<b>P</b>		
<b>POINTS OF ORDER (continued) :—</b>		
<b>RULINGS OF SPEAKER (continued) :—</b>		
That motion in respect to expenditure from Revenue and Loan Account was irregular in form as submitted, as some of the Resolutions were inconsistent with each other, 143.		
That Motion of Adjournment in reference to payment of legal expenses of Sergeant McKee without the consent of Parliament, should not be discussed, as the item could be discussed in Supply, 193.		
That Hon. Member was in Order in Committee of the Whole in discussing <i>Hansard</i> reports of Speeches made in past Sessions, provided they were relevant to subject under discussion, 250.		
That the matter of referring the Central Railway Station, Devonshire-street, to the Public Works Committee, instead of submitting to Parliament the Hyde Park scheme recommended, was in Order; also, that the explanation of the Minister as to the probable revenue to be derived from the work was clearly that no revenue would result, 265.		
That motion for adjournment in reference to prosecution of Kate Burns, at Bourke, was not in Order, as matter could be discussed in Committee of Supply. (Mr. Speaker also referred to previous rulings), 282.		
That Member was not in Order in discussing any particular item in Committee on the Appropriation Bill which had been passed by Committee of Supply, 307.		
That Member was not in Order in moving in Committee the omission of an item in the Appropriation Bill, 307.		
That the proposed amendment on the Motion to refer the matter of the Extension of the Railway into the City was in accordance with the terms of the Public Works Act, 315.

Clerk adjourns House in the absence of the Speaker and Deputy-Speaker at time appointed for meeting, 251; Standing Order amended in reference to absence of Speaker and Chairman of Committees, 265; Assent reported, 271.		
Submits Nomination to fill vacancy on Public Works Committee separately, 328.		
Reports letter from Governor enclosing Despatch in reference to Address on Federal Constitution Bill, 201.		
<b>RULINGS OF :—</b>		
That a motion for adjournment of the House could not be moved before the Address in Reply to the Governor's Opening Speech had been dealt with, 4.		
That motion for adjournment in reference to Australian Jockey Club Trust was out of order as it was not definite, and introduced another subject for discussion, 84.		
That amendment on motion to declare the Member for Paddington, <i>Mr. Neild's</i> , seat vacant, to refer matter to the Elections and Qualifications Committee was in order, 88.		
That an amendment on a proposed amendment on the Motion of Censure against the Government was relevant to the proposed amendment, 107		
That an amendment on a proposed amendment on the Motion of Censure was relevant to the original motion, 107-108.		
That after the mover of a motion, on which an amendment has been proposed, had replied, an Hon. Member could only address the House on the amendment, 136.		
That amendment, on motion for removal of Green Rocks, in connection with Hunter River Flood Mitigation Scheme, to refer matter to the Public Works Committee, was in order, 142.		

REFERENCES TO THE VOTES AND PROCEEDINGS, VOL. I—18TH PARLIAMENT—THIRD SESSION, 1899.	PAPERS ORDERED TO BE PRINTED.	
	VOL.	PAGE.
<b>S</b>		
<b>SPEAKER (continued) :—</b>		
<b>RULINGS OF (continued) :—</b>		
That motion in respect to expenditure from Revenue and Loan Account was irregular in form as submitted, as some of the Resolutions were inconsistent with each other, 143.		
That motion of adjournment in reference to payment of legal expenses of Sergeant McKee without the consent of Parliament, should not be discussed, as the item could be discussed in Supply, 193.		
That Hon. Member was in Order in Committee of the Whole in discussing <i>Hansard</i> reports of Speeches made in past Sessions, provided they were relevant to subject under discussion, 250.		
That the matter of referring the Central Railway Station, Devonshire-street, to the Public Works Committee, instead of submitting to Parliament the Hyde Park scheme recommended, was in Order; also, that the explanation of the Minister as to the probable revenue to be derived from the work was clearly that no revenue would result, 265.		
That motion for adjournment in reference to prosecution of Kate Burns, at Bourke, was not in Order, as matter could be discussed in Committee of Supply (Mr. Speaker also referred to previous rulings), 282.		
That Member was not in Order in discussing any particular item in Committee on the Appropriation Bill which had been passed by Committee of Supply, 307.		
That Member was not in Order in moving in Committee the omission of an item in the Appropriation Bill, 307.		
That the proposed amendment on the motion to refer the matter of the Extension of the Railway into the City was in accordance with the terms of the Public Works Act, 315.		
That an amendment to alter the route on the motion to carry out the Extension of the Railway into the City, as recommended by the Public Works Committee, was an evasion of the Public Works Act, 315.		
<b>SPECIAL ADJOURNMENT (See "ADJOURNMENT").</b>		
<b>STAGE CARRIAGES BILL :—</b>

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## DEPARTMENT OF LANDS.

(NINETEENTH ANNUAL REPORT.)

*Printed under No. 4 Report from Printing Committee, 24 August, 1899.*

To the Honorable J. H. Young, M.P., Secretary for Lands.

Sir,

Department of Lands, Sydney, 4th July, 1899.

I have the honor to submit for your information the nineteenth Annual Report of the business of the Department, being that for the year 1898.

*Legislation.*

A small but very important Bill passed into law during 1898, viz., "The Crown Lands Act, 1898." This Act consists of only four sections. It settled the basis on which improvements to an incoming tenant should be appraised, and thus put to rest a question troublesome in itself, and one which, under the interpretation placed upon the pre-existing law, promised considerable and undue hardship to the selector. The Act in question provides that the value that shall be appraised and paid shall be the value of the improvements at the commencement of the incoming tenant's title; shall be their value to him; shall not include any value which may be due to the inherent capabilities of the land; and shall in no case exceed the cost of making the improvements.

In addition to this, the Act provides that when lands are set apart for homestead selection, settlement lease, &c., a preliminary appraisalment will not be necessary, but it will be sufficient if an official valuation of the improvements be gazetted, which valuation will be subject to correction on a subsequent appraisalment.

The Act also provides that in valuing water-frontage land (on the rescission of the usual reservation by the Crown of 100 feet from high-water mark), the price payable for the purchase of the land shall be the difference in value of the adjoining land consequent upon the addition of the reserved land to it.

*Legal Decisions.*

*Minister for Lands v. Chapman.*—In this case, Chapman was the holder of a conditional purchase, the application for which was confirmed by the Local Land Board on the 21st January, 1892. On the 17th April, 1896, the Minister referred to the Land Board, in pursuance of section 20 of the Crown Lands Act of 1884, the question whether any statements made by Chapman in his declaration which accompanied his application for the land were false. The Land Board in May, 1896, found in Chapman's favour.

On the 18th August following the Minister referred the case to the Land Appeal Court, under section 59 of the Crown Lands Act of 1895, on the ground that the Board had failed or neglected to discharge its duty according to law. The Land Appeal Court, in the following November, remitted the case to the Land Board, who, upon rehearing the case, indorsed their previous finding. The Minister again referred the case to the Land Appeal Court, under section 59 of the Act of 1895, on the ground that the rights or interests of the Crown were injuriously affected by the Board's

Board's decision. The Land Appeal Court dismissed the Minister's reference, holding that the Minister had no power to make the reference. A special case was then stated for the Supreme Court, and that Court decided that once a decision has been given under section 20 of the Act of 1884, there is no provision in the law giving the Minister the right to reopen the matter. (N.S.W.L.R., xix, page 9; W.N., xiv, p. 141.)

*Minister for Lands v. Stairs.*—The decision in this case followed the decision in the preceding case. (*S. M. Herald*, 5 March, 1898.)

*Minister for Lands v. Nelson.*—Certain lands were, on the 22nd August, 1896, set apart for settlement lease, to become available on and after the 17th September following:—On the 21st August, 1896, the land was "temporarily reserved and exempt from sale or lease other than settlement lease." Part of the land had been surrendered to the Crown in an exchange under section 47 of the Act of 1895, and on the 21st August, 1896, the lands were proclaimed to be Crown lands for the purposes of the Crown Lands Acts, but there was no notification declaring the land to be open to conditional purchase. When the land became (on 17th September) available for settlement lease, several applications for settlement leases were made, and among the applicants for a settlement lease were Richard Lumby and James Nelson. A ballot was held, which resulted in Lumby coming first and Nelson twenty-second. Nelson thereupon withdrew, and applied for an additional conditional purchase and a conditional lease, in pursuance of section 11 of the Act of 1895. The Land Board confirmed Lumby's application, and disallowed the application made by Nelson. Nelson appealed to the Land Appeal Court, and that Court reversed the Land Board's decision.

The case then came before the Supreme Court as a special case, and the Supreme Court decided that the land was not available for conditional purchase—1st, because it was land which had been exchanged under section 47 of the Act of 1895, and there was no notification declaring it to be open to conditional purchase; and, 2nd, because there was a notification under section 39 of the Crown Lands Act of 1889, expressly reserving it from sale or lease other than settlement lease. (N.S.W.L.R., xix, p. 17; W.N., xiv, p. 137.)

*Hill, Clark, & Co. v. Dalgety & Co.*—This was a decision of the Privy Council, reversing a decision of the Supreme Court in which the Supreme Court (N.S.W.L.R., xvii, p. 282; W.N. xiii, p. 81) held that the Land Appeal Court has no power at the request of one of the parties to state a case under the Rabbit Act of 1890 for the opinion of the Supreme Court. (N.S.W.L.R., xix, p. 98; W.N. xiv, p. 175.)

*Flood v. Garnsey and Wife.*—On the 2nd September, 1886, Edith F. Flood made applications for a conditional purchase and conditional lease, which were confirmed on 18th July, 1887. On the 21st September, 1892, the purchase and lease were notified as forfeited, but on 25th October, 1892, the Minister approved of the forfeiture being provisionally reversed, and a notification of the reversal appeared in the *Gazette* of 28th October, 1892. On the 19th May, 1893, this provisional reversal of forfeiture was revoked. On the 27th October, 1892, Isabella Garnsey (then Cambridge) applied for the land as a conditional purchase and a conditional lease, and on the 25th May, 1893, Ida Flora Flood lodged similar applications. The Land Board confirmed Isabella Cambridge's applications on 20th June, 1893, and disallowed those of Ida Flora Flood on the 14th of the following August. Ida Flora Flood appealed to the Land Appeal Court, and her appeal was dismissed. A case was subsequently stated for the Supreme Court, the question being whether the provisional reversal of the forfeiture (which reversal was itself subsequently reversed) prevented the lands from being Crown lands for the purpose of Isabella Cambridge's applications. The Supreme Court held that the lands were not Crown lands open to selection. (N.S.W.L.R., xv, p. 330.) On the 14th September, 1894, the Land Appeal Court made an order directing the Land Board to confirm Ida Flora Flood's applications, and the Board carried out this order on the 3rd December, 1894. On the same day the Land Board reversed the order of the 20th June, 1893, and disallowed Isabella Cambridge's applications. Isabella Cambridge then appealed to the Land Appeal Court, which held that the Board could not reverse their former order without the Appeal Court's direction. The Appeal Court, however, on the 19th June, 1895, made an order directing the Land Board to rehear the case, and to disallow the application of Isabella Cambridge.

On

On the 20th October, 1895, a rule was obtained by the appellants calling upon the respondents to show cause why the verdict of the Supreme Court should not be set aside and a new trial granted; but on the 26th August, 1896, the Court refused to allow the question, which was decided on the special case to be reopened. An appeal was then made to the Privy Council against this order. The Privy Council, however, affirmed the order of the Supreme Court, stating that it would be quite contrary to the design and purposes of the Land Laws and the institution of the Land Appeal Court that the rival claimants of the land should be allowed to raise the question which had been decided by the Supreme Court on the special case in an action in that Court and have its decision reviewed. (xix N.S.W.L.R., p. 342; W.N. xv, p. 162.)

*Ex parte F. Harper.*—The question in this case was whether it was open to the Minister to refer to the Land Board, after a conditional purchase had been confirmed, the question whether the conditional purchaser made a false declaration when he applied for the land. It was argued that, under section 13 of the Act of 1889, it was the duty of the Land Board to be satisfied as to the *bona-fides* of the applicant, and that the land was taken up for his sole use and benefit, and that once the Board is satisfied on that point their decision is final.

The Supreme Court decided that, although the Board's finding was final as against everybody except the Crown, the Minister had power to refer the case to the Board, in pursuance of section 20 of the Act of 1884; that the Board had jurisdiction to deal with the matter; and that, if it transpired that the confirmation of the application had been brought about by any false statement in the declaration, the Minister could forfeit the land. (N.S.W.L.R. xix, p. 133; W.N. xiv., p. 194.)

*Attorney-General v. Walters.*—This was a judgment of the Privy Council reversing a judgment of the Supreme Court. An original and an additional conditional purchase were made under the repealed Acts, subject to a condition that the land should be improved to the extent of 6s. per acre within three years, and to the extent of 10s. per acre within five years from date of purchase. In accordance with the provisions of section 17 of the Act of 1875, the Minister directed that the period for effecting improvements should date from the date of survey of the land, viz., the 26th February, 1885. In June, 1888, the Land Board, on an inquiry under section 20 of the Act of 1884, found that improvements to the value of 6s. per acre had been made within three years from date of survey. This finding of the Board was so far final. On the 4th August, 1891, the Minister referred to the Land Board the question whether 10s. per acre worth of improvements had been made within the five-year period. In December, 1891, the Land Board found that the original conditional purchase never was improved to the value of 10s. per acre, and that the additional conditional purchase was never improved at all.

It appeared to be a question whether the second reference (*i.e.*, on the 4th August, 1891), was under section 13 or section 20 of the Act of 1884; but the Privy Council, differing from the Supreme Court, thought that the reference must be taken to have been made under the provisions of the latter section.

The Chief Justice held that the power of the Minister to declare a forfeiture had, since the repeal of section 18 of the Act of 1861, been completely swept away; that the reference was under section 13 of the Act of 1884; that it bound no one; and that the Minister, if he considered the case to be one that justified forfeiture, should refer the specific question of *forfeiture* to the Land Board. The Privy Council held that it was sufficient for the Land Board to find on the question of fact whether the statutory requirements connected with the conditional purchases had been fulfilled, and that as the Board had found that the conditions had not been fulfilled, the Minister had the discretionary power of declaring a forfeiture. They said: "The Act of 1884 does not prescribe any particular form of reference under section 20. There seems to be no reason why a decision upon a reference framed in the words of subsection (ii) of section 13, though not containing anything pointing directly and in terms of section 20, should not be final under the provisions of that section, if the question is really a question of forfeiture—that is, an issue of fact, which, if determined against the conditional purchaser, would render the purchase liable to forfeiture." (N.S.W.L.R. (Equity) xix 64; W.N. xv, p. 17.)

*Ex parte James Bennett.*—Bennett was the holder of a conditional purchase, applied for in May, 1891. The Minister, in pursuance of section 20 of the Crown Lands Act of 1884, referred to the Land Board the question whether any statements in

in the declaration lodged by Bennett when he applied for the land were false, and whether any evidence given on oath in connection with the purchase had, within the meaning of section 135 of that Act, been given for the purpose of misleading any officer, &c., or had wilfully misrepresented facts. The Board found that a certain statement made by Bennett did wilfully misrepresent facts. Application was made for a prohibition to the Board and the Minister.

The Supreme Court held that a prohibition would not lie against the Minister, he not being a Court; and, so far as the Land Board was concerned, there was nothing to prohibit, as the functions of the Board had come to an end. (N.S.W. L.R., XIX, p. 139; W.N. XIV, p. 196.)

*Attorney-General v. Love.*—The important question involved in this case was, whether the English Nullum Tempus Act (9 Geo. III, c. 16) is in force in this Colony, and applies to land which has never been granted out or dealt with by the Crown—whether sixty years adverse possession holds good against the Crown. The Privy Council, supporting a judgment of the Supreme Court, decided the question in the affirmative. (N.S.W.L.R., XIX, p. 205; W.N., XV, p. 132.)

*Minister for Lands v. Watt and Gilchrist.*—A homestead selection was applied for by James Willmott of land which had been withdrawn from the Genanagic Pastoral Holding, under the provisions of section 3 of the Crown Lands Act of 1895.

The block contained improvements; and the Land Board, when they confirmed Willmott's application, found that, as the lands had been withdrawn under the section referred to, the improvements were the property of the pastoral lessee.

The Minister referred the case to the Land Appeal Court, under the provisions of section 59 of the Act of 1895, on the grounds that the rights and interests of the Crown were injuriously affected by the Land Board's decision, and that the Board had failed to discharge its duty according to law. The Land Appeal Court held that it had no jurisdiction to entertain the Minister's reference, inasmuch as the Minister had offered no evidence in support of the allegations in the reference; that there was no evidence before the Board or the Court that the Crown is entitled to the improvements; and that the mere fact that the Board had arrived at an erroneous conclusion does not sustain a charge of default in the performance of judicial duty.

The case came before the Supreme Court, and that Court held that it may have been that as the Minister offered no evidence before the Land Appeal Court, that Court should have found in favour of the pastoral lessee, but that the Land Appeal Court had jurisdiction and should have decided the matter. (N.S.W.L.R. XIX, p. 258; W.N., XV, p. 65.)

*Bolger v. Minister for Lands.*—The question in this case was whether Regulation 49 under the Crown Lands Acts is *ultra vires*. That Regulation provides that two or more homestead selection blocks may be included in one application and only one deposit and survey fee paid.

On the 18th November, 1897, James Bairstow lodged an application including twenty-one blocks. On the same day Martin Bolger lodged an application for only one block. A ballot was held, at which Bairstow was successful for the particular block for which Bolger had applied. The Land Board confirmed Bairstow's application, and disallowed that of Bolger. Bolger appealed to the Land Appeal Court, but that Court dismissed the appeal, holding that Regulation 49 is not *ultra vires*. A special case was then stated for the Supreme Court.

The Supreme Court held the Regulation to be *intra vires*, and saw nothing inconvenient in it, or anything in it inconsistent with the Act. The Chief Justice applied the principle laid down in *Blackwood v. the London Chartered Bank of Australia* (5 L.R.P.C. 92), in which the Lord Chancellor said:—

“If these Regulations, properly construed, are found to be reasonable and convenient Regulations for carrying the Act into full effect, though they may govern, not only the form, but the effect of instruments of transfer of those rights which precede the grant of leases; if they are found to relate to matters arising within the provisions of the Act—which they unquestionably do; if they are found to be consistent with the provisions of the Act—which they unquestionably are; and, if they are not in the Act expressly provided for—then their Lordships cannot do otherwise than come to the conclusion that they are valid in law, and that there is no ground for the objection that they are *ultra vires*.” (N.S.W.L.R. XIX, p. 275; W.N. XV, p. 54.)

*Minister*

*Minister for Lands v. Ricketson and the Australian Mortgage Land and Finance Company (Limited).*—The respondents were the holders of the Billabong Pastoral Holding, an extension of the lease of which had been granted under the provisions of section 43 of the Crown Lands Act of 1889. The leasehold area contained about 30,000 acres. By virtue of the provisions of section 78 of the Crown Lands Act of 1884, 400 acres were withdrawn from the pastoral lease and the area thus withdrawn contained a tank known as Bartley's Tank. The Land Board appraised the compensation payable under two headings, viz., one amount to represent the value of the lease of the 400 acres for the unexpired term of the lease, and another to represent the value of the improvements. These values were ascertained irrespective of the effect of the withdrawal upon the value of the lessees' other lands, the Board having limited the inquiry to the area actually withdrawn.

An appeal was made by the lessees to the Land Appeal Court and their appeal sustained, and subsequently the case came before the Supreme Court at the instance of the Minister for Lands.

The Supreme Court ruled that the lessee should receive compensation to the extent of their loss, and that their loss should be tested by what was the value of that of which they were deprived. They held that the compensation payable should be ascertained by taking the two things for which compensation was to be given—the unexpired term of the lease, and the improvements—together as being one; and the whole area of the holding, with all its improvements thereon, should first be assessed, and then the value of the holding, less the area and improvements withdrawn—the difference representing the amount which the lessees should receive as compensation. (N.S.W., L.R., xix. p. 281.)

*Landale v. Minister for Lands.*—Landale was the holder of a pastoral holding, and in accordance with the provisions of the Crown Lands Act of 1884, made application for the division of his holding into a leasehold area and a resumed area. He forwarded with his application a statement in which he alleged that the area within the pastoral holding amounted to 24,000 acres, less a claim for about 6,000 acres, thus reducing the area to 18,000 acres; but a plan which he at the same time forwarded, shewed the area of the proposed leasehold area as 13,925 acres and that of the proposed resumed area as 14,816 acres—28,741 acres in all.

The holding was divided in the manner proposed by Landale, and the division notified in the *Gazette* of the 11th July, 1885. In 1887 the rents of the leasehold and resumed areas thus created were determined, and in the *Gazette* of 12th September of that year the rents were calculated upon an estimated acreage of the leasehold area, stated as 13,925 acres, and an estimated area of the resumed area, stated as 14,816 acres.

The acreage of the leasehold and the resumed areas were over-estimated to the extent of 2,100 and 1,300 acres respectively, and the Crown granted a refund of the rent paid in excess between the years 1890 and 1897, but declined to grant a refund for an earlier period.

The pastoral holding had not been surveyed.

Landale claimed a refund of rent paid in excess between 1885 and 1890, as there had been a mistake in the area and this was a mistake of fact.

The Supreme Court, while explaining that money might be recovered if paid under a mistake of facts even though the party paying may at the time of payment have had means of knowledge of which he neglected to avail himself, held that the case was one where there had been no mistake, as both parties were aware there had been, and probably would be, no actual measurement; that Landale had himself put forward and was content to take an estimated acreage as the basis upon which rent was to be determined and paid. The case was held to be governed by the principle that "when parties have agreed to act upon an assumed state of facts, their rights as between themselves are justly made to depend on the conventional state of facts and not on the truth." (N.S.W.L.R. xix, page 314.)

*Ex parte Fielding.*—W. Fielding purchased a certain conditional purchase from the Sheriff. The Land Board, after an inquiry under section 20 of the Crown Lands Act of 1884, found that the conditional purchase was liable to forfeiture for breach of the condition of residence. Fielding appealed to the Land Appeal Court upon the ground (*inter alia*) that the decision was against evidence. The Appeal Court allowed fresh evidence to be given before them, and then decided the question how far the first ground (that the decision of the Board is against evidence, and the weight

weight of evidence) had been made good upon the whole of the evidence before the Court. Their decision was: "We have carefully perused and considered the evidence before the Board, and in the light of the fresh evidence taken before this Court at appellant's request; we find ourselves unable to say that the Board's finding is one which reasonable men should not have arrived at; and, consequently, the Court must decline to disturb that finding, except so far as it contains what purports to be a declaration of forfeiture. This is not within the powers of the Board, and must be eliminated from the finding."

The Court refused to state a case for the Supreme Court on, the ground that no question of law was involved. Application was then made for a writ of mandamus to compel the Court to state a case on the grounds—

- (1.) That further evidence having been taken before the Court in the appeal, it became a matter of rehearing by the Court, and should have been decided by the Court on its merits, having regard to the whole of the evidence, and without regard to the finding of the Land Board.
- (2.) That the Court proceeded upon a wrong principle of law in dismissing the appeal on the ground that it could not determine that the finding of the Board was not one that reasonable men might have come to.

The Supreme Court, although thinking the Land Appeal Court's decision was somewhat inartificially worded, came to the conclusion that that Court had formed an independent judgment, and refused to grant a mandamus. (W.N. xv, p. 45.)

*Ex parte Simpson.*—W. H. Simpson was the holder of a non-residential conditional purchase within a special area. The purchase was applied for, and the application confirmed, before the passing of the Crown Lands Act of 1895.

Simpson, by virtue of the provisions of section 36 of that Act, applied to have the value of the land determined by appraisalment. On the 11th December, 1895, the Land Board appraised the land at £4 per acre, ignoring the fact that the price of a non-residential is double that of a residential conditional purchase. On the 13th February, 1896, the Minister accepted the appraisalment; but, on the 13th December, 1897, referred the case to the Land Appeal Court under section 59 of the Act of 1895, on the ground that the Land Board should have appraised the value of the land as held under non-residential conditional purchase.

A writ of prohibition was issued against the Land Appeal Court and the Minister.

The Supreme Court held that as section 36 refers to the provisions of section 6 of the Crown Lands Act of 1889, and the latter section limits the period within which the Minister may refer an appraisalment to the Land Appeal Court to one month, the Minister could not refer the case after the expiration of this period, and that section 6 of the Act of 1889, and section 36 of the Act of 1895, are not set aside by section 59 of the latter Act. (W.N. xv, p. 10.)

*Re J. H. Smith.*—Reference was made by the Minister to the Land Board as to whether J. H. Smith, the holder of a conditional purchase in the Warren district, had made a false declaration when he applied for the land, and also whether he had given false evidence before the Land Board, upon inquiry as to the fulfilment of the conditions imposed by the Act. Application was made to make absolute a rule nisi for a writ of prohibition directed to the Land Board and the Minister, to restrain them from proceeding on the reference. The Court discharged the rule with costs. (W.N. xv, p. 12.)

*Patrick v. Johnston.*—This was a special case stated by the Land Appeal Court. Johnston was the holder of a conditional purchase and conditional lease, and Patrick lodged a complaint with the Land Board that Johnston had not fulfilled the conditions attaching to his land. The Land Board held that Patrick was not entitled to lodge the complaint as he had no interest in the land. Patrick appealed to the Land Appeal Court, but that Court dismissed the appeal. The case came before the Supreme Court, where it was decided that although Patrick had no legal or equitable interest in the land, yet he had held the land under occupation license, which was interrupted by Johnston selecting the land; that up to this time he had the interest in the land which the occupation license represented; and that he knew that if the conditions were not complied with the lands might become forfeited and be added to the land held by him under license. The Court could not hold that Patrick was a mere stranger in the matter, and accordingly decided that he was entitled to lodge the complaint. (W.N. xv, p. 92.)

*Ex*

*Ex Parte Charles Campbell.*—Campbell applied for a settlement lease, but the Local Land Board not being satisfied as to the applicant's *bona fides* disallowed the application. The Land Appeal Court, on appeal, upheld the Board's decision, and refused to state a case for the Supreme Court, holding that the Board's decision turned, not upon a question of law but on one of fact. Campbell applied for a writ of mandamus, directing the Land Appeal Court to state a case; but the Supreme Court said it was impossible for that Court to say that the Land Board ought to have been satisfied upon the evidence before them; and even if it did say so it would carry the case no further, because the Minister for Lands was bound by Act of Parliament to act upon the satisfaction or dissatisfaction of the Land Board. (W.N. xiv., p. 144.)

*Re John Cutler—Executors of John Stinson, Respondents.*—Cutler made an application for a conditional purchase of improved lands, and the Land Board appraised the improvements at £37 2s. 6d., which sum Cutler was ordered to pay the respondents. It appeared that the respondents, while occupation licensees of the land, sublet it to one Clarke who cleared the land for purposes of cultivation, and cultivated it for several seasons, and that Stinson and Clarke shared the profits of such cultivation and in such a manner that Clarke received from Stinson no payment in money for effecting such improvements.

It was also admitted that the improvements for which Cutler was required to pay were identical with those effected by Clarke under the agreement for subletting. Cutler appealed to the Land Appeal Court, and argued that the claim of the applicants being founded in matter contrary to the provisions of an Act of Parliament was not enforceable at law, and that the improvements having been effected by the applicant, or with their cognizance, in terms of an illegal contract to which they were a party, no course of action accrued to the applicants in respect thereof. The Land Appeal Court reduced the Board's valuation of the improvements to £22 5s. 6d., but held that the act of subletting was not such an illegality as would vitiate the contract at Common Law; and that even if the subletting was such an illegality as to vitiate the contract, a stranger, such as Cutler, was not entitled to raise the question of, and rely upon, such illegality. The Supreme Court (before which Court the matter came as a special case) held that while the Land Appeal Court was wrong in holding that the act of subletting was not such an illegality as would vitiate the contract at Common Law, they were right in holding that a stranger such as the appellant was not entitled to raise the question of, and to rely upon, the illegality. (*S.M. Herald*, 20th August, 1898.)

*Hill, Clark, & Co. v. Dalgety & Co.*—Before the coming into effect of the Rabbit Act of 1890, Dalgety and Co. erected an alleged rabbit-proof fence along the boundary between the pastoral holding of Gidgee and the pastoral holding of Pulpulla, these holdings being situated within a duly proclaimed rabbit-infested district. Dalgety & Co. were, and continued to be, the registered lessees of Gidgee pastoral holding. On 9th August, 1892, Dalgety & Co. made a demand for half cost of making the fence rabbit-proof upon Messrs. Josephson and Nisbet, who were at the time the registered owners of the Pulpulla holding, and on the 27th of the same month applied to the Land Board to assess such half cost. The Board found that the fence was not reasonably sufficient to exclude rabbits, and dismissed the case. An appeal was made by Dalgety & Co., and the Land Appeal Court, in March, 1893, sustained the appeal and returned the case to the Board for evidence whether any, and, if so, what, repairs or modification of the fence would make it rabbit-proof. In June, 1893, the Board took evidence and found that certain repairs and modifications would render the fence rabbit-proof.

On 26th July, 1893, the appeal came before the Land Appeal Court and was struck out of the list. No further proceedings were taken against Messrs. Josephson and Nisbet. In August, 1893, however, a demand was made against Josephson, who had become the sole registered owner of Pulpulla, but when the case came before the Board the application was withdrawn, on the application of Dalgety & Co.'s solicitors.

In September, 1894, demand was made on Hill, Clark, & Co., the then registered holders. The Land Board took evidence (the tenor of which was that the fence was erected before the commencement of the Rabbit Act, and that the repairs specified in the order of the Board had been effected on or before June, 1893), and dismissed the claim. Dalgety & Co. then appealed to the Land Appeal Court and that Court sustained the appeal.

A special case was then stated for the Supreme Court. That Court differed from the Land Appeal Court, and held that there was nothing expressed or implied in

in the Rabbit Act which transferred the liability to pay for the fence from one owner to another. The Court said that if any proceedings could be taken at all, they should be taken against the original owners, Messrs. Josephson and Nisbet. They would not say whether they could be taken now or not; but if they could not, it was Dalgety & Co.'s fault for not taking them at the proper time. (W.N. xv, p. 50.)

*Minister for Lands v. City of Melbourne Bank, Limited.*—Application having been made, in pursuance of section 9 of the Act of 1895, for a reappraisal of the rent of Coan Downs leasehold area, the Land Board, in July and August, 1896, determined the rent but deferred the question of the value and ownership of improvements claimed by the Crown. On 14th October, 1896, the Minister notified in the *Gazette* that the rent had been determined at six-tenths of a penny per acre, making in all £571 13s. 3d. On the 9th April, 1897, the Board held an investigation and appraised the value of the Crown improvements at £193 6s. 8d. and their annual value at £9 13s. 4d. Against the Board's decision the Bank appealed, and the Land Appeal Court sustained the appeal. A special case was stated for the Supreme Court, the question for decision being: Whether the Land Appeal Court was right in holding that, as the improvements were not in lands held under annual lease or occupation license within section 44 of the Crown Lands Act of 1899, the lessee was not liable to be charged rent for the use thereof; and whether the Land Appeal Court was right in holding that, as the rent of the leasehold area had been determined and gazetted, the rent of the improvements could not be afterwards appraised. The Supreme Court thought it unnecessary to answer the first question, and decided the second question in favour of the Bank. (W.N. xv, p. 49.)

#### *Information Bureau.*

Much useful work has been carried out in this branch of the Department during the past year, and the general public continue to show a large appreciation of the advantages afforded them by its establishment. In fact it has become a recognised centre from which all classes of information can be obtained regarding Crown lands available for settlement.

The leaflets that have been prepared by the Bureau giving in a concise form the salient characteristics of the main systems of alienation, &c., namely, homestead selection, conditional purchase, settlement lease and improvement lease, have proved of great assistance to intending settlers, and numerous requests for copies, which are issued free of charge, have been received.

*The Lands Department Gazette* is now issued bi-weekly to subscribers instead of weekly, as heretofore, thus increasing its sphere of usefulness, more especially to private land agents. At the close of the year there were 120 regular subscribers to this *Gazette*, as compared with 108 at the end of 1897, and in addition there are many intending settlers who subscribe for broken periods until some particular notification, setting apart Crown lands for settlement appears. Apart from its usefulness to the general public, the advantages to the Department are very considerable, owing to the avoidance of all extraneous matter, while at the same time the Departmental notifications are retained in a concise and compact form.

One edition of the pamphlet showing lands open for homestead selection and settlement lease throughout the Colony was published during the year, and another was in course of preparation when the year closed, and has since been published. These pamphlets, which are in considerable demand, are sold at a nominal cost of 6d., and give very full and complete particulars about homestead selection and settlement lease areas, being in fact almost complete reproductions of the original notifications published in the *Gazette*.

The preparation of monthly advertisement sheets and pamphlets has also been continued. These publications (which are descriptive of areas notified each month in the *Gazette* as available at an early date for homestead selection, settlement lease, improvement lease, occupation license, auction sale, &c., and afford a good medium for conveying to the public information respecting the latest movements in connection with Crown lands) are exhibited at all the more prominent Railway Stations, Crown Lands Offices, Post Offices, and District Survey Offices.

Advertisements have also been prepared every week for the Press respecting lands about to be set apart for homestead selection, settlement lease, and improvement lease

lease; and paragraphs have also been supplied to the leading Sydney papers giving such particulars, as it was thought would prove interesting to the public, of the progress of land settlement as evidenced by the applications received each week on the regular Lands Office day.

The correspondence carried out in this branch during the past year shows a slight increase over that of the previous year, the number of letters despatched during the two years being respectively 2,053 and 1,965.

Every effort is made to insure prompt replies to all inquiries, and the information given is set forth as clearly and fully as possible.

*Inquiry Branch.*—This division of the Bureau acts mainly as a medium through which solicitors, Banks, private land agents, and financial companies investigate matters relating to the titles of holders of Crown lands prior to their acceptance as security for loans or as a preliminary to the transfer of these holdings, so that the parties interested may be assured that no forfeiture is impending, or that no other defects exist which might in any way affect the title.

Small fees are charged for supplying particulars of this kind, which realised in 1898 the sum of £346 9s. 6d., as compared with £358 8s. 6d. in 1897, and £326 12s. 3d. in 1896.

The inquiry papers lodged during the year were 5,010 in number, and for supplying answers to 1,794 of these, fees were charged as above-mentioned. The balance of these inquiries, namely, 3,216, which had reference chiefly to matters then under Departmental consideration, were answered free of charge. In addition a large number of personal inquiries were answered verbally, and advice was given as to the various methods of procedure prescribed by the Crown Lands Acts.

*The Map Sales Branch.*—The work of the staff consists mainly in receiving lithographs of the various maps published by the Department, such as those of counties, towns, parishes, &c., and in issuing the necessary supplies to Crown Land Agents, District Survey Offices, and other departments. In addition to this, sales of lithographs to the general public are also attended to, and this class of work necessarily involves a large number of explanations as to the information shown on these maps.

As mentioned in the report for 1897, the work of stocktaking was commenced towards the end of that year. This involved, in the first place, the counting of every lithograph in stock, amounting to 182,217, and also the preparation of the necessary books for the introduction of a new system of keeping an account of the lithographs received, issued, and sold. This system, it may be mentioned, has now been in use for more than twelve months with very satisfactory results as regards accuracy and economy of time.

On 31st December, 1897, there were 182,217 lithographs in stock, the sale price being £15,671 3s. 6d., and on 31st December, 1898, the stock had increased to 200,573, of which the value was £17,409 1s. 1d.

During 1897, 55,173 lithographs were received into stock, and 36,817 issued. Of these latter 17,802 were required for the Department's own purposes, 6,902 were issued to other departments, 270 were given to members of Parliament, 3,896 were cancelled, being obsolete, and 7,945 were sold, realising £531 1s. 4d.

The supervision of the issue to Crown Land Agents for sale purposes of Crown Land Acts, pamphlets, and parchment forms used in connection with the transfer of conditional purchases, was undertaken by the branch during the year. The parchment forms sold by Crown Land Agents amounted to 7,491, realising £936 7s. 6d., and 326 Crown Lands Acts and pamphlets were also disposed of, the receipts being £29 7s. 9d.

#### *Rabbit Branch.*

Although there has been a marked increase in the prevalence of the rabbit pest in some parts of the Central Division, and even in a few spots in the Eastern Division, the periodical reports furnished by the various Rabbit Inspectors throughout the Colony prove beyond all doubt that rabbits generally have been less in evidence during the year 1898 than at any previous period since the introduction of legislation for their suppression.

The Queensland Government having decided, early in the year, that it was not desirable to incur further expense in erecting any extensions of the rabbit-proof fence, from Mungindi to the Namoi River, it at once became evident that any steps for the continuation of that barrier southerly, to the rabbit-proof fence on the Wingadee boundary, and easterly to the vicinity of Narrabri, would have to be undertaken by this Government, aided, perhaps, by the monetary co-operation of those landowners whose properties would be benefitted by its erection.

Efforts were speedily made to induce the Government to proceed with the proposed extension; and reports having been obtained from the local Field-staff as to the best general scheme for the extension of this fence, it was decided, in response to the representations of pastoralists and others interested, that the extension to Wingadee and Narrabri, should be taken in hand as soon as the amount of the contribution to be provided by private individuals, towards the erection of a barrier fence from Mungindi to Narrabri had reach a total of £2,000, and endeavours are now being made to thoroughly canvass the district with a view to obtain the sum required.

During the period under review, the duty of rabbit destruction has been made simultaneous and compulsory within the boundaries of the population area of Deniliquin, and the sheep district of Forbes; in addition to which, applications of a more or less representative character, urging the enforcement of the compulsory destruction clauses of the Rabbit Act, in other parts of the Colony, are now under consideration.

Notwithstanding the opposition with which proposals of this nature are frequently received, it has been found that most satisfactory results have invariably attended the enforced destruction of rabbits, and that, too, apparently without involving any cases of hardship to individuals, or serious friction between the Crown and its tenants.

As the result of inquiries instituted by the District Surveyors, some 1,726 miles of rabbit-proof fencing, not shown on the new Colony map have since been charted, thus bringing up the verified total length of rabbit-proof fencing erected in the Colony to 19,006 miles.

Proposals to extend the area of the rabbit-infested districts continue to be received, but owing to local opposition and other causes the question of their consideration has necessarily been postponed.

The 41st section of the Rabbit Act makes provision for the issue of licenses to keep live rabbits, and the requisite authority to do so was granted to the persons mentioned in the following Schedule:—

Name.	Place.	Period.
F. Tidswell, M.D., D.P.H...	Biological and Bacteriological Laboratories of the Board of Health.	12 months.
J. McGarvie Smith ...	Denison-street, Woollahra ... ..	..
Eugene Rougier, M.D. ...	"The Hermitage," Double Bay ... ..	..
John E. Cory ... ..	Berrigal, Moree ... ..	..

#### *Labour Settlements.*

*Wilberforce.*—The condition of affairs at this settlement is practically unchanged since the date of my last report. Owing to the continuance of unfavourable seasons many of the settlers have been unable to obtain any adequate return for their labours from their land, and have been compelled to apply to the Board of Control for permission to leave the settlement from time to time, and to seek in Sydney and elsewhere, employment at their respective trades, in order to provide means to sustain their wives and families and to effect improvement on their allotments.

With the advent of more propitious seasons, the judicious investment of their outside earnings in the further cultivation of their land, and the purchase of farming implements and stock, a more prosperous condition of affairs may reasonably be looked for.

*Bega.*

*Bega.*—Many members of this settlement (like the less-favourably circumstanced settlers at Wilberforce) have found it difficult to maintain themselves and families; but it is satisfactory to report that, in spite of every drawback, each settler has been able to maintain himself without seeking employment outside the settlement to supplement his means of livelihood. Notwithstanding the disadvantages of flood and drought, each settler has managed to make a living, and the eagerness with which old residents in the neighbourhood apply for enrolment as members when any vacancy occurs is sufficient to warrant the opinion that the settlement offers a fair field to the industrious labourer, irrespective of good or bad seasons, and that the portions are large enough to support any family the head of which is possessed of energy and perseverance, with the necessary ability to use his land to the best advantage.

The probationary stages of both of these settlements may now, however, be considered to have been safely passed.

#### *Animals Infectious Diseases Act.*

There was a small increase during the year in the number of persons who desired to avail themselves of the provisions of the Animals Infectious Diseases Act, with the result that twenty licenses (eight under section 6 and twelve under section 7) were in force on the 31st of December, 1898.

Ten of these licenses were granted for the purpose of enabling the holders to inoculate sheep and cattle against anthrax, the firm of McGarvie Smith and Gunn alone having successfully vaccinated 1,196,156 sheep and 7,109 head of cattle during the year.

The possible advent of Tick or Texas Fever is responsible for the issue of four licenses (two under section 6 and two under section 7) to Mr. J. D. Stewart, Veterinary Surgeon to the Stock Branch of the Department of Mines and Agriculture, and Mr. A. A. Devlin, Stock Inspector of Armidale, while the remaining six were distributed among the following members of the medical profession, solely for experimental purposes, viz. :—

To Frank Tidswell, Government Bacteriologist, M.D., D.P.H., two licenses, sections 6 and 7.

Eugene Rougier, M.D., two licenses, sections 6 and 7.

William Frederick Litchfield, M.B., one license, section 6.

W. H. Goode, M.A., M.B., one license, section 6.

During the latter part of the year an application was received from the recently-appointed Macleay Bacteriologist to the Linnean Society in this city for permission to introduce into this Colony, and to inoculate certain birds and animals with, numerous bacteria, including those of bubonic plague, rinderpest, and other diseases previously unknown in Australasia.

Owing to the alarming reports that were constantly being received by cable respecting the terrible effects of these diseases on human and animal life in various parts of the world, it was felt that the introduction of the bacteria of deadly diseases hitherto unknown in the Colony should not be permitted, and that the investigation of such diseases should be left to the countries where they exist, or limited to places or institutions properly equipped and organised for such investigations.

In view of all the circumstances the application was refused, and Mr. Secretary Carruthers, in coming to that decision, expressed the opinion that it would be "an act of criminal recklessness for the Government in any way to authorise the introduction into this Colony, even for experimental purposes, of bacteria of dread diseases hitherto unknown in Australasia; and that the law should be at once amended to rigorously prohibit, under severe penalties of imprisonment (without mere fines as options), the introduction of bacteria of such diseases."

The necessary steps were at once taken to prepare a Bill to amend the Animals Infectious Diseases Act in the direction indicated by the Minister, but owing to the almost immediate prorogation of Parliament the consideration of the measure had necessarily to remain in abeyance.

The

*Revenue.*

The amount paid to the Treasury during 1898 totalled the sum of £2,002,415, being £110,508, in excess of the receipts for 1897. An increase has accrued under the following heads of revenue:—

	1897.	1898.	Increase.
	£	£	£
Auction Sales ... ..	63,513	105,149	41,636
Newcastle Pasturage Reserve ... ..	1,454	1,770	316
Improvement Purchases .. ..	1,598	1,981	383
Conditional Purchases { Deposits ... ..	31,715	38,913	7,198
{ Instalments ... ..	903,673	906,390	2,717
{ Balances ... ..	67,027	93,374	31,347
Homestead Selections (improvements) ... ..	1,580	3,348	1,768
Total Increase Land Sales ... ..	...	.....	£85,365
Annual Leases ... ..	44,292	49,130	4,838
Scrub Leases ... ..	455	747	292
Improvement Leases (rents) ... ..	3,860	7,009	3,149
Homestead Selections (rents) ... ..	10,394	13,772	3,378
Settlement Leases... ..	20,351	31,620	11,269
Artesian Well Leases ... ..	836	1,176	340
Quit Rents... ..	188	269	81
Total Increase Pastoral Occupation ... ..	...	.....	£23,347
Church and School Lands ... ..	.....	9,111	9,111
Licenses to cut timber ... ..	2,512	12,806	10,294
Fees on preparation Title Deeds ... ..	2,533	2,623	90
Fees on transfers of Runs, &c. ... ..	935	957	22
Survey Fees ... ..	22,340	32,876	9,536
Special Leases ... ..	17,633	20,622	2,989
Total Increase Miscellaneous Receipts ... ..	...	.....	£22,931
Grand Total Increases ... ..	...	.....	£140,754

Receipts under the following heads of revenue have, however, fallen off as shown hereunder:—

	1897.	1898.	Decrease.	
	£	£	£	£
Brought forward ... ..	.....	.....	.....	£140,754
Miscellaneous Purchases ... ..	7,398	2,715	4,683	
Interest on land conditionally purchased ... ..	76,257	75,803	454

Snow and Inferior Leases ... ..	1,090	696	394	
All other receipts .. ..	37,728	16,949	20,779	
				30,246
				£110,508

It is pointed out that the increase includes receipts from timber licenses for the whole of 1898, while the revenue for 1897, under this head, included receipts for one quarter of that year only, the Forest Branch having been transferred from the Department of Mines to this Department from the 1st October, 1897.

The average revenue derived from this service per month was £837 6s. 8d. in 1897, and £1,067 3s. 4d. in 1898—an average increase of £229 16s. 8d. per month.

It may be added that the increase also includes amounts received on account of Church and School Lands, which were not shown in last year's returns as such payments did not form part of the Consolidated Revenue until 1898.

It is gratifying to observe that, in spite of adverse seasons, the revenue has been buoyant and in excess of each of the preceding three years.

*Expenditure.*

The total expenditure for all services amounted to £327,071 18s. 3d., *i.e.*:—

For services paid from Consolidated Revenue ... ..	£287,563	5	0
"    "    Loan Votes ... ..	39,508	13	3
	£327,071	18	3

In 1897 the expenditure was £361,345 16s. 1d., showing a decrease of £34,273 17s. 10d. this year. Of the total expenditure in 1898 the sum of £14,599 7s. 8d. was for services performed in 1897 and previous years, the main outstanding accounts being for surveys effected during those years. Omitting

Omitting the special services, for which £18,221 6s. 1d. was paid during the year, the cost of the Department has been £269,341 18s. 11d., as against £275,077 16s. 6d. for 1897, a decrease of £5,735 17s. 7d. Notwithstanding this expenses have been greater than in 1897, as in that year salaries for one quarter only for the staff of the Forest Branch, for one month for the officers of the Church and School Branch, and for a proportion only of the twenty-eight land agents transferred from the votes of the Justice Department were taken into account. An expenditure, £6,483 9s., therefore, became necessary, which was increased by other items to £9,010 12s. This additional expenditure has, however, been counterbalanced by a proportionate reduction in amounts paid for travelling and legal expenses.

The payments out of Loan Votes were considerably less in 1898 than in the preceding year. Expenditure in connection with the clearing of West Bogan scrub lands, the draining of Terragong swamp, and the thinning of forests was £31,824 less than in 1897. (*See* Schedule II.)

Schedule III gives a comparative statement of details of expenditure for the years 1897 and 1898.

The number of accounts registered was 9,813, and 16,422 separate payments were made by cheque.

Schedule IV shows the total payments for salaries to officers in the various branches of the Department.

Schedule V indicates that the numerical strength of the staff, on the 31st December, 1898, was 668, as against 689 on the same date in the preceding year.

The summary, hereunder, shows the vacancies created in the Department by the retirement, resignation, dismissal, or death of officers, and also indicates the number of new appointments, reappointments, and transfers of officers to other Departments.

Appointments	...	...	...	16 New appointments.
				7 Reappointments.
				13 Transfers to other Departments.
				—
Total	...	...	...	36
Retirements, resignations, transfers of officers to other Departments, &c.	}	4	Retirements under the Act.	
		7	Transfers to other Departments (including three instances of removal of Police Officers who were Acting Foresters).	
		9	Resignations.	
		13	Services dispensed with.	
		2	Dismissals.	
		1	Death.	
Total	...	...	...	36

Schedule VI shows the amounts paid in connection with Local Land Board meetings; the total amount being £10,775 6s. 3d., as against £11,842 11s. 9d. in 1897.

Schedule VII gives a comparative statement of revenue and expenditure for the year under review. It shows a reduction of  $1\frac{1}{4}$  per cent. in expenditure as compared with the preceding year.

#### *Inspection of Accounts.*

During the year the accounts were subjected to an independent audit by an Inspector of Public Accounts.

#### *Land Appeal Court Report.*

During the year 1898 the Court heard and disposed of 396 cases, comprising 250 appeals and 146 references. Of these cases 340 were dealt with in Sydney, and 56 in the country. The Court held sittings in Sydney on fourteen different occasions, and in the country as follows:—Dubbo, 2; Wagga Wagga, 2; and Tamworth, 1.

During 1898 the Land Appeal Court was asked to state special cases for the decision of the Supreme Court in 19 instances, 7 of which were subsequently withdrawn, and in 2 others the Court declined to state a case, as no point of law was involved. Ten cases were duly stated and forwarded to the Supreme Court, with the result that the ruling of the Land Appeal Court was confirmed by the Supreme Court in six instances, and reversed in one. The remaining three cases are still before the higher Court. Those cases are Nos. 5,226, *in re* Nestram, 5,227, *in re* Nestram, and 5,320, *in re* Buckley. *Forest*

*Forest Branch.*

This report comprises the first complete year's operations of the Forest Branch under this Department since the year 1889.

A measure to better regulate forest working, which also includes provisions for the creation of permanent forests, the issue of grazing and exclusive licenses, and the regulation of penalties for offences has been prepared for presentation to Parliament.

The activity in coastal timber operations, mentioned in the preceding report, continued throughout the year, and was especially noticeable in the pile, girder, and sleeper trades, piles and girders being the principal items of export to other colonies. There was also during the year evidence of a rising demand for some of our ornamental or brush varieties, many inquiries having been made for supplies of rosewood (*Dysoxylon Fraserianum*), black bean (*Castanos permum australe*), and silky oak (*Grevillea robusta*).

Inquiry made during the year showed the necessity for increasing the staff engaged in the supervision of forest operations, and the difficulty has been met by the appointment of seven (7) Assistant Foresters, who have taken up duty in the principal timber districts, three (3) being located in the coast and four (4) in the inland districts.

The practice which permitted the payment of royalties on timber held in depôts to be deferred until removal of the timber, has been found unsatisfactory in many ways, as the outstanding balances under the system frequently amounted to very large sums. This has been modified by limiting the period for which payments on such timber may be deferred to three (3) months, and the modification has already resulted in a large reduction of the outstanding balances.

The views of a number of experienced officials on the subject of cypress pine forests (*Callitris calcarata and verrucosa*), and their improvement by thinning, were collected during the year, and have been condensed for publication in a pamphlet, the information in which will doubtless be of much value and assistance in future.

A departure from previous practice was inaugurated this season in connection with the distribution of shrubs and forest trees for planting, a guarantee as to *bonâ fides* being now required before delivery, while subsequent reports as to growth and progress of such trees, &c., have to be furnished. In this way the Department will be enabled to collect valuable information as to the varieties best suited to different localities.

There were 148 prosecutions for offences, under which 112 convictions were secured, and penalties amounting to £108 7s. 6d. were inflicted, while the proceeds from sales of confiscated timber amounted to £264 10s. 11d.

A small vote for the establishment of a reserve plantation of marram grass was obtained, the site for which has been selected at Cook Park, Sans Souci, and preparation is being made to plant it this winter.

*Office Work and Records.*—This work has been kept up to date, there being no arrears of current work at the close of the year. A rearrangement of records on the report of forest lands is a necessary work that might be attended to when assistance is available.

The number of papers registered in the branch was 5,204, which with 693 foreign papers dealt with makes a total of 5,897. The number of letters issued, exclusive of circulars and forms, was 2,615.

The Forest Branch Library has been remodelled and catalogued. It comprises 172 volumes, also 50 special articles and 32 sets of reports on forest working in other countries, the whole being of great value for reference purposes.

*Forestry Museum.*—No additions have been made to the stock of samples. The carpenter has been fully employed in preparing specimens for exhibition, export, and other purposes, and in constructing requirements for the Gosford Nursery. During the year the Department issued certificates upon 500,000 superficial feet of timber for export. This was done upon the recommendation of the timber expert, and after examination and branding by that officer.

The

The following table gives the distribution of samples of timber for the year :—

Description of Samples.	Local Distribution.	London.	Germany.	India.	New Zealand.	Total.
General Specimens ... ..	150	105	56	65	106	482

*Forest Improvement—Thinning.*—The State Forest Thinning Works closed early in the year, the actual expenditure for the period being £4,236 14s. 9d. These works have not since been renewed, and with the exception of some £3,000 retained for certain clearing up work to be undertaken in winter, the Vote for this class of work is exhausted. The class of forests treated were principally *Euc. rostrata* and *Callitris calcarata* and *verrucosa*, the profuse growth of which renders the destruction of a large proportion of the immature trees necessary, in order that the saplings left may mature. In carrying out this work the weakest and least promising plants are selected for destruction, and the standard of the forests thereby greatly improved.

The following table shows the total area of forests improved under this Vote with the periods and cost of same :—

Period.	Class of work.	Name of Forest.	Particulars of Thinning.	Area in acres.	Average cost per acre.
<b>REDGUM FORESTS (<i>Euc. rostrata</i>).</b>

*Planting.*—Beyond preparing the ground for a small extension to the Hogan's Brush plantation, in which it is intended this winter to plant out some 6,000 young cedars (*Cedrela australis*), no plantation work has been done on State forests. The usual planting of trees on Government parks, farms, and public lands under Trust was very much curtailed owing to the protracted drought experienced throughout the Colony, the actual number of trees planted on such sites being 20,918.

*Gosford State Forest Nursery.*—The permanent staff at this establishment now consists of the foreman, one labourer, and two youths, and it is found that, with occasional assistance, this is sufficient to carry on the work. During the year considerable alteration has been made in the system of working, affairs being now administered from the Head office, while actual nursery operations are confined to 10 out of 60 acres of the site.

The.

