculty of Arts or that of pure Science:—

Burdekin Bursary.	Walker Bursary No. 2 (one half).
Hunter-Baillie Bursary No. 1	Walker Bursary No. 5 (one half).
Hunter-Baillie Bursary No. 2 (one half).	Watt Exhibitions (two).
Maurice Alexander Bursary.	

14. The number of students permitted to attend lectures without paying fees was 55, including 43 State bursars and holders of the University bursaries. The payments to bursars amounted to £778 15s. and to scholars £993.

Three students of State Training Schools attended at a reduced scale of fees.

*Public Examinations.*

15. The Junior Public Examination was held in June, in Sydney and at the following local centres:—  
*New South Wales.*—Albury, Araluen, Armidale, Ballina, Bathurst, Bega, Blackheath, Bombala, Bourke, Bowral, Braidwood, Broken Hill, Bungendore, Burrowa, Camden, Carcoar, Condobolin, Cootamundra, Cowra, Deniliquin, Goulburn, Grafton, Gundagai, Hay, Hillgrove, Hornsby Junction, West Kempsey, Lismore, Lithgow, West Maitland, Mount Victoria, Mudgee, Newcastle, Orange, Parkes, Parramatta, Queanbeyan, Richmond, Rylstone, Singleton, Tamworth, Taree, Temora, Wagga Wagga, Wellington, Wingham, Wollongong, Young.

*Queensland.*—Bowen, Brisbane, Bundaberg, Charters Towers, Ipswich, Mackay, Maryborough, Rockhampton, Southport, Toowoomba, Townsville, Warwick.

There were 1,079 candidates, and 698 passed.

16. The Senior Public Examination was held in November, concurrently with an examination for Matriculation Honours and Scholarships, in Sydney, and at the following local centres:—

*New South Wales.*—Bathurst, West Maitland, Wagga Wagga.  
*Queensland.*—Brisbane, Ipswich, Rockhampton, Townsville.

There were 110 candidates, and 96 passed.

17. The prizes for general proficiency in the Senior and Junior Examinations were awarded as follows:—

*Seniors.*

John West Medal and Grahame Prize Medal—Claude Seccombe Browne; Roy Noel Teece, *æq.*  
 Fairfax Prize for Female Candidates—Marjory Knox.

*Juniors.*

University Prize for Boys—Robert Smith Armstrong, Harry Ernest Neal, *æq.*; *prox. acc.*, Edmund Harold Molesworth.  
 Fairfax Prize for Girls—Stella Mabel Kellick, [Edith Muriel L. Swain, over age], *æq.*; *prox. acc.*, [Blanche Vavasour Sandford, over age].

18. Three Law examinations were held, similar and equal to that prescribed for Matriculation, for candidates for Articles of Clerkship with Solicitors. At these there were 29 candidates, and 15 passed.

*Meetings of Senate.*

19. The Senate held eleven ordinary meetings, one adjourned meeting, in addition to the annual commemoration, and five meetings of the Conjoint Board, consisting of the Senate of the University and the Board of Directors of the Prince Alfred Hospital.

The attendances of the various Fellows were as follows:—

MacLaurin, the Hon. H. N., M.A., LL.D., M.D., M.L.C., Chancellor ...	18
Backhouse, His Honour Judge, M.A., Vice-Chancellor ...	16
Anderson, H. C. L., Esq., M.A. ...	17
Barton, Edmund, Esq., M.A. ...	3
Butler, Professor, B.A. ...	13
*Cobbett, Professor, M.A., D.C.L. ...	6
Cullen, the Hon. W. P., M.A., LL.D., M.L.C. ...	14
*Jones, P. Sydney, Esq., M.D. ...	...
Knox, E. W., Esq. ...	16
Liversidge, Professor, M.A., LL.D., F.R.S. ...	18
†MacCallum, Professor, M.A. ...	6
O'Connor, His Honor Mr. Justice, M.A. ...	6
Oliver, Alexander, Esq., M.A. ...	9
Renwick, the Hon. Sir Arthur, B.A., M.D., M.L.C. ...	15
Rogers, His Honor Judge, M.A., LL.B., Q.C. ...	7
Russell, H. C., Esq., B.A., C.M.G., F.R.S. ...	16
Scott, Professor, M.A. (Retired in September) ...	12
Simpson, His Honor Mr. Justice A. H., M.A. ...	12
*Stephen, Cecil B., Esq., M.A. ...	3
Stuart, Professor T. P. Anderson, M.D. ...	14
Teece, Richard, Esq., F.I.A. ...	17

\* Absent on leave. † Elected 20th September, 1898.

20. Twenty-one meetings of Sub-Committees of the Senate for Finance, Grounds, and other matters, were held during the year, the attendance of members being as follows:—The Chancellor (The Hon. Dr. MacLaurin), 21; the Vice-Chancellor (His Honor Judge Backhouse), 20; Professor Butler, 2; the Hon. Dr. Cullen, 11; Edward W. Knox, Esq., 14; Professor Liversidge, 2; the Hon. Sir Arthur Renwick, 4; Professor Scott, 1; Cecil B. Stephen, Esq., 1; Professor Stuart, 4; Richard Teece, Esq., 9.

*Vice-Chancellor.*

*Vice-Chancellor.*

21. The annual election to the office of Vice-Chancellor in the month of April resulted in the unanimous re-election of His Honor Judge Alfred Paxton Backhouse, M.A.

*Senate.*

22. In February leave of absence from the meetings of the Senate for twelve months was granted to P. Sydney Jones, Esq., M.D., and in April similar leave for nine months to C. B. Stephen, Esq., M.A., both of these gentlemen being about to visit Europe.

*Deans of Faculties.*

23. In accordance with the usual practice for the biennial election of Deans of Faculties, the Senate invited recommendations from the various Faculties as to the Branches of Learning the Professors of which should be ex-officio members of the Senate under the Act 24 Victoria No. 13, and should be elected to the office of Dean for a period of two years.

Acting upon the recommendations received, an amended by-law referring to ex-officio memberships was made and approved by the Governor in Council, and the following were appointed in November to be Deans of Faculties and ex-officio members of the Senate for a period of two years:—

Faculty of Arts, Professor MacCallum, M.A.  
Faculty of Law, Professor Pitt Cobbett, M.A., D.C.L.  
Faculty of Medicine, Professor Stuart, M.D.  
Faculty of Science, Professor Liversidge, M.A., LL.D.

*Staff Appointments, &c.*

24. In the early part of the year leave of absence was granted to Professor Threlfall during Lent and Trinity Terms to enable him to prosecute certain inquiries concerning the methods of teaching electrical subjects and the appliances used in the most recently-fitted Laboratories of Physical Science.

Upon his return to Sydney in Michaelmas Term he resigned his office as Professor of Physics from the 31st of December, 1898, for certain reasons of a private nature which rendered it necessary for him to reside in England.

In accepting his resignation, the following resolution was unanimously passed:—"The Senate in accepting the resignation of Richard Threlfall, Esq., M.A., of the Professorship of Physics in the University of Sydney, expresses its regret that family circumstances have caused him to resign his Chair, and desires to place on record its high appreciation of the ability and energy with which he has discharged the duties of his office during a period of twelve and a half years, of his eminent scientific attainments, and of the valuable services which he has rendered to the cause of education in the community of New South Wales."

In order to fill the vacancy created by this resignation, advertisements have been issued in Australia and in Great Britain inviting applications from qualified persons, and the following gentlemen have been requested to act as a Selection Committee in London, and to forward the names of the three applicants whose qualifications appear to be the best:—

Sir Daniel Cooper, Bart., Acting Agent-General for N.S.W.  
Sir Charles Nicholson, Bart., D.C.L.  
F. L. S. Merewether, Esq., B.A.  
Lord Rayleigh, Royal Institution.  
Professor J. J. Thomson, M.A., Cavendish Laboratory, Cambridge.  
Professor P. G. Tait, M.A., D.Sc., University of Edinburgh.  
Professor G. F. Fitzgerald, M.A., Sc.D., University of Dublin.  
Professor Ayrton, City and Guilds Institution.  
Professor Rücker, Royal College of Science, London.  
Dr. P. Sydney Jones.

Pending a permanent appointment to the Professorship, the Senate has appointed J. A. Pollock, Esq., B.Sc., to be Acting Professor of Physics. This gentleman has acted efficiently as Demonstrator in Physics for the past eight years, and as Professor Threlfall's *locum tenens* during his leave of absence.

The vacancy existing at the end of 1897, in the office of Demonstrator in Physiology, was filled by the appointment of Herbert Hawker, Esq., late Demonstrator in Physiology in University College, London.

The vacant office of Surgical Tutor was filled by the appointment of H. V. Critchley Hinder, Esq., M.B., Ch.M.

The offices of Demonstrator in Geology and Lecturer in Metallurgy, rendered vacant at the end of 1897 by the resignation of W. F. Smeeth, Esq., M.A., B.E., were filled by the appointment of W. G. Woolnough, Esq., B.Sc., to the former office, and of J. Taylor, Esq., B.Sc., A.R.S.M., Government Metallurgist, to the Lectureship in Metallurgy, with the consent of the Public Service Board of New South Wales.

E. F. Pittman, Esq., A.R.S.M., was reappointed to the office of Lecturer in Mining.

In September the office of Demonstrator in Anatomy became vacant by the resignation of A. E. Mills, Esq., M.B., Ch.M., in consequence of his appointment as Honorary Assistant Physician at the Prince Alfred Hospital. The office was filled by the appointment of F. J. T. Sawkins, Esq., M.B., Ch.M.

The Junior Demonstratorship in Chemistry, resigned by J. M. Petrie, Esq., at the end of 1897, was held for two terms by C. Walker, Esq., and for the third term by G. Harker, Esq.

A. G. Corbin, Esq., B.Sc., acted as Junior Demonstrator in Biology during Lent Term, and J. J. E. Durack, Esq., as Demonstrator in Physics in Lent and Trinity Terms.

In the month of December J. C. Dibbs, Esq., was reappointed Auditor of the University for a period of two years.

*Leave*

*Leave of Absence.*

Leave of absence for Lent and Trinity Terms of 1899 has been granted to Professor G. Arnold Wood, M.A., Professor of History, to enable him to visit Europe. During his absence the duties of his office are to be performed by G. C. Henderson, Esq., B.A. This gentleman—a distinguished graduate of this University—gained the James King, of Irrawang, Travelling Scholarship, and he has had a distinguished career at Balliol College, Oxford, having been lately appointed to the first class of University Extension Lecturers under the Oxford Delegacy.

Leave has also been granted to Dr. W. Camac Wilkinson, Lecturer in Pathology, for the same period of 1899; and the duties of his office are to be performed by Dr. Sydney Jamieson.

Neither of these arrangements entails any additional expense to the University.

*P. N. Russell School of Engineering.*

25. The conditions of award of the P. N. Russell Gold Medal have been determined by the Senate, and published in the University Calendar. The Medal is to be awarded for the best thesis upon some engineering subject to a graduate of Engineering of not more than two years' standing.

*University Extension.*

26. The annual election of the University Extension Board took place in the month of December, and resulted in the following appointments:—

*Members of the Senate.*—His Honor Judge Backhouse, M.A.; H. C. L. Anderson, Esq., M.A.; The Hon. W. P. Cullen, M.A., LL.D.; R. Teece, Esq., F.I.A.

*Members of the Teaching Staff.*—Professor Anderson, M.A.; Professor David, B.A.; Professor MacCallum, M.A.; Professor Scott, M.A.; Professor Wilson, M.B., Ch.M.; Professor Wood, M.A.

*Other Members.*—H. Goodere, Esq.; Rev. J. Hill, M.A.; A. W. Jose, Esq.; E. B. Taylor, Esq.

*Benefactions.*

27. (a) The Senate has to acknowledge thankfully the receipt of a bequest of £2,050 from the Executors of the late Thomas Garton, Esq., for the foundation of two Scholarships. The terms of the bequest were the following:—

Being desirous of showing my gratitude to the inhabitants of Sydney, New South Wales, for the large amount of happiness I enjoyed during the few—too few—short years I was a resident in their midst, and knowing of no more appropriate form the expression of it could assume than in the foundation of two Scholarships in the University of their beautiful city, I therefore, with that object, give and bequeath to Sir Saul Samuel, Agent-General in London, for New South Wales, or to the Agent-General in London for New South Wales for the time being, the sum of £2,050 (free from all duties and taxes whatsoever) for transmission to Sydney (less expenses), to such of the authorities in the University authorised to receive the same for the foundation of two Scholarships, the one for German and French Languages, the other for Ancient History, in the University of Sydney, New South Wales. Should, however, it be the opinion of the "Council" that the appropriation of the said sum of £2,050 to some other branch of Science or Literature would better promote the interests of the University, then in such case it is my pleasure to leave the matter entirely and unreservedly to the discretion of the Members of the Council.

As the subject of Ancient History is included with the ancient Classics, in which a number of Scholarships are provided, it has been determined to devote the Garton Scholarships for the present to French and German exclusively, and two Scholarships of the annual value of £30, tenable for one year, have been established, to be awarded at the First Year Examination, and the Second Year Examination respectively, in the Faculty of Arts.

(b) The fund bequeathed by the late Edwin Dalton, Esq., for Scholarships in memory of the late Dr. Woolley, is now being administered in London by George Slade, Esq., and Samuel Yardley, Esq., C.M.G., as trustees, and will continue to be so administered until the lapse of the present annuities chargeable to the estate. The income, however, is being transmitted to Sydney, and a Travelling Scholarship has been established from the fund under the following regulations:—

1. The Scholarship shall be awarded to a graduate in Arts of less than four years' standing at the time of the award, reckoning from his qualification by examination for the B.A. degree.
2. The Scholarship will be awarded by the Senate after report from the Professors of Greek, Latin, Modern Literature, Philosophy, and History, who shall recommend to the Senate that candidate who in their opinion, shows the greatest promise of success in further study in any one or more subjects falling under the heads of Language, Literature, History, and Philosophy; provided that they consider such candidate to be of sufficient merit.
3. The holder will be required to prosecute his studies or researches to the satisfaction of the Senate at some approved place or places during the tenure of his Scholarship.
4. The amount of the Scholarship is £150 per annum, tenable for not more than two years.
5. An award of this Scholarship shall generally be made in alternate years with an award of the James King of Irrawang Travelling Scholarship.

(c) An admirable portrait of the late Sir William Windeyer, M.A., LL.D., formerly Vice-Chancellor and Chancellor of the University, executed by Arthur Foster, Esq., has been presented to the University by Lady Windeyer, and has been given a place on the northern wall of the Great Hall.

(d) A handsome bust in white marble of P. N. Russell, Esq., who generously endowed the School of Engineering by a gift of £50,000, has been presented by Mrs. Russell. It has also been placed in the Great Hall.

(e) A further valuable donation of books has been received from Sir Charles Nicholson, Bart., D.G.L., for the University Library, thus making an addition to his many previous benefactions, and illustrating the great interest which he still maintains in the University, in the foundation of which he was one of the most important actors.

*Nicholson*

*Nicholson Museum of Antiquities.*

28. A catalogue of the Greek and Etruscan vases, and of Greek and Roman lamps, in the Nicholson Museum, at the University, has been prepared by Miss Louisa Macdonald, M.A., Principal of the Women's College; and has been printed and distributed to kindred institutions and to persons engaged in archæological studies.

*The University Library.*

29. The great inconvenience existing through lack of space for the proper storage of books in the University Library has been somewhat relieved during the past year by the erection of a number of bookshelves in the ante-room to the Great Hall. This room, on the walls of which is stored the Stenhouse collection of books, has for many years been used as a lecture-room for History and Logic and Mental Philosophy, and for other classes. Space has had to be found in other rooms, at very great inconvenience, for the classes in these subjects. The present principal library or reading-room is most inconveniently crowded by readers during term-time, and many would-be readers are unable to gain admission at the times which are the most convenient. The Senate looks forward to the time when the present unsatisfactory condition of the University Library may be relieved by the erection of a suitable building, to form an extension of the present building, by the completion of the quadrangle originally designed.

Additional space is also required for the exhibits which belong to the Nicholson Museum, and it is hoped that at no distant date provision will be made to meet both these wants.

The rooms in the main building which would be set free by the transfer of books and museum specimens to the new building are urgently required as lecture-rooms in which to carry on the ordinary University teaching.

*Affiliation to the University of Cambridge.*

30. An application made by this University for affiliation to the University of Cambridge has been granted by that University.

The practical effect of this affiliation is to permit students who have completed two years of study in the University of Sydney to compete for Honours at the Tripos Examinations in the University of Cambridge after two years of study there, and to proceed in due course to the B.A. or LL.B. degree.

The University of Oxford accords a similar recognition to the University of Sydney.

*Science Research Scholarship.*

31. Her Majesty's Commissioners for the Exhibition of 1851 offered to the University the nomination to a Science Research Scholarship of the value of £150 per annum, for the year 1899, under the usual conditions.

As the Senate was unable on this occasion to nominate a candidate who had fulfilled all the required conditions, the Commissioners have been asked to renew their offer of a nomination for the year 1900.

*Naval Medical Staff.*

32. At the instance of His Excellency the Commander-in-Chief of the Australian Station, the Lords Commissioners of the Admiralty have been pleased to revise the regulations governing the entry into the Medical Branch of the Royal Navy, so as to include a regulation allowing the nomination by the University of Sydney of a Graduate in Medicine for appointment to the Medical Staff.

This privilege will enable Colonial Graduates to gain admission to that service without the necessity of attending the regular competitive examinations held in London.

*Army Medical Staff.*

33. The Secretary of State for War has been pleased to offer to the University of Sydney the nomination of a Graduate in Medicine for appointment to the Army Medical Staff for the year 1900. The time allowed for the nomination, however, was so short that no candidate came forward; and a request has been made for the privilege of nomination to be extended to the next year.

*Accounts.*

34. The annual statements of receipts and expenditure, and statements showing the position of the various trust funds of the University at the 31st of December, duly certified by the Auditor, J. C. Dibbs, Esq., are appended to this Report.

H. E. BARFF,  
Registrar.

## APPENDIX.

RECEIPTS and EXPENDITURE of the University of Sydney for the year ending 31st December, 1898.

## GENERAL ACCOUNT.

DR.				CR.	
RECEIPTS.				EXPENDITURE.	
	£ s. d.	£ s. d.		£ s. d.	£ s. d.

## SYDNEY GRAMMAR SCHOOL.

(REPORT FOR THE YEAR 1898.)

*Printed under No. 3 Report from Printing Committee, 22 August, 1899.*

The Chairman of the Board of Trustees to The Minister of Public Instruction.

Sir,

Sydney Grammar School, 29 March, 1899.

I have the honor to submit the following Report of the progress of the School, and the proceedings of the Trustees, during the year 1898, in order that the same may be laid before His Excellency the Governor and the Executive Council, in accordance with the provisions of the "Sydney Grammar School Act."

The increase in the number of boys attending the school, which was referred to in the last Report, has continued, the average attendance during the year having been 466 as against 418 in 1897. It has been necessary in consequence to supplement the teaching staff to a certain extent, and an additional master has been appointed.

The Trustees are pleased to be again able to report that the independent examination of the boys has given very satisfactory results, as will be gathered from the reports of the Examiners, which are appended hereto, with the Annual Returns.

Many of the prizes and scholarships given in connection with the University examinations have also been won by pupils of the School.

The Morehead Exhibition has been awarded to Mr. C. S. Browne.

During the year the offices of Chairman and Vice-Chairman have again been filled by Mr. A. J. Cape and Mr. E. W. Knox.

The following Annual Returns are annexed:—

Statement of Account, duly audited, gives particulars of the receipts and expenditure for the year 1898.

Return giving details of the Teaching Staff and other employees, with their emoluments.

Return giving particulars of the number of Masters and Scholars.

I have, &c.,

EDW. W. KNOX,

Chairman of the Trustees.

RETURN of the Number of Masters and the Number of Scholars at the Sydney Grammar School in the year 1898.

Number of Masters.	Number of Scholars.				
	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Average of Year.

JUSTIN J. BRENNAN,  
Acting Secretary to Trustees.

REPORT UPON THE ANNUAL EXAMINATIONS, DECEMBER, 1898.

Presented to the Trustees of the School.

THE Upper School has been examined by the Masters of the School, who report upon the several subjects as follows :—

1. *Latin*.—The work at the top of the Forms is as good as it has ever been, and is much more even throughout all the Forms than it has been before. There are very few absolute failures. A considerably larger proportion of boys are doing higher work. The average knowledge of the language seems to be greater in amount, and to be more fairly distributed throughout the School. This subject is quite satisfactory.

2. *Greek*.—The highest work is better than it has been, and in each division a few boys are very promising, but there is too much inequality, and too much inaccuracy in the knowledge of pure grammar. It will be wiser, perhaps, for the future to restrict the study of Greek to those who show some special aptitude for this language. At present the subject is not satisfactory throughout.

3. *French*.—In the Upper Forms the standard in special honour work and in composition has been well maintained, and a noticeable advance made in unseen translation. The number of boys to whom such teaching has been given is considerably greater than last year, and whilst the best results have been brilliant, the general average of knowledge is quite as high as in former years. In the Middle Forms the work shows less relative advance, due largely to the prevalence of sickness, but partly also to want of that systematic teaching on definite lines which should prove equal to a sudden strain.

In the Lower Forms the training imparted by the Lower School has afforded a satisfactory ground work, but there is some material of a less promising character which has not enjoyed this advantage. In all Forms there is a good advance in breadth of vocabulary, owing to use of a more comprehensive text-book. In the higher Forms, knowledge of syntax has improved, and in almost all the other divisions there is a more accurate and more intelligent application of inflexional forms.

4. *German*.—The highest division has been doubled in number, and the teaching has stood the additional strain with results decidedly gratifying. The second division, which contains less satisfactory material, is receiving very capable and systematic teaching, but is at present not up to the usual standard. In the lower divisions the work is unequal, deficient in quantity, and spoilt by marked weakness in vocabulary. The insufficient continuity between the Junior Divisions, and the consequent loss of vitality, is a serious menace to general success in the teaching of this language.

5. *Mathematics*.—The papers sent in to the Examiner this year show that the School has fully maintained the high position it took last year in Mathematics. The improvements specially noted were a general advance in Arithmetic, the higher standard attained in the first division in Mechanics, and in the second division in Trigonometry, and the greater facility shown in solving Geometrical deductions by the lower divisions. This evidence of greater attention having been given to the careful development of the reasoning powers was noticeable in each division down to Division 5, where it was very distinctly marked. On the other hand, the range of work covered by one division was found to be too limited, while another division showed weakness in Algebra. The working of the lowest division in two sections has enabled the boys who have any aptitude for Mathematics to make a more rapid advance than they otherwise would have done.

6. *Natural Science* has been taught in all the Forms of the Upper School. The best work has been done by boys in Form IV, and five very good papers were sent in from Form V. The papers in Physical Geography of Commercial I were only fair.

The Rev. A. H. Coombes, M.A., Senior Mathematical Master of the King's School, reports upon the organisation and work of the Lower School as follows :—

CLASSIFICATION AND ORGANISATION.

The recent increase in the numbers, and the necessity of supplying more boys to the Upper School, have rendered it inadvisable to adhere to the method of simple gradation of Forms. A classification has been introduced, in which there will be two streams of boys doing work at different rates of speed. For this classification special advantages are claimed; it has obvious dangers and requires special precautions. If these dangers and cautions are borne in mind—and under the present Master of the Lower School they have all been noticed and allowed for—it seems that this scheme will succeed in producing what is aimed at—a constant supply of well-trained boys for the Upper School.

In the time-table, provision is made to bring every boy in the school immediately under the eye of the Master of the Lower School. The distribution of subjects is normal.

RESULTS OF THE EXAMINATIONS.

*Latin*.—The grammar was thoroughly good except in one Form. The composition is excellent in the five Upper Forms and good in the Lower ones. Translation from Latin to English was almost faultless in the two Upper Forms, but was not so well done below.

*French*.—The composition was very thoroughly known, the grammar less thoroughly. There is a need, which has been anticipated, of a drill-book of grammar.

*English*.—This examination was conducted by Masters of the School. The results point to unusually effective English teaching. I was particularly struck with the effort made to encourage literary appreciation.

*Geography*.—The papers were very searching. The result was satisfactory, though the map drawing was not neat.

*History*.—Two Forms were examined with satisfactory results.

*Mathematics*.—The text of Euclid was exceedingly well known. The deductions set seemed in every case to have been too hard for the boys. Algebra was very satisfactory and showed signs of careful teaching. The Arithmetic of the highest Forms was excellent; lower down it was not so even. Divisions 4 and 6 were good; Divisions 2B and 5 weak.

The results of the examinations indicate the thoroughly healthy condition of the Lower School, and speak volumes for the energy of the teaching. When the improved organisation which is now being evolved has come into full play, it is reasonable to suppose that the efficiency of the Lower School will be still further increased.

NEW SOUTH WALES.

## AUSTRALIAN MUSEUM.

(REPORT OF TRUSTEES FOR THE YEAR 1898.)

Presented to Parliament pursuant to Act 17 Vic. No. 2, sec. 9.

Printed under No. 1 Report from Printing Committee, 3 August, 1899.

TO HIS EXCELLENCY THE GOVERNOR AND EXECUTIVE COUNCIL,—

The Trustees of the Australian Museum have the honour to submit to Your Excellency their Forty-fifth Annual Report.

1. Since their last Report two vacancies on the Board have occurred. On 2nd May, Hon. P. G. King, M.L.C., who had been a Trustee since 1881, sent in his resignation, and on 23rd August, James R. Hill, Esq., died. The vacancies were duly filled by the election of Hugh Pollock, Esq., Secretary to the Attorney-General, and Dr. Thomas Storie Dixon, Elizabeth-street, Sydney.

2. The Museum continued open to visitors during the usual hours, viz., from 2 to 5 p.m. on Sundays and from 10 a.m. to 5 p.m. on all week-days, except Mondays, which were reserved for cleaning purposes. On Monday afternoons the collections have, as usual, been accessible to students and schools for teaching purposes, on application being made to the Curator. The total number of visitors recorded is shown in Appendix VI, and shows a decrease of 4,358 from the year 1897. The average was 334 on week-days (341 the previous year) and 561 on Sundays (634 the previous year). The largest attendance on any one day ever recorded occurred on Monday 3rd October (Eight-hours Day) when 3,358 persons entered the building.

The Trustees regret that for some years past the funds voted for the maintenance of the Museum have been inadequate. In 1892 the Museum vote, leaving out of account special items, was £7,201. In 1893 the Trustees were compelled to submit to considerable reductions rendered necessary by the financial pressure of the time, and they endeavoured to adapt their work to the rates allowed. They expected, however, that with returning prosperity, not only would former votes have been restored, but that some material consideration would have been given to the natural advancement of the Institution; moreover it is to be noted that as regards the Members of the Scientific Staff no steps have been taken towards restoring the salaries to the rates existing before the retrenchment of 1893, although, in the Public Service generally, considerable increases have been granted to Officers. In 1892 the vote for purchases was £1,250; since 1893 only £200 a year have been allowed, including purchase of books as well as specimens. Consequently, many desirable specimens have been lost to the Museum and therefore to the Colony, while no collecting, so necessary for maintenance as well as increase of the exhibits, has been done, and the Library has also fallen into arrears. The insufficiency of the funds provided for the Museum by the Statutory Endowment of £1,000 per annum, together with the irregularity both in amounts and in detail of the Annual Votes of Parliament, supplementary to the Endowment, prevent anything like an effective promotion of the interests of Science in connection with the Natural History of the Colony. As those interests have an important relationship to the development of the resources and, consequently, to the future prosperity of the community, the Trustees are exceedingly anxious to be

placed in a better position for carrying out the purposes for which the Museum has been established. The Trustees are pleased to say that for the current financial year (1898-99) a slightly larger sum has been voted, but still not as much as is necessary. The whole amount will be expended before the year has half expired, leaving no possibility of purchasing new specimens or books for many months to come—that is, until the next year's Estimates are passed.

A table for reference is appended showing side by side what were the Trustees' estimates for the year 1898-99, and the amount that was submitted by the Government and voted by Parliament.

Details.	Trustees' Estimates.		Amount voted for year ending 30th June, 1899.	
	£	£	£	£
Curator .....	650		650	
Scientific Assistants .....	1,500		1,370	
Attendants .....	600		600	
Night Watchmen.....	180		180	
		2,930		2,800
Contingencies—				
To meet the expenses of the Museum on Sundays .....	150		150	
Collecting and purchasing Specimens .....	400		200	
Purchasing and Binding books.....	500		200	
Scientific catalogues, Museum Records, Printing and Binding.....	645		500	
Additional Endowment for General Purposes .....	876		876	
Travelling Expenses .....	60		60	
Show-cases, including repairs ..	500		400	
		3,131		2,386
		6,061		5,186

3. The greater part of the funds available for purchases has been spent in the acquisition of Ethnological specimens, from the northern districts of Australia, not hitherto represented in the Museum. Another large and important collection was under offer at the close of the year, but the Trustees have only been able to make arrangements for its purchase in part. The only other noticeable acquisitions by purchase were:—A small Meteorite from Western Australia; a remarkable Bone Club, origin unknown, apparently of a New Zealand type, but with New Guinea ornamentation; a collection of Broken Hill Ores, containing some exceedingly fine specimens of dendritic Native Copper; a valuable collection illustrative of New Caledonian Ethnology; and a fine mother-of-pearl inlaid Skull from the Solomon Islands.

4. No collecting expeditions were despatched during the year 1898, the Trustees not having the necessary means at their disposal. At the suggestion of the Public Service Board the Trustees were invited to send a naturalist to accompany the Trawling and Dredging Expedition of H.M.C.S. "Thetis," under the control of Frank Farnell, Esq., M.L.A. Mr. Edgar R. Waite was selected, and he accompanied the expedition throughout. The entire scientific collections have been deposited in the Museum, and the results will be worked out by the Museum Staff and published as a Museum Memoir at as early a date as possible.

5. The maintenance of the Museum collections is now mainly dependent on the generosity of donors, and specimens of more or less interest are from time to time received. The most noticeable of last year's acquisitions from this source were:—Ethnological specimens from Erromanga, New Hebrides, by the Rev. H. A. Robertson, including two examples of the rare *Navelah*, or "Moon Rings"; the well-known "Soudan Donkey," by the Zoological Society; Muridæ, from Central Australia by Prof. W. Baldwin Spencer; and a Japanese Salamander, by Mr. W. C. Heron.

6. As reported, last year, a sum of £1,500 had been placed on the Estimates for certain much needed repairs, which are now being carried out very slowly. It would be in the interests of the Museum if this work could be accelerated. On the Loan Estimates for 1898-99 a further sum of £13,500 has been voted for Museum extension, the intention being to build the superstructure over the recently erected workshops as a portion of the south wing.

7. There has not been any change on the Scientific Staff, but among the Mechanics and Attendants there have been some slight adjustments of duties, and one additional officer has been engaged. Full particulars of the staff will be found in Appendix XIV.

8. The work on the "Fishes of Australia" is still being continued by Mr. J. Douglas Ogilby, under the supervision of a Committee appointed by the Trustees. The scope of the work is so extensive, that the Trustees fear that it will not be possible for Mr. Ogilby to complete it within the time allowed by the Public Service Board,

9. The publications which have been issued during the year 1898 are :—Records of the Australian Museum, Vol. III, Nos. 3 and 4. Memoirs of the Australian Museum, Vol. III (On Funafuti), No. 6. Catalogue of Australian Birds (by Dr. E. P. Ramsay), parts 1 and 2, revised by Mr. A. J. North. Australian Lepidoptera and their Transformations (by late Mr. A. W. Scott), revised and edited by Mrs. Helena Forde and Mr. A. S. Olliff, Vol. II, part 5, being the title page and index only to complete the four previously published parts of Vol. II.

10. Full information with respect to the Museum will be found in the Appendices attached to this Report, viz. :—

- I.—Curator's Report.
- II.—Reports of Scientific Assistants.
- III.—Secretary's Report.
- IV.—Statement of Receipts and Expenditure.
- V.—Attendance of the Trustees.
- VI.—Attendance of Visitors and summary for fifteen years.
- VII.—Return of Specimens acquired.
- VIII.—Donations.
- IX.—Exchanges.
- X.—Return of information supplied to the Public.
- XI.—Additions to the Library.
- XII.—Publications of the Australian Museum.
- XIII.—Papers published by Members of the Museum Staff.
- XIV.—Museum Staff.

The Common Seal of the Museum was hereunto affixed by order of the Board, this 6th day of June, 1899.

(*l.s.*)

JAMES C. COX, M.D.,  
Chairman.

S. SINCLAIR,  
Secretary.

## APPENDIX I.

CURATOR'S REPORT FOR 1898.

To the Trustees of the Australian Museum,—  
Gentlemen,

Sydney, January, 1899.

I have the honour to hand you the following Report, dealing with the work of the Australian Museum during the past year, and on the condition of the Collections in your charge:—

1.—*General Condition.*—This continues to be satisfactory on the whole, but might be made still more so, were it not for the want of a more liberal Appropriation. The periodical examination of the roof structures and other likely spots by the Carpenters has not revealed any further ravages by Termites.

2. *Fire Appliances.*—The charge of these appliances still continues in the hands of the Metropolitan Fire Brigade. The fire-alarm bell referred to in last year's Report was procured and erected in the grounds contiguous to the Workshops.

3. *Staff Duties, &c.*—It is almost needless to say that the general attention of the whole Staff to their duties was most satisfactory.

Mr. Henry Barnes, who, for the past thirty-eight years, had acted as Articulator, Photographer, and Formator to this Museum, and retired from failing health, died on March 17th, 1898.

Mr. A. Barnes was promoted to be additional Attendant in February, to take the place of Attendant Robert Grant, whose transfer to the Taxidermist's shop as Assistant Taxidermist was duly carried out at the same time. Mr. A. W. Brown was appointed Labourer in February, and both he and Attendant A. Barnes were sworn in as Special Constables. The appointment of Mr. J. W. Woodhead as Compositor and Printer was also confirmed in February. Our thanks are due to two volunteer workers, who have lent great assistance during the past year; Mr. F. W. Franks who has aided Mr. C. Hedley in the Conchological Section since August, and Mr. Allan McCulloch who has efficiently assisted Mr. E. R. Waite since July.

Notwithstanding these additions to the Staff, I can do no less than reiterate my remarks of the last two years' Reports, in which I referred to the under-manned condition of the Museum generally, and the inadequate remuneration of many members of the Staff. It requires no demonstration to prove that as the collection increases at the rate, that under your control it has been doing for the last few years, a proportionate increase is needed amongst those who are charged with its care.

4. *Care of the Collections.*—I am again in a position to report that the Collection, both exhibited and in store, is in an excellent condition, although its size is fast outgrowing the capacity of the number of hands employed to keep it in an efficient and clean condition. In the Ethnological Section alone there is room for the undivided attention of two pair of hands, for it is the most difficult portion of the Museum's contents to keep in a clean and healthy state.

It is practically impossible for the Scientific Assistants, overburdened as they are with systematic work, to give that attention to the collections under glass that the importance of the latter demands. The time has now arrived, or to speak correctly, has passed, when a few Mechanical Assistants should be appointed, to whom should be committed the well-being of all collections, both exhibited and in store, under the respective Assistants-in-charge.

5. *Space.*—The appropriation obtained for the casing of the uppermost or sky gallery was utilised to provide wall-cases and locks for half the gallery approximately. The second moiety is the only portion of the Museum now devoid of cases, and this will be cased from the 1898-99 Vote. The space referred to last year in the three small rooms attached to the Ethnological Hall was also utilised.

6. *Structural Matters.*—In my last Report (1897) it was stated that on the Loan Estimates for 1897-8 was placed the sum of £1,500, to be expended chiefly in repairs to the existing building, some of which are referred to in the 1896 Report. I regret to say that very great and, to my thinking, unnecessary delay has arisen in the carrying out of these renovations. However, up to the present time the following items have been completed:—(1) Erection of a divisional brick wall, surmounted by a stone coping, between portions of the Museum and Sydney Grammar School Grants. This wall is 114 feet long and 10 feet high, and to it the Trustees of the Grammar School have added iron stanchions supporting a strong wire-netting fence, of considerable height, as a protection to our windows against balls, &c. (2) Refacing the stairs of the main staircase with metal fillets, and infilling the foot-hold behind with asphalt, the stairs having become much worn and dangerous to those using them. (3) Office telephones, to the number of sixteen were distributed throughout the building, and have already proved a source of great convenience and saving of time. (4) Alterations to rooms under main staircase for the accommodation of the Numismatics. (5) Renovation of the Photographic Studio.

In 1897, when the new Workshops were erected, a Crematorium was built for the destruction of offal, but it was not a success. After a number of alterations and experiments by the Government Architect, an efficient furnace was at last constructed, and now appears to perform the work required in a complete manner.

Coloured blinds were provided by the Department of Public Works for the new Spirit-house; the roadway leading to the private entrance was re-ashed at the Trustee's expense; the areas around the back portions of the Museum premises were re-whitewashed; and the charcoal filters distributed about the building were abolished, and replaced by one of Pasteur's Germ Pressure Filters, which provides sufficient pure water for all necessary purposes.

A store for empty packing cases and a smithy were erected by our Carpenters.

You were pleased to approve of plans submitted by the Government Architect for a further addition to the new south wing, and in consequence the Government were good enough to place on the 1898-99 Loan Estimates a sum of £13,500 to carry these out. This sum will be expended in building portions of two galleries above the recently-finished workshops. This continued building activity is particularly gratifying, because it foreshadows the completion of the south wing at no very distant date, and is a pleasing interlude to our otherwise gloomy financial outlook. The gain of space afforded by these immediate additions will afford two areas of floor-space alone, to say nothing of the walls, of approximately 88 feet long by 45 feet wide; but when the building is completed in the future these galleries will each be approximately 200 feet long by 45 feet wide.

It

It may not be out of place to mention here that the portrait of the Hon. Alexander Macleay, F.R.S., an Hon. Secretary of the Linnean Society of London, and a member of the Australian Museum Committee (as it was in those days) from its commencement in 1836 to his death in 1848, was renovated and revarnished. This remarkably fine portrait and picture was painted in London in 1838, but the artist's name is unfortunately obliterated, although the address—"Langham Place, London"—still remains perfectly clear and legible.

7. *New Cases.*—In consequence of the limited amount of wall-space still to be occupied, less work in the erection of new cases was carried out during 1898 than almost any previous year. One half of the wall-cases in the Sky or Fish Gallery were erected, and the locks provided out of the 1897-98 Appropriation; the glass shelving was taken from store.

A floor-case was provided for an additional Bower-bird group, the Newtonian Bower-bird (*Prionodura newtoniana* De Vis.), and a similar case for the Mount Stirling Meteorite.

Two rooms under the main staircase were provided with desk floor-cases for our coins, &c., and a third was wall-cased out of old material for the reception of Erotic figures and images.

The balustrade cases in the Invertebrate Gallery still remain without new locks, as already twice reported on.

8. *Collecting and Field Work.*—During the earlier summer months Mr. A. J. North, in his vacation, visited the neighbourhood of the Clarence River for the purpose of making observations on the nidification of some of our sub-tropical birds, and succeeded in obtaining a valuable series of photographs from nature. Mr. Charles Hedley also passed his vacation on the north-east coast of New South Wales, where he procured a fine set of Mollusca, that he generously presented to the Museum; and Mr. W. J. Rainbow, during a similar period, collected insects in the Blue Mountains.

The most signal success, however, relating to collecting, in which the Australian Museum has participated for some years past, was the Trawling and Dredging Cruise, under the control of Mr. Frank Farnell, M.L.A., of H.M. Col. S.S. "Thetis," (Capt. C. P. Hildebrand), commencing on February 18th, and terminating on April 9th. The Trustees were represented during the whole cruise by Mr. E. R. Waite, who succeeded in enriching our collection with a very fine set of marine organisms, many of them little known, some undescribed, and again others that had not been met with since H.M.S. "Challenger" visited our waters. Mr. Waite's outline Report is appended hereto.

*Thetis Trawling Cruise.*

To the Curator.

Sir,

Australian Museum, 28 April, 1898.

I have the honor to hand you a bare outline of the movements of the Trawling Expedition, which I understand is declared to be concluded.

Four times we returned to Sydney, the dates being as follows:—

1st Cruise	...	...	...	...	...	...	...	...	Feb.	18 to Feb.	23
2nd "	...	...	...	...	...	...	...	...	"	25 "	March 8
3rd "	...	...	...	...	...	...	...	...	March	10 "	" 22
4th "	...	...	...	...	...	...	...	...	"	25 "	April 9

The coast-line covered extended from Jervis Bay to the Manning River, and apart from the Lord Howe Island trip (fourth cruise), the greatest distance attained from land was 25 miles. The depths at which the trawl was lowered ranged between 10 and 90 fathoms. As you are aware, very valuable collections were secured for the Museum, and I am at present engaged in preparing a Preliminary Report on the fishes for Mr. Farnell. As far as can be estimated at present, there are about 100 species of fishes represented by 365 specimens. Several are new to the Colony, while a few are new to science.

I have, &c.,  
EDGAR R. WAITE.

Mr. Waite's preliminary "Scientific Report on the Fishes" was published as an appendix to Mr. Farnell's "Report upon Trawling Operations."\* On two occasions I had the pleasure of accompanying the expedition, one to the Manning Bight and the other to Lord Howe Island. Acting on a suggestion of mine, you were pleased to recommend to the late Minister for Public Instruction that a sum of £400 should be placed on the 1898-99 Estimates to provide for the publication of the complete scientific results of the Expedition. The subject was also warmly taken up by Mr. Frank Farnell, and in due course the money was voted.

To the assistance of Mrs. Thomas Nicholls, of Lord Howe Island, we were indebted for a further instalment of Mollusca from that interesting island.

In accordance with your instructions a map of Australia was coloured, showing areas that had been zoologically surveyed by members of the Museum Staff up to the present time.

I feel it my duty for the third time to call your attention to the disadvantage the Museum labours under through the want of a permanent trained Collector, and a sufficient allowance to enable such an officer to investigate many of the interesting problems still awaiting solution. This is the more to be regretted when we find a sister institution, not directly concerned in systematic science, the Technological Museum, in a position to do so; and Museums in other lands engaging Australian collectors.

9. *Exchanges.*—The principal exchanges effected during the year were:—From the Royal Museum of Vertebrate Zoology in Florence, Professor Henry Giglioli despatched a further consignment of mounted Mammals, comprising a Wolf (*Canis lupus*, Linn.), a Beaver (*Castor fiber*, Linn.), an Opossum (*Didelphys azaræ*, Temm.), a Monk Seal (*Pelagius monachus*, Herm.), &c. From the Perth (W.A.) Museum, Birds and Marsupials were received, and to the latter mounted Placental Mammals were forwarded. A collection of Australian Minerals and Metaliferous Ores was sent to the Imperial Geological Institute of Berlin. Indian Mammals of the Blandford Collection were received from the British Museum (Nat. Hist.), London.

10. *Presentations.*—Although the gifts last year were tolerably numerous, no one particular object or set of specimens calls for very special notice. A fine block of floated Pumice was presented by Mr. G. Sweet on his return from the Second Funafuti Coral-boring Expedition, obtained at Tarawa Island, Gilbert Group. Ethnological specimens were given by the Rev. H. A. Robertson, from Erromanga, New Hebrides, including a Cooking-pot and two examples of the *Navilah*, or "Moon Ring"; a series of Mesozoic,

\*Sea Fisheries. Report upon Trawling Operations off the Coast of New South Wales, &c., carried on by H.M.C.S. "Thetis," under the direction of Frank Farnell, Esq., M.P. (8vo. Sydney, 1898. By Authority.)

Mesozoic, Carboniferous, and Palæozoic fossils from Tasmania, by Mr. T. Stephens, M.A.; numerous Mammals by the New South Wales Zoological Society, including the well-known "Soudan Donkey"; a welcome set of Muridæ from Central Australia, by Professor W. Baldwin Spencer; a Japanese Salamander (*Megalobatrachus maximus*, Schl.), by Mr. W. C. Heron, a Reptile quite new to our collection; a valuable series of Corals, Aleyonarians and Crustacea, from New Caledonia, by Mr. C. Hedley.

11. *Purchases*.—Although few purchases were made during 1898, the specimens so obtained were highly important, the principal being:—An additional small iron Meteorite from Western Australia; valuable collection of New Caledonian Ethnology, from Mr. J. J. Atkinson, of Thio, including two funeral masks; Tasmanian minerals, through the Tasmanian Museum, Hobart; Broken Hill minerals from Mr. J. A. Burnell, the Native Coppers being particularly fine; a remarkable inlaid Skull from the Solomon Islands; and a Sunfish (*Orthogoriscus mola*, Schl.) from Port Jackson.

12. *Publications*.—The important work issued under your auspices, "The Zoology of Funafuti Atoll, based on collections made by Mr. C. Hedley in 1896," being Memoir No. III of the Museum Series, was steadily continued throughout the year, resulting in the publication of Part 6.

One part of the Museum Records was published, being Part 4 of Vol. III.

The new edition of Parts 1 and 2 (Accipitres and Striges) of Dr. E. P. Ramsay's "Catalogue of Birds in the Australian Museum," was duly published last year.

The second part of Mr. North's "Insectivorous Birds," prepared by desire of the Honorable the Secretary for Mines and Agriculture, appeared in the *Agricultural Gazette* (January, 1897) as already reported, but as the third part has now been in the hands of the Agricultural Department for upwards of four years, it is feared that its publication is abandoned. This, in my opinion, is very short-sighted policy, for I have received abundant proof of the popularity of these excellent articles.

In the early part of 1898 you requested me to report on the condition of the incomplete amongst the Museum catalogues, with the result that I recommended the abandonment *sine die*, of all except the "Catalogue of Australian Birds," by Dr. E. P. Ramsay; the "Tunicata," by Prof. W. A. Herdman; Mr. North's "Catalogue of Nests and Eggs of Birds found breeding in Australia and Tasmania"; and the Library Catalogue by Mr. Sinclair.

During the present year the "Funafuti Memoir" will be completed and two other important works commenced. viz., "The Scientific Results of the 'Thetis' Trawling Expedition," and a second edition of the "Catalogue of Nests and Eggs," as detailed in paragraph 23. I have long felt the want of a working catalogue of the more important specimens in the Museum, as well as of the duplicates, with the view of rapidly ascertaining both what we possess and are in want of, or as available for exchange. To this end Mr. Waite suggested the adoption of the Library system of card slips as explained in his Report (Appendix II), and this has so far been found to answer the purpose well.

13. *Information and Duplicates Disseminated*.—Numbers of visitors interested in Zoology were afforded access to the collections, and accommodation found for artists desirous of drawing from nature, particularly students from the Technical College.

A large number of mineral oddments was sent to the Technical College at Newcastle for the use of the students, and a series of food fishes was prepared for the Museum there. Certain anatomical preparations outside the scope of our operations were transferred to the Anatomical Museum at the University. Sundry botanical specimens, coming within the same category, were sent to the Botanical Gardens Museum. A full return under this head will be found in Appendix X. •

A large amount of information was disseminated in the form of replies to correspondents.

14. *Spirit Collection*.—As foreshadowed in my Report for 1897, the whole of the specimens in spirit were transferred from the old shed to the new Spirit-house, erected in 1897 without accident, under the superintendence of Messrs. Whitelegge and Waite. With the exception of the Mollusca all the groups were arranged in systematic order on the shelves and in the glazed cases by the various Assistants in charge, and printed group labels provided. This year Mr. Hedley will take the Mollusca in hand.

A reference to the Birds retained in spirit will be found in paragraph 23.

Previous to the commencement of last year it was always the custom to throw away dirty or foul spirit. This appeared to me a very wasteful act, and in consequence you were good enough to obtain from the Treasury a permit to redistil such material without procuring a license, or entering into any further bond than that already existing. So far, with very crude apparatus, 50 gallons of spirit have been recovered of a strength sufficiently high to enable it to be used for store and collecting purposes. Now, one of Townson and Mercer's six-gallon copper stills, with worm, &c., is under order from London, and on arrival I shall be in a position to make a much larger and more satisfactory saving of spirit—one of the most expensive items on our store list.

15. *Taxidermists* (Messrs. J. A. Thorpe and R. Grant).—A very satisfactory year's work was completed by the Taxidermists. I have elsewhere (par. 14) referred to the abandonment of the practice of keeping Bird skins in spirit. In following out this principle, 578 skins were prepared. In a similar manner, all Marsupial skins were removed from the tanks, and made up, to the number of ninety-six. Thirty new Mammal skins were preserved, or preserved and made up, and the same number was mounted. With the view of economising space in the wall-case devoted to the Rodentia, the Muridæ and Sciuridæ were taken in hand, and individuals of the same species and habitat grouped together; in this manner, forty-three skins were dealt with. Amongst Birds, only one nest group was set up, but the grouping process was again resorted to with advantage amongst the Australian Pigeons and Game-birds, forty-three groups being so prepared. The Lyre-bird group, showing these graceful Birds with their natural surroundings, was entirely dismantled and reset. The bower of Newton's Bower-bird (*Prionodura newtoniana*) was also worked up. Twenty-three new Reptile skins were mounted, and sixteen restored, chiefly Chelonian. The whole of the skin collections and the Ethnology also were in charge of the Taxidermists throughout the year.

16. *Articulators* (Messrs. H. Barnes, Junr., and A. H. Taylor).—Several valuable preparations were added, the principal being the skeleton of a Salamander. The skeletons of eighteen Mammals were mounted, and twenty-five prepared; fifteen Birds mounted, and thirty-five prepared; one Reptile mounted, and one prepared. In addition to the foregoing work, 453 separate bones were macerated, cleaned, and added to the collection of Comparative Osteology, 347 Mammals, and 106 Birds. A skeleton of the Japanese Salamander (*Megalobatrachus maximus*, Schl.) was successfully prepared.

17. *Formatori* (Messrs. H. Barnes, Junr., and A. H. Taylor).—Thirteen moulds were made and nineteen casts or reproductions taken, and fifteen of them subsequently coloured. The more important were a Japanese Salamander (*Megalobatrachus maximus*, Schl.), a Carpet Snake (*Python spilotes*, var. *variegata*, Gray); a Sea Snake (*Engyrus bibroni*, H. and J.); and two Meteorites, one known as the "Hay," the other as the "Yardea" Meteorite.

*Photographer* (Mr. H. Barnes, Junr.)—Photographic work shows a considerable advance upon that of last year. Seventy-two negatives were taken, 139 prints prepared, and fifty-six prints mounted. Amongst these negatives is a very fine set of Birds' nests, obtained in the majority of instances by Mr. A. J. North, with their natural surroundings.

19. *Carpenters* (Messrs. R. Barnes and B. Lucas).—The Carpenters were again kept fully employed, chiefly in the preparation of stands, tablets, small glass shades, cases, &c., for the display of specimens, 477 stands, eighteen tablets, and fourteen shade cases having been made. The usual amount of odd repairs effected, including fittings for the dark-room attached to the Photo. Studio, new cask-stands and foot-gratings in the Spirit-house, new fount trays for the Printer's presses, additional Library shelving; new picket fencing at the inner private gates, new step-shelf throughout the wall-cases devoted to Reptilia; frames for descriptive labels in the Reptile and Mineral galleries, and other miscellaneous work. Amongst other duties, the Carpenters had depending on them the keeping in order of all locks and the examination of the whole of the roofs and other structures for the detection of Termites.

20. *Smiths* (Messrs. B. Lucas and R. Barnes).—This branch of work, inaugurated in 1896, was fully taken advantage of, and it becomes more apparent year by year what a distinct gain it is to be able to perform this work on the premises, rather than putting it out to the trade. The work is of necessity of a miscellaneous character, but the principal items were racks in the Taxidermist's and Articulator's shops, brackets for support of shelving, supports for large Crocodile, mountings for garden roller, stretcher bars for glass shelving in wall-cases, &c.

21. *Compositor and Printer* (Mr. J. W. Woodhead).—The work performed by the Compositor and Printer last year was particularly satisfactory, comprising 7,667 labels of various sizes. The labels printed were distributed as follows:—Mammalia, 561; Reptilia, 190; Osteology, 39; Aves, 209; Insecta, &c., 2,210; Invertebrata (general), 352; Conchology 3; Ethnology, 645; Mineralogy, 1,047; Palæontology, 31; Library, 139; and general purposes, 2,241. The labels under Mineralogy comprise those for the crystal models, all of them of a highly intricate and technical nature. Some confidential returns and memoranda for Board Meetings were also composed.

22. *Mammalia*.—The entire space that can be devoted to this class being now occupied no additions to speak of were made, but the permanent printed labels were completed; in fact, no additions can be made until the proposed south wing of the Museum is erected in its entirety.

The old Spirit-house was cleaned and renovated, and used for the housing of unexhibited mounted skins, and duplicates.

Amongst Marsupials received from the Perth Museum was a specimen of the Rufous Hare-wallaby (*Lagorchestes hirsutus*, Gould), not previously represented in our series. Mammals received from Prof. Henry Giglioli will be found detailed in Par. 9. Prof. W. Baldwin Spencer, of Melbourne, with his usual liberality and desire to render our collection as complete as possible, presented several examples of Central Australian Muridæ. The Zoological Society of New South Wales was particularly mindful of us last year, for besides numerous small animals, we received from its menagerie a Black Leopard (*Felis unicolor*, Linn.), three Pumas (*Felis concolor*, Linn.), two young Orang Utans (*Simia satyrus*, Linn.), and the celebrated "Soudan Donkey." The latter animal, I am informed by Surgeon Col. W. D. Campbell Williams, was captured in the Soudan by a party of so-called "Friendlies"—Hadendowa Arabs—from one of Osman Digna's men, at a place called Otao, the furthest point reached by the British Expedition during the campaign of 1885. An outpost of New South Wales Infantry met the Arabs, and appropriated the donkey and a herd of goats that the dervish was driving, and on the latter objecting the Arabs calmly lopped off his right hand with one of their straight, razor-edged swords, and pursued the even tenor of their way, leaving the original donkey proprietor to do the best he could for himself. The hand, however, they tied round the donkey's neck, and came back to Otao in great form, the hand being produced as an evidence of their friendly spirit, and as to how they served Osman's men. The wounded Arab was found next morning by a scouting party, and brought into the Guard's Brigade Camp. In the Field Hospital the stump was trimmed up, and the man made a good recovery. When he was left by the Arabs to his own devices he rammed the stump of his arm into the sand to stop the bleeding. This is the true history of the "Soudan Donkey."

23. *Aves*.—Mr. North completed the second edition of Ramsay's Catalogue of Australian Birds, Parts 1 and 2, and they were accordingly published.

It is gratifying to be able to report that in this section acquisitions were more numerous than in any preceding year.

The cabinet collection of Australian Birds' Eggs has progressed in arrangement. We are, however, still much in want of many complete and side blown clutches.

The living example of the Golden-winged Parrakeet (*Psephotus chrysopterygius*) from Port Darwin, only five other examples of which are believed to be known, still continues to thrive and enliven us with his remarkably varied and musical note.

You were pleased to direct that a second edition of our most popular Catalogue "Nests and Eggs of Australian Birds," should be prepared, and published in an improved form. It will contain, in addition to the ordinary plates of eggs, illustrations of the more important nests photographed *in situ*, and some typical Birds. With this end in view Mr. North lost no opportunity during the late breeding season of securing good photographs of the former, often even to the sacrifice of his private time.

In consequence of other urgent work requiring attention only one nest group was mounted, but a number were procured and will receive attention during the current year. Among those presented was a particularly interesting nest of *Sericornis ceteoquularis* or rather group of five nests agglomerated into one by successive nidifications. This was presented by Mr. W. M. Thomas, of Dubbo.

A practice existed in this Museum for many years of allowing Birds in the flesh to accumulate in our Spirit-tanks, no allowance whatever being made for the fact that given sufficient time in spirits, the more vivid colours of most Birds' plumage will become obliterated. I have put an entire stop to this proceeding, and henceforth, unless Birds are required for anatomical examination, all that come in will be at once turned into skins, or osteological specimens.

24. *Reptilia and Batrachia*.—The Australian Snakes were also in part remounted and rearranged. The Snake models were increased by a small addition.

Descriptive labels, illustrated by diagrams of Reptilian structure, were framed and hung in contiguity to the specimens, and distribution maps were placed in the cases.

Of the Japanese Salamander (*Megalobatrachus maximus*, Schl.), presented by Mr. W. C. Heron, a model was in the first instance taken, and afterwards the specimen converted into both skin and skeleton.

25. *Pisces*.—Mr. Waite, after his return from the "Thetis" expedition, was employed for some time in the determination of the fishes obtained during the cruise. This, with other indispensable duties, referred to elsewhere, prevented more than a commencement being made with the arrangement of the general collection in the new cases, and as it is now necessary for him to describe the "Thetis" gatherings in detail, little will be accomplished this year in the direction of systematic arrangement, certainly not until well on in the year.

26. *Osteology*.—In the Report for 1897, I stated that the final disposition of the Birds, Reptile, and Fish Osteological preparations was held over. The removal of the Reptilia to the new cases prepared for them set free certain large cases on the floor of the Upper Main Hall. This enabled the congested state of the Bird skeletons to be relieved by transferring the smaller species to the cases in question, which were placed in contiguity to the general series of Birds. The wall-cases of the Osteological gallery proper are now quite full, with the exception of that portion allotted to the Rodentia and Marsupialia. Ample room has been reserved for the latter for some time to come, as it is, in my opinion, the one group we should, by every means in our power, endeavour to render as complete as circumstances will possibly permit.

The nucleus of a comparative series of disarticulated bones, commenced in 1897, has progressed very satisfactorily, 453 bones having been added to it.

The preparation of the skeleton of a Sunfish (*Orthogoriscus mola*, Linn.) was commenced late in the year, and it is hoped that it will turn out an object of interest and instruction.

The skeleton of a Japanese Salamander was prepared and mounted.

27. *Insecta, Myriapoda, and Arachnida*.—The donations of 1898 exceeded those of 1897 very considerably, whilst 3,209 specimens were received in exchange. The exhibited Australian Coleoptera and Lepidoptera were registered, and the former considerably augmented. The Exotic Coleoptera were provided with printed labels. This year the Exotic Lepidoptera will be similarly treated.

Mr. Rainbow has given as much attention as possible, beyond that of mere care, to the cabinet collections, the exotic and endemic Butterflies being completed, and the Moths well in hand.

As I anticipated, when writing last year's Report, an investigation of our spirit Insecta stores added largely to the duplicates for exchange.

28. *Mollusca*.—With the exception of keeping down current work, such as registration of acquisitions and preparation of exchanges, Mr. Hedley's whole time was taken up with the elaboration of the Funafuti Gasteropoda; this was completed at the end of the year, and is now in the hands of the printer. Had it not been for the cordial assistance of Mr. W. A. Franks, no advancement could have been made in the preparation of new material for future exhibition. Under Mr. Hedley's supervision, he mounted 1,800 tablets of shells.

It became necessary to provide movable covers to the Conchological cases to exclude the strong light, in consequence of some of the shells showing a tendency to become bleached; half the cases were so provided last year, and the remainder will be supplied this year.

29. *Invertebrata (exclusive of Insecta, &c., and Mollusca)*.—Mr. Whitelegge during the early part of 1898 continued and completed his researches into the Marine Invertebrata, other than the Mollusca, of Funafuti, and commenced the study of the Crustacea obtained during the "Thetis" Expedition; these are already partly named and registered.

Prof. W. A. Herdman having completed his descriptions of the New South Wales Tunicata returned the specimens, including fifty types. The collection was at once prepared by Mr. Whitelegge, and placed on exhibition. In 1888 my predecessor, Dr. E. P. Ramsay, acting on instructions from you, forwarded this collection of Tunicata for description to Prof. Herdman. In 1893, however, just as the work was about to be sent to press, circumstances of an official nature, beyond your control, temporarily put a stop to the publication. It now affords me much pleasure to say that in 1897 it was again possible to contemplate the publication of a Catalogue, which was therefore at once completed, and is about to be issued as one of the Museum Series.

At the time the specimens were forwarded to Prof. Herdman they formed a complete collection of the Tunicata of the New South Wales coast as then known to us, and very few additional forms have since come to hand. It is, however, unquestionable that by systematic collecting, which, unfortunately, the Australian Museum is not at present in a position to carry out, the list might be very much enlarged.

In addition to the Museum material, Prof. Herdman has incorporated certain forms known to him, but at present not represented in the former. A preliminary list was published in the "Annals and Magazine of Natural History" for June, 1898.

30. *Ethnology and Anthropology*.—As a possible means of assisting to perfect our Collection of Weapons and Implements, both Australian and Pacific, you authorised the distribution of two Circulars asking for donations, copies of which are attached:—

Sir,

The Australian Museum, Sydney, 1 November, 1898.

I am desired by the Trustees of the Australian Museum to ask the favour of your assistance in extending and completing the Ethnological Collections by your kindly presenting to the Trustees, and forwarding to the Curator, any specimens of interest you may obtain, with as much information as is available regarding locality, method of manufacture, uses, &c.

I send, under separate cover, a pamphlet published by the Trustees, on the "Ethnology of Funafuti," for your acceptance. A perusal of it will give you an idea of the kind of information required concerning articles from any of the South Sea Islands.

The Trustees are also willing occasionally to treat for the purchase of Specimens not already represented in the Museum.

I am, &c.,

R. ETHERIDGE,

Curator.

Sir,

The Australian Museum, Sydney, 1 November, 1898.

I am desired by the Trustees of the Australian Museum to ask the favour of your assistance in extending and completing the Ethnological Collections by your kindly presenting to the Trustees, and forwarding to the Curator, any specimens of interest you may obtain,

The

The fine Collection of Australian Aboriginal Implements belonging to the Trustees was entirely destroyed by the Garden Palace fire in September, 1881, and, although many specimens have since been acquired, the Trustees have none representing the now almost extinct coast tribes.

There must be many of these in the possession of old residents, and the Trustees would very highly appreciate gifts of such as can be spared.

I am, &c.,

R. ETHERIDGE,  
Curator.

I am glad to say that these applications have already borne fruit in the form of small collections obligingly presented by Mrs. W. Wyatt-Gill, Mrs. A. A. Smart, and the Rev. S. Ella, with the promise of others.

The unexhibited portion of our Ethnological collection had always been inconveniently scattered in several store-rooms, thereby causing much loss of time in instituting comparisons with new material. To avoid this I devoted four months, or more, to its thorough investigation, and succeeded in systematically classifying the whole, bringing like with like, and separating the duplicates. Each specimen was, in addition to its registration tag, supplied with a locality label. During the progress of this work many hundreds of specimens passed through my hands. I was cordially assisted in this work, at various times, by Messrs. R. Grant and B. Lucas. I also spent much time in working out the natural history of as many of the exhibited specimens as possible, and succeeded in inserting 645 descriptive labels, unfortunately only an infinitesimal portion of those required.

The whole of our Phallic or Erotic specimens were also arranged in a private room and labelled.

The chief acquisitions consisted of a valuable series of objects from Thio, New Caledonia, including two fine Funeral Masks, some particularly interesting examples of Shell-money, and the peculiar *Doigtier*, or Spear-throwing becket; an inlaid skull from the Solomon Islands; and an interesting Cooking-pot from Erromango, presented by the Rev. H. A. Robertson, of that island.

The general acquisitions in this section were also numerous.

31. *Historical*.—No work of any importance was performed in this Section during 1898.

32. *Numismatical*.—Comparatively few additions were made to the Numismatical Collection, but two private and suitable rooms for this important branch of Ethnology with suitable cases were fitted up. I hope during the current year to have a fair proportion of our coins and medals arranged, Mr. Sinclair having kindly lent his assistance and got through a good deal of the preparatory work.

33. *Mineralogy and Chemistry*.—The Mount Stirling Meteorite entrusted to Professor H. A. Ward, of Rochester, New York State, to be cut and etched, was safely returned, and now forms a prominent object in the Mineral Gallery.

The arrangement of the interesting and instructive series of Crystal Models was completed by Dr. Cooksey. In general the same surface throughout the combination of forms in a given mineral species received the same tint, and as far as possible similar surfaces throughout a system were treated in a like manner. The models number 743 in all, and in many instances are accompanied by natural crystals of the same form. Each model is provided with a printed label containing the name, crystallographic formula, and locality. In addition a large explanatory label of the symbols used is provided, and to each of the six systems an additional label, also explanatory is added. A collection of characteristic Australian minerals and ores was sent to the Imperial Geological Institute of Berlin, and a large number of mineral oddments to the Technical College, Newcastle, for the use of the students. From the Tasmanian Museum a collection of minerals of that island was received, including fine examples of Crocoite and Axinite.

Amongst a series of Broken Hill minerals purchased from Mr. J. A. Burnell, the Native Coppers, dendritic and feathery, were very fine; an additional small iron meteorite from West Australia was purchased from Mr. J. F. Connelly; and a slice of the Thunda Meteorite was obtained by exchange with Prof. A. Liversidge.

Amongst presentations the more important were:—Native Arsenic from Lunatic, near Drake, by Mr. E. Jordan; Stilbites from the Liverpool Plains by Mr. D. A. Porter; Fulgarites from Kensington, by Messrs. J. W. Grimshaw and G. H. Knibbs; Telluride of Gold from Kalgoorlie, by Mr. G. Sharp; and a slice of the Mungindie Meteorite, by the Government Geologist, (Mr. E. F. Pittman.)

Through the courtesy of Mr. F. R. Godfrey, of Melbourne, we were able to obtain a cast of a meteorite in his possession, and new to us, from near Hay, New South Wales; and Dr. E. C. Stirling, Director of the Public Museum, Adelaide, was kind enough to allow us to take a cast of a meteorite found at Yardea, Gawler Ranges, S.A.

34. *Palæontology*.—The large specimens exhibited in the wall-cases were increased by twenty-three. No tabletted specimens were added in consequence of the want of a Mechanical Assistant.

Mr. C. W. de Vis, M.A., Curator of the Queensland Museum, continued his examination and determination of our extinct Marsupial remains, much to our advantage.

Some years ago, when the alterations to the Geological Hall took place, certain portions of the general Foreign Collection were, from the want of space, packed up and passed into store. The whole were again unpacked, cleaned, and systematically arranged in covered wooden trays and placed on shelving in my workroom. This occupied my attention for about four months.

The most important acquisitions by presentation were a collection of Tasmanian Mesozoic, Carboniferous and Silurian fossils, by Mr. T. Stephens, M.A.; Cretaceous Reptilian and Fish remains from the Flinders River, by Mr. J. B. Nutting; Devonian, Silurian, and Carboniferous fossils from North America, by Mr. W. E. Crane; Prof. R. Tate's co-types of Ordovician fossils from Central Australia, collected during the Horn Expedition, by Mr. W. A. Horn, through Prof. R. Tate, &c.

During our enforced stay at Lord Howe Island, on the cruise of the "Thetis," Mr. Waite and myself succeeded in collecting some additional very interesting remains of the peculiar extinct Chelonian, *Meiolania platyceps*.

35. *Library*.—The Library has received careful attention, and acquisitions have been duly placed on the shelves. There are, however, many valuable books which it is important we should acquire for pressing needs, as soon as funds are available for purchasing them.

36. *Office*.—Under the watchful eye of your Secretary (Mr. S. Sinclair), the office work was efficiently carried on by Messrs. F. T. Clark and J. A. Spencer.

I have, &c.,

R. ETHERIDGE, JUNR.,  
Curator.

## APPENDIX II.

## REPORTS OF SCIENTIFIC ASSISTANTS.

To the Curator,—  
Sir,

Herewith I have the honour to submit to you my Report for the year 1898.

*Mammals.*

It is with satisfaction I am able to report that all the specimens in the Mammalian Galleries are now uniformly labelled. The Orders attended to during the year were the Rodentia, Ungulata, Edentata, Marsupialia, and Monotremata. The time was chiefly occupied with the fine collection of Marsupials; the *fœtal* stages in spirits were also included.

Perhaps, from a popular point of view, the most interesting donation was the donkey brought home by the New South Wales Contingent to the Soudan war. The carcass was presented by the Zoological Society of New South Wales, in whose gardens it had long been a familiar object. Professor W. Baldwin Spencer of Melbourne further enriched our collection of Central Australian Muridæ, while Mr. J. Stein, and Mr. F. C. Janson were liberal donors of Mammals. Exchanges were satisfactorily negotiated with the Perth (W.A.), Christiania, Florence, and British Museums.

In place of the usual book-form catalogue, I, with your concurrence, adapted the "card-catalogue" plan now being so extensively used in libraries. A separate card is issued for each specimen; one of these may be withdrawn or the series added to without in any way disturbing the whole. Already all the duplicate Mammals have been so catalogued, and the exhibited collection is now receiving attention in this direction.

Compared with Fishes and Reptiles, the number of Mammals preserved in spirits is extremely small, nevertheless it is pleasant to have them in such order as they occupy in the new spirit house, further to be mentioned.

The Taxidermists have, during the year, "made up" ninety-six skins of Mammals from spirit specimens; they have dealt with thirty animals in the flesh, while a similar number was mounted for exhibition purposes. The groups prepared number forty-three.

During the second half of the year I had the services of Master Allan R. McCulloch, a volunteer, who relieved me of much of the clerical work, such as preparing MS. labels for the printer and other matters within his powers.

*Reptiles and Batrachians.*

In this Section the work performed was not great; some progress was, however, made with the spirit collection of snakes. Hitherto these had been coiled in jars in the usual unsatisfactory manner. I have commenced arranging them in natural curves against a sheet of opal glass, by which means they are attractively and usefully displayed. The Lizards, Frogs, etc., I had previously mounted in this manner.

The series of groups representing Lizards among natural surroundings was added to, and the maps illustrative of distribution were completed and form a most useful adjunct to the gallery.

Hung near the Lizards and Frogs will be found descriptive letterpress and diagrams, at present taking the place of a much needed and reliable guide.

A few more snakes were utilised as models for the "dry" collection, and the Japanese Salamander presented by Mr. W. C. Heron was first cast and then passed over to the Articulator. Among other donors may be mentioned Mr. Henry Richards, who furnished specimens from West Australia, and the Rev. George Brown, who enriched our series of New Guinea Reptiles.

The main work accomplished during the year, in company with Mr. Whitelegge, was the transference of the entire collection of spirit specimens to the new house specially built for its reception. In addition to thousands of bottles, wooden tanks each of fifty gallons capacity were moved for some distance up a steep incline almost without mishap.

The bottle specimens of Reptiles were placed in systematic order upon the shelves of the new spirit house.

*Fishes.*

In the Section of Fishes my office has been that of a collector rather than of an administrator. In accordance with your instructions, I accompanied the trawling expedition of H.M.C.S. "Thetis" as naturalist. The operations extended from February 18th to April 8th, and included the coast of the Colony from Jervis Bay to the Manning River, up to the 90-fathom line. As you accompanied us both to the Manning Bight and on the final excursion to Lord Howe Island, you are aware how, after leaving Sydney on March 25th, and encountering heavy weather, our passage occupied seventy hours as against the usual thirty-six. We were left upon the island for eleven days, the "Thetis" being blown to sea in the gale, returning to Sydney for coal and supplies before taking us off.

Large collections of marine objects were accumulated during the seven weeks' cruise, the determination of which will occupy some time. An essay on the fishes obtained has already been printed at the Government Printing Office, but a more technical account will be issued by the Museum.

One section of the new Fish Gallery, referred to in my last Report, has been completed, and a small number of specimens has already been housed. An extension of the gallery will be proceeded with during the coming year.

The Spirit Collection of fishes now in the new house has been broadly classified, time not yet having been found for a more detailed arrangement.

*Skeletons.*

As far as space permits this collection is in a satisfactory condition. The smaller bird skeletons were removed to the Bird Gallery, but at present space cannot be found there for the Ratitæ; these, consequently, remain in the Osteological Gallery.

The Articulators have in hand the skeleton of a Sunfish, but as the treatment adopted, being similar to that employed for cartilaginous fishes, occupies considerable time, it is still in course of preparation.

Ninety-six skeletons were prepared during the year, of which number thirty-four were mounted and placed in the gallery.

I am, &c.,

EDGAR R. WAITE.

To

To the Curator,—

Sir,

I have the honour to hand you herewith my Annual Reports for 1898 of the Sections under my charge.

*Aves.*

One thousand two hundred and ninety-three specimens have been registered during the year. Numerically the registrations exceed those of any previous year. This is chiefly due to the partial incorporation, as time permits, of the Dobroyde Collection. Good progress was made with the Cabinet Collection of Australian Birds' Eggs, which occupied the greater portion of my time during the first six months of the year. The collection of Australian Birds' Nests was rearranged in the cases and labelled, and a small number of written tickets in the Bird galleries replaced by printed ones.

Most important work was done in the Spirit Collection. The collections of Birds from various sources during the last quarter of a century were brought together, the broken, bleached, and worthless specimens destroyed, those of any value either being kept for future reference or skinned by the Assistant Taxidermist. It was found on examination that a large number consisted of unregistered and mutilated specimens, obtained in the neighbourhood of Sydney.

With a view to the publication of a second edition of the Catalogue of "Nests and Eggs of Birds found breeding in Australia and Tasmania," during the spring and summer months many photographs of nests and eggs were taken *in situ*. A visit was also made to the Upper Clarence River in November, resulting in the acquisition of specimens and information which will form the subject of future remarks.

No additions were made to the Group Collection illustrating the life-histories of Australian birds, but many nests *in situ* were secured, and will claim the early attention of the Taxidermist. A very fine case of Newton's Bower-bird (*Prionodura newtoniana*) was set up with the bower or playground. Useful work was also done by the Taxidermist, in grouping together the singly-mounted specimens of Pigeons, Game-birds, and Waders, thereby rendering an amount of space available for future additions.

The collections are in a good state of preservation, the Assistant Taxidermist having devoted a large amount of his time to their systematic examination.

Numerous inquiries were answered, either personally or by letter, during the year, and several small collections of birds' eggs were determined, also one of the *Paradiseidae*.

Proofs of Parts I and II of the 2nd edition of Dr. Ramsay's "Catalogue of the Australian Birds in the Australian Museum" were revised, and the publication issued.

The publication of the remainder of the M.S. on "The Insectivorous Birds of New South Wales," prepared at the request of the Under Secretary for Mines and Agriculture for the use of the students at the Hawkesbury Agricultural College, may be regarded as practically abandoned. The last part was issued in the *Agricultural Gazette* in January, 1897.

*Ethnology.*

Eight hundred and eighty-four specimens were registered.

Consequent upon your circulars issued during the year, the acquisitions to this Section were both numerous and valuable. Chief among these may be mentioned a large collection of miscellaneous articles from different islands of the Pacific, presented by the Rev. Samuel Ella; a similar donation from the Rev. H. A. Robertson, of Erromanga, New Hebrides, including two large stone-rings or "Navelahs," of great rarity and value; and mats, fish-hooks, &c., from Mr. Craig Maginnis, of Tonga. By exchange a large collection of Palæolithic implements was received from Indiana, North America; and shields, bull-roarers, &c., from the Tasmanian Museum, Hobart. The principal additions by purchase consisted of a collection from Thio, New Caledonia; various articles of extreme rarity from North and Central Australia; and boomerangs, dilly-bags, &c., from the Upper Clarence River.

Under your supervision the ever-increasing collection in the storerooms has been systematically arranged, labelled, and rendered available for future reference.

A considerable amount of your time, too, was devoted to the preparation of descriptive labels, which were struck off by the printer, and attached to the specimens.

*Numismatical and Historical.*

The chief acquisitions, by presentation, to the Numismatical Collection consist of an Ashanti bronze star, and nineteen pieces of ribbon belonging to various British war and other medals, received through the Agent-General for New South Wales, from the War Office, London, and two silver medals received from the Public Schools Athletic Association through the Department of Public Instruction, Sydney.

Only three Historical specimens were received during the year—the most noteworthy being a large shark-hook found in a well while digging the foundations of the additions in George-street to the General Post Office, Sydney.

I am, &c.,

ALFRED J. NORTH.

To the Curator,—

Sir,

I have the honour to hand you herewith the Annual Report of the Entomological Section for the year 1898.

The number of specimens received as donations is considerably in excess of those registered during the preceding year. The principal contributors to our cabinets were Mrs. J. Babington White, from whom we received a collection of Thursday Island Lepidoptera, and Mr. G. A. Waterhouse, who generously donated a large collection of Indian butterflies. Messrs. P. de la Garde, R.N., of H.M.S. "Waterwitch"; Hatley Boyd, of Minmi; E. N. Atkin, of Sydney; and J. A. Thorpe, of the Australian Museum, added largely to our duplicate collection of Australian Coleoptera.

Very

Very little collecting was done during the year, and this principally by Dr. Ramsay. During my annual leave I embraced the opportunity presented by a short trip to the Blue Mountains to collect a number of specimens of which our duplicate collection stood in need.

The total number of specimens received in exchange was 3,209, and consisted principally of British Coleoptera, Rhopalocera, and Heterocera; these were from Mr. Edgar R. Waite. A small series of Australian butterflies was received as an exchange from Mr. G. A. Waterhouse, of Waverley. The balance of a collection of Australian Coleoptera, due to Mons. E. Guérin, of Maion, France, was made up and despatched.

The work of revising, remounting, and registering specimens received considerable attention during the year. Nearly the whole of the exhibited collections of Australian Coleoptera and Lepidoptera were registered, and many examples of the former, not previously displayed, were set out in the gallery. The total number of registrations under this head is 626.

The whole of the manuscript labels attached to the exhibited collection of Exotic Coleoptera were replaced by printed ones, and added greatly to the general appearance by their neatness and uniformity. The Exotic Lepidoptera will be similarly treated as the work of printing progresses.

The task of examining and arranging the spirit collection in the new spirit room was undertaken and accomplished. This, although it involved much time and labour, will be of immense advantage in the future when selecting specimens for exchange.

One noticeable feature of 1898 was the increase in the number of young students of Australian Entomology. The facility afforded to private collectors, by the displayed collection, of naming specimens was largely availed of, and in addition much help was given in the way of names and information.

The collection is clean and free from insect pests.

I have, &c.,

W. J. RAINBOW.

To the Curator,—

January, 1899.

Sir,

I have the honour to hand you herewith my Annual Report on the Conchological Section for the year 1898.

The study of the Atoll of Funafuti, which had already consumed the two previous years, has again almost exclusively engaged me; this time by the preparation of a report on the Mollusca. Except the section on the Bivalves, this was completed and partly printed by the end of the year. At a considerable expenditure of time, but at a reduction of cost to the Institution, all the illustrations for this were prepared by myself.

In the course of the investigation of the Funafuti shells, a large number of species from other parts of the tropical Pacific were compared and named.

For six months the Conchological Section has benefited by the valuable assistance of a volunteer, Mr. F. W. Franks, who attended daily, and mounted about 1,800 tablets of shells under my supervision. By his kind and efficient aid I have been able to overtake work which the Funafuti studies had thrown into hopeless arrear.

The increases registered were from the following sources:—Dr. C. G. Seligman presented a useful series of small shells from Torres Straits; Dr. R. Pulleine, a collection of South Australian Mollusca; Mr. J. S. Gardiner, a set of the land shells of Rotuma, duplicates of author's types; Mr. A. U. Henn, a series of Lifu shells determined by Mr. J. C. Melvill; shells from New Zealand, New Caledonia, and New South Wales were added by myself. By exchange small collections were received from Prof. R. Tate, Mr. J. Jennings, the British Museum, and the Technological Museum of Sydney. Mrs. T. Nicholls collected a series from Lord Howe Island. From the old collection 234 species were registered.

The total number of the acquisitions registered other than the foregoing amounts to 1,094.

During my annual leave I visited the North Coast of New South Wales, and obtained there a series of Mollusca, illustrating geographical distribution and embracing several species new to our collections.

From time to time my services have been required by you in the Ethnological Section.

Students and inquirers have been, as usual, supplied with names and other information.

I have, &c.,

CHARLES HEDLEY.

To the Curator,—

Sir,

I have the honour of submitting my Annual Report for the year 1898.

The acquisitions received during the year were unusually large.

The principal donation consists of a large and valuable collection of Corals, Alcyonarians, and Crustacea from Oubatche, New Caledonia, collected and presented by Mr. Charles Hedley. It contains many rare and interesting forms hitherto wanting in the Museum collection. Numerous specimens were received in exchange, the most important being a very fine series of mounted slides of Victorian Polyzoa from Mr. Joseph Gabriel of Melbourne.

The

The material collected during the cruise of H.M.C.S. "Thetis" pertaining to my section consists of a very large number of Sponges, Zoophytes, Corals, Gorgonias, Echinoderms, Crustacea, and Polyzoa. The great variety of forms procured fully proves that the waters off the coast are as richly endowed with life as those of Port Jackson. The collection contains a very large number of rare or new forms not hitherto recorded from our coasts. Considerable progress has already been made in sorting out and classifying the "Thetis" collection, and the Crustacea have been in part specifically separated and registered.

During the year Mr. Waite and myself were engaged in transferring the collection of spirit specimens to the new spirit house. This work was carried on intermittently, and occupied considerable time; it has, however, been completed, and the whole of the collections under my charge have been arranged in systematic order.

The exhibits have been enriched by the addition of the collection of Australian Tunicata, determined by Prof. W. A. Herdman, of Liverpool. The material was sent from the Museum in the years 1886 and 1887, and returned about the middle of 1898. On arrival, the specimens were immediately unpacked, mounted, and placed in the cases, and considering that the collection contains over fifty types, it is a most valuable addition.

The paper on the Madreporarian Corals of Funafuti, as mentioned in my last report, was finished and published on the 21st of February. (Mem. Aust. Mus., vol. III, pt. 6.)

A paper dealing with the Hydrozoa, Scyphozoa, Actinozoa, and Vermes was completed during the past year and is now in the press.

I am, &c.,

THOMAS WHITELEGGE.

To the Curator,—

Sir,

I have the honour of submitting to you my Annual Report for the year 1898.

The number of specimens acquired has suffered a diminution on that of last year; this is principally due to the smaller number of donations. However, among these some valuable specimens have been sent in, notably some fine Stilbites from Mt. Nomby, Liverpool Plains, presented by Mr. D. A. Porter; specimens of Fulgurites from Kensington, near Sydney, presented by Messrs. Grimshaw and Knibbs; and some good specimens of Calaverite, the Telluride of Gold, from Kalgoorlie, West Australia, presented by Mr. G. Sharp.

A large number of very beautiful specimens of native Crystallised Copper, besides other interesting minerals from Broken Hill, were purchased from Mr. J. A. Burnell; and the Tasmanian Museum sent us two instalments in continuation of the standing purchase, in the second of which a number of very desirable minerals were secured, including some Axinites, Crocoites, and Datolites. Two valuable slices of the Mungindi and Thunda meteorites were obtained by exchange, the former with the Geological Survey of New South Wales, Sydney, and the latter with Prof. A. Liversidge. These were both new to the collection.

The Mount Stirling Meteorite purchased last year, and sent to Professor H. A. Ward, of Rochester, U.S.A., to be cut, polished, and etched, was returned to us, together with two slices. Four slices of West Australian Meteorites have been received in addition to complete the transaction. The main mass is now exhibited in a specially-built case at the west end of the gallery.

Casts of two Australian Meteorites have been taken from the originals kindly lent to us for that purpose. They are—

1. A Siderite, weighing 7 lb.  $3\frac{1}{2}$  oz., found in 1875, four miles south of Yardea Station, Gawler Ranges, South Australia, and now in the Public Museum, South Australia.
2. A Siderolite, weighing 9 $\frac{1}{2}$  lb., found in 1868-70 at Pevensey Station, Old Man Plain, ten miles below Hay, in a paddock fifteen miles south of the Murrumbidgee, New South Wales. The original is in the possession of Mr. Godfrey, of Melbourne.

The latter, and the Eli Elwah Meteorite in the possession of Mr. H. C. Russell, Government Astronomer, and found at Eli Elwah Station, fifteen miles west of Hay, are probably portions of the same original mass. Both have the appearance of having formed parts of a larger one.

The colouring, mounting, and labelling of the Crystallographic Models has now been completed, and in addition about one hundred natural crystals have been determined and labelled, and placed with their corresponding models. Large descriptive labels were also printed, so that this branch of the collection is now quite out of hand. It forms a very valuable and interesting exhibit.

Unfortunately a little progress only was made with the printed labels for the minerals themselves. These are badly needed, and would add very greatly to the value of the collection.

An effort to improve the appearance of the topmost shelves of the wall-cases by mounting and labelling large specimens proved very successful; a number of attractive specimens, for which glass shades and stands were prepared on the premises, has also been placed on the small shelves between the balustrade table-cases. It is intended to continue these additions, as opportunity occurs, all around the gallery.

A good number of specimens was added to the exhibited collection during the year, to which, in most cases, printed labels were attached.

A large number of mineral oddments was sent away for school and college use, particularly to the Technical College, Newcastle.

I have, &c.,

T. COOKSEY.

## APPENDIX III.

## SECRETARY AND LIBRARIAN'S ANNUAL REPORT FOR THE YEAR 1898.

To the Trustees of the Australian Museum,—  
Gentlemen,

I have to report that the office work has been efficiently performed by the Staff, documents and papers have been properly filed, and all clerical work duly attended to.

The Accounts have been audited monthly, and found in order by the Finance Committee.

To give a return of the documents received and registered conveys little information as to the labour involved in dealing with them, but it is of interest as comparing year by year. The following is a comparison of two years, showing the growth of the Museum in the time :—

	1898.	1899.
Letters received ... ..	471	1,104
Letters written ... ..	385	1,009
Letters of thanks written... ..	345	1,246
Vouchers ... ..	397	405
Reports ... ..	25	37
Schedules—		
Purchase ... ..	55	21
Exchange ... ..	42	57
Donation ... ..	360	776
Collection ... ..	.....	62
Information ... ..	.....	82

The Library continues to receive a large share of time and attention, and current work is kept up to date. The number of volumes received and registered was 347, besides 168 pamphlets and numerous unbound parts.

Owing to the want of funds to pay for the printing and employ the necessary assistance, the Library Catalogue has made no progress towards publication. It is, however, kept in the office in MS., and is available for reference by the Staff. It consists of—

Part 1. An alphabetical list of all the books in the Library under names of Authors or Institutions, arranged on slips, card-catalogue system.

Part 2. A more detailed list of periodical literature, arranged geographically, and made up ready for press.

Part 3. The pamphlets, collected in bound volumes. A portion of this has been printed; a further portion is ready for press.

Part 4. General Subject Index.

The Library contains the following number of books :—

<i>Periodical Literature.</i>				<i>General Subjects.</i>

Mr. R. Grant.....	3	Butterflies— <i>Chrysophanus aurifer</i> .	Mr. C. Hedley .....	...	Mollusca—continued.
Do .....	4	Spiders—1 <i>L. scelio</i> , 1 <i>Voconia immanis</i> , 1 <i>Amaurobins robustus</i> , 1 <i>Lycosa sp.</i>			<i>Columbella sagittata</i> , 1 <i>Harpa gracilis</i> , 2 <i>Mitra cardinalis</i> , 1 <i>Strombus tridentatus</i> , 21 <i>Torinia dorsuosa</i> , 5 <i>Natica chinensis</i> , 11 <i>Natica marochiensis</i> , 8 <i>Nerita reticulata</i> , 12 <i>Turricula exasperata</i> , 14 <i>Turricula deshayesi</i> , 9 <i>Mangilia zonata</i> , 5 <i>Clathurella philippinensis</i> , 12 <i>Solidula nitidula</i> , 4 <i>Solidula sulcata</i> , 25 <i>Solidula solidula</i> , 12 <i>Phasianella variegata v. graeffei</i> , 28 <i>Gibbula danieli</i> , 40 <i>Trochus thomasi</i> , 2 <i>Cerithium sp.</i> , 1 <i>Cerithium planum</i> , 3 <i>Cerithium sp.</i> , 6 <i>Cerithium sp.</i> , 6 <i>Cerithium sp.</i> , 10 <i>Pisania fusciculata v. montrougeri</i> , 1 <i>Sigaretus papilla</i> , 1 <i>Rissoina spirata</i> , 5 <i>Scalaria sp.</i> , 5 <i>Scalaria sp.</i> , 2 <i>Scalaria multiperforata</i> , 1 <i>Vanikoro ligata</i> , 1 <i>Mangilia balansai</i> , 1 <i>Mangilia angicostata</i> , 14 <i>Mangilia rubida</i> , 3 <i>Drillia lactea</i> 12 <i>Engina lineata</i> , 2 <i>Engina trifasciata</i> , 2 <i>Engina mundula</i> , 8 <i>Trochus stigmatarius</i> , 15 <i>Monilea nuclea</i> , 15 <i>Leptothyra lactea</i> , 2 <i>Pyramidella auris-cati</i> , 2 <i>Solidula alveola</i> , 1 <i>Torinia infundibuliforme</i> , 1 <i>Solarium ozytropis</i> , 1 <i>Omphalotropis sp.</i> , 1 <i>Trivia exigua</i> , 1 <i>Triforis connatum</i> , 1 <i>Mangilia sp.</i> , 1 <i>Triforis sp.</i> , 9 <i>Triforis ruber</i> , 2 <i>Cerithium sp.</i> , 1 <i>Rhytida beraudi var.</i> , 1 <i>Rhytida ouveana</i> , 2 <i>Pararhytida dictyodes</i> , 4 <i>Microcystis savesi</i> , 1 <i>Pseudopartula singularis</i> , 1 <i>Amphicyclotus guesterianus</i> , 2 <i>Helicina primeana</i> , 2 <i>Flammulina baladensis</i> , 3 <i>Endodonta n. sp.</i> , 15 <i>Endodonta sp.</i> , 8 <i>Endodonta sp.</i> , 12 <i>Diplommatina perroquiniana</i> , 12 <i>Diplommatina n. sp.</i> , 2 <i>Placostylus caledonicus</i> , 1 <i>Septoteuthis lessoniana</i> , 1 <i>Mactra maculata</i> , 1 <i>Corbis fimbriata</i> , 20 <i>Melanopsis frustulum</i> , 20 <i>Septaria bougainvillei</i> , 15 <i>Isodora nasuta</i> , 1 <i>Succinea montrougeri</i> , 20 <i>Melania arthuri</i> , 2 <i>Neritina bruguieri</i> , 15 <i>Neritina variegata</i> , 2 <i>Neritina petiti</i> , 5 <i>Neritina canalis</i> , 1 <i>Chiton sp.</i> , 2 <i>Cypraea erronea</i> , 1 <i>Mitra isabella v. peasei</i> , 1 <i>Natica solida</i> , 4 <i>Ricinula fuscillum</i> , 6 <i>Trochus obeliscus</i> , 2 <i>Trochus fastigiatus</i> , 20 <i>Monilea nuclea</i> , 40 <i>Monilea pudibunda</i> , 1 <i>Monodonta canaliferus</i> , 8 <i>Leptothyra lactea</i> , 1 <i>Euchelus fischeri</i> , 10 <i>Cyclostrema n. sp.</i> , 2 <i>Stomatella concinna</i> , 4 <i>Stomatella concinna var.</i> , 3 <i>Schismope ferriezi</i> , 2 <i>Schismope moreleti</i> , 5 <i>Teinostoma sp.</i> , 2 <i>Scalaria lyra</i> , 4 <i>Scalaria sp.</i> , 8 <i>Scalaria lineolata</i> , 1 <i>Scalaria sp.</i> , 1 <i>Scalaria subauriculata</i> , 1 <i>Rissoina scolopax</i> , 2 <i>Rissoina sp.</i> , 1 <i>Rissoina spirata</i> , 5 <i>Rissoina spirata v. artensis</i> , 4 <i>Rissoina sp.</i> , 1 <i>Rissoina sp.</i> , 3 <i>Rissoina oryza</i> , 40 <i>Rissoina exasperata</i> , 1 <i>Rissoina sp.</i> , 1 <i>Rissoina obeliscus</i> , 1 <i>Rissoina sp.</i> , 2 <i>Rissoina ambigua</i> , 1 <i>Rissoina n. sp.</i> , 3 <i>Rissoina sp.</i> , 2 <i>Rissoia sp.</i> , 1 <i>Rissoia semicarinata</i> , 2 <i>Rissoia sp.</i> , 5 <i>Diala semistriata</i> , 2 <i>Diala sp.</i> , 35 <i>Diala hardyi</i> , 1 <i>Diala hardyi v. prolongata</i> , 1 <i>Diala sp.</i> , 3 <i>Diala ludens</i> , 2 <i>Barleia chasteri</i> , 8 <i>Fenella pyrrhacme</i> , 1 <i>Columbella turturina</i> , 10 <i>Columbella marquesa</i> , 7 <i>Columbella stephensi</i> , 3 <i>Mitra cucumerina</i> , 16 <i>Turricula luculenta</i> , 1 <i>Turricula amanda</i> , 1 <i>Turricula fusiformis</i> , 3 <i>Mangilia reticulata</i> , 2 <i>Mangilia rhodacme</i> , 1 <i>Borsenia nigrocincta</i> , 3 <i>Clathurella felina</i> , 5 <i>Caecum exile</i> , 1 <i>Cadulus vivipidens</i> , 1 <i>Cerithiopsis sp.</i> , 4 <i>Bittium sp.</i> , 2 <i>Bittium sp.</i> , 12 <i>Bittium sp.</i> , 1 <i>Odostomia pupaeformis</i> , 6 <i>Pyramidella typica</i> , 1 <i>Pyramidella turrita</i> , 1 <i>Turbonilla sp.</i> , 5 <i>Pyrgulina glirella</i> , 1 <i>Auricula hanleyana</i> , 1 <i>Melampus albus</i> , 12 <i>Haminea tenera</i> , 1 <i>Phenacolepas sp.</i> , 1 <i>Marginea elliptica</i> , 20 <i>Tornatina hadfieldi</i> ,
Do .....	1	Nest of the Spine-billed Honeyeater— <i>Acanthorhynchus tenuirostris</i> .			
Do .....	1	Australian Raven— <i>Corone australis</i> .			
Do .....	1	Grey Crow-shrike— <i>Strepera cuneicaudata</i> .			
Do .....	1	Hybird between the White-backed and Black-backed Piping-crows— <i>Gymnorhina leuconota G. t. bicen</i> .			
Do .....	1	Valve of <i>Ostrea</i> from refuse-heap in rock-shelter at Abbotsford— <i>Ostrea edulis</i> , var., <i>angasi</i> , <i>Sowerby</i> .			
Do .....	1	Gourd spinning-top.			
Misses Griffiths .....	14	Entry turrets from ants' nests— <i>Formicida sp.</i>			
Do .....	13	Ants— <i>Camponotus intrepidus</i> .			
Do .....	2	Ants-nests entries— <i>Camponotus intrepidus</i> .			
Do .....	1	Wasp— <i>Diamma bicolor</i> .			
Do .....	2	Plant bugs— <i>Pentatoma sp.</i>			
Master Frank Grimley.	1	Chrysalis— <i>Euploea corinna</i> .			
Messrs. J. W. Grimshaw and G. H. Knibbs.	11	Fulgurites.			
Mr. F. Gunning.....	1	Limestone.			
Do .....	1	Pumice.			
Do .....	1	Carbonate of copper.			
Do .....	1	Tuff.			
Do .....	1	— <i>Phacops sp.</i>			
Do .....	22	Siluro-Devonian Corals—19 <i>Favosites sp.</i> , 3 Encrinital limestone.			
Rev. J. and Mrs. Hadfield.	1	Bait for cuttle-fish in form of a rat.			
Do .....	7	Samples of twine.			
Do .....	1	Samples of fishing-net.			
Do .....	1	Meshing-needle.			
Do .....	1	Wooden rule.			
Mr. H. L. Hall .....	1	Skink— <i>Lygosoma casuarinae</i> .			
Miss V. Hall .....	1	Moth— <i>Daralla chelepteryx</i> .			
Mr. G. Halligan.....	2	<i>Calobates saulii</i> .			
Do .....	1	Block perforated wood.			
Messrs. W. F. Hamlin and O. H. Andersen.	22	Birds eggs from China.			
Mr. E. T. Hancock..	7	Spears.			
Do .....	2	Boomerangs (carved).			
Do .....	3	„ (plain).			
Do .....	1	Bull-roarer.			
Do .....	1	Womerah.			
Mr. W. R. Harper...	...	Two negatives of conical grinding stones, S.W. New South Wales.			
Mr. Herbert Harris..	1	Wasp's nest built into an empty cartridge case— <i>Pison? sp.</i>			
Mr. Percy R. Harris	5	Trap-door nests of a spiders of the family — <i>Avicularidae,? gen. et sp.</i>			
Mr. A. Haylock.....	1	Sea urchin— <i>Echinobrissus recens</i> .			
Miss R. Heard .....	1	Praying mantis— <i>Mantis sp.</i>			
Do .....	1	Stick Insect "Native Lady"— <i>Acrophylla titan</i> .			
Mr. Jas. Heane .....	1	Tick— <i>Ixodes sp.</i>			
Mr. C. Hedley .....	2	Photos. of a fish hook collected by Dr. M'Sherry, of H.M.S. "Wallaroo" at Mambare, Bnt. New Guinea.			
Do .....	...	Mollusca—14 <i>Sphaerium tasmanicum</i> , 1 <i>Soletellina epidemia</i> , 1 <i>Donax cuneata</i> , 12 <i>Mactra sp.</i> , 4 <i>Diplodonta sp.</i> , 2 <i>Lucina, n. sp.</i> , 1 <i>Myodora sp.</i> , 5 <i>Diplodonta sp.</i> , 2 <i>Donax sp.</i> , 1 <i>Tellina sp.</i> , 1 <i>Tellina assimilis</i> , 8 <i>Tellina sp.</i> , 6 <i>Tellina subrosea</i> , 5 <i>Tellina ticaonica</i> , 1 <i>Tellina sp.</i> , 15 <i>Tellina robusta</i> , 1 <i>Montacuta sp.</i> , 3 <i>Mactra artensis</i> , 2 <i>Kellia sp.</i> , 2 <i>Diplodonta sp.</i> , 5 <i>Venus striatus</i> , 1 <i>Caecella cumingi</i> , 3 <i>Crenella sp.</i> , 12 <i>Pectunculus sp.</i> , 2 <i>Cytherea picturata</i> , 2 <i>Cuspidaria sp.</i> , 12 <i>Cordata</i> , 4 <i>Tapes variegata</i> , 1 <i>Pannimobiasquamosa</i> , 4 <i>Myodora convexa</i> , 1 <i>Scintilla sp.</i> , 2 <i>Lucina fabula</i> , 1 <i>Columbella atrata</i> , 11 <i>Nassa muricata</i> , 6 <i>Nassa albescens</i> , 20 <i>Nassa paupera</i> , 6 <i>Nassa kieneri</i> , 15 <i>Columbella versicolor</i> , 20 <i>Columbella pardalina</i> , 6 <i>Columbella sp.</i> , 3 <i>Columbella obtusa</i> , 6 <i>Columbella plucaria</i> , 20 <i>Columbella varians</i> , 20

Mr. J. G. Skeet .....	1	Limonite.	Mr. J. A. Thorpe ...	325	Beetles—18 <i>Anoplognathus analis</i> , 9 <i>Anoplognathus porosus</i> , 65 <i>Liparetrus marginipennis</i> , 200 <i>Liparetrus depressus</i> , 9 <i>Phylotocus palliatus</i> , 5 <i>Chrysolophus spectabilis</i> , 8 <i>Hipporhinus sp.</i> , 9 <i>Lepidoptera hopei</i> , 1 <i>Stigmodera maculata</i> , 1 <i>Aulocopriss reichei</i> .
Do .....	1	Jasper.	Do .....	2	Locusts—1 <i>Acridium aeruginosum</i> , 1 <i>Phaneroptera tringitiduoguttata</i> .
Mrs. A. A. Smart .....	1	Model of Canoe.	Do .....	2	Moths— <i>Antheraea eucalypti</i> .
Do .....	2	Pieces of Tappa.	Do .....	2	Yellow-cross bugs— <i>Mictis symbolica</i> .
Do .....	2	Yackis.	Do .....	130	Beetles—2 <i>Cestrinus trivialis</i> , 9 <i>Pterohelæus vicarius</i> , 6 <i>Saragus lævicollis</i> , 1 <i>Promethis angulatus</i> , 7 <i>Meneristes laticollis</i> , 9 <i>Adelium geniale</i> , 2 <i>Adelium sp.</i> , 7 <i>Adelium porcatum</i> , 4 <i>Amarygmus cupripennis</i> , 4 <i>Amarygmus picipes</i> , 4 <i>Amarygmus obsoletus</i> .
Do .....	1	Shield.	Do .....	29	Weevils—1 <i>Talaurinus rugosus</i> , 26 <i>Cubicorrhynchus maculatus</i> , 2 <i>Sosytelus lobatus</i> .
Do .....	1	Womerah.	Do .....	36	Beetles—1 <i>Paropsis reticulata</i> , 3 <i>Paropsis oclopunctata</i> , 2 <i>Paropsis sp.</i> , 1 <i>Lacon caliginosus</i> , 2 <i>Lacon sp.</i> , 4 <i>Monocrepidius striatus</i> , 3 <i>Monocrepidius brucki</i> , 3 <i>Monocrepidius sp.</i> (wire worms), 4 <i>Promecoderus brunnicornis</i> , 8 <i>Harpalus ignobilis</i> , 1 <i>Harpalus sp.</i> , 1 <i>Notonomus varicollis</i> , 1 <i>Platynus marginicollis</i> , 10 <i>Aulacocyclus edentulus</i> , 1 <i>Mastichilus puncticollis</i> , 1 <i>Ceralognathus niger</i> , 1 <i>Cryptodus creberrimus</i> , 1 <i>Cryptodus sp.</i> , 1 <i>Onthophagus granulatus</i> .
Do .....	2	Yacki Clubs.	Do .....	1	Wasp, "Solitary Ant"— <i>Mutilla rugicollis</i> .
Do .....	1	Circular-headed club.	Do .....	2	Bull-dog Ants— <i>Myrmecia tarsata</i> .
Do .....	1	Boomerang.	Do .....	6	Parasitic Bugs— <i>Reduvius sp.</i>
Do .....	1	Paddle.	Do .....	10	Cockroaches—4 <i>Panesthia brevicollis</i> , 6 <i>Panesthia sp.</i>
Do .....	2	Bows.	Do .....	2	Earwigs— <i>Forficula sp.</i>
Do .....	2	Spears.	Do .....	1	Scorpion— <i>Isometrus melanophysa</i> .
Do .....	1	Club with grass covering.	Do .....	1	Pseudo-scorpion— <i>Chelifer ramosus</i> .
Do .....	3	Carved waddies.	Do .....	12	Spiders— <i>Tetragnatha cylindrica</i> , 4 <i>Latrodectus scelio</i> , 1 <i>Stoerina braccata</i> , 1 <i>Lampona obsœna</i> , 1 <i>Liocranum sp.</i> , 1 <i>Voconia immanis</i> , 1 <i>Marpusia elegans</i> , 2 <i>Hasarius obscurus</i> .
Do .....	1	Plain waddie with iron bands.	Do .....	1	Puparium of moth—? <i>gen. et sp.</i>
Do .....	1	Crutch-headed club.	Do .....	1	Ladybird— <i>Epilachna 28-punctata</i> .
Mr. Edgar A. Smith.	2	Photos of <i>Pleurotomaria Beyrichi</i> with Mollusc.	Do .....	4	Nest and Eggs of the Little Grass-bird— <i>Megalurus gramineus</i> .
Mr. F. W. Smithurst	1	Giant Toado— <i>Tetrodon inermis</i> .	Do .....	1	Nest of Pied Grallina— <i>Grallina picata</i> .
Mr. F. W. Smythe...	1	Velvet Fish— <i>Haploactis milesii</i> .	Do .....	1	Black-faced Cuckoo-shrike— <i>Graucalus melanops</i> .
Prof. W. B. Spencer	12	Pouched Rats— <i>Thylacomys cervinus</i> .	Do .....	1	Yellow-rumped Thorn-bill— <i>Geobasileus chrysoorhoa</i> .
Do .....	1	Thick-tailed Rat— <i>Conilurus pedunculatus</i> .	Do .....	1	Australian Raven— <i>Corone australis</i> .
Do .....	2	Long-tailed Rats— <i>Podanomalous longicaudatus</i> .	Do .....	1	Marsh Tringa— <i>Limnocinclus acuminatus</i> .
Do .....	1	Long-haired Rat— <i>Mus villosissimus</i> .	Do .....	1	Bittern— <i>Botaurus poicilopterus</i> .
Do .....	2	Little Rats— <i>Mus nanus</i> .	Do .....	1	Spiny Skink— <i>Amphibolurus muricatus</i> .
Mr. W. Stalkarrt, Junr.	1	Plaited box.	Do .....	2	Three-toed Lizards— <i>Lygosoma decresense</i> .
Do .....	1	Turned box.	Do .....	2	Three-striped Lizards— <i>Lygosoma trilineatum</i> .
Miss Stanfield .....	1	Barraband's Parrakeet— <i>Polytelis barrabandi</i> .	Do .....	1	Frog— <i>Limnodynastes tasmaniensis</i> .
Mr. W. D. Stanford.	2	Long-eared Bats— <i>Nyctophilus timoriensis</i> .	Do .....	1	<i>Tettys Sowerbyi</i> .
Do .....	1	Flying Mouse— <i>Acrobates pygmaeus</i> .	Dr. Tidswell	1	Cast Green-tree Frog— <i>Hyla carulæa</i> .
Mr. Thos. Steel .....	1	Tree Snake— <i>Dendrelaphis schlenckeri</i>	Mr. C. Toms	1	Ferruginous sandstone showing form due to weathering.
Do .....	8	Silkworms— <i>Bombyx mori</i> .	Mr. J. B. Toovey ...	1	Beetle— <i>Calloodes greyanus</i> .
Do .....	8	Cocoons— <i>Bombyx mori</i> .	Town and Country Journal.	1	Banded Sea Snake— <i>Platurus colubrinus</i> .
Do .....	2	<i>Calobates fluviatilis</i> .	Mr. W. A. Tulloch...	1	Cicada (locust)— <i>Cyclochila australasiæ</i> .
Do .....	1	Slug.	Mr. H. Underwood	1	Short-legged Lizard— <i>Lygosoma verreauxii</i> .
Do .....	1	Block perforated wood.	Unknown .....	1	Malachite and Azurite.
Do .....	3	<i>Lingula anatina</i> .	Mr. E. Veron.....	1	Boobook Owl— <i>Ninox boobook</i> .
Do .....	3	Prawns— <i>Palamon affinis</i> .	Mr. Edgar R. Waite	1	Pheasant Coucal— <i>Centropus phasianus</i> .
Mr. James Stein.....	1	Sugar Squirrel— <i>Petaurus sciureus</i> .	Do .....	1	Sooty Owl— <i>Strix tenebrosa</i> .
Do .....	5	Flying Mouse— <i>Acrobates pygmaeus</i> .	Do .....	2	Nests of the Friar-bird— <i>Tropidorhynchus corniculatus</i> .
Do .....	1	Spiny Skink— <i>Egernia cunninghami</i> .	Do .....	1	Nest of the Black and White Fantail— <i>Sauloprocta motacilloides</i> .
Do .....	1	Sugar Squirrel— <i>Petaurus sciureus</i> .	Do .....	2	Eggs of the Black and White Fantail— <i>Sauloprocta motacilloides</i> .
Mr. T. Stephens.....	4	Flint arrow-heads.			
Do .....	1	Flint chip.			
Do .....	1	Flint cone.			
Do .....	4	Worked flint chips.			
Do .....	1	Tin Ore.			
Do .....	1	Tasmanite.			
Do .....	6	<i>Strophomena</i> or <i>Leptæna</i> , <i>Myalina sp.</i> (Carboniferous), Chert with univalve shells (Cretaceous)			
Do .....	65	Collection of Tasmanian Mesozoic, Permian, Carboniferous, and Silurian fossils.			
Mr. F. R. Stockall...	1	Moth— <i>Macrosila casuarina</i> .			
Master Wm. Stone...	1	Nest and two eggs of the Reed Warbler— <i>Acrocephalus australis</i> .			
Do .....	1	Nest and two eggs of the White shouldered Caterpillar-eater— <i>Lalage tricolor</i> .			
Mrs. A. Stringer ...	1	Caterpillar— <i>Macrosila casuarina</i> .			
Do .....	1	Vernal Loriquet— <i>Loriculus vernalis</i> .			
Mr. Geo. Sweet .....	1	Block of Pumice.			
Mr. A. J. Taylor .....	3	Latham's Snipes— <i>Gallinago australis</i> .			
Do .....	1	Pennant's Parrakeet— <i>Platycercus elegans</i> .			
Do .....	1	Land Rail— <i>Hypotaenidia philippensis</i> .			
Do .....	4	Varied Turnix— <i>Turnix varia</i> .			
Do .....	1	Stubble Quail— <i>Coturnix pectoralis</i> .			
Do .....	1	Swamp Quail— <i>Synœcus australis</i> .			
Mr. J. Taylor.....	1	Spider— <i>Argiope atherea</i> .			
Prof. R. Tate.....	2	Fossils— <i>Archœocyathina</i> , 1 Honeysuckle— <i>Banksia integrifolia</i> (leaves).			
Mr. W. M. Thomas..	1	Native Orange— <i>Citris australis</i> .			
Do .....	2	Native Pomegranates— <i>Capparis nobilis</i> .			
Do .....	...	Fruits of <i>Capparis lasiantha</i> , R. Br., locally known by native name of "Napine."			
Do .....	1	Group of nests conjoined of the Yellow-throated Scrub Wren— <i>Sericornis citreogularis</i> .			
Mr. Ernest Thornton	1	Gigantic Water Scorpion— <i>Belostoma indicum</i> .			
Mr. H. Thorpe .....	2	Eggs of Superb Warbler— <i>Malurus cyaneus</i> .			

Donor.	No. of Specimens.	Common and Scientific Names.	Donor.	No. of Specimens.	Common and Scientific Names.
Mr. Edgar R. Waite	1	Bower of the Satin Bower-bird— <i>Ptilonorhynchus violaceus</i> .	Mr. G. A. Waterhouse.	2	Spiders—1 (venomous) <i>Latrodectus scelio</i> , 1 <i>Amaurobius senilis</i> .
Do	1	Peaceful Dove— <i>Geopelia tranquilla</i> .	Mr. E. H. Webb	1	Nest of Yellow-throated Scrub-wren— <i>Sericornis citreogularis</i> .
Do	12	Chocolate Bats— <i>Chalinolobus morio</i> .	Do	2	Eggs of Yellow-throated Scrub-wren— <i>Sericornis citreogularis</i> .
Do	1	Flying Fox— <i>Pteropus poliocephalus</i> .	Do	1	Nest of Large-billed Scrub-wren— <i>Sericornis magnirostris</i> .
Do	1	Wonga Pigeon— <i>Leucosarcia picata</i> .	Do	1	Nest of Brown Gerygone— <i>Gerygone fusca</i> .
Do	2	Spiders— <i>Sarotes procerus</i> .	Do	1	Nest of Little Brown Thornbill— <i>Acanthiza pusilla</i> .
Do	1	Spider's Egg-bag.	Rev. T. Whan	55	Shells—6 <i>Assimineia australis</i> , 19 <i>Potamopyrgus buccinoides</i> , 9 <i>Littorina diemenense</i> , 6 <i>Rissoa hulli</i> , 2 <i>Cingulina australis</i> , 3 <i>Odostomia sp.</i> , 10 <i>Venus sp.</i>
Do	2	Tumble-dung Beetles— <i>Aulacopris reichei</i> .	Mrs. J. Babington White.	38	Butterflies—8 <i>Ornithoptera pronomus</i> , 2 <i>Papilio capaneus</i> , 1 <i>Papilio polydorus</i> , 2 <i>Papilio agamemnon</i> , 1 <i>Delias argenthona</i> , 1 <i>Callidryas gorgophone</i> , 1 <i>Mynes geoffroyi</i> , 1 <i>Danais hamata</i> , 1 <i>Euploea corinna</i> , 2 <i>Euploea tulliolus</i> , 1 <i>Neptis Shepperdi</i> , 1 <i>Cynthia ada</i> , 1 <i>Melanitis leda</i> , 1 <i>Diadema bolina</i> , 5 <i>Amblypoda micale</i> , 2 <i>Ismene exclamatoris</i> , 2 <i>Ismene discolor</i> , 1 <i>Ismene doleschallii</i> , 1 <i>Pamphila augiades</i> , 1 <i>Pamphila augius</i> , 2 <i>Tagiades gamelia</i> .
Do	13	Tumble-dung Beetles' Dung-balls— <i>Aulacopris reichei</i> .	Do	5	Moths—4 <i>Euchema mais</i> , 1 <i>Euchromia sp.</i>
Do	2	Mason Wasps— <i>Eumenes arcuatus</i> .	Do	1	Egg of Red-tailed Tropic-bird— <i>Phaeton rubricauda</i> .
Do	8	Mason Wasps' Nests— <i>Eumenes arcuatus</i> .	Do	1	Egg of White-capped Tern— <i>Micranous leucocapillus</i> .
Do	1	Fly— <i>Pangonia maculipennis</i> .	Do	22	Eggs of Large-crested Tern— <i>Sterna bergi</i> .
Do	1	"Whip" Spider— <i>Ariamnes flagellum</i> .	Mr. H. L. White	1	Nest of White-winged Chough— <i>Corcorax melanoramphus</i> .
Do	5	Spiders—1 <i>Tetragnatha cylindrica</i> , 1 <i>Argyrodes gracilis</i> , 1 <i>Opisthoncus quadratus</i> , 1 <i>Acompse valida</i> , 1 <i>Thorellia migriceps</i> .	Do	1	Flying Mouse— <i>Acrobates pygmaeus</i> .
Do	2	Beetles—1 <i>Chalcophora lei</i> , 1 <i>Orthopagus granulatus</i> .	Mr. Voss Wiburd	3	Bat Guano.
Do	1	Wasp— <i>Pompilus molestus</i> .	Do	4	Phosphatic earth.
Mr. A. Wansey	1	Weevil— <i>Orthorrhinus cylindrirostris</i> .	Do	1	Porphyry enclosing small pieces of limestone.
Mr. E. E. Ward	1	Parasitic Bug— <i>Coranus pictus</i> .	Do	1	Gypsum.
Mr. G. A. Waterhouse.	96	Butterflies—1 <i>Athyma selenophora</i> , 2 <i>Athyma peruis</i> , 1 <i>Athyma opalina</i> , 2 <i>Athyma inara</i> , 2 <i>Athyma cama</i> , 1 <i>Euthalia francaia</i> , 1 <i>Euthalia appiades</i> , 1 <i>Euthalia kesava</i> , 2 <i>Zemerus fegyvas</i> , 1 <i>Neptis zaida</i> , 1 <i>Neptis ananata</i> , 1 <i>Neptis miah</i> , 1 <i>Neptis soma</i> , 1 <i>Neptis ophiana</i> , 1 <i>Neptis sp.</i> , 1 <i>Virapa anaxias</i> , 1 <i>Rahinda hordonia</i> , 1 <i>Atella alcippe</i> , 1 <i>Acræa vesta</i> , 1 <i>Charaxes dolon</i> , 1 <i>Charaxes hierax</i> , 2 <i>Charaxes athamas</i> , 1 <i>Papilio choan</i> , 2 <i>Papilio ganessa</i> , 2 <i>Papilio androgeus</i> , 1 <i>Papilio castor</i> , 2 <i>Papilio paris</i> , 1 <i>Papilio anticrates</i> , 1 <i>Papilio paphos</i> , 2 <i>Papilio sarpedon</i> , 1 <i>Papilio agamemnon</i> , 1 <i>Papilio euryphilus</i> , 1 <i>Papilio bathycles</i> , 1 <i>Appias hippoides</i> , 1 <i>Appias vacans</i> , 1 <i>Pioneris thestylis</i> , 3 <i>Catophaga lalage</i> , 1 <i>Catopsilia pyranthe</i> , 1 <i>Nepheronia avarar</i> , 1 <i>Pieris brassicae</i> , 1 <i>Pieris sp.</i> , 1 <i>Delias agostina</i> , 1 <i>Delias pasilloe</i> , 1 <i>Ixias pyrene</i> , 2 <i>Ixias sp.</i> , 1 <i>Terias hecabe</i> , 3 <i>Lycæna sp.</i> , 1 <i>Jamides hochus</i> , 1 <i>Gonepteryx cleobule</i> , 1 <i>Lycæna sp.</i> , 1 <i>Mycælesis santonana</i> , 1 <i>Mycælesis gopa</i> , 1 <i>Mycælesis mineus</i> , 2 <i>Mycælesis malsara</i> , 1 <i>Mycælesis visala</i> , 1 <i>Mycælesis visala</i> , var., 1 <i>Rangbia scanda</i> , 1 <i>Rhaphicera satricus</i> , 2 <i>Elymnias undularis</i> , 1 <i>Cirrochroa aoris</i> ♂, 1 <i>Cirrochroa aoris</i> ♀, 1 <i>Cynthia erota</i> , 1 <i>Lethe chaudica</i> , 1 <i>Lethe kansa</i> , 1 <i>Lethe serbonis</i> , 2 <i>Lethe dinarbas</i> , 1 <i>Lethe nictella</i> , 1 <i>Lethe maitrya</i> , 1 <i>Zophæssa jalaurida</i> , 2 <i>Zophæssa goalpara</i> , 1 <i>Zophæssa mælleri</i> , 1 <i>Zophæssa atkinsonia</i> , 1 <i>Neorina hilda</i> , 1 <i>Danais tytia</i> , 1 <i>Danais aglea</i> , 1 <i>Danais melanoides</i> , 2 <i>Danais genulia</i> , 1 <i>Danais chryssippus</i> , 3 <i>Euploea midamus</i> , 1 <i>Euploea rhadamanthus</i> , 2 <i>Euploea hopi</i> , 1 <i>Euploea leucocyma</i> , 1 <i>Lethe mekara</i> , 1 <i>Lethe rohria</i> .			
Do	46	Pupaskins of Butterflies—3 <i>Papilio erectheus</i> , 1 <i>Papilio anactus</i> , 3 <i>Lampides boeticus</i> , 20 (2 webs) <i>Jalmenus evagoras</i> , 3 <i>Pamphila augiade</i> , 1 <i>Pamphila augias</i> , 4 <i>Hesperilla picta</i> , 3 <i>Hesperilla ornata</i> , 3 <i>Apaustus lascivia</i> , 3 <i>Epinephile abeona</i> , 1 larva and 1 pupa, <i>Danais erippus</i> .	Do	1	Coleopterous larvæ.
Do	16	Butterflies—2 <i>Apatura parysatis</i> , 1 <i>Blinida pulaha</i> , 2 <i>Symbrenthia hypoclus</i> , 1 <i>Symbrenthia hypselis</i> , 1 <i>Symbrenthia niphanda</i> , 2 <i>Precis iphita</i> , 1 <i>Doleschalia po'ibete</i> , 1 <i>Limnitis zayla</i> , 2 <i>Limnitis procris</i> , 1 <i>Limnitis darara</i> , 2 <i>Adelpha mah'sa</i> .	Do	6	Venomous Spider— <i>Latrodectus scelio</i> .
			Do	1	Plant Bug— <i>Pentatoma sp.</i>
			Do	1	Retitelarian or "Shawl" web.
			Do	5	Spiders—1 <i>Lampona murina</i> , 4 <i>Amaurobius sp.</i> , ♂ et ♀.
			Do	1	Hairworm— <i>Gordius sp.</i>
			Mr. T. Wilkins	1	Gold in talcose slate.
			Mr. L. Wilkinson	1	Egg of Masked Parrakeet— <i>Platycercus personatus</i> .
			Mr. Edward Williams	1	Tapeworm— <i>Tæni sp.</i>
			Mr. H. A. Wilshire	1	Rock Gecko— <i>Gymnodactylus platurus</i> .
			Dr. G. Wilson	...	Australian Mud-fish, eggs, and fry— <i>Ceratodus forsteri</i> .
			Do	1	Native Porcupine (young) — <i>Echidna aculeata</i> .
			Mr. J. Wilson	2	Blind Snakes— <i>Typhlops proximus</i> .
			Prof. J. T. Wilson	1	Brown Snake— <i>Diemenia textilis</i> .
			Mr. J. W. Woodhead	1	Moth— <i>Darala ocellata</i>
			Do	2	Larva cases— <i>Aphrophora sp.</i>
			Do	1	Blue-tongued Lizard— <i>Tiliqua scincoides</i> .
			Mr. C. Wooller	4	Telluride of Gold.
			Do	1	Cobaltiferous Manganese.
			Mrs. J. D. Young	1	Brown's Parrakeet— <i>Platycercus browni</i> .
			Do	1	Masked Grass Finch— <i>Poephila personata</i>
			Do	1	Crimson Finch— <i>Neckmia phaeton</i> .
			Mr. W. R. Young	1	Spider — <i>Gasteracantha flavomaculata</i> .

## APPENDIX IX.

## EXCHANGES, 1898.

Specimens received.	Specimens forwarded.	Specimens received.	Specimens forwarded.
Mr. W. T. Angove. (57) Birds (eggs)—13 specimens.	Birds (eggs)—12 specimens.	Mr. A. J. Prentice. (41) Loan of specimen for moulding.	Casts—3 specimens.

## APPENDIX X.

## RETURN OF INFORMATION SUPPLIED TO THE PUBLIC, 1897.

Name.	Details.	Name.	Details.
Amateur Fisherman's Association.	Identification of and information respecting the Black King Fish, <i>Elacate nigra</i> .	Mr. H. J. McCooley ...	Identification of Mammals.
Mr. William Baldwin	Giving information on the life history, ravages, and prevention of Ship-Worms.	Mr. Selwyn Mort .....	Naming Collection of N.S. Wales Silurian and Permo-Carboniferous Fossils.
Lieut. C. E. Beddome	Showing Collection of Shells.	Newcastle Museum ...	Naming Natural History objects for the Museum.
Rev. T. Blackburn.....	Displaying Cabinet Collection of Australian Coleoptera	Mr. John Nobbs, M.L.A.	Displaying Cabinet Collections of Australian Insects and giving information <i>re</i> life histories of same.
Mr. C. C. Brittlebank	Exhibiting Ornithological Collections.	Hon. A. Norton .....	Naming shells; giving description of Collections and Museum.
Mr. T. Buckland .....	Exhibiting Ornithological and Oological Collections.	Mr. E. G. W. Palmer	Identification of Diamond Snake ( <i>Python spilotes</i> ).
Mr. A. G. Campbell ...	Displaying collections of Rhopalocera and Heterocera (Australian) and information <i>re</i> Insect Pests.	Mr. J. Parry .....	Identification of skin of <i>Varanus varius</i> .
Mr. F. R. Chapman ...	Giving information <i>re</i> Aboriginal Carved Trees.	Mr. Perkins .....	Giving information as to Sea Snakes, their habits, &c.
Master Clark .....	Naming Australian Coleoptera.	Dr. Posman .....	Giving information <i>re</i> cutting Opalised Wood.
Mr. Symonds Clark ...	Exhibiting Ornithological Collection.	Mr. Pritchard .....	Giving information on Ornithological Collections.
Mr. J. B. Cleland .....	Identification of Bird-skins.	Mrs. Ross .....	Giving information <i>re</i> life histories of Insects.
Miss Cookson .....	Exhibiting Ornithological and Cabinet Collections.	Misses Ross .....	Displaying Cabinet Collections of Australian and Exotic Butterflies.
Rev. A. H. Coombes ...	Identifying Birds' Eggs and making list of same.	Mr. B. G. Rye .....	Displaying Cabinet Collections of Elateridae and Buprestidae, and of Australian Coleoptera.
Mr. C. A. Copeland ...	Giving information <i>re</i> Finches, Fijian Parrots, &c.	Mr. Thomas Steel .....	Naming collection of New Guinea Insects; determining Fijian Arachnida; displaying method of preserving insects by means of the hot-air process; naming Collection of Queensland Arachnida.
Mr. J. M. Cross, M.L.A., Qd., and Party.	Description of Collections and Museum.	Dr. C. G. Seligman ...	Giving information about materials for collecting; general information on the Fauna, Flora, Geology, and Ethnology of British New Guinea, with especial reference to the plants and shells used by savages.
Enquirer .....	Giving information as to Diamond Snake of Tasmania.	Mr. John Single.....	Identification of Legless Lizard or Slow Worm ( <i>Pygopus lepidopus</i> ).
Mr. W. Farrer .....	Giving information <i>re</i> supposed new Mammal frequenting S.E. Waters.	Mr. C. McKay Smith	Giving information as to Killer Whales ( <i>Orca</i> ) and Thresher Sharks ( <i>Alopias</i> ).
Mr. J. Fitzhardinge ...	Identification of Green Tree Snake, <i>Dendrophis punctulatus</i> .	Mr. and Miss Sweet ..	Explaining and showing general Collections.
Mr. Milton Flood .....	Naming Lepidoptera.	<i>Sydney Mail</i> .....	Replies to Correspondents on various subjects.
Mr. C. French, junr....	Exhibiting Ornithological and Oological Collections.	Prof. R. Tate .....	Exhibiting Collection.
Mr. G. W. Froggatt ...	Identification of portion of jaw of Schnapper, <i>Pagrus unicolor</i> .	Technical College Students.	Facilities for sketching from Natural Objects.
Mr. W. W. Froggatt...	Naming Spider and displaying Collections of Buprestidae, Ornithoptera, and Coleoptera.	Technological Museum	Naming Shells, and explaining scheme and extent of displayed collection; naming Lizards and Snakes.
Dr. Godding .....	Displaying Collections of Membracidae and Coecopidae.	Mr. A. W. E. Tom ...	Determining Bones (Marsupial) from the Stuart Town Caves, near Mudgee.
Mr. William Harley ...	Determining small pebbles of Quartz.	<i>Town and Country Journal</i> .	Numerous replies to Correspondents on various subjects.
Miss E. M. Hayes .....	Use of room and specimens for sketching.	Mr. G. S. Turnbull ...	Giving information <i>re</i> Moth, and determining same.
Mr. Thomas Hickey ...	Information <i>re</i> Snake found on an ant-hill, showing a small lizard inside.	Dr. A. J. Turner .....	Displaying Meyrick's types of Micro-Lepidoptera.
Mr. R. H. Hogg .....	Displaying Collection of Arachnida and nests.	Lieut. Vaughn .....	Giving information <i>re</i> Birds' Eggs, &c.
Mr. A. W. Howitt and Daughter.	Describing Collections in Museum.	Visitor.....	Identification of Diadem Snake ( <i>Pseudelaps diadema</i> ).
Mr. J. G. Hunter .....	Identification of Brush-tailed Pouched Mouse, <i>Phascogale penicillata</i> .	Mr. J. A. Wall .....	Naming Snakes and Lizards, and information generally.
Prof. F. W. Hutton ...	Explaining construction of new workshops.	Mr. Harry Waugh.....	Inspection of Gould's "Mammals of Australia," and assistance with illustrations of Marsupials.
Capt. Hynes .....	Giving information about electric qualities of <i>Hypnos subnigrum</i> , exhibiting books on subject, and general information.	Prof. J. T. Wilson.....	Identification of three Snakes.
Mr. R. L. Jack .....	Determination of Fossil from No. 3 North Smithfield Mine, Gympie.	Mr. Charles J. Vyner, M.R.C.V.S.	Giving information <i>re</i> Bottling Specimens.
Messrs. Kerry and Co.	Supplying list of Anthropological Societies.		
Mr. E. H. Lane.....	Identifying Birds' Eggs and exhibiting Oological and Ornithological Cabinet Collections.		
Mr. O. Le Bon .....	Information <i>re</i> N.W. Austr. Finches.		
Mr. P. Le Garde .....	Naming Heterocera.		
Dr. Long.....	Identification of Black Snake, <i>Pseudechis porphyriacus</i> .		
Mrs. Lyden .....	Giving information <i>re</i> Structure of Birds.		
Miss McArthur and Friend.	Explaining Museum Collections.		

## APPENDIX XI.

## ADDITIONS TO THE LIBRARY.

Reg. No.	Books.	How acquired.	Reg. No.	Books.	How acquired.
PART I.—BOOKS.					
9158	ATLAS. Victoria Regina Atlas. Political, Physical, and Astronomical. W. and A. K. Johnston. 1 vol. 4to. Edinburgh and London, 1897.	Purchased	9129	FINSCH (Dr. Otto). Exploring Cruises of the "Samoa." Ethnological Atlas. Types from the Stone Age of New Guinea. 1 vol. 4to. Leipzig, 1888.	Presented
9205	BYNG (M.) and BELL (F. G.) A Popular Guide to Commercial and Domestic Telephony. First Edition, 1898. 1 vol. 8vo. London, 1893.	Purchased	9130	— Ethnologische Erfahrungen und Belegstücke aus der Sudsee. Beschreibender Katalog einer Sammlung im K. K. Naturhistorischen Hofmuseum in Wien. Abth. i. Bismarck Archipel. Abt. 2. Neu-Guinea. <i>An K. K. Nat. Hofmus. Wien</i> iii, and vi. In 1 vol. 8vo. Wien, 1888 and 1891.	Presented
9100	CARPENTER (C. W.) [Editor and Compiler.] The Mines of New South Wales. 1897. 1 vol. 8vo. Melbourne. Sydney, &c., 1897.	Purchased	9225	— Samoafahrten Reisen in Kaiser Wilhelms-Land und Englisch-Neu Guinea in den Jahren 1884 und 1885 an bord des Deutschen Dampfers "Samoa." 1 vol. 8vo. Leipzig, 1888.	Purchased
9017	CATECHISM and Hymal in the Language of Erromanga, New Hebrides. Fourth Edition. 1 vol. 8vo. Sydney, 1894.	Presented by Rev. H. A. Robertson.	9226	— Ethnologischer Atlas Typen aus der Steinzeit Neu-Guinea. 1 vol. 4to. Leipzig, 1883.	Purchased
9252	CHALMERS (James) and GILL (W. Wyatt). Work and Adventure in New Guinea. 1877-1885. 1 vol. 8vo. London, 1885.	Purchased	9128	FLOWER (W. H.) Inaugural Address, British Association, 1889. Subject—Museums. ( <i>Nature</i> , 12 Sept., 1889.) Suggestions for the formation and arrangement of a Museum of Natural History, in connection with a public school. ( <i>Nature</i> , 26 Dec., 1889.) 1 vol. 4to.	Purchased
9146	CUNNINGHAM (J. T.) The Natural History of the Marketable Marine Fishes of the British Islands. Prepared by order of . . . the Marine Biological Association . . . With a Preface by E. Ray Lankester. 1 vol. 8vo. London, 1896.	Purchased	9016	FOUR GOSPELS AND THE ACTS OF THE APOSTLES in the Language of Erromanga, New Hebrides. 1 vol. 8vo. Sydney, 1890.	Presented by Rev. H. A. Robertson
9251	CURRAN (J. Milne). Geology of Sydney and the Blue Mountains. 1 vol. 8vo. Sydney, 1898.	Purchased	9181	FROMENTAL (E. de). Introduction a l'Étude des Polypiers fossiles. 1 vol. 8vo. Paris, 1858-61.	Purchased
9102	CUTTER (Charles A.) Rules for a Dictionary Catalogue ( <i>U.S. Bureau of Education, Special Report on Public Libraries, part 2</i> ). Third Edition. 1 vol. 8vo. Washington, 1891.	Purchased	9136	GRAY (John Edward). Indian Zoology. A series of about 40* plates of Birds, Animals, Amphibia, and Fish, from the Collection of Major-General Hardwicke, with Names, executed under the Superintendence of John Edward Gray. 1 vol. Fol. London. Re-registered	
9344	COSMAN (Maurice). Revue Critique de Paléozoologie. Années I, 1897; II, 1898. 1 vol. 8vo. Paris, 1897-98.	Purchased		* There are 21 plates of mammals, 68 of birds, 15 of reptiles, 14 of fishes, 1 of shells, 1 of insects, in all 118 plates.	
173A C20	DAMES (W.) UND KOKEN (E.) Paläontologische Abhandlungen. Neue Folge Band IV (der ganzen Reihe Band VIII). Heft 1, Die Gastropoden der Maestrichter Kreide, von F. Kaunhowen. Jena, 1898.	Purchased	9244	HAZLITT (W. Carew). The Coinage of the European Continent. 1 vol. 8vo. London, 1893.	Purchased
9086	DENDY (Arthur). Studies in the Comparative Anatomy of Sponges. 1. On the Genera <i>Ridleya</i> and <i>Quasillina</i> . 2. On the Anatomy and Histology of <i>Stelospogus flabelliformis</i> . 3. On the Anatomy of Grantiabyrthina, and the so-called family Teichnidae. 4. On the Flagellated Chambers and Ova of <i>Halichondria panicea</i> . 5. On the Anatomy and Relationships of <i>Lelapia australis</i> , a living representative of the fossil <i>Pharetrotes</i> . <i>Qu. Journ. Micro. Sci.</i> 1888, and new series xxxii, xxxvii. In 1 vol. 8vo.	Presented	9247	HIGGINS (Frank C.) An Introduction to the Copper Coins of Modern Europe. ( <i>Young Collector Series</i> .) 1 vol. 8vo. London, 1892.	Purchased
9227	EUGENIE. Kongliga Svenska Fregatten Eugenie Botanic II, Zoologi VI. 4to.		9128	HIGGINS (H. H.) Museums of Natural History; a Paper read before the Literary and Philosophical Society of Liverpool. Also, a Phylogenetic Scheme of the Pedigree of Animals and Vegetables, by Professor Herdman. 1 vol. 8vo. Liverpool, 1884.	Purchased
9255	FAUNA OF BRITISH INDIA Birds. Vol. IV. By W. T. Blandford. 1 vol. 8vo. London, 1888.	Purchased	67A9	GODWIN-AUSTEN (H. H.) Land and Freshwater Mollusca of India. Vol. II. Part VII, Oct., 1897. Text and plates.	Purchased
9175	FAUNA CHILENSIS. Abhandlungen zur Kenntniss der Zoologie Chiles nach den Sammlungen. Von Dr. L. Plate. Heft I, Jena, 1897. 1 vol. 8vo. Jena, 1898.	Purchased	9246	HOWORTH (Daniel F.) Coins and Tokens of the English Colonies and Dependencies. With Introductory Chapter by Samuel Smith, jun. Second Edition. ( <i>Young Collector Series</i> .) 1 vol. 8vo. London, 1890.	Purchased
9235	— Heft 2 ( <i>Zool. Jahr. Sup. IV, heft 2</i> ). 1 vol. 8vo. Jena, 1898.	Purchased	9137	KEARTON (Richard). With Nature and a Camera, being the Adventures and Observations of a Field Naturalist and an Animal Photographer. 1 vol. 8vo. London, 1898.	Purchased
	Contains:— Die Anatomie und Phylogenie der Chitonen. Von Ludwig H. Plate. Die Reptilien und Batrachier der Sammlung Plate. Von Franz Werner.		9075	LANG (Arnold). Text Book of Comparative Anatomy. Translated into English by Hy. M. Bernard and Matilda Bernard. Part 2. 1 vol. 8vo. London, 1896.	Purchased
	Contains:— Die Fische der Sammlung Plate, von Franz Steindachner. Beiträge zur Kenntniss der Nuculiden, von Walter Stempel. Die Holothurien der Sammlung Plate, von Hubert Ludwig. Die Kalkschwämme der Sammlungen Plate, von L. L. Breitfuss. Die Oligochaeten der Sammlungen Plate, von W. Michaelsen.		9141	LIDDELL (Hy. Geo.) and SCOTT (Rob.) Greek-English Lexicon. Second edition. 1 vol. 4to. Oxford, 1869.	Re-registered
9147	FINDLAY (Alex. Geo.) Directory for the Navigation of the South Pacific Ocean. Fifth Edition. 1 vol. 8vo. London, 1884.	Purchased	9256	LOCKHART (J. H. Stewart). Guide to the Inscriptions on the Coins of the Farther East, with special reference to the Glover Collection, and a Chronology of the Dynasties and Emperors of China, Annam, and Japan, forming Vol. III of the Currency of the Farther East. 1 vol. 8vo. 9069	LONG (Mark Henry). List of Copper and Bronze Tokens, compiled by Mark Henry Long. ( <i>Type-written copy of M.S. Book.</i> ) 1 vol. 4to. Sydney, 1898.		9005	ORMEROD (Eleanor A.) Pamphlets :— Report of Observations of Attack of Turnip Fly in 1881 (1882). Warbles. Ox Warble Fly, <i>Hypoderma bovis</i> , De Geer. <i>Observ. Injur. Insects</i> , 1888. Ox Warble Fly, or Bot Fly, <i>Hypoderma bovis</i> , De Geer. May, 1888. New Edition, Feb., 1897. Third Report on Warble Fly, or Ox Bot Fly. <i>Report Injur. Insects</i> , 1888 (1889). Fourth Report on Warble Fly, or Ox Bot Fly. <i>Report Injur. Insects</i> , 1889 (1890). Paris Green, (or Emerald Green). Its Uses and Methods for its Application as a means of destruction of Orchard Moth Caterpillar, 1891. Turnip and Cabbage Root Attacks. <i>Report Injur. Insects</i> , 1892 (1893). Notes on Injurious Insects. Forest Fly, 1895. Wireworms, 1896. Daddy Longlegs, 1897. Stem Eel-worms, 1897. In 1 vol. 8vo. London, 1882-1897.	Purchased	Presented
9249-50	MARTIN (John). An account of the Natives of the Tonga Islands, . . . compiled and arranged from the extensive communications of Mr. William Mariner. 2 vols. 8vo. London, 1817.	Purchased	9006	— Pamphlets :— A Lecture on Injurious Insects, delivered at the Royal Agricultural College, Cirencester. (1882.) A Lecture on the Turnip Fly, delivered at the Royal Agricultural College, Cirencester. (1882.) Some Observations on the Cæstridæ, commonly known as "Bot-flies," especially on the Ox Warble Fly. (1884.) The Hessian Fly in Great Britain in 1887. (1887.) A few preliminary Observations on the Sugar-cane Shot-borer Beetle; its Habits and recent Spread in the West Indian Islands. (1892.) In 1 vol. 8vo. London, 1882-1893.		Presented
9095	MASTERS (George). Catalogue of the Described Coleoptera of Australia— Supplement, Part 1. Cincindelidæ and Carabidæ. <i>Proc. Linn. Soc., N.S.W.</i> [2], x, 1895. Supplement, Part 2. Dytiscidæ, &c. <i>Proc. Linn. Soc., N.S.W.</i> , xxi, 1, 1896. In 1 vol. 8vo. Sydney, 1895-97.	Presented by Linn. Soc., N.S.W.	9007	— Manual of Injurious Insects, with Methods of Prevention and Remedy for their Attacks on Food Crops, Forest Trees, and Fruit. Second Edition. 1 vol. 8vo. London, 1890.		Presented
9200	MESCHINELLI (Aloysius). Fungorum Fossilium Omnium hucusque cognitorum Iconographia. Vol. I. 1 vol. 4to. Vicetiae, 1898.	Purchased	9008	— Text-book of Agricultural Entomology, being a Guide to Methods of Insect Life, and Means of Prevention of Insect Ravage. Second Edition. 1 vol. 8vo. London, 1892.		Presented
9024	MINERVA. Jahrbuch der gelehrten Welt. Herausgegeben von K. Trübner. Jahrgang XVII, 1897-98, 1 vol. 8vo. Strassburg, 1898.	Purchased	9058	OTES (Felix P.) Los Querandíes. Breve Contribución al Estudio de la Etnografía Argentina. 1 vol. 8vo. Buenos Ayres, 1837.		Presented
9072	MOORE (George Fletcher). Descriptive Vocabulary of the Language in common use amongst the Aborigines of Western Australia. 1 vol. 8vo. London, 1842.	Purchased	9073-74	PARKER (T. Jeffrey) and HASWELL (Wm. A.) A Text Book of Zoology. 2 vols. 8vo. London, 1897.		Purchased
9320	MEYER (A. B.) Abbildungen von Vogel-Skeletten. Band II. 1 vol. 4to. Berlin, 1889-97.	Presented	9248	RAWLINGS (Gertrude Burford). The Story of the British Coinage. 1 vol. 8vo. London, 1898.		Purchased
F 11	MONACO (Albert, Prince de). Résultats des Campagnes scientifiques accomplies sur son Yacht. Fasc. XII. Echinides et Ophiures provenant des campagnes du yacht l'Hirondelle (Golfe de Gascogne, Açores, Terre-Neuve), par R. Kœhler. 1 vol. 4to. Monaco, 1898.	Presented	9239	SACHS (Julius). Text-book of Botany, edited with Appendix by Sydney H. Vines. Second Edition. 1 vol. 8vo. Oxford, 1882.		Purchased
9101	MORRIS (Edward E.) Austral-English, a Dictionary of Australian Words, Phrases, and Usages. 1 vol. 8vo. London, 1893.	Purchased	9264	SEWARD (A. C.) Fossil Plants for Students of Botany and Geology. Vol. I. ( <i>Cambridge Natural Science Manual, Biological Series.</i> ) 1 vol. 8vo. Cambridge, 1898.		Purchased
9098	WORKMAN (Thomas). Spiders. Vol. I. Malaysian Spiders. 1 vol. 4to. Belfast, 1896.	Purchased	9240	SEEMANN (Berthold). Viti: An account of a Government Mission to the Vitian or Fijian Islands in the years 1860-61. 1 vol. 8vo. Cambridge, 1862.		Purchased
9001	ORMEROD (Eleanor A.) Notes for Observations on Injurious Insects. 1877. — Notes of Observations of Injurious Insects. Report, 1879 (1880). — Notes of Observations of Injurious Insects. Report, 1880 (1881). — Report of Observations of Injurious Insects during the year 1882, with Methods of Prevention and Remedy, and a Special Report on Wireworm (1883). — Report of Observations of Injurious Insects and Common Crop Pests during the year 1883, with Methods of Prevention and Remedy (1884).		9346-47	SHARPE (R. Bowdler). Monograph of the Paradisidæ, or Birds of Paradise, and Ptilonorhynchidæ, or Bower-birds. 2 vol. Fol. London, 1891-98.		Purchased
9002	— Report of Observations of Injurious Insects and Common Farm Pests, with Methods of Prevention and Remedy. Eighth Report, 1884 (1885); Ninth Report, 1885 (1886); Tenth Report, 1886 (1887); Eleventh Report, 1887 (1888); Twelfth Report, 1888 (1889).		9243	SMITH (A. M.) Illustrated Encyclopædia of Gold and Silver Coins of the World from A.D. 1855 to B.C. 700. 1 vol. 8vo. Philadelphia, 1886.		Purchased
9003	— Report of Observations of Injurious Insects and Common Farm Pests, with Methods of Prevention and Remedy. Thirteenth Report, 1889 (1890); Fourteenth Report, 1890 (1891); Fifteenth Report, 1891 (1892); Sixteenth Report, 1892 (1893).		9161	SMITH (William). Classical Dictionary of Biography, Mythology, and Geography. Thirteenth Edition. 1 vol. 8vo. London, 1873.		Purchased
9004	Report of Observations of Injurious Insects and Common Farm Pests, with Methods of Prevention and Remedy. Seventeenth Report, 1893 (1894); Eighteenth Report, 1894 (1895); Nineteenth Report, 1895 (1896); Twentieth Report, 1896 (1897). In 4 vols. 8vo. London, 1877-1897.	Presented	9145	SOWERBY (G. B.) Marine Shells of South Africa, and Appendix. 1 vol. 4to. London, 1892 and 1897.		Purchased
B 34	— Report of Observations of Injurious Insects and Common Farm Pests during 1897. Twenty-first Report. 1 vol. 8vo. London, 1898.	Presented	9099	STORY-MASKELYNE (N.) Crystallography, a Treatise on the Morphology of Crystals. 1 vol. 8vo. Oxford, 1895.		Purchased

Reg. No.	Books.	How acquired.	Reg. No.	Books.	How acquired.
9253	STRACHAN (John). Explorations and Adventures in New Guinea. 1 vol. 8vo. London, 1888.	Purchased	9267	GEOLOGICAL SURVEY OF NEW SOUTH WALES. Memoirs. Palaeontology No. 6. Descriptions of the Palaeozoic Fossils of New South Wales (Australia) by the late L. G. de Koninck. Translated from the French by Prof. T. W. E. David, Mrs. David, and Mr. W. S. Dun. 1898.	
9245	THORBURN (W. Stewart). Guide to the History and Valuation of the Coins of Great Britain and Ireland, in Gold, Silver, and Copper. Third Edition. Revised and enlarged by Herbert A. Grueber. 1 vol. 8vo. London, 1898.	Purchased		— No. 7. The Mesozoic and Tertiary Insects of New South Wales, by R. Etheridge, junr., and A. Sidney Olliff. 1890. 1 vol. 4to. Sydney, 1890-98.	Presented
9115	TRAUTSCHOLD (H.). Der Klin'sche Sandstein. <i>Nov. Mém. Soc. Imp. Nat. Moscou</i> , XIII, 3. 1 vol. 4to. Moscou, 1871.	Presented by E. P. Ramsay	A 7	— Records. Vol v. Part 4. Sydney, 1898.	Presented
9345	TROUSSERT (E. C.) Catalogue Mammalium tam viventium quam fossilium. Nova Editio. Fasc. 1-5. 1 vol. 8vo. Berlin, 1897-98.	Purchased	A 10	GOULBURN MECHANICS INSTITUTE. Forty-fourth Annual Report. 1897. Goulburn, Jan., 1898.	Presented
B 21	WEBSTER (W. D.) Illustrated Catalogue of Ethnological Specimens, European and Eastern Arms and Armour, Prehistoric and other Curiosities. Nos. 3, 8, 12, 15, 16, 17.	Presented	9014 & 9263	GOVERNMENT STATISTICIAN, NEW SOUTH WALES. Statistical Register for 1896 and previous years, and 1897 and previous years, by T. A. Coghlan, Government Statistician. 2 vols. 8vo. Sydney, 1897-98.	Presented
PART II.—PERIODICALS.			9009	— The Wealth and Progress of New South Wales, 1896-97. Tenth issue. By T. A. Coghlan. 1 vol. 8vo. Sydney, 1897.	Presented

A 20	GORDON TECHNICAL COLLEGE MUSEUM. The Wombat. Vol. III. Nos. 2, 3 4. 1898.	Presented		— Annual Report for Year ending 30 June, 1898.	
9171	MELBOURNE UNIVERSITY. Calender, 1899.	Presented	A 29	GEOLOGICAL SURVEY, WESTERN AUSTRALIA. Bulletin No. 1. Bibliography of the Geology of Western Australia, by A. Gibb Maitland. Perth, 1898.	Presented
A 29	MINES AND WATER SUPPLY, DEPARTMENT OF. Annual Report of the Secretary. 1897.	Presented	A 29	— Bulletin No. 2. 1. The State of Mining in the Kimberley District. 2. The Probability of obtaining Water between the Pilbarra Gold-fields and the Great Desert, by R. Neil Smith. Perth, 1898.	Presented
9082	— Annual Report of the Secretary to the Minister for Mines for 1884.	Presented	A 29	— Annual Progress Report of the Geological Survey for the Year 1897. Fol. Perth, 1898.	Presented
9082	MINES DEPARTMENT. Annual Report of the Secretary to the Minister for Mines for 1885.	Presented	A 29	— Reports by the Government Geologist in connection with the Water Supply of the Gold-fields. Perth, 1897.	Presented
9083	— Do for 1888, 1889.	Presented	A 29	MINES—DEPARTMENT OF, WESTERN AUSTRALIA. Gold-mining Statistics, 1897.	Presented
9084	— Do for 1890, 1891.	Presented	9271	— Interim Report of the Department of Mines for half-year ending 30 June, 1894.	Presented
	In 4 vols. Fol. Melbourne, 1885-1897. (1892-3-4 are out of print.)			— Report for 1895, with Supplementary Notes on part of 1896.	Presented
A 29	— Annual Report of the Secretary to the Minister for Mines for 1896.	Presented	9272	WESTRALIA. South Western Districts, by George Hope. Supplement to the <i>Geraldton Express</i> . 2 parts, 1898.	Presented
5643	— Report of the Chief Inspector of Mines to the Minister for Mines for 1883.	Presented		In 1 vol. Fol. 1898. Presented by Department of Mines, W.A.	
3496	PUBLIC LIBRARY, MUSEUMS, AND NATIONAL GALLERY OF VICTORIA. Report of the Trustees for 1897.	Presented		QUEENSLAND.	
	Fol. Melbourne, 1893.			AGRICULTURE—DEPARTMENT OF, QUEENSLAND. Queensland Agricultural Journal. Vol I, 1897. Vols. II and III, 1898.	Presented
A 11	ROYAL SOCIETY OF VICTORIA. Proceedings. Vol. XI (new series). Parts 1, 2.	Presented	9156 } 9268 }	— Annual Report for the year 1897-98. 2 vols. 8vo. Brisbane, 1898.	Presented
7493	SCHOOL OF MINES, BALLARAT. Annual Reports for 1896 and 1897. 8vo. Ballarat, 1897-98.	Presented	A 21	— Annual Report for the year 1897-98. 1 vol. 8vo. Brisbane, 1898.	Presented
A 29	SCHOOL OF MINES AND INDUSTRIES, BENDIGO. Annual Reports for years ending June, 1896 and 1897. Bendigo, 1897.	Presented	9269	GEOLOGICAL SURVEY OF QUEENSLAND. Bulletins—	
A 29	ZOOLOGICAL AND ACCLIMATISATION SOCIETY OF VICTORIA. Thirty-fourth Annual Report. February, 1898.	Presented		No. 1. Artesian Water in the Western Interior of Queensland, by R. L. Jack. 1895.	
	TASMANIA.			No. 2. Notes on the Pikedale Gold-field, by A. Gibb Maitland. 1895.	
3502	TASMANIA. Reports of the Secretary for Mines for 1896-97 and 1897-98.	Presented		No. 3. Mount Cannindah Copper and Gold Deposits, by William H. Rands. 1896.	
P 18 [13 and 29.]	— The Progress of the Mineral Industry of Tasmania for the quarter ending 30 June, 1898, and for quarter ending September, 1898, compiled by J. Harcourt-Smith.	Presented by Secr. for Mines.		No. 4. Notes on the Present Condition of the Hodgkinson Gold-field, by Robert L. Jack. 1896.	
	Tasmania, 1898.			No. 5. Notes on the Palmer as a Reefing District, by Robert L. Jack. 1897.	
	SOUTH AUSTRALIA.			No. 6. Catalogue of the Exhibits in the Queensland Mining Court, Queensland International Exhibition, 1897, by Robert L. Jack. 1897.	
3499	GOVERNMENT GEOLOGIST, ADELAIDE. Report on Explorations in western part of South Australia, by H. Y. L. Brown.	Presented		No. 7. Additions to the Fossil Flora of Queensland, by John Shirley. 1898.	
	— Contributions to the Paleontology of South Australia, by R. Etheridge, junr.	Presented		No. 8. Report on the Gold Mines at the Fanning and Mount Success, by William H. Rands. 1898.	Presented
A 29	— Record of the Mines of South Australia: The Mahanahill Gold-field, by H. Y. L. Brown, and The Wadnaminga Gold-field, by H. Y. L. Brown.	Presented		No. 9. Report on the Chillagoe Mining District, and Projected Railway, by Robert L. Jack. 1898.	Presented
3498	PUBLIC LIBRARY, MUSEUM, AND ART GALLERY OF SOUTH AUSTRALIA. Report of Board of Governors, with Reports of Standing Committees for 1886-87.	Presented		No. 10. Six Reports on the Geological Features of part of the District to be traversed by the Proposed Transcontinental Railway, by Robert L. Jack.	Presented
	Do 1896-97. Adelaide, 1897.			In 1 vol. 8vo. Brisbane, 1895-98.	Presented
	Do 1897-98. Adelaide, 1898.	Presented			

Reg. No.	Books.	How acquired.	Reg. No.	Books.	How acquired.
7272	GEOLOGICAL SURVEY OF QUEENSLAND. Various Reports— Annual Progress Report of the Geological Survey for 1893. 1894. Deep Lead, Pentland, Cape River Gold-field, by W. H. Rands. 1894. Towalla and Mareeba Gold-fields, by W. H. Rands. 1894. Ulam Gold-field, by A. Gibb Maitland. 1894. Report on Mount Morgan Gold Deposits, by R. L. Jack (reprint from a Report of 1884). Fol. Brisbane, 1894.	Presented	9153	ENTOMOLOGICAL SOCIETY OF LONDON. Transactions for the year 1897. 1 vol. 8vo. London, 1897. Purchased	
A 26	— Report on the Geology of the Basalt Workings, Mount Rainbow Gold-field, by Walter E. Cameron. 1897. — Report on the Big Hill Gold-mining Company's Lease, Taigai, by William H. Rands. 1898. — On the Geology of the Country round Stanthorpe and Warwick, South Queensland, with especial reference to the Tin and Gold Fields and the Silver Deposits, by Sydney B. J. Skertchly. Brisbane, 1898.	Presented	9287	ENTOMOLOGIST. Vol. XXXI. 1 vol. 8vo. London, 1898. Purchased	
A 15	ROYAL SOCIETY OF QUEENSLAND. Proceedings. Vol. XIII. 1 vol. 8vo. Brisbane, 1898.	Presented	9288	ENTOMOLOGISTS' MONTHLY MAGAZINE. Vol. IX (XXIV). 1 vol. 8o. London, 1898. Purchased	
3495	QUEENSLAND MUSEUM. Reports of the Trustees for 1876, 1877-78, 1878-79, 1879-80, 1881-82, 1882, 1883, 1884, 1885, 1890, 1892, 1893, 1897.	Presented	9286	GEOLOGICAL MAGAZINE. New Series, Dec. 4. Vol. v. 1 vol. 8vo. London, 1898. Purchased	
A 18	— Annals. No. 4. The Xylorctidæ of Queensland, by A. J. Turner. Brisbane, 1897.	Presented	9120	GEOLOGICAL SOCIETY OF LONDON. Quarterly Journal. Vol. LIII, 1897. 1 vol. 8vo. London, 1897. Purchased	
9068	QUEENSLAND MUSEUM. Annals No. 1. Synonymical Catalogue of the Lepidoptera Rhopalocera (Butterflies) of Australia, by W. H. Miskin. 1 vol. 8vo. Brisbane, 1898. Presented by Queensland Government, London.	Presented	9157	— General Index to the first fifty volumes of the Quarterly Journal. 1 vol. 8vo. London, 1897-98. Purchased	
A 26	QUEENSLAND. Report of the Hydraulic Engineer (J. B. Henderson) on Water Supply. Brisbane, 1897. Presented by R. Etheridge.	Presented	5529	GEOLOGICAL SURVEY OF GREAT BRITAIN AND MUSEUM OF PRACTICAL GEOLOGY. Memoirs. The Iron Ores of Great Britain. Parts 1 (1856), 2 (1858), and 3 (1861). 1 vol. 8vo. London, 1856-61. Re-registered	
	NEW ZEALAND.		9113	— Descriptive Guide to the Museum of Practical Geology, with Notices of the Geological Survey of the United Kingdom, the Royal School of Mines, and the Mining Record Office. Fourth Edition, by Robert Hunt, and F. W. Rudler. 1 vol. 8vo. London, 1877. Presented by E. P. Ramsay.	
A 22	MINES DEPARTMENT, NEW ZEALAND. Thirty-first Annual Report of the Colonial Laboratory, by Wm. Skey. New Zealand, 1898.	Presented	9291	IBIS. A Quarterly Journal of Ornithology. Seventh Series, vol. IV. 1 vol. 8vo. London, 1898. Purchased	
9172	NEW ZEALAND INSTITUTE. Transactions and Proceedings, 1897. Vol. xxx, (thirteenth of new series.) 1 vol. 8vo., Wellington, 1898.	Presented	9013	— Index of Genera and Species referred to, and an Index to the plates in the "Ibis" (fourth, fifth, and sixth Series), 1877-1894. Edited by Osbert Salvin. 1 vol. 8vo. London, 1897. Purchased	
A 23	POLYNESIAN SOCIETY. Journal, containing the Transactions and Proceedings of the Society. Vol. VII, 1898.	Presented	9116	INTERNATIONAL FISHERIES EXHIBITION, LONDON, 1883. United States of America. A Preliminary Catalogue and Synopsis of the Collections exhibited by the United States Fish Commission and by Special Exhibitors. 1 vol. 8vo. Washington, 1883. Presented by E. P. Ramsay.	
A 29	WANGANUI PUBLIC MUSEUM. Annual Reports and Balance Sheet for year ending June, 1898. Presented by S. H. Drew.	Presented	9117	— Fishing and Hunting in Russian Waters, by O. Grimm. 1 vol. fol. 8vo. St. Petersburg, 1893. Presented by E. P. Ramsay.	
	BRITISH NEW GUINEA.		9119	— A Short Account of the Fisheries of the Bombay Presidency, with a Catalogue of the Exhibits forwarded by the Government of Bombay. 1 vol. fol. Bombay, 1833. Presented by E. P. Ramsay.	
9241	BRITISH NEW GUINEA. Report of British New Guinea from Data and Notes by the late Sir Peter Scratchley, Her Majesty's Special Commissioner, by G. Seymour Fort. 1886. — Report for the Year 1886 of Her Majesty's Special Commissioner for the protected Territory. 1887. in 1 vol. fol. Brisbane, 1886-87. Presented	Presented	9135	JOURNAL OF SCIENCE, and Annals of Biology, Astronomy, Geology, &c. (formerly the Quarterly Journal of Science). Vol. I (Dec. part only), II (Jan. to May parts only). In 1 vol. 8vo. London, 1879-80. Found in old cupboard	
9270	— Annual Report 1894-95. Brisbane, 1896. — Annual Report 1895-96. Brisbane, 1897. — Annual Report 1896-97. Brisbane, 1897. in 1 vol. fol. Brisbane, 1896-97. Presented	Presented	9208	LIBRARY CONFERENCE—SECOND INTERNATIONAL. Transactions and Proceedings, 1897. 1 vol. fol. London, 1898. Purchased	
	GREAT BRITAIN.		9279	LINNEAN SOCIETY OF LONDON. Journal—Botany. Vol. XXXIII, 1897-98. 1 vol. 8vo London, 1897-98. Purchased	
9097	BRITISH MUSEUM (Natural History). Catalogue of the Madreporarian Corals in the British Museum. Vol. III, Montipora and Anacropora, by Henry M. Bernard. Vol. 4to. London, 1897. Presented	Presented	B 14	— List of the Linnean Society of London, 1897-98. London, 1897.	
B 36	— Annual Return for 1897. 1 vol. 8vo. London, 1898. Presented	Presented	B 14	— Proceedings. 1896-97. London, 1897.	
9285	ANNALS AND MAGAZINE OF NATURAL HISTORY. Series 7. Vols. I. II. 1878. 1 vol. 8vo. London, 1898. Purchased	Purchased	B 15	— Journal—Zoology. Vol. XXVI. Nos. 168, 169, 170, 171. London, 1897-98.	
9277	ANTHROPOLOGICAL INSTITUTE OF GREAT BRITAIN AND IRELAND. Journal, vol. XXVII, 1897-98. 1 vol. 8vo. London, 1898. Presented	Presented	B 17	— Transactions. 2nd Ser.—Zoology. Vol. VII. Part 4. London, 1898. Presented	
9210	BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE. Report of the Sixty-seventh Meeting, held at Toronto in 1897. 1 vol. 8vo. London, 1898. Purchased	Purchased	9275	MINERALOGICAL SOCIETY. The Mineralogical Magazine and Journal of the Mineralogical Society. Vol. XI, 1895-97. 1 vol. 8vo. London, 1897. Presented	
			B 6	— Vol. XII, No. 54. June, 1898. Presented	
			9292	NATURAL SCIENCE. A Monthly Review of Scientific Progress. Vols. XII, XIII. 1 vol. 8vo. London, 1898. Purchased	
			9228	NATURALIST. A Monthly Journal of Natural History for the North of England, edited by Wm. Demison Roebuck and others. Vol. x, 1884-85. 1 vol. 8vo. London, 1885. Presented	
			9229-9234	— 1886-1897. In 6 vols. 8vo. London, 1886-97. Presented	
			B 22	— June, July, August, September, 1898. Presented	
			9121	NATURE. A Weekly Illustrated Journal of Science. Vol. LVII. (Nos. 1462-1487.) 1897-98.	
			9293	— Vol. LVIII. (Nos. 1488-1513). 1898. 2 vols. 4to. London, 1898. Purchased	

Reg. No.	Books.	How acquired.	Reg. No.	Books.	How acquired.
9265	PALAEONTOGRAPHICAL SOCIETY. Vol. I, issued for 1896. 1 vol. 4to. London, 1896.	Purchased	B 13	CONCHOLOGICAL SOCIETY OF GREAT BRITAIN AND IRELAND. The Journal of Conchology. Vol. IX. Nos. 1, 2, 3, and 4, 1896.	Presented
	Contains:— The Crag Foraminifera. Part 3. By T. R. Jones. The Jurassic Gasteropoda. Inferior Oolite. Part 1, No. 9. Conclusion, by W. H. Hullestone. Carbonicola, Anthracomya, and Naiadites. Part 3. Conclusion, by Wheelton Hind. The Carboniferous Lamellibranchiata. Part 1. By Wheelton Hind. The Devonian Fauna of the South of England. Vol. iii. Part 1. By G. F. Whidborne.		9124-27	GEOLOGICAL AND POLYTECHNIC SOCIETY OF THE WEST RIDING OF YORKSHIRE. Proceedings. Vol. I. 1840-1843 (imperfect). Vol. II. 1842-48. Vol. III. 1849-1857 (imperfect). Vol. IV. 1858-1865 (imperfect, parts 1860, 1863-4, 1864-5 only). 4 vols. 8vo. Leeds, 1840-1865.	Re-registered
9112	— Vol. LI, issued for 1897. 1 vol. 4to. London, 1897.	Purchased	B 24	LANCASHIRE SEA FISHERIES LABORATORY. Report for 1897 of the Lancashire Sea Fisheries Laboratory at University College, Liverpool, and the Sea Fish Hatchery at Piel; drawn up by W. A. Herdman, assisted by And. Scott and James Johnstone, with an Appendix, Guide to Fisheries Exhibition at Liverpool. by Professor W. A. Herdman.	Presented
	Contains:— The Crag Foraminifera. Part iv. By T. R. Jones. The Carboniferous Lamellibranchiata. Part ii. By Wheelton Hind. The Carboniferous Cephalopoda of Ireland. Part 1. By A. H. Ford. The Devonian Fauna of the South of England. Vol. iii. Part 2. By G. F. Whidborne.		B 3	LEEDS GEOLOGICAL ASSOCIATION. Transactions. Part 10, 1894-95, 1895-96.	Presented
9289	QUARTERLY JOURNAL OF MICROSCOPICAL SCIENCE. New Series. Vol. XI, 1897-98. 1 vol. 8vo. London, 1898.	Purchased	B 3	LEEDS PHILOSOPHICAL AND LITERARY SOCIETY. The Seventy-eighth Annual Report (for 1897-98). Leeds, 1898.	Presented
9090	RAY SOCIETY. Volume for 1896. The Tailless Batrachians of Europe, by G. A. Boulenger. Part 1. 1 vol. 8vo. London, 1897.	Purchased	9019	LIVERPOOL BIOLOGICAL SOCIETY. Proceedings and Transactions. Vol. XI. Session 1896-97. 1 vol. 8vo. Liverpool, 1897.	Presented
9133	ROYAL GEOGRAPHICAL SOCIETY OF LONDON. Journal. Vol. V. 1835. Part 2.		B 2	LIVERPOOL GEOLOGICAL SOCIETY. Proceedings, Session 36th. Vol. VIII, part 1, Liverpool, 1897.	Presented
9134	— Journal. Vol. XXV. 1850. Part 1. 2 vols. 8vo. London, 1835 and 1850.	Re-registered	B 2	LIVERPOOL GEOLOGICAL ASSOCIATION. Journal. Vol. XVI. Session 1895-96.	Presented
9284	— The Geographical Journal, including Proceedings of the Royal Geographical Society. Vols. XI-XII. 1898. 1 vol. 8vo. London, 1898.	Presented	9274	MANCHESTER LITERARY AND PHILOSOPHICAL SOCIETY. Memoirs and Proceedings. (Manchester Memoirs.) Vol. XLII., 1897-98. 1 vol. 8vo. Manchester, 1898.	Presented
B 23	— Antarctic Exploration: A Plea for a National Expedition, by Sir Clements B. Markham. London, 1898.	Presented	B 5	MANCHESTER MICROSCOPICAL SOCIETY. Transactions and Annual Report, 1897. 8vo. Manchester, 1898.	Presented
9290	ROYAL MICROSCOPICAL SOCIETY. Journal. 1 vol. 8vo. London, 1898.	Purchased	B 4	MANCHESTER MUSEUM. Report for the year 1897-98. Manchester, 1898.	Presented
9093	ROYAL SOCIETY OF LONDON. Proceedings. Vol. LXII, 1897-1898. 1 vol. 8vo. London, 1898.	Presented	B 4	— Museum Handbook. The Nomenclature of the Seams of the Lancashire Lower Coal Measures. By Herbert Bolton. Manchester, 1898.	Presented
9076	— Year Book, 1897-98. 1 vol. 8vo. London, 1898.	Presented	B 4	— Museum Handbook, General Guide to the Contents of the Museum, Second Edition, 1893	Presented
B 1	— Proceedings. Vol. LXIII. Nos. 391-401.	Presented		— Museum Handbooks. Catalogue of the Hadfield Collection of Shells from Lifu and Uvea, Loyalty I-land, by James Cosmo Melville and Robert Standen. Parts 2 and 3. Manchester, 1897.	Presented
B 1	— Proceedings. Vol. LXIV. No. 402-403.	Presented	B 12	MARINE BIOLOGICAL ASSOCIATION OF THE UNITED KINGDOM. Journal, New Series. Vol. V, No. 2. April, 1898.	Presented
9212-13	— Philosophical Transactions. Vol. 189. Series A. and B. 1897. 2 vols. 4to. London, 1897.	Purchased	9091	MUSEUMS ASSOCIATION. Report of Proceedings, with the papers read at the Eighth Annual General Meeting, Oxford, 1897. 1 Vol. 8vo. London, 1897.	Purchased
3523	SCIENCE AND ART, DEPARTMENT OF. Prospectus of the Metropolitan School of Science applied to Mining and the Arts. Sixth Session, 1856-7. — Government School of Mines and of Science applied to the Arts. Eighth Session, 1858-59. In 1 vol. 8vo. London, 1856-1858.	Re-registered	B 24	NATURAL HISTORY TRANSACTIONS OF Northumberland, Durham, and Newcastle-upon-Tyne. Vol. XIII. Part, 2. Newcastle-upon-Tyne, 1898.	Presented
9280	ZOOLOGICAL SOCIETY OF LONDON. Proceedings of the General Meetings for Scientific Business, 1897. 1 vol. 8vo. London, 1897.	Presented	B 24	OXFORD UNIVERSITY MUSEUM. Catalogue of Books added to the Radcliffe Library, 1897. Oxford 1898.	
B 18	— Proceedings, 1898. Parts 1 and 2.	Presented	B 36	PLYMOUTH INSTITUTION AND DEVON AND CORNWALL NATURAL HISTORY SOCIETY. Annual Report and Transactions. Vol. XII. Part 4. 1897-98. 8vo. Plymouth, 1898.	Presented
9282	— List of the Fellows, May, 1898.	Presented	B 2	PUBLIC LIBRARIES, MUSEUMS, AND ART GALLERY OF THE CITY OF LIVERPOOL. Forty-fifth Annual Report of the Committee for 1897. Liverpool, 1898.	Presented
9131	— Transactions. Vol. XIV, 1896-98. 1 vol. 4to. London, 1898.	Presented	B 36	ROYAL CORNWALL POLYTECHNIC SOCIETY. Sixty-fifth Annual Report, 1897. 8vo. Falmouth and Truro, 1898.	Presented
9062	— Catalogue of the Mammalia preserved in the Museum, by G. R. Waterhouse, Curator. Second Edition. 1 vol. 8vo. London, 1838.	Re-registered	B 22	YORKSHIRE NATURALISTS UNION. Transactions, Part, 21, for 1895, Leeds, 1898. — The "Naturalist" January, February, April, May, 1898.	Presented
9063	— List of the Vertebrated Animals living in the Gardens. First Edition, 1862; Second Edition, 1863; Third Edition, 1865; Fourth Edition, 1866. In 1 vol. 8vo. London, 1862-66.	Presented	B 36	YORKSHIRE GEOLOGICAL AND POLYTECHNIC SOCIETY. Proceedings, New Series. Vol. XIII. Part 3, pages 279-374, 1893.	Presented
9064	— List of the Vertebrated Animals now or lately living in the Gardens. Sixth Edition, 1877; First Supplement to Seventh Edition, 1879. In 1 vol. 8vo. London, 1877-79.	Presented	3508	UNIVERSITY OF CAMBRIDGE. Annual Report of the Library Syndicate 1897.	Presented
9065	— Eighth Edition, 1883.		3508	— Thirty-second Annual Report of the Museum and Lecture Rooms Syndicate. for 1897.	Presented
9065	— Ninth Edition, 1896. 2 vols. 8vo. London, 1863-96.	Presented

	Canada.		9164	— The Ganjan District Manual, by T. J. Maltby; edited by G. D. Leman.	Exchange
9295	GEOLOGICAL SURVEY OF CANADA. <i>Palaeozoic Fossils</i> . Vol. II. Part 1; by E. Billings, Montreal, 1874.	Presented	9165-67	— Manual of the Salem District in the Presidency of Madras, compiled by H. Le Fanu. Vol. I. The District; Vol. II. The Taluks, and Map. 3 vols. 8vo. Madras, 1883.	Exchange
9296	— Vol. III. Parts 1, 2, 3; by J. F. Whiteaves, Montreal, 1884, Ottawa, 1895, 1897.	Presented	9168	— Manual of the Coimbatore District in the Presidency of Madras, by F. A. Nicholson.	Exchange
C 13	HAMILTON ASSOCIATION. <i>Journal and Proceedings for Sessions of 1897-98</i> . Number XIV.	Presented	9160	PAMIR BOUNDARY COMMISSION. Report of the Natural History Results, by A. W. Alcock. With a List of the Plants, by J. F. Duthie, and a Notice of the Rock Specimens, by T. H. Holland. 1 vol. Fol. Calcutta, 1898.	Presented
9207	MCGILL COLLEGE AND UNIVERSITY. Annual Calendar. Session 1898-99.	Presented	9154	ROYAL ASIATIC SOCIETY (China Branch of The). <i>Journal</i> , new series, Vol. XXVIII. 1898-94.	Presented
C 15	MCGILL UNIVERSITY. <i>Papers from the Department of Physiology</i> . Nos. 4, 5, 6. Geology. Nos. 3, 4, 5, 6, 7, 8. Botany. Nos. 4, 5, 6, 7. Philosophy. No. 2. Engineering. No. 1. Physics. Nos. 2, 3, 4, 5 and 6.	Presented	9150	UNITED STATES DEPARTMENT OF AGRICULTURE. Yearbook, 1897.	Presented
C 11	NATURAL HISTORY SOCIETY OF MONTREAL. <i>The Canadian Record of Science</i> . Vol. VII. Nos. 5, 6, 7.	Presented	9300	— Division of Entomology. <i>Bulletins</i> , New Series, Nos. 10, 11, 12, 13, 14, 16, 17, 18.	Presented
C 14	NATURAL HISTORY SOCIETY OF NEW BRUNSWICK. <i>Bulletin</i> No. XVI. Vol. IV. Part I. St. John, N.B., 1898.	Presented	9301-2	— Division of Entomology. <i>Bibliography of the More Important Contributions to American Economic Entomology</i> , prepared by Samuel Henshaw. Parts 1, 2, 3, Benjamin Dann Walsh and Charles Valentine Riley, 1890.	Presented
C 12	NOVA SCOTIAN INSTITUTE OF SCIENCE. <i>Proceedings and Transactions</i> . Session 1896-97. Vol. IX (II of new series). Part 3. Halifax, 1897.	Presented		— Part 4-5, Government and State Entomologists and other contributors, 1895-96.	
9015	ROYAL SOCIETY OF CANADA. <i>Proceedings and Transactions</i> . Second series. Volume II. 1 vol. 8vo. Ottawa, 1896.	Presented		— Part 6, June, 1883 to Dec., 1896, by Nathan Banks.	Presented
	BRITISH COLONIES.		9142	— Division of Ornithology and Mammology— <i>Bulletin</i> No. 1. The English Sparrow ( <i>Passer domesticus</i> ) in North America, by Walter B. Barrow. 1 vol. 8vo. Washington, 1899.	Presented
	Africa.		9143	— <i>Bulletin</i> No. 2. Report on Bird Migration in the Mississippi Valley in 1884 and 1885, by W. W. Cooke.	Presented
C 30	DURBAN BOTANIC SOCIETY. Report of the Natal Botanic Gardens for 1897; by J. Medley Wood, Durban, 1898.	Presented	9144	— <i>Bulletin</i> No. 3. The Hawks and Owls of the United States in their relation to Agriculture, by A. K. Fisher.	Presented
C 30	COLONIAL HERBARIUM (Natal). Report for the year 1897; by J. Medley Wood. Durham, 1898.	Presented		1 vol. 8vo. Washington, 1898.	Presented
3516	SOUTH AFRICAN MUSEUM. Report for the year ending December, 1897. Cape Town, 1898.	Presented

D 8	UNITED STATES DEPARTMENT OF AGRICULTURE. Bulletin No. 5. The Pocket Gophers, by Vernon Bailey. 1895.		8047	UNITED STATES GEOLOGICAL SURVEY. Monographs. Vol. xxv. The Glacial Lake Agassiz; by Warren Upham. 1895.	
	— Bulletin No. 7. Preliminary Report on Food of Woodpeckers, by F. E. L. Beal; and Tongues of Woodpeckers, by F. A. Lucas. 1895.	Presented	9048	— Vol. xxvi. The Flora of the Amboy Clays; by John Strong Mewberry. A posthumous work; edited by Arthur Hollock. 1895.	
D 8	— Farmers' Bulletin, No. 75. Grain Smuts, by W. T. Swingle. 1893.	Presented	9949	— Vol. xxvii. Geology of the Denver Basin in Colorado. By Samuel Franklin Emmons, Whitman Cross, and George Homans Eldridge. 1896.	
D 8	— Bulletin 15. Division of Vegetable Physiology and Pathology.	Presented		3 vols. 4to. Washington, 1895-96.	Presented
D 8	— Hybrids and their Utilisation in Plant Breeding, by Walter T. Swingle and Herbert A. Webber. <i>Year Book, Dep. Agric.</i> 1897.	Presented	9050-51	— Vol. xxviii. The Marquette Iron-bearing District of Michigan, with Atlas; by Charles Richard Van Hise and William Shirley Bayley. Including a chapter on the Republic Trough; by Henry Lloyd Smith. 1 vol. text 4to., and 1 vol. Atlas fol. Washington, 1897.	Presented
9012	UNITED STATES FISH COMMISSION. Bulletin, Vol. XVI, for 1896.	Presented	9052	— Bulletins; No. 87. 1897.	
	Contains:—		9053	— Do 127. 1896.	
	A Report upon Salmon Investigations in the head Waters of the Columbia River, by Barton W. Everton.		9054	— Do 128-134. 1895-96.	
	The Artificial Propagation of the Rainbow Trout, by Geo. A. Seagle.		9055	— Do 135-138. 1896.	
	The Russian Fur Seal Islands, by Leonhard Stejneger.		9056	— Do 139-141. 1896.	
	The Artificial Propagation of Salmon on the Pacific Coast of the United States, by Livingston Stone.		9057	— Do 142-147. 1896.	
	Deep Sea Exploration: A General Description of the steamer "Albatross," her Appliances and Methods, by Z. L. Tanner.			In 6 vols. 8vo. Washington, 1895-97.	Presented
9190	UNITED STATES COMMISSION OF FISH AND FISHERIES. Part XXII. Report of the Commissioner for the year ending June, 1896.	Presented	D 11	— Bulletin; No 148. 1897.	Presented
	Contains—		9107	UNITED STATES GEOLOGICAL AND GEOGRAPHICAL SURVEY OF THE TERRITORIES. Bulletin No. 6. Second Series. 1876. Vol. vi, No. 2, 1881.	
	Report on the Propagation and Distribution of Food Fishes, by W. de C. Ravenel.			1 vol., 8vo. Washington, 1876, 1881.	Purchased
	Report upon the Inquiry respecting Food Fishes and the Fishing Grounds, by Richard Rathbun.		9.03	NAVY DEPARTMENT. Alphabetical Catalogue of the Library. Authors.	
	Report of the Division of Statistics and Methods of the Fisheries, by Hugh M. Smith.			1 Vol., 8vo. Washington, 1891.	Purchased
	Report of the Representatives of the United States Fish Commission at the Cotton States and International Exposition at Atlanta, by W. de C. Ravenel.		9176	UNITED STATES NATIONAL MUSEUM. Proceedings. Vol. XIX. 1 vol. 8vo. Washington, 1897.	Presented
	Notes on the Extension of the Recorded Range of Certain Fishes of United States Coasts, by Hugh M. Smith and William C. Kendall.			Contains:—	
	Notes on the Food of Four Species of the Cod Family, by William C. Kendall.			Descriptions of new Cynipidous Galls and Gall-Wasps in the United States National Museum; by William H. Ashmead.	
	Report of a Survey of the Oyster Regions of St Vincent Sound, Apalachicola Bay, and St. George Sound, Florida, by Lieut. Franklin Swift, United States Navy.			Contributions to the Natural History of the Commander Islands. XII. Fishes collected at Bering and Copper Islands by Nikolai A. Grebnitski and Leonard Stejneger; by Tarleton H. Bean and Barton A. Bean.	
	Report on the Fisheries of Indian River, by John J. Bruce, Barton W. Everman, Barton A. Bean, A. G. Maddren, and W. A. Wilcox.			Notes on Fishes collected in Kamchatka and Japan by Leonard Stejneger and Nikolai A. Grebnitski, with a description of a new Blenny; by T. H. Bean and B. A. Bean.	
	Report on the Fish and Fisheries of the Coastal Waters of Florida, by John J. Bruce.			The Food Plants of Scale Insects ( <i>Coccidæ</i> ); by T. D. A. Cockerell.	
	Publications of the United States Commission of Fish and Fisheries, available for distribution on June 30, 1897.			Report on the Fishes dredged in deep water near the Hawaiian Islands, with Descriptions and Figures of twenty-three new Species, by Frank Cramer.	
	Records of Observations made on board the U.S. Fish Commission steamer "Albatross" during the year ending June 30, 1896.			Report on the Mollusks collected by the International Boundary Commission of the United States and Mexico, by William Healey Dall.	
	Observations upon the Herring and Herring Fisheries of the North east Coast, with special reference to the vicinity of Passamaquoddy Bay, by H. F. Moore.			Descriptions of Tertiary Fossils from the Antillean Region; by William Healey Dall.	
	The Herring Industry of the Passamaquoddy Region, Maine, by Ansley Hall.			Report on the Fishes dredged in deep water near the Hawaiian Islands, with Descriptions and Figures of twenty-three new Species, by Charles Henry Gilbert and Frank Cramer.	
	Statistics of the Fisheries of the Interior Waters of the United States, by Hugh M. Smith			Descriptions of twenty-two new Species of Fishes collected by the Steamer "Albatross," of the United States Fish Commission, by Charles Henry Gilbert.	
	Notes on the Fisheries of the Pacific Coast in 1895, by William A. Wilcox.			Descriptions of Tertiary Fossils from the Antillean Region; by E. J. Lechmere Guppy and William Healey Dall.	
9038-39	UNITED STATES GEOLOGICAL SURVEY. Seventeenth Annual Report to the Secretary of Interior, by Charles D. Walcott, Director.	Presented		Description of new Species of North American Coleoptera in the Families <i>Cerambycidae</i> and <i>Scabroderidae</i> ; by Martin L. Linell.	
	2 vols. 8vo. Washington, 1896.			On the Insects collected by Dr. Abbott on the Seychelles, Aldabra, Glorioso, and Providence Islands, with Descriptions of nine new Species of Coleoptera; by Martin L. Linell.	
	Part 1, Director's Report and other Papers.			Notes on Larval Cestode Parasites of Fishes; by Edwin Linton.	
	Part 2, Economic Geology and Hydrography.			Is the Florida Box Tortoise a Distinct Species? By Einar Lounberg	
	Part I contains:—			Preliminary Diagnoses of New Mammals from the Mexican Border of the United States, by Edgar A. Mearns.	
	Magnetic Declination in the United States, by Henry Gannett.			Descriptions of six new Mammals from North America; by Edgar A. Mearns.	
	A Geological Reconnaissance in North-western Oregon, by J. S. Diller.			Description of a new Genus and four new Species of Crabs from the West Indies; by Mary J. Rathbun.	
	Further Contributions to the Geology of the Sierra Nevada, by H. W. Turner.			Catalogue of a Collection of Birds made by Dr. W. L. Abbott in Madagascar, with descriptions of three new Species; by Charles W. Richmond.	
	Report on Coal and Lignite of Alaska, by W. H. Dall.			Birds of the Galapagos Archipelago, by Robert Ridgway.	
	The Untate (Gilsonite) Deposits of Utah, by G. H. Eldridge.			On the Fossil Phyllopod Genera <i>Dipeltis</i> and <i>Protocaris</i> , of the Family <i>Apodidae</i> ; by Charles Schuchert	
	Glacial Brick Clays of Rhode Island and South-eastern Massachusetts, by N. S. Shaler, J. B. Woodworth, and C. F. Marbut.			On the Genus <i>Remondia</i> , Gabb, a group of Cretaceous Bivalve Mollusks, by Timothy W. Stanton	
	The Faunal Relations of the Eocene and Upper Cretaceous of the Pacific Coast, by T. W. Stanton.			A Revision of the Adult Tapeworms of Hares and Rabbits; by Ch. Wardell Stiles.	
	Part II contains:—			A Revision of the American Moles; by Frederick W. True	
	The Gold Quartz Veins of Nevada City and Grass Valley, California, by Waldemar Lindgren.			Summary of the Hemiptera of Japan presented to the United States National Museum by Professor Mizukuni, by Philip B. Uhler.	
	Geology of Silver Cliff and the Rosita Hills, Colorado, by Whitman Cross.			Cambrian Brachiopoda: Genera <i>Iphidea</i> and <i>Yorkia</i> , with descriptions of new species of each, and of the Genus <i>Acrothele</i> ; by Charles D. Walcott.	
	The Mines of Custer County, Colo., by S. E. Emmons.				
	Geologic Section along the New and Kanawha Rivers in West Virginia, by M. R. Campbell and W. C. Mendenhall				
	The Tennessee Phosphates, by C. W. Hayes				
	The Underground Water of the Arkansas Valley in Eastern Colorado, by G. K. Gilbert.				
	Preliminary Report on Artesian Waters of a Portion of the Dakotas, by N. H. Darton.				
	The Water Resources of Illinois, by Frank Leverett.

9216	UNITED STATES NATIONAL MUSEUM. Annual Report of the Smithsonian Institution for the year ending June, 1895. Report of the United States National Museum. 1 vol. Svo. Washington, 1897.	Presented	D 4	BIOLOGICAL SOCIETY OF WASHINGTON. Proceedings, Vol. XI, pp. 241-282, Dec., 1897; title page and contents. Vol. XII. 1898, pp. 1-170.	Presented
	Contains, besides reports:— The Social Organisation and the Secret Societies of the Kwakiutl Indians; by Franz Boas. The Graphic Art of the Eskimos; by Walter James Hoffman. Notes on the Geology and Natural History of the Peninsula of Lower California; by George P. Merrill. The Mineralogical Collections in the U. S. National Museum; by Wirt Tassin. The Tongues of Birds; by Frederick A. Lucas. The Ontonagon Copper Boulder in the U. S. National Museum; by Charles Moore. Taxidermical Methods in the Leyden Museum, Holland; by R. W. Shufeldt. The Antiquity of the Red Race in America; by Thomas Wilson.		D 23	BOSTON SOCIETY OF NATURAL HISTORY. Proceedings, Vol. XXVIII. Nos. 1-12.	Presented
7383	— Directions for Collecting and Preserving Scale Insects. By T. D. A. Cockerell. <i>Bulletin, U. S. National Museum</i> , 39. Washington, 1897.	Presented	D 39	BUFFALO SOCIETY OF NATURAL SCIENCES. Bulletin, Vol. V, Nos. 1, 2, 3, 4, 5 Buffalo, 1886-97. Vol. VI, No. 1, Buffalo, 1898.	Presented
9011	SMITHSONIAN INSTITUTION. Annual Report of the Board of Regents to July, 1895. 1 vol. Svo. Washington, 1896.	Presented	9191	BOSTON PUBLIC LIBRARY. Hand-book for Readers in the Boston Public Library. Ninth Edition. 1 vol. Svo. Boston, 1890.	Presented
	Contains:— Zoology, since Darwin; by Ludwig v. Graff. The Yellow Races; by E. T. Hamy. Compulsory Migrations in the Pacific Ocean; by Otto Sittig. The Old Settlements and Architectural Structures in Central North America; by Carl Sapper. The Cliff Villages of the Red Rock Country, &c.; by J. Walter Fewkes. Races and Civilisation. by W. M. Flinders Petrie. The Tusayan Ritual; by J. Walter Fewkes. And other Papers.		9192	— Brief Description of the Chamberlain Collection of Autographs in the Public Library. Texts of the Four Great Documents. A Supplement to a Brief Description of the Chamberlain Collection. In 1 vol. Svo. Boston, 1897 and 1898.	Presented
9037	BUREAU OF AMERICAN ETHNOLOGY. Sixteenth Annual Report to the Secretary of the Smithsonian Institution. 1894-95. J. W. Powell, Director. 1 vol. Svo. Washington, 1897.	Presented	9193	— Annual Report of the Trustees, 1897. 1 vol. Svo. Boston, 1898.	Presented
	Contains:— Primitive Trephining in Peru; by Manuel Antonio Muniz and W. J. McGee. Cliff Ruins of Canyon De Chelly, Arizona; by Cosmos Mindeleff. Day Symbols of the Maya Year; by Cyrus Thomas. Tusayan Snake Ceremonies; by Jesse Walter Fewkes.		9198	— The first letter of Christopher Columbus to the Noble Lord Raphael Sanchez announcing the Discovery of America, reproduced in facsimile from the copy of the Latin version of 1493 now in the Boston Public Library, with a new translation. 1 Vol. Svo. Boston, 1891	Presented
9304	ACADEMY OF NATURAL SCIENCES OF PHILADELPHIA. Proceedings, 1897. 1 vol. Svo. Philadelphia, 1897.	Presented	9194	— Bibliographies of Special Subjects. No. 6. Some materials for a Bibliography of the Official Publications of the Continental Congress 1774-89. Collected and annotated by Paul Leicester Ford, 1890. No. 8 Contributions towards a Bibliography of the Higher Education of Women, 1897. In 1 vol. Svo. Boston, 1890 and 1897.	Presented
D 14	— Proceedings, 1898, Part 1.	Presented	9195	— List of Periodicals, Newspapers, Transactions, and other Serial Publications in the principal Libraries of Boston. 1 vol. Svo. Boston, 1897.	Presented
9306	ACADEMY OF SCIENCE OF ST. LOUIS. Transactions. Vol. VII. 1894-97. 1 Vol. Svo. St. Louis, 1898.	Presented	9196	— Catalogue of English Prose Fiction, and Books for the Young, in the Lower Hall of the Public Library, Boston. Eighth edition, 1893. — Catalogue of the English Prose Fiction added to the Public Library, Boston, since 1893. Supp. to Eighth edition, 1897. In 1 vol. Svo. Boston, 1893 and 1897.	Presented
D 39	AGRICULTURAL EXPERIMENT STATION, COLLEGE OF AGRICULTURE, NEW MEXICO. Bulletin No. 25. Preliminary Notes on the Codlin Moth, by T. D. A. Cockerell.	Presented	9197	— Catalogue of the Books relating to Architecture in the Public Library, Boston. 1 vol. Svo. Boston, 1894.	Presented
9122-23	AMERICAN ANTIQUARIAN SOCIETY. Proceedings Vol. X. New Series, 1885 (Index only.) Vol. XI. New Series, 1896-1897. 2 Vols. Svo. Worcester, 1896 and 1898.	Presented	9040	— Handbook of the New Public Library in Boston, compiled by Herbert Small. 1 vol. Svo. Boston, 1895.	Presented
D 22	— Proceedings, Vol XII, New Series, Parts 1, 2, 1897-98, Worcester, Mass, 1898. — Title Page and Index to Vol. XI.	Presented	D 2	CALIFORNIA ACADEMY OF SCIENCES. Proceedings. Third series. Botany. Vol. I No. 2. Zoology. Vol. I. Nos. 2, 3.	Presented
9214	AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE. Proceedings. Forty-sixth Meeting held at Detroit, Michigan, 1897. 1 Vol. Svo. Salem, 1898.	Presented	D 2	— Occasional Papers v. The Reptiles of the Pacific Coast and Great Basin; by John van Denburgh. San Francisco, 1897.	Presented

GENERAL ZOOLOGY.					
P 1 (22)	FINN (Frank). Contributions to the Theory of Warning Colours and Mimicry. No. 1. ( <i>Journ. As. Soc. Bengal</i> ). Calcutta, 1898.		P 3 (32)	FINN (Frank). On some imperfectly known points in the Habits and Economy of Birds, No. 11. On the Use of the Feet for Prehension by certain Passerine Birds. ( <i>Proc. As. Soc., Bengal</i> , 1898).	
P 1 (11)	— Contributions to the Theory of Warning Colours and Mimicry. No. 2. Experiments with a Lizard ( <i>Calotes versicolor</i> ). No. 3. Experiments with a Tupaia and a Frog. No. 4. Experiments with various Birds. Summary and Conclusions. ( <i>Journ. Asiatic Soc. Bengal</i> , lvi, 2, 1, 1896; lvii, 2, 2, 1897; lviii, 2, 4, 1897.)	Presented	P 3 (29)	— Note on the gait of the Common Teal. ( <i>Proc. As. Soc., Bengal</i> , 1897.)	
P 1 (17)	PARONA (Corrado). I Tricosomi degli Ofidii. ( <i>Boll. Mus. Zool. Anat. Comp. Genova</i> , 1857.)		P 3 (30)	— On a Third Invasion of India by Baer's Pochard ( <i>Nyroca baeri</i> ). ( <i>Proc. As. Soc., Bengal</i> , 1898.)	
P 1 (15)	PARONA (C.) ed CUNEO (A.) Cisticerco intermuscolare diffuso in una donna. ( <i>Boll. Mus. Zool. Anat. Comp. Genova</i> , 1897.)		P 3 (31)	— Note on the Seasonal Change of Plumage in the Males of the Purple Honeysucker ( <i>Arachnechthra asiatica</i> ), and of an analogous American Bird ( <i>Coereba cyanea</i> ). ( <i>Journ. As. Soc., Bengal</i> , lviii, 2, 1894.)	Presented
P 1 (20)	BRIAN (Alessandro). Catalogo di Copepodi parassiti dei pesci della Liguria. ( <i>Boll. Mus. Zool. Anat. Comp. Genova</i> , 1898.)		P 3 (13)	NORTH (Alfred J.) The Birds of the County of Cumberland. ( <i>Handb. Syd. Austr. Assoc. Adv. Sci.</i> , 1898.)	Presented
P 1 (19)	CATTANEO (G.) Per la storia dell'anatomia comparata. ( <i>Boll. Mus. Zool. Anat. Comp. Genova</i> , 1898.)		P 3 (34)	— Descriptions of the Nests and Eggs of four species of Australian Birds. ( <i>Proc. Linn. Soc., N.S.W.</i> , 1898.)	Presented
P 1 (18)	SETTI (Ernesto). Nuove osservazioni sui cestodi parassiti degli iraci. ( <i>Boll. Mus. Zool. Anat. Comp. Genova</i> , 1898.)		REPTILIA.		
P 1 (16)	— Nuovi elminti dell' Eritrea. ( <i>Boll. Mus. Zool. Anat. Comp. Genova</i> , 1897.)	Presented by Prof. Corrado Parona	P 4 (13)	FINN (Frank). On the Long-snouted Whip Snake ( <i>Dryophis mycterizans</i> ). ( <i>Journ. As. Soc., Bengal</i> , lviii, 2, 1898.)	
P 30(21)	SCOTT (A. W.) Five miscellaneous sketches.	Presented by Mrs. H. Forde	P 4 (14)	— Note on a specimen of the rare Scincoid Lizard, <i>Eumeces blythianus</i> (Anderson), from the Afridi Country. ( <i>Proc. As. Soc., Bengal</i> , 1898.)	Presented
MAMMALIA.					
P 2 (7)	COLLETT (R.) Bemærkinger vedrørende Norges Pattedyrfauna, 1882-1897. ( <i>Nyt. Mag. Naturvidenskaberne</i> , xxxvi.) Christiania, 1898.	Presented	P 4 (10)	MUELLER (A.) Dr. T. L. Bancroft before the Royal Society of Queensland, "On Strychnine a useless Remedy in Snake-bite." ( <i>Austr. Med. Gazette</i> , Nov., 1890.)	Found in old cupboard
P 2 (6)	PALMER (T. S.) A List of the Generic and Family Names of Rodents. ( <i>Proc. Biol. Soc. Wash.</i> xi, 1897.) Washington, 1897.	Presented	P 4 (11)	PERACCA (M. G.) Solla presenza dell'Agama phillipsii, Blgr. nella Colonia eritrea. ( <i>Boll. Mus. Zool. Anat. Comp. Torino</i> , xii, 304, 1897.)	
P 31 (8)	MORGAN (John). Description of the Mammary Organs of the Kangaroos. ( <i>Linn. Soc. Trans.</i> xvi, 1828.)	Presented by E. P. Ramsay	P 4 (12)	— Descrizione di una nuova specie di Tritone italiano. ( <i>Boll. Mus. Zool. Anat. Comp. Torino</i> , xiii, 317, 1898.)	Presented by J. D. Ogilby
AVES.					
P 3 (33)	ATKINSON (George E.) The Game Birds of Manitoba. ( <i>Histor. and Sci. Soc., Manitoba, Trans.</i> 51.) Winnipeg, 1898.	Presented by W. J. Rainbow	PISCES.		
P 3 (27)	COLLETT (R.) En ny Bastardform blandt Norges Tetraonider "Fjeldrype-Orre" ( <i>Lagopus nutus</i> x <i>Tetrao tetrix</i> ). ( <i>Bergens Museums Aarboeg</i> , 1897, No. vii.)	Presented	P 5 (9)	DREW (S. H.) Notes on Regalecus sp. ( <i>Trans. N.Z. Inst.</i> , xxx.)	Presented
P 5 (8)	— Contributions to the Knowledge of the Genus <i>Lycodes</i> Reinb. I. <i>Lycodes sarsati</i> , Coll. ( <i>Vinenskabselskabets Skrifter. I. Mat. Nat. Cl.</i> , 1898.) Christiania, 1898.	Presented	P 5 (7)	HECTOR (James). Protection of Mullet. ( <i>Report to New Zealand Parliament</i> , 1897.)	Presented
P 3 (14)	GADOW (H.) A List of the Birds of the Island of Rotumah. ( <i>Ibis</i> , Jan., 1898.)	Presented by J. Stanley Gardiner	MOLLUSCA.		
B 3 (28)	GURNEY (J. H.) The Economy of the Cuckoo. ( <i>Trans. Norf. and Norw. Nat. Soc.</i> , vi, 1897.)	Presented	P 6 (18)	BEDDOME (C. E.) Catalogue of Tasmanian Marine Shells, prepared by Lieut. C. E. Beddome for the Tasmanian Court, at the International Fisheries Exhibition, London, 1883.	Presented by E. P. Ramsay
P 3 (21)	FINN (Frank). On the occurrence in India of two Rare Ducks ( <i>Fuligula baeri</i> and <i>Eristamta leucocephala</i> ). ( <i>Proc. Asiatic Soc., Bengal</i> , Apr., 1896.)		P 6 (23)	BOFFIL Y POCH (Arturo). Nota sobre nueva forma malacológica de la Provincia de Gerona ( <i>Nenia subarcuata</i> ) por el Académico numerario. ( <i>Bol. R. Acad. Cien. Art., Barcelona</i> , Oct. 1897.)	
P 3 (22)	— On some Noteworthy Indian Birds. ( <i>Journ. Asiatic Soc., Bengal</i> , lviii, 2, 2, 1897.)			— Nota sobre la Presencia del <i>Ancodus aymardi</i> en Los Lignitos de Calaf, Provincia de Barcelona; su Significación bajo los Puntos de Vista paleontológico y estrati gráfico, por el Académico numerario. ( <i>Bol. R. Acad. Cien. Art. Barcelona</i> .)	Presented
P 3 (23)	— Notes on various species of Grebes, with special reference to the power of walking and digestion possessed by these birds. ( <i>Journ. Asiatic Soc., Bengal</i> , lvi, 2, 4, 1897.)		P 6 (17)	HEDLEY (C.) Mollusca, County of Cumberland. ( <i>Handb. Austr. Assoc. Adv. Sci., Sydney</i> , 1898.)	Presented
P 3 (24)	— Note on the Occurrence in India of the Dwarf Goose ( <i>Anser erythropus</i> ). ( <i>Proc. Asiatic Soc., Bengal</i> , Jan., 1898.)		P 6 (21)	— Descriptions of New Mollusca, chiefly from New Caledonia. ( <i>Proc. Linn. Soc., N.S.W.</i> , 1898.)	Presented
P 3 (25)	— Indian Goosander ( <i>Merganser comatus</i> ). Note on its walking powers. ( <i>Proc. Asiatic Soc., Bengal</i> , March, 1898.)		P 6 (22)	— Further Notes on Australian Shipworm. ( <i>Proc. Linn. Soc., N.S.W.</i> , 1898.)	Presented
P 3 (26)	— On certain imperfectly known points in the Habits and Economy of Birds, No. 1. On the position of the feet of the "Picarian" Birds and of Parrots In Flight. ( <i>Proc. Asiatic Soc., Bengal</i> , Mar., 1898.)	Presented	P 6 (26)	PRITCHARD (G. B.) and GATLIFF (J. H.) On a New Species of Victorian Mollusca ( <i>Corallio-philu wilsoni</i> ). ( <i>Roy. Soc., Vict.</i> , 1897.)	
			P 6 (27)	— Catalogue of Marine Shells of Victoria. Part 1. ( <i>Roy. Soc., Vict.</i> , 1897.)	Presented by G. B. Pritchard

Reg. No.	Books.	How acquired.	Reg. No.	Books.	How acquired.
P 6 (14)	SMITH (Edgar A.) Descriptions of New Species of Land Shells from New Guinea. ( <i>Proc. Malac. Soc.</i> , ii, 6, 1897.)				
P 6 (15)	— On a Collection of Land and Freshwater Shells from Rotuma Island. ( <i>Ann. Mag. Nat. Hist.</i> , 6, xx, 1897.)				
P 6 (16)	— On a Collection of Land Shells from New Guinea. ( <i>Ann. Mag. Nat. Hist.</i> , 6, xx, 1897.)				
P 6 (23)	— Description of <i>Mulleria dalyi</i> . Description of <i>Rhaphaulus perakensis</i> . Marine Shells from New Zealand and Macquarie Island. Land Shells from Lombok Island. Land Shells from New Guinea, North Borneo, and Aldabra Island. ( <i>Proc. Malac. Soc.</i> , iii, 1, 1898.)				
P 6 (24)	— On some New Species of Land Shells from the Island of Socotra. ( <i>Journ. Malacology</i> , vi, 3, 1897.)				
P 6 (25)	— On some Land Shells from Trinidad. ( <i>Journ. Conch.</i> , ix, 1, 1898.)	Presented			
P 6 (20)	STEARNS (Frederick). List of the Mollusca and other forms of Marine Life, collected in the years 1889—1890, in Japan. Detroit, 1891.	Presented by E. P. Ramsay			
INSECTA.					
P 7 (81)	BLANCHARD (Raphael). Contributions à l'Étude des Diptères parasites. ( <i>Ann. Soc. Ent.</i> , Fr., lxx, 4, 1896.) Paris, 1896.				
P 7 (82)	— La Chique des Oiseaux (Sarcopsylla gallinacea). ( <i>Bull. Soc. Nation. Acclim.</i> , Fr., 1897.)	Presented			
P 32 (5)	BURCHARDT (Eugen). Aleyonaceen von Thursday Island (Torres-strasse), und von Amboina. ( <i>Jen. Denkschriften</i> , viii. <i>Semon, Zool. Forschungsreisen in Australien, &amp;c.</i> , v, 1898.)	Presented by Dr. L. Döderlein			
P 7 (79)	DISTANT (W. L.) Description of two new species of Oriental Cicadidæ. ( <i>Ann. Mag. Nat. Hist.</i> [7], 1, 1898.)				
P 7 (80)	— The Butterflies of the Transvaal. ( <i>Ann. Mag. Nat. Hist.</i> [7], i, 1898.)				
P 7 (83)	— Heterocera from the Transvaal. ( <i>Ann. Mag. Nat. Hist.</i> [7], i, 98.)				
P 7 (87)	— On a collection of Heterocera made in the Transvaal. ( <i>Ann. Mag. Nat. Hist.</i> [7], i, 1898.)				
P 7 (89)	— Coleoptera collected in the Transvaal. ( <i>Ann. Mag. Nat. Hist.</i> [7], i, 1898.)	Presented			
P 7 (84)	HAMPSON (Geo. F.) On a collection of Heterocera made in the Transvaal. ( <i>Ann. Mag. Nat. Hist.</i> [7], i, 1898.)	Presented by W. L. Distant			
P 7 (88)	JACOBY (Martin). List of the Phytophagous Coleoptera obtained by Mr. W. L. Distant in the Transvaal, with descriptions of the new species. ( <i>Ann. Mag. Nat. Hist.</i> [7], i, 1898.)	Presented by W. L. Distant			
P 7 (85)	KOLBE (H. J.) Africanische Coleoptera des Königlichen Museums für Naturkunde zu Berlin. ( <i>Entom. Nachr.</i> , xxiii, 23, 1897.)	Presented by Kon. Mus., Berlin			
P 7 (91)	LECHNER (A. A. van Pelt). Lepidoptera om en bij Zevenhuizen (Z.—H.). ( <i>Tijdschr. v. Entomologie</i> , xl.)	Presented			
P 7 (90)	LIDGOTT (James). Notes and Observations on some Victorian Coccidæ. ( <i>The Wombat</i> , 1898.)	Presented			
P 7 (77)	RAINBOW (W. J.) The Insecta and Arachnida of the County of Cumberland. ( <i>Handb. of Syd. Aust. Ass. Adv. Sci.</i> , 1898.)	Presented			
P 7 (78)	— Descriptions of some New Araneidæ of New South Wales. No. 8. ( <i>Proc. Linn. Soc., N.S.W.</i> , 1897.)	Presented			
P 7 (92)	— Contribution to a Knowledge of the Arachnid Fauna of British New Guinea. ( <i>Proc. Linn. Soc., N.S.W.</i> , 1898.)	Presented			
P 7 (58-76)	SENNA (Dr. A.) 19 Pamphlets on Brentidi, &c.	Presented			
P 7 (86)	WANDOLLECK (Benno). Monographie der Dipteren-Gattungen Colax Wiedem, und Trichopsidea Westw. ( <i>Entom. Nachr.</i> , xxiii, 16, 1897.)	Presented by Kon. Mus., Berlin			
				TUNICATA, &c.	
P 8 (13)	HERDMAN (W. A.) Note on the Tunicate Fauna of Australian Seas. ( <i>Ann. Mag. Nat. Hist.</i> [7], i, 1898.)				Presented
P 8 (14)	— Description of some simple Ascidians collected in Pugot Sound, Pacific Coast. ( <i>Trans. Liverpool Biol. Soc.</i> , xii, 1898.)				Presented
				ARACHNIDA.	
P 9 (12)	POCOCK (R. I.) On the Arachnida taken in the Transvaal and in Nyassaland by Mr. W. L. Distant and Dr. Percy Rendall. ( <i>Ann. Mag. Nat. Hist.</i> , [7] 1, 1898.)				Presented by W. L. Distant
P 9 (11)	SIMON (E.) Arachnides de l'Archipel malais. ( <i>Rev. Suisse Zool. et Ann. Mus. Hist. Nat., Genève</i> ). Genève, 1893.				Presented by W. J. Rainbow
				CRUSTACEA.	
P 13 (6)	CHILTON (Charles). A new Amphipod from New Zealand (Family Pontoporeidæ). ( <i>Ann. Mag. Nat. Hist.</i> [6] xix, Jan. 1897.)				Presented
P 13 (7)	— A new Freshwater Amphipod from New Zealand. ( <i>Ann. Mag. Nat. Hist.</i> [7] i, June, 1898.)				Presented
P 32 (4)	DÖDERLEIN (L.) Ueber "Krystallkörper" bei Seesternen und über die Wachstumserscheinungen und Verwandtschaftsbeziehungen von Gomodiscus sebæ. ( <i>Jen. Denkschriften</i> , viii. <i>Semon, Zool. Forschungsreisen in Australien, &amp;c.</i> , v, 1898.)				Presented
P 13 (5)	RATHBUN (Mary J.) The Brachyura of the Biological Expedition to the Florida Keys and the Bahamas in 1893. ( <i>Bull. Laboratories Nat. Hist. State Univ., Iowa</i> , 1898.)				Presented
P 13 (3)	SARS (G. O.) On some additional Crustacea from the Caspian Sea. ( <i>Ann. Mus. Zool. Acad. Imp. Sci. St. Pétersbourg</i> , 1897.) St. Pétersbourg, 1897.				Presented
P 13 (4)	STEAD (David G.) Notes on the Habits of some of the Australian Malacostracous Crustacea. ( <i>The Zoologist</i> , May, 1898.)				Presented
				CELENTERATA.	
P 32 (5)	BURCHARDT (Eugen). Aleyonaceen von Thursday Island (Torres-Strasse) und von Amboina. ( <i>Jen. Denkschriften</i> , viii. <i>Semon, Zool. Forschungsreisen in Australien, &amp;c.</i> , v, 1898.)				
P 14 (7)	DENDY (Arthur). On the Sponges described in Dieffenbach's "New Zealand." ( <i>Trans. N.Z. Inst.</i> , 1897.)				
F 15 (12)	— On some Points in the Anatomy of <i>Caudina coriacea</i> Hutton. ( <i>Linn. Soc. Journ. Zool.</i> xvi, 1897.)				
P 14 (6)	— On Pontobolbos, a Remarkable Marine Organism from the Gulf of Manaar. ( <i>Linn. Soc. Journ. Zool.</i> xvi, 1897.)				Presented
				LOWER FORMS.	
P 15 (8)	BLANCHARD (Raphael). Pseudo-parasitisme d'un Gordius chez l'Homme. ( <i>Bull. Acad. Med.</i> , 1897.)				Presented
P 15 (9)	— Note IV. Hirudinées du Musée de Leyde. ( <i>Notes Leyden Museum</i> xix.)				Presented
P 15 (10)	— Hirudinées des Indes Néerlandaises. ( <i>Zool. Ergebnisse einer Reise in Nied. Ost-Indien</i> iv, 1897.)				Presented
P 15 (11)	McINTOSH (W.C.) On Early Stages in the Development of <i>Phydolloe maculata</i> , Johnston. ( <i>Ann. Mag. Nat. Hist.</i> , 1869.)				Presented by E. P. Ramsay
P 15 (12)	WATTS (H.) Foraminifera of Victoria. ( <i>Vict. Nat.</i> , 1883.)				Presented
P 32 (5)	DÖDERLEIN (L.) Bericht über die von Herrn Professor Semon bei Amboina und Thursday Island gesammelten Crinoidea. Ueber einige epizoisch-lebende Ophiuroidea. ( <i>Jen. Denkschriften</i> , viii. <i>Semon, Zool. Forschungsreisen Australien, &amp;c.</i> , v, 1898.)				Presented
P 32 (8)	HADDON (Alfred C.) The Actiniaria of Torres Straits. ( <i>Sci. Trans. Roy. Dublin Soc.</i> [2], vi, 16, Dublin, 1898.)				Presented
P 32 (19)	LEACH (William Elford). Observations on the Genus <i>Ocythoë</i> of Rafinesque, with a Description of a New Species. ( <i>Phil. Trans.</i> , 1817.) London, 1817.				Presented by E. P. Ramsay

PALEONTOLOGY.					
P 16 (26)	BRANNER (John O.) Thickness of the Paleozoic Sediments in Arkansas. ( <i>Silliman's Amer. Journ. Sci.</i> [41] ii. 9, 1896.)	Purchased	P 17 (14)	RAMOND (G.) Étude de Géologie sur le Bassin de Paris Aqueduc-Égout d'Achères et Pro-	
P 19 (18)	HOLM (Theo.) Studies upon the Cypræacæ ( <i>Silliman's Amer. Journ. Sci.</i> [41] ii. 9, 1896.)	Purchased		longements Terrains d'Épandages, &c. ( <i>Assoc. Fr. Avanc. Sci.</i> , 1897.)	Presented
P 16 (18)	HALL (T. S.) Stylasteridæ from the Victorian Tertiaries. ( <i>Roy. Soc. Vict.</i> 1897.)		P 17 (5)	STEEL (Thomas.) On Australian Coals. ( <i>Trans. Geol. Soc. Glw.</i> , 1893.)	Presented
P 16 (19)	— Appendix B of Geology of Coimadaí. Part 2; by G. Officer and E. G. Hogg. On the Graptolites of the district. ( <i>Roy. Soc. Vict.</i> 1897.)	Presented	P 17 (12)	WEED (Walter Harvey), and PRISON (Louis V.) The Bearpaw Mountains of Montana. Second paper. Part 2. ( <i>Silliman's Amer. Journ. ii.</i> 9, 1896.)	Purchased
P 16 (28)	HALL (T. S.) and PRITCHARD (G. B.) A contribution to our knowledge of the Tertiaries in the neighbourhood of Melbourne. ( <i>Roy. Soc. Vict.</i> , 1898.)		MINERALOGY.		
P 16 (29)	— Note on a Tooth of Palorchestes from Beaumaris. ( <i>Roy. Soc. Vict.</i> , 1897.)	Presented by G. B. Pritchard	P 18 (18)	KUNZ (George F.) Precious Stones. ( <i>Mineral Resources, U.S.</i> , 1885.)	Washington, 1886.
P 33 (17)	LORIOU (P. de) Étude sur les Mollusques et Brachiopodes de l'Oxfordien supérieur et moyen du Jura Bernois. 2me partie. ( <i>Mem. Soc. Pal. Suisse</i> , xxiv. 1897.)	1 vol. 4to. Genève, 1897.	P 35 (19)	— Precious Stones. ( <i>Report on Mineral Industries, U.S.</i> , at Eleventh Census, 1890.)	
P 33 (20)	OWEN (Prof. Richard) Description of the Cavern of Bruniquet and its Organic Contents. ( <i>Phil. Trans. clix.</i> , 1869.)		P 18 (20)	— Precious Stones. ( <i>Mineral Resources, U.S.</i> , 1892.)	Washington, 1893
	— Supplementary Remarks on Fossil Remains of Equines from Central and South America referable to Equus conversidens, Ow., Equus tau, Ow., and Equus arcidens, Ow. ( <i>Phil. Trans. clix.</i> , 1869.)	Presented by E. P. Ramsay	P 18 (23)	— The Genesis of the Diamond. ( <i>Science (N.S.)</i> , vi, 142, 1897.)	
P 16 (25)	POTONIE (H.) Lehrbuch der Pflanzenpalæontologie mit besonderer Rücksicht auf die Bedürfnisse des Geologen. Lief 3. Berlin, 1898.	Purchased	P 18 (26)	— Mineralogical Notes. ( <i>Proc. Amer. Assoc. Adv. Sci.</i> xxvii, 1885.)	Salem, 1886
P 16 (27)	PRITCHARD (G. B.) Contributions to the Palæontology of the Older Tertiaries of Victoria. Gastropoda Part I. ( <i>Roy. Soc. Vict.</i> , 1898.)	Presented	P 18 (22)	KUNZ (G. F.) and HUNTINGTON (O. W.) On the Diamond in the Canon Diablo Meteoric Iron, and on the Hardness of Carborundum. ( <i>Amer. Journ. Sci.</i> , xlvii, 1893.)	Presented
P 33 (21)	RILEY (Henry) and STUTCHBURY (Samuel.) Description of various Fossil Remains of three distinct Saurian Animals, recently discovered in the Magnesium Conglomerate near Bristol. ( <i>Geo. Soc. Tran.</i> [2] v., 1836.)	Presented by E. P. Ramsay.	P 18 (25)	KUNZ, PRISON, and PRATT. On the Sapphires from Montana, by Geo. F. Kunz; on the Corundum-bearing Rock from Yogo Gulch, Montana, by L. V. Prisson; on the Crystallography of the Montana Sapphires, by J. H. Pratt. ( <i>Amer. Journ. Sci.</i> iv, 1897.)	Presented
P 16 (22)	SHERZER (Will A.) A Revision and Monograph of the Genus Chonophyllum. ( <i>Bull. Geol. Soc. Amer.</i> iii, 1892.)	Purchased	P 21 (19)	LIVERSIDGE (A.) 1. Experiments on the Waterproofing of Bricks and Sandstones with Oils. 2. Experiments upon the Porosity of Plasters and Cements. ( <i>Austr. Assoc. Adv. Sci.</i> , Brisbane, 1895.)	Presented
P 16 (23)	— A chart of the Rugose Corals. ( <i>Amer. Geologist</i> , vii, 5, 1891.)	Purchased	P 18 (11)	— 1. Variation in the Amount of Free and Albuminoid Ammonia in Waters on keeping. 2. On the Corrosion of Aluminium. 3. Crystallised Carbon Dioxide. 4. On the Internal Structure of Gold Nuggets. 5. Contributions to the Bibliography of Gold. ( <i>Austr. Assoc. Adv. Sci.</i> , Brisbane, 1895.)	Presented
P 16 (24)	TATE (Ralph.) On two Deep-level Deposits of Newer Pleistocene in South Australia. ( <i>Trans. Roy. Soc., S.A.</i> , 1898.)	Presented	P 18 (12)	— On the Crystalline Structure of Gold and Platinum Nuggets and Gold Ingots. ( <i>Roy. Soc. N.S.W.</i> , 1894.)	List for Exchanges of Papers and Reports. Presented
GEOLOGY.					
P 17 (11)	AGASSIZ (A.) A visit to the Great Barrier Reef of Australia. Extract from a letter to the Editor. ( <i>Silliman's Amer. Journ. Sci.</i> 41 ii. 9, 1896.)	Purchased	P 18 (21)	TIFFANY & COMPANY, Collection of Rough Diamonds, 1883.	
P	CARD (George W.) Report on some West Australian Rocks. ( <i>Ann. Rep. Dep. Mines, N.S.W.</i> , 1897.)	Presented	P 18 (24)	— Catalogue of a Collection of Precious and Ornamental Stones of North America, exhibited at the Paris Exposition, 1889. New York, 1889.	
P 17 (2)	DAVILLE (—). Tremblements de Terre aux Nouvelles-Hébrides. ( <i>Compte rendu séances Soc. Géogr.</i> 12, 1894.)	Presented by Surgeon Bowie, H.M.S. "Tauranga."	P 18 (27)	— Boscoreale Collection.	
P 17 (7)	GARDINER (J. Stanley). The Geology of Rotuma. With an Appendix by W. Woods. ( <i>Qu. Journ. Geol. Soc.</i> , liv, 1898.)	Presented by C. Hedley.	P 18 (25)	— Catalogue of Old English Silver. by Geo. F. Kunz	Presented
P 17 (13)	HALL (T. S.) and PRITCHARD (G. B.) Geology of the Lower Moorabool. ( <i>Roy. Soc. Vict.</i> , 1897.)	Presented	P 18 (20)	WARD (Hy. A.) Fourth Rough List of Meteorites. Philadelphia, 1897.	Presented
P 17 (6)	HEDLEY (Charles). The Broadening of Atoll-Islets. ( <i>Natural Science</i> , xii, 1893.)	Presented	BOTANY.		
P 17 (9)	JUDD (J. W.) William Smith's Manuscript Maps. ( <i>Geol. Mag. n. s.</i> , Dec. iv, Vol. iv, 1897.)		P 19 (10)	BAILEY (F. Manson). 6 Pamphlets. Contributions to the Flora of Queensland. ( <i>Qd. Agric. Journ.</i> ii, 1, 2, 3, 4, 5, 6.)	Presented
P 17 (10)	— The Earliest Engraved Geological Maps of England and Wales. ( <i>Geol. Mag. n. s.</i> , Dec. iv, Vol. v, 1898.)		P 19 (20-2)	— Contributions to the Flora of New Guinea & Queensland. ( <i>Qd. Agric. Journ.</i> iii, 3, 4, 5, 1898.)	
P 17 (11)	— The Earliest Geological Maps of Scotland and Ireland. ( <i>Geol. Mag. n. s.</i> , Dec. iv, Vol. v, 1898.)	Presented	P 19 (19)	MAIDEN (J. H.) A Preliminary Study of the Prickly-pears naturalised in New South Wales. ( <i>Dep. Agric. N.S.W. Misc. Publ. No.</i> 253.)	Sydney, 1898. Presented
			P 19 (11)	MUELLER (Ferd. von.) Fragmenta Phytographiæ Australiæ. ( <i>Imperfect.</i> )	
			P 19 (12)	— Additional Note on Sterculiacæ. ( <i>Vict. Nat.</i> , 1886.)	
			P 19 (13)	— Record of a New Papuan Helicia. ( <i>Vict. Nat.</i> , 1886.)	Found in old cupboard
			P 19 (9)	WOOD (J. Medley) and EVANS (Maurice S.) New Natal Plants. Decade II. ( <i>Journ. Bot.</i> , 1897.)	Presented

## APPENDIX XII.

## PUBLICATIONS OF THE AUSTRALIAN MUSEUM UP TO THE END OF 1897.

## I.—CATALOGUES.

1. Catalogue of the Specimens of Natural History and Miscellaneous Curiosities in the Australian Museum, by G. Bennett. 1837. 8vo. pp. 71. (Out of print.)
2. Catalogue of Mammalia in the Collection of the Australian Museum, by G. Krefft. 1864. 12mo. pp. 133. (Out of print.)
3. Catalogue of the Minerals and Rocks in the Collection of the Australian Museum, by G. Krefft. 1873. 8vo. pp. xvii-115. (Out of print.)
4. Catalogue of the Australian Birds in the Australian Museum, by E. P. Ramsay, Part I, Accipitres, 1876. 8vo. pp. viii-64, and Supplement, 1890. Part II, Striges, 1890. 8vo. pp. 35. Second edition, revised by A. J. North, 1893. Part I, Accipitres. 8vo. pp. xii-74. Part II, Striges. 8vo. pp. vi-31. Part III, Psittaci, 1891. 8vo. pp. viii-110. Part IV, Halcyones, 1894. 8vo. pp. viii-24.
5. Catalogue of the Australian Stalk and Sessile-eyed Crustacea, by W. A. Haswell. 1892. 8vo. pp. xxiv-324, with 4 plates.
6. Catalogue of the Library of the Australian Museum. 1833. 8vo. pp. 178, with two supplements. (Out of print.) New edition. Part III, Pamphlets.
7. Catalogue of a Collection of Fossils in the Australian Museum, with Introductory Notes, by F. Ratte. 1883. 8vo. pp. xxviii-160.
8. Catalogue of the Australian Hydroid Zoophytes, by W. M. Bale. 1894. 8vo. pp. 198, with 19 plates.
9. Descriptive Catalogue of the General Collection of Minerals in the Australian Museum, by F. Ratte. 1885. 8vo. pp. 221, with a plate.
10. Catalogue of Echinodermata in the Australian Museum, by E. P. Ramsay. Part I, Echini, 1885. 2nd edition, 1890. 8vo. pp. viii-54, with 5 plates.
11. Descriptive Catalogue of the Medusæ of the Australian Seas. Part I, Scyphomedusæ. Part II, Hydromedusæ, by R. von Lendenfeld. 1887. 8vo. pp. 32 and 49.
12. Descriptive Catalogue of the Nests and Eggs of Australian Birds, by A. J. North. 1889. 8vo. pp. iv, v-407, with 21 plates.
13. Descriptive Catalogue of the Sponges in the Australian Museum, by R. von Lendenfeld. 1888. 8vo. pp. xiv-260, with 12 plates.
14. Catalogue of the Fishes in the Australian Museum. Part I, Palæichthyan Fishes, by J. Douglas Ogilby. 1888. 8vo. pp. 34.
15. Catalogue of the Marine Shells of Australia and Tasmania, by J. Brazier. Part I, Cephalopoda, 1892. 8vo. pp. 20. Part II, Pteropoda, 1892. 8vo. pp. 22. Part III, Gasteropoda (Murex), 1893. 8vo. pp. 32.
16. Catalogue of Australian Mammals, with Introductory Notes on General Mammalogy, by J. Douglas Ogilby. 1892. 8vo. pp. xvi-144.