The following permanent improvements have been effected:—Re-brushing three bush-houses and entirely rebuilding a fourth; logging, draining, forming, and metalling 20 chains of roads of communication; laying on water by pipes and troughs to all the sheds; re-labelling 200 seed-bearing stocks; laying out lower grounds for planting to an ornamental design; fitting up seed-room and presses.

The present dry season limited the demand for plants, the following being the actual distribution:—

	Plants.
To Parks and Recreation Reserve Trusts ... ..	4,665
„ Hospital Committees ... ..	2,166
„ Progress Associations ... ..	1,287
„ Government Farms, Plantations, and Institutions ... ..	16,253
„ Cemetery Trusts ... ..	1,855
„ Pastoral Associations ... ..	350
„ Exchanges for Seeds, &c., ... ..	819
Total ... ..	27,395

Expenditure has been kept to the lowest possible limit compatible with efficient working, the cost for the period being—wages £259 4s. 7d., incidental £176 9s. 7d., total £435 14s. 2d. The number of plants raised during the year was about 30,000, the stock, including all varieties, on 31st December, 1898, being 146,000. The nursery is now in thorough working order, and all the plant in repair.

*Class and Area of Forest Reserves.*—On the 31st December, 1898, the total area of reserved forest land was 5,896,581 acres. These reserves are divided for operation into classes A, B, and C, the two first under fixed license fees, and the latter under license, subject to royalty on the quantity of timber felled. The totals of the areas under each class are as follow:—

Class A ... ..	2,845,071
Class B ... ..	148,799
Class C ... ..	2,902,711
Total ... ..	5,896,581

By comparison with the figures in preceding report, it is found that the total area of land reserved for forestry has been increased by 286,397 acres during the past year.

*Revenue and Expenditure.*—Total revenue for the year amounted to £10,952 9s. 1d., in comparison with £8,760 5s. 4d. for the preceding period. The expenditure under all heads amounted to £3,136 8s. 10d. The revenue for 1898 exceeded that of the preceding year by £2,192 3s. 9d., and the difference between revenue and expenditure for 1898 represented a surplus of £7,816 0s. 3d. The details of revenue and expenditure are as under:—

## REVENUE.

*Prickly-pear Extermination.*—Under the provisions of the Prickly-pear Act, during the year ending 31st December, 1898, tenders for leases were invited for fifty-three portions, embracing an area of 22,769 acres. Of these, twenty-eight lots, totalling 5,089 acres, let for terms varying from three to twenty-one years, realising an annual rental of £96 11s. 5d. The total area of Crown Lands to date held as leases under this Act is 36,515 acres, yielding an annual rental of £537 19s., or, roughly, £9 10s. per section of 640 acres. The results obtainable under these leases are highly satisfactory, inasmuch as the destruction of the pest is a condition of the lease, and while further expense is checked, a fair rental for the land is at the same time secured.

*Settled Districts.*—A large number of notices to eradicate pear were served upon private owners, resulting in many instances in the complete extermination of the pest, while in all cases (with few exceptions) satisfactory endeavours to cope with it were made.

*Outlying Districts.*—In these localities, particularly the north-west, little progress has been made in pear destruction, and it is feared such work is practically at a standstill, and the pear rapidly spreading. Supervision in these districts is incomplete, and the law difficult to enforce, the holdings being large and intersected, in many instances, by Crown reserves upon which no expenditure is incurred in eradicating the pest. Travelling stock and camping reserves and river beds are, in particular, sources for the growth of prickly-pear.

*Botanical Work.*—The botanical work of the Department is undertaken by the Government Botanist, who, although largely occupied with other duties, is considerably interested in forestry matters. The botanical exploration of the Colony, which is being conducted by Mr. Maiden, is a very important work from a forestry point of view, and the notes taken are frequently of great value and assistance in subsequent identification of species, and in arriving at a decision as to the disposal of lands set apart for forest purposes.

During the year a large number of plants, forwarded by officials and correspondents, were identified, and a review of the naming of the stocks at Gosford Nursery was undertaken. Special reports were furnished on the following subjects:—“Musical instrument reeds and their occurrence in Australia”; “The blackbutt of the Tenterfield district (*Eucalyptus pilularis*)”; “On the suitability of certain hardwoods for fruit-cases”; “On the Otford Plantation”; “On timbers proposed for exhibit at the Paris Exhibition”; “On reputed efficacy of certain trees for renovating worn out lands”; and “On the general question of forest thinning.” The germinating power of seeds purchased by the Department was also tested by the Botanist.

*Auction Sales.*

*Town Lands.*—During the year 4,416 lots, comprising an aggregate area of 1,783 acres 0 roods  $22\frac{1}{5}$  perches, were offered for sale, of which 749 lots, containing 299 acres 3 roods  $13\frac{9}{10}$  perches, were sold, and the sum of £9,810 15s. 3d. (an average of £32 14s.  $4\frac{3}{4}$ d. per acre) was realised.

*Suburban Lands.*—1,592 lots were offered, containing an area of 5,622 acres 1 rood  $23\frac{3}{4}$  perches. 273 lots were sold, comprising 935 acres 3 roods  $18\frac{1}{2}$  perches and realising £6,285 19s. 6d., or an average of £6 14s. 4d. per acre.

*Country Lands.*—2,382 lots were offered, containing in all 176,770 acres 1 rood 30 perches; 651 lots were sold, comprising 50,556 acres 1 rood  $6\frac{1}{4}$  perches. The amount realised was £85,540 8s. 11d., or £1 7s.  $7\frac{3}{4}$ d. per acre.

From Schedule XXXI it will be seen that the total number of lots offered for sale by auction during 1898, and comprising all classes of land, was 8,390, while the area so offered amounted to 184,175 acres 3 roods  $36\frac{3}{4}$  perches.

The total number of lots sold was 1,673, comprising an area of 51,791 acres 3 roods  $38\frac{3}{4}$  perches, and realising a total sum of £101,637 3s. 8d.

Transactions in connection with sales of this class in 1897 and 1898 are compared in the following Schedule :—

	Year.	No. of lots offered.	Area offered.			No. of lots sold.	Area sold.			Amount realised.			Average price per acre.		
			a.	r.	p.		a.	r.	p.	£	s.	d.	£	s.	d.
Town ...	1897	3,190	1,272	1	21	722	289	1	20	10,327	13	1	35	13	$9\frac{1}{2}$
	1898	4,416	1,783	0	$22\frac{1}{5}$	749	299	3	$13\frac{1}{5}$	9,810	15	3	32	14	$4\frac{3}{4}$
Suburban ...	1897	1,330	6,764	1	$11\frac{1}{2}$	358	1,600	3	24	6,772	10	1	4	4	$7\frac{1}{4}$
	1898	1,592	5,622	1	$23\frac{3}{4}$	278	935	3	$18\frac{1}{2}$	6,285	19	6	6	14	4
Country ...	1897	1,059	47,038	2	$36\frac{1}{4}$	423	21,820	1	$19\frac{1}{2}$	37,716	11	11	1	14	$6\frac{3}{4}$
	1898	2,382	176,770	1	30	651	50,556	1	$6\frac{1}{4}$	85,540	8	11	1	7	$7\frac{3}{4}$

It will be seen that about  $16\frac{3}{4}$  per cent. of Town Lands,  $16\frac{1}{2}$  per cent. of Suburban Lands, and  $23\frac{1}{2}$  per cent. of Country Lands were sold out of the areas offered in 1898, as compared with 23 per cent., 24 per cent., and 46 per cent. respectively in 1897.

It is also shown by the above Schedule that the revenue derived from Auction Sales during 1898 (£101,637 3s. 8d.) is nearly double the amount (£54,816 15s. 1d.) which was derived from the same source in 1897. This increase in revenue has been obtained entirely from sales of Country Land. Revenue derived from Town and Suburban land is somewhat less than last year. Particulars of areas offered and sold are given in Schedule XXXI.

#### *After Auction Selections.*

The number of applications of this kind received last year was 720. Of these, 60 were either refused or withdrawn, while 643 applications, comprising 838 lots, were granted.

The aggregate area sold in this manner was 1,958 acres 0 roods  $20\frac{1}{4}$  perches, the revenue realised therefrom being £12,966 17s. 2d. The average prices obtained per acre were as follow :—For Town Lands, £16 11s.  $6\frac{1}{4}$ d.; for Suburban Lands, £5 4s.  $11\frac{1}{4}$ d.; and for Country Lands within Population Areas, £5 19s.  $0\frac{1}{4}$ d. Additional particulars with respect to these sales will be found in Schedule XXXII.

#### *Forfeiture of Auction Purchases.*

The number of lots forfeited during the year for non-payment of balance of purchase money within the prescribed period was 135, comprising a total area of 262 acres 2 roods 16 perches. The deposits paid in connection therewith, amounting to £741 18s. 4d., were forfeited to the Crown. For further particulars, see Schedule XXXIII.

When Crown Land is purchased at auction by persons entitled to the improvements existing thereon, it is customary to add the value of such improvements to the upset price of the land, for the protection of the owner, and to remit it subsequently. In this manner a sum of £507 3s. 9d. was refunded and other payments which had been made in excess to the amount of £91 12s. 0d. were also refunded during the year.

*Homestead*

*Homestead Selections.*

The demand for holdings of this class has been maintained, applications being more numerous during the year under review than in the preceding one. Schedule XIX shews that 1,051 applications were received during the year ending 31st December, 1898, for a total area of 461,646 acres 2 roods 7 perches, as against 896 last year for an area of 367,290 acres 2 roods 15 perches.

During the same period the Land Boards dealt with 1,070 applications, comprising 460,502 acres 1 rood 25 perches, of which 802 applications were confirmed for an area of 311,606 acres 2 roods 37 perches, and 268 were disallowed or withdrawn.

From Schedule XXII it will be seen that the number of Homestead Selections applied for up to the 31st December, 1898, was 3,699, including an area of 1,493,867 acres 2 roods 3 perches. After deducting 1,004 disallowed, &c., comprising an area of 456,639 acres 3 roods 26 perches, the number in existence at the close of the year (exclusive of conversions of Conditional Purchases and Conditional Leases into Homestead Selections) was 2,695, containing an area of 1,037,227 acres 3 roods 17 perches.

From Schedule LXXXI it will be seen that 928 blocks, containing an aggregate area of 377,503 acres 1 rood 11 perches, were notified during the year as being set apart for Homestead Selection.

During the year 11 applications were made to convert Conditional Purchases and Conditional Leases into Homestead Selections. These applications included 18 Conditional Purchases and 3 Conditional Leases, the area represented being 5,154 acres. The total number of Conditional Purchases and Conditional Leases converted in this manner from the 1st June, 1895 (the date on which the Crown Lands Act of 1895 came into operation), to the 31st December 1898, is 120 (under 54 applications) the area comprised being 26,053 acres 3 roods 30 perches. (*Vide* Schedule XXIV.)

One hundred and one Selections containing an area of 25,726 acres 16 perches were forfeited during the year on account of non-fulfilment of the prescribed conditions (*vide* Schedule XXI) and forfeiture was waived in 125 instances.

Information is given in Schedule XXIII respecting the notification and disposal of Homestead Selection Areas since the passing of the Crown Lands Act of 1895. From the schedule it will be seen that 4,528 blocks, containing 1,454,398 acres 3 roods 20½ perches, had been set apart for Homestead Selection up to 31st December, 1898. As, however, 456 blocks, containing 150,471 acres 3 roods 23 perches did not become available during the year, the actual area available for selection up to the end of the year was only 1,300,513 acres 2 roods 37½ perches, comprised within 4,072 blocks. Of this area, 2,665 blocks, comprising an area of 988,992 acres 2 roods 24 perches were selected, or 76 per cent. of the area available. The capital value represented by the land selected is £1,313,904 15s. 11d.

The table hereunder (compiled from Schedule XXIII) shows transactions in each of the Land Board Districts.

Land Board District.	Quantity of land available.			Area selected.			Area unselected on 31st December, 1897.			Capital value represented by land selected.

Conditional Purchases.

Transactions in connection with this class of holding were more numerous this year than last. The area applied for during 1898 was 298,137 acres 2 roods 11½ perches under 1,591 applications; whilst, in 1897, 241,789 acres 1 rood 4½ perches were applied for under 1,306 applications.

Schedule VIII and subjoined summary show that, of the applications received, 844 were for Original Conditional Purchases, 725 were for Additional, and 22 were for Non-residential Conditional Purchases.

Particulars relating to the number of applications received during the year for land within Special Areas, and for ordinary lands, also respecting the number and area of Conditional Purchases applied for from 1862 up to the present time, are furnished in Schedule IX.

Of the applications made during the year, 707 were confirmed for an area of 149,052 acres 3 roods 28 perches, and 288 applications were disallowed.

Including the applications made prior to 1st January, 1898, the total number confirmed during the year was 1,093, for an area of 205,128 acres and 37 perches, and 369 were disallowed. Further details are given in Schedule X.

The Incomplete Conditional Purchases in existence at the end of the year numbered 150,697, comprising an area of 20,243,738 acres 0 roods 15 perches, and the number of Conditional Purchases for which deeds of grant had been issued was 25,522, representing an area of 3,059,191 acres 0 roods 33 perches. (Vide schedule XVIII.)

Three hundred and fifty-six Conditional Purchases were forfeited in 1898, representing an area of 43,990 acres 1 rood and 36½ perches, as against 254 Conditional Purchases, containing an area of 35,768 acres 3 roods and 4½ perches in 1897.

It will be seen from Schedules XV and XVI that of the total forfeitures, 144 were due to non-payment of balances, interest, or instalments of purchase money, and 212 to non-fulfilment of the required conditions.

Under the provisions of the Crown Lands Act Amendment Act of 1891, forfeiture was conditionally waived in 176 instances, and absolutely waived in 130.

Extensions of time for payment of instalments were granted to the holders of 1,272 Conditional Purchases, the total area of the holdings involved being 211,560 acres 2 roods 13 perches.

The provisions of section 28, Crown Lands Act of 1895, under which resident Conditional Purchasers can obtain suspension of payment of instalments for twelve months, were not taken advantage of to the same extent as in 1897. Applications were granted with respect to 322 Conditional Purchases, containing 65,043 acres 1 rood 7 perches, and 164 applications were refused, as compared with 704 applications granted, and 142 refused in 1897.

It

It is satisfactory to note that, notwithstanding the severe drought which prevailed recently, the transactions under the Conditional Purchasers' Relief Act of 1896, were not nearly as numerous in 1898 as in the preceding year. Three hundred and eighty-six applications were granted in connection with 987 Conditional Purchases, the difference between the original amount of annual instalments payable and the reduced amount being £2,819 9s. 4d. In 1897, 1,252 applications were granted with respect to 3,418 purchases, involving a difference of £9,844 4s. 3d. between amount of instalments payable and amount as reduced. For further particulars see Schedule XII.

Totals... ..	386	987	7,725 16 11	4,906 7 7	2,819 9 4

Schedule XIV affords full information with respect to transfers received and dealt with during the year. The number received was 8,868, and 9,254 were dealt with, representing 17,557 Conditional Purchases in all. This number, however, includes purchases which were transferred more than once during the year. The number of purchases actually transferred was 11,457, containing 1,972,208 acres 3 roods 11 perches.

The number of transfers on which stamp duty was paid was 3,465, the revenue derived therefrom being £7,457 13s.

Nine Conditional Purchases, containing  $1,096\frac{1}{4}$  acres and three Conditional Leases, containing 1,305 acres, were validated under the provisions of the 44th section of the Crown Lands Act of 1895 during the year. Details are given in Schedule XVII.

Information is given in Schedule LXXXVIII, with respect to the number of Instructions issued to, and reports received from Conditional Purchase Inspectors. The total number of Instructions issued was 11,397, and 12,529 reports were received.

Since December, 1885, the following areas have been resumed from Conditional Purchases and Conditional Leases, on account of the auriferous character of the land, viz. :—3,461 acres 1 rood  $13\frac{3}{4}$  perches, affecting 20 Conditional Purchases, and 10,061 acres 1 rood from 19 Conditional Leases.

#### *Special Areas.*

The number of Special Areas proclaimed during the year was 179, including an area of 60,894 acres 2 roods 25 perches, as against 233, containing 62,626 acres 3 roods 33 perches, proclaimed in 1897. Of the Special Areas proclaimed 141 represented 57,375 acres 19 perches of Country Land, while 38 included 3,519 acres 2 roods 6 perches of land within Population or Suburban Areas. Further details are given in Schedule LXXX.

It will be seen from Schedule XI that out of a total available area of 135,010 acres 2 roods  $2\frac{3}{4}$  perches of lands in Suburban or Population Areas, 103,098 acres 2 roods  $15\frac{3}{4}$  perches have been selected, and that from an available area of Country Land amounting to 935,797 acres 3 roods 35 perches not less than 847,921 acres 2 roods 6 perches have been selected. The area which remained available for selection on 31st December, 1897, was 119,789 acres 1 rood 16 perches.

The

The appended summary taken from Schedule XI shows the transactions in the several Land Board Districts since 1st January, 1885:—

Land Board District.	Class of Land.	Quantity of Land available.		Area selected.		Area unselected.

With respect to appraisement of special areas under the provisions of section 36 of the Crown Lands Act of 1895, it may be stated that the total area covered by the applications to appraise was 597,011 acres 2 roods 17 $\frac{1}{2}$  perches, and values have been finally determined with respect to 579,794 acres 0 roods and 18 $\frac{1}{2}$  perches. The capital value of the latter area prior to appraisement was £1,157,494 3s. 1d.; but the value, as determined by appraisement, is only £817,967 4s. 6d., involving a reduction in capital value of £339,526 18s. 7d., and a proportionate diminution in the amount of the annual instalments payable. It may be added that prior to appraisement the annual instalments in connection with 579,794 acres and 18 $\frac{1}{2}$  perches amounted to £57,874 14s. 2d., while under recently appraised values they will only amount to £40,898 7s. 2d., showing an annual loss of £16,976 7s.

The appraisements of conditional purchases within special areas have been practically completed, with the exception of a few in the Wagga Wagga Land Board District.

The appended summary will serve to show the transactions in each of the Land Board Districts:—

SUMMARY.

### *Improvement Purchases.*

Applications under section 46 of the Crown Land Act of 1884 were not as numerous in 1898 as in the previous year, but the average price realised was greater. The number received during 1898 was 158, of which 58 were approved and 31 were refused. The area alienated comprised 54 acres 2 roods 22 perches, representing 134 lots, and the price realised was £1,612 18s. 9d. In 1897 the applications received numbered 192. The area sold amounted to 92 acres and 17 $\frac{1}{4}$  perches, while the price realised was £1,543 3s. Details will be found in Schedule XXXIV.

### *Special Purchases.*

Special purchase applications are of the following kinds:—For rescission of water frontage reservations (section 12, Act of 1861, and section 63, Act of 1884); for permission to reclaim and purchase land (section 64, Act of 1884); for the purchase of small, isolated areas, &c. (section 66, Act of 1884); for permission to close and purchase unnecessary roads, and also for the granting of Crown lands in lieu of land resumed for roads (the Public Roads Act of 1897). It may, however, be pointed out that previously to the passing of the last-named Act, the two latter classes of "Special Purchases" were dealt with under section 67 of the Act of 1884, and section 42 of the Act of 1889, respectively.

The number of applications received during the year was 164, of which 1 was under section 63, Act of 1884; 13 were under section 64, Act of 1884; 19 under section 66, Act of 1884; and 131 under the Public Roads Act of 1897.

Under the last-named sections an area of 262 acres 2 roods 30 $\frac{1}{4}$  perches was alienated, the revenue realised being £2,965 16s. 4d. In the previous year the area alienated was 1,145 acres and 16 perches, the purchase money received being £7,398 16s. 7d.

Under section 42 of the Act of 1889, 35 cases were disposed of, the area dealt with being 89 acres 1 rood 37 perches.

Transactions under the above-named sections during 1898 are summarised hereunder, and further particulars are given in Schedule XXXV:—

	Area sold.			Purchase money.		
	a.	r.	p.	£	s.	d.
Section 63, Act 1884...	3	3	10	1,957	1	6
"  64,  "  ...	50	2	2 $\frac{1}{2}$	343	5	3
"  66,  "  ...	183	0	16 $\frac{3}{4}$	595	6	6
Public Roads Act of 1897	25	1	1	70	3	1
Section 42, Act of 1889	89	1	37	2,965	16	4
	352	0	27 $\frac{1}{4}$	2,965	16	4

### *Surrenders and Exchanges.*

Although applications for surrenders and exchanges were not as numerous in 1898 as in the previous year, the amount of business transacted under this heading has been well maintained. This is evidenced by the fact that 85 cases, representing an area of 279,248 acres 2 roods 29 perches, were finally completed, and the surrenders accepted by the Governor-in-Council.

Further information on this subject will be found in Schedule XXXVI, from which it will be seen that 127 applications were received, 78 were refused or withdrawn, and 330 were outstanding at the end of the year. In the previous year 181 applications were received, 67 were refused or withdrawn, and 366 were outstanding at the close of it.

Among the more important exchanges (as far as the area involved is concerned), and in connection with which the approval of the Governor and Executive Council was obtained during the year, those within the following pastoral holdings may be mentioned, viz.:—Moonagee, 13,983 acres; Borambil, 9,121 acres; Cowl

Cowl Cowl, 15,927 acres; Wargam, 13,156 acres; Toganmain, 34,505 acres; Yallaroi, 9,396 acres; Bando, 17,660 acres; Drildool, 8,684 acres; and Brookong, 15,715 acres.

With reference to the subsequent disposal of surrendered lands, it may be remarked that, if they are not within a leasehold area, the necessary steps are at once taken to have the areas made available for settlement, or, if too limited in extent for this purpose, they are added to adjoining selections, in accordance with the provisions of the Crown Lands Acts.

#### *Deeds of Grant.*

As there were only 2,099 deeds issued in 1897, for an area of 262,391 acres 1 rood  $16\frac{1}{2}\frac{1}{0}$  perches, it will be seen that there was a decided increase in 1898 in the number prepared, viz.:—3,447 for an area of 542,518 acres and  $10\frac{1}{2}\frac{1}{0}$  perches. A fair proportion of these deeds related to land alienated by way of exchange, and it has already been pointed out in previous reports that the investigation of titles to lands surrendered involves much work of an exceedingly difficult and complicated character.

#### *Volunteer Land Order Applications.*

Two applications of this kind were received during the year for land in the Albury and Tamworth Land Districts respectively. Including these, and also the applications lodged prior to 1898, but not dealt with, the transactions during the year were as follow:—One application refused, 2 approved, and 4 (representing an area of 200 acres) finally dealt with.

#### *Settlement Leases.*

Schedule LXXXII shows that settlement lease areas containing 426 farms were notified during the year, the area embraced being 1,208,687 acres 3 roods 20 perches, as compared with 367 farms notified in 1897, which contained 1,046,999 acres.

Five hundred and thirty-one applications for leases were received, representing an area of 1,447,279 acres 2 roods 20 perches, and an annual rental of £19,278 14s. 5d. Two hundred and sixty-eight applications were confirmed for an area of 721,324 acres and 20 perches, and 185 were disallowed, while 102 applications were outstanding at the end of the year. (For details see Schedule LV.)

The total number of leases executed since the passing of the Crown Lands Act of 1895, and current at the end of 1898, was 682, embracing an area of 1,858,367 $\frac{1}{4}$  acres. The rental payable on this area was £22,364 15s. 8d., or an average of nearly 3d. per acre. It may be added that there were 427 leases current at the end of 1897, covering 1,174,207 acres. (For details see Schedule LVI.)

Three leases containing an area of 8,420 acres, and upon which a rental of £93 10s. was payable, were declared null and void during the year, and 9 leases containing 38,340 $\frac{1}{4}$  acres, representing a rental of £402 4s. 6d., were forfeited. (See Schedule LVII.)

Seven transfers of settlement leases were received prior to 1898, and 36 during that year, making a total of 43, of which 32 were finally dealt with during the year, leaving 11 outstanding at the close of it.

Information is given in Schedule LVIII with respect to the notification and disposal of settlement lease areas since the passing of the Crown Lands Act of 1895. It will be seen therefrom that up to the 31st December, 1898, an area of 4,292,666 acres 0 roods 20 perches, comprising 1,380 farms, had been set apart for settlement lease. Of this area, however, only 1,108 farms, containing 3,421,412 acres 2 roods 20 perches, became available before the close of the year, and of these 822 farms, embracing 2,254,640 acres 1 rood 20 perches, had been selected, showing that 66 per cent. of the area available had been applied for. The capital value of the land selected was £2,241,465 11s. 4d., and the average rental per acre, 2·98 pence.

The

Totals .....	1,108	3,421,412	2 20	822	2,254,640	1 20	286	1,166,772	1 0	2,241,465	11	4

#### Annual Leases.

The number of annual leases in existence on 31st December, 1898, was 10,555, embracing an area of 6,490,522 acres 1 rood 7 $\frac{1}{4}$  perches, producing an annual rental of £42,965 19s. 5d. (*Vide* Schedule LXXI.)

Table hereunder shows the number, area, and rental of the leases in existence in each Division of the Colony at the end of 1898 :—

Division.	No.	Area.		Rental.	
		a.	r. p.	£	s. d.
Eastern ... ..	9,322	5,268,355	1 9 $\frac{1}{2}$	34,306	12 7
Central ... ..	1,155	1,154,893	1 38	8,102	18 1
Western ... ..	78	67,273	2 0	556	8 9
Totals .....	10,555	6,490,522	1 7 $\frac{1}{4}$	42,965	19 5

From Schedule LXX it will be seen that the number of leases lapsed during the year was 1,120, containing an area of 697,183 acres and 17 perches, the rental derivable therefrom being £4,605 14s. 10d. Thirty-one leases were cancelled, the area being 16,885 acres 3 roods, and the rental £108 0s. 3d.

Two thousand two hundred and sixteen applications were disposed of during the year, of which 1,610 were granted and 401 were either disallowed or withdrawn. Some of these applications were lodged prior to 1898. The area leased in connection with the applications granted was 889,172 $\frac{1}{2}$  acres, representing an annual rental of £6,316 19s. 1d. (*Vide* Schedule LXVII.)

The area offered for lease by auction or tender included 59,596 acres, of which 15,102 acres 2 roods were sold, realising an annual rental of £202 14s. 4d. (Schedule LXIX.)

The Table hereunder, compiled from Schedules LXVIII and LXIX, gives the number of applications made, the area applied for, and the area leased by auction and tender during the past five years :—

Year.	Applications made.	Area applied for.		Area leased by auction.	
		a.	r. p.	a.	r. p.
1894 ... ..	1,779	1,018,615	0 0	11,042	0 0
1895 ... ..	2,444	1,458,627	2 0	6,929	3 0
1896 ... ..	1,928	1,072,830	0 35 $\frac{1}{2}$	8,689	2 0
1897 ... ..	2,322	1,473,680	1 24	33,232	1 0
1898 ... ..	2,216	1,339,757	0 0	15,102	2 0

In comparing the transactions last year under this head with those of the preceding year, a slight decrease is apparent in the number of applications made and the area applied for.

*Conditional Leases.*

Nine hundred and forty-nine applications were received in 1898 for an area of 367,440 acres 2 roods 2 perches.

From Schedule XXV, and the summary hereunder, which has been compiled from it, it will be seen that the number of applications lodged and the area applied for last year were greater than during the two preceding years, also that there has been a proportionate increase in the rental derived.

Year.	Number.	Area.		Deposits.	
		a.	r. p.	£	s. d.
1885 ... ..	3,816*	2,547,045	0 15*	21,225	7 6
1886 ... ..	2,500	1,207,953	0 8	10,066	5 6
1887 ... ..	2,228	1,242,380	0 0	10,353	3 4
1888 ... ..	2,623	1,424,753	1 25	11,872	18 11
1889 ... ..	3,470	1,569,949	3 30	13,082	18 4
1890 ... ..	5,466	3,056,774	2 26	25,489	7 2
1891 ... ..	3,952	2,177,810	0 15	18,140	17 10
1892 ... ..	2,692	1,171,971	1 18	9,769	5 1

1894 ... ..	1,338	528,612	2 30	4,409	9 10
1895 ... ..	1,120	478,301	3 20	3,985	1 8
1896 ... ..	736	335,101	1 30	2,783	7 5
1897 ... ..	713	298,819	0 0	2,498	11 9
1898 ... ..	949	367,440	2 2	3,069	13 4

\* This includes 1,994 applications, made under 54th section of the Act of 1884, representing an area of 1,193,617 acres 0 roods 30 perches.

Seven hundred and sixty-nine applications were dealt with last year, of which 518 were confirmed for an area of 207,574 acres 1 rood 20 perches, and 251 were disallowed. The latter represented an area of 114,710 acres 3 roods 30 perches. Fuller details are given in Schedule XXVI.

The number of transfers passed in 1898 was 3,039, under which 2,063 leases, containing a total area of 1,395,130 acres 2 roods 3 perches, were transferred. (*Vide* Schedule XXVII.)

Two hundred and twelve conversions of conditional leases into conditional purchases took place last year, under the provisions of section 25 of the Crown Lands Act of 1889. Of these leases, 144 were wholly, and the remainder partly, converted. The total area converted in this manner embraced 104,730½ acres, which prior to conversion returned a rental of £1,495 1s. 3d. For particulars see Schedule XXIX.

The rents recommended by the Land Board were approved by the Minister in 518 cases, and no references were made to the Land Appeal Court.

Extension of time for payment of rent on conditional leases was granted in 245 cases, the amount involved being £2,303. Forfeitures incurred for breach of conditions were provisionally waived in 151 cases, and absolutely waived in 94 cases. The fees called for to cover cost of provisional waiver amounted to £111 6s.

During last year 482 conditional leases were gazetted as approved, representing an area of 184,281 acres 2 roods, and a rental of £2,024 12s. 1d. The total number of

of gazetted leases current at the end of the year was 22,114, embracing an aggregate area of 12,607,091 acres 1 rood  $24\frac{3}{4}$  perches, and producing an annual rental of £150,119 15s. 2d. Further information will be found in Schedule XXX.

The number of conditional leases gazetted as forfeited last year amounted to 626, representing an area of 229,573 acres 2 roods 5 perches, and a rental of £2,615 15s. (See Schedule XXVII.)

An area of 10,061 acres and 1 rood has, since December, 1885, been excised from 19 conditional leases, and cancelled on account of the land having been found to be auriferous.

#### *Pastoral Leases.*

The number of pastoral leases current on the 31st December, 1898, was 692, representing an area of 52,912,506 acres, and an annual rental of £248,020 14s. Three hundred and eighty-four of these leases were situated in the Central Division, and 308 in the Western. (See Schedule XXXVIII.)

Schedule hereunder shows the area leased in each Division, and the rental returned:—

No. of Leases.	Division of Colony.	Area.	Rent.	
		acres.	£	s. d.
384	Central ... ..	10,835,754	110,904	6 11
308	Western ... ..	42,076,752	137,116	7 1
692		52,912,506	248,020	14 0

Four pastoral leases were forfeited during the year, all being situated in the Central Division. (See Schedule XLVI.)

The area withdrawn from pastoral lease for public purposes in 1898 was 643,900 acres. This area was excised from 87 leaseholds, and refunds to lessees of rent paid in advance upon the area withdrawn amounted to £5,378 17s. 2d. (Schedule XXXIX.)

The number of pastoral leases transferred during the year was 67, of which 44 were in the Central and 23 in the Western Division. (Schedule XL.)

During the year the rentals of 18 pastoral leases were reappraised under the provisions of section 29 of the Crown Lands Act of 1889. The area comprised in these leases was 2,225,941 acres, which, prior to reappraisal, returned a rental of £5,255 10s. 1d. The total rentals, as redetermined, amounted to £4,625 11s. 1d., or an average rate per acre of  $\frac{49}{100}$ ths of a penny, as against the original rate of  $\frac{56}{100}$ ths. (See Schedule XLIII.)

Eleven applications (comprising an area of 1,203,321 acres) were made during the year under section 8 of the Crown Lands Act of 1895 for the attachment of resumed areas to their respective leaseholds. Four applications, containing 715,757 acres, were approved, and 4, containing 305,136 acres, were either refused or withdrawn; while 12 applications, covering 1,691,956 acres, were outstanding at the close of the year. For additional particulars see Schedule XLI.

The names and numbers of the pastoral leases which expired during 1898 are given in Schedule XLVIII, and particulars respecting those which will expire in 1899 will be found in Schedule XLVII.

In order to meet the demand for land for closer settlement, 289,800 acres were withdrawn from pastoral lease during the year under the provisions of sections 3 and 6 of the Crown Lands Act of 1895, the whole of this area being situated in the Central Division. Preliminary notification of the intention to withdraw was gazetted with respect to 5 other holdings, all situated in the Central Division. Further information respecting the area withdrawn, and the names of holdings from which it is proposed to withdraw land, is given in Schedule XLIX.

It may be stated that the pastoral leasehold of Ungaree (No. 133) was during the year subdivided into two pastoral holdings, respectively numbered and named No. 755, "Ungaree" (32,400 acres), and No. 756, "Ungaree West" (3,100 acres).

*Occupation*

*Occupation Licenses.*

The number of licenses in force during 1898 was 1807, embracing an area of 37,267,354 acres, while the fees payable annually thereon amounted to a total of £106,125 7s. 10d.

The Table hereunder shows that the licenses current in 1898 were more numerous than in the preceding year, and also indicates an increase both in area and rental:—

Current on 31st December, 1897.				Current on 31st December, 1898.			
Division.	No.	Area.	Rent.	Division.	No.	Area.	Rent.
		acres.	£ s. d.			acres.	£ s. d.
Eastern .....	432	5,206,420	11,423 10 3	Eastern .....	502	5,877,510	15,532 17 10
Eastern (preferential)...	305	3,535,612	16,052 3 3	Eastern (preferential)	309	3,553,936	15,807 12 1
Central .....	541	5,140,851	27,784 10 5	Central .....	538	5,233,325	26,604 14 2
Central (preferential) ...	239	3,534,796	23,499 6 0	Central (preferential) ..	269	4,376,272	28,479 16 4
Western .....	196	19,542,767	21,770 19 5	Western .....	189	18,226,261	19,700 7 5
Total .....	1,713	36,960,446	100,529 9 4	Total .....	1,807	37,267,354	106,125 7 10

Two hundred and forty-five licenses, embracing an area of 3,176,176 acres, were offered for sale by auction or tender, of which 121, containing 1,693,506 acres, were sold. The number and area sold in 1897 was considerably less, viz., 64 licenses, containing 863,680 acres. (*Vide* Schedule XLII.)

The number of preferential occupation licenses which were not renewed in 1898 was 24, of which 6 are situated in the Eastern Division, 17 in the Central, and 1 in the Western Division, whilst the number of ordinary occupation licenses was 53, of which 21 were situated in the Eastern Division, 25 in the Central, and 7 in the Western. (*Vide* Schedule XLVI.)

Transfers were made during the year of 32 preferential and 89 ordinary occupation licenses. (Schedule XL.)

An area of 383,995 acres was withdrawn from pastoral lease for settlement under the provisions of sections 3 and 6 of the Crown Lands Act of 1895.

The lessees having in many instances availed themselves of the right to hold the land temporarily under preferential occupation license pending selection, an appraisalment was made under which the license fees payable annually amounted to a total of £2,317 12s. 1d.

In Schedule XLIV will be found the distinguishing number of each license, its area, the annual fee payable in connection with it, and the name of the pastoral holding from which it was withdrawn.

Certain unrenewed occupation licenses and preferential occupation licenses were reinstated last year. Of the former, 6 were situated in the Eastern Division, 15 in the Central, and 6 in the Western, while of the latter 6 were in the Eastern, 7 in the Central, and 1 in the Western Division.

Withdrawals for purposes of alienation, reservation, &c., were made from 420 licenses, the area withdrawn being 1,628,142 acres, necessitating refund to licensees of rent, paid in advance, amounting to £7,008 17s. 7d. (Schedule XXXIX.)

With respect to 14 resumed areas, the license fees were reappraised and gazetted under the provisions of the 81st section of the Crown Lands Act of 1884. For further particulars see Schedule XLV.

Information respecting the attachment of resumed areas to leasehold areas is given in this report under the heading "Pastoral Leases," and also in Schedule XLI.

The areas and rentals of certain preferential occupation licenses (formerly held under pastoral lease in the Central Division) were reappraised, and detailed information respecting them is given in Schedule LI.

*Homestead*

*Homestead Leases.*

At the close of last year, 1,237 homestead leases were in existence, comprising an area of 10,456,668 acres, and returning a rental of £53,916 12s. 4d.

Of these leases, 802 are situated in the Land Board District of Bourke. They contain an aggregate area of 6,902,172 acres, and yield a rental of £33,833 9s. 8d., the average rate per acre being  $1\frac{17}{100}$ d. The district of Hay has 312 leases, containing 2,508,399 acres, and returning £11,620 14s. 9d. rent, or an average rate per acre of  $1\frac{11}{100}$ d., while Moree has 123 leases, comprising 1,046,097 acres, with a rental of £8,412 7s. 11d., or an average rate per acre of  $1\frac{93}{100}$ d. (*Vide* Schedule LIV.)

Applications for homestead leases were not as numerous last year as in the preceding one. Seventy-eight applications were received in 1897, and 50 in 1898.

The Table hereunder shows the number of applications received each year since 1885, together with the area applied for, and the amount received each year by way of deposit. Further details are given in Schedule LI:—

Year.	No. of Applications.	Area applied for.	Deposits lodged.
		acres.	£ s. d.
1885	391	3,823,235	15,880 2 11
1886	121	1,141,963	4,758 3 7
1887	128	1,198,286	4,992 17 2
1888	141	1,332,691	5,511 15 7
1889	238	2,187,837	9,113 19 9
1890	310	2,620,959	10,920 13 3
1891	191	1,515,629	6,278 2 1
1892	176	1,214,447	5,648 16 6
1893	135	870,044	3,582 10 4
1894	110	692,515	2,885 9 7
1895	106	613,723	2,557 3 7
1896	89	605,146	2,521 8 10
1897	78	494,680	2,055 4 11
1898	50	353,842	1,492 17 6

Fifty homestead leases were granted during the year, comprising a total area of 362,047 acres, and returning a rental of £1,033 6s. 2d. These figures are somewhat under those of the previous year, in which the number of leases granted was 61, the area embraced being 419,840 acres, and the annual rental £1,246 18s. 11d. The average rental per acre of the area leased in 1898 was  $\frac{68}{100}$ d.

Six applications were either refused or permitted to be withdrawn, and 22 were outstanding at the close of the year. (See Schedule LII.)

Eighteen leases, comprising an area of 105,845 acres, and returning a rental of £392 9s. 11d., were forfeited during the year. (See Schedule LIII.)

An area of 935,459 acres, included in 122 leases, was reappraised under the provisions of section 29 of the Crown Lands Act of 1889. The rental payable on this area, prior to reappraisal, amounted in the aggregate to £5,680 11s. 11d.

The rental as reappraised amounts to £4,799 15s. 10d., about 16 per cent. less than the original amount. The original rent amounted to an average of about  $1\frac{45}{100}$ d. per acre, whilst the rent as reappraised was at the rate of  $1\frac{23}{100}$ d. For additional details respecting reappraisal, see table hereunder.

TABLE showing details respecting homestead leases reappraised under section 29 of the Crown Lands Act of 1889:—

Land Board District.	Number of Leases appraised.	Area.	Rental according to original rate.	Rentals as reappraised.
		acres.	£ s. d.	£ s. d.
Bourke ... ..	43	282,660	1,657 8 9	1,312 11 6
Hay ... ..	60	506,304	2,709 0 10	2,305 9 3
Moree ... ..	19	146,495	1,314 2 4	1,181 14 10
	122	935,459	5,680 11 11	4,799 15 10

Average rate per acre ... ..  $1\frac{45}{100}$ d. ... ..  $1\frac{23}{100}$ d.

During the year 183 transfers of homestead leases were completed.

*Special*

*Special Leases.*

In 1898, 743 applications for special leases were received, being a very decided advance on the number received in each of the two preceding years respectively, 514 having been received in 1897, and 275 in 1896. 424 applications were outstanding on 31st December, 1897; the number to be dealt with during the year under review was therefore 1,167. Of these 591 were dealt with, 275 being granted, and 316 declined, lapsed, &c. The leases granted comprise an area of 15,776 acres 1 rood and  $1\frac{3}{4}$  perches, and return an annual rental of £2,308 8s. 7d. The number of applications on which action was not completed in 1898 was 604. Additional information is given in Schedule LX.

A larger number of special leases were forfeited last year than during the preceding one. Thirty-nine leases were forfeited in 1898, comprising 1,171 acres and 25 perches, and yielding a rental of £480 11s. 7d., as against 28 leases, containing 1,015 acres 1 rood  $36\frac{1}{2}$  perches, with a rental of £271 12s. For further details, see Schedule LXI.

A larger number of leases were current at the close of last year than at the end of 1897. The number, inclusive of those which terminated by effluxion of time on the 31st December, 1898, was 992, containing 39,364 acres 1 rood 28 perches, and returning a rental of £17,271 7s. 2d., as against 804 leases current at the close of 1897, containing 25,695 acres 1 rood, with a rental of £16,332 0s. 2d. Seventy-nine leases expired by effluxion of time during the year, comprising an area of 1,540 acres 0 roods  $3\frac{3}{4}$  perches. (Additional details will be found in Schedules LXII and LXIII.)

Special leases are granted under the provisions of sections 89, 90, and 92, of the Crown Lands Act of 1884, and section 46 of the Crown Lands Act of 1895, for the various purposes specified hereunder:—

## Under section 89—

Floating docks, jetties, piers, and wharfs below high-water mark.

## Under section 90—

Accommodation house.	Gravel (to obtain).	Residence.
Accommodation paddock.	Grazing.	Saw-mills.
Agriculture.	Graving dock.	Sericulture.
Bakery.	Guano (to obtain).	Shells (to obtain).
Ballast (to obtain).	Inn.	Ships (building or repairing).
Bathing places.	Irrigation.	Skin-drying and packing.
Bee and Poultry Farm.	Landing-places.	Slaughter-houses.
Boats (building and repairing)	Lime-kilns.	Smelting-works.
Boiling-down works.	Limestone (to obtain).	Smithy.
Brick earth (to obtain).	Loam (to obtain).	Stables and accommodation paddocks.
Brick-kiln.	Machinery (erection of).	Store.
Bridges.	Mail stations in sparsely-populated districts.	Storage purposes.
Cricket.	Night-soil depôt.	Sugar-cane growing.
Dairying.	Nursery garden.	Tanks.
Dams.	Patent slip.	Tannerics.
Drainage.	Pipe-line.	Tobacco growing.
Engineering works.	Pig and poultry farm.	Vegetable garden.
Eucalyptus (cultivation of).	Public recreation and Show Ground.	Village settlement.
Explosives (sites for storage of).	Punt-houses.	Wattle-growing.
Factory.	Quarries.	Well.
Ferries.	Railway station and depôt.	Wharfs (above high-water mark).
Fisheries.	Recreation.	Wool-washing establishments.
Freezing works.		Working mineral springs.

## Under section 92—

Irrigation works and tramway purposes.

## Under section 46, Crown Lands Act of 1895—

Business purposes.

Erection of buildings.

*Artesian Well Leases.*

One artesian well lease was granted in 1898, comprising 10,240 acres, and returning a rental of £12 16s. The number of these leases, which were current on 31st December, 1898, was 37, representing an area of 378,547 acres and a rental of £1,023 16s. 7d.

*Improvement Leases.*

These leases are either sold at auction or let by tender. The tenures under which they are held are of considerable length and the rents are exceedingly moderate, in proportion to the areas leased. They are, however, subject to stringent conditions with respect to the improvements to be effected by lessees.

During

During the year 113 leases, comprising 786,773 acres 0 rood 1 perch, and yielding a rental of £2,040 19s. 2d., were sold at auction; while 61 leases, representing an area of 259,844 acres and a rental of £1,787 16s. 10d., were disposed of by tender. (*Vide* Schedule LIX, Part A.)

Schedule LIX, Part B, shows that on the 31st December, 1898, 413 leases were current, including an area of 3,823,950 acres 3 roods, and producing a rental of £7,654 3s. 6d., or an average of 48d. per acre; also, that 13 leases, containing 128,658 acres, were either forfeited or declared void during the year, the total rental involved being £210 6s. 3d.

#### *Scrub Leases.*

More applications for leases of this kind were received last year than during the preceding one. Forty-seven applications were received in 1898 for an area of 659,488 acres, as against 36 applications and an area of 554,690½ acres in 1897. Thirty-six applications, for an area of 892,796 acres, were outstanding on 31st December, 1897, making a total of 83 applications to be dealt with during the year. Seventeen of these were granted, representing an area of 205,396 acres and a rental of £635 2s. 2d., while 19 were either disallowed or withdrawn.

No leases expired during the year, but 2 were forfeited, their combined areas amounting to 12,740 acres, and their rentals to £39 7s. 6d. Fifty-five leases were in force at the close of the year, embracing 423,557½ acres, and returning an annual rental of £943 0s. 11d. (*Vide* Schedule LXIV.)

#### *Leases of Inferior Lands.*

Six leases were granted during the year, the combined areas and rentals thereof being, respectively, 18,010 acres and £12 10s. Five leases were forfeited, their areas amounting to 62,205 acres and rentals to £46 11s. 6d.; and 38 leases, representing an area of 378,580 acres and an annual rental of £300 13s. 3d., were current at the end of the year. (*Vide* Schedule LXV.)

#### *Residential Leases.*

One hundred and eleven applications were received in 1898, which, with 117 outstanding on 31st December, 1897, left a total of 228 leases to be dealt with for an aggregate area of 1,639 acres 2 roods 26 perches. Twenty-six applications were disallowed or withdrawn, while 69 were granted for an area of 869 acres 2 roods 25 perches, at a rental of £104 10s. 4d.

Ten leases were forfeited, their aggregate areas amounting to 108 acres 1 rood 24 perches, and their rentals to £13 19s. 5d.

The leases current at the close of the year numbered 272, the area embraced by them amounting to 3,046 acres 2 roods 36 perches, and the rental payable in connection therewith being £412 15s. 10d. (*Vide* Schedule LXVI.)

#### *Snow Leases.*

From Schedule LXVIII it will be seen that no leases of this description were granted during the year; but 2 were declared forfeited, the area affected being 5,230 acres, and the rental £46 1s. 11d.

The number of these leases current on 31st December, 1898, was 19, containing an area of 89,767 acres, and yielding an annual rental of £782 19s. 7d.

#### *Dedications, Reserves, Resumptions.*

The total number of reserves from sale for various purposes notified during the year was 1,273, comprising an area of 1,232,410 acres, while the revocations of similar reserves numbered 2,173, and affected an area of 3,391,032 acres. (Schedules LXXV and LXXVI.)

Two hundred and twenty-one reserves from lease and license, annual lease, &c., were notified in 1898, comprising a total area of 443,698 acres.

The revocations of reserves of this class numbered 343, and affected an area of 297,479 acres. (Schedule LXXVII and LXXVIII.)

During

During the year 119 dedications for religious and public purposes were made, within which were included 16,779 acres 2 roods 28 perches. Particulars respecting the objects of these dedications are given in Schedule LXXIX.

An area of 2,128 acres 2 roods  $1\frac{3}{4}$  perches was resumed during the year under the provisions of section 105 of the Act of 1884, section 41 of 1889, and section 7 of the Public Trusts Act of 1897. The area resumed under these sections in 1897 was 403 acres 1 rood 17 perches. Additional particulars appear in Schedule LXXIV.

#### *Newcastle Pasturage Reserve.*

There are 519 holdings under the Newcastle Pasturage Reserve Act on which purchase money is being paid by instalments. Balances on 18 purchases were paid during the year, bringing the total number of completed purchases up to 337, the purchase money represented being £20,388 3s. 3d. (*Vide* Schedule LXXIII.)

#### *Cases of trespass on Crown Lands.*

Cases of this class were not as numerous last year as in 1897. Two hundred and ninety-one cases were reported by the Crown Lands bailiff during 1898, as against 403 cases in 1897. The number of cases outstanding at the end of 1897 was 345, making a total of 636 requiring action in 1898, of which 308 cases were dealt with in various ways, leaving a balance at the close of the year of 328 incomplete cases.

#### *Applications for permission to ringbark.*

One hundred and seventy applications were received during the year, embracing an area of 1,262,111 acres. The fees lodged with these applications amounted to £464. Of the applications received prior to 1898, 59 were granted, while of 170 applications received during the year 92 were also granted, making a total of 151 applications, and including a total area of 1,284,917 acres. Sixteen applications were disallowed during the year, and 65 were outstanding at the close thereof. (*See* Schedule LXXXIX for further particulars.)

#### *Permissive occupancies.*

At the close of the year 615 permission occupancies were current, comprising an area of 98,767 acres 3 roods 11 perches, returning a rental of £1,404 5s. 10d. (*Vide* Schedule LXXII.)

#### *Cases dealt with by Local Land Boards.*

During the year 16,468 cases were dealt with by the Local Land Boards, of which 995 cases were adjourned. Hereunder is a comparative statement showing the number of cases considered and adjourned, respectively, and the number of days occupied in sittings of Boards during the past six years, while additional information on this subject will be found in Schedule LXXXVII.

1893 ...	...	30,910 cases dealt with ;	2,830 cases adjourned ;	1,419 $\frac{1}{2}$ days occupied.
1894 ...	...	25,988	2,055	1,438
1895 ...	...	21,436	1,970	1,236 $\frac{1}{2}$
1896 ...	..	22,067	2,308	1,697
1897 ...	...	17,597	1,355	1,266
1898 ...	...	16,468	995	1,169 $\frac{1}{2}$

#### *Correspondence.*

The number of documents received and registered in the Head Office during the year was 124,385, showing a decrease of 3,726 in comparison with the number registered in 1897. (Schedule XC.)

During

During the year 172,759 printed and manuscript letters, schedules, parcels, &c., were despatched, while 1,691 telegrams were sent and 104 circulars were issued. (Schedule XCI.)

The number of letters and circulars received at the various Land Board Offices during 1898 was 108,244, as against 112,004 received in 1897, while 112,243 letters, parcels, &c., were despatched. Further particulars are given in Schedule XCII.

#### *Church and School Lands.*

Part "A," Schedule LXXXIV, shows that 303 Pastoral Leases granted under the Church and School Lands Dedication Act of 1880, were current on the 31st December, 1898, comprising an area of 226,330 acres 2 roods 26 perches, and returning a rental of £5,599 13s. 7d.

Part "B" of Schedule LXXXIV shows that on the date above named 300 Agricultural Leases were current embracing an area of 9,811 acres 3 roods 34 perches, and producing revenue to the amount of £1,676 18s.

Three applications for Mineral Leases comprising an area of 171 acres 1 rood were lodged during the year. Two applications were outstanding from the previous year, leaving a total number of 5 to be dealt with during 1898. One of these was granted for an area of 60 acres at a rental of £15. Fourteen leases were cancelled during the year, containing 905 acres, and twelve leases, including 504 acres 0 roods 1 perch, and returning a rental of £142 18s. 8d., were current at the close of the year. (See Part "A" of Schedule LXXXV.)

One application for a Gold Lease was received during the year, and nine applications were outstanding at the end of the preceding year. The number to be dealt with in 1898 was therefore 10. Six applications were granted and 2 were declined, leaving 2 on which action had not been completed. The 6 leases granted contained 71 acres 3 roods 26 perches, and the annual rental payable on them amounted to £72. Twenty-six leases were cancelled, comprising an area of 171 acres 3 roods 30 perches, and 3 leases containing 4 acres expired during the year.

Eighty-three Gold Leases were current on 31st December, 1898, including an area of 530 acres 3 roods 29 perches, and yielding a rental of £598 16s. (For further information see Part "B," Schedule LXXXV.)

Forty-four leases granted for building and similar purposes for specified periods were current on 31st December, 1898, covering an area of 27 acres 1 rood 20 $\frac{3}{4}$  perches, and producing a rental of £554 15s. (See Schedule LXXXVI.)

Several leases of a miscellaneous character were current at the end of 1897. Only one of these, however, was in existence at the close of 1898, containing an area of 1 acre 1 rood 28 perches, with a rental of 15s. per annum.

It may be mentioned that the lands formerly known as the Church and School Lands became, by the passing of the Church and School Lands Act of 1897, vested in Her Majesty the Queen, free from all trusts and provisions affecting the same, but subject to the provisions of the Crown Lands Act of 1884, the Mining Act of 1874, and of any Acts amending them; the lands in question to be dealt with under the said Acts as Crown lands.

The Church and School Land Act of 1897 provided, *inter alia*, that any lessee might, within six months of the passing thereof, apply for permission to convert his lease into one or other of the following holdings under the Crown Lands Acts, viz. :—a Homestead Selection, a Settlement, Special, or Improvement Lease, or a Special Purchase. It further provided that lessees under the Church and School Lands Mining Act could apply to convert their leases into leases under the Crown Lands Mining Act, 1874.

The residue of any lease, which has been only partly converted, may be dealt with under the provisions of the Crown Lands Acts. Any leases not so converted will still be subject to the provisions of the Church and School Lands Alienation Act of 1880 until their expiration or determination in any other manner, when they will be also available under the Crown Lands Act.

One hundred and eighty-three applications were received for the conversion of 394 leases of agricultural and pastoral lands, comprising a total area of 127,749 acres 1 rood 6 perches, but have not yet been finally dealt with.

The following tabulated statement shows the number of applications received for conversion in the various land districts and the class of holdings applied for.

SCHEDULE showing the number of applications received to convert Church and School Lands Leases into holdings under the Crown Lands Acts, the number of leases sought to be converted, and the total area applied for.

Nine applications were received by the Department of Mines for conversion of mining leases, issued under the Church and School Lands Mining Act, into holdings under the Crown Lands Mining Act, 1874.

*Cost of Survey.*

Information as to cost of various classes of measurements effected during the year by licensed surveyors, paid under a system of fees, will be found in Schedule XCIV.