## II.—MONOGRAPHS.

1. Australian Lepidoptera and their Transformations, by the late A. W. Scott, with Illustrations by his daughters, Mrs. Morgan and Mrs. Forde. Edited and revised by Mrs. Forde and A. S. Olliff. Vol. II, Parts 1, 2, 3, and 4, and index, fol., 1890-1898. pp. 36, and 12 plates.

## III.—MEMOIRS.

1. History and Description of the Skeleton of a new Sperm Whale in the Australian Museum, by W. S. Wall. 1851. 8vo. pp. 66, with plates. Reprint, 1887.
2. Lord Howe Island: its Zoology, Geology, and Physical Characters. 1889. 8vo. pp. viii-132, with 10 plates.
3. The Atoll of Funafuti, Ellice Group; its Zoology, Botany, and General Structure, based on Collections made by Mr. C. Hedley. Part 1, December, 1896. 8vo. Part 2, February, 1897. Part 3, July, 1897. Part 4, September, 1897. Part 5, November, 1897. Part 6, February, 1898.

## IV.—GUIDES.

1. Guide to the Australian Fossil Remains in the Australian Museum. 1870. 8vo. (Out of print.)
2. Guide to the Contents of the Australian Museum. 1883. 8vo. pp. iv-56. (Out of print.)
3. Guide to the Contents of the Australian Museum. 1890. 8vo. pp. 156.

## V.—MISCELLANEOUS.

1. List of old Documents and Relics in the Australian Museum. 1884. Reprinted with additions, 1890. 8vo. pp. 4.
2. Descriptive List of Aboriginal Weapons, Implements, &c., from the Darling and Lachlan Rivers, by K. H. Bennett, F.L.S. 1887. Reprinted, 1897. 8vo. pp. 8.
3. Notes for Collectors. 1887. 8vo. pp. 43.
4. Hints for Collectors of Geological and Mineralogical Specimens, by F. Ratte, pp. 26, with a plate.
5. Hints for the Preservation of Specimens of Natural History, by E. P. Ramsay. 1891. 4th Edition, pp. 32.

## VI.—RECORDS.

- Records of the Australian Museum, Vol. I, 1890-91. 8vo. pp. 220. 30 plates.  
 Vol. II, 1892-96. 8vo. pp. 112. 23 plates.  
 Vol. III, Part 1, January, 1897. Vol. III, Part 2, August, 1897. Vol. III, Part 3, November, 1897. Part 4, June, 1898.

May be obtained from the Attendants at the Museum, or from Messrs. Angus and Robertson, Castlereagh-street, Sydney; Messrs. Turner and Henderson, Hunter-street, Sydney; Mr. E. W. Cole, George-street, Sydney, Book Arcade, Melbourne, and Rundle-street, Adelaide; Messrs. Melville, Mullen, and Slade, Melbourne; Messrs. R. Friedlander and Son, Berlin; Messrs. Kegan, Paul, Trench, Trübner, & Co., Paternoster House, Charing Cross Road, London.

[Exchanges of Serials, Works, Reports, and other Publications are earnestly solicited on behalf of the Museum Library.]

## APPENDIX XIII.

PAPERS PUBLISHED BY MEMBERS OF THE AUSTRALIAN MUSEUM STAFF  
DURING THE YEAR 1898.

## ETHERIDGE, R. JUNR.

1. Plant Remains from the South Australian and Queensland Border, approximately Lat. 25° 55' S., Long. 139° 25' E. *S. Austr. Parl. Papers*, 1898, No. , p. 7, pl.
2. A New Form of *Syringopora*, allied to *Syringopora tabulata*, Van Cleve. *Rec. Geol. Survey N.S. Wales*, 1898 vol. v, pt. 4, pp. 149-153, pl. 16.
3. Palæontologia Novæ Cambriæ Meridionalis. Occasional Descriptions of N.S. Wales Fossils, No. 3. *Rec. Geol. Survey N.S. Wales*, 1898, vol. v, pt. 4, pp. 175-179, pl. 19.
4. On the Occurrence of the genus *Endophyllum*, Ed. and H. (Emend. Schlüter), in the Lower Palæozoic Rocks of N.S. Wales. *Rec. Geol. Survey N.S. Wales*, 1898, vol. vi, pt. 1, pp. 43-46, pls. 4 and 5.
5. A further Cambrian Trilobite from Yorke Peninsula [S. Australia]. *Trans. Roy. Soc. S. Austr.*, 1898, vol. XXII, pt. 1, pp. 1-3, pl. 4.
6. New or Little-known Lower Palæozoic Gasteropoda in the Collection of the Australian Museum. *Rec. Austr. Mus.*, 1898, vol. III, No. 4, pp. 71-77, pls. 15 and 16.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

---

**EDUCATION.**

(REPORT OF THE SUPERINTENDENT OF THE NAUTICAL SCHOOL-SHIP "SOBRAON" FOR THE YEAR ENDED 30TH APRIL, 1899.)

---

Presented to Parliament by Command.

*Printed under No. 1 Report from Printing Committee, 3 August, 1899.*

The Commander and Superintendent, N.S.S. "Sobraon," to The Under Secretary of Public Instruction.

Nautical School-ship "Sobraon,"

Sydney, 29 June, 1899.

Sir,

I have the honor to submit, for the information of the Minister of Public Instruction, my Annual Report concerning the Nautical School-ship "Sobraon" covering the twelve months terminating 30th April, 1899, in compliance with the 14th clause of the "Sobraon" Regulations.

PART I.

THE FIRST STAGE—BOYS ON BOARD.

2. The past twelve months complete thirty-two years since the inauguration of the Institution, and find the oldest of Australian Industrial Schools fully maintaining its successful record of reformatory work.

A high and very competent authority last year, in commenting on my Report, said: "It is not necessary to have startling disclosures; on the contrary, the steady even flow is a good proof that matters are going on satisfactorily." Profiting by this very wise ruling, it affords me pleasure to record an entire absence of any sensational events, but a quiet and uneventful twelve months of regular work and steady progress.

The admissions (159) show a falling off to the extent of 40 as compared with those of last year, which accounts for a similar shrinkage in the enrolment (478).

The discharges (157) leave the actual number on board at the commencement and termination of the year very evenly balanced. The daily average of 311 in no way overtaxes the ship's capacity.

It is difficult to account for the somewhat marked reduction in the number of committals, the more so to anyone noting the very large number of half-clothed, dirty, and neglected children which are to be found at every wharf and street corner in and about Sydney. No greater kindness could be rendered to these youngsters than by placing them under much needed restraint. The community would also be relieved of an ever-present danger and costly nuisance.

The total expenditure is somewhat lower than that of the previous year, although, the divisible average being smaller, a proportionately higher cost per head by a few shillings, viz., £24 3s. 2d., is shown.

Thanks to a liberal policy sanctioned by the Minister, much useful work has been carried out upon the "Sobraon" shore premises. The boys' swimming bath has been extended to double its former size. Dredging, cleaning, and providing several hundreds of tons of sand has now rendered it the cleanest and most inviting enclosure for bathing purposes within the harbour. A boat-shed, slip, and fine sail-room have also been constructed. A very substantial sea-wall and reclamation works are now being carried out. All such durable and necessary structures entail considerable expenditure, and such might with justice be distributed in cost over very many years to which their advantages and use will apply. Forming, however, a charge upon the past and current years' Votes of the Institution makes it necessary for somewhat increased expenditure being shown.

It has been possible, by practising strict economy, to meet these charges as the work progresses.

3. The well-established health record of the ship has been unimpaired, and although two unpleasant epidemics of measles caused considerable anxiety and extra work to all members of our staff, we were fully rewarded by the very satisfactory and rapid progress which all the patients made towards good health, no case terminating fatally, or leaving injurious effects.

Newcomers were responsible for the infection, and such experience points strongly to the necessity of providing for a medical examination prior to admission among other and healthy boys. Not only is this desirable as a protection against infection, but it would also furnish an insight into cases of serious disability for shipboard experience which are now frequently overlooked.

At the present time a boy having a wooden leg is an inmate.

There can be no doubt that the liberal scale of diet, made up of wholesome and nourishing food, together with regularity in meal-hours and exercise, also perfect sanitation, form the secret of obtaining good health amongst numbers whose previous unenviable experiences tended in a contrary direction.

Included amongst the Appendices will be found a dietary scale, giving details of each boy's provisions; and comparison drawn with that of any similar institution will remove all doubt as to the "Sobraon" being at an advantage in this important connection.

4. The general conduct of the inmates has proved most gratifying, and in every way satisfactory. No instance of absconding has occurred, although there is never a week passes without some special indulgence being granted of freedom beyond the ship's premises. A good tone pervades the entire establishment, and during over twenty-one years' continuous connection with the ship it has never been my unpleasant duty to report the slightest disturbance or riot. The system of appealing to all that is good in boy-nature, and tendering as a reward of these qualities compensating advantages to the individual, continues to develop the best results, and to materially assist in producing useful petty officers as encouraging examples to less experienced hands. It will be more readily apparent after a perusal of Table B, in which antecedents of those admitted are given, that the task of reformation sought to be accomplished here is not devoid of necessity for much watchful care and constant supervision. With direct evidence that a large proportion were, prior to reaching the ship, classed as incorrigibles, and, if not themselves vicious, at least in close companionship with the worst of characters, it cannot but be satisfactory to the Department that creditable, orderly, and deferential behaviour now supplants a former condition of savagery and a total absence of respect for person, age, or authority.

Every lad upon joining the ship has it made unmistakably clear to him that he starts a new career for himself, unsaddled by any previous misdemeanour, and that he is regarded as being in every way acceptable to participate on equal terms with numerous comrades, meriting kindly treatment and inducement to adopt a truthful and honest course, firstly, as being the most profitable procedure to pursue, and, later, as being the more honorable one.

I regret to state that a feature touched on by me in previous reports still obtains, viz., the tendency on the part of many parents to regard the State ship as being intended for the purpose of their especial convenience, and as a means of easy relief from distasteful parental obligations. A reference to the miserably inadequate sum figuring in Table H, under heading of "Parents' contributions towards maintenance," and which for twelve months is under £300, claims some notice. In the midst of a city justly proud of its democratic privileges and independent freedom, it seems somewhat inconsistent to find evidence of pauperism where moral obligation, if not legal compulsion, should appeal against saddling the State with the entire cost of maintenance, educating, and reforming the children of many persons well able to contribute towards that purpose. Several well-to-do parents, who admit the improvement accomplished in their children, should consider it a cheaply-gained advantage under payment of 10s. a week. Were the low charge of 2s. 6d. a week obtained upon the daily average, the result would be £2,021 10s. accruing to the Public Treasury, as compared with £291 18s. actually received. Probably this important point will not be overlooked under much-needed amending legislation.

Recreation has been well provided for, and in addition to the daily time set apart for amusement, many excursions to all parts of Sydney and harbour have been enjoyed. Attendances at theatre, pantomime, circus, concert, and sport gatherings, have, through the kindness of various managers and committees, been, with Ministerial sanction, availed of as rewards to deserving boys. The last excursion took the form of a picnic to Clarke Island and Middle Harbour, where the boys were conveyed in a special steamer; 300 attended and thoroughly enjoyed the freedom. All behaved in an exemplary manner.

5. The following work gives an outline of industrial labour performed on board by the boys when out of school, with its approximate monetary value:—

	£	s.	d.
Sailmakers' Work—			
Making 75 hammocks, at 3s. ... ..	11	5	0
" 3 awnings ... ..	4	10	0
" 50 bags for boys' clothes at 2s. . . . .	5	0	0
" 3 man-ropes ... ..	2	10	0
" 60 hammock lashings ... ..	4	0	0
" 3 sets boats' cushions and covers ... ..	10	0	0
" 50 pudding bags, at 1s. ... ..	2	10	0
" 1 cutter's sail and cover ... ..	3	10	0
" fenders, yoke-lines, covers, and belts ... ..	5	0	0
General repairs, awnings, sails, bags, hammocks, screens, covers, hose, tarpaulins, buoys, &c. ... ..	211	6	0
Carpentry—			
General repairs, decks, boats, pumps, ship and shore premises ... ..	120	0	0
Glazing and polishing ... ..	30	0	0
Tailoring—			
Making and repairing clothes, towels, &c. ... ..	120	0	0
Painting—			
Ship and boats ... ..	200	0	0
Masts, yards, and booms ... ..	20	0	0
Shore premises ... ..	20	0	0
Riggers' Work—Tarring, scraping, repairs aloft and to boats' gear, fenders and general seamen's work ... ..	200	0	0
Gardening—Planting, mowing, keeping trees and bush-house plants in order, feeding animals ... ..	50	0	0
Cooking—Preparation of meals, stewarding, waiting, &c. ... ..	250	0	0
Musicians' Work—Keeping instruments clean and in order, copying music, and services of band when playing out ... ..	120	0	0
Laundry—(All done by boys, each of whom washes his own clothing—8 pieces—weekly)—			
170,000 pieces at 1d. ... ..	708	6	8
Hammocks and blankets, 4,200 at 3d. ... ..	52	10	0
Photography—Applied to records and recreative purposes, magic-lantern, &c. .	100	0	0
	General		

	£	s.	d.
General Work—			
Coaling ship weekly ... ..	52	0	0
Washing and cleaning decks daily ... ..	150	0	0
Lamp trimming and cleaning... ..	60	0	0
Cleaning and keeping in order boats, play-ground, dormitory, sheds, bath, ship's hull, rifles, swords, aviaries, landing-places, store-rooms, &c. ... ..	150	0	0
Work on steam launch and water supply ... ..	200	0	0
Sale of chain cable to Messrs Smith and Kopsen (cash) ... ..	103	0	9
Total value of work done and service rendered ... ..	£2,965	8	5

6. From the routine list, to be seen amongst the Appendices, it will be gathered that no idle time is spent. When not engaged during the day in school or at some of the numerous drills, a specially selected working party finds abundance of employment in and about the ship, rigging, boats, and extensive shore premises.

Excellent results continue to be accomplished in the school-room, thanks to painstaking efforts of the chief schoolmaster, Mr. A. Thompson, who is well supported by Messrs. Leer and Mitchell. During January the annual examination was made by Mr. Willis, Metropolitan Inspector, the high average of 78 per cent. marks being awarded, with a summary as follows:—Organization—“Very good to excellent”; Discipline—“Excellent,” and General Management—“Very satisfactory.” A new and pleasing departure took place this year in the distribution of a large number of valuable prizes given by gentlemen interested in promoting emulation and rewarding meritorious application on the part of the boys in school and at drill. A suitable date having been fixed upon, the Hon. C. A. Lee, M.P., Minister for Justice, very considerably attended, and, in the presence of a very large number of ladies and gentlemen, handed the prizes to the successful boys with a few well-chosen words of encouragement. Having initiated this procedure, I look forward to its continuance, as all must be alive to the advantage of offering practical inducement to excel in the acquirement of such invaluable knowledge. It must not be lost sight of that the time spent in school is but half that applying to hours available in Public Schools; also that truancy mainly accounts for the presence here of “Sobraon” pupils. Many of our elder lads are unable to read or write prior to reaching the Institution. None leave for apprenticeship until such rudiments are mastered. A Table included in the Appendices affords some idea of the standard attained.

7. Swimming instruction has been with regularity imparted, and much progress rewards our efforts. With the much needed extensions sanctioned by the Department, “Sobraon” inmates now possess greatly increased capacity within a most perfectly equipped swimming-bath at any tide. Apart from the healthy and pleasurable experience secured, the knowledge of being able to swim is regarded as necessary to all before leaving for service.

The gymnastic, cricket, and football clubs show no diminution, but, on the contrary, are kept well patronised, and turn out many well set-up athletes. The closing season has left a capital record of victories scored against several Public School teams. All these contests gave evidence of the ambitious desire to gain laurels, wisely tempered with good taste in acting gracefully under the disappointment of a reverse of fortune.

The winter evenings admit of concerts and magic-lantern lectures, when the ship's company obtains welcome support to its own resources from numerous artists amongst the public who are always willing to afford amusement to the “Sobraon” boys.

8. Classification under the mark system provides to every boy opportunity for defining his own standing with compensating advantages, and such appeals to the common-sense instincts of all experiencing the kindly and humane methods of obtaining reformation. As showing the proportionate strength of our various Class Tables, I cannot do better than quote what applies to-day amongst the 320 inmates. Classes I to IV contain the names of good-conduct petty officers, who, I may here add, render most valuable and loyal support to the main staff; total, 50, or  $\frac{1}{6}$ . Class V includes well-behaved lads entitled to participate in the majority of the ship's privileges, but without monetary recompense, and numbers 200, or  $\frac{2}{3}$ . Class VI obtain a fair proportion of indulgences after leaving the lowest grade, and equal 60, or  $\frac{1}{5}$ . Class VII represents defaulters who have forfeited, through misconduct, their recreation and, temporarily, their rights to any privileges. They are kept as much aloof from the other boys as possible, are well drilled, and kept under close supervision; they discharge the disagreeable duties necessary about the ship. These number 10, or  $\frac{1}{32}$ .

All classes are subject to revision weekly, and promotion or reduction depends upon the marks recorded by officers, in books furnished for that purpose.

A pleasing instance of considerate thoughtfulness on the part of the boys was displayed in the form of assistance given to an unfortunate apprentice, who, owing to an accident, had his leg amputated in the Grafton Hospital. The boys subscribed a sum of money as a contribution towards payment of a premium by which the sufferer was to be taught the trade of tailor or shoemaker.

Acts of this kind form gratifying evidence of unselfishness, and a much to be desired consideration for others.

10. Correspondents still favour me with inquiries as to the possibility of placing their children voluntarily under the ship's training, which fact may be construed as complimentary testimony that “Sobraon” experience is not regarded as carrying any objectionable stigma or hardship. Undoubtedly this view is a correct one, and no greater kindness can be shown an uncontrollable or neglected child than that of placing him under some disciplinary restraint. I am always adverse to advising the surrender of parental influence where it can be exercised advantageously under desirable home-like conditions, as no substituted agency should command greater influence over youthful subjects. I give hereunder a few instances, omitting names for obvious reasons:—

J.C., of Petersham:—“Sir,—As I have a boy whom I am most anxious to place on board the training ship ‘Sobraon,’ I should feel very much obliged if you would kindly give me full particulars as to how I can obtain the necessary information?”

W.M., Henty:—“Sir,—I have a son who is completely beyond control, and is likely to get into serious trouble. I would be glad to know if you would receive him on your ship, provided the Regulations permit you to do so, and subject him to the same discipline as the other boys? To have him committed by

by a magistrate would injure me in my position. \* \* \* Being quite ignorant of the Regulations re training-ship boys, I would be greatly obliged for your advice. The lad is 13 years of age, and fairly well educated for his age, but through bad company has made this application necessary."

H.A., Glebe :—"Dear Sir,—I read a report of your noble Institution, and wish to place a boy nearly 14 under stricter discipline than I, in my bad health, can exercise. \* \* \* Can I, without exposure, put him under your care, and pay for him. Yours respectfully, H.A."

B.L.E., Cundletown :—" \* \* \* A widow lady who has to work for her living \* \* \* has a son who is somewhat unmanageable, and cannot be restrained, simply because he has not been favoured with the benefit to be derived from a father's rule. She cannot get him to work. He is 15 years of age, and every day is either out swimming, or elsewhere. He is a strong boy, is not vicious or morally bad—only wants to be taught obedience and the necessity of bowing to authority. Could you take him, say, for six months? \* \* \* If you can do this I will be willing to take him after that time. It is absolutely necessary that he is placed somewhere where he will have to be obedient, and that habit encouraged in him. \* \* \*"

L.L., East Maitland :—"Sir,—Would you be good enough to inform me in what way I could place a respectable boy, aged 17 years, under your charge? The matter stands thus: Up to to-day he has obeyed me. I require him to go to the High School, finding it is necessary to finish his education. He refuses, and is unable to get employment of a suitable kind. I will not allow him to leave school without employment. He has a high moral character; his family are in a good position."

I.O., South Melbourne :—"Sir,— \* \* \* I have a boy 13 years old. He is well built, just fit for to make a good sailor, only at present a little unruly. I have been reading so much about the good training that boys get on board the 'Sobraon' that I would like to place him on board, if possible. Of course I will pay for him if he could be taken."

C.G., Darlinghurst :—"I have a boy here, about 14 years of age, whose father cannot keep him from getting into mischief and truanting. He is very anxious to know if, by paying a reasonable sum, he could have him placed on your ship, and under what conditions? \* \* \* If you cannot receive him under any such conditions, would you kindly let me know if there are any of the institutions for boys known to you that can do so?"

11. The costly material obtained for mooring the vessel has not entirely accomplished all that could be desired towards permanency and sense of security, owing, in my humble opinion, to the novel method of securing all cable outside the vessel instead of through the hawse-pipes. The Engineer-in-Chief has recommended reverting to the use of a buoy, which meets with Departmental approval, and will shortly be placed in position.

12. The clerical work of the Institution shows no falling off, and, as mentioned in my last Report, unduly taxes the time of one clerk and myself in keeping abreast of a large correspondence, together with necessary attention to daily receipt and issue of stores. Whilst no effort is spared to do justice to these matters, the accuracy aimed at cannot be assured, nor can much desired supervisory work be accomplished.

## PART II.

### THE SECOND STAGE—APPRENTICESHIP.

13. Applications for the services of "Sobraon" boys continue to come daily to hand, and many desirable homes now await lads when eligible to leave the ship.

This is a healthy indication that points to the large majority going to employment giving satisfaction.

From over 400 reports just received, the percentage of 93 are giving satisfaction, and from the small balance fully a third have proved failures owing to want of tactful management on the part of over-exacting employers.

I claim that, considering the class from which the ship recruits its material, these results are not only encouraging, but they are indicative of the practical utilisation of many promising lives which were previously abandoned as hopelessly incorrigible. It must not be forgotten that many of our boys proved failures under other institutional handling, and notwithstanding the prevailing desire for experimental new departures, the ship's system furnishes results that only the supercritical can take exception to.

14. During nine years ended last month no less a sum than £13,553 6s. 7d. has been handed to the ship's apprentices for services rendered; and some thousands of pounds to-day stand at credit of lads serving apprenticeship.

This is a gratifying fact; but even more profitable gain is provided through the medium of employers who, acting up to the conditions of the indenture contract, impart useful instruction, which later enables young men to earn a respectable livelihood by honest toil. The few years spent happily in the country generally bears fruit in eradicating former undesirable preference for city life, and many of our boys elect from choice to remain away from temptations responsible for early failings and long-to-be-remembered hardships.

During the past twelve months it has only been possible to make one short visit from the ship. The necessity for a prosecution of an employer in the South Coast district, who had been unduly severe in punishing an apprentice, having arisen, I attended at the Court proceedings, and a verdict, with substantial damages, was recorded against the master. The lad had, previous to law proceedings, been removed to a more suitable home, and I am pleased to say gives every satisfaction.

Whilst in the district I found time to visit and chat with several apprentices, all of whom seemed pleased to see me.

I have long considered the want of such periodical inspection by a ship's officer who knows the boys, and in whom they have confidence in confiding, to be the weakest part of this Institution's dealings. Were it possible to have as one of the staff an inspector who with regularity could visit apprentices in their homes, and also furnish any necessary information regarding fitness of applicants seeking boys, wiser allotment, under reliable insight, would be secured. The protection of State wards renders such precautionary measures a matter of justice to those thus placed in isolated and sparsely-populated districts.

It is true the police have for years past most efficiently and conscientiously discharged supervisory work over our boys; but such not only taxes their fully occupied time somewhat excessively, but frequently gives rise to most unfair resentment from the very people who share in the benefit of their well-intended mediation. I have quite a number of protests from masters who are short-sighted enough to construe the police inspection of their State charge, and his surroundings, as an intended reflection upon themselves. The great advantage attaching to inspection by a ship's officer comes from his carefully-acquired knowledge

knowledge of the character pertaining to each different lad—and few coincide. Close daily contact on board ship over one and a half year discloses this. He is, therefore, in a position to form a more correct opinion as to how far the complaint or friction is attributable to either contracting party. I would, however, be more than ungrateful were I not to take this opportunity of thanking the Inspector-General, Mr. E. Fosbery, J.P., and his efficient staff for the immense amount of work done for this Institution in many directions. The kindly counsel and encouragement given to lads serving in all parts of New South Wales proves invaluable, and the old adage of “a friend in need” proving “a friend indeed” is very applicable to the country constabulary and all State charges.

15. As has always been the case, interference on the part of relatives still gives rise to much friction between employers, this Institution, and its *protégés*. I regret to say it rarely proves possible for a lad to complete his engagement after his whereabouts becomes known to his relatives, who, either from shortsighted or sordid motives, write and visit the boy until the master's influence and authority is completely undermined; also the boy is rendered so unsettled as to become useless in his situation. There are, of course, exceptions to this, where sensible parents recognise the wisdom of non-interference.

A very mistaken impression seems frequently to go unjustly abroad that my sympathies are indiscriminately opposed to all relatives, and that I wish to resent their very natural interest in their children. This is quite a fallacy where the parents have the slightest claim to respectability; further, I am quite alive to the fact that no more valuable assistance could be enlisted than that of a well-disposed parent's influence and wise counsel.

A few from many letters in my possession will show that this is at times recognised by relatives as being the view upon which I act:—

A.D.O., Sydney:—“ \* \* \* For securing such an excellent situation and refined home for F.J.O., as well as for the very great kindness and consideration which you have displayed all through the matter, we owe you our deepest gratitude. Indeed, I feel compelled to say that from my experience of you, I consider that the Institution presided over by you is fortunate in having one who, whilst possessing the qualities of a strict disciplinarian, is imbued with the best instincts. Kindly convey our sincere thanks to the Rev. W. A. Charlton for his extremely kind endeavours therein.”

S.H., of Newcastle:—“From letters received from my son, I am satisfied in my own mind that he has been placed under a good master in Mr. Elliott, and, more, appears to be happy and contented. For this consideration, do, I pray, accept my heartfelt gratitude in return.”

M.S., of Sydney:—“Allow me to thank you for your kindness in allowing me to correspond with my boys, and also for the kindness you have shown them in the past.”

A.H., of Newtown:—“I am keenly thankful Cyril is doing so well; glad, too, that Mr. French is an exact man; it will be so helpful to my boy. I need hardly tell you that my mind is at rest now about my boy's surroundings.”

E.C., of Surry Hills:—“I have received a letter from my son J.W., and he is very happy and contented; and I am very thankful to you for your kindness towards me, for it has relieved my mind very much and I can rest contented now.”

E.G.P., of Enmore:—“I have pleasure to inform you that my son Henry has successfully obtained admission to the Permanent Artillery Band, and I must kindly ask you to accept the thanks of Mrs. P. and self for the interest you took in the matter.”

16. No statement of mine can so well illustrate the sentiments of masters and boys as a few letters penned by both, which I therefore submit from some hundreds in similar terms:—

Mr. F. V. Wareham, Byron Bay:—“In reply to your circular *re* W.S., I beg to state as follows: 1. W.S., is a splendid boy at any work I set him to do, and appears very ambitious to learn. He works well and is quick and cheerful; takes quite an interest in everything about the farm; is very kind to animals, and looks after their wants without having to be told to do so. I have never known any man or boy I have hired that I like so well. He has naturally a good disposition. He is also kind and attentive to the little children. He is a very good boy, and if he goes on as he is doing at present he must make his way in the world, especially if he remains in this new and rich district. 2. Three shillings have been paid into the Savings' Bank, and 3s. more will be paid in about Monday next. I enclose a note from him.”

Mr. A. W. Perkins, Bexhill:—“ \* \* \* I have found the boy industrious and anxious to get on, and he has now to his credit in the Savings' Bank 21s. 4d. I have requested him to write to you, and he acceded to my request. The only ‘Sobraon’ boys are with S. Parkes, Bexhill, and H. Sparke, Cooper Creek, that I know of, and both seem to be well satisfied with them, and the boys seem to be getting along all right.”

Bandmaster Hutchinson, Paddington:—“Colonel Smith was speaking to me yesterday about the boys from the ‘Sobraon.’ I have had nothing but good reports, G. especially, and wanted to know about R. and the others, he being very anxious to make up the band. Can you oblige me by sending the boys along, also one other likely to pass medically.”

Mr. W. Black, Alstonville:—“I have to report E.M. a good and obedient boy during the time he has been with me. I am very satisfied with his behaviour.”

Mr. R. Bryen, Granwell:—“*Re* conduct of boys. They have been two good boys up to the present. Both of them do their work well, and are getting very useful on the farm. The amount of wages paid to your and the boys' credit in the bank—C., £4 1s. 6d., and C.K., £2 8s. 3d.”

Mr. D. Orman, Bective:—“ \* \* \* As for the apprentice, I could not wish for a better lad, both in work and every other way. I have banked £9 17s. to his credit, being wages to date.”

Mr. W. Holden, Stewart's River:—“I have much pleasure in informing you that the lad entrusted to my care has given good satisfaction and has proved useful and industrious, and is easily managed. I am much pleased with him, and like him well. I think he is satisfied with his home, as I never hear him complain.”

Mr. J. Smith, Tweed River:—“A.N. has conducted himself quite satisfactorily during the past year, and if he does as well this year I will be satisfied. Of course, I have treated him as my own boy. I have deposited £4 2s. to his and your credit.”

Mr. J. Haddin, Albion Park:—“I am pleased to tell you that L.W. is still a very good boy. He has £3 17s. 9d. deposited to his and your credit. He has written to you to-day.”

Mr. T. Murphy, Koorawatha:—“I am happy to inform you that the apprentice you allotted to me is proving a very worthy lad. He is respected as the best boy in the district. I let him go to Sydney to see his friends. He has £1 4s. to his credit.”

Mr.

Mr. G. Nowland, Quirindi :—"The apprentice has conducted himself splendidly. £1 17s. to his and your credit. The lad will write to you next week."

Mr. F. Brice, Coomerong :—"My apprentice, G.T., has conducted himself very well. I have no fault to find with him as yet."

Mr. J. Mackey, Parkes :—"I am pleased to inform you that my apprentice has conducted himself well during the time he has been in my service. The money now deposited in your name and G.W.B. is £7 7s., being wages to date."

Mr. E. W. Ffrench, Moree :—"I have much pleasure in reporting that my apprentice has conducted himself very well since he has been with me. He is obedient, respectful, and very industrious; has no inclination to go away from the home and mix with other boys. H. is writing to you."

Mr. P. C. Basche, Frederickton :—"In reply to your communication, I beg to furnish you with information desired *re* boys: F.L., wages deposited to 14th instant; conduct since last report excellent. H.V., wages paid to date; tries very hard, and is most trustworthy. Of the ex-apprentices, C. is the only one in the district; he seems to be doing very well, and B. is with his brother on a station near Wagga."

Mr. J. W. Selwin, Winton :—"Apprentice E.H.: His health has been excellent, his conduct good, and wages have been duly paid."

Mr. H. McKenzie, Mungindi :—"In reference to the lad P.R., his time with me has expired, and he is going to work at the local hospital as wardsman. He has been very well behaved, and a very willing boy to work, and is thoroughly reformed. Should you have another lad I shall be very pleased to take him and give him a good home."

Mr. J. Kelly, Shellharbour :—"The boy K. is in good health, and is doing well. I have no faults to find whatever; he is a good boy, and very willing to do what is told. O'S., the last boy who served his apprenticeship with me, came and spent his Easter with me. He has grown a fine young man, and is doing well at the Kembla coal-mines. £7 5s. is the amount placed to your joint credits. It is my intention to apply, in the course of a few days, for another boy, as K.'s time will soon be up."

Mr. S. McCaughey, J.P., M.L.C., Narrandera :—"I saw the 'Sobraon' boys B.R. and F.G.T. this week, and are both in good health and are doing well."

Messrs. Burns, Philp, & Co., Sydney :—"Regarding the boy C.S., who is employed on board the s.s. 'Miowera,' I now send you a report, signed by the commander and chief officer, from which you will see that this boy has given satisfaction on board. We do not at present require another boy on this steamer, but I shall inform you if we be able to take one on the next steamer on her arrival." (Report): "This is to certify that C.S., during our voyage to Vancouver and back to Sydney, has been a very willing and hardworking boy, attentive and honest, and giving satisfaction."

Apprentice E.J. :—"On last Friday night, our Sunday school prizes were given out, and I am very glad to tell you that I carried home the first prize in my class. \* \* \* I would like to know whether the boy W.S. is on the ship still, as he and I are old shipmates, and I would like to send him a letter. I would also like to tell you that my master and mistress are very good to me, and I cannot do anything too good for their kindness."

T.H. :—"I have got very nice people and a good situation, and I go to school every day. I can milk, and drive the horse and cart, and I will soon be learning to plough. Give my best respects to all my good officers and shipmates, and accept the same yourself."

S.M. :—"My time expired with Mr. Sullivan last Sunday, and I may state that I am so much attached to my esteemed master and family that I do not intend to leave them. I may take a trip to Sydney next Christmas, and, if so, shall go on board to see you. The boy T. arrived the other week; he seems to like the place very well."

F.O.G. :—"\* \* \* I am very thankful to you for your kind advice, and I am sure I will gain by it. I am not anxious to leave my master."

J.McT. :—"I am sending you down some emu eggs; my mistress gave them to me. I like the country very much, because there is no place like the bush. I have a comfortable home, and everybody is kind to me. There is a good swimming-hole up here, and I often go for a swim." He desires to be remembered to several boys and officers.

P.W. :—"I am very sorry I did not write before. I have got on first-rate since I came up here over three years ago, and the treatment that I receive from my master is all that could be desired. My term of apprenticeship will expire next month. There are several boys from the ship in this district, their names being L.S., A., and T.R., and others; all are doing well, and seem to like the country. There are two old boys up here. They are both doing well; they seem to like the country."

A.W. :—"I am getting on, and I am in good health. My master and mistress are very kind to me, and I have plenty to eat and drink. I can milk and ride, and drive a cart, and do lots of other things. I enjoyed the ride up in the train. I thank you for getting me such a good situation. I have to milk two cows every morning and evening. I would like to be remembered to these officers and boys" (naming a large number).

W.G.N. :—"I am pleased to say that I am getting along all right, and that I have not had to be spoken to since I came here. I take an interest in my work, and try to learn all I can. I have a very good master and mistress. We go to church every Sunday, a ride of 7 miles. I have just ploughed a paddock of 53 acres. I have to drive twenty horses and cows a mile a day for water. There are eight or nine boys in this district; they all seem to be doing well. Remember me to Mr. Robilliard, and tell him I thank him for all the good he has done for me; tell him how I am getting along."

C.T. :—"I received my bugle all right, and I was very glad to get it. I sound my bugle every morning to get up, and 'cooks' for every meal; I thank you very much for sending it to me. I can ride and milk very well now. The boy M. is growing very tall now. Remember me to all the officers on board."

F.R.T. :—"I am quite well and like my place very well. Mrs. Cameron is very kind to me. I get good meals, and clothes, and bed. I have a pony, and I go for the mail three times a week. I have learned to milk. I have got all my pocket-money up till now." He wishes to be remembered to a long list of boys.

W.H. :—"\* \* \* I may say I have been in good health all the time I have been here. I have now entered on my last year of apprenticeship, and mean to fill my time out, as I have a good place. Mr. Smith has paid me in cash for pocket-money upwards of 36s., and he says there is £5 to your and my account at the bank. Best wishes to everybody on the ship."

G.W.

G.W. :—"My master's brother is sending down for a boy. He is married, and has got a farm about a mile away. My master is very kind to me, and I go to town every other week. Remember me to all the boys."

G.M. :—"I like my situation very well. My mistress and master are very kind to me. I get plenty to eat and drink. I hope you are all well on board. I go to a swim every Sunday. There is only one 'Sobraon' boy up here, that is S., and he lives about 2 miles from me."

R.T. :—"I have been to two hare drives since I have been up here. I received your nice letter. Please remember me to these boys" (13).

E.B. :—"I thank you for getting me such a nice place. I am in the best of health, and have everything that I want. Remember me to S., M., and J."

T.E.H. :—"I have my meals with the family, and get as much as I can eat, plenty of clothes, and plenty of work to do. I go to church, and to see the boy A., who is very pleased with his place; also the boy G.K., and he likes his place well. I am thankful to you and Mr. Waddell, M.P., for getting me such a good place, and when I am old enough to get a vote I will give it to Mr. Waddell."

E.J. :—"I am getting on very well with the trade (tailor). I can do anything in the trade now, and everything is going on well with me and my mate. We do everything to please our master. We go to church every time there is church here with our master, and Sunday school as well."

W.F. :—"Just a line to let you know that I am all right. I am thankful to you for getting me such a good place. Mr. and Mrs. O'Donnell and the boys are very good to me. I grew 6 inches since I came here. Mrs. O'Donnell has given me my pocket-money."

H.A.S. :—"I am a better farmer now; I can plough with six horses and a four-furrow plough, and any plough. I have to drive all stock to water, about 5 miles. I like my place as well as ever. I often meet the other Winton and Bective boys at church."

L.W. :—"I am well and happy as ever, and hope you and all aboard are the same. \* \* \* I will write more next time. Remember me to all the boys."

J.B. :—"I am milking twenty cows. I have been with my master two years and eight months, and have only four months to do. I saw in the paper that you had measles on board; I hope the same is all gone now. My master has banked £11 3s. in the bank. J.R. won a sulky in the art union; he paid a shilling for the ticket, and sold the sulky for £10."

J.B.A. :—"We have shifted to Wandar Station, 8 miles away. I have turned over a new leaf, as you told me to do, and will try to give satisfaction to my master."

Constable Somerville :—"J.J.T. was found to be exceptionally well conducted, trustworthy, respectful, and fond of his master, who treats him kindly, and provides him with an excellent home. £9 3s. to the credit of W. H. Mason and J.J.T."

Senior-sergeant Chiplin reports upon three boys :—"A.C.,—Mr. Bryer says he is a well-behaved and good boy. J.McT.,—Mr. Veech says he is a good and well-behaved boy. J.T.,—Mr. Auston says he is a good and well-behaved boy."

Senior-constable Ranford :—"Boy B. has just completed his apprenticeship; all wages paid to the amount of £7 7s. B. is still staying with his late master, who resides 14 miles from Parkes. Mr. McKay gives B. an excellent character."

Senior-constable Wright :—"Mr. Prior stated that the boy E.A. was of good character, obedient, and very willing to do his work, and that he had no complaints against him. He had the appearance of being in perfect health, and was well clothed and clean. The boy had no complaints whatever to make."

Senior-sergeant Harvey reports on four boys, F., M., O'N., and M. :—"The respective masters of each have been interviewed, and there are no complaints either by the boys or their masters. Their characters are very satisfactory."

Constable Justelins :—"Visited apprentice, A.S.S., at his master's, the Ven. Archdeacon Dunstan. The master states the boy's character is very good. The wages are paid to date, £6 5s."

Constable J. J. Rowe :—"States that he visited apprentice P.J.J. The boy had the appearance of being well cared for in every respect—well clothed, and stated he was very well satisfied with his master, who always treated him well. Mr. Henderson stated that the boy was a very good working lad, is truthful, obedient, and to be trusted."

The same constable reports of another boy :—"Visited H.H.; he had no complaints to make, and the boy's master stated that he was very well pleased with the boy, who was obedient and truthful; £4 17s. to his credit."

Senior-constable Madden reports :—"Visited H., and his master gives him an excellent character. Amount to his credit is £9."

Constable Tilney :—"Interviewed three apprentices, A.Mc., G., and F.A. The masters were well satisfied with the boys, and had no complaints to make. A.G. has £6 2s. to credit, A.Mc. £7 9s. 10d., and A. 17s."

Constable Branch :—"Finds that C.B. has a good home, and is well cared for, and expresses himself as being well satisfied; he bears a good character from his master, also from others who know him."

Sergeant Roberts :—"The boy is strong and healthy, and told the sergeant that he likes his work, and is contented, and has no complaints. Mr. Molloy informed him that the boy was all that could be desired, and would grow up to be a good man."

Constable Canney :—"S. is well behaved, and gives every satisfaction to his master."

Senior-constable Reynolds :—"The boy's bank-book shows that the wages are fully paid up to 13th instant; pocket-money also paid up. The boy bears a good character, and is well spoken of by his master."

Senior-constable Donnelly :—"W.K. bears a splendid character, is well dressed, and always clean, and is a good citizen."

Senior-constable Jordan :—"H.A. states that he is well treated, and that Mr. Moseley is a very good master. Mr. Moseley speaks highly of the apprentice as a willing, civil, and well-conducted youth. Amount of money to his credit is £12."

Constable McCrae :—"The boy bears an excellent character, is well treated, and contented with his home. Wages are paid up to date."

Constable Moore :—"This boy bears a splendid character. Mr. Basche speaks very highly of his obedience and behaviour. Wages are paid up to date."

Constable

Constable O'Rourke :—" A.T. looks well, is neatly kept, and expressed himself as satisfied with all his surroundings. The boy's master gives the apprentice a very excellent character."

Constable Matthews :—" The lad E.E. bears a very good character, is well treated, and seems thoroughly satisfied with his place. His time expired a little while ago, but he is remaining in the service of Mr. Ellis."

Senior-constable Tubman :—" F. is a very good boy, truthful and honest. He looks very well, and informed the constable that he was well treated by his master."

### PART III.

#### THE THIRD STAGE—EX-APPRENTICES.

17. I now come to the interesting period that permits of judging whether the time spent under the "Sobraon" training has accomplished its mission, or proved barren of permanent good results.

It is with great satisfaction that I find a proportionately high average to that shown in connection with apprentices as continuing and being applicable to successes amongst those becoming free agents.

The "old boys" still continue to display their recognition of what the ship has done for them by paying numerous visits, almost daily; and steady correspondence from those precluded by distance from attending contains much genuine assurance of the writer's appreciation and gratitude. This being the case, does much to encourage and stimulate the ship's staff in the discharge of duties which, at times, seem difficult of accomplishment.

A very large proportion of our young men, completing some years of country service, become enamoured of the desirable, healthful, and free mode of life, and elect to remain away from more dangerous influences, which course I always use my advocacy towards bringing about. Wages paid over exactly nine years represent the respectable total of £13,576 17s. 1d., and were it possible to insure wise application in its disposal would, with the useful teaching obtained from employers during service, go to form the nucleus of a small competency that might be acquired by industrious perseverance and saving habits.

18. Again I have to thank the Comptroller-General's courtesy in furnishing a complete record of all ex-"Vernon" or "Sobraon" inmates entering any gaol in New South Wales under conviction during the year just ended. The total of forty-eight names discloses a smaller number by ten than applied to the previous year, which is mainly due to closer inquiry and identification than was formerly assured, each committal being brought under my notice at the time of entering any gaol for corroboration to his being an ex-inmate. They class as follows :—

During apprenticeship	...	...	...	...	...	...	...	6
After "	...	...	...	...	...	...	...	32
Discharged to relatives by Governor-in-Council...	...	...	...	...	...	...	...	10
Total	...	...	...	...	...	...	...	48

The dates of their leaving the Institution register from 1873, or twenty-six years back, up to 1898. The Minister for Justice, Hon. C. A. Lee, M.P., in reviewing this return, kindly lays stress upon the fact of one lad only being included who had left the ship within the past twelve months. I am able to add that this young man was provided with employment at the advanced age of 17½ years, not as one in whom confidence was reposed, but as the alternative of turning him adrift in the city when 18. It is but fair to the Institution to point out that from the total of forty-eight the large proportion of ten must be deducted in order to arrive at the number of those proving failures under the system, that number having been removed by Executive authority prior to experiencing the full course of the ship's training, and restored to the custody of their relatives. A comparison drawn between thirty-eight failures and 3,942 admissions gives 9, or under 1 per cent. On the other hand, it will be seen that those returned to their relatives and reverting to evil habits, viz., ten, provide a fifth of the total relapses.

I find the number of male prisoners committed during 1898 to have been 15,066; so that the boys from this Institution contribute but an infinitesimal fraction of that aggregate.

These figures are beyond contradiction, and, were it not for the unsatisfactory proportion coming in evidence from those only partially experiencing the ship's reforming influence, would leave little to be desired.

A few illustrations from many hundreds recorded in my Ex-Apprentices' Register may prove interesting :—

P.H.—Sent here at 8 years of age, being too young for the ship experience, was transferred to the State Children's Relief Department. Having proved a failure under that system, he was recommitted to the "Vernon." Served his apprenticeship with credit, and has been in steady employment at the Victoria Barracks for the past four years. He visits occasionally to inquire after a younger brother serving apprenticeship at Kiama.

A.E.R.—Committed from Newcastle Bench in 1889, after two previous convictions, and sent to the ship as being incorrigible. Was apprenticed in July, 1893, and creditably served his full term of apprenticeship. Frequently visits the ship, and has assured me that the best thing ever happened to him was being sent to the ship. His former employer, Mr. F. Buekle, has secured him lucrative employment at Paddington, where he continues to favourably acquit himself.

W.W.—One of four brothers sent here, all of whom have turned out well. He was apprenticed sixteen years ago. On 11th July last he visited the vessel, having just returned from Western Australia, where he had been profitably employed in mining. He spent the night on board, and left Sydney the following day to join his brother, who is engaged in farming on the Tweed River. He is a fine, strong young man.

J.C.—Sent from Glen Innes in 1892, his father being an inmate of Callan Park Lunatic Asylum and the lad sadly neglected. Was apprenticed to Mr. P. Hiney, of Orange, for four years. Having obtained a week's holiday, he visited the ship in July last, and assured me that he regards having been sent to the ship as a very fortunate thing for him. He receives a most excellent character, and returned to his former service on the following Saturday.

L.W.D.—Left the ship in October, 1886; is now a prosperous tradesman in the town of Warren. He has at the present time in his employ two "Sobraon" apprentices, both of whom he writes me most encouraging reports.

J.S.—Writes from Montreal, Canada, to the effect that he has settled down in Canada and purposes getting married. This lad at a juvenile age proved a non-success under the State Children's Relief Department and was sent to the ship, from where he went to sea, following the occupation up successfully for some years. His letter is a newsy one, containing many references to "Vernon" experiences.

W.J.—Left the ship in 1891, and has retained permanent employment ever since. He bears most exemplary character in the employ of one our most prosperous city merchants. Having an elder brother employed in the Botanical Gardens, he visits to seek my assistance in obtaining entry to the same department.

A.E.—Came to the Institution from Parramatta Gaol after three previous convictions. Leaving after less than two years detention, he served close upon three years apprenticeship at Girilambone, during which time he received an excellent character. He visited the ship in September last, and gives me the satisfactory evidence of permanent reformation by production of a lengthy reference of good character, being now employed by a large firm as carter at £2 per week. He names numerous other old boys known to him to be doing well.

D.S.—Left the ship twelve years ago, prior to which date he was a ward of the State Children's Relief Department, by whom he was handed over to his mother's care; proving beyond her control, he was sent to the ship; was apprenticed to Mr. Clarke, of the Tweed River; he turned out well. Visited during September, and informed me that he had inherited considerable house property from his late father, who was at one time harbour-master in Sydney. A most respectable and steady young man.

A.W.L.—Left the vessel six years ago, and served his apprenticeship at Rockdale. After completion of his term, he married a relation of his master. Visited with his wife during September, and took considerable pleasure in pointing out the features of interest on board his old ship.

T.L.—This lad served several sentences prior to coming to the ship in 1887, and came from a family of criminals. Apprenticed in May, 1888, he served his full term most creditably. For many years past he has been employed in the Railway Department, and recently was placed upon the permanent staff. He frequently visits me, and in the most pleasant way discusses his future prospects. He has been for some years married, and has recently insured his life for a considerable sum.

A.L.R.—Sent here from the Central Police Court in 1892. Served his apprenticeship with Mr. Gordon, of Braidwood, and frequently visits the ship. He is now a fine, strong man of the most respectable class, obtaining a lucrative wage as vanman in the city.

A.D.—Left the ship in September, 1894. Now employed under the Municipal Council of Sydney, and supports his mother, receiving 32s. 6d. per week.

G.B.—Left the "Vernon" twenty-nine years ago, when he went to sea, and later entered the service of the New South Wales Marine Board in the capacity of pilot, which position he has most creditably filled for close upon thirteen years. In October last he visited this ship to see his son, who is now an inmate. In conversation with myself, he explained that, having lost his wife, and being much absent from home, he recognised the necessity for placing his boy under wholesome restraint. Having benefited himself by "Vernon" experience, he elected to place his son on board the "Sobraon," where, I am pleased to say, he is making very satisfactory progress.

C.M.—Left the ship ten years ago. Visits and assures me he derived much permanent good from the ship's training; also that it saved him from ruin. He has been for four years past a member of the Scottish Rifle Corps, is a first-class swordsman, and recently visited to take part with others in a display given for the amusement of the "Sobraon" inmates.

P.H.—Left the ship nine years back; comes on board from Charters Towers, where he has been working in the Clark-Worcester Gold-mine, and earning 10s. per diem. From here he went on to Narrandera to spend Christmas with his former employer, Mr. Watt. A fine, straightforward young man, who always speaks in pleasing terms of the ship.

F.F.—Visited during December last, and spent a public holiday on board, having just returned from Narrabri, where he served five years with Mr. Dale, solicitor. He returns upon the following Friday to start a business of his own as a baker.

W.F.—Left the ship in October, 1886, being apprenticed to a relative of the late Mr. Whittingdale Johnson, S.M.; completed his term with great credit, and has been now some years employed in the service of the New South Wales Government. He is generally respected as a steady married man.

C.H.—Left the ship in 1889, and completed his service with Mr. Barton, of Wellington, by whom he is still employed. He visited the ship in January of this year, when he intimated to me his appreciation of what the ship had done for him. He is married, and has two of a family.

19. When brought face to face with the lasting results each year being added to through the medium of this Institution, I feel assured of the countenance and the support of all charitably disposed members of our liberal community, as no undertaking will so readily commend itself to practical minds as that which tends to convert depraved youthful humanity into respectable law-abiding citizens. The ship, or shore reformatory, be it either, is but a means towards an end, its object being to secure, not short-lived popularity, but permanent and far-reaching results; and its success or failure can only be determined by closely analysing the proved characters of those who pass under its influence. That we continue to keep closely in touch with all former wards will be evidenced by a glance at the registration of 380 visits paid, and information gleaned from "old boys" in conversation during the past year. Many pleasing reminiscences are revived by young men calling on board to discuss with me their previous experiences of the ship and their after career, which confidences, freely reposed, go far towards enlisting my ready sympathy and forbearance with less experienced novices coming daily to profit by the initiatory influences of the system.

#### PART IV.

##### MISCELLANEOUS.

20. Prayers are said during the morning and evening of each day. The boys land in Balmain on Sundays and march to their respective churches; the afternoon of that day, together with an hour each Tuesday, is devoted to religious instruction. During the year a large party of boys from both Protestant and Roman Catholic denominations were confirmed by the Right Reverend the Primate and His Eminence the Cardinal.

Too many thanks cannot be given to the Rev. W. A. Charlton, the Reverend Dean Healey, and others, who are all most assiduous in their thoughtful and painstaking efforts towards spiritual teaching of the boys. The staff as a body benefit by the refining influences thus introduced amongst the lads. In this connection my thanks are due to the kindly-disposed and philanthropic ladies, Mrs. Ford and the Misses Hughes and Maguire, who ably second the Church of England clergyman by weekly visits. Their presence does much to encourage respectful behaviour and attentive decorum amongst the pupils. Similar praiseworthy help is rendered to the lads of Jewish persuasion by the Rev. Phillipstein, who kindly attends on Tuesdays to instruct them.

The worthy rector of St. John's is almost invariably to be found in evidence amongst the youngsters whenever they enjoy a day's holiday for sports. In such numerous ways I am indebted to this gentleman, who is universally respected by all my charges.

I would also desire to place on record the great assistance rendered this Institution by the Visiting Surgeon, Dr. C. U. Carruthers, J.P., who, during our epidemic of measles, was most unremitting in his attendance upon the patients and solicitous regarding their progress. The fact of no serious after effects developing in any instance speaks volumes for the treatment prescribed.

21. It is not easy to record the names of all generous patrons and contributors towards the pleasure and amusement of the inmates, but amongst the number I have to thank the Hon. J. A. Hogue, M.P.; Mr. J. C. Maynard, J.P., Under Secretary of Public Instruction; Mr. Bridges, Chief Inspector; Colonel Bell, Consul, U.S. America; Major Rennie; the Hon. J. H. Carruthers, M.P.; Hon. C. A. Lee, M.P.; Mr. R. Hickson, M.I.C.E., Under Secretary of Public Works; Messrs. Turner and Conway, Principals of Fort-street Model and Cleveland-street Superior Public Schools; the lessees of our theatres and circuses and societies who have entertained the boys; the Committees of the Balmain and Anniversary Regattas; Messrs. Southwell, S. N. Fairland, Pattinson, Piercy Ethell, Blundell, Louis Phillips, and Captain Connor; also several others who, if not personally named, none the less command my very grateful thanks.

22. The past year has recorded the same large number of visits from influential ladies and gentlemen interested in scrutinising the methods adopted and general surroundings of the Institution, foremost amongst whom must be named our late Ministerial head, the Hon. J. Garrard, M.P., who both in office and over a term of very many years has always taken a keen and practical interest in the ship. His very complimentary assurance written to me, conveying satisfaction with the manner in which the ship's staff carried out their duties whilst under his administration, was very gratifying. His successor, the Hon. J. A. Hogue, has on several occasions favoured the ship with a visit, as also has the Under Secretary and the Chief Inspector, also the principal officers of the Public Instruction Department. From all I receive most valuable encouragement and assistance. My greatly-respected predecessor and former colleague, Captain Neitenstein, again claims recognition as an active sympathiser and supporter of the ship's work, who frequently spares time to bring representative visitors to inspect the establishment. He has surrendered none of his former interest in the inmates, whom he continues to frequently assist in many ways.

23. A few extracts taken from the Visitors' Book, as entered by leading authorities whose opinions command weight, will point to the popularity of the Institution, and tend to dispel any false impressions as to over-exacting or unduly severe procedure being applicable to the system of accomplishing reformation.

Lord Jersey, writing from Middleton Park, Bicester:—"It is always a pleasure to know that a good work continues its useful career, and your report on the year's work of the 'Sobraon' shows that the advantages which it confers on the State increase. It is not necessary to have startling disclosures; on the contrary, the steady, even flow is a good proof that matters are going on satisfactorily."

The Right Reverend the Primate, after a recent visit, writes as follows:—"The good order, the admirable discipline, the cheerful vigour of the boys were good to see; the drill and physical exercises were excellently performed; the music was very creditable, both to bandmaster and to band-boys. I congratulate you also on the beautiful condition of the ship and its various departments. Wishing for you and your staff God's blessings upon your important work, and hoping that the 'Sobraon' may continue to confer, by the careful education and training given in it, great and permanent benefit to all the boys."

Public Service Commissioner, Mr. G. A. Wilson:—"Very good work is being done here."

Mr. R. McMillan, Editor, *Stock and Station Journal*:—"The most pathetic, suggestive day I ever put in."

Messrs. W. M. Hughes, W. A. Holman, T. A. Byrne, Alfred Edden, E. H. Dight, T. Waddell, Members of the Legislative Assembly of New South Wales:—"Deeply impressed, beyond mere words." "Am delighted with all I saw." "A credit to the Colony, and especially to the Captain and all concerned in the work of the ship." "A noble institution, and splendidly managed."

Dr. F. H. L. Zillmann, Ph.D.:—"Having had experience of Elmira Reformatory and Boys' Prisons, in New York, I am happy to say that I have never seen anything superior in all that goes to make up efficient discipline."

Mr. Piercy Ethell:—"Visited the 'Sobraon,' and was extremely interested with everything. The main feature which struck us was the perfect discipline on board and the absolute cleanliness everywhere."

Mr. Thomas Walker:—"As a visitor from the 'Old Country,' I have been very interested by what I have seen on the 'Sobraon.' The discipline, order, and general smartness of the boys is everything to be desired."

The Hon. C. A. Lee, M.P., Minister for Justice, accompanied by Captain F. W. Neitenstein, J.P., C.G.P.:—"I am so pleased with all I have seen on board to-day that I will convey my impressions by letter to Captain Mason, whose good work is self-evident." The Comptroller-General kindly adds: "I concur in the Minister's remarks."

The Right Hon. G. H. Reid, P.C., Premier of New South Wales:—"Always in good order; never in better form than now."

The Hon. W. Best, M.P., Minister for Lands, Victoria, accompanied by twenty Members of the Victorian Legislature:—"We are delighted with all we have seen; the Institution is a credit to the Mother Colony."

Rev. H. Benwell, R.N., with other gentlemen:—"With some experience of similar institutions, I think that the 'Sobraon' as nearly as possible approaches perfection. I cannot express my pleasure at my visit to the 'Sobraon.'"

Captain A. S. Mullock and Captain Reynolds:—"Discipline splendid; drill excellent; never saw better in any part of the world; altogether a splendid institution." "Splendid discipline; more perfect than I have seen in any other ship." Messrs.

Messrs. Rayment :—“ A grand work indeed is done here under the able superintendence of Captain Mason, which will have an undying influence for good, both on the boys and the Colony's future. The backbone of a nation.”

Mr. M. E. Jull, of West Australia, accompanied by Mr. C. Napier Bell, C.E., and others :—“ A splendid institution ; a standard of excellence ; the best thing of its kind in these colonies.”

Mr. L. W. Stanton, Chairman, Board of Inspectors of Schools, South Australia, accompanied by Mr. William N. Neale, Inspector :—“ Discipline excellent ; the whole establishment evidently a grand success. It is clear that work of the highest value is done. The discipline is of the very best ”

Colonel A. Hume, Inspector of Prisons, New Zealand :—“ I am extremely pleased with the discipline and organisation prevailing on the ship. The state of the ship reflects the greatest credit on Captain Mason and his officers, who are doing really good work for the Colony. I am delighted in having seen the ‘ Sobraon,’ and extremely obliged for the courtesy shown to me by those connected with this splendid institution.”

Mr. C. Delohery, S.M., accompanied by Mr. L. W. Marriland :—“ Found the ship in perfect order ; the boys cleanly, happy, and in the best of health. Captain Mason and the officers under him deserve the greatest of credit for the most efficient manner in which they perform their duties.”

The Hon. Edmund Barton, Q.C., M.P., Messrs. R. E. O'Connor and Bruce Smith, M's.L.C., Mr. Howard Willoughby, of Victoria :—“ Extremely interested ; order and discipline apparently perfect ; much impressed and pleased.”

Mr. W. M. Barker, Solicitor :—“ Extremely interested and impressed, and consider the benefit of the system cannot be over-estimated.”

Mr. W. F. Roydhouse, New Zealand :—“ Certainly the most interesting institution I have visited in New South Wales. The methods pursued cannot be other than reforming in the highest degree.”

Mr. E. L. Demestre :—“ Very much interested. A most valuable institution ; evidently perfectly managed.”

24. I am just in possession of intimation that Regulations have been adopted by the Liverpool Municipality for the protection of young children. Those over 11 years of age obtaining licenses will be allowed to sell articles in the streets up to 9 p.m. The guardians of other children hawking in the streets will be prosecuted. Similar legislation is much needed in New South Wales to remove a crying evil.

25. The year just closed shows no change in the constitution of the Staff. Mr. Williams, seaman, who served on board for some years, I am pleased to state, obtained promotion to a position under the Department dealing with explosives. All officers continue to display a conscientious, painstaking observance of their duties, and merit my acknowledgment of their loyal support.

26. In bringing to a close this review of the year's work, I would desire respectfully to convey my recognition of much-encouraging confidence reposed in me by the Ministerial head, the Under Secretary, and all Departmental officers, which has made my task pleasant, and its results productive of good to the community.

I have, &c.,

W. H. MASON,  
Commander and Superintendent.

## SCHOOLMASTER'S Report.

Sir,

I have the honor to report that the number of new enrolments for the year ending 30th April was 159. These were classified as follows:—27 were placed in 3rd class, 40 in 2nd class, and 92 in 1st class; 25 boys were admitted of ages varying from 7 to 16, of whom some scarcely knew the alphabet, and the remainder could not read Primer I satisfactorily; 35 others could only read Primer II in an indifferent manner.

Each class has been worked in two or three sections throughout the year. 157 boys left during the same period, of whom 60 had been in 3rd class, and 57 others in 2nd class.

The annual school inspection took place in January of this year, and the results showed a general improvement on last year's work. This improvement was most marked in reading and writing, all classes gaining a higher percentage of marks in those subjects.

The conduct of the boys whilst under instruction has been in every respect thoroughly satisfactory, the boys obeying orders promptly and willingly, and the greater number taking a genuine interest in their work.

The numerous privileges extended by the Regulations of the ship to well-conducted boys have proved of great help in the work of the school, by encouraging the better-disposed lads to greater efforts.

I have, &amp;c.,

ALEX. THOMPSON,

The Commander and Superintendent, Nautical School-ship "Sobraon."

Schoolmaster.

DIETARY Arrangements.

Ration authorised to be issued to boys on board the Nautical School-ship "Sobraon" :—

20 oz. bread .....	} ½ ration	1 pint milk.
2 oz. sugar .....		1½ oz. soap (best yellow).
1½ oz. jam or butter, at Superintendent's option .....		12 oz. fresh beef, or 16 oz. mutton.
½ oz. tea .....		16 oz. potatoes.
½ oz. salt .....		6 oz. vegetables for soup.

With extras, as authorised.

Alternative Ration authorised to be issued to boys on board the Nautical School-ship "Sobraon" :—

20 oz. bread .....	} ½ ration	1 pint milk.
2 oz. sugar .....		1½ oz. soap (best yellow).
1½ oz. jam or butter, at Superintendent's option .....		24 oz. fresh fish.
½ oz. tea .....		16 oz. potatoes.
½ oz. salt .....		6 oz. vegetables for soup.

With extras, as authorised.

Ration authorised for boys on "Sobraon" (weekly ration) :—

2 lb. flour .....	} ½ ration	1 lb. fresh fruit or canned fruit, at Superintendent's option.
½ lb. raisins .....		
1 oz. suet .....		

Breakfast—Tea, bread and butter, or jam.

Tea—Tea, bread and butter, or jam.

Dinner.

## Dinner.

	First Division	Second Division	Third Division.
Monday, Thursday ..	Soup, roast meat, boiled potatoes.	Stew, potatoes, and vegetables, pudding.	Sea-pie, potatoes, and vegetables.
Tuesday, Friday ..	Stew, potatoes, and vegetables, pudding.	Sea-pie, potatoes, and vegetables.	Soup, roast meat, boiled potatoes.
Wednesday, Saturday	Sea pie, potatoes, and vegetables.	Soup, roast meat, boiled potatoes.	Stew, potatoes, and vegetables; pudding.
Sunday . . . . .	Roast fresh meat, boiled salt meat, vegetables, potatoes, cake or pudding, fruit.		

Each boy has 1 pint of milk with his dinner daily; and occasionally on Fridays fresh fish is substituted for meat. During the four winter months milk is provided with oat or maize meal for breakfast, in addition to bread and butter; and, for the same period, pea-soup is added to the usual scale for dinner three times weekly.

## (N.)

## WORK AND DRILL ROUTINE.

*Morning.*

Monday	9 to 10	General drill.
	10·10 to 11·45	1 division, work.
	10 10 to 11	2 divisions, rifle drill.
	11 to 11·45	1 division, compass, lead and log line, numbers of flags.
		1 division, rule of the road, names of spars, ropes, parts of boat and sails, launch for steering and steam instruction.
Tuesday	9 to 11·45	1 division, work.
	9 to 10	2 divisions, squad drill.
	10·10 to 11	Boat drill, two divisions pulling.
	11 to 11·45	Making sail, step and unstep masts, salutes, keeping close to ship; when weather permits, sails to be loosed in afternoon.
Wednesday	9 to 10	General drill.
	10·10 to 11·45	1 division, work.
	10·10 to 11	1 division, cutlas drill; 1 division, man boats, shove off, come alongside properly, toss oars, &c.
	11 to 11·50	2 divisions, gymnastics and dumb-bell exercise.
Thursday	9 to 10	3 divisions, boat exercise and flag instruction.
	10·10 to 11·45	1 division, work.
	10·10 to 11·45	2 divisions, land at Cockatoo for drill in marching, wheeling, &c., without arms. (Occasional long pull in winter.)
Friday	9 to 10	General drill.
	10·10 to 11·45	1 division, work.
	10 10 to 11	Balance step, extension motions, saluting, squad drill.
	11 to 11·45	Seamanship and launch instruction as on Monday. (Occasional long pull in winter.)
Saturday	Until 11·45	Cleaning ship, arms, &c.
	9 to 9·15	Lieutenant's inspection.
	9·15 to 10·15	Commander inspects all boys, decks, grounds.
	10·30	Land for church, or service aboard.

## NOTES.

Boys at drill to stand easy 1 minute in every 10.  
 Watch boys to be selected weekly from 5 and 6 classes, one division in each watch in turn.  
 Cricket club practice on Island, on Friday, from 3 to 4·40.  
 Athletic club practice on Island, on Monday or Thursday, from 3 to 4·40. Recall to be hoisted 5 minutes each.  
 When painting or special work is in operation this time-table to be suspended.

*Afternoon.*

Monday	.. .. .	Mending clothes, which are to be thoroughly overhauled by Divisional Officers. Boys are not to loiter after repairing clothes, but to be at once sent up on deck. Disengaged boys to barge and sailing instructions.
	1 to 2	Barge to be cleaned.
	2·15	Change watches.
	3 to 3 45	Beginners to swim.
Tuesday	1 to 2	3 divisions, swimming, or physical drill with arms.
	2 to 2·45	1 division, clean all boats.
		2 divisions, gymnastics and dumb-bells.
	2 45 to 3 45	Religious instruction. Boatswain to overhaul any of his gear. Seamen to overhaul their boats, cushions, fenders, oars, &c. Any Officer absent from his boat should arrange with another seaman to do his work.
Wednesday	1 to 2	General singing instruction.
	2 to 3	Special drill party and cleaning arms
	3 to 3 45	3 divisions, swimming or physical drill with arms.
Thursday	1 to 3	1 division, work, including cleaning arms.
	1 to 2	2 divisions, physical drill with arms, bayonet exercise, aiming drill, &c.
	2 to 3	Boat exercise, wheeling, line abreast, line astern, learning to come alongside, shove-off (proper words of command to be given).
	3 to 3·45	Swimming, or balance step, extension motions, saluting
Friday	1 to 3	1 division, work, coaling ship, cleaning dormitory and swimming bath.
	1 to 2	Special club party; † remainder, seamanship, launch instruction.
	2 to 3	Boat exercise.
	3 to 3 45	Swimming exercise, or physical drill with arms.
Saturday	.....	Recreation—Cricket, athletics, harbour excursions, visits ashore for deserving boys.
	1·15	Dinner and recreation.
	2·30	Sunday school.
	4	Muster.

## NOTES.

Inspection at 8 45 a.m. Divisions and prayers at 9 a.m.  
 Recreation (10 minutes) at 10 a.m., when all boys go over lower masthead. Commander's Court of Inquiry at 12 50.  
 Muster at 1 p.m. Muster, dismiss school, work and drill parties at 3 50 p.m.  
 \* When religious instructors do not attend, boys not required by seamen in boats to be busily employed at either drill or work.

† At 2 p.m. all the special drill party to be marched into school.

## THE ANNUAL REPORT

OF

## THE POSTMASTER-GENERAL,

FOR THE YEAR

1898.

---

---

*Printed under No. 2 Report from Printing Committee, 10 August, 1899.*

---

---

SYDNEY: WILLIAM APPLIGATE GULLICK, GOVERNMENT PRINTER.

1899.

48—

[2s. 3d.]

[935 copies—Approximate Cost of Printing S.L. (labour and material), £89 13s. 4d.]

The following are the items of expenditure paid from Votes under the control of other Ministers which have not been taken into consideration in the above financial analysis:—

	1897.	1898.
Stores and stationery ... ..	£4,178 2 8	£4,162 8 1
Repairs and alterations to buildings ... ..	4,062 0 10	2,868 0 9
Furniture (including carriage)... ..	196 10 11	78 12 5
Printing, bookbinding, <i>Gazette</i> advertisements, <i>Gazettes</i> , &c..	7,192 9 8	7,064 6 5
Printing postage stamps ... ..	4,197 19 5	4,655 17 4
Do postal notes ... ..	541 7 0	578 19 5
Municipal and other rates ... ..	2,476 16 5	2,544 10 10
Postage ... ..	900 0 0*	960 0 0*
Advertising in newspapers ... ..	272 2 9	283 4 3
Fuel and light ... ..	1,784 18 1	1,923 12 7
Total ... ..	£25,802 7 9	£25,119 12 1

\* Estimated.

The interest on the cost of construction of Electric Telegraph and Telephone Lines and Tunnels is estimated at £39,577, and the interest on the cost of buildings owned by the Government, and used as Post and Telegraph Offices in various parts of the Colony, is estimated at £34,685.

Adding the expenditure on account of the services of the Postmaster-General from the Votes of other Departments, and the interest on the cost of buildings and construction of telegraph lines, the expenditure properly chargeable to the Department under my control for the year 1898 was £947,066 8s. 2d., or £27,019 9s. 1d. in excess of the revenue for the same period.

As explained in the report of my predecessor, for 1897, the Post Office performs a number of services for the public and for other Government Departments, for which no monetary credit is taken in the foregoing statement. These services include the conveyance by post of petitions to the Governor, the Executive Council, and Members of either House of Parliament; newspapers under seven days old; returns under the "Land and Income Tax Assessment Act of 1895," letters and packets for the purpose of carrying out the provisions of the "Census and Industrial Returns Act," and returns of births, deaths, and marriages, all of which are by law exempt from postage; also all mail matter on Her Majesty's Service, the postage properly chargeable on which is thought to be not fully covered by the annual vote of £32,000 for this purpose; the supply of shipping and weather intelligence by telegraph; the performance by Postmasters and other officers in various districts of the Colony of the duties of Electoral Registrar, Deputy Electoral Registrar, Registrar of births, deaths, and marriages, Meteorological Observer, &c.; and the maintenance of the electric light at Parliament House, Circular Quay, Cowper's Wharf, and the Jenolan Caves.

It is impossible to accurately appraise the value of these services, but it will be understood from the nature of them that they entail a considerable amount of expenditure on the Department, probably not less in the aggregate than £50,000 per annum.

#### INTERCOLONIAL POSTAL AND TELEGRAPH CONFERENCE.

A Conference was held in Hobart in March–April, 1898, at which the Colonies were represented as follows:—

New South Wales—By the Hon. Joseph Cook, M.P., Postmaster-General.

Victoria—By the Hon. John Gavan Duffy, M.L.A., Postmaster-General.

South Australia—By the Hon. J. G. Jenkins, M.P., Commissioner for Public Works.

Queensland—By the Hon. James R. Dickson, C.M.G., M.L.A., Home Secretary and Postmaster-General.

Tasmania—By the Hon. Sir Philip Fysh, K.C.M.G., M.H.A., Treasurer and Postmaster-General.

New Zealand and Western Australia were not represented at the Conference.

A full report of the proceedings of the Conference has already been laid before Parliament. The principal resolutions contained in this Report are the following :—

RELATING TO POSTAL SERVICE.

1. That in the opinion of this Conference it would be inadvisable to make any further reduction of the over-sea postage rate until the way is clear for a reduction in the present large subsidies paid for the carriage of such mails, and the present inland and intercolonial rates.

2. That this Conference is of opinion that the word "specimen" be placed across all stamps issued to collectors. That all Postage Stamps issued to the Berne Postal Bureau or between Post Offices shall bear an obliteration with the date-stamp.

3. That an inset or a hand-bill should not be regarded as coming within the definition of a Newspaper Supplement under the Post Office Acts.

4. That representations be made from this Conference to the Post Office authorities at Queensland, pointing out that the high rates charged on newspapers coming from other Colonies is an unjustifiable restriction on the Australian press.

5. That this Conference hereby records its appreciation of the zealous and able manner in which the Hon. J. Gavan Duffy, Postmaster-General of Victoria, discharged the duty of representing Australasia at the Washington Postal Convention.

6. That this Conference recommend to the Governments of Australasia the ratification of the Treaty entered into at Washington at the last Universal Postal Congress.

7. That this Conference recommends to the Governments of Australasia that no alteration in International Postal Rates be made without the Colony proposing to make such alterations advising the other Colonies and endeavouring to arrange for uniformity of action.

8. That the various Agents-General, Delegates to the Postal Conference in London, be instructed to oppose the proposal to reduce the rate of postage to all parts of the British Empire from 2½d. per ½ oz. to 2d., and also the Canadian proposal to reduce her outgoing rate from 5 cents per ½ oz. to 3 cents per oz., for the following reasons :—

- (1.) The present rate is not an unreasonably high one, having in view the large cost to the Colonies involved in the maintenance of the present means of postal communication with the various portions of the Empire.
- (2.) Because of the anomaly which would be created by carrying letters 14,000 miles for the same rate as now charged for delivery within the limits of the town where posted.

Regarding the proposal of Canada to reduce her outgoing postage, this Conference is strongly of opinion that no reduction should take place which would be a departure from the present uniform rate, for the following reason, *inter alia*, at present a charge of 2d. per ½ oz. is made in Australia for the carriage of letters to however small a distance, while the Canadian proposal would involve the carrying of letters over the same routes at a greatly reduced cost. This would, in the opinion of the Conference, lead to confusion and dissatisfaction.

TELEGRAPHIC.

9. That this Conference recommends to the Governments of Australasia that no alteration in International Telegraphic Rates be made without the Colony proposing to make such alterations advising the other Colonies, and endeavouring to arrange for uniformity of action.

10. That this Conference regrets that, owing to the financial loss involved, the question of a general reduction in the prices of Intercolonial Telegrams must stand over for the present, and make no suggestion on the question of the limitation of addresses; but it is suggested that the Governments of New South Wales and Queensland arrange between themselves as to rates and limitations of words in addresses.

The following proposal by the Representative of Queensland, which was not agreed to, was ordered to be recorded :—"That any re-arrangement of charges should be on the basis of either charging for every word, whether in addresses or text, such being the international principle, or of allowing the address and signature to the number of twelve words to be sent free."

11. That, in the opinion of this Conference, telegraphic employees should be absolutely prevented from speculating in shares.

12. That, in the absence of any satisfactory proposal from the Eastern Extension Telegraph Company, and of any proposal at all, except on the basis of an alternative cable *via* Africa, this Conference is unable to make any fresh arrangement with that Company.

13. That this Conference re-affirms the opinion that in the interests of Australasia the Pacific Cable project should be consummated as speedily as practicable, and that the Governments of the various Australasian Colonies be requested to represent to the Imperial and Dominion Governments the foregoing opinion, together with the proposal of the Premiers as agreed to at their recent Conference held in Melbourne, viz. :—That if Great Britain and Canada would each contribute one-third of the cost, the Colonies would be prepared to contribute the remaining one-third.

14. That the question in reference to the Overland Telegraph Lines between South Australia and Queensland be referred to the Governments of those Colonies.

15. That this Conference has heard with satisfaction from the representative of South Australia of the intention of the Government to take immediate steps for the improvement of the Overland Telegraph Line, and urges him to impress upon his Government to lose no time in effecting the improvements suggested, and hopes the Western Australian Government will take similar steps with regard to their overland line.

## INLAND SERVICE.

The new postal routes opened during the year 1898, as shown in the annexed return, amounted to 1,165 miles, viz. :—

Postal Line.	No. of times per week.	Postal Line.	No. of times per week.
<i>In the Western Country.</i>		<i>In the Southern Country—continued.</i>	
From Booroondarra Tank to Innesowen.....	1	From Hay to Thelangerin .....	1
Cobar to Nymagee (re-established) .....	1	Kiandra to Scott's Gully .....	1
Condobolin Railway Station to Post-office ...	3 or 6	McKinnon's Corner to North Gogelderie ...	2
Coolabah to Coolabah Experimental Farm....	2	Margules to H. F. Hall's .....	1
Forbes to Mount Eurow .....	1	Mossgiel to Gunerambly Tank .....	1
Geurie to Windorah .....	2	Narrawa to Sligar's.....	2
Narramine to Waterloo .....	2	Nowra to Bengelala .....	6
Springside to Spring Terrace.....	2	Queanbeyan to Burra .....	2
Tomingley to Peak Hill.....	2	Reno to Mount Kimo .....	6
Trangie to Nevertire .....	2	West Wyalong to Hiawatha.....	2
Vermont Hill to Bobadah .....	2	Windellama to Rosevale .....	2
Walkden's Bore to Pera Bore .....	1	Yarrangobilly to Yarrangobilly Caves ...	1
Warren Railway Station to Post-office ...	Twice or oftener daily.	Yass-Queanbeyan mail line to Majura .....	3
<i>In the Southern Country.</i>		<i>In the Northern Country.</i>	
From Bancannia Lake to Yandarlo .....	1	From Belford to Lower Belford .....	3
Barmedman to Goodwin's .....	1	Belle Vue to Rosebrook .....	3
Berrigan to Wangamong .....	2	Booral to The Branch.....	2
Blowering to Yarrangobilly .....	1	Bulyeroi to Burrilda Station.....	2
Boloko to Panpong .....	2	Cambo Cambo to Burrenbar .....	2
Braidwood-Tarago mail line to Larbert .....	3	Collins's Letterbox to Mourabie .....	1
Breadalbane to Pomeroy .....	2	Glen Innes-Inverell mail line to Beaufort ...	6
Bungonia to Inverary .....	2	Inverell to Boggy Camp.....	3
Cathcart to H. McDonald's .....	1	Kerramingley to Tycannah .....	2
Collingullie to Bardwell's .....	3	Mungindie to Goondabluie .....	1
Delegate to Kirkenong .....	2	Murwillumbah to Crystal Creek .....	3
Eastbourne to Bogong .....	1	Nana Glen to Mole Creek .....	2
Glynnwood to Yaouk .....	1	Pennant Hills to West Pennant Hills.....	6
Gundagai to Reno .....	6	Singleton to Whittingham.....	6
Gunning to Collector .....	2	W. Spencer's to Mitchell's .....	1
		Yarramalong to Brush Creek .....	3
		Yarrowitch to Kangaroo Flat .....	1

The postal routes abolished, amounting to 648 miles, are shown in the following return :—

Postal Line.	No. of times per week.	Postal Line.	No. of times per week.
<i>Western Roads.</i>		<i>Southern Roads—continued.</i>	
Between Barnato and Innesowen .....	1	Between Queanbeyan and Williamsdale .....	2
Bedgerebong and Condobolin .....	3	Rosedale and Yaouk.....	1
Fifield and Carlisle .....	2	Tooma and Toolong .....	1
Manildra and Meranburn .....	2	Tullah and Noorong .....	1
Nevertire and Warren .....	12		
Rockley and Charlton .....	1	<i>Northern Roads.</i>	
Roto and Mount Hope .....	1	Between Aberglasslyn and Rosebrook .....	3
Vermont Hill and Conley's .....	1	Bowraville and Missabotti .....	1
Warren and Bowen Park .....	2	Brooklyn, Steamer's Wharf, and Post Office .....	6
Wimbledon and Fitzgerald's Valley .....	2	Brunswick and Billinudgel .....	6
<i>Southern Roads.</i>		Cuttabri and Baradine .....	1
Between Barellan and North Gogelderie.....	2	Macksville and Nambucca Heads .....	3
Barmedman and Wallandry .....	1	Moonbi Railway Station and Moor Creek Reservoir.....	3
Berrigan and Finley .....	1	Murwillumbah and Willowgrove .....	3
Braidwood and Larbert .....	2	Tamworth and Moor Creek.....	2
Craigie and Mila .....	3	Thornleigh Railway Station and Post Office, Pennant Hills.....	6
Golspie and Leighwood .....	2		
Howlong and Corowa .....	2	<i>Suburban Roads.</i>	
Jerilderie and Wangamong .....	2	Between Hurstville and Mortdale .....	6
Mahonga and Urangeline .....	1	Ryde and North Sydney .....	6
Marsden's-Waroo mail line and Bena .....	1		
Michelago and Burra .....	1		
Nelligen and Brimbramalla .....	1		

Increased communication on existing lines was afforded as follows :—

Postal Line.	No. of times per week.		Postal Line.	No. of times per week.	
	From	To		From	To
<i>Western Roads.</i>			<i>Southern Roads—continued.</i>		
Between Blayney and King's Plains .....	3	4	Between Milton and Bateman's Bay .....	1	3
Blayney and Vittoria .....	2	3	Moonbah and Ingebyra .....	1	2
Bogan Gate and Dandaloo .....	2	3	Moss Vale, Railway Station, and Post Office .....	22	31
Condobolin and McDonald's .....	1	2	Mumbledool and Mr. Charles Ridout's selection .....	1	2
Eauabalong and Mount Hope .....	1	2	Murrumburrah and Garangula .....	2	3
Forbes Railway Station and Post Office .....	6	9	Tilba Tilba and Mount Dromedary .....	2	3
Judd's Creek and Mount David .....	3	6	Tocumwal and Finley .....	3	6
Manildra Railway Station and Post Office .....	4	6	<i>Northern Roads.</i>		
Oberon and Jenolan Caves .....	3	6	Between Armidale and Rockvale .....	1	2
Parramatta Railway Station and Post Office .....	60	72	Attunga and Attunga Springs .....	2	3
Rockley and Burruga .....	3	6	Bulyeroi and Mogil Mogil .....	1	2
Warren and Cannonbar .....	1	2	Collarenebri and Moongulla .....	1	2
Wellington and Wuuluman .....	1	2	Glen Innes and Grafton .....	4	6
Wilcannia and White Cliffs .....	2	3	Llangothlin and Tubbamurra .....	1	2
Woodlands Station and Lansdale .....	2	3	Lostock and Upper Lostock .....	3	6
<i>Southern Roads.</i>			Rock Vale and Oban .....	1	2
Between Coolamon and Upper Currawarna .....	2	3	Wilson's Downfall and Acacia Creek .....	1	2
Eden and Kiah .....	1	2	Wilson's Downfall and Rivertree .....	1	2
Michelago and Burra .....	1	2			

The communication existing on the following lines was decreased :—

Postal Line.	No. of times per week.	
	From	To
<i>Western Roads.</i>		
Between Blayney and Brown's Creek .....	6	3
Nymagee and Mount Hope .....	2	1
<i>Southern Roads.</i>		
Between Clare and Manfred .....	2	1
Helensburgh and Darke's Forest .....	2	1
Ivanhoe and Clare .....	2	1
Murrumburrah and Marshall McMahon Reef .....	6	3
Taralga and Bannaby .....	6	3

The extent of postal route traversed in the Colony up to the 31st December, 1898, was 34,961 miles, as compared with 34,444 miles traversed in 1897—

	1897.	1898.
On horseback ... ..	10,393 miles	10,103 miles.
By coach ... ..	20,472 "	21,214 "
By railway ... ..	2,687 "	2,752 "
By tramway ... ..	68 "	68 "
By steamer ... ..	824 "	824 "

The extension of mail route by railway during 1898 was as follows :—

Nevertire to Warren ... ..	12 miles.
Bogan Gate to Condobolin .....	39 "
Berrigan to Finley ... ..	14 "
Total ... ..	65 miles.

The number of miles travelled in the year 1898 was 11,003,500, being an increase of 670,000 on the mileage of the previous year.

The number of Post Offices established was 53, viz. :—Abington, Bendick Murrell, Beryl, Blanket Flat, Boggy Camp, Boorooma, Brobenah, Bulyeroi, Burren, Canimbla, Comborah, Condong, Crow's Nest, Dark Corner, Eastbourne, Garah, Greenwich Park, Hazlebrook, Hill Plain, Isabella, Kensington, Kirkdale, Kirkenong, Lady Robinson's Beach, Lower Forest, Little Coogee, Marsfield, Mewburn, Millwood, Moongulla, Moorebank, Morisset, Mount Kimo, Narrabeen, New Mollyan, Pennant Hills Railway, Pera Bore, Pleasant Valley, Porter's Retreat, Reno, Sawyer's Gully, South Clifton, South Mount Hope, Spring Ridge, Spring Terrace, The Dairy, Tinda Tank, Tomanbil, Upper Meroo, Williamsdale, Wuuluman, Yarrabundi, and Yarranbah.

The Post Office at Sebastopol was re-established.

The

The number of Post Offices discontinued was 12, viz.:—Boona Tank, Brunswick, Bullenbong, Castlerag, Colo Creek, Day Dream, Fitzgerald's Valley, Keepit, Moor Creek Reservoir, Round Hill, The Albert, and Yandarlo.

It was found desirable to change the designations of the following Post Offices, viz.:—Ferrier's to Lockhart, Galley Swamp to Gallymont, Grong Grong Railway Station to Grong Grong, Pennant Hills to West Pennant Hills, Pennant Hills Railway to Pennant Hills, and The Dairy to Holroyd.

Appendix A.

In the Appendix will be found a list of the 1,578 Post Offices in the Colony on the 31st December, 1898. In addition to these, there are 3 Travelling Post Offices, which run between Sydney and the northern border of the Colony at Jennings, between Sydney and Albury on the southern border, and between Sydney and Dubbo in the West.

201 changes of Postmasters occurred during the year.

Receiving Offices were established at the following places:—Ashley, Avondale, Balladoran, Bamarang, Barrieton, Baw Baw, Bengelala, Bijiji, Booroondarra Tank, Booth's Reward, Broula, Brush Creek, Bullenbong, Coghill's Flat, Colo Creek, Combaning, Condong, Coolatai, Coonong Siding, Crystal Creek, Eucumbene, Gilmandyke, Goondabluie, Grey Mares, Gurley Siding, Hallsville, Hiawatha, Ilford Railway Station, Inverary, Kelly's Creek, Knockrow, Lilyvale, Limbri, Lower Lewis Ponds, Majura, Meadow's Hotel, Melrose, Meerschaum Vale, Mole Creek, Mungeribar, New Meragle, Ogunbil, Paddy's Flat, Panpong, Parragundy, Phillips' Corner, Pomeroy, Rosevale, Rowe's, Scott's Gully, Talbingo, Taylor's Flat, The Branch, Tibbereenah, Upper Bago, Windorah, Woodenbong, Woodford Dale, Woolabra, Yerra Yerra.

Receiving Offices were re-established at Cooney Creek, Dinoga, Duck Flat, Five Islands, Lochiel, Lower Belford, and Woodford.

The names of the following Receiving Offices were changed, viz.:—Eucumbene to Marshall's Plain, Ironbong to Ferndale, and Kelly's Creek to Bimbimbie.

The Receiving Offices at the following places were converted into Post Offices, viz.:—Abington, Bendick Murrell, Blanket Flat, Boggy Camp, Boorooma, Canimbla, Comborah, Condong, Eastbourne, Hazlebrook, Hill Plain, Greenwich Park, Isabella, Kirkdale, Lower Forest, Mewburn, Millwood, Moongulla, Moorebank, Morisset, Narrabeen, New Mollyan, Pera Bore, Pleasant Valley, Porter's Retreat, Sawyer's Gully, South Clifton, South Mount Hope, Spring Ridge, Tinda Tank, Tomanbil, Upper Meroo, Williamsdale, and Wuuluman.

The Receiving Offices at the following places were discontinued, viz.:—Blair Hill, Booth's Reward, Brimbramalla, Carlisle, Cell's Field, Coghill's Flat, Curracabark, Dinoga, Duck Flat, Eulalie, Five Islands, Hollymount, Langwell, Lower Belford, Missabotti, Mount Wayo, Nana Creek, Noorong, Tarrabandra, The Risk, Ward's River, Willowgrove, and Woodford.

Appendix B.

In the Appendix will be found a list of the Receiving Offices in existence at the close of the year—520 in number.

Appendix A.

Appendix A contains a return of the Government Buildings for the transaction of the Postal, Money Order, Savings Bank, and Telegraph business, and particulars of the premises rented or otherwise provided for the purpose. Government Buildings at the following places were completed and occupied during the year 1898, viz.:—Alexandria, Arncliffe, Captain's Flat, Carrington, Collarenebri, Drummoyne, Howlong, Ivanhoe, Lismore, Major's Creek, Mossgiel, Murwillumbah, Randwick, South Broken Hill, Trangie, and Wattle Flat.

Sites for Post and Telegraph Offices were secured at Bodalla, Burruga, Captain's Flat, Clifton, Currecki, Dulwich Hill, Forster, Hornsby Junction, Lockhart, Narrandera, Stockton, Summer Hill, Taree, and Tocumwal.

During the year 1898, 4 pillar letter-receivers were removed to different sites, and 1 was withdrawn; 59 small iron letter-receivers were placed, 4 removed to different sites, and 8 withdrawn.

On the 31st December the number of letter-receivers erected in the Colony (both large and small) was 1,329, and the number of newspaper-receivers, 28.

The number of licenses for the sale of postage stamps issued in 1898 to persons other than postmasters or receiving-office-keepers was 113, the number transferred, 61, and the number cancelled, 19.

A new letter-box, designed by an officer of the Department (Mr. D. M. Whyte), was brought into use during the year. The box, which can be attached to lamp

lamp or telegraph posts, is larger than the one previously in use, having a capacity for 400 letters. By an ingenious arrangement, immediately the key is turned in the door of the box the letters drop into a bag previously hung beneath it. A dial, which is fixed on the face of the box, may be altered to show the time of the next clearance, and the door is shut on a spring lock. Already 50 of these boxes have been brought into use, the invention proving very satisfactory.

On the 31st December, 1898, the number of locked private letter-boxes let at the General Post Office was 1,260. In addition to these 68 were allotted to Public Departments. The system is now in operation at the following offices, viz.:—Adelong, Albury, Armidale, Ashfield, Ballina, Balmain, Balranald, Bathurst, Bega, Berrigan, Bingara, Bombala, Bourke, Bowral, Braidwood, Broken Hill, Burwood, Casino, Cobar, Cendobolin, Cooma, Coonamble, Cootamundra, Coraki, Corowa, Cowra, Deniliquin, Dubbo, East Maitland, Emmaville, Forbes, George-street North, Glen Innes, Goulburn, Grafton, Granville, Grenfell, Gulgong, Gunnedah, Hay, Haymarket, Hillgrove, Hillston, Inverell, Jerilderie, Junee, Katoomba, Kempsey, Kiama, King-street, Lismore, Maclean, Manly, Marrickville, Moree, Moruya, Moss Vale, Mount Victoria, Mudgee, Murwillumbah, Muswellbrook, Narrabri, Narrandera, Newcastle, Newtown, North Sydney, Nymagee, Orange, Pambula, Parkes, Park-street, Parramatta, Queanbeyan, Quirindi, Rozelle, Scone, Silvertown, Singleton, Tamworth, Taree, Temora, Tenterfield, Uralla, Urana, Wagga Wagga, Walgett, Warialda, Warren, Wentworth, West Maitland, Wilcannia, Wollongong, West Wyalong, and Young.

Five private posting-boxes have been constructed on private premises for the use and at the expense of the occupants, under the system introduced in August, 1886. The fee charged for the clearance of these boxes varies from £3 to £5 per annum, according to the number of clearances effected daily.

The number of persons employed in connection with the Postal and Electric Telegraph Department for the year 1898 was as follows:—1 Postmaster-General, 1 Deputy Postmaster-General, 1 Secretary, 1 Chief Electrician and Engineer-in-Chief of Telegraphs, 1 Chief Accountant and Controller, Money Order Office and Government Savings Bank.

*Ministerial Division.*—1 inland mail clerk, 1 appointment clerk, 1 inspector for irregularity and missing and dead letter branch, 1 correspondence clerk, 1 record clerk, 40 clerks, 1 medical officer, 1 chief messenger, 7 indoor messengers, 2 detectives, 3 constables.

*Money Order and Government Savings Bank Division.*—1 accountant, 1 examiner, 1 teller, 76 clerks, 8 indoor messengers.

*Account and Cash Division.*—1 accountant, 1 distributor of stamps, 1 cashier, 20 clerks, 1 indoor messenger.

*Mail Division.*—1 chief inspector and superintendent, 1 senior inspector, 6 inspectors, 1 acting inspector and relieving officer, 53 clerks, 1 officer in charge of parcel post, 1 clerk in charge of stores, 1 shipping clerk, 1 assistant shipping clerk, 1 clerk and translator, 1 relieving officer, 1 Chinese interpreter, 17 mail guards, 1 overseer of sorters, 125 sorters, 12 stampers, 1 outdoor inquiry officer, 1 overseer of letter-carriers, 76 letter-carriers, 16 junior letter-carriers, 59 mail-boys, 17 assistants, parcel post branch, 4 storemen, 2 custodians of mails, 1 custodian of mail-bags, 1 assistant in bag-room, 2 bag turners, 1 bag-maker, 1 letter-carriers' timekeeper, 1 mechanic, 1 carpenter, 1 caretaker, 1 assistant caretaker, 1 officekeeper, 1 tower attendant, 6 cleaners, 15 female servants, 1 manager of stables, 1 farrier, 1 assistant farrier, 3 grooms in charge, 5 grooms, 1 foreman of mail-cart drivers, 12 mail-cart drivers, 3 lift attendants.

*Telegraph Division.*—1 station manager, 2 assistant station managers, 1 check clerk, 1 electrician, 1 assistant electrician, 3 testing officers, 1 receiving clerk, 35 clerks, 24 booking clerks, 2 cadets (electrician's branch), 175 operators, 5 junior operators, 1 supernumerary operator, 7 supernumerary assistants, 4 messengers' overseers, 11 monitors (despatch branch), 156 messengers, 1 mechanic, 5 fitters, 1 probationer (mechanical branch), 1 inspector of lines (city and suburbs), 1 assistant line repairer, 1 assistant (construction branch), 9 batterymen, 1 jointer.

*Telephone Branch.*—1 manager, 1 clerk, 1 mechanic, 31 fitters, 1 exchange foreman, 1 line foreman, 7 monitors, 1 matron, 96 switch attendants (44 male and 52 female), 2 junior assistants, 1 cleaner and messenger, 1 messenger.

*Electric Light Branch.*—1 chief engineer, 4 engineers, 12 assistant engineers.

*Branch,*

*Branch, Suburban, and Country Offices.*—1,578 postmasters (431 official, 1,147 non-official), 8 telegraph station masters, 114 postal assistants, 69 junior postal assistants, 8 supernumerary assistants, 64 temporary postal assistants, 244 operators, 54 junior operators, 56 supernumerary operators, 23 non-official station masters and telephone operators, 17 mail-guards, 2 assistant guards, 1 sorter, 170 letter-carriers, 199 junior letter-carriers, 49 mail-boys, 384 telegraph messengers, 97 switch attendants, 2 telephone fitters, 4 battery-men, 45 line-repairers, 4 construction overseers, 4 carpenters, 18 temporary line-repairers, 63 labourers, 2 boys, 1 mason, 520 receiving office keepers.

Total, Head Office ... ..	1,246
„ Branch, Suburban, and Country Offices ...	3,800
„ Number of Mail Contractors ... ..	853
„ „ Porters ... ..	106

These may be subdivided into—

Persons whose whole time is occupied in the service;	{	Principal officers ... ..	35
		Clerks ... ..	259
		Post and telegraph masters ... ..	439
		Assistants at Post Offices ... ..	233
		Operators ... ..	535
		Subordinate officials ... ..	1,822
			<hr/>
			3,323
and			
Persons whose time is only partially employed in the service.	{	Sub or non-official postmasters, telephone operators, and receiving office keepers ... ..	1,690
		Assistants to non-official postmasters and other subordinate officials ... ..	33
		Mail contractors and mail porters ... ..	959
			<hr/>
			2,682
		Total ... ..	6,005

The removals from the Service numbered twenty. Of these, two post and telegraph masters each received a sentence of nine months' imprisonment for embezzlement, and a junior postal assistant was sentenced to one year's imprisonment for a similar offence. A relieving officer was sentenced to two years' imprisonment for stealing Government money; and sentences of three years' and twelve months' imprisonment respectively were imposed on a letter-carrier and a telegraph messenger for stealing letters. For tampering with a letter a telegraph messenger was sentenced to imprisonment for six months, and another telegraph messenger was ordered to be confined in lock-up for twenty-four hours for stealing Government money. The remainder were dismissed for the following offences:—A post and telegraph master, a postal assistant, and a telegraph messenger for irregular treatment of letters; another postal assistant for misappropriating three Savings' Bank deposits; an operator for irregularities in Savings' Bank transactions; a junior letter-carrier for detaining and delaying the delivery of newspapers; a supernumerary operator for irregular performance of duty; a switch attendant and a telegraph messenger for stealing letters; a telegraph messenger for absence without leave; another for stealing money; and a third on account of unsuitableness for the service.

Eleven deaths occurred, namely:—J. T. McMahon, assistant superintendent, Mail Branch; W. P. Raper, post and telegraph master, Dubbo; H. G. Thornley, postal assistant, Newtown; S. H. Edwards, operator, Orange; E. E. Hadley, operator, Head Office; F. Zglinicki, operator, Camden; M. Tier, junior operator, Eden; T. J. Archer and J. Steele, letter-carriers; G. T. Carroll, line repairer; and M. Kelly, mail-cart driver.

Eighty-one resignations took place.

Nineteen officers were transferred to positions in other Government Departments.

Ten officers retired from the Service, namely:—J. R. Colls, post and telegraph master, Yass, who was allowed a pension under the Civil Service Act, 1884; J. R. Redstone, post and telegraph master, Dalmorton; D. M. Honniball, postal assistant, the Exchange; R. Philips, operator, Head Office; W. Wiburd, mail guard; T. Costello, letter-carrier; H. Bright, junior letter-carrier, Quirindi; T. H. Hanna, line-repairer, Dungog, and F. J. Reardon, indoor messenger, who were allowed gratuities under the Public Service Act of 1895; and H. J. Lee, post and telegraph master, Palmer's Island, who retired without gratuity, but was granted a refund of his contributions to the Superannuation Fund.

The

The Postal Inspectors in 1898 travelled a distance of 52,189 miles, and inspected the postal routes appertaining thereto, visiting 656 offices, 171 of which were visited more than once during the year.

In order to protect the revenue, it was found needful to adopt more stringent regulations than those previously in force in regard to the transmission of official correspondence through the post, and consequently it was provided that from 1st January, 1898, all official correspondence despatched from Public Departments should be allowed to pass through the post as duly prepaid, provided it be enclosed in printed official envelopes or covers bearing the endorsement "O.H.M.S.," with the name of the Department or Branch thereof, from which it emanates, in the lower left-hand corner, and also the endorsement,—“This envelope can only be lawfully used by Government Departments on the public business. The use of it by public officials to avoid payment of postage on private matter of any kind is punishable, and involves the letter being charged double postage. The public are cautioned against using it under any circumstances.” Printed papers, returns, &c., must bear printed labels similarly endorsed.

The transmission of postal notes, money orders, and cheques by post within and to places beyond the Colony, as packets, and their enclosure in packets, or parcels, was in June prohibited, intimation being given that such articles must be sent separately, at letter rate of postage.

The rate of postage on letters transmitted to and from post and receiving offices within the respective distances mentioned hereunder was reduced to 1d. per  $\frac{1}{2}$  oz., or fraction thereof, from the dates named.

Within a radius of 13 miles of Cobar, from 7th June.
„ 13 miles of Robertson, from 21st September.
„ 13 miles of Wellington, from 15th December.

The limit of weight of letters containing gold, posted in New South Wales, for delivery therein, was raised from 3 lb. to 6 lb. from the 1st May.

From the 1st July, the regulation relative to the transmission within the Colony, and to the other Australasian Colonies, of cards, travellers' cards, or circulars, was amended so as to allow of their bearing, in addition to the date and name of the traveller, the date of sending, and the date of intended visit of the traveller, also the time of departure of train or steamer, and name of latter by which goods are forwarded.

Arrangements were made for samples of glass, liquids, greases, and colouring powders for transmission to the United Kingdom, and articles of natural history, dried or preserved animals or plants, geological specimens, &c., for the United States, to be forwarded by sample post from the 1st July.

From the 15th July, private post-cards, single and reply, bearing adhesive stamps, were admitted to transmission within the Colony, and to the other Australasian Colonies and Fiji, at the rate of 1d. for a single card, and 2d. for a reply card, and from the 1st September, to other parts of the world, at the rate of 1 $\frac{1}{2}$ d. for a single card, and 3d. for a reply card, subject to the conditions applying to private post-cards, bearing impressed stamps.

From the 1st September it was decided to transmit at packet rate of postage within the Colony, and to Victoria, Queensland, South Australia, Tasmania, and Western Australia, proxy forms, or notices, in which may be inserted such particulars as date, signature, name of proxy, date of meeting, name of shareholder, or member, and number of votes, provided that nothing appear in writing or print which does not form part of the document as a legal instrument.

In October the limit of weight for packets containing printed matter or circulars, or other matter not printed in ordinary type, was increased from 16 oz. to 4 lb.

From the 15th October the rate of postage on magazines for transmission inland and to Victoria, was reduced to 1d. for the first 8 oz. or fraction thereof, and  $\frac{1}{2}$ d. for each additional 4 oz., or fraction thereof (up to 5 lb.), but subject, in the case of magazines for inland transmission only, to the usual rate of  $\frac{1}{2}$ d. for a printed paper not exceeding 2 oz.

Amended regulations have been introduced in connection with the transmission by post of Bankers' packets; the payment in cash of postage on bulk quantities of mail matter; the official registration of articles supposed to contain valuable enclosures; the treatment of unclaimed correspondence; certificates of posting; acknowledgment of delivery; Customs declaration and despatch note, in connection with postal parcels.

## FOREIGN SERVICE.

The new contracts with the Peninsular and Oriental and Orient Steam Navigation Companies, particulars of which are given in the report of my predecessor for the year 1897, commenced on the 1st February, 1898, and full details of the performances of the vessels employed in the service during the year 1898, will be found in a subsequent part of this Report.

There is a provision in the contract with the Peninsular and Oriental Company empowering the Company to carry mails "in one and the same mail ship, or by branch mail ship, over any part of the mail routes on any outward or homeward voyage," and in pursuance of this power mails are now conveyed by a fast branch steamer of moderate tonnage between Brindisi and Port Said, the mail packet steaming direct between Marseilles and Port Said and not calling at Brindisi. Under this plan the inward mails, which are due in Sydney on every alternate Wednesday, are often delivered in advance of contract time, thus enabling replies to be sent by the outgoing mail on Tuesday, and effecting a week's saving in the course of post.

The arrangement made with the New Zealand Government in 1892 for the conveyance of mails, once every four weeks, to and from Sydney and San Francisco, *via* Auckland, by contract packets of the Union Steamship Company of New Zealand, for the sum of £4,000 per annum, has been renewed from time to time, and is still in existence.

The contract with Mr. James Huddart, for the mail service between Sydney and Vancouver, expired on the 24th May, 1899, and an agreement (copy of which will be found in the Appendix) has recently been concluded with Messrs. Burns, Philp, & Co. (Limited), the terms and conditions of which are similar to those of the previous contract (with certain modifications introduced during its currency), except that the route is to be *via* Brisbane instead of *via* Wellington. The subsidy payable is £10,000 per annum, and the duration of the contract four years.

A contract has been entered into by the Government with Messrs. Burns, Philp, & Co. (Limited) for a steam service to Lord Howe and Norfolk Islands, New Hebrides, Banks Group, and Santa Cruz for a period of three and a half years, dating from 1st January, 1898. The contract provides for the conveyance of mails, passengers, and cargo six times a year to and from Sydney, Norfolk Island, New Hebrides, Banks Group, and Santa Cruz, calling on each alternate trip at Lord Howe Island; but the contractors have undertaken to allow their steamers to call at Lord Howe Island on every trip both going and coming. The subsidy payable to the contractors is £2,100 per annum, and the rates of freight and for passengers must not exceed certain specified amounts.

Particulars of the Mail Services performed *via* Suez, San Francisco, and Vancouver during the year 1898:—

------------------------	-----------

The subsidy paid for the year 1898 to the Orient and the Peninsular and Oriental Steam Navigation Companies for the conveyance of mails to and from the United Kingdom and Australia, *via* Suez, was £170,000. The contribution of the United Kingdom was £97,750.

The

The amount paid by each contributing colony, on the basis of population, was as follows:—

New South Wales	...	...	...	...	...	£25,976	1	8
Victoria	...	...	...	...	...	23,124	8	4
Queensland	...	...	...	...	...	9,507	13	4
South Australia	...	...	...	...	...	7,133	1	8
Tasmania	...	...	...	...	...	3,366	15	0
Western Australia	...	...	...	...	...	3,142	0	0
Total...	...	...	...	...	...	£72,250	0	0

The Colonial share of subsidy was reduced from £75,000 to £72,000 per annum, from the 1st February, 1898.

The following return shows the number of letters, packets, and newspapers despatched and received by the various ocean mail routes during the year 1898, as compared with similar information for the year 1897:—

Year.	Route.	Despatched.						Received.					
		Intercolonial.			International.			Intercolonial.			International.

Estimated postages collected in the Colony ... ..	1,720	0	0			
			<hr/>	2,734	3	0
Estimated net cost to the Colony ... ..				£7,345	9	9
The estimated net cost for 1897 was ... ..				<hr/> <hr/>	<hr/> <hr/>	<hr/> <hr/>
				£8,780	0	5

## PARCEL POST.

From the 1st June the parcel post was extended to the New Hebrides, Banks' Group, and Santa Cruz Islands, at the intercolonial rate of 8d. for the first lb., and 6d. for each additional lb. (up to 11 lb.)

An exchange of parcels has also been arranged with the following places :— Netherlands East India (through the intermediary of Queensland); Republic of Honduras, *via* Belize; Peru, *via* France and Germany (through the intermediary of the United Kingdom); Seychelles, *via* India; Formosa, *via* Hong Kong; and Russia, including Finland (through the United Kingdom).

In March, revised rates were introduced in connection with parcels for Cameroons, British East Africa, and Zanzibar. In June, a regulation was introduced, providing for intercolonial parcels sent out of course (*i.e.*, articles despatched from one Colony as packets, &c., but regarded in the Colony of destination as parcels) being charged double the amount of the deficient postage at parcel rate on delivery.

At the request of the Postal Administrations of India and Egypt, this Department has consented to act as intermediary for the transmission of parcels from those countries to the New Hebrides, Banks' Group, and Santa Cruz Islands, subject to the usual payments for sea conveyance from New South Wales.

The Inland and Intercolonial Parcel Post was established on 1st October, 1893, and during the three months ended 31st December, 1893, 38,025 Inland parcels, weighing 115,066 lb. were posted, upon which postage amounting to £2,038 was paid; 3,830 Intercolonial parcels, weighing 10,086 lb., with a declared value of £4,766 were also posted, the postage amounting to £309. The following table shows the growth of the Parcel Post for the five years ended 31st December, 1898 :—

\* The number of articles, other than newspapers, exempt from postage being comparatively small, a separate account has not been kept of them, and they are included with articles subject to postage.  
 † Including 44,400 Illustrated Post Cards issued in November, 1898.

NOTE.—The numbers of ordinary letters and packets, and newspapers, are calculated on the basis of returns furnished by Postmasters during two months of the year, and must therefore be accepted as approximate only. For all other items, the actual numbers dealt with during the year are given.

## DEAD LETTER BRANCH.

The following return shows the number of Letters, Post Cards, and Packets dealt with either by the return to writers, discovery of persons addressed, or otherwise, during the year 1898 :—

	Letters.	Post Cards.	Packets.
INLAND.			
Returned to senders.....	208,306	3,375	326,500
Destroyed, in accordance with section 32 of 31 Vic. No. 4.....	38,060	480	24,435
INTERCOLONIAL.			
Originally addressed to other colonies :—			
Returned to senders, or otherwise disposed of.....	17,648	230	19,850
Destroyed, in accordance with section 32 of 31 Vic. No. 4.....	4,496	38	2,566
Returned to other colonies as unclaimed.....	20,105	560	3,199
FOREIGN.			
Originally addressed to other countries :—			
Returned to senders, or otherwise disposed of.....	5,790	70	790
Destroyed, in accordance with section 32 of 31 Vic. No. 4.....	1,447	19	64
Returned to other countries as unclaimed.....	28,366	337	880
Total number dealt with.....	324,218	5,159	378,284

Included in the above return are 2,294 registered letters, which were posted originally within the Colony. A considerable number of these bore the names and addresses of the senders on the envelopes, and were therefore returned intact. The others were opened to obtain the required information. They were found to contain, besides correspondence and valuable articles of jewellery, such as watches, rings, &c., the sum of £925 15s. in coin, notes (bank and postal), cheques, money orders, and stamps. In 1,363 unregistered letters were found enclosures representing £4,337 3s. 9½d.

445 registered letters, originating in places beyond the Colony, were returned unopened, as follows :—196 to the other Australasian colonies, 101 to London, and 148 to other countries.

Packets, to the number of 713, containing merchandise, jewellery, &c., exclusive of those disposed of immediately after receipt, having been refused by addressees on account of surcharges, or posted out of course, or having become detached from their covers in transit, were received and detained pending inquiry. The major part of these were subsequently delivered. Articles of the kind alluded to are kept for a specified period, at the expiration of which, if not claimed, they are sold by public auction, in conformity with the Postage Act, the proceeds being paid into the Consolidated Revenue.

1,160 letters were posted unaddressed, 930 of which were returned to the writers. The remainder afforded no adequate indication as to the whereabouts of the senders. As an illustration of the negligence shown by some people, even in matters of importance, it may be mentioned that 29 of these letters covered valuable enclosures amounting to £101 0s. 3d.

On an average, 46 letters and packets, with insufficient directions, were passed on to the Dead Letter Office daily for treatment, the addresses of a large proportion being corrected, and the articles forwarded accordingly. The others were returned to the senders or were otherwise dealt with, as required by law.

Nearly 20,000 letters were refused by addressees, owing to surcharges. The largeness of this total is explained by the fact that no fewer than 14,671 of them were directed to the author of a chain-letter, the United Kingdom contributing by far the greatest share to this immense collection of rejected communications.

1,396 Chinese letters, imperfectly addressed, were despatched to their intended destinations through the assistance of the Chinese interpreter, by whose instrumentality 943 letters were returned as unclaimed.

A sum of nearly £250, contained in registered letters, which had remained unclaimed for the prescribed period, was paid, in accordance with law, to the credit of the Consolidated Revenue.

It is estimated that about 300,000 unclaimed newspapers were received during the year.

#### DELIVERY BY LETTER-CARRIERS.

The number of letters, &c., delivered by the Letter-carriers attached to the head office during the years 1897 and 1898 was as follows:—

	1897.	1898.
Unregistered letters ... ..	9,697,044	10,360,173
Registered letters ... ..	90,187	96,591
Books, &c. ... ..	233,449	246,457
Newspapers ... ..	1,393,555	1,496,144

#### REGISTRATION BRANCH.

The number of Registered Letters which passed through the General Post Office in 1898 was 821,930, against 772,056 in 1897, the increase in number being 49,874.

#### MAILS RECEIVED AND DESPATCHED.

The following return shows the number of Mails received at and despatched from the General Post Office during the years 1897 and 1898.

Year.	Received.		Despatched.		Total number of Mails which passed through the office.
	Inland.	Foreign.	Inland.	Foreign.	
1897 .....	240,770	10,481	208,226	12,600	472,077
1898 .....	249,513	10,535	213,104	12,744	485,896
Increase .....	8,743	54	4,878	144	13,819

#### RECORD BRANCH.

The number of written communications received from the public during 1898, intimating changes of address, or requesting letters, &c., to be forwarded, was about 25,000—the same as in 1897.

The number of communications addressed to the Department relating to the extension and improvement of the service, to irregularities connected with the performance of mail contracts, and to the transmission of letters, telegrams, &c., and recorded in the year 1898, was 51,713, against 47,838, in 1897.

POSTAGE STAMPS, STAMPED ENVELOPES, &c.

The following return shows the number, description, and value of Postage Stamps, &c., issued at the General Post Office during the years 1897 and 1898 :—

		£41	8	0

The colour of the sixpenny postage stamp, which it was thought too closely resembled that of the one-penny stamp, was, from 1st May, altered from rosine madder to viridine green.

A series of illustrated post-cards, of the value of 1d. each, for inland and intercolonial service, and 1½d. each for international service, representing some of the more remarkable features of the scenery and public buildings of the Colony, was issued in November, for sale to the public, at face value, singly or in sets. On the cards was printed the appropriate inscription, "With Christmas Greetings," or "With New Year's Greetings," and, as was anticipated, the public largely availed themselves of the opportunity thus afforded of sending them as souvenirs to their friends, not only in this and the adjoining colonies, but also throughout the world, the sales up to 31st December amounting to 117,040 cards of the value of £580 5s.

An amendment of the Regulations relative to impressing postage stamps on envelopes supplied by the public was made in October, so as to provide for the extension of the system to envelopes combined with sheets of note-paper, a charge of 2s. per 1,000 or portion thereof being made for the service.

## INLAND MAIL CONVEYANCE.

In the year 1898 the average cost per mile of the Inland Mail Conveyance was about  $3\frac{3}{5}$ d., against  $3\frac{1}{5}$ d., the price per mile paid during the previous year.

The number of contracts in existence on the 31st December, 1898, for the conveyance of inland mails was 986, and the number of mail services in respect of which no formal contracts were executed, 297.

## MONEY ORDERS.

Money Order Offices were established during the year 1898 at the following places, viz.:—Bellinger Heads, Bexhill, Bulyeroi, Cathcart, Coogee, Corrimal, Crow's Nest, Fairfield, Girilambone Mine, Hampton, Lockhart, Morundah, Quambone, Riley's Hill, Waroo, Woy Woy, and Yalgogrin North.

The offices at Colo Vale, Kookabookra, Moatefield, and Thackaringa were abolished, and the name of the office at Galley Swamp was changed to Gallymont.

The number of Money Order Offices in the Colony on 31st December, 1898, was 648.

The number of money orders issued was 407,161 (exclusive of 4,917 certificates of transfer amounting to £31,026 used by Postmasters in connection with transmitting fees for private letter-boxes, &c., &c.), and the value £1,371,727, against 393,299 of the value of £1,311,850, the difference showing an increase of 13,862 in the number, and £59,877 in the amount, as compared with 1897.

The number of money orders paid (exclusive of 4,917 certificates of transfer amounting to £31,026) was 410,772, and the value £1,432,373 against 403,779 of the value of £1,421,524 in 1897, being an increase of 6,993 in the number and £10,849 in the amount.

The amount of revenue received as commission on money orders issued was £15,110 5s., being £46 16s. 4d. more than the amount collected in 1897.

A comparative return showing the various countries where the money orders issued in New South Wales were made payable, and also the money order issues of other countries payable in New South Wales, will be found in the Appendix. Appendix D.

In the information contained in Appendix A will be found a detailed statement of the business transacted and revenue collected at each office in the Colony. Appendix A.

In December the charge for telegraph money orders to New Zealand was fixed at 3s. 6d. (in addition to the ordinary rate of commission) irrespective of the number of orders issued, provided the numbers be consecutive, and the orders be from the same remitter to the same payee, the remitter as usual being required to advise the payee by telegraph of the money being sent, paying for the message at the ordinary rate.

A convention (the text of which will be found in the Appendix) was concluded in May, 1898, between New South Wales and Fiji, providing for the exchange of money orders between the two colonies, the rate of commission being fixed at 6d. per £1, or fraction thereof. Each colony retains the commissions charged on all money orders issued within its jurisdiction, but pays to the other one-half of 1 per cent. on the amount of such orders. The service was brought into operation on the 1st July, 1898, and shortly afterwards, at the request of the Indian Postal Administration, this Colony undertook to act as intermediary for the exchange of money orders between India and Fiji, an extra charge of 6d. in the £1 being made for the accommodation. Appendix E.

## POSTAL NOTES.

During the year 1898, 1,158,010 postal notes, of the value of £424,422 17s. 2d. were supplied to Postmasters for sale to the public. Of these, 1,099,224 were issued and paid in New South Wales, having a value (with stamps affixed) of £396,224 3s. 7d.; 51,478 notes, value £20,834 8s. 1d., of other colonies were also paid; making a grand total of 1,150,702, of the value of £417,058 11s. 8d., paid in New South Wales.

The number of notes issued in this Colony and paid in other Colonies was 61,655, of the value of £23,888 7s. 2½d. (including postage stamps to the value of £212 2s. 2½d. affixed thereto).

The amount of revenue collected as poundage was £10,099 1s. 6d., an increase of £1,007 1s. 10d. as compared with 1897.

The following table contains particulars of the postal notes paid in New South Wales during the year 1898:—

Issuing Colony.	Denomination of Notes.														Total Number.	Value of Stamps affixed.			Total value of Notes and Stamps.		
	1/-	1/6	2/-	2/6	3/-	3/6	4/-	4/6	5/-	7/6	10/-	10/6	15/-	20/-		£	s.	d.	£	s.	d.

In July provision was made for the issue of duplicate postal notes in cases where the originals have been lost, subject to conditions to prevent abuse.

## GOVERNMENT SAVINGS BANK.

The following branches were opened during the year 1898, viz.:—Ben Lomond Railway Station, Bulgeroi, Carinda, Coogee, Corrimal, Gallymont, Girilambone Mine, Mullumbimby, Riley's Hill, Tintenbar, Waroo, and Yalgogrin North.

Four branches were closed, viz.:—Colo Vale, Kookabookra, Thackaringa, and Wyrallah.

During the year 47,970 new accounts were opened and 35,761 accounts were closed. The number of accounts remaining open at the close of the year was 163,552.

The number of deposits received was 359,751, and the amount £2,261,872 17s. 9d., being an increase of 27,096 in the number and £70,990 6s. 7d. in the amount on the business of the previous year. The interest added to depositors' accounts was £132,216 6s. 8d.

The number of withdrawals was 215,382, and the amount £2,059,853 10s., being an increase of 8,204 in the number and of £64,302 2s. 7d. in the amount on the business of the previous year.

The balance at the credit of depositors at the close of the year was £5,026,069 7s. 9d., being an increase of £334,235 14s. 5d. on the previous year.

The average amount of each deposit was £6 5s. 8 $\frac{3}{4}$ d., and of each withdrawal £9 11s. 3 $\frac{1}{4}$ d.

The average balance at the credit of each depositor at the close of the year was £30 14s. 7 $\frac{1}{4}$ d.

The following return will show the annual progress of the Government Savings Bank system from 1st January, 1889, to 31st December, 1898 :—

Year.	Number of Deposits.	Interest added to Depositors' Accounts.			Amount of Deposits.		Number of Withdrawals.	Amount of Withdrawals.			Balance at Credit of Depositors.

The total cost of the whole extent of Telegraphic and Telephonic communication in the Colony on 31st December, 1898—35,630 miles 46 chains—was £989,423 2s. 3d.

The Telegraph Lines in course of construction but not completed during the year 1898, and the estimated length thereof, are shown in the following return:—

	Line. ms. chs.	Additional Wire. ms. chs.
Branxton to Belford ... ..	0 70	5 40
Hartley Vale to Hartley Vale Siding ... ..	2 43	...
Tamworth to Manilla (Railway) ... ..	0 37	29 0
Sydney to Bathurst, Trunk Telephone Line ... ..	140 0	140 0
Total... ..	143 70	174 40

Telegraph Offices were opened at Bulyeroi, Lockhart (late Ferrier's), Moree Railway-station, and White Cliffs, and at Mullumbimby and Warne, in lieu of the Telephone Offices previously existing at those places.

The Offices at Broke, Green Cape, Newport, Thackaringa, Woodburn, and Wyrallah were converted into Telephone Offices, and the Office at Brunswick was closed.

The names of the Public Telephone Offices opened and closed are given under the heading of Telephone Branch.

In February, North Killarney Railway Telegraph Station, Queensland, was included amongst the border stations in Queensland, between which and all stations in this Colony telegrams may be transmitted at the rate of 1s. for the first ten words, and 1d. for each additional word.

From the 1st March the Telegraph wires between any two Offices were made available to the public for carrying on special conversations, provided they were not of too long duration, or likely to interfere to any extent with the regular traffic. The charge was fixed at  $\frac{1}{2}$ d. per word during office hours, and 4s. per hour or portion thereof after office hours, with an additional 2s. for every subsequent hour after the first hour.

In May, Crow's Nest, Holroyd, Narrabeen, St. Leonard's, and West Pennant Hills were added to the places in the city and suburbs, between which telegrams are transmitted at the minimum rate of 6d. for the first ten words, and 1d. for each additional word; and in November this rate, which previously applied to telegrams transmitted between Newcastle and certain contiguous places, was extended to all places within the Newcastle penny postage area—that is, within a radius of 12 miles of Newcastle.

An amendment was made in May in the regulations prescribing the course to be adopted and the fees to be paid in cases where the sender or addressee of a telegram desires to inspect or obtain a certified copy of the original message.

From the 1st July, an English dictionary word containing not more than fifteen letters was admitted as a cipher word, without extra charge, in telegrams transmitted within the Colony, and to the other Australasian colonies, except Western Australia. From the same date the use of figures in the text of inland and intercolonial messages was prohibited, it being required that the amounts and numbers should be written and signalled in words only (except in the case of "O.H.M.S." telegrams, and telegrams to and from the British Naval Authorities on the Australasian Station), also that isolated letters, or groups of letters, having no connected meaning should be charged as one word for each letter.

From the 1st July, ordinary telegrams transmitted from New South Wales to Tasmania on Sundays, Christmas Day, and Good Friday were charged double the rates levied on other days, this being the practice previously followed in the case of telegrams to the other Australian Colonies.

The

The rate for ordinary telegrams to Queensland was reduced to 1s. for the first ten words, and 2d. for each additional word, and the charge for Press messages to the same colony was fixed as follows, from the 1st July:—

	s.	d.
Ten words or under ... ..	1	0
Each additional word up to 22 words ... ..	0	2
Over 22 and up to 100 words ... ..	3	0
Each additional 50 words or fraction thereof ... ..	1	6

A regulation was introduced in July, providing for such instructions as "By post," "Porterage paid," or "Guaranteed," &c., in connection with telegrams lodged for transmission at any telegraph office in the Colony being charged for as part of the text of the message.

The charge for Press messages transmitted to New Caledonia was reduced to 5d. per word, from the 1st August.

Arrangements were made during the year for the transmission of telephone messages between Cobar and Wrightville, Darlington Point and Darlington Railway Station, Moree and Moree Railway Station, and between Mount Victoria, Hartley, and Little Hartley, at the rate of 6d. for the first ten words, and 1d. for each additional word.

In February, 1897, my predecessor decided to introduce bicycles for the delivery of telegrams, instead of horses, and supply them to the suburban and country messengers where practicable. The sum of £1,000 was voted on the 1897-8 Estimates, and in April, 1898, bicycles were supplied to a number of offices, in addition to several where they had been previously used. Upon their supply, the forage allowances to messengers at the following offices were withdrawn, viz., Alexandria, Ashfield, Camperdown, Croydon, Dulwich Hill, Enfield, Fairfield, Granville, Homebush, Hornsby, Manly, Marrickville, Mosman, Newtown, Parramatta, Petersham, Randwick, Rookwood, St. Peter's, Strathfield, Summer Hill, Albury, Balranald,\* Barringun, Bathurst, Berrigan, Berrima, Bourke, Bowral, Broken Hill, Condobolin, Coonamble, Cootamundra, Corowa, Deniliquin, Dubbo, East Maitland, Forbes, Goulburn, Gun-nedah, Hamilton,\* Hay, Hillston,\* Katoomba, Milperinka,\* Moree, Moss Vale, Mudgee, Mulwala,\* Narrabri, Narrabri West, Narramine, North Broken Hill, Nyngan, Orange, Parkes, Peak Hill,\* Richmond, Singleton, South Broken Hill, Tamworth, Wagga Wagga, Wellington, Warren, West Maitland, White Cliffs,\* Windsor, Wyalong, Yass, Yerong Creek,\* and Young.

In a small minority of cases, their use was not attended with complete success, owing to a number of breakdowns, which caused trouble and inconvenience to the Department, and in a few instances drew complaints of delay from the public.

Owing to the unsuitableness of the localities for their use, they were withdrawn from Bowral and Edgecliff, and inquiry is to be made respecting six other places where the results have been unsatisfactory.

The past twelve months of use has, to a great extent, been an experimental period, which shows the cost of maintaining 79 bicycles at 74 offices to be about £917. As the cost of providing forage allowances to those offices would have been £2,335 the saving effected by the use of the bicycle amounts to about £1,418 per annum.

It is expected that the experience gained will enable the Department to avoid many of the difficulties encountered during the period completed, and obtain a more serviceable and even more economical result in future.

---

\* At these places the official supplies his own bicycle.

The following return shows the extent of line and wire in use, and the number of offices in existence on the 31st December, 1898; also the number and value of telegrams which passed over the lines during the year, as compared with 1897:—

*Cable Communication.*

In the report of my predecessor for the year 1897, it was mentioned that the proposal of the Eastern Extension Australasia and China Telegraph Company to lay an alternative line of cables between England and Australia, *via* the Cape of Good Hope, had been relegated to a Committee in England, the Agents-General for New South Wales and South Australia representing Australian interests.

On 9th March, 1898, a cablegram was received from the Agents-General in the following terms :—

Have been desired by Committee on proposed cable *via* Cape to ascertain the views of the colonies we represent, on the terms of the Eastern Extension Company's proposal.

First.—To lay cable to Perth.

Second.—To continue it to Adelaide.

Will colonies agree to one or other; or what modifications of terms will they agree to, if any? Admiralty and War Office consider Cape route most valuable for strategic purposes—preferable to Pacific. Let us know decision as soon as possible.

To this the Right Honorable the Premier of New South Wales, on the 14th March, 1898, sent the following reply to the Acting Agent-General for New South Wales :—

We prefer Pacific cable; do not think we would subsidise any other.

While the Postal and Telegraphic Conference was sitting at Hobart in March-April, 1898, an endeavour was made to ascertain on what basis fresh arrangements could be entered into for carrying on the cable business over the Company's lines after the expiration of the period for which the subsidy of £32,400 per annum is payable, but no definite proposal from the Company being submitted, the Conference adopted the following resolution :—

That, in the absence of any satisfactory proposal from the Eastern Extension Telegraph Company, and of any proposal at all, except on the basis of an alternative cable *via* Africa, this Conference is unable to make any fresh arrangement with that Company.

Shortly after the close of the Hobart Conference, in reply to an inquiry from this Department, the Cable Company's Manager stated (under date of 20th April) that "the Company have no further proposals to make, other than those already submitted to the respective colonies, for an alternate route *via* the Cape, and now await their decision respecting the same."

A suggestion by the Postmaster-General of South Australia that the International rate might be reduced from 4s. 9d. to 4s. per word by all administrations concerned, reducing their shares thus,—

The British Post Office might make its rate 1d. on all cable messages to and from the United Kingdom, maintaining 2d. for messages to and from Europe. India might fairly be asked to make their rate 2d., and Java 1d., instead of 1½d. These, with some reduction on the part of the Cable Company and South Australia, would bring the rate down to 4s.

was referred to the Company's Manager in Australia for his opinion and advice, and on the 9th June, 1898, he replied as follows :—

My Company cannot offer any opinion or advice respecting the proposal for reducing the tariff to 4s. until the Australian Governments definitely decide whether they will, or will not, take part in the Cape Cable scheme. Should they definitely decide in the negative, my Company will then be prepared to consider any proposals that may be submitted for a 4s. tariff.

On the 22nd July, 1898, a cablegram was received from the acting Agent-General in the following terms :—

Canadian Postmaster-General now in London. Have ascertained that Canadian views on Pacific Cable friendly, but indefinite. It is proposed to arrange informal Conference between Imperial Government, Canada, and Agents-General for New Zealand, Queensland, Victoria, and self, with a view to facilitate adoption some scheme. No binding decision to be arrived at, but opinions of Conference to be forwarded to respective Governments. If you concur, please telegraph full authority for me to act.

This authority having been given, a reply (dated 29th July, 1898) was received as follows :—

Pacific Cable. Informal Conference held to-day. Canada represented by Postmaster-General and High Commissioner for Canada; New South Wales, Victoria, Queensland, South Australia, New Zealand, by Agents-General. Canadian representatives suggested Canada would probably guarantee two-ninths of total cost, but not more. Her Postmaster-General undertook to do his best for scheme on this basis. Imperial Government contribution will certainly not exceed one-third. Can Australian Colonies guarantee remaining four-ninths? Please telegraph reply before tenth proximo. Please inform other Governments.

supplemented on, the following day, by another, stating that the "Imperial Government, Western Australia, and Tasmania were not represented at informal Conference."

Communications

Communications having passed between the colonies, my predecessor, on 12th August, 1898, expressed his opinion on the matter as follows :—

This matter might, perhaps, be discussed at the projected Premiers' Conference. Personally, I would be prepared to guarantee, in conjunction with the other Colonies, four-ninths of the capital cost. It is important, also, that some definite communication be made to the Eastern Extension Company on the question of the Cape proposal. The present subsidies expire next year, and the Company declines to consider proposals for reduction in rates until a definite reply has been given on their Cape scheme.

On the same date, the Acting Agent-General cabled :—

With regard to Pacific Cable, Secretary of State for the Colonies stated, Imperial Government have received no proposals from Canada, South Australia, Western Australia, and New Zealand, and until formal and definite proposals are received from the Governments concerned, Imperial Government cannot proceed further in the matter.

In accordance with the proposal abovementioned, a Conference of Premiers met in Sydney, on the 20th August, 1898, when it was decided that if the Canadian and British Governments would guarantee five-ninths of the cost of a cable across the Pacific, then the Premiers of New South Wales, Victoria, and Queensland would recommend their respective colonies to each contribute one-ninth, it being believed that New Zealand, which was not represented at the Premiers' Conference, would be prepared to guarantee the remaining one-ninth, making up the required four-ninths from Australia. This decision was communicated to the Acting Agent-General on the 29th August, 1898, but nothing further of any importance transpired until the 3rd May, 1899, when the following message was received from the Agent-General :—

Pacific Cable. Imperial Government conveyed to me their decision. Opinion that cable of minor importance to United Kingdom, therefore consider construction and working should be borne by Canada and Australasian Colonies. Only offer twenty years' subsidy, not exceeding twenty thousand pounds (£20,000) in any year. Colonies construct and maintain line. Imperial Government to approve all rates charges. Government messages at  $\frac{1}{2}$  rate. Treasury to pay five-eighteenthths of amount by which net receipts short of expenses, subject to maximum limit of £20,000. Agents-General interested have together considered Government's letter; think terms unreasonable and unacceptable, and substantially different to the assumed basis of previous negotiations, which I understand was joint contributions, not subsidy value; subsidy outweighed by onerous conditions. We are communicating with Secretary of State for the Colonies. Letter to follow.

Further representations having been made to the Imperial Government, the Agent-General cabled, on 9th June, 1899 :—

Pacific Cable. Secretary of State for the Colonies now writes, willing consider matter on the basis of utilising credit United Kingdom providing capital, but as this makes necessary discussion on mode raising capital, construction, and control, suggests Colonial Governments appoint delegates to meet Chancellor of Exchequer and, or, Chamberlain. Letter to follow.

Sir Julian Salmons has been authorised to act as New South Wales delegate to further discuss the matter with the Chancellor of the Exchequer.

The total amount of the contributions by the Colonies towards the various subsidies and guarantees, and the proportions paid by New South Wales during the period from 1891 to 1898, are shown in the appended return :—

#### Telephone Branch.

During the year ended 31st December, 1898, there were added to the number of subscribers :—

To the Central Exchange ... ..	455
„ Branch Suburban Exchanges ... ..	813
„ Country Exchanges ... ..	164
	1,432

The following return shows the number of lines connected with the Telephone system at the close of the year :—

	Exchanges.	No. of Lines.
Central, Sydney ... ..	...	3,228
Branch, Suburban ... ..	...	2,522
Country ... ..	...	647
Telephone Bureaux ... ..	...	24
Extension Lines—City and Suburbs ... ..	...	1,020
„ „ Country ... ..	...	61
Private Lines—City and Suburbs ... ..	...	404
„ „ Country ... ..	...	255
Total ... ..	...	8,161
Total number of Telephones in use ..	...	8,928

The

The length of lines opened during the year was 98 miles and 52 chains, and additional wires erected 1,780 miles and 44 chains, the cost of construction, including expenditure on tunnels, being £45,285 14s.

In addition to the Central Exchange at the General Post Office, Exchanges are now open in the following Suburbs:—Ashfield, Balmain, Burwood, Carlingford (East), Chatswood, Edgecliff, Glebe, Hunter's Hill, Kogarah, Manly, Mosman, Newtown, North Sydney, Paddington, Parramatta, Petersham, Randwick, Rookwood, Wahroonga, Waverley, and William-street; and at Albury, Bathurst, Broken Hill, Cobar, Dubbo, Goulburn, Lismore, Lithgow, Newcastle, Wagga Wagga, and West Maitland in the country.

Telephone Bureaux for the use of the Public, on payment of a small fee, are now open at the General Post Office, Sydney, Ashfield, Balmain, Bathurst, Bayview, Burwood, Carlingford (East), Chatswood, Cobar, Edgecliff, Glebe, Gunnedah, Gunnedah Railway Station, Hunter's Hill, Katoomba, Kogarah, Manly, Milson's Point, Mosman, Newcastle, Newtown, North Sydney, Paddington, Parramatta, Petersham, Randwick, Redfern Railway Station, Rockdale, Rookwood, Rozelle, Wagga Wagga, Wahroonga, Waverley, and William-street.

The first long-distance telephone service in the Colony was inaugurated on the 3rd January, 1898, connection being between Sydney and Newcastle, a distance of 102 miles.

The fees payable are 3s. for each conversation of three minutes or fraction thereof, and for each additional three minutes or fraction thereof, 1s. 6d.; Press messages between 8 p.m. and 8 a.m., at half the above rate.

Subscribers to the Telephone Exchanges have the use of the trunk line, when required, at the above rates, provided a sum of money equal to their estimated requirements for, say, one month, be paid in advance.

Bureaux have been established at Sydney and Newcastle, where persons may, on application to the proper officer, be connected with any telephone subscriber at the other end, or may converse with any person at the Bureau at the other end who may be in attendance by appointment to be made by telephone, on payment of the prescribed fee.

Upon payment of an additional fee of 6d., a messenger is despatched to call any person the applicant may desire to converse with, provided the place of business or residence of such person be within a radius of 1 mile from Sydney or Newcastle Post Office.

The total receipts on account of the Sydney-Newcastle Telephone service for the year 1898 was £774 4s. 9d.

On the 4th January, 1898, Telephone communication was established between Sydney and the Signal Station, South Head. The charge to Telephone subscribers for this connection is 10s. per annum, or a sum may be deposited sufficient to cover any probable communications. For non-subscribers, or others wishing to communicate with the South Head Signal Station from the Public Telephone Bureaux in the city or suburbs, the charge is the usual Bureau rate, viz., for any period not exceeding three minutes, 6d., and for every additional three minutes or portion of three minutes, 6d. The revenue from this service for the year 1898 amounted to £20 14s. 6d., including the fees from thirty-six subscribers.

Some important amendments in the Regulations in connection with the Telephone system were introduced on the 1st September, the principal of which are, the reduction of the charge for business establishments connected with suburban exchanges, from £10 to £9 a year (the rate previously charged for similar establishments connected with the Central Exchange), where the line does not exceed 1 mile in length; the extension of the limit of connections over 1 mile (at £1 per half mile in the suburbs, and 10s. per quarter mile in the country) from 3 to 5 miles; the restriction of the use of the line by any person to a period of ten minutes, in cases where other applicants are waiting to use it; and the application to any large centre of the rates formerly charged for private lines between houses, offices, &c., in the metropolitan area.

Public Telephone offices were opened during the year at Broke, Green Cape, Newport, Thackaringa, Woodburn, and Wyrallah (in lieu of the Telegraph offices previously existing at those places), and at Baulkham Hills, Berowra, Bowling Alley Point, Bredbo, Buchanan, Burren, Collector, Comara, Cornelia, Crow's Nest, Curban, Devlin's Siding, Dungowan, Fifield, Giant's Creek, Goondabluie, Grass Hut,

Hut, Gurley Siding, Hartley, Hermidale, Hickey's Creek, Holroyd, Kensington, Lady Robinson's Beach, Lansdale, Little Coogee, Little Hartley, Long Creek, Merah North, Mount Drysdale, Mount Vincent, New Park, Numba, Pallamallawa, Pennant Hills (railway), Pera Bore, Pitt Town, Quambone, Swamp Oak, Woolabra, Wrightville, Yalgogrin North, and Yarranbah.

The telephone offices at Mullumbimby and Warne were converted into telegraph offices.

The name of the office at Pennant Hills was changed to West Pennant Hills, and the office at Granuaile was closed.

#### *Tunnels.*

Towards the end of the year, a commencement was made with the extension of the main subway from the Redfern Railway Station to Glebe Point.

Conduits have been laid, from near the General Post Office, along George-street to Dawes Point, and from King-street to Edgecliff Road.

#### *Electric Light.*

During the year, the electric lighting at the General Post Office, Circular Quay, Cowper's Wharf, Government House, and Parliament House has been carried out satisfactorily.

A large number of incandescent and arc lamps, also fan motors, have been fitted throughout the General Post Office.

Foundations have been prepared to receive the engines and dynamos in the space allotted for the new engine-room.

Eight new 32-hour arc lamps were purchased to replace a similar number of old and defective lamps at Circular Quay, and two extra lamps have been fitted to the Eastern and Australian Steamship Company's Wharf, on the western side of quay.

In January, four (4) 32-hour arc lamps were erected on the wool-sheds at the new wharfs on the eastern side of Cowper's Wharf.

A number of extensions of and alterations to the electric lights at Parliament House have been made during the year.

#### *New Steam Plants.*

In view of the increased lighting requirements at the General Post Office and Circular Quay, tenders were invited during the year for the supply and erection of two (2) 200 horse-power boilers, and one (1) combined steam engine and dynamo of 70 kilowatt capacity, for the General Post Office, and one (1) 60-arc light plant complete, for Circular Quay.

The tender of Messrs. Lassetter & Co. for both plants was accepted.

In reviewing the business of the Postal and Electric Telegraph Department for the year 1898, there is reason for congratulation upon its augmented character as shown in this Report. The increase may, I think, be taken as an indication of an improvement in the general welfare of the Colony itself.

I have the honor to be,

Your Lordship's most obedient Servant,

VARNEY PARKES,

Postmaster-General.

Postal and Electric Telegraph Department,

General Post Office, Sydney, 30th June, 1899.

APPENDIX A.

RETURN showing names of Post and Telegraph Offices, number of Letters posted, Telegrams transmitted, Postal Notes paid, Money Orders issued and paid, Savings Bank Deposits and Withdrawals, Revenue received from each Office, Salaries and Allowances paid, and arrangements regarding premises during the year 1898.

## APPENDIX B.

## LIST of Receiving Offices on 31st December, 1898.

Abattoirs	Carrabolla	Glengarry	Mandemar
Aberglasslyn	Carrawobity	Glen Hill	Maracket
Agnes Banks	Castle Doyle	Gleniffer	Margules
Alfred Town	Cattia Creek	Glynnwood	Markdale
Altcar	Cave Creek	Godfrey's Creek	Markwell
Amaroo	Cawdor	Good Hope	Marrar
Angledale	Central Lansdowne	Goondabluie	Marshall's Plains
Angourie	Central Raleigh	Goonellabah	Maybole
Anna Bay	Central Wattagan	Gordonville	Meadow's Hotel
Annangrove	Chanticleer	Gorton's Yard	Medowie
Apple-tree Flat	Cheetam's Flats	Gowrie	Meermaul
Argalong	Cherry-tree Hill	Grass Hut	Meerschauam Vale
Armatree	Chilcott's Grass	Grattai	Melrose
Armidale Gully	Chinderah	Green Point	Meragle
Ashley	Clairville	Greghamstown	Meringlo
Avenel	Clare	Gregra	Merool Creek
Avondale	Claremont	Greig's Flat	Meryla
Back Creek	Clareval	Grey Mares	Middle Adelong
Backwater	Cloverley	Gullen Flat	Milbrulong
Balladoran	Cochran Creek	Gumble	Milburn Creek
Ballengarra	Cocomingla	Gunnary Creek	Mimosa
Bamarang	Colinroobie	Gurley Siding	Minore
Barooga	Collingullie	Gurrundah	Miranda
Barrieton	Collingwood	Gwynne	Moeyan
Baryulgil	Colo Creek	Hadley	Mole Creek
Baw Baw	Combaning	Half-way Creek	Moona Plains
Bawden Bridge	Conley's	Hallsville	Moparrabah
Belgrave	Cooba	Halton	Morago
Bellawongarah	Coobang Creek	Harold's Cross	Mororo
Belle Vue	Coolalie	Hellman's Tank	Morton
Belooth	Coolatai	Hiawatha	Mosquito Island
Benandarah	Cooney Creek	Hillas Creek	Mount Allen
Bengelala	Coonong Siding	Hillermann's	Mount Aubrey
Beni Creek	Cooradigbee	Hopefield	Mount Kenwary
Bennett's Flat	Corona	Hughstonia	Mount Pleasant
Bereen	Countegany	Huon	Mount View
Bermagui South	Cowan's	Ilford Railway Station	Mount Werong
Berowra	Cowper	Ingebyra	Mowabla Tank
Bielsdown	Craig Lea	Ingleadow	Mulbring
Bijiji	Cronulla Beach	Inglewood	Mullenderree
Bilambil	Crystal Creek	Inveralochy	Mummulgum
Billy's Look Out	Cullerin	Inveray	Mundarlo
Bimbimbie	Cullubumbung	Jackson's Water-holes	Mungeribar
Bindogandra	Culparlin	Jaunter	Munmurra
Bingleburra	Cumbalum	Jiliby	Munyabla
Binneguy	Cundle Flat	John's River	Murraging
Black Swamp	Cundumbul	Junction Point	Murrah
Bobeyan	Curra Creek	Kamandra	Murrayville
Bobin	Dapper	Kangaroo Camp	Murruibale
Bo Bo	Darke's Forest	Kareela	Muskgrove
Bocoble	Darobalgie	Katoomba South	Myalla
Boconnoc	Deep Creek	Keerrong	Myall Creek
Bolaro	Deep Gully	Kelvin	Myall Plains
Bolton Vale	Dienunga	Kempton	Nanama
Boney's Rocks	Dilga	Killabakh Creek	Nanangroe
Bongongo	Dingo Creek	Kilrush	Naranghi
Boonoo Boonoo	Dinoga	Kingalbung	New Cryan
Boorobanilly	Dondingalong	Kingsdale	Newlands
Booroolong	Dorroughby	King's Plains	New Meragle
Booroodarra Tank	Doyle's Creek	Kingsvale	Nirrim
Borambl	Drillwarrina	Kinross	Noraville
Boree Creek	Duck Flat	Knockrow	North Araluen
Bossley Park	Duranbah	Kundibakh	North Bourke
Bournewood	Durren Durren	Lallarook	Norton
Bow	East Seaham	Lamb's Creek	Norway
Braemar	Edith	Lankey's Creek	Numulgi
Breelong	Eganton	Larbert	Oakey Creek
Brenda	Elcombe	Laurel Hill	Obley Vale
Brierfield	Enwylong	Lavadia	Ogunbil
Brockley	Eurimbla	Leconfield	Olera
Broken Dam	Everett	Ledgerton	Ournie
Bronti	Fairy Hill	Lilyvale	Owcn's Gap
Brook's Creek	Farringdon	Limbr	Paddy's Flat
Brookvale	Federal	Limestone Creek	Page's Creek
Broula	Ferndale	Linden	Parkesborough
Brucedale	Five Islands	Linton	Parkesbourne
Brunkerville	Fladbury	Little Bombay	Parragundy
Brush Creek	Flyer's Creek	Lobb's Hole	Paupong
Bucca Bucca	Forrester	Lochiel	Payne's Crossing
Bucca Wauka	French Park	Lockwood	Peakview
Budgong	Galore Park	Long Swamp	Pee Dee
Bukkulla Station	Garangula	Looby's	Pheasant Ground
Bullenbong	Garland	Lorne	Phillip's Corner
Bungarby	Giant's Creek	Lower Belford	Piambong
Bungulla	Gidginbung	Lower Botobolar	Pine Mount
Burra	Gil Gil	Lower Hickey's	Pine Vale
Burramundra	Gill	Lower Lewis Ponds	Piney Range
Burrapine	Gillenbine	Lower Mookerawa	Platina
Byangum	Gilmandyke	Lower Taylor's Arm	Pomeroy
Caloola Creek	Girvan	Maclaurin	Port Hacking
Camboon	Glendhu	Mahratta Station	Pretty Gully
Carba	Glenfield	Majura	Pretty Pine

List of Receiving Offices on 31st December, 1898—*continued.*

Puddledock	Stanwell Park	Trickett	White Swamp
Pudman Creek	Steve King's Plain	Tubbamurra	Widden
Quartzville	Store Creek	Tubbul	Willanthry
Quinburra	Stott's Creek	Tullamore	Willaroo
Quorrobolong	Summervale	Turee Vale	Williams' Crossing
Ralvona	Suntop	Twelve Mile	Willow Forest
Reddycliff's	Swan Creek	Tyagarah	Willy Wally
Redlands	Sweetbriar	Unkya Creek	Winchendon Vale
Reedy Creek	Talbingo	Upper Bago	Windorah
Reeves	Tallawudjah	Upper Bingara	Winduella
Rivertree	Tallewang	Upper Chichester	Wollun Platform
Rockmore	Talmalmo	Upper Dungowan	Wombeyan Caves
Rockton	Taloumbi	Upper Gilmore	Womboo (Rogers')
Rocky Plain	Taradale	Upper Horton	Womboota (Edwards')
Rosebrook	Tarban	Upper Lostock	Woodenbong
Rosemount	Tathra Road	Upper Myall	Woodford
Rosevale	Taylor's Flat	Upper North Creek	Woodford Dale
Roslyn	Telegherry	Upper Shark Creek	Woodhall
Rossi	Temagog	Upper Tooloom	Woodlawn
Roto	Tenterden	Verona	Woolabra
Rowe's	Teridgerie	Wagragobilly	Woola Woola
St. George's Basin	Teven Creek	Wakool Crossing	Wright's
St. Leonards	Thalaba	Wallandool	Wyndella
Salisbury	The Branch	Walmer	Yagobie
Sally's Flat	The Peak	Wang Wauk	Yalbraith
Sandon	The Tamarinds	Wanstead	Yallaroi
Sassafras	The Vineyard	Wantool	Yarragundry
Scott's Gully	Thornford	Wapengo	Yarralumla
Shannon Vale	Thornton	Wargeila	Yarrangobilly
Shark Creek	Thyra	Warner's Bay	Yarrowitch
Snowball	Tia	Warrell Creek	Yathella
Somersby	Tibberecnah	Wattamadara	Yellowin
South Corowa	Tilbuster	Waugoola	Yerra Yerra
South Gundurimba	Tingiringi	Webb's Creek	Yowaka
South Rivertree	Tomakin	Weetangerra	Yowrie
Spring Creek	Tomboy	West Blowering	Yuelba
Spring Vale	Tomki School	West Milby	
Stannore Railway Station	Towac	Westove	
	Triangle Flat	Whipstick	

## APPENDIX C.

ARTICLES OF AGREEMENT made and entered into this fifth day of June in the year of Our Lord one thousand eight hundred and ninety-nine between the Honorable Varney Parkes Postmaster-General for the Colony of New South Wales (hereinafter called "the Postmaster-General" in which expression his successors in office the Postmaster-General for the time being are respectively intended to be included) on behalf of the Government of New South Wales and not so as to incur or come under any personal liability in respect to these presents of the first part and Burns Philp and Company Limited of Sydney in the Colony of New South Wales (hereinafter called "Contractors" which expression shall be deemed to include the permitted assigns of the said company when the context so requires or admits) of the other part witnesseth that for and in consideration of the covenants and agreements hereinafter contained on the part of the Postmaster-General the Contractors for themselves and their permitted assigns do hereby covenant and agree with and to the Postmaster-General and his successors in manner and form and to the effect following that is to say:—

1. That the Contractors will provide establish and during the period of four years calculated as and from the twenty-third day of May one thousand eight hundred and ninety-nine maintain continue and carry on in the manner hereinafter set forth a regular steamship service between the city of Sydney in the Colony of New South Wales and the city of Vancouver in the province of British Columbia calling at Brisbane in the Colony of Queensland at Honolulu in the Sandwich Islands and at the outer wharf in the city of Victoria in the said province on both outward and homeward voyages from Sydney to Vancouver and from Vancouver to Sydney and similarly at Fiji at the option of the company and such service shall as far as practicable make connection at Sydney with all local lines of steamships running between Sydney and other ports in Australia and New Zealand. 1. To maintain monthly steamship service

2. Three steamships to be approved by the Postmaster-General shall be regularly and continuously employed in the said service warranted to be each of a gross tonnage not less than three thousand three hundred tons Each of the said steamships is further warranted to have the most approved triple expansion machinery refrigerators for the ship's use duplicate electric light engines special ventilation for tropical voyages ample saloon and cabin accommodation for at least one hundred and thirty passengers and to be provided with every comfort and convenience that is to be found in the best Atlantic liners of its size. Each of the said steamships is further warranted to be of the highest class at Lloyds and to have a present passenger certificate of the New South Wales Marine Board and each of the said steamships shall during the continuance of this Contract be at all times tight sound staunch and strong and well and sufficiently manned victualled and equipped and in every respect seaworthy and shall further at all times during the continuance of this Contract retain the qualification and class which it is hereinbefore warranted to possess. 2. Steamships to be provided.

3. The round trip for each of the said steamships shall begin and end at Sydney in the colony of New South Wales calling at Brisbane going and returning as aforesaid and similarly at Fiji at the option of the company and the first voyage in performance of this contract shall commence and be made from Sydney aforesaid on the twenty-third day of May in the year of Our Lord one thousand eight hundred and ninety-nine The period of each voyage from Sydney to Vancouver and from Vancouver to Sydney shall not exceed twenty-one days (calculated as to the voyage from Sydney to Vancouver from the date of leaving the port of Sydney aforesaid up to the time of the acceptance of a pilot at British Columbia and as to the voyage from Vancouver to Sydney from the date of the discharge of the pilot at British Columbia to the date of the arrival at the port of Sydney) including one day's detention at Honolulu on each voyage both outward and homeward but it is expressly agreed and understood that in the event of the said steamers calling at Brisbane or Fiji as hereinbefore provided for a further period of thirty-six hours is to be allowed for the time spent in calling at each port on both inward and outward voyages The said service shall be four weekly and the said steamers shall leave the said ports of Sydney Brisbane and Vancouver on the days and at the times to be from time to time appointed for that purpose by the Postmaster-General after consultation with the Canadian Postmaster alternately arriving at Vancouver and at Sydney at intervals of not more than four weeks after the date of the arrival of the steamship leaving Sydney on the twenty-third day of May as hereinbefore 3. Duration of voyage.

hereinbefore provided at Vancouver on its said first voyage in the performance of this Contract Each voyage shall be deemed to commence so soon after the completion of the embarkation of the mails intended to be thereby conveyed as having regard to practical considerations the anchor of such vessel can be weighed or the vessel can be loosed from its moorings And each such voyage shall be deemed to be completed when the vessel has arrived and been anchored or moored at some position in the port of destination from which the mails can be conveniently disembarked And the times of the commencement and completion of every voyage shall be ascertained and recorded by the Officers of the Postmaster-General in pursuance of arrangements to be from time to time made by him for such purpose and the decision of the Postmaster-General as to all questions relating to any such times or periods shall be final and conclusive.

4. Not to call at United States. 4. The said steamships shall not during the continuance of this Contract call at any port in the United States of America.
5. Carriage of freight and passengers. 5. The said steamships shall each according to its capacity carry both outward and homeward all the freights and passengers which may be reasonably offered and obtained and at tariff rates both as to passengers and freights which shall be approved by the Governor of New South Wales with the advice of the Executive Council of the said Colony and after consultation with and approval of the Canadian executive body.
6. Preference to New South Wales and Queensland. 6. No discrimination shall be made as regards tariff rates for either freights or passengers in any manner directly or indirectly against any New South Wales or Queensland ports or against the New South Wales or Queensland Government Railways or against any New South Wales or Queensland merchants or shippers but New South Wales and Queensland merchants or shippers shall at all times have preference for the carriage of their goods over other merchants and shippers as far as regards the Australian connection But in the event of a subsidy from any other Colony being received space shall be provided *pro rata* to the respective subsidies.
7. Carriage of mails. 7. During the continuance of this contract the said steamships shall at the cost and expense of the said Contractors receive and carry on each and every voyage all such mails as shall or may be tendered for conveyance to the said steamships or to the Masters or any Officers on board of the same at the port of Sydney aforesaid by or on behalf or under the direction of the Postmaster-General for the time being his officers agents or servants and shall deliver such mails at their proper ports of destination upon the sailing route of the said steamships as herein indicated And in order to the due and proper performance of this covenant the said steamships shall each be provided with sufficient and convenient accommodation and protection for all such mails to the satisfaction of the Postmaster-General for the time being And the said Contractors shall further take all reasonable and necessary precautions for the protection of such mails while upon the said steamships from loss damage or injury in any way and they shall be responsible for any loss or damage thereto caused by the negligence or want of proper care or accommodation on the part of the said Contractors or their agents or servants or on the part of the officers or employees or crew on board the said steamships. And in this connection it is specially covenanted and agreed by the Contractors that this Contract shall be subject to the steamships to be employed in carrying the mails thereunder not having on board in the pay of the Contractors any coloured labour.
8. Accommodation on board. 8. The Contractors shall provide to the satisfaction of the Postmaster-General all necessary and suitable accommodation including lights for the purpose of sorting and making up the mails on board the several vessels employed under this contract and on being required to do so by the Postmaster-General shall at their own cost erect or set apart in each of the said vessels on the spar deck a separate and convenient room for such purposes and all the furniture lamps fittings and other conveniences in and about such rooms shall be from time to time cleansed and kept in repair and the oil for the lamps supplied by the servants and at the cost of the Contractors The Master or Commander of each of the said vessels shall also if required provide assistance for conveying the mails between the mail-room and the sorting-room and also render such other assistance as may from time to time be needed without charge.
9. Master to take charge if required. 9. If the Postmaster-General shall think fit to entrust the charge and custody of the mails to the Master or Commander of any vessel to be employed under this contract and in all cases where the officer or other person appointed to have charge of the mail shall be absent to the knowledge of the Master or Commander of such vessel such Master or Commander shall without any charge take due care of and the Contractors shall be responsible for the receipt safe custody and delivery of the said mails at the several appointed places on shore in the respective ports as part of the services hereby contracted to be rendered. The Master or Commander shall also make the usual Post Office Declaration and furnish such journal returns and other information and perform such other services as the Postmaster-General or his Officers shall from time to time reasonably require.
10. To obey directions. 10. The Contractors and all commanding and other officers in charge of the vessels employed under this contract shall at all times punctually attend to the orders and directions of the Postmaster-General or his officers or agents as to the mode time and place of landing transhipping delivering and receiving the mails subject to the special provisions herein contained and so far as such orders and directions are reasonable and consistent with the safety of the vessels.
11. Passenger accommodation for officers of Post Office. 11. The Contractors shall provide suitable first-class accommodation including a cabin and state-room for the exclusive use of a mail officer or agent of the Postmaster-General and for one assistant on board each of the vessels employed under this contract who shall be at liberty to use such accommodation as may be required for the performance of their duties and such officers or agents and assistants shall be victualled by the Contractors as chief cabin passengers without charge either for their passage or victualling and whilst the vessel stays at any port excepting the ports of Sydney and Vancouver to and from which the mails are conveyed such officers agents and assistants shall be allowed to remain on board and shall be victualled as aforesaid.
12. Mail Officer to have full authority. 12. Every such mail officer or agent and assistant shall be recognised and treated by the Contractors their officers and agents as the agents of the Postmaster-General and as having full authority in all cases to require a due and strict performance of this Contract Provided that no such agent officer or assistant shall have power to control or interfere with any Master Commander or Officer in the performance of his duty and every such agent officer and assistant shall be subject to all general orders issued by the Master or Commander for the good order health and comfort of the passengers and crew and the safety of the said vessels.
13. Conveyance of mails at ports. 13. The expense of conveying mails to and from the said steamships or vessels from or to the Post Offices at the terminal ports of the several voyages or at the ports at which the said vessels call *en route* shall be borne by the Contractors.
14. Power to Postmaster-General to delay sailing. 14. The Postmaster-General shall in case of need and for the purpose of duly forwarding such mails as may be required have the right to delay the sailing of any of the said steamships for the space of twenty-four hours.
15. Definition of mails. 15. The expression "mails" for the purpose of this Contract shall be deemed to mean and include all boxes bags or packets of letters post cards newspapers parcels books or printed paper and all other articles which under the Post Office Act or Acts and Postal Regulations for the time being in force are transmissible by post in New South Wales without regard to place either of origin or destination and also all empty bags empty boxes and other receptacles stores and articles used or to be used in carrying on the Post Office service or which shall ordinarily be sent by or to or from the Post Office.
16. Not to carry other letters. 16. The said Contractors shall not nor shall the master or officers of any or either of the said steamships receive or permit to be received on board of any or either of such steamships at any New South Wales port any letters for conveyance other than those contained in Her Majesty's mails or which are or may be privileged by the law nor the mails of any other country except such as may be specified by the Postmaster-General for the time being And the said Contractors shall in all respects be subject to all the Postal laws of New South Wales and all the Regulations lawfully made thereunder.
17. Nitro-glycerine &c. not to be carried. 17. The Contractors shall not convey in any steamship employed by them under this Contract any nitro-glycerine or any other article which shall have been proclaimed as an explosive or explosive substance or shall have been legally declared specially dangerous or shall be so declared by the Postmaster-General by notice in writing.
18. Not to assign. 18. This Contract shall not nor shall any right or interest therein be assigned under-let or otherwise disposed of without the consent in writing of the Postmaster-General to such assignment having been first obtained Provided however that if such proposed assignment is to be to a Joint Stock Company of which the Contractors shall be shareholders or stockholders such consent as aforesaid shall not be required.
19. To furnish copies of manifests. 19. The said Contractors shall from time to time furnish to the Postmaster-General full and complete copies of the manifests of the cargoes and lists of the passengers carried by each of the said steamships on its outward and its homeward voyages certified by the proper Customs Officials and also such other documents information and evidence as may be reasonably

reasonably required by the Postmaster-General to show the volume extent and value of the trade carried on by the said steamships and such other Customs certificates documents and evidence as may be necessary or as may be reasonably required by the Postmaster-General to prove the performance of the service herein contracted for and to enable the Postmaster-General to judge as to whether this contract is being properly and faithfully carried out and performed. And the furnishing of such documents certificates information and other evidence as hereinbefore specified shall be a condition precedent to the due payment of the subsidy hereinafter provided or any portion thereof.

20. And the said Postmaster-General for himself and his successors covenants to and with the said Contractors that they well and faithfully performing all and every covenants agreements and stipulations hereinbefore on their part set forth and contained he the Postmaster-General will well and truly pay or cause to be paid to them during the continuance of this contract a subsidy of seven hundred and sixty-nine pounds four shillings and seven pence sterling for each and every round trip performed by each of the said steamships in accordance with the intention of these presents payable in New South Wales the first subsidy for the first round trip to be payable and paid within ten days after the arrival of the first of the said steamships from Vancouver in the performance of this Contract and the remaining subsidies to be payable and paid respectively within ten days after the succeeding arrivals of the said steamships at Sydney in the performance of this Contract the subsidy in respect of the last round voyage to be performed in pursuance of this Contract not to become payable however until such round voyage shall have been satisfactorily completed. Provided however that no amount or instalments of subsidy shall be payable at any time unless it appears to the satisfaction of the Postmaster-General that up to the time of such payment there has been no breach on the part of the said Contractors of any of the covenants provisions or stipulations of this Contract.

20. Covenant for payment of subsidy.

21. If at any time or times the mails required to be conveyed by the Contractors under this agreement between Sydney and Vancouver shall not be conveyed from Sydney to Vancouver or from Vancouver to Sydney within the respective periods of transit hereinbefore prescribed in that behalf then and so often as the same shall happen there shall be deducted from the subsidy which but for this provision would be payable to the Contractors a sum of thirty pounds for every complete period of twenty-four hours by which the time actually occupied in the conveyance of such mails from Sydney to Vancouver or from Vancouver to Sydney as the case may be shall have exceeded the period of transit hereinbefore prescribed in that behalf. Provided always that no deductions shall be made from the said subsidy by reason of any such default or failure as in this clause mentioned which may be proved to the satisfaction of the Postmaster-General to have arisen wholly or in part from any cause or causes altogether beyond the control of the Contractors.

21. Deduction not to be for delay.

22. Each of the deductions hereinbefore mentioned and hereby agreed to be made shall be made and the subsidy be reduced accordingly although no damage or loss shall have been sustained by reason of or in connection with such default and (except in such cases as in the last preceding clause hereof expressly provided) from whatever cause or causes any such failure or default shall have arisen and no such deduction shall in any case be deemed to be a penalty or in the nature of a penalty and the payment by the Postmaster-General of what shall from time to time remain due in respect of the said subsidy after making any such deductions as aforesaid shall in no case prejudice the right of the Postmaster-General to treat the failure of the Contractors to provide an appropriate vessel at any appointed place or time or to perform any service at or within the appointed period as a breach of this Contract.

22. Deductions not to be penalty.

23. This Contract shall remain in force until fifty-two round voyages have been performed according to the true intention of these presents provided that the Postmaster-General shall have the right at any time by giving notice in writing under his hand to determine this Contract and every matter and thing herein contained if it shall appear to him that there has been any material breach on the part of the said Contractors of any of the covenants stipulations agreements or provisions herein contained and entered into on the part of the said Contractors. And it is hereby declared and agreed that the Postmaster-General shall at all times be the sole and final judge as to whether there has been any such breach and his determination shall be final and conclusive.

23. Duration of Contract.

24. Provided however and it is the true intent and meaning of these presents that if the said steamships any or either of them or any steamship replacing either of such steamships under this proviso shall be by the perils of the sea or other unavoidable casualty lost destroyed or temporarily disabled from performing their voyages according to the true intent and meaning of the agreements stipulations and provisions herein contained such loss or disability shall not be deemed to be a breach of these presents or any matter or thing herein contained but the said Contractors shall in such case as soon as reasonably may be having regard to the circumstances replace the said steamships or steamship so lost or destroyed by others or another of equal class speed equipment character and capacity to the satisfaction and approval of the Postmaster-General or to the like satisfaction and approval repair the damage done in case the said steamship has been only temporarily disabled and continue the said service herein contracted for with such substituted or repaired steamship with as little loss of time as possible under all the circumstances. Provided always that there shall be no payment of any subsidy in respect of any voyage not actually and fully performed. Provided further that the Postmaster-General shall be the sole judge and have the final right of determination as to whether any suspension or temporary discontinuance of or delay in the said regular four weekly service has been actually caused by the perils of the sea or other unavoidable casualties within the meaning of this proviso and his finding and determination thereon shall be conclusive.

24. Proviso for replacing steamers disabled.

25. All notices or directions which the Postmaster-General his officers agents or others are hereby authorised to give to the Contractors their officers servants or agents other than any notice of the termination of this Contract may at the option of the Postmaster-General his officers agents or others either be delivered or sent by post to the master of any of the said vessels or any other officer or agent of the Contractors in the charge or management of any vessel employed in the performance of this Contract or left for the Contractors at or sent by post to the Contractors' agents office or house of business in Sydney or any other place and any notices or directions so given left or sent by post shall be binding on the Contractors. Provided always that any notice of termination of this Contract shall be left for the Contractors at the office or last-known office of their agents in Sydney or sent by post to such office.

25. Notices.

26. And it is hereby further agreed that the execution of this Contract by the Postmaster-General shall be on the condition that he executes the Contract subject to its being ratified by the Parliament of New South Wales but until such ratification is refused the said Postmaster-General shall continue to perform this Contract on his part including payments for any voyage commenced at the time of such refusal by the said Parliament.

26. Proviso for ratification by Parliament.

In witness whereof the Honorable VARNEY PARKES Postmaster-General for the Colony of New South Wales has hereunto set and affixed his hand and seal as such Postmaster-General and the Common Seal of Burns Philp & Company limited of Sydney aforesaid hath been hereunto affixed the day and year first hereinbefore written.

Signed sealed and delivered by the HONORABLE VARNEY PARKES in the presence of—  
S. H. LAMBTON,  
Deputy Postmaster-General. } VARNEY PARKES. [Seal.]

The Common Seal of BURNS PHILP & COMPANY LIMITED was hereto affixed by us the undersigned—  
AND we certify that we are the proper Officers of the said Company by whom or in whose presence the said Common Seal is to be affixed to all deeds executed by the said Company—  
S. J. NOSWORTHY,  
Secretary. } JAMES BURNS,  
Managing Director. [Seal.]

## APPENDIX E.

## CONVENTION BETWEEN THE COLONIES OF FIJI AND NEW SOUTH WALES CONCERNING THE EXCHANGE OF MONEY ORDERS.

The Post Office Department of Fiji and the Post Office Department of the Colony of New South Wales, being desirous of establishing a system of exchange of money orders between the two countries, the undersigned, duly authorised for the purpose, have agreed upon the following articles:—

## Article 1.

There shall be a regular exchange of money orders between the two countries.

The maximum amount for which a money order may be drawn in either country upon the other shall be £10 sterling. No money order shall contain a fractional part of a penny. The amount of each order, whether issued in the Colony of Fiji or the Colony of New South Wales, must be expressed in sterling.

## Article 2.

The amounts deposited by the remitters and paid to the payees of money orders shall be in gold coin, or any other legal money of the same current value.

## Article 3.

Each money order shall be delivered to the remitter thereof, to be forwarded by him, at his own expense, to the payee.

## Article 4.

The Fiji Post Office Department shall have power to fix the rates of commission on all money orders issued within its jurisdiction, and the Post Office Department of New South Wales shall have the same power in regard to all money orders issued in the Colony of New South Wales.

Each office shall communicate to the other its tariff of charges or rates of commission which shall be established under the Convention, and these rates shall, in all cases, be payable in advance by the remitter, and shall not be repayable. It is understood, moreover, that each office is authorised to suspend, temporarily, the exchange of money orders, in case the course of exchange, or any other circumstance, should give rise to abuses or cause detriment to the postal revenue.

## Article 5.

Each country shall keep the commission charged on all money orders issued within its jurisdiction, but shall pay to the other country one-half of 1 per cent. on the amount of such orders.

## Article 6.

Orders shall be drawn only on the authorised Money Order Offices of the respective countries, and each Postal Administration shall furnish to the other a list of such offices, and shall from time to time notify any addition to or change in such list.

## Article 7.

Every money order and advice must contain the name of the office at which it is intended that payment shall be made, and no order shall be issued unless the applicant furnishes the forename and surname of the person to whom the amount is to be paid, and his own forename, surname, and address, or the name of the firm or company who are the remitters or payees.

## Article 8.

The service of the Money Order system between the two countries shall be performed by the agency of offices of exchange.

On the part of the Colony of New South Wales the office of exchange shall be Sydney, and on the part of the Colony of Fiji the office shall be Suva. Lists of Money Orders issued shall be despatched from each office of exchange, accompanied by the advice, each bearing an impression of the dated stamp of the office from which the list is despatched. The lists shall be numbered consecutively throughout the year, commencing with No. 1 at the beginning of the month of January in each year, and ending with the last number included in the transactions of the year.

Lists shall be despatched only when there are advices to be forwarded.

## Article 9.

Money Orders issued either in New South Wales or Fiji in the month of December, the relative advices of which have failed to reach the respective office of exchange until the month of January, shall be entered in supplementary lists of the year in which the orders were issued.

## Article 10.

The advices on their arrival at the exchange office in the country of payment shall be compared with the entries in the list, and afterwards stamped and despatched to the office of payment.

## Article 11.

Each office of exchange shall promptly communicate to the other the correction of any simple error which it may discover in the verification of the lists.

When the lists shall show irregularities which the respective office shall not be able to rectify, that office shall apply for an explanation to the despatching office, and such explanation shall be afforded without delay.

## Article 12.

The Orders drawn by each country on the other shall be subject, as regards payment, to the regulations which govern the payment of inland orders of the country on which they were drawn.

The paid orders shall remain in the possession of the country of payment.

## Article 13.

At the close of each quarter, or as soon after as practicable, an account shall be prepared at the Post Office at Sydney showing in detail the totals of the lists containing the particulars of orders issued in either country during the quarter, and the totals of repaid and void orders. The balance due by either country shall be settled by a Bill of Exchange payable at sight. If, pending the settlement of an account, one of the two Postal Administrations shall ascertain that it owes the other a balance exceeding one hundred pounds (£100) sterling, the indebted administration shall promptly remit the approximate amount of such balance.

## Article 14.

Duplicate Orders shall be issued, and transfer of place of payment made only by the Postal Administration of the country on which the original orders were drawn, and in conformity with the Regulations established, or to be established, in that country.

## Article 15.

Repayment of Orders to remitter shall not be made until an authorisation of such repayment shall first have been obtained by the country of issue, from the country where such orders are payable; and the amounts of the repaid orders shall be duly credited to the former country in the quarterly account. (Article 13).

It is the province of such Postal Administration to determine the manner in which repayment to the remitter is to be made.

## Article 16.

## Article 16.

Orders which shall not have been paid within twelve months from the month of issue shall become void; and the sums received shall accrue to, and be at the disposal of, the country of origin. The New South Wales Office shall, therefore, enter to the credit of Fiji, in the quarterly account, all Money Orders entered in the lists received from Fiji which remain unpaid at the end of the period specified. (Article 13.)

On the other hand, the Post Office Department of Fiji shall, at the close of each month, transmit to the New South Wales Office, for entry in the quarterly account, a detailed statement of all Orders included in the lists despatched from the latter Office which under this article becomes void.

## Article 17.

The two Postal Administrations may, by mutual agreement, make modifications, if found expedient in matters of detail connected with the execution of this Convention, in order to provide for greater security against fraud, or for the better working of the system.

## Article 18.

This Convention shall take effect on the first day of July, 1898, and shall continue in force until twelve months after either of the contracting parties shall have notified to the other its intention to terminate it.

Done in duplicate, and signed in Sydney, on the 14th day of April, in the year of our Lord 1898; and in Suva, on the 30th day of May, in the year of our Lord 1898.

JOSEPH COOK,  
Postmaster-General, New South Wales.

G. T. M. O'BRIEN,  
Colonial Secretary, Fiji.

## APPENDIX F.

## GOVERNMENT SAVINGS BANK.

## STATEMENT of Accounts for the year 1898.

Account of all Deposits received and paid from 1st January to 31st December, 1898, together with a Statement of the total amount due to all Depositors at the close of 1898.

Places marked \* are also included in the Parramatta Penny Postage District.

The Town Rate of Postage, viz., 1d. the  $\frac{1}{2}$  oz., is levied upon letters posted within the under-mentioned districts for delivery within the same district:—

Within a 12-mile radius of—

NEWCASTLE—Including Adamstown, Ash Island, Belmont, Cardiff, Carrington, Charlestown, Cockle Creek, Dudley, Hamilton, Islington, Hexham, Lambton, Merewether, Minmi, Mosquito Island, Newcastle, Newcastle West, New Lambton, Stockton, Tarro, Teralba, The Junction, Tighe's Hill, Tomago, Toronto, Wallsend-Plattsburg, Waratah, West Wallsend, Wickham, William Town, and Young Wallsend.

Within a 13-mile radius of—

ALBURY—Including Albury, Black Range, Bowna, Bungowanah, Jindera, Moorwatha, Tabletop, Thurgoona.

ARMIDALE—Including Arding, Armidale, Armidale Gully, Black Mountain, Castle Doyle, Dumaresq, Hillgrove, Invergowrie, Kelly's Plains, Metz, Puddledock, Rocky River, Uralla.

BALLINA—Including Alstonville, Ballina, Bangalow, Broadwater, Buckendoon, Cowlong, Cumbalum, East Wardell, German Creek, Kilgin, Knockrow, Newrybar, North Pimlico, Pearce's Creek, Riley's Hill, Rous, Rous Mill, South Woodburn, Spring Vale, Swan Bay, Teven Creek, Tintenbar, Upper North Creek, Wardell, Wollongbar, Woodburn.

BATHURST.

- BATHURST**—Including Bathurst, Bolton Vale, Brewongle, Clear Creek, Cow Flat, Dunkeld, Duramana, Eglinton, Esrom, Evans Plains, Fitzgerald's Valley, George's Plains, Glanmire, Kelso, Locksley, O'Connell, Orton Park, Peel, Perth, Raglan, Tarana, The Lagoon, Vittoria, White Rock, Wimbleton, Yetholme.
- BOURKE**—Including Bourke, North Bourke, Pera Bore.
- BRAIDWOOD**—Including Araluen, Back Creek, Ballalaba, Bell's Creek, Braidwood, Farrington, Jembaicumbene, Larbert, Little Bombay, Major's Creek, Manar, Marlow, Mongarlowe, North Araluen, Reidsdale.
- CAMDEN**—Including Appin, Bringelly, Brownlow Hill, Camden, Campbelltown, Cobbitty, Douglas, East Minto, Eckersley, Glenfield, Greendale, Holdsworthy, Hoxton Park, Ingleburn, Luddenham, Menangle, Minto, Mount Hunter, Mulgoa, Narellan, North Menangle, Picton, Preston's, Rossmore, The Oaks, Thirlmerc, Wallace, Werombi, Wilton.
- CARCOAR**—Including Barry, Blayney, Brown's Creek, Burnt Yards, Cadia, Carcoar, Eganton, Forest Reefs, Galley Swamp, Garland, Greghamstown, Hobby's Yards, King's Plains, Lyndhurst, Mandurama, Millthorpe, Moorilda, Neville, Newbridge, Norton, Shaw, Spring Hill.
- COBAR**—Including Cobar, The Peak, Wrightville.
- COOTAMUNDRA**—Including Bethungra, Brawlin, Cootamundra, Cullinga, Dudauman, Ironbong, Jindalee, Kilrush, Moatefield, Muttama, Nubba, Pinkerton, Stockinbingal, Wallendbeen.
- DENILIQUIN**—Including Deniliquin, Pretty Pine, Southdown.
- DUBBO**—Including Belarbigill, Brocklehurst, Dubbo, Minore, Murrumbidgee, Terra Bella.
- FORBES**—Including Carrawobity, Forbes, Tichborne.
- GLEN INNES**—Including Beaufort, Dundee, Dundee Railway Station, Glencoe, Glen Innes, Graham's Valley, Matheson, Reddestone, Red Range, Stonehenge, Wellingrove.
- GOULBURN**—Including Breadalbane, Bungonia, Carrick, Goulburn, Kenmore, Merrilla, Mummel, Parkesbourne, Tarlo, Thornford, Towrang, Yarra.
- GRAFTON**—Including Bawden Bridge, Brushgrove, Coldstream, Copmanhurst, Coutt's Crossing, Cowper, Eatonsville, Gerrymberryn, Grafton, Kangaroo Creek, Lower Southgate, Ramornie, Seelands, Southgate, South Grafton, Stockyard Creek, Ulmarra, Upper Coldstream, Upper Copmanhurst, Whiteman Creek.
- HAY**—Including Belcoeth, Hay.
- IVERELL**—Brodie's Plains, Elsmore, Gilgai, Goomoorah, Gum Flat, Inverell, Nullamanna, Oakwood, Rob Roy, Stannifer, Tingha.
- KATOomba**—Including Bell, Blackheath, Bowenfels, Clarence Tunnel, Hartley, Hartley Vale, Hazlebrook, Katoomba, Katoomba South, Lawson, Leura, Linden, Lithgow, Little Hartley, Lowther, Medlow, Megalong, Mount Victoria, South Bowenfels, Vale of Clwydd, Wentworth Falls, Woodford.
- KEMPSEY**—Including Belgrave, Clybucca, East Kempsey, Frederickton, Gladstone, Greenhill, Kempsey, Kinchela Creek, Sherwood, Skillion Flat, Smithtown, Summer Island, Warneton, West Kempsey, Woodhall.
- KIAMA**—Including Albion Park, Berry, Bombo, Broughton Vale, Broughton Village, Coolangatta, Croome, Dapto, Dunmore, Foxground, Gerringong, Jamberoo, Jerrara, Kiama, Marshall Mount, Pheasant Ground, Rose Valley, Shellharbour, Tanner's Creek, Tongarra, Tullimbar, Wattamolla, Woodhill, Yellow Rock.
- LISMORE**—Including Alstonville, Bexhill, Buckenoon, Bungawalbin, Casino, Clunes, Codrington, Cooper's Creek, Coraki, Cowlong, Dorroughby Grass, Dunoon, Eltham, Eureka, Goolmangar, Goonellabah, Greenridge, Gundurimba, Irvington, Jiggi, Kilgin, Lismore, Numulgi, Pearce's Creek, Riley's Hill, Rosebank, Rous Rous Mill, South Codrington, South Woodburn, Spring Vale, Steve King's Plains, Swan Bay, Tatham, Teven Creek, Tomki School, Tuckurimba, Wollongbar, Woodburn, Woodlawn, Wyrallah.
- LITHGOW**—Including Bell, Blackheath, Bowenfels, Clarence Tunnel, Hartley, Hartley Vale, Katoomba, Katoomba South, Leura, Lidsdale, Lithgow, Little Hartley, Marrangaroo, Medlow, Megalong, Mount Victoria, Piper's Flat, Portland, Rydal, South Bowenfels, Vale of Clwydd, Wallerawang.
- MACLEAN**—Including Brushgrove, Chatsworth Island, Coldstream, Cowper, Harwood Island, Iluka, Lawrence, Lower Southgate, Maclean, Palmer's Island, Shark Creek, Southgate, Taloumbi, Tyndale, Upper Shark Creek, Woodford Leigh, Yamba.
- MOLONG**—Including Amaroo, Belgravia, Boomey, Borenore, Canoblas, Cheeseman's Creek, Cumnock, Eurimbla, Garra, Manildra, Meranburn, Molong.
- MOSS VALE**—Including Avoca, Barrengarry, Berrima, Bowral, Braemar, Bundanoon, Burradoo, Burrawang, Colo Vale, Cross Roads, East Kangaloon, Exeter, Glenquarry, Joadja Creek, Kangaloon, Kareela, Meryla, Mittagong, Moss Vale, Myra Vale, North Yurrunga, Robertson, Sutton Forest, and Yurrunga.
- MUDGEE**—Including Avisford, Broombe, Budgee Budgee, Canadian Lead, Collingwood, Cooyal, Cullenbone, Eurunderee, Home Rule, Limburn, Lower Botobolar, Mudgee, Stony Creek, Upper Meroo, Windeyer.
- MUSWELLBROOK**—Including Aberdeen, Dunbar's Creek, Kayuga, Liddell, Muscle Creek, Muswellbrook, Spring Creek, Wybong.
- NARRANDERA**—Including Grong Grong, Narrandera, Yanko.
- NOWRA**—Including Barrengarry, Bellowongarah, Bendeela, Berrellan, Berry, Bolong, Bomaderry, Burrier, Cambewarra, Comerong, Coolangatta, Falls Creek, Greenwell Point, Huskisson, Jasper's Brush, Kangaroo Valley, Meroo Meadow, Moeyan, Nowra, Numba, Pyree, Terara, Tomerong, Wattamolla, West Cambewarra, Woodhill, Yalwal.
- ORANGE**—Including Amaroo, Belgravia, Borenore, Byng, Cadia, Canoblas, Cave Creek, Cheeseman's Creek, Forest Reefs, German's Hill, Guyong, Lewis Ponds, Lucknow, March, Millthorpe, Mullion Creek, Ophir, Orange, Spring Hill, Springside.
- PARKES**—Including Bindogandra, Kamandra, Parkes, Tichborne.
- PARRAMATTA**—Including Abattoirs, Alexandria, Annangrove, Annandale, Arcadia, Arncliffe, Ashfield, Auburn, Balmain, Bankstown, Baulkham Hills, Beaconsfield, Beecroft, Belmore, Bexley, Biloela, Blacktown, Blakehurst, Bonnyrigg, Bossley Park, Burwood, Cabramatta, Camperdown, Canley Vale, Canterbury, Carlingford, Carlton, Castle Hill, Chatswood, Colyton, Como, Concord, Crow's Nest, Croydon, Darlington, Doll's Point, Druiit Town, Drummoyne, Dulwich Hill, Dundas, Dural, East Balmain, Eastern Creek, East Hills, Eastwood, Enfield, Enmore, Epping, Ermington, Erskineville, Fairfield, Five Dock, Galston, Gladsville, Glebe, Glenfield, Glenhaven, Glenorie, Gordon, Granville, Greenwich, Guildford, Guildford Railway Station, Harnleigh, Homebush, Hornsby, Hornsby Junction, Holdsworthy, Holroyd, Hoxton Park, Hunter's Hill, Hurstville, Ingleburn, Kellyville, Kenthurst, Kingsgrove, Kogarah, Lady Robinson's Beach, Leichhardt, Lilyfield, Lindfield, Liverpool, Longueville, Macdonaldtown, Marrickville, Marsden Park, Marsfield, May's Hill, Meadow Bank, Merrylands, Middleton-street, Military-road, North Sydney, Milson's Point, Moorebank, Mortdale, Mortlake, Mount Druitt, Neutral Bay, Newtown, North Botany, North Parramatta, North Ryde, North Sydney, Peakhurst, Pennant Hills, Pennant Hills Railway, Petersham, Plumpton, Preston's, Prospect, Prospect Reservoir, Pymble, Redfern, Riverstone, Riverview, Rockdale, Rookwood, Rooty Hill, Rouse Hill, Rozelle, Rydalmere, Ryde, Sandringham, Sans Souci, Seven Hills, Smithfield, St. Ives, St. John's Park, St. Leonard's, St. Mary's, St. Peter's, Stanmore Railway Station, Strathfield, Summer Hill, Sydney and its City Branch Offices, Tempe, Tempe Park, Thornleigh, Toongabbie, Turramurra, Upper Bankstown, Wahroonga, Wanstead, Waterloo, Wentworthville, West Pennant Hills, Wetherill Park, Willoughby, Woolwich.
- PENRITH**—Including Agnes Banks, Badgery's Creek, Blacktown, Castlereagh, Cranebrook, Colyton, Eastern Creek, Emu, Emu Plains, Faulconbridge, Freeman's Reach, Glenbrook, Greendale, Grose Vale, Hazlebrook, Jamison Town, Kingswood, Kurrajong, Linden, Llandilo, Luddenham, Marsden Park, Mount Druitt, Mulgoa, Mulgrave, North Richmond, North Springwood, Penrith, Plumpton, Prospect, Richmond, Riverstone, Rooty Hill, Rouse Hill, St. Mary's, Seven Hills, Springwood, The Valley, Toongabbie, Wallace, Windsor, Woodford.

- QUEANBEYAN**—Including Bulga Creek, Bungendore, Burra, Canberra, Majura, Ginninderra, Hall, Hoskins Town, Molonglo, Queanbeyan, Sutton, Tallagandra, Tharwa, Tuggranong, Williamsdale.
- QUIRINDI**—Castle Mountain, Fairview, Quipolly, Quipolly Creek, Quirindi, Wallabadah, Warrah Ridge, Werris Creek, Willow Tree.
- ROBERTSON**—Including Albion Park, Barrengarry, Bendeela, Bowral, Brownsville, Burradoo, Burrawang, Colo Vale, East Kangaloon, Glenquarry, Kangaloon, Kangaroo Valley, Marshall Mount, Mittagong, Moss Vale, North Yurrunga, Pheasant Ground, Robertson, Rose Valley, Tongarra, Tullimbar, Wattamolla, Wild's Meadow, Woodhill, Yurrunga.
- SCONE**—Including Aberdeen, Brushy Hill, Gundy, Kayuga, Owen's Gap, Parkville, Rouchell Brook, Scone, Wingen.
- SINGLETON**—Including Belford, Boggy Flat, Branxton, Bridgeman, Broke, Bulga, Camberwell, Elderslie, Glendon Brook, Glennie's Creek, Gouldsville, Jerry's Plains, Liddell, Lower Belford, Mitchell's Flat, Ravensworth, Rix's Creek, Scott's Flat, Sedgfield, Singleton, Vere, Warkworth, Westbrook, Whittingham.
- TAMWORTH**—Including Attunga, Attunga Springs, Bective, Duri, Moonbi, Moonbi Railway Station, Moor Creek, Nemingha, Tamworth, Tintin Hull, West Tamworth.
- TAREE**—Including Cattai Creek, Cedar Party Creek, Coopernook, Cundletown, Dingo Creek, Ghinni Ghinni, Glenthorne, Harrington, Jones' Island, Killawarra, Kimbriki, Krumbach, Kundibakh, Lansdowne, Marlee, Mitchell's Island, Oxley Island, Pampoolah, Taree, Tinonee, Upper Lansdowne, Wingham.
- WAGGA WAGGA**—Including Alfred Town, Bomen, Brucedale, Collingullie, Downside, Harefield, Lake Albert, Malebo, Uranquinty, Wagga Wagga, Yathella, Yarragundry.
- WELLINGTON**—Including Baker's Swamp, Bodangora, Comobella, Curra Creek, Dripstone, Geurie, Lincoln, Maryvale, Montefiores, Neurea, Ponto, Suntop, Walmer, Wellington, Wuuluman.
- WEST MAITLAND**—Including Aberglasslyn, Allandale, Bellevue, Bishop's Bridge, Branxton, Buchanan, Cessnock, Dalwood, East Maitland, Eskdale, Farley, Glenoak, Gosforth, Greta, Hexham, Hinton, Lamb's Creek, Largs, Lochinvar, Miller's Forest, Morpeth, Mount Vincent, Nelson's Plains, Paterson, Pokolbin, Raymond Terrace, Rosebrook, Rothbury, Sawyer's Gully, Seaham, Tarro Railway Station, Vacy, West Maitland, Woodville.
- WINDSOR**—Including Agnes Banks, Blacktown, Castlereagh, Central Colo, Colyton, Comleroy Road, Cranebrook, Ebenezer, Emu, Emu Plains, Freeman's Reach, Grose Vale, Kellyville, Kingswood, Kurrajong, Kurrajong Heights, Leet's Vale, Llandilo, Lower Portland, Marsden Park, Mount Druitt, Mulgrave, North Richmond, Penrith, Pitt Town, Plumpton, Richmond, Riverstone, Rooty Hill, Rouse Hill, Sackville Reach, St. Mary's, Seven Hills, Toongabbie, Upper Colo, Wilberforce, Windsor.

Also between—

- Broken Hill, South Broken Hill, and Broken Hill Railway Station.  
 Harden and Murrumburrah.  
 Narrabri and Narrabri West.  
 Wyalong, Wyalong West, and Sixteen-mile Tank.  
 And upon letters posted at any City or Town in the Colony for delivery within the same City or Town.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MEN EMPLOYED ON TELEPHONE TUNNEL WORKS.

(RETURN RESPECTING.)

*Printed under No. 2 Report from Printing Committee, 10 August, 1899.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 18th April, 1899, That there be laid upon the Table of this House,—

“All papers relating to the employment, discharge, and rate of wage of men employed on telephone tunnel works since 10th February, 1899.”

(Mr. Hughes.)

No. 1.

The Clerk of Works to The Deputy Postmaster-General.

Sir,

Martin-place, Sydney, 7 March, 1899.

On Friday last Mr. Gregory conveyed your instructions to me—“Not to pay the shilling a day increase of wages, as per the pay-sheet, to W. Tolly, the foreman on No. 9 section of the tunnels.” I consider it my duty to remind you of the fact that when Mr. J. Cook, the late Postmaster-General, did me the honor of placing the construction of the tunnels by day labour in my hands, I accepted the responsibility only on condition that I should have full control of the employment and dismissal of the men required on the work, and that I should rate each man according to the value of his labour. To these conditions Mr. Cook assented, in the presence of the Engineer-in-Chief, stipulating only that I must be guided as to the *minimum by the Minister for Works' Schedule of Minimum Wages payable on public works.*

I have carried on the whole of the works under these conditions, and my actions have not been interfered with in any way until last week.

I have obeyed your instructions, and did not pay the additional shilling per day, and have refunded the money to the Treasurer. I must say, however, that Mr. W. Tolly is worth more than the 13s. per day while there are so many men to control and so much work to do; and if I, as manager of the work, cannot estimate the value of a man's labour who is working under me on work with which I have had many years' experience, who on earth can or is supposed to do so?

I am, &amp;c.,

GEORGE DONALD.

I have to sign the pay-cheque, and certainly knew nothing of such large powers having been given to Mr. Donald. Mr. Walker might report.—S.H.L., 8/3/99.

Mr. Donald was appointed Clerk of Works for the tunnels by the late Postmaster-General, and in that capacity I understood that he was responsible to the engineers in charge of the work, Messrs. McCredie, whose certificate I always insisted on before submitting any vouchers for payment. So far as my recollection goes, Mr. Cook did, verbally, give Mr. Donald complete control of the men and the regulation of their pay.—P.B.W., 9/3/99.

This is the first I have heard of any such arrangement. It seems unreasonable that the Clerk of Works should have the absolute power of fixing the men's wages. If he could increase them, as in the case in question, by 6s. a week, he could apparently raise them, if he thought fit, by £1 a week. I always understood that a standard rate of pay was allowed, on the scale adopted by the Works Department. The question now is whether Tolly is to have the extra 1s. a day.—S.H.L., 9/3/99.

No.—V.P., 9.

119—A

Mr.

Mr. Donald points out that Mr. Cook stipulated that he was to be guided by the Minister for Works' schedule of *minimum* wages payable on public works. I do not think he is overpaid at the rate proposed, as he is a first-class man.—P.B.W., 9/3/99.

Yes; but the amount now in question is above the minimum. Submitted.—S.H.L., 9/3/99. Twelve shillings a day is ample pay for Mr. Tolly.—V.P., 9.

Read, noted, and returned, March 10th.—T. BAVISTER. For Mr. Tolly's information. To be returned. Noted.—W.H.M., 13/3/9.

## No. 2.

### Minute by The Postmaster-General.

*Subject* :—Rate of wages to be paid to men working in the tunnels.

MR. BAVISTER must clearly understand that the following are the maximum wages to be paid to men working in the tunnels, and these rates must on no account be exceeded:—Bricklayers, 9s. a day; plasterers, 9s. a day; labourers, 7s. a day.

Any men now in receipt of wages in excess of these sums should be at once informed that, on and after to-morrow, they will only be paid at the above rates.

Tolly, employed I understand as Foreman, must be informed that his wages, on and from to-morrow, will be at the rate of 12s. a day only.

VARNEY PARKES,  
10th March, 1899.

Mr. Bavister and Accountant to note.—P.B.W., 10/3/99. Noted.—T. BAVISTER, 10/3/99.

## No. 3.

### The Clerk of Works to The Postmaster-General.

*Subject* :—Rate of wages to be paid to men working on tunnels.

Sir,

Martin-place, 11 March, 1899.

Having read minute above referred to, and feeling convinced that the Hon. Postmaster-General cannot be aware of following facts, I desire respectfully to state them for his information.

Nineteen bricklayers are employed, as shown by wage-sheet—Sixteen are paid 10s. per day; one at 11s. per day; one, an improver, is paid 7s. 6d. per day, and one (Harding) has not yet received any pay, starting on the 10th instant.

Upwards of thirty men classed labourers have been paid 7s. 6d. or more per day, having special qualifications and duties.

Is it intended that where men are doing special work, and are held responsible in some instances for proper discharge of duty by others, shall receive only the same pay as those of less ability and who take no responsibility, and is it further intended to reduce the whole of the bricklayers 1s. per day each?

Trusting this matter may be brought under the notice of the Hon. Postmaster-General with the least possible delay,—

I am, &c.,

THOMAS BAVISTER,  
Clerk of Works.

Submitted.—S.H.L., 11/3/99. Ask Mr. Bavister to state his definite cases.—V.P., 11. T. BAVISTER, 13/3/99. *i.e.*—What men are doing special work and are held responsible, &c., and what their wages should be in Mr. Bavister's opinion; also, why should not all bricklayers have uniform pay?—S.H.L.

## No. 4.

### The Clerk of Works to The Chief Electrician and Engineer-in-Chief of Telegraphs.

#### RATES OF WAGES TO BE PAID.

*Questions* :—What men are doing special work or are held responsible? What their wages should be? Why should not all bricklayers have uniform pay? Workmen, classed labourers on pay-sheet, receiving more than 7s. per day, showing what kind of work they do entitling them to different pay than that of the ordinary pick-and-shovel hand?

#### Section 9.

A. Walker, J. Dickson, each 8s. 6d.—first-class miner and timber-men of proved ability and carefulness; the safety of the workmen and the work often depends on their skill and care; leading men.

J. Butler, A. McGregor—both first-class miners and timber-men; get 8s. per day.

A. Lewis, drainer—good and capable man; paid 8s. per day.

A. Power, J. Stockton—leading packers and first-class rock-men; 8s. per day.

W. Andrews, M. Bourke, M. Brennan, M. Byrnes, A. Casburn, D. Cooney, W. Davis, T. Fitzsimmons, W. Gategood, T. Lanegan, C. Montgomery, F. Mitchell, W. Rogers, R. Thompson, D. Bres, J. McGuire, W. King—each of these men are good men as miners, rock-men, timberers, and packers; at 7s. 6d.

J. H. Riley is a carpenter and timber-man, suitable for this kind of work; paid 7s. 6d. This man is classed carpenter on wage-sheet.

A. Bryer is in charge of Woolloomooloo Yard, and receives and checks all material, and superintends such work as is done there—sand crushing and washing, and stone-breaking, the latter being piece-work at per ton.

G. Digby is concrete-man—a good man, leaving clean, well-graded work. These two men each get 7s. 6d. per day.

W. Clark, H. Martin, J. Neilson, and J. Riley (the latter now on No. 10) are first-class bricklayers' labourers; experienced at this work; who know the requirements of, save much time to the bricklayers, direct and lead the other labourers, making their work more effective; they are paid 7s. 6d. per day, and are fully worth it.

Martin Power, acting blacksmith, is not a success in that position, and I recommend he be put on the rock-cutting, at which he is a good man, and that another smith be employed.

No.

## No. 10 Section.

G. Bancroft is leading rock-man, a first-class man, at 8s. per day.

A. Henson is fire-master and powder-man, at 8s.

T. Oliphant, pipe-layer and drainer, getting 7s. 6d., worth 8s.

S. Grocock is concrete-man on this section.

All the other men classed labourers on the pay-sheet, except P. Woods, are good workmen in rock-work as hammer and drill men or gutterers. This section being nearly all rock, other men were of no use.

They are all paid 7s. 6d., and, except the one named, are worth that rate.

J. Riley and A. Vernon, bricklayers' labourers, are each well worth the 7s. 6d. per day they are paid.

In reply to query as to uniform pay to bricklayers,—

W. Urquhart, who has all through been foreman, is well worth the 11s. per day paid to him. He is a capable and experienced man.

A. Locke, who, with consent of Postmaster-General, has been put in charge of brickwork of No. 10, is worth fully 11s. per day while he retains that position. He is as good a workman as any in the employ, and though he has a smaller number of men to control than Urquhart, he compensates for that by laying bricks himself when not actually engaged setting lines and profiles. He is getting a much better result from the bricklayers on this section (who were all strange to this work) than was obtained when there was no particular person responsible.

There are three bricklayers, two on No. 10 and one on No. 9, who are not nearly equal in efficiency to the others, and whom I consider it desirable to remove, as if they are paid a lower rate according to the worth of their labour they only act as a drag on the other men, to the detriment of the work.

THOMAS BAVISTER,  
Clerk of Works, Telephone Tunnels, 14/3/99.

Submitted.—S.H.L., 15/3/99. Mr. Bavister must adhere to the standard of wages set out in Minute 10, but his foremen may be paid 11s.—V.P. Mr. Bavister to note.—P.B.W., 15/3. Noted, 16/3/99. Further reasons submitted; reconsideration asked.—THOMAS BAVISTER. W.H.M., 17/3/99.

## No. 5.

## The Clerk of Works to The Deputy Postmaster-General.

Sir,

1, Martin-place, 16 March, 1899.

I desire to point out that the Public Works Department are paying bricklayers 10s., labourers 7s. 6d. per day, on the extension and additions now being carried out at the G.P.O., and also on the other works being carried out by that Department as day labour.

Leading contractors are paying same or higher rates on general building construction.

Contractors carrying out sewer work (of which class this tunnel work is, being underground, executed in cement, with saturated bricks, frequently difficult of access, from timber, pipes, and other causes of obstruction) pay higher rates of wages, by in some cases 50 per cent., than those in force on the telephone tunnels.

The rates paid on this work were fixed at the commencement of section 9 (Railway to Glebe Road) some months ago, and have been continuously confirmed and endorsed during all that period by the weekly pay-sheets being accepted and passed by the Department without any objection being made.

For all these reasons, and the fact that the men specified are each well worth the pay he is receiving,—

I respectfully resubmit the matter for further consideration.

THOMAS BAVISTER.

Urgent.—P.B.W. Submitted.—S.H.L., 16/3/99. I think Mr. Bavister is right. Let him fix a standard of wages and submit.—V.P., 17. Mr. Bavister.—P.B.W., 17. THOMAS BAVISTER, 17/3/99. It is necessary for you to submit a scale for the P.M. General's approval.—P.B.W., 18/3/99.

## No. 6.

## The Clerk of Works to The Deputy Postmaster-General.

21 March, 1899.

In response to request to submit a rate of wages, I submit the following list:—

Bricklayers, 10s.; foremen, 11s.

Plasterers, 10s.; first-class brick labourers, 7s. 6d.

Unskilled labourers, 6s. 6d. and 7s.—excavation work.

First-class experienced men in all details of the work as miners, timberers, packers, drilling, blasting, &c., competent to take charge and lead set of men, 8s. 6d. per day.

Good miners, timberers, packers, and rock-man, 8s.

Good men as miners and timberers or packers or rock-man, but not combining all these qualifications, 7s. 6d. per day.

Ordinary pick-and-shovel men, 7s.

First-class concrete-man, able to gauge, lay, and grade, 8s. per day.

Good concrete-men, gauge, &c., 7s. 6d.

Drainers accepted by W. and S. Board, 8s.

Yours, &c.,

THOMAS BAVISTER,  
Clerk of Works  
(per E. F.)

THOMAS BAVISTER, 21/3/99. Submitted.—S.H.L., 22/3/99. Let this be the unalterable scale of wages to be paid.—V.P., 22. Noted.—W.H.M., 22/3/99. Mr. Bavister and Accountant to note.—P.B.W., 23/3/99. T. BAVISTER, 23/3/99. Noted.—C.S.G., 24/3/99. P.A., J.T.

## No. 7.

## Minute by The Deputy Postmaster-General.

General Post Office, Sydney, 13 March, 1899.

I PRESUME the routine to be adopted in regard to employees on the tunnels is understood by every one, namely:—Mr. Bavister notes the paper conveying the authority for the employment; the name is then scored off the list, and the paper afterwards sent to the Accountant to note.—S.H.L.

Yes. Mr. Bavister might note this.—P.B.W., 13. Noted.—T. BAVISTER, 13/3/99.  
Accountant might also note.—S.H.L., 14. Noted.—W.H.M., 15/3/99. Noted.—F.C., 15/3/99. J.O.