*Chief Surveyor.*

The report of the Chief Surveyor and Director of Trigonometrical Survey is appended hereto.

WM. HOUSTON,  
Under Secretary.

## SCHEDULE XVIII.

SUMMARY of particulars relating to the number and area of Conditional Purchases in existence on 31st December, 1898.

Particulars.	No.	Area.	No.	Area.
		a. r. p.		a. r. p.
Number and area selected up to 31st December, 1897, after deducting number and area cancelled, lapsed, forfeited, disallowed, withdrawn, converted into homestead selections, and for which deeds have issued*	151,183	20,224,892 0 37 $\frac{3}{4}$		
Number and area applied for during 1898 .....	1,591	298,137 2 11 $\frac{1}{2}$	152,774	20,523,029 3 9 $\frac{1}{2}$
Less net decrease due to disallowances, &c., as below .....	686	102,762 2 22 $\frac{1}{2}$		
„ number and area for which deeds were issued during 1898 .....	1,391	176,529 0 12	2,077	279,291 2 34 $\frac{1}{2}$
Number and area in existence on 31st December, 1898 .....			150,697	20,243,738 0 15
Number and area of conditional purchases for which deeds have been issued up to 31st December, 1898 .....			25,522	3,059,191 0 33
Disallowed or withdrawn during 1898 .....	369	68,608 0 27		
Declared forfeited during 1898 .....	356	43,990 1 36 $\frac{1}{2}$		
Decrease in area (Schedule XIII) .....		2,255 0 23 $\frac{1}{2}$		
Converted into homestead selections during 1898, exclusive of applications withdrawn or refused .....	18	2,977 2 0	743	117,831 1 6 $\frac{1}{2}$
Reversals of forfeiture for non-payment—Crown Lands Act, 1861 .....	26	3,475 3 10		
Reversals of forfeiture for non-payment—Crown Lands Act, 1884 .....	21	3,113 0 1		
Reversals of forfeiture for reasons other than non-payment—Crown Lands Act, 1884 .....	7	1,330 1 0		
Increase in area (Schedule XIII) .....		6,092 1 13 $\frac{1}{2}$		
Applied to be converted into Homestead Selections prior to 31st December, 1897, and applications withdrawn or refused during 1898 .....	3	1,057 1 0	57	15,068 2 24 $\frac{1}{2}$
Net decrease in number and area due to disallowances, &c. ....			686	102,762 2 22 $\frac{1}{2}$

\* These figures are in lieu of those given in Schedule XXI of Annual Report for 1897 (vide 98-11,530 Dep.).

SCHEDULE XIX.

RETURN of applications for Homestead Selections received from 1st June, 1895, to 31st December, 1898.

## SCHEDULE XCIII.

APPROXIMATE Statement of Land Alienated and Unalienated in the Colony on the 31st December, 1898.

1. Area alienated in all forms prior to 1862 .....	acres. 7,146,579
2. Area alienated by auction sale and after auction selection (including sales under deferred payments) from 1st January, 1862, to 31st December, 1898 .....	11,103,899
3. Area alienated by improvement and special purchase during the same period .....	2,799,965
4. Area alienated by conditional purchase during same period for which deeds have issued .....	3,059,191
5. Area alienated under Volunteer Land Regulations of 1867, to 31st December, 1898, for which deeds have issued .....	168,395
6. Area alienated by all other forms during same period, including lands dedicated .....	803,543
Area alienated up to 31st December, 1898 .....	
7. Estimated area of unalienated land in the Colony on the 31st December, 1897 .....	25,081,572 173,556,508
* Estimated area of Colony, 310,372 square miles; or, .....	
8. Area under incomplete conditional purchase up to 31st December, 1898, exclusive of forfeitures, lapsings, cancellations, disallowances, and voidances .....	198,638,080
9. Area comprised in homestead selections in existence on 31st December, 1898, exclusive of forfeitures, disallowances, &c. ....	20,243,738
10. Area converted into homestead selections under section 20, Crown Lands Act of 1895 .....	1,037,227 26,053

\* Includes Lord Howe Island, 50 square miles.

## Report of the Chief Surveyor to The Under Secretary for Lands.

Sir,

Department of Lands, Sydney, 31 January, 1899.

I have the honour to submit for your information a brief statement of the Field Staff of this Department, and a report of the services performed in the Survey Branch of the Head Office for the year 1898.

Permanent field staff.

The permanent field staff of the General Establishment, and the Trigonometrical Survey, numbered in all 63 officers, viz. :—13 district surveyors, 36 surveyors, 8 assistant surveyors, 4 field assistants, and 2 piling overseers.

Promotion.

Mr. J. Lindsay, the senior assistant surveyor, was promoted to the position of surveyor.

Dismissal.

One surveyor was dismissed from the service of the Department during the year.

Contract surveyors.

The number of surveyors licensed for survey of Crown lands in this Colony is 618, of whom 128 are in salaried service of the Government, leaving 490 available for employment; of these only 73 were engaged on contract surveys for this Department, the total amount of their earnings being £41,402. In many cases the employment was of casual character.

Inspection of contract surveys.

Forty-three reports of inspection of surveys performed under contract were received. In 10 cases the inspecting officers reported that the surveys were not up to the standard prescribed by the Departmental Survey Regulations.

Licenses under the Real Property Act.

Licenses under the 100th section of the Real Property Act were issued to 85 surveyors after consideration by the Registrar-General and the Chief Surveyor (as a Board); the annual license fee of £1 1s. was paid, except in three special cases. Two first licenses were also granted.

Investigations for the Registrar-General.

Twenty-eight applications for certificates of title under the Real Property Act were referred to this Department by the Registrar-General for report as to any objections to the issue of the certificates; 5 cases as to alleged errors in surveys were also referred for investigation. After inquiry had been made in each case the results were communicated to the Registrar-General.

## BOARD OF EXAMINERS FOR LICENSE TO SURVEY CROWN LANDS.

Simultaneously, and under like conditions with the Boards in the colonies of Western Australia, South Australia, and Victoria, the Board of Examiners at Sydney, in September, held an examination of candidates for license to survey. Eight candidates were examined, of whom the following were recommended for license as surveyors, viz. :—William Kennedy, Norman Eric Lowe, Ernest Percival Cotton, Frank Wearne, William Henry Wearne.

In October the Board met for the examination of one of the candidates, part of whose examination had been postponed from the September meeting. The candidate was not recommended to be licensed.

In December the Board met for the completion of examination of William Wade, one of the candidates, whose examination in September had been interrupted by illness. He was found to be qualified, and was recommended for a license.

## TRIGONOMETRICAL COMPUTING BRANCH.

Field-books of angles at the following stations have been received, viz. :—Cooma, Bowning, Barren Jack, Bobbara, Marina, Rock Lodge, and Muttama, observed at with 18-inch theodolite; and at Black, Waalimma, Delegete, Tingi-Ringi, Black Jack, Tombong, Substitute, Ben's Peak, Bungarby, Nimbi, Kerlewis, Thredbo, and Munyang, where the measurements were made with 10-inch theodolites. The contents of all these field-books have been examined, reduced, and entered in the record-books, while the calculations of triangles and of the co-ordinate positions have been made wherever the field work has been completed, and, in certain cases where special demand arose, in anticipation of its completion.

There has been recomputation of the triangulation of the county of Camden, and the final reduction of the survey of the county of Auckland has been made; the former work has been entered in duplicate. Provisional calculations of other parts of the survey have been effected for the purpose of furnishing data for the map-compiling and other branches.

Notes of astronomical observations of azimuth at Cooma, and of azimuth and latitude at Bobbara, have been received. The observations at Wolunla, Glenbog, Tathra, Cooma, and Bobbara have been finally reduced, though the entry of some of the computations has not yet been made.

The comprehensive reduction of the heights of the whole of the stations of the southern system, an opportunity for making which it was hoped would be afforded during the year, has not yet been made, owing largely to the necessity which arose for the employment elsewhere of the assistant computer, who was absent during ten and a half months of the year. The need for this work has, however, been kept in view, and steps have been taken to enable it to be rapidly carried through as soon as it can be entered on.

Particulars have been prepared for a supplement to the register of main stations, which will include all the information made available since the publication of that work in 1895. It is expected that this supplement will be issued early in the current year.

Comparison of the accompanying map with that appended to last Annual Report will indicate the progress made during the period under notice.

The condition of the stock of surveying and other instruments belonging to the Department has been carefully attended to, and all repairs required to keep the instruments in serviceable order have been made.

## TRIGONOMETRICAL SURVEY.

The Surveyor-in-charge of Field Operations, Mr. J. Brooks, F.R.A.S., F.R.G.S., and Mr. F. J. Gregson, surveyor, have been engaged on this work; there have been two piling parties employed continuously, and a third party temporarily for three months. The weather generally has been favourable for observing, and the work done comprises the determination of seven first-class stations and twelve second-class stations, besides revisiting three other second-class stations. There have been seventy-six new stations

stations formed, twenty-eight reserves at trigonometrical stations measured, and 95 miles of connection traversed. Two series of check levels were run about 10 miles, viz., from Mundoonen and Breadalbane respectively to bench marks on the Southern railway.

Mr. Brooks' report, being a review of the year's service, is attached as an Appendix.

The trigonometrical survey becomes more important year by year, especially to enable the compilation of maps for the various purposes of Government. In connection with land tax assessment maps of more perfect character are needed, and, in order that compilation of maps shall proceed on an economical basis, it is necessary that this survey shall be extended as rapidly as possible. I understand that the Minister has approved of a third piling party, and this addition to the staff will enable the services of the two surveyors now engaged to be applied effectively in the extension of the survey into new country.

The Chief Draftsman has prepared the following synopsis of the service performed in the Drafting and Lithographic Branches of this office.

#### CHARTING BRANCH.

With the exception of auction, which shows a considerable increase for the year, the work dealt with in Charting Branch during 1898, is about the same in volume as that disposed of during the previous twelve months.

1,437 auction cases were disposed of, and 181,531 acres scheduled for disposal; against 658 cases dealt with, and 65,379 acres scheduled in 1897.

The boundaries of the Police, Petty Sessions, Licensing, and Circuit Court Districts, which were adjusted during 1897, were gazetted early in 1898. The preparation of a colony map showing these boundaries, together with those of the District Court Districts is in hand, and has been expedited as much as possible.

Practically the same number of exchange cases passed through the branch as in 1897, viz., 1,453.

Of the 337 Central Division Pastoral Leases which had expired by the end of 1898, 273 have been finally dealt with (49 during 1898). Action on the remainder is well on the way towards completion. With the exception of a few cases, the Central Division Leasehold Areas which expire up to the end of 1900, are now with the district surveyors for reports as to the disposal of the available Crown lands for new settlement.

3,456 plans and tracings were charted at an expense of £215 1s.

The index to the new register of reserves is being type-written, and the two first volumes representing 926 pages have been bound ready for use.

Extra assistance had to be put on to the work of revision of plans for deed purposes; 3,535 plans and 978 certified copies were examined and noted, besides other cases incidental to this class of work being disposed of.

The time of one draftsman has been exclusively occupied since April with work in connection with Norfolk and Lord Howe Islands.

The record register of the branch shows the receipt of 11,066 registered papers during 1898, made up as follows:—

	1898.	1897.
Alienation ... ..	4,348	3,955
Miscellaneous ... ..	3,933	4,009
Conditional sales ... ..	1,459	2,871
Leases ... ..	91	323
Miscellaneous leases ... ..	672	657
Ministerial ... ..	37	54
Occupation ... ..	488	281
Roads, &c. ... ..	38	38
Total ... ..	11,066	12,188

Besides the above, 101 unregistered papers were received.

The work dealt with under the different headings during 1898 and 1897 is as follows:—

	1898.	1897.
Papers in Branch, 31st December ... ..	534	1,028
Auction cases in Branch, 31st December ... ..	86	461
Exchange cases dealt with ... ..	1,453	1,454
Plans and tracings charted ... ..	3,456	3,140
Area scheduled ... ..	181,531 acres.	65,379 acres.
Papers of all classes disposed of ... ..	10,788	11,666
Auction cases dealt with ... ..	658	1,437

#### COMPILING BRANCH.

*Miscellaneous Division.*—During the first half of the year the whole staff of the branch was employed on parish map compilation, to enlarge the output of these very useful maps; but during the last half of the year only four draftsmen have been employed upon that work.

After this Division entered on parish map compilation as a temporary arrangement, the following counties were completed in respect of standard parish maps, viz., Ashburnham (part), Brisbane (part), Roxburgh (part), Georgiana (part), Wallace, Bathurst (part)—numbering 136 new standard parish maps. Parishes in county of Jamison are now in hand.

The county map work, put on one side during 1897, has now been taken up again.

In regard to town map work, only such towns that were urgently required could be put in hand.

A large amount of miscellaneous work has been done during the year, principally in connection with preparation of maps illustrative of tenure of land adjacent to projected railway lines, for the Public Works Committee.

New compilations of the following county maps have been completed:—Ashburnham, Hume, Goulburn, Taila, Tandora, and Narran—the last three with references.

Standard map prepared for new edition—Cowper, and new reference sheets.

Compilations

Compilations of the following county maps were in hand on 31st December, 1898, viz., Monteagle, Phillip, Gough, Pottinger, Georgiana, King, Selwyn, Cowley, Hardinge. Maps of the towns of Forbes and Byron Bay, and of the villages of Manildra, Uralba, and White Cliffs, have been compiled and drawn, and the map of the village of Narromine was in hand at 31st December, 1898. Maps have also been prepared from surveyors' plans for the villages of Bulgandra, Illabo, McMahon, Woolabra, Boyd, Bogan-gate, Bywater, and Bodangora: and standard maps have been prepared for new editions of the towns of Bourke, Coonabarabran, Wyalong, Junee, Condoulin, Hill End, Tamworth, Quirindi, Liverpool; and also of the village of Mt. McDonald and environs; and part of the environs of Young for auction sale purposes.

The Land Board District maps of Forbes and Sydney have been revised for new editions.

Twenty-six plans, representing 164 miles of feature and connection surveys have been charted.

In addition to the above, a large amount of miscellaneous work has been done.

*Parish Map Division.*—In this Division there have been 238 new compilations made, and 146 standard maps charted up for new editions. The total number of maps issued by the Division during the year is 433, which is in excess of any previous record. 4,362 heliographs were prepared during the year.

Owing to temporary transfers and unfilled vacancies, neither of these Divisions has had its full complement of officers continuously throughout the year.

#### LITHOGRAPHIC BRANCH.

The preparation of lithographs, to be used in promoting settlement under the Crown Lands Act of 1895, continues to engage a large share of attention in this branch; and all necessary information has been satisfactorily supplied on the 408 plans printed for the purpose.

The following returns show the details of lithographic operations for the year.

##### *Counties.*

County maps show measured areas, roads, reserves, features, and all other information which is capable of delineation on a scale of 2 miles to an inch; they are published at 5s. per copy.

Nine county maps were lithographed during the year, comprising 1,300 printed copies:—

Baradine	Finch	Robinson
Canbelego	Gresham	Roxburgh
Cooper	Narromine	Tandora

##### *Towns.*

Town maps show the general design, measured lands, and names of purchasers thereof, reserves and dedications within town and suburban limits. They are usually photo-lithographed from compilations prepared at this office, or from the surveyors' original plans, to the scale of 4 or 8 chains to an inch, and sold at 1s. per copy.

Twenty-four town maps were lithographed during the year, comprising 2,450 printed copies:—

Bodangora	Carpina	Junee	Quirindi
Bogangate	Coolah	Liverpool	Tamworth
Boyd	Coolamon	Manildra (two	The Peak
Bulgandra	Fiefield	editions)	Woolabra
Byron Bay	Gladstone	McMahon	White Cliffs
Bywater	Illaboo	Mulwala	Yass

##### *Parishes.*

Parish maps are compiled to a scale of 20 chains to an inch for office use, and then, with few exceptions, reduced to 40 chains scale for publication and sale at 1s per copy.

Five hundred and thirty six parishes were lithographed during the year, comprising 47,202 printed copies.

##### *Auction Sale and Surveyors' Plans.*

Eighty eight plans of lands measured for auction were lithographed for use at auction sales during the year, comprising 9,654 printed copies.

##### *Miscellaneous.*

This class of work principally comprised the following items, viz.:—408 plans for homestead selection, settlement lease, improvement lease and occupation license purposes; 3 maps in connection with "scrubbing" in the West Bogan country; 8 maps of Land Board Districts; 5 maps of travelling stock reserves, Bogabri to Rylstone (sheet 4), Moree to Sydney (sheet 1), and Mungindi to Moree (sheets 1, 2, and 3); general map of New South Wales in 9 sheets (8 miles scale); map of New South Wales showing pastoral holdings, &c. (16 miles scale); map of New South Wales showing travelling stock routes, &c. (32 miles scale); map of New South Wales showing all divisions for purposes of Crown Lands Acts (32 miles scale); map of New South Wales showing land districts (48 miles scale); 3 maps illustrating Annual Report of the Department of Lands for 1897.

Four hundred and forty eight miscellaneous maps and plans were lithographed during the year, comprising 111,121 printed copies.

##### *Other Departments.*

Maps, plans, and diagrams have been printed for the Department of the Chief Secretary, Public Works, and Railway Commissioners, comprising 4 maps of New South Wales; map showing principal railway systems of Australia; chart of part of coastline of New South Wales, to accompany the report of trawling expedition; 7 sheets of the detail survey of city of Sydney and suburbs; maps of Lake Illawarra and Lake Macquarie; 2 sheets of drawings of plain beam bridge details, &c., &c.

Eighteen maps, plans, and diagrams were lithographed during the year, comprising 17,170 printed copies.

*Official*

*Official Forms.*

These forms comprise circulars, forms, decisions, and memoranda required for use at head-quarters and at country offices, and are printed in this branch, with the exception of those which can be more economically produced at the Government Printing Office.

Eighty-seven (87) official forms were lithographed during the year, comprising 62,140 printed copies.

*Comparative Summary for 1897 and 1898.*

Map, Plan, or Document.	1897.		1898.	
	No. of Separate Maps.	No. of Copies Printed.	No. of Separate Maps.	No. of Copies Printed.
Countries .....	24	4,956	9	1,300
Towns .....	20	2,200	24	2,450
Parishes .....	375	32,171	536	47,202
Auction Sales and Surveyors' Plans .....	184	7,208	88	9,654

Official Forms .....	86	51,335	87	62,140
Totals.....	1,205	245,452	1,210	251,037

*Contracts.*

Contracts for lithography have been completed during the year in value to the amount of £179 15s.

## ROADS BRANCH.

The Roads Branch inquires into applications for survey and opening of roads through alienated land and Crown land held under lease, and deals with correspondence relating to roads and streets matters in general—*e.g.*, complaints of obstruction of roads, objections to proposed roads, and claims to compensation. The plans of roads are examined, catalogued, and approved in the District offices, and then forwarded to this branch, where proceedings are taken under the Public Roads Act.

The Public Roads Act of 1897, which became law on 30th June, 1897, repealed previous Acts relating to the opening and closing of roads, the granting of compensation, &c., &c., and since the date named, all new cases which come within the scope of that Act have been begun and proceeded with under its provisions. Afterwards the roads are charted upon office plans and maps, and fully noted copies of the plans are furnished to the Department of Public Works and to the Registrar-General.

If terms as to compensation for opening of roads cannot be equitably arranged with the land-owner, the matter is referred to the Land Board; and the Board's appraisal is then considered, and the compensation, whether in land or money, is, if unobjectionable, recommended for consideration of the Minister, and, after approval, action to grant or to add the compensating areas to incomplete purchases is taken in this Branch.

Plans of streets surveyed for alignment on the applications of municipal councils are examined, catalogued, and approved in District Survey Offices, then forwarded to this Branch where the cases are prepared for submission to His Excellency the Governor for approval of the proposed alignments. The Public Roads Act of 1897 legalises the performance of alignment surveys by the Crown on application being made by municipal councils, the establishment of alignment under the Governor's authority, and it also gives power to alter the alignment of streets which have previously been aligned.

Applications for permission to erect public gates under Act 39 Victoria No. 10 are considered and dealt with. The powers of the Public Gates Act have been extended by the Public Roads Act of 1897.

Applications for purchase of unnecessary roads receive preliminary consideration, and descriptions, &c., are prepared for gazetta, subsequent action is taken in Alienation Branch. The Public Roads Act of 1897 repealed the 67th section of the Crown Lands Act of 1884, and, since the 30th June, 1897, action to close and alienate unnecessary roads has been taken under the Public Roads Act.

During the year, 511 applications for survey of roads and streets were received and dealt with; also 358 surveyors' reports (exclusive of reports transmitting plans of surveys); 309 road plans, showing 728 miles of road surveyed; 10 alignment plans, showing 20 streets as marked for alignment of carriage-ways and footways; 54 applications for permission to erect 113 public gates; 189 applications for purchase of 245 unnecessary roads; and 355 objections and claims with regard to road and street surveys.

Information has been furnished for 3,938 letters in reply to communications and inquiries from members of the public with regard to roads and streets matters. There were 7,682 papers registered during the year, which, together with 782 papers relating to roads registered in other branches, make a total of 8,464 papers received and dealt with. In 178 cases action has been taken to grant Crown Land or unnecessary roads in compensation for land resumed under 42nd section of the Crown Lands Act of 1889 and Public Roads Act of 1897.

## OCCUPATION DRAFTING BRANCH.

In addition to the ordinary work confirmations and disallowances of conditional purchases and homestead selections are at present being noted by this branch.

Five surveys of pastoral holding boundaries have been effected as against eleven in 1897, but the mileage surveyed shows a slight increase. Seventy-seven miles twelve chains (77m. 12c.) were surveyed, towards the cost of which the pastoral lessees paid the sum of £99 7s.

The number of parish maps chartered with holding boundaries shows an increase, the numbers being 365 and 450 for 1897 and 1898 respectively.

In 848 cases it was found necessary to adjust the areas and rents of occupation licenses and pastoral leases, consequent upon the withdrawals from and reversions to the areas.

In 150 instances a thorough investigation of the area under review was found to be expedient.

Notifications of withdrawals from ten leaseholds in the Central Division were published in the *Government Gazette*, covering an area of 193,683 acres, of which 175,400 acres were withdrawn from seven leaseholds during the year. Withdrawal from the remaining three will not take effect until the year 1899.

Miscellaneous business in connection with offering fifty-eight blocks as improvement leases, embracing an area of 286,317 acres of the West Bogan country, cleared by the Government for settlement purposes, has been carried out in this branch.

A new edition of the Colony map, showing pastoral holding, &c., has been completed and published with a numerical and alphabetical index.

Two hundred and forty-two occupation licenses and lots have been prepared for sale by auction or tender, and 150 new occupation licenses have been sold and noted on maps.

Two hundred and fifteen homestead, improvement, and other leases have been charted on office maps, and 317 plans noted.

One thousand and thirty-eight illustrative tracings and lithographs have been prepared.

Seven hundred and twenty-four oyster lease cases have been dealt with.

Two thousand seven hundred and sixty-two papers were recorded in the Branch, as against 1,312 in 1897.

#### MISCELLANEOUS CONTRACT BRANCH.

There were 4,305 drawings prepared and issued from this branch, a slightly larger number than for the previous year. Three hundred and eighty-six of these were maps of areas set apart for settlement under the provisions of the Act of 1895; 349 for illustration of exchange proposals; 119 standard tracings of plans of roads and streets, and seventy-three plans for notation purposes. Four or five sketches and tracings were made for the use of Inspectors in connection with the Conditional Purchasers Relief Act. Five hundred and ten diagrams for oyster leases have also been prepared.

#### PLAN RECORD BRANCH.

Approximate number of plans entered in books at end of the year ... ..	280,832
Approximate number of plans issued to and returned from officers in Lands and Mines Departments, Sydney ... ..	156,073
Cancelled maps received ... ..	786
Plans sent to plan-mounter ... ..	429
Issued to Inquiry Branch...! ... ..	570
Exhibited at counter ... ..	6,584
Surveyors' Field-books in custody ... ..	7,389
Plans despatched to District Survey Offices ... ..	16,934
Plans returned from District Survey Offices ... ..	18,305
Applications from District Survey Offices (registered) ... ..	3,123
Memoranda returning plans from District Survey Offices (registered) ... ..	1,559
Draftsmen's memoranda to District Survey Offices for plans ... ..	1,775
Certified copies received from District Survey Offices ... ..	3,514

#### PLAN-MOUNTING BRANCH.

The work performed comprises:—Plan-mounting, 13,759 pieces; rollers, varnishing, corners, lists, and miscellaneous, 819 pieces; binding, 181 pieces; parcels post, 681 pieces; total, 15,390 pieces.

#### CORRESPONDENCE AND RECORD BRANCH.

The duties performed in this branch during the year are shown hereunder:—

Papers received from other branches and dealt with ... ..	12,977
Papers, plans, &c., received by post ... ..	1,056
Instructions recorded and issued to surveyors... ..	1,732
Reports received from surveyors and recorded ... ..	1,390
Letters written and despatched ... ..	940
Memoranda, tracings, lithographs, plans, &c., sent to surveyors ... ..	6,677
Minutes written to the Under Secretary ... ..	920
Ministerial decisions noted ... ..	485
Telegrams written and despatched ... ..	104

Leave registers showing all leave of absence granted to the field and office staffs of the Survey Branch of the Department are kept in this branch.

I have the honor to be,

Sir,

Your obedient servant,

E. TWYNAM.

## APPENDIX.

The Surveyor in charge of Field Operations, Trigonometrical Survey, to The Chief Surveyor, forwarding Annual Report for the year 1898 :—

99/3

Trigonometrical Survey Camp, Moatefield,

Sir,

11 January, 1899.

I have the honor to submit the following report on the progress of the Trigonometrical Survey during the year 1898.

The westerly extension of the main triangulation was commenced by observations at Bowning Trigonometrical Station, and during the year I was employed mainly in the county of Harden. The Surveyor in charge.

The 18-inch altazimuth was used at Bowning, Barrenjack, Bobbara, Marina, Rock Lodge, Muttama, and Burra trigonometrical stations, and the 10-inch theodolite was used at second-class stations Black, Mimbi, and Jindalee.

It will be seen that, on the whole, the weather was favourable for observing, as, including shifting camp, &c., an average of a little over five weeks was spent at each station.

Astronomical observations were made at Bobbara, Rock Lodge, and Burra trigonometrical stations.

Three thousand five hundred and thirty-four horizontal angles were measured with the 18-inch altazimuth, and 1,012 observations with the 10-inch theodolite. Two hundred and twenty-seven stars were observed for azimuth, 234 stars for latitude, and 30 stars for time, the stars for these observations being selected and the programmes prepared in camp.

Vertical observations were made at each of the ten stations named, 926 observations being obtained.

Magnetic declination was also determined at each of those stations, using the needle on a 6-inch theodolite.

During the year, camp was moved a distance of 239 miles; and flying camp, horses or vehicles, 2,235 miles.

The difference of height between a railway bench-mark and the trigonometrical station was determined at Wilkie and at Jindalee; and with respect to the latter, I am waiting for a redetermination of the height of the bench-mark connected to before sending in the sketch.

Mr. Surveyor F. J. Gregson visited Tingi Ringi, Substitute, and Numbla trigonometrical stations to observe the stations which had been formed since I visited them, and he completed nine second-class stations, using a 10-inch theodolite, viz., Waalimma, Delegete, Black Jack, Tombong, Ben's Peak, Bungarby, Kerlewis, Thredbo, and Munyang. F. J. Gregson, Surveyor.

He measured 3,201 horizontal angles, and 1,056 vertical angles, and measured ten reserves, and traversed connections 319 chains. Magnetic observations were made at these stations.

Wullwe trigonometrical station was in course of observation at the end of the year, but was not completed by the 31st December.

He moved full camp a distance of 519 miles, travelled on duty 114 miles, and his men travelled 5,743 miles for the purpose of fixing screens, &c.

Mr. Piling-Overseer J. Healy was engaged in counties Harden, Bland, and Monteagle, and formed thirty-six new stations, measuring six reserves and connections (1,986 chains), where necessary. Piling Overseers. J. Healy.

He moved full camp 421 miles; flying camp 901 miles; travelled on duty 2,810 miles, and was employed sixteen days at office work.

Mr. Piling-Overseer R. C. Gordon was engaged in counties Cowley, Wynyard, Buccleuch, and Selwyn. R. C. Gordon.

He formed thirty-one new stations, and measured seventeen reserves, and connections, where necessary, 4,516 chains. He moved full camp 569 miles; flying camp 281 miles; travelled on duty 4,975 miles, and was employed at office work about sixty-five days during year.

The services of Mr. Licensed-Surveyor A. Dewhurst were available as Piling Overseer for three months, during which time he formed nine stations, measuring reserves at five of them, and connections, 842 chains. A. Dewhurst.

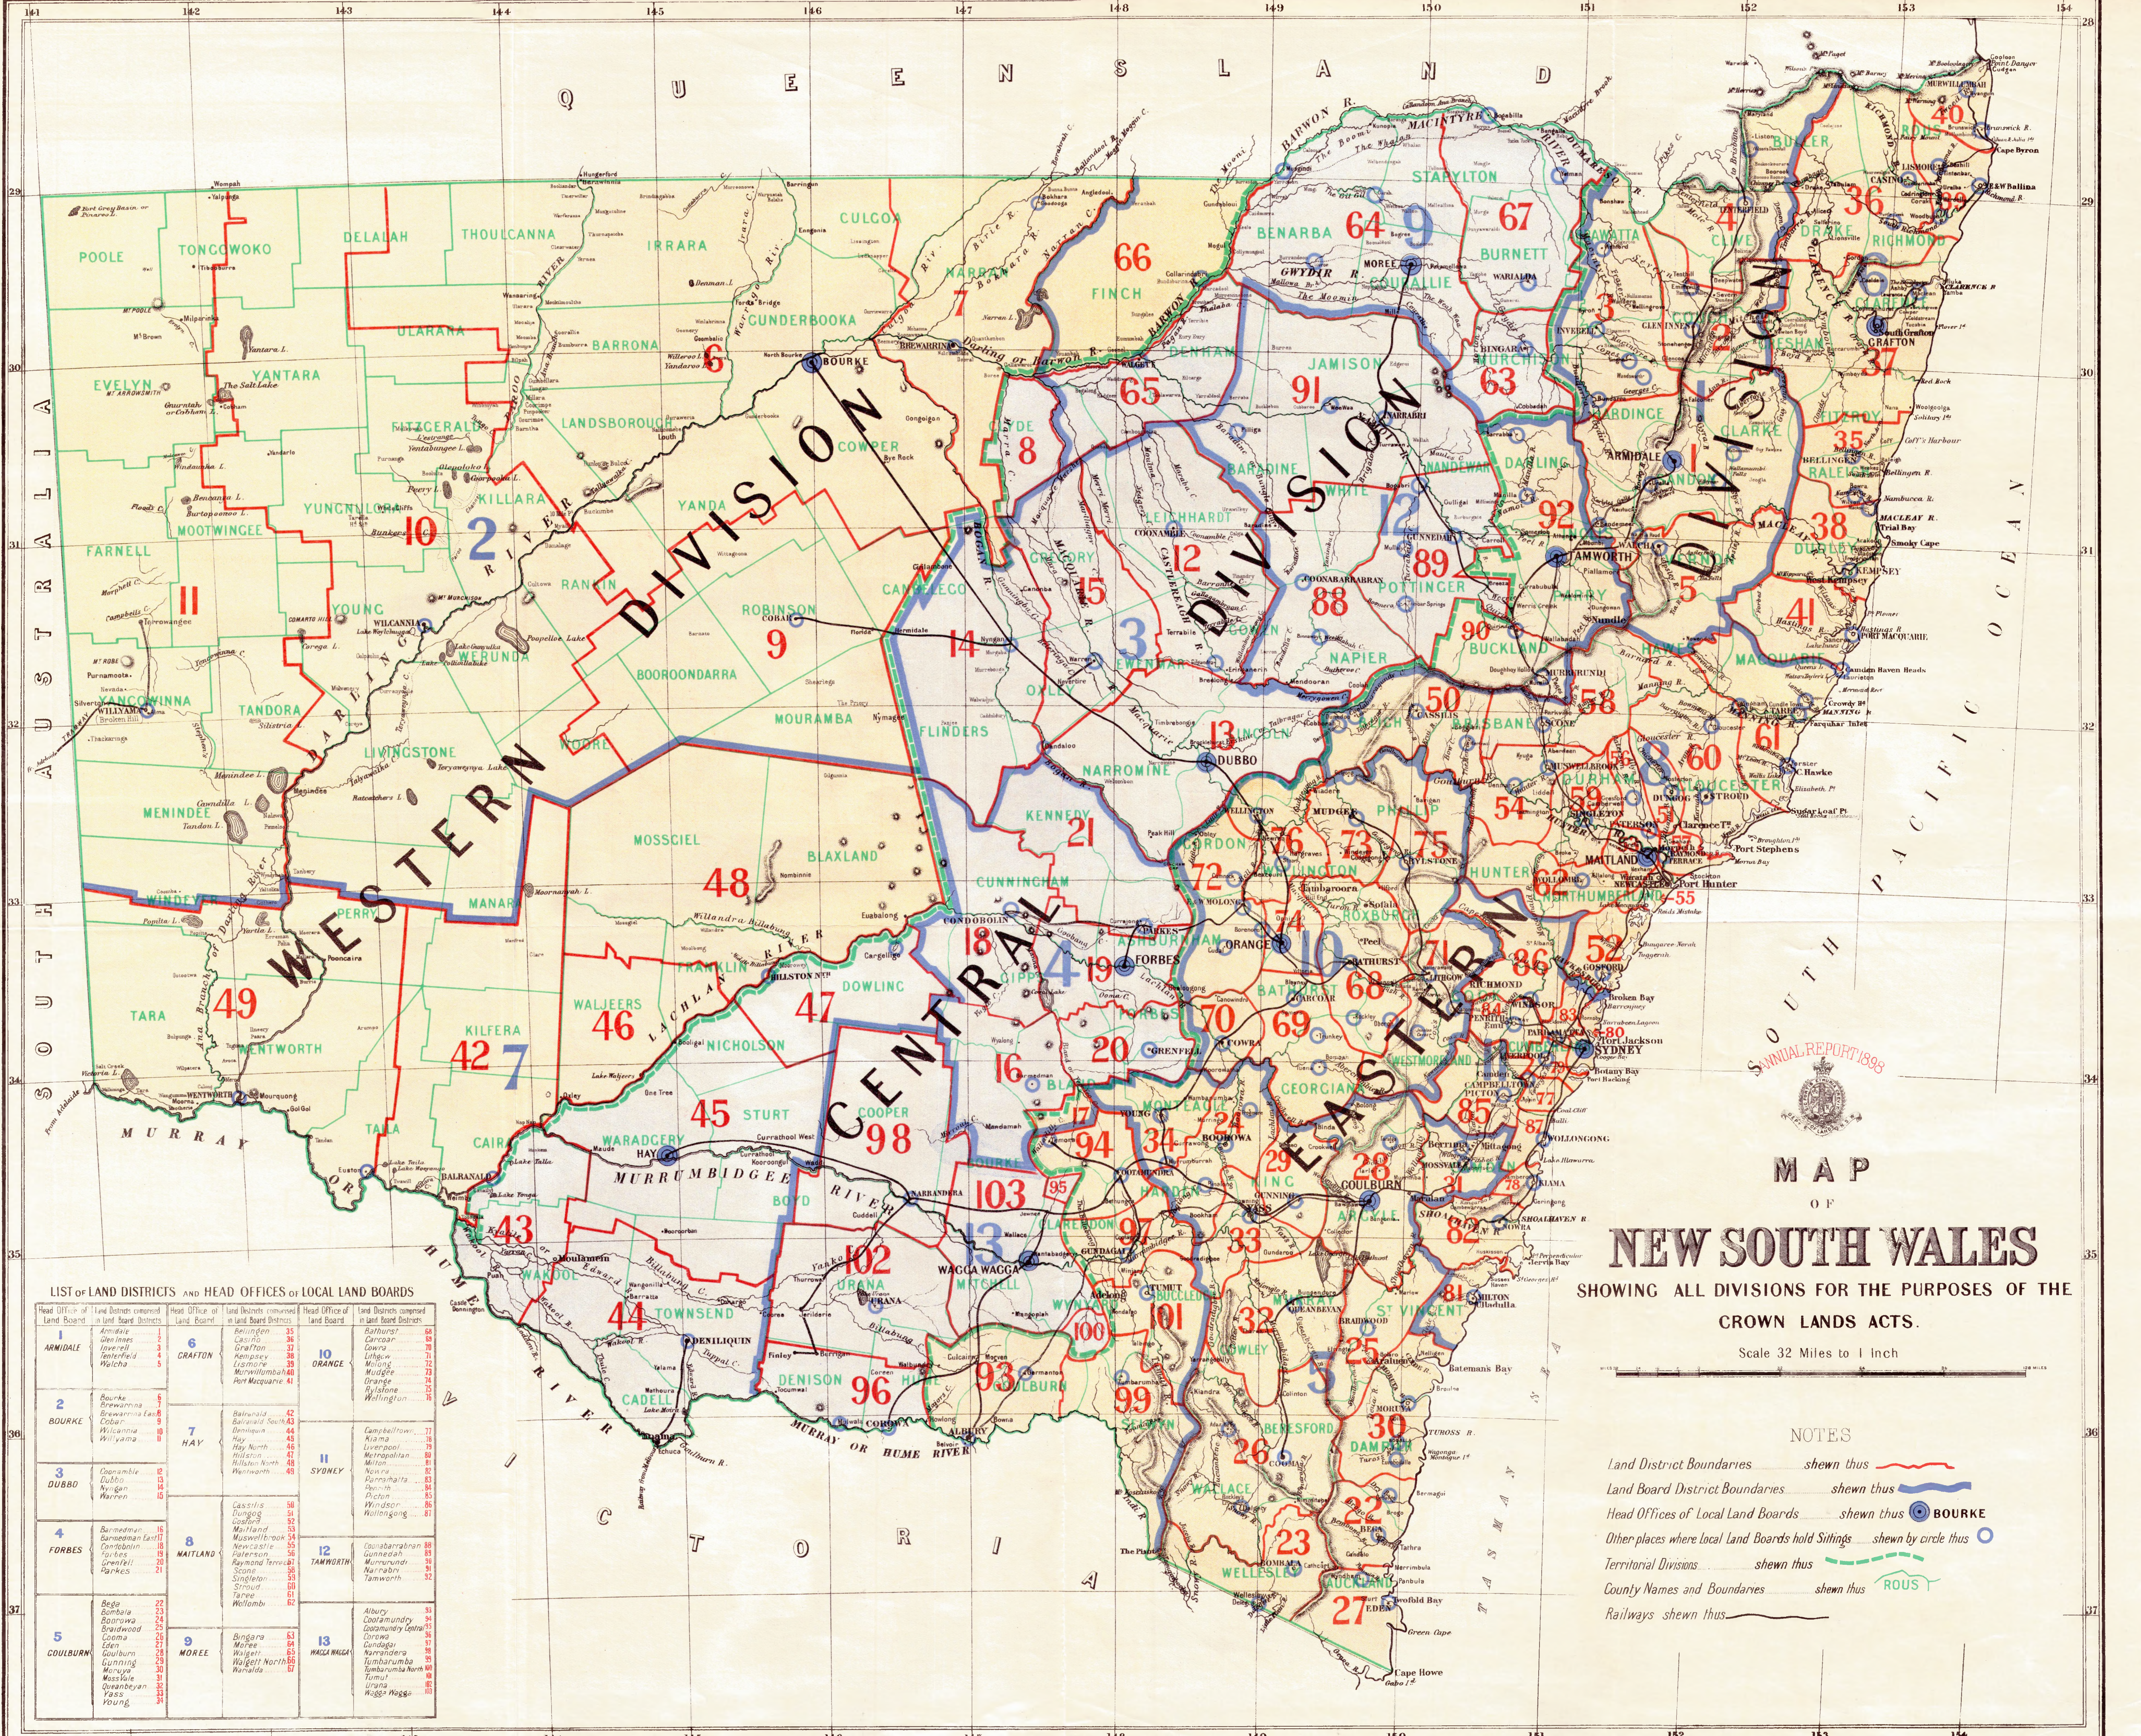

Details of the services performed by the officers of the field staff of the Trigonometrical Survey will be found in the quarterly statements already forwarded.

I have, &amp;c.,

J. BROOKS,

Surveyor in charge of Field Operations, Trigonometrical Survey.

## No. 2.

## Petition from Residents of Meerschaum, Tuckombil, to the Secretary for Mines.

To the Honorable the Minister for Mines,—

The Petition of the inhabitants of Meerschaum, Tuckombil, and the surrounding neighbourhood in the Richmond River district, humbly sheweth:—

THAT your Petitioners suffer great inconvenience and loss through the circuitous road they have to travel to Lismore, the location of banks, District Court, Lands Office, Police Court, and general centre of business.

That a much nearer and more practicable road can be obtained by opening up the present road reserve, starting from the road Chilcott's to Casino, at the south-west corner of Wm. Davis' conditional purchase, and running between that land and J. Staines' conditional purchase; continued through T. Davis' selection to the lower crossing of Meerschaum Creek; thence through Loadman's selection, J. Davis' conditional purchase, and other properties, to the Lismore and Ballina Road, effecting a saving in distance of at least 7 miles.

That the road suggested runs through rich agricultural land which is already selected and settled on.

Your Petitioners therefore pray that you will be pleased to take these premises into your favourable consideration and cause a sum of money to be granted for this purpose at as early a date as possible.

And your Petitioners, as in duty bound, will ever pray:—

Name.	Residence.	Occupation.
E. Crofton ... ..	Meerschaum	planter.
H. Strong ... ..	"	"
F. Strong ... ..	"	"
S. Strong ... ..	"	"

[Here follow 107 other signatures.]

Presented and recommended by Charles H. Fawcett, 12/7/81. Forward to the Surveyor-General and inform.—H.W., 13/7/81. C. W. Fawcett, M.P., informed, 15/7/81. The Surveyor-General, B.C.—G.E.H. (for the Under Secretary), 16/7/81. Forwarded to Mr. District-Surveyor Donaldson for report in accordance with paragraph 75 of Surveyors' Instructions. Part of the road applied for would appear to follow reserved road.—A. J. STOPPS (for Surveyor-General), 15/8/81, No. 220. Mr. Temporary Staff-Surveyor Ewing for report as above. A tracing showing all the roads reserved, &c., is forwarded herewith.—P. R. DONALDSON, District Surveyor, 16/9/81.

## No. 3.

## The Under Secretary for Mines to Chas. M. Fawcett, Esq., M.P.

Sir,

Department of Mines, Sydney, 15 July, 1881.

I have the honor to acknowledge the receipt of Petition of certain inhabitants of Meerschaum, Tuckombil, &c. (presented by you), for the opening of a road from the road, Chilcott's to Casino, at the south-west corner of W. Davis' conditional purchase, thence through certain selections to the Lismore and Ballina road, and to inform you that the Petition has been forwarded to the Surveyor-General for action.

I have, &c.,

GERARD E. HERRING  
(for the Under Secretary).

## No. 4.

## Mr. Licensed-Surveyor T. T. Ewing to The Surveyor-General.

Mr. Licensed-Surveyor Ewing to the Surveyor-General, reporting on road from Wyrallah to Wardell Road to Lismore and Ballina Road, County of Rous.

No. 82-9.

Sir,

Lismore, 31 January, 1882.

I have the honor to inform you that, in accordance with instructions of the 15th August, 1881, No. 81-220 (to Mr. D. S. Donaldson), I visited localities referred to in Petition, and found a large population inconvenienced by the want of a direct road to Lismore, where most of their business has to be transacted. I herewith propose, and show on tracing by red dotted line, the most suitable route, starting from the south-east corner of portion 22, parish of Tuckombil, on the road from Wyrallah to Wardell, which road is now being partly cleared; thence following road between portion 22 and portion 139 for some distance; thence bearing north-westerly through portions 22 and 119 (J. Staines' conditional purchases), crossing Youngman Creek about position indicated; thence through Thomas Davis' conditional purchases 142 and 143, crossing Marom Creek; thence through W. Loadman's conditional purchases 207 and 214, to join reserved road through portion 174, the road between 207 and 214 not being suitable (I have seen J. Staines, T. Davis, and W. Loadman; none of them offer any objection to the severance of their land); thence following reserved road through portion 174, between 180 and 213, and through 213 to deviation through portion 268 (see my letter, with plan, of this date, No. 2); thence along that deviation and through north-east corner of portion 143. The road could go round 143, as reserved. I consider it to be for the public benefit to put it through, the route being more level, as shown by red line, to Lismore and Ballina road. The deviation through portions 102 and 103 has been marked and plan transmitted (see my letter of this date, No. 2).

The

The deviations necessary from existing roads will be a slight deviation over Tucki Tucki Creek; through portion 143, parish of Lismore; 214, parish of Lismore; portions 143, 142, and 119, parish of Tuckombil; portion 22, parish of Lismore.

The road thus proposed will be very good naturally; the ordinary scrub-clearing and a few approaches would make it passable for\* vehicular traffic.

I have, &c.,

T. T. EWING.

\* Paper mutilated.

Report herewith. Mr. District-Surveyor Donaldson is requested to survey the road as recommended by him.—A. J. STOPPS (for Surveyor-General), 3rd March, 1882.

Notice of instructions survey roads. Instructions No. 53. Mr. Licensed-Surveyor Ewing to survey the road (\*where not?) previously reserved, as recommended, and transmit plan and book of reference.—P. R. DONALDSON, 24/8/82.

\* Paper mutilated.

See my letters 83-10 and 83-11, 26th March.—T. T. EWING.

As there is no objection on the part of the owners of the land, and the opening of this road will facilitate access to a large quantity of land, I would recommend that it be surveyed through the portion where not previously reserved, and opened under Act of Council, 4 Wm. IV No. 11.—P. R. DONALDSON, District Surveyor, 8/2/82.

### No. 5.

#### Mr. Licensed-Surveyor T. T. Ewing to The Surveyor-General.

Transmitting plan, book of reference, &c., of road (being portion of road from Lismore to Wardell), parish of Lismore, county of Rous, proposed to be opened as a parish road under Act of Council, 4 Wm. IV No. 11.

No. 83-11.

Sir,

Lismore, 26 March, 1883.

I have the honor herewith to transmit plan, &c., &c, of road through portions 94, 61, 69, and 143, parish of Lismore, county of Rous, proposed to be opened as a parish road under Act of No. 4 Wm. IV No. 11, and surveyed in accordance with instructions of the 3rd March, 1882, No. 82-53, to the District Surveyor.

No fencing will be required on these portions—but the land will be required to be paid for, there being no road to be given in lieu of the one now taken from portions.

With this letter will be found my report and sketch of 31st January, 1882. It will be seen that in survey I have deviated considerably from proposed route; this was done to get the best position possible. I have again gone through reserved roads, and find that further deviations will be necessary.

The deviations (which have been under different instructions) will be found with my letters, Nos. 82-1, 82-2, 83-10, 83-11, these being all necessary between Lismore and Wardell; road already formed.

I have, &c.,

THOS. T. EWING.

Roll plan, R. 2,635-1,603. I submit the survey of this road for acceptance. I recommend it be opened.—P. R. DONALDSON, District Surveyor, 3/4/83.

### [Enclosure.]

Book of Reference of part of road from Wardell to Lismore, viz., from the east boundary of H. Slade's 100 acres conditional purchase, portion No. 143, to a reserved road with J. T. McIlfatrick's 49 acres conditional purchase, portion No. 94, parish of Lismore, county of Rous, to be opened as a Parish Road, under the Act of Council, 4 William IV No. 11, and resumed under the 27th clause of the Act 43 Victoria No. 29.

No. 9.

Mr. Luke Lofts to The Secretary for Mines.

Sir,

Richmond River, Lismore, 8 April, 1884.

With reference to an advertisement appearing in the local press, stating that a digression was intended in the road "Lismore to Wardell," the same going through my conditional purchase, as per sketch, I have the honor most respectfully to apply that the surveyed road, from the north-east corner of George Cooper's conditional purchase No. 143, of 100 acres, selected on 22nd November, 1877, to its junction with Tucki Tucki Creek, may be given me in lieu of the land resumed for the proposed digression; also that I may be allowed the required amount to enable me to fence the proposed road on both sides to prevent the inroad of cattle on my crops.

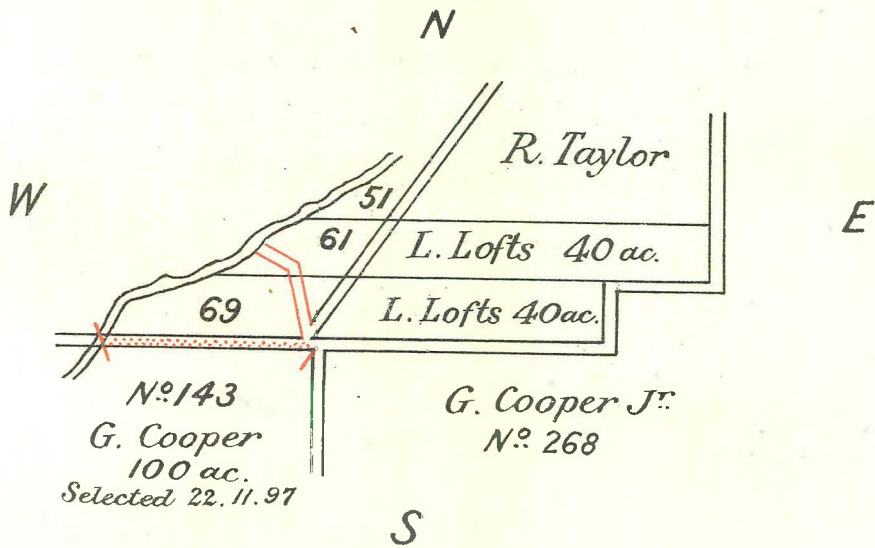

I have, &c.,  
LUKE LOFTS.

Acknowledge.—G.E.H. (for the Under Secretary), 15/4/84. See recommendation on 81, 10, 14-21.

The sketch at Local Police Office shows that the proposed road goes through my Conditional Purchase, as under.

Selection.	Date of Selection.	No.	Area.	Length of Road.	Area resumed.
Original .....	71	61	acres. 40	6 chains 62 links.....	3 roods.
Additional .....	71	69	40	7 " 39 " .....	2 " 38 perches.

Parish of Lismore, County of Rous.

NOTE.—Red-lined road shows proposed digression.  
Dotted lines (red) shows road asked for instead of land to be resumed.

No. 10.

Mr. J. T. McIlfatrick to The Secretary for Mines.

Sir,

Lismore, Richmond River, 8 April, 1884.

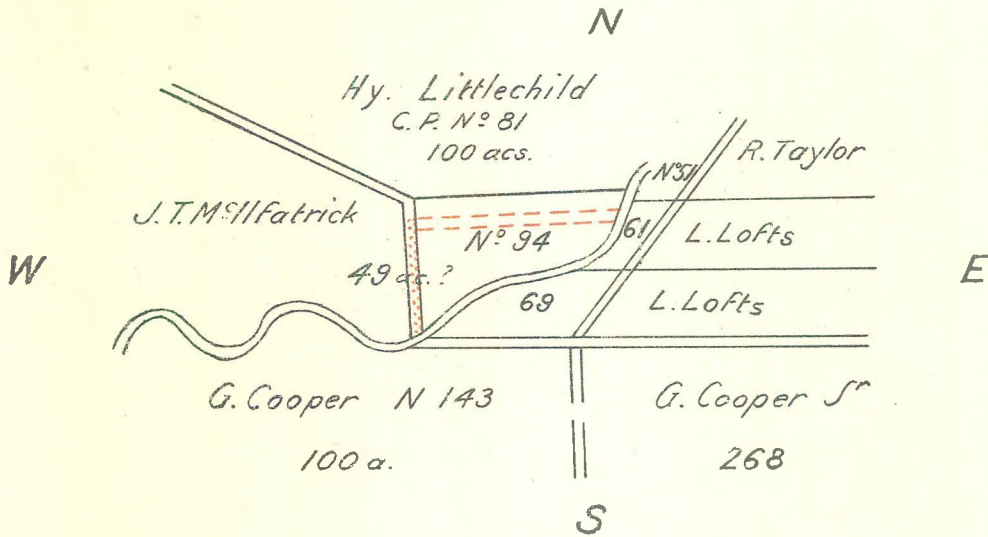

With reference to an advertisement appearing in the local papers, stating that a digression was intended in the road "Lismore to Wardell," the same going through my conditional purchase, as per sketch, I have the honor most respectfully to apply that the present surveyed road, from its junction with Tucki Tucki Creek to where the proposed digression meets it, may be given to me in lieu of the land resumed for the proposed digression; also that I may be allowed the required amount to enable me to fence the proposed road on both sides to prevent the inroad of cattle to my crops.

I have, &c.,  
J. T. McILFATRICK.

The sketch at Local Police Office shows that the proposed road goes through my Conditional Purchases, as under.

Selection.	Date of Selection.	Area.	Length of Road.	Area resumed.
Additional.....	74	acres. 49	1 chain 75 links .....	1 acre 0 roods 15 perches.

Parish of Lismore, County of Rous.

NOTE.—The dotted lines (red) show proposed digression.  
The dots in coloured red show land asked for in lieu thereof.

## No. 11.

The Bench of Magistrates, Lismore, to The Under Secretary for Mines.

Lismore, 8 April, 1884.

The Plan and Book of Reference, as per number in margin and description, have been duly exhibited for thirty days, as required by law. Road, Mines,  
No. 84-820.

## Description of Road.

Part of road from Wardell to Lismore, viz., from the east boundary of H. Slade's 100 acres conditional purchase, No. 143, to a reserved road within J. T. McIlpatrick's 49 acres conditional purchase, portion No. 94, parish of Lismore, county of Rous.

WM. CARSON, J.P.  
(for the Bench).

## No. 12.

The Clerk of the Executive Council to The Under Secretary for Mines.

Sir, Executive Council Office, 22 April, 1884.

Referring to your letter of the 3rd March, I do myself the honor to inform you that no objection has been lodged with me to the formation of the proposed parish road, noted in the margin.

I have, &c.,  
ALEX. C. BUDGE,  
Clerk of the Council.

Part of road from Wardell to Lismore, viz., from the east boundary of H. Slade's 100 acres conditional purchase, No. 143, to a reserved road within J. T. McIlpatrick's 49 acres conditional purchase No. 94, parish of Lismore, county of Rous.

The Surveyor-General.—G.E.H. (for the Under Secretary), B.C., 23/4/84.

Mr. Donaldson for report on application 81-1,014/16 and 17 herein, as to whether the reserved and boundary roads referred to may be given in lieu of the proclaimed road.—A. J. STORRS (for Surveyor-General), 17/6/84.

Nature of instructions to report roads, instructions No. 184, to Mr. P. R. Donaldson, District Surveyor. Replied to by 84-147.—P. R. DONALDSON, District Surveyor.

## No. 13.

Mr. J. T. McIlpatrick to The Under Secretary for Mines.

Sir, Lismore, Richmond River, 19 July, 1884.

Through a digression intended to be made in the new road, Lismore to Wardell, the same going through my conditional purchase, No. 94, parish of Lismore, I made an application on the 8th April that the present surveyed road from its junction with Tucki Tucki Creek to where the proposed digression meets it may be given me in exchange for the land resumed for the proposed digression.

On receipt of the above, I received a reply, dated 16th April, stating that the matter would receive immediate attention.

Sir, I make a further application, that you will be good enough to take the matter into consideration, and cause the exchange to be made, as the two roads make that part of my conditional purchase of no value, and only one of them can be used.

I have, &c.,  
JAMES T. McILPATRICK.

Claims are being considered. So inform.—G.E.H. (for Under Secretary), 4/8/84. J. T. McIlpatrick informed, 5/8/84. The Surveyor-General.—G.E.H. (for the Under Secretary), B.C., 6/8/84. See recommendation on 81-1,014/21.

## No. 14.

Mr. District-Surveyor Donaldson to The Surveyor-General.

Lismore Land District, Roads 81-1,014-18.

Mr. District-Surveyor Donaldson to the Surveyor-General, reporting on application for two original roads in lieu of proclaimed road through portions 94, 61, and 69, parish of Lismore.

Sir, District Survey Office, Grafton, 31 July, 1884.

With reference to instructions of 17th June, 1884, No. 184, to report whether the reserved and boundary roads applied for by J. T. McIlpatrick and L. Lofts may be granted in lieu of the part of the Wardell and Lismore Road, proclaimed through portions 94, 61, and 69, &c., I have the honor to inform you that there is no objection to that part of the reserved road in portion 94, extending from the proclaimed road to Tucki Tucki Creek, being granted in lieu of that proclaimed through this portion.

With reference to the application of L. Lofts, I do not think it is desirable to grant the whole of the boundary road from the north-east corner of G. Cooper's conditional purchase, portion 268, to Tucki Tucki Creek, as applied for; but I see no objection to that part of the boundary road between portions 69 and 143, extending from the proclaimed road to Tucki Tucki Creek, being given in lieu of the road proclaimed through portions 61 and 69; the length and area of the road which I recommend may be given, will be slightly in excess of that taken for road.

I have, &c.,  
P. R. DONALDSON,  
District Surveyor.

Confirmation of this road is recommended in lieu of that part of the reserved road within portion 94, extending from the proclaimed road to Tucki Tucki Creek (amended schedule of conditional purchases herewith). If this course be approved of, it is further recommended that when portion 69 is held as a freehold

freehold it will be competent for the owner of that portion to apply that the boundary road lying to the south of that portion and between the proclaimed road and Tucki Tucki Creek, be granted to him under the provisions of the 26th section of 43 Victoria, No. 29. Compensation for fencing cannot be recommended (as asked for, *vide* papers roads 81-1,014-16, 17, 19, and 22), as no enclosures are severed by the road; but the balance of the purchase money on the area taken for the road and the interest thereon, will not be demanded.—A. J. STORRS (for Surveyor-General), 9th September, 1884.

Exhibit G., case 527, vol. 7, folios 11 and 12, papers L.B.D., 98-2,910.—A. J. PARK, Chairman, Court-house, Lismore, 18/6/98. Submitted.—G. E. H. (for Under Secretary), 12/9/84. Approved.—J. P. ABBOTT, 12/9/84. Luke Lofts informed, 15th September, 1884. J. T. McIlpatrick informed, 15th September, 1884. Executive Council minute, 22nd October, 1884.

## No. 15.

## The Under Secretary for Mines to Mr. J. T. McIlpatrick.

Sir, Department of Mines, Sydney, 15 September, 1884.  
With reference to your letter of the 19th July last, applying for the old road to be given in lieu of the part of the new road from Wardell to Lismore, where it passes through portion No. 94, parish of Lismore, I am directed by the Secretary for Mines to inform you that it is the intention to confirm the road as preliminarily notified in the *Government Gazette* of the 29th February, 1884, folio 1465, in lieu of the part of the reserved road within portion 94, extending from the proclaimed road to Tucki Tucki Creek.

I have, &amp;c.,

GERRARD E. HERRING

(for the Under Secretary).

## No. 16.

## The Under Secretary for Mines to Mr. Luke Lofts.

Sir, Department of Mines, Sydney, 15 September, 1884.  
With reference to your letter of the 12th May last, and previous correspondence, applying for the old road to be given to you in lieu of the part of the new road from Wardell to Lismore, where it passes through portions Nos. 61 and 69, parish of Lismore, &c., I am directed by the Secretary for Mines to inform you that it is the intention to confirm the road, as preliminarily notified in the *Government Gazette* of the 29th February, 1884, folio 1465, after which when portion 69 is held as a freehold, it will be competent for the owner of that portion to apply that the boundary road lying to the south of that portion, and between the proclaimed road and Tucki Tucki Creek, be granted to him, under the provisions of the 26th section of the Act 43 Victoria No. 29.

Compensation for fencing cannot be granted, as no enclosures are severed by the road, but the balance of the purchase money on the area taken for the road, and the interest thereon, will not be demanded.

I have, &amp;c.,

GERARD E. HERRING

(for the Under Secretary).

## No. 17.

## Gazette Notice.

Department of Mines, Sydney, 16 September, 1884.

Proposed Resumption of Land for Road under 27th Section of Act 43 Victoria No. 29.—Land District of Lismore.

NOTICE is hereby given that it is proposed to resume so much land as is embraced in certain Conditional Purchases (described in the appended Schedule), the same being required for the following road, viz.:—Part of road from Wardell to Lismore, viz.:—From the east boundary of H. Slade's 100 acres C.P., No. 143, to a reserved road within J. T. McIlpatrick's 49 acres C.P., portion No. 94, parish of Lismore, county of Rous.

## Mr. Robert Taylor to The Commissioner for Roads, Sydney.

Sir,

Chilcott's Grass, near Lismore, 16 October, 1884.

I have the honor to bring under your notice that, up to the present time, nothing has been done to the road, known as the road to Staines from the Lismore and Ballina road, thereby causing great loss and inconvenience to myself and neighbours, through and near to whose land the said road passes, it being, in fact, the only outlet we have to Lismore, where all our business is transacted, and to where our produce has to be brought when we ship it to Sydney, our chief market.

I trust you will be good enough to give instruction to have the vote of £800, which, I am given to understand, was placed on the Estimates for this road, expended, and thereby confer a great benefit on a great number of struggling people, who are pressed for the want of means of communication by which they can send their produce to market.

I have, &amp;c.,

ROBERT TAYLOR.

Mr. Steel, what amount is available?—W.B., 20/10/84. Mr. Steel, 20/10/84. Cowalong to Staines' mill, £800, which is probably the road in question.—J.R.S., 21/10/84. Mr. Williamson, do this as soon as possible.—W.B., 22/10/84. Mr. Williamson, B.C. 240 chains clearing called for on this road, which will absorb the whole of the money.—J.W.P., 5/11/84. Inform.—W.B., 14/11/84. Mr. Logan, 14/11/84. Informed, 17/11/84. File.

## No. 19.

## Minute for Executive Council.

Resumption of land and confirmation of road.

Department of Mines, Sydney, 22 October, 1884.

It is recommended for the approval of His Excellency the Governor and the Executive Council that the land within conditional purchases required for the undermentioned line of parish road, which has been duly advertised in the *Government Gazette*, be resumed under 27th section of the Act 43 Vic. No. 29, and that such road be now confirmed in accordance with the provisions of the Act 4 Wm. IV No. 11, viz., part of road from Wardell to Lismore, viz., from the east boundary of H. Slade's 100 acres C.P., portion No. 143, to a reserved road within J. T. McIlpatrick's 49 acres C.P., portion No. 94, parish Lismore, county Rous, in lieu of that part of the reserved road within portion 94, extending from the proclaimed road to Tucki Tucki Creek.

J. P. ABBOTT.

The Executive Council advise that the course herein recommended be approved, and the necessary notices issued.—ALEX. C. BUDGE, Clerk of the Council, 28/10/84. Minute 84-47. Confirmed, 4/10/84. Approved.—A.L., 28/10/84. Notified, 12 November, 1884. Advertised 15/11/84.—G.E.H. (for the Under Secretary), 22/12/84. Resubmit. No claims. Records, 23/12/84. Exhibit H, case 527, vol. 7, folios 11 and 12. Papers, L.B.D. 98-2,910.—A. J. PARK, Chairman, Court-house, Lismore.

## No. 21.

## Mr. Robert Taylor to The Commissioner for Roads, Sydney.

Sir,

Chilcott's Grass, near Lismore, 29 November, 1884.

In reply to your letter of the 17th instant (No. 84-9,086), I beg to inform you that the road to which I referred in my former letter is, I understand, the road known in your Department as road Goonellabah to Jesswoolgan; it leaves the Ballina road at the former place and goes through the selection of Borton, formerly Roberts (No. 103), passing along the surveyed road until it is again diverted through the selections of McIlpatrick, Lofts, and Cooper, and extending on to Jesswoolgan, as I now am led to understand.

389-B

Up

Up to the present—and some of us have been thirteen years on the land—we have no road on which to take a load without trespassing on some one's land; and if Marshall's selection is closed up it would be quite impossible for many of us to get out a wheeled vehicle of any kind. I therefore trust that you will be good enough to have something done without further delay, and so confer a great benefit on a number of selectors who are altogether hemmed in, and who have been trying to make known their difficulties for a number of years, but without any result beyond getting the Department of Mines to open the ground where the road is intended to go.

I have, &c.,  
ROBERT TAYLOR.

• Produce papers.—W.B., 5/12/84. 84-9,986 herewith, 8/12/84. Mr. Williamson.—W.B., 9/12/84. Money has been spent on road Goonellabah to Jesswoolgan, which is a scheduled road.—E.J.S., 22/8/85. Mr. Statham, should any action be taken, this paper is now so old? Is further action in field necessary?—W.B., 28/8/85. Mr. J. Statham, B.C. Action has been taken; money expended.—E.J.S., 3/9/85. File.—W.B., 7/9/85.

#### The Surveyor-General to Mr. District-Surveyor Donaldson.

Surveyor-General's Office, Sydney, 30 December, 1884.

THE part of road from Wardell to Lismore, viz., from the east boundary of H. Slade's 100 acres conditional purchase, portion 143, to a reserved road within J. T. McIlpatrick's 49 acres conditional purchase, portion 94, parish Lismore, county Rous, surveyed by Mr. Ewing, surveyor, has been confirmed under 4 William IV No. 11, and requires to be formally opened.

Mr. Donaldson, District Surveyor, is requested to name the surveyor to whom instructions for opening might be issued, and to state whether a tracing will be required.

A. J. STOPPS  
(for Surveyor-General).

Roads 81-1,014-29, S.G.O. No. R. 2,635-1,603 to be returned direct to the Officer-in-charge of the Roads Branch, Surveyor-General's Office, Sydney. Folio 43, No. 91.  
Instruction for opening should be forwarded to Mr. Surveyor Ewing; no tracing will be required.—P. R. DONALDSON, District Surveyor, 8/1/85.

### No. 24.

#### The Surveyor-General to Mr. Surveyor T. T. Ewing.

Surveyor-General's Office, Sydney, 5 February, 1885.

Part of road from Wardell to Lismore, viz., from the east boundary of H. Slade's 100 acres conditional purchase, portion 143, to a reserved road within J. T. McIlpatrick's 49 acres conditional purchase, portion 94, parish Lismore, county Rous, having been confirmed through alienated land as a parish road in the *Government Gazette* of 12th November, 1884, folio 7589,

I have to request that you will, as early as may be convenient, remove all obstructions from the road as laid out.

In carrying out this instruction, you will give notice either verbally or in writing to the proprietors of any enclosed lands through which the road passes, and suggest to them the desirability of their removing any fences or other obstructions which may exist, and you will then proceed along the road for the purpose of re-marking it in those places where the previous marking may have been obliterated.

Should the parties to whom you may give notice not remove the fences or other obstructions, you will summarily remove them, and in doing so, you will be guaranteed from loss by the Government.

You will be good enough to report the fulfilment of this instruction.

I have, &c.,  
P. F. ADAMS.

Roads 81-1,014-29, S.G.O. 2,635-1,603. This instruction to be returned.

Mr. Surveyor T. T. Ewing to The Surveyor-General.

Lismore Land District, Roads 81-1,014-31.

Mr. Surveyor Ewing to The Surveyor-General with respect to road, parish of Lismore, county of Rous.

Sir,

Lismore, 31 March, 1885.

I have the honor to inform you with reference to road, being part of road from Wardell to Lismore, parish of Lismore, county of Rous—instructions No. 85-1 of 5th February, 1885—that I proceeded along road mentioned; there are no enclosures upon it, and the public are in unmolested use.

I have, &amp;c.,

THOS. T. EWING.

Received.—Surveyor-General's Office, 10/4/1885. Secretary and Cashier, Surveyor-General's Office, 16/4/1885. Roads, 81-1,014-31, herewith. P.R.D., Grafton, 6/4/85. It is recommended that the customary notice of formal opening with reference to this road be inserted in the *Government Gazette*.—A. J. STOPPS (for Surveyor-General), 11/4/1885. Submitted.—G.E.H. (for the Under Secretary), 15/4/1885. Approved.—J.H., 25/5/85. Notified 22nd May, 1885, folio 3333, advertised, 27/5/85. The Surveyor-General.—G.E.H. (for Under Secretary), 29/5/85.

## No. 26.

P. Hogan, Esq., M.P., to The Secretary for Mines.

Sir,

Sydney, 5 November, 1885.

I beg to forward the enclosed petition just sent me that the road mentioned therein may be opened up.

I have, &amp;c.,

P. HOGAN, M.P.

Acknowledge and forward to the Under Secretary for Public Works.—G.E.H. (for Under Secretary), 6/11/85. Informed P. Hogan, M.P., 6/11/85. The Under Secretary for Public Works.—B.C., 6/11/85. G.E.H. (for Under Secretary.) Roads.—B.C., 10/11/85. J.R., for papers. W.B., 10/11/85. Herewith, 12/11/85. Mr. Williamson, for immediate report, 12/11/85. Shown on Mr. Williamson's sheet as Goonalbah to Jessworgan, 83-2,470. See roads, 85-11,166, herewith stating this will be attended to in January.

[Enclosure.]

The Honorable the Minister for Mines, Sydney,—

Sir,

Lismore, 20 October, 1885.

The humble petition of the undersigned residents of Chilcott's Grass and the surrounding locality,—

Humbly sheweth:

That the road Lismore to Wardell, *via* Chilcott's Grass, lately resumed, and starting from the Ballina road, through Thomas Barton's conditional purchase No. 103 of 80 acres, parish of Lismore, is almost impassable, especially that part crossing the small creek, running through Robert Marshall's conditional purchase No. 93 of 100 acres, and known as the Sheep-station Creek, the bank on the east is perpendicular, and when Mr. Marshall stops the traffic through his paddock (which he has allowed for years) in the course of a few weeks through fencing, the inhabitants will be unable to get out at all. Up to the present no money has been expended on this part of the road, and the inhabitants have a great difficulty in getting their produce to market.

Your petitioners therefore humbly pray that you will be pleased to cause a sum of money to be yearly granted for it. And as in duty bound your petitioners will ever pray.

Name.	Occupation.	Residence.
James T. McIlpatrick ... ..	Farmer	Wilson's Ridges.
Abraham Godfrey ... ..	"	"
George Fisher ... ..	"	Boggy Creek.
John Fisher ... ..	"	"

[Here follow 43 other signatures.]

## No. 27.

Messrs. T. Ewing and P. Hogan, Ms.P., to The Secretary for Public Works.

Sir,

22 November, 1885.

We have the honor to inform you that a vote for the road is much wanted, which we hope you will provide in Estimates.

Yours, &amp;c.,

THOS. EWING.

P. HOGAN.

Acknowledged, 28/11/85. Messrs. Ewing and Hogan might be informed in reply to this, and 85-9,297 herewith, that the road is on Schedule and that the work at Marshall's will be attended to in January.—W.B., 4/12/85.

Under Secretary.—B.C., 8/12. Public Works Office, 11/12/85. Submitted—J.R., 11/12/85. Inform.—J.R., 12/12/85. T. Ewing, Esq., M.P., and P. Hogan, Esq., M.P., 14/12/85.

Send memo. to Mr. Williamson to do this work at Marshall's at once. I think there was another paper on this a day or two since.—W.B., 2/1/86. Mr. Brown. Memo. sent.—4/1/86.

[Enclosures.]

[Enclosures.]

A.

The Commissioner and Engineer for Roads and Bridges,—  
Sir,

Roads Office, Lismore, 23 November, 1885.

I believe you will find that the road included in enclosed Petition was recommended to be placed on the Schedule for 1886.

I enclose a parish map showing road from Ballina (?) Road at Goonellabah to Marom Creek where it joins the road Casino to Chilcott's Wharf. The portion coloured blue will require to be altered to dotted line, as the road laid out runs up a hill about 1 in 5 only to come down again, while the dotted line is level and good creek crossing.

WM. WILLIAMSON.

T. T. Ewing, Esq., M.P., Sydney,—

Dear sir,

Rous, 16 November, 1885.

My object in writing is to bring under your notice the fact that the road from Staines' Mill to Lismore is not yet open. You may remember that you surveyed the road in '82 or '83.

Description in Petition as follows:—Starting from road known as Chilcott's to Casino, at south-west corner of W. Davis's conditional purchase of 640 acres, through conditional purchases of S. Staines, Davis, and Loadsman, and *via* Chilcott's Grass to Lismore.

This road is urgently needed, we having to travel 17 miles to town, while the road in question will reduce the distance to 10 miles.

Mr. E. Crofton forwarded a Petition to the Minister for Mines about the end of May asking that a sum of money be placed on the estimates for the opening of said road; but I have heard nothing of it since.

I have, &amp;c.,

CHARLES H. STAFF.

The Honorable the Minister for Mines, Sydney,—

Sir,

Lismore, 20 November, 1885.

The humble Petition of the undersigned residents of Chilcott's Grass, Goonellabah, and locality,—  
Humbly sheweth :

That the road Lismore to Wardell, *via* Chilcott's Grass, lately resumed, starting from the Ballina Road through John Roberts' (now Thomas Borton's) conditional purchase No. 103 of 80 acres in the parish of Lismore, county of Rous, is almost impassable, especially that part crossing the small creek running through Robert Marshall's conditional purchase No. 93 of 100 acres, and known as the Sheep-station Creek. The bank on the east is perpendicular, and when Mr. Marshall stops the traffic through his paddock, which he has allowed for years, in the course of a few weeks, through fencing, the inhabitants will be unable to get out at all. Up to the present no money has been expended on this part of the road, and the inhabitants have a great difficulty in getting their produce to market.

Your Petitioners, therefore, humbly pray that you will be pleased to cause a sum of money to be yearly granted for it. And as in duty bound your Petitioners will ever pray.

[Here follow 26 other signatures.]

Presented by Thos. Ewing and P. Hogan, Ms.P., with memo.

For report.—W.J.L., 26/11/85.

No. 28.

Messrs. T. Ewing and P. Hogan, Ms.P., to The Secretary for Public Works.

Sir,

Parliament House, Sydney, 20 March, 1886.

The road referred to is, we think, called Road from Lismore to Staines, turning off Lismore-Ballina Road about 2 miles from Lismore.

We think it is provided for on Estimates.

Yours, &amp;c.,

THOS. EWING.  
P. HOGAN.

[Enclosure.]

Sir,

Lismore, 26 February, 1886.

In the early part of January last I saw the *Northern Star* that the Meerschaum Road, from Lismore and Ballina Road to Wardell *via* Meerschaum, was to be reported on immediately, and tenders called for same. Two months has now passed, and nothing has been heard by us, in Lismore, as far as I have made inquiries. Further, we, as you are aware of, are going through Mr. Marshall's conditional purchase on sufferance. If he, which has been threatened, closes, there is no possible way of taking our supplies out; neither can we get our produce to market on account of the bank of the creek running through Marshall's, and being in the road about 10 feet perpendicular.

The road, further, is in a bad state. Seven of us, residents of Meerschaum, close to Boggy Creek, in last month, had to cut between 40 and 50 chains of a cart-track through the scrub, being blocked by Fisher on the old track. This road is traversed daily by people going to and from Wardell to Lismore and Wyrallah, even from Cowlong to Woodburn; and, as they pass my conditional purchase, I have asked several of them their opinion which is, as far as time judges by riding and ease in the journey, the shortest way from the places named which the geography of the place confirms. Trusting you will make all efforts to have the road opened, or information of what is being done in the matter, you know the difficulties we, between Meerschaum and Lismore, are placed better than I can state.

I am, &amp;c.,

SPENCER M. COTTEE.

T. T. Ewing, Esq., Member of Parliament for Richmond River.

Roads.—J.R., B.C., 24/3/86. There are numerous papers on this; it is known as Staines' Mill, also Goonellabah roads to Chilcott's Wharf.—W.B., 25/3/86. Records, 25/3/86. Herewith, 26/3/86. Submitted, 27/3/86. Has not this been answered more than once? If so, and further action is not required, file papers.—W.B., 3/4/86.

Mr.

## No. 29.

Mr. Road-Superintendent W. Williamson to the Commissioner and Engineer for Roads and Bridges.

Sir,

Roads Office, Lismore, 20 September, 1886.

Enclosed is a tracing of part of parish of Lismore showing a portion of the road Goonellabah to Jesswoolgan. The road as surveyed is red; the road that I would recommend is blue, through Mr. McIlpatrick's conditional purchase, S. No. 94.

The surveyed road from the angle corner of 93 and 94 runs up the face of a hill, allowing of no improvements, and at a grade of about 1 in 9. After reaching the highest point at northern corner of 94 comes down again to Tucki Creek. Mr. McIlpatrick is willing to give possession on condition of receiving £75 for fencing. I would ask the Commissioner's sanction to my paying this out of the vote—the offer is fair, as there will be a mile of fencing, and the advantage offered by the deviation will be very great, original road being an obstacle to any heavy traffic. Contract No. 35 sent in last batch is for this road.

I have, &c.,

W. WILLIAMSON,  
Road Superintendent.

There should be fuller information and something like comparative sections. How will this suit the owners of the other allotments fronting abandoned road, and also the branch road running north from "A" towards "B." The extent of land required, and, if it is cleared, its value, and also the exact length of fence should be stated.—W.B., 29/9/86. Mr. Williamson, B.C.

Enclosure to Exhibit F, No. 2, case 527, vol. 7, folios 11 and 12, papers, L.B.D., 98-2,910. From creek crossing marked "I" the road ascends to A 214 feet, or 1 in 9, falling from A to creek marked "3" 236 feet, or 1 in 8, the new line having a difference of 22 feet, or practically level. The line A to 3 could be given up. No compensation beyond the £75 for fencing is asked, and the line A to 3 given. I consider that this would be saved in the deviation, besides doing away with permanent inconvenience to traffic. There are 75 chains fencing.—W.W., 10/11/86. Commissioner for Roads.

Make the deviation; it is too palpable an improvement to delay a moment; but if the adjoining frontages to road A to 3 object, that road cannot be given up, but in that case the improvement will justify paying for the land; it is shorter, and has no hill. It is hard to guess why the road was taken as surveyed.—W.B., 15/11/86. Mr. Williamson, B.C. Enclosure to Exhibit F, No. 4, case 527, vol. 7, folios 11 and 12, papers, L.B.D., 98-2,910.

## No. 30.

Telegram from Mr. Road-Superintendent Williamson to the Commissioner for Roads, Sydney.

Lismore, 15 January, 1887.

ROAD Goonellebah to Jesswoolgan. Can I pay McIlpatrick cheque for the seventy-five pounds as agreed, compensation for road? He has given possession of the ground.

W. WILLIAMSON.

Enclosure to Exhibit F, No. 1, case 527, vol. 7, folios 11 and 12, papers, L.B.D., 98-2,910. Papers.—W.B., 15/1/87. S6-11,005 herewith.—17/1/87. Telegraph pay, and send in at once.—W.B., 17/1/87. Telegram sent Mr. Williamson's credit should be protected upon receipt of voucher. Mr. Carroll.—17/1/87. Has voucher come in?—O.C., 19/1/87. Nearly two months have elapsed since Mr. Williamson was authorised to pay, and no voucher has been received yet.—O.C., 1/3/87. Mr. Williamson, B.C. Amount has since been paid. I now return all papers.—E.M.A., 20/12/87. The Commissioner, B.C.

Public Works Department, No. 10,207, 12 October, 1897.—Report by F. S. Murray, resident engineer, on road Goonellebah to Rous.

Copy of letter to James Carroll, 19, Hunter-street, Sydney, re copy of report of late Mr. Road-Superintendent Williamson.

Public Works Department, No. 9,889, 1 October, 1897.—Letter from J. Carroll, asking for copy of report of the late Mr. Road-Superintendent Williamson.

Public Works Department, No. 9,311, 16 September, 1897.—Letter, J. Carroll (for J. T. McIlpatrick) asking for copy of report of Superintendent Williamson.

## No. 31.

Mr. J. T. McIlpatrick to The Secretary for Mines.

Sir,

Wilson's Ridges, 15 June, 1889.

About two years ago Mr. Williamson, then Superintendent of Roads in this district, was opening up the road from Goonellebah to Jesswoolgan, and to avoid a hill he made arrangement with me to run it through my selection, No. 94, in the parish of Lismore, on account of giving the old road within the boundary of No. 94 in exchange of the one that he preferred.

As up to the present time it has not been surveyed, and I am anxious to have it enclosed, as it is a great annoyance to me, I would be very thankful to you if you would cause a survey of it to be made as soon as possible.

I have, &c.,

JAMES T. McILPATRICK.

Forward to Department of Lands and inform.—E.T. (for Under Secretary), 21/6/89.

J. T.

McIlpatrick informed, 25th June, 1889.

Referred

Referred to the Commissioner and Engineer for Roads who is requested to state whether any deviation from the proclaimed road within applicant's land has been made, and if so, whether any arrangements were made as regards exchange of roads, and whether survey and proclamation of the formed road are desirable. The proclaimed road is shown on tracing herewith.—A. J. STOPPS (for Surveyor-General), B.C., 3 August, 1889. The Commissioner and Engineer for Roads. Mr. Allman for report on questions raised by Mr. Stopps.—7/9/89.

---

No. 32.

Mr. J. T. McIlpatrick to The Under Secretary for Lands.

Sir, Wilson's Ridges, 29 September, 1889.  
Some time ago when Mr. Williamson was Road Superintendent in this district he, in opening the road from Goonellabah to Jesswoolgan, to avoid a hill made a digression in my selection No. 94 in the parish of Lismore, this digression was made in consideration of giving the original road in lieu of the present one, that is—that part within the boundary of No. 94, and up to the present time it is not surveyed. As I am anxious to get the place enclosed from the public you would oblige me by causing a survey to be made of it with as little delay as possible.

Yours, &c.,  
JAMES T. McILPATRICK.

Referred to the Commissioner and Engineer for Roads to whom the previous papers in this case were sent on 5th August, 1889.—A. J. STOPPS (for Under Secretary), 5th November, 1889. The Commissioner and Engineer for Roads through The Under Secretary for Public Works.

---

No. 33.

Mr. Road-Superintendent E. M. Allman to the Commissioner and Engineer for Roads.

Papers 89-13,647 of 9/8.—E. M. Allman.

Subject:—As to roads within J. T. McIlpatrick's conditional purchase No. 94, parish Lismore, county Rous.

Sir, Roads Office, Lismore, 26 November, 1889.  
I now return papers 89-13,647, in reference to above question, together with 87-8,177 and others.

Mr. Stopps inquires, in minute of 3rd August, if any deviation has been made from proclaimed roads within portion under consideration, whether any arrangements have been made as regards exchange of roads, and whether survey and proclamation of formed roads are necessary.

I have shown approximately, by dotted line, the position of road in use, the greater part of which has been cut, and a culvert placed over Tucki Creek, opposite boundary road between portions 69 and 143.

The deviation was made by Mr. Williamson some years ago, and McIlpatrick has been paid £75 for fencing by this Department (voucher 1-87). McIlpatrick says that, in first instance, it was also arranged that he should get the reserved road, shown in sienna, in lieu of new line. He has nothing to show in support of this in the way of writing, and it is unlikely would definitely promise anything of the kind, not having the power to do so. It does not appear to me, however, that there is any great objection to his getting the road.

It is certainly desirable that the road now in use should be surveyed and proclaimed.

I have, &c.,

E. M. ALLMAN,

Road Superintendent.

Mr. Williamson's report of 20th September, 1886, deals with this case, and I attach copy. The original should be with these papers, but is not.—E.M.A.

Col. Wells.—J.B., 2/12/89.

---

No. 34.

Mr. Road-Superintendent E. M. Allman to The Assistant Engineer, Grafton.

Extract from Roads 85-295-25.

Deviations in road Goonellabah, *via* Rous, to Wardell.

Sir, Roads Office, Lismore, 17 April, 1890.  
I have to request that application may be made for early survey of the deviations made or proposed within the following portions:—

No. 93.—R. Marshall, parish Lismore.

No. 94.—J. McIlpatrick, parish Lismore.

\* \* \* \* \*

I have, &c.,

E. M. ALLMAN,

Road Superintendent.

The road through the portions named herein was established by proclamation in *Government Gazette*, 12th November, 1884, and opened for traffic 22nd May, 1885, see page 3333, and the papers in the case were sent to the Commissioner and Engineer of Roads on 6th November, 1889, in order that the action desired by the Commissioner may be taken. It is requested that the previous papers be returned to this Department.—A. J. STOPPS (for Under Secretary), 16/6/90. Roads Lands, 81 1/2/89. Commissioner and Engineer of Roads, 6/11/89.

The

The Under Secretary, Department of Public Works (for Commissioner for Roads). Papers herewith—89-23,319, Roads, Public Works; 81 <sup>19-14</sup>, Roads, Lands. These papers might now be returned to Lands Department.—F.W., 8/7/90.

Commissioner, Under Secretary.—R.P.H., 9/7/90. The Under Secretary for Lands.—D.C.McL. (for the Under Secretary), B.C., 10/7/90.

Mr. District-Surveyor Donaldson is requested to cause survey to be made of the deviated road, as required by the Department of Public Works; and it should be made to connect with and cover the road adopted at, or near, the north-east corner of George Cooper's (now Henry Slade's) 100 acres, portion No. 143; and also connect with the proclaimed road through portion 268. The plan should show clearly, in blue colour, the roads that might be granted in lieu.—ED. TWYNAM, Chief Surveyor, 19/8/90, No. 100. The District Surveyor at Grafton.

Received in District Survey Office, Grafton, 27/8/90. Mr. Licensed-Surveyor Hunter, for survey, &c., in accordance with these instructions.—P. R. DONALDSON, 5/9/90. No. 90-35. Replied to by my plan letter of the 11th April, No. 91-19.—F. VERDON HUNTER.

### No. 35.

#### Mr. Licensed-Surveyor F. V. Hunter to The District Surveyor.

Sir,

Ballina, 11 April, 1891.

In obedience to your instructions No. 35, of the 5th May, 1890, I have honor to transmit herewith plan showing deviations in the old Goonellabah-Wardell road passing through portions 93, 94, and 69, in the parish of Lismore, in the county of Rous.

The route shown on plan herewith follows the course chosen by the Works Department; but that part of the road from the north-western corner of portion 93, to where it joins the old road, has been graded only, and is one of the deviations asked for. At present the public are using the old road, but an easier grade is sought in the position shown on plan herewith.

The remainder of the road, from the south-eastern corner of 93, to the west boundary of 143, has been cleared and improved by forming cuttings and culvert, and is now in use.

I have indicated on plan herewith by blue colour those roads which I would suggest being given in lieu of the one now measured by me.

I have, &c.,

F. VERDON HUNTER.

The deviation, as surveyed, is submitted herewith for opening. A letter is also forwarded (L.B.D., 91/2,433) from the owner of portion 81. It is presumed access will be left to that portion by re-opening the old reserved road running south from the south-west corner.—P. R. DONALDSON, District Surveyor, 22/4/91. The Under Secretary for Lands.

Advance account No. 91/19 passed.—J.B., 24th April, 1891. The Under Secretary for Lands.—J. BURT (*pro* District Surveyor), 7th May, 1891. Exhibit "J," case 527, vol. 7, folios 11 and 12. Papers L.B.D., 98/2,910.—A. J. PARK, Chairman, Court-house, Lismore, 18/6/98.

[Enclosure.]

Mr. District-Surveyor Donaldson, Grafton,—  
Sir,

Lismore, 1 April, 1891.

In the deviation of the new road, Goonellabah to Jesswoolgan, my road out on to the main road has been closed. Will you please to make arrangements so that the road through McIlpatrick's Conditional Purchase will be left open from my Conditional Purchase No. 81, as formerly, as I have no other means of getting out?

I have, &c.,

H. LITTLECHILD.

Plan of McIlpatrick's Conditional Purchase to be applied for.—P.R.D., 3/4/91. Telegram sent, 3/4/91.

The writer should be informed that the deviation in this road, recently surveyed, was done under instructions from the Under Secretary for Lands; but that, as access to his land has been severed, his letter will be forwarded to the Under Secretary for Lands with the plan of the road.—J. BURT (*pro* District Surveyor), 16th April, 1891. To be returned to District Surveyor.

The writer informed accordingly.—B.S.L., 20/4/91. The District Surveyor.—B.S.L. (*pro* Acting Chairman), 20/4/91. Forwarded to the Under Secretary for Lands, with Mr. Licensed-Surveyor Hunter's Report, 91/19. L.B.D., 91/2,651. See memo. thereon.—P. R. DONALDSON, District Surveyor, 22/4/91.

### No. 36.

#### T. T. Ewing, Esq., M.P., to The Under Secretary for Lands.

Dear Sir,

Parliament House, Sydney, 2 May, 1891.

Could this kindly be soon dealt with?

Yours, &c.,

THOS. T. EWING.

Forwarded to the District Surveyor for report. Mr. Littlechild's letter appears to refer to instruction of 25th August, 1890, No. 100.—A. J. STORRS (for Under Secretary), 22nd May, 1891, No. 57. The District Surveyor at Grafton.

Received in District Survey Office, Grafton, 25/5/91.

The plan of the road herein referred to was forwarded to the Under Secretary for Lands on the 21st May, under cover of Licensed-Surveyor Hunter's letter No. 91-19. A report is not necessary. See my minute on letter above quoted. It will be absolutely necessary to re-open the old reserved road through portion 94 a sufficient distance to afford access to Littlechild's portion No. 81.—P. R. DONALDSON, District Surveyor, 1 June, 1891. The Under Secretary for Lands.

[Enclosures.]

[Enclosures.]

T. T. Ewing, Esq., M.P., Sydney,—

Lismore, 29 April, 1891.

Dear Sir,

May I trouble you in a matter of great importance to me to call at the Lands Office, and see if you can help me in the matter of a road of access to my selection? The enclosed letter will explain what I have already done, and if you can help the matter along I will take it as a great favour. Situated as I am with the deviation of the road, I am put to very great inconvenience from the way my road has been closed by the fencing put up by my neighbour. Trusting to your kind offices to assist me,

I am, &amp;c.,

HENRY LITTLECHILD.

Mr. H. Littlechild, Lismore,—

Land Board Office, Grafton, 20 April, 1891.

Sir,

Referring to your letter of 1st instant, pointing out that by the deviation of the new road, Goonellabah to Jess-woolgan, your road of access has been severed. I have the honor to inform you that the deviation in this road recently surveyed was done under instructions from the Under Secretary for Lands; but as access to your lands has been severed, your letter will be forwarded to the Under Secretary with the plan of the road.

I have, &amp;c.,

B. S. LEVICK  
(for the Chairman).

## No. 37.

Mr. R. Marshall to Mr. Roads Engineer E. J. Statham.

Sir,

Brunswick, 2 July, 1891.

I do myself the honor to write you respecting the proposed deviation of a road through my property, portion No. 93, parish Lismore.

I regret to say that I strongly object to the deviation, as it will spoil my land as a farm, dividing it as it would in triangular shape, at the same time passing over some of the best of the land, and I am sure it would considerably lessen the value of the land as a farm if the deviation is carried out. I also think that the cost of improving the present road, viz., by cutting the hill and filling up at the culvert would be less than the cost of constructing the new road, whilst it would only benefit a few and mean a serious loss to me. Some of the residents have informed me that they would prefer the present road if improved, and it would also be more suitable to the Gundurimba people. I trust you will cause careful inquiry to be made into the matter before deciding to adopt the new route, and I would also respectfully request that, if possible, you will do what you can to retain the present road instead of the proposed one through my land.

I am, &amp;c.,

R. MARSHALL  
(per W.C.M.).

Acknowledged, 9/7/91.

Mr. Allman for report.—E.J.S., 9/7/91.

## No. 38.

Mr. Resident Engineer E. M. Allman to The Superintending Engineer,  
No. 1 Division.

Subject:—Deviation through Marshall's portion No. 93, parish Lismore.

Roads Office, Lismore, 3 August, 1891.

I now beg to return above paper, which conveys a protest from Mr. Marshall against proposed deviation through his land, portion 93, parish Lismore.

The proposed deviation, which has been surveyed by the Lands some months since, has been laid out with a view of avoiding a very steep hill on road Goonellabah to Rous, about 2 miles from the Ballina Road and close to the junction of the road leading towards Gundurimba. The tracing and section attached will, I think, serve to show that the alteration is justified. It would be impossible to get anything like a reasonable grade on the present road without very heavy work, while the deviation gives grades of from 1 in 13.3 to 1 in 84.6, with little more than surface work. Mr. Marshall says he thinks the cost of making new road would exceed that of improving the old road, possibly it might, it all depends upon what would be considered a suitable improvement of old road. To get a 1 in 12 grade it would be necessary to cut nearly the whole distance from A to C (*vide* section), with a maximum depth of about 30 feet; this of course is out of the question while lighter work and heavier grades, on a road of this class, should not be thought of.

The severance of the farm is perhaps somewhat injurious, although it is a question whether the fact of the road going through as it does, may not be useful for subdivision purposes hereafter; but I think if the new road is fenced for Mr. Marshall and the old road A to C given in exchange for area resumed, he will not have much to complain of, and will probably have little difficulty in letting both paddocks. As regards the number of people benefited which Mr. Marshall says will be but few, I may say that I consider this one of our most important roads, and it must daily grow in importance. The question of the Gundurimba traffic is scarcely worth noticing, what little traffic there is from south, &c., goes towards Lismore, and if occasionally there may be travellers going from that direction towards Rous an extra 30 or 40 chains on a good road would not inconvenience them very much. I would strongly urge that works be undertaken on the new line as early as practicable, and, if possible, a special grant of £300 might be given to cover cost of opening road and fencing both sides.

Following are the lengths of the different lines:—A C, old road, 3,070 links; C B, old road, 2,300 links; A B, new line, 5,037.7 links.

E. M. ALLMAN,  
Resident Engineer.

Has it been formally opened?—E.J.S., 9/9/91. Mr. Allman. Not yet.—E.M.A., 11/9/91. The Superintending Engineer. Bring forward again when survey and resumption are complete.—E.J.S., 24/10/91. Mr. Allman. As this road has now been proclaimed I beg to refer the matter for reconsideration.—H.G.M., 17/12/92. The Superintending Engineer, No. 1 Division.

No. 39.

19

No. 39.

Mr. Henry Littlechild to The Under Secretary for Lands.

Sir,

Lismore, 2 September, 1891.

Referring to my previous communication in reference to giving me means of access to my conditional purchase No. 81, parish of Lismore, county Rous, permit me to call your attention to the serious loss and inconvenience I am being put to from the want of a road to my place. All that I require is the opening of the original road from my south-west corner on to the public road which my neighbour has fenced off. I have called at the Roads office and Survey office, Lismore, but in neither place can I get any assistance. Trusting to your giving this, to me, important matter your immediate attention.

I have, &amp;c.,

HENRY LITTLECHILD.

It is recommended that Mr. Littlechild be informed that the new deviation of the main road has not yet been established, but that when such is being done it is intended to proclaim a road in the position formerly occupied by the reserved road, in order that he may have access to the new road.—

A. J. STOPPS, 23/9/91.

May be informed.—F.H.W. (for Under Secretary), 24/9/91. Approved.—J.N.B., 25/9/91.  
H. Littlechild informed.—29/9/91.

No. 40.

The Under Secretary for Lands to Mr. Henry Littlechild, Lismore.

Sir,

Department of Lands, 29 September, 1891.

With reference to your letter of the 2nd instant, further respecting road of access to your conditional purchase, portion No. 81, parish of Lismore, county of Rous, I am directed by the Secretary for Lands to inform you that the new deviation of the main road has not yet been established, but that when such is being done, it is intended to proclaim a road in the position formerly occupied by the reserved road, in order that you may have access to the new road.

I have, &amp;c.,

WM. HOUSTON,  
Under Secretary  
(per F.H.W.).

No. 41.

Office Memorandum.

Roads Branch, Lands Department, 1 October, 1891.

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of part of road from Lismore to Wardell, parish of Lismore, county of Rous, transmitted by Mr. F. V. Hunter. Letter No. 19, of 11th April, 1891, and on which Mr. F. V. Hunter's (Licensed Surveyor) report in explanation is requested.

SUBJECT.

A discrepancy exists between the boundaries of portions as compiled from data on originals, and those as shown on plan of above survey (*vide* two tracings herewith) A and B.

(The east boundary of portion 143 appears to be about 100 links to the east of that boundary, as shown on road plan.)

The correct bearing and distance should have been given between the termini of survey.

If Mr. Hunter has to go on to the ground to investigate, he might connect his survey with Mr. Ewing's survey of road through portion 268, tracing (C) of which is herewith.

A. J. STOPPS  
(For Chief Surveyor),  
2 October, 1891.

Received in District Survey Office, Grafton.—  
5/10/91.

Mr. F. V. Hunter (L.S.) through the District Surveyor, Grafton.

Mr. Licensed - Surveyor Hunter.—J. R. DONALDSON, 5/10/91. The Under Secretary for Lands.—J. BURT (*pro* District Surveyor), 22/12/91.

REPORT.

I have again made a re-survey of this road, and much regret to state that I made an error in lengths given if I traverse line No. 11, which should be 296 links instead of 196 as given. c tracings.

Notwithstanding diligent search, I could not find any of Mr. Ewing's road pegs. The country has been all cleared through which the road passes, and all old marks have been destroyed.

F. VERDON HUNTER.  
Ballina,  
18/12/91.

Received in District Survey Office, Grafton.—  
22/12/91.

The error now reported in line 11 vitiates the plan, and the alteration leads to the inference that the proposed road will include part of P. Gwynne's 52 acres.

I observe that there are no corners identified on this survey, and there are no connections; this is an omission which detracts from the value of the survey, and certainly there should be some assurance on part of the Surveyor, supported by the District Surveyor, that there are no corners extant, before the plan can be approved.

The plan is badly drawn, and cannot be regarded as a fair copy document, and I think a new and correct plan should be supplied.

E. T.,  
Chief Surveyor,  
12/1/92.

Mr. Licensed Surveyor F. Verdon Hunter (*per* the District Surveyor at Grafton).

Received in District Survey Office, Grafton.—21/1/92.  
Mr. Hunter accordingly.—J. BURT (*pro* District Surveyor), 22/1/92. Replied to by my plan and letter of 7th June, No. 92-11.—F. VERDON HUNTER.

## No. 42.

Mr. Henry Littlechild to The Under Secretary for Lands.

Sir,

Lismore, 7 October, 1891.

Yours No. 81-1,014-41 of the 29th September, informing me that it is intended to give me the access I require to my conditional purchase No. 81, parish of Lismore, to the new road is duly to hand, in reply permit me to point out the urgency of the matter as it affects me. Here I am hemmed in and deprived of all means of taking my produce to market to my great loss, all by the action of the Department in depriving me of the right I have enjoyed since 1872 of reaching the road. Surely the Department can do something at once to have the obstruction removed from the reserved road from my south-west corner.

I have, &amp;c.,

HENRY LITTLECHILD

(per W.W.).

## No. 43.

Mr. Henry Littlechild to T. T. Ewing, Esq., M.P.

Dear Sir,

Lismore, 7 October, 1891.

Kindly see the Lands Department for me again. I have a letter (No. 81-1,014, 29th September), from the Under Secretary saying what is intended to be done, but I am completely shut out from the road and put to great loss. An officer from the Roads Department could do all I require in a very short time if duly instructed.

I assure you it is a very important matter to me. Thanking you very much for what you have done.

Yours, &amp;c.,

HENRY LITTLECHILD

(per W.W.).

## No. 44.

The Chairman, Local Land Board, Grafton, to Mr. Henry Littlechild.

Sir,

Land Board Office, Grafton, 6 November, 1891.

In reply to your letter of 28th ultimo, respecting means of access to your selection, I have the honor to inform you that the road having been surveyed, application should be made (if you have not already done so) to the Under Secretary for Lands, to whom your communication has been forwarded.

I have, &amp;c.,

HERBERT PHILLIPS

(pro Chairman).

## No. 45.

## Book of Reference of Road.

## Schedule of Areas to be Resumed.

DESCRIPTION of part of road between the Lismore-Gundurimba Road, and Wardell, and a Branch, parish of Lismore, county of Rous. The road passes through the lands described in the following table, in which particulars are set forth. ## No. 46.

Mr. District-Surveyor P. R. Donaldson to The Under Secretary for Lands.

11 November, 1891.

H. LITTLECHILD applying for means of access from his portion No. 81, parish of Lismore, county of Rous, to the road from Lismore to Wardell.

The enclosed letter is forwarded to the Under Secretary for Lands in connection with Licensed-Surveyor Hunter's letter No. 91-19.

The road to which access is desired is that leading from Lismore to Wardell, formed and maintained by the Works Department. This road was measured by Mr. Licensed-Surveyor Hunter, and supersedes the road through portions 94, 61, 69, 143, parish of Lismore, confirmed 12th November, 1884, folio 7589, to which the writer had access.

As

As the Works Department has deviated from the confirmed road, it will be necessary to open that part of the reserved road through J. T. McIlpatrick's portion 94, running south from the confirmed road to that surveyed by Mr. Hunter, which was closed in 1884. The plan of Mr. Hunter's survey was forwarded to the Under Secretary for Lands on the 21st May, 1891. (See L.B.D., 91-2,651, Grafton Roads; 81-1,014-36).

P. R. DONALDSON,  
District Surveyor.

[Enclosure.]

P. R. Donaldson, Esq., District Surveyor, Grafton,—  
Sir,

Some months ago I wrote you in reference to getting means of access to my conditional purchase No. 81, parish of Lismore, and since then to the Department of Lands and Works, but up to the present I have had nothing done for me. Could you by any means assist me, if the matter is in your hands, by expediting the opening of the road, the want of which puts me to very great inconvenience and loss?

Lismore, 28 October, 1891.

I have, &c.,

H. LITTLECHILD  
(per W.W.).

P.S.—I have a letter saying the matter is in the Department of Lands, being dealt with.

The writer should be informed that the road having been surveyed, he should apply to the Under Secretary for Lands. He might also be informed that his letter will be forwarded to the Under Secretary, with a request that action may be expedited. Papers to be then returned to the District Surveyor for further action.—P. R. DONALDSON, District Surveyor, 5/11/91. The clerk in charge. H. Littlechild informed, 6/11/91. The District Surveyor.—H.P., 6/11/91. Received in District Survey Office, Grafton, 10/11/91. See covering memo. by District-Surveyor Donaldson, dated 11th November, 1891, to Under Secretary for Lands.

No. 47.

T. T. Ewing, Esq., M.P., to The Under Secretary for Lands.

Sir,

Parliament House, 23 November, 1891.

I should be glad if you can instruct your surveyor to point out to Mr. Littlechild, and others concerned, on the ground, the position of road. This should close the case, and get rid of useless litigation.

I have, &c.,

THOS. EWING.

[Enclosure.]

Thomas T. Ewing, Esq., M.P., Sydney,—

Dear Sir,

I am under the necessity of still further troubling you over the matter of the road to my selection. As the matter stands, I am unable to get my crop away unless I cut down the obstruction placed across the reserved road. I am very averse to having to resort to the extreme course of cutting down the fence erected by my neighbour, but I cannot suffer the loss and inconvenience I am put to much longer unless something is done speedily.

Lismore, 13 November, 1891.

Yours faithfully,

H. LITTLECHILD  
(per W.W.).

No. 48.

Gazette Notice.

Department of Lands, Sydney, 24 November, 1891.

Notification of Proposed Resumption of Land for a Road.

NOTICE is hereby given that it is proposed to resume certain lands for a road, under the 42nd section of the Crown Lands Act of 1889 (53 Victoria No. 21).

Should any person desire to object to the action proposed to be taken, it is requested that objection be made in writing, and forwarded to the Minister for Lands within one month from the date of this notice.

Plan of the road in question may be inspected at this office, a tracing of the same at the office of the Crown Lands Agent at Lismore, and Schedule of particulars at the Local Land Board Office at Grafton.

[Rds. 81-1,014-45; R. 4,061-1,603.]

HENRY COPELAND.

Description of Road:—Part of road from the Lismore-Gundurimba Road to Wardell, between the north-west corner of R. Marshall's (now Commercial Banking Company's) 100 acres, C.P. portion No. 93, and the east boundary of G. Cooper's (now H. Slade's) 99 acres 2 roods, C.P. portion No. 143; with a branch to reserved road south of portion No. 81, parish of Lismore, county of Rous, partly in lieu of parts of road confirmed in *Government Gazette* of 12th November, 1884, folio 7589 (R. 2,635-1,603).

Schedule and Particulars of Lands proposed to be Resumed.

Land District of Lismore.

## No. 49.

Mr. Henry Littlechild to The Under Secretary for Lands.

Sir,

Lismore, 9 December, 1891.

Referring to previous correspondence in reference to means of access to my conditional purchase No. 81, parish of Lismore, county of Rous, and the *Gazette* notice, 24th November, 1891, folio 9218, with the tracing exhibited at the Land Office, Lismore, showing the road as proposed to be opened, I now beg to say the road will answer my purpose, and is left in the way I have been asking for it. All that I now want is authority to remove the obstruction placed across the original reserved road, or I would much prefer that this was done under the supervision of an officer specially deputed to have it done, and I will find the necessary labour, as the matter is of pressing necessity to me for the getting of my crop to market.

Trusting to have the obstruction removed,

I have, &amp;c.,

HENRY LITTLECHILD

(per W.W.).

## No. 50.

Mr. J. T. McIlpatrick to The Secretary for Lands.

Sir,

Wilson's Ridges, 12 December, 1891.

I have received notice that it is proposed to resume certain lands for a road from Lismore to Wardell, through portion No. 94, the same being my conditional purchase. About five years ago I gave consent to Mr. Williamson, the then Road Superintendent, to alter the road through portion No. 94 (see diagram marked red). To that part I make no objection; but to the branch road I do object, for the following reasons:—

1st. Branch road not required, as there is already a road running from the Lismore and Wardell Road direct to portion No. 81, with easy access, passing about 3 (three) chains from the principal house on the place, and is used by others (see diagram). Creek not difficult, being very small—so small it has been discontinued as a frontage (see map).

2nd. Branch road forming a boundary road around portion 94, excluding it from having any access to the creek, it having no other water available, leaving it only a high dry hill (see pencil-mark in diagram; see also map).

The branch road in question is not forming any part of the deviation, and having no connection with the previous existing road, having been given to me in 1884 in lieu of confirmed road within the boundary of portion 94, and forming part of my conditional purchase from that date; therefore is a new and separate road altogether.

The objections here stated are undeniable facts, and can be proved if called upon. Annexed, please find diagram showing the position of the principal houses on each portion, as well as an outline of the roads and hill in portions 94, 81, and 70, although rough, may convey some information to you.

Trusting, hon. sir, considering the importance of objection 2nd, compared with the unnecessary proposition, you will be able to come to a satisfactory conclusion.

I have, &amp;c.,

JAMES T. McILPATRICK.

Exhibit K, case 527, vol. 7, folios 11 and 12. Paper L.B.D., 98-2,910.—A. J. PARK, Chairman, Court-house, Lismore, 18/6/98.

## No. 51.

Mr. G. Larkin to J. Perry, Esq., M.P.

Dear Sir,

Lismore, 12 December, 1891.

The accompanying letter and sketch, I have been requested by McIlpatrick to ask you to present to the Under Secretary for Lands, and do what you can for him. He is a very decent old fellow, and seems by sketch to have been rather overdone with roads; the road in question is the one that goes from Goonellebah to Rous.

According to sketch which is correct, it would appear that the piece of road marked blue might well be closed as conditional purchase 81 (Littlechild) has plenty creek, and McIlpatrick would be cut off altogether.