## No. 8.

## Minute by The Deputy Postmaster-General.

THE Postmaster-General desires that no information whatever be given to persons outside the Department as to whether there are vacancies on the tunnel works, or whether more men are wanted. Information of this kind only leads to additional applications being made, and there are now over 200 names on the list awaiting employment.—S.H.L.  
10th March, 1899.

Mr. Walker, Messrs. McCredie, Mr. Bavister to note.—S.H.L. Noted.—P.B.W., 10/3/99.  
Noted.—T. BAVISTER, 10/3/99. Returned to me attached to minute-paper *re* wages.—T. BAVISTER, 13/3/99. Noted and returned.—A.L. and G. McC., 16/3/99.

## No. 9.

## Minute by The Postmaster-General.

(B. 2-1,468.)

ALL the men, excepting foremen and special men stated to Mr. Lambton by Mr. Bavister, whom Mr. Donald, the former Clerk of Works, placed upon the tunnel works without official authority to the number of 115, provided they have had two months' work and over, will not be employed after Thursday, the 30th, nor at whatever day their work ends; but those specially put on by the Departmental authority, and so stated in Mr. Donald's list, are to remain. In the place of those men who will be removed, the men whose names are ticked by me in the official list of recommended men will be employed indefinitely. VARNEY PARKES.

Mr. Bavister to note.—P.B.W., 22/6/99. Number of names on list of tunnel-men taken on by Mr. Donald contains 140 names; evidently only one column of section 10 was counted.—T. BAVISTER, 30/3/99.

## No. 1.

LIST of tunnel-men taken on by Mr. Donald, and who have had two months' work and more, so as to make room for the next shift.—V.P.

## Section 10.

## No. 10.

The Clerk of Works to The Deputy Postmaster-General.

Sir,

Martin-place, 22 March, 1899.

I desire to call attention to the fact that, by directions dated 21/3/99, the workmen's week now ends at 5 p.m. on Wednesdays, and would suggest that effect be given to this minute either on the 29th instant or the 5th prox., otherwise trouble and possible confusion may be caused the Accountant, unless the men so discharged on Thursday have to wait one week and make a special journey for the one day's pay due. The number of names on lists total 140, not 115. I have requested Mr. Fisher to furnish necessary particulars to enable me to comply with P.M.G.'s direction, under which, as stated, all the foremen—Tolly, Urquhart, Lock, and Buchanan—as well as the drainers, concrete-layers, most expert and experienced miners, and bricklayers will be discharged, which is contrary to the intentions expressed by the Hon. P.M.G. to me at an interview this day.

I have, &c.,

THOMAS BAVISTER.

Say the 29th.—V.P., 22. Mr. Bavister.—P.B.W., 22. See P.M.G.'s amendment in pencil of previous minute.—S.H.L., 23. THOS. BAVISTER, 23/3/99. List of names of men to be employed gives no guide as to what occupation such men usually follow.—THOMAS BAVISTER, 23/3/99. Perhaps the best way would be for Mr. Bavister to send for each in *numerical* order as required and question them.—S.H.L., 24. T. BAVISTER, 25/3/99. Urgent.—P.B.W. I have retained list on tissue paper to obtain particulars.—T. BAVISTER.

## No. 11.

The Clerk of Works to The Deputy Postmaster-General.

Sir,

27 March, 1899.

I herewith submit lists of names of employees to be discharged and of others necessary to be retained, in accordance with P.G.M.'s directions (see B. 2-1,468), which I shall be glad to have confirmed or otherwise dealt with as early as possible.

May

May I also be informed as to what interruption of work will be caused by Easter holidays, to enable me to arrange for the starting of such fresh men from list supplied to me for that purpose.

Yours, &c.,

THOMAS BAVISTER.

Submitted. I suppose work should cease on Good Friday and Easter Monday only.—S.H.L., 28. Yes. Mr. Bavister ought to know what is usually done.—V.P., 29.

No. 1.

LIST of men stated to have been irregularly employed who Postmaster-General directs should be discharged on completing two months' employment, to operate on March 29th:—  
(Pay drawn to and include March 22.—From Thursday, 30th, at 9 a.m.)

	weeks	days		weeks	days
*Bryers, A., yardman, Circular Quay.....	13	0	*Mitchell, F., miner .....	10	6
*Brown, E., navy .....	10	3	*Nash, G., windlass hand .....	12	4
*Casbourne, F., miner .....	13	2	*Neilson, J., brick labourer .....	8	2
*Dunn, T., navy .....	8	1	*McCotter, T., miner .....	8	5
*Fahey, T., navy .....	12	5	*Walker, A., miner .....	14	0
*Gaitgood, W., navy .....	11	1	*Walker, R., labourer .....	9	3
*Hennebury, W. ....	10	1	*Williams, D., labourer .....	14	4
*Le Bris, C., miner .....	10	4	*Worboys, J., bricklayer .....	10	4
*Lee, T., mason .....	11	3	*Walsh, M., labourer .....	8	5
*Martin, J., labourer .....	13	6			

Mr. Bavister must make room for the full number ticked off upon the list.—V.P., 29.

No. 2.

LIST of men who Mr. Bavister recommends to be retained in employment, and specially states for that purpose as directed by Postmaster-General (*see* B. 2-1,468):—

*Aspinall, J., lampman, section 9.	†James, G., leading mason and flag-layer.
*Aspinall, A., boy carrying tools to and from smith, son of lampman.	*King, W., leading rock-man, driving and blasting.
†Andrews, W., packer.	*Kershaw, T., flag-layers' assistant and kerb-setter.
*Bryers, W., boy assistant to bricklayers; more useful than many men.	†Lewis, A., first-class drainer.
†Butler, J., miner.	*Lewis, M., boy, son of and assistant to above.
†Cousins, W., mason and kerb-setter.	†Lymer, bricklayer.
†Dickson, J., miner; most suitable man for foreman if one should be required.	*Lahiff, J., mason.
*Dickson, A., boy, son of above, 5s. per day.	*Martin, H., bricklayers' labourer.
†Digby, G., our best concrete-layer.	*Montgomery, C., packer.
†Flannery, D., day-carter; intelligent and reliable, knows all sources of Departmental supply.	†Murphy, M., yardman, George-street West.
†Hill, W., bricklayers' labourer.	†Nolan, F., bricklayer.
Holt, Geo., bricklayer, not yet due.	†Oliphant, Thos., drainer.
*Jeffs, E., lad, cart-checker; experienced, smart youth, 3s. 6d. per day.	*Stowell, H., smiths' assistant, George-street.
	*Rogers, W., rock-man.
	†Stockton, J., packer.
	†Whitfield, T., timberer and carpenter.
	†Wadsworth, H., youth, with bricklayers; good working, useful boy, 3s. 6d. per day.

THOS. BAVISTER,

28/3/99.

No; these men must go and give others an opportunity. It is only in the case of gangers or foremen who cannot well be dispensed with. I presume all these have been more than two months employed.—V.P.

All those marked (\*) discharged; all those marked (†) kept on.—T.B., 29/3/99. Further particulars and request attached.—T.B.

No. 12.

The Clerk of Works to The Deputy Postmaster-General.

Sir,

Martin-place.

I have to report all men in list No. 1, dated 27th March, 1899, have been discharged this evening (except first on the list, A. Bryer), in consequence of my not reaching Woolloomooloo yard in time; he will cease work at 9 a.m. Thursday, 30th.

Eylis and Grocock also discharged from No. 10 section.

Of the men on List 2—Andrews and Stockton (packers), Butler and Dickson (miners), I have not discharged, as these men are absolutely necessary to be retained, for safety of passing people, workmen employed, and property immediately adjacent to the work; Cousins, W. (mason and kerb-setter), and James Griffiths (foreman mason and pavior); Lewis, A., and Oliphant, T. (drainers under Water and Sewerage Board, sections 9 and 10); Lymer, W., Nolan, F. (bricklayers—two best and most experienced men at this work); Hill, W. (bricklayers' labourer—careful, capable, and experienced, necessary in places of difficulty and danger); Flannery, D. (day-carter—who knows the Departmental of supply, is a thoroughly trustworthy man, with first-class dray and horse); Whitfield, T. (first-class timberer and carpenter); Wadsworth, H., junior (bricklayer, at 3s. 6d. per day—worth more, a most useful boy); Murphy, M. (yardman at George-street West)—smart man for such work, thoroughly checking incoming and outgoing material, and thoroughly trustworthy; a great consideration, as a large amount of property not owned by the Government is in this yard.

For these reasons I have not discharged these men, and again respectfully request that they may be retained. Forty-three men discharged.

Yours, &c.,

THOMAS BAVISTER,

29/3/99.

Submitted.—S.H.L., 30. Yes; but other men who can be put off must be put off to make room for the second batch of 115.—V.P., 30. Mr. Bavister.—P.B.W., 30/3/99. THOMAS BAVISTER, 30/3/99. Read.—S.H.L., 4.

No. 13.

No. 13.

The Chief Electrician and Engineer-in-Chief of Telegraphs to The Clerk of Works.

Mr. Bavister,

17 April, 1899.

Are the men who were noted on the first list employed now?  
 What are the rates of wages? Have they been lowered?  
 How many are there upon the lists unemployed?

P.B.W.

Or the list of men to be discharged—On section 9, 14 have not yet reached time limit stated (two months); on section 10, 23 have not yet reached time limit stated (two months); leaving 37 still to be discharged. Of list marked in red ink (No. 2) to fill vacancies, all have been written to except 12, for whom no address was obtained—92 of these have been employed, 5 are in other employment, 12 either have not responded to letters or are of occupations not required. Of first portion of Postmaster-General's special list to work on section 12, comprising 27 names, 23 have been employed, 2 have not responded, 2 are of occupations not required. Second portion, comprising 32 names—7 were without address, 21 have been employed, 2 did not respond, 1 is probably on his way from Mount Victoria to start work, and 1 (McQuinn) has been submitted for Postmaster-General's decision. Wages are in accordance with schedule approved by Postmaster-General, and have not been lowered. One man was lowered last week, having only worked half a day before previous rating.—THOMAS BAVISTER, 18/4/99.

No. 14.

The Clerk of Works to The Chief Electrician and Engineer-in-Chief of Telegraphs.

Sir,

27 February, 1899.

Enclosed is a list of men working on the telephone tunnels, with the names of those who recommended them. Those marked P.M.G. were names sent from your office without any other recommendation, except the Postmaster-General, so far as I know.

The names with the green tick (thus \*) in front are men who were previously employed on the work, and whom I could depend upon.

Those with the blue dot (thus †), most of whom have been on the previous work, had been in Lithgow some years ago.

Those with the red mark (thus ‡) are the only two who came from Lithgow recently, both qualified miners and good workers.

Where the other men live or come from I do not know, as I never inquire, except the address is left when they bring a letter of recommendation.

Those names without a mark were engaged on the work as they applied, about nine of whom were personally recommended by several Members of Parliament, and I did not make a note of the names.

Singularly, only three mechanics were recommended to me, and I had to depend on applicants on the job for bricklayers, carpenters, and blacksmiths. I have plenty now, and don't want any more.

I notice that the best men, either navvies, labourers, or mechanics, do not trouble Members or anyone else for letters of recommendation, with a very few exceptions.

The system of employing men on letters of recommendation is demoralising to the best—some who bring them cannot be demoralised any more.

There are also in addition to the list 26 carters on No. 9 section and 18 on No. 10. These are employed at per load, and are intermittent, as the work requires.

GEORGE DONALD.

For the Postmaster-General's information. This list should not be recorded or made official, as it would then have to go to the Public Service Board, and these become appointments under the Board, out of our control. At present they are temporary, and unrecorded. The Clerk of Works must have a free hand to deal with the men, otherwise he has no control, and they will become unmanageable.—P.B.W., 27/2/99.

## No. 15.

The Clerk of Works to The Deputy Postmaster-General.

Sir,

Martin-place, 30 March, 1899.

I am arranging to-day to communicate with first fifty men on list to be employed, asking them to attend at this office, Tuesday, at 7.30 to 8 a.m., with a view to those whose occupation corresponds with that of the men discharged filling such vacancies.

And I further propose to notify as many as can be started on section 12, as directed.

Yours, &amp;c.,

THOMAS BAVISTER.

Why only 50 when instructions were given for 115?

Because 79 had worked less than two months, which the Hon. P.M.G. made one condition.—T. BAVISTER, 4/4/99.

Those men whose names were specially taken for the new section must go on first. The 115 whom I marked to take the places of men put off must be kept on the old sections until completion.—V.P. Mr. Bavister. P.B.W., 4/4/99.

These fifty, as note states, were to fill places vacated on Wednesday last on sections 9 and 10. Next paragraph states, "And I further propose to notify as many as can be started on section 12, as directed." The only special list of men to be employed which has yet reached me is a list of typed names with No. 2 written in red ink on head of first sheet, commencing:—5. Michael Lee, Church-street, Camperdown, and closing, on fourth sheet, with 325, W. Baxter, Steam-mill-street, City.—THOMAS BAVISTER, 11.50 a.m., 4/4/99.

Very few of the 115 or 140 can be found room for on either sections 9 or 10, as these sections have now been opened up to within a few yards of their termination.—T.B., 4/4/99. Then none of the old hands now working on completing sections are to go on the new one, No. 12.—V.P. THOMAS BAVISTER, 7/4/99.

## No. 16.

J. C. Watson, Esq., M.P., to The Deputy Postmaster-General.

Dear Sir,

Parliament House, 29 March, 1899.

The bearer is Mr. J. M. Toomey, about whom Mr. Watkins and myself spoke to you last night.

Yours &amp;c.

J. CHRIS. WATSON.

Postmaster-General says put him on as foreman on No. 12 section, at 10s. a day.—S.H.L., 30. Mr. Bavister.—P.B.W., 30. THOMAS BAVISTER, 30/3/99. W.J.S., 14/4/99. Returned with statement for Postmaster-General's notice.—T.B.

## No. 17.

The Clerk of Works to The Deputy Postmaster-General.

Sir,

Tunnel Office, Martin-place, 30 March, 1899.

In connection with the appointment of J. M. Toomey, as foreman on section 12, I desire to submit the following for the Hon. Postmaster-General's consideration:—Section 12 is in one of the busiest positions of the city, and from the narrowness of the street and pathway, and the fall that many of the buildings (close to and below the foundations of which this work passes) are very old and insecure, and that some of the most difficult ground to work in will almost certainly be met with. For these reasons the foreman on that section, 12, should of had experience on such work as well as ability.

Therefore, I respectfully suggest that W. Tolly—whose ability, care, and judgment have been proved on this work—be put on section 12 for the reasons stated.

Section 9 is through the most difficult and dangerous part; the position yet to be done being in good ground, in fairly wide streets, with very little building near line of work.

There are a few good men on this section who know their work, and, in my opinion, it would be better, both for the Department and also for Mr. Toomey, that he took Mr. Tolly's place on section 9.

Yours, &amp;c.,

THOMAS BAVISTER.

Urgent.—P.B.W. Submitted.—S.H.L., 4/4/99.

It is only necessary for a good foreman to be over the men, and new men can work as well on such work as others. I approve of Mr. Tolly taking charge, but entirely new men, as repeatedly directed by me, must be put on this section.—V.P., 6/5/99. THOMAS BAVISTER, 7/4/99.

## No. 18.

J. C. Watson, Esq., M.P., to The Postmaster-General.

Dear Sir,

Parliament House, 5 April, 1899.

The bearer, George Orton, was recommended by me for employment some weeks ago, and yesterday morning he was informed that he could start this morning. However, on turning up he was told that there was no room, and no prospect of it. The poor chap was so jubilant yesterday at the prospect of starting work that to-day I felt quite sorry for him in his disappointment.

Therefore, if there is still a chance of employment for a modern Hercules, I should be glad if Orton can get a chance.

Yours, &amp;c.,

J. CHRIS. WATSON.

Orton

Orton is one of the men employed at 7.30 a.m., Tuesday, 4/4/99, but whom P.M.G. directed must stand aside for the special list made out at 12.30 p.m. same day, 4/4/99.—THOMAS BAVISTER, 7/4/99. G. Orton to go on; also find room for McSweeney and Toohey, whom I placed upon the list of 115, and who have not yet found work.—V.P., 7. Mr. Bavister for initials and date of commencement of these men, 9/4/99.—W.W. Orton started 10/4/99. Ward will be written to to-day, 10/4/99. Toohey no address.—T. BAVISTER, 10/4/99. Third name not on list. No address for him.—T.B.

## No. 19.

## The Clerk of Works to The Deputy Postmaster-General.

Sir,

Martin-place, 5 April, 1899.

Smith's help.

The smith's helper at Circular Quay yard, H. Stowell, has been kept on after expiry of two months' work in consequence of the smith being exceptionally busy with tool-making and renewals on section 9, and for starting section 12, and no smith's help or striker being among the men sanctioned for employment, discharging Stowell would have practically stopped the blacksmith. James Murphy, one of the men whom the Hon. Postmaster-General names specially to be employed on section 12, says he is able to act as smith's help. Would it be well, and will Postmaster-General sanction this man being sent from No. 12 to the blacksmith's shop for smith's report, Stowell being retained till such report be submitted?—[Yes.—V.P., 6.]

Carpenter.

No carpenter (rough carpenter and timberer) having appeared among those written to, and being compelled to have such a man for fencing in at Liverpool-street, on section 12, I had to take Waters from section 10.

Such a man will be necessary for section 12. May this man be retained for that position?—[Yes.—V.P., 6.]

Yours, &amp;c.,

THOMAS BAVISTER.

Owing to loss of time for weather and holidays, no men of the 115 have completed the two months' period stated by P.M.G.—T.B., 5/4/99.

THOMAS BAVISTER, 7/4/99.

## No. 20.

## Memo.

JOHN WARD, 36, Wells-street (West), Redfern.—P.M.G. says this man is to be put on in place of (H. Wood, 106 on list) ticked on list by Mr. Parkes. Wood has since obtained work elsewhere (on Railways), 6/4/99. (Delivered at Clerk of Works Office after 4 p.m., 7/4/99.—T.B.)

Put Ward on in place of Wood.—V.P. Will Accountant recognise this as sufficient authority on which to pay wages? Are foot-note and mark by the Hon. P.M.G.?—THOMAS BAVISTER, 7/4/99. Yes.—P.B.W., 10/4/99. THOMAS BAVISTER, 10/4/99. Acct.—W.J.S., 14/4/99.

## No. 21.

## J. S. T. McGowen, Esq., M.P., to The Deputy Postmaster-General.

Dear Sir,

7 April, 1899.

The bearer is the person I spoke to the Postmaster-General about yesterday, and he promised (the Postmaster-General) to put this man on, with his tip-cart and horse, at the telephone tunnels, telling me to send the man to you.

R. Bedford is the owner of cart, but his brother, I see, is the driver.

Yours, &amp;c.,

JAS. S. MCGOWEN, Redfern.

Bedford, with tip-dray, to go on this new 12 section.—J. S. T. MCGOWEN. Put him on.—V.P. 7/4/99. THOMAS BAVISTER, 7/4/99. W.J.S., 14/4/99. W.W.

## No. 22.

## Memorandum by Clerk of Works.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## TELEPHONE EXCHANGE.

(STATEMENT RESPECTING, AND ARRANGEMENTS IN CONNECTION THEREWITH.)

*Printed under No. 13 Report from Printing Committee, 12 December, 1899.*

As some considerable misapprehension appears to exist in the public mind in regard to the Telephone Exchange and the working of the telephone system, as well as the arrangements in connection therewith, I think it desirable that some statement should be made in regard to the difficulties we have had to contend with in connection with procuring an additional switchboard to provide sufficient accommodation to meet public requirements.

It will be seen that on the 15th June, 1897, I minuted as follows:—

The present very large increase in the suburban telephone business is causing me some anxiety, because of the absolute necessity for altering the method of working, which is usually done by connecting the outward trunk lines direct with the ordinary sections of the multiple switchboard at the Central Exchange, instead of through the Branch Exchange boards.

Recently I altered the old system and adopted the one indicated above, which has greatly assisted the means of communication between subscribers in the city and suburbs, but in doing this it has been necessary to utilise 100 of the general jacks on each section of the multiple board, so that at present we are left with only 215 spare numbers on the board available for general purposes; and these, at the rate we are now going, will only last till about the end of October next—*i.e.*, if new subscribers keep coming on at the present rate.

I therefore think that the best way to meet this is to provide 1,800 more multiple spring jacks at the same price as the last (1s. 10 $\frac{1}{2}$ d.), if they can be obtained from Mr. Kingsbury, and these should be ordered without delay. If this be done it will then leave us in a position to provide for 100 additional subscribers, by setting free the jacks now used for the trunk lines, and will enable us to work the present switchboard up to its full capacity of 400 numbers, which I consider will keep us going for about eight (8) months.

It will be necessary, however, to take steps to provide for an entirely new switchboard of the latest pattern, fitted with metallic circuits.

I attach a photograph of one of the latest boards which has been erected at the Rue Gutenberg, Paris, in 1896. This is the class of board we require.

I therefore think that Mr. Kingsbury should be asked to give us the price for this particular board, so that we may consider what steps to take in regard to providing for the metallic circuits.

I think myself, from inquiries made, that the board would cost somewhere about £16,000 or £17,000, but before it can be erected it will be necessary to have a proper building fitted for the purpose, and the Government Architect should be asked to push matters on in reference to my recommendation as regards the mansard roof over the present Telephone Exchange, otherwise we shall be run into considerable difficulty in the course of the next eight or nine months.

Of course, I am looking ahead, and it is a matter of anxious thought to me in dealing with a large business such as this is, to have everything in readiness to provide for the growth thereof.

I therefore urge that these matters be given immediate consideration, so as not to delay operations; and I recommend that steps be at once taken to obtain the jacks, the particulars of the Western Electric board from Mr. Kingsbury as well as that the Government Architect be pressed to push on matters in regard to the arrangement for the proper space.

This minute was approved of only so far as the jacks were concerned, and the Works Department was written to in reference to the suggestions for the mansard roof; but no other action was taken in reference to the switchboard until a further minute from me on the 28th July was written, calling attention to a letter from Messrs. Kingsbury & Co. offering to supply a switchboard of 4,000 subscribers, with a capacity for 6,000, and including toll and branch line boards for 200 lines, together with testing boards, distributing boards, &c., complete, and stating that they were prepared to import two experts from the factory to superintend the erection of the board, for the sum of £14,950 inclusive.

At the same time I called attention to the fact the Messrs. L. M. Ericsson & Co., of Stockholm, and the Antwerp Company of Antwerp, Belgium, were also large manufacturers who could produce switchboards; and I thought it would be prudent to ask the agents of these companies to give prices for the work before deciding what should be done.

On 31st July, 1897, it was approved that tenders be invited, and on the 4th August, 1897, the *Gazette* notice was prepared, tenders to open on the 16th August, 1897. In the specification the following paragraph was inserted:—“The tenderer is to include in his tender the amount of all patent rights and royalties which may be claimed by any patentee or patentees for the manufacture and use of any portion of the articles, and must undertake to liquidate the same when required to do so.”

I then minuted:

It is absolutely necessary that we should have the board with all possible despatch, and to postpone it for one month would plunge us into difficulty, as every week is of moment.

This minute was made on the application of Messrs. Webendorfer Bros. for an extension of time for tenders.

Four tenders were received, as per schedule, and opened by the Tender Board, and these were forwarded to me for report on the 16th August.

On the 20th August, 1897, I reported upon the tenders as follows :—

The tenders in connection with the supply and erection of a metallic circuit branching system multiple telephone switchboard, to accommodate 4,000 subscribers, with a capacity for 6,000, are in the following order :—

	£	s.	d.
Messrs. L. M. Ericsson & Co. (Stockholm), 4,200 numbers .....	10,920	0	0
G. Gulliver & Co. (Melbourne) .....	14,513	10	0
H. H. Kingsbury & Co. .....	15,450	0	0

The last named firm have also put in a number of alternative tenders, varying from £12,480 to £14,950, but as these are below the numbers required in some cases, and for a much longer period than we could wait, I do not think they are desirable tenders to entertain. I also consider it undesirable to consider Messrs. Gulliver & Co.'s tender under any circumstances, as the sureties in this case are Messrs. Draper & Co., who had a recent action with Mr. Kingsbury in connection with their patent rights, and cost the Department a considerable amount of inconvenience and trouble through the manner in which they carried out their contract for this work.

The matter seems, therefore, to rest between the first and third tenders, and as Messrs. Ericsson and Co. are the lowest, being a first-class firm, if they can satisfy the Department that there are no patent rights relating to this metallic switchboard likely to be affected, then their tender is worthy of consideration. On the other hand, if Messrs. Kingsbury & Co. have the patent rights, and they can prove that their single wire jack and plug are identical with the metallic jack and plug, and accomplish one and the same object, then their tender should be considered.

The minute further suggests that it is a matter of law, and concludes by pointing out that it should be referred to the Crown Solicitor, and if he thinks the Department could safely accept the tender of a solid firm, such as Messrs. Ericsson & Co., it appeared to be a most desirable one, as it was £4,500 less than Kingsbury & Co.'s.

This minute was referred to the Crown Solicitor on the same date (20th August, 1897), but no decision was arrived at by the Attorney-General until the 8th November, when the Hon. J. H. Want wrote as follows :—

This is hardly a case for a legal opinion, but as my honorable colleague has referred the matter to me, and a certain action might involve litigation, I have considered the question.

Though there may be some doubt whether Kingsbury's patent rights would be legally infringed (a matter which could only be definitely decided by the Court), morally there is clearly an infringement of the patent, and I do not think the Crown ought to place itself in the position of having such a charge levelled against it.

On 27th September, 1897, an application was made by Mr. C. A. Falstedt to know whether any other tenders than Messrs. Ericsson had been received for the supply of the switchboard, or whether the matter had been postponed; upon which the Minister minuted: "I was under the impression we had declined the whole of the tenders. This had better be done until we have decided the matter of patent rights."

This was accordingly done on the 28th September, 1897.

Considerable correspondence then took place upon different subjects relating to the board and the building to accommodate it, and the matter was hung up until 2nd December, 1897, when the Minister asked the question if the board could not be installed until the building additions were made—a period of probably eighteen months; upon which I replied (on 3rd December, 1897) that the board certainly could not be put up until the alterations were completed, and that I understood from Mr. Vernon and Mr. Cook—of the Architect's Department—the time would be over twelve months.

The Minister asked (on the 7th December, 1897) why tenders were called, to which the following reply was made :—

The alterations to the building were under consideration by the Architect's Department in March, and it was understood at that time that they would be completed in about nine months. It was, therefore, necessary that forethought should be exercised to have the board here in time for the new building, and accordingly the calling for tenders was approved.

On the 9th December, 1897, a further letter was written to the Crown Solicitor in regard to Kingsbury & Co.'s patent rights.

On the 4th January, 1898, Messrs. Kingsbury & Co. reopened the question by submitting a further offer for consideration, and this offer was accepted in a modified form, Messrs. Kingsbury & Co. agreeing to accept £12,500 for the board complete, by further tender, dated 25th January, 1898.

The whole of the contract arrangements were not completed by Messrs. Kingsbury & Co. until the 30th April, 1898; so that the delay of nearly ten months from the time of the recommendation of the tenders to the acceptance of the contract was caused thereby; consequently the Department lost all this valuable time in arranging the contract, which should have been settled some six months previously, owing to the difficulty arising about the patent rights.

Messrs. Kingsbury & Co.'s contract was accepted, and they agreed to supply the board within nine months from the date of the acceptance of the contract. Their contract for the first portion of the board terminated on the 28th February, 1899, and for the second portion on the 30th April, 1899; but prior to the completion of the contract Messrs. Kingsbury & Co. became involved in difficulties, and as they were not proceeding with the contract in a satisfactory manner, the late Postmaster-General considered it advisable to enter into a fresh contract with the Western Electric Company, represented by Mr. Williamson. The contract was accordingly transferred to the Western Electric Company, a deposit of £1,250 being made to the Department.

This contract is now being carried out; but in consequence of the delays in the original contract, and the difficulties in regard to the building, the whole department of the Telephone Exchange has been thrown into confusion, and considerable difficulty has had to be contended with.

This, to a certain extent, explains what has caused the difficulty in working the Telephone Exchange.

Of course, the Department has to put up with delays owing to the difficulty in regard to the switchboard, because the present board, being full, is not able to accommodate any fresh trunk lines; and until trunk lines are provided, and proper accommodation on the new board is available, the public will be considerably inconvenienced, and delays must arise which are unavoidable.

In regard to the annoyance complained of by Mr. Hughes in the House, I might remark that we have no record of any complaint from Mr. Hughes; and if he was kept waiting for twenty-six minutes he should have followed the directions laid down in the Telephone Book and communicated with the Manager, when he would have had an explanation at once.

Of

Of course, his idea that when he requested the operator to put him in communication with the Manager, the "telephone engaged" difficulty vanished immediately, is one that might have existed; but there is no record of any complaint of the kind, and it is impossible for us to trace it. At the same time, I would point out that it is just possible that the line became free at the particular moment when he put this question to the operator.

At the present time the Telephone Exchange in the Head Office is doing 100,000 calls per day, and I think that this is a sufficient answer to any question as regards delays; because it is evident that when a huge business of this kind is being carried on we must have some persons grumbling about want of attention. Most of the telephone people seem to think that they should have trunk lines for their own special benefit, and that whenever they ring up everybody else using the telephone should immediately give way to them; and the operators are so fully occupied that there is no possibility of their explaining, nor are they allowed to offer any explanation. When a subscriber calls, they are only allowed to give the word "engaged," which represents that the trunk line which the subscriber requires is engaged, or else the subscriber that is required is "engaged" on another circuit, over which, of course, the Department has no control.

In conclusion, I might add that the Honorable J. H. Want, unsolicited, yesterday forwarded the following testimony in connection with the Telephone Exchange, namely:—

I see they are making complaints about your telephone service. I have just seen the service as carried out in the United Kingdom and Europe, and have no hesitation in saying we are enormously ahead of any and all of them, and the difficulties experienced there are absent here.

P. B. WALKER,  
Chief Electrician and Engineer-in-Chief.

## METROPOLITAN BOARD OF WATER SUPPLY AND SEWERAGE.

(ELEVENTH REPORT, FROM 1 JULY, 1898, TO 30 JUNE, 1899.)

6 September, 1899.

To the Honorable the Secretary for Public Works,—

Sir,

The Board of Water Supply and Sewerage have the honor to submit to you their Eleventh Report, embracing the period from 1 July, 1898, to 30 June, 1899.

### WATER SUPPLY.

2. The average daily consumption of water per head of estimated population supplied, was 41·72 gallons, as against 42 gallons during the year 1897–8. The average daily supply was 18,794,920 gallons, and the estimated population supplied 450,483.

3. During the year 2,856 houses were connected to the water supply, making a total at present supplied of 92,370 houses. The total number of properties, including vacant land, liable for water rates is 115,556.

4. The total length of trunk and reticulation mains laid was 36 miles, 655 yards; and 17 miles, 744 yards were cleaned. Of the mains laid, a distance of 4,869 yards was of 36 inches diameter, and 780 yards of 30 inches diameter. Thirty-five screw-down and 519 ball hydrants were fixed. The total length of water-mains, exclusive of trunk mains, now under the Board's control, is 1,098·96 miles, with 1,893 screw-down and 19,259 ball hydrants.

5. During the month of September, a careful inspection was made by the Medical Officer and the Secretary of all the holdings situated on the northern and eastern portions of the catchment area, which has since resulted in considerable improvements in the sanitary condition of the settler's homesteads.

These holdings consist chiefly of lands alienated by the Crown many years ago, prior to the proclamation of the catchment area of the Sydney water supply. At the request of the Board, both the Lands and Mines Departments have agreed to refuse all applications for further alienations or mining leases, or at least to refer them first to the Board for an expression of opinion before dealing with the same.

To resume or acquire for the purpose of laying waste and removing all settlement therefrom, the alienated portions of the area, which is no doubt the most desirable course, would prove too costly an undertaking to warrant its consideration at the present time; but no doubt this desideratum will be kept in view. In the meantime, the next best course is being followed, viz., a rigid and continual inspection by reliable rangers, of all settlements and stock situated on the watershed.

As a further means of safeguarding the purity of the supply, arrangements have been made, by the erection of fencing, for excluding all stock from the watershed of the storage reservoir at Prospect. Although this action will result in a substantial pecuniary loss in the shape of agistment fees, it is considered far preferable to endeavour to preserve this area absolutely free from any possible pollution.

6. The canal, tunnels, aqueducts, &c., above Prospect have been maintained in a satisfactory condition, no important work beyond ordinary maintenance having been carried out, with the exception of the extension of the work of strengthening and lining the canal at No. 10 section, which is in pursuance of the policy already determined upon of carrying out a portion of this work every year, until the whole of the doubtful places have been dealt with.

7. The duplicate telephone line along the whole length of the canal, referred to in last report as in progress, has been completed, and is working well; most of the maintenance men's cottages are connected.

8. Owing to the abnormally dry period recently passed through, the level of the water in the storage reservoir at Prospect fell to 182.75 feet, or 12.25 feet below the old top water level, which was lower than the water had ever been since the reservoir was first filled. Although the whole of the water flowing down the three rivers was being taken, the quantity did not aggregate for some time more than 339,000 gallons per day, whilst the discharge from the reservoir was 23,000,000 gallons per day.

9. The experience of last year forces upon the Board the question of providing, in the not very distant future, further facilities for the storage of additional water, and the rangers have been instructed to report as to any suitable sites for constructing weirs for impounding water in the upper reaches of the rivers forming the source of supply.

In the meantime, the action taken by the Board in raising the puddle-core and by-wash at Prospect Reservoir, will result in considerably increasing the quantity stored therein.

10. As a result of the depletion of the reservoir, a settlement took place on the inner slope of the embankment at transverse section 44, which was immediately attended to by removing the top weight and loading the toe with blue-metal ballast from the quarry close by.

11. Other works at Prospect are in good order, additional trees have been planted, and fences erected to keep cattle off the water-shed.

12. The canal between the Prospect Reservoir and the Pipe Head Basin has been cleaned out, and repairs effected where required. Steps will be taken to clean out the existing 72-inch main as soon as the duplicate main now nearing completion is handed over to the Board.

13. The Reservoir and Screening Chamber at Pott's Hill have been maintained in an efficient condition.

14. Improvements in existing water supplies in the following districts have been completed:—Darlinghurst Heights and Princes (City), Auburn, Beecroft, Canterbury, Mosman, North Sydney, and Randwick.

Similar works are in progress, and will be completed before the coming summer sets in, at the Glebe, Balmain, Petersham and Ashfield.

15. The number of water meters fixed during the year was 1,523, 569 were removed, the net increase being 954. The total number now fixed is 8,498.

One thousand four hundred and thirty-nine meters of various sizes were issued on the hire system, the total number now in operation under this system being 4,138.

16. 72,102 water fittings of various kinds were tested at the Board's shops at Crown-street, Reservoir, of which 69,160 were passed and stamped, 2,860 returned as defective, and only 82 were rejected. This shows that the manufacturers and importers are fully alive to the necessity for submitting only first-class articles for test.

17. The pumping plants at the different stations have received the usual attention and are working efficiently. The cost of pumping 1,000 gallons 100 feet high, as compared with former years, was as follows:—

	1890.	1891.	1892.	1893.	1894.	1895-6.	1896-7.	1897-8.	1898-9.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
Crown-street ... ..	·75	·70	·48	·32	·35	·347	·345	·387	·339
Ryde ... ..	...	...	...	...	...	·324	·312	·422	·373
Chatswood ... ..	...	...	...	...	...	...	1·025	·805	·615
Carlton ... ..	...	...	...	...	...	...	·984	1·149	·844
Richmond ... ..	...	...	...	...	...	...	1·452	1·788	1·308

18. The quantity of water pumped within the Metropolitan area was 3,766,417,776 gallons, being an increase of 518,116,787 gallons, and representing 54·9 per cent. of the total discharge from Prospect.

19. The new high-level reservoir in the Centennial Park has been completed, and handed over to the control of the Board, and is now in use.

20. The necessary Enabling Bill having been passed by the Legislature for the supply of water to the town of Camden, the works were at once put in hand, and consist of a concrete tank alongside the canal near Kenny Hill, and an 8-inch steel riveted main thence to Camden, with a branch *en route* to supply the requirements of the village of Narellan. Most of this work has been completed, and it is hoped that everything, including the reticulation mains, will be in readiness before the approaching hot weather arrives.

21. The works in connection with the water supply to the following country towns are giving every satisfaction:—Liverpool, Campbelltown, Smithfield, and Richmond.

22. During the year active measures were taken for the disposal by lease of a number of blocks of surplus land. Some have already been dealt with at satisfactory figures, and others, including the now disused Paddington Reservoir, are about to be submitted to public competition.

When all are disposed of it is expected that a substantial addition to the revenue will annually accrue.

23. Two additional blocks of land forming portion of the old Water reserve at Botany have been leased for woolscouring and fellmongering purposes, and the period of lease of two of the original lessees of other portions has been extended five years.

24. The system adopted by the Board of having a monthly analysis of the water made has been continued and indeed extended, so as to include samples from country towns, and notwithstanding the low level of the water in the storage reservoir during a portion of the year, the results proved eminently satisfactory.

A tabulated return of the results as reported by Mr. William M. Hamlet, Government Analyst, is appended hereto, and the Board desire to place on record their thanks and indebtedness to Dr. Ashburton Thompson, Chief Medical Officer, and President of the Board of Health, for the facilities afforded.

#### SEWERAGE.

25. During the year 8·80 miles of sewers were transferred from the Government to the control of the Board, and 59·96 miles of reticulation-sewers were constructed by the Board. The total length of sewers under the jurisdiction of the Board is 389·01 miles.

In addition to the foregoing, 1·637 miles of stormwater ducts were vested in the Board, making the total length of these channels now maintained by the Board 22·308 miles.

26. The number of houses connected to the sewers during the year was—in the city, 400; and suburbs, 6,895. The total number now connected is 58,720, representing a population of 281,856.

This record exceeds that of any previous year since the inception of the Board. The greatest activity was displayed in the Western Suburbs, North Sydney, and Balmain.

27. The whole of the main outfalls and reticulation-sewers have been maintained in an efficient condition.

28. The total quantity of silt removed from the sewers was 4,208 tons, 2,900 tons being taken from the sewers of the old system, 785 tons from Bondi, 463 tons from Botany, and 60 tons from the Macdonaldtown branch sewer.

The quantity of sand lifted from the various stormwater channels was 3,885 tons.

29. The quantity of sewage lifted into the Botany outfall sewer by the Shone's ejector plant at Alexandria was 133,630,000 gallons, or a daily average of 367,115 gallons. This plant is working well, and giving every satisfaction.

30. The pumping-plant in connection with the Double Bay low-level system of sewerage has now been handed over to the Board. This plant, although also on the Shone system, is somewhat different to that at Alexandria, being actuated by electrical power obtained from the Tramway Power House at Rushcutters' Bay. Although there has been some delay in transferring this plant to the Board, the residents have not been debarred from obtaining the benefits of proper drainage, as the sewers were made available for house connections some months ago, and it is hoped that within two or three months there will be very few houses in this district unprovided with modern systems of drainage.

31. A considerable expenditure has been incurred in laying down reticulation sewers for the drainage of premises on the eastern slopes of Waverley and Bondi; but owing to an accident on the main works, which the Sewerage Construction Branch of the Public Works Department have in hand, the Board are as yet unable to charge a sewerage rate on the premises concerned, although the residents are being permitted to connect, and are daily availing themselves of the privilege, so as to obtain the benefits of the same during the coming summer.

32. The average daily flow of sewage on to the farm was, at Botany, 2,376,000 gallons, as against 2,675,000 during the previous year, and the average daily flow on to the Rockdale end was 1,750,000 gallons.

33. Additional filter-beds have been prepared, and drained, for the reception of sewage at the Botany end of the farm, and the cultivation-beds are giving good results. Stock-rearing has also proved a profitable venture.

The revenue received from sale of produce, stock, &c., was £197 8s. 6d., as compared with £199 2s. 3d. during the previous year.

34. A good deal of work has also been done at the Rockdale end of the farm in preparing filter-beds, and steps are now being taken to under-drain the same.

Tree-planting on both portions of the farm has been pushed on energetically, and the young plants are doing well.

35. The Board contemplate constructing a biological filter on the farm, for the treatment of sewage by what is known as the Dibden System, and propose, in the first place, to expend the sum of £500 to experiment with the sewage from the Main Southern Outfall, and it is hoped that the application that is now with the Minister, for the necessary authority, will receive favourable consideration.

36. Samples of effluent water from the farm have been regularly analysed by Mr. W. M. Hamlet, and his reports show the results of the filtering to be all that can be desired.

37. The total number of premises connected to the sewers by the Board was 392. Of these, 106 were dealt with under the compulsory clauses of the Act, and 286 under the Deferred Payment System.

38. The number of official certificates issued on completion of plumbing and drainage works, was 3,011.

39. 546 ventilating shafts of various sizes have been erected, the quantity of piping used being 22,410 lineal feet.

40. The total length of sewers now ventilated is 330 miles, and the metal shafts erected, 146,611 lineal feet.

FINANCIAL.

## FINANCIAL.

## WATER SUPPLY.

41. The following table shows the working of the Water Branch :—

Year.	Revenue.	Working Expenses.	Capital Cost.	Capital Cost, excluding item City Council's Water Fund.	Percentage of Working Expenses to Revenue.	Percentage of Working Expenses to Capital Cost.	Percentage of Revenue on Capital Cost.	Interest on Capital Cost after Paying Expenses.
	£	£	£	£				
1888	125,486	19,205*	3,004,557	2,623,837	20·40	0·97	4·78	3·81
1889	138,923	36,568	3,088,068	2,707,500	26·32	1·35	5·13	3·78
1890	145,990	34,788	3,189,080	2,808,412	23·82	1·23	5·19	3·96
1891	165,831	38,291	3,306,649	2,925,987	23·09	1·30	5·66	4·36
1892	155,886	45,078	3,394,581	3,013,919	28·91	1·49	5·17	3·68
1893	157,426	37,141	3,409,731	3,029,059	23·59	1·22	5·19	3·97
1894	161,167	39,274	3,440,614	3,059,957	24·36	1·21	5·26	4·05
1895 for six months.	85,364	19,693	4,078,979	3,698,323	23·06	1·06	4·60	3·54
1895-6	174,357	37,495	4,154,261	3,776,879	21·50	0·99	4·61	3·62
1896-7	175,984	40,821	4,244,550	3,867,168	23·19	1·05	4·55	3·50
1897-8	178,881	45,220	4,327,543	3,950,161	25·27	1·14	4·52	3·38
1898-9	194,332	47,147	4,398,945	4,021,563	24·26	1·17	4·83	3·66

\* For nine months only.

42. The total revenue for the year shows an increase of £15,451 over that of the previous year ; but, notwithstanding the additional mileage of reticulation mains laid, the increase in assessed rates is only £25, proving that the valuations of properties are still on the down grade, but to a much less extent than previously.

43. The additional revenue from meters is responsible for £7,739 of the total increase, while the saving on account of the abolition of the Discount System amounted to £3,275.

44. The working expenses have been increased by the sum of £1,927 ; this is chiefly due to increased pumping, and extension of the meter hire system, the expenses of management being only £141 more than the previous year.

45. The capital cost has increased £71,402, being the value of new works constructed.

46. The revenue was £194,332, and the working expenses £47,147, or 24·26 per cent. of the gross revenue, leaving a net revenue of £147,185, or a return of 3·66 per cent. upon the capital cost.

47. The following tables in connection with the towns of Campbelltown and Liverpool speak for themselves, and call for no particular comment:—

CAMPBELLTOWN WATER SUPPLY.

Year.	—	Annual Instalment required to pay off Cost of Reticulation and Interest thereon in 100 years.	Maintenance (including proportion of Head Office expenses).	Charge for Water supplied from Canal, 32 gallons per head per day at 3d. per 1,000 gals.	Total Charges.	Revenue.

48. The financial result of the Richmond Water Supply Works, which are quite distinct from the main scheme, and are simply being managed by the Board on behalf of the Minister, still continues unsatisfactory, for the reasons stated in previous reports, and will remain so until an Amending Bill be passed, properly vesting the scheme in the Board.

The following table gives the necessary particulars :—

**RICHMOND WATER SUPPLY.**  
(Date of Transfer to Board, 26 May, 1893.)

**SEWERAGE.**

49. The following table shows the working of the Sewerage Branch :—

Year.	Revenue.	Working Expenses.	Capital Cost.	Capital Cost, exclusive of Items on which Interest is not charged.	Percentage of Working Expenses to Revenue.	Percentage of Working Expenses to Capital Cost.	Percentage of Revenue on Capital Cost.	Interest on Capital Cost after paying Expenses.
	£	£	£	£				
1890 .....	81,800	22,249	1,281,045	1,177,614	27.19	1.88	6.94	5.06
1891 .....	81,302	25,411	1,447,287	1,343,856	31.25	1.89	6.05	4.16
1892 .....	87,927	27,305	1,605,948	1,503,517	31.05	1.81	5.84	4.03
1893 .....	93,661	27,092	1,691,462	1,588,031	28.92	1.70	5.89	4.19
1894 .....	93,134	23,053	1,745,120	1,641,689	30.12	1.70	5.67	3.97
1895 .....	43,110	14,250	1,831,611	1,728,180	33.05	1.64	4.98	3.34
(six months)								
1895-6 .....	85,486	30,304	1,892,256	1,788,825	35.44	1.69	4.78	3.09
1896-7 .....	87,652	29,680	2,018,120	1,914,689	33.86	1.55	4.57	3.02
1897-8 .....	89,688	30,564	2,116,306	2,012,875	34.07	1.51	4.45	2.93
1898-9 .....	103,955	32,433	2,699,426	2,426,495	31.19	1.33	4.28	2.94

50. There is an increase of £14,267 in the revenue of this Branch, due to the extension of reticulation sewers to new districts, principally the Western Suburbs and North Sydney.

51. It is satisfactory to note that although the Capital Debt has increased to the extent of £413,620, the working expenses are only £1,869 more.

52. The revenue was £103,955, and the working expenses £32,433, or 31.19 per cent. of the gross revenue, leaving a net revenue of £71,522, or a return of 2.94 per cent. upon the Capital Cost.

WATER

## WATER AND SEWERAGE.

53. The following table shows the working of the two Branches taken together :—

Year.	Revenue.	Working Expenses.	Capital Cost.	Capital Cost, exclusive of Items on which Interest is not charged.	Percentage of Working Expenses to Revenue.	Percentage of Working Expenses to Capital Cost.	Percentage of Revenue on Capital Cost.	Interest on Capital Cost after paying Expenses.
	£	£	£					
1890	227,790	57,037	4,470,125	3,986,026	25·03	1·43	5·71	4·28
1891	247,133	63,702	4,783,936	4,269,843	25·77	1·49	5·78	4·29
1892	243,813	72,388	5,001,529	4,517,436	29·68	1·60	5·39	3·79
1893	251,087	64,233	5,101,183	4,617,090	25·58	1·39	5·43	4·04
1894	254,301	67,327	5,185,734	4,701,646	26·47	1·43	5·40	3·97
1895 (6 months).	128,474	33,943	5,910,590	5,426,503	26·42	1·24	4·72	3·48
1895-6	259,843	67,799	6,046,517	5,565,704	26·09	1·21	4·67	3·46
1896-7	263,637	70,502	6,262,670	5,781,857	26·74	1·21	4·56	3·34
1897-8	268,569	75,784	6,443,849	5,963,036	28·21	1·27	4·50	3·23
1898-9	298,287	79,580	7,098,371	6,448,058	26·67	1·23	4·62	3·39

54. The total revenue was £298,287, and the working expenses £79,580, or 26·67 per cent. of the gross revenue, leaving a net revenue of £218,707, or a return of 3·39 per cent. upon the Capital Cost.

55. In previous years it was customary for the Board to debit itself with interest on the Loan Expenditure at the rate of 3·789 per cent., but this year the calculation has been made at the rate of 3·5 per cent., this being the rate of interest provided for in the financial clauses of the Amending Bill, now in draft. The amount, therefore, required to pay interest, calculated at rates varying from 6 per cent. to 4 per cent. on the Municipal Debentures taken over by the Board, and 3·5 per cent. on moneys provided out of Government Loans, is £222,484 3s. 8d., to which must be added £4,633 1s. 8d. for depreciation in the value of machinery, working plant, buildings, &c., and £79,580 4s. 5d. working expenses, making the total expenses of the Board £306,697 9s. 9d., whilst the revenue actually receivable was £298,287 11s. 6d., leaving a net deficiency on the year's transactions of £8,409 18s. 3d.

56. Although the sum of £298,287 11s. 6d. is the amount actually receivable, it does not represent the total earnings for the year, as the Board still continue to supply free of charge large quantities of both pumped and gravitation water to Public Hospitals and Charitable Institutions, to Municipal Councils for street watering and washing, and for other purposes; and as a considerable expenditure is involved in the performance of this service, it is only equitable, as pointed out in previous reports, that some credit should be taken for the same. If this were done, the deficiency alluded to in the previous paragraph would disappear, and give place to a substantial credit balance.

57. It is feared, however, that this happy state of things will not long continue, as certain very necessary works are either now in progress, or contemplated, which will be the means of considerably increasing the Capital Indebtedness, without augmenting the revenue in any way. The works referred to are the Centennial Park Reservoir, duplicate 72-inch main from Pipe Head Basin to Pott's Hill Reservoir, raising walls of Canal between Prospect Reservoir and Pipe Head Basin, 36-inch trunk main to Western Suburbs, additional work at Embankment, Prospect, lining and strengthening walls of Canal above Prospect, and improvement of Water Supplies generally.

In view of this it therefore became necessary for the Board to consider how the additional revenue to meet requirements could be most equitably obtained, and among other conclusions arrived at was one to recommend that provision be made in the proposed Amending Bill to increase the minimum Water and Sewerage Rates from 10s. to 15s. per annum each.

As this decision has excited unfavourable comment in some quarters, it is deemed advisable to take this opportunity of placing the matter in its true light, and showing that no injustice whatever will be perpetrated by the intended action.

A water-rate cannot, or should not, be looked upon in any sense as a tax; it is simply payment for actual value received, and should be treated in the same way as any tradesman's account. When this is done, it must be admitted at once that, while the better class of properties are fairly charged, those paying only the present minimum rate of 10s. per annum do not contribute a sum at all commensurate with the value they receive.

The present minimum rate of 10s. per annum is equal to a charge of  $\cdot 329$  of a penny per day per house; and, as the average number of inmates per house is five, the charge per inmate per day is  $\cdot 066$  of a penny for an unlimited supply of water brought into the premises. The rate proposed will mean that the charge per house per day will be increased to  $\cdot 49$  of a penny, and the charge per inmate to  $\cdot 098$  of a penny. This surely cannot be looked upon as exorbitant, and certainly would not meet the cost of buckets and ropes if the water had to be obtained from wells on the premises.

Exception has been taken to the step proposed on the grounds that it deals with one class of properties only, and it has been remarked that any increase in rates should be general over the whole; but a general increase of (say) a half-penny, or one penny, in the pound would raise the charges on premises which, it is considered, are paying sufficiently high already, while it would touch but very few of the smaller class now charged the minimum rate; and it is because the latter class are deemed, as already explained, to have been treated too liberally in the past, that the course proposed has been agreed to.

With a view to ascertaining definitely the quantity of water actually consumed on premises paying the present minimum rate, test meters were fixed during last year on the service pipes of eight houses in the city and suburbs, each having five inmates. The result of the tests showed that in a house in Bruce-street, Carlton, the value of water consumed was 18s. 9d. per annum, while the assessed rates paid were 10s. per annum, or an excess of 8s. 9d. At Brown-street, Camperdown, the consumption was £1 6s. 10d., or an excess of 16s. 10d., and at a terrace of six houses in Mew-street, Denison Ward, City, the consumption was £1 5s. 8d. at each house, or an excess of 15s. 8d. each. These

These figures clearly prove the Board's contention, and also show that even if the assessed rate were increased to 15s. per annum, there would still be a loss on such assessments.

The foregoing remarks apply with equal force to a sewerage rate. Where dry earth pans exist at present, no distinction whatever is made by the local municipal councils in the charges for attending to same, properties of a high and low assessment being charged alike, and in few cases is the charge less than 26s. per annum, for a bi-weekly service, while in some boroughs it is considerably more; yet, under the Board, the minimum charge for a complete and modern sanitary system of water carriage sewerage is only 10s. per annum, which charge it is proposed to raise to 15s.

Before the inauguration of the Board the charge made for water by the City Corporation was 5s. per room per annum; but immediately before the works were transferred the rate was reduced to 3s. 6d. per room per annum, and it was customary to charge as a room any portion of a building furnished with a door, while the charge for sewerage was 6d. in the £ on the municipal assessment. Taking, as an example, a house of four rooms, kitchen, and wash-house, let at 10s. per week, the charge under the City Corporation was 21s. per annum, for very often, during the dry summer time, an intermittent supply; while under the Board the charge for a permanent supply is—Assessment, £23, at 7d. in the £ = 13s. 5d. per annum. If the proposal of the Board be adopted, the rates on this house will be raised to 15s., or less than was formerly paid to the City Council.

An impression appears to prevail that the rates on all premises of £25 annual value, and under, will, if the Board's suggestion be carried out, be immediately increased by the sum of 5s. each for water and sewerage; but this is not so. For instance, the increase on a £25 house will only be 6d.; a £24 house, 1s.—£23 = 1s. 8d., £22 = 2s. 2d., £21 = 2s. 10d., £20 = 3s. 4d., £19 = 4s., £18 = 4s. 6d., while it is only on properties of £17 and under that the increase will be 5s.

One great objection raised to the proposal is that the increase being on the smaller properties, the burden will fall principally on the working man; but this view cannot be sustained, as in the city and the districts immediately around the city, very few of the smaller tenements are owned by occupants, but are in the hands of Banks, Societies, Companies, Syndicates, and other large property-holders; but in the more distant or outlying suburbs, where land could be obtained at a lower figure, small allotments have been purchased and dwellings erected thereon by persons of the artizan class. These would come under the minimum rate; but in the great majority of cases it may safely be said that the poor man will not suffer; but even if he did, he is only, as before pointed out, asked to pay a fair and reasonable price, not for a luxury, but for an absolutely indispensable commodity.

The additional revenue which it is estimated would be received is as follows:—

	Water.			Sewer ge.			Total.			
	£	s.	d.	£	s.	d.	£	s.	d.	
City of Sydney ... ..	955	19	0	929	6	2	1,885	5	2	
Suburbs and Country ... ..	5,947	16	6	2,015	5	1	7,963	1	7	
	£	6,903	15	6	2,944	11	3	9,848	6	9

Attached to the report will be found a list of properties in each municipality that will be affected, and to what extent, both as regards Water and Sewerage.

58. During the past dry season the conviction has been forced upon the Board that the revenue received by special fees for the use of water for garden purposes was not commensurate with the value of the water consumed. It was therefore decided that from 1 July, 1899, the supply to gardens having a superficial area exceeding 1,000 square feet, should be by meter; in other words the maximum special fee was fixed at 10s. per annum.

59. A further extension of the meter system has been made in the direction of Dining-rooms, Restaurants, large Boarding Houses, and other business establishments.

The action in both cases is expected to result in a large accession of revenue.

60. The amount of revenue outstanding to 30 June, 1899, was £41,778 9s. 6d., the principal items being:—Meters, representing consumption to 30 June, accounts for which have only just been issued, £20,375; Churches and charities, £9,635; vacant lands, £5,918; and house properties, £3,996.

61. The receipts paid into the Consolidated Revenue, exclusive of Richmond, amounted to £293,580 0s. 6d., as against £272,762 15s. 8d. during the previous year, or an increase of £20,817 4s. 10d.

62. The gross receipts paid into the Treasury since the inception of Board are as follows:—

	£	s.	d.
Water ... ..	1,833,747	6	2
Sewerage ... ..	840,861	7	0
	<hr/>		
	£2,674,608	13	2

63. Legal proceedings were taken for the recovery of £5,787.

64. The total amount actually expended by the Board, exclusive of Richmond, was £270,354 13s. 1d., made up as follows:—

	Water.			Sewerage.		
Chargeable to Loans ...	£71,542	4	1	£124,743	19	8
Chargeable to Revenue	42,600	9	2	31,116	3	10

65. The number of premises which became liable for water rates was 2,124; sewerage rates, 9,662; and drainage rates, 590, making the total number, including vacant land, now rated—water, 115,556, sewerage, 68,882, and drainage, 10,895.

66. Rate notices to the number of 309,541 were delivered.

67. The value of goods received by the Comptroller of Stores was £22,219 10s. 8d., and issued, £24,701 8s. 7d. The value of stock on hand was £13,843 3s. 10d.

The usual reports by the Medical Officer on the health of the Board's employees, and on the health of the Metropolitan District generally are appended. These reports bear eloquent testimony as to the sanitary value of the operations of the Department.

69. The inherent defects in the existing Acts, which the Board are appointed to administer, are daily becoming more apparent, rendering it at times very difficult for the Board to satisfactorily discharge the important trusts committed to their charge; and they cannot too strongly urge upon the Minister again, as they have frequently done, in former reports, the absolute necessity for passing into law the Amending Water and Sewerage Bill now in his hands.

70. The Board regret having to record the loss by death, which occurred on 14 January, of the late President, Colonel Thomas Rowe, F.R.I.B.A., who had held the office for so many years. The value of Colonel Rowe's services in the cause of sanitation is too well known by all to need any further testimony at the hands of the Board.

71. To fill the vacancy caused by Colonel Rowe's demise, the Government on 24 January appointed the Hon. Jacob Garrard to the position of President.

No other change has taken place in the personnel of the Board.

72. In addition to the usual weekly meetings at the Board's Offices, at which the attendance of members is recorded below, the Board paid frequent visits of inspection to works completed and in progress, as well as consultations on the sites of the proposed works.

MEETINGS OF BOARD FROM 1 JULY, 1898, TO 30 JUNE, 1899.

\* Deceased, 14 January, 1899. † Appointed 24 January, 1899.

73. The balance-sheets prepared by the Accountant, and reports by the Board's Chief Engineer (Mr. J. M. Smail, M.Inst.C.E.) and other officers, are attached hereto.

J. GARRARD,  
President.

WILLIAM HOLMES,  
Secretary.

Description

## Description of Sydney Water-works at end of June, 1899.

THE Nepean, Cordeaux, and Cataract Rivers are the sources from which the Sydney Water-works are supplied. The combined catchment areas of the three rivers enjoy a copious and regular rainfall, and extend over an area of 354 square miles. By the aid of a dam, 10 feet high, built of concrete, across the Nepean River, a portion of the flow is diverted into the tunnel,  $4\frac{1}{2}$  miles in length, which conducts it into the Cataract River.

Across this river a similar dam to that on the Nepean is built, just below the outlet of the Nepean tunnel, and the water is thence conveyed by another tunnel about  $1\frac{3}{4}$  miles, and, afterwards, through a series of open canal and tunnels, making in all about  $40\frac{1}{2}$  miles from the source, to the Prospect Reservoir. Of this distance,  $11\frac{2}{3}$  miles are in tunnel, and  $28\frac{1}{2}$  miles in open canal. Several creeks of considerable magnitude are crossed on the way, some by inverted siphons and others by pipe aqueducts.

### Prospect Reservoir.

When the reservoir is full the surface of water covers an area of 1,297 acres, and has a gross capacity of 11,392,713,000 gallons. The earthen dam is 7,300 feet long. The maximum height is 85.67 feet, with slopes of 3 to 1 on the water side, and  $2\frac{1}{2}$  to 1, with two 15 feet berms, on the outer side, and is 30 feet wide on the top. When quite full there are available by gravitation 7,324,343,000 gallons.

The water is drawn off from the reservoir through a valve-tower by cast-iron pipes, enclosed in a brick tunnel, carried outside and round the northern end of embankment, and is discharged into a basin, at the end of which is a gauge-weir, measuring the volume passing over daily. From thence it proceeds by canal, 5 miles in length, to the Pipe Head Basin, situated  $16\frac{1}{4}$  miles from Sydney. It is then conveyed for a further distance of 5 miles by a wrought-iron pipe, 6 feet in diameter, to Potts' Hill Reservoir.

### Potts' Hill Balance Reservoir.

This tank, having a capacity of 100,000,000 gallons, is built partly in excavation and partly in bank. The bottom is lined with hydraulic lime concrete, and the sides, laid to a slope of 1 to 1, are lined with dry-coursed rubble masonry. This work is designed to tide the city over any interruption of supply from Prospect, and to prevent fluctuation of pressure.

### Screening Tank and Trunk Mains.

The screening-tank at Potts' Hill is built of brick in two concentric rings. The water is delivered into the outer ring, and passes through a series of copper-gauze screens of 840 meshes to the inch. These screens are arranged so that the orifice which they fill can be closed by the insertion of a dummy, and the screens taken out and cleaned. From this tank the water proceeds towards the city in two 48-inch cast-iron mains.

The first laid main is 48-inch as far as Lewisham, whence it bifurcates, one branch (48-inch) leading to Petersham Reservoir, the other (42-inch) to Crown-street Reservoir. The new 48-inch main, completed in 1893, continues of the same diameter to Crown-street Reservoir.

The two trunk mains are connected at New Canterbury Road, Petersham.

### Crown-street Reservoir and Pumping-station.

The Crown-street Reservoir is built of brick, and holds 3,250,000 gallons. The top-water level is 141 feet above high-water mark. Here is situated the main pumping-plant, consisting of three pairs of compound high-duty pumping-engines. No. 1 Worthington pumping-engines are capable of raising 400,000 gallons per hour to the Centennial Park Reservoir, a height of 104 feet above the pumps; No. 2 Worthington pumping-engines are capable of raising 210,000 gallons per hour to Woollahra Reservoir, a height of 140 feet above the pumps, and also of raising 200,000 gallons per hour to Waverley, a height of 220 feet above the pumps; No. 3 pumping-engines, of the horizontal compound condensing rotative direct-acting type, designed and erected by the Mort's Dock and Engineering Company, are capable of raising 100,000 gallons per hour to the Waverley tanks.

Four 142-h.p. boilers of the Babcock and Wilcox type are used.

### Centennial Park Reservoir.

The Centennial Park Reservoir, built by the Public Works Department, was completed in the early part of the year, and handed over to the Board. It is constructed of brickwork, roofed in with coke-concrete groined arches. It has a capacity of 17,000,000 gallons, and a top-water level of 245 feet above high-water mark, a height of 31 feet superior to that of Paddington Reservoir, which tank has since been abandoned.

Woollahra Reservoir.

### Woollahra Reservoir.

Woollahra Reservoir, with a top-water level of 282 feet above high-water mark, or 141 feet above Crown-street, is built of brick, and contains 1,000,000 gallons, supplied by a 24 $\frac{1}{4}$ -inch wrought-iron main from Crown-street, and distributes the water through a 20-inch main.

### Waverley Reservoir.

Waverley Reservoir, with a top-water level of 360 feet above high-water mark, is built of brick, and contains 1,087,000 gallons. Water is distributed therefrom through two outlets of 24-inch and 15-inch diameter respectively. Supplemental tanks in Waverley Park, erected at an elevation of 20 feet above the present reservoir, supply the upper zones of the district.

### Petersham Reservoir.

This reservoir is built of brick, and contains 2,157,000 gallons. The top-water level is 166 feet above high-water mark. It receives its supply by gravitation from Potts' Hill. Water is distributed therefrom through one 20-inch and two 18-inch outlets.

### Ashfield.

Part of Ashfield being too high to receive a supply by gravitation from Potts' Hill, the more elevated parts are supplied from the Woollahra Reservoir by a main, which conveys the water to a 100,000-gallon wrought-iron tank, erected on a brick circular support, at an elevation of 223 feet above high-water mark.

### Hurstville, Kogarah.

The bulk of the supply to Kogarah is by gravitation through a 12-inch main connected with the Petersham Reservoir. The higher portions of this district are supplied from Penshurst, where is erected an elevated steel tank having a capacity of 1,000,000 gallons, and also a 20,000-gallon cast-iron tank, built on brick piers. The tanks are filled from the Carlton pumping-station. The pumping-plant consists of small Blake's duplex pumps, having a capacity of 12,000 gallons per hour, and Worthington compound high-duty pumps, having a capacity of raising 30,000 gallons per hour.

### North Sydney Supply—Ryde Pumping-station, Ryde Hill Tank, and Chatswood Tanks.

North Sydney receives its supply from Potts' Hill, delivered through a 24-inch and 20-inch diameter pipe into Ryde Pumping-station Reservoir, which contains 2,116,000 gallons, from whence the water is pumped through a 24 $\frac{1}{4}$ -inch wrought-iron main into a 1,000,000-gallon tank at Ryde village, 23 $\frac{1}{4}$  feet above high-water mark, and, by a continuation of the same main, into a pair of steel tanks of a joint capacity of 3,000,000-gallons at Chatswood, at an elevation of 370 feet above high-water mark.

From the Ryde village tank the whole of Ryde, Gladesville, and Hunter's Hill get their supplies. A 9-inch main extends over the Parramatta River and Iron Cove Bridges to supply the heights of Balmain. The tanks at Chatswood supply Lane Cove, Willoughby, North Sydney, and Mosman.

### Gordon, Wahroonga, Hornsby, Thornleigh, and Beecroft.

This district, extending from Chatswood to Beecroft, *via* Hornsby, and adjacent to the Milson's Point Railway and Northern Railway Lines, is supplied by Chatswood pumps, which lift water into the Wahroonga tanks, one a steel tank having a capacity of 1,000,000 gallons, and the other a wrought-iron tank of 40,000 gallons, the smaller one being specially reserved to supply the high zone in its immediate environment. These tanks are at a height of 720 feet above sea-level.

The pumping-main from Chatswood to Wahroonga, which is also used as a main distributory, is 10 in. in diameter and 7 $\frac{1}{2}$  miles in length; a further extension, also of same diameter, is laid to Hornsby. From Pierce's Corner an 8-in. steel main branches off this 10-in. pipe, and supplies Thornleigh, Beecroft, &c. About 19 $\frac{1}{4}$  miles of reticulation mains of 6-inch and 4-inch diameters have been laid along such roads and streets in the various centres of population as are sufficiently built upon to warrant the outlay.

### Campbelltown.

Campbelltown is supplied by gravitation direct from the main canal, through a 6-inch pipe from the canal laid to the town, a distance of 2 $\frac{1}{2}$  miles, the reticulation mains being 4 inches in diameter. The offtake is at 16 $\frac{1}{2}$  miles from Nepean.

### Liverpool.

Liverpool receives its supply by a 9-inch pipe from the main canal at Cecil Hills, which is extended as far as Mount Young, and thence by a 6-inch main to the town. In order to tide over any possible interruption to the flow in the canal a 4,000,000-gallon earthen reservoir has been constructed close to the canal, and is filled therefrom.

### Smithfield.

### Smithfield.

The Smithfield Water-works, completed in July, 1895, were designed to supply the township of Smithfield, which is situated on the Prospect Creek, about 3 miles south-east of the reservoir. The works included may be briefly summarised as under:—

An off-take on the main canal, about 3 miles below Prospect Reservoir; a circular concrete tank on the bank of said canal, having a capacity of 100,000 gallons; a 4-inch main to the township; and mains totalling about  $3\frac{1}{2}$  miles of the same diameter laid in all streets occupied by dwellings. The works cost about £2,900, and supply a population of 300.

### Rookwood, Granville, and Auburn.

Rookwood and Auburn receive their supply through an 18-inch main along Joseph-street from Potts' Hill Reservoir.

Granville is supplied through a 15-inch main laid along Woodville-road for a distance of  $2\frac{1}{2}$  miles, connected with the 6-foot trunk main immediately below Pipe Head Basin; and also by an 18-inch and 15-inch main laid along Parramatta-road from John-street, Rookwood.

### Richmond.

In July, 1893, the Board assumed the temporary management of the Richmond Water-works, which were completed in 1892, and had since then been worked locally by the Richmond Municipal Council. The scheme, which is entirely unconnected with the Sydney supply system, consists of a small pumping-plant—two horizontal 6-horse power engines, coupled and geared, working two brass-lined single-barrel deep-well pumps (Tangye's), fixed 61 ft. 6 in. below floor of engine-room—erected on the left bank of the Hawkesbury River, just below the confluence of the Grose and Nepean; a circular brick service tank, 60 feet in diameter, having a capacity of 225,000 gallons; a 6-inch supply main to Richmond, 4 miles in length; and  $5\frac{1}{2}$  miles of reticulation mains, 3-inch and 4-inch diameter, within the town.

## Description of the Metropolitan Sewerage System.

### City.

THE Metropolitan Sewerage System, now under the jurisdiction of the Metropolitan Board of Water Supply and Sewerage, comprises the old and new systems. The old system was initiated by the City Commissioners in 1853, and continued by their successors, the present City Council, since their incorporation in 1857.

The City Council had control of the water and sewerage works in the city until the year 1888, when the water-works were transferred to the Board. The transfer of the existing sewerage-works followed in 1889.

The old system of sewerage was designed on the principles of what is known as the "combined system." It comprised four main outfalls, with subsidiary sewers along the principal streets; these in turn received the reticulation sewers of the minor thoroughfares. The four main outfalls discharged the city sewage of the city into the harbour at Blackwattle Bay, Darling Harbour, Fort Macquarie, and Woolloomooloo Bay respectively. The pollution of the harbour, and the consequent menace to public health, led to the appointment of a Commission to inquire into the best means of diverting the sewage from the harbour, and its disposal when thus diverted. The new intercepting system was the outcome of the labours of the Commission.

The new system adopted is on the lines of the partially "separate system," and intercepts all sewage from the gravitation zone, *i.e.*, all above a contour line about 40 feet above high-water mark. The sewage from the low-level areas, *i.e.*, those below that contour line will eventually be pumped into the gravitation sewers.

The system consists of two main outfalls, the northern and southern respectively. The northern outfall discharges into the Pacific Ocean, at a point named "Ben Buckler," near Bondi, and will, when the low-level systems are complete, take all sewage previously discharged into the harbour.

The southern outfall discharges into the sewage farm at "Webb's Grant," and provides for the remainder of the city, together with some of the suburbs.

The main works were constructed by the Government, and on completion were transferred, with all other existing works, to the control of the Board by Act of Parliament. The works are of considerable magnitude, and have not been constructed without considerable difficulty and outlay.

### Northern Outfall.

The northern system commences at "Ben Buckler," where a large chamber is constructed in the sandstone rock. From this chamber two channels bifurcate, so as to ensure a free discharge during either northerly, easterly, or southerly gales. Above the chamber a shaft has been erected for ventilation and escape of air when the sea breaks into the discharge channels. The dimensions of the main outfall at the chamber are 8 ft. x 7 ft. 6 in., and decreases by decrements to 6 ft. 10 in. x 5 ft. 10 in. at the Oxford and Liverpool Streets junction.

Between these places it receives the discharge of the following branch sewers:—

- (a) The Waverley and Bondi branch, now in course of construction, which will, when complete, drain the sea slopes of Waverley and Bondi.
- (b) The Woollahra and Waverley branch, extending along the eastern side of Double Bay Valley, passing under Edgecliffe-road, and terminating in Denison-street, Waverley. This sewer drains the northern watersheds of Woollahra and Waverley.
- (c) The Darling Point branch, joining the main outfall near Harris-street, Paddington, and extending along the eastern side of Rushcutters' Bay, with a sub-branch running towards Double Bay, into which the Double Bay low-level sewage is now pumped. This branch sewer drains portions of Paddington and Woollahra.
- (d) The Elizabeth Bay branch, joining the main outfall at Great Barcom Street and extending along the western bank of Lacrozia Creek and Rushcutters' Bay, intercepting sewage formerly discharged into both these places.
- (e) The Potts' Point branch sewer, commencing at Bourke-street, near Darlinghurst Gaol, and extending along that street for some distance, then passing along Victoria-street, and terminating at Challis Estate, intercepting a considerable quantity of sewage previously discharged into Woolloomooloo Bay.
- (f) Riley-street branch, extending northwards along Riley-street, a little past Stanley-street, and intercepting portion of sewage prior to its construction discharged into Woolloomooloo Bay.

The Double Bay Creek storm-water channel and an overflow sewer discharging into Rushcutters' Bay are connected with the main outfall to carry off surplus water during heavy rainfalls. The Rushcutters' Bay overflow was carried across low-lying ground on arches and circular piers; the latter were constructed on the same principle as that adopted in India.

At the large chamber at Oxford and Liverpool Streets three different branches discharge into the main outfall sewer:—

1. The northern branch, passing under Hyde Park to Castlereagh-street, where it bifurcates, one sub-main terminating in Macquarie-street below the tram terminus, and intercepting sewage formerly discharged into harbour at Macquarie Point; the other sub-main terminating in Argyle-street and intercepting sewage previously discharged into Sydney Cove.

2. The western branch, which extends along Liverpool and Kent Streets to Miller's Point, intercepting sewage which formerly discharged into Darling Harbour.

3. The south-western branch, passing under Belmore Gardens, Benevolent Asylum, and along George-street West to Carlton-street, where it bifurcates into two sub-mains, one passing through Darlington, University Grounds, and Camperdown, terminating at Liberty-street, Newtown, and intercepting old city sewers and draining new areas at Darlington, Camperdown, Newtown, and Petersham. The other sub-main passes along George-street West by a long syphon, on account of a depression in the ground. Connected with the syphon is a scour-chamber and valves for periodic cleansing. This branch extends through the Glebe, Annandale, and Leichhardt, to Balmain, being carried across Johnstone's and White's Creeks on aqueducts. At Foucart-street the sewer bifurcates, one branch draining the south-eastern slopes of Balmain, the other branch, now almost completed, draining the north-western slopes of the same suburb. This sub-main drains the Glebe, portions of Annandale, Leichhardt, and Balmain. The scheme for the drainage of the low-level areas in Balmain and Leichhardt is now in course of construction.

The work in connection with the whole of these sewers was carried through varying formations—in some instances the stratum was indurated sandstone; in others, shale, clay, and water-charged drift-sand. Concrete enters largely into the construction of the works, the lining of rock tunnels being principally bluestone concrete rendered with cement mortar. Wherever the outfall sewer crossed natural creeks or watercourses, offset and scour valves were provided.

#### Southern Outfall.

The southern main outfall commences at the inlet chamber on the north side of Cook's River, near its junction with Botany Bay. The sewer is 5 ft. 6 in. in diameter, constructed of concrete, with brick lining rendered with Portland cement. In places the sewer is above the level of the adjoining ground; in others it passes through low sandhills and swampy ground. Where natural watercourses are passed over, concrete culverts and overflow chambers and valves are provided. Some distance to the south of Bourke-street the Macdonaldtown and Alexandria branch discharges into the main outfall. This branch is carried on aqueduct over low-lying ground at Alexandria, and receives the sewage from portions of Alexandria, Erskineville, and Newtown.

The sewage from a low-level area, comprising parts of Alexandria, Erskineville, and Newtown, is being temporarily pumped into this branch.

At Botany-road the main outfall receives the discharge of a branch running along that road, and draining portion of Waterloo.

The main outfall continues along Bourke-street to Phelps-street, Surry Hills, receiving on its way the discharges from the Elizabeth-street branch, draining large portions of Waterloo and Redfern, and several small branches draining parts of the Surry Hills portion of the city.

#### Western Outfall.

The sewerage system for the Western Suburbs is being carried out by the Government Sewerage Department under a special vote as regards the main ducts. The outfall works, the eastern branch sewer and sub-branches, and parts of the northern branch have been completed and handed over to the Board.

The main western outfall sewer commences at a receiving chamber in the Rockdale end of the Sewage Farm. From thence it runs in open carrier, 8 ft. 8 in. x 5 ft. 3 in. across portion of the Sewage Farm to another receiving chamber, about a quarter of a mile north-east of Muddy Creek. From thence in 6-foot circular triplicate sewers to Premier-street, Marrickville, being carried on aqueducts over low-lying ground near Arncliffe Station and over Woollie Creek and Cook's River.

At Premier-street is a large chamber, over which a ventilating shaft has been erected. Here the main outfall receives the discharges of three branches, viz. :—

(1.) The eastern main branch passing along the Illawarra-road (partly in syphon, owing to a depression in the ground), then across Marrickville and Petersham, passing under the suburban railway near Stanmore Station, then along Ferris-street, and terminating at Collins-street, Annandale. Connected with the syphon in Illawarra-road is a scour sewer along Sydenham-road, discharging into the low-level system, and used occasionally for cleansing. This main branch sewer receives the discharges of the following sub-mains, viz. :—

(a) The Renwick-street sub-main, draining portion of Marrickville.

(b) The Camden-street sub-main, meeting the main branch at Emily-street and passing along that street, Sarah-street, and Camden-street, and terminating at Union-street, Newtown. This sub-main, with two short branches in Tupper-street and Edgeware-road, drains parts of Marrickville and Newtown.

(c) The Parramatta-road sub-main, leaving the main branch at Corunna-road and passing along Parramatta-road and terminating at Johnstone's Creek, drains portions of Petersham and Annandale. The Nelson-street sub-branch, running along Nelson-street and terminating at Booth-street, discharges into this sub-main and drains portion of Annandale.

The work in connection with the scheme for sewerage the low-level areas in St. Peters, Newtown, Erskineville, Alexandria, and Marrickville is now being proceeded with, and the sewage will eventually be pumped into the eastern branch high-level sewer, at a point near the Marrickville Station.

(2.) The northern main branch sewer passes across the Belmore Railway, near Livingstone-road, through Marrickville, along the Wardell-road, through Petersham, crossing the suburban railway near Lewisham Station, through Leichhardt, along Flood, James, and Church Streets, and terminates at Glover-street. On its way the following sub-mains discharge into it, viz. :—

(a) The Marrickville-road sub-main, draining portion of Marrickville.

(b) The Pile-street sub-main, draining a portion of Marrickville.

(c) The Dobroyde sub-main joins the main branch sewer at Frazer's-road, Petersham, passes under the suburban railway, crosses the Long Cove Creek on aqueduct, and terminates for the present in Sloane-street, Summer Hill. This sub-main also receives the discharge of the Canterbury old road branch, draining portion of Petersham and the Long Cove Creek sub-branch. This sub-branch joins the sub-main in Dover-street, Summer Hill, and extends along the western bank of Long Cove Creek to Pigott-street. The sub-main and its sub-branches drain portions of Petersham, Summer Hill, and Ashfield.

The sewage from the low-level area adjoining Long Cove Creek will, when the scheme is carried out, be pumped into this branch.

(3.) The western main branch passes through Marrickville crossing the Belmore railway near Wardell-road Station; through Ashfield, crossing the suburban railway near Croydon Station; through Burwood, passing along George-street, again crossing the railway about midway between Burwood and Strathfield Stations, passing along Morwick-street; through Strathfield, passing along Margaret-street and Albert-road, and terminating in that road about half a mile to the west of Homebush-road.

On its way this branch will receive the discharges of the following sub-mains, viz. :—

- (a) The Livingstone-road sub-main, draining portion of Marrickville.
- (b) The Canterbury and Enfield sub-main, terminating for the present in Terrace-road.
- (c) The Frederick-street sub-main, draining portion of Ashfield.
- (d) The Carshalton-street sub-main, draining portions of Ashfield and Enfield.
- (e) The Webb-street sub-main, draining portion of Burwood.
- (f) The Five Dock sub-main to be constructed in the future.
- (g) The Elsie-street sub-main, meeting the main branch in Elsie-street, Burwood, and passing through Burwood Park, and along the Parramatta-road, and terminating in that road near Bourke-street, Concord. This sub-main will drain portions of Burwood and Concord.

The work in connection with this branch and its sub-mains is now being proceeded with.

The area to be served by these sewers will include portions of Marrickville, Summer Hill, Ashfield, Croydon, Burwood, Strathfield, Canterbury, Enfield, Five Dock, and Concord.

### North Sydney Outfall.

The main outfall sewer discharges on a filtering bed at Long Bay, Middle Harbour. From thence it extends to Alfred-street, near Ernest-street; thence along Alfred, McDougall, Broughton, Pitt, and Jeffreys Streets to its termination in Campbell-street. On its way it receives the discharges of the following sub-mains :—

- (a) The Willoughby sub-main, joining the main outfall near the Sewage Farm, and extending from thence to a creek near the junction of West and Marks Streets. This sub-main is now in course of construction.
- (b) The Ernest-street sub-main.
- (c) The Neutral Bay and Mosman sub-main, joining the main sewer at McLaren-street, and extending from thence along the foreshores of Neutral Bay at the head of Shell Cove, and crossing Mossman's Bay and Little Sirius Creek. This sub-main is in course of construction.
- (d) The High-street sub-main.
- (e) The Lavender Bay sub-main, joining the main outfall at the junction of Alfred and McDougall Streets, and extending thence along Lavender and Holt Streets, and terminating in Dumbarton-street. The Blue's Point sub-branch joins this sub-main in Holt-street, and extends across Blue's Point, terminating at the junction of East-street and East Crescent Road.
- (f) Two small sub-mains in McDougall and Willoughby Streets respectively.
- (g) The Glen-street sub-main, meeting the main outfall in Broughton-street, and extending from thence to Glen-street.

The area to be sewered by this outfall and its sub-mains comprises North Sydney and portions of Mosman and Willoughby.

### Coogee Outfall.

This outfall sewer discharges into the Pacific Ocean to the north of Coogee Bay. From thence it runs to Dolphin-street, thence along that street to Melody-street, thence to Rainbow-street, passing along that street, Bunnerong-road, and west of Randwick Racecourse to its termination in Allison-road. This outfall sewer when complete will sewer Randwick, Coogee, and Kensington.

### Inlet House.

The sewage passes from the main outfall to the screening-chambers of the inlet house. The chambers are in duplicate and controlled by valves, so that when one series is in use the other is being cleaned out. The sewage in each series is strained by means of three circular screens, which are worked by one central shaft, with suitable gearing fixed on the platform at one end, the meshes varying from 3 inches to 1 inch, which intercept all extraneous matter before the sewage passes to the siphon-well. The sludge thus intercepted is grabbed out of the various chambers and deposited in trucks to be conveyed on to the farm, *via* the temporary bridge now crossing Cook's River. The grab is operated by means of "Capitaine" oil-engine, working on an overhead traveller. Owing to the cost of keeping the temporary bridge in an efficient state of repair being excessive, it has been decided to force the sludge across the river through a submarine line of ball and socket pipes by means of compressed air, and the necessary plans are approaching completion, when tenders will be invited for carrying out the work. Owing to the exposed situation of this house, it was deemed necessary to protect it against being struck by lightning, and a contract was let to Mr. G. C. Penboss, of this city, to erect the necessary conductors, and it is now considered practically lightning-proof. From the siphon-well the sewage passes under the bed of Cook's River by a cast-iron inverted siphon, 3 ft. 9 in. diameter, laid in a trench and surrounded with concrete. The siphon is connected with a well in the outlet house on the south side of river, from which the sewage flows along a main carrier, and is distributed over the irrigation-beds and settling-tanks by valves of simple construction, and the distribution of the sewage is easily controlled by the farm manager. Both the inlet and outlet houses are provided with storm offlet valves, to allow the superabundant storm-water to pass direct into Cook's River. The outlet house is also treated in a similar manner to the inlet house as regards lightning conductors.

### Botany and Rockdale Sewage Farms.

The Sewage Farm is situated on a neck of land called Webb's Grant, on the eastern end of which the southern outfall discharges, while the western outfall discharges on the western end. The formation is raw drift-sand, originally covered with low dense scrub, that portion adjoining Muddy Creek being submerged at high water until the fascine training-banks were built there by the Public Works Department.

For agricultural purposes, to be worked at a profit, this land is useless, except on the eastern end, which has been a number of years in use, and upon which fair crops can be grown if the sewage is applied to it in a state capable of being assimilated by plant-life. That being the case, it is evident some course of treatment is necessary for this particular class of sewage, which contains a large amount of grease from the boiling-down establishments, before it can be utilised for agricultural purposes.

The southern main carrier runs through the centre of the neck of land, the northern side of which is laid out in irrigation beds, at different levels, so as to allow the manager to command the whole area. On this area the sludge, which is dredged from the inlet house, is conveyed in trucks by a small locomotive to the various beds, and used as manure. This sludge is also used as a top dressing to the newly-formed sandbanks to prevent them being demolished by the wind. It is the intention, when the new system of pumping the sludge on to the farm comes into vogue, to pump it into a tank, from which it will be distributed over the farm by means of the loco. or specially-built carts. At the end of the irrigation area three new filter-tanks have been constructed with mains for distributing the sewage evenly over their surface. As soon as these tanks are underdrained they will be brought into active operation.

On the southern side of the main carrier the ground is laid out in a series of these filter-tanks, and to facilitate filtration some of these beds have been underdrained, with satisfactory results, and at times, when circumstances admit, they are cultivated, which assists in keeping the ground clean and improves the soil as a filter. Numerous types of underdrains have been tried, and the one finding most favour at present consists of a coir mat wrapped around each joint and sewn on. Cattle and pigs are reared on the surplus products of the farm. The pig-styes are built of concrete, and kept clean by daily washing. Cattle and horses are also taken for agistment. The daily discharge on to the eastern or Botany farm for the last year has averaged 2,376,000 gallons, a smaller quantity than the previous year, owing to the dry season; this is disposed over 71 acres of land prepared to receive same, the effluent water discharging above high-water mark into Botany Bay.

Now that the whole of the works at the Rockdale end of the farm are under the control of the Board, it was necessary, for efficient management, to provide easy means of transit and through communication from one end to the other; accordingly the Board constructed a light railway, being a continuation of the old line, and the loco. can now run from the inlet house to Marsh-street, close to Arncliffe Station. The new rails are 40 lb. per lineal yard, and were manufactured by the Carnegie Steel Co. (Ltd.), Pittsburgh, Pennsylvania.

### The Western Outfall.

Owing to the completion of this work being of recent date, the flow is still of very limited proportions, being only about  $1\frac{3}{4}$  million gallons daily.

This outfall terminates on the farm in a screening chamber, where the coarser matter is separated from the sewage, which at this point, as well as other offset valves from the main carrier, is diverted on to filter-beds, of which about 127 acres have been levelled and will soon be underdrained, one contract being let and another will be as soon as the ground is fit to be operated upon.

It has been found necessary to make further provision for the overflow of storm-water from the main carrier, as those overflows provided by the Public Works Department were found to be totally inadequate.

## Rates and Charges for Water, Sewerage, and Stormwater Drainage.

### METROPOLITAN WATER RATES.

1. The following rates and charges are those which the owners and occupiers of houses, tenements, and lands shall pay in respect of water supplied by the Board, that is to say:—

*For water supplied for domestic purposes otherwise than by measure.*

2. (I.) In respect of lands and tenements of which the assessed annual value is £17 or under, 10s. per annum.
- (II.) In respect of lands and tenements of which the assessed annual value is over £17, a rate of 7d. for each pound sterling on the amount of the assessed annual value up to £300 inclusive; 5d. for each pound sterling on the amount of the assessed annual value in excess of £300 up to £700 inclusive; 4d. for each pound sterling on the amount of the assessed annual value in excess of £700 up to £1,000 inclusive; 3d. for each pound sterling on the amount of the assessed annual value in excess of £1,000 up to £4,000 inclusive; and 2d. for each pound sterling on the amount of the assessed annual value in excess of £4,000.

3. The following rates shall be paid in each year in respect of lands and tenements which are not supplied with water for domestic purposes, and which are not more than 60 yards distant from a main constructed by or vested in the Board, that is to say:—

- (I.) In respect of lands and tenements of which the assessed annual value is £10 or under, a rate of 1s. in the pound.
- (II.) In respect of lands and tenements of which the assessed annual value is over £10, a rate of 10s. per annum up to the assessed annual value of £17 inclusive.
- (III.) In respect of lands and tenements of which the assessed annual value is over £17, a rate of 7d. for each pound sterling on the amount of the assessed annual value.
- (IV.) In respect of lands on which no building is erected for human habitation, a rate of 4d. in the pound of the assessed value.
- (V.) The like rates as those above mentioned shall be charged on all lands and tenements not included in any valuation by the Municipal Council of the City of Sydney or Redfern, or of any Borough or Municipal District, and on all lands for the time being valued by the said Municipal Council of the City of Sydney or Redfern, or by such Borough or Municipal District, at a sum less than the true value thereof.
- (VI.) When any lands or tenements become liable to a rate, or to an increased rate, during the currency of any half-year by reason of the extension of a main or for any other reason whatsoever, then a part of such rate or increased rate, as the case may be, proportionate to the unexpired period of the current half-year, shall become due and be paid forthwith.

*Supply of water by meter.—Charges for water supplied by meter.*

4. The charge for water supplied by meter shall be 1s. per 1,000 gallons for all water consumed up to 20,000,000 gallons per annum, and 9d. per 1,000 gallons for all water consumed in excess of 20,000,000 gallons per annum: Provided that the minimum quantity of water to be charged for, where water is so supplied, shall be 10,000 gallons per annum. Her Majesty's ships will be supplied free of charge.

5. All charges for water supplied by meter shall, unless otherwise provided by a contract made between the Board and the person to be supplied, be paid within one month after service by the Board upon the person liable to pay such charge of a notice in writing setting forth the amount due for water so supplied, and demanding payment thereof within the period of one month aforesaid. Service of any such notice may be effected by serving the same personally on the person named therein, or by sending such notice through the post to the person named therein at his last known place of abode or business; and where the place of abode and the place of business of such person are unknown to the Board, by sending it through the post addressed to him at the lands and tenements to or in respect of which the water is supplied, or by leaving it on such lands and tenements.

*For water for other than domestic purposes otherwise than by measure.*

- (VI.) The charge for water supplied to gas-engines or oil-engines shall be 5s. per annum for each engine of two horse-power and under, and for every additional horse-power beyond two horse-power an additional charge of 2s. 6d. per annum for each horse-power.
- (VII.) The charge for water supplied to steam-boilers shall be £1 per annum for each steam-boiler up to three horse-power. And for every additional horse-power beyond three horse-power an additional charge of 5s. per annum for each horse-power.

(VIII.)

(VIII.) The charge for water supplied for actuating ventilators or refrigerators shall be by special fee, according to the following scale, namely:—

Class A.—Passing 60 gals. per hour at 65 lb. pressure—	
1 nozzle,	£6 per annum.
2 nozzles,	£4 10s. per annum each.
3    "    "	£3 10s.
4    "    "	and upwards, £3 per annum each.
Class B.—Passing 40 gals. per hour at 65 lb. pressure—	
1 nozzle,	£3 15s. per annum.
2 nozzles,	£3 per annum each.
3    "    "	£2 10s. per annum each.
4    "    "	and upwards, £2 per annum each.

*Supply for twelve hours only in each day.*

Provided, however, that the supply of water under this By-law shall be for twelve hours only in each day, and no person having such supply shall continue to use the same for more than twelve hours in any one day.

*Water for trade purposes, &c.*

(IX.) The charge for water supplied for purposes of the under-mentioned or other trades shall be at such rates, upon such terms, and subject to such conditions as may be agreed upon by the Board and the person requiring to be supplied, provided, however, that for any year or part thereof, the minimum charge for water supplied for the under-mentioned trades shall be that in each hereunder case set opposite the trade, viz. :—

Photography, and any like process...	...	...	5s. per annum.
Tripe-cleaning	...	...	5s.    "
Tying purposes	...	...	5s.    "
Laundries	...	...	5s.    "
Dyers	...	...	10s.   "
Condiment-making	...	...	5s.    "
Bottle-washing	...	...	5s.    "
Small goods (sweets)	...	...	5s.    "
Waterfalls and fountains	...	...	5s.    "
Shop-fronts, by hose	...	...	5s.    "
Organ motors and such like mechanisms ..	...	...	20s.   "

*Washing Vehicles.*

(X.) The Board may supply water for the washing of vehicles with a hose, without meter, at the rate of 5s. per annum for each vehicle.

In all cases where special fees are charged the Board reserve to themselves the right of insisting upon a meter being fixed at any time, notwithstanding the fact that the special fee may have been paid. All special fees are in addition to the assessed annual rate of the premises on which such fees are charged, and are payable in advance. All premises on which water is used for other than domestic purposes, and upon which special fees are paid, shall be open for inspection by the inspectors of the Board at any reasonable hour.

2. Assessed rates shall be paid half-yearly in advance, whether a meter is used or not. In the case when a meter is used the meter account will be rendered only when it is in excess of the assessment. Cheques and Post-office orders will be received in payment of rates; but if the cheque tendered by any person as payment for rates due is dishonored, the Board may cut off his service, and proceed for the recovery of the amount by warrant for distress or otherwise. Cheques and Post-office orders must be crossed in favour of the Board.

3. The minimum charge for water, whether supplied through meter or otherwise, for domestic purposes and for purposes other than domestic, is the assessed annual rate. If the water is supplied by meter, and the meter account exceeds the assessment (calculated at the rate of 1s. per 1,000 gallons), then such excess shall be charged in addition to the assessment.

4. One meter may be allowed to supply several tenements when such tenements are occupied by one person or firm as a place of business or abode, and the meter account will be credited with the assessments of all such tenements. One service only will be allowed under these conditions, upon which the meter will be fixed, and all the water for such tenements must pass through such meter. Where peculiar circumstances entail a departure from the above, and two services are absolutely necessary, then there shall be a meter on each service pipe.

*Building Charges, &c.*

(XI.) The charge for water supplied for building and plastering purposes, shall be at the rate of one half-penny per cubic yard on the cubical contents of each building. The Board will also supply water by meter at the rate of 1s. 6d. per 1,000 gallons (excepting Gordon and Richmond, which shall be 2s. per 1,000 gallons), or at the rate abovementioned per cubic yard on the cubical contents of each building, provided that the meter so used shall be  $\frac{1}{2}$  inch in size; and the minimum charge in each case for water so supplied through meter shall be 15s.

- (1.) The charge for water supplied for plastering rooms only shall be 2s. 6d. for each room, and for the building of wash-houses, water-closets, coppers, and chimneys only, 2s. 6d. each.
- (2.) The charge for water supplied for making and mixing of concrete for foundations of wooden blocks, stone cubes, or other form of permanent roadway or pavement, shall be at the rate of £1 1s. per 1,000 square yards by superficial measurement of road surface, and for all other concrete, brickwork, or masonry, at the rate of three half-pence per cubic yard, as measured on the work.

(XII.)

- (XII.) Any person who maintains horses or cows may be supplied with water, without meter, from the domestic service for the sum of 5s. per annum for each animal, in addition to the assessed annual rate of the premises on which such animal is maintained or supplied with water.
- (XIII.) All lands or premises actually supplied with water by the Board, on which any one or more head of horses or cattle shall be kept or maintained, shall be liable to an extra rate or charge (beyond and in addition to the assessed annual rate of the premises) of 5s. per head for each head of horses or cattle kept or maintained on such lands or premises. And where such lands or premises are not actually supplied with water by the Board they shall be liable to an extra rate or charge (beyond and in addition to the assessed annual rate of the premises) of 2s. 6d. per head for each head of horses or cattle kept or maintained on such lands or premises.
- (XIV.) The Board may supply water for gardens, which do not exceed 1,000 square feet superficial in area (and for such purpose may permit a hose and stand-pipe to be used), without meter, at the rate of 10s. per annum, in addition to the assessed annual rate of the premises to which such gardens belong or are attached.

#### METROPOLITAN SEWERAGE RATES.

1. The following rates and charges are those which the owners and occupiers of houses, tenements, or lands shall pay for or in respect of sewerage, or for or in respect of the liability of such houses, tenements, or lands to rates and charges for sewerage, that is to say :—

- (I.) Where the premises are of the assessed annual value of £10 or under, a rate of 1s. in the £ per annum on the amount of the valuation.
- (II.) Where the premises are above the assessed annual value of £10, a rate of 10s. per annum up to the assessed annual value of £17 inclusive.
- (III.) Where the premises are above the assessed annual value of £17, a rate of 7d. for each pound sterling on the amount of the valuation.

2. The following rates shall be paid in each year in respect of vacant and unoccupied lands and tenements, on which no building is erected for human habitation, and which are not connected with any sewer or drain under the control of the Board, and which are situated within 150 feet from a sewer or drain belonging to the Board, that is to say :—

- (I.) A rate of 4d. for each pound sterling on the amount of the assessed value.

#### *Western Suburbs Outfall Sewer, Rockdale.*

The following rates and charges are those which shall be paid by the owners or occupiers of houses, tenements, or lands liable to be rated in respect of the Western Suburbs Outfall Sewer at Rockdale and reticulating sewers connected therewith, that is to say :—

A rate of 1s. for each pound sterling on the amount of the valuation of such houses, tenements, or lands.

#### *North Sydney Sewerage Works.*

The following rates and charges are those which shall be paid by the owners or occupiers of houses, tenements, or lands liable to be rated in respect of the North Sydney Sewerage Works and reticulating sewers connected therewith, that is to say :—

A rate of 1s. for each pound sterling on the amount of the valuation of such houses, tenements, or lands.

#### FOR COUNTRY DISTRICTS IN COUNTY OF CUMBERLAND.

For water supplied for domestic purposes otherwise than by measure :—

- (I.) On every house, tenement, or land of £10 assessed annual value and under, 10s. per annum.
- (II.) On every house, tenement, or land above the assessed annual value of £10, a rate of 1s. for each pound sterling on the amount of the valuation.
- (III.) Vacant or unimproved lands are subject to a rate of 4d. for each pound sterling on the amount of the valuation.
- (IV.) The like rates as those above mentioned shall be charged on all lands, tenements, and hereditaments not included in any valuation by any Borough or Municipal District, and on all lands for the time being valued by any such Borough or Municipal District at a sum less than the true value thereof.

For water supplied by measure :—

- (V.) The charge for water supplied by measure shall be 1s. per 1,000 gallons for all water consumed up to 20,000,000 gallons per annum, and 9d. per 1,000 gallons for all water consumed in excess of 20,000,000 gallons per annum.

#### *District of Gordon.*

For water supplied for domestic purposes, otherwise than by measure :—

- (I.) On every house, tenement, or land, a rate of 1s. for each pound sterling on the amount of the valuation.
- (II.) In respect of vacant or unimproved lands not supplied with water, and which are not more than 60 yards distant from a main constructed by or vested in the Board, a rate of 6d. for each pound sterling on the amount of the valuation.

For water supplied by measure :—

- (III.) The charge for water supplied by measure shall be 1s. 6d. per 1,000 gallons.
- (IV.) Any person who maintains horses or cows may be supplied with water, without meter, from the domestic service for the sum of 7s. 6d. per annum for each animal, in addition to the assessed annual rate of the premises on which such animal is maintained or supplied with water.
- (V.) The Board may supply water for gardens which do not exceed 1,000 square feet superficial area (and for such purpose may permit a hose and stand-pipe to be used), without meter, at the rate of 15s. per annum, in addition to the assessed annual rate of the premises to which such gardens belong or are attached.

## METROPOLITAN DRAINAGE BY-LAWS.

Whereas by the "Metropolitan Water and Sewerage Act Extension Act of 1894" the Board of Water Supply and Sewerage is authorised and empowered to make, alter, and repeal By-laws: Now, the Board of Water Supply and Sewerage, under and by virtue of the powers contained in the above-mentioned Act, do hereby make the By-laws following, that is to say:—

*Assessment and Rates.*

1. For the purposes of these By-laws the value of lands and tenements in each year shall be the value (if any) at which the same are for the time being assessed for rating purposes by the Municipal Council of the City of Sydney or the Borough or Municipal District respectively in which such lands or tenements are situated, on the 1st day of January and the 1st day of July respectively, as the case may be, in each year; and such value shall continue to be the value of such lands or tenements for the purposes aforesaid during such year.

2. The rates which are respectively set opposite to the descriptions of stormwater drains hereunder mentioned are those which shall be paid by the owners or occupiers of the lands or tenements situated within the boundaries of the drainage areas respectively proclaimed in respect of such stormwater drains, and for the purpose of assessing such rates, the valuation of such lands and tenements by the Municipal Council of the City of Sydney or the Borough or Municipal District respectively within which the same respectively are situated, shall be taken as the valuation thereof by the Board under the said Act. The minimum rate payable under these By-laws shall be in each case 1s. per annum:—

Rushcutter's Creek Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Willoughby Falls, Neutral Bay, and Careening Cove Drains.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Blackwattle, Glebe, and Denison Ward Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Beattie-street, Balmain, Drain.—A rate of 2d. for each pound sterling on the amount of the valuation of such lands or tenements.

Iron Cove Creek, Ashfield, Burwood, Enfield, and Canterbury Drain.—A rate of 6d. for each pound sterling on the amount of the valuation of all lands or tenements situated within the drainage area described as Class A, and a rate of 4d. for each pound sterling on the amount of the valuation of all lands or tenements situated within the drainage area described as Class B.

Shea's Creek, Waterloo, Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Iron Cove Creek Extended, Ashfield, and Burwood Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Homebush Creek, Burwood, and Strathfield Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Homebush Creek Extended, Strathfield, Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Long Cove Creek, Leichhardt, Ashfield, and Petersham Drain.—A rate of 3d. for each pound sterling on the amount of the valuation of all lands or tenements situated within the drainage area described as Class A, and a rate of 1d. for each pound sterling on the amount of the valuation of all lands or tenements situated within the drainage area described as Class B.

Erskineville and Munni-street, Newtown, Alexandria, and Erskineville Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Euroka Creek, North Sydney, Drain.—A rate of 2½d. for each pound sterling on the amount of the valuation of the lands or tenements.

Easton Park, Balmain, Drain.—A rate of 4d. for each pound sterling on the amount of the valuation of the lands or tenements.

Double Bay, Woollahra, Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

3. All such rates as before-mentioned shall be paid in advance by equal payments on the first day of January and the first day of July in each year, and the first payment shall be made at the time when an owner or occupier becomes liable to pay such rates.

## Report on the Health of the Officers and Employees of the Board.

To the Secretary for presentation to the President and Members of the Board,—

Sir,

I have the honor to inform you that 147 persons presented themselves for examination during the past financial year. Thirty-four were examined as to their fitness for being employed by the Board; 25 were suffering from measles; 12 were suffering from accidents; 5 were ordered to return to work; 1 caused his illness through his own fault; 70 were suffering from general diseases; 1,150 days of leave were recommended. Subjoined is analysis of diseases, and the number of days of sick leave recommended for each disease.

I have, &c.,  
THEO. MAILLER KENDALL,  
Medical Adviser.

Diseases.	No. of days of sick leave recommended.	Diseases.	No. of days of sick leave recommended.

## Medical Adviser's Report on the Health of the Metropolis during the year 1898.

To the Secretary, for presentation to the President and Members of the Board,—

Sir,

I have the honor to submit my report on the health of the metropolis during the year 1898.

The population increased by 7,250 souls over the population for the year 1897, and the increase is to be noted both in the city and the suburbs.

Population.	1895.	1896.	1897.	1898.
City ... ..	103·870	100·000	95·850	97·500
Suburbs ... ..	319·730	308·500	314·150	319·750
Metropolis ... ..	423·600	408·500	410·000	417·250
Density per acre ... ..	48·7	44·9	45·93	46·1

The mean temperature for the year just ended was less than that for the year 1897. The extremes of temperature were sudden and severe, and the humidity was very great. The highest temperature, 99·7, was registered 19th October; the lowest, 40·4, 20th July; greatest range, 37·3, occurred 19th October, 1898.

Temperature.	1896.		1897.		1898.

## COMPARISON of Deaths in the Metropolis for ten Years.

Year.	Population.	Deaths under—				Total Deaths.	
		One Year.		Five Years.		Deaths.	Rate per 10,000 of Population.
		Deaths.	Rate per 10,000 of Population.	Deaths.	Rate per 10,000 of Population.		
1889 ...	357,470	5,323	66.09	4,273	121.9	6,431	182.9
1890 ...	370,357	1,850	50.0	2,516	67.9	5,591	150.9
1891 ...	389,655	2,175	55.7	2,821	72.4	6,418	169.8
1892 ...	406,480	1,830	45.0	2,422	60.0	5,512	135.6
1893 ...	431,710	1,966	47.7	3,161	76.7	6,418	156.8
1894 ...	423,600	1,788	42.1	2,373	53.6	5,961	140.7
1895 ...	423,600	1,331	31.4	2,156	50.9	5,549	130.9
1896 ...	408,500	1,711	41.8	2,232	54.5	5,492	134.4
1897 ...	410,000	1,551	38.0	1,976	48.2	5,231	130.0
1898 ...	417,250	1,934	46.1	2,699	64.6	6,365	151.8

It will be seen that the mortality for the year 1898 shows a considerable increase over that for any year since 1893, and is greater than that for the year 1897 by 1,134 cases. The annual mortality in London, which is one of the healthiest cities in the world, is about 168.0 per 10,000 of the population. Huddersfield, 132.0; Derby, 126.0; Croydon, 132; Liverpool, 220.0; Swansea, 230.0; Sunderland, 230.0; Bolton, 270.0; Edinburgh, 240.5. Taking into consideration, therefore, the effect of climate and the recent epidemic of measles which occurred during the latter half of the year, the Metropolis of Sydney shows as low a death-rate as that of any English town its own size, and a far lower death-rate than some of the Scotch and Irish towns. Of course, it must be admitted that other beneficial results of practical legislation have been at work, but it is worthy of remark that before the installation of the present water supply and sewerage systems the mortality from general causes reached as high as 200 per 10,000 of the population, but has since fallen, and although occasionally an epidemic may cause the death-rate to assume alarming proportions, this does not occur so frequently as it did during former years, and adjusts itself upon the subsidence of the epidemic. The increase in the mortality is made up by 268 cases of measles, 191 cases of whooping cough, 156 cases of bronchitis, 129 cases of pneumonia, 6 cases of diarrhoea, 14 cases of diphtheria, phthisis 90, and 284 from other causes.