Yours, &amp;c.,

GEORGE LARKIN.

It is recommended that Mr. Perry, M.P., be informed that the gazettal of this road will close the reserved road which passes south-easterly through Mr. McIlpatrick's portion, and also the confirmed road passing easterly through same land, but that is necessary to re-open the reserved road which connects the main road with portion 81, as the owner of that portion has always had the right of access to the main road in that direction.—A. J. STOPPS, 30th December, 1891.

For approval.—F.H.W. (for Under Secretary), 31/12/91. Approved.—H.C., 5/1/92. J. Perry, M.P., informed, 7/1/92.

## No. 52.

The Manager, the Commercial Banking Company of Sydney, at Murwillumbah, to J. Perry, Esq., M.P.

Commercial Banking Company of Sydney,

Sir,

Murwillumbah, 17 December, 1891.

I beg to enclose herein letter from Mr. Robert Marshall, the mortgagor of the property gazetted last November, of portion 93, parish Lismore, county Rous, 100 acres, objecting to the land being resumed for a road.

Yours, &amp;c.,

A. A. WILSON,

Manager.

[Enclosures.]

[Enclosures.]

To the Hon. Minister for Lands,—

Dear Sir,

In reference to a road going through my conditional purchase portion 93, parish Lismore, county Rous, and gazetted 24th November, 1891. I object to the said road going through the above portion as the people have already a road going by the property, if the road was put through the portion, it would render one part of it almost useless, hence my objections; also the road is not required.

Brunswick Heads, 14 December, 1891.

Yours, &amp;c.,

ROBERT MARSHALL,  
Brunswick Heads.

M.C.B.—

Dear Sir,

In reference to the road gazetted last 24th November, to go through portion 93, parish Lismore, county Rous, I object strongly to the said road, it not being required, as already they have a road going by the property this ten or twelve years, and if the road was shifted it would greatly damage one portion of the property.

Brunswick Heads, 14 December, 1891.

Yours, &amp;c.,

ROBERT MARSHALL.

P.S.—I wrote to Mr. Statham about the road some time ago, objecting to it; he answered it, and said he would see about the matter.

## No. 53.

The Crown Lands Agent at Lismore to The Under Secretary for Lands.

Sir,

Crown Lands Office, Lismore, 31 December, 1891.

I have the honor to return herewith a tracing of road in the parish of Lismore, county of Rous, proposed to be resumed in accordance with *Gazette* notice of 24th November, 1891, the said tracing having been exhibited outside this office for a period of one month.

I have, &amp;c.,

F. A. RIDLEY,  
Crown Land Agent.

## No. 54.

The Under Secretary for Lands to J. Perry, Esq., M.P.

Sir,

Department of Lands, Sydney, 7 January, 1892.

With reference to the letters of Messrs. George Larkin and James T. McIlpatrick (presented by you) objecting to the opening of the branch road from the Lismore-Gundurimba road to Wardell, to reserved road south of portion No. 81, parish of Lismore, county of Rous, I am directed by the Secretary for Lands to inform you that as the owner of portion No. 81 had access to the road passing Mr. McIlpatrick's land, which has been superseded by proclamation of the present road adopted by the Department of Public Works nearer the creek, it has been necessary to open the branch road, to the new road, to place the owner of portion No. 81 relatively in the same position with regard to access as he was formerly. The reserved road which passes south-easterly through Mr. McIlpatrick's portion, and also the confirmed road passing easterly through the same land will be closed by the action taken.

I have, &amp;c.,

WM. HOUSTON,  
Under Secretary.

## No. 55.

Mr. J. T. McIlpatrick to The Secretary for Lands.

Sir,

Wilson's Ridges, 28 January, 1892.

With reference to your communication of the 7th instant, wherein you say that it is necessary to open the branch road to the new road to place the owner of portion No. 81, relatively, in the same position, with regard to access as he was formerly. This access never did exist, as the new road is only about five years in existence, and part of the branch road was given to me in 1884 in lieu of confirmed road (see *Government Gazette* of 15th September, 1884, folio 6018), showing that they reserved 1 acre 15 perches, in lieu of part of reserved road (see also *Government Gazette* of 12th November, 1884, folio 7586), showing the confirmation of the same road in lieu of part of reserved road; this was three years before the new road did exist. I have read every Act I could get, and I cannot find any section to justify the action proposed to be taken under the circumstances—placing the owner or occupier of any adjoining lands with a former access that never existed. I have sent reasonable and undeniable objections with reference to same, and I now insist that they be taken into consideration.

I have, &amp;c.,

JAMES T. McILPATRICK.

Exhibit L, case 527, vol. 7, folios 11 and 12, papers L.B.D., 98-2910.—A. J. PARK, Chairman, Court-house, Lismore, 18/6/98.

## No. 56.

Office Memorandum.

Roads Branch.

As several inquiries are being made urging the establishment of the road as surveyed by Mr. Hunter, through Mr. McIlpatrick's land, parish Lismore, county Rous, it is requested that Mr. Hunter will forward the new plan of road as soon as possible.

The instruction for the amended plan was sent to him 19th January last.

A. J. STOPPS

(For Chief Surveyor),

Mr. F. V. Hunter, Surveyor, through the District Surveyor at Grafton.

4th May, 1892.

Mr.

Mr. Foster.—What date was this forwarded to Mr. Hunter?—J.B., 9/5/92. To Licensed-Surveyor Hunter, 22/1/92. H.F., 9/5/92. Urgent.—Forwarded to Mr. Hunter accordingly, with a request that this matter may receive immediate attention.—P. R. DONALDSON, District Surveyor, 9th May, 1892. This case has been in Mr. Frost's hands for the last month, and I am anxiously awaiting his action in the matter.—F. VERDON HUNTER, 19/5/92. Received in District Survey Office, Grafton, 28/5/92. Draftsman in charge.—P.R.D., 30/5/92.

The amended plan of this road was forwarded to the Under Secretary on the 14th instant, under cover of Licensed-Surveyor Hunter's letter No. 92-11.—J. BURT (*pro* District Surveyor), 20/6/92. The Under Secretary for Lands.

Telegram from Mr. Licensed-Surveyor F. V. Hunter to The District Surveyor at Grafton.

Ballina, 30 May, 1892.

My rough of road ; been with Mr. Frost six weeks ; kindly urge him forward plan.

F. VERDON HUNTER,  
Licensed Surveyor.

---

No. 60.

Mr. Licensed-Surveyor F. V. Hunter to The District Surveyor at Grafton.

Sir,

Ballina, 7 June, 1892.

In obedience to your instructions No. 35 of the 5th May, 1890, and memo. of 22nd January, 1892, Roads 81-1,014/56, I have the honor to transmit herewith plan showing deviations in the old Lismore-Goonellabdt-Wardell road passing through portions 93, 94, 69, and 143, in the parish of Lismore, in the county of Rous.

The route shown on plan herewith follows the course chosen by the Works Department.

That part of the road from traverse 1 to 12 has been graded, but is not yet formed, the remainder of the road has been cleared and formed, and is now used by the public.

I have indicated on plan herewith by blue colour those roads which I think might be given in lieu of the one shown on my plan.

In making this amended survey I have altered traverse line No. 1, which will now commence from the north-western corner of 93.

The north-west corner of 268, and the north-west corner of 93, were found by me, and should have been shown on my original survey.

I have, &c.,

F. VERDON HUNTER.

Amended plan submitted.—P. R. DONALDSON, District Surveyor, 14/6/92. The Under Secretary for Lands. Exhibit M, case 527, vol. 7, folios 11 and 12; papers L.B.D., 98-2,910.—A. J. PARK, Chairman, Court-house, Lismore, 18/6/92.

---

No. 61.

Mr. J. T. Fitzpatrick to The Secretary for Lands.

Sir,

Wilson Ridges, 5 October, 1892.

I have the honor of drawing your attention to the following urgent reason on my part for objecting to the proposed resumption of land for a road, which notice appeared in the *Government Gazette*, dated 20th September, 1892, folio 7469.

1. The portion of the proposed resumption to which I object, that running from the original Lismore-Gundurimba and Wardell road in a southerly direction across my conditional purchase No. 94 to the other proposed deviation (*viz.*, that part which was granted to me on the 12th November, 1884, reference can be seen in the *Government Gazette*, folio 7589, also 16th September, folio 6018, in lieu of confirmed road), which is altogether unnecessary, and, therefore, unwarranted. 2.

2. About five years ago I consented to the exchange of the deviation now in question for the then existing road within the boundary of portion No. 94, notwithstanding this decreased my area, and thereby deprived me of the greatest part of my water frontage. This I am still willing to allow to be resumed.

3. The portion running at right angles from this (nearly), viz., the branch road, completely cuts off the rest of my water frontage, leaving my conditional purchase valueless.

4. The road running past the house of owner of portion No. 81 on the east side provides ample communication with the present existing road for the occupants of conditional purchase No. 81, and all other properties in the neighbourhood.

I, therefore, respectfully, but most strenuously, object to the resumption of this part of the proposed road as being an injury and injustice to me—the wrong being one for which there is no reasonable excuse, and could only have resulted from gross misrepresentation, as a reference to the map will at once confirm my statements.

Before gazettement the proposed road I would respectfully suggest that some impartial and duly qualified person should be sent to report upon the various deviations which have been suggested.

As this is a matter of vital importance to me, I wish it will receive due attention.

I have, &c.,

JAMES T. McILFATRICK.

No. 62.

Mr. J. T. McIlpatrick, to J. Perry, Esq., M.P.

Sir,

Wilson's Ridges, Lismore, 8 October, 1892.

Herewith please receive Petition from the residents of the locality, and also a letter and sketch, all for the Minister for Lands. Would you kindly read and forward on, at the same time using your influence to assist me from being deprived of some of my land, and being unnecessarily and entirely cut off from all water frontage. The sketch shows:—

- I. Road in red, which was granted to me in 1884, *vide Government Gazette*, 12th November, 1884, folio 7589, in lieu of part of the confirmed road marked blue and red.
- II. About five years ago another deviation was made along the creek, marked green; for this I was promised the original road, marked blue and blue and red (this has not yet been confirmed). The only way I now had to the creek for the upper parts of portion 94 was over the road granted to me in 1884.

I have now received notice that this part which was, as before stated, granted to me in 1884, is to be resumed. This entirely cuts me off from my water supply, and leaves portion 94 useless. The only reason for opening this road is, it is said, to benefit one person, who, as shown on sketch, has ample communication with the present existing roads, as explained in my letter to the Minister for Lands. It will be seen by red dots on the sketch on portion 81, the distance the proprietor of said portion will have to travel round heading gullies and creeks, &c., to get to the proposed branch road, while he lives within 3 chains of the other road which takes all the traffic of the neighbouring farms.

I would respectfully ask you to use your best influence in arranging this matter for me at your earliest convenience.

My paddock is open, and I am unable to do anything with the place.

Leaving the matter in your hands,

I am, &c.,

JAMES T. McILFATRICK.

[Enclosure.]

To the Honorable The Minister for Lands,—

We, the undersigned residents in the neighbourhood, and persons acquainted with the proposed resumption of land for road purposes in the conditional purchase 94 of J. T. McIlpatrick, parish of Lismore, hereby declare our conscientious belief that the portion of the proposed resumption to which he (J. T. McIlpatrick) objects, namely, the branch from the original "Lismore-Gundurimba-Wardell Road" to the proposed deviation is an unnecessary encroachment upon, and injury to, his property, and one which should not be granted, especially as Mr. McIlpatrick has already, in the interests of the public, permitted the resumption of a valuable piece of land for a like purpose between the water and the rest of his conditional purchase, and we believe that no person will be injured by its not being granted.

We further think that any proposal to resume the portion now objected to could only have resulted from gross misrepresentation, or a misunderstanding on the part of the Department.

We have, &c.,

Thomas Loadsman .....	farmer.
Luke Lofts, Chilcott's Grass .....	"
Solomon T. Payne .....	"
James Gwynne .....	"

[Here follow 15 other signatures.]

No. 63.

Executive Council Minute.

Resumption of land for a road.

Department of Lands, Sydney, 28 October, 1892.

It is recommended for the approval of His Excellency the Governor and the Executive Council, that the lands which have been particularised by notification in the *Government Gazette* as proposed to be resumed for a road under 42nd section of the Act 53 Victoria No. 21, be now resumed for the road in question, viz.:—Part of road from the Lismore-Gundurimba road to Wardell, between the north-west corner of R. Marshall's (now Commercial Banking Company's) 100 acres conditional purchase, portion No. 93, and the east boundary of G. Cooper's (now H. Slade's) 99 acres 2 roods conditional purchase, portion No. 143; with a branch to reserved road south of portion No. 81, parish of Lismore, county of Rous, partly in lieu of parts of road confirmed in *Government Gazette* of the 12th November, 1884, folio 7589.

HENRY COPELAND.

The Executive Council approve of the recommendations herein set forth.—ALEX. C. BUDGE, Clerk of the Council, 7/11/92. Minute 92-53. Approved.—JERSEY, 7/11/92. Confirmed, 15/11/92. Notified, 18 November, 1892, folio, 9171. Advertised, 21/11/92. Re-submit, 28 December, 1892.

No. 64.

## No. 64.

Canly Dickey, Esq., to The Under Secretary for Lands.

Sir,

Lismore, 1 November, 1892.

I have been consulted by Mr. James T. McIlpatrick, of Wilson's Ridges, of Lismore, the present holder of portion 94 of 49 acres, as seen by reference to the parish map. Mr. Littlechild is the owner of portion 81. It is proposed by the Lands Department to resume 4 acres 2 roods and 10 perches in lieu of a reserved road and part of confirmed road, as shown by *Government Gazette* of 20th September, 1892, and if this proposed road is made, Mr. McIlpatrick's conditional purchase, No. 3,662, of 1874, will be rendered useless to him, as the whole of his water frontage will thereby be taken away from him. I would respectfully call your attention to the correspondence between Mr. McIlpatrick and your Department with reference to the road in question. Mr. McIlpatrick consented (see his letter to the Minister for Lands, dated 5th October last, No. 2) to the exchange of the deviation now proposed except the branch road, as shown on sketch lodged in your Department with petition, and if this branch road is confirmed, Mr. McIlpatrick will be deprived of his water rights altogether, and Mr. Littlechild, the owner of portion No. 81, can get easier access to the same road at a point within 3 chains of his own house, and he is the only person who could use this branch road my client objects to. Mr. Littlechild might be put to the expense of about £3 in making a small culvert across the creek opposite his house.

Before finally coming to a conclusion with reference to this matter, I would ask you to get Mr. Murray, the local superintendent of roads, to go and inspect the proposed deviations and report on the matter to you, as I am quite confident if you knew the injury that must ensue to Mr. McIlpatrick if the proposed resumptions are confirmed, and how little resumptions will convenience or benefit Mr. Littlechild, you would never permit such resumptions to be confirmed.

Trusting that you will kindly direct Mr. Murray to inspect and report to you on this subject without loss of time.

I have, &amp;c.,

CANLY DICKEY,  
Solicitor for Mr. McIlpatrick.

## No. 65.

Mr. J. T. McIlpatrick to The Under Secretary for Lands.

Sir,

Wilson's Ridges, 5 November, 1892.

I am sorry to trouble you with this subject; but the necessity of the case compels me to do so. In 1874 I selected a measured portion of land, containing 49 acres. There was a road passing through it; this remained unaltered to 1883. There was a deviation surveyed in it, for what reason I could never learn. In 1884 this deviation was confirmed, and I was granted, as compensation, part of the original road—from the confirmed road to Tucki Creek. This part that was granted to me was then standing scrub, which I afterwards felled. Three years after this Mr. Williamson came to me, stating that he was going to do some work on the road, and that he never could get a grade over the hill, and that he wanted to see if he could make any arrangements with me. He had the parish map with him. Showing me the map, there was a pencil mark drawn across my place in the position that the deviation now passes—pointing this mark out to me, stating this is the way we want to go. This proposed deviation cut off the creek on one side of my conditional purchase, passing about 2 chains from my house. I replied, that road went through my conditional purchase any way, and if it was any improvement to the road, or advantage to the public, he could have it; providing that I was allowed the old road within the boundary, as the one road would do me as well as the other; but I would not consent to have two roads in the place. To this he agreed also. As this would leave my place open, as I had the old road almost fenced, it would cost me no more, and it would be reasonable to allow for the fencing of it off. We then went in to consider the cost, and he allowed me £75. This £75 was for the cost of erecting the fence on the proposed deviation, and has nothing to do with the exchange of the road. There is not a living soul that knows the place from Lismore to Wardell but approves of the alteration of the road; but this one person, backed up by his nephew, who has ample access to the present existing road by a road passing about 3 chains from his house, and it is a shorter and better one than the road he wants, and is in use by others. I am cruelly and unnecessarily persecuted in this matter, and I understand that there is secret influence brought to bear in this case, and all means is cut away from me, so that I am unable to defend myself. I have sent in objections containing nothing but solid facts, as well as a petition signed by nineteen residents of the place. I am willing for an impartial report of the place. I am also willing for an inquiry at the Local Land Board. I offer every fair terms in my petition, but all is denied me. I respectfully ask you, as honorable gentlemen, to try and set this matter right by all fair and just actions.

I have given you an account of the whole transaction from the first, so that you will better understand how the subject stands.

As this is a matter that is very pressing on me, as I cannot make any use of the place until this matter is settled—even the horse that I ride I am obliged to get him grazed with a neighbour—and if the water is cut off unnecessarily with this proposed branch road, the place will never be any use to me, as the place is grass land, and if they take the water from it they can take the whole 49 acres. Therefore, I will resist it to the last.

Trusting, sir, you will try and set matters right in a fair and just way.

I am, &amp;c.,

JAMES T. McILPATRICK,

Presented by Messrs. Ewing, Nicoll, Perry, Ms.P.

27

No. 66.

Mr. Henry Littlechild to The Under Secretary for Lands.

Sir,

Lismore, 12 November, 1892.

After much weary waiting I am compelled once more to appeal to you to have the road to my conditional purchase 81, parish of Lismore, opened.

I am led to believe that all that is now required is for the road to be gazetted. Could you have this done, for pity's sake, and so save me from further loss from the want of access to my place? I feel sure if you only knew the strait I am put to you would not allow a day to elapse before I had the road opened.

I have, &amp;c.,

HENRY LITTLECHILD

(per W.W.).

No. 67.

Canly Dickey, Esq., to J. Perry, Esq., M.P.

Dear Sir,

Lismore, 15 November, 1892.

The *locale* is Wilson's Ridges, near Lismore. The injured man in this case is Mr. James T. McIlpatrick, who is the owner of a conditional purchase, portion 94, of 49 acres, on parish map of Lismore. A Mr. Littlechild is the owner of portion 81, adjoining. A host of papers, petitions, and documents, maps, &c., are in the Lands Department. Littlechild wishes the road to run through McIlpatrick's land, and if the road is made as Littlechild wants it, all the water frontage will be taken away from McIlpatrick. Littlechild can get to the same road at a point within 3 chains from his own house, but this would involve an expenditure by him of about £3, to make a small culvert over the creek, and he objects to do this.

Some time ago my client agreed to allow a road to go through his land, at the request of the Government, and this proposed road deprived him of all his water frontage, except a little bit, and now it is proposed to take the rest of the water frontage away by making this road where Littlechild wants it. Will you kindly look after this matter and see that Mr. McIlpatrick is not treated unjustly in this manner?

I wrote the Under Secretary for Lands *re* this matter on the 1st November instant, and have not heard from him since.

Yours, &amp;c.,

CANLY DICKEY.

No. 68.

## Gazette Notice.

Notification of Resumption of Land for a Road.

Department of Lands, Sydney, 18 November, 1892.

NOTICE is hereby given that the lands required for a road, and embraced within the holdings particularised in the appended Schedule, are hereby resumed under the 42nd section of the Act 53 Victoria No. 21.

By His Excellency's command,

HENRY COPELAND.

[Rds. 81-1,014-72; R. 4,061a.]

Description of Road:—Part of road from the Lismore-Gundurimba Road to Wardell; between the north-west corner of R. Marshall's (now Commercial Banking Company's) 100 acres conditional purchase portion No. 93, and the east boundary of G. Cooper's (now H. Slade's) 99 acres 2 roods conditional purchase portion No. 143, with a branch to reserved road south of portion No. 81, parish of Lismore, county of Rous,—partly in lieu of parts of road confirmed in *Government Gazette*, 12th November, 1884, folio 7589.

Schedule and Particulars of lands resumed.

Land District of Lismore.

No. 69.

Mr. Charles Dean, Junr., to B. B. Nicoll, Esq., M.P.

Dear Sir,

Lismore, 29 November, 1892.

A Mr. James McIlpatrick, of Wilson's Ridges, and a good many people interested with him, have asked me to write requesting you to be good enough to take some immediate action in the matter of road proposed to be run through his property. The matter stands this way: McIlpatrick has, as you will see by a rough sketch hereto attached, two pieces of land, 89 acres in all; the 49-acre piece fronting the Tucki Creek; and about five years ago he generously consented to the exchange of the deviation now in question

question for the then existing road within the boundary of portion No. 94, notwithstanding this decreased his area and deprived him of the greater part of his water frontage; but this he does not in any way mind, and is still willing that it should be resumed. But the portion (now believed to be gazetted) and known as the branch road, running from the original Gundurimba-Wardell road in a southerly direction across conditional purchase No. 94 to the other proposed deviation, viz.:—That part which was granted to him on the 12th November, 1884, in lieu of confirmed road. It appears that this portion is being advocated for by one individual (Littlechild) and against the fact that nineteen property-holders alleged by petition that it is absolutely unrequired and unnecessary. The road running as it does past the house of the owner of portion 81 on the east side, provides the most ample accommodation with the existing road for the occupants of conditional purchase No. 81, and any other properties in the neighbourhood. Now it is presumed by all these parties interested that (Littlechild) must have some strong influence at his back to have worked this so far in his favour, and it is presumed by many that Messrs. Ewing and Perry, not knowing the facts, have been led to favour the interests of this party; but whether this is so or not I cannot say; anyhow I am sure, and many others too, that if they were aware of the injustice that will be done to McIlpatrick if this is carried out, as well as the uselessness of the road, excepting for Littlechild, they could never favour it. You will see by the plan that it completely shuts him off from the water frontage and renders this selection valueless; and so far as compensation is concerned he would require the value of the selection which he is not likely to get; though he can for a certainty fill the Land Court with witnesses as to the injury he will sustain.

The matter has been fully talked over, and a prominent man here recommended that you should be solicited to interview the authorities and prevent any further action being taken if possible.

The matter is of vital importance to this man who has on his side almost every person in the neighbourhood in which he lives, and it is only a simple act of justice that no action as proposed by the Department be carried out, 93-527.

One of the officers who is believed reported long ago on the road never even examined it carefully, or rather, had no knowledge of the damage this man would suffer. Of course if there was the slightest necessity for it, it would be some argument; but even Littlechild, who is the only one that can be served, will scarcely use it in preference to the existing road. It is a bit shorter, but very rugged. If necessary there could be twenty letters on top of this endorsing all said; but if you will kindly look the matter up early, you will see the petition, &c., from these people who feel very much hurt at what has been so far done; in fact, they will sift it to the end, and if necessary have the matter brought before the House.

Kindly give the matter your best attention, and endeavour to have matters remain as they are. It does seem strange that one man's interest should be so supported without any reason or justice for it whatever.

Yours, &c.,

CHARLES DEAN, JUNR.

Presented by B. B. Nicoll, M.P., for inquiry into this matter.—Acknowledged, 11/1/93. Commissioner for Roads.—D.C. McL. (for Under Secretary), B.C., 11/1/93. Com-

## No. 70.

### Mr. J. T. McIlpatrick to The Under Secretary for Lands.

Sir,

Lismore, 29 November, 1892.

I beg most respectfully to point out that since the receipt of your last communication of 15th October informing me that "the matter would receive immediate attention." I have received no further information on this subject as promised, although a notice appears, I believe, in the *Government Gazette* with reference to this road. In view of the great importance of this matter to me I respectfully say—

1. That the road known as the branch road running to reserved road south of portion No. 81, parish of Lismore, county of Ross, if resumed, will injure me most seriously, cutting off the balance of my water frontage of area No. 94, and render it valueless.

2. There is only one person who may use it, and who is the chief advocate for his own, or what he considers his own, personal advantage.

3. The existing roads satisfy all demands for traffic and convenience, as my petition, largely signed by property-owners, will show.

4. Compensation will be useless to me unless I receive the value of the conditional purchase No. 94, and I can stack the Land Court with witnesses to prove this statement.

5. It is puzzling to nearly every individual in the neighbourhood how this branch road can be considered necessary when such ample convenience exists for the properties adjoining conditional purchase No. 81 and owner of 81 also, and I strongly solicit the justice of having a report by some competent person.

6. I trust that you will not resume this "Branch Road Portion," as after spending years of my life on the selection it will be ruinous to me; and to this fact I have abundance of evidence to produce.

I have, &c.,

JAMES T. McILPATRICK.

Presented by B. B. Nicoll, Esq., M.P.

No. 71.

## Office Memorandum.

19 December, 1892.

Part of road between the Lismore-Gundurimba Road and Wardell with a branch road, parish of Lismore, county of Rous.

LAND for the abovementioned road having been resumed under the 42nd clause of Act 53 Victoria, No. 21, by notice in the *Government Gazette* of 18th November, 1892, folio 9171, it is hereby intimated that a certain area specified in Schedule below has been resumed for that road from the undermentioned conditional purchase.

A. J. STOPPS.

No. of C.P.	Cat. No. of Plan.	Parish.		Name of Conditional Purchaser.	Original Area of Portion.	Area Resumed for Road.	Difference between area of Reserved Road and Resumed Land.	Present Area of Portion.
		No.	Name.					
74-3,662	R. 948-1,759 ...	94 ...	Lismore .....	J. T. McIlfratrick .....	a. r. p. 49 0 0	a. r. p. 4 2 10	a. r. p. 1 2 0	a. r. p. 47 2 0

In lieu of a reserved road and part of a confirmed road, area of portion decreased by 1 acre 2 roods.

The present holder of conditional purchase 74-3,662 may be refunded the deposit on  $1\frac{1}{2}$  acre resumed for road purposes.—C.C., 9/1/93. W.H.C. (for Under Secretary), 10/1/93. Approved.—H.C., 12/1/93. Applicant with refund order, 7s. 6d. Agent and Treasury informed.—C.C., 10/2/93.

No. 72.

Mr. J. T. McIlfratrick to T. T. Ewing, Esq., M.P.

Sir,

Wilson's Ridges, 1 January, 1893.

I am in receipt of your communication of 24th ultimo with reference to plan. I beg to draw your attention to the gross misrepresentation of the road in question, as the plan does not show that part of the road leading direct to the house of the owner of portion No. 81 through portion No. 51, leaving portion No. 51 blank, as if owner of portion No. 81 has no access to main road, which, if you refer to the original map, you will at once discover the error, as the road passes right through No. 51 up to the owner of No. 81 boundary, and within 3 chains of his house, giving him full access to the main road; also the Progress Association has made application for the improvement of this road connecting portion No. 81 and all other farms in the neighbourhood; and a deviation has been recently surveyed as shown in diagram, and if you refer to plan it does not show the east boundary of No. 81 where the road connects. This, I believe, has caused the whole trouble.

I do not crave for any favour, but I do sincerely ask for justice; and if you and Mr. Perry will assist me in bringing the matter before the Local Land Board for each to prove our claims, I will be ever grateful to you.

I remain, &amp;c.,

JAMES T. McILFRATRICK.

No. 73.

Petition from the Residents in the neighbourhood of Wilson's Ridges.

To the Honorable the Minister for Lands, Department of Lands, Sydney,—

The Petition of the undersigned residents in the neighbourhood of Wilson's Ridges, in the parish of Lismore, county of Rous,—

Humbly sheweth:—

1. That the portion of road resumed, viz., that portion running from the original Lismore-Gundurimba-Wardell Road in a southerly direction across Mr. James T. McIlfratrick's conditional purchase No. 94 to the other proposed deviation, viz., that part which was granted to him on the 12th November, 1884, and 16th September is absolutely unnecessary and unrequired.

2. That the road running past the house of owner of portion No. 81, on the east side, provides the most ample and complete communication with the existing road for the occupant of Conditional Purchase No. 81 and the occupants of all other properties in the neighbourhood, as we your Petitioners resident in the locality well know.

3. That if the branch road already gazetted or resumed be opened, it will be altogether useless and will inflict the greatest injury and injustice on Mr. McIlfratrick, whose water frontage will be completely cut off and his conditional purchase rendered valueless.

4. That the report of the roads officer could only be the result of misrepresentation, as the existing road is the most suitable and convenient for the general public and we the undersigned residents, who strongly sympathise with Mr. McIlpatrick in the loss that he must sustain if the branch road referred to be opened.

And your Petitioners humbly pray that you will be pleased to order the question of the resumption of the branch road referred to to the Land Court at its first sittings to be holden in Lismore, in order that evidence may be properly taken as to whether the road is required and should be resumed.

And your Petitioners, as in duty bound, will ever pray.

Name.	Address.	Occupation.

Presented by T. T. Ewing and J. Perry, Ms.P.

#### No. 74.

Mr. J. T. McIlpatrick to The Under Secretary for Lands.

Sir,

Lismore, 29 September, 1893.

Will you please be good enough to inform me at your earliest convenience in what position my matter concerning the road running through my property, Wilson's Ridges, is, and if it comes on for hearing at the ensuing sittings of the Local Land Court; also, if the Board have the right of taking evidence as to whether the road is required in the public interest.

I have, &c.,  
JAMES McILPATRICK.

The Works Department is still considering claims made for compensation in connection with the road in question, and the case has not been referred to the Land Board for appraisement of value of the several areas resumed for the road. Mr. James McIlpatrick may be so informed.—A. J. STORRS, 12/10/93. Inform.—F.H.W., 14/10/93. James McIlpatrick informed.—H.L.T., 16/10/93.

#### No. 75.

The Under Secretary for Lands to Mr. J. T. McIlpatrick.

Sir,

Department of Lands, Sydney, 16 October, 1893.

In reply to your letter of the 27th ultimo, I have the honor to inform you that the Department of Public Works is still considering claims made for compensation in connection with a road at Wilson's Ridges.

I may add that the case has not been referred to the Local Land Board for appraisement of value of the several areas resumed for the road.

I have, &c.,  
WM. HOUSTON,  
Under Secretary  
(per F.H.W.).

#### No. 76.

The Manager, Australian Joint Stock Bank (Limited), Byron Bay, to The Secretary for Lands.

Sir,

The Australian Joint Stock Bank (Ltd.), Byron Bay, 26 October, 1893.

Some time back, 4 acres 3 roods of R. Marshall's (now Australian Joint Stock Bank, Ltd.) conditional purchase, No. 73-7,962, of 100 acres, parish of Lismore, county of Rous, were resumed for road purposes.

Mr. Marshall claimed as compensation £300, but the Government would only allow him £100, which he refused, and since then the matter has been allowed to stand over.

I would, therefore, respectfully request if any decision or arrangement has been come to, and if not, would you cause the necessary steps to be taken to have the matter adjusted as quickly as can conveniently be done.

I have, &c.,  
P. FRASER.

It is recommended that the writer be informed that the matter of compensation with regard to road referred to in his letter is being dealt with by the Works Department, and that any application with regard to such compensation should be addressed to the Under Secretary for Public Works.—A. J. STORRS, 20/11/93. Yes.—F.H.W. (for Under Secretary), 20/11/93. Informed.—H.L.T., 22/11/93.

31

No. 77.

The Under Secretary for Lands to The Manager, Australian Joint Stock Bank  
(Limited), Byron Bay.

Sir,

Department of Lands, Sydney, 22 November, 1893.

With reference to your letter of the 26th ultimo, respecting the resumption of 4 acres 3 roods of R. Marshall's (now A.J.S. Bank's) conditional purchase 73-796 of 100 acres, parish of Lismore, county of Rous, for road purposes, I have the honor to inform you that the matter of compensation is being dealt with by the Works Department, and that any application with regard to such compensation should be addressed to the Under Secretary for Public Works.

I have, &amp;c.,

WM. HOUSTON,  
Under Secretary  
(*per* F.H.W.).

No. 78.

Mr. J. T. McIlpatrick to The Under Secretary for Lands.

Sir,

Wilson's Ridges, 19 March, 1894.

I am sorry that I am under the necessity of drawing your attention to my case, *re* unnecessary branch road through portion No. 94, parish of Lismore.

In your last communication it was stated that it was under consideration in the Works Department; but so far as I am aware the Works Department has never moved further in the matter, thereby causing injury to me.

Trusting, sir, you will cause immediate action to be taken in the matter; but at the same time, I still most respectfully but most strenuously resist this unnecessary branch road.

I am, &amp;c.,

JAMES T. McILPATRICK.

It is recommended that the writer be informed that the branch road referred to by him is the originally reserved road which was provided for access to portion 81, and that at one time it was intended to cancel a part of it on account of a proposed deviation of the main road; but as the Works Department decided to form such main road in a position further to the south, it was found necessary to re-open the reserved road so as to preserve access to it, as such could not be closed unless with the consent of the owner of portion 81 (who, however, would not allow such to be done) as it was specially provided for access to his land.—A. J. STORRS, 9/4/94.

May be informed as suggested.—F.H.W. (for Under Secretary), 10/4/94. Approved.—H.C., 11/4/94. James T. McIlpatrick informed—H.L.T., 12/4/94.

No. 79.

The Under Secretary for Lands to Mr. J. T. McIlpatrick.

Sir,

Department of Lands, Sydney, 2 April, 1894.

I have the honor to acknowledge receipt of your letter of the 19th ultimo, with respect to the unnecessary branch road through portion No. 94, parish of Lismore, and to inform you that your letter will receive immediate attention.

I am to add that a further communication will be made to you when a decision in this case has been given.

I have, &amp;c.,

WM. HOUSTON,  
Under Secretary  
(*per* F.H.W.).

No. 80.

The Under Secretary for Lands to Mr. J. T. McIlpatrick.

Sir,

Department of Lands, 12 April, 1894.

With reference to your letter of the 19th ultimo, respecting an alleged unnecessary branch road through portion No. 94, parish of Lismore, I am directed by the Secretary for Lands to inform you that the road in question is the originally reserved road which was provided for access to portion No. 81, and that at one time it was intended to cancel a part of it on account of a proposed deviation of the main road; but as the Department of Public Works decided to form such main road in a position further to the south, it was found necessary to re-open the reserved road so as to preserve access to it, as such could not be closed unless with the consent of the owner of portion 81, who, however, would not allow such to be done, as it was specially provided for access to his land.

I have, &amp;c.,

WM. HOUSTON,  
Under Secretary  
(*per* F.H.W.).

No. 81.

Mr. J. T. McIlpatrick to B. B. Nicoll, Esq., M.P.

Dear Sir,

Lismore, 22 May, 1894.

When you were here the other day you asked me, as you were then hurrying to get away, to write you further with reference to the matter of my road. I have had a few letters from the Department lately, but each one is so conflicting with the other that it is a puzzle to understand them.

The facts are simply these—In 1884 they resumed a road through my land, giving me the branch road in question in lieu of compensation. This was three years afterwards. The then Road Superintendent (Mr. Williamson), made an agreement with me to give me the then existing road (*viz.* the reserved

reserved and confirmed road of 1884), the same deviation passing through the prohibited area, within 200 yards of my house, and this, with the greater part of my water frontage, I sacrificed in the interests of the public.

The road superintendent made and formed the road under these conditions, no claim having been raised till after the public had been for two years using the deviation made by Mr. Williamson. If you call at the office (Lands) you will ascertain the whole facts of the case from the correspondence, petitions, &c., and I trust you will be good enough to give it your earliest and best attention, as I am being put to a lot of trouble, and will, if this road is allowed, suffer a grave injustice. I treated the Department well, and for the sake of one or two people they should not allow my interests to suffer. If they pursue the course of taking the road the selection is valueless to me. I require no compensation but to have the road closed, or rather, not interfered with. You will see by the petition so largely signed, that the whole of the residents of the locality back up my request, and I sincerely trust you will block the whole concern, which can be done if the Department only were really aware of the true position of how the thing stands.

I cannot consent to compensation, for without this road the land is useless to me, so kindly take an hour and look the matter up thoroughly, and I shall not forget your kindness in another way.

Yours very truly,  
JAMES McILPATRICK.

The question that in the public interest the road is required is absurd (see the petitions voluntarily carried around by Loadsman and others for signature). Littlechild has all the best means of getting out by the old roads.

In a letter from the Department they said the road could not be closed without the consent of owner of portion 81 (Littlechild); but why should I seek his consent? Surely the whole public and my interests are to be considered as against this one man and one or two of his relatives.—J. McL.

Presented by B. B. Nicoll, M.P.

This man, McIlpatrick, seems to have been unfairly treated.—B.B.N. Acknowledged, 27/6/94.

#### No. 82.

T. T. Ewing, Esq., M.P., to The Under Secretary for Lands.

Sir,

Legislative Assembly, 20 November, 1894.

Can I kindly have a statement of this case (Mr. Stopps will know it, parish of Lismore, county Rous, Lismore Land District)? I believe the case was dealt with by the Roads and Lands and Land Board.

Can a full statement kindly be sent to me?

Yours faithfully,  
THOS. EWING.

[Enclosure.]

To T. T. Ewing, Esq., M.P.,—

Sir,

Wilson's Ridges, 17 November, 1894.

I am sorry to trouble you again with my case, viz., the branch road through my place, No. 94, parish of Lismore, extending from the Lismore-Rous Road to south of portion No. 81, still remains with me a disputed matter. It has been stated to you on different occasions that this road is quite unnecessary, and is very detrimental to me, thereby causing me to leaving the place and find other employment, causing the place to fall into neglect.

I am anxious that this matter be put to right as soon as possible, as I would like to put the place in order now when the season will permit, otherwise if this road is not cancelled it is useless to spend any more labour on the place.

Trusting, sir, you will see to this matter for me, as on my part it is very important.

Yours, &c.,  
JAMES T. McILPATRICK.

#### No. 83.

##### Office Memorandum.

Road through Mr. McIlpatrick's land, portion 94, parish Lismore, county Rous.

WHEN Mr. McIlpatrick's land was measured (about year 1874) a road was reserved through it to give necessary access to a previously surveyed portion owned by Mr. Littlechild; subsequently the Works Department proposed a deviation of the main road, which rendered unnecessary part of the access road; but afterwards that Department decided that the main road should be located in a slightly different position, which necessitated the reopening of part of the originally reserved road in order to preserve Mr. Littlechild \* \* \* has always protested against the road being closed, and the Crown could not, therefore, agree to such being done, as the access was specially provided and reserved when Mr. McIlpatrick's land was surveyed.

It is recommended that Mr. Ewing, M.P., be informed as above.

W. WINDER, 10/12/94.

Inform of facts.—H. CURRY, Assistant Under Secretary, 14/12/94.  
informed, 19/12/94.

T. T. Ewing, M.P.,

#### No. 84.

The Under Secretary for Lands to T. T. Ewing, Esq., M.P.

Sir,

Department of Lands, Sydney, 19 December, 1894.

In reply to your letter of the 26th ultimo, I have the honor to inform you that when Mr. J. T. McIlpatrick's land was measured (about the year 1874) a road was reserved through it to give necessary access to a previously surveyed portion owned by Mr. Littlechild; subsequently the Department of Public Works proposed a deviation of the main road which rendered unnecessary part of the access road, but afterwards

afterwards that Department decided that the main road should be located in a slightly different position, which necessitated the reopening of part of the originally reserved road in order to preserve Mr. Littlechild's right of access, which right he refused to forego. Mr. Littlechild has always protested against the road being closed, and the Crown could not, therefore, agree to such being done, as the access was specially provided and reserved when Mr. McIlpatrick's land was surveyed.

I have, &c.,

F. H. WILSON,  
Acting Under Secretary.

No. 85.

Mr. J. T. McIlpatrick to The Under Secretary for Lands.

Hon. Sir,

Wilson's Ridges, 8 June, 1895.

I have the honor of communicating with you on an affair of mine relating to an unjust and unnecessary road through my conditional purchase No. 94, parish of Lismore.

The unjust and unnecessary road referred to has been opened by the late Minister without considering my objections, as well as a petition presented by the inhabitants, they being old residents of the place. I have reason to believe this has been done through influence and misrepresentation, misleading the Department, and causing a miscarriage of justice. Through this action of the Department it made my place useless, instead of being a source of living it became a yearly expense, placing me in this position, that I must surrender the place if there is no redress.

There was an alteration of the road through my place in 1887 made by agreement with Mr. Williamson, and reported on fully by that gentleman, he being Road Superintendent here at that time, and approved of by the authorities, a copy of which can be seen at the Road Office, Lismore. I have repeatedly tried to have this report brought forward that is now lying dormant, but only received indifference for my pains.

The alteration before referred to was made and carried out by Mr. Williamson, and all things considered satisfactory until some years afterwards. This was after Mr. Williamson had left the district; through the acumen of some uninterested persons this unjust and unnecessary road was first discovered and brought in.

This unjust and unnecessary road, termed the branch road, originally formed part of the main road passing through my place, but became alienated to me in 1884 by virtue of compensation for other land taken from me, therefore it ceased to be any longer a road and ceased to be any reserve held by the Crown, forming part of my conditional purchase from that date. Reference can be seen in the *Government Gazette*, 15th September and 12th November, 1884.

The foregoing matters connected with the affair I could better bring before your knowledge if you, honorable sir, would kindly grant me a personal interview, which I most respectfully request.

I have, &c.,

JAMES T. McILPATRICK.

Road through Mr. McIlpatrick's land, portion 91, parish of Lismore, county of Rous.—Mr. McIlpatrick desires a personal interview with the Minister to protest against the action of the Department in reference to a road established within his land. The circumstances of the case are set forth fully in Minute of 10th December, 1894, on paper 93 enclosed, to which attention is invited. As there are no grounds upon which departure from the decision of the Department already conveyed to Mr. McIlpatrick can be recommended; apparently the interview desired is unnecessary.—W. WINDER, 24th June, 1895.

F. H. WILSON, Chief Clerk, 25/6/95. W.H., 26/6/95. Approved.—J.H.C., 27/6/95. Jas. T. McIlpatrick informed, 2/7/95.

No. 86.

The Under Secretary for Lands to Mr. J. T. McIlpatrick.

Sir,

Department of Lands, Sydney, 2 July, 1895.

With reference to your letter of the 8th ultimo, requesting that you may be granted an interview with the Minister for Lands respecting a road through your portion No. 94, parish of Lismore, county of Rous, I am directed to inform you that as there are no grounds upon which a departure from the decision of the Department already conveyed to you can be made, the interview desired is unnecessary.

I have, &c.,

WM. HOUSTON,  
Under Secretary  
(per F.H.W.).

No. 87.

Mr. J. T. McIlpatrick to The Chairman, Local Land Board, Grafton.

Sir,

Wilson's Ridges, 20 July, 1895.

I have the honor of drawing your attention to an affair of mine relating to an unnecessary road through my conditional purchase No. 94, parish of Lismore, county of Rous.

The unnecessary road referred to was opened in Mr. Copeland's Ministry without considering my objections, as well as a petition presented to the inhabitants, they being old residents of the place. I have reason to believe this has been done, through influence and misrepresentation, misleading the Department, and thereby causing a miscarriage of justice. By this action of the Department it broke faith with me, and severed my place from having any access to water, making it useless; instead of being a source of living it became a yearly expense.

There

There was an alteration of the road through my place made in 1887, as referred to in my second objection. This was made by Mr. Williamson, by an agreement with me, and reported on fully by that gentleman, he being Road Superintendent here at that time, and approved by the authorities. A copy of this report can be seen at the Roads office, Lismore. I have repeatedly tried to have this report brought forward that is now lying dormant, but only received indifference for my pains.

The alteration before referred to, was made and carried out by Mr. Williamson, and all things considered satisfactory until some years afterwards; this was after Mr. Williamson had left the district. Through the acumen of some person not having an interest in the place, this unnecessary road was first discovered and then brought in.

This unnecessary road objected to, termed the branch road, originally formed part of the reserved road passing through my place, but became alienated to me in 1884, by virtue of compensation for other land taken from me, therefore it ceased to be a road, and ceased to be any reserve held by the Crown, and formed part of my conditional purchase from that date. It can be seen by referring to the *Government Gazette* of 29th February, folio 1465; 15th September, folio 6214; 12th November, folio 7589, 1884.

I have been continuously urging for the consideration of my objections with the Department, but only received many erroneous replies. I herewith transmit a copy of my objections, and a copy of the petitions of the residents for your information.

I therefore respectfully appeal to you, sir, to cause action to be taken in the matter, to have this brought forward for inquiry, so that all things connected with this affair can be reduced to evidence.

I have, &c.,

JAMES T. McILFATRICK.

R. 4,061; A. 1,603, Road Survey, portion 94, parish Lismore, 74-3,662. Submitted. Nothing has been received from head office *re* this matter.—H.P., 26/7/95. The Chairman. Sec page 6.—A. J. PARK, Chairman, Local Land Board, Grafton, 31/7/95.

[Enclosure.]

To the Honorable the Minister for Lands,—

We, the undersigned, residents in the neighbourhood, and persons acquainted with the proposed resumption of land for a road purpose, in the conditional purchase No. 94, of J. T. McIlpatrick, parish of Lismore, hereby declare our conscientious belief that the proposed resumption, to which he, J. T. McIlpatrick, objects, namely, the branch from the original Lismore-Gundurimba-Wardell Road to the proposed deviation, is an unnecessary encroachment upon and injury to his property, and one which should not be granted, especially as Mr. McIlpatrick has already, in the interests of the public, permitted the resumption of a valuable piece of land, for a like purpose, between the water and the rest of his conditional purchase, and we believe that no person will be injured by its not being granted.

We further think that any proposal to resume the portion now objected to could only have resulted from gross misrepresentation, or a misunderstanding on part of the Department.

We have, &c.,

Thomas Loadsman .....	Farmer.
Luke Lofts, Chilcott's Grass .....	"
Soloman Thomas Payne .....	"

[Here follow sixteen other signatures.]

Submitted to the Under Secretary for Lands, Sydney, for directions.—A. J. PARK, Chairman, Local Land Board, Grafton, 31/7/98. The Under Secretary for Lands, Sydney.

No. 88.

Mr. J. T. McIlpatrick to The Secretary for Lands.

Hon. Sir,

Wilson's Ridges, 25 April, 1896.

I have the honor of urgently drawing your attention to the unsatisfactory way the Department is dealing with my affair with regard to the unnecessary road objected to through my conditional purchase No. 94, parish of Lismore, county Rous.

In 1887, when the resident engineer, Mr. Williamson, obtained my consent to alter the road passing through my conditional purchase, as without my consent the resumption could not have been made, my consent was obtained on the following grounds:—

1st. I was not to be put to any loss or inconvenience.

2nd. The then existing road was to be in lieu of the altered one, as two roads were not to exist within my conditional purchase.

This was duly reported upon by Mr. Williamson, and sanctioned by the authorities. This report and its sanction is still in existence, consequently there was little for the Department to do except to adjust the measure and determine the two areas.

Through the way the Department treated this matter I have been deprived of the use of my place for a period of nine years.

The road objected to was not thought of until two years after the deviation was made by Mr. Williamson; then, after Mr. Williamson had left the district, through influence, it was brought in falsified, misrepresented, and interwoven with the deviation made by Mr. Williamson in 1887, and with other deviations made afterwards. Reference to the *Government Gazette* will prove that it formed part of my conditional purchase, and had no connection with any road whatever.

Portion No. 51 is already well provided with road accommodation, by a road made by the Works Department; consequently, any attempt to establish another road to intersect the same portion, running parallel with the one constructed by the Works Department, is unjust, unreasonable, and is therefore unnecessary.

As this is a matter of serious importance to me, as I am deprived from making any use of my place, I would urgently, but most respectfully, request you, honorable sir, to cause an inquiry into this matter, and I am confident you will find the road complained of is an unnecessary encroachment.

I have, &c.,

JAMES T. McILFATRICK.

Under Secretary  
(per F.H.W.).

No. 90.

Office Memorandum.

Objection by Mr. McIlpatrick to road through his portion 94, parish of Lismore, county of Rous. MR. McILPATRICK'S objections have been full considered. See papers 89 and 93, also Ministerial decision on paper 95 declining to alter previous decisions. Perhaps he might be informed that his objections, having received full consideration, it has been decided that previous decisions cannot be departed from, and the correspondence must now be considered as closed.

W. WINDER,  
30 May, 1896.

For approval.—F. H. WILSON, Chief Clerk, 1/6/96. Approved.—J.H.C., 2/3/96. J. T. McIlpatrick informed, 9/6/96.

No. 91.

The Under Secretary for Lands to Mr. J. T. McIlpatrick.

Sir, With reference to your letter of the 25th April last, respecting a road established through your land, I am directed by the Secretary for Lands to inform you that your objections, having received full consideration, it has been decided that previous decisions, which have already been conveyed to you, cannot be departed from, and that the correspondence must now be considered as closed.

I have, &c.,  
WM. HOUSTON,  
Under Secretary  
(per F.H.W.).

No. 92.

Mr. J. T. McIlpatrick to The Chairman, Land Board, Lismore.

Sir, I, James T. McIlpatrick, the owner of a conditional purchase, containing 49 acres, No. 94, parish of Lismore, district Lismore, which portion has become the subject of an alteration of an existing road, and the resumption of an unnecessary road, do hereby apply to the Board to deal with all matters arising with the alteration and the resumption of the roads, and the granting of compensation, at the next Board, or any other time the Board may conveniently appoint.

I have, &c.,  
JAMES T. McILPATRICK.

Received in open court, at Lismore, this day; now for registration and return.—A. J. PARK, Chairman, 7/12/96. Submitted as desired.—HERBERT PHILLIPS, 9/12/96. Received.—11/12/96. See my memo. of this date attached—A. J. PARK, Chairman, 11/12/96. Acknowledged receipt.—HERBERT PHILLIPS, Clerk in charge, 14/12/96. James McIlpatrick.—14/12/96. Clerk in charge; also this date on L.B.D. 96-7,320.—A. J. PARK, Chairman, 30/12/96. Received in District Survey Office, Grafton.—31/12/96.

No. 93.

Office Memorandum.

Department of Lands, 11 December, 1896.  
A SIMILAR application was made some few months ago by S. E. Cheers, of Frederickton, which I think was sent on to the Under Secretary for some information as to the practice—no other case under Regulation 292 having at that time arisen in this Land Board District. What was done in the matter?

A. J. PARK,  
Chairman.

The case was referred to the Under Secretary for Lands as follows, and has not been returned:—L.B. 96/4,041, P. E. Cheers, Frederickton, 13/7/96, forwarding letters and tracing *re* compensation for road through portions 82 and 84, parish of North Bellinger. Under Secretary for Lands, 17/7/96.—HERBERT PHILLIPS, Clerk in charge, 11/12/96. The Chairman. Under Secretary for Lands asked to return above.—E.W., 12th December, 1896.

## No. 94.

The Acting Under Secretary for Lands to The Chairman, Local Land Board, Grafton.

Sir,

Department of Lands, Sydney, 23 December, 1896.

In reply to your memorandum of the 12th instant, I have the honor to inform you that the land required for a road within Mr. P. E. Cheers's portions Nos. 82 and 84, parish of North Bellingen, county of Raleigh, was not resumed under the 42nd section of the Crown Lands Act of 1889; the road being proclaimed under the Act 4 William 4 No. 11, appraisement by the Local Land Board of the value of the land contained in the road so proclaimed was not required, and Mr. Cheers was so informed on the 13th August last.

I have, &c.,

H. CURRY,  
Acting Under Secretary  
(per F.H.W.).

Submitted.—HERBERT PHILLIPS, Clerk in charge, 29/12/96. Ascertain whether land has been resumed under Act 4, roads or otherwise.—A. J. PARK, Chairman, 30/12/96. Clerk in charge. Would the District Surveyor be so good as to state whether land has been resumed from McIlfatrick's conditional purchase for road purposes, and if so whether same is under 4 William 4 No. 11, also date of resumption?—HERBERT PHILLIPS, (pro Chairman), 31/12/96. The District Surveyor. Received in District Survey Office, Grafton, 31/12/96. By *Gazette* notice of 18th November, 1892, page 9171, a road 1 chain wide was resumed from J. T. McIlfatrick's conditional purchase 74/3,662, portion 94, parish Lismore, county Rous, in lieu of a reserved road and part of a confirmed road. The area of the portion is reduced by 1 acre 2 roods.—H. E. WILKINSON (for District Surveyor), 6th January, 1896. The Chairman.

## No. 95.

## Office Memorandum.

Re resumption for road purposes from J. T. McIlfatrick's conditional purchase 74-3,662, Lismore.

7 January, 1897.

By *Government Gazette* of the 18th November, 1892, page 9171, 4 acres 2 roods 10 perches were resumed, in terms of section 42, Act 53 Victoria No. 21, from J. T. McIlfatrick's portion 94, parish of Lismore, the area of the portion being decreased by 1 acre 2 roods. As McIlfatrick has now lodged an application for appraisement of the value of the land so resumed, in terms of Regulation 292, will the Under Secretary be so good as to cause the papers in the matter to be referred to this office at his early convenience, so that steps to comply with McIlfatrick's application may be taken?

A. J. PARK,  
Chairman.

B.C.L.B.O., Grafton. The Under Secretary for Lands. Exhibit B, case 490, vol. 6, folio 109.—A. J. PARK, Chairman, Court-house, Lismore, 6/7/97.

## No. 95½.

## Office Memorandum.

Resumption of land for road through J. T. McIlfatrick's conditional purchase, portion 94, parish of Lismore, county of Rous.

3 February, 1897.

THE papers in this matter are forwarded to the Chairman as requested, in view of Mr. McIlfatrick's application under regulation 292, for appraisement by the Land Board.

In forwarding the papers attention is invited to the accompanying statement of the action in the case, taken from the papers.

It will be seen, therefrom, that as regards the road first established, the only land-holder who received money compensation was Mr. McIlfatrick, who received £75 for fencing, from Works Department.

As regards the altered road, the holder of portion 93—Mr. R. Marshall—has been paid £150 as compensation by the Works Department after a considerable amount of negotiation. The holders of portions 69 and 143 neither claimed, nor appear entitled to, money compensation; and Mr. McIlfatrick, holder of portion 94, has now applied for the Board's appraisement in his case.

The actual area by which his holding is reduced is 1½ acre (*vide* paper 61); it was held that as the holder of portion 81 was not willing to forego the access to the through road, which had been provided when Mr. McIlfatrick's portion 94 was measured, the Crown had no alternative but to re-open the branch road, on the position of the through road being altered.

A. J. STOPPS  
(for Under Secretary).

The Chairman, Local Land Board, Grafton.

Exhibit C., case 490, vol. 6, folio 105; papers L.B.D., 97-3,827.—A. J. PARK, Chairman. Court-house, Lismore, 6/7/97. Submitted.—HERBERT PHILLIPS, Clerk in charge, 8/2/97. The Chairman. Seen. May be set down for hearing after usual action in allied cases.—A. J. PARK, Chairman, 19/2/97. Clerk in charge. Referred to the district surveyor for tracing for conditional purchase inspector.—HERBERT PHILLIPS (pro Chairman), 20/2/97. District Surveyor's Office, Grafton, 20/2/97. Mr. Oakes, for tracing.—H.E.W., 20/2/97. Tracing herewith.—H. E. WILKINSON (for District Surveyor), 1/3/97. Refer to conditional purchase inspector for report for appraisement in both roads.—HERBERT PHILLIPS, Clerk in charge, 2/3/97. Referred to Inspector W. P. Pope for report.—H.P., 8/3/97-59. For Board when report received.

[Enclosure.]

## [Enclosure.]

## Statement of Action from the Papers.

In consequence of a petition, a road, as shown in red on tracing marked 81-1,014/4, was opened 22/5/85, under Act 4 William IV, No. 11, and resumed under 27th Section Land Act Further Amendment Act of 1880, through portions 143 (Slade's conditional purchase), 69, and 61 (Loft's conditional purchases), and 94 (McIlpatrick's conditional purchase), and the parts of old road, shown in blue, were thereby superseded, Mr. McIlpatrick also being paid £75 by the Works Department for fencing.

The Works Department, however, appeared to have decided to form the road by the route shown in broken black lines on the tracing, and continuing easterly along the closed part, between portions 69 and 143, and westerly through R. Marshall's conditional purchase, portion 93, as shown on helio marked 1881-1,014/59. This was accordingly surveyed, when J. T. McIlpatrick set up a strong opposition to the re-opening of the (branch) road giving access south from portion 81, the holder of which (H. Littlechild), on the other hand, desired that it should be re-opened, to place him in his former position as to access to the through road, and it was held he was thereto entitled.

The altered road was resumed 18th November, 1892, and was declared to be a road for public traffic, 13th December, 1892. The resumption affected portions 90, 94, 69, and 143.

R. Marshall, conditional purchase holder of portion 93, asked for consideration on account of the resumption through his land. This was referred to Works Department, and, as a satisfactory arrangement could not be arrived at, the papers were sent again to Lands, suggesting that the matter might be decided by the Local Land Board, it being intended that Mr. McIlpatrick's objection might be similarly dealt with afterwards.

Mr. Stopps pointed out that the law only empowers the Land Boards to appraise land values, whereas the Works Department had offered Mr. Marshall compensation beyond this, and that even if the Board assessed compensation other than land value, it would have no binding effect.

The Works Department recognised this, but still desired that the Board might take evidence, and express an opinion as to what would be fair compensation to Mr. Marshall; but it was decided that the Board should only be placed in the position of an arbitrator, with the concurrence of both sides. This was not availed of by the Works Department, and, ultimately, that Department made an offer of £150, which was accepted by Mr. Marshall in full satisfaction.

The papers do not show that Mr. McIlpatrick's objections were dealt with by Works Department; but he was repeatedly informed by Lands Department that the re-opening of this branch road, to which he objected, was necessary to preserve the access from portion 81 to the through road, which access was provided when portion 94 (McIlpatrick's) was surveyed, and to which the owner of portion 81 is not willing to forego his right.

It now appears that Mr. McIlpatrick has applied under Regulation 292, that an appraisalment of the land resumed through his portion 94 may be made by the Local Land Board.

J. L.,  
2/2/97.

## No. 96.

The Chairman, Local Land Board, Grafton, to Mr. Inspector W. P. Pope.

Local Land Board District, Grafton, 8 March, 1897.

Mr. Inspector W. P. Pope is instructed to visit and report on the roads within the conditional purchase specified hereunder, as shown by blue and red tint on tracing for appraisalment purposes, No. 743,662, under section 13, applied for by James T. McIlpatrick. Portion No. 94, area 47½ acres, parish of Lismore, county of Rous, land district of Lismore.

Area of portion reduced by 1½ acre.

Date of resumption 18th November, 1892.

HERBERT PHILLIPS  
(for Chairman).

## No. 97.

Mr. J. T. McIlpatrick to The Chairman, Land Board, Grafton.

Sir,

Wilson's Ridges, 12 April, 1897.

With reference to the application made by me at the Land Board, held at Lismore on 7th December, 1896, asking the Board to deal with the matter, as stated, viz., the alteration of an existing road and the resumption of an unnecessary road, which is two separate and distinct roads within the boundary of portion No. 94, containing 49 acres, parish of Lismore, county Rous.

You will do me a kind favour by informing me the reason that it did not come before the last Board held at Lismore, also what proceedings has been taken in the matter.

I have, &c.,

JAMES T. MCILPATRICK,  
Via Lismore.

Submitted.—HERBERT PHILLIPS, Clerk in charge, 20/4/97. Inform that the case was not ready for Board action at the next sitting, but that it will, in all probability, be set down for hearing at the ensuing Board meeting.—A. J. PARK, Chairman, 21/4/97. Clerk in charge. James T. McIlpatrick, 20/4/97. For Board,—If not ready by next sitting remind inspector.—HERBERT PHILLIPS, Clerk in charge, 21/4/97. Inspector W. P. Pope, 31/5/97. For Board,—As above.—HERBERT PHILLIPS, Clerk in charge, 31/5/97. Court at Lismore, 5/7/97. Registered notice, 18/6/97, to James T. McIlpatrick.

## No. 99.

Mr. Inspector W. P. Pope to The Chairman, Local Land Board, Grafton.

Conditional-Purchase Inspector W. P. Pope to the Chairman, Local Land Board, Grafton, reporting for appraisal purposes, upon the road within conditional purchase 74-3,662, portion 94, of 47½ acres, parish of Lismore, county Rous.

Sir,

Burringbar, 4 June, 1897.

In accordance with instructions, dated 8th March, No. 97-59, I have the honor to report that I personally inspected the above-described road on the 9th May, 1897.

The area tinted blue on tracing embraces land of inferior quality unimproved, chiefly suitable for grazing.

The resumed road tinted red running south from the blue tint is unimproved land of fair quality, covered with light brush or scrub.

The resumed road tinted red, and running approximately parallel to Tucki Creek, is of inferior quality, chiefly suitable for grazing; it has been partially improved by ringbarking. It has been fenced on both sides, with the exception of 6 chains on south side at the eastern end.

The northern portion of the conditional purchase is cut off from water by the resumed road.

The road in question forms part of the main Lismore-Rous road, which is of distinct benefit to the owner of the land.

I have, &c.,

W. P. POPE,  
Conditional Purchase Inspector.

Exhibit G, case 490, vol. 6, fol. 105, papers, L.B.D. 97-3,827.—A. J. PARK, Chairman, Court-house, Lismore, 6/7/97.

## Caption to Deposition of Witnesses.

New South Wales, }  
To wit. }

THE examination of James Thomas McIlfatrick, of Chilcott's Grass, near Lismore, in the Colony of New South Wales, labourer; Francis Lisson Murray, of Lismore, resident engineer; John Gwynne, of Lismore, farmer; Luke Loftis, of Chilcott's Plain, farmer; and Wilfred Parsley Pope, Inspector of Conditional Purchases and Forester, Burringbar, in the said Colony. Whereas by an application dated 7 December, 1896, it became necessary to appraise the value of the land resumed for road purposes from C.P. 74-3,662 Lismore, J. T. McIlfatrick, and it has been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

Number of pages of evidence, 15.

„ „ Exhibits A to G.

For Exhibit E see Exhibit E with L.B. 98-2,910.

THIS deponent *James Thomas McIlfatrick*, of Chilcott's Grass, near Lismore, labourer, being duly sworn by making affirmation, per section 10 Common Law Procedure Act of 1857, 22 Vic. No. 7, maketh oath and saith as follows—(called by *Mr. Sullivan*, solicitor, and examined by him): I am the owner of portion No. 94, parish of Lismore, county of Rous; previous to subject resumption I had access to water in Tucki Tucki Creek, along the southern boundary of my portion 94; prior to the resumption I could not make my living out of the land by keeping cattle because my possession of the land was disturbed by constant deviations of the road; I considered the subject portion was a valuable property prior to the subject resumption; land varies so in value that I could not say the value of the land before resumption; I consider that portion 94 was worth £5 per acre, taken as a whole, before resumption; the subject road has shut me off from the water in the creek; portion 94 is valueless to me now; portion 94 is fit for grazing and cultivation as well; I cannot value the land, owing to the detriment of the portion by being cut off from water; the actual value of the land resumed may be small, but the damage done to portion 94 by separation from the water is very great; no compensation for the land resumed has been awarded to me; I received £75 as compensation from the Works Department for fencing; I fenced the subject resumed road with the £75; I originally had that fenced on the original Lismore-Wardell road, through my portion, many years before that £75 was given to me; I only removed one side of the fencing from the older road; the remainder of the fencing on the present road was done with pretty well all new stuff, and the fencing on the new road is not quite complete; the north and south road passing through portion 94 has not been fenced, as I received no money to fence that road.

Mr. Inspector Pope has no questions.

*By Chairman*: My market-town is Lismore, access to which is given by the subject road; I could also go to Wardell if I wanted to; Tucki Tucki Creek is not navigable, not even for a punt; it is discontinued as a frontage above my portion; if it were not for this road, which is the main road, I should not be able to get out from my portion; the new road does a greater damage to the portion than the old road, by severing a larger portion of land from Tucki Tucki Creek; the subject portion 94 consists of scrub and forest; there is water on the portion north of the subject road, in a spring, but it goes dry in summer; it is close to the road side; that is all the water there is north of the subject road; I used to graze horses on the portion before subject resumption; the road was opened under an agreement between me and an officer of the Roads Department, and it was used and opened for traffic about three or four years before it was surveyed; I could not fence it until it was surveyed; by the time it was surveyed I had some of the fencing up; it is not completely fenced as the place was valueless to me owing to this resumption leaving it open; the piece that is left open is from Littlechild's, and I had no money given to me to fence that part of the road; if I did not fence the north and south road nothing could be kept in the place; if I did fence it no stock in the portion could get to water; the fence on the old road formed the south boundary of the paddock containing my original conditional purchase; I could not use the land between that fence and the subject resumption in conjunction with my original conditional purchase for grazing purposes, as the cattle could not have got to water to the creek on the north of my original conditional purchase on account of scrub; the land on Tucki Creek is good cultivation land the same as that on the creek on my original conditional purchase, and was similarly scrubbed; that on Tucki Creek I have felled, but not yet cultivated it; I have sown grass on it about four or five years ago; I cannot say how much fencing I have put on the resumed road; I have fencing on each side of the road; I have got no fencing on the north and south road; I am not using the original conditional purchase because of these roads; my house was burnt on it, and I built a new house between the subject road and Tucki Creek; I can only use my holding for the purpose of a residence, all owing to these roads; if it was not for these roads I could use my holding for the purpose of dairy-farm; I could work it as a dairy-farm by putting the cows through gates on the subject road so that they could graze on the remainder of the holding, if I were constantly there and had hands to do it, but I have only got myself.

Taken and sworn at Lismore, this }

6th day of July, 1897, before,— }

A. J. PARK, Chairman.  
S. GARRARD, Member.

JAMES T. McILFATRICK.

This

This deponent, *Francis Sisson Murray*, Resident Engineer for Roads, stationed at Lismore, being duly sworn, maketh oath and saith as follows:—

*By Mr. Sullivan*, solicitor: I read a report from press copy-book, folio 329, written by Mr. Williamson, Road Engineer, dated 20th September, 1886, the following passage occurs:—"Mr. McIlpatrick is willing to give possession on condition of receiving £75 for fencing. I would ask the Commissioner's sanction to my paying this out of the vote. The offer is fair, as there will be a mile of fencing, and the advantage offered by the deviation will be very great, the original road being an obstacle to any heavy traffic." I read also a report from another press copy-book, folio 299, written by E. M. Allman, Road Superintendent, dated 26th November, 1889, from which the following passage occurs:—"The deviation was made by Mr. Williamson some years ago, and McIlpatrick has been paid £75 for fencing by this Department, voucher 47; McIlpatrick says that in the first instance it was also arranged that he should get the reserved road shown in sienna in lieu of new line, but he has nothing to show in support of this in the way of writing; and it is unlikely would definitely promise anything of the kind, not having the power to do so." I think that between the word "unlikely" and "would" the name of Williamson has been omitted.

*By Chairman*: The deviation shown upon heliograph roads 1881  $\frac{121}{10}$  in red colour produced, is, I believe, the deviation referred to in the reports from which I have read extracts; £75 for a mile of fencing is a good price; but as I do not know how far the timber had to be drawn in this particular locality, I cannot say whether it was too much.

Mr. Inspector Pope has no questions.

Sworn by Francis Sisson Murray, at the Court, at Lismore, }  
this 7th day of July, 1897,— }

A. J. PARK, Chairman.  
S. GARRARD, Member.

F. S. MURRAY.

This deponent, *John Gwynne*, of Lismore, farmer, being duly sworn, maketh oath and saith as follows:—

*By Mr. Sullivan*, solicitor: I have a selection close to McIlpatrick's portion 94, parish of Lismore, and I know the nature and quality of the soil about there; portion 94 is suitable for dairying purposes; owing to the subject resumption Mr. McIlpatrick is shut out from water on that portion; it is not now practicable to work that portion as a dairy-farm owing to subject resumption; I know McIlpatrick's original conditional purchase portion No. 70, parish of Lismore; there is some water at the northern end of that portion; it is too far for cattle to water at the water at the north end of portion 70, and it is all a dense scrub about that creek at the present moment; McIlpatrick's house is built between the Tucki Tucki Creek and the resumption; gates through the fences of the resumed road were fenced would not permit the holding to be used as a dairy-farm, cattle want to go to water at their own time; to drive the cattle to water twice a day would add to the expense of working the farm; I consider the land with free access to water would be worth £5 per acre; its present value is no value because the place is all open, and we cannot keep the cattle on it, therefore it is no use for dairying; the north and south road is not fenced; if it were fenced portion 94 would be cut off from water altogether then, and its value diminished; I would give no price for it in its present state as I should have to stop there to get the cattle to water.

*To Chairman*: The Tucki Tucki Creek, the south boundary of portion 94, is a better watering-place for cattle than the creek on the north side of portion 70, because the latter is all standing scrub; the holding could be worked as a dairy-farm if the cattle were watered at the house on portion 94, and put through gates on to the road to the pasture; at some opening cattle would go to water in the morning; I have known this land all the time McIlpatrick has had it; I cannot say if he ever had any cattle on portion 70; he had a horse; the deviation coloured red on exhibit is not wholly fenced.

*To Mr. Pope*, Conditional Purchase Inspector: On portion 70 I cannot say how much cultivation there is, nor how much scrub; it would not cost much to make a small cutting through the scrub to let cattle to water; they cannot get through without for vines; I do not know if anyone ever offered to take the place as a tenant; the horses he had on the portion 70 I cannot say how they were watered; I cannot say if the spring near the resumption is always running.

Sworn by John Gwynne, at the Court-house at Lismore, }  
this 7th day of July, 1897,— }

A. J. PARK, Chairman.  
S. GARRARD, Member.

JOHN GWYNNE.

This deponent, *Luke Lofts*, of Chilcott's Plain, farmer, being duly sworn, maketh oath and saith as follows:—

*By Mr. Sullivan*, solicitor: I own some property on the other side of the creek to portion 94, parish of Lismore, being portions 61 and 69; I know the land of subject resumption through McIlpatrick's portion 94; the effect of the resumption is to take all the water frontage off his property; the strip of land left on the water is too small to graze cattle on; it is too far for cattle to travel for water to the north boundary of portion 70, if the place were worked as a dairy-farm; if gates were placed across the road it could be so used with a great deal of trouble incurred by driving the cattle to water; the land with free access to water is worth £4 per acre; it is worth now almost nothing as a dairy-farm; there is no other purposes to which the holding is suited except as a dairy-farm; the old road resumed is not wholly fenced; there is a break in it at the east end of about 5 or 6 chains.

*To Mr. Inspector Pope*: It is too far to drive cattle to water on the north of portion 70; from south boundary of land in portion 70 is 20 chains; I have not been at that water; cannot say if the cattle could get through the scrub; I have seen dairy cattle go into the scrub for shade; two-rail fence, finding all labour and materials, is worth 4s. per rod now, it was worth 4s. 6d.; I think 5s. per rod is too much to pay.

*To Mr. Garrard*: The cattle could not get to water if the scrub were cleared away from the creek on north of portion 70 because of the fence on the old road.

Sworn by Luke Lofts, at the Court-house, Lismore, }  
this 7th day of July, 1897,— }

A. J. PARK, Chairman.  
S. GARRARD, Member.

LUKE LOFTS.

This deponent, *Wilfred Parsley Pope*, of Burringbar, Inspector of Conditional Purchases and Forester, being duly sworn, maketh oath, and saith as follows:—Under instructions dated 8th March, 1897, I visited and inspected the subject resumed land in portion 94, county of Rous, parish of Lismore, on the 9th May, 1897; the area tinted blue on tracing (Exhibit F produced) embraces land of inferior quality unimproved, chiefly suitable for grazing; the resumed road tinted red on tracing (Exhibit F) running south from the blue tint is unimproved land of fair quality covered with light brush or scrub; the resumed road tinted red on tracing (Exhibit F) running approximately parallel to Tucki Creek is of inferior quality, chiefly suitable for grazing; it has been partially improved by ringbarking about 8 acres at a cost of 9d. per acre at present rates; it has been fenced on both sides, with the exception of 6 chains on south side at the eastern end; the northern portion of portion 94 is cut off from water on its south boundary by the resumed road; the road in question forms part of the main Lismore-Rous road, which is of distinct benefit to the owner of the land; it is a formed road at the present time; I know that the owner (McIlpatrick) of portion 94, also owns portion 70 to the north of it; the latter portion is watered by Tucki Tucki Creek, the same creek that forms the southern boundary of portion 94; the two portions could be used in conjunction as a dairy-farm if the roads were fenced off by a cutting being made to water on portion 70, if the cattle could not already be watered there; portion 94 is only grazing land; part of 70 could be used as cultivation, the remainder inferior grazing land; the spring, so far as I could see, has no practical value; I refer to the spring on the boundary of resumed land; £75 would be a large sum for fencing, per mile, at the present time; I saw the fencing on resumed road, part of it had been used before for fencing purposes; it was a very good fence, and worth 16s. per chain when I saw it; I know of no recent sales of land in the vicinity; I do not think that the transposition of the fenced barrier from the land coloured blue to the land coloured red renders the portion wholly valueless, as has been alleged on oath in this Court; the road-fencing necessitates an opening through the scrub on portion 70, to give cattle access to water on north side of portion 70; the land on portion 70 is accessible to the passage of cattle to water except a fringe of scrub on the creek at north boundary of about 9 or 10 chains in depth; that is the scrub which would have to have an opening made to admit cattle to water.

*Mr. Sullivan*, solicitor, has no questions.

THE examination of Francis Sisson Murray, of Lismore, in the Colony of New South Wales, Resident Engineer, Roads Branch of Public Works Department: Whereas by an application dated 7th December, 1896, it became necessary to appraise the value of the land resumed for road purposes from conditional purchase 74-3,662, Lismore, J. T. McIlfatrick, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

Number of pages of evidence, 1. (For previous evidence see L.B.D. 97-3,827 and L.B.D. 97-6,219.)  
Number of exhibit, A.

## [Enclosure.]

This deponent, *Francis Sisson Murray*, of Lismore, Resident Engineer, Roads Branch, Public Works Department, being duly sworn, maketh oath and saith as follows:—

Called and examined by *John Currie*, agent for J. T. McIlfatrick:—I have found no agreement made between any officer in the Roads Branch of the Public Works Department and J. T. McIlfatrick; I produce a press copy of a voucher in which the following is found:—“J. T. McIlfatrick, compensation for fencing and land resumed for road purposes through portion 94, parish of Lismore, county of Rous, as agreed between the Commissioner for Roads and J. T. McIlfatrick, the proprietor of the land, £75.” It bears no date.

To *Chairman*: From its position in the letter-book it would be, I think, before 31st January, 1887, and after 31st December, 1886; this transaction was before my time in the Roads Branch, and I cannot say if it was customary to have written agreements between Roads' officers and land owners; it is not customary now.

This deponent, *Francis Sisson Murray*, of Lismore, Resident Engineer, Roads Branch of Public Works Department, being duly sworn, maketh oath, and saith as follows:—

By *Chairman*: I produce the original report by Mr. Williamson, late Road Superintendent in this district, by which it is shown, in conjunction with a telegram, that the road coloured red through portion 94, shown on heliograph L.B.D. 97-710, Enclosure, Roads Branch, 1881 1,014-59, was resumed from portion 94, or to that effect, and that J. T. McIlfatrick, the owner of portion 94, received £75 as compensation; there is also a suggestion that he should receive the reserved road coloured blue, south-easterly from the north-west corner, also a short piece of road coloured red and marked branch road, extending southerly from the south-east extremity of the aforesaid blue road; there is nothing to show in those papers that those roads were ever granted to J. T. McIlfatrick, as it is a matter out of the jurisdiction of the Works Department.

*Mr. Currie*, agent for J. T. McIlfatrick, has no questions.

## No. 108.

Mr. J. T. McIlpatrick to The Chairman, Land Board, Grafton.

Sir,

Lismore, 19 March, 1898.

Please find enclosed statement by J. T. McIlpatrick as requested by you.

I am, &amp;c.,

JOHN CURRIE

(Agent for J. T. McIlpatrick).

For next Board at Lismore.—W. A. MACPHEE, Clerk in charge, 28/3/98. Court at Lismore, 18/6/98. Notice by post on, 27/5/98. To James Thomas McIlpatrick, c/o John Currie, of Lismore.—W.A.MACP., Clerk in charge.

[Enclosure.]

I, JAMES THOMAS MCILPATRICK, of Wilson's Ridges, near Lismore, do solemnly and sincerely declare that in February, 1884, a *Government Gazette* notice appeared about the resumption of a portion of my conditional purchase, No. 94, parish of Lismore, for road purposes; on November 12th, 1884, it was confirmed—please see *Gazette* of that date; in September, 1886, Mr. Williamson, the then Roads Superintendent, reported that a good road for wheel traffic could be got between portions 72, 93, 69, 143, and continued through portion 94—the latter, my property; I agreed, on the condition of the exchange of the then existing road for the proposed new one through portion 94, and to be paid for the fencing; Mr. Williamson made me an offer of £75, which I agreed to take, and was paid accordingly for the fencing; in all my interviews with Mr. Williamson I gave him distinctly to understand that I would not have two roads within my boundary (portion 94); the road as proposed and agreed to between Mr. Williamson and myself was made and in use for five years before it was surveyed; when the survey was made they, by some means or other, included a branch road that goes off at right-angles from Lismore; Wardell road has no connection whatever with Lismore-Wardell road, as agreed upon between Mr. Williamson and myself; it is not at all likely that I would have agreed to an unnecessary road that would completely cut off my water frontage, thereby rendering my property, portion 94, valueless; in 1891 and 1892, when surveys were made, I wrote to the Department for Lands again at the unnecessary encroachment upon my land (portion 94), and altogether contrary to my agreement with Mr. Williamson; I got no reply whatever to my communication; the inhabitants in the neighbourhood got up a petition—which please see amongst documents—against the road as an unnecessary encroachment upon my property, and not at all wanted for any public convenience; I have been nearly twelve years deprived of the use of my property; I beg to state that all my transactions were with Mr. Williamson; what was done after he left was done without my consent or knowledge. And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, entitled “An Act for the more effectual Abolition of Oaths and Affirmations, taken and made in various Departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of Voluntary and Extra Judicial Oaths and Affidavits.”

JAMES T. MCILPATRICK.

Witness to the signature of James McIlpatrick,—  
ALEX. J. SIMPSON, J.P.,  
Lismore, 19th March, 1898.

## No. 109.

## Office Memorandum.

RESUMPTION of land for road purposes within J. T. McIlfatrick's portion 94, parish Lismore, county Rous, conditional purchase 74-3,662, 47½ acres.

Land Board Office, Grafton, 10 June, 1898.

THE matter of appraisal of the value of the land resumed for road purposes from the above-quoted conditional purchase will again be before the Board, at Lismore, on the 18th instant, the decision having been reserved from the last meeting on the 18th March last, and it may be of assistance to the Board to have the facts before them as briefly as possible, as obtained from the mass of papers in the case. The attached statement is hereto appended for the Board's information.

W. A. MACPHEE,  
Clerk-in-Charge.

The Chairman, Court-house, Lismore.

[Enclosure.]

Statement referred to in Memo.

Land Board Office, Grafton, 10 June, 1898.

On the 14th July, 1881, a petition from the inhabitants of Meerschaum, Tucumbil, and surrounding locality in the Richmond River District was received, 81-2,059 Roads, complaining of having to travel a circuitous route to reach Lismore—upon which a report was obtained, with the result that a deviation of the existing road was approved of—part of which was to go through McIlfatrick's portion 94, as shown in red on tracing marked Roads 1,014-4 (enclosure now to L.B. 97-710), and joining the already reserved road within that portion shown by sienna colour on same tracing, the area taken for the road and shown in red colour being 1 acre 0 roods 15 perches, as notified in *Gazette* of 29th February, 1894, under section 27, Act 43 Victoria No. 29, in lieu of the former notice of 29th February, 1884, above referred to, the land being resumed under the same Act on the 12th November, 1884, and under Act 4 William IV No. 11; the confirmation of the parish road was gazetted same date, the formal opening of the road being notified 22nd May, 1885.

McIlfatrick, on the 8th April, 1884, referring to the notification, applied that the then present surveyed road from Tucki Tucki Creek, running north to where the proposed deviation meets it, may be given him in lieu of the land to be resumed, and that he be allowed the required amount to fence the proposed new road on both sides. It was approved, 12th October, 1884, that the application be granted, but compensation for fencing was refused, Mr. McIlfatrick being so informed. On the 16th October, 1884, the proposed resumption, as approved, was gazetted under section 27, Act 43 Victoria No. 29, in lieu of the former notice of 29th February, 1884, above referred to, the land being resumed under the same Act on the 12th November, 1884, and under Act 4 William IV No. 11; the confirmation of the parish road was gazetted same date, the formal opening of the road being notified 22nd May, 1885.

Complaints having been received as to the impassable state of the road, Lismore to Wardell, especially through portion 93, Road Superintendent Williamson was instructed to attend to the matter (12th November, 1885), and reported on the 23rd November, 1885, and again on the 20th September, 1886, enclosing a tracing shown by blue colour the deviation recommended by him through portion 94, McIlfatrick's, and showing what he terms the present surveyed road in red colour, stating that the surveyed road from the angle corner of portions 93 and 94 runs up the face of a hill, allowing of no improvement, and that after reaching the highest point at corner of portion 94 descends to Tucki Tucki Creek; that Mr. McIlfatrick is willing to give possession on condition of receiving £75 for fencing. This offer Mr. Williamson considers a fair one, as there will be a mile of fencing, and the advantage offered by the deviation will be very great, the original road being an obstacle to traffic. (It may here be observed that part of the road shown in red colour on Mr. Williamson's tracing, being the access road to portion 81, H. Littlechild, had been previously given to McIlfatrick in lieu of a former deviation shown by red colour on tracing marked Roads 81/1,014-4, enclosure to L.B. 97-710.)

This would appear to be the first of the correspondence with respect to any compensation for the proposed deviation through Mr. McIlfatrick's portion 94. Upon Mr. Williamson's report the Commissioner for Roads asks—How will the proposed deviation suit the owners of other allotments fronting abandoned road, and also the branch-road running north of portion 94, A to B, as shown on the tracing with 86-11,005 Roads? also what extent of land be required, and value and extent of fence? In reply thereto (see same paper) Mr. Williamson describes the grade of existing road, including the part 2 to 3, as shown on the tracing, and further states: "The line A to 3 could be given up. No compensation beyond the £75 for fencing is asked, and the line A to 3 given, this being considered to be saved in the deviation, besides doing away with the permanent inconvenience to traffic, and stating there are 75 chains of fencing. The Commissioner for Roads thereupon, under date 15th November, 1886, directs the deviation to be made, it being too palpable an improvement to delay a moment; but that if adjoining frontages to road A to 3 object, that road cannot be given up, but in that case the improvement contemplated would justify paying for the land." (See telegram, enclosure to 86-11,005 as to payment of the £75 compensation to McIlfatrick.) On the 15th June, 1889, McIlfatrick wrote to Under Secretary, Lands, stating that about two years ago Road Superintendent Williamson made an arrangement with him to run the road through his selection, portion 94, on account of giving the old road within the portion in exchange for the one he, Williamson, preferred, upon which the Surveyor-General (3rd August, 1889) asks whether any deviation from the proclaimed road within applicant's land has been made, and, if so, whether any arrangement were made as regards exchange of roads (proclaimed road shown on tracing 81/1,014-4 by red colour)? In reply Road Superintendent Allman shows on tracing (R. 81/1,014-4) approximately by dotted lines the position of roads in use, and that that deviation was made by Mr. Williamson some years before, McIlfatrick being paid £75 for fencing by Roads Department (Voucher I-87), McIlfatrick claiming that it was originally arranged that he should get the reserved road (shown in sienna colour on tracing) in lieu of the new line, Mr. Allman further stating that there was no writing to support the statement made by McIlfatrick, and that it was unlikely that such a promise would be made, but that there is no objection to his getting the road.

Action with regard to the survey of the deviations through portions 93 and 94 was requested by the Works Department, instruction for the survey being issued on the 19th August, 1890. In submitting a plan of the survey the District Surveyor stated it was presumed access to portion 81 would be left by reopening the old reserved road through portion 94 a sufficient distance to afford access. On the 29th September, 1891, the holder of portion 81 was notified of the intention to proclaim a road in the position formerly occupied by the reserved road to provide access to the new road from his portion. Complaints were received from Littlechild, the owner of portion 81, of want of access to his portion, and urging that same be provided.

On the 24th November, 1891, the proposed resumption of the deviation, and the branch road of access to portion 81, was notified under section 42, Act 89, in lieu of reserved road, and part of confirmed road, *vide Gazette* 12th November, 1884, the area of the portion being decreased by 1 acre 1 rood 20 perches. Further communications were received from H. Littlechild, the owner of portion 81, and from McIlfatrick, the latter objecting to the resumption of the branch road which was given to him in lieu of confirmed road in 1884—*vide Gazette*, 12th November, 1884. An amended survey, Roads 1,014-59, was made, showing the course of the deviation as proposed by the Works Department (see tracing marked R. 1,014-98), and notification of proposed resumption was again gazetted on the 20th September, 1892, reducing the area of portion 94 by 1½ acre. The owner of portion 81 again urged the opening of the access road, which McIlfatrick as strongly opposed. The land, however, was duly resumed on the 18th November, 1892, and gazetted open to traffic 13th December, 1892. McIlfatrick was duly informed of the reasons for reopening the branch road, and that the owner of portion 81 would not consent to its being closed, as it was specially reserved for access to his portion.

Further communications were received from McIlfatrick urging his claim to the branch road, stating his consent to the present deviation had been obtained by Road Superintendent Williamson on the grounds that he had to suffer no loss or inconvenience, and that the then existing road was to be in lieu of the altered one, as two roads were not to exist within his portion. On the 9th June, 1896, McIlfatrick was informed that the previous decision could not be departed from, and that further correspondence must cease.

Application

Application was then made by McIlpatrick, 7th December, 1896, for the Board to appraise the value of the land resumed, which came before the Board on the 10th July, 1897, and again on the 12th November, 1897, but was adjourned for production of the alleged agreement and correspondence between McIlpatrick and the Works Department.

On the matter again coming before the Board on the 18th March last, the decision was reserved till next sitting, to enable McIlpatrick to state the facts in chronological order. McIlpatrick has sent in a statement, 19th March 1898, and the case is now set down for hearing on the 18th instant, at Lismore.

W. A. MACPHEE,  
Clerk-in-Charge.

Exhibit D.—Case 527, vol. 7, folios 11 and 12; papers, L.B.D. 98-2,910.—A. J. PARK, Chairman, Court-house, Lismore, 18/6/98.

### No. 110.

#### Decision of Local Land Board.

Crown Lands Act of 1884—(Part II, Section 14, Sub-section 4).

Lismore,  
C.P. 74-3,662,  
J. T. McIlpatrick.

New South Wales, }  
to wit. }

Inquiry under Regulation 292.

For Exhibit M,  
see 60.

WHEREAS by an application dated 7 December, 1896 L.B. 96-6,978, it became necessary on this 18th day of June, 1898, for us to appraise the value of the land resumed for road purposes from the conditional purchase named in the margin, and having taken evidence and inquired into the said matter, we report that for the resumption of that piece of land coloured red and marked A.B. on heliograph, Exhibit E, James Thomas McIlpatrick is entitled to no compensation beyond what he has already received. For that coloured red, and marked C.D., he is entitled to compensation for damages, loss of land, and severance, in addition to the land to be given in lieu thereof. We appraise the value of that compensation at £20 sterling.

Given under our hands, at the Court-house, at Lismore, in the Colony of New South Wales, this 18th day of June, 1898.

A. J. PARK, Chairman.  
S. GARRARD, Member.

[Enclosure.]

*Chronicle of Portion No. 94.*

Mr. R. Barling in 1873, when surveying the applications for land of John Gwynne, junr., P. Gwynne, and R. Marshall—that is, portions Nos. 91, 92, and 93—in the days following surveyed portion No. 94, with a reserved road passing through it. Portion 94 then remained a measured portion up to 26th March, 1874. Portion 94 remained unaltered to 1884, when an alteration was made of part of the reserved road within boundary of said portion under the Parish Roads Act. By this transaction I was granted that part of the reserved road in lieu of proclaimed road extending from the proclaimed to Tucki Creek, within the said boundary, by the Executive Council. That part then ceased to be a road, and ceased to be any reserved right held by the Crown, and then formed part of my conditional purchase.

This transaction had been completed a considerable time before Mr. Williamson came to this district. In 1886, when public money was about to be expended on the road, as no public money had been expended on it before—the part passing through portion 94 was neither in a direct course nor the grade suitable—Mr. Williamson proposed to me to alter the position of this part of the road for the reason stated. The proposed position of the alteration was a direct course across my conditional purchase from west to east, viz., from between portions 92 and 93 on the west side to between 69 and 140 on the east side. For this alteration I was to get in exchange for the land the then existing road within the boundary and be paid for erecting the fences on either sides at usual price, or £75 bulk sum, otherwise my consent would not have been obtained. With this understanding on both sides, the road was made in the position of the proposed alteration as stated, and as a road of traffic by the public. I erected the fences as far as I considered it was safe, but could proceed no further without a survey. I waited till 1889, but no surveyor came. I was anxious to regain the use of the land. I wrote then to the Mines Department for a survey on the grounds as already stated. In reply I was directed to the Lands Department. I afterwards wrote to the Lands Department, urging a survey on the grounds of the alteration that had been made between Mr. Williamson and I, as I had no transaction with any other. After waiting a little longer, instead of a survey, as I was expecting, Mr. Allman came, he said, to make a report of it. He (Mr. Allman) was quite a stranger to me at that time; but no survey came to 1891, when Mr. Anderson surveyed it. Then another survey in 1892 by Mr. Hunter. In these surveys was included that part that I now do object to, as it has no connection with the existing road after the alteration was made in 1884; nor did it form any of the road that was made by Mr. Williamson in 1886 and 1887, and is quite unnecessary, and was without my knowledge or consent.

JAMES T. McILPATRICK.

Handed in Court this day by Mr. Currie, agent for J. T. McIlpatrick.—H. BREAKELL, Deposition Clerk, Court-house, Lismore, 18/6/98. Exhibit C.—Case 527, vol. 7, fol. 11 and 12; Papers, L.B.D. 98/2,910.—A. J. PARK, Chairman, Court-house, Lismore, 18/6/98.

### No. 111.

Mr. J. T. McIlpatrick to The Chairman, Local Land Board, Grafton.

Form 3.—Crown Lands Acts.

Notice of Appeal to the Land Appeal Court from decision of Local Land Board.

New South Wales, }  
to wit. }

WHEREAS on the eighteenth day of June, 1898, a certain matter, wherein James T. McIlpatrick was applicant for the appraisal of land resumed for road purposes within his conditional purchase 74-3,662, portion 94, parish of Lismore, county Rous, came before the Local Land Board at Lismore, in New South Wales, for decision; and whereas the said Board awarded that the sum of twenty pounds stg. (£20) was sufficient compensation for said resumption, which deprives me of all access to water, thereby making my conditional purchase next to valueless; and whereas I am aggrieved by such decision, and desire

desire to appeal therefrom to the Land Appeal Court: These are, therefore, to give you notice that I appeal as aforesaid, and that I deposit the sum of £5 as security for the costs of such appeal. The grounds of such appeal are set out below. I desire that this appeal shall be heard in Sydney.

Signed this twenty-seventh day of June, 1898.

JAMES T. McILFATRICK,  
Chilcott's Grass, Lismore, Richmond River.

Received the sum of £5 referred to above.

Grounds of Appeal.

That the decision is against the weight of evidence, oral or documentary, as placed before the Land Board.

I beg to state that I purpose, with the permission of the Court, to bring forward additional evidence—the correspondence that passed between myself and the Department of Mines during the year 1884 relative to the resumption through my conditional purchase.

J. T. McILFATRICK.

No. 112.

The Under Secretary for Lands to The Crown Solicitor.

Sir,

Referring to your letter of the 16th instant, respecting the Land Appeal Court case noted in the margin hereof, I am directed by the Secretary for Lands to inform you that, in reply to a letter from Messrs. Norrie and McGuren, these gentlemen were, on the 28th February last, apprised that their communication had been written apparently under a misapprehension, as no arrangement is admitted by Mr. Stopps, and that it might be an advantage if they would call at this Department and see that officer personally. I am to add that no further action in the matter has been taken by this Department.

I have, &c.,

## No. 115.

The Registrar, Land Appeal Court, to The Under Secretary for Mines and Agriculture.

Land Appeal Court No. 5243.—Form 2.

In the Land Appeal Court of }  
 New South Wales. } *Summons and Subpœna.*

To The Under Secretary for Mines and Agriculture,—

WHEREAS, in a certain matter of the appeal of J. T. McIlpatrick, conditional purchase 74-3,662, Lismore, it hath been made to appear that you are likely to give material evidence touching the said matter: These are therefore to command you, in Her Majesty's name, to be and appear on Tuesday, the twenty-third day of August instant, at ten of the clock in the forenoon, at the Land Appeal Court at Darlinghurst, and then and there give such evidence, and testify to what you may know concerning the matter, and produce all books, papers, deeds, and documents—particularly all correspondence and other documents in your custody, possession, or control, relating to the resumption of land through the conditional purchase of John Thomas McIlpatrick, No. 74-3,662, portion 94, county of Rous, parish of Lismore, advertised in the *Government Gazette* of 29th February, 1884, 16th September, 1884, and 12th November, 1884—which may be in your possession or under your control, having any reference to the matter under investigation, and so attend from day to day until the said matter be disposed of.

Signed this 29th day of July, 1898.

W. N. DOVE  
 (for the Registrar).

Issued at the instance of Messrs. Norrie and McGuren, 369, George-street, Sydney. The Under Secretary for Mines, Sydney. Mr. Collis,—Do we know anything of this? If we do, see me with the papers.—D.McL., 19/8/98.

This refers to a resumption for road purposes. The action was taken by this Department before the transfer of the "Roads" business to the Lands. It is now a matter for the Lands Department. This paper may be sent on.—W.R.C., 22/8/98.

Submitted. The Under Secretary for Lands.—D.McL., 22/8/98. Urgent.

## No. 116.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir, Office of Land Appeal Court, Darlinghurst, 3 August, 1898.

I have the honor to inform you that the matter of the appeal, as per margin, was brought before the Land Appeal Court of New South Wales, sitting at Sydney on the 2nd instant, when the following order was made:—Case postponed to next sitting of the Court at Sydney, commencing the 23rd instant.

I have, &amp;c.,

J. T. KEATING,  
 Registrar.

Appeal by  
 J. T. McIlpatrick  
 against the  
 appraised value  
 of the land  
 resumed for  
 road purposes  
 from his  
 C.P. 74-3,662,  
 Lismore.

## No. 117.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir, Office of Land Appeal Court, Darlinghurst, 23 September, 1898.

I have the honor to inform you that the matter of the appeal, as per margin, was brought before the Land Appeal Court of New South Wales, sitting at Sydney, on the 20th instant, when the following order was made:—On application of Mr. Norrie, with consent of Mr. Davies, case to stand over generally.

I have, &amp;c.,

J. T. KEATING,

Registrar.

Appeal by J. T. McIlfrick against the appraised value of the land resumed for road purposes from his C.P. No. 74-3,662, Lismore. Papers retained.

## - No. 118.

Messrs. Norrie and McGuren to The Under Secretary for Lands.

Re McIlfrick, J. T.

Sir,

Sydney, 369, George-street, 26 September, 1898.

We beg respectfully to request that all the papers in this matter be forwarded as soon as possible to the Chairman of the Land Board, at Grafton, with a view to the inquiry being held as arranged.

We understand that the Land Board will hold a Court at Lismore very shortly.

We have, &amp;c.,

NORRIE AND MCGUREN,

Solicitors.

It is understood that the papers are with the Land Appeal Court.—A. J. STORRS, 23th September, 1898. The Chief Inspector.

## No. 119.

The Registrar, Land Appeal Court, to The Draftsman-in-Charge, Roads Branch.

Re McIlfrick.

Land Appeal Court of New South Wales, Sydney, 5 January, 1899.

MEMO.—The order of this Court, of 20th September last, was "Case to stand over generally." Apparently Messrs. Norrie and McGuren (Solicitors) are desirous of having these papers before the Board for some purpose. If that purpose be merely for reference, or as exhibits in some case, there would be no objection to forwarding them; but it would be useless to send them to deal with McIlfrick's case *per se*, as that case is not before the Board, nor does the order of the Court empower the Board to reopen the matter.

Papers, Roads. 81/1,014-107 herewith.

J. T. KEATING,

Registrar, Land Appeal Court.

Messrs. Norrie and McGuren personally expressed a desire that the papers in this case should be before the Land Board at their next sitting, which is to be soon. As the case is before the Land Appeal Court, I did not consider it was for the Department to take any action at this stage, and therefore wrote a memo. (herewith) to the Registrar, asking him whether anything was required to be done by the Department. The Registrar sends down the papers with this reply, "Submitted for direction."—A. J. STORRS, 5/1/99.

F.H.W.—Inform that it is not apparent for what purpose the papers could be forwarded to the Land Board, as the case is in the hands of the Appeal Court still.—H. CURRY, 7/1/99. Norrie and McGuren informed, 11/1/99. Returned to the Registrar of Land Appeal Court.—A. J. STORRS, Chief Draftsman of Roads, 10 March, 1899.

## No. 120.

The Under Secretary for Lands to Messrs. Norrie and McGuren.

Gentlemen,

Department of Lands, Sydney, 11 January, 1899.

Referring to your personal request that the papers in Mr. J. T. McIlfrick's case may be before the Local Land Board at their next meeting, I have the honor to inform you that it is not apparent for what purpose the papers could be forwarded to the Land Board, as the case is still in the hands of the Land Appeal Court.

I have, &amp;c.,

WM. HOUSTON,

Under Secretary

(per F.H.W.)

## No. 121.

Messrs. Norrie and McGuren to The Under Secretary for Lands.

Sir,

369, George-street, Sydney, 12 January, 1899.

We have to acknowledge receipt of your letter of yesterday, 81/1,014-108, referring to the case of J. T. McIlfrick.

From the tenor thereof we can see that you do not understand the arrangement arrived at between your Department, the Crown, and our Mr. Norrie. We shall, therefore, put you in possession of the facts.

Our client, Mr. McIlfrick, is the owner of a conditional purchase on Tucki Tucki Creek, near Lismore, containing 49 acres, and being conditional purchase No. 94. The road from Lismore to Wardell ran through this portion.

In

In the year 1884 the Mines Department made an alteration in this road, and gave a part of the old road to our client, in lieu of the new road.

In 1886 the Roads Department came along and made another alteration in this road, for which our client received certain compensation.

It appears from the papers that the Government subsequently resumed the small portion of the old road which had been given our client when the first alteration was made.

Our client, on receipt of notice of the proposed resumption, at once sent in objections, in accordance with the Act, backed up by a petition from all the residents but one, that the proposed road was unnecessary, and would completely cut him off from water.

He repeatedly tried to have the matter referred to the Local Land Board for a report as to the necessity for this road. At last he received word from the Land Board that the matter would be inquired into, and attended the Court at Lismore, with a number of witnesses, to prove the road was unnecessary.

Much to his surprise, he was informed by the Chairman that the only matter referred to them by the Minister was the amount of compensation to be paid him for the resumed road. This question was gone into by the Board, who assessed the compensation at £20 for this particular piece of road; and against this decision our client appealed, and thus the matter got before the Land Appeal Court.

After the matter was first before the Appeal Court, our Mr. Norrie called upon Mr. Stopps, of your Department, and went over the papers with him, and explained what our client really wanted was access to water.

It was then arranged that the appeal should stand over generally, and Mr. Stopps drafted a memorandum to the effect that it should be referred to the Local Land Board to inquire and report whether that road was necessary or not. If the Board, after hearing evidence, reported the road was unnecessary, we would abandon our claim to the £20 compensation allowed, and the appeal would be at an end. If, on the other hand, the Board reported in favour of the road, it would then be for Appeal Court to say on the evidence whether the £20 was sufficient compensation.

This was the arrangement arrived at between Mr. Davies, representing the Crown, Mr. Tillet, of the Crown Solicitor's Office, and our Mr. Norrie, and we were indeed surprised to learn from our client that the matter had not been sent on to the Local Board.

On inquiry at the Appeal Court we ascertained that the papers were still there, and had not been asked for by your Department.

Of course you must see that the Local Board could not hold the inquiry agreed upon without the papers, and the necessary instructions from the Minister.

We trust that you will, as soon as possible, have the papers sent on to the Chairman at Grafton, together with Mr. Stopps' memo, which contains the terms of our arrangement.

We have, &c.,

NORRIE AND MCGUREN.

If any arrangements were made with the consent of the Crown Solicitor, would not the Department have been formally informed?—  
A. J. S.

## No. 122.

### Office Memorandum.

Messrs. Norrie and McGuren *re* McIlpatrick's appeal to the Land Appeal Court and alleged Memo. referring a certain matter to Local Land Board for inquiry, &c.

16 January, 1899.

REFERENCE is herein made to a memorandum which I am represented to have made to the effect that the question whether a road resumed from McIlpatrick and leading to Littlechild's land, portion 81, for which the Land Board appraised compensation in the sum of £20 was required or not.

I have no recollection of any such memo having been drafted or written by me, and the following reasons lead to the direct inference that Messrs. Norrie and McGuren are in error.

The matter was at the time before the Land Appeal Court on the appeal of McIlpatrick, and it would have been necessary for the Court to direct the Department to take some course before it would have moved further in the matter.

Presumably the Court could have referred the case back to the Land Board, if it desired further evidence to be taken.

Moreover the Land Appeal Court retained the papers in the case after informing the Department on the 23rd September, 1898, that the case was to "stand over generally," and did not request any action to be taken by the Department.

Presumably too, if Messrs. Norrie and McGuren desired that further information should be placed before the Court which would be favourable to their client's cause, it was for them to ensure that the necessary steps were taken.

The Department had decided that the road should be reopened which McIlpatrick desires to have closed, as the reopening of it only restores rights of access to Littlechild which had specially been provided for him alone when the Crown estate was surveyed for alienation; and even had the Land Board (should reference have been made to it) reported that the road was of no public advantage, the Department would not again have deprived Littlechild of rights of access it had deliberately restored by resuming land the appraised value of which was the subject of McIlpatrick's appeal.

The only way to get the road closed is for McIlpatrick to get Littlechild's consent.

A. J. STOPPS.

The papers were borrowed from the Land Appeal Court to deal with Messrs. Norrie and McGuren's inquiries.—F. H. W. Referred to the Crown Solicitor, having reference to the statements in Messrs. Norrie and McGuren's letter of the 12th instant concerning an alleged arrangement between them and Mr. H. Davies.—W. H., 18/1/99. The Crown Solicitor accordingly.—A. J. STOPPS, for Under Secretary, 21/1/99.

## No. 123.

## The Crown Solicitor to The Under Secretary for Lands.

Sir,

Crown Solicitor's Office, Sydney, 20 February, 1899.

I have the honor to return herewith the papers numbered as in the margin forwarded to me with reference to an alleged arrangement between Mr. Hanbury Davies and Messrs. Norrie and McGuren as to the appeal of J. T. McIlpatrick. 1881/1,014-110

Mr. Hanbury Davies made no arrangement with Messrs. Norrie and McGuren with regard to this appeal further than as follows:—Mr. Norrie informed Mr. Davies that he had come to an arrangement with Mr. Stopps, of the Lands Department, much as is stated in Messrs. Norrie and McGuren's letter of the 12th ultimo, and he asked that the appeal should be allowed to stand over generally to admit of that arrangement being carried out, and to that Mr. Davies consented.

I have, &amp;c.,

GEORGE COLQUHOUN,

Crown Solicitor.

See my memo. of 16th January on paper 110.—A. J. STOPPS, 22/2/99. F. H. Wilson, Chief Clerk, 22/2/99. Chief Inspector.—W.H., 23/2/99.

The case was before the Land Appeal Court on a question of compensation, but Messrs. Norrie and McGuren obviously desire the Land Board to inquire and report as to whether the road (which had been resumed) was necessary or not—in fact, to review the departmental action as to resumption. It may be pointed out to these gentlemen that their letter has been written apparently under a misapprehension, as no arrangement is admitted by Mr. Stopps. It might be an advantage if they would call at the Department and see Mr. Stopps personally.—H. CURRY, 22/2/99. Approved.—W. H., 23/2/99. Norrie and McGuren informed, 28/2/99.

## No. 124.

## The Under Secretary for Lands to Messrs. Norrie and McGuren.

Gentlemen,

Department of Lands, Sydney, 28 February, 1899.

Referring to your letter of the 12th ultimo, respecting the case of Mr. J. T. McIlpatrick, I have the honor to point out that such communication has been written apparently under a misapprehension, as no arrangement is admitted by Mr. Stopps, and that it might be an advantage if you would call at this Department and see that officer personally.

I have, &amp;c.,

WM. HOUSTON,

Under Secretary,

(per F.H.W.)

## No. 126.

## Office Memorandum.

6 April, 1899.

MR. NORRIE, Solicitor, 369 George-street, called to-day on behalf of Mr. McIlpatrick, and asked that the Crown should not oppose an application for postponement of the case now before the Appeal Court.

Ask Crown Solicitor to instruct Mr. Hanbury Davies. Mr. Norrie desires to make application to close an unnecessary road, and although I pointed out that there was no necessary connection between the unnecessary road question and the case before the Land Appeal Court, he stated that he desired a postponement in order to consider the situation.

H. CURRY.

Crown Solicitor instructed, and Mr. Norrie informed, 6/4/99.

## No. 1.

### Decision of Local Land Board.

Crown Lands Act of 1884—(Part II, Section 14, Sub-section 4.)

New South Wales, )  
to wit. }

WHEREAS on the 16th, 17th, and 18th days of February, 1897, it became a matter for investigation before us to determine the ownership at date of application of improvements on Alfred Austin Sampson's settlement lease No. 96-21, of 3,534 acres, applied for at Gunnedah on 29th October, 1896, and confirmed on 16th February, 1897, and to appraise the values thereof as on the date of application; and having taken evidence and inquired into the said matter, we determine the ownership and appraise the values as indicated in Appendix "A" hereto. The total value, as appraised, of improvements, the property of the Crown, is £226 4s., and of improvements, the property of the occupation licensee, £121 6s. 1d.; in all £347 10s. 1d. for Crown and station property as appraised.

As to the fence, W X Y, on the easterly boundary (*see* Exhibit "A") it was at first contended by Mr. Creagh, for the occupation licensees, in effect, that under the decision of the Land Appeal Court in case 3,737 of *Molesworth and Ware v. Gibson* (vol. 5, fol. 217, Pike). Mr. Creagh stated that he was speaking from memory; that Mr. Sampson, the settlement lessee, is successor in title to the occupation licensees; and that if an award were made against Mr. Sampson for the total value of that fence he would be entitled to obtain half contribution from the holders of the adjoining lands, held under conditional leases 85-52, 91-21, and 87-14 respectively, being a settlement leaseholder under a lease having more than five years to run. (It is to be borne in mind—*see* page 31 of the evidence—that the fence W X Y was erected before conditional leases 85-52, &c., were applied for.)