## MORTALITY due—Measles and Respiratory Diseases.

	1897.			1898.		
	City.	Suburbs.	Metropolis.	City.	Suburbs.	Metropolis.
Measles ...	...	1	1	87	182	269
Whooping Cough ...	...	2	2	20	173	193
Bronchitis ...	49	113	162	111	207	318
Pneumonia ...	79	169	248	207	285	377
Total ...	128	285	413	310	847	1,157

The mortality due to measles was heavier during the year 1898 than it was during the last epidemic in the year 1893. As in the year 1893 the mortality from respiratory diseases increased greatly during the epidemic of measles, so the same occurred in the year 1898.

The

The zymotic death-rate in the city rose from 1·4 per 10,000 of the population at the end of December, 1897, to 2 at the end of January, 1898; fell to ·9 at the end of February, and remained at the same at the end of March. It fell during April to ·8, and at the end of May to ·6. Owing to the severe epidemic of measles it rose at the end of July to 2·3, and as the whooping cough increased it stood at the end of August at 5. As the epidemic abated the rate fell again at the end of September to 1·5, at the end of October to 1·1, rose slightly at the end of November to 1·9, and stood at the end of December at 1·8. In the suburbs this rate was 1·7 at the end of December, 1897; 1·2 at the end of January, 1898; 1·07 end of February; 1·3 end of March; 1·2 end of April; 1·1 end of May; 1·3 end of June; 1·7 end of July; 2·7 end of August; 3 end of September; 2·2 end of October; 2 end of November, and 2·3 end of December. With the ever-advancing tide of civilisation and for the convenience of trade, towns and villages increased both in size and number. Through the fact that some towns became more famous for trade than others, the population of such towns increased beyond the limits of proper and wholesome accommodation, so that many diseases came into existence which were formerly unknown, and the origin of such diseases without doubt was due to a want of appreciation of that cleanliness which is so important a factor in the welfare of large communities. During the Victorian age, owing to the unceasing efforts of many scientific bodies, the barriers of ignorance and prejudice are fast being broken down, and sanitary laws are more properly appreciated. The hygienic conditions of communities are constantly being raised to a higher standard, and, consequently, the mortality due to preventable diseases is annually decreasing. The experience of all those cities which have engaged in works belonging to a high state of civilisation, viz., the installation of a proper system of sewerage and a properly managed water supply, has been, that, as these systems have been extended, the public health has been raised to a higher standard, and that, although the decrease in the mortality has been very great after the establishment of a proper water supply, it has been still greater after the installation of a proper sewerage system.

The mortality from diarrhœa was slightly in excess of what it was for the year 1897, but not nearly so great as it was in former years. Since the extension of the Board's operations the rate has fallen from 10·9 per 10,000 of the population to 4·9. The summer rise of the mortality from diarrhœa coincided with the rise of the four-foot earth temperature, which reached the height of 67°. A systematic observation of these temperatures has been made during the year by Inspectors McKenzie and Lyons, and very careful readings have been taken in order that the correct temperature might be obtained.

#### MORTALITY from Diarrhœa.

Excessive humidity in the atmosphere, more especially during the existence of a high temperature, favours putrefactive change. Irregular removal of house garbage allows festering heaps to exist, and attracts flies and mosquitoes. Recently there has been much inquiry into the matter of dissemination of disease by means of insects, and it has been found that the mosquito is capable of disseminating disease. The subject has yet to be more completely worked out, but with the data at present obtained care should be exercised to prevent these insects from being a cause of disease. The recent action of the city municipal authorities in regulating the display of the dirt-boxes in front of houses is a step in the right direction; but there should be some attempt at regulating that sorting which is evidently necessary in order to prevent these inadequate receptacles of filthy household garbage from being raked and turned over on the public pavements by the itinerant rag and bottle merchants. To attain this desirable state it will be necessary for the municipal authorities to prescribe by a by-law the exact kind of dirt-box to be used by householders. It would be unjust to throw all the blame on the municipal authorities, and not to emphasise the importance of individual action in the prevention of disease, and it is impossible, unless individual responsibility is properly appreciated, to check the dangers arising through those mephitic vapours which come from the putrid exhalations of foul drains, ash-pits, dirt-boxes, and improperly managed pan-closets.

#### COMPARISON of the Rate of Mortality from Diarrhœa.

	1889.	1890.	1891.	1892.	1893.	1894.	1895.	1896.	1897.	1898.
Number of deaths ... ..	384	263	288	297	305	281	297	253	200	206
Rate per 10,000 of population...	10·9	7·1	7·37	8·3	7·4	6·6	7·0	6·1	4·8	4·9

Among the other important factors for checking the spread of disease, especially in a hot climate such as that of this metropolis, street scavenging plays an important part. No municipal authority can afford to neglect street scavenging, and it must be thoroughly carried out by a properly trained staff of assistants if it is to be in any way effectual in coping with the increase of disease. It is now well known that

that many diseases are propagated by aerial convection, consequently every precaution ought to be taken to prevent infective dust from being carried into the atmosphere. No one has ever yet pretended that the inhalation of finely-pulverised horse-dung is a useful application to the respiratory membranes; and yet badly-carried-out street-scavenging allows such an evil to persist, notwithstanding that the researches of Klein have brought to light the fact that there is a bacillus, *enteriditis sporogenes*, largely present in horse-dung which has been pulverised into the dust of streets, as well as in such dung when found in other places. He considers that this bacillus is responsible for a form of diarrhœa which is liable to prevail in epidemics and to cause serious danger to life. This bacillus grows readily and well in milk, and, consequently, may through this medium be accountable for much of the mortality through diarrhœa. This discovery of Klein's is alarming, owing to the present faulty methods of distributing milk, and the evil manner in which householders leave their milk-jugs handy to street dust and prowling domestic animals. Another important cause of diarrhœa is to be found in soil. The organic pollution which renders a soil distinctly favourable to a high diarrhœa mortality need not be of a fœcal or excremental nature, and for this reason dwellings built upon made ground, refuse of towns, reclaimed areas, sites of old market-gardens, and places where the earth beneath is polluted by collections of liquid filth, are very likely to become the seats of a high rate of sickness and diarrhœal mortality, proving the truth of Lord Bacon's statement "that he who buildeth a house on an ill seat committeth himself into a prison." Such ill sites, however, are greatly improved by the laying of sewers; in fact, the tendency of any soil to cause diarrhœa is mitigated through this means.

DIARRHŒA.—Rate of Mortality from Diarrhœa per 10,000 of the Population.

	Before Laying of Sewers.	Since Laying of Sewers.
City of Sydney . . . . .	6·7	3·98
Municipality of Darlington . . . . .	6·6	2·00
Municipality of Glebe . . . . .	10·0	3·00
Municipality of Newtown . . . . .	5·2	2·8
Municipality of Paddington . . . . .	10·5	5·0
Municipality of Redfern . . . . .	15·5	5·0
Municipality of Waterloo . . . . .	27·0	17·0
Municipality of Woollahra . . . . .	9·1	4·0

That sewer air in a properly-ventilated sewer is not extraordinarily harmful is shown by the immunity from disease which is experienced by the men constantly working in sewers. The origin of contagious disease is not to be traced to such sewers, but will be found in some foul house-drain which, through neglect and improper flushing with water, has given rise to those dangerous emanations which cause nausea and lower the general vitality of the individual. Such chronic putrid gas-poisoning leads to attenuation and physical and intellectual weakness. It is now acknowledged that diphtheria is mainly an air-borne disease, and owes infectivity to germs which are carried in the air. As before mentioned, the subject of school attendance has, in the opinion of Sir Richard Thorne Thorne and others, a great bearing upon the increase of this disease. Diphtheria has no connection with sewers or sewer air except in so far as the constant breathing of any foul emanation will bring about a physical change in the system so as to increase its susceptibility, either through the simple vulnerability of the respiratory mucous membranes by which the infection enters, or by lessening the refractoriness of the whole system to infection.

Diphtheria is classed as a preventable disease, but it is difficult to understand its seasonal fluctuations and the causes of its epidemicity. Diphtheria is a filth disease, and the mephitic vapours which arise through the putrefaction of collections of decaying matter cause a physical weakness which renders the human system unable to cope with the virulence of the attack of the disease. A filthy dust-bin does not confine its dangerous attentions solely to its owner, but may give rise to such germs of disease as may be borne by currents of air into the dwelling of a cleanly neighbour, there to disseminate death and disease. This question of the filthy dust-bin applies also to ill-managed municipal rubbish tips, and it is a standing disgrace to any municipality that in this enlightened nineteenth century these filthy tips should exist, sending forth currents of air sewage to surrounding dwellings and even farther afield. The question of dealing with garbage is a difficult one, and cannot be approached without providing for that sorting which is inevitable, and the proper destruction of the remainder either by fire or by something equally destructive.

RATE of Mortality from Diphtheria per 10,000 of the Population in the Metropolis.

	1889.	1890.	1891.	1892.	1893.	1894.	1895.	1896.	1897.	1898.

Phthisis, or more properly tuberculosis, is now acknowledged to be an infectious disease, which may be communicated by aerial convection or by ingestion of food. Sir William Broadbent remarks that "Consumption is no longer to be regarded as a visitation of God: for it is well known to be the result of man's ignorance and carelessness." There is some difference of opinion as to the relative frequency with which infection takes place by means of the lungs and the alimentary canal. It may be and is undoubtedly produced by the inhalation of specially infected dust containing the spores derived from dried and desiccated sputum which has been recklessly thrown out through the filthy, pernicious, and unnecessary habit of expectorating in public thoroughfares and conveyances. The introduction of Dumont's or Chauvette's spittoon may mitigate the danger from aerial convection of this disease, but a more definite result will be obtained by educating the individual to an appreciation of the danger of indiscriminate expectoration. As tuberculosis in infants and young children is very often a disease with lesions of cerebro-spinal membranes, or a disease affecting the intestines and their related lymphatic glands, there is good ground for belief that the infection in childhood at least finds its entry in a very large proportion of cases by way of the alimentary canal. The ingestion of food containing the active infective agent of tuberculosis cannot be regarded as free from danger at any age. Sir Richard Thorne Thorne remarks "that during the last half century sanitary improvements have reduced the death rate from phthisis, at any rate that form which is due to infection through aerial convection; but that form of tuberculosis caused through infection through the alimentary canal has steadily increased its number of victims, and this increase has gone hand-in-hand with the steady increase in the consumption of cow's milk." Brown, of Carlisle, has pointed out that the tuberculous lesions in cattle have the same localisations as in the human subject, and he lays great stress upon the great necessity for the periodical inspection of dairy cattle, because of the undoubted propagation of tuberculosis by milk. The fact that cow's milk enters so largely into the diet of infants and children, taken in conjunction with the special character of the distribution of the lesions in infancy and childhood, is sufficient in itself to draw attention to milk as being the usual vehicle of infection, more especially as it is well known that the milk of a tuberculous cow does contain the tubercle bacillus in an active state. Sir Richard Thorne Thorne has definitely proved that the increase of tuberculosis has not occurred during the meat-eating period of life but rather before it. In our metropolis the deaths from phthisis during the year 1898 comprised 7.7 per cent. of the total number of deaths from all causes, and the decrease during the last ten years has not been in the same ratio, for those tubercular diseases which Sir Richard Thorne Thorne ascribes to ingestion of food, as it has been for phthisis itself. Mr. Francis Fox, in speaking of this disease, states that 70,000 deaths could be avoided in Great Britain if people only understood the value of fresh air. He emphasised the fact that air passed through the human lungs becomes highly poisonous, and that the rebreathing of such air sewage was fraught with the gravest consequences to health. He states that the impurity of air in schools and dwelling-houses is often greater than it is in sewers, and he advocates most strongly that the public should be educated to appreciate the value and merits of fresh air.

MORTALITY from Phthisis.

Quarters ending—	1895.			1896.			1897.			1898.

MORTALITY from Phthisis in the Metropolis during the year 1898—According to age.

Under 5 years.	5 years to 10 years.	11 years to 20 years.	21 years to 30 years.	31 years to 40 years.	41 years to 50 years.	51 years to 60 years.	61 years to 70 years.	71 years to 77 years.
9	2	44	134	128	85	50	20	10

This last table tells its own tale of the loss of life during the wage-earning age, and the necessity for some measure to prevent what has happened during the year 1898 from again recurring, for the increase in the number of deaths from phthisis amounts almost to an epidemic. The average of the last ten years shows that the death rate in the city from phthisis has decreased from 15.5 per 10,000 of the population to 9.2, and in the other sewered districts there is an equally great decrease since the laying of deep sewers, showing that drying of the soil by the laying of deep sewers has had a beneficial effect in reducing the mortality from phthisis.

## PHTHISIS Mortality in 1898.

	Deaths reported.	District in which the largest number of Deaths occurred.
January ... ..	47	City, Balmain.
February ... ..	34	Redfern, Glebe, Woollahra.
March ... ..	36	City, Balmain, Redfern, Paddington, Waterloo.
April ... ..	33	City, Ashfield.
May... ..	45	Glebe.
June ... ..	37	Marrickville, Petersham.
July... ..	64	Balmain, Newtown, Waterloo, City.
August ... ..	49	Paddington, Glebe, Marrickville, North Sydney, City.
September ... ..	40	Balmain, Leichhardt, Newtown, Redfern, Glebe, Petersham, Paddington.
October ... ..	38	City, Balmain, Leichhardt, Newtown, Redfern, Petersham, Glebe, Paddington.
November ... ..	39	Balmain, Marrickville.
December ... ..	31	Balmain, Glebe, Willoughby.

During the whole year the greatest mortality from phthisis occurred in the western suburbs, then in order follow the northern suburbs, while the lowest mortality in the west central suburbs. In the individual suburbs, in proportion to their population, Lane Cove reports the highest mortality, and is followed in order by Canterbury, Enfield, Darlington, Marrickville, Waterloo, Glebe, Kogarah, Strathfield, Newtown, Paddington, Leichhardt, city of Sydney, Manly, North Sydney, Petersham, Camperdown, Redfern, Annandale, Willoughby, Waverley, Erskineville, Balmain, Five Dock, Botany, Ashfield, St. Peter's, Burwood, Alexandria, Ryde, North Botany, Woollahra, Hurstville, Concord, Rockdale, Mosman.

The year 1898 marks the new era of registration of cases of infectious disease which came into force at the beginning of this year as a part of the Public Health Act. Previous to this year no such regulation existed, but in the year 1894 a partial voluntary system of notification was instituted by the Board, which was attended with good results, and enabled many existing dangers to health to be abolished or remedied.

## CASES of typhoid fever reported.

Quarters ending—	1894.	1895.	1896.	1897.	1898.	Total.
31 March ... ..	214	186	253	150	334	1,137
30 June ... ..	168	90	216	167	269	910
30 September ... ..	27	36	45	36	75	219
31 December ... ..	133	96	102	118	205	654
Total ... ..	542	408	616	461	883	2,920

To thoroughly understand the disaster accompanying the dire results of epidemics of this disease, and the importance of this matter to statesmen, through the seeming impotence of medicine to effect a remedy, it is necessary to reduce these cases to a money value. As there were 497 fatal cases during this time, each life must be valued at £150, and each case being supposed to continue on an average for ten weeks, each week must be valued at £1.

$$\begin{array}{r} 497 \text{ lives at } \pounds 150 = \pounds 74,550 \\ 2,920 \text{ cases at } \pounds 10 = \pounds 29,200 \end{array} \quad \left. \vphantom{\begin{array}{r} 497 \text{ lives at } \pounds 150 = \pounds 74,550 \\ 2,920 \text{ cases at } \pounds 10 = \pounds 29,200 \end{array}} \right\} = \pounds 103,750$$

as the loss to the State in the Metropolis alone during five years.

## DISTRIBUTION of Cases of Typhoid Fever.

Month.	Cases.	Districts reporting greatest number in order of incidence.
January ... ..	143	Western suburbs, north-western suburbs, northern suburbs, west central suburbs, City of Sydney, east central suburbs, eastern suburbs, southern suburbs.
February ... ..	86	North-western suburbs, northern suburbs, western suburbs, City of Sydney, east central suburbs, west central suburbs, northern suburbs, eastern suburbs, southern suburbs.
March ... ..	105	North-western suburbs, west central suburbs, City of Sydney, east central suburbs, western suburbs, northern suburbs.
April ... ..	116	North-western suburbs, west central suburbs, western suburbs, eastern suburbs, east central suburbs, City of Sydney, northern suburbs, southern suburbs.
May ... ..	119	Western suburbs, north-western suburbs, east central suburbs, eastern suburbs, west central suburbs, City of Sydney, northern suburbs, southern suburbs.
June ... ..	34	East central suburbs, western suburbs, City of Sydney, west central suburbs, north-western suburbs.
July ... ..	41	East central, west central, north-western suburbs.
August ... ..	17	Western and north-western suburbs.
September ... ..	17	" "
October ... ..	23	" "
November ... ..	29	" "
December ... ..	153	Western, north-western suburbs, City of Sydney, northern, eastern, west central, east central, southern suburbs.

For the whole, in proportion to their population the western suburbs reported the greatest number of cases; then in order the west central, north-western, northern, east central, eastern, southern suburbs, and, lowest of all, the City of Sydney.

The subject of typhoid fever has for some years engaged the attention of all sanitary experts, and the question has resolved itself into one of national importance. Every attempt is being made to avoid this pest, and owing to the great strides made in scientific investigation there is every reason to suppose that in the near future the evil will be greatly minimised, if not altogether abolished. In order that the greatest amount of practical good may be obtained through the results of scientific research, it behoves every individual to recognise his true position of responsibility, for the very dog who quests around a post is making abstractions and drawing inferences, and therefore man should use his reasoning powers, for it is through ignorance and indifference that infectious material is scattered broadcast, diminishing the chances of recovery of persons suffering from disease, and imperilling the safety of others. The number of putrescible substances is not great, but they are universally distributed, and are derived from every organised being, and as germ-life is ubiquitous, hordes of anaërobic microbes quickly invade decaying matter with dangerous activity, causing injurious smells. Pathogenic germs, however, are of so delicate a nature that they soon perish in the struggle with swarms of saprophytes which simultaneously come into existence, and all recent investigation has been in the direction of attempting to arrange the surroundings of sewage farms and outfalls so that a still greater number of these saprophytes will be brought into existence and prove the destroyers of the pathogenic germs. Messrs. Dibdin and Thudichum, who have gone thoroughly into this matter, state: "Sewage purification is based upon the advances which have been made in the direction of treatment by natural agencies concentrated and controlled by art. Sewage is a mixture of a most varying and complex character, in which a process of oxidation is always taking place, and this oxidation is being promoted by the life-action of certain micro organisms. The problem, therefore, is how this natural method of oxidation may be best controlled and expedited. The best and most natural system hitherto tried, namely, the application of sewage to land, depends for its success entirely upon the fostering and increase of micro-organisms. But the use of crude sewage upon land leads to great difficulties, and it has not been seen that the same agencies which destroy the dissolved impurities could, if given the necessary conditions, equally deal with those in suspension. With the clear effluent it was possible to deal, although the process, being dependent so much on local conditions and climatic influences, was always uncertain. In the recognition of the fact that all processes of sewage purification must be made subservient to the requirements of the various micro-organisms lies the whole secret of success, and in the process of completely oxidising effete matters two stages are to be recognised in which distinct classes of organisms play their respective parts." Into the relative merits of the aërobian and anaërobian classes of organisms it is not at this present time necessary to inquire; but it is sufficient to state that oxidation constitutes the successful process, and the purifying action of the bacteria depends upon the passage of thin films of fluid over surfaces in the presence of air. When the first elementary ideas as to purification of sewage had passed away, two schools of thought arose; one advocated the treatment of sewage on land and others treatment without land. The first school can show that by downward filtration and irrigation a good and fairly pure effluent could be produced; but in many places land suitable for the treatment of sewage cannot be obtained, and attempts have been made to arrive at some process which will take the place of the sewage farm and prove cheaper in its working. "During the last few years filtration, through artificial media, such as ballast and coke, has been shown to be effective in purifying the sewage of towns. The value of these media has been brought out prominently by the experiments of Mr. Dibdin. Mr. Garfield, the manager of the Wolverhampton sewage works, conceived the idea that fine coal would prove the most efficient filter of sewage yet known, and along with Mr. E. W. T. Jones, the public analyst of Wolverhampton, he carried out a series of experiments, with good results, on the worst form of sewage known, viz., sewage contaminated with brewery refuse. Coal appears to have the special power of removing putrescent organic matter from sewage, and the effluent produced is as good or even better than that which may be obtained from land. It is superior to coke or ballast in that it has at once a chemical action, and its purifying power is marked from the first day it is used, although a still better

better result is obtained after a period of two or three months' use. The medium is cheap and easily obtained, and the death-knell of the costly sewage farm has been rung, and what is of far more importance from an economic and sanitary sense, the problem of sewage disposal has been at last solved." (Professor Bostock Hill.) By the labours of such men as Adeney, Dibdin, Thudichum, Garfield, and Jones, a flood of light has been thrown upon the whole subject of bacterial action in treating polluted waters, and the value of any system of sewage purification can be tested by the touchstone of well-established and fully-proved scientific truths. Out of the total number of cases of typhoid fever reported to the Board during the year 1898, more than 6 per cent. were under the age of 5 years, 40 per cent., or one-third of the total number, under 10 years of age, 70 per cent. under the age of 20 years, and 90 per cent. under the age of 30 years.

## DISTRIBUTION of Reported Cases according to Age.

Age.	Number of Cases Reported.

In sanitary science the chief aim is to prevent putrefactive change. It is not germ-life itself which is dangerous to mankind, but the poisonous products of putrefactive change; and in order to limit and avoid the action of such products there is every need to secure those two great essentials of all sanitation, viz., pure air and pure water. The science of public health is not founded upon fads and fancies; it is founded upon solid facts, and all true hygiene is based upon the true principles of common sense and scientific research. The huge strides made by the advances in chemical science during the Victorian era have given rise to more correct data than those formerly in acceptance, and although it seems a pity to upset those notions of sanitation which have taken deep root in men's mind, and to demolish suddenly pet theories, still the truth must be told, in order to restore comfort, to avoid unnecessary alarm, and to place those very notions and theories on a firm basis. As before mentioned, putrefaction is a process of vast importance, as its results do not always remain in the locality in which it takes place, but are carried away by the power of diffusion and are distributed in atmospheric space. Such air sewage, loaded with morbid matter, may be carried by air currents beyond its own district into a healthier zone, consequently, each and every individual is responsible both to himself and his fellows to preserve both his person and his dwelling in a cleanly state so that all refuse shall be quickly removed from the neighbourhood of his habitation or shall be so guarded that it shall not become subject to putrefaction. Of the 883 cases of typhoid fever reported to the Board during the year 1898, 87 cases, or 9.8 per cent., of the total number reported, came from the dwellings the sanitary fittings of which were in accordance with the Board's regulations, and of these 87 cases, 42 cases, or 48 per cent., were school children. That so large a number of cases should occur among young children points to the fact which I have before emphasised, that parental control is not sufficient to prevent these children from playing about stinking places and thrusting the major part of their bodies into gully shafts and other dangerous holes. In addition to this parental control there is also the individual responsibility in keeping dwellings and their surroundings clean, and the necessity for this is more marked in those districts as yet unprovided with a proper system of sewerage, and still having to be content with the pit or pan closets, for it is to be noted that more than two-thirds of the total number of the cases of typhoid fever reported came from the unsewered districts. There is a marked degree of difference in the incidence of typhoid fever upon houses having different types of closets, and it is greatest upon those provided with the pail closet and common privy. The difficulty experienced with these two kinds of closets is that of keeping them clean, and although the pail closet is much to be preferred to the other, still there is the danger of some of the contents being spilled upon the surrounding earth or floor; being allowed to dry in that position, and being diffused as dust into the atmosphere, and carried through air to contaminate both it and water. "Happy is the man who neither breathes the one nor drinks the other when so contaminated." The responsibility for the health of the citizens in any town mainly rests upon its municipal body, and there is no necessity to allow unsightly and inadequate receptacles of house garbage to be displayed along the public thoroughfares, nor is there any need for those pestilence breeding heaps called "municipal tips." The proper disposal of street refuse and house garbage is to be arrived at by carrying out the inevitable sorting, and destroying the remainder by fire. The present arrangement encourages the itinerant rag and bottle merchant to ply their necessary trade without restriction, and thus very probably to disseminate disease. Such tips render the surrounding neighbourhood unhealthy, and afford a nidus for disease and other germs which are often highly inimical to human life. Of the 883 cases of typhoid fever reported to the Board, 73, or 8.1 per cent., proved fatal. Of these 73 cases, 49 died at the various metropolitan and suburban hospitals, and 24 at their own homes.

MORTALITY

The districts from which the fatal cases came were: City of Sydney, Annandale, Leichhardt, Newtown, Redfern, Waterloo, Alexandria, Kogarah, Burwood, North Sydney, Manly, Ashfield, Paddington, Marrickville, Petersham, Randwick, Balmain, Hunter's Hill, Canterbury, Lane Cove, and from ships coming into port.

A careful inquiry was made into the environment of these cases, with the following result:—

	Jan.	Feb.	Mar.	April	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Total.
No sewers were available ... ..	5	5	5	6	7	5	3	1	0	2	0	6	46
Houses were in an insanitary state ... ..	4	3	2	4	3	0	0	1	2	2	1	0	22
Regulations had been complied with ... ..	0	0	0	0	0	1	0	0	0	0	0	0	1
No fixed abode ... ..	1	1	1	0	0	0	0	0	0	0	0	0	3
Came into port suffering from fever..	0	1	1	0	0	0	0	0	0	0	0	0	2
Total ... ..	10	10	9	10	10	6	3	2	2	4	1	6	73

Only 1 fatal case, or 1·3 per cent. of the total number, came from a dwelling the sanitary fittings of which were in accordance with the Board's regulations, and this case was proved to have come from a country district. Of these fatal cases, 5·2 per cent. of the total occurred under the age of 5 years, 16·4 per cent. under the age of 10 years, 38·3 per cent. under the age of 17 years, 47 per cent. under the age of 20 years, and 74 per cent. under the age of 30 years. Since the extension of the Board's operations there has been a very marked decrease in the mortality from typhoid fever.

## MORTALITY from Typhoid Fever.

	Before Laying of Sewers.	Since Laying of Sewers.
City of Sydney ... ..	5·07	1·3
Glebe ... ..	2·5	1·1
Darlington ... ..	4·0	·4

Woollahra ... ..	2·1	·9

At the present time the most pressing work of the sanitary reformer is not to legislate, but to educate. The masses of the people must be taught to participate in the knowledge of the causes of preventable disease, for it is through ignorance and prejudice that people fail to appreciate the immeasurable results of sanitation.

I have, &c.,

THEO. MAILLER KENDALL,

Medical Adviser.

## Medical Adviser's Report for Quarter ending 31 March, 1899.

To the Secretary, for presentation to the President and Members of the Board,—

Sir,

I have the honor to submit my report for the first quarter of the year 1899. The population of the metropolis shows a decided increase since the corresponding quarter of the previous year, and this increase is to be noted both in the city and the suburbs.

	1895.	1896.	1897.	1898.	1899.
City ... ..	103,870	100,000	95,850	95,250	97,875
Suburbs... ..	319,730	308,000	314,150	315,050	324,225
Metropolis ... ..	423,600	408,000	410,000	410,300	422,100
Density per acre in city ... ..	48·7	42·9	43·0	42·7	43·9

The temperature was subject to much variation, although the extremes approached were not so high as in former years, but the humidity was very great.

	1896.		1897.		1898.		1899.	
	Date.	Temperature.	Date.	Temperature.	Date.	Temperature.	Date.	Temperature.
January ... ..	13	108·5	18	57·6	19	98·1	2	88·7
"  ... ..	16	105·2	22	90·3	22	58·3	3	88·7
"  ... ..	30	63·0	...	.....	...	.....	31	54·2
February... ..	1	98·0	6	61·3	9	94·8	2	56·6
"  ... ..	4	58·0	24	90·5	20	59·8	27	83·1
March ... ..	5	80·0	11	57·8	2	83·8	21	56·8
"  ... ..	31	52·6	14	92·9	16	55·6	23	90·4

The highest temperature, 90·4, for the whole quarter just ended was registered 23rd March; the lowest, 54·2, 31st January; and the greatest range, 32·0, occurred 23rd March, 1899.

The rainfall was distributed over 41 days, or 5 days more than during the corresponding quarter of last year. The amount registered was 4·83 inches, or 6·78 inches less than fell during the corresponding quarter of last year. The quarter, therefore, has been remarkably dry.

### RAINFALL for the quarter ending 31st March.

1894.		1895.		1896.		1897.		1898.		1899.	
Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.
17·25	61	16·20	43	9·97	43	5·95	37	11·61	36	4·83	41

The total number of deaths from all causes was greater than the total for the corresponding quarter of last year, and the increase is to be noted in such diseases as whooping-cough, measles, typhoid fever, and phthisis.

### DEATHS from all Causes for the quarter ending 31st March.

	1894.	1895.	1896.	1897.	1898.	1899.
City ... ..	377	448	474	341	401	429
Suburbs ... ..	1,049	825	1,141	872	955	944
Metropolis ... ..	1,466	1,373	1,615	1,213	1,356	1,373

The zymotic death-rate in the city rose from 1·8 per 10,000 of the population at the end of December, 1898, to 2·5 at the end of January, 1899, the rise being due to the prevalence of whooping-cough. It fell at the end of February to 1·1, and at the end of March it stood at 1·0. For the suburbs this rate fell from 2·3 at the end of December, 1898, to 2·0 at the end of January, 1899, 1·3 at the end of February, and stood at 1·2 at the end of March.

MORTALITY from Diarrhœa, quarter ending 31 March.

	1895.	1896.	1897.	1898.	1899.
City ... ..	21	36	8	26	11
Suburbs ... ..	74	108	55	62	26
Metropolis... ..	95	144	63	88	37

The effect of insanitary conditions is seen in the miserable physique of the masses, their dirt and immorality, and the appalling sacrifice of infant life. It cannot be expected that the less educated masses will improve in physique and appreciate the value of cleanliness, both of person and dwelling, as long as they are provided with jerry-built houses flung together on building sites of made soil. Dr. Robertson, of Sheffield, has found, after a long course of experiments, that surface soils contain micro-organisms of different species, and that the number of these organisms is greater in made soils. Some of these micro-organisms, especially those found in made soils, are pathogenic in character, and as there is a tendency to upward diffusion, especially when accompanied by heat, these pathogenic micro-organisms while they lie dormant during the winter months, sally forth in the warmer months and become a menace to the general health. All made ground, therefore, especially that composed of household garbage and street refuse, ought to be avoided as sites for building purposes or public parks. It is not reasonable to suppose that street sweepings containing dried horsedung and other abominations can be at all healthy to use either for building sites or public parks. If diarrhœa, which is essentially a disease of the soil, is to be avoided, proper measures must be taken for preserving the soil itself free from germs of an evil nature.

MORTALITY from Diphtheria, quarter ending 31 March.

	1895.	1896.	1897.	1898.	1899.
City ... ..	2	0	3	0	0
Suburbs ... ..	23	10	12	11	2
Metropolis ... ..	25	10	15	11	2

Diphtheria is a disease which bears little if any direct relation to sewerage systems. Until late years it was a rural rather than an urban disease, but owing to the exigencies of advanced civilisation and the compulsory system of education more children are now thrown together than formerly, and this disease has therefore made greater progress. The disease itself is chiefly transmitted by air convection, and its relation to school attendance is well shown by what is called the holiday drop—that is, the disease is less frequently met with during the cessation of school attendance. Of course it must be remembered that individual carelessness contributes to the spread of this disease, and that through uncleanness and ignorance, innocent persons who appreciate the value of hygienic precautions may suffer infection and death.

MORTALITY from Phthisis, quarter ending 31 March.

	1895.	1896.	1897.	1898.	1899.
City ... ..	56	41	31	31	49
Suburbs ... ..	107	43	59	87	74
Metropolis ... ..	163	84	90	118	123

The bacillus of tuberculosis is a saprophyte as well as a parasite, and can grow in the organic matter contained in expired air, or in the vapour arising from the soil. To remedy this, overcrowding of rooms must be avoided; there should be free ventilation; or, in the words of Dr. Manson, swilling and flushing with fresh air; every facility for a plentiful supply of sunlight, and measures ought to be taken to free the soil from vapour by drying it. Ransome observes that free ventilation plus sunshine mitigates the peril from tuberculous sputum and disinfects it. The clearance of crowded sites and the reconstruction of insanitary house property is a matter of great importance in dealing with the spread of tuberculosis; and Broadbent states that "by the effects of subsoil drainage, improved hygiene, the raising of the general standard of cleanliness, and a greater attention to ventilation, the mortality from tuberculosis has been greatly reduced." Tuberculous people become a source of danger to others partly through the pernicious and unnecessary habit of expectoration which causes the dust of our streets to become laden with the bacillus of tubercle so that it becomes a source of danger through inhalation, and street sweepings become useless for other purposes and must be destroyed by fire unless the habit of expectoration can be in some way checked. It has been observed by Sir Richard Thorne and other eminent authorities that the mortality from tuberculosis in early childhood—that is, during the milk-feeding age,

age, has not decreased in the same ratio as it has during the meat-feeding age. The extension of bovine tuberculosis constitutes a serious economic loss and a new source of danger to man. Professor Delepine says although boiling of milk protects the consumer by being effective in killing the tubercle bacillus, there should be no need to practise it if proper supervision were exercised over the milking cows, and it only serves to cover up the sins of the owner of diseased cattle. Praussnitz has been making experiments in order to ascertain how far the contagion of tubercle may be traced to public vehicles and dwellings. He finds that not only the bacillus of tubercle is to be found in railway carriages, but also many other germs of a pathogenic nature among which were the bacillus of typhoid and septicaemia. Such being the case, it is little wonder that this disease thrives apace, and that the mortality due to it has been so great during the past quarter, which has been such a dry one.

The fatal cases of phthisis came from the following districts, which are arranged in the order of the greatest incidence of mortality:—Darlington, Five Dock, Waterloo, Concord, Willoughby, Botany, Redfern, Kogarah, North Botany, Burwood, Newtown, Manly, Paddington, Glebe, Marrickville, City of Sydney, Hurstville, Erskineville, St. Peters, Woollahra, Rockdale, Balmain, Ashfield, Randwick, Camperdown, North Sydney, Annandale, Alexandria, Waverley, Petersham.

DISTRIBUTION of Mortality from Phthisis, according to age, quarter ending 31 March.

1 year to 3 years.	10 years.	11 years.	18 years.	20 years to 29 years.	30 years to 39 years.	40 years to 49 years.	50 years to 59 years.	60 years to 66 years.	70 years.	77 years.
3	1	1	3	39	30	26	12	5	1	1

During the quarter just ended a fewer number of cases of typhoid fever was reported than during the quarter of last year. It must be remembered that during the years 1894, 1895, 1896, 1897, notification was not compulsory, so that all the cases occurring during these years were not reported.

CASES of Typhoid Fever reported, quarter ending 31 March.

1894.	1895.	1896.	1897.	1898.	1899.
214	186	253	150	339	306

Typhoid or enteric fever may be communicated either directly from one individual to the other, or by means of some vehicle, such as food, water, air, milk containing the microbe of the disease. Sir Charles Cameron looks upon typhoid as a semi-miasmatic disease which may cling to individual houses and thus infect succeeding tenants. The bacillus of typhoid fever is capable of living and multiplying in ordinary soil, and thrives even more readily in soil which has been polluted through badly arranged pavements, careless disposal of slop waters, and neglect of filth around privies and drains. Typhoid excreta should never be buried, as there is a tendency for the bacillus to work its way upward to the surface of the soil, and in the town of Nice the source of a typhoid epidemic was traced to the polluted subsoil which had been washed away by heavy rains. Typhoid excreta, therefore, ought always to be destroyed by fire.

DISTRIBUTION of Cases of Typhoid Fever during the quarter ending 31 March, showing the rate per 10,000 of the Population.

20 North Sydney ...	9.78	5.7	19.9	40 Ryde ...	.32	0	0

The greatest incidence of typhoid fever occurred in the east central group of suburbs, which reported 10 cases per 10,000 of their population; next in the western suburbs, 9.5 cases; north-western suburbs, 9.4 cases; southern suburbs, 8.7 cases; west central suburbs, 7.3 cases; eastern suburbs, 4.5 cases; northern suburbs, 4.5 cases; city of Sydney, 4.4 cases. It is most interesting to note the decrease which has taken place in the number of cases of typhoid fever occurring in many of the suburbs. For instance, Erskineville, which was formerly noted for its great unhealthiness, is now to be pointed out for being practically free from typhoid fever, which was formerly its great curse. The scare which was recently raised about the great amount of typhoid fever in North Sydney, has proved a fabrication, as this suburb has never been more free from typhoid fever than it is at present, and it has only reported about half the number of cases of typhoid fever it reported for the corresponding quarter of last year. It is useless to provide any district with a proper system of sewerage and a good water supply, unless there is displayed some amount of care by the individual to keep these systems in good order, so that broken portions shall be renewed and every means taken to prevent chokage. No system, however perfect, will work successfully unless there is a careful supervision on the part of the householder; and if such supervision were only exercised even in a moderate degree there would be fewer cases of typhoid fever to report. In man and also in the lower animals during perfect health, there is a certain microbe, *Bacillus coli communis*, common bacillus of the intestine, which infects the intestines. It has been discovered that this bacillus is an adjuvant factor of typhoid fever, and that it may remain a perfectly harmless saprophyte or may rapidly alter its character and become possessed of intense pathogenic activity. Its virulence is subject to extraordinary variability, and the exaltation of its virulence may be due to an association with other organisms, pathogenic or non-pathogenic. Professor Ray Lankester looks upon this bacillus as perfectly innocent while it remains alone in the intestines of man or animals; but should this bacillus pass by any means from the intestine of animals and be conveyed into the intestine of man, it there meets the same bacillus of an equally saprophytic nature, and stirs it up by some means into activity and exalts its virulence so that it produces the symptoms of typhoid fever. This, then, emphasises the necessity of keeping all animals away from watersheds and reservoirs, for the presence of *Bacillus coli communis* in any water supply is a sign of contamination through animal excreta. Doctors Lorrain Smith and Tennant, while searching for the cause of the typhoid epidemic at Belfast, Ireland, discovered that the bacillus, *Coli communis*, has a special relation to typhoid fever, and that although it differs in its properties while in the healthy human intestine, symbiosis there with other bacilli even of its own kind increases its pathogenic power. Sanarelli states that when the typhoid process is set up, this bacillus acquires virulence and takes an active part in the disease through auto-intoxication. If then there is such an opportunity through which danger may arise, each individual should appreciate personal cleanliness, and hesitate before they recklessly and unnecessarily foul the soil around their dwellings or in the environment of any water supply. The experience of all eminent authorities, therefore, points to the exclusion of sheep, cattle, dogs, pigs, and horses from the gathering grounds of any water supply, and from the land surrounding reservoirs, and to ensure the public safety each and every water authority should own its gathering ground, so that it may be able to provide a large and growing population with pure water free from contamination, collected far above the haunts of man and delivered in a constant and abundant supply. There is danger to be feared through the existence of cultivated and manured land close to any source of water supply, for in Glasgow an epidemic of typhoid fever was traced to the drainings of such land. The larger towns of England have all purchased outright, and laid waste, their various catchment areas, and the city of Melbourne has followed the same practice for ensuring the purity of the water supply.

An inquiry was made into the environment of the 306 cases of typhoid fever reported to the Board with the following result:—

	January.	February.	March.	Total.
Sewers not laid ... ..	35	42	78	155
Sewers laid, houses not connected...	4	9	29	42
Dwellings insanitary ... ..	22	32	34	88
Regulations complied with ... ..	8	7	4	19
No fixed abode ... ..	0	1	0	1
Came into port suffering from disease ... ..	0	0	1	1
Total ... ..	69	91	146	306

It might reasonably have been supposed that in those dwellings which had been provided with a proper system of sewerage some effort would have been made to keep such fittings in good order, but the Inspectors' reports reveal that the gully traps were found broken, bath wastes choked, and in many places all things kept in a state of supreme dirtiness, so that it is little wonder that although fewer cases of typhoid fever were reported, the attacks were of greater virulence than during the corresponding quarter of last year, and more cases proved fatal. If, suddenly, through some unknown cause, a few people were removed and murdered, there would be a general outcry of inefficiency if the police were unable to unravel the fatal cause, but when hundreds are removed by death through disease which could have been prevented, supreme indifference is exhibited, and the finger of God is held responsible. The mortality from typhoid fever was greater during the past quarter than it has been for some years past. It is quite possible that the prolonged dry weather, with a close and humid atmosphere, has had something to do with this excessive rate of mortality; but the fact remains that ill-advised retrenchment on the part of municipal bodies, carelessness and uncleanness on the part of the individual, and, last of all, "tips of garbage," and those evil notices of "Rubbish may be shot here," have also aided the spread and virulence of the disease.

## MORTALITY from typhoid fever, quarter ending 31st March.

	1894.	1895.	1896.	1897.	1898.	1899.
City ... ..	.....	6	18	5	5	13
Suburbs ... ..	.....	26	39	13	24	28
Metropolis ... ..	50	32	57	18	29	41

The fatal cases came from the following districts, which reported the greatest number of deaths per 10,000 of their population in the order given:—Botany, Canterbury, Lane Cove, Enfield, Burwood, Randwick, Petersham, Newtown, Redfern, Balmain, Leichhardt, Waterloo, Ashfield, Woollahra, City of Sydney, Paddington.

A careful inquiry was made into the surroundings of these forty-one cases, with the following result:—

	January.	February.	March.	Total.
Sewers had not been laid ... ..	6	5	10	21
Sewers laid, houses not connected... ..	1	0	1	2
Dwellings insanitary ... ..	3	7	7	17
Regulations complied with... ..	0	0	0	0
Came into port suffering from disease ... ..	0	0	1	1
Total ... ..	10	12	19	41

More than half the cases, therefore, came from districts where sewers do not exist, and the greater part of the remaining cases came from dwellings in which sanitation was regarded with supreme indifference. Of the thirteen fatal cases reported for the city, eight came from unsewered districts for treatment. It is agreeable to again report that no fatal cases came from dwellings provided with proper sanitary systems, but it is well to remind the general public that such systems are not automatic, and that they require attention if they are to be kept in good working order, and to act as safeguards against disease.

I have, &c.,

THEO. MAILLER KENDALL,  
Medical Adviser.

## Medical Adviser's Report on the Health of the Metropolis for the Quarter ending 30 June, 1899.

To the Secretary, for presentation to the President and Members of the Board,—

Sir,

I have the honor to submit my report for the second quarter of the year 1899.

The population of the Metropolis has greatly increased since the corresponding quarter of last year; and the increase is to be noted both in the City and the Suburbs.

### POPULATION.

	1895.	1896.	1897.	1898.	1899.
City ... ..	103,870	100,000	95,850	95,250	98,250
Suburbs ... ..	319,730	308,000	314,150	315,050	328,700
Metropolis ... ..	423,600	408,000	410,000	410,300	426,950
Density per acre in city ... ..	46·7	44·9	43·1	44·1	44·1

The mean temperature was higher than it was during the corresponding quarter of last year. The extremes of heat and cold reached, however, were not so great. The highest temperature, 81°, was registered on 7 April, 1899; the lowest, 43·3°, on 29th June; and the greatest range, 19°, occurred on 8th April.

### TEMPERATURE.

	1896.		1897.		1898.		1899.	
	Date.	Temperature.	Date.	Temperature.	Date.	Temperature.	Date.	Temperature.
		° F.		° F.		° F.		° F.
April ... ..	8	83·9	12	88·0	3	83·0	7	81·1
" ... ..	15	51·0	22	50·0	22	48·5	29	51·6
May ... ..	3	81·0	9	44·0	22	66·8	3	72·0
" ... ..	13	45·2	17	78·8	25	42·4	24	44·3
June ... ..	22	42·5	10	68·0	11	65·8	23	68·3
" ... ..	28	67·0	30	44·8	28	41·5	29	43·3

The rainfall was distributed over forty-seven days, or two days more than during the corresponding quarter of last year. The amount registered equalled 20·74 inches, or 3·21 inches more than fell during the corresponding quarter of the year 1898.

### RAINFALL, quarter ending 30 June.

1895.		1896.		1897.		1898.		1899.	
Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.
5·12	41	18·70	34	17·70	33	17·53	45	20·74	47

The general death rate was lower during the last quarter than it was during the corresponding quarter of last year, in the Metropolis, but it was higher in the City proper, owing to the increase in the mortality from whooping cough, cancer, phthisis, and typhoid fever.

### DEATHS from all causes, quarter ending 30 June.

	1895.	1896.	1897.	1898.	1899.
City ... ..	358	361	444	429	477
Suburbs ... ..	962	840	954	980	926
Metropolis ... ..	1,320	1,201	1,398	1,409	1,403

The zymotic death-rate in the city stood at 1 per 10,000 of the population at the end of March, rose to 1·7 at the end of April, fell to ·6 at the end of May, and to ·2 at the end of June. For the suburbs this rate stood at 1·2 at the end of March, at ·9 at the end of April, fell to ·8 at the end of May, and remained at the same point at the end of June.

The mortality from diarrhœa shows a slight increase over that of the corresponding quarter of last year. Dr. F. W. Andrews has found that the anærobic bacillus described by Klein, and mentioned by me, was commonly met with in the many different forms of diarrhœa which he investigated. As this bacillus is found in the dung of horses and cows, it is necessary to use every precaution against the dust of this excrement being blown about the streets and inhaled by human beings. Since the inception of the Board's operations there has been a very marked decrease in the mortality from diarrhœa.

DIARRHŒA Mortality, Quarter ending 30 June.

	1895.	1896.	1897.	1898.	1899.
City ... ..	18	7	7	6	7
Suburbs ... ..	46	35	25	25	26
Metropolis ... ..	64	42	32	31	32

Recent investigations in the subject of diphtheria show that school attendance is an important though not sole factor in the spread of this disease. Dr. Newsholme contends that diphtheria is a disease which creeps slowly from place to place, and that months or even years may elapse before it takes root and begins actively to propagate itself. He also states further that besides personal infection there is another factor concerned in the spread of this disease and that that factor is "essentially protracted drought." Diphtheria is a disease beyond the scope and influence of the Board; it is a filth disease, and I have before drawn attention to the danger arising from dirty ash-bins through air sewage carrying the germs of disease to a healthy zone.

DIPHTHERIA Mortality, Quarter ending 30 June.

	1894.	1895.	1896.	1897.	1898.	1899.
City ... ..	.....	4	4	2	2	0
Suburbs ... ..	.....	25	39	14	30	7
Metropolis ... ..	75	29	43	16	32	7

The mortality from pulmonary phthisis shows a decrease as compared with that for the corresponding quarter of last year, but the mortality from other forms of tuberculosis shows a decided increase. Ransome shows that in England during the last thirty years there has been a steady decrease in the mortality from pulmonary tuberculosis in direct proportion to the improvement in general hygiene, but he makes it clear that there has been no such diminution in tuberculous disease of other organs, and he also agrees as to the evil influence of damp soils. According to most observers dried sputum is the ordinary vehicle of infection, and consequently every effort should be made to render this vehicle harmless. Professor Nocard considers it the duty of every medical practitioner to preach that "tuberculosis is a preventable disease, arising, in the majority of cases, from a contagion which can be easily guarded against," and Sims Woodhead states:—"The children of tuberculous parents may be placed under such conditions that they will never contract the disease. They do not inherit tuberculosis from their parents, though they may inherit those weaknesses of tissue and constitution which renders them peculiarly liable to succumb to the attacks of the parasites that in their parents are doing such damage. If the child is placed under such conditions that the tubercle bacillus can gain no access to it, by-and-by there will come a time at which the attacks of the bacillus are as futile as they are against the child who inherits from his parents all those protective agencies with which healthy individuals are endowed for the warding off of the onslaught of pathogenic micro-organisms." I have before drawn attention to the so-called pasteurisation of milk in large quantities, and I have expressed myself as doubtful of its value. As milk forms a very important portion of the diet of children it is highly necessary that it should be subject to proper hygienic control, as it is exceedingly difficult to preserve milk on account of its being particularly liable to infection by any hardy germs. Martin, Schroeder, Flügge, Lane-Notter and others agree that "there is at present no practicable and certain way for freeing milk, on a large scale, from germs, without at the same time seriously prejudicing its flavour and nutritive value." Truly sterile milk is very difficult of digestion.

PHTHISIS Mortality, Quarter ending 30 June.

	1895.	1896.	1897.	1898.	1899.
City ... ..	39	29	43	38	46
Suburbs ... ..	73	74	69	77	63
Metropolis ... ..	112	103	112	115	109

## DISTRIBUTION according to Age, quarter ending 30 June, 1899.

4 years.	14 years.	18 years.	20 to 29 years.	30 to 39 years.	40 to 49 years.	53 to 59 years.	62 to 69 years.
1	1	3	31	32	27	8	10

On the whole the mortality from phthisis shows a decrease for the past quarter in the metropolis. The greatest incidence of this mortality occurred in the western suburbs, next in the north-western suburbs, then in order, the eastern suburbs, the city of Sydney, the west-central suburbs, the east-central suburbs, and the southern suburbs. Of the individual suburbs Five Dock reported the greatest mortality, then in order Drummoyne, Canterbury, Enfield, Ashfield, Botany, Glebe, city of Sydney, Paddington, Newtown, Randwick, Willoughby, Balmain, Hurstville, Leichhardt, Marrickville, Petersham, North Sydney, Rockdale, Annandale, Camperdown, Redfern, Alexandria, Waterloo.

## TYPHOID Fever, Cases reported quarter ending 30 June.

Voluntary Notification.		Compulsory Notification.	
1896.	1897.	1898.	1899.
216	165	252	257

There is a slight increase in the number of cases of typhoid fever reported during the past quarter when compared with the corresponding quarter of past years. An inquiry was made into the environment of each of these 257 cases with the following result:—

	April.	May.	June.	Total.
Sewers not laid ... ..	63	63	26	152
Sewers laid, houses not connected ... ..	6	6	1	13
Dwellings insanitary ... ..	29	24	18	71
Regulations complied with ... ..	7	5	7	19
No fixed abode ... ..	1	0	0	1
Came into port suffering from the disease ... ..	1	0	0	1
Total ... ..	107	98	52	257

Of the different causes of typhoid fever none need be emphasised more strongly than human indifference. The recent investigations of the treatment of sewage through bacterial action, leads us to hope that in the near future the dangers arising from sewage will be reduced to a minimum; but it is useless to hope unless the whole individual members of the community assist in furthering the aims of those sanitary systems which have been provided. Human indifference is exhibited in neglect of making use of these systems and in regarding them as automatic, and unless activity is shown and apathy shaken off, nature will exact the penalty and disaster will befall us. The revelations of the inspectors' reports are truly awful—many places are provided with proper sanitary systems, but householders have failed to connect with them—cisterns broken and not provided with water—broken water connections—cracked pans—choked drains—deficient ventilation—and dirty houses, all contribute to swell the list of the causes of the virulence of the present epidemic of typhoid fever. More power is required to deal with these evils and prevent the repeated reporting of certain dwellings as hot-beds of typhoid fever. Proper house to house inspection is needed so that people may be kept healthy, and more inquiry should be made by would-be tenants. If would-be tenants insisted on the production by a landlord of an authorised certificate showing that the sanitary systems of the dwelling are in good order and in accordance with the regulations of the Board, the present powers of the Board would be extended, and material assistance could then be given to carry out necessary reforms and to make landlords understand that their first duty is the preservation of the health of the tenant. In this way the standard of national health would be raised and the national wealth increased. The scientific investigations of Dr. Sidney Martin go to prove that soil plays an important part in the propagation of typhoid fever and it is not always a water-borne disease. These results are supported by those obtained by Dr. Robertson, who has shown that the typhoid bacillus can persist in soils through the winter months, and can take on new growth during the warm season. Sir Charles Cameron has repeatedly insisted that typhoid fever is a soil disease, and Sir Richard Thorne has emphasised that soil may be highly favourable to the vitality and propagation of the typhoid bacillus. Instances of soil infection have presented themselves during the present epidemic, and every effort should be made to secure the best weapon of defence, by keeping the soil dry, and free from organic matter, so that the organisms will be deprived of the essential conditions for existence. It is in the privy or midden that the danger arises, for it is impossible to ensure the disinfection of a midden once polluted by typhoid dejecta, and as these receptacles are seldom impervious, the surrounding soil soon becomes saturated with infective faecal matter. One of the strongest objections to earth closets is the fact that bacilli may remain alive for an almost indefinite period in mould or ashes, and as Robertson has shown that there is a tendency on the part of disease germs to upward diffusion through soil, it is not unlikely that the buried contents of such closets may prove detrimental to health. There can be no doubt that typhoid dejecta ought to be destroyed by fire, and ought never to be allowed to pass into a sewer or be buried in the soil.

## TYPHOID FEVER, Cases reported Half-year ending 30 June.

20 North Sydney	9.78	17.0	10.0				

The greatest incidence of typhoid fever during the past quarter occurred in the north-western suburbs, and then in order in the western suburbs, the west-central suburbs, the east-central suburbs, the city of Sydney, the northern suburbs, the southern suburbs and the eastern suburbs. As compared with the first half of last year there was an increase in the number of cases reported from Botany, Canterbury, Annandale, North Botany, St. Peters, Randwick, Petersham, Balmain, Mosman, Redfern, Newtown, Glebe, Camperdown, city of Sydney, Woollahra, Strathfield, Paddington, Hurstville and Willoughby. Typhoid fever has proved more virulent during the past quarter than during the corresponding quarter of last year and more fatal cases have been reported.

Six of these fatal cases came from the City of Sydney, three from Redfern, two from Balmain, two from Burwood, two from Glebe, one from Woollahra, one from Canterbury, one from Ashfield, one from Annandale, one from Paddington, one from St. Peters, one from North Sydney, one from Waterloo, one from Newtown, one from Strathfield, one from Mosman, and one from Katoomba. Eight cases died at their own homes and twenty at the various hospitals.

I have, &c.,

THEO. MAILLER KENDALL,

Medical Adviser.

Annual

## Annual Report of Assessor's Branch.

Sir,

Sydney, 28 August, 1899.

I have the honor to submit the following report on the working of this Branch during the year ending 30 June, 1899.

### Rate Notices.

During the year 309,541 notices were served, which includes those for new mains, new sewers, and finals for payment of overdue rates, being an excess of 19,523 over the preceding year.

### New Mains, New Sewers, and Stormwater Drains.

690 properties became liable for rates from new mains, 9,271 from new sewers, and 533 from new stormwater drains, making a total of 10,494 properties liable for new works. This is an increase over the previous year of 5,092, chiefly due to the extension of the Western Suburbs and North Sydney Sewerage Schemes.

### New Assessments.

The new buildings assessed and rated by the Department during the year numbered 1,434, and the fees for the use of water for building purposes amounted to £2,402 9s. 11d.

On the 17 March the Board sanctioned the use of meters for residential buildings in cases where builders elected to take the water in that way instead of by payment of the special fee. This concession is being largely availed of.

### Recovery of Rates.

During the year the rates and meter accounts received amounted to £277,200 4s. 1d., being £18,306 13s. 8d. in excess of the amount received in the preceding year. The arrears outstanding on the 30 June compared with the previous year are as shown in the following table:—

Comparative Return of Arrears carried forward.	1897-98.			1898-99.		
	£	s.	d.	£	s.	d.
House property—						
Water Rates ... ..	2,713	9	8	2,355	11	9
Sewerage Rates ... ..	2,440	19	2	1,507	12	7
Drainage „ ... ..	128	15	10	133	9	11
Vacant Land—						
Water Rates ... ..	5,150	19	0	4,502	18	11
Sewerage Rates ... ..	1,161	1	6	1,105	16	9
Drainage „ ... ..	344	7	2	309	7	9
Churches and Charities—						
Water Rates ... ..	4,643	8	6	5,233	17	6
Sewerage Rates ... ..	4,084	5	0	4,264	2	11
Drainage „ ... ..	100	12	11	137	15	6
Stock Fees ... ..	314	17	7	6	17	2
Garden „ ... ..	131	3	8	.....		
Special „ trade purposes ... ..	134	11	7	2	1	3
Meter Accounts ... ..	16,252	14	4	20,375	15	4

### Special Fees.

The fees received for stock, gardens, and water for trade purposes, show satisfactory increases.

From stock £2,642 8s. 2d. was received, being an increase of £102 3s. 2d.; from gardens, £2,429 8s. 5d., or an increase of £418 16s. 7d.; water for trade purposes, £678 6s. 11d., an excess of £120 11s.

The resolution of the Board to have meters fixed on all gardens where the area to be watered exceeds 1,000 square feet, affects 1,318 gardens, and while reducing the revenue under this head for the ensuing year, will augment the meter revenue.

Summons

## Summons Work.

The operations of the year have resulted in a decrease in the amount of arrears to be carried forward on house property and vacant land, and in view of the fact that it has been possible to attain this result with the issue of fewer summonses than last year, cannot be regarded as other than satisfactory.

40,884 final notices were served, and 4,049 summonses issued (5,976 summonses served in the preceding year). The following table shows the issue from each court, viz.:—

Balmain Court	...	...	...	...	...	256
Campbelltown Court...	...	...	...	...	...	6
Central Court	...	...	...	...	...	446
District Court	...	...	...	...	...	48

<i>Sewerage.</i>				
City of Sydney and Suburbs ... ..	63,569	5,313	68,882	53,720

The assessment made by the suburban councils, and also by the City Council, on which the Board's rates are based, have shown a declining tendency since the year 1892, and have in some measure affected the revenue for the year under review. It is satisfactory, however, to note that the assessments made by the municipal councils in February last—taken as a whole—show no appreciable decrease.

It is, therefore, anticipated that the Board will receive the full benefit of all new revenue derived from the various extensions of the water mains and sewers, instead of the amount being absorbed in the general decline, as has been the case for some years past.

The Secretary.

THOMAS ROSEBY,  
Assessor.

## Annual Report of Stores and Pay Branch.

### Stores.

Sir,

9 August, 1899.

The introduction, some years ago, of a system of biennial contracts for supplies other than those subject to wide fluctuations in price, like pig-lead, or subject to disturbance by labour disputes, like coal, has proved such an advantage over the annual limit that formerly obtained—both as regards clerical economy and cheaper rates—that we have a tendency to still further extend the time limit where the contract involves a heavy outlay for plant. Apart from the five biennial contracts for stores and services, we have now a three-year contract for supply of water-meters, a four-year contract for valves, one of like period for hydrants, and two five-year contracts for cast-iron work.

Following is a statement showing the extent of the contracts dealt with by this Branch during the past year:—

Article.	Contractor.	Rate.	Amount.
			£   s.   d.
General stores .....	Keep and Son .....	5¼% below Schedule .....	1,922 19 6
Uniforms .....	Hatfield Bros. ....	Schedule Rates .....	175 8 7
Pig-lead .....	Briscoe, Drysdale, & Co. ....	£13 5s. per ton .....	966 15 0
Do .....	Sydney Lead Works .....	£12 19s. do .....	329 8 4
Iron pipes .....	Pope, Maher, & Co. ....	£6 9s. do .....	4,963 18 6
Pipes and castings* .....	G. and C. Hoskins .....	Schedule Rates .....	29,687 1 6
Valves .....	do .....	5¼% below Schedule .....	1,115 13 10
Hydrants .....	Pope, Maher, & Co. ....	4¾% over Schedule .....	410 5 3
Cement .....	Goodlet and Saith .....	9s. 10½d. per cask .....	264 6 4
Road material .....	S. Wales .....	10½% below Schedule .....	77 2 2
Cartage .....	Various .....	.....	205 3 3
		Total.....£	40,118 2 3

\* A further large quantity was charged direct to the works, without operating on the Stock Account.

### Fettling old Water-mains.

Two hundred and forty-four tons only were lifted this year, as against the 1,400 tons treated the previous year. This 244 tons, consisting chiefly of 3-in. and 4-in. pipes, was, at a cost of £227, cleaned for re-issue; the 4-in. for reticulation and the 3-in. for private services only, as it was long since decided to lay no more 3-in. mains in the streets.

### Stock Balance.

	£38,544	12	5		£38,544	12	5

### Stock-taking.

The biennial stock-taking was effected in September last—the actual material sighted by the officers represented £15,387 9s. 4d., whereas the balance in the stock-books was £14,422 4s. 11d.—the surplus, £965 4s. 5d., was shown to be chiefly savings of scrap-iron and lead melted from joints of old mains recovered from the ground.

### Sales.

Sales of old stores were conducted as usual by public advertisement. The scrap-iron fell invariably to the one buyer, at £2 16s. per ton.

## Pay, &c.

### Contracts.

Three hundred and forty-two tenders were received during the year on account of sixty-eight advertised contracts. A valuable, in preference to a personal, security is held in each contract, and at the close of the year these securities amounted to £10,435, as against £6,710 held the previous year. As the amount of security bears a fixed percentage to the contract sum, it is apparent the contract work this year has been of much greater magnitude.

### Mail.

Out of a total of 32,390 official letters received by post, and opened in this office, 14,226 were found to contain remittances to the value of £67,445; by far the greater bulk of this sum was represented by cheques, the balance by postal notes, stamps, money orders, and currency in that order; in a few instances bank notes and cash were sent under cover without the precaution of post registration. This heavy mail transaction was effected during the twelve months without report of a single case of monetary loss, though complaints were received of two cheques having gone astray.

Library.

## Library.

Thirty books on progressive sanitary science and engineering have been added to the Library, making a total of 470 instructive volumes available for the free use of those of the staff who desire to keep abreast of the times, or who may be actuated by scientific research in their profession.

## Clerical Examination.

The annual examination of candidates for junior clerkships was conducted in June; out of twenty-five nominees twenty attended, and of these thirteen gained the necessary 75 per cent. of marks to qualify for appointment, in order of merit, to any clerical vacancies that may arise during the ensuing year.

## Disbursements.

The total sum paid in this office during the year was £95,837 15s. 1d., made up as follow:—

	£	s.	d.
Board Fees ... ..	2,085	0	0
Salaries ... ..	22,266	17	6
Wages ... ..	67,266	12	6
Petty Cash ... ..	1,256	11	3
Refunds of Over-payments ... ..	170	4	2
Compensation ... ..	1,910	9	1
Sundries ... ..	882	0	7
	<u>£95,837</u>	<u>15</u>	<u>1</u>

A. ELLICE FLINT,  
Paymaster and Comptroller of Stores.

## Engineer's Report.

Sir,

Engineer's Office, 24 August, 1899.

I have the honor to submit, for the information of the Board, the annual report of the working of the Engineer's Department for year ending 30th June, 1899.

### 1. WATER SUPPLY BRANCH.

#### Catchment Area and Head Works.

The extreme dryness of the season necessitated special supervision on the part of the Rangers to prevent pollution of the watershed, through settlers using the swamp areas for depasturing cattle on, many of which were in such enfeebled condition that they never recovered. Where cattle died the Rangers had same removed, or if owners could not be found, the carcasses were burnt.

There is a marked improvement in the sanitary conditions of settlers' holdings on the watershed, the pan system replacing the old cesspits formerly existing. The drainage from stockyards, piggeries, &c., have been diverted from direct access to watercourses, and made to pass over cultivated ground.

These precautions can, however, only be considered as palliative, as the wisest course would be to resume the whole of the areas when the revenue of the Board admit of such addition to the capital account.

The health of the residents on the watershed has been good on the whole. Any cases that occurred were inquired into and reported on by the Rangers.

The boundaries of the catchment area have been conspicuously marked by substantial boundary posts and blazing of trees along the lines.

The rainfall returns, kindly furnished by private observers at Sherbrooke and Cordeaux, show that the quantity which fell at their respective stations was 40.15 and 42.53 inches respectively. The returns from the official rain-gauge at Cataract River was only 24.6 inches.

The only work carried out at offtake works, at Nepean and Cataract, consisted of constructing a covered way from outlet of Nepean tunnel, to prevent the accumulation of sand and debris, which occurred at every flood, and was a source of expense to remove same. The debris now passes away over the weir. The Nepean weir was rendered in cement mortar, as the faces hitherto not rendered showed signs of wear by abrasion. The cliff at valve-house at Cataract River was also underpinned and access to the valves made safer for the attendant in time of flood.

#### Upper Canal and Prospect Reservoir.

The principal work carried out on upper canal was strengthening and relining a portion of the canal at section No. 10. The length dealt with was 3,393 lineal feet, at a cost of £4,700. Included in this amount is the cost of 2,000 cubic yards of broken metal and 1,500 cubic yards of sand for continuing the work, which, for reasons connected with the dryness of the season and depletion of Prospect Reservoir, had to be suspended. When a favourable opportunity occurs the work will be pushed on.

During the year a slip occurred at 29 $\frac{1}{4}$  miles, which was taken in hand and repaired without interfering with supply to any extent.

The fencing has been renewed for a length of 3 $\frac{1}{2}$  miles, the type of fence adopted being a top rail with four wires.

The outside of aqueducts over Simpson's, Elledale, Ousedale, and Mullaly Creeks have been cleaned and painted. Other minor works—consisting of painting maintenance men's cottages, fixing new gauge at Cataract River, and general repairs—have been carried out by day labour.

The telephone line between Cataract and Prospect has been duplicated, so as to provide against contingencies.

Other portions of the canal nearer Prospect have been examined and marked out for improvements.

#### Prospect Reservoir.

With regard to the water impounded, the conditions were very favorable at the opening of the year, the water overflowing at the bywash, the level of which was 195.16 R.L., with an abundant supply of water in the rivers. The level of water at corresponding period of previous year was 193.04 R.L.

Advantage was taken of the good supply to shut off the incoming water and push on works in No. 10 section of canal, which was very defective. The work of relining was continued until 15th September, when level of water in reservoir stood at 192.00 R.L.; water was then turned on, and top water-level reached 195.00 R.L. on 17th November; at this date the total available supply from the rivers was only 12 million gallons per day, and daily diminishing. The water was then cut off, and the urgent work in connection with canal pushed on until 7th December, the water-level in reservoir then standing at 193.3 R.L. From this date it was decided to take the whole of the available supply during the summer months; but no rain fell, and the flow into reservoir gradually diminished, until, in March for several days, the combined flow of the rivers did not aggregate more than 339,000 gallons per day, and on 31st May the water-level in reservoir was reduced to 182.75 R.L. Rain then fell, and by 30th June the level stood at 188.50 R.L., and at end of July the water rose to 195.50. Comparing the above levels with preceding year, it will be seen that, although the observations for 1897-8 showed a dry season, the returns for last year showed that the drought was accentuated. The lowest level touched in the period of 1897-8 was 183.85 R.L.

During last season no water was lost through interruptions in canal, except a total quantity of 140 million gallons, between November and December, yet the water in reservoir touched a level which raised doubts as to whether the available supply by gravitation would be equal to the demand; in which

case pumping into lower canal would have to be resorted to. Fortunately, however, this limit has not yet been reached; but it necessitated active measures having to be taken by the Department in limiting free supplies and checking waste.

The experience gained during the past years of drought must not be overlooked in connection with the storage capacity at the disposal of the Board, and the gradual increase in consumption of water in the area supplied. There is every indication that the latter will increase considerably beyond the present daily quantity, and storage capacity should be provided in the same ratio.

To amplify the existing impounding area the top water-level has been raised 1 ft. 6 in., which considerably increases the storage capacity, as mentioned in last year's report.

That this will be insufficient in the near future there is no doubt, and provision should be made to store up the surplus water in abundant seasons for regulating the supply in seasons of drought.

The work of raising the puddle-wall and bywash has been completed.

When reservoir was depleted, the inner slope of embankment settled again at T.S. 44. After inspection and reporting to the Board, the place was inspected by the President and members of the Board, and it was decided, before restoring the bank to its proper level, to flatten the slope and weight the toe, by depositing a mass of stone to prevent any forward movement into the reservoir. This work is nearly completed.

While the water was at a low level the rendering of inlet tower was renewed.

The outlet pipes from reservoir have been cleaned and recoated where required, as well as other minor works of repairs.

On the flat below reservoir about 20 acres of the old excavation have been soiled, and 80 acres planted with good pasture grasses. This will increase the agistment area outside the watershed of the reservoir.

The Board having decided to discontinue the agistment of horses on land draining into the reservoir, the paddocks lying outside the drainage area were improved to the extent of clearing 130 acres, and ringbarking and ground-clearing 200 acres. Much of the ringbarked timber will find ready sale for firewood.

Notwithstanding the decrease in agistment area and dry season, the receipts for the year amounted to £348, as against the receipts for last year of £415 18s. 3d.

The purchase of a steam launch for the weighting of toe of bank will provide means for keeping reservoir clear of weeds with less labour than heretofore.

The sanitary arrangements of the Resident Engineer's quarters have been thoroughly overhauled, and new drains laid from the premises.

#### Supply from Prospect Reservoir.

The quantity of water supplied to the various districts under the Board's control for past year is recorded at 6,860,146,000 gallons, or an increase of 186,632,000 gallons. The increase last year over the preceding one was 228,000,000 gallons, so that in two years the aggregate increase reaches 414,632,000 gallons.

The average daily supply is equal to 18,794,920 gallons, or an increase of 511,920 gallons on preceding year.

The supply per head is equal to 41.72 gallons per diem on estimated population of 450,483.

#### Lower Canal and Works below Prospect Reservoir.

During the year the lower canal has been emptied and cleared of weeds and deposit; the aqueduct has also been repaired, and some bad leaks stopped. A concrete pier has been built under 72-inch main at Duck Creek, together with other ordinary maintenance work. The existing pipe-line throughout is in good condition externally. When the duplicate line, which is now approaching completion, is available, the existing line will be emptied and thoroughly examined. It will be necessary to clean the pipe from incrustation, and coat the inside. As this will be a work of some magnitude, it would be an expensive matter to do the cleaning by hand labour, and with view of economy, the question of dealing with it by compressed air in the form of a sand blast is under consideration. I do not anticipate that the work can be undertaken before next winter.

#### Potts' Hill Reservoir.

This reservoir is in good condition, and no further slips have taken place.

The spindles in connection with sluices in screening chamber are being renewed as occasion requires in gun-metal, and damaged screen frames and gauze-wire are also being renewed.

Some of the wattle-trees are being thinned out, and bark of same will be disposed of. The bloom from the whole plantation has been disposed of to a leading florist, a ready sale for same being found in the city.

#### Trunk Mains.

The two trunk mains to the city and that to Ryde are in good order. During the year blown joints were reported on two occasions; these caused considerable expense to repair. On the arterial mains the following bursts took place:—In Crown-street, on the old 30-inch main; Oatley-road, 36-inch main; Albion-street, old 30-inch main; in Cleveland-street tunnel the 42-inch main was fractured through the carelessness of contractor in laying the new 36 arterial main for Western Suburbs; in Moore Park a fractured pipe occurred on new main. At Ryde the 24 $\frac{3}{4}$ -inch steel main was found to be blown at the joints—this is the pumping main to Chatswood. Five other bursts occurred in mains of smaller diameter, 24-inch to 18-inch.

The above were attended to at once, and supply kept up during the progress of the work.

#### General Reticulation.

The condition of the whole of the reticulating system is good.

The work done during the year consists of laying 36 miles 655 yards of mains, varying in size from 42 inches to 3 inches in diameter; cleaning and general fettling of 17 miles 744 yards of mains of various sizes; lowering 1,424 yards of pipes to suit new street-levels; removing 3 miles 1,397 yards of mains; raising

raising 278 yards, and relaying 1,503 yards. Included in mileage of new mains is part of the new arterial main to Western Suburbs, viz., 4,869 yards of 36-inch pipes and 780 yards of 30-inch pipes. It is anticipated that this new main will be available by the next summer, and the supply to the high levels of Glebe, Balmain, Petersham, &c., be materially improved.

Within the city boundary the following improvements have been carried out, viz. :—Darlinghurst heights, an 18-inch main has been laid in Bourke and Forbes streets, and a 15-inch main along Darlinghurst-road ; in Princes-street, an 8-inch main was laid.

For improving the supply to Auburn and adjoining districts, a 12-inch main was laid.

Six-inch mains have been laid in the city, Mosman, Canterbury, North Sydney, Beecroft, Auburn, Randwick, &c., the aggregate length being 5 miles. With 4-inch mains almost every district has benefited, the length laid being about 23 miles. [See Appendix I.]

The number of blown joints, bursts, &c., on smaller mains attended to during the year was 143. The number of hydrants fixed was 519 ball hydrants and 35 screw-down. The number of service pipes shut off to prevent waste through defects were—City, 386 ; Suburbs, 405 ; total, 791.

### Fires.

The number of fires attended to by the Board's staff was 70, none of which require special mention.

### Analysis of Water.

Monthly analyses have been made by the Government Analyst of samples of water drawn from different points supplied by the reticulation, and the reports have been satisfactory.

The complaints as to dirty water have been comparatively few ; the cause has been found on investigation to be local.

The coupling of dead ends is being carried on gradually, the important sections being dealt with first. To this cause can be attributed the decrease in number of complaints *re* dirty condition of water.

To prevent ingress of organic or other matter to the mains, the Board approved of a spring hydrant valve being fixed in lieu of ball hydrants, and on summits, spring dirt-caps. This system has met with the approval of the Board of Health. A contract for supply of same is now in progress.

### House Services.

The number of private services connected to the mains during the year was 2,862, or a decrease of 71 on last year. The number of permits was 12,736, or an increase of 2,628 over last year. The number of inspections made was 1,370.

In the working of this branch it is found that action is retarded by the absence of legislative power to enter premises for the purpose of shutting off water for nonpayment of rates. In carrying out this duty the officers run the risk of being prosecuted for trespass, unless covered by an authority under seal from the owner to enter. It is to be hoped that this and other necessary powers will shortly be obtained, as I question whether an agreement signed by one owner can bind his successor.

### Meter Sub-Branch.

The operations of this sub-branch show an improvement over previous year's business, and results are satisfactory.

*Meter Clerks.*—During the year 1,523 meters were fixed. Of these, 139 were attached to services for building purposes, 569 were renewed, showing a net increase of 954 ; the total now in operation being 8,498.

This large increase is due to the abolition of garden fees over the minimum fee, and payment of water for gardens by meter.

Of the 1,523 meters fixed, 1,439 are on the "hire system" at annual rentals ; the number under this system now in operation is 4,138, as against 2,788 last year, showing an increase of 1,350 for the year.

During the year 378 meters were found to be inoperative, or recording incorrectly. These were promptly repaired or replaced with new meters.

On the 1st July, 1898, a reduction in meter rents was made, equal to 22 per cent. ; but in view of the rise in cost of meters, and a general tendency of rise in metals connected with manufacture, no further reduction can be made, at any rate, for the present.

The financial result, as shown by the books, cannot be considered other than highly satisfactory, viz. :—

- (a) Revenue in excess of assessment, June, 1898, to June, 1899, £54,797 17s. 1d., as against £47,006 1s. 3d. for 1898 ; increase, £7,791 15s. 10d.
- (b) Amount earned by Board's meters, included in above, £13,020 4s. 6d., as against £7,822 4s. 1d. in 1898 ; an increase of £5,198 0s. 5d.
- (c) Revenue from rents of hired meters for year, £1,299 3s. 5d., as against £977 14s. 11d. for 1898 ; an increase of £321 8s. 6d.

The quantity of water supplied free under meterage to charitable institutions and public parks was 92,907,000 gallons, or value of £4,645 7s. 0d.

*Meter and tap-testing shops.*—The number of water fittings submitted for test and examination during the year was 72,102. Of this number 69,160 were passed and stamped, 2,860 were returned for alteration, and only 82 were rejected. This result speaks well for the quality of the goods imported or locally manufactured. Meters owned by consumers within the Metropolitan district, 80 were tested, and 217 repaired. Meters hired out to consumers, 800 have been overhauled and cleaned in position.

Meters for use in connection with country towns' water supply, not under the Board's jurisdiction, 398 were examined and tested, and 51 repaired.

The number of meters supplied by Board's contractor was 1,155 of all sizes.

The number of meters condemned as unreliable was 120, the majority being replaced by Board's meters.

The new system in connection with meters being fixed on existing services by the Board's staff came into operation on 3rd February, and since then 413 services have been prepared and meters fixed.

The

## Reservoirs and Service Tanks.

The different reservoirs and service tanks are in good condition and have received the annual cleaning out.

The new tank erected at Wabroonga, on the Milson's Point and Hornsby Line, at an elevation of 720 feet above high-water mark, and of 1,000,000-gallon capacity, was satisfactorily completed and brought into use during the year. A residence has also been built for the local Turncock and the grounds planted with shrubs, &c. The tank and cottage with surroundings present a neat appearance.

An intermediate tank will be built at Pymble to augment the supply of the district and reduce the pressure on the lower levels.

The new Reservoir at Centennial Park, constructed by the Public Works Department, and handed over to the Board, was immediately brought into service. The capacity is about 17 million gallons, which makes it the largest covered Reservoir in Australia. The top water-level is 245 feet above high-water mark, and commands a very large and thickly populated area.

With the dwarf wall, ornamental railing, and bandstand it presents a handsome appearance. The Reservoir being erected within the Park area, arrangements are being made for the Controller of Park to take charge of the surface.

Manholes are being fixed in the service tanks at Chatswood and Ryde Village, and in an examination of the interior face it has been decided to repaint same—the tanks have not been painted for thirteen years.

## New Districts.

A special Act having been passed by the Legislatures empowering the Board to supply water to the town of Camden, and an appropriation having been obtained the works were commenced and are well in hand, so that water will be available by coming summer.

The works consist of a circular tank having a capacity of 100,000 gallons, built close to the upper canal, at Kenny Hill.

The tank and canal is connected by a 15-inch pipe, the inlet to tank and outlet therefrom are protected by screens to prevent the ingress of any foreign matter into the mains. A drop-bar weir is built below the outlet from canal, so that a head of water can always be maintained. From the tank to Camden, *via* Narellan, an 8-inch steel-riveted main is laid along the main Camden-road, crossing the Nepean River into Camden. Here the main will be reduced to 6 inches diameter, and branch mains, 4 inches diameter, will be reticulated therefrom.

The aggregate length of mains will be about  $6\frac{1}{4}$  miles, and, when laid, it is anticipated that a fair revenue will be obtained.

## Country Towns Water Supply.

The various works in the towns of Campbelltown, Liverpool, Smithfield, and Richmond, are in good order. With exception of laying 274 yards of 4-inch main in Liverpool, no works beyond ordinary maintenance have been carried out. The abolition of dead ends in Liverpool has resulted in an absence of complaints.

The water supplied to each town is analysed in conjunction with the metropolitan supply, and in each case has been favourably reported upon by the Government Analyst.

## Botany Reserves.

The Board has leased two more allotments for wool-scouring purposes on favourable terms. The first one, which includes the old engine and boiler houses, was leased to Mr. Swinbourne; the second, which is located between Messrs. Johnstone and Vicar's lease and Botany-road, is leased to Messrs. Sykes, Holt, & Co.

There are now six leaseholds which are used for wool-scouring, &c.

Many of the lessees during the summer months were working day and night and, notwithstanding the excessive dryness of the season, the water in dams was sufficient to keep them in full swing.

The lessees have effected several improvements to their machinery and additions to the buildings.

The Board's works are, as far as possible, kept in good order, but the timber sheeting at the Blackwater Creek is becoming so rotten that steps will have to be taken to renew it or protect the banks by some other method.

According to the records which have been kept by the local officers for years past, the season has been the driest on record. The records show that for the first ten months of the year 24.98 inches fell, but the total rainfall for the twelve months totalled 40.19 inches.

The storage capacity of the dams is estimated at 286,000,000 gallons.

## Contracts let during the year.

The contracts let, or in progress, during the year were:—Contracts completed: Supply of submarine pipes for Goat Island; tank at Wabroonga; new pumps and boiler, Chatswood; extension of buildings, Chatswood; supply of 42-in. and 36-in. pipes for main from Centennial Park Reservoir; laying ditto, ditto; overhauling Blake pumps, Carlton; fencing upper canal; erection of cottages at Penshurst and Wabroonga; supply of wrought-iron clips for Ryde pumping main, &c. Contracts let: Supply of 36-in., 30-in., and 24-in. pipes and laying same from Oatley-road, Paddington, to Petersham; supply of coal, cement, timber, water meters, lead, spring-hydrant fittings; ball and screw-down hydrants, stop-valves; pipe laying, fencing upper canal; supply of steel pipes for Camden waterworks; renewing screens, Pott's Hill; renewing sluice spindles for Pott's Hill screening tank; cartage service for Meter Branch.

A considerable amount of work has also been carried out by day-labour, *viz.*:—Main-laying within the city limits; repairs to cottages; reservoirs; boundary fencing; raising puddle wall, Prospect Dam; relining upper canal; erection of smithy and storeroom, Chatswood; re-erection of dynamo, Crown-street; connecting high and low level tanks, Wabroonga; iron gate at Paddington; wrought-iron grating for guarding entrance to Cecil Hills tunnel, &c., besides general maintenance work.

The

The expenditure on Loan Vote for new works, &c., amounted to £71,609 Os. 1d., viz. :—

	£	s.	d.
New mains, including arterial mains ... ..	50,264	5	9
Buildings and machinery ... ..	1,581	16	11
Strengthening and relining upper canal ... ..	6,131	0	8
Raising puddle wall, Prospect Dam ... ..	1,833	12	2
Weighting toe of inner slope, Prospect Dam ... ..	1,365	5	11
Improvements to canal—restoring bank, Sec. No. 44—land resumption, Prospect ... ..	4,000	0	0
Sundry works, including completion of Wahroonga tank and portion of Camden water supply, including Richmond, £66 16s. ... ..	6,432	18	8
	£71,609	0	1

### Expenditure on Revenue Vote.

The expenditure on the Revenue Vote for the year was £30,129 12s. 5d., showing a decrease of £330 14s. 11d. as compared with the expenditure of previous year.

The reports of the Chief Mechanical Engineer and Resident Engineer, Prospect, with summary of mains laid and diagrams, are submitted herewith.

### Chief Mechanical Engineer's Report.

Sir,

Engineers' Department, 10 July, 1899.

I have the honor to submit the following report upon the working of pumping engines, &c., and water supplied for the year ended 30 June, 1899. The work during the year was of the usual routine character, consistent with keeping the machinery in working order, that of any moment was the general overhaul to No. 2 engine in July last, after two years' running—being the period allotted for each set of engines, the others taking up the work of supply during the general overhaul, making the overhaul for each set of engines every alternate year.

The overhaul was of the usual routine consistent with two years' running, viz. :—Everything was opened up; steam pistons drawn, rings adjusted, steam valve chest casings rejointed, valves and valve-gear adjusted; main pumps cleaned and painted throughout; new valves and springs where required; air pumps drawn; new valves throughout, and all connections let together and adjusted; lower compensator pots bored out, pistons and glands bushed to fit, new bolts, &c.; compensator pistons throughout rebushed; new gland bolts fitted; two new junk-ring bucket ends fitted; compensator cross-head gudgeons turned up, and connecting bearings lined to fit; water and air compensator pumps, and feed pumps, were all done up, rebushed, and pins fitted throughout; jacketing steam pipes and valves done up throughout; boiler safety-valves, &c., have been attended to as required. Nos. 1 and 3 engines are now about to have a general overhaul, otherwise all the machinery is in good working order.

The hydrant connections for safety in case of fire, have been periodically tested in order to maintain their efficiency.

The electric power and lighting machinery was re-located to obviate objectionable noise to neighbourhood in March last, with desired result. Water pumped during the year ended, and for the quarter, is given in tabulated form herewith attached, and as under, viz. :—Water pumped by Crown-street pumps during the year to Centennial reservoir was 2,067,636,000 gallons, being 207·89 million gallons more than the year previous; and for the quarter, 470,152,000 gallons, being 17·399 million gallons more than the corresponding quarter of the year previous. The quantity of water pumped to Woollahra reservoir during the year was 440,803,600 gallons, being 10·317 million gallons more than the year previous; and for the quarter 102,640,600 gallons, being 6·937 million gallons more than the corresponding quarter of the year previous. The quantity of water pumped to Waverley reservoir during the year was 378,223,610 gallons, being an increase on the previous year of 49·764 million gallons; and for the quarter 81,155,880 gallons, being 752,630 gallons more than corresponding quarter of year previous. The quantity of water pumped at Ryde works for the year to Ryde Hill was 121,041,000 gallons, being 9·666 million gallons more than the year previous; and for the quarter was 26,811,000 gallons, being 2·754 million gallons more than the corresponding quarter of the year previous. To Chatswood for the year was 509,712,000 gallons, being an increase on the year previous of 117·504 million gallons; and for the quarter was 120,816,000 gallons, being 26·304 million gallons increase on corresponding quarter of year previous.

The quantity of water pumped at Carlton for the year was 100,961,860 gallons, being an increase of 34·096 million gallons on the year previous; and for the quarter 19,372,180 gallons, being 330,100 gallons more than corresponding quarter of year previous.

The Worthington pumps at Carlton had a general overhaul in June last; brass liners were fitted in air pumps, and Donkey feed, piston buckets, renewed to fit; everything relined and adjusted, new valves where required, main pumps thoroughly cleaned internally and painted; they are now running well; boiler was also cleaned and requirements attended to.

The Chatswood pumping for the year was 108,522,710 gallons, being an increase of 48·08 million gallons on that of the year previous; and for the quarter 28,519,840 gallons, being an increase of 13·188 million gallons on corresponding quarter of year previous.

The machinery has been running satisfactorily throughout the year, nothing further than little requirements having to be attended to. The pumping plant at all the works are now in fair working order.

J. FYFE,

The Engineer-in-Chief.

Chief Mechanical Engineer.

## Resident Engineer's Annual Report, Prospect Reservoir and Conduit from Nepean River to Potts' Hill, July 1, 1898, to June 30, 1899.

Prospect, 29 July, 1899.

The most important consideration in this Annual Report is the actual available supply of water at the catchment area during the period under review, and the extent to which it has been availed of to maintain the best storage at Prospect; together with reasons, if any, for not taking the fullest advantage of it. My last annual report, in speaking of the low level which had been touched here, drew attention to the interruptions due to work in progress on the Upper Canal, and care was taken to avoid their recurrence, but a still lower level was reached this year, due entirely to the dry season and consequent scarcity of water in the rivers.

The year began (July 1, 1898) with the reservoir overflowing and an abundant supply of water. (Note:—The Byewash here was then still at its original R.L. 195·00, but was shortly after raised to 196·50.) Advantage was taken of this to push on with re-lining of canal till September 15th when water was at R.L. 192·00. Water was then turned on and again reached 195·00 on November 17th, when—the total available supply from the rivers being only 12,000,000 gallons per day and dropping off—it was again cut off and re-lining resumed till December 7th, when water level was at 193·30. It was then decided to take all available water during the summer months, but no rain came, and the supply diminished till, in March, for several days, the whole available water was 339,000 gallons per day, and on May 31st, 1899, the R.L. here was 182·75. Rains then fell and by June 30th R.L. 183·50 was reached, and at date of writing is 195·50

Thus it may be said that no water was lost by interruption of the inflow, excepting an average of 8,000,000 gall. per day from November 17th till December 7th, or a total of 140,000,000 galls.; yet a level was reached so low as to cause some doubt as to the supply by gravitation holding out.

The result of the year's experience seems to point to the advisability of exploring (as agreed to by you) the catchment area for possible sites for regulating reservoirs to impound the surplus of abundant seasons as a stand-by during periods of excessive drought.

It having been decided to discontinue the practice of grazing horses on land draining into the reservoir, attention was given to improving the paddocks outside the drainage area. About 130 acres have been cleared, and useless timber on some 200 acres more ringbarked. Much of the ringbarked timber will later find ready sale for firewood. Some 20 acres of the excavations below the bank have been soiled, and about 80 acres sown with good pasture grasses.

In spite of the loss of grazing area above referred to, and the extremely bad season, the year's receipts for agistment amounted to £348.

With the low level of water in reservoir, the embankment at T.S. 44 again settled over a length of 450 feet. It was decided before restoring it to extend and flatten the inner slope at the spot, and at the same time to weight the toe by depositing a mass of stone there. This is almost finished and the restoration of puddle wall is in progress.

Though not under the directions of the Board, it may be mentioned that the pipes forming the duplicate 72-inch main from Pipe Head to Pott's Hill have been laid, but not yet connected at either end. Its completion will be a great relief, as the single pipe has been taxed to the utmost to maintain a full level in Pott's Hill Reservoir during extreme hot spells in summer.

Among

Among minor works may be mentioned the following:—

July, 1898.—Erection of iron gates along upper canal; also of duplicate telephone line; tree planting at Prospect, Liverpool dam, and along canal.

August, 1898.—Slip in canal at 29¼ miles being dealt with.

September, 1898.—Lower canal emptied and cleaned; overflow weir, Prospect Reservoir, raised 1 foot 6 inches.

November, 1898.—Soiling excavations below embankment.

December, 1898.—Scour valve fixed in Cataract Dam; underpinning cliff at Cataract proceeding; concrete pier built under 72-inch main at Duck Creek.

January, 1899.—Painting aqueducts over Simpson's, Ellerdale, Ousedale, and Mullally Creeks—outside work.

February, 1899.—Painting maintenance men's cottages; new gauge in Cataract River; telephone, via Parramatta, connected; repairs to rendering of tower; and repairs to 30-inch main.

March, 1899.—Cleaning pipes in tunnel; leak in canal at Sugarloaf Inlet stopped.

April, 1899.—Heavy rains; extra maintenance work due to choked flumes, culverts, and drains; covered way, Nepean outlet, finished.

May, 1899.—Weighting bank at T.S. 44 started; preparing ground for further tree-planting.

June, 1899.—Repairs to Jones' cottage; water cut off from lower canal; some repairs to aqueduct carried out.

A. F. JACOB,  
Resident Engineer.

The Engineer.

## II.—SEWERAGE BRANCH.

During the year the following stormwater drains, constructed by the Government Sewerage Branch, have been transferred to the control of the Board under the provisions of the Amending Act of 1894, viz. :—

Euroka Creek stormwater channel.  
Careening Cove „ „

During the same period the following main sewers, constructed by the Government Sewerage Branch, have been transferred to the Board under the provisions of the Amending Act of 1889 (Western Suburbs Sewerage Act), viz. :—

Western Suburbs System.—Main Northern branch, 3rd division.  
Long Cove sub-branch.  
Homebush Creek low-level branch.  
Northern System.—Double Bay low-level sewerage.  
Balmain south-eastern slopes branch.  
Weston and Victoria Streets branch.  
Reynolds-street branch.  
Rosser-street branch.  
Palmer-street branch.  
Curtis-road branch.

The following municipal stormwater drains have been transferred to the Board under the provisions of the Amending Act of 1894, viz. :—

Leichhardt.—O'Neill-street stormwater channel.  
Ashfield.—Smith-street main trunk drain.  
Carrington-street branch.  
Croydon main drain, 1st and 2nd sections.  
Thomas-street branch.

The length of sewers and stormwater ducts transferred to the Board during the year were, viz. :—

Sewers—8·80 miles. (*Vide Appendix A. Table 1.*)  
Stormwater Ducts—1·637 miles. (*Vide Appendix A. Tables 2 and 4.*)

### Surveys, &c.

Surveys have been carried out to determine the position and level of side inlets for the Government Sewerage Department in connection with the reticulation sewerage for the following sewers :—

Kensington sewer.  
Balmain low-level sewers.  
Mossman's Bay sewer.

Surveys have been made for stormwater drains at Ashfield, Pyrmont, and Burwood, and for reticulating sewers in Ashfield, Annandale, Balmain, Camperdown, City, Leichhardt, Paddington, Petersham, North Sydney, Marrickville, Randwick, Waterloo, Waverley, Willoughby, and Woollahra. Surveys are also in progress for dealing with the reticulation of low-level areas in Newtown, St. Peters and Marrickville, and Burwood, Woollahra, Waverley, and Neutral Bay.

### New Sewers.

The new sewers and stormwater ducts constructed by the Board during the year was 59·96 miles as against 50·85 miles in the preceding year. Stormwater ducts '08 miles, as against '15 miles previous year. (*Vide Appendix B.*)

The aggregate length of sewers and stormwater ducts now under the control of the Board is—

Sewers	...	...	...	...	...	...	389·01 miles.
Stormwater ducts	...	...	...	...	...	...	22·30 „
Total	...	...	...	...	...	...	411·31 „

The usual procedure is followed in giving the ratepayers the benefits of the new system when the Government sewers are available without awaiting the formal transfer of the latter. This arrangement of the Board is much appreciated by the public, as to debar them from having improved sanitation pending the formal transfer would be a fruitful source of dissatisfaction. While, however, the Board meets the public convenience in this respect they cannot legally charge rates until such transfer takes place, and in some instances this has resulted in a loss of revenue.

### Contracts in Progress.

During the year the work of constructing new sewers has been vigorously pushed on—as many as sixty contracts were in progress during the year as against three hundred and sixty-one in the preceding year, the contracts comprised a total length of 654,584 lineal feet of various sizes in different formations, the length for preceding year totalled 445,000 lineal feet. Contract was let for erecting of ventilating shafts attached to buildings and detached pillar shafts in vacant land.

Brick shafts of neat design have been erected in main outfall sewers at Premier-street in Western suburbs system, and at North Sydney Park in main sewer of that system. The shafts are effective and fulfil the purpose for which they were erected.

Flushing-gates have been erected in the Beattie-street stormwater sewer, and have acted satisfactorily since erection.

A considerable amount of work has been done by contract in constructing subsidiary carriers at the Rockdale Sewage Farm, and contracts are in progress for subsoil draining the southern section of the farm, and constructing an additional stormwater outlet from main carrier.

New cottages have been erected at the ventilating shaft at Premier-street which will be occupied by the district maintenance men under rent.

Additions have also been made to manager's house and maintenance mens' cottages at Botany Sewage Farm.

Contract will shortly be let for a group of cottages on the Rockdale Sewage Farm for the labourers. These will be under rent, and while being convenient for the men, will not be a tax on the Board's revenue.

### Stormwater Sewers.

The loss on the stormwater sewers continues to be a drag on the sewerage revenue. The cost of maintenance is kept as low as possible, consistent with efficiency. In the case of North Sydney and Double Bay the drainage rate will merge into the sewerage rate, and the latter must bear the charge for interest and maintenance. It is evident that the statutory limit is not sufficient in some cases to cover the cost of the annual charges.

### Outfall Sewers.

The outfall sewers are generally in good order. In the northern and southern a partial silting up occurs on some sections; this is due in a great measure to the long spell of dry weather and absence of flushing which the large sewers receive during rain-storms. The opening up of sections of reticulating sewers necessitated spreading the available men out, and funds did not admit of increasing the staff. The repairs at Bondi and Botany sewers will be put in hand on first favourable opportunity. The penstocks and valves are in good working order, but will shortly require scraping down and repainting.

The automatic recorders continue to give satisfaction.

### Reticulation Sewers.

The whole of the reticulating sewers in city and suburbs are in good working order. Very few complaints were received of premises being flooded. Where surcharging occurred, relief was given by diverting some of the flow into other channels not working up to full capacity.

The additional sewers, transferred by the Government and constructed by the Board, tax the existing staff, and, to cope with same, provision has been made on Estimates for additional labour.

In some cases, where the ground has proved unstable, the sewer-pipes have sunk, and water-charged sand found its way into pipes through the joints, causing a partial block. The work will be taken in hand when subsoil water decreases.

The ventilation of the sewers is effective in preventing the formation of sewer gas, and makes the maintenance of the sewers safe to the workmen. The flushing tanks at terminal points of slow grades are working satisfactorily.

The different pipe aqueducts are sound and in good order, except in a few cases where repainting is necessary.

In connection with the cleaning and painting of iron structures generally under the Board's control, the scraping down and cleaning off of rust, &c., becomes expensive when done by hand, and the saving in labour, by using a sand-blast plant, would in time fully cover the first cost of such plant. I have previously referred to this matter in connection with the Water Branch, and such a plant might serve the requirements of both services.

### Removal of Silt, &c.

The quantity of silt removed during the year from the old system and stormwater ducts in Metropolitan district was viz. :—Sewers, 2,900 tons, as against 1,450 tons previous year; Rushcutters' Bay S.W. duct, 875 tons; Neutral Bay and Careening Cove, 520 tons; Balmain S.W. duct, 850 tons. The quantity removed from the main outfalls new system was—Bondi Main Sewer, 785 tons; Botany Main Sewer, 463 tons; Macdonaldtown Branch Sewer, 60 tons; Long Cove Creek Stormwater duct, 1,000 tons; Iron Cove Creek S.W. duct, 450 tons; Cleveland-street, 40 tons; and Shea's Creek S.W. duct, 150 tons.

The lower end of Long Cove Creek was cleaned of obstructions and generally improved as far as it was possible to deal with a natural channel. The pent up water at flushing gates has better effect in flushing out, as no dead water is left to cause a nuisance at the lower end.

### Repairs to City Sewers.

No work other than that of ordinary maintenance, raising old manholes to surface, and replacing defective timber covers with cast-iron ditto has been carried out. The number of new castings fixed are, viz. :—32 circular manhole castings, and 31 square castings. It will be necessary to take in hand a section of old sewer running across the Railway yard, as same is reported to require reconstruction to make it safe.

Old sewers in Evans road, Prince Alfred Park, Liverpool-street, and Young-lane, collapsed and had to be reconstructed.

### Pumping Plant.

The Shones ejector plant at Alexandria is in good working order, and gives satisfaction. The quantity of sewage raised into the Botany outfall sewer was 133,630,000 galls. for the year, being a daily average of 367,115 gallons.

The Double Bay plant is on the Shone system, but the motive power is by electricity.

These works have only lately come under the control of the Board, and although the plant is substantially constructed, it is too early to express an opinion on the economy or efficiency of working.

After a run of six months under fair working conditions, a statement will be prepared, showing the number of units absorbed in generating power for the compressors. With this information a comparison can be made with other systems, and probably a rearrangement of the subsidy paid to Railway Commissioners be effected.

Outlet

### Outlet Works, Cook's River.

There has been nothing of import to report in reference to these works. The whole of the plant is in good running order, and building in good condition. The quantity of lime used for lime-washing pits and partial precipitation is 10 tons.

The rolling stock is in fair order, except locomotive, the boiler of which gives trouble, and other working parts require renewing. The locomotive has been constantly running for about twelve years, and was not a first-class one at the beginning.

The temporary bridge requires careful watching, and it is proposed to abolish it and convey the sludge under the river to the farm by a submarine pipe, compressed air being the power used to force the sludge. A contract has been invited for the pipes, and plans are prepared for a second contract for building engine compressor, &c.

### Sewage Farms.

The disposal of the sludge from inlet house has been carried out without causing a nuisance.

The daily sewage has been disposed of over irrigation beds, or filtering tanks, in the usual manner. The daily quantity averages 2,376,000 gallons. This quantity is less than the preceding year, and can be accounted for by the extreme dryness of the year.

The soil of filtering tanks is kept well open by ploughing and harrowing, admitting of air and sunlight doing its work of oxidising the soil.

Additional beds have been subsoil drained. The great difficulty on the farm has been to obtain a pipe which will admit of water passing into it without being charged with sand. After various trials which, more or less, were successful in fulfilling above conditions, but not at the rate of filtration required, a trial was made with coir material. Some of this material was made in the form of a mat, and buried in one of the beds which was used in the filtration of the sewage, so that it would be exposed to the influence of the filtered sewage. After twelve months it was taken and found to be as sound as the day it was put in. Where other fibrous substances used in pipe joints had rotted and become useless, this material appeared to have withstood the test. The manager showed me a small piece which had been underground for eighteen months, under same conditions; this appeared to be unchanged in quality.

One of the beds has been drained with agricultural pipes without sockets, the joint being formed with a wrapper of this material. So far the trial has been satisfactory; but sufficient time has not elapsed to see if there is any decrease in the rate of filtration.

The whole of the valves, sluices, &c., are kept in working order.

The cultivation beds are showing well with crops of Swede turnips, cabbages, and fodder plants.

The pigstyes are in satisfactory state, and stock look in a healthy condition. The manager hopes, by keeping a good strain with the breeding pigs, to establish a name for the farm for stock of this description.

It is only by breeding stock for which satisfactory prices can be realised that we can hope to reduce the working expense of the farm.

Works were carried out to the extent of £232 3s. 10d. for subsoil, drains, and new fencing, which is chargeable to Loan Account.

The expenditure on revenue vote, which includes wages, material, ploughing, harrowing, purchase of forage, live stock, seeds, &c., was £1,048 0s. 3d. Against this there is the revenue derived from sale of produce, live stock, and agistment, aggregating £197 8s. 6d.; the value of live stock on the farm at 30 June being £144 5s.

Tree-planting is continued on the farm as breakwinds and for ornamental purposes.

### Rockdale Farm.

During the year the staff have been engaged in getting the filtering beds into a state to receive sewage; but until the beds are thoroughly underdrained it is impossible to have satisfactory results. A contract has been let for the southern section, and when this has been completed the northern section will be taken in hand.

Tree-planting forms a feature on this farm. About 1,500 trees of various kinds were planted; about three-fourths are growing well. The plants were selected and supplied by Mr. Maiden, Director of Botanic Gardens, for whose cordial assistance and advice I have to express my warmest thanks.

Between the bank and Muddy Creek, a space was reserved for the growth of Osiers. These plants are greedy absorbers of sewage, and as it will only be the filtrate which will reach them, they should thrive on same. Where they have been planted under favourable conditions, the young trees looked very healthy and thriving.

It is quite possible, after a time, to bring the whole area of this margin into favourable conditions for growing Osiers, and it is further possible to obtain some tangible result from the cultivation.

Osiers of a certain variety are used for basket-making, and material is imported from neighbouring colony, and as a local market can be obtained, I am of opinion it will be profitable in the future to cultivate Osier beds on this farm.

Until the banks become well covered and knitted with grass, the high winds cause considerable damage to the formation, and increases the cost of maintenance.

The expenditure on the farm last year was £355 16s. 9d. on revenue account, which included cost of wages, ploughing and harrowing, tools, &c., also the sum of £341 12s. 3d. on loan account, for extending distributing carriers, and tree-planting.

A railway line is being laid in extension of the existing line on Botany Farm, which will command the whole length of the two farms. This line will facilitate transport of produce and considerably reduce the carriage of material required in construction work on the farm.

The abolition of the temporary bridge across Cook's River will cut off direct access to the farm from Botany side, the main entrance will then be from Rockdale side. The probable loss through this disconnection will be more than compensated for by opening up of the western suburbs districts as a market for the sale of produce from the farm.

The present flow of sewage on to the farm is about 1½ million gallons per day. The opening of new districts and rapid rate of connection of premises to the sewers will considerably increase this flow. The area at present available for filtration is 127 acres.

The

The provision for increase of sewage in the future has received careful consideration, and in a report submitted to the Board on the subject, it was pointed out that, taking into account the cost of preparing beds for filtering purposes on the present system, and subsequent charge on the revenue for maintaining same in a proper condition for filtering sewage, it would be advisable to change the method of disposal and adopt the "Biological" system of treatment on lines which is generally known as "Debdin's" system.

In the report a comparative statement was given, which showed that there would be a substantial saving in first cost by constructing Roughing filters and bacteria beds as against preparing future beds for land treatment. The reduction in first cost is followed as a natural sequence by less charges on the Board's revenue for interest and working expenses. Further, it was pointed out that the existing beds could be utilised for agistment or cultivation purposes by being irrigated or watered by the filtrate from the bacteria beds, which would be rich in nitrates and suitable for plant life, and a considerable revenue be derived therefrom.

With the view of obtaining certain data which is absolutely necessary before entering upon works of a large scale, the Board approved of an appropriation of £500 for constructing a small installation on the Botany Sewage Farm to experiment with the sewage from the Southern Outfall Sewer, which is of a varying and complex character. The approval of the Minister has not yet been obtained to cover the expenditure, but it is hoped that this is only a temporary delay, and that the Board will be in a position to dispose of the sewage from the Western Suburbs on scientific as well as economic principles.

The whole of the leaseholds are in a satisfactory state, except in one instance, where it was found necessary to give the specified notice to tenant of determination of lease.

The effluent water has been periodically analysed by Mr. Hamlet, Government Analyst, and the results have been satisfactory as to quality of same.

It is proposed to erect a group of workmen's cottages on the farm for the use of the employés. These will be grouped together, and will be of neat cottage design with tiled roofs. Water will be supplied from the Board's mains, and sanitary conveniences will be provided. The premises will be let at moderate rental, and arrangements will be made, as suggested by the President on a visit, to provide transit by locomotive to end of farm for the children attending the local schools.

It is proposed to make the farm area ornamental as well as useful by tree-planting and other accessories, but this can only be achieved by time and constant attention to filtering beds and plantations.