We cannot adopt the view advanced by Mr. Creagh, and deem that it would be most inequitable for Mr. Sampson to be placed in the position of having to pursue claims against the holders of the conditional leases. Section 141, Crown Lands Act of 1884, does not seem framed to meet such a case as involved in connection with the fence W X Y, and we must, to the best of our judgment, proceed under section 44, Crown Lands Act of 1889. We deem that substantial justice is done by awarding against Mr. Sampson the amount of the half value of the fence W X Y as at the time of his settlement lease application. This we consider more expedient than to incur the delay of a reference to the Land Appeal Court.

If the holders or owners of the conditional leases referred to are able to advance claim (if they have any claim to any proportions of fence W X Y at all) to more than half the remaining value of the party fence, it will be open to the Board to proceed under Regulation 279, and without the intervention of a higher court—*i.e.*, if our present action in this special matter as the fence W X Y be not varied or set aside.

The evidence shows that the cost of the ringbarking is considerably less than our valuation thereof; but we are bound in this matter to have due regard to section 51, Crown Lands Act of 1895, as interpreted by the Land Appeal Court in the case of *Barnes*, No. 3,792 (vol. 6, fol. 91, Pike), which we have referred to. We have also referred to case 3,737, *Molesworth and Ware v. Gibson* (vol. 5, folio 217, Pike), in view of Mr. Creagh's remarks.

We would point out that Mr. E. W. Turner (a witness) yesterday claimed to have practically settled, some years back, with the lessees of the then Wondoobar leasehold area (now Wondoobar preferential occupation license), as to contribution towards the party fence along the westerly boundary of his conditional leases 85-52, &c. (*See* Exhibit A.)

Mr. Creagh, solicitor, of Tamworth (of Ross and Creagh), on the 16th and 17th instant, appeared for Mrs. Hungerford, owner of the Wondoobar preferential occupation license and estate.

Mr. A. H. Sampson, appeared on the same dates for his son, the settlement lessee; he also attended to-day.

Given under our hands, at the Court-house, at Gunnedah, in the Colony of New South Wales, this 18th day of February, 1897.

WILLIAM FREEMAN, Chairman.  
JAMES G. DIGHT, } Members of  
ALEX. CRAWFORD, } Board.

## APPENDIX A.

APPENDIX A to our findings and decision of to-day in the matter of appraisement of value of improvements upon A. A. Sampson's settlement lease, No. 96-21, of 3,534 acres, in the Land District of Gunnedah. [*Refer to Exhibit A.*]

## Crown Improvements.

	£	s.	d.
Tank, 2,367 cubic yards, at 9d. ... ..	88	15	3
Mixed fence around tank ... ..	4	0	0
27 chains of 6-wire boundary fence, 5-6, at 3s. 9d. ... ..	5	1	0
83 chains of 6-wire intersecting fence, 1-2 and 3-4, at 2s. 6d... ..	10	7	6
1,770 acres ringbarking, at 1s. 4d. ... ..	118	0	0
	<u>£226</u>	<u>4</u>	<u>0</u>

## Station Property.

87 chains of 6-wire boundary fence, B 5, at 3s. 9d. ... ..	16	6	3
Half value of 155 chains of boundary fence W X Y, at 3s. 9d. per chain, 6-wire fence ... ..	14	10	8
137 chains of 6-wire intersecting fence, 2-3 and 4-5, at 2s. 6d. ... ..	17	2	6
1,100 acres of ringbarking, at 1s. 4d. ... ..	73	6	8
	<u>£121</u>	<u>6</u>	<u>1</u>

Total value of both sets of improvements ... .. £347 10 1

WILLIAM FREEMAN, Chairman.  
JAMES G. DIGHT, } Members of Local  
ALEX. CRAWFORD, } Land Board.

Court-house, Gunnedah, 18th February, 1897.

## [Enclosure.]

## CAPTION TO DEPOSITION OF WITNESSES.

New South Wales, }  
to wit. }

THE examination of Frederick Poate, of Tamworth, in the Colony of New South Wales, District Surveyor; William Frederick Robey, of Tamworth; Edwin Woodward Turner, of Curlewis; William Thomson, of Gunnedah; Robert Elms, of Wondobar; Andrew Hornery, of Gunnedah; Alfred Bacon, of Gunnedah; Percy Albert Sampson, of Gunnedah; Samuel Hole, of Wondobar; Edwin W. Turner, Thomas Henry Hall Goodwin, and Edwin W. Turner: Whereas it hath become necessary to determine ownership, and appraise value of improvements on settlement lease 96-21, Gunnedah; and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

This deponent, *Frederick Poate*, of Tamworth, District Surveyor, being duly sworn, maketh oath, and saith as follows:— In the matter of settlement lease 96-21, I claim, on behalf of the Crown, 830 acres of ringbarking, being ringbarking on land that was continuously reserved from sale as reserve 577 and reserve 2,014, from the 18th November, 1874, to the 8th November, 1895; I also claim 940 acres of ringbarking contained in the two areas marked "A B 5 C," and "D E F G," on heliograph marked Exhibit "A," for the reason that the ringbarking was done without permission; the continuous reservations referred to were as reserve 577 and reserve 2,014; the northern limits of the permits for ringbarking are indicated by the line "A X"; permits in pursuance of ringbarking applications 86-9 and 86-10, of the 14th May, 1886, and granted on 21st July, 1886, L.B. 88-1,155; north of the line "A X," within the cancelled reserve, there are 250 acres of ringbarking; of the fencing the parts indicated on Exhibit "A," between the points 1 and 2, 3 and 4, 5 and 6; 1 and 2, and 3 and 4 comprise 83 chains, 5 and 6, 27 chains, are Crown improvements, being on the cancelled reserve 577 and 2,014, and for the same reason the tank shown on Exhibit "A" is Crown property; it is near the south-west corner of portion 41.

Sworn by Frederick Poate, at Gunnedah, before us, } FRED. POATE.  
this 16th day of February, 1897,— }  
WILLIAM FREEMAN, Chairman.  
JAMES G. DIGHT, Member.  
ALEX. CRAWFORD, Member.

This deponent, *William Frederick Robey*, of Tamworth, Manager of Commercial Bank, being duly sworn, maketh oath, and saith as follows:—

*By Mr. Creagh*: I know portion 54, parish of Wondoba, county of Pottinger, being settlement lease 96-21, to-day confirmed to A. A. Sampson; when the lease was applied for in November, 1896, the portion formed part of Wondoba occupation license, the holders of which are myself and Robert Alfred Orville Gill, as trustees for Mrs. Alice Hungerford; I am the managing trustee, and have the conduct of all matters financial; the license fee was paid in November last up to the end of 1897; I claim the ringbarking south of the line "A X" on Exhibit "A," with the exception of that which was in the reserve mentioned in Mr. Poate's evidence; I also claim for a fence on the north boundary, B to 5, and W X Y on east boundary; also the fence shown on Exhibit "A" from 2 to 3, and from 4 to 5; there is no record in the Wondoba Estate books of any payment having been made as contribution towards the cost of the fencing W X Y; the improvements claimed by the Crown were effected by the owners of Wondoba—the ringbarking and the dam about 1886 and 1887; I cannot speak as to the time of the erection of the fences; according to the books the dam was 2,688 yards, for which Mr. John Gill paid 1s. per yard.

*By Mr. Sampson*: I had nothing to do with Wondoba when "W X Y" was erected; I had nothing to do with any of the erection of the fences in connection with this settlement lease; I only became connected with the estate about three years back; I can only speak from what I have seen in the books; I would not know whether Mr. John Gill made any arrangements as to the fences, if such did not appear in the books.

Sworn by W. F. Robey, at Gunnedah, } W. F. ROBEY.  
this 16th of February, 1897,— }  
WILLIAM FREEMAN, Chairman.  
JAMES G. DIGHT, } Members.  
ALEX. CRAWFORD, }

This deponent, *Edwin Woodward Turner*, of Curlewis, licensed surveyor, being duly sworn, maketh oath, and saith as follows:—

*By the District Surveyor*: Cancelled reserves 577 and 2,014 are ringbarked, except about 20 acres; the areas "A B 5 C" and "D E F G," are ringbarked, with the exception of shade trees; the ringing is pretty heavily suckered, large suckers at least five years old; the ringbarking, or rather similar country, could be ringbarked now for 9d. per acre; I should say it would cost about 4d. per acre to remove the suckers; the ringbarking has improved the land very much,  
either

either for pastoral or agricultural purposes; I think the ringing, in its present state, has doubled the carrying capacity the capacity is now about a sheep to  $1\frac{1}{2}$  acre; I think it could be cleared for the plough now for 15s. per acre; in a green state I think it would cost £2 per acre; all the cancelled reserves is first-class agricultural land; the area "D E F G" is level, good agricultural land, but very stony in places, and fully half of "A B C" is good agricultural land, the rest of it is too hilly and stony; the fencing between 1 and 2, and 3 and 4—the intersecting fencing—was erected about twelve years ago; pine posts, 9 x  $4\frac{1}{2}$  inches on top, 15 feet apart, 40 inches high from ground to top; the wire is various, from No. 4 to No. 10, averaging about No. 8; the strainers are pine, round, 1 foot in diameter, six wires; I estimate the present value at £13 per mile; the fence between 5 and 6, 27 chains, is six-wire, erected about 1884; the posts, pine, 8 x 4 inches, two No. 8, and four No. 10 wires; posts 12 feet apart, pine strainers about 1 foot in diameter; the sap is now rotten and the strainers cannot now be plugged; present value, £18 per mile.

*By the Chairman:* My evidence in respect to this fence will apply in every respect to fence "W X Y."

*By the District Surveyor:* The tank is situated in a drainage valley, about 100 yards wide and 5 feet deep in the centre; the dimensions are 40 x 42 yards on top and 20 x 32 on bottom, 75 inches deep on the average, the extremes being 66 and 93 inches deep; the content is 2,367 cubic yards; the earth taken out of the excavation was used to form a bank; the bank is the same as it was twelve months ago, there being no silting rains in the interval; it was made about ten years ago; I consider the site the best that could be obtained, there being a catchment of about 500 acres; the total storage of the reservoir, without the tank, would be about 7,000 cubic yards of water, having an average depth of 18 inches; the reservoir full, the depth of water in the tank would be between 10 and 11 feet; 5 feet of this would be due to the bank; the earth taken from the excavation banks up water right across the valley, and throws the water back, I should say, about 10 chains; I value this excavation and forming the bank at 9d. per yard, including a small quantity of soft rock on the south side; when making the tank they had to cart water at least 2 miles; the most accessible water, however, was 4 miles distant; I value the tank at £93, allowing £4 for supervision; this evidence is the result of a special inspection on the 18th November last; there is a fence close round the tank to keep cattle from breaking the bank—6 chains of two-sapling fence, value 15s. per chain, and 2 chains of six-wire fence at 10s. per chain.

*By the Chairman:* I think all the fencing I have valued would last eighteen years longer, with fair maintenance; I have land adjoining this settlement lease for about 40 chains, and I have had experience on it in grazing and agriculture; I have not had any personal experience in clearing green timber, but I had 60 acres of dead timber cleared for the plough, the cheapest of which cost me £1 per acre; the timber was more dense than the timber on the settlement lease; the proportion would be about twenty-five trees to the acre on this settlement lease, and thirty-three trees to the acre on mine; I had my clearing done by good men on wages; I had about twenty green trees burned, which gave three times as much trouble as the dead ones.

*By Mr. Creagh:* There are about 1,770 acres of ringbarking claimed by the Crown; of this area about 1,200 acres is good agricultural land; in addition to the ringing claimed by the Crown, there are 1,100 acres of ringing, the property of the occupation licensees, covered by the ringbarking permits, and not on reserved land, making in all about 2,870 acres; the evidence I have given in respect to the 1,770 acres of ringing applies equally to the ringbarking on the 1,100 acres, 1,000 of which, I should say, is good agricultural land; I think, from the size of the suckers, the ringing had been suckered once; about half of the trees are free from suckers; the suckers are not too large to be split off with an axe; I do not think this work could be done for less than 4d. per acre; the timber on the slopes is narrow-leaved box, and on the low-lying land it is bibik, which is much harder to kill than the narrow-leaved box; the first suckering after the ringbarking would cost 4d. per acre; it was probably done about four years after the ringbarking; the annual net profit on an average sheep would be about 1s. 6d. on this country, allowing for ravages by dogs, wallabies, and grass-seed; of the intersecting fence, there are 137 chains not on cancelled reserves mentioned in this evidence; the evidence I have given as to the other part of this fence applies to this part in every respect; it is in very fair order; I saw no broken wires or burnt posts in it; a similar fence could be put up now for £12 per mile, with the wire laid on the line, the timber being so handy; it takes about 19 cwt. of No. 8 wire to a mile of six-wire fencing, and about 13 cwt. of No. 10; the intersecting fence is not a judicious subdivision of the settlement lease; my evidence with reference to the fencing 5 to 6 applies in all respects to the fence B to 5, the length of which is 87 chains; the length of the fence W X Y is 155 chains; a similar fence could be erected for £15 per mile excluding wire; the fences on the north and east boundaries were in good repair; I saw no broken wires or burnt posts; the country eastward of the tank is hard, red, loam, drains well off, and is not bad for silting; it is on an unusually symmetrical embankment, and perfectly safely constructed; it is a really first-class job; I know the tank is retentive, as I have seen it nearly full; there is no water on the portion besides the tank; the value of the ringing in its present state to an incoming tenant is about £1 per acre, assuming the unimproved value of the land to be £1 per acre; the easy capability of the land to improvements is the inducement to select it; the land, as a freehold improved to the cost of 5s. per acre, would sell at £1 15s. per acre; the value of the ringing as distinguished from its cost would be 15s. per acre; if the land were put up for sale, with a condition of keeping the timber alive or not killing the timber, it would bring 15s. per acre less.

*By Mr. Sampson:* Virtually I contributed contribution to the fencing common to my land and the settlement lease; I have known Wondobar about thirteen years; I have known worms to be in sheep on this settlement lease about three years ago; previous to that the country was healthy; they were young sheep; not all the country on the fall to the tank is rung; there is no silt tank to it; there is a strip about 30 chains above the dam, and about 10 chains below, about 5 chains wide left for shade; in this good judgment is displayed; sheep would be likely to camp in this shade, but I do not consider their droppings would cause the tank to silt materially; the water in the tank now would require boiling before being fit for human consumption; when full the water is fit for human consumption, and I have drunk it myself; if the present water were mixed up with water sufficient to fill the tank it would not spoil the water; the description of the country on Exhibit C is substantially correct, and probably is condensed from my report; to my knowledge there is no water nearer to this tank than 2 miles; I consider it easier to cart water from New Wondobar Well, 4 miles distant, than from Old Wondobar, 2 miles distant; beyond the value of the wire I consider the intersecting fence of no value to an incoming tenant; I have had land burned off level to the ground for 10s. per acre, but not cleared for the plough for less than £1 per acre; I know of several methods of clearing for the plough, and I adopted the one I think the best; I think 6d. per year for the grass for a sheep on this country would be a fair rental; taking the rent of the land as the basis of its capital value, I would estimate it to be twenty times the rental—that is to say, 6s. 8d. per acre for sheep-grazing; if it were wire-netted, the country would be worth more than 6d. per sheep; for all sorts of grazing purposes the land could be let at 1s. per acre per annum.

How do you make it up? Fourpence per acre for sheep, and 1s. per acre for cattle; I have lost heavily by overstocking; personally I saw the common about a week ago; the fenced part looks well, but outside the fence on the south side it is scalded country, and has never much grass on it; on parts I have never seen grass; ringbarking, in addition to increasing the growth of grass, sweetens it; the grass on the ringbarked part is sweeter than on the unrung part; I refer to country of the same class; the grass being good attracts the wallabies; wallabies eat nothing but the choicest grass; there is an immense number of wallabies out there, which tends to ruin the pasturage; I have no idea how long it would take the the land to recover, supposing the wallabies were netted out; it would be most necessary to wire-net this settlement lease; I am of opinion the wallabies have greatly injured the pasture; to the best of my memory, there was a lot of pine scrub there about ten years ago; they have been taking logs to the mill from there; I think all the large pines are picked out; I think the worst of the pine can be completely killed for 2s. 6d. per acre; none of the overhanging trees have been cleared along the lines of fencing; I suppose it would be worth £10 per mile to do it now, as all the wires would have to be taken out; it would be necessary before erecting a wire-netting fence, but not for a twelve-wire fence, which would keep the wallabies back.

*By Mr. Creagh:* I have been offered for my country, which is not so good as this, a rental of 1s. per acre for general grazing purposes; when I last saw the country it was good for cattle and fair for wethers; to make a six-wire fence into a twelve-wire fence, the cost would be about £20 per mile, and it would keep out wallabies; there is a fence running nearly parallel with the west boundary of portion 54 about 7 chains from it on P. A. Sampson's portion 37; if the western boundary of portion 54 was fenced, the intersection fence would connect with it.

E. W. TURNER.

The parties agreed to consider the cost of the wire laid on this line to be £14 per ton.

JOHN H. CLEARY,  
Deposition Clerk, 16/2/97.

Sworn by E. W. Turner, at Gunnedah, before us, }  
this 16th day of February, 1897.—

WILLIAM FREEMAN, Chairman.  
JAMES G. DIGHT, } Members.  
ALEX. CRAWFORD, }

This

This deponent, *William Thomson*, of Black Jack, Gunnedah, farmer, being duly sworn, maketh oath, and saith as follows:—

*By Mr. Sampson*: I know the Wondobar holding, and the lease, the subject of this inquiry; the settlement lease, portion 54, is not good country; the larger proportion is basalt country; I have known it twenty-five years; I have never had any stock of my own to speak of, but I have seen a lot of grazing; about ten years ago there was a lot of large pine on this settlement lease, but it has been taken away to the saw-mills; I have cut 600 to 700 logs myself on it; I have known of others to be cutting there; I have not seen them cutting, but I have seen the logs cut and branded; the logs I cut were for the saw-mills; I saw Mr. Pike's brand on some of the logs cut; he is the owner of a saw-mill; I did not give Wondobar Station any consideration for the privilege of cutting the logs; the pine scrub started to grow up about fifteen years ago; I put down the cost of the ringing at 8d. or 9d. per acre; I have seen it quite recently; I should say it would cost 6d. per acre afresh; there are four or five saplings growing from some of the trees, 8 inches through I should say; one in every three trees have suckers too large to remove; I do not think the settlement lease would at present carry a sheep to 10 acres; it was no better before it was ringbarked; ringbarking sweetens the grass, and where there are wallabies it attracts them; the wallabies have increased on this settlement lease, and injured the pasture; if they were netted out the country would take two or three years to recover; they eat closer than sheep; they eat the grass out by the roots; I have seen the tank; I have never seen it full; the catch appears to be good, but it is not good; if the catch were good the tank would be often-filled with the rains we have had; I saw it about two months ago; it was then very low; the water looked good, but I did not drink any of it; I was afraid to give my horse a drink; it being boggy, there was no fence around it; there is a soakage about a mile from the tank; it is in the position marked "S" on Exhibit A; similar tank work could be done for 8d. or 9d. per yard; I know the fence along the north boundary; the labour of it would cost about £15 per mile, with the wire laid on the ground; the ringbarking has not made the land any better.

*By Mr. Creagh*: The person who stated the ringing has doubled the carrying capacity is not stating a fact; I am 37 years old—born here; I have been living on Wondobar; I was employed by the station; I have seen much of this country since it has been ringbarked; I have not seen it suckered, but I have seen signs of some of the suckers having been removed; if the suckers were small, the suckering would not cost 6d. per acre.

*By the Chairman*: The suckers that were removed were removed about twelve months after the ringing.

*By Mr. Creagh*: I did not see the suckers being removed, but I saw them lying on the ground; nearly all of the ringbarking has suckered; I am farming for my mother; it is on similar country to the settlement lease; between 4 and 5 miles from it; our land is ringbarked and fenced by a twelve-wire fence, which seems to keep out the wallabies; the ringbarking has made the settlement lease land no better; it makes it worse for grass; there are 600 or 700 acres good agricultural land; I did not know Sampson before he applied for the lease; the reason I say the catch to the tank is not good is because I have never seen the tank full; if I saw it full I would call the catch good; the soakage "S" dries up; I have not seen the tank since two months ago; I did not make any special inspection of the land for the purpose of this inquiry; I am only speaking of it from my recollection of it as part of Wondobar; I have had some conversation with A. A. Sampson during the day, but not as he came out of the court; he spoke to his brother when he came out of the court.

*By Mr. Sampson*: If you saw the tank full once, would you say the catch is good? No, I still adhere to my opinion that it is not good; I have seen the tank over twenty times, and never saw it full.

When you saw the settlement lease two months ago, did you then consider it part of Wondobar? Yes. No.

Did you mean to tell Mr. Creagh that two months ago you thought this lease part of Wondobar? No.

As a matter of fact you knew otherwise? Yes.

Sworn by W. Thomson, at Gunnedah, before us, }

This deponent, *Robert Elms*, of Wondobar, kangaroo shooter, being duly sworn, maketh oath, and saith as follows:—

*By Mr. Sampson*: I have practical knowledge of ringbarking; I know settlement lease, the subject of this inquiry; I am over it every day; I would ringbark similar country for about 9d. per acre.

As the settlement lease is at present, what would you ringbark it for? One shilling per acre if I had to cut the pine scrub, and 6d. per acre omitting it.

When the trees are rung and the large pine cut down, how would the ground be if neglected? Young pine would come up and suckers would grow.

*By Mr. Creagh*: I have been kangaroo shooting for fifteen or sixteen years; it has been my occupation for the last two years in this district.

ALEX. CRAWFORD, }

This deponent, *Andrew Hornery*, of Gunnedah, labourer, maketh oath and saith as follows:—

*By Mr. Sampson*: I have done ringing; I know the settlement lease, the subject of this inquiry.

What would you estimate the original cost of the ringbarking? About 9d. per acre, and to ringbark it now as the suckers are, 7d. per acre; and, including cutting the pine, 3s. per acre; the suckers growing on the settlement lease are large and, I am sure, could not be knocked off with an axe; I do not think the ringing has sweetened the grass on the settlement lease, because the timber has grown up very nearly as thick, if not thicker, than the original timber, as a result of the ringing; before this growth the grass was sweetened by the ringbarking; wallabies like sweet grass; I should say the scrub would bring the wallabies to the settlement lease—it would be a harbour; I have seen the settlement lease quite recently; I have known the country four years; the grass on it now is not very good, caused by want of ringbarking; I know the tank on the lease; I have known it about four years; I have never seen it full; there has been sufficient rain to fill ordinary tanks within the last two years; I have done a good bit of tank-sinking; it would be worth about 7d. per yard to excavate that tank and make the tank; I do not work for low wages, and would be prepared to take a contract at that rate; there is a spring a little more than a mile from the tank; I was camped at it; the old Wondobar Spring is behind on the other side of the ridge; I do not think much of the spring; I should say there are between ten and fifteen horses at the spring; I saw the tank a few days ago; it is not full; the water was from 6 to 13 inches deep when I saw Mr. Sampson measure it two days ago; some of the lease is sandstone.

*By Mr. Creagh*: I do not know how many acres are in the lease; I cannot say how many acres are sandstone; some of the rest seems nice red soil; I did not know it before it was ringbarked; I am kangaroo-shooting at present; I generally shoot in the winter-time—during the rest of the year I am shearing; I am shearing about three months in the year, on an average; my last contract for tank-sinking was some time last year; it was 8 or 9 miles from Carroll in this district; I got 7d. per yard; it was for Mr. Perrett; I did the work by scooping; the earth was put round one end of the tank only; we left it where we scooped it out; we had one of Mr. Perrett's teams, and one of our own; he gave us grass for the horses; a plough and scoop were provided by Mr. Perrett; the tank on the settlement lease would not be bad if cleaned out; the embankment is made pretty well; I do not care much about the site; the spring seems to be going dry now; I have been over pretty well all the lease; I know the land, because Mr. Sampson gave me permission to shoot on the land, and because of the survey line; the survey line might be the survey line of another lease.

ALEX. CRAWFORD, }

This deponent, *Alfred Bacon*, of Gunnedah, agent, being duly sworn, maketh oath, and saith as follows :—  
*By Mr. Sampson* : I have had large experience in grazing ; sheep country is more valuable than cattle country ; I know Wondobar ; some of it is cattle country, and a good deal of it is sheep country ; I do not know Wondobar very well ; I do not know the settlement lease Mr. Sampson applied for ; most of this district is sheep country, but there are parts more suited for cattle.

*By Mr. Creagh* : Any information I can give is of very little value, as I do not know the settlement lease ; from my experience I have never known a case in which wallabies have been attracted in such numbers as a consequence of the grass being sweetened by ringbarking as to render the country worse than its original state ; wallabies would be attracted by country sweetened by ringing.

WILLIAM FREEMAN, Chairman.  
 JAMES G. DIGHT, } Members.  
 ALEX. CRAWFORD, }

This deponent, *Percy Albert Sampson*, of Gunnedah, selector, being duly sworn, maketh oath, and saith as follows :—  
*By Mr. Sampson* : I know the settlement lease the subject of this inquiry ; I know the tank on it ; the value of excavation of the kind is 6d. per yard ; a man has offered to put down a 2,000-yard tank on my lease for 6d. per yard ; the catch towards the head of the gully is good, but it becomes bad within a quarter of a mile of the tank ; the tank at present is nearly empty ; most of the tanks about are nearly dry ; Morris Tank has a good drop of water, and there are others lower down nearly dry ; the nearest water to the tank is a spring on my brother's lease, a little over a mile from the tank ; the spring is watering between thirty and forty head of large stock ; I should think this country is suited for sheep naturally, but being surrounded with scrub it would not carry so many ; if the scrub were infested with native dogs it would not be suitable for sheep ; if it were wire-netted it would be good sheep country—more valuable for sheep than cattle ; some of the sheep on Wondobar are very poor, but I do not know if it is from worms ; the description on Exhibit "C" is very fair, but in my opinion there is another 100 acres suited for agriculture ; the intersecting fence is no use at all ; it will not control sheep or cattle ; the wire is of very little service ; I would estimate its value at £3 per mile for removal ; the labour of fencing similar to that on the north and east boundary would cost now £8 11s. per mile ; the fencing on those boundaries is not a sufficient fence ; I am erecting fencing—posts 10 feet apart, seven wires ; the line is cleared free of anything that might fall on the fence ; the total cost was £21 10s ; it was done by weekly work ; I have 1½ mile post up and one-third of a mile bored ; I have had experience in ringbarking ; I consider the original cost of the ringing on the settlement lease would be 8d. to 9d. per acre ; it would cost £1 per acre to clear the green timber on this settlement lease for the plough ; I should not think there were more than nine or ten trees to the acre ; I based my estimate on this assumption ; a man has contracted to clear 20 acres on my settlement lease, with larger trees than on my brother's land, for £1 per acre ; the trees are larger than on my brother's ; he has not commenced yet ; he wants to take 50 acres instead of the 20 ; his name is Edwin Blackman, Quirindi his address ; ringbarking pretty well doubles the carrying capacity the first few years, but after nine or ten years it goes back ; I have had my attention drawn to this ; there is not much difference in this land in its present state and land not rung ; I would sooner have the timber green and ringbark it myself, as I could do it in slack times, and besides I would be sure of having the full benefit of it ; I would have to wait between three and four years before I could start clearing it as dead timber ; for the first few years I would not have much time to clear, as I would be occupied in other work, and the timber would be pretty well dead by the time I would be ready to clear ; I have had experience in wheat-farming.

*By the Chairman* : I am 28 years old ; I have been farming, fencing, and working on a station, and the owner of sheep in a small way.

Do you mean to say that it is your deliberate opinion that ringbarked country, instead of improving as years go on, deteriorates for grazing purposes after the first two or three years ? It is at its best two or three years after, and after five years it goes back, as the ground gets hard, and there seems to be only short grass that grows on it, which burns off very quickly ; I fancy that the timber that has been dead ten or eleven years is easier cleared than timber dead three or four years ; I think it is a great deal easier.

*By Mr. Creagh* : I have the adjoining settlement lease, portion 37 ; I took it up in July, 1896 ; the soil and timbers are much the same on the two leases ; there was some ringing on my settlement lease when I took it up ; I do not admit the ringing on my brother's settlement lease has doubled the carrying capacity ; it did a few years after ; I think the ringing of my land was done about the same time as that on my brother's ; it was all the one paddock ; I do not think I stated to the Land Board in September that the ringing on the part rung on my land doubled the carrying capacity ; I may have ; my brother gave evidence on my behalf then ; he was working on my land, and had plenty of opportunity of seeing the land he was going to take up ; my estimate of cost of clearing green timber is on the assumption there are nine or ten trees to the acre ; Blackman could not get lamb-shearing at Wondobar, and came looking for work ; I did not know my brother's settlement lease before it was ringbarked ; I do not consider the ringbarking has improved the country, judging from green country in the locality ; I was farming on my own account between five and six years ; I had sheep before that ; I was partner with my father ; the greatest number of sheep we had was 500 ; afterwards I had 300 myself ; I sent in stock returns in my own name ; I have done a little ringing by contract ; my last contract was about four years ago ; it was Blackman who offered to make the tank for 6d. per yard ; he would find his own plant ; I have only known the Spring five or six months ; it is lowering ; the men working at the fencing are Jack Dowd, from Manilla, and Blackman ; I had three other men, but they are not working now ; I work at it myself sometimes ; I was here when this case started, and was outside the court all day yesterday ready to give evidence ; I was not called till this morning.

PERCY A. SAMPSON.

Sworn by P. A. Sampson, at Gunnedah, before us, }  
 this 17th day of February, 1897,—

WILLIAM FREEMAN, Chairman.  
 JAMES G. DIGHT, } Members.  
 ALEX. CRAWFORD, }

This deponent, *Samuel Hole*, Manager of Wondobar Station, being duly sworn, maketh oath, and saith as follows :—

*By Mr. Creagh* : I have been forty years engaged in pastoral pursuits, and I have been managing stations thirty-five years ; I managed Gullendaddy seven years, Bomera nearly twenty-eight years, and I have also managed other stations ; I know portion 54, parish Wondoba, county Pottinger, taken up by Mr. Sampson ; I inspected it with a view to giving evidence in January last, and I have been over the portion a dozen times ; all the suckers, except those growing out of the ground, can be knocked off with an axe ; on one part there are a good many suckers ; the area rung could be suckered for 2d. to 3d. an acre ; the thick suckers are on 300 or 400 acres, the balance is not badly suckered ; I wait from two to four years before I sucker ringbarking ; there are not worms in the sheep on Wondobar ; the cost of clearing similar land to the settlement lease with the timber green would be about £2 5s. per acre.

*By the Chairman* : There would be about twenty trees to the acre.

*By Mr. Creagh* : As the land is now the cost of clearing for the plough would be about 10s. or 12s. per acre.

*By the Chairman* : I cannot say how much pine scrub there is on the ringbarked area.

*By Mr. Creagh* : The pine is very close together ; one blow of a billhook would cut any one of the pines off ; there is also pine scrub on the land unringed, but there is no difference—it is as thick in the one place as the other ; I have had experience in this kind of country ; there is no doubt that the ringing has doubled the carrying capacity ; wallabies would come there more after the ringing on account of the sweet grass, but I should say that the statement that they come in such numbers as to render the land worse than it was before is not correct ; I should say the water in the tank was about 15 inches deep in January last ; I should say a man provided with plant and horses should do tank excavation 3d. a yard cheaper than if he found his own plant.

*By Mr. Sampson* : I think this settlement lease land that is ringbarked would carry twice as many stock as similar land adjoining unringed, notwithstanding the marsupials and native dogs ; it is sound sheep country.

*By the Chairman* : Is it safe sheep country ? Undoubtedly.

By

*By Mr. Sampson*: It is more valuable for sheep than cattle; if wallabies are in the adjacent country there is no doubt they would come in great numbers to the ringbarked part; if they did come in great numbers the carrying capacity would be lessened; I think they have lessened the carrying capacity; it is merely a question as to the number of wallabies that come there; I believe there are a great many wallabies there; I have seen pines on the land 6 inches in diameter; these would be in the pine scrub; there are odd ones thicker than the rest.

This deponent, *Edwin Woodward Turner*, being duly sworn, maketh oath, and saith as follows (recalled):—

*By the Chairman*: The information on Exhibit "C," as to the area of agricultural land, is in accordance with my report; there is more than that arable, but 500 acres is the best; my report is now marked Exhibit "D," Appendix 1; by my evidence yesterday, I believe there are upwards of 2,000 acres of arable land; I described it as first-class to good—500 acres first-class; on my recent inspection I did not inspect as to agricultural land; now I consider I took too sanguine a view of the quality of most of the agricultural land yesterday; I was aware of subsection 1 of section 24 of Crown Lands Act of 1895 at time of my report, and I thought the land was too good for settlement lease when I was surveying it; I cannot say there is no spring at the place marked "S"; it is scrubby there, and I may have missed it.

*By Mr. Creagh*: Having heard all about the spring, I still consider the dam necessary; if there is a spring as described by the other witnesses, the subdivision fence is not valueless or useless; the embankment is placed about 2 chains below the excavation; I believe, from the size of the present suckers, that the whole of the ringing has been suckered once; I think that nine out of ten of the suckers could be knocked off with an axe easily; about three years ago the worms were bad everywhere; they were no worse at Wondobar than they were at Boggabri; they are not bad now, and were not bad last winter; I graze sheep of my own; I think the wallabies were reduced by shooters; I think there are less now than there were three years ago; I graze sheep, and do a little farming on land adjoining.

*By the Chairman*: I have 5,000 acres, on which I run about 1,600 sheep; I am not half stocked; wallabies and dingoes drove me off one side.

*By Mr. Creagh*: It is more on account of want of capital than trouble from the marsupials and dingoes that I have not more stock; the excavation was overflowing about three years ago; it was fairly full when I inspected the improvements in connection with an application for the extension of the pastoral lease; that was about three years ago.

*By Mr. Sampson*: My opinion of the land now is that 100 acres is first-class agricultural land, and 500 acres good—I mean 600 acres altogether; the information as to improvements on Exhibit "C" is from my report.

*By Mr. Creagh*: Since forming my estimate of the values of improvements, as mentioned in Exhibit "C," I made a detailed inspection, and my evidence is a result of that inspection; in fixing the value of the ringing, I thought that I was bound by the cost at present rates.

This deponent, *Thomas Henry Hall Goodwin*, of Gunnedah, grazier, being duly sworn, maketh oath, and saith as follows:—

*By Mr. Creagh*: I have been living in this district nearly twenty-five years; I have been a licensed surveyor and stock-owner; I surveyed the road on the north of the settlement lease; I know portion 54, parish of Wondoba; I have not been over it for six or seven years; I know similar country in the district that has been rung; speaking generally, ringbarking doubles the carrying capacity; this would apply to the land in question, notwithstanding the marsupials; the cost of clearing for the plough, timber—green timber—on this land would be £2 to £2 15s. per acre; £2 would be a low estimate; I cannot say how many trees to the acre; it is the ordinary forest country of the district; the sweetened grass attracts the wallabies, which are in numerous colonies in the adjacent lands; I held land adjacent up to some time last year; I have never known wallabies to be attracted, as a consequence of the ringing, in such numbers as to render the land worse than it was before being rung; if the land had not been part of Wondobar leasehold area there is no doubt it would have been selected long ago at £1 per acre; I have known similar land to bring more than £1 per acre—land improved to about 10s. per acre, inclusive of ringbarking; I am referring to conditional purchases.

*By Mr. Sampson*: What distance from town would this be? From 8 to 40 miles.

How far is this settlement lease from Gunnedah? About 15 miles. The £1 would be in addition to the amount owing to the Crown; I have never noticed any ringbarked country worse than it was before ringing, caused by the attraction of wallabies to the sweetened grass.

This deponent, *Edwin Woodward Turner*, recalled:—

*By the Chairman*: The fence "W X Y" was erected about a year before I applied for my conditional lease 85-52; the years in which the adjoining conditional leases were taken up, viz., years 1887 and 1891 are indicated in Exhibit "A."

E. W. TURNER.

Sworn by E. W. Turner, at Gunnedah, this }  
17th day of February, 1897,—

WILLIAM FREEMAN, Chairman.  
JAMES G. DIGHT, }  
ALEX. CRAWFORD, } Members.

*Exhibit D, Appendix 1.—Evidence of E. W. Turner.*

Chairman: William Freeman.

Licensed Surveyor E. W. Turner to the District Surveyor, furnishing information in reference to portion numbered 54, parish of Wondoba, county of Pottinger. Plan transmitted under cover of letter dated 4th October, No. 95-21.—E. W. TURNER, Licensed Surveyor, 4th October, 1895.

1. Capital value per acre:—£1.
2. Most accessible railway station:—Curlewis, distance 7 miles.  
Most accessible township:—Gunnedah, distance 14 miles.
3. Means of access and description of roads to railway station and township:—Teams; unimproved, good bush walks over gravelly country.
4. Character of country (level, undulating, hilly, &c.):—Undulating, hilly to level; greater part gently undulating.  
Character of soil:—Red loam with stony patches; sandstone along east, volcanic towards north-west.  
Character of pasturage:—Fair; seedy and reedy towards the east, but good about the centre and south-west.
5. Climate:—Mild.
6. Mean annual rainfall:—26 inches.
7. Water supply and facilities for obtaining or storing same:—No natural surface water, but there is an abundant supply in a tank about the centre.

8. Present grazing capacity :— $1\frac{1}{2}$  acre to a sheep.  
Is any improvement of same possible (by ringbarking, clearing, providing an ample supply of water, &c.) ; and, if so, to what extent? The ringbarking is much in need of "sweetening," and there is a great deal of scrubby pine that should be cut down. By this means the capacity could be increased to about 1 acre to a sheep.
9. Agricultural capabilities :—Fair for 500 acres, about south-west part of portion.
10. Timber (nature and distribution of) :—Open forest country, timbered with box, pine, currajong, yarran ; nearly all ringbarked (the box) about ten years. Proportion of area of portion covered—the whole. Thick forest, timbered with scrub ; timbered with scrubby pine and a little hop ; proportion of area of portion covered—half.
11. Existence of rabbits or other noxious animals :—Wallabies are abundant, and dingoes are troublesome.
12. Whether clearing of scrub, or undergrowth, or noxious weeds should be a condition in the selection or lease :—The useless pine and hop should be destroyed, choice pine being preserved at intervals for timber.
13. Improvements (value, date of erection, and ownership at date of survey) :—Ringbarking 2,870 acres, 1884, at 9d.—£108 ; 6-wire fence, A B, 1884, £29 ; half present value of 6-wire fence, D E, made 1884, £19 ; 6-wire fence, F B, 1884, £44. Tank 30 x 30 x 2 yards, made 1884—£75 ; total £275, all the property of the pastoral tenant. (Of the ringbarking, 560 acres valued at £21, of the fencing 110 chains, or about, at £23 14s., are Crown improvements, as is also the tank, being on land reserved from sale continuously from 18th November, 1874, to 8th November, 1895, as reserves Nos. 577 and 2,014.—F.P. 13th April, 1896.)
14. Objections, on the ground of mining occupation :—Partly within coal-mining reserve, but not likely to be required for coal-mining.
15. Any special characteristics in connection with the land.

---

## No. 2.

### Messrs. Ross and Creagh to The Under Secretary for Lands.

Sir,

Tamworth, 6 March, 1897.

At the inquiry by the Gunnedah Land Board, on the 16th, 17th, and 19th ultimo, as to value and ownership of improvements on A. A. Sampson's settlement lease, No. 96-21, Gunnedah, the Board found that improvements consisting of some boundary and intersecting fencing and ringbarking, to the value of £121 6s. 1d., are the property of the occupation licensees of Wondobar holding (resumed area), and that a tank and fence round same and balance of boundary and intersecting fencing and ringbarking, to the total value of £226 4s., are the property of the Crown.

The occupation licensees have instructed us to lodge an application for the remission of the value of the improvements allotted to the Crown, and being dissatisfied with the value placed by the Board upon the ringbarking and fencing have also instructed us to appeal to the Land Court in respect of these. If the Land Court placed a greater value upon the improvements mentioned, their decision will only affect those which the Board have decided are our clients' property ; and they are, therefore, desirous that the Honorable the Minister for Lands should refer to the Land Appeal Court the question of value of those parts of the fencing and ringbarking which were decided to be the property of the Crown, and we have the honor to request that this will be done ; as, assuming that the Court will sustain the lessees' appeal, and that their application for remission will be granted, they will otherwise obtain only part of the value of the improvements effected by them. We may also point out that if their application for remission be not granted, the extra value which would be the result of an appeal will be lost to the Crown unless the matter is referred to the Court as suggested.

As the evidence is equally applicable to the Crown and lessee's improvements, the Crown need not incur any expense before the Land Appeal Court, as the two matters can be taken together and argued by our client's counsel.

We have the honor to request the favour of an early reply and prompt attention to the matter, as the time for lodging and serving the appeal will expire on the 19th instant.

We have, &c.,

ROSS AND CREAUGH.

---

Settlement lease application, 96-21, Gunnedah—A. A. Sampson.—Messrs. Ross and Creagh, solicitors for occupation licensees, of Wondobar resumed area, state that the Local Land Board at Gunnedah have appraised the value of improvements on the settlement lease at £121 6s. 1d., the property of the licensees, and £226 4s., the property of the Crown. The licensees intend appealing against the valuation of those improvements set down by the Board as their property, and to apply for a remission of the value of those said to be the property of the Crown. They are dissatisfied with the valuation of these latter, and desire that the Minister should appeal against the Board's valuation of them, so that if their application for remission is allowed, they will not lose part of what they consider the proper value. It should, perhaps, be stated that the writers intimate "that the Crown need not incur any expense before the Land Appeal Court, as the two matters can be taken together and argued by our counsel." Writers urge early consideration of the case, as time for appeal expires on 19th instant. Under section 24, subsection 3, it appears that the matter of appraisal of improvements, whether owned by Crown or otherwise, rests with the Minister—after inquiry and report by the Local Land Board—and if the Minister considers a reference to the Land Appeal Court desirable, there is no limit to the time in which such may be made (*vide* section 59, Crown Lands Act, 1895). As the case now stands, Messrs. Ross and Creagh wish the Minister to appeal on their *ex parte* statement. The papers are still with the Board, and if appeal be lodged with the licensees, will be forwarded to the Land Appeal Court before being sent here.—J. P. MCGUANNE, Miscellaneous Leases Branch, 11/3/97. Special.

Submitted. At present it will be sufficient for Ross and Creagh to be informed that the Department has not before it sufficient particulars to enable it to say whether it will have the case brought under review by the Land Appeal Court.—R.H.D., 12/3/97.

F. H. Wilson, Chief Clerk, 13/3/97. Inform.—W.M. HOUSTON, 15/3/97. Messrs. Ross and Creagh informed, 16/3/97.

## No. 3.

## Notice of Appeal to the Land Appeal Court from decision of Local Land Board.

New South Wales, }  
to wit. } Form 3, Crown Lands Acts.

WHEREAS on the 16th, 17th, and 18th days of February, 1897, a certain matter wherein it became necessary to determine the ownership at date of application of improvements on Alfred Austin Sampson's settlement lease No. 96-21 of 3,534 acres, applied for on 29th October, 1896, and confirmed on 16th February, 1897, and to appraise values thereof as on the date of application, came before the Local Land Board at Gunnedah, in New South Wales, for determination. And whereas the said Board determined that the ownership and values of the said improvements and the said determination is fully set out in Appendix A hereto. And whereas we are aggrieved by such decision, and desire to appeal therefrom to the Land Appeal Court: These are, therefore, to give you notice that we appeal as aforesaid, and that I deposit the sum of £5 as security for the costs of such appeal. The grounds of such appeal are set out below. We desire that this appeal shall be heard in Sydney.

Signed this 13th day of March, 1897.

WILLIAM FREDERICK ROBEY,  
ROBERT ALFRED ORVILLE GILL  
(Trustees for Alice Hungerford, Tamworth),  
By their Solicitor and Agent,

COLIN J. ROSS.

To the Chairman, Local Land Board, Tamworth.

*Grounds of Appeal.*

1. That the decision of the Board is against the evidence and weight of evidence.
2. That the Board was in error in not appraising the value of the improvements as to the incoming tenant.
3. That the basis of the Board's valuation was not in accordance with the provisions of sections 24 and 25 of the Crown Lands Act of 1895.
4. That the Board was in error in only allowing half value for the eastern boundary fence.

Received the sum of £5, referred to above.—T. W. WARD (*pro* Chairman), Tamworth, 13th March, 1897.

## No. 4.

## The Under Secretary for Lands to Messrs. Ross and Creagh.

Gentlemen,

Department of Lands, Sydney, 16 March, 1897.

Referring to your letter of the 6th instant, urging that the Secretary for Lands should, for the reasons advanced by you, appeal to the Land Appeal Court against the Local Land Board's appraisal of the value of the improvements belonging to the Crown on the settlement lease farm applied for by Mr. A. A. Sampson, I have the honor to inform you that the Department has not before it sufficient particulars to enable it to say whether it will have the matter referred to brought under review by the Land Appeal Court.

I have, &c.,

WM. HOUSTON,  
Under Secretary  
(*per* R.H.D.)

Application  
96-21, Narrabri

## No. 5.

## Notice of Appeal to the Land Appeal Court from decision of Local Land Board.

New South Wales, }  
to wit. } Form 3, Crown Lands Acts.

WHEREAS on the 16th, 17th, and 18th days of February 1897, a certain matter wherein it became necessary to determine the ownership at date of application of improvements on Alfred Austin Sampson's settlement lease No. 96-21 of 3,534 acres, applied for on 29th October, 1896, and confirmed on 16th February, 1897, and to appraise values thereof as on date of application, came before the Local Land Board at Gunnedah, in New South Wales, for decision. And whereas the said Board decided that there were Crown improvements to the value of £226 4s., and station improvements to the value of £126 6s. 1d. And whereas I am aggrieved by such decision, and desire to appeal therefrom to the Land Appeal Court: These are, therefore, to give you notice that I appeal as aforesaid, and that I deposit the sum of £5 as security for the costs of such appeal. The grounds of such appeal are set out below. I desire that this appeal shall be heard in Sydney.

Signed this 18th day of March, 1897.

AUSTIN SAMPSON,  
C/o A. H. SAMPSON,  
Upper Manilla.

To the Chairman, Local Land Board, Tamworth.

*Grounds of Appeal.*

- That the Board was in error in deciding that the ringbarking, the tank, and the intersecting fence were improvements of value to the incoming tenant.
- That even if the ringbarking, the tank, and the intersecting fence were improvements at all, then the Board's decision as to their value was far in excess of their real value.

Received the sum of £5, referred to above, at 10 a.m.—T. W. WARD (*pro* Chairman), Tamworth, 18th March, 1897.

## No. 6.

*Précis of Appeal Cases, Land Appeal Court.**A. A. Sampson (Settlement Lessee) v. Crown and the Trustees for Alice Hungerford.**Trustees for Alice Hungerford v. A. A. Sampson.*Section 51, Crown Lands Act of 1895, Land Court Case; *re* Barnes, No. 3,792.

ALFRED AUSTIN SAMPSON appealing against appraisalment of value of Crown and station improvements on his settlement lease 96-21 of 3,534 acres, applied for at Gunnedah, on 29th October, 1896, and confirmed on 16th February, 1897, at time of application; and William Frederick Robey and Robert Alfred Orville Gill, trustees for Alice Hungerford, by their solicitor and agent, Colin James Ross, appealing against appraisalment of values of improvements on the above-stated settlement lease at time of application therefor.

This is a specially important case under sections 6 and 44, Crown Lands Act of 1889, and section 51, Crown Lands Act of 1895, particularly as to appraisalment of the value of ringbarking some 2,870 acres, done many years back, partly under ringbarking permit and partly without authority—also partly on reserves from sale.

Sixty-three pages of evidence were taken on 16th and 17th ultimo, and at about quarter to 1 p.m. next day reserved decision was given thus:—

We determine the ownership and appraise the values as indicated in Appendix A hereto. Appendix A is thus:—

## Crown Improvements.

	£	s.	d.
Tank, 2,367 cubic yards at 9d. ... ..	88	15	3
Mixed fence around tank ... ..	4	0	0
27 chains of 6-wire boundary fence, 5-6,* at 3s. 9d. ... ..	5	1	3
83 chains of intersecting fence, 1-2* and 3-4,* at 2s. 6d. ... ..	10	7	6
1,770 acres ringbarking at 1s. 4d. ... ..	118	0	0
	£226	4	0

## Station Property.

	£	s.	d.
87 chains of 6-wire boundary fence, B 5,* at 3s. 9d. ... ..	16	6	3
Half value of 155 chains of boundary fence, WXY,* at 3s. 9d. per chain, 6-wire fence ... ..	14	10	8
137 chains of 6-wire intersecting fence, 2-3 and 4-5, at 2s. 6d. ... ..	17	2	6
1,100 acres of ringbarking at 1s. 4d. ... ..	73	6	8
	£121	6	1

Total value of both sets of improvements ... .. £347 10 1

As to the fence WXY\* on the easterly boundary, see Exhibit "A,"† it was at first contended by Mr. Creagh, for the occupation licensees, in effect, that under the decision of the Land Appeal Court in case 3,737, of Molesworth and Ware *v.* Gibson (Vol. 5, fol. 217, Pike)—Mr. Creagh stated he was speaking from memory—that Mr. Sampson, the settlement lessee, is successor in title to the occupation licensees, and that if an award were made against Mr. Sampson for the total value of that fence, he would be entitled to obtain half contribution from the holders of the adjoining lands, held under conditional leases 85-52, 91-21, and 87-14 respectively, being a settlement leaseholder under a lease having more than five years to run. (It is to be borne in mind, see page 63 of the evidence, that the fence WXY was erected before conditional leases 85-52, &c., were applied for.)

We cannot adopt the view advanced by Mr. Creagh, and deem that it would be most inequitable for Mr. Sampson to be placed in the position of having to pursue claims against the holders of the conditional leases.

Section 141, Crown Lands Act of 1884, does not seem framed to meet such a case as is involved in connection with the fence WXY, and we must, to the best of our judgment, proceed under section 44, Crown Lands Act of 1889. We deem that substantial justice is done by awarding against Mr. Sampson the amount of the half value of the fence WXY, as at the time of his settlement lease application.

This we consider more expedient than to incur the delay of a reference to the Land Appeal Court.

If the holders or owners of the conditional leases referred to are able to advance claim (if they have any claim to any proportions of the fence WXY at all), to more than half the remaining value of the party-fence, it will be open to the Board to proceed under Regulation 279, and without the intervention of a higher court, *i.e.*, if our present action in this special matter, as to the fence WXY, be not varied or set aside.

The evidence shows that the cost of the ringbarking is considerably less than our valuation thereof, but we are bound, in this matter, to have due regard to section 51, Crown Lands Act of 1895, as interpreted by the Land Appeal Court in the case of Barnes, No. 3,792 (Vol. 6, fol. 91, Pike), which we have referred to; we have also referred to case 3,737, Molesworth and Ware *v.* Gibson (Vol. 5, fol. 217, Pike), in view of Mr. Creagh's remarks.

We would point out that Mr. E. W. Turner (a witness) yesterday, 17/2/97, claimed to have practically settled, some years back, with the lessees of Wandooobar Leasehold Area (now Wandooobar Preferential Occupation License), as to contribution towards the party fence along the westerly boundary of his conditional leases 85-52, &c.—see Exhibit "A."

Mr. Creagh, solicitor, of Tamworth (of Rees & Creagh), on 16th and 17th instant, appeared for Messrs. Robey and Gill, trustees for Mrs. Hungerford, owner of the Wandooobar Preferential Occupation License and Estate. Mr.

\* Refers to marking on heliograph Exhibit A in the case. † Copy herewith for reference.—W.F., 19/3/97.

Mr. A. H. Sampson appeared on the same dates for his son, the settlement lessee ; he also attended to day.

(Then the signatures of the Board memo. at Court-house, at Gunnedah, under date 18th February, 1897.)

On the 13th instant notice of appeal, from William Frederick Robey and Robert Alfred Orville Gill, trustees for Alice Hungerford, by their solicitor and agent, Colin J. Ross, was received.

The alleged grounds are —

1. That the decision of the Board is against the evidence and weight of evidence.
2. That the Board was in error in not appraising the value of the improvements as to the incoming tenant.
3. That the basis of the Board's valuation was not in accordance with the provisions of sections 24 and 25 of the Crown Lands Act of 1895.
4. That the Board was in error in only allowing half value for the eastern boundary fence.

Yesterday at 10 a.m. notice of appeal from settlement lessee, Alfred Austin Sampson, was received. The alleged grounds are—

That the Board was in error in deciding that the ringbarking, the tank, and the intersecting fence were improvements of value to the incoming tenant.

That even if the ringbarking, the tank, and the intersecting fence were improvements at all, then the Board's decision as to their value was far in excess of their real value.

The decision in this case is practically a *précis*. I may, however, state that the difference between the cost and our appraised value of the ringbarking is in the Board's opinion the advantage to the settlement lessee in being able to start clearing for wheat-growing at a cheaper rate than if the timber were green, and stock-grazing more advantageously on account of the grass increase through the ringbarking of a number of years back ; interest on outlay being saved, and the increased profit that is quickly realised.

Submitted.

WILLIAM FREEMAN, Chairman,  
Tamworth, 19/3/97.

## No. 11.

## Office Memorandum.

In the Land Appeal Court of New South Wales, Tamworth, 24 June, 1897.

No. 4,757A.—Appeal by Alfred A. Sampson against the Board's decision in respect of improvements on his settlement lease No. 96-21, Gunnedah.

The land embraced in Sampson's application forms a farm of 3,534 acres, portion 54, within settlement lease area No. 50, notified on 30th November, 1895. The improvements are described in the notification as fencing, £92; ringbarking, £108; tank, £75—£275.