### House-drainage Branch.

The following is the number of houses connected with the metropolitan and suburban sewers under the control of the Board during the past twelve months:—

	1890.	1891.	1892.	1893.	1894.	1895-6.	1896-7.	1897-8.	1898-9.	Total.
City ...	961	541	1,070	1,223	1,050	1,384	971	1,147	400	8,747
Suburbs ...	3,804	3,578	3,448	3,437	2,853	3,113	2,160	2,685	6,895	31,973
										40,720
										18,000
										58,720
										Connected with city sewers prior to Board's control ... ..

The subjoined list shows the number of properties connected with Board's sewers during the last year:—City, 400; Alexandria, 82; Annandale, 873; Balmain, 152; Camperdown, 14; Erskineville, 76; Glebe, 147; Leichhardt, 849; Marrickville, 903; Newtown, 805; North Sydney, 1,628; Petersham, 582; Paddington, 154; Redfern, 115; Randwick, 43; Waterloo, 60; Waverley, 149; Woollahra, 242; Ashfield, 21.

### House-drainage Plan Fees.

The fees for house-drainage plans, and the number of plans prepared, are as follows:—

	1890.	1891.	1892.	1893.	1894.
Plans prepared ... ..	2,213	2,303	2,485	2,669	2,119
Fees ... ..	£1,033.	£1,036 15s.	£1,013 2s. 6d.	£1,224 2s. 6d.	£788 12s. 6d.
					Total.
Plans prepared ... ..	2,624	2,557	3,219	6,655	26,844
Fees ... ..	£875 2s. 6d.	£690 5s.	£894 12s. 6d.	£1,933.	£9,488 12s. 6d.

The number of houses surveyed and charted on permanent records was 2,312, and the building plans lodged for approval were 200.

The average cost of the drainage for dwellings of the ordinary suburban type, as carried out by Board's contractor at schedule rates, was £10 16s. per house.

In connection with the system of carrying out drainage work on the "deferred payment system," advantage was taken which was never contemplated when the system was initiated. Owners of property, agents, and others, to either save themselves the trouble, or avoid employing an architect, applied to the Board to carry out the work. An approximate cost of the work was forwarded, and the owners, &c., could then express their wish whether they desired the Board to carry out the work. It was found that the information supplied by the Board was used in competition with the bids of licensed plumbers and drainers, and the latter had fair grounds of complaint as to the Board competing against them. As it was never the intention of the Board to compete in any way with the licensed tradesmen, it was decided that the provisions of the Act should only apply to persons in necessitous circumstances, the *bonâ-fides* of which would be investigated before the Board moved in the matter.

The provisions of the Act, in connection with work done under compulsion, stands on a different footing.

The great activity in connection with house-drainage on the suburbs is shown in the number of houses connected to the sewers during the year, the number being 6,895, as compared with 2,685 for the previous year. The plan fees amounted to £1,933, as against £894 12s. 6d. for previous year.

With regard to the premises connected with the old city system, the number of premises which have been newly connected, or had sewerage system reconstructed, according to by-laws of the Board, total 8,747 since the inception of the new system. That

That many of the tenements are in an insanitary condition is beyond a doubt, but with the present imperfect Acts the Board are powerless to obtain proper alterations, but have done the best under the circumstances in getting the old type yard gullies removed and proper ones fixed, which are safeguards against sewer-gas; the old type were not.

The rapid expansion of the house-drainage work has taxed the inspecting staff to the utmost; the work is not confined to sewer districts, but outside the limits of such districts owners request the Board to have the sanitary work inspected by the staff in anticipation of the system being extended to the localities in which the premises are situated.

### House-drainage Certificates.

The number of official certificates issued during the year was:—City divisions, 1,643; suburban division, 1,368. The numbers issued from 1891 to 1898 were:—City, 2,206; suburban, 5,069.

Considering the number of houses connected, the public do not protect themselves as much as would be liked; but as it is not compulsory to obtain a certificate, the public must be left as the best judges of their interests.

### Defective Drainage.

During the year in the City division 69 1st notices were served, and 14 2nd notices to repair or alter defective drainage; North Sydney, 2 1st notices, and 1 2nd notice; Glebe, 13 1st notices, and 10 2nd notices were served.

Action was taken on same as follows:—City, 60 notices were acted upon, and on 9 no action had been taken up to 30 June. North Sydney—In all cases notices were complied with. Glebe—In 9 cases work was completed, and in 4 work was in progress.

In the City, Glebe, and Leichhardt, 183 yard gullies were altered, and gullies of approved type were fixed.

In the city, 140 chokages of private drains occurred; in the Glebe, 10; and in Leichhardt, 1. These are all the cases reported, and have been examined by the staff. The number of premises smoke-tested for defective drainage was 9, which were afterwards dealt with.

### Sanitary Plumbing.

The defects in existing Acts apply as strongly with regard to sanitary plumbing as to house drainage.

The only method by which the Board can compel owners to make premises safe in a sanitary sense is very cumbersome. Under the existing Health Act, the local council is the local authority, and if an owner proves recalcitrant, the local body has to be moved; if they fail, the Health Board can then be moved to take action, by calling upon the local body to do its duty under the provisions of the Health Act. The effect of this cumbersome system is that in cases nothing is done.

The number of jobs supervised is largely in excess of last year's work. The report of the Inspector shows that 4,641 jobs were completed in the city and suburbs, for which 2,418 certificates were granted. The number of soil-pipes tested under water pressure was 275, and smoke-tested 8.

The number of notices served for defective plumbing was 191; of this number, about half have been attended to, although in many cases in the city only yard gullies were fixed instead of being reconstructed.

In the course of inspection the officers have not come across many cases where the sanitary work was so dangerous to health as to warrant a special report, except in one case.

The exception being business premises in King-street; here it was found that the only w.c. for female employees was situated on one of the upper floors in the middle of the building; the room was dark, but lit by artificial means. The closet was one of the abominable type of "pan and container," and in bad state of repair. Alongside the closet was a wash-sink, the waste-pipe being connected to the soil-pipe from closet; the trap of the waste-pipe was tilted to such a degree that it acted as a vent to the soil-pipe, as there was none other. The lead soil-pipe was carried down inside building behind glass cases; the joints of the pipe were found open, and, it is unnecessary to state, that the smell, both soil and waste pipe, was unbearable. On serving notice to reconstruct, the system was altered. This is one of the cases which could be termed exceptions to the general rule connected with defective sanitation of city premises.

The Inspector reports a marked improvement in the quality of material used in connection with sanitary plumbing.

He also regrets that, owing to the scarcity of competent men connected with the plumbing trade, great difficulty is experienced in getting good workmanship, although the materials are up to standard and principles are carried out. The sewerage works of Melbourne, being carried out simultaneously with that of Sydney, causes a dearth in competent men, and in many instances a large part of the work is left to youths. This entails extra work on the inspecting staff.

### Ventilation of Sewers.

#### *Construction.*

The ventilation of sewers in Western suburbs and North Sydney has been pushed on during past twelve months, 546 shafts of various sizes having been completed under contract. Of the number, 397 were erected in Western suburbs, and 149 at North Sydney, the total number being made up of 269 detached tee-iron pillar shafts and 125 attached to timber supports, 149 attached to buildings, and 3 connected direct to chimney stacks, and 3 combined induct water sprays and flushing tanks. Included in the number are 2 shafts, 24-inch diameter, 1 18-inch diameter, and 6 9-inch diameter.

The quantity of piping used was 22,410 lineal feet, giving an average height of shaft of 41 feet.

The 24 and 18 inch shafts are connected with main services, and are each 75 feet in height.

I am pleased to report that the whole of the shafts were erected without any friction on the part of the public and local councils; the latter afforded the Board every assistance in carrying out the work. The whole of the material used in construction of the shafts was made locally.

The brick shafts continue to act effectively, and where erected have been beneficial in improving the condition of the sewer air.

*Maintenance.*

*Maintenance.*

The staff has been kept busy in effecting repairs, painting, and replacing surface boxes with inspection doors in shafts, the latter having been found to be interfered with by children.

Out of 4,000 shafts erected only three complaints were received of damage having been done to private property; in each case it was traced to the wall-plugs to which the strops are fixed.

During the heavy wind storms, in some instances attaining a velocity of 75 miles per hour, only fifteen shafts were damaged; these were promptly repaired.

The staff also attends to overhauling and maintaining the induct sprays and automatic flushing chambers and plumbing work at detached stations.

The mileage of sewers now ventilated totals 330 miles, and the quantity of tubing in ventilating shafts is 146,611 lineal feet, as against 124,201 lineal feet for the previous year.

Dead ends are connected up where practicable, in order to ensure circulation of air and reduce the number of shafts.

The special shafts have been tested during the year, and results are shown in following Table:—

**Special Shafts.****STEAM-SHAFTS, WATER-SPRAYS, STACKS, &C., 1898-99.**

### Drawings.

During the year 423 tracings and 95 sheets of drawings for various works have been prepared. Heliotypes printed, 1,626; plans mounted, 1,000; and 97 photographs taken.

### Expenditure on Loan Vote.

The expenditure on Loan Vote for the year was £124,743 19s. 8d. Included in this amount is the sum of £2,500 for Balmain Sewerage Debentures taken over by the Board.

### Expenditure on Revenue Vote.

The expenditure on Revenue Vote for the year was £21,710 9s. 5d., for maintenance, wages, and repairs of sewers, sewage farm expenses and inspection of house drainage and plumbing.

### Cement and Pipe-testing Room.

Parcels of cement representing 8,473 casks and 23,400 bags were tested, and issued under supervision of Board's officers. Out of the 26 parcels submitted all passed the standard test except three which were rejected.

Fifty tests were of stoneware pipes, including porosity and crushing tests.

Ten tests were made with "Monier" pipes for crushing strain only.

Eleven samples of sand for use on the works were also tested in the usual manner.

Eight tests were made with bricks submitted for use on Board's works for absorption and crushing strain.

In connection with this sub-branch, the whole of the special shafts and 2,912 ventilating shafts were tested as to efficiency during the year.

Forty-eight observations in connection with the temperature of sewers, and twenty-two observations as to the subsoil water and temperature of subsoils, were taken.

### Diagrams.

Sewerage reticulation.

Zymotic death-rate.

### General.

During the year the President accompanied by the Engineer made an inspection of upper and lower canals, Prospect, and Pott's Hill, as well as the various pumping stations and tank reserves under the Board's control. The upper canal inspection commenced from the Pheasant's Nest, and continued to Cataract onwards to Prospect. Richmond works were also inspected.

Underground inspections were also made of a large portion of the Bondi outfall sewer—the whole of the lower section of the Botany outfall, also the Western Suburbs outfall sewers, including the sewage farms at Botany and Rockdale.

The outfall sewers works at Willoughby were also inspected before being transferred to the Board.

The information furnished by the Government Astronomer and Government Statistician has been of the greatest assistance to the Department, and I take this opportunity of returning thanks for the courtesy shown by them.

The Assistant Engineers and other officers of the Department have ably assisted me in carrying out the various works, which in the case of Sewerage Branch has been more extensive than any previous year.

I have, &c.,

J. M. SMAIL, M. Inst. C.E.,

Board Engineer.

The Secretary.

## NEW SOUTH WALES.

## HUNTER DISTRICT WATER SUPPLY AND SEWERAGE BOARD.

(REPORT FROM 1 JULY, 1898, TO 30 JUNE, 1899.)

Newcastle, 4 September, 1899.

To the Honorable the Secretary for Public Works,—

Sir,

The Hunter District Water Supply and Sewerage Board have the honor to submit to you their Report for the year ending 30 June, 1899.

## WATER SUPPLY.

2. The average daily consumption of water per head of the estimated population was 21·94 gallons as against 20·89 gallons during the preceding year.

3. During the year 651 houses were connected with the mains.

4. The number of properties rated at the close of the year was 13,925, of which 7,920 were connected, leaving 2,181 vacant lands and 3,824 houses not connected. During the year 32,767 rate notices have been served.

5. It will be seen that a very large number of ratepayers have failed to take advantage of the water supply. The Board have not deemed it advisable to exercise the powers conferred upon them by the Principal Act, under which the occupiers of premises rated could have been called upon to connect their properties with the mains, but the terms of the Deferred Payment System are sufficiently easy to enable the poorest ratepayer to have his premises connected, repaying the cost of same by quarterly instalments extending over three years. During the year ninety-five ratepayers have connected under this system, making a total of 608 who, since the inception of the Board, have been assisted to obtain the benefit of the water supply in return for the rates paid.

6. During the year 3 miles 1,047 yards of 3-inch pipes and 1,437 yards of 4-inch pipes have been laid. The lengths of mains now under the Board's control are as follows :—

Suction mains	...	...	...	1 mile 176 yards.
Rising mains	...	...	...	14 miles 1,407 yards.
Gravitation mains	...	...	...	17 miles 762 yards.
Reticulation mains	...	...	...	142 miles 420 $\frac{5}{8}$ yards.
Total	...	...	...	175 miles 1,005 $\frac{5}{8}$ yards.

7. The repairs to the main pipe line bridges crossing the swamps between Buttai and Lambton reservoirs, commenced at the close of last year, have been satisfactorily completed, and the bridges are now in a safe condition.

8. The rainfall on the catchment area of the Hunter River above the intake at Walka and on the Water District was below the yearly average. During the year there were three more than usual rises in the river, the highest being the flood rise in September last, when the gauge at Belmore Bridge, West Maitland, recorded 25 feet 6 inches. At the end of the summer the flow of water had considerably diminished, and it was estimated that the visible flow past the intake at Walka did not then exceed 15,000,000 gallons per day. No inconvenience was, however, felt, the river furnishing at all times a more than ample supply. The Board Engineer, in a recent report, stated that prolonged droughts have been known during which, it is said, the flow of the Hunter River was so much diminished as to be scarcely observable, but the immense stores of water in the long deep pools would afford an inexhaustible supply should the river actually cease running during such a drought.

9. Since the inception of the Board considerable attention has been paid to the improvement of the water in the storage reservoir at Walka Pumping Station. This reservoir, formed by constructing an earthen embankment with puddle core across an old lagoon, contains the reserve supply of water, and has a capacity of 200,000,000 gallons. Water is pumped from it when the river supply is turbid, and the reservoir is replenished by the rainfall on its catchment area of 200 acres, and by water pumped from the river. Large quantities of water are run off through the scour pipe. The circulation thus kept up has considerably improved the quality of the water, but realising that the best results could not be obtained without removing the soft sludge, which has accumulated on the bottom of the reservoir beyond the action of the scour-pipe, the Board decided to construct a syphon scour-pipe for this purpose. This pipe, fitted with a long flexible jointed suction length, has been fixed, and is made to operate on the bottom of the reservoir wherever required by means of floats and a pontoon. It has worked very satisfactorily, removing the sludge without discolouring the body of water in the reservoir. The drain laid by the Board in Cook's-lane to connect the lagoon below the storage reservoir (into which the scour-pipe discharges) with the river has been extended up to the outfall end of the reservoir by-wash with stoneware pipes. This extension was carried out to enable the sludge to be taken direct into Cook's-lane drain, instead of passing through the intervening lagoon. The syphon has not been in operation sufficiently long yet to show any marked results, but its operation so far, combined with the system of circulation adopted, has improved the quality of the water.

10. Small quantities of the water weeds, which gave considerable trouble four or five years ago have reappeared. The larger weeds are now being removed and burnt.

11. The filterbeds at Walka Pumping Station continue to work satisfactorily, and better results have been obtained since the water has been well aerated immediately before filtering, and the beds refilled with filtered water slowly from the bottom after they have been dried off for skimming, &c., instead of the former system of applying water to the top.

12. During recent years it has been found necessary to frequently empty and cleanse the clear water tank to remove growths of aquatic weeds from the floor and sides. To exclude the light, and so prevent the growth of the weeds, the Board have decided to cover over the tank, and contracts have now been let for the supply of materials. The constant expense and inconvenience of previous operations will then be avoided.

13. Regularly every month samples of water, taken from the river, storage reservoir, settling tank, and clear water tank at the Walka Pumping Station, are submitted to the Government Analyst, Mr. William M. Hamlet, F.I.S., F.I.C. His reports show that the filtered water delivered into the mains for consumption continues to maintain its reputation as a good wholesome water fit for drinking and all domestic purposes.

14. The river water is moderately hard, but the dissolved substances contained in it vary from time to time with the rainfall over the watershed of the Hunter, increasing in time of drought, partly due to the long continued evaporation, and partly to the streams being principally fed with spring and subsoil water, which in its passage through the ground has become charged with soluble minerals. The hardness of the river water differs considerably, ranging from only 6 degrees during freshets to as high as 22 degrees during dry weather. The filtered water has varied from 12 to 19½ degrees (Clark's scale). The variations in the soluble matter and the high percentage which gives a permanent hardness to the river water at present prevent the application of any economical softening scheme which would be within the Board's resources. When the revenue improves, however, the matter will be again looked into, and, if possible, steps will be taken to soften the water, so as to make it more suitable for laundry purposes.

15. The Pumping Plant at Walka is working satisfactorily. The quantity of water pumped during the year was as follows:—From the river to the storage reservoir 231,163,771 gallons, from the river to the settling tank 143,644,169 gallons, from the storage reservoir to the settling tank 180,979,877 gallons, making the total quantity of unfiltered water pumped 555,787,818 gallons, an increase over the previous year of 18,612,545. From the clear water tank to the service reservoirs 317,184,136 gallons of filtered water were pumped, showing an increase over last year of 32,117,416 gallons. The quantity of water pumped from the Newcastle reservoir to the high-level tank supplying the highest parts of Newcastle, was, approximately 2,400,000 gallons.

16. The cost of pumping 1,000 gallons 100 feet lift for last year was 427d., as against 439d. for the previous year. The cost of coal delivered at the pumping station was 5s. 6d. per ton during the first half, and 6s. 6d. during the second half of last year.

17. The whole of the buildings at the Walka Pumping Station and the various reservoirs are in good order. Slight additions will be required to four of the caretakers' cottages. The suction, rising, and reticulation mains have been maintained in proper working order.

18. To prevent the pollution of the watershed of the river, regular inspections for a distance of 20 miles above the intake at Walka are made. There is comparatively little settlement of population in the neighbourhood of the river along this length. The sanitary arrangements of these holdings, however, receive strict supervision, and the river and its banks are also carefully inspected.

19. The new duplicate suction main from the river and the rising main to Buttai have considerably improved the facilities for pumping to the service reservoirs, but the best results will not be obtained until the 15-inch gravitation main from Buttai to Newcastle is duplicated. As this work will involve an expenditure of, approximately, £80,000, the Board will defer its construction as long as possible; but there can be little doubt, if the consumption continues to increase as it has done since 1892, the duplication of the existing single pipe line cannot safely be postponed much longer. For the year ending 30 June, 1893, the water pumped to the service reservoir for consumption was, in round figures, 165,000,000 gallons, and last year it reached 317,000,000 gallons, or very nearly double.

20. The decay of the metal in a number of cast-iron watermains in certain parts of the reticulation of Newcastle and suburbs continues to cause trouble and expense. The decay is confined to the mains laid in streets where copper slag, furnace ashes, and such like refuse has been used as part of the road-making material. From local investigations and tests made by the Government Analyst, it has been clearly shown that the decay is due to the action of acid liberated from copper ore, slag, &c., in or near which the pipes have been laid. At Minmi several bursts took place in the 6-inch main pipe. On examination the pipes were found badly decayed, most probably caused by water percolating to them from the decomposing pyritous refuse in the adjacent railway embankment, which has been formed mainly with coal-pit refuse. Where mains are laid in streets formed in this way it is now the practice to place limestone in the bottom of the trenches to neutralise the acidity of the subsoil water.

21. During the year 1,870,100 gallons of water have been supplied free to public hospitals, benevolent asylums, churches, parks, mechanics institutes, and schools of art. The liberal allowance of 30 gallons per head per day has been made in the case of hospitals and asylums, any excess over same being charged for. Water for street-watering and public baths is charged for at the specially reduced rate of 6d. per 1,000 gallons, and is supplied free for gutter flushing and cleansing sumps and drains.

22. For the year 267 meters have been hired-out by the Board. The meter used is the class specially designed by the Metropolitan Board of Water Supply and Sewerage, to whom the Board are indebted for the privilege. The hire charges are moderate. Since the initiation of the system in January, 1896, 588 meters have been hired-out to consumers. During the year 365 meters have been tested.

#### FINANCIAL.

23. The revenue struck for the year was £26,958 14s. 8d. Adding to this the arrears outstanding at 30 June, 1898 (£12,236 12s. 3d.), gives the total revenue receivable, £39,195 6s. 11d. Of this amount, £27,770 2s. 3d. was collected and remitted to the Treasury, leaving £11,465 3s. 5d. outstanding at the close of the year. Included in this amount is the sum of £5,300, due by the Railway Commissioners of New South Wales, payment of which has been delayed in consequence of a difference of opinion as to the liability of the Commissioners' properties for water-rates for the year ending 30 June, 1898, and the basis of charging for water supplied. The whole of the papers have been submitted to the Minister, and the Board hope that the amount will be paid by the Commissioners without further delay.

24. The Board are unable at present to submit a proper balance-sheet showing the revenue and expenditure for the year, as the capital debt has not yet been determined. In accordance with the provisions of the Amending Act, the Board have been furnished with particulars of the capital debt to 30 June, 1897, for consideration and report. This matter was receiving attention at the close of the year.

25. The management expenses for the year amounted to £4,848 12s. 8d., and the working expenses to £5,014 11s. 8d. The amount of interest for the year on the capital debt and the statutory instalments to the sinking fund for the maintenance and reconstruction of renewable works, cannot be ascertained until the capital debt is finally determined.

26. The total amount expended by the Board during the year was :—

Chargeable to loans ... ..	£3,188	5	5
Chargeable to revenue ... ..	£9,689	6	6

### SEWERAGE.

27. The Board have been furnished with copies of the report prepared by Mr. J. Davis, M.Inst.C.E., Chief Engineer for Sewerage Construction, embodying his scheme for the sewerage of Newcastle and suburbs. A brief description of same is attached. This report has been sent to the Board for an expression of opinion as to whether, from a financial point of view, the scheme should be referred to the Parliamentary Standing Committee on Public Works for investigation. The Board at once requested the District Medical Officer of Health to furnish them with a report on the present sanitary condition of the areas proposed to be sewered, the prevalence of typhoid fever, phthisis, and other diseases which the construction of efficient sewerage works might reasonably be expected to prevent or mitigate.

Dr. Dick promptly supplied the Board with an able and exhaustive report, copy of which is submitted herewith. He has dealt very fully with the existing sanitary arrangements of the borough of Newcastle and the municipalities of Hamilton, Wickham, and Merewether, and has given statistics of the cases of phthisis, diphtheria, diarrhœa, and typhoid fever. Referring to these diseases, he states :—

A consideration of the tables given discloses the fact that the typhoid fever death-rate and attack-rate, and the diarrhœal death-rate in the local centres, considerably exceed the rates which obtain in a completely sewered locality, such as the city of Sydney. As already stated, the prevalence of these two diseases is, to a large extent, influenced by insanitary conditions, such as are present in the local centres, and these conditions are such as can be practically done away with in the most effectual way by the institution of a sewerage system.

Dealing with the existing municipal sanitary systems, he reports :—

As regards the present systems in use in the different localities, it may be said that in Merewether the methods generally adopted are entirely at variance with sound principles of hygiene. In Hamilton and Wickham, whilst the pail system is a marked step in advance, the question of the disposal of the slop waters (which are practically equally as foul as the sewage of a water-closeted town) remains to be satisfactorily dealt with. In Newcastle the present mixed system as regards the removal of the contents of pail-closets cannot be deemed to be by any means a good one. The patent pails which are connected with the drains are filthy contrivances. The present sewerage system, judging from a limited experience, appears to stand in need of much improvement in important particulars.

In concluding his report, Dr. Dick says :—

Considering the great benefits from a health standpoint which have resulted from the establishment of sewerage systems, as judged from the statistics given, it is reasonable to expect that similar benefits will follow the institution of an efficient sewerage system in the localities under review.

The

The Board feel that, looking at the matter solely from a public health point of view, the information furnished by the District Medical Health Officer amply demonstrates the necessity of an efficient scheme of sewerage being provided to supersede the present defective sanitary arrangements.

Mr. Davis came to Newcastle by special request and personally explained his scheme to the Board. He dealt fully with the questions of the disposal of storm waters, polluted yard waters, situation of the reticulation sewers, average cost of house connections, carrying out of same by Board for ratepayers on a system of deferred payments, possibility of the pollution of the beaches adjacent to the out-fall works, extension of the scheme to the outlying areas later on, the discharge of the sewage into the ocean, and of the biological and other systems of treating sewage.

With regard to the estimated capital cost of the works, the Board pointed out that, in the event of the scheme being carried out, they hoped the estimated cost would not be exceeded, and although they felt they could hardly expect the Minister to give a guarantee to that effect, they would be glad to have some assurance on the point, so as to prevent subsequent disappointment and dissatisfaction. Mr. Davis suggested that the object the Board had in view might be attained by arranging that all the tenders for the work close at the same time, so that the total of the lowest tenders could be ascertained, when it could be seen at once whether the work could be carried out for the sum named in his report or not, and the Minister could then decide as to acceptance. Mr. Davis's suggestion will materially assist the Board in arriving at a decision, as it affords a reasonable guarantee that the works will not be carried out if the estimated cost is likely to be exceeded by any great amount. The Board feel certain that if the total of the tenders exceeds the estimated cost the Minister will afford them an opportunity of considering the matter before any tenders are accepted.

At the close of the year this matter was still under consideration, and estimates of probable revenue and expenditure were being prepared by the Board's officers.

#### GENERAL.

28. In consequence of a serious waste of water, and the want of proper supervision and control generally, on the occasion of a large fire in Scott-street, Newcastle, in February last, the Board wrote to the Chief Secretary, drawing his attention to this matter, and pointing out that, in their opinion, the time has arrived for the proper organisation of the fire brigades in the district. Upon receipt of this minute, the Chief Secretary directed Mr. Alfred Webb, Superintendent of the Metropolitan Fire Brigades, to inquire into and report on same. Mr. Webb came to Newcastle and went exhaustively into the whole matter, and also into a counter complaint made by one of the fire brigades that the water supply was insufficient. The Board was furnished with a copy of Mr. Webb's report, and were pleased to note that the searching inquiry made put it beyond all doubt that the water supply on the occasion of the fire was in every way ample, had it been used in a proper manner.

The Board considered the disclosures made by Mr. Webb fully justified their action in asking for an inquiry, and recommended that the Board should be represented on the Fire Brigades Board, which Mr. Webb suggested should be established.

The

The water used at fires has, by law, to be supplied free of charge, at the expense of the ratepayers of the Hunter district, and the Board are, therefore, interested in seeing that the brigades are kept in a state of proper organisation and efficiency. The Chief Secretary has been good enough to promise that this request shall receive consideration, and the Board hope, in view of the present disorganised and unsatisfactory condition of the local fire brigades, an effectual remedy will be provided with the least possible delay.

29. During the year the Board have again brought under the notice of the Minister the recommendation made by them that the staff should be placed under the control of the Public Service Board, so as to widen the scope of promotion for their officers, and have been favoured with a reply to the effect that certain amendments have been found necessary in the Public Service Act, and when the Amending Bill is being drafted the matter will receive consideration.

This subject was referred to at length in last year's report, and the Board hope that the necessary legislation will soon be passed to give effect to their recommendation.

30. The Board have during the year made inspections of the pumping station, several of the service reservoirs, and the pipe-line bridges.

31. Mr. H. W. Lee, official member of the Board, resigned his seat in May last, and Mr. John Reid was appointed to fill the vacancy.

32. Fifty-eight meetings of the Board were held, at which the attendances were as follows:—

MEETINGS OF BOARD FROM 1 JULY, 1898, TO 30 JUNE, 1899.

	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	April	May.	June.

Board's Offices, Newcastle, 28 August, 1899.

ALFRED E. FRY,  
Secretary and Accountant.

## Report of Assessor's Branch for year ending 30 June, 1899.

I HAVE the honor to submit a report of the work of this branch during the year ending 30 June, 1899.

### RATE NOTICES.

During the year 32,767 notices have been served upon ratepayers, including those for new mains, new assessments, special fees, and final notices, for overdue rates.

### REVENUE STRUCK.

The total amount of revenue struck for the year was £26,478 15s. 11d.

### REVENUE COLLECTED.

The revenue collected for the year was £27,250 4s. 9d., the total receivable for the year with arrears from previous years was £38,715 8s. 2d., leaving outstanding at 30 June, 1899, £11,465 3s. 5d. The Board's officers have been in attendance on specified days at the several Municipal Council Chambers, for the convenience of ratepayers.

### PROPERTIES RATED AND SUPPLIED AT 30 JUNE, 1899.

At 30 June, 1899, there were 13,925 properties rated, namely, 2,181 unimproved land, 3,824 properties unconnected, and 7,920 properties connected with the Board's mains, showing an increase of 388 charged at 30 June, 1898.

### SUMMONS WORK.

During the year 4,174 final notices were served, 644 summonses, and 54 executions issued.

### METERS.

At 30 June, 1899, 1,188 meters were on private supplies, showing an increase for the year of 223. During the year 365 meters have been tested.

### METER HIRE.

During the year 267 Board's meters have been hired by private consumers, making a total of 588 since the inception of the hire system.

### DEFERRED PAYMENTS.

During the year ninety-five ratepayers have availed themselves of the deferred payment system, of connecting their premises with the Board's mains, making a total of 608 since the inception.

### FREE SUPPLY OF WATER.

Hospitals...	...	...	...	...	1,175,200 gallons.
Fire Stations	...	...	...	...	69,000 "
Churches	...	...	...	...	11,300 "
Parks	...	...	...	...	74,600 "
Mechanics Institutes	...	...	...	...	16,300 "
Benevolent Asylums	...	...	...	...	523,700 "
Total	...	...	...	...	1,870,100 "

Detailed returns attached.  
The Secretary.

P. DE MESTRE HART,  
Assessor, 29/8/99.

## Rates and Charges for Water in force for the year ending 30 June, 1899.

1. Water By-laws Nos. 1, 2, 3, 4, 5, 6, 7, 8, and 9, published in the *Gazette* of 1 November, 1898, are hereby repealed, and the following By-laws shall be substituted in lieu thereof: Provided that such repeal shall not prejudice or affect the payment or recovery of any rate, charge, or sum now due under the repealed By-laws.

2. The following shall be the rate to be paid in respect of property ratable for water supply, whether such property is connected with any main, or is otherwise supplied with water by the Board or not.

### WATER RATES ON PROPERTY.

- (I.) Where the land or premises are of the assessed annual value of £10 or under, 10s. per annum.
- (II.) Where the land or premises are above the assessed annual value of £10, a rate of 1s. for each pound sterling of the amount of the assessed annual value.
- (III.) Where the land or premises, on which no building is erected for human habitation, are of the assessed annual value of £5 or under, 5s. per annum.
- (IV.) Where the land or premises, on which no building is erected for human habitation, are above the assessed annual value of £5, a rate of 1s. for each £ sterling of the amount of the assessed annual value.
- (V.) Vacant lands of the assessed annual value of £10, and under, a rate of 3s. 4d. per annum; and on all such lands above the assessed annual value of £10, 4d. for each £ sterling of the amount of the assessed annual value.

## WATER SUPPLIED BY MEASURE.

Supply to  
property by  
measure.

3. Unless otherwise determined by special agreement between the Board and the consumer, the charge for water supplied by measure shall be 2s. per 1,000 gallons. The minimum quantity of water to be charged for where water is so supplied shall be the quantity which, calculated at the charge prescribed by the By-laws, amounts to the rates paid in respect of the property.

## CHARGES IN ADDITION TO RATE ON UNMETERED SERVICES.

Special fees.

4. The following shall be the charges to be paid in addition to the rate in respect of property where water is used for other than domestic purposes, and the supply is not through a meter, and are hereinafter referred to as Special Fees.

Trade purposes.

(I.) The Special Fees for water supplied for:—

Photography and any like process shall be...	...	10s. per annum.
Tripe cleaning ... ..	...	10s. „
Tying purposes ... ..	...	20s. „
Small goods (sweets) ... ..	...	10s. „
Waterfalls and fountains ... ..	...	20s. „
Shop fronts, by hose ... ..	...	20s. „
Organ motors and such-like mechanism ... ..	...	40s. „
Washing vehicles, by hose ... ..	...	10s. „
Washing yards, by hose ... ..	...	20s. „

Vehicles.

Yards.

(II.) All Special Fees shall be payable in advance.

Nozzle and  
waste pipes.

5. No person shall use water in connection with any motor unless the nozzle supplying such motor has been first approved of by the Board. The waste-pipe from each motor shall be so fixed that the waste water can be measured at any time.

Gardens.

6. The charge for water supplied for watering gardens or lawns, by hose, shall be at the rate of 5s. per annum for every 500 square feet, superficial area, or part thereof, and 2s. 6d. for every additional 250 square feet, superficial area, or part thereof.

Meter may b  
insisted upon.

7. In all cases where special fees are charged, the Board reserve to themselves the right of insisting upon a meter being fixed at any time, notwithstanding the fact that the Special Fee may have been paid.

Building  
charges, &c.

8. (I.) The charge for water supplied for building and plastering purposes, for buildings to be used either wholly or partly as dwelling-houses, shall be at the rate of 1d. per cubic yard on the cubical contents of each building. The Board will supply water for all other buildings, either by meter or at the rate above mentioned by cubic yard on the cubical contents of each building, as the Board shall determine: Provided that before any water shall be used through meter for building purposes such meter shall be submitted to the Board in each case for examination, and must pass the sensitive test; and the minimum quantity of water to be charged for where water is so supplied shall be 20,000 gallons.

(II.) The charge for water supplied for plastering rooms only shall be 5s. for each room, and for the building of wash-houses, water-closets, coppers, and chimneys only, 2s. 6d. each.

(III.) The charge for water supplied for the making and mixing of concrete for foundations of wooden blocks, stone cubes, or other form of permanent roadway or pavement, shall be at the rate of £3 per 1,000 square yards, by superficial measurement of road surface; and for all other concrete, brickwork, or masonry, at the rate of 6d. per cubic yard, as measured on the work.

Premises where  
horses and cows  
kept liable to  
extra rate.

9. All lands or premises actually supplied with water by the Board, on which any one or more head of horses or cattle shall be kept or maintained, shall be liable to an extra rate or charge (beyond and in addition to the rates hereinbefore imposed) of 5s. per head for each head of horses or cattle kept or maintained on such lands or premises. Where such lands or premises are not actually supplied with water by the Board, they shall be liable to an extra rate or charge (beyond and in addition to the rates hereinbefore imposed) of 2s. 6d. per head for each head of horses or cattle kept or maintained on such lands or premises.

## Board Engineer's Report.

Sir,

Newcastle, 28 August, 1899.

I have the honor to submit my report relating to the water supply for the year ended 30 June, 1899.

## QUANTITY OF WATER SUPPLIED.

A constant supply of water at a satisfactory pressure was maintained in the reticulation water mains throughout the Newcastle and Maitland Districts during the year.

The total quantity of filtered water pumped to the distributing reservoirs was 317,184,136 gallons being an increase of 32,117,416 gallons over the previous year; the total quantity of unfiltered water pumped to the settling tank and the Storage Reservoir amounted to 555,787,817 gallons, an increase of 18,612,544 gallons.

The number of properties (excluding vacant lands) liable for water rates amounted to 11,744 at the close of the year, representing an approximate population of 58,720 persons contiguous to the water-mains. The number of these properties actually connected to the watermains was 7,920 estimated to contain 39,600 inhabitants. The total population of the municipal and other areas reticulated with water mains is estimated to be 64,480—many of these, however, reside in houses beyond reach of the water pipes.

The

The average daily consumption of water per inhabitant of the 7,920 properties connected to the water mains was 21·94 gallons as against 20·89 gallons for the preceding year. Averaging the daily consumption separately for the Maitland District (comprising East and West Maitland, Morpeth, &c.) and the Newcastle District (comprising City of Newcastle, suburbs and mining townships) the former gave 15·04 gallons per head and the latter 23·92 gallons per head.

The quantity of water supplied through meter to 63 large consumers such as Railways, Collieries, Shipping, Breweries and factories of various kinds was, for Maitland District, 2,065,400 gallons, and for Newcastle District, 81,944,020 gallons, together making 84,009,420 gallons and equal to 26 per cent. of the total consumption. The remaining 74 per cent. was the consumption for street watering, domestic purposes, small gardens, stock, &c., and averages 14·46 gallons per head per day in Maitland District and 16·77 in Newcastle District.

Owing to the hardness of the water supplied by the Board, most householders store rain water and use it for laundry and similar purposes; this additional consumption must be borne in mind when considering the consumption per head stated above.

Particular attention was given throughout the year to the prevention of waste of water from consumers pipes and fittings, and in this direction the institution of the practice of the free rewashing of taps by the Board's employees has been beneficial.

#### COST OF PUMPING.

The cost of pumping 1,000 gallons 100 feet high at Walka Pumping Station was 427d., a slight reduction as compared with 439d. for the previous year, although there was an increase in the cost of coal. The pumping engines worked satisfactorily, and much credit is due to the Mechanical Engineer in charge, Mr. E. Hackett, for the efficient maintenance and working of the machinery.

#### QUALITY OF THE WATER.

The filter beds at the pumping station continued to give satisfactory results; the filtered water as supplied for consumption being shown by the results of analysis of samples sent monthly to the Board of Health, to maintain its good character. The filtered water varied in hardness from 12 degrees to 19½ degrees, Clarke's scale. The Hunter River water ranged between wider limits, viz., from 6 degrees during freshets to as high as 22 degrees during dry weather. Frequent emptying and cleansing of the clear water tank has during recent years been found necessary to remove growths of aquatic weeds from the floor and sides. To avoid the constantly recurring expense and inconvenience of this operation the exclusion of light by covering over the tank is necessary. This course was decided upon and contracts let for the supply of material for roofing the tank.

#### PIPE LAYING.

The total length of water mains laid during the year amounted to 4 miles 724½ yards, raising the total length laid by the Board during the past seven years to 36 miles 738½ yards. The new mains laid comprised extensions to Boolaroo, Cockle Creek; Georgetown, Waratah; and Broadmeadow. The laying and jointing was all done by day-labour.

#### MAINTENANCE OF PIPE LINES.

The repairs to the main pipe line bridges, commenced during the previous year, were completed and the bridges left in a safe condition. The rising mains from Walka Pumping Station to East Maitland and Buttai Reservoirs and the gravitation main from the latter to Newcastle were all maintained in good working order. The full working capacity of the gravitation main from Buttai to Newcastle District is gradually being approached in the hottest part of the summer.

Trouble and expense have continued to be caused by decay of the cast-iron water mains in certain parts of the reticulation of Newcastle and suburbs where copper-slag, furnace-ashes, and such like, have been used for forming streets. Whenever repairs of decayed pipes are effected limestone is placed in the bottoms of the trenches to neutralise the acidity of the subsoil water.

Several bursts took place in the 6-inch main pipe line to Minmi, at a place where the pipe line dips in a depression at the base of a railway embankment, formed mainly with coal-pit refuse. The cast-iron pipes were found to be badly decayed, probably caused by water percolating to them from the decomposing pyritous refuse in the embankment. As the pipe line in this locality is in very low swampy ground, and in wet seasons is submerged for months at a time, the pipes should be lifted and placed on piles; a recommendation to this effect has been submitted for the Board's consideration.

Inside rust tuberculation of water pipes has not proceeded to any serious extent, as seen in pipes removed for repairs, connections, and alterations, although the pipes have been in use fourteen years.

In proposals made to Municipal Councils for the erection of garbage destructors, the value of the clinker produced for forming roads and streets is usually mentioned; it is more than probable that if so used or deposited in the neighbourhood of water, or other metallic pipes, these would receive severe injury therefrom. The question of regulating the deposit of slag, clinkers, furnace-ashes, and such like in the vicinity of water-pipes will, sooner or later, have to be considered by the authorities charged with the maintenance of the pipes.

#### THE STORAGE RESERVOIR.

The scheme approved by the Board for removing the sludge from the bottom of the Storage Reservoir was constructed, and brought into successful operation on the 6 June. This work consists of an extension of Cook's-lane drain with 24 and 21 inch stoneware pipes to the outfall end of the reservoir by-wash, thence a 12 inch stoneware pipe to the toe of the embankment, where it is connected to an 8 inch cast-iron syphon carried over the embankment and terminating about 3 feet below top-water level of reservoir. At this end a submerged flexible jointed suction-pipe is connected and carried a few inches below the water surface by means of floats as far as a pontoon, to the underside of which it is suspended. Several ball and socket-joints are here provided in the pipes, and the pipe turns downwards and descends to the bottom of the reservoir.

Dredging

Dredging operations are conducted as follows :—There is a difference of about 20 feet between the water level in the reservoir and the level at which the syphon discharges below, this difference causes a powerful inrush of water at the mouth of the pipe on the bottom of the reservoir when the syphon is started. By slowly hauling the pontoon along the arc of a circle, using the floating pipe as a radius, and at the same time from the deck of the pontoon operating the vertical part of the suction-pipe so as to cause its mouth to move over the bottom in and out for a width of about 9 feet transversely to the arc of travel, the sludge is swept in by the strong inrush of water, carried through the syphon, and discharged into the outfall drain. To ensure complete removal of the sludge, the same strip of the bottom is gone over twice, then the radius is increased or reduced, as the case may require, and an adjoining strip of the bottom operated upon. This system of dredging acts satisfactorily, and the soft sludge is removed without discolouring the body of the water in the reservoir.

The Storage Reservoir was kept nearly full throughout the year. 231,000,000 gallons were pumped in from the river, 143,000,000 gallons drawn off for the supply of the filter beds, upwards of 32,000,000 gallons discharged through the scour-pipe, and a considerable quantity through the suction-dredge pipe. The full capacity of the reservoir is about 200,000,000 gallons; it is, therefore, obvious that a very fair circulation of the water was effected. More river water could have been pumped in, but its extreme hardness during many months of the year rendered this course inadvisable. Rainfall on the catchment area of the reservoir, and water pumped in from the river, caused the contained water to range in hardness between 11 and 17 degrees.

The water weeds which appeared and grew abundantly four and five years ago, and the removal of which entailed considerable trouble and expense, have reappeared in small quantities.

The attention given to the Storage Reservoir is slowly causing an improvement in the quality of the water; this, it is expected, will proceed more rapidly when the sludge is removed.

The construction of Cook's-lane drain has been attended with beneficial results; it affords a free outlet into the Hunter River for water and sludge discharged from the Storage Reservoir, and has also enabled the water level of the swampy lagoon at the back of the reservoir embankment to be considerably reduced.

RAINFALL AND RIVER.

The rainfall on the catchment area of the Hunter River above the intake of the Walka water-works, and on the water supply district, was below the yearly average.

From reports furnished by the Government Astronomer, the following information respecting the rainfall during the year ending 30 June has been compiled.

Catchment Area.							
Cassilis ...	...	...	...	...	...	...	16.16 inches.
Denman ...	...	...	...	...	...	...	17.66 "
Merriwa ...	...	...	...	...	...	...	16.06 "
Singleton ...	...	...	...	...	...	...	24.46 "
Wingen ...	...	...	...	...	...	...	19.95 "
Broke ...	...	...	...	...	...	...	17.55 "
Water Supply District.							
Newcastle ...	...	...	...	...	...	...	33.74 inches.
Maitland ...	...	...	...	...	...	...	21.59 "

November, 1898, and May, 1899, were very dry months; rain fell most abundantly during September, 1898, and April, 1899.

The Hunter River rose in flood on September 2 and 3, 1898, to the height of 25 ft. 6 in. measured on the gauge at Belmore Bridge. The only other rises worth mentioning were 11 feet on July 3, 1898, and 8 ft. 5 in. on April 5, 1899. From the middle of September, 1898, after the flood waters had subsided, the river kept at a very low level until 4 April, 1899, the flow gradually diminishing until towards the end of the period, from rough measurements made, it was estimated that the visible flow past the intake was reduced to about 15,000,000 gallons per day, and fluctuations of water level due to tidal influence were observed below the gravel bar on the downstream side of the intake. The amount of rainfall on the catchment area of the river has a considerable influence on the quality of the water, particularly its hardness. Samples of river water taken just after the flood in September gave a total hardness of six (6) degrees (Clark's scale), of which four (4) were permanent. During the subsequent dry period the hardness rose to 20 degrees in March, fell in April to 13 degrees, due to a rainfall sufficient to cause a freshet in the river, then rose again rapidly; the maximum for the year, 22 degrees, being reached in June.

Although the rainfall, taken as a whole, was low, the showers fell at intervals favourable to the maintenance of a fair supply of rain water in householders tanks, much resorted to for laundry purposes owing to the hardness of the river water. It was mainly owing to the favourable distribution of the rainfall that, whilst the average weekly summer consumption of water from the pipes was greater than during the previous summer, the maximum weeks consumption did not rise so high as the maximum of that summer.

Tabular statements of operations, results, and comparisons are annexed.

The Secretary.

J. B. HENSON, Assoc. M. Inst. C.E.  
Board Engineer.

## Description of Hunter District Water Works at 30 June, 1899.

The supply of water for the district under the control of the Board is pumped from the Hunter River, at the apex of the Hunter River Delta, about  $1\frac{1}{2}$  miles up stream from Belmore Bridge, West Maitland. Between this point and the sea coast at Newcastle the river is subject to tidal influence, and the water is unfit for domestic purposes.

The drainage area of the Hunter River above the intake is 7,090 square miles, on which the average annual rainfall is about 25 inches.

The Hunter River and its principal tributary, the Goulburn River, rise in the Great Dividing Range. There are no permanent snow-fields on the mountains, and no lakes in the valleys. The river for about 50 miles of its course above West Maitland, where it is at about sea-level, has an average surface grade of 2 feet per mile, and consists in ordinary summer weather of long reaches of deep still water separated by gravel and rock bars, over which the water rushes; it is subject to floods which at times are severe and destructive, and prolonged droughts have been known during which it is said the flow of water was so much diminished as to be scarcely observable. The immense stores of water in the long deep pools would afford an inexhaustible supply should the river actually cease running during a prolonged drought.

A natural bar of gravel extends across the river immediately below the intake, and is the limit to tidal influence. From this bar up stream there extends a long reach of deep water.

The greater part of the drainage area consists of sedimentary strata of carboniferous and permo-carboniferous age. In the north-west, along the Liverpool Range, there is an extensive area of eruptive rocks, and isolated masses of similar rock are distributed over the eastern and north-eastern parts of the river basin. The Hawkesbury sandstone measures extend into the valley from the south at its extreme western end, and cover a fair extent of country. These measures overlie the carboniferous beds, and afford a superior class of soft water, but are too remote for their capabilities in this respect to be directly availed of. Limestone is comparatively rare; a few isolated outcrops of limited area occur in the valley of the Upper Hunter. The lime and magnesia, which cause the hardness of the river water, together with salt, are probably derived mainly from the marine beds of the permo-carboniferous measures.

The productive coal measures of the Hunter Valley extend over a considerable portion of the contributing drainage area, but actual coal-mining operations are at present of a limited extent above the intake. In course of time, no doubt, a greater development of this industry will take place, and precautions will have to be taken to prevent pollution of the river water, especially at periods of minimum flow. The principal coal workings of the Hunter District are situated between Maitland and the coast.

The river water is moderately hard, but the dissolved substances contained in it vary from time to time with the rainfall over the drainage area, increasing in time of drought, partly to the long continued evaporation, and partly to the streams being principally fed with spring and subsoil water, which in its passage through the ground has become charged with soluble minerals. In times of flood, although the amount of material washed down by the current will show a large increase in the suspended matter, yet the dissolved matter is not so noticeable, owing to the greater dilution over a given volume of the water.

The number of persons now settled on the drainage area is approximately 30,000, which gives 4.23 persons per square mile. The Board have jurisdiction over the river for a distance of 20 miles above the intake, and frequent inspections are made for prevention of pollution. There is comparatively little settlement of population in the neighbourhood of the river along this length.

The scheme of water supply was originally designed by the late W. Clark, M. Inst. C.E., in the year 1877, and it provided for the requirements of the City of Newcastle and suburbs and the municipalities and townships on the southern side of the Lower Hunter River from the sea coast to West Maitland. Its construction, with some modifications in the details, was commenced by the Government in the year 1879.

Towards the end of 1885 an urgent demand for water arose in the Newcastle District, caused by a prolonged drought, and the main pipe lines being completed, a temporary pumping plant was erected at the intake on the Hunter River, and water was in this way first delivered into Newcastle on 23 November, 1885. The temporary pumping plant was kept almost constantly at work until January, 1887, when it was superseded by the permanent engines.

The Hunter District Water Supply and Sewerage Board was formed and took control of the water works on 1 July, 1892. During the seven years which have elapsed extensions and improvements to the works have been effected.

The pumping engines are situated above flood-level on a hillside about 44 chains back from the right bank of the river. The pumping plant consists of three independent Woolf compound beam pumping engines of about 150-horse power each. Two engines are designed to force water to the summit reservoirs; each works two main pumps of the bucket and plunger type—one pump, having 19-inch bucket and 14 $\frac{3}{4}$ -inch plunger, is at the crank end of the beam, and the other, having 15-inch bucket and 10 $\frac{1}{2}$ -inch plunger, is at the cylinder end of the beam. The third engine is designed to raise water from the river, or the storage reservoir, to the settling tank, or to raise water from the river to the storage reservoir as required. It works three main pumps; two, having 21 $\frac{1}{2}$ -inch buckets and 15-inch plungers, are placed one on each side of the beam centre; the third pump is double-acting, having a pump barrel 24 inches diameter, and is worked from a supplementary beam linked to a cross-head on the pump rod of the pump at engine side of main beam centre. This third pump was added in 1896, and is designed mainly to pump water from the Hunter River to the storage reservoir. Each engine averages thirteen to fourteen revolutions per minute, and all the pumps have a uniform stroke of 4 feet 6 inches.

There are two river suction pipes, each 44 chains in length; one is 18 inches diameter, cast-iron; the other 20 $\frac{3}{4}$  inches diameter, riveted steel plates.

The boiler-house contains five 50-horse power Lancashire boilers, two of which ordinarily supply sufficient steam for the engines. A coal store is attached, having a capacity for 120 tons. A residence is provided for the engineer in charge, and five cottages for workmen.

At the pumping station are a settling tank of 1,390,500 gallons capacity, which receives the water pumped from the river; four filter-beds, 100 feet by 100 feet each; a clear water tank of 589,500 gallons capacity; and a storage reservoir of 172,408,100 gallons available capacity, all uncovered. The latter has been formed by constructing an earthen embankment with puddle core across an old lagoon. It contains a reserve supply of clear water, which is resorted to when the river-water is turbid, and is replenished by rainfall on its catchment area of 200 acres, and by water pumped up from the river.

Water is pumped into the settling tank, from which it descends to the filter-beds; the filtered water is collected in the clear-water tank.

The filtered water is pumped from the clear-water tank into two summit reservoirs—one at East Maitland and one at Buttai. The latter is on the top of a range about 5 $\frac{1}{2}$  miles distant from the pumps. These reservoirs are built of brick and concrete, and are covered over.

East Maitland Reservoir is supplied through a 10-inch cast-iron rising main, 4 miles 310 yards in length, and has a capacity of 463,430 gallons. It commands East Maitland, West Maitland, Morpeth, and neighbouring places.

There are two rising mains to Buttai Reservoir—one riveted steel pipe 20 $\frac{3}{4}$  inches diameter, common to both, extends from the engine-house a distance of 155 yards then it bifurcates, one line continues as a 20 $\frac{3}{4}$  inch riveted steel pipe—the other is a 15-inch cast-iron pipe. The length of the line of rising mains from the pumps to Buttai Reservoir is 5 miles 983 yards.

Buttai Reservoir has a capacity of 1,051,010 gallons.

The district commanded comprises the following places:—City of Newcastle, Carrington, Wickham, Hamilton, Waratah, Merewether, Adamstown, New Lambton, Lambton, Wallsend, Plattsburg, Minmi, and Cockle Creek.

There are six district reservoirs which are supplied by gravitation from Buttai Reservoir, and receive the water for distribution. Their location and respective capacities are as follows:—

Minmi, 62,209 gallons; Hamilton, 402,909 gallons; Wallsend, 452,472 gallons; Newcastle, 523,613 gallons; Lambton, 402,610 gallons; Obelisk Hill, Newcastle, 137,125 gallons. All these reservoirs are built of brick and concrete, and are covered over.

The gravitation main from Buttai Reservoir to Newcastle is cast-iron, 15 inches diameter, and 17 miles 762 yards in length. On the hill at Newcastle there is a high-level tank constructed of iron on timber supports, which has a capacity of 20,000 gallons; it is supplied with water by a small duplex steam-pumping engine placed on the roof of Newcastle reservoir.

A cottage is provided for the caretaker in charge of the three reservoirs at Newcastle, and similar provision is made for caretakers at each of the other reservoirs.

The lengths of mains now under the Board's control are as follows:—

<i>Suction Mains</i>	...	From River to Walka (old),	Diameter 18 ins.	968 yds.	} 1 ml.	176 yds.

Brief description of the Scheme proposed for the Sewerage of Newcastle and Suburbs by Mr. J. Davis, M.Inst.C.E., Chief Engineer for Sewerage Construction, Department of Public Works, N.S.W., dated 5 January, 1899.

THE scheme is designed ultimately to embrace the whole of the City of Newcastle, Merewether, Hamilton, and Carrington and the greater part of Adamstown, Lambton, New Lambton, Waratah, and Wickham, covering an area of 4,656 acres, on which the estimated ultimate population for which provision has been made in determining the capacity of the sewers is 138,660 persons; the present population is 40,548.

It is, however, proposed at first to construct only a portion of the scheme to provide for the more densely inhabited areas.

The districts to be thus sewered comprise the whole of the City of Newcastle, nearly the whole of the Municipality of Merewether, considerable part of Hamilton, and a small part of Wickham, covering in all an area of 1,222 acres, having an estimated present population of 23,000; the estimated ultimate population is 46,380.

Of the 1,222 acres comprised within the first division of the scheme, 867 acres are to be drained by gravitation, while the sewage of 355 acres will require to be pumped. In that portion of the scheme left for future extension 2,056 acres can be drained by gravitation and 1,378 acres of low-lying lands will need to be dealt with by pumping.

The scheme advocates the adoption of the Water Carriage Separate System of Sewerage. The distinguishing feature of this system is the rigid exclusion of rain-water aimed at—the sewers being restricted to the conveyance of sewage only. The dimensions of the sewers and works and the volume of the sewage to be disposed of are each by this system reduced to the minimum.

The sewers have been designed of sufficient capacity, running not more than two-thirds full, to carry off 50 gallons per head of population per day, one-half running off in six hours.

It is proposed to discharge the sewage into the ocean after it has been carefully screened, and all paper, fruit-peelings, and other solids arrested. This method is simple and will entail the least expense, but if it should be eventually found necessary, by reason of pollution of the beaches, to put a stop to the discharge of screened but otherwise untreated sewage into the ocean, the design provides for the construction of tanks near the outfall into which the sewage, having previously been mixed with lime, will pass, and deposit the greatest part of the offensive matter before it finally flows into the ocean. Nothing but actual experience can determine whether in this particular case the discharge of crude sewage into the ocean will or will not be a success, and one of the advantages of the position chosen for the outfall is that if it be not a success the method of disposal can be altered at the least possible expense.

The outfall is on the coast, about one-eighth of a mile north-easterly from Merewether Beach. At this point flat rocks extend out from the coast for more than 200 feet. A suitable inlet exists here in which there is deep water, and the sewer will be led to this as a point of discharge. Rocks, submerged at high water, run out from the inlet for a considerable distance, which will have a tendency to assist the flow of sewage seawards. A tidal flap will be provided where necessary.

The outfall sewer, constructed of concrete with dimensions 5 ft. by 3 ft. 6 in., begins at the point on the coast above-mentioned, and runs in a south-westerly direction to the screening chamber near the intersection of Darby and Junction Streets, at which latter point the two main sewers join.

One of these sewers, 3 ft. 3 in. by 2 ft. 2 in., extends northerly, and, with subsidiary sewers, provides for the reception of the sewage from the northern portion of the City of Newcastle and Hamilton and the part of Wickham embraced in the first division of the scheme, also provides for the ultimate reception of the sewage from the whole of Carrington and additional portions of Wickham and Hamilton. The other sewer, 4 ft. by 3 ft., will extend westerly, and, with subsidiary sewers, provides for the sewage from the western suburbs—Merewether, Adamstown, New Lambton, Lambton, Waratah, and parts of Hamilton and Wickham. As, however, these districts, with the exception of Merewether, are not included in the first division, it is intended to provide for the present requirements of Merewether by laying a 16-inch pipe, which will be replaced by the larger sewer referred to above when the occasion demands it.

Reticulation sewers for that portion of the district proposed to be dealt with at once consist of 5 miles  $14\frac{1}{2}$  chains of 9-inch pipes and 19 miles  $72\frac{1}{2}$  chains of 6-inch glazed stoneware pipes, with 472 man-holes. In locating reticulation sewers, great attention has been given to the question of economy in house connections; and with this end in view many of the sewers are designed to run through the blocks instead of in the streets. The report states this arrangement will lead to a very considerable saving to individual owners when connecting their properties with the sewers.

Two pumping stations will be required to deal with the sewage from the low-level areas laying within the first division of the scheme. One will be located near the corner of Brown and King Streets, and the other near the intersection of Cottage Creek storm-water channel with Landford-street. These pumping stations will consist of subterranean cast-iron cylinders, provided with chambers for the reception of sewage. The sewage will be raised from the cylinders into the gravitation sewers by means of pumps driven by electric motors. At No. 2 Station—viz., the one situated at Cottage Creek—a power-station will be installed for the purpose of generating electricity for the electric motors. It is proposed to install the electrical plant on what is known as the three-phase system, and the cables will be carried overhead on poles.

The estimated cost of that division of the scheme now proposed to be carried out is £75,308 12s. 6d. Annual interest and repayment (in 100 years) will be £2,723 2s., the working expenses £2,109 5s., making together the annual cost £4,832 7s.

The total annual value of property within the area covered by the first division is estimated at £177,000; consequently, the rate necessary to cover interest, repayment, and working expenses will be about 6½d.

In the event of experience showing the necessity of abandoning the method of turning crude sewage into the ocean, and, consequently, some form of treatment being required, these estimates will have to be modified thus:—Capital cost, £89,130 2s. 10d.; interest, and repayments in 100 years, £3,222 10s.; working expenses, £3,510 1s.; making together the annual cost, £6,732 19s. As before, the annual value of property sewered is taken at £177,000; hence a rate of about 9d. in the £ will be necessary to cover interest and repayments and working expenses.

---

## Report by the Medical Officer of Health on the Sanitary Conditions of Newcastle and Suburbs.

Letter addressed by the Secretary of the Hunter District Water Supply and Sewerage Board to the Secretary of the Board of Health:—

Sir,

Newcastle, 28 February, 1899.

The Honorable the Minister for Public Works has referred to the Board for their consideration and report the proposed scheme for the sewerage of Newcastle and suburbs, designed by the Chief Engineer for Sewerage Construction, Mr. J. Davis, M.Inst.C.E.

In his report Mr. Davis gives valuable information as to the proved benefits of sewerage in Great Britain and Sydney from a sanitary point of view. The Board are anxious to have before them, if possible, local health statistics, by which the present health standard of the district may be gauged, so that in considering Mr. Davis' report they may have some data to enable them to express an opinion as to what improvement may be expected if an efficient sewerage scheme is carried out.

I am, therefore, directed to ask if the President of the Board of Health will be good enough to cause the Board to be supplied with the statistics of cases of typhoid fever, phthisis, and other diseases, which the construction of the sewerage works may be expected to prevent or mitigate.

These statistics are required for the city of Newcastle and the municipal districts of Hamilton, Wickham, and Merewether, and, if possible, for, say, the last five years.

The Board will also be glad to have the mortality rate per 1,000 of the population within such areas for the same period.

Letter addressed by the Secretary of the Hunter District Water Supply and Sewerage Board to Dr. Robert Dick, Resident Medical Officer of Health, Waratah:—

Sir,

Newcastle, 10 March, 1899.

I have the honor to enclose copy of a communication addressed by me to the Secretary of the Board of Health on the 28 ultimo, to which I am to-day in receipt of the enclosed reply, which please peruse and return.

Will you be good enough to supply the Board with the information referred to in my letter, and oblige?

I am to add that the Board will be glad to have in addition any other information you can give which may assist them in arriving at an opinion of the present health conditions of the district embraced in the area which it is proposed to sewer at first, and of the improvement in the public health which may be expected to result from the carrying out of this work.

Letter from Dr. Robert Dick, Medical Officer of Health to the Hunter River Combined Districts, to the Secretary of the Hunter District Water Supply and Sewerage Board:—

♦ Sir,

Waratah, 21 March, 1899.

In reply to a communication received from the Secretary, I have the honor to present herewith a short statement dealing with questions which may be considered of importance in judging of the advisability or otherwise of providing a system of sewerage for the localities concerned, viz., Newcastle, Hamilton, Merewether, Wickham.

I have confined myself almost entirely to the hygienic aspect of the subject. This is no doubt the most important consideration. The data for death-rates have been obtained from the death registers of the different places, and information has been gained from the Newcastle Hospital register, which has rendered it possible to distribute to their proper districts the deaths of persons who have died in that institution.

The rates which have been obtained during the same years in the city of Sydney (where a complete sewerage system is present) have been taken for the purposes of comparison. These numbers, for the years 1895-1897, have been derived from returns made to the Metropolitan Sewerage Board by their medical adviser; those for 1898 have been kindly furnished by Dr. Armstrong, the M.O.H. for the metropolitan combined districts.

## Short Note by Dr. Robert Dick on the present systems in vogue for dealing with Sewage Matters in the localities concerned.

### NEWCASTLE.

A fairly extensive sewerage system is in existence. This was originally constructed for conveying away surface waters and household slops, but some 830 water closets are at present connected with the sewers. A fee of 10s. for each closet per annum is charged by the council. The sum of £380 was received from this source during 1898.

In addition to the water closets there are in use some 1900 pails, and about 220 cesspits exist.

As Regards Pail Closets.—Householders are required to supply their own pails, which must be of specified size. The municipality provides scavengers. The sum of 9d. is charged per removal, if done at irregular intervals, and 7d. if removed weekly or fortnightly. Very few pails are emptied at these shorter intervals—about  $\frac{1}{5}$ th of the number are emptied weekly,  $\frac{1}{5}$ th fortnightly, and the remainder at much longer intervals. In a few cases, probably about 20, a type of pail exists which is so constructed as to allow fluids to pass through perforations at the bottom or sides to the drains. When the pail becomes full, which it does at long intervals, the contents are removed by the scavenger.

Fæcal matter collected from pits and pails is disposed of by being punted to sea, as a rule twice weekly, in the meantime being stored at a depot in tightly closed wooden tanks.

As Regards Drains.—There are a number of premises—some 500—without drains. In these cases house slops are disposed of by being cast about the yard areas. In other cases where pail closets are provided and where water closets are present, provision is made for the removal of slop and surface water by means of drains. The yard gullies in connection with these channels have been noticed in many cases to be of antiquated and inefficient types. During the last nine months opportunity has occurred for examining the condition of a limited number of drains, which have been tested and found imperfect, and serious defects were found in connection therewith.

There are eight ventilating shafts only attached to the sewers of the city. It appears the exception for drains to be disconnected from the sewers, and water closets are rarely provided with anti-syphonage or ventilating pipes.

Mode of Discharge of the Sewage.—A small quantity from the highest parts of the city is discharged into the ocean; the main bulk, however, flows into the harbour. Certain of the effluents, owing to their position, lead to considerable fouling of the foreshores in the vicinity.

### HAMILTON.

A Duplicate pail system, with a fortnightly service; about 100 pails are removed weekly, and 25 twice weekly. The charge for fortnightly removal is 9s. per annum, and *pro rata* for a more frequent service. About 14 cesspits still exist.

Excrement is disposed of by burial at a depot situated within the municipality. This depot appears suitable for present purposes, but, undoubtedly, with increasing settlement towards Newtown, will have to be abandoned. The yard areas in the more densely populated part of the municipality are very small. Householders are not allowed to dispose of slop waters by running them into the street gutters. The want of an efficient method to get over the slop water difficulty is keenly felt in this municipality.

### WICKHAM.

The present duplicate pail system has been in vogue for the past six years. Pails are removed at weekly intervals, about 20 of them bi-weekly. The charge is 12s. per annum for the weekly removal. Pails are provided by the council. There are still about 200 cesspits in existence.

Excrement is disposed of by burial at a depot situated within the municipality, but removed some distance (quarter mile) from the nearest settlement.

There is no system of drainage apart from street gutters. Householders make use of these for getting rid of slops.

### MEREWETHER.

In this municipality there is no uniform system for dealing with excrement. A few of the residents who live near the Hamilton boundary take advantage of the Hamilton sanitary service. A fairly large number of cesspits are in existence; where these are not present, pails are used for the reception of excrement. In the absence of a regular system of scavenging householders are obliged to dispose of the contents of pail closets, and this they do by burial on their own premises. The pails for the reception of excrement are in many instances of an unsuitable type, and, as a result, pollution of the ground in and around the privy takes place.

In this municipality underground tanks are not at all infrequent as sources of water supply. These tanks are in many cases poorly constructed and covered, and with no provision made to prevent the inflow of ground waters. The burial of excreta—normal as well as infectious—on premises where underground sources of water supply are made use of, is not by any means a safe procedure. A householder will, as a rule, endeavour not to endanger his own water supply, but he does not always extend to his neighbours the same consideration.

The street gutters are the only channels provided for conveying away surface and slop waters.

### STATISTICAL EVIDENCE.

In attempting to judge of the health conditions of communities by statistical evidence importance is given to the following points, amongst others:—The corrected death rate, death rate from typhoid fever, diphtheria, diarrhoea (zymotic diseases), phthisis death rate, infantile mortality rate (number of deaths under one year, per 1,000 births).

The

The diseases typhoid fever, diarrhoea, and diphtheria are those the prevalence of which depend to a considerable extent on faulty sanitary states, and a high death rate from these affections may be taken as indicative of the presence of insanitary conditions.

The phthisis death rate, if excessive, indicates dampness of soil, unhealthy workrooms, and overcrowding of tenements.

The infantile mortality rate is influenced by the prevalence of epidemic diarrhoea, the occurrence of epidemics of whooping-cough and measles, and by a want of proper care and management on the part of mothers.

In addition to the death rate, the sickness rate is a very important factor to be taken into consideration, for it is clear that the number of deaths from a particular disease by no means represents the total number of cases of that affection which may exist. Under the provisions of the Public Health Act, the diseases typhoid and diphtheria have been made notifiable diseases since January, 1898, so that it is now possible to obtain definite information as to the prevalence of these maladies. Where conditions exist which are favourable to the development and spread of typhoid and kindred diseases, there we should expect to find the most cases, but not necessarily the greatest number of deaths, for the death rate may vary according to the type of disease and other factors. Hence the importance of considering the attack rate.

*Points to be taken into account in calculating and comparing rates.*

Correct estimate of the population is necessary. The population figures given are taken from the statistical registers. In comparing death rates certain corrections need to be applied, such as for differences as regards age and sex distribution, and the exclusion of the deaths of non-residents who have died in public institutions in a district, and the inclusion of residents who have died elsewhere. This correction has as far as possible been made so far as Newcastle and other places are concerned, but the same cannot be said of the Sydney rates except for the year 1898.

POPULATION and General Death Rate per 1,000 of the Population for the Years 1895-1898.

	1895.		1896.		1897.		1898	
	Popula- tion.	Death- rate per 1,000.	Popula- tion.	Death- rate per 1,000.	Popula- tion.	Death- rate per 1,000.	Popula- tion.	Death- rate per 1,000.
Newcastle ... ..	13,500	13·3	14,800	12·16	15,150	10·75	15,700	10·5
Hamilton ... ..	5,200	10·38	5,200	11·7	5,350	12·15	5,420	11·2
Merewether ... ..	4,350	16·7	4,420	14·7	4,470	10·51	4,450	15·9
Wickham ... ..	6,650	13·3	5,650	10·8	5,900	11·6	6,100	16·5
Sydney (City) ... ..	101,935	16·51	97,925	16·5	98,125	16·03	98,250	17·38

It will be seen that, with the exception of Merewether, in 1895, the general death rates locally are lower than those of Sydney. Now, a mere comparison of such rates alone cannot yield conclusions of any value as regards health conditions, for several reasons, as follows:—(1.) The constitutions of the populations are without doubt dissimilar as regards age and sex distribution (a large number of very young or very old people in a district considerably increases the death rate, and also the mortality among males and females at different age periods differs). (2.) The great influence which density of population has in increasing the death rate in large centres. In Sydney the average density is 34 persons per acre, whereas in Newcastle there are 14, in Wickham 6, in Merewether 4, in Hamilton 3 persons only per acre. (3.) In large centres of population people tend to become of lowered vitality and prone to hereditary diseases. There are more accidents, increased indoor occupations, greater intemperance, and other evil conditions, the result of co-existent poverty and modes of living.

Though the general death rates compare favourably with those of Sydney, it will be seen later on, when diarrhoea and typhoid fever are considered, that these affections are much more prevalent, and exact from the inhabitants of the local centres a greater death toll than occurs in completely sewered localities.

It is therefore in the reduction of the prevalence of these diseases which are to a very great extent preventable that every effort should be made.

*Phthisis.*

Death Rates per 1,000 of the Population for the years 1895-98.

	1895.	1896.	1897.	1898.
Newcastle ... ..	1·11	·87	·66	·63
Hamilton ... ..	1·15	·38	1·12	·36
Merewether ... ..	1·14	1·13	·22	1·3
Wickham ... ..	·75	·53	·85	·32
Sydney (City) ... ..	1·07	·98	·91	·92

It will be noted that the local death rates are lower than those of Sydney, with certain exceptions, viz.: Newcastle in 1895, Hamilton in 1895, 1897, Merewether in 1895, 1896, 1898.

As already stated phthisis is most prevalent, and also most fatal in those places where overcrowding of dwellings and workshops occur, and where dampness of soil exists. In the local districts the important factor of overcrowding and the unhealthy conditions resulting therefrom do not obtain to any extent. This no doubt conduces in a great measure to the more satisfactory rates which prevail locally, as compared with those which obtain in a large centre, such as Sydney.

*Diphtheria.*

*Diphtheria.*

## Death Rate per 1,000 of the Population.

	1895.	1896.	1897.	1898.
Newcastle ... ..	·22	0	·06	·19
Hamilton ... ..	·19	0	·37	0
Merewether ... ..	·46	·22	·22	·22
Wickham ... ..	·60	·17	·50	·16
Sydney (City)... ..	·09	·06	·05	·10

Merewether rates exceed those of Sydney in 1895, 1896, 1897, 1898.

Wickham rates exceed those of Sydney in 1895, 1896, 1897, 1898.

Hamilton rates exceed those of Sydney in 1895, 1897.

Newcastle rates exceed those of Sydney in 1895, 1897, 1898.

*Diphtheria.*

## Attack rate per 1,000 of the Population, 1898.

Locality.	Population.	Cases of Diphtheria.	Attack rate † 1,000.
Newcastle ... ..	15,700	11	·7
Hamilton ... ..	5,420	6	1·1
Merewether ... ..	4,450	2	·44
Wickham ... ..	6,100	8	1·3
Sydney (City)... ..	98,250	89	·90

For the past year the attack rate in Hamilton and Wickham exceeds the Sydney rate.

*Diarrhœa.*

Death Rates per 1,000 of the Population in various districts for the years 1895-98, compared with those which obtained in the City of Sydney (where a complete sewerage system is present.)

	1895.	1896.	1897.	1898.
Newcastle ... ..	1·7	1·6	1·4	·51
Hamilton ... ..	2·5	1·9	2·4	1·1
Merewether ... ..	2·7	2·4	1·5	1·1
Wickham ... ..	1·8	1·7	1·7	3·4
Sydney (City)... ..	·65	·59	·36	·4

With one exception (Newcastle, 1898) the rates are much higher in the local centres than in Sydney.

Important factors which contribute to the prevalence of, and death rate from, diarrhœa are the following:—Want of cleanliness, foul air from sewers, drains, accumulations of filth, improper food, maternal neglect, soil pollution (loose, porous soils, contaminated with organic matters derived from slops, soakage from cesspits, &c., being favourable).

The good effect which the institution of a sewerage system has had in reducing the death rate from diarrhœa is shown in the following table:—

## Death Rate from Diarrhœa per 1,000 of the Population.

	Before laying of Sewers.	After laying of Sewers.
Sydney (City) ... ..	·67	·58
Glebe ... ..	1·00	·34
Paddington ... ..	1·05	·50
Newtown ... ..	·52	·30

*Typhoid Fever.*

Death Rate per 1,000 of the Population.

	1895.	1896.	1897.	1898.
Newcastle ... ..	·37	·60	·26	·38
Hamilton ... ..	·57	·38	·18	·92
Merewether ... ..	·68	·22	·22	·67
Wickham ... ..	·15	·17	·0	·49
Sydney (City)... ..	·19	·42	·16	·07

Newcastle rates exceed those of Sydney in 1895, 1896, 1897, 1898.

Hamilton rates exceed those of Sydney in 1895, 1897, 1898.

Merewether rates exceed those of Sydney in 1895, 1897, 1898.

Wickham rates exceed those of Sydney in 1898.

*Typhoid Fever.*

Attack Rate per 1,000 of the Population, 1898.

Locality.	Population.	Cases of Typhoid.	Attack rate, per 1,000.
Newcastle ... ..	15,700	23	1·4
Hamilton ... ..	5,420	27	4·9
Merewether ... ..	4,450	30	6·7
Wickham ... ..	6,100	20	3·2
Sydney (City) ... ..	98,250	103	1·04

It will be seen that the numbers per 1,000 who became affected with this disease in the local centres were much in excess of those who were attacked in Sydney.

The prevalence of this disease locally calls for close attention.

Typhoid fever is one of the maladies which are classed as preventable, since by the absence or removal of those conditions which engender and act as media by which the affection spreads the occurrence of the disease may be obviated.

It is an established fact that the germs of typhoid thrive in a soil polluted by excrement and other filth, and measures which have been effected in order to do away with such insanitary conditions have been followed by a reduction in the prevalence of this particular malady.

The actual means of dissemination is mostly by water and milk, and the increased precautions taken in guarding these liquids from pollution have had the effect in reducing the extent of the disease which is often water and milk borne.

The most important local matters which need consideration in connection with the occurrence of this disease may be briefly stated:—1. How soil becomes polluted so as to encourage the growth of the germs of typhoid. (a) By excremental matters derived from leaky sewers, drains, cesspits, &c.; (b) By household slops. From absence of a drainage system these are disposed of by surface gutterage, or by being thrown on yard areas. (c) Other organic matters, such as are contained in garbage. 2. Soil pollution dangerous, in that it leads to water pollution. This is of special import in those places where underground sources of water supply are made use of, as at Merewether. 3. The disease may be spread by infected dust particles derived from soils polluted with solid or fluid excreta.

Measures which are needed to remedy the conditions which have been mentioned as being favourable to the occurrence of the disease are the following:—(a) Paving of yards in crowded areas to prevent soakage and exhalation, sub-soil drainage to remove dampness. (b) Frequent removal of house refuse, and proper disposal of same. (c) A proper system of drainage to carry off all waste products.

The effect of underground drainage in reducing the prevalence of and death rate from typhoid is shown in the following tables:—

## England and Wales.

Typhoid death rate per 1,000 of the population.

1870... ..	·38
1871-75 ... ..	·37
1880-85 ... ..	·21
1890-97 ... ..	·17

In England underground drainage systems have been in existence for more than fifty years, but during recent times many improvements have been made in regard thereto.

An investigation by the Medical Officer of the Local Government Board into the effect of sanitary works in reducing the death rate of typhoid fever in England and Wales showed that of 25 towns taken into consideration where such works had been carried out, in nine there was a reduction exceeding 50 per cent., and in ten others a reduction between 30 and 50 per cent.

These good effects have been experienced not only by England, but many other instances might be added of Continental cities and others showing similar beneficial results following the provision of sewerage systems. Coming nearer home, we may take the case of the city of Sydney and its suburbs :—

## City of Sydney.

Death rate from Typhoid Fever per 1,000 of the population.

Year.	Death rate per 1,000.
1889	·50
1890	·37
1891	·26
1892	·17
1893	·14
1894	·40
1895	·19
1896	·42
1897	·16
1898	·07

The present sewerage system was instituted in the year 1889.

The reduction in mortality which has followed the laying of sewers has been marked, as the following table shows :—

## Death rate per 1,000.

	Before laying of Sewers.	After laying of Sewers.
Sydney (City)	·50	·24
Glebe	·25	·11
Paddington	·27	·16
Newtown	·66	·38

In conclusion, a consideration of the tables already given discloses the fact that the typhoid fever death rate and attack rate, and the diarrhoeal death rate in the local centres, considerably exceed the rates which obtain in a completely sewerred locality, such as the city of Sydney. As already stated the prevalence of these two diseases is to a large extent influenced by insanitary conditions such as are present in the local centres, and these conditions are such as can be practically done away with in the most effectual way by the institution of a sewerage system.

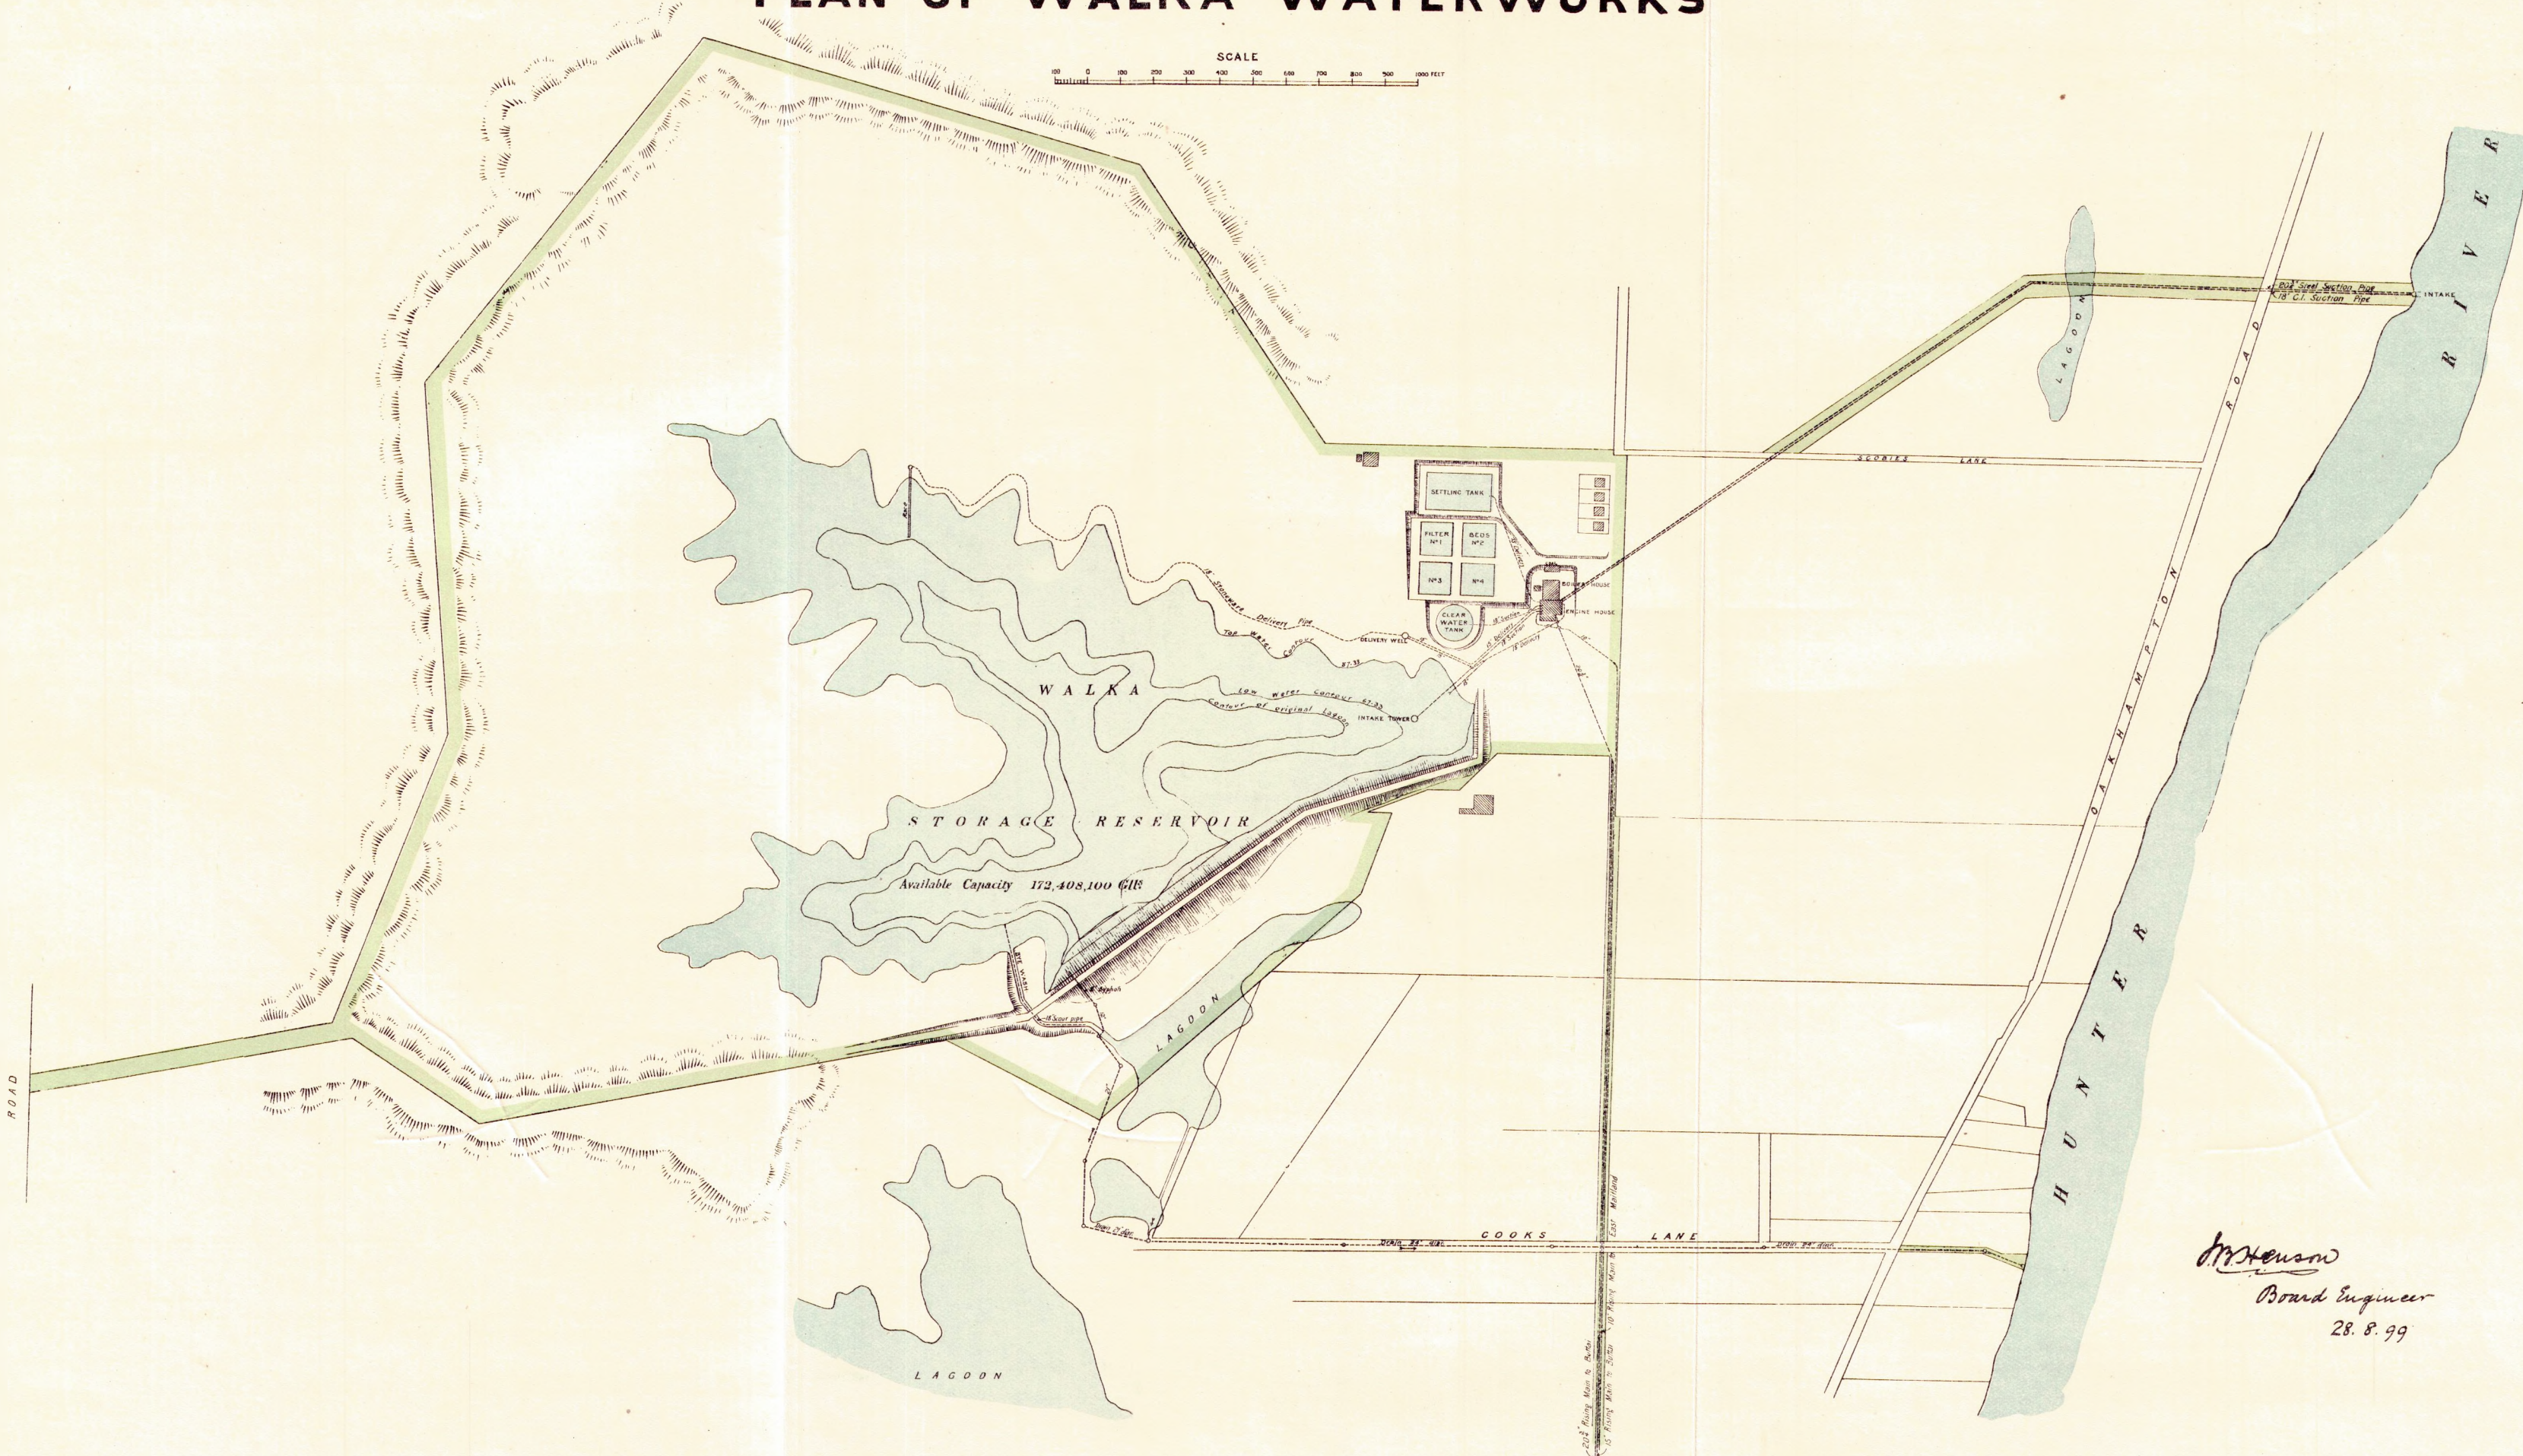

As regards the present systems in use in the different localities, it may be said that in Merewether the methods generally adopted are entirely at variance with sound principles of hygiene. In Hamilton and Wickham, whilst the pail system is a marked step in advance, the question of the disposal of slop waters (which are practically equally as foul as the sewage of a water closeted town) remains to be satisfactorily dealt with. In Newcastle the present mixed system as regards the removal of the contents of pail closets cannot be deemed to be by any means a good one. The patent pails which are connected with the drains are filthy contrivances. The present sewerage system, judging from a limited experience, appears to stand in need of much improvement in important particulars.

Considering the great benefits from a health standpoint which have resulted from the establishment of sewerage systems as judged from the statistics given, it is reasonable to expect that similar benefits will follow the institution of an efficient sewerage system in the localities under review.

## MILITARY FORCES OF THE COLONY.

---

REPORT for the Year ending 30th June, 1899, by Major-General G. A. FRENCH, R.A., C.M.G., Commanding Military Forces.

To The Principal Under Secretary,—

Sir,

I have the honor to submit the following Report on the Forces and Defences of the Colony for the year ending 30th June, 1899, for the information of the Honorable the Minister :—

### PERMANENT FORCES.

(1.) “A” Battery was encamped from 28th September, 1898, to 8th November, 1898, in the National Park, when a complete course of gun practice was carried out with the nine 15-pounder guns, using cordite. Hitherto spasmodic practices could only be carried on owing to the difficulty in obtaining a suitable artillery range; but now that a very suitable one is available I hope that an encampment for gun practice for all the field batteries will be an annual affair. This Battery is in a very efficient state, and I was very pleased at my last inspection to find men, guns, horses, harness, &c., turned out in a most creditable fashion, the barrack-rooms, stables, gun-sheds, &c., being also a credit to the Corps.

### FIRST GARRISON ARTILLERY.

(2.) The formation of this force into three complete Companies works well, and it allows of a regular system of relief being carried out annually.

The physique of 131 recruits passed for these Companies during the past year was particularly good—

Average height ... ..	5 ft. 10 $\frac{1}{4}$ in.
„ chest measurement ... ..	38 $\frac{1}{8}$ in.
„ weight... ..	11 st. 4 $\frac{1}{4}$ lb.

Captain A. H. Sandford and Lieutenant C. W. Lamb returned from England on 18th May, 1899, and 21st February, 1899, respectively, having passed very creditably the examinations in connection with their Courses of Instruction.

(3.) The Annual Local Long Course of Gunnery was carried out from 6th June to 15th December, 1898, and two of the neighbouring colonies were again represented. Bridging and Major-General French's Scheme of Coast Defence were introduced for the first time, in addition to the usual Syllabus of Practices.

(4.) By letter dated 14th July, 1899, and subsequent *Gazette* notice, authority was given by Her Most Gracious Majesty the Queen for the Permanent Artillery of New South Wales being in future styled the “New South Wales Regiment of the Royal Australian Artillery,” an honor which, doubtless, will be fully appreciated by all ranks of the Force.

### SUBMARINE MINERS.

(5.) This Corps carried out, practically, laying of mines from 31st March, 1899, to 15th April, 1899.

The old submarine mining steamer, which was little suited for the work of laying mines, was given over to the Public Works Department (Harbours and Rivers Branch), and a regular submarine mining steamer of up-to-date pattern has been ordered, and should be delivered next year. This will add greatly to the efficiency of this branch; it will also be of much use to the Garrison Artillery for towing targets at a fast rate for gun practice.

These small, disjointed sections are at a great disadvantage at the present time. Federation should make a great improvement in them.

PARTIALLY-PAID

## PARTIALLY-PAID FORCES.

## MOUNTED FORCES.

(6.) The Lancers are still well to the front. They have been re-armed with the Martini-Enfield carbine.

Three Officers and 102 Non-Commissioned Officers and men proceeded to England in s.s. "Nineveh," and have been undergoing hard practical training with the Cavalry at Aldershot.

This party was received most cordially by the Civil and Military Authorities in England, and had quite an ovation from the London populace on landing. To those philosophers who despise sentiment the above may seem nothing, but those interested in the defences of the whole Empire will value anything which promotes good feeling between the Mother Country and the Colonies.

(7.) I have reason to believe that 100 of the Infantry will next year follow the good example set by the Mounted Rifles and the Lancers, and I should hope that the public of New South Wales will fully understand that these men go for right down hard work, accept the small rates of pay received by the Regular Forces, and also have to pay a portion of their passage money themselves. Further, that the rest of the expense is provided by a few citizens, whose patriotism should be more appreciated. I would especially mention Lieutenant-Colonel J. Burns, through whose exertions the Lancer scheme was carried through and made a practical success.

I may mention that the Imperial Government have given a Commission in the Imperial Cavalry to Lieutenant William John Scott Rundle, of the detachment of Lancers sent to England.

(8.) The Mounted Rifles hold their own as a Corps well suited to this country. A large percentage (96.4) were present in Camp for the full time. They have been re-armed with the .303 Martini-Enfield rifle, as they preferred it to the Magazine rifle.

(9.) The 1st Australian Horse progress steadily, and are growing in numbers; the only check to further growth is the want of funds. Although a Volunteer Corps, the expenses in connection with it are very great, mainly in consequence of heavy charges for transport of men and horses to Camp, and to the small concentrations of Squadrons for united drill made by the Railway Department.

These small Camps form very valuable training for horses and men, and the expenses in connection with them, so far as camping grounds, forage, rations, &c., are borne by private individuals, to whom I should like to be allowed to express my thanks publicly for their highly patriotic action.

Uniform and personal equipment for this Regiment was obtained in a rather hurried, and consequently extravagant, fashion, and on borrowed money. The amount of correspondence that this has involved with the Commanding Officer pressing the wants of the Corps on one side, and the Auditor-General and the "spot-cash" system on the other, can be more readily imagined than described.

## FIELD BATTERIES.

(10.) Four 15-pdr. guns, with cordite ammunition, have been ordered for one of these Batteries. It would seem desirable that the other should have new equipment at an early date, and possibly the 5-inch howitzer may be considered suitable, as there are no weapons of this nature available in Australia.

These Batteries were able to make a short visit to the Artillery Practice Camp, and carried out a little gun practice under supervision of Colonel Smith, R.A., whose report is attached.

We have also enough Government horses now to turn out the guns at least with properly-trained horses, and the improvement is most marked. These horses did nearly all the cartage in connection with the Mobilisation Camps, and when the Camps were struck and stores returned, most of them were turned out to grass, thus saving much expense.

## ENGINEERS.

(11.) Nos. 1 and 2 Field Companies have undergone valuable instruction in bridging during the Easter training, and some good work has been carried out. All ranks evidence considerable interest in their duties, and voluntary parades are well attended.

No. 3 S.M. Company has received more instruction in mine-field work during its annual training, and I am satisfied with the results generally.

No. 4 Electric Company has been increased to provide personnel for the additional electric lights which have been recently completed, and to provide a complete field telegraph section for the Offensive-Defensive Force. The latter section is to a certain extent handicapped for want of the Service pattern carts, but has carried out satisfactory work during the mobilisation and annual training.

#### INFANTRY.

(12.) All the Infantry have been provided with Magazine rifles, and there are sufficient in stock to bring all the corps up to War strength.

The four Regiments attended Camp, almost in full strength.

The provision of Musketry prizes, as asked for last year, has been carried out with the best effects. Every Company now has certain prizes for its own members, and much more interest will be taken in the shooting. The new rifle having little recoil, I feel sure that the general average of the shooting will be brought up from this cause alone.

This branch, by careful attention to their capitation allowance, have considerable funds in hand, and are now applying a portion for the purchase of equipment and stores to enable them to take the field, as well as barrack furniture and gymnasium stores for use in drill-halls. This application of the funds seems highly commendable.

#### VOLUNTEERS.

(13.) This branch is still extending, want of funds being the only drawback.

The Scottish Rifles, consisting of six Companies, now form a distinct Regiment.

The Irish Rifles, with some Companies to be raised in the Illawarra District, forming a new Regiment, the "8th." These two Corps will in time, no doubt, form separate Regiments.

The 6th Regiment had a good muster at Camp, but the 7th a poor one.

(14.) The Railway Volunteer Corps has been disbanded, a matter which I much regret, as they were a splendid lot of men, and a credit to the Service.

This Corps was raised on the suggestion of the late Mr. Eddy; every facility was given to them to carry out their drills at times suitable to themselves; they had not to attend Camp; but latterly they got the notion into their heads that the superior officials of the Railway Department were opposed to them, and one after the other the officers resigned, and the men followed suit.

It is difficult to believe that the superior officials of the Railway Department should be opposed to a Corps of this nature, whose main duty would be the protection of railway property and weak points in the railway system. Thus it was the special duty of these two Companies to protect the Hawkesbury Bridge, and naturally they would work more in harmony with the railway officials than chance Companies detached from any Regiment; but the latter is the system that must now be reverted to.

Owing to the collapse of this Corps, the above bridge was left quite undefended when practising our Mobilisation Scheme last April, the other Corps having taken up the positions assigned to them in the Defence Scheme.

#### CAMPS.

(15.) The Annual Encampment in April last was arranged so that for the first four days all Corps should take up the place assigned them in the Scheme of Defence, and find out in practice the weak spots therein. With this view, the Troops were concentrated at the following points:—

##### I.—SYDNEY FORTRESS.

Commandant—Officer Commanding New South Wales Artillery Forces.

*No. 1, or Port Jackson Section.*—Section Commander—Officer Commanding 2nd Infantry Regiment.

*No. 2, or Botany Bay Section.*—Section Commander—Officer Commanding 5th (Vol.) Infantry Regiment.

*No. 3, or Sydney Fortress Movable Column.*—Officer Commanding—Officer Commanding purely Volunteer Regiments and Corps.

##### II.—NEWCASTLE DEFENCES.

Commandant—Officer Commanding 4th Infantry Regiment.

III.

## III.—WOLLONGONG DEFENCES.

Commandant—Officer Commanding No. 6 Company, 2nd Garrison Division Artillery.

## IV.—THE FIELD FORCE.

General Officer Commanding and Staff.

## V.—RICHMOND AND CLARENCE RIVERS.

Officer Commanding—Officer Commanding No. 4 Squadron, New South Wales Lancers.

(16.) The various units comprising the several divisions of the Defence may be congratulated upon the manner in which they grasped the duties allotted them. This is the more satisfactory, seeing it is the first occasion upon which mobilisation at the various essential points has been attempted; a novel experience, which has been productive of much good, and a practical example to all ranks. Weak points, which it has been the very object of the mobilisation to discover, have been undoubtedly ascertained, but that they were not sufficient to dislocate the system is a matter on which all may be congratulated.

(17.) It is to be regretted that apparently the system applicable to the local Military Forces has not been adopted by the local Naval Forces, for which it seems that continuous training is supposed to be impossible; and it cannot be considered at all satisfactory that the guns which ought to have been manned by the Naval Forces were left unmanned altogether, thus leaving some serious gaps in the Defence.

(18.) The partial mobilisation was commenced on the 31st March and concluded on the 8th April as far as the Partially-paid Forces were concerned.

The purely Volunteer Forces only remained in Camp till 3rd April, with the exception of the 1st Australian Horse, which again this year attended the full period.

What has really been of most value has been the experience gained by the Staff and Departments, which will admit of arrangements being made in the future to avoid what in the past have been unforeseen difficulties.

During the second four days all troops not required elsewhere joined the Field Force at Rookwood.

The following Field Manœuvres were carried out on Easter Monday:—

## GENERAL IDEA.

(19.) The General Idea is that an enemy has arrived, and, having beaten the Field Force, is advancing by Saltpan Creek and is proceeding to Sydney south of Canterbury.

Enemy to be represented by Field Force, Rookwood.

Sydney has at its disposal the Movable Column of the Fortress Defence Force.

The operations are to be confined between Cook's River and Wollie Creek.

The bridge across Cook's River, at Canterbury, is supposed to be blown up.

Time for operations to commence will be communicated in Special Ideas to Officers Commanding respective Forces.

All Forces involved in above to carry dinner rations, cooked.

Ammunition to be carried:—10 rounds blank per rifle and carbine; 15 rounds blank per gun.

O.C., Rookwood Force—Colonel Holborow, C.M.G.

O.C., Sydney Force—Colonel Smith, R.A.

(By order) X.Y.Z.,  
Chief Staff Officer.

Umpires were duly appointed.

## SPECIAL IDEAS.

(20.) To O.C., Sydney Fortress.

Rookwood, Monday, 6 a.m., 3rd April, 1899.

Field Force defeated, retiring by Liverpool Road. It is likely enemy will advance along the Canterbury Trust Road, and make for the crossing, Cook's River, either at Canterbury, or Undercliffe Bridge, or Tempe. Push out with all despatch, under your personal command, your Movable Column, and take up a line of defence from Canterbury southwards. Be in position not later than noon.

(By order) X.Y.Z.,  
Chief Staff Officer.

(21.)

(21.) To Colonel Holborow, C.M.G., Camp, Rookwood.

Rookwood, Monday, 8 a.m., 3rd April, 1899.

Representing an enemy, you have successfully reached Saltpan Creek. Push on at once to attack Sydney, *via* country between Canterbury and Tempe, being prepared for strong opposition.

All troops at Rookwood Camp at your disposal, except Engineers.

(By order) X.Y.Z.,  
Chief Staff Officer.

These Ideas were worked out practically, and fully criticised by General Officer Commanding, as per General Order, dated 4th April, 1899.

#### DRILL-HALLS AND ARMOURIES.

(22.) The Sydney Corps are still at a great disadvantage for want of a central drill-hall. A large sum is available for the erection of a drill-hall and offices, but no site can be obtained in a suitable position. Considering the thousands of men who would find such a place a source of convenience for instruction and as a gymnasium, it would seem as if they have a fair claim for a site on some of the reserves in vicinity of Chancery Square.

(23.) Halls have been erected at Albury, Wagga Wagga, Cooma, Goulburn, Richmond, Kiama, Lambton, and East Maitland, and tenders called for the erection of one at Penrith, during the past year, but are still required at \*Hornsby, Dubbo, \*Singleton, \*Orange, \*Forbes, \*Hunter's Hill, \*North Sydney, and \*Sydney, and urgently at those places marked \*.

#### RIFLE ASSOCIATIONS.

(24.) *Defence Force Rifle Association, Sydney*.—Incorporated under regulations approved by the Government, and published in *Government Gazette* of 16th May, 1899.

The first meeting was held on the 8th and 10th April, 1899.

Nine hundred and forty individuals officers, non-commissioned officers, and men entered for nine competitions.

The Provisional Committee of the Defence Force Rifle Association drew up a programme of events for the first meeting, which were fired on the 8th and 10th April, 1899.

Notwithstanding that the programme was issued less than a month prior to the dates fixed for the matches to take place, it is most gratifying to report that the Defence Forces and Civilian Rifle Clubs took advantage of the opportunity to an extent quite beyond which might have been expected.

It may reasonably be concluded that if longer notice had been given, which would have afforded better opportunity for previous practice, the number of competitors would have been much greater; nevertheless, the number of entries clearly indicate the keen interest taken in this class of shooting by the members of the Defence Force generally.

Undoubtedly the success of the Association has been assured by the enthusiasm displayed by all ranks, and as it has now been incorporated under regulations approved by the Government and published in the *Government Gazette*, all future meetings will be governed by these rules, and the Council will be in a position to issue its programme at an early date for the meeting to be held after the forthcoming Encampment.

The difficulties involved in controlling the work in connection with such a very large meeting, taking into consideration that the executive officers were all new to the work, were surmounted by the keenness and energy displayed by all concerned—in fact, it was due to an excess of zeal on the part of these officers that not one single complaint was preferred or protest lodged in connection with the meeting—a very interesting feature, which speaks for itself as to the general management and control of affairs.

The financial success of the meeting may be gauged by the fact that the Committee found itself in a position, after the meeting had commenced, to offer an amount of £90 for additional prizes.

The

The several competitions were conducted in accordance with the published programme, and the following is a list of the matches, with number of entries :—

- “The Duff.” Mounted Section Attack.—16 teams, representing 64 N.C.O.’s and men.
- “The Coomassie.” Infantry Attack Practice.—50 teams, representing 450 N.C.O.’s and men.
- “The Beginners.” Deliberate Individual Fire.—285 entries.
- “The French.” Deliberate Individual Fire.—540 entries.
- “The Roberts.” Rapid-firing.—547 entries.
- “The Scouts.” Individual Rapid-firing.—431 entries.
- “The Ulundi.” Rapid Volleys.—40 teams, representing 360 officers, N.C.O.’s, and men.
- “The Carbine.” Individual Fire.—67 entries.
- “The Continuous.”—937 entries.

In the rapid-firing matches the Magazines were not permitted to be used, as all competitors were not armed with the Magazine rifle.

(25.) *National Rifle Association of N.S. Wales, Sydney*, is governed by regulations passed by members of the Association.

This Association still does little to forward shooting on Service conditions. The following remarks of the Colonial Defence Committee should have weight :—

#### RIFLE ASSOCIATIONS.

The Colonial Defence Committee desire to indorse very strongly the remarks of the Commandant on the subject of expenditure on Rifle Associations. The view held by the Commandant is identical with that taken by the War Office, where relations with similar bodies at Home are at the present moment under the consideration of the Secretary of State.

Individual firing at fixed targets, with known ranges, is a stepping-stone towards the attainment of efficiency by a soldier; but it is only one of many stepping-stones, and it cannot be too clearly understood that such practice, unaccompanied by other military training, is of no real value, and adds nothing to the defensive power of the State in time of emergency. Rifle Associations, therefore, which lack military organisation, and encourage individual target-practice as an end, rather than as a means to an end, should not be subsidised. Money devoted to prizes under such conditions should not be deemed, in any sense, part of the military expenditure incurred by the State as an insurance against the risks of war.

On the other hand, the same money devoted to the encouragement of musketry under Service conditions in the organised military forces of the State is a most valuable form of military expenditure, and adds materially to the efficiency of those forces.

In these circumstances, the Colonial Defence Committee are entirely at a loss to understand the principle upon which the Government of New South Wales extend a large measure of support to Civilian Rifle Associations, while their infantry forces are denied the incentive of musketry prizes\* in the very inadequate annual course of musketry which they undergo.

(26.) *Rifle Associations that have adopted Government terms :—*

- Defence Force Rifle Association,
- Southern Rifle Association,
- South Coast Rifle Association.

#### WARLIKE STORES.

(27.) I pointed out last year the very unsatisfactory manner in which our requisitions on the Imperial Authorities for the most necessary warlike stores are treated, and the loss of time that accrues. We have had a fresh experience during the past year.

(28.) Mr. Chamberlain (who, according to my experience, has done more for Colonial Defence Forces than all his predecessors in office) arranged that these Colonies should exchange their Martini-Henry rifles for ‘303 rifles, and thus have weapons taking the same ammunition as the Imperial troops. With this view, the Colonies were invited to send to England for conversion a proportionate number of Martini-Henry rifles, for which the sum of 10s. each was to be allowed.

Acting on above, 2,000 arms were sent from this Colony, carefully packed in cases, with the result that 1,734 were condemned as unfit for conversion by War Office officials, and we were politely asked if we wished them to be “broken up.”

Some 4,000 arms sent from other Australian Colonies for conversion were every one condemned. This resulted in a strong protest from each Colony concerned, and I am glad to say that by recent reports New South Wales is now credited with 1,541 serviceable arms out of the 2,000 sent. (29.)

\* This has been approved since.

(29.) From the above, it will be observed that the sound intention of the Secretary of State for the Colonies was, in the first instance, entirely frustrated by the officials of the Department which one would naturally expect to be most interested in questions of defence, but a long Colonial experience has forced on me the conclusion that there is no Central Authority responsible for the defences of the extremities of the Empire; if there was, such a *fiasco* as the above could not have occurred, and if this is the result in times of peace, it is serious to think of what might be the result in time of war when distant Colonies were clamouring for the warlike stores so necessary for their protection.

#### “BRASSEY” COMPETITION (VICTORIA).

(30.) In response to the invitation of the Victorian Government, Major J. H. A. Lee, Commanding Submarine Miners, and Captain J. G. Legge, Adjutant, 2nd Infantry Regiment, proceeded to Melbourne for the purpose of witnessing the “Brassey” Competition carried out at Kyneton on 24th May, 1899.

This competition is a combined exercise in marching, field-firing, and camp-pitching. The winning team receives a trophy, value £25, presented by His Excellency the Governor, a silver medal to each member of the team, and £100 cash. The second team receives £25.

Valuable reports were furnished by the abovementioned officers, and Captain Legge, in concluding his, states: “Comparing the match with our own ‘Coomassie,’ I consider that the objectives in the ‘Brassey’ were easier to hit, and that their average, less than 10 per cent., bears no comparison with the 30 per cent. attained in April last at Randwick.”

#### EXCHANGE OF TROOPS.

(31.) The proposal made by Mr. Chamberlain for an exchange of duties between a Company of the Royal Artillery and one of N.S. Wales Artillery was approved in this Colony, and in due course should take place at an early date. This should have a very beneficial result, and, as far as I can see, the benefits will be for the most part on our side.

It is to be hoped that later on a similar change of Field Batteries will take place. The principle seems to be a sound one, and should do much in drawing together the Defence Forces of the Empire.

I have the honor to be,

Sir,

Your obedient Servant,

G. A. FRENCH,  
Major-General.

## APPENDIX A.

From Colonel S. C. U. Smith, R.A., commanding Artillery, to The Assistant Adjutant-General.

Sir,

Artillery Staff Office, Victoria Barracks, 26 June, 1899.

I have the honor to forward a report on my command for the past twelve months.

## BRIGADE DIVISION FIELD ARTILLERY.

## "A" Battery.

(1.) A much-needed increase in personnel has been sanctioned during the last few months, and this <sup>Men.</sup> Battery is now being organised as a 6-gun Battery in lieu of a 4-gun.

The present establishment is 108 of all ranks, which, though very low for a 6-gun Battery, is a decided step in the right direction.

(2.) The establishment of horses has again been slightly increased, and at the present moment stands <sup>Horses.</sup> at ninety-seven. This is the outcome of a proposal made in my report for 1897, and has been a complete success as far as it has gone. The saving to Government, both in transport expenses and in "hire of horses" has not only justified the line adopted, but clearly demonstrates the absurdity of previous arrangements. The work done by the horses of "A" Battery prior to, during, and subsequent to, the Easter Encampment of 1898 saved £1,000 and in 1899 £600, which sums would otherwise have been claimed by contractors.

In addition to the above saving of money, there is the increased efficiency which I trust would in itself have been considered a sufficient return. I was enabled at the last Encampment, for the first time on record, to turn out the three Field Batteries each with four guns fully horsed; the advantage, although apparent to anyone, can be best appreciated by those who have had experience with the animals utilised on the "Hire system" (at enormous expense). Hiring still has to take place for horses for the Army Medical Corps and Engineers, which means that saving is still to be made by a further increase of permanent horses.

(3.) A Battery of four 15-pr. B.-L. guns and equipment are under order from the Home <sup>Armament.</sup> Government. These will be similar to the six guns now forming the armament of "A" Battery, except that the latest improvement for checking the recoil, advocated by Sir George Clarke and adopted by the Imperial Government, is being added to the carriages. The device referred to largely reduces the recoil of the guns, thus enabling greater rapidity of fire and less labour to the detachment, and consequently giving largely increased efficiency.

Application has been forwarded for working drawings to enable me to alter the six in my possession so as to be up-to-date.

(4.) For the first time on record in the Colony I was able to form a satisfactory Field Artillery <sup>Annual camp.</sup> Camp. This desirable object was obtained largely by the courtesy of the Trustees of the National Park, who allowed the Camp to be held on their ground. "A" Battery were in Camp from the middle of September to the end of October, and gained more useful experience than they had had a chance of doing before. Ranges up to 4,000 yards and over were easily obtainable, giving every variety of background. Targets could be placed so as to make observations of fire easy, moderate, or difficult. The country throughout was feasible for movement, requiring in many places much vigilance on the part of Nos. 1 and Drivers, and gave good practice to ground scouts.

It is proposed to repeat this Camp annually, there being no extra expense to Government involved.

## "B" and "C" Batteries.

(5.) An addition of three half-day parades during the year was a welcome addition, and was much appreciated.

Both Batteries were able to make a short visit to the Field Artillery Camp and carry out a little practice.

My remarks last year, referring to these Batteries in connection with the Easter Encampment, I desire to emphasise, and now recommend that in future these Batteries be only in Camp for the four days which constitute the Easter holidays, and that an effort be made to induce them to attend the Field Artillery Camp at National Park for an appreciable period, of certainly not less than four consecutive days, and more if possible. It is impossible at the Easter Encampment, where everyone is fully employed, to exert the necessary supervision over these Batteries, with the result that little, if anything, is learnt in the sixteen half-days which are appropriated at this period. My recommendation that one permanent Driver should be attached to each subdivision of these Batteries has been carried out with beneficial results.

The riding and driving in these Batteries still leaves very much to be desired, and the Driving Drills on a fairly level Parade Field do not tend to improve these points. A good burst across country at National Park, both with and without guns, would soon shake the men into, or out of, their saddles, thus impressing them respectively with the fact of their ability or inability to make good Field Artillery Drivers.

The Officers also require more experience of this sort of work, as although many of them know their drill, they have little idea of leading their Batteries in a practical way across country.

## 1st GARRISON DIVISION.

## Permanent Artillery.

(6.) The only alteration in personnel during the past year has been the addition of fifteen boys. <sup>Personnel.</sup> Preference has been given to the sons of old soldiers of the Regiment, provided they come up to the physical standard. As soon as these boys pass their marching drills they will be instructed as either trumpeters, bandmen, clerks, or artificers, in accordance with any aptitude they may evidence.

- Company courses. (7.) The regular Company Courses instituted last year have been a success, and each Company Commander now gets his Company together for a month without interference. Each Company Course concludes with a searching inspection, both practical and theoretical.
- "Crying down credit." (8.) A proclamation "crying down credit" has been issued on my last year's recommendation, and will have a very good effect in stopping an obnoxious system which existed, of tailors touting for custom in Barracks. I have made it clear to the men under my command that this proclamation is not meant to assist the men to repudiate just debts, a view of the matter they were rather inclined to take.
- Long course. (9.) The usual Long Course lasting six and a half months was held, at which representatives of Victoria and Queensland were present. For some reasons or other, jealousy being doubtless one, no representatives from the other Colonies have accepted our invitation this year; however, it is their own loss.
- Officers in England. (10.) The following Officers and N.-C. Officers who were in England at the date of my last Annual Report have rejoined the Regiment:—Captain Sandford, Lieutenant Lamb, Sergeant-Major Molyneaux. Captain Sandford went through the Long Course of Gunnery at Shoeburyness in 1897, the other two in 1898. Captain Sandford then went through the Firemaster's Course in 1898. All three were well reported on by the Home authorities—Captain Sandford exceptionally so—and they may all be said to have done the Regiment great credit.
- Plain clothes. (11.) I was obliged, as reported last year, to place some restrictions on the wearing of plain clothes. This was rendered necessary by the large numbers of unpaid tailors' bills which were forwarded to me for collection. No man under two years' service is now eligible for the privilege. This has caused some unrest in the Regiment during the year; this I fear the curtailment of any privilege is likely to do.
- Small arms. (12.) This branch of the Force will be rearmed with the Martini-Enfield at the end of the present month, in lieu of the Martini-Henry.
- Camp. (13.) The Permanent Garrison Artillery took part in the Mobilisation Camp at Easter, and took up the actual duties they would be called on to perform on the outbreak of hostilities.

## 2ND GARRISON DIVISION.

*Partially-paid.*

(14.) An addition of three half-day parades during the past year was a concession much appreciated, and the good effect was distinctly noticeable both in the result of the competitive practice as also in the marching of the two Town Companies at the Queen's Birthday Review.

As far as the competitive practice is concerned, the advance was more noticeable in the improved fire discipline and smartness in carrying out the drills than actually in the result as regards hits on the target. However, one Company, Major MacCabe's, from Wollongong, made five direct hits on a record target out of sixteen shots, and thereby acquired a second-class prize. No. 3 Company (Major Wigram) got a third-class prize with three hits. The general result of the shooting was better than these facts would lead one to believe.

Camp. (15.) This year the 2nd Garrison Division were in Camp at Easter during the same period as the other troops, and the Camp, being a mobilisation one, the two outlying Companies did not come to Sydney, but took the positions allotted to them at Wollongong and Newcastle respectively. From all centres good reports were received of the work done by the men.

I append a few remarks on the Forts and Armament (confidential).

I have, &c.,

S. C. SMITH,  
Colonel, Commanding Artillery.

[Confidential.]

## FORTS, ARMAMENT, &amp;c.

The principal points now receiving attention in connection with the Defences are:—

1. The introduction of General French's scheme for fighting forts, as an alternative system.
2. The construction of a battery at South Head to take three 6-in. Q.-F. guns.
3. The provision from England of three 6-in. B.-L. guns converted to Q.-F. mountings and automatic sights of latest pattern.
4. The placing of three 6-pr. Q.-F. in the Casemate at George's Head on embrasure mountings.
5. Improvement of breech gear and loading arrangements of the 25-ton guns at Middle Head.  
As far as the trials in this line have gone they have proved successful, and will probably be adopted.
6. The provision from England of four 15-pr. B.-L. guns and carriages with the latest device for checking recoil.
7. The alteration of existing 15-pr. carriages locally.

Points which will require attention in the near future:—

1. Removal of all 80-prs. from Defences and substitution of Q.-F's. for mine-field protection.
2. Defence of entrance to the Harbours.
3. Defence of Mount Kembla.

All guns are in good working order, and when existing indents have been complied with the ammunition will be complete.

The mobilisation stores in my charge are complete and in good order.

S. C. SMITH,  
Colonel, Commanding Artillery.

APPENDIX

APPENDIX B.  
NEW SOUTH WALES MILITARY FORCES.  
*Report of the School of Musketry.*

1. Five courses of instruction were held at the Rifle Range, Randwick, during the year 1898-1899, one being Class A for officers, two, Class C for Warrant and Non-commissioned Officers, and two, Classes A and C for Officers, Warrant and Non-commissioned Officers.

Courses.	Numbers.		Results of Examination.					
			Officers.			W. and N.-C.O's.		
	Officers.	W. and N.-C.O's.	Class A. Certificate.	Failed.	Total.	Class C. Certificate.	Failed.	Total.
No. 2. Staff, Warrant, and N.-C.O.'s ... Aug. 13, Sep. 12, 1898.	.....	10	.....	.....	.....	7	3	10
No. 3. Staff Officers ..... Sept. 19, Oct. 11, 1898.	3	.....	2	1	3	.....	.....	.....
No. 3. Staff, Warrant, and N.-C.O.'s ... Nov. 19, Dec. 19, 1898.	.....	10	.....	.....	.....	8	2	10
No. 4. Staff Officers, W. and N.-C.O. ... Feb. 4, Mar. 6, 1899.	1	5	1	.....	1	5	.....	5
No. 5. Staff Officers, W. and N.-C.O. ... April 29, May 30, 1899.	1	9	1	.....	1	9	.....	9
Totals .....	5	34	4	1	5	29	5	34

2. The instruction given at the School of Musketry to the Officers and Warrant and Non-commissioned Officers attending the Classes in the theory and practice of Musketry during the year 1898-99, comprised, in addition to the theory of Musketry, thorough grounding in firing exercise drills; also, how to instruct others, and practically to drill and instruct a squad of recruits.

Fire discipline and control of fire.

Range-finding with the Mekometer.

Judging distance by sight and sound.

Complete course of individual range practices with the Lee-Enfield rifle.

Collective firing in all its branches, including long-range volleys at distances of 2,000 yards and upwards, volleys at unknown ranges, &c.

Revolver Practice.

Care of arms and ammunition, and special instruction in the mechanism of the Lee-Enfield and Martini Breech Action rifles and Webley pistol.

Aiming Drill.

Testing rifles and ammunition, and working out the diagrams in connection with same.

Selection and construction of Rifle ranges.

Morris and miniature cartridge tubes.

And instruction in the practical keeping and completion of the various Returns, Registers, &c.

3. The result of the shooting with the Lee-Enfield rifle has proved the superiority of the new weapon, as regards its accuracy, when compared with the Martini-Henry; as a Service weapon, comparison can hardly be made, not a single case of jamb having arisen throughout the year.

4. The following is the result of the shooting:—

*Individual Practices.*

Lee-Enfield Rifle.

	Recruit Course.			M.	Trained Men's.		
	1st C.	2nd C.	3rd C.		1st C.	2nd C.	3rd C.
Officers .....	3	2	.....	.....	3	1	1
W. and N.-C.O.'s .....	30	4	.....	5	23	4	2

*Collective Practices.*

Lee-Enfield Rifle.

	Number of Rounds.	Number of Hits.	Percentage.
Officers .....	600	298	50
W. and N.-C.O.'s .....	4,080	2,494	61

5. Early in the year the new building for the School of Musketry was completed; it is needless to remark on its utility, the work performed by those attending the Classes being far more satisfactory and yielding better results; at the same time the serious inconveniences frequently caused by inclement weather have been entirely avoided.

Headquarters, Sydney, 29th June, 1899.

M. BOAM,  
Major, A.A.A.-General.

#### 4. *Mobilisation.*

The general principles governing the Mobilisation of the Medical Services worked well at the Partial Mobilisation at Easter. Several minor defects were brought to light, and are now remedied. Senior Medical Officers of Districts were well up in their duties, and grasped their responsibilities. With the distribution of the Army Medical Corps into the various Sections of Defence it was apparent that the present establishment of the Partially-paid Corps was strained to meet requirements.

#### 5. *Continuous Training.*

Every advantage was taken to make the training as practical and as near Service conditions as possible, and the nine days' work made a great improvement in all ranks.

Marked attention to detail, which is so essential for an efficient Medical Service, was evident.

#### 6. *Ambulance Transport.*

During the year two Ambulance Waggon have been built. This completes the number required for the Bearer Company attached to the Field Force (War Establishment), viz., ten Ambulance Waggon.

One Ambulance Waggon is yet required for the Newcastle Defences, and another for the Wollongong District, one of which I propose to ask for during the present year, and the second later on.

#### 7. *Medical and Surgical Field Equipment.*

Additions have been made during the present year, and the necessary requisitions have been forwarded to provide for any new service.

The special points to which I would draw attention are—

1. *Regiments and Corps.*—These are now all equipped, in accordance to scale laid down, with Ambulance Stretchers (including stretchers requisitioned for on 14/7/99), Medical Companions, Surgical Haversacks, and Water-bottles, but incomplete in Field Medical Panniers; four pairs are still required for active service conditions.

2. *Sydney Fortress—Half Field Hospital, with Movable Column.*—The necessary Ordnance, Medical, and Surgical Stores, were requisitioned for in 1898, but this requisition was ordered to remain over until this year. It was resubmitted last month.

3. *Newcastle Defences.*—With the supply of stores, already indented for, the Half Field Hospital for this section of Defence will be in order. The Medical and Surgical Equipment for the Forts, Regiments, and Corps of this District of Defence are practically complete.

4. *The Field Force—Field Hospitals.*—With the exception of a few details of medical and surgical Field Equipment, already requisitioned for, the two Field Hospitals (50 beds each) are equipped to scale, and ready for immediate service.

In connection with these Field Hospitals, I would strongly advocate that the E.P. tents be replaced by the light Field Hospital tent ("Tortoise," 20 ft. x 20 ft.), as they are in every way more suitable, and after exhaustive trials they are found superior for Field Hospital uses.

#### 8. *Reserves.*

The Reserve system, as regards training, is now in good working order. The men are well drilled, zealous, and not afraid of work. Eighty-one Reservists were "efficient" on 30th June, 1899. At Newcastle over 20 Reservists attended Camp, many of them for the nine days. The "Khaki drill uniform" with which they are supplied answers all purposes, and with an extra suit and greatcoat they could take the field.

I have submitted a proposal to arrange these Reservists in Companies; at present they do not form any unit, nor are they under any individual control. This suggestion would not entail any expense, and would greatly add to the well-being and efficiency of the Reserve system.

#### 9. *Army Nursing Service Reserve.*

The enrolment has been carried out, and the establishment of 1 Lady Superintendent of Nurses, 1 Superintendent, and 24 Nursing Sisters. There were over 70 applicants. Those selected possess the highest nursing qualifications and training, and are drawn from the past and present staffs of Prince Alfred, the Sydney, St. Vincent's, Children's, and Coast Hospitals.

Lectures will commence for this branch of the Service in September next.

#### 10. *Sanitation.*

(a) *General.*—With the exception of measles, there has not been any outbreak of an epidemic, and the general health of the Garrison during the year has been satisfactory.

(b) *Drainage.*—Every attention has been given to keep this service in a sanitary condition.

(c) *Water Supply.*—All barracks and quarters, with the exception of Wollongong, are now supplied from city services.

(d) *Victoria Barracks—Men's Quarters.*—Since 1841, nearly 60 years ago, the date of building of the Barracks, practically nothing has been done to bring the quarters up to modern ideas of what the accommodation for a soldier really should be. In barrack buildings of a similar age in the Imperial Service (where such still exist), great improvements have been effected by "Sanitary annexes," dining-rooms, &c.

The addition of a wide verandah and balcony on the southern side of main barrack building (western wing), with "Sanitary annexes," would add considerably to the general health and comfort of the men, as at present one room and a strip of balcony has to suffice for sleeping, meals, cleaning arms, &c., and airing bedding. I would most strongly urge that some provision be now made for improved accommodation. I believe that our Engineer Department have plans of these Sanitary annexes as adapted to Imperial barrack buildings.

(e) *Swimming-baths.*—With the natural advantages at South Head, Middle Head, Chowder, and Bare Island, the construction of fair-sized swimming-baths would be an easy matter, and the general good which would obtain therefrom needs no comment. I would recommend this for favourable consideration.

11. *Capitation Fund, A.M.C. (P.P.).*

In order to provide the full dress uniform for the Corps the fund has been found temporarily inadequate, but by the end of present financial year it will be out of debt, and with sufficient funds to carry on the clothing as same becomes due. With the exception of fifteen N.C.O. and men all are duly provided with full dress, and special authority is now asked to complete in this direction, as by a ruling of the G.O.C., of 14/7/99, I was informed through the M.C.C. Board that no further accounts were at present to be passed for the Corps.

12. *Conclusion.*

Not only in personnel and training, but also in ambulance field equipment and transport, I consider that the general efficiency of the Medical Services show a distinct advance on previous years, and in the event of any federation of Services a prominent position will be assured.

I have, &c.,  
W. D. C. WILLIAMS, Colonel, P.M.O.,  
Commanding N.S.W. Medical Services.

## APPENDIX A.

1898-99.

*Acute Specific.*—Influenza, 19; Measles, 79; Fever and ague, 1. Total, 99.  
*Alimentary Canal.*—Colic, 7; Constipation, 1; Diarrhoea, 10; Dyspepsia, 2. Total, 20.  
*Injuries.*—Pott's fracture, 1; Fracture of phalanges, 1; Dislocation of shoulder, 2; Sprain of shoulder, 4; Sprain of hip, 1; Sprain of wrist, 5; Sprain of back, 8; Sprain of knee, 14; Sprain of ankle, 11; Sprain of instep, 1; Minor injuries, 22. Total, 70.  
*Nervous System.*—Neuralgia, 5; Sciatica, 6; Fits, 1; Cardiac stenosis, 1; Tabes dorsalis, 1; Effects of sun, 6; Hyperæsthesia, 1; Lumbago, 1. Total, 22.  
*Eye, Ear, and Skin.*—Catarrhal ophthalmia, 3; Deafness, 1; Boils, 12; Abscess, 10; Herpes zoster, 1; Ulcers, 3; Corns, 4; Sebaceous cyst, 1; Whitlow, 1; Eczema, 1; Ringworm, 1; Minor sores, 29. Total, 67.  
*Respiratory Organs.*—Catarrh, 24; Pharyngitis, 2; Tonsillitis, 18; Asthma, 2; Whooping cough, 1; Pleurisy, 1. Total, 48.  
*Genito-Urinary.*—Gonorrhœa, 52; Gleet, 8; Orchitis, 10; Chancre (soft), 3; Syphilis, 7; Urethritis, 2; Gumma, 2. Total, 84.  
*General Diseases.*—Debility, 2; Rheumatism, 15; Enlarged glands, 3; Piles, 1; Intemperance, 6; Inguinal hernia, 3; Periostitis, 1; Fistula, 1; Myxœdema, 1; Nil, 2. Total, 35.  
Grand total, 445.

W. D. C. WILLIAMS, Colonel, P.M.O.

NEW SOUTH WALES.

---

**MILITARY.**

(COST OF CAMPS HELD BY THE 1ST AUSTRALIAN HORSE.)

---

*Printed under No. 12 Report from Printing Committee, 30 November, 1899.*

[*Laid upon the Table of this House in accordance with promise made in answer to Question No. 3 of 19 October, 1899.*]

---

Question.

- (3.) Cost of Camps held by the 1st Australian Horse.—Mr. Wright asked the Colonial Secretary,—  
What has been the total cost to the Government of the various local camps held by the 1st Australian Horse during the past twelve months?

Answer.

Mr. See answered,—This information will be prepared and laid upon the Table of the House early next week.

---

FOUR District Camps of the Australian Horse were held during the last financial year ended 30th June, 1899, at Mudgee, Cootamundra, Gunnedah, and Bungendore, at a cost of £277 2s. 9d., being railway charges for camp equipment, transit of men, and horses of outlying troops.

All the other expenses, viz., forage for horses, rations for the men and transport by road to and from the nearest railway station, were defrayed by the officers and residents of the districts concerned.

Travelling expenses of the General and Permanent Staff, amounting to £101 15s., were also incurred for annual inspection of the troops in question, which would have been necessary according to the regulations, apart from these camps.

**MILITARY.**

(LETTER FROM LIEUT.-COLONEL BURNS, OFFICER COMMANDING NEW SOUTH WALES LANCER REGIMENT, REPLYING TO REMARKS MADE IN PARLIAMENT ON FRIDAY MORNING, 17<sup>TH</sup> NOVEMBER, 1899.)

*Printed under No. 11 Report from Printing Committee, 23 November, 1899.*

The Officer Commanding New South Wales Lancer Regiment to The Chief Secretary  
of New South Wales.

*Subject :—Remarks in Parliament on 17 November, 1899.*

Dear Sir,

Head-quarters, Parramatta, 20 November, 1899.

Regarding the remarks made by some Members of the House on Friday morning last, I have carefully read the reports of same, and find that the utterances imputed to me by Members differ considerably from the actual published interviews which appeared in the Press.

If I may have said anything which has wounded the feelings of any Member I regret it, as my only desire was to defend my comrades from attack; and I think you will acknowledge that any officer abandoning those under his charge, during any period of trial, could hardly be considered worthy to hold his Commission.

Yours truly,

JAMES BURNS, Lieut.-Colonel,

Commanding N.S.W. Lancer Regiment.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## NEW SOUTH WALES NATIONAL GUARD.

(PARTICULARS RESPECTING.)

*Printed under No. 15 Report from Printing Committee, 21 December, 1899.**[Laid upon the Table of this House in accordance with promise made in answer to Question No. 2 of 12 December, 1899.]*

## Question.

- (2.) Captain Sir George Dibbs, New South Wales National Guard:—Mr. Sleath asked the Colonial Secretary,—
- (1.) Has Sir George Dibbs, the Commanding Officer of the New South Wales National Guard, passed his examination as Captain, in accordance with the Rules and Regulations of the New South Wales Volunteer Forces; and has he been gazetted in General Orders?
  - (2.) Has he qualified himself each or any year as an efficient, since the formation of the National Guard, by attending the necessary number of night and day parades, in accordance with the Volunteer Regulations?
  - (3.) Has he passed through the usual and necessary course of musketry instruction and class-firing to qualify himself as an efficient during the past three years?
  - (4.) Has he been returned as an efficient Volunteer for each of the past three years in the Official Parade States of the National Guard sent to the Military authorities at head-quarters, Victoria Barracks?
  - (5.) Have efficiency capitation allowances been drawn by the officials of the National Guard for Captain Sir George Dibbs during each or any one of the past financial years since the formation of the corps?
  - (6.) What was the sufficiency of the cause for the discharge of Corporal Stephen J. Byrne from the New South Wales National Guard by the Commanding Officer, Captain Sir George Dibbs?
  - (7.) What Military crime or offence did Corporal S. J. Byrne commit to cause his discharge, and where was he discharged?
  - (8.) Why has Corporal S. J. Byrne's discharge not been published in General Orders?
  - (9.) Why have Corporal S. J. Byrne's arms, clothing, accoutrements, &c., not been called in to their Military stores by the officials of the National Guard?

## Answer.

Mr. See answered,—This information is being prepared, and will be laid upon the Table as soon as possible.

The following answers have been furnished by the Major-General Commanding the Military Forces:—

- (1.) In special cases examinations may be waived. I consider this a special case. Yes, he has been gazetted in General Orders.
- (2 and 4.) He has attended parades whenever health permitted, but he acts continually in the interests of the National Guard.
- (3.) Attendance is optional.
- (5.) No.
- (6 and 7.) His Commanding Officer states his conduct was subversive of discipline, of which he is empowered by the Act to judge. He was discharged at Sydney.
- (8.) No request to this effect has been received from the Commanding Officer.
- (9.) It is reported that action in this direction is being taken.

1899.  
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## FISHERIES OF THE COLONY.

(REPORT OF COMMISSIONERS OF FISHERIES FOR YEAR 1898.)

*Printed under No. 12 Report from Printing Committee, 30 November, 1899.*

The Honorable The Chief Secretary,—

Department of Fisheries,  
Sydney, 1 September, 1899.

Sir,

We have the honor to submit our Annual Report on the Fisheries and Oyster Fisheries of the Colony for 1898.

It is with deep regret that the Commissioners announce the death of Mr. J. R. Hill, after an association of over thirteen years. Mr. Hill took a great interest in the fisheries, and rendered valuable assistance in the administration of the Commission, and the Commissioners wish to place on record their high appreciation of his services.

The appointment of the Honorable J. H. Want, M.L.C., on the 1st September, to the vacancy thus caused has given satisfaction to all who have the interests of the fishing industry at heart. In other respects the constitution of the Board is unchanged.

### Finance.

Mainly owing to the increased demand for oyster-culture leases the revenue for the year has increased beyond the Commissioners' most sanguine expectations, and it affords them much satisfaction in reporting that the receipts from all sources amounted to £3,713 10s. 1d., which is a substantial increase of £732 15s. 9d. on the amount received during 1897.

197 new leases were issued, which is greatly in excess of those granted for several years.

877 fishermen's licenses and 410 fishing-boat licenses were issued, the majority of which were taken out before the end of the half-year, and to this fact is to be accounted an increase of £55 on the previous year's return.

The fact that considerably more licenses for men and boats were issued during the first part of the year is a strong indication that the Inspectors have been in evidence with those who follow the occupation of fishermen.

On account of the small staff at the disposal of the Commissioners the Inspectors have not been able to effectually prohibit breaches of the Act, although they have not been numerous. The amount realised from fines and sale of forfeited nets totalled £169 14s.

A detailed statement of the receipts for the year is appended in Schedule A.

### Official Staff.

Owing to the increase of the work of the Department, it was found necessary to obtain extra clerical assistance to keep the work current, and on the 23rd September Mr. R. L. Taylor was appointed as a probationary clerk.

Provision was made on the Estimates for the appointment of an additional Inspector to supervise the waters of Port Stephens and the Hunter River, and it is the intention of the Commissioners to take steps to secure the services of a practical man to undertake the duties of this position.

\*192—A

735 copies—Approximate Cost of Printing (labour and material), £41 18s. 6d.

Senior-constable

Senior-constable Maude was appointed, with the concurrence of the Inspector-General of Police, as an assistant Inspector for Lake George, as it was represented that a close supervision over those waters was necessary.

Mr. William Jones having resigned his position as caretaker at the Prospect Hatchery, Mr. James Jones was appointed to succeed him from the 1st October.

### Fisheries.

The supply of fish to the several fish markets has been considerably in excess of the quantity supplied during the previous year, and the following list shows the returns consigned from different waters:—

Botany and George's River ...	14,235	Macleay River ... ..	657
Clarence River ... ..	13,588	Richmond River ... ..	630
Lake Macquarie ... ..	12,470	Port Hacking ... ..	538
Hawkesbury River ... ..	9,377	Bermagui River ... ..	533
Tuggerah Lakes ... ..	6,259	Camden Haven ... ..	500
Lake Illawarra ... ..	5,936	St. George's Basin ... ..	420
Port Jackson ... ..	5,016	Terrigal ... ..	273
Cape Hawke ... ..	3,247	Hunter River ... ..	98
Manning River ... ..	3,144	Moruya ... ..	97
Shoalhaven River ... ..	3,057	Wagonga River ... ..	58
Port Stephens ... ..	2,831	Narrabeen ... ..	52
Ulladulla ... ..	1,879	Twofold Bay ... ..	37
Brisbane Water ... ..	1,866	Jervis Bay ... ..	26
Hastings River ... ..	1,426	Kiama ... ..	13
Bateman's Bay ... ..	711	Nambucca River ... ..	6

As far as possible, reliable information has been obtained regarding the operation and volume of business transacted at the various fish markets in Sydney, and interesting returns are given in the Appendices of the quantity of fish disposed of at each market, and the range of prices obtained for each class of fish.

The greatest business is done at the Eastern Market, which possesses a refrigerating chamber, in which the fish are stored on arrival in Sydney, and removed for the early morning sales. It is a drawback to the Redfern Markets that they are not fitted with cooling chambers, but the majority of fish retailed at these markets are stored on their arrival in cooling chambers at Pyrmont, and removed for the daily sales.

While on this subject, it may be pointed out that reform is greatly required in the mode of treatment of fish from the time of capture to its disposal by auction. With very few exceptions, fish are bundled haphazard into baskets and boxes upon capture, exposed to the sun for hours, and when they reach the markets their condition is very inferior, and, naturally, their value much affected. To avert this objectionable method, the Commissioners would suggest that the fishermen, in their own interest, should gut all fish when caught, pack them in cases composed of wire trays at intervals to prevent undue pressure, and charge the cases with ice, care being taken that the dissolved water does not come into contact with the fish. This will effect the necessary reduction of temperature throughout the entire contents of the box, and fish packed and carried in this manner should be sweet and firm, and would realise much better prices than those obtained under the present conditions.

Shoals of fish have been seen in various waters, and have occasionally disappeared without any apparent reason to account for their doing so. As there are good and bad fishing years in the waters, as well as good and bad harvests on land, it is only reasonable to suppose that the seasons and other causes of which nothing is definitely known, influence their movements and consequently the supply.

A considerable quantity of fresh and chilled fish has been imported principally from the adjacent Colonies during the year—7,249 packages, valued at £6,627, as against 2,206 packages exported, valued at £3,299. Detailed particulars of the quantity and value of imports and exports are given in Appendix C. The highest imports come from New Zealand, from which Colony 2,192 packages of fresh fish and 1,379 of chilled fish have been imported.

From the returns furnished and printed in the Appendix marked D, it will be seen that 75,218 baskets of fish, 2,145 baskets of prawns, and 1,689 dozen crayfish were disposed of at the three Metropolitan Fish Markets, particulars of which are given therein. Newcastle is the centre of supply of all the northern towns, and a large percentage of the fish from Port Stephens and Lake Macquarie are sent direct from that city along the railway line, instead of being consigned to Sydney.

Closures.

### Closures.

It having been reported by the various Inspectors that the supply of fish in certain waters was becoming depleted through over-netting and other causes, and the Commissioners having satisfied themselves of the correctness of their reports, the following waters were closed against fishing-nets for periods ranging from four months to two years:—

Portion of Middle Harbour from the Spit to Pearl Bay, and all that part of the Main Arm of Middle Harbour lying to the north of the south-east corner of John Baptiste's 41 acres, portion 5, being about 10 chains south of Echo Farm.

That portion of George's River westward of a line drawn from Dover Point to Horse Rock Point, Sylvania, and the whole of Brisbane Water north of a line drawn from Box or Hawk Head to Green Point.

The continuous netting on these grounds had been most disastrous up to the period of closure, by tearing up the bottom of the waters, and causing injury to the fauna and flora inhabiting the grounds, the principal injury being caused by the sunken nets legalised contrary to the advice of the Commissioners. It is from this fauna and flora that many of the fish obtain their food; but it is gratifying to state that the feeding-grounds are now greatly improving.

The closure of a portion of the waters of Lake Illawarra, Lake Macquarie, Woronora and George's Rivers having expired, advantage was taken of the provision of the Fisheries Act, which allowed an extended protection of such waters, and they were further extended for a term of twelve months.

It is very difficult to adopt necessary measures for a proper protection of the fish and fishing-grounds without causing a certain amount of dissatisfaction amongst the fishermen, but, while the Commissioners are anxious to assist the licensed men as far as practicable, they find it absolutely necessary for the preservation of fish, and to maintain the supply, that breeding-grounds should be nursed and protected.

In all the protected waters young fish abound in vast numbers, and the Commissioners look forward to a great increase in the number of mature fish from these sources.

The "Fisheries Act Amendment Act of 1894," which admits of nets not exceeding 300 fathoms being hauled, was, after careful inquiries and consideration, extended to portions of Lakes Illawarra and Tuggerah.

Upon the recommendation of the Trustees of the National Park, a proclamation was issued under the "Net Fishing in Port Hacking Prohibition Act Amendment Act of 1894," declaring the whole of Port Hacking waters eastward of the Spit to be open to net-fishing during the winter months of June, July, and August, and very heavy freights of fish were captured during this period.

### Prawns.

A request having been made by the Fisheries Department in Auckland, New Zealand, for the supply of live prawns, with a view to acclimatising them in their waters, several experiments have been made by the Inspectors to ascertain whether they could be kept alive a sufficient time to enable them to be successfully carried to the New Zealand coast, but, though every available method has been tried, only partial success has resulted. The experiments resulted as follows:—

Two quarts of prawns were placed in about 4 gallons of the water from which they were taken, and the next morning they were all dead. The next lot were placed in a bucket containing a deposit of sand, and others in a box containing salt-water weeds, and although they were kept in a cool place, the vessels being replenished with salt water morning and evening, they were all dead in three days.

A fresh batch was then placed in a tank half filled with water, sand, and seaweed. This tank was then fed by a small continuous stream from another tank placed above it. The prawns were all dead on the seventh day.

On another occasion the Inspector experimented with sixty-five prawns, all of which died within five days.

These experiments show the impracticability of transporting prawns in a live condition to places that necessitate several days journey.

It has been the practice of the Department for some years to pay a penalty for the destruction of sharks within Port Jackson over 8 feet in length, and during the past year forty-five have been destroyed after being measured and certified to by the Inspectors.

The monsters are, in addition to being a menace to human life, terribly destructive to the schools of fish that frequent these shores, and if they were more generally destroyed the supply of fish might be better.

Sharks are found in these waters all the year round, but are more plentiful in the warm months when the salmon and mullet are travelling. Some of these attain a great size. In one of the sharks caught by Mr. Phillips at Quarantine Grounds he found a joint of a whale's back 10 inches long and 7 inches broad, and tested the size of the jaws by slipping them over the shoulders of a full-sized man.

To give some idea of their fecundity, one specimen was found to contain thirteen young ones, and another case brought under notice contained forty-six young advanced in development, and about 15 inches long.

A well-conditioned sea shark will yield 12 gallons of oil, extracted by cutting the liver into small pieces and boiling it in water, on which it floats.

The oil gives a bright light in burning and is valuable for lubricating machinery.

The fins when dried find a ready market at 10d. per pound, they being considered a delicacy by the Chinese, who utilise them as articles of food.

Much inconvenience to some of the Inspectors, and deterioration to the property of the Department, has been caused through the absence of proper provision to protect boats, &c., in the various waters, and the Commissioners have had erected at moderate expense, boatsheds, but our funds will not allow of this conserve precaution being generally carried out. Such sheds as the Commissioners have had erected at the Hawkesbury River and Lake Illawarra afford protection to the boats and enable the Inspectors to keep their movements to a certain degree from the knowledge of those who are particularly anxious to ascertain them.

The boat at Nelson's Bay has been placed in charge of the local police and the boatshed loaned to the Customs Officer until required, while the boatshed at Newcastle has been temporarily handed over to the Harbour-master at that port.

To replace the boat at Lake Illawarra, which is 15 years old and past utility, a new boat has been built more suited to that water, and the Inspector is now enabled to get about the lake in all weathers.

The preliminary steps taken in 1896 for the resumption of a portion of land at Tuggerah for the erection of a residence for the local Inspector were concluded on the 31st December, 1897, when the area of 1 acre was set apart for this purpose at a cost of £43 16s. 7d.

Steps have been taken to secure a more suitable site for the erection of a residence for the Inspector at Lake Macquarie, which, if successful, will enable him to have a commanding view of the closed waters at the channel entrance as well as the main portion of the lake.

### Oyster Culture.

In our last Annual Report the Commissioners recorded the fact that the supply of oysters for the year had greatly exceeded the returns for the previous ten years, and they find that there has been a further increase of over 1,500 bags in the output for 1898.

As a matter of fact, the great quantity of oysters put on the market has been the means of reducing the cost in bulk, but whether the public have benefited by this reduction in price by obtaining this mollusc at a reduced cost—retail—is a matter of doubt.

At the beginning of the year it was thought the oyster cultivators of this Colony would have a very prosperous season, in view of the fact that in the neighbouring Colony the oysters had developed the same disease as exists in some of our oyster-beds, but as the season advanced oysters from this source were disposed of in this market, and in Melbourne, at exceptionally reduced prices, and militated against the realisation of high prices being obtained.

Some of the best oysters from this Colony's waters, produced last season, were from Camden Haven waters, and their excellent condition is no doubt due, in a great measure, to the care and attention that is bestowed upon them by the lessee.

From April to October the young oysters from the spatting-beds on the foreshores and round the mangroves in these waters are carefully removed and taken to the deep-water maturing beds, where they are allowed to remain a few months and then forwarded to market in excellent condition, and rich in flavour.

As the leases in these waters are all held by one lessee, Mr. Gibbins, he receives the benefit of labour expended in their production, and the Commissioners have every reason to believe that the commendable mode of cultivation now carried out will be continued.

The production in excess over the previous year—from the Hunter River was 1,888 bags, Clyde River 302, Shoalhaven 167, Hawkesbury 266, and George's River and Botany 372, while a considerable falling off was apparent in the Camden Haven, Cape Hawke, and Port Stephens waters.

The increase in the import from and export to other colonies of oysters during the year has been very great, no less than 7,110 bags, valued at £5,322, having been imported, as against 6,124 bags, valued at £8,036, being exported, particulars of which may be seen in Appendix E.

The reason of these high figures is in a large measure due to the partial failure of the oyster crop in Queensland, which Colony has been hitherto a large competitor with the oyster cultivators of New South Wales.

Applications were lodged during the year for 48,154 yards of foreshore, and the total area under lease at the end of 1898 aggregated 191,014 yards.

On the 31st December, 1898, fifty-one leases became due for renewal for a further term of fifteen years, in accordance with the terms of the Oyster Fisheries Act of 1884, and the necessary steps were taken to give effect to the provisions of the Act in the cases of those that had complied with the conditions of the leases and regulations.

Early in February, 1898, a very abundant fall of spat occurred at Wallis Lake, and attached itself chiefly to low-water mark in Wollamba River, Clement's Bay, Twin Islands, Godwin's Island, and Breckenridge Creek. The local Inspector obtained some samples which were placed in good developing ground with a view to making observations as to their growth and maturation, and to ascertain, if possible, the length of time they required to attain a marketable size. At the end of the year they were found to have reached a size of  $1\frac{1}{4}$  inch in diameter, and to have a very healthy appearance, but were not yet ready for the market.

A tabulated statement, marked F, is appended giving particulars of the quantity of oysters consigned to market from each lease monthly, and the monthly output from each water.

A few observations may be made for the benefit of those who wish to take up oyster culture, which, if carefully noted, will ensure the greatest return for the labour employed and expense incurred.

The breeding season varies very materially in different latitudes and in different years, but from records made it is probable that (in this Colony) the spatting season occurs between November and March.

The fecundity of the oyster is enormous; each spatting oyster, it is estimated, produces about 1,000,000, but the risk of destruction is so great that only a small proportion of the larval oysters set free from the parent in the natural condition can survive to attain the fixed state of maturity.

In order that the larvæ of the parent oyster may be saved as much as possible, it is necessary, among other considerations, that when the time for the fixation of the larval oyster arrives, it shall find a clean surface upon which to adhere. An estuary which possesses a clean, firm bed is a most important catchment, and where this feature does not obtain, it is necessary to supply the deficiency.

If the larval oyster falls upon soft muddy ground, it is lost to the oyster cultivator, but if it falls upon a clean catchment its chance of survival is greatly increased.

In order to bring about this condition where it does not naturally exist, substances with a clean surface should be laid down just prior to the liberation of the fry. Such substances as oyster-shells dried and bleached during the winter months, and stones recently broken, with clean surfaces, may be used.

Tops of branches of oak-trees, slates suspended, which have been whitewashed, or tiles covered with a specially-prepared cement, consisting of lime, sea water, and sand in variable proportions, which allows of the easy chipping off of the attached mollusc, are very suitable.

The essential feature, however, is that all or any of these contrivances shall have a clean surface, so that the infant oyster can adhere to it; and to secure this cleanliness the collecting cultch must not be laid down till the time immediately preceding the date of the larval oyster's liberation.

A great deal of judgment in the deposition of the collecting cultch has to be exercised; if placed in position too early the material is apt to become covered with a slimy deposit which is fatal to the adhesion of the spat; if, on the other hand, it is deposited too late, a large number of the infant oysters are lost.

The cultch being ready, and the spatting season having commenced, it should be laid down with all possible haste.

At

At the request of the Honorable J. M. Borrow, a member of the Government of Fiji, who was visiting Sydney, six cases of oysters were procured from the waters of George's River, Hawkesbury River, and Brisbane Water in May, and presented to that gentleman for transport to Fiji, in the hope that the Sydney oyster might be established in their waters. The oysters were carefully packed, and reached their destination safely, but no information has been received as to the result of the experiment.

In February, Mr. George Griffin, a practical oyster cultivator in Moreton Bay, was accredited to this Department by the Chairman of the Fisheries Department of Queensland to inquire into and report on the preventive means used in the Hunter River District by Mr. Gibbins to check the spread of the disease in those waters.

The Chief Inspector accompanied this gentleman to Newcastle, where Mr. Gibbins had made all necessary arrangements for a thorough inspection of the oyster-beds, and Mr. Griffin obtained much valuable information regarding the pest, which is similar to that in the Queensland waters, *Polydora ciliata*.

The disease is generally found below half-tide mark, and generally on mud flats, more particularly those in the back channel.

The long continued dry weather appears to have greatly facilitated the increase of this disease, and the lessee has a gigantic undertaking before him if he succeeds in eradicating it. Mr. Gibbins, the lessee of this river, is, however, endeavouring to grapple with the difficulty in a manner that commends itself to those interested in oyster culture, and is sparing neither time nor money in his efforts to eradicate the worm from his leases.

Hundreds of tons of shell cultch have been dredged from the deep waters and placed on the banks to dry, and are then returned to the waters. When freshes in the river occur, the probability is that he will overcome the disease.

This disease is supposed to be caused by the immature form of the worm, known as *Polydora ciliata*, swimming into the open oyster when the valves are naturally apart and fixes itself within the margin of the shell beneath the mantle of the animal, over which fine mud particles are deposited, acting as a rough irritating body. The oyster sets to work to cover it over with a thin layer of smooth shelly matter. This process is repeated on the entrance of other worms, and in the end the oyster becomes exhausted and dies.

As this disease is becoming prevalent in several of the oyster fisheries of the Colony, it is only reasonable to suppose that the oyster industry will be seriously affected if some stringent measures are not adopted to eradicate the evil, and the Commissioners recommend that a clause should be embodied in the new Bill to be brought before Parliament during the present session, to compel lessees to keep their beds free from this disease.

A report of the Chief Inspector's visit to the Hunter River is printed in the Appendices.

### Reserves.

The Commissioners have not lost sight of the interests of the residents near oyster-grounds, and have proclaimed public oyster reserves at Khappinghat Creek, Clarence River, Port Hacking, and Sussex Inlet, which will be the means of exempting these foreshores from oyster leasing, and will provide ample ground for people residing in the vicinity of such exemptions, provided they are placed under supervision which the present Act does not provide for.

### Inland Fisheries.

A considerable quantity of fresh fish has been forwarded to market from the railway stations of Hay, Wagga Wagga, Bourke, Wellington, Forbes, and Gunnedah, aggregating 16 tons 11 cwt. 1 qr. 11 lb., the greater portion of which were forwarded from Bourke during the winter months.

These fish are principally of the cod species; they meet a ready sale; and greater quantities could be easily disposed of if chilled chambers were provided in trains coming from these far-distant waters once or twice a week.

Detailed particulars of the quantity arriving monthly from these waters are given in Schedule marked G.

The past year has not alone been disastrous to stock and cultivations, but has been terribly disastrous to fish-life in the waters of the interior.

Thousands

Thousands of fish have been reported to have died, as a result of the rivers stopping running and lakes drying up; and it will take a considerable time before such waters are restocked by the remaining ova.

Lake George and other lakes, which at one time promised to become factors in the supply of fish to the metropolis, have suffered very severely; and, in fact, the water in several fine lakes has quite disappeared, and the stench from them is an indication of the enormous destruction of fish-life that must have occurred.

The attention of the Commissioners has been drawn to the class of fish-traps used in various inland rivers, which are of a very objectionable character, and from their manner of working tend to prevent the free passage of fish up and down the rivers.

While deploring the use of these traps, the Commissioners are not in a position to take any proceedings against their use, as they do not come within the provisions of the present Act, and the attention of the Government is recommended to this defect in bringing any new Bill into force.

The trap is constructed as follows:—A drop fence of poles is erected across the river with an opening in the centre of the stream. Into this opening a square wooden frame covered with wire-netting of small mesh is placed, and on the side of the cage facing down stream a funnel-shaped entrance is fixed, the opening being larger on the outside than on the inside.

A Trawling Expedition on behalf of the Government was carried out under the supervision of Mr. Frank Farnell, with a view of testing the ocean bottom off the coast to prove whether trawling operations could be carried on with success.

The Government steamer "Thetis" was fitted out for the purpose and was equipped with an otter trawl in charge of Captain Neilsen. Operations were carried out along the coast in depths from 10 to 90 fathoms, and the grounds from Manning Heads to Jervis Bay were tested.

A very interesting and instructive report upon the experiments made was issued by Mr. Farnell, and laid before Parliament last year, and a detailed account has been partially worked out by the scientific staff of the Australian Museum of fish and other marine fauna found, part of which is now passing through the Press.

#### Trout Acclimatisation.

Fifty thousand trout ova, consisting of rainbow (*salmo irideus*), brown trout (*salmo fario*), and loch leven (*salmo levenensis*), were obtained from the Wellington Acclimatisation Society, New Zealand, in July, August, and September, and hatched out at the Prospect Hatchery.

On account of the late consignment of a portion of these ova (partly due to an adverse season in New Zealand) a number of the eggs were in bad condition on arrival, and consequently several were lost before being hatched out, but the remainder were hatched in a very healthy condition.

The temperature of the water in the hatchery and ponds has been taken, and an average has been struck for each month, particulars of which are given in Appendix H.

Several thousands were liberated in the fry stage in the following waters, with very satisfactory results, viz. :—

Stream at Black Mountain.	Paterson River.
Braidwood Creek.	Winburndale Creek.
St. Omer Creek.	Cudgegong River.
Currowan Creek.	Waterloo Creek.
Cookaralla Creek.	Lake near Cooma.
Fagan's Creek.	Streams near Albury.
Little River.	Macquarie River.
Charleyong River.	Cataract River.
Warrambucca River.	Snowy River.
Bombay Creek.	Nepean River.
Shoalhaven River.	Waters near Armidale.
Wollondilly River.	Turon River.
Nattai Creek.	Lagoon at Glenbrook.
Creek at Lawson.	Scotchies Creek.
Rivers at Walcha.	Beardy River.
Creek at Taralga.	Maun River.
Quidong River.	Woronora River.
Saucy Creek.	Hunter River, Singleton.
Belabula River.	Glen Innes Waters.

In

In response to a communication from the Department to well-known residents in the interior, asking for information as to the growth and increase of trout which have in years past been liberated in the various streams throughout the Colony, much valuable information has been received, pointing to the fact that trout are rapidly becoming thoroughly acclimatised in certain districts, more particularly in the Monaro District waters, where the temperature and conditions are more favourable to their existence.

The following particulars, which have been extracted from the supplies furnished, give those waters in which trout have at various times during the year been observed and caught:—

*South.*

*Eucumbene River.*—Young trout are frequently seen, and some weighing  $\frac{1}{2}$  a pound have been caught with eel lines.

*Moonbah River.*—Over thirty trout have been counted rising out of the water in a distance of half a mile, and some of 1 lb. and  $2\frac{1}{2}$  lb. weight have been caught.

*Mowembah River.*—Upwards of sixty have been caught with hand lines from  $\frac{1}{2}$  lb. to 3 lb. weight.

*Bibbenlake River.*—Two caught weighing 4 lb. and 5 lb., and some from 2 inches to 10 inches long have been seen.

*Upper Queanbeyan River.*—Several have been seen, and one weighing  $1\frac{1}{2}$  lb. to 2 lb. has been caught.

*Albury Waters.*—A number of small fry have been seen, but not yet caught.

*Snowy River.*—These waters are well stocked, and trout from 18 in. to 30 in. in length can be seen.

*Taralga Creeks.*—Several have been caught weighing  $\frac{1}{2}$  lb. and upwards.

*Guincoor Creek.*—Several caught, on eel lines, measuring 8 in. in length.

*West.*

*Carcoar Waters.*—Several 7 in. and 8 in. long have been seen and appear to be thriving.

*Jounama Creek, Tumut.*—Several have been seen, but no attempts have been made to catch them.

*Oberon Waters.*—One caught weighing  $10\frac{1}{2}$  lb.

*Wallinga Creek, Mudgee.*—One caught  $\frac{1}{2}$  lb. in weight.

*Rylstone Creek.*—Small trout can be frequently seen.

*Turon River.*—They have been seen rising out of the water, and one was caught weighing 1 lb.

*Macquarie and Fish Rivers.*—Trout are doing well and a few have been caught.

*Winburndale Creek.*—Several seen 11 in. or 12 in. long.

*Wallerawang Creek.*—Several small trout from 6 oz. to 8 oz. caught, and they appear to be increasing.

*North.*

*Macdonald River.*—Eleven trout were washed ashore by a fresh in the waters, some weighing 4 lb.

*Allyn and Patterson Rivers.*—Several have been seen up to 2 lb. weight.

*Bendemeer Waters.*—Some have been seen, but none caught.

*Sandy Creek, Wandsworth.*—Small trout have been caught, but not in quantity.

*Glen Innes Waters.*—Small trout have been seen swimming about contentedly.

In consequence of the want of power to prevent the destruction of trout or other fish introduced into inland waters under the present Act, it will take several years to properly stock the streams of this Colony with trout.

Until these fish are thoroughly established the Commissioners look to the local people to protect them.

Many fishing enthusiasts in the interior have supported us in this respect by returning trout to the water when caught on lines baited for other fish, and it is the desire of the Commissioners that similar action should be taken in those waters that are only sparingly supplied with this species of fish.

Owing to the excessive dry season which we have passed through several of the water-courses that have been stocked are merely a chain of holes, and it has been reported that boys are in the habit of wading into the shallow parts and spearing the introduced fish.

This reprehensible practice is much to be deplored, and the Commissioners will be glad if the local authorities will assist the Department in preventing such wanton destruction, and protect the fish.

The natural enemies of young trout, in the guise of cormorants, eels, carp, water-rats, water-lizards, and possibly snakes, are very numerous, and it is therefore necessary for sportsmen to offer them all the protection possible till they are well established throughout the Colony.

Two of the ponds running into Prospect Reservoir have been covered with wire-netting, and 4,000 fry were liberated here on the 3rd November, and 2,000 were retained in the three ponds at the hatchery.

It is our intention to retain these fish till they reach the yearling stage, and then liberate them in some of the most suitable waters in the Colony.

Notwithstanding the great care which has been bestowed upon these fish in protecting and regularly feeding them, a fair percentage are from one cause and another destroyed, but the Commissioners hope to have a large number for distribution.

A wire-netting fence has been erected round the hatchery at Prospect, at a cost of £18 10s., with a view of protecting the building and ponds from the stock, and it has improved the appearance of the grounds considerably.

The difficulties and dangers attending the conveyance of trout fry from the Prospect Hatchery to inland waters, renders it necessary that hatcheries should be established on the banks of trout streams, and the Commissioners will be glad if the Government will make the necessary provision for the erection of one or two of such buildings.

In connection with the trout hatchery, valuable assistance has been rendered by the local officers of the Water and Sewerage Board, and the Commissioners have to thank Mr. Jacob, the resident engineer, for the loyal assistance he at all times rendered them.

In concluding this report, the Commissioners would again urge upon the Government the necessity for introducing new legislation to remedy the evils existing under the present fisheries enactments.

The existing laws are full of defects and have failed to promote the fishing industry, or to give satisfaction to the professional fishermen or to the public, and it is much to be deplored that remedial legislation on this important industry has been so long delayed.

We have the honor to be,

Sir,

Your most obedient servants,

JAMES C. COX,  
J. H. WANT,  
S. H. HYAM,  
W. R. CAMPBELL,  
FRANK FARNELL.

I.

NETS confiscated during 1898. No prosecutions.

1. Portion of an illegal net seized at Tuggerah.
2. An illegal net found in Wm. Burton's boat at George's River.
3. An illegal net seized in closed waters, Cook's River.
4. An illegal net seized at George's Beach.
5. An illegal net found staked across Mylock Creek.
6. A net found which had been hauled in closed waters of Parramatta River.
7. A sunk net seized at Cockatoo Island.
8. An illegal net seized at Narrabeen Lake.
9. A net seized in closed waters at Port Hacking.
10. A net staked in closed waters at Tuggerah.
11. An overlength seized at Tuggerah.
12. A portion of an illegal net seized at Tuggerah.

PARTICULARS of Prosecutions for infringements of the "Fisheries Act, 1881," and the "Oyster Fisheries Act, 1884," during the year 1898.

Name.	Nature of Offence.	Result of Prosecution
Goodwin, Walter H.	Fishing in closed inland waters . . . . .	Net confiscated ; fined £10, in default three months' imprisonment.

### Fisheries Inspectors' Reports.

The President, Fisheries Commission,—

Sydney, 1 March, 1899.

Sir,

I have the honor to report as follows, with regard to the Fisheries, for 1898 :—

#### *Port Jackson.*

Fish have not been plentiful in the open waters, but in those closed against net-fishing they have increased greatly, and is a good number of fry.

Occasionally fishermen in the harbour have made good hauls, but, taking the year as a whole, poor freights have been made.

During the summer months the prevalence of blubber was a great hindrance to fishermen, as well as being injurious to the nets.

Several shoals of fish have been observed travelling along the coast from the south. Sea mullet entered the harbour in March; pilchards and cowan young in great quantities in September, and king-fish and salmon in December. During the winter the scarcity of fish was very marked, and a number of the local fishermen migrated to other waters north and south of the metropolis.

These waters were as usual closed against prawning from the 1st of June to the 30th September, and towards the end of the year exceptionally large prawns were captured in the deep waters near Bradley's Head.

Marketable oysters on the foreshores are very scarce, the public paying so much attention to them that they are not allowed to grow to a proper size. The rocks in Middle Harbour are literally covered with small stuff, but they do not grow here to any size, on account of the amount of salinity in the water.

In addition to the existing closures of the Parramatta and Lane Cove Rivers, the breeding-grounds situated between the Spit and Pearl Bay, and that portion of Middle Harbour from Echo Farm to its source, have been closed for a period of two years, with a view to protecting the shoals of young fish inhabiting these localities.

#### *George's River and Botany.*

The upper portions of George's River and Woronora River have been well supplied with fish principally of a young age, and owing to the protection afforded by the closure of these portions of the waters, great hopes are held that the lower waters will receive the benefit when the fish reach maturity.

Line-fishing has been carried on vigorously during the summer months, and great quantities of whiting, bream, and flathead have been caught in this manner.

The net fishermen have had a good season, and have consigned 14,244 baskets to market as the year's take.

Prawns have been very plentiful in Cook's River, Salt-pan Creek, and on Lady Robinson's Beach, and several men have obtained a livelihood by devoting themselves to this class of fishing.

Considerable activity has been shown in regard to oyster culture, and several new areas have been taken up during the year.

The oysters growing on the mud flats, notably in Wooloware Bay, have been slightly affected with mud disease, but not to such an extent as to materially affect their market value. On the rocks and on the hard bottoms oysters of good quality have been grown.

A good deal of trouble has been caused to the oyster lessees through the pilfering from leased areas, and great difficulty is experienced in protecting them from the depredations of unprincipled persons, who make a practice of stealing them both day and night.

More stringent provisions are necessary than those provided by the present Act, and it is very desirable that, when new legislation is introduced, more protection will be given to the oyster cultivators.

#### *Lake Illawarra.*

These waters have not been so prolific as in the previous year.

They have been worked incessantly by a large number of fishermen, with the result that the supply has been considerably depleted.

The tributaries flowing into the lake are all well stocked with fish in young stages of growth, which will eventually make their way into the deep waters.

Several

Several shoals of different kinds of fish have been observed travelling northerly, and have passed the entrance to the lake without making any attempt to enter. The situation of Windang Island, which stands immediately on the southern side of the bar at the mouth of the lake, is probably the cause of the fish being diverted from these waters, as, after passing that point, they keep wide out, and, consequently, miss the entrance.

The bar carried plenty of water over it until December, when it closed up owing to the continued dry weather, and it will not reopen until heavy rains set in and replenish the waters in the lake.

With the exception of a few oysters in the channel entrance, there are no such deposits in the lake, and there is practically no prawn-fishing carried on.

Good sport has been obtained by amateur line fishermen during the summer months, and some exceptionally large bream have been captured in Mullet Creek.

A steam-launch has been built for the use of visitors to the lake, and, as she is of light draught, is able to steam over the flats without any risk. This little vessel is a great attraction to the lake, and is used by fishing and picnic parties to a considerable extent.

#### *Hawkesbury River.*

The supply has been fully maintained for the year, no less than 9,377 baskets of fish having been caught by licensed fishermen, as well as great quantities by amateur line men. Many thousands of immature fish of all kinds have been destroyed in these waters during the past year, both by the professional and the amateur men, the former leaving them on the banks and the latter adding them to their baskets.

There is no more certain way of reducing the supply of mature fish than this deplorable practice, and it is to be regretted that the provisions of the present law will not allow of any penalty being imposed to prevent such wanton destruction.

Prawning is carried on to a considerable extent, but the prawns do not grow to a large size. In the summer months they are largely used as bait, and are forwarded to Woy Woy in great quantities for line fishing.

Several cases of fishing in closed waters have been reported by the local inspector, and the parties offending have had to pay the penalty by being mulcted in fines.

Several new areas have been taken up for oyster-culture, and the oysters have maintained their good condition during the year.

Extensive pilfering has been carried on in these waters, of oysters from Crown lands, and much trouble has been experienced in protecting the unleased portions of the river from the depredations of unprincipled persons, many of whom obtain a living in this illegal way.

The local inspector frequently sees illicit oystering when patrolling the waters, but owing to the rugged and steep hills along the foreshores the oysterers have little difficulty in eluding him.

#### *Brisbane Water.*

The closure of these waters expired on the 30th April, and for four months the fishermen worked them so continuously that they were practically cleaned out.

On the 3rd September they were again closed for a period of two years, and since then great quantities of young fish have made their appearance.

These waters appear to be a natural breeding-ground for bream, whiting, flathead, and mullet, and with protection from indiscriminate netting will soon be alive with mature fish of the above species.

There is no more attractive fishing-ground for line-fishing than these waters, and they are much frequented in ordinary seasons, but owing to the very small run of fish in the early part of the summer only a comparatively few visitors were attracted to Woy Woy.

#### *Tuggerah Lakes.*

The quantity of fish taken from this water last year was only about two-thirds of the number caught during 1897, and it is probable that the scarcity is the result of a practice that has existed for some time of the fishermen using hauling ropes of over a mile in length, and in dragging the bottom of large areas and disturbing the feeding-grounds to such an extent that the fish have not found the same attraction as formerly.

The entrance from the ocean to the lake has been open the whole year, and schools of fish have been observed travelling in and out at various times.

Fish caught in these waters are placed on board the steamer by the fishermen and conveyed from the mouth of Wyong Creek to the railway station, and thence consigned to Sydney. This means considerable handling, and does not tend to improve the fish.

It would be a distinct advantage to those engaged in the fishing industry, as well as to the public, if a light railway line could be laid to the shores of the lake, and it is probable that such an undertaking would be self-supporting, as visitors would be attracted in great numbers if there was a quick and easy means of access.

#### *Lake Macquarie.*

These waters have fully maintained their foremost position for the supply of fish, no less than 12,470 baskets having been consigned to the Newcastle and Sydney markets during the year.

The entrance from the ocean to the lake has been open the whole year, and numerous shoals of mullet, bream, and garfish have entered and distributed themselves through the lake.

The tributaries are closed against net-fishing, and owing to the protection thus afforded they are very plentifully supplied with young fish, which will eventually find their way into the main waters of the lake.

On the 21st November the closure of that portion at the channel entrance including Belmont Bay expired, and was reclosed for a further period of twelve months. During the thirty days' grace allowed by the Act before the extension came into operation, great catches were made, and on the first day no less than 120 baskets, consisting mostly of whiting, were captured.

The waters of Black Ned's Bay, adjoining the channel entrance, having been included in an old grant of land, it has been found that this Department has no jurisdiction over them, and steps are being taken to lease the bay from the Australian Joint Stock Bank, who are the present owners, in order that the Department may have a legal right to afford the same protection to the fish in this inlet as is given in waters that are closed against net-fishing.

*Cape Hawke.*

Every variety of fish has been in abundance in these waters, but on account of the irregular steam service only a small percentage of the fish caught find their way to the market. It is no uncommon thing for the fishermen to have to throw away the whole of their catches owing to the delay in the arrival of the boat, and its inability to cross out over the bar when the weather is unfavourable.

Until some better and more reliable arrangements are made for the speedy conveyance of fish to the markets, these waters cannot be relied upon for regular supplies.

During the winter months a number of the Sydney fishermen visit these waters and obtain from the rocky foreshores considerable quantities of crayfish.

These waters are very suitable to the growth of the oyster, and have been very prolific in its production. The oyster industry has improved, and the majority of the beds are being worked in a satisfactory manner.

With a view to determining the age at which oysters reach maturity, Inspector Massingham secured some oyster spat which had just been deposited, and laid them on good ground under regular observation, and in the course of eleven months the diameter of the shells measured  $1\frac{1}{4}$  inches.

The oysters are free from disease in Wallis Lake.

The Manning River is visited periodically by Inspector Massingham, but the waters north of this river, and those south of Lake Illawarra, are without regular supervision, on account of the small staff at the disposal of the Department.

I have, &c.,

J. A. BRODIE,  
Chief Inspector.

Sir,

Sydney, 26 January, 1899.

In compliance with your request, I beg to submit a brief report for the past year, and in doing so I must say that there is no perceptible difference between this and the previous year's report.

The same closures exist, viz., Lane Cove River, and Parramatta above Abbotsford. In the latter part larger shoals of mullet have been seen during the first and last quarters than have been seen for at least two years; throughout the remaining portion of the period fish were less plentiful. I have not observed any marked increase in bream and whiting, but there is an improvement in flathead and jewfish. I never knew the fry of any of the fish to be so scarce in the latter closure as in the past year. It may be attributed to the polluted state of the water; if such be the case, the evil cannot be remedied before the completion of the sewerage scheme.

It was particularly noticeable that whilst fry did not make its appearance in the above waters the young fish in a more advanced stage were to be seen; therefore, it is evident that the water did not suit the fish.

As to the open waters, the fish have been in no way plentiful, and most of the fishermen have made but poor living at their calling. This is, to a great extent, caused through the indiscriminate use of the destructive prawn and garfish nets, which are the most used; whilst but little use is made of the hauling and meshing nets. The only spell these waters receive is during the winter months, when prawning is prohibited, thus giving a four months' stoppage to the prawn-nets.

During the month of September some of the fishermen down the harbour caught fair quantities of pilchard and mackerel; but such catches realised but little for the catcher, the supply being more than equal to the demand.

It would be almost impossible to state the number of persons following out the occupation of fishermen as a living, as about seventy boats may be counted some weeks, then it will fall down to as low as twenty, some of the crews having gone to other waters for a change; whereas others knock off till fish improve—this takes place throughout the winter months.

Having visited Batchelor's Fish Market, Redfern, frequently throughout the year, and found the fish in good order and size, and although 14,000 baskets of fish have been received there, Botany Bay having contributed nearly one-third, the remainder coming from Clarence, Macleay, Manning, Port Stephens, Hunter, Lakes Macquarie, Tuggerah, and Illawarra, Shoalhaven, Bateman's Bay, and Wagonga, not more than sixty-three were condemned as unfit for food. I also made visits to Marriott's Market, and found the fish plentiful and good size, and only sold if in good condition. Both these persons expressed to act on their own judgment in getting bad fish out of their markets to prevent a possibility of its being sold. At both markets quantities of oysters, prawns, and crayfish have been sold; as regards the latter, in warmer months, about 10 per cent. have been found dead upon arrival at the markets; these are sent away also.

The prices realised for fish alone have been good throughout, and in some instances large returns have been the results of the fishermen's work, much to the detriment of the large numbers of fish-dealers who visit the markets daily, as their profits would be reduced.

FRED. W. SMITHERS.

Sir,

Sydney, 9 January, 1899.

I have the honor to present the following report on the Fisheries and Oyster Fisheries of Sydney Harbour for the year ending 30th December, 1898:—

During the months of February and March large shoals of mullet were in the harbour, and a great quantity were caught. Bream and whiting were also plentiful.

From April to July fish of all sorts were very scarce. In August a few bream were caught in the lower part of the harbour, principally by meshing.

In September and October large shoals of pilchard and cowyoung came in the harbour, and some large hauls were made. By November these fish had all left, and large shoals of kingfish and salmon came in. In the latter part of December a quantity of mullet came down the river, being driven down by the south-westerly weather, but are working up the river again with the fine weather.

The

The Parramatta and Lane Cove Rivers were closed on the 14th October, 1897, for two years. Port Jackson and tributaries are entirely closed against prawn-fishing during the months of June, July, August, and September in each year.

Narrabeen, Deewhy, Curl Curl, and Manly Lagoons were closed on the 8th May, 1897, for two years. That portion of Middle Harbour within a line drawn from Spit Point to Pearl Bay Wharf, also that portion above a line taken from below the Orange Grove to the opposite shore, were closed on the 6th April, 1898, for a period of two years. The whole of Crown land's foreshores were closed against the removal of oysters on 14th October, 1897, for a term of three years.

For some time past the blubber has been a great nuisance to net-fishing throughout the harbour, and often fishermen have been unable to land their nets, and consequently lost their fish. Another of the ill-effects of blubber is that fish and prawns, mixing with it, very soon go bad, and further still, it rots the nets.

The quantity of fish taken to the Eastern Markets during my attendance there—that is, from the 7th February, 1898, to the end of December—is 32,522 baskets, 949 dozen crayfish, and 1,020 baskets prawns.

I have endeavoured to obtain information respecting the quantity of fish condemned as unfit for food from the market inspector, the only person who can give same, and he declines to furnish it.

The only fish seized by me in this market for being under weight were two cases of garfish from Newcastle.

Approximately, there are just over 200 men and ninety-five boats licensed. These men are distributed, sometimes working in the harbour, other times, various places along the coast, rivers, and lakes; of course, taking their boats with them.

Most fish are affected by the weather. Southerly weather will disturb fish in the rivers, and drive the matured into outside waters and then carry them north, and on the southerly weather abating, the matured fish will work their way back to the rivers. Freshes in a river will also disturb fish, and cause them to leave.

The following are the kinds of nets used:—Meshing-net, general hauling-net, garfish and prawn net. The two last-named are very destructive to small fish and spawn.

The prawners started on the 1st October, but the supply at the market has not been plentiful; not because prawns are scarce, but on account of the blubber being so thick that in some places they cannot haul a net.

Respecting oysters, with the exception of Vacluse and a few private wharfs, there is scarcely a marketable oyster in the harbour. There are plenty of oysters in Middle Harbour, but they are very small, and I do not think they will ever grow to a marketable size. I have taken them on different occasions, and laid them down in Woolloomooloo Bay where other oysters grow fairly fast, but they never got any larger.

I beg to state that I have attended Woolloomooloo Market every morning early since the 7th February when not on other duty, and also attended at office for instructions and obeyed.

I have, &c.,

RICHARD HELLINGS,

Inspector of Fisheries.

Sydney, 17 February, 1899.

Sir,

I have the honor to report on the working of the Prospect trout hatchery during the year 1898.

On the 28th July I received from New Zealand two boxes of trout ova; one box contained 20,000 rainbow ova, the other box contained 15,000 brown trout ova. This consignment arrived in very bad condition, owing to ova not having a sufficient supply of ice on the passage from New Zealand.

I found the top trays of ova in each box perfectly dry, through being kept short of ice, with the result that 10 per cent. of ova were dead.

This consignment was placed in the hatching boxes soon after arrival, and was hatched out at a temperature of 49 to 51 degrees. The brown trout ova began to hatch on the 5th August, and were all hatched out by the 17th of the same month; they began feeding on the 8th September.

The rainbow started to hatch on the 3rd August, were all out by the 16th, and started feeding on the 8th September.

On the 29th August I received one box containing 10,000 rainbow ova which were in bad condition, fully 12 per cent. of ova had died.

This consignment was hatched out at a temperature of 55 degrees. They began to hatch out on the 30th August, and were all hatched on the 6th September, a great number dying after hatching.

On the 21st September I received the third shipment of rainbow; a great number, I found, had hatched out on the passage from New Zealand, and the remainder were all hatched out by the 26th of the same month, and started to feed on the 6th October, fifteen days after receiving the ova.

This ova was hatched out at a very high temperature, the water at 65 and the inside of the hatching-house at 80 degrees, a great number of fry dying after hatching.

Owing to the hot weather on the 21st October the distribution of trout fry commenced. Consignments of fry were sent to Bathurst, Walcha, Glen Innes, Black Mountain, Armidale, Paterson River, Cooma, Boloko, Bombala, Albury, Whittingham, Carcoar, Sofala, Rylstone, Lawson, Collaroy, Hazelbrook, Yalbraith, Picton, Burratorang, Yass, Woronora River, Queanbeyan, Braidwood, Merimbula, Bell, and the Cataract River. From last year a small number of rainbow were kept and distributed as yearlings in the Wollondilly River.

Four thousand rainbow trout fry were placed in the Bloxsome Ponds, and 2,000 in the hatching-house ponds, and will be distributed as yearlings when the cool weather returns.

I beg to call your attention to the unsatisfactory results obtained from the brown trout ova, which are unable to stand the warm climate.

A fence has been erected round the hatchery, and has been the means of protecting the building from the stock.

I beg to call your attention to the hatching-house ponds, which are leaking very badly, and will have to be repaired before the ova arrive next season.

I have, &c.,

GEORGE GLADING.

Sir,

Forster, 12 January, 1899.

I have the honor to submit the report of the fisheries of Wallis Lake for the year 1898.

*Net-fishing.*

The supply of bream, whiting, and garfish in their season has been fairly good, whilst tailer, jew-fish, black-fish, mullet, and flathead are in abundance during their season.

With regard to the latter, it is a common occurrence during the summer months, in the lower waters, for one person to land forty or fifty fish with hook and line in a few hours; but frequently the bulk of these fish are allowed to be wasted.

Large quantities of sea-mullet appeared in the Wollamba and Wallingat Rivers during the month of April; also, during November, fairly large schools of salmon entered the harbour; but as these fish are considered of such little value as a food fish very few were captured.

It was reported to me that a school of whales were seen in the offing during the month of November.

A party of Italians were engaged during June, July, and August in the cray-fishing industry. Good results were obtained at the beginning; but, latterly, bad weather, detention, and non-arrival of the steamer seriously retarded the enterprise. Their total catch amounted to about 164 dozen, out of which one shipment, consisting of twenty-five dozen, were rendered unfit for consumption through detention of the steamer.

The quantity of fish sent to the metropolis was 3,247 baskets, being an excess of 784 baskets for the previous year. Unfortunately, a very considerable portion of these did not reach the market in a satisfactory state, owing to delay in transit.

The number of licensed fishermen employed at irregular intervals during the year was twenty-two, and the licensed fishing-boats nine. In addition to these, a number of half-castes were employed, being supplied with boats and nets by the licensed fishermen, who receive shares. During the winter months the number is augmented by Italian fishermen from the home fisheries.

I regret to report that the fishing industry is at present practically at a stand-still, owing to the want of steam communication. The last steamer—which was, however, unsuitable for the trade—has been recently wrecked.

That such an extensive fishery within easy distance of the metropolis should be rendered idle through the want of a suitable steamer is to be deplored, both on account of the hardship entailed by the local fishermen and the consequent limited supply placed upon the Sydney market. However, it is an ill wind that blows good to no one; the temporary may conduce to a greater abundance of fish when operations are resumed.

There were three prosecutions during the year for fishing without license, and one for fishing in an unlicensed boat, and verdicts obtained.

*Oyster Fisheries.*

On the whole, the condition and prospects of the oyster fisheries may be considered as encouraging.

Much work has been done during the year in laying down shells along the foreshores for the collection of spat, notably on Leases Nos. 2,412, 2,263, 876, 2,526, 2,640, and portions applied for by Mr. G. Ravel, at Goodwin Island.

It may be mentioned that the shells referred to were obtained locally, from heaps on the land fronting old oyster deposits, presumably left there by aboriginals.

The custom of importing shells from Sydney for this purpose has been discontinued, for two very good reasons, one on account of the expense entailed, the other on account of the liability to transmit disease.

Good progress has also been made in laying out immature oysters, and removing others to more suitable situations for their development. In this work Messrs. Woodward and Moriarty keep one and two men almost constantly employed, and as a result the leases which are comparatively free from weeds have been heavily stacked, notably, Nos. 1,431, 1,432, 417, 907, 908, 2,205, 2,405, 2,208, 2,210, 2,625. Other leases also have been considerably improved. Messrs. Ravel, Rush, and Elliott, have also done good work in this direction on their Leases Nos. 2,652, 2,413, and 2,672.

Some attempts to eradicate the weeds by pulling them up, has been made, but the results achieved have not proved a success. There are indications of a diminution of this pest on some of the areas, but whether any permanent benefit will follow is very difficult to determine at present, but I am of opinion that a succession of dry seasons will have the desired effect. From information supplied to me, very few weeds existed prior to the flood. I think it quite possible the flood brought them, and they have become accustomed to the new conditions, and nothing but the dense salt water will destroy them.

Other leases than those enumerated are, where the weeds will allow, fairly well stocked.

The condition of the oysters is good, and no appearance of disease is perceptible.

A heavy fall of spat was noticeable in February, so small, however, as not to be determined with the naked eye. A sample was forwarded to the Department as evidence. Some were also secured and laid down on the 4th March as an experiment, and which have grown remarkably well. I consider them, at time of writing, to be about eleven months old, and they have attained to the diameter of  $1\frac{1}{4}$  inch, but this mostly flat shell, and are still a long way from being considered of a marketable size. They are situated on the best ground in the fishery, and where they can be examined from time to time.

During the year there has been six applications for oyster-culture leases dealt with, comprising 1,200 yards of foreshore, thus bringing the total length of foreshore under lease and applied for as 24,250 yards. But although the Cape Hawke Oyster Fishery is so extensive, the fact remains that about one half the areas are held merely for the catching of spat, and for this purpose they are well suited, and I think it safe to assert that they would not produce a bag of good marketable oysters in ten years if allowed to remain. This, then, shows the necessity of a system of oyster cultivation in these waters in order to ensure a regular supply being obtained.

The prolific resources of the district may be estimated by the quantity of oysters obtained during the year viz. :—2,126 bags, which were sent to Sydney, and two bags locally consumed, making a total of 2,128 bags.

It is also noteworthy that these beds are constantly being worked throughout the year.

*Manning*

*Manning River.*

From occasional visits to this river, I am not in a position to give a detailed account of the actual condition of the oyster fisheries, but from observations and examinations of the different areas which were dealt with, I may state that they are generally in a satisfactory condition, and with careful management on the part of the lessees and their employees, the average output will be maintained.

Numerous spat-collecting areas have been applied for, with a view to increasing the stock on suitable situations, and some good work has been done in this direction during the winter months. Hitherto cultivation in this direction has received scant attention on this river.

The major portion of the areas are deep water, or dredge beds, and are fairly well stocked.

The only leased area on which disease is known to exist to any extent are situated in Scott's Creek, and to all appearance on last examination the disease does not seem to have extended, if anything it has somewhat decreased.

An examination of the public oyster reserve at Luthrie Bay reveals the fact that disease is there as rife as formerly. I would specially recommend that strict precautions be taken to prevent the removal of oysters from this to any other areas in order that disease may not be spread over the district.

From report it appears that a considerable deal of oyster-stealing has been carried on, and prosecutions have followed; but with what result I am unable to state, as the cases were not in my charge.

Applications for oyster-culture leases, nine in number, and consisting of 1,800 yards of foreshore, has been examined and reported on, bringing the total number of yards under lease and applied for up to 20,650.

I have, &c.,

J. MASSINGHAM,

Inspector of Fisheries.

Sir,

Swansea, 21 January, 1899.

I have the honor to submit my report on the fisheries of Lake Macquarie for the year 1898.

About 70 fishermen and 30 boats were engaged in catching fish for sale; these captured an average of 178 baskets per man, or 415 baskets for each boat; and although this does not reach the number caught during the previous year, 1897, I think the returns from the sales, if they could be obtained, would show a decided improvement, as, from my observations, there were a great deal more choice fish, such as whiting, bream, and schnapper, caught during the twelve months than there were for either of the two previous years. There are no large hauls to report, but the supply seems to have been more general and regular.

The mullet season was the best I have ever seen. Old residents and fishermen of the lake say they never saw them so plentiful; in fact, fishermen, during one month, would not bother about catching them, as their returns would not yield sufficient to pay the expense of sending them to Sydney.

The total number of baskets of fish caught for market was 12,470; of these, 260 baskets were taken from Belmont and retailed about Newcastle and its suburbs. During the month of July a fisherman named J. Davis and his son, of Port Stephens, paid a visit to Lake Macquarie with a view of testing the lobster grounds about the Heads; but, as they did not find many lobsters, they soon left; their total catch was about fifteen dozens.

Towards the end of the year the lake entrance closure was thrown open to net-fishing, and it proved a great harvest to some of the fishermen, for at other parts of the lake about that time fish were somewhat scarce. On the first day it was opened about 120 baskets of fish were caught, the majority being sand whiting. Charles Parker and George Parker were the most successful, they having about twenty baskets each of whiting besides other fish. Salmon and sharks were so plentiful about this time that there was very little hauling done in the channel, fishermen would not risk their nets amongst them.

F. C. ALDRICH.

Sir,

Brisbane Water, 13 January, 1899.

In compliance with your request, I have the honor to submit a short report upon the Brisbane Water Fisheries for the year 1898.

The waters were open for net-fishing on the 30th April, and were reclosed 3rd September. During the period between opening and reclosing a number of fishermen were here with their boats and nets from Botany, Sydney, and Tuggerah, it being thought at time of opening that large freights would be the result, consequently no less than thirty-two boats were here to start work, but that number did not continue, as by the time of reclosure only eight boats remained.

During the above period of opening and reclosing no less than 1,866 baskets of fish were sent away, being the record of the total by the licensed fishermen, but the catch during the first and last parts of the time fell off considerably, as during the first month 753 baskets were obtained as against 398 captured in the last month. I am of opinion that the fishermen that work here are blind to their own interests through the continual use of the garfish net, thereby causing destruction to the immature fish, and further, that class of net dragging more heavily on the bottom; and still some of these men seem not satisfied with hauling as above, but had to weight the lead lines of their nets with increased weight by attaching iron bolts or half bricks to make the net drag everything out of the channels, and tearing the bottom to pieces, and it was some time after the reclosure before the fish again worked upon them where excessive hauling took place.

I would hope that in the near future a power be given to prevent the use of garfish-nets in these waters when open, and allow nothing under 2½-inch mesh to be used.

Referring to the cases made, I think that more care should have been used in transit to the market. If this had been done the fish would have gone through in better order, as it should be, considering the close proximity of these waters to Sydney.

I may also add that during the year 600 baskets of fish were sent from Gosford to Sydney which were caught at Terrigal. All these baskets contained good fish, namely, bream, whiting, garfish, mullet, and flathead.

I must draw attention to the vast importance of this place as a fishing resort, as will be seen when I point out that 4,500 persons visited Woy Woy alone during the year; a great number also arrived from Gosford and Point Clair. The catches taken must total largely, as it should be taken into consideration that over 200 boats are in use by line fishermen.

When

When speaking of line fishermen, I regret to say that numbers of them cause wilful destruction among small fish, simply catching and keeping everything in order that it may be said they caught so many fish. It is no unusual thing to see such crews go away with twelve dozen fish, half of which would not weigh 3 ounces, yet I have no power to stop this waste.

I may say that the matured fish have been very plentiful, especially mullet, and a visit to any part of these waters would prove this. With regard to the fry—go where you like on shallows in creeks, both from the bottom to the top of these waters, and you will find them in thousands.

I have much pleasure in drawing attention to the satisfactory condition of the oyster leases, as some of the lessees take a deal of interest in the matter of oyster culture; their beds may be found well stocked with marketable and small oysters, and by putting down spat collectors, they have secured a deal of spat. During the year, 136 bags were recorded as having been removed from the leases, an increase on the previous year, and this increase will steadily go on as the leased areas amount to 3,100 yards.

The other foreshores being Crown lands have been almost denuded of oysters by persons for their own use. The fall of spat has taken place at different parts throughout the year, the largest set took place in October, and that in Cockle Creek, and further down.

The oysters have been free from any disease, and, taken right through, have been in good condition, and have grown well.

Although prawns may be found here in quantities, no attempt is made to catch them.

The Fisheries laws have been fairly well adhered to, only a few cases having been taken before the court for fishing without licenses, and one illegal net, but several warnings were given and taken.

I have, &c.,

JOHN CAIN,

Inspector of Fisheries.

Sir,

Wyong, 17 January, 1899.

I have the honor to submit my annual report to you for the year 1898 of Tuggerah Lakes.

The year just ended has been the worst year for fish that has been known, all kinds being alike scarce. The reason for the scarcity is, I think, the light weight that all varieties of fish are allowed to be sent to market; also the diver nets used here do much harm in continually disturbing the bottom. These nets are sunk, and with the long hauling lines which are used, sometimes over a mile long, on either end, come along the bottom, thereby stirring the food of the fish up and killing it.

About the month of August there was some sort of disease among the eels here, large quantities being seen all over the lake dead. I noticed that those which were sick could not stay long under the water, but would come to the surface and twist about till death overtook them.

On April the 20th I noticed the entrance full of very small fish. I caught some, and forwarded them to the Department—to Dr. Cox—and they proved to be the spawn of the mullet, and only a day or two old, so by this I conclude that mullet, at all events, spawn in the entrance.

I also put about twelve in a small glass jam jar, and kept them alive for ten days, only changing the water once or twice a day. I think by this that fish from the other Colonies could be introduced in this way, as well as ours sent to other parts.

I have also been experimenting with prawns to see how long they can be kept alive. On 23rd November I caught four dozen prawns, and put them in a kerosene tin, with about 2 inches of sand on the bottom, and half filled with water. I then placed another tin full of water over the one with the prawns in, so that the top tin could leak into the lower and give the prawns a supply of fresh water. In this manner I kept two prawns alive for over a week. I got some fresh prawns, sixty-five in number, and put them in with the two which were alive, with the following result:—Prawns caught 9 p.m. on 1st December; on the 2nd, thirty dead; 3rd, thirteen; 4th, ten; 5th, nine; 6th, three; 7th, two prawns alive, and they kept alive till 26th, when one died; the other kept alive till the 28th. If larger vessels were used I think more could be kept alive.

I have observed several shoals of fish travelling both in and out during the year. So late as 25th July a very large shoal of mullet came in, and on 19th August I saw a large shoal of bream and blackfish lying at entrance, bailed up by tailers and jewfish.

The entrance still keeps open, having about 4 feet on bar at high water, so that travelling fish can enter, and fish outward bound can get out.

The catch for the whole year was only 6,259 baskets, as compared with 10,372 for 1897, and 11,422 for 1896. This shows a decrease yearly, but this last year has the greatest decrease of any previous years.

There is only one oyster lease here, and the lessee has not sent any oysters to market off it yet. He has sold two and a half bags in small lots to various pleasure parties.

The acre which was resumed for inspector's residence has been fenced, and shelter trees planted round it. The house, which is my own, is in a very leaky condition, and leaks every time it rains. A new house is very much wanted.

The average number of men at work during the year has been fifty-seven, and twenty-three boats.

CHARLES GORDON,

Inspector of Fisheries.

Sir,

Hawkesbury River, 6 January, 1899.

I have the honor to report on the condition of the net and line fisheries on this river, and also the oyster fisheries for the past year, 1898.

The net and line fisheries on this river have during the past year given employment to 106 persons, who use fifty-two licensed fishing-boats.

Some of these men follow prawn-fishing, others line-fishing, others use hauling-nets, and others depend on meshing-nets.

The kind of hauling-nets mostly used in the Hawkesbury River is the destructive garfish net, the most destructive net among all nets to young fish, great quantities of which are destroyed daily. The meshing-net, being of large mesh, destroys no small fish, and a net which I can recommend. In consequence of the destructive nature of the nets used, great quantities of young fish are destroyed daily, also a large number of undersized fish are caught by pleasure parties for pleasure. Fish of all kinds have now become very scarce in the whole of this river.

The

The total number of baskets of fish sent to market during the past year was 9,377, but of this number a large percentage are only half baskets or small baskets, especially for prawns.

I beg to state for your information that the prawn fisheries of the Hawkesbury River promises to be a very important industry, but it requires a little help from the Government in providing a suitable market, and later hours of selling.

Of the oyster fisheries of this river, I would again beg to state that a valuable industry in oyster culture is being neglected, which would give employment to many; also that the leased areas, together with all the oyster-bearing foreshores of Crown land, are greatly denuded of oysters; that leased areas are in no cases used for oyster culture, but only for points of vantage in plundering the surrounding Crown lands of all oysters. During the past year 971 bags of oysters have been shipped to Sydney, besides quantities of oysters which are used on this river as bottled oysters and sold by persons who have no lease. The quantity stated may be looked upon as the produce of the whole river, and fully 70 per cent. of which oysters must have come off unleased Crown land, and the result of thieving.

I would also beg to bring under your notice the fact that certain oyster lessees have, for a consideration, lent their name and the number of their lease to others who have no lease, in order that stolen oysters may be sent to market.

I would further beg to state that in November I observed a quantity of oyster spat floating on the water near Bar Point, a thing often seen in former years, but rarely seen of late years. Under an improved plan of oyster culture spat found in this manner might be utilised.

I beg further to state that on the 1st January two oyster leases expired by expiration of time.

I have, &c.,

P. SMITH,

Inspector of Fisheries.

Sir,

George's River, 18 January, 1899.

I have the honor to submit the following report of the fisheries under my supervision during the year ending the 31st December, 1898:—

*Woronora River.*

This river has been closed against net-fishing up to the 29th September, being again closed on the said date for a further period of one year. There being no penalty in the Act for net-fishing for one month from date of closure, large quantities of mullet and other fish were caught during October. There being no blubber of any account in this river, the fish are at the mercy of the nets. In the early part of the year the line fishermen were catching thousands of whiting, and two-thirds of them would not weigh more than 3 ounces. Since the last closure, fish have accumulated in great quantities, especially mullet.

Since the early part of November great quantities of mullet and other fish have left the river at every change of the weather; in fact, all fish are travelling from river to river along the coast from September to April.

*George's River.*

George's River was open to net-fishing from 1896 up to the 26th May, 1898, when it was closed till 30th September, and reclosed on the latter date for a further period of one year. During the month of October there were about twenty net boats fishing in the river. There was a great quantity of fish caught during the month, but the blubber being so plentiful in the river during the warm weather the net boats could not kill many white fish; the principal fish caught being what are commonly called 2½ to 3-inch hardgut mullet, they being plentiful. At the present time the upper part of the river is in a flourishing condition, although great quantities of mullet are continually travelling down the river. From the early part of February to the end of July was the best season for many years for line-fishing, an average of over 200 dozen whiting (all big fish) being caught daily from Commons Point to mouth of river and in the bay.

During last mullet season great shoals of sea-mullet came into the bay, but through keeping wide off could not be killed as the nets could not reach them, only about thirty boatloads being killed.

On the whole this has been a very prosperous season, as we have had no freshes in the river during the winter. The only fresh of any consequence was in February, which brought down a fair quantity of white fish, from which the fisherman and public derived the benefit. If a fresh occurs in our river during the winter months, it takes some time to recover; but during the warm weather when fish are travelling, a fresh in the river does no harm.

Prawns.—I am pleased to state that prawns are very plentiful this year, five boats and crews being employed at Salt Pan Creek, ten boats and crews at Cook's River, besides private boats. Prawns have also been caught in fair quantities at Lady Robinson's Beach, Kogarah, and other bays, and in all the boats crews have done fairly well.

Oysters.—At the present time there is an area of 14,700 yards under lease, besides 1,400 yards applied for; all the leases have greatly improved during the year, and 857 bags have been sent to market, an increase of 326 bags over last year, and all the leases are still well stocked. All oysters after being laid down take the disease, and a small percentage of those growing naturally are slightly touched; some of the lessees have tried experiments to get rid of the disease, but have failed. I think the only remedy is to pick up all diseased oysters and throw them away, which the lessees do not seem inclined to do.

I have, &c.,

J. D. GRANT,

Inspector of Fisheries.

Sir,

Wollongong, 30 January, 1899.

I have the honor to furnish the following report on the fisheries under my supervision for the year ending 31st December, 1898:—

During the year large shoals of fish have been reported to your inspector as having been seen at sea.

The first shoals being reported during February, the varieties noticed being whiting, bream, sea and flat-tail mullet.

Large shoals of sea-mullet were noticed working in a northerly direction during the months of February, March, April, and May. Very few of these fish worked into this fishery. The

The only reason I can assign for this is that the sea entrance through sand-bar being on the north side of Windang Island, these shoal fish invariably work away from the sea-beach to the north of the island, and consequently miss the entrance to lake. Further, I have noticed that, with the channel to the south of this island, they have no difficulty of entering.

A very large shoal of sea garfish was reported travelling north during the month of October, also a large shoal of salmon was reported as being off the coast during the same month.

None of these shoals of fish were utilised.

The total output for 1898 was 5,936 baskets of fish, of which 4,646 were forwarded to the metropolis, the balance (1,290) being consumed in this district.

Prawns have not been worked to any extent, only four baskets being forwarded to the Sydney market.

The average number of men at work during the year was thirty, and boats eighteen.

Several of the best hauling grounds in the lake continue to be so weeded up as to be almost useless for hauling purposes.

The closing against net-fishing of the tributaries of the lake, with the sea entrance, has had a beneficial effect on the continuity of supply of young fry of the several varieties in which the lake abounds, the supply of which is very abundant in all parts of this fishery.

The entrance of lake to the sea sanded up during the early part of December, thus preventing the ingress and egress of shoal fish.

Amateur line fishermen have had fair sport in this fishery during the year, the varieties caught being whiting, bream, tarwhine, flathead, and tailer.

Crayfish, as hitherto, have not been utilised, except a few that have been caught by amateurs off Wollongong.

Amateurs have had good sport on the offing fishing-grounds. Schnapper, of which large numbers have been caught, being the principal variety, with a fair quantity of teraglin, flathead, nannegai, and morwong.

During the month of January several amateur line fishermen reported to me that teraglin and schnapper were full roed.

#### *Tom Thumb Lagoon.*

This water is fairly well stocked with whiting, bream, flathead, and mullet, and has not been netted to any extent.

The oyster deposits in Tom Thumb Lagoon and the entrance of Lake Illawarra are in fair condition, no disease existing. There was a fall of spat in both these waters during the early part of the year.

I have, &c.,

D. W. BENSON.

Sir,

Sydney, 7 March, 1898.

I have the honor to report that I accompanied Mr. George Griffin, a representative of the Queensland Fisheries, to the Hunter River oyster-beds, with a view to inquire into the worm disease there existing, to ascertain if it is similar to the disease now rampant in Moreton Bay.

Mr. Gibbins' foreman, Mr. Poile, met us with a boat on the 3rd and 4th instant, and conveyed us to the oyster-beds, giving us every assistance in prosecuting the work in hand.

We started on Lease No. 334, an area of 2,000 yards, on Spit Island in the Back Channel, and had several samples brought up by the dredge. They are badly affected here, worms being easily seen with the naked eye in the majority of oysters, and the mud being covered in some by half a dozen layers of thin shell. We also examined several leases off Sandy, Goat, and Spectacle Islands, and found the disease freely showing in these localities, which are all deep-water beds and worked with the dredge.

On Spit Island there is a vast heap of shells, some thousands of baskets, which have been dredged from badly-affected areas, and placed there for eighteen months to dry.

The disease seems by this process to be completely driven out of the shells, and the lessee is now shipping them to the Camden Haven waters to lay down as cultch.

Mr. Gibbins is grappling with the disease in a very practical manner. He has several hands employed in thoroughly dredging the affected areas, and has the oysters cast into heaps on dry land for some months to dry.

This seems to be the best way to check its spread, but it is doubtful even if this treatment will completely eradicate it, as it is only natural to suppose that the worm is carried about in barnacles on dirty bottomed ships, and possibly by birds.

If these surmises are correct, it would account for the disease being introduced into the different rivers on our coast.

Portions of this river are exceptionally favourable to the rapid growth of the bivalve. On one bank out in the stream I was shown oysters of ten months' growth which would not go through an inch and three-quarters' ring, quite healthy and fit for market, and I know of no other water in the Colony where a similar growth is obtained in so short a period.

Mr. Griffin is of opinion that the worm in these waters is in some respects similar to the one they have in Moreton Bay, but that it is not the same.

The worm is said to enter the oyster when it is feeding, and after collecting a deposit of mud, it spawns in the oyster about November, depositing bags of eggs, the young of which set to work to form another layer of mud on the top of the deposit already existing in the fish, and this is covered over by another thin shell, and so on, until the oyster completely exhausts itself and dies.

The most effectual way to cope with the disease is, in my opinion, to freely dredge the areas badly affected, just prior to the spawning season of the worm, and to place the oysters and shells on dry land for some months to be thoroughly dried.

I have, &c.,

J. A. BRODIE,

Chief Inspector.

Memo.

Memo.

22 December, 1898.

During my visit to Camden Haven I inspected the majority of oyster-beds with the following results:—

No. 347B. This is the southernmost lease on the western shore. It has a shelly bottom; is well stocked with large-shelled oysters in very good condition. They have been laid down on this bed from the mangroves, and there is a very good show of young stuff.

I made two hauls and got good results.

Oysters will not thrive south of this lease, as it is sandy bottom.

As the north end of 347B and the south end of 347 terminate opposite the centre of the mouth of Saltwater Creek, I instructed Mr. Gibbins to put stakes at each side of the mouth of the creek. The oysters are on a bank in centre of river.

No. 347. This is a fattening-ground. Bankers laid down here last winter show a splendid growth, with plenty of young stuff attached.

No. 348. A fattening-bed, on which bankers from the rocks at the entrance and Hunter River shells were laid down last winter.

I made two hauls and got some fine oysters, with a splendid show of young stuff.

No. 348A. A fattening-bed, where bankers have been laid down. I made two hauls with dredge and got very good oysters, with a good show of young stuff. This water is about 7 feet deep.

In May, 1898, there were 148 bags of bankers laid down in No. 348. In April, 176 bags from Gogley's Island, 15 bags from Chinaman's Bay, 52 bags from the Heads, and 303 tons of shells from the Hunter River.

No. 346. A fattening-bed, on which bankers were laid down in the winter. A good show of oysters, with plenty of young stuff.

No. 708. Made three hauls, and found oysters large and in good condition. There are no oysters on the foreshore, but plenty in deep water near centre of stream, about 11 feet deep.

No. 1,244. This is a shallow bed, with oysters along the foreshore. Some Hunter River shells were laid down here, and there are Mangrove and Cobbler Peg oysters.

No. 791. Has a good supply of bankers in good order and well grown on the northern end, but the southern end is sandy, and has no oysters.

These oysters were turned, and laid out in April.

No. 535. Consists of bankers and oysters on ballast stones, and plenty of them.

No. 533. A foreshore bed, with a splendid show on ballast stones, which are removed to deep-water beds in winter.

No. 1,439. This lease is about 2 miles away from the general oyster-beds up Stinkey Creek.

I made three hauls with the dredge, and got some very fine oysters, well grown, and in good condition. The water is about 10 feet deep in the centre of the stream, and the oysters grow up to the foreshore. This is a fattening-ground, and has very little young stuff. 204 bags were taken off this lease in 1897.

No. 1,437. Adjoins the previous lease, and is all sand, except the southern end, where there are a few oysters.

It is a peculiar thing there are no oysters on this creek between these two leases and the main river.

No. 849. Mangrove and Cobbler Peg oysters in great quantities; also a good show on the ballast stone around the foreshore.

The oysters from this lease are used to stock the deep-water beds. This lease is not located on the river in accordance with the plan.

The area worked under this lease and the adjoining one, No. 742, is some hundreds of yards to the south of those charted on the map,

No. 1,273. Has a frontage to the southern portion of Gogley's Island, and is plentifully supplied with Mangrove and Cobbler Peg oysters of a small size on the foreshore, while in the deep water they grow large and marketable.

It is plentifully supplied with young stuff, which is removed to the deep-water leases in the month of April yearly.

No. 1,274. Has a frontage opposite the previous lease, and the same remarks apply to it as No. 1,273.

Nos. 861, 812, 2,241. These three leases with No. 1,273 take in the whole of Gogley's Island.

They are all bountifully supplied with Mangrove and Cobbler Peg oysters, while No. 2,241 has a very excellent show of large oysters in deep water.

No. 1,209. Well supplied with oysters on ballast stones.

This lease is wrongly charted on the map; it should adjoin No. 542, as described in the lease.

No. 2,175. Has been erroneously placed and described in the lease as starting from the southern end of No. 1,209. As there was no vacant foreshore between 1,209 and 542, it will be necessary to amend the lease and place it at the north-eastern end of No. 1,209.

Through the errors made in Nos. 1,209 and 2,175, the public oyster reserve of 500 yards is wrongly described, and it would be advisable to amend the description of same to start from the north-west corner of No. 2,175 when amended and run 500 yards northerly.

There will then be 100 yards of good oyster ground vacant at the northern end of the termination of the public oyster reserve.

The training-wall for the breakwater is nearly completed, and when finished will run from the entrance up to Gogley's Island, and will leave two clear entrances, one for the channel, and the other will allow the water to have a clear run round Gogley's Island into the river. As far as I can judge at present none of the leases will be affected by the deepening of the channel and the training-wall.

The office map does not show the contour of the shores correctly, and should be amended, and the leases out of position will require to be properly placed.

The result of my inspection shows that this is one of the best, if not the best, of oyster-growing grounds in the Colony, and is worked to the best advantage both as regards production and continuity of supply by the lessee, Mr. Gibbins.

J. A. BRODIE,  
Chief Inspector.

Sir,

Sir,

Sydney, 23 May, 1898.

On the 20th instant I visited Lake George, with a view to inquiring into the fisheries there.

At the present time the lake is not more than 15 miles in extent from north to south, the waters having receded between 2 and 3 miles owing to the continued dry weather in the district.

The average depth was 7 feet a few years ago, but now it is estimated that it does not exceed 5 feet, and the water is quite brackish and unfit for drinking purposes.

From local information I ascertained that the waters are plentifully supplied with codfish and carp, the latter forming one of the principal foods for the cod.

Crayfish are also here in great quantities, and, on account of the abundant supply of fish-food, the efforts made by the local anglers to catch the cod with the hook and line meet with very little success.

The cod in these waters are said to be of an excellent flavour, and are much appreciated by the local residents of Bungendore, who readily pay 6d. a pound for them.

If it is at any time considered advisable to experiment with the cod with a view to trying the fry in the eastern waters, there is very little doubt that some full-grown female fish could be obtained in the spawning season and transported in casks to the Prospect Hatchery, where the ova could, in all probability, be taken from them and hatched out.

There are no professional fishermen here, as the waters offer very little inducement to fishing as a livelihood.

Nets cannot be hauled, on account of the snags and stumps all over the lake, and it is only at the mouths of the creeks that meshing-nets are ever used.

At the present time there is so little water flowing into the lake from the creeks that they are not now used.

There are four tributaries emptying into the lake, into two of which trout have at various times been liberated, but there is no trace of them now, nor have they been seen by the local people.

The country through which these creeks flow is very flat and the water rather sluggish, consisting at the present time of a long chain of water-holes with muddy and sandy bottoms.

These streams appear to me to be very unsuitable for the propagation of trout, and I think it inadvisable to send any more for liberation here.

In view of the proposed appointment of Senior-constable Maude as an Assistant Inspector of Fisheries, it would perhaps be as well to notify Messrs. Patrick Osborne and Nathaniel Powell that their services will not now be required as honorary Inspectors.

The fisheries boat is in charge of Mr. W. H. Glover, and is very badly in want of a couple of coats of paint.

I have, &amp;c.,

J. A. BRODIE,

Chief Inspector.

21.