Section 24, subsection III, Act of 1895, provides that the value to an incoming tenant of any improvements on any such farm may be appraised by the Minister after inquiry and report by the Local Land Board in the prescribed manner, and such appraisal shall, as between the Crown or the owner of the improvements, as the case may be, and any person taking such farm, be conclusive evidence of the value of the improvements at the date of the appraisal.

See also Regulations 271-275.

The Local Land Board determined the ownership and appraised the value of the improvements, and found that there were Crown improvements to the value of £226 4s., viz. :—

	£	s.	d.
Tank, 2,367 cubic yards, at 9d. ... ..	88	15	3
27 chains 6-wire boundary fence, 5-6, at 3s. 9d....	5	1	3
Mixed fence around tank ... ..	4	0	0
83 chains 6-wire intersecting fence, 1-2 and 3-4, at 2s. 6d. ...	10	7	6
1,770 acres ringbarking, at 1s. 4d. ... ..	118	0	0
	<hr/>		
And station improvements to the value of ... ..	121	6	1
	<hr/>		
Total value ... ..	£347	10	1

The grounds of appeal are—

That the Board was in error in deciding that the ringbarking, the tank, and the intersecting fences were improvements of value to the incoming tenant.

That even if the ringbarking, the tank, and the intersecting fences were improvements at all, then the Board's decision as to their value was far in excess of their real value.

That the improvements are improvements to an incoming tenant, there can be no doubt. With regard to the intersecting fence, it is not necessary that a fence to constitute an improvement should form or effect an enclosure, or be on the boundary. In *re Fox* and in *re Bank New South Wales*, Land Appeal Court Reports, Vol. 3, pages 31 and 99.

Counsel should support the interests of the Crown as regards the valuation of the Crown's improvements, and attention is invited to Licensed Surveyor E. W. Turner's evidence with regard thereto.

WM. HOUSTON,  
Under Secretary.

18/6/97.

Approved.—J.H.C., 18/6/97.

## No. 12.

## Mr. A. H. Sampson to The Secretary for Lands.

Sir,

Town Hall Coffee Palace, Sydney, 14 July, 1897.

I have the honor to bring under your notice the decision of the Land Appeal Court given to day in *re Austin Sampson's settlement lease No. 96-21, Gunnedah*, by which decision ringbarking, which costs 9d. per acre, is valued to the incoming tenant at 5s. per acre.

This is tantamount to ordering the settlement lessee to quit, as it is quite impossible to pay such an amount and have any hope of profitable occupation of the land; and what is our fate to-day may be the fate of others to-morrow. I know, also, that such has been the fate of some would-be settlers quite recently.

The *Gazette* notice which announced this settlement lease open for application gave the value of the ringbarking as 9d. per acre (£108 for the whole), and the appraisal of value by the Land Board which we expected to have to deal with was the question of fact as to whether the ringbarking could be done for this in the first instance, and what is its unexhausted value now, owing to a great quantity of suckers having sprung up. We certainly thought, and believe we are right in still thinking, that the value which inheres in the land—its capacity to produce wealth—is its capital value, and as such belongs to the Crown—is, in fact, the very thing it asks us to pay rent for—that the capacity to produce is in the land as in a reservoir, and that ringbarking is but the tap which allows it to flow. However, the Land Appeal Court has held otherwise; has, in fact, held that the value inheres in the improvements and not in the land.

I cannot believe that this view, so disastrous to settlement, is concurred in by you. I do not know what can be done in the matter; but something may be suggested to your mind by my bringing the matter promptly under your notice. If nothing can be done, we must, beyond all question, abandon the settlement lease.

I have, &c.,  
A. H. SAMPSON.

No. 13.

## No. 13.

## Office Memorandum.

A. A. Sampson's Case.

THIS case has reference to the question of value of improvements on 3,534 acres of land applied for under settlement lease.

In the *Gazette* notice, setting the land apart for settlement lease, the "nature and reported value of improvements" were given as follows:—"Fencing, £92; ringbarking, £108; tank, £75." These were the values reported by the District Surveyor (*vide* Misc. 95-9,089 Dep.). The capital value of the land was fixed at £1 per acre; the annual rental is therefore £44 3s. 6d.

The application was confirmed on the 16th February, 1897.

On the 18th February the Land Board appraised the value of the improvements, and decided that the Crown owned £226 4s. worth, and the occupation licensee £121 6s. 1d. worth, a total of £347 10s. 1d. In giving their decision the Board said, "The evidence shows that the cost of ringbarking is considerably less than our valuation thereof, but we are bound in this matter to have due regard to section 51, Crown Lands Act, 1895, as interpreted by the Land Appeal Court in the case of Barnes (No. 3,792, vol. 6, folio 91, Pike), which we have referred to. We have also referred to case Molesworth and Ware *v.* Gibson, in view of Mr. Creagh's remarks."

Two appeals were made—one by the occupation licensee, and one by the applicant for the land.

The grounds of appeal were:—

By the Settlement Lessee—

That the Board was in error in deciding that the ringbarking, the tank, and the intersecting fences were improvements of value to the incoming tenant.

That even if the ringbarking, the tank, and the intersecting fences were improvements at all, then the Board's decision as to their value was far in excess of their real value.

By the Occupation Licensee—

1. That the decision of the Board is against the evidence and weight of evidence.

2. That the Board was in error in not appraising the value of the improvements as to the incoming tenant.

3. That the basis of the Board's valuation was not in accordance with the provisions of sections 24 and 25 of the Crown Lands Act of 1895.

4. That the Board was in error in only allowing half value for the eastern boundary fence.

Sampson's appeal was dismissed, and Robey and Gill's appeal sustained, the decision of the Land Appeal Court on both appeals being that the Board's appraisal should be sustained so far as concerned all the improvements except the ringbarking, which should be allowed for at 5s. per acre.

The following table shows the different improvements as appraised by the Board:—

Crown Improvements.						£	s.	d.
Tank, 2,367 yards, at 9d.	...	...	...	...	...	88	15	3
Mixed fence round tank	...	...	...	...	...	4	0	0
27 chains six-wire boundary fence, 5-6, at 3s. 9d.	...	...	...	...	...	5	1	3
83 chains six-wire intersecting fence, at 2s. 6d.	...	...	...	...	...	10	7	6
1,770 acres ringbarking, at 1s. 4d.	...	...	...	...	...	118	0	0
						£226	4	0
Station Property.						£	s.	d.
87 chains boundary fence, at 3s. 9d.	...	...	...	...	...	16	6	3
Half value 155 chains boundary fence, at 3s. 9d.	...	...	...	...	...	14	10	8
137 chains six-wire fence, at 2s. 6d.	...	...	...	...	...	17	2	6
1,100 acres ringbarking, at 1s. 4d.	...	...	...	...	...	73	6	8
						£121	6	1

In this way the Board's appraisal of the Crown's improvements has been increased to £550 14s., and those of the licensee's to £322 19s. 5d.; in other words, the total value of the improvements has been raised from £347 10s. 1d. to £873 13s. 5d.

Mr. Sampson asked the Land Appeal Court to make its decision appealable, so that he could refer to the Supreme Court, but the Court, it is understood, declined to do this, holding that the question was one of fact, and not of law.

By the 39th rule of the Land Appeal Court a fortnight is given for lodging a notice, with £20 deposit, requiring the Appeal Court to state a case for the Supreme Court. The Court may (on personal application, it seems) extend the time, but in the present instance the Court would, it seems, have to sit specially for the purpose, as there will be no regular sitting within the fortnight.

Even should a notice be lodged, the probability is that the Court will refuse to state a case, on the ground that the question is not one of law; and should the Court take up this position the only course open would be to apply to the Supreme Court for a mandamus.

In the present case the Crown was represented at the Court in support of the Crown's interests; but this was done merely as a matter of course.

Mr. Sampson, who, with Mr. Moore, M.P., has personally attended the Department in connection with the case, thinks that the Crown should support him and pay his expenses in an endeavour to pursue the matter. He holds that there is a question of law involved in the case, and that the question has reference to the basis of value on which the Appeal Court's decision rests, and that the question being a general one which would extend beyond his own individual case, the Crown should assist in the direction indicated.

H. CURRY, 17/7/97.

The

The case is fully set out in the above memo. The Land Appeal Court appear to have followed in this instance the doctrine laid down by them in the case of *Greene v. Hargraves*, and valued the improvements even above the actual cost. Possibly counsel's opinion might be asked as to whether there is any means of securing a review of the decision. Special.—Wm. Houston, Under Secretary, 17/7/97.

Counsel's opinion may be taken. I have written my views very fully in a minute to-day, copy of which may go with these papers.—J.H.C., 20/7/97. A copy of the Minister's minute is placed herewith. Forwarded to the Crown Solicitor. Urgent.—H.A.G.C. (*pro* Under Secretary), B.C., Lands Department, 20/7/97.

### Office Memorandum.

#### Assessment of Improvements.

THERE can be no question that Parliament has definitely laid down a basis for the assessment of value of improvements on Crown lands, viz., the value to an incoming tenant. Therefore no other basis, such as cost, is admissible, and the decision of the Land Appeal Court in *Greene v. Hargrave* is absolutely and clearly unassailable. Certain "*obiter dicta*" occur in the Court's judgment in this case, but they must be ignored until such time as they become actual decisions of the Court.

Having agreed that the Land Appeal Court decision in *Greene v. Hargrave* is sound, what follows? That the Land Boards must find on whatever evidence may be before them what is the value to an incoming tenant. There are various modes of ascertaining the value, but it is the Board's duty to decide on the case as presented to it, and if either party fails by his evidence to demonstrate his case as favourably as circumstances may warrant, he has no remedy against a decision ultimately founded on the actual evidence. Evidence of the value of the land unimproved is one good method; evidence of what it would cost to effect the improvements in actual outlay, in interest and loss of time, and, on the other hand, the increased usufruct of the land improved is another sound method. But in each case there should be evidence of the force of Nature which is silently working to complete the improvement begun by human hands. Actual expert testimony, however, on all these points must be before the Board ere it can be expected to give a proper decision. If any such evidence be absent, then the decision given must be accepted on the evidence adduced.

If a case be properly represented before the Board, I take it that the following is the rule of a wise decision:—

- 1st. That the difference in value between the land in an unimproved state and in the improved state is the value of the improvement.
- 2nd. That unless there be evidence that such value or a portion of it is included in the capital value of the land, then the value of the improvement ascertained under No. 1 should be so declared by the Board. (N.B.—Few cases will be found to be complicated by any of the improvements, value being included in the capital value; but when such cases exist they will be met by my remarks later on.)
- 3rd. The value under the foregoing being ascertained, the Board should find if there are any circumstances either of tenure, area, or conditions to diminish it to the incoming tenant, and if such circumstances exist they should make such clear, and diminish the value accordingly. If none such exist then the value remains, and in either case the result is the value to an incoming tenant.
- 4th. The next question arising for the Board's decision is, who is the owner of the value of the improvements? Clearly, to my mind, the outgoing tenant is not entitled to claim the benefit of Nature's work in addition to his own. If so, the man who added a ton of manure, costing £6 in material and labour, might claim the value of increased crops for three or four years as the value payable to him for his improvements, crediting Nature and the soil with nothing. In ringbarking, man kills the tree; then Nature does the rest, and the result is that the same soil undergoes, under the influence of the sun and air, certain chemical changes which render it more productive and less difficult to work. I take it that the owner in fee is entitled to claim the value effected in the soil by natural agencies, whilst the outgoing tenant is entitled to claim the cost, the interest on cost on a liberal scale, and reasonable compensation for any other proved loss in time, or other element relevant to value.
- 5th. When adjustment is made as to relative ownership by the Crown and the outgoing tenant, there should be taken into consideration the capital value, so as to exclude any possibility of a double charging of any part of the value of an improvement.

Now, in the cases which have been before me, there has been no clear handling of the evidence, so as to elucidate the points essential to a wise decision, and my difficulty has been to seize upon a case which will be a fit one for a test case.

In Sampson's case there seems to me to be this difficulty—that the cardinal principles of assessment as above set out were lost sight of by the Land Board, and, on the evidence before that body, the Land Appeal Court has given a decision which cannot be set aside as bad in law, inasmuch as it has set up no hard and fast basis for its decision, but has given its assessment on the evidence and weight of evidence as it appeared to the Court. The surveyor (Turner) testified that the land unimproved was worth £1 per acre; improved, £2 per acre; and this is not contradicted to any extent. That leaves a value of £1 per acre, of which the Court assess 5s. to be outgoing tenant's. My opinion is that the Land Appeal Court's decision is a finding on fact, and not on law; and, that being so, no appeal can be sustained, as the Supreme Court cannot review the decision of the Land Appeal Court on questions of fact. For these reasons, the Crown will not be justified in joining in or supporting an appeal in this case, but an endeavour will be made to have the case referred to the Land Appeal Court again, so as to have a clear distinction drawn as to the Crown's rights, as apart from the tenant's, in the value of improvements.

J.H.C.,

## No. 15.

Extract from *The Daily Telegraph* of 21 July, 1897.

Value of Improvements to an Incoming Tenant.

*To the Editor.*

Sir,

As the interpretation of the words "value of improvements to an incoming tenant" by the Land Appeal Court must result in the ruin of many who have taken up land for settlement, and also cause a loss of hundreds of thousands of pounds to the Crown, as well as prohibit settlement on improved lands in the future, the matter becomes one of such grave public import that I crave your indulgence while I endeavour to show that the Land Act is right and the Land Appeal Court wrong.

The position I take is, that almost the whole of the evidence given before the Local Land Boards as to the value of improvements to an incoming tenant is absolutely irrelevant to the question, though it would be quite relevant if the question were the determination of the capital value of the land itself. To illustrate:—

Suppose the Crown to have two pieces of swampy land open for settlement, each of which would be worth £2,000 when drained, but at present are worth only £20 each. Assume that one of these pieces of land is made swampy by a bar of hard rock which crosses it, and which it would cost £1,000 to cut through, while the other piece is made swampy by a bar of soft rock which can be cut through for £100. How would the Crown determine the capital value of these two pieces of land? Evidence would be adduced to bring out the facts above stated, and the capital value would be determined at £2,000 each, less the costs of the improvements, *i.e.*, the capital value in the one case would be £1,000; in the other, £1,900; and it is upon these values that the Crown would charge rent to an incoming tenant. Here the evidence is good and relevant. But, now, had there been an outgoing tenant, from whom the Crown had resumed one portion of this land, and who had cut through (say) the soft rock, would this evidence, which had already determined the capital value of the land, be relevant also to determine the value of improvements to an incoming tenant. Is it competent for the outgoing tenant to claim from the incoming tenant £900 as the result of £100 outlay in improvements, seeing that this £900 has already been included in the capital value, for which the incoming tenant is charged rent? Further, in what way can the capital value of land be ascertained except by taking its productive capacity less the cost of obtaining that productive capacity? Of course, I do not say original cost; that may be greater or less than the value, but I do say cost to date valued now, which includes cost of maintenance of improvements as well as interest on outlay, while waiting for a return. In other words, that the value of improvements, as of anything else, cannot be more than the price at which the incoming tenant could produce them for himself. But here we must carefully guard ourselves from considering the usufruct of the land as pertaining to the improvements, because that has already been absorbed in the capital value.

As, however, the great *casus belli* is the value of ringbarking, permit me an illustration which, I think, will cover that.

Assume that an outgoing tenant has three pieces of exactly similar land—one piece near Sydney, another at Gunnedah, and the third 500 miles still further west. Suppose the land, good and lightly timbered, and ringbarked at a cost of 8d. per acre, that previous to ringbarking it would carry a sheep to 2 acres, but will now carry a sheep to 1 acre; in fact, that ringbarking has doubled the carrying capacity, and that the grass of a sheep is worth 8d. per annum. Then, according to the Land Appeal Court, the outgoing tenant's position would be this: For his original outlay of 8d. an acre he would, except during the first year, receive 100 per cent. per annum; 1,000 per cent. altogether if he held the land ten years, and would now be entitled to 5s. per acre for the land at Gunnedah, 2s. 6d. per acre for the land further west, because the profit on such land for grazing would be only half that of the Gunnedah land, and 10s. per acre for the land near Sydney, because the profit on grazing there would be double that at Gunnedah. He it is who, according to the Land Appeal Court, is to derive the advantages accruing from the position of the land with respect to railways and markets. But, observe, if this land had not been ringbarked all this difference of value of position would have been claimed by the Crown as the capital value of the land. There is not a supreme question of law to decide as to whom this value belongs. The Crown claims it, and the outgoing tenant claims it, and is allowed it by the Land Appeal Court; yet it cannot belong to both, nor should the incoming tenant be asked to pay for it twice, as he now is—once in the form of capital value, and again as value of improvements to incoming tenants.

The value of improvements to the incoming tenant is dependent upon the position of the land with regard to markets; and I submit, with all due deference to the Land Appeal Court, that the value of position, less cost, as I have defined it, belongs to the Crown. Were it otherwise, a conditional purchaser who should ringbark his land as soon as he took it up could rightfully claim at the end of five years that he had improved his land up to the requirements of the Act by simply ringbarking.

So far I have dealt only with grazing land; but if we substitute agricultural for grazing land in one hypothetical case, the result would be very startling. For the land far west the outgoing tenant would get nothing as the result of ringbarking, except the 2s. 6d. an acre, because however good for agriculture the land might be, there would be no market. At Gunnedah he might get £1 an acre, and near Sydney £20, or even £100. I think, therefore, that it cannot possibly be maintained that evidence which is used to determine the capital value of land is relevant also to determine the value of improvements on that land, and so give a double value where only one exists.

Sydney, 20 July, 1897.

Yours, &c.,  
A. H. SAMPSON.

### No. 18.

The Crown Solicitor to The Under Secretary for Lands.

Sir,

Crown Solicitor's Office, Sydney, 26 July, 1897.

I have the honor to return herewith the papers, numbered as in the margin, forwarded with your blank cover communication of the 20th instant for me to obtain the opinion of counsel on the points raised therein. Misc. Lease No 8,405.

I have obtained Mr. Hanbury Davies' opinion, of which I forward a copy herewith.

I have, &c.,

GEO. COLQUHOUN,  
Crown Solicitor.

[Enclosure.]

A. A. SAMPSON'S CASE.

(Opinion.)

On account of its great importance, I have considered this case very carefully, with the view to discover if by any means the opinion of the Full Court can be obtained upon it.

It is only when a principle of law is involved in any case that the decision of the Land Court is subject to review, and I fail to see from the manner in which this case has been brought before the Land Board and the Land Court how the latter Court can be asked to state a case for decision by the Supreme Court in this particular manner.

If Mr. Sampson asked the Land Court to state such a case, he would, I have no doubt, be met with a refusal, and on an application for a mandamus, he could not, in my opinion, point out from the papers in the case to which he would be restricted that a principle of law "arose in the case before them."

If the important point which he wishes decided had been brought before them, they would have been bound to decide it one way or the other; but I understand they delivered no judgment, but merely varied the decision of the Board by increasing the amount payable by way of ringbarking, which the Board themselves had assessed at a rate higher than cost price.

If, then, no point of law was brought before them, they cannot be compelled to state a case, and, in my opinion, the application to the Court in Banco made with this object would for this reason fail.

Then the Act provides no other way of getting the opinion of the Supreme Court in this matter, so, in so far as this particular case is concerned, the decision of the Land Court must be regarded as final.

In any future case this point can be so raised by the incoming tenant as to come before the Land Court in a manner which would give the right of having a case stated, involving a full discussion of the principle on which the value of the particular improvement by ringbarking to the land should be arrived at.

I venture, too, to suggest to the Crown, if they should be disposed to assist any incoming tenant in such a matter, to go further, and get the point raised for the purpose of decision as to whether ringbarking is an "improvement" at all within the meaning of section 51 (a) and (b); for if the subject-matter of this section should ever form a portion of an Amending Act, consequent on the decision of the Full Court, this point might at the same time be rendered absolutely clear.

Selborne Chambers, 24th July, 1897.

HANBURY DAVIES.

For the information of the Minister.—W.M. HOUSTON, 28/7/97.

Since writing the above I have been informed that Sampson has sent in a notice asking the Land Appeal Court to state a case for the Supreme Court, and that the notice may come before the Court on the 17th proximo—the date of next sittings. It is suggested for consideration whether Mr. Davies should not be instructed, on behalf of the Crown, to render Mr. Sampson whatever assistance may be possible when the matter comes before the Land Appeal Court.—W.M. HOUSTON, Under Secretary, 28/7/97. Special.

Approved.—J.H.C. The Crown Solicitor.—H.A.G.C. (*pro* Under Secretary), B.C., Lands Department, 29/7/97.

### No. 19.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir, Land Appeal Court of New South Wales, Sydney, 27 July, 1897.

I have the honor to inform you that I am in receipt of notice requiring the Land Appeal Court to state a case for the decision of the Supreme Court in the matter as per margin.

I have, &c.,

J. T. KEATING,

Registrar.

Send to Mr. Curry.—R.H.D., 29/7/97. Seen. The fact was personally ascertained and noted on the other papers.—H. CURRY, 29/7/97.

### No. 20.

The Crown Solicitor to The Under Secretary for Lands.

Sir, Crown Solicitor's Office, Sydney, 23 September, 1897.

I have the honor to return herewith the papers, numbered as in the margin, forwarded with your blank cover communication of the 29th July last, instructing me to brief Mr. Hanbury Davies to support Mr. A. A. Sampson's application to the Land Appeal Court to state a case for the decision of the Supreme Court.

The matter came before the Court yesterday, when it was arranged, at the suggestion of the Court, that the application should stand over until the final determination of the case of *Greene v. Hargraves*.

I have, &c.,

GEO. COLQUHOUN,

Crown Solicitor.

Sampson's case submitted for information.—H. CURRY, 29/9/97. Shortly. The Land Appeal Court have postponed Sampson's case until *Greene v. Hargraves*' case is dealt with.—W.M. HOUSTON, Under Secretary, 29/9/97. Seen.—J.H.C., 30th September, 1897.

97-8,633, Misc. Lease.

### No. 21.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir, Land Appeal Court of New South Wales, Sydney, 13 October, 1897.

I have the honor to inform you that the matter, as per margin, was brought before the Land Appeal Court sitting at Sydney on the 22nd ultimo, when, by the consent of all parties, it was arranged that this case should stand over (the time for stating a case being extended from time to time as necessary by order of the Court) until the case of *Greene v. Hargrave*, No. 4,942, shall have been decided by this Court; or in the event of either party requiring a case to be stated for the decision of the Supreme Court, until the decision of that Court. Mr. Sampson undertakes to give security for the payment of the amount found due by the Land Appeal Court to the outgoing tenant with interest at 5 per cent. per annum from date 22nd September, 1897, such sum and interest not to exceed £330. Security to be given within fourteen days from date (22nd September, 1897) to the satisfaction of Mr. Ross, solicitor, of Tamworth.

I have, &c.,

J. T. KEATING,

Registrar.

Appeal by A. A. Sampson against the Board's decision in respect of improvements on his settlement lease No. 96-21, Gunnedah.

### No. 22.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir, Land Appeal Court of New South Wales, Sydney, 16 February, 1898.

I have the honor to invite your attention to my letter of 13th October last, conveying the order of this Court in the appeal as per margin, and to inform you that as no appeal has been made in the matter of *Greene v. Hargrave* (L.C.C. 4,942) for the decision of the Supreme Court, this case may be mentioned at the sitting of the Land Appeal Court in Sydney, commencing 8th March next, for such further action as may be advised.

I have, &c.,

J. T. KEATING,

Registrar.

Appeal by A. A. Sampson against the decision of Board in respect of improvements on his settlement lease No. 96-21, Gunnedah.

This case was postponed pending the result of *Hargrave's* case. That case has been settled without reference to the Supreme Court. It is understood that Mr. Sampson has been informed of the case coming forward, and, presumably, his counsel will argue that there is a question of law which can and should be submitted to the Supreme Court. Mr. Hanbury Davies may be asked to appear and, on behalf of the Crown, to urge the reference.—H. CURRY, 21/2/98.

For approval.—W.M. HOUSTON, Under Secretary, 22/2/98. Approved.—S. SMITH, 24/2/98.

## No. 23.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir, Office of Land Appeal Court, Darlinghurst, 9 March, 1898.

I have the honor to inform you that the matter as per margin was brought before the Land Appeal Court of New South Wales, sitting at Sydney on the 8th instant, when the following order was made:—Case postponed to sitting of Court in Sydney, commencing 29th instant.

I have, &c.,  
J. T. KEATING,  
Sydney.

Appeal by A. A. Sampson against the Board's decision in respect of improvements on his settlement lease No. 96-21, Gunnedah.

## No. 24.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir, Land Appeal Court of New South Wales, Sydney, 16 April, 1898.

I have the honor to forward herewith a copy of the special case in the matter as per margin, as settled by this Court and proposed to be forwarded to the Prothonotary for the decision of the Supreme Court.

A copy has also been forwarded to the Crown Solicitor this day.

I have, &c.,  
J. T. KEATING,  
Registrar.

A. A. Sampson. appeal re settlement lease, No. 96-21, Gunnedah.

[Enclosure.]

In the Supreme Court of }  
New South Wales. }

In the matter of the Appeal of Mr. A. A. Sampson from the decision of the Land Appeal Court.

1. On 29th October, 1896, Alfred Austin Sampson made an application for settlement lease No. 96-21 of 3,534 acres, portion 54, part of Wondoba occupation license.

2. The said application was confirmed by the Tamworth Local Land Board at Gunnedah on the 16th day of February, 1897.

3. At the date of the said application for the said settlement lease, certain improvements, including ringbarking, were alleged to have been made upon the land so applied to be leased as aforesaid, and it became a matter for investigation before the said Local Land Board to determine the ownership at date of application, and to appraise the values as on the date of application of the said alleged improvements.

4. On the 18th day of February, 1897, the said Local Land Board among other things determined the ownership, and appraised the value of the said ringbarking as follows:—

Crown improvements.—1,770 acres ringbarking at 1s. 4d. ....	£118 0 0
Station property.—1,100 acres ringbarking at 1s. 4d. ....	73 6 8

5. The said Alfred Austin Sampson appealed from the said decision of the said Local Land Board to the Land Appeal Court on the grounds following:—

- (i) That the Board was in error in deciding that the ringbarking, the tank, and the intersecting fence were improvements of value to the incoming tenant.
- (ii) That even if the ringbarking, the tank, and the intersecting fence were improvements at all, then the Board's decision as to their value was far in excess of their true value.

6. William Frederick Robey and Robert Alfred Orville Gill (trustees for Alice Hungerford), the holders of Wondoba occupation license, also appealed from the said decision of the said Local Land Board to the Land Appeal Court on the grounds, among others—(1) that the decision of the Board was against evidence and the weight of evidence; (2) that the Board was in error in not appraising the value of the improvements to the incoming tenant; (3) and that the basis of the Board's valuation was not in accordance with the provisions of sections 24 and 25 of the Crown Lands Act of 1895.

7. The said appeals came on for hearing before the said Land Appeal Court on the 25th day of June last, and were by consent heard together, and the appeal of the said Alfred Austin Sampson was dismissed, and the appeal of the said William Frederick Robey and Robert Alfred Orville Gill was sustained, and an order was made by the Land Appeal Court determining the value of the said ringbarking at 5s. per acre.

8. The said sum of 5s. per acre is far more than the cost of the said improvements; but the Court were of opinion that, in estimating the value of improvements to an incoming tenant under sections 24 and 25 of the Crown Lands Act of 1895, the Court might take into consideration the increased value given to the holding by reason of such improvements, and based their decision upon this principle. The appellant contended that the additional value given to the land reverted to the Crown and was presumably charged to the incoming tenant in his rent, and was not payable by the incoming to the outgoing tenant.

The question for determination of the Supreme Court is whether the Land Appeal Court was right in determining the value of improvements under sections 24 and 25 of the Crown Lands Act of 1895 upon the principle above stated.

## No. 25.

Mr. A. H. Sampson to The Registrar, Land Appeal Court.

Sir, Peel-street, Tamworth, 18 April, 1898.

I have the honor to acknowledge the receipt of your letter of 16th instant, No. 4,757A, covering draft case *in re* Austin Sampson's appeal *re* settlement lease No. 96-21, Gunnedah.

My contention before the Local Land Board at Gunnedah (which I have no doubt the Board would admit) was in these words:—"The value of improvements, as of anything else, cannot be more than the price at which the incoming tenant could produce them for himself." I used exactly the same words before the Land Appeal Court at Tamworth; and Mr. Kemp, in replying to them, said:—"Mr. Sampson's contention will not do; he did not produce the axe—he did not make the axe," and I repeated the words in the columns of the *Daily Telegraph* in a letter dated 20th July, 1897.

Rightly or wrongly, these words of mine appear to me to convey a very different meaning to the words "actual cost" as used in the draft case; in fact, my counsel, Mr. Wise, was instructed that "actual cost" was not a criterion of value.

Desiring

Desiring to treat the Court with the greatest respect, I am at a loss to know how far I may go without (apparently, though certainly without intent) infringing that respect; but if I am at liberty to make a request through you, I would ask that my contention be stated in my own words as given above as nearly as possible; and that paragraph 7 (draft case) should be altered by putting in the words—"that at which the incoming tenant could effect such improvements for himself" in place of "the actual cost thereof," and that the necessary consequential amendments should be made in the wording of paragraphs 9 and 10.

I have, &c.,

A. H. SAMPSON.

No. 26.

The Crown Solicitor to The Under Secretary for Lands.

Sir,

Crown Solicitor's Office, Sydney, 18 April, 1898.

I have the honor to forward herewith a copy of the special case stated by the Land Appeal Court in the matter of valuation of the improvements upon A. A. Sampson's settlement lease No. 96-21, Gunnedah.

I shall be glad to receive instructions if it is desired to brief counsel upon the argument of the case before the Supreme Court.

I have, &c.,

GEO. COLQUHOUN,

Crown Solicitor.

Sampson's case stated to the Supreme Court. Should the Crown brief counsel? The Crown Solicitor forwards a copy of the special case stated by the Land Appeal Court *re* the matter of the valuation of improvements on A. A. Sampson's settlement lease No. 96-21, Gunnedah, and asks to be instructed whether he is to brief counsel upon the argument of the case before the Supreme Court. The question for the Supreme Court to decide is whether, in determining the value of improvements under sections 24 and 25 of the Crown Lands Act of 1895, the Land Appeal Court were right in taking into consideration any other element of value than the actual cost of effecting and maintaining such improvements. Upon application being made to the Land Appeal Court to state a case to the Supreme Court, Mr. Hanbury Davies was instructed to appear, and, upon behalf of the Crown, to urge the reference. The case is fully stated on 98-2,909, Miscellaneous Leases, herewith.—J. R. YORKE, 20/4/98.

It is submitted that counsel should be briefed. As Mr. Hanbury Davies has been in the case in its recent stage, he may appear. It is presumed Mr. Wise will appear for Mr. Sampson.—H. CURRY, Acting Under Secretary, 20/4/98.

Mr. Davies may appear, but must be careful how he argues, as my views are that Sampson deserves to win. The value of the ringbarking is caused largely by natural improvement of the soil, and is not a matter of private property. Mr. Davies should argue on the basis of the stand the Crown took in Hargrave's case, of which fully inform him.—J.H.C., 21/4/98.

[Enclosure.]

In the Supreme Court of New South Wales, on }  
appeal from the Land Appeal Court. }

In the matter of the Crown Lands Acts of 1884, 1889, and 1895.—*Re* Alfred Austin Sampson's Settlement Lease No. 96-21, Gunnedah.

Alfred Austin Sampson, appellant; the Minister for Lands, W. F. Robey, and R. A. O. Gill, respondents.

CASE stated by the Land Appeal Court for decision by the Supreme Court in pursuance of the sixth sub-section of section eight of the Crown Lands Act of 1859.

1. On 29th October, 1896, Alfred Austin Sampson made an application for settlement lease No. 96-21, Gunnedah, of 3,534 acres, being portion 54, and then forming part of Wondoba occupation license.

2. The said application was confirmed by the Tamworth Local Land Board at Gunnedah on the 16th day of February, 1897.

3. Certain improvements, consisting of a tank, fencing, and ringbarking, were, at the date of the said application, upon the land so applied for, and of these improvements some were claimed to be the property of William Frederick Robey and Robert Alfred Orville Gill, as trustees for Mrs. Alice Hungerford, and holders of the said occupation license, and others were claimed to be the property of the Crown; and it became a matter for investigation before the said Local Land Board to determine the ownership, and to appraise the value of the said improvements as at the date of such application.

4. On the 18th day of February, 1897, the said Local Land Board, among other things, determined the ownership, and appraised the value of the said improvements as follows, viz. :—

Crown Improvements.

	£	s.	d.
Tank, 2,367 cubic yards, at 9d.....	88	15	3
Mixed fence around tank .....	4	0	0
27 chains of 6-wire boundary fence, 5-6, at 3s. 9d. ....	5	1	3
83 chains of 6-wire intersecting fence, 1-2 and 3-4, at 2s. 6d. ....	10	7	6
1,770 acres ringbarking, at 1s. 4d. ....	118	0	0
	£226	4	0

Station Property.

87 chains of 6-wire boundary fence, B5, at 3s. 9d. ....	16	6	3
Half value of 155 chains of boundary fence, W.X.Y., at 3s. 9d. per chain, 6-wire fence .....	14	10	8
137 chains of 6-wire intersecting fence, 2-3 and 4-5, at 2s. 6d.....	17	2	6
1,100 acres of ringbarking, at 1s. 4d. ....	73	6	8
	£121	6	1
Total value of both sets of improvements .....	£347	10	1

5. The said Alfred Austin Sampson appealed from the said decision of the said Local Land Board to the Land Appeal Court, on the grounds following:—

- (1) That the Board was in error in deciding that the ringbarking, the tank, and the intersecting fence were improvements of value to the incoming tenant.
- (2.) That even if the ringbarking, the tank, and the intersecting fence were improvements at all, then the Board's decision as to their value was far in excess of their real value.

6. The said William Frederick Robey and Robert Alfred Orville Gill also appealed from the said decision of the said Local Land Board to the Land Appeal Court on the grounds, among others,—

- (1.) That the decision of the Board is against the evidence and the weight of evidence.
- (2.) That the Board was in error in not appraising the value of the improvements to the incoming tenant.
- (3.) That the basis of the Board's valuation was not in accordance with the provisions of section 24 and 25 of the Crown Lands Act of 1895.

7. The said appeals came on for hearing before the said Land Appeal Court on the 25th day of June last, and were by consent heard together. At the said hearing the Crown appeared by counsel, and contended that the value of the subject ringbarking, the property of the Crown, was 15s. per acre to an incoming tenant. Counsel for the holders of the occupation license contended that the value of the said ringbarking should be fixed at between 15s. and 25s. per acre, and on behalf of the said Alfred Austin Sampson it was contended that the additional value given to the land reverted to the Crown, and was presumably charged to the incoming tenant in his rent, and was not payable by the incoming to the outgoing tenant, but that in any case the value of the said ringbarking could not be fixed at a higher sum than the actual cost thereof.

8. The Land Appeal Court dismissed the appeal of the said Alfred Austin Sampson, and sustained that of the said William Frederick Robey and Robert Alfred Orville Gill, and, upon full consideration of the evidence, determined the value of the said ringbarking, both of that which was claimed by the Crown and of that which was claimed by the said William Frederick Robey and Robert Alfred Orville Gill, at 5s. per acre, and the value of the other improvements at the respective amounts fixed by the said Local Land Board.

9. It is admitted, for the purposes of this case, that the value of the said ringbarking, as appraised by the said Local Land Board, and also as determined by the Land Appeal Court, exceeds the actual cost thereof; and further, it is admitted, for the like purpose, that the said Court, in so determining such value, took into consideration elements of value other than the actual cost of effecting and maintaining the said improvements of ringbarking.

10. The question for the decision of the Supreme Court is whether, in determining the value of improvements under sections 24 and 25 of the Crown Lands Act of 1895, the Land Appeal Court was right in taking into consideration any other element of value than the actual cost of effecting and maintaining such improvements.

## No. 27.

### Office Memorandum.

Sampson's Case.

21 April, 1898.

MR. MOORE, M.P., called to-day on behalf of Mr. Sampson. Mr. Sampson desires that the question submitted to the Supreme Court should be not whether the Land Appeal Court was right in taking into consideration any other element of value than the actual cost of effecting and maintaining the improvements, but whether anything should be taken into account other than what it would cost the incoming tenant to effect the improvements himself.

The draft, as drawn up by the Land Appeal Court, is open to revision, and Mr. Hanbury Davies may be asked to assist in having Mr. Sampson's question introduced, if possible, as it certainly represents a truer criterion of value than the original cost of making the improvements.

It is presumed Mr. Wise will appear for Mr. Sampson, and Mr. Sampson should send whatever suggestions he desires to make to that gentleman.

It may be that the Land Appeal Court in the draft case intend to raise Mr. Sampson's question, and there may not be any great difficulty in having a slight verbal amendment made.

H. CURRY,  
Acting Under Secretary.

Approved.—J.H.C., 22/4/98. S. W. Moore, Esq., M.P., and the Crown Solicitor informed,  
28/4/98.

## No. 28.

### The Under Secretary for Lands to The Crown Solicitor.

Sir,

Department of Lands, Sydney, 28 April, 1898.

Referring to your letter of 18th instant (No. 98-303) forwarding copy of the special case stated by the Land Appeal Court in the matter of the valuation of improvements on A. A. Sampson's settlement lease 96-21, Gunnedah, I have the honor to forward herewith papers,\* Ms. Lease 98-5,339, relating to the case, and to inform you that the Secretary for Lands has approved of Mr. Hanbury Davies being briefed upon the argument of the case before the Supreme Court, and in doing so would invite your special attention to the Minister's minute on Ms. Leases 98-5,091 of 21st instant approving of the proposal.

I would also invite attention to the Minister's approval of 22nd instant on Ms. Leases 98-5,339 with regard to a proposed amendment of the draft case drawn by the Appeal Court.

Mr. Sampson, it may be mentioned, has been advised in accordance with Mr. Secretary Carruthers' approval of 22nd instant.

I have, &c.,  
WM. HOUSTON,  
Under Secretary  
(per R.H.D.)

\*NOTE.—It is understood that the briefs in connection with the case *Greene v. Hargraves* are in the office of the Crown Solicitor.

## No. 29.

The Under Secretary for Lands to S. W. Moore, Esq., M.P.

Sir,

Department of Lands, Sydney, 28 April, 1898.

Referring to your personal inquiry of 21st instant, and to your representations on behalf of Mr. A. A. Sampson, with regard to the special case stated by the Land Appeal Court in the matter of the valuation of improvements on settlement lease 96-21, Gunnedah, I am directed by the Secretary for Lands to inform you that the draft case as drawn by the Appeal Court is apparently open to revision, and counsel for the Crown has been asked to assist in having Mr. Sampson's question, as to whether anything should be taken into account other than what it would cost the incoming tenant to effect the improvements himself, introduced, if possible.

It is presumed, however, Mr. Wise will appear for Mr. Sampson, and whatever suggestions it is desired to make should be sent to that gentleman.

I have, &amp;c.,

WM. HOUSTON,

Under Secretary

(per R.H.D.)

## No. 30.

The Registrar, Land Appeal Court, to Mr. A. H. Sampson.

Sir,

Land Appeal Court, New South Wales, Sydney, 1 June, 1898.

Reverting to your letter of the 18th April last, wherein, after acknowledging receipt of the draft case in the matter, as per margin, forwarded to you with my letter of the 16th of the same month, you proceed to contend that certain words used by you before the Land Appeal Court at Tamworth would convey, or appear to convey, a very different meaning to those used in the draft case, I am directed by the President to inform you that the question of law submitted by the case as forwarded to you is the question raised by the appeal to this Court; but that on the 21st instant you will be at liberty to show the Court, at the sitting fixed for that date in Sydney, if you can, that the question of law raised on your appeal is that stated in your letter above referred to.

I might add that you have already had an opportunity of mentioning this matter to the Court, according to promise, but you have not availed yourself of it.

I have, &amp;c.,

J. T. KEATING,

Registrar.

## No. 31.

The Registrar, Land Appeal Court, to Mr. A. H. Sampson.

Sir,

Land Appeal Court of New South Wales, Sydney, 7 July, 1898.

I have the honor to inform you that the matter of the final settlement of the terms of the special case for the decision of the Supreme Court in the appeal, as per margin, was brought before the Court on the 5th instant, when the Court declined to insert in the case as settled the amendments suggested by Mr. Wise, counsel for Mr. Sampson.

The case will shortly be forwarded to the Prothonotary in the form of a copy of which was supplied to you with my letter of 16th April last.

I have, &amp;c.,

J. T. KEATING,

Registrar.

## No. 32.

Mr. A. H. Sampson to The Registrar, Land Appeal Court.

Sir,

521, George-street, Sydney, 11 July, 1898.

I have the honor to acknowledge the receipt of your letter of 7th instant, No. 4,757A.

As my contention from first to last was, as stated in my letter to you of 18th April last, and as similarly stated in the notes of Mr. Commissioner Freeman, taken at the hearing at Tamworth, I must decline to recede from my position or accept a contention which is not mine, and which I never made.

In view of the President's remarks that the evidence points to "actual cost" being the criterion of value, I have carefully re-read the whole of the evidence, and with the exception that Mr. Robey mentioned that the books showed that Mr. Hill had paid 1s. a yard for the tank, the whole of the evidence seems to me to point the other way—that is, in the words of Mr. Turner, a witness for the other side, to "cost at present rates."

Under these circumstances, as intimated to the Court by my counsel, Mr. Wise, I will not trouble to send the case on to the Prothonotary.

I have, &amp;c.,

A. H. SAMPSON.

## No. 33.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir,

The Land Appeal Court of New South Wales, Sydney, 12 July, 1898.

I have the honor to inform you that I am in receipt of a letter from Mr. A. H. Sampson, agent for A. Sampson, withdrawing his notice requiring the Land Appeal Court to state a case for the decision of the Supreme Court in the matter as per margin.

I have, &amp;c.,

J. T. KEATING,

Registrar.

No. 34.

Alfred A. Sampson. Appeal re value of improvement on settlement lease No. 96-21, Gunnedah.

A. A. Sampson. Appeal re value of improvements on his settlement lease No. 96-21, Gunnedah.

Appeal by A. Sampson re improvements on settlement lease No. 96-21, Gunnedah.

No. 34.  
Office Memorandum.  
Mr. Sampson's Case.

12 July, 1898.

MR. SAMPSON called to-day, and stated that he had written to the Registrar of the Land Appeal Court to the effect that he would not proceed with the case. The Land Appeal Court consented to state a case for the Supreme Court, but Mr. Sampson is not satisfied with the way the case has been put, and, in fact, holds that the question proposed for the Supreme Court does not involve the point of law which he raised. The question, as drawn up by the Land Appeal Court, is whether that Court was right in taking into consideration any other element of value other than the actual cost of effecting and maintaining the improvements. Mr. Sampson, I understand, would himself answer this question in the affirmative, and anticipates the Supreme Court would answer it in the same way. His point is that the Land Appeal Court should have determined the cost at which the incoming tenant could effect the improvements. Mr. Sampson was represented by Mr. Wise, and I learn from him is advised that he cannot hope for any success by reason of the way in which the Land Appeal Court has drawn up the case. I asked him whether it was not worth while to venture in the hope that the Supreme Court might throw some light on the question, and perhaps settle the principle which should govern appraisements. He, however, does not appear in the least degree sanguine, and of course has to consider the question of expense.

It is to be regretted that the matter has concluded in this unfortunate way.

H. CURRY.

I think the case should go to the Supreme Court, whatever may be the result; and the Crown might, in the circumstances, instruct counsel (Mr. Davies) to represent Mr. Sampson, if he is willing to proceed, and if the Land Appeal Court will consent to his notice of withdrawal being revoked. Special.—WM. HOUSTON, Under Secretary, 14/7/98.

Approved.—J.H.C., 15/7/98. Mr. Sampson informed, 15/7/98.

It has been ascertained from the Land Appeal Court that Mr. Sampson has not asked for a revocation of his notice of withdrawal, and that if he had it could not be allowed, as the other parties in the case have been notified of such withdrawal.—J. P. MCGUANE, Miscellaneous Leases Branch, 3/8/98.

Please see also Mr. Sampson's letter of 3rd instant, Ms. Leases 98-10,785, herewith.—J.P.M., 5/8/98.

No. 35.

The Crown Solicitor to The Under Secretary for Lands.

Sir,

Crown Solicitor's Office, Sydney, 13 July, 1898.

In compliance with the request contained in your letter of to-day's date, I have the honor to forward herewith the papers relating to the case noted in the margin.

I have, &c.,

GEO. COLQUHOUN,  
Crown Solicitor.

Land Appeal Court case, No. 4,757A, A. A. Sampson.

No. 36.

The Under Secretary for Lands to Mr. A. A. Sampson.

Sir,

Department of Lands, Sydney, 15 July, 1898.

With reference to your appeal against the Local Land Board's appraisalment of the value of the improvements upon your settlement lease quoted in the margin, I am directed to inform you that it is understood you are unwilling to allow the case to go to the Supreme Court owing to your objection to the question which the Land Appeal Court has proposed for solution by the higher Court, and to ask whether you would be willing to proceed with the case, as, if so, the Crown, having regard to the importance of the matter as a public and general one, would instruct Mr. Hanbury Davies to appear on your behalf.

I may mention that, as it appears you have already notified the Land Appeal Court that you have withdrawn your notice requiring the Land Appeal Court to state a case for the Supreme Court, it is not apparent that anything can be done without your obtaining permission of the Land Appeal Court to revoke your notice of withdrawal referred to.

I have, &c.,

WM. HOUSTON,  
Under Secretary  
(per W.H.C.)

Land Appeal Court case, No. 4,757A, re settlement lease 96-21, Gunnedah, A. Sampson.

No. 37.

Mr. A. H. Sampson to The Under Secretary for Lands.

Sir,

521, George-street, Sydney, 3 August, 1898.

I have the honor to acknowledge the receipt of your letter, 15th ultimo, No. 98-9,706.

I should have replied earlier, but that I wished to consult Mr. Wise, my counsel, and also Mr. Newman, my solicitor.

Since hearing from them an attack of influenza has still further delayed my reply.

Mr. Wise held out no hope that anything further could be done through the Law Courts, and Mr. Newman writes as follows:—"Knowing your line of argument before the Land Court at Tamworth, I am surprised at the Court refusing to state the case in such a way as to embrace the question which you so clearly put before it. I note that the President said that, though you must have mentioned the point, you did not argue it. If you did not argue it, what did the Court consider was your object in mentioning it? I think it most unlikely that the other side would allow your notice of intention not to proceed to be revoked; 'public grounds' would be nothing to them. You have no doubt raised a question of law of

of supreme importance to the Crown and the people; but the question which the Land Court pinned you down to is a very different one indeed, wanting altogether the element which made yours of such importance."

That Mr. Newman is right in saying that the other side would not allow notice not to proceed to be revoked is now proved; for the other day, in conversing with Mr. Pike, their counsel, I offered to pay over the whole amount of the Land Appeal Court's award to them if they would allow the case to go to the Supreme Court. He replied, "Litigants do not fight on public grounds."

Under these circumstances it appears that nothing can be done in the way suggested in your letter, even though the Land Appeal Court should offer no objection.

Apart from my own interest in this case, I am exceedingly sorry that there should be in it such manifest injustice. I am sure the Land Act is right, and the Land Appeal Court wrong; that the Crown settlers are being ruined and Crown revenues lost by a misinterpretation of the Act; and, so satisfied am I of this, that, if I can get hold of another case like this one, I will effectually guard against it being said, "the point raised was not argued," for I shall object before the Land Board to every particle of evidence of land value being taken on an inquiry to determine the value of improvements—and have my objection noted—and so, too, before the Land Appeal Court.

My legal advisers tell me that the question has never been raised as I have raised it, and that there is absolutely no Supreme Court decision as a precedent. Mr. Wise at first thought otherwise, but he does not think so now, he having been referred to certain phases of the question by my solicitor, Mr. T. M. Newman.

It is noteworthy that a section of the country Press says, with reference to this case, and similar ones: "Finality has been reached, and a clear ruling laid down as to the position of settlement lessees in regard to station improvements." It seems a pity such an impression should get abroad, for not only is the letter of the Act misinterpreted, but, in consequence of this misinterpretation, the very spirit and intention of the Act are being outraged, as in the case of the Australian Mutual Provident Society, No. 5,139, vol. 8, Land Appeal Court Cases.

I have, &c.,

A. H. SAMPSON,  
Agent for A. A. Sampson.

Mr. Sampson's Case.—According to Mr. Sampson's letter of the 3rd instant there now appears to be no prospect of the case going to the Supreme Court. Mr. Sampson himself withdrew the case, and he now finds it impossible to persuade the other side to allow him to proceed.—H. CURRY, 6/8/98.

Submitted for the Minister's information.—WM. HOUSRON, Under Secretary, 6/8/98. Seen.—J.H.C., 8/8/98.

### No. 38.

Mr. A. H. Sampson to The Chairman, Local Land Board, Tamworth.

Dear Sir,

Town Hall Coffee Palace, 521, George-street, Sydney, 6 August, 1898.

Would you kindly let me know whether your office precludes you saying whether I argued before you at Gunnedah, and also before the Land Appeal Court at Tamworth, that the value of improvements to an incoming tenant could not be more than the cost at which he could effect such improvements for himself.

Of course I do not wish an answer unless you are perfectly free to give it; but if you can answer I shall be greatly obliged to you, as I think it would materially assist me.

I am, &c.,

A. H. SAMPSON.

Receipt acknowledged.—W.F., 9/8/98.

A. A. Sampson's settlement lease 96-21, Gunnedah, Land Appeal Court Case, No. 4,757A; as to line of argument by his representative, A. H. Sampson, before the Local Land Board at Gunnedah, and before the Land Appeal Court at Tamworth. From personal knowledge, I am able to testify that Mr. A. H. Sampson did argue before the Local Land Board at Gunnedah, and before the Land Appeal Court at Tamworth, "that the value of improvements to an incoming tenant could not be more than the cost at which he could effect such improvements for himself." I leave it to you whether Mr. Sampson is to have the information. If he is, kindly advise him. I am, under date 5th instant (L.B. 98-5,405, Tamworth), advised by the Registrar, Land Appeal Court, that the decision of that Court of 14th July, 1897, fixing the value of the 2,870 acres ringbarking (1,770 acres Crown property, 1,100 acres station property) at 5s. per acre, stands as final. I have simply, so far as Mr. A. H. Sampson is concerned, acknowledged receipt of his letter, and advised him that I have referred it to you with information, the nature of which I have not stated.—WILLIAM FREEMAN, Chairman, Tamworth, 9th August, 1898.

Mr. A. H. Sampson desires to be supplied with a copy of the above communication by Mr. Chairman Freeman. Of course, there is something behind the request. The Chairman is asked by Mr. Sampson if he (Mr. Sampson) pursued a certain line of argument. The Chairman says he did; but the question ought to be one about which Mr. Sampson should not require any information now that the case has closed.—J. P. MCGUINNE, Miscellaneous Leases Branch, 23/8/98.

Special. Send to Mr. Curry in connection with other papers of Sampson's case.—R.H.D., 24/8/98.

Settlement lease and farm No. 637—Mr. Sampson's Case.—Attention is invited to Mr. Sampson's letter of the 13th instant, 98-11,236. Mr. Sampson wrote to the Chairman of the Land Board, asking him whether he (Sampson) argued in a certain way before the Land Board and the Land Appeal Court. The Chairman has stated his recollection of the case, and forwarded the letter here. Mr. Sampson wishes to be informed what the Chairman has said. It is submitted that this Department should not accede to Mr. Sampson's request. The matter has ended so far as its judicial phase is concerned, and, as the Land Appeal Court is outside this Department, it would not be proper for this Department to be the vehicle for communicating anything said to have taken place in the Court, especially as the impressions on the Chairman's mind may not coincide with what the Court itself might hold. In his letter of the 22nd instant, Mr. Sampson is evidently looking for something beyond what has already been conceded to him by the Crown. The Crown has, so far, acted generously in face of, though at the same time recognising, the possibility that its action may not be without considerable inconvenience to itself. The question really

really now is, whether the Crown will pay to Mr. Sampson the difference between the Land Appeal Court's valuation of the outgoing tenant's improvements and what Mr. Sampson would say was a fair valuation of these improvements. The facts of this particular case are, no doubt, special, but involved in it is the very large question whether the Department should act as a Court of Review of the Appeal Court's valuations between parties, and be responsible for any sums which might be in excess of, or below, a certain standard. In the present instance, the Crown admits the valuation to have been excessive, but it may have to admit that in many other cases. The machinery of the Land Law has been exhausted, and it is not apparent that the Crown should take any further steps in this matter at present. Mr. Sampson seems disposed to place some of the responsibility of the Land Appeal Court's valuations on the shoulders of counsel who appeared for the Crown; but this is obviously not fair. The Land Appeal Court is not necessarily swayed by counsel on one side or the other, and it ought not to be overlooked that the outgoing tenants appealed against the Board's valuations as being too low, and were represented in the Court by Mr. Pike, who, of course, argued in the interests of his clients. A perusal of the Land Court's reports will at once show that the Appeal Court decides cases according to its own apprehension of their merits, and the Court having given its decision, the case has reached, at least, judicial finality.—H. CURRY, 26/8/98.

(No. 1.) Clearly this Department cannot with decency grant Mr. Sampson's request in regard to Mr. Freeman's views as to what occurred in the Land Appeal Court. (No. 2.) With regard to Mr. Sampson's letter of the 22nd, which, presumably, is an application for compensation, the Crown has, apparently, done what it could already. Whether any further provision can or ought to be made is a matter for the Minister's consideration.—WM. HOUSTON, Under Secretary, 26/8/98.

(No. 1.) I concur in. (No. 2.) The request for compensation cannot be entertained.—J.H.C., 29 August, 1898. Mr. A. H. Sampson, care of S. W. Moore, Esq., M.P., informed, 31/8/98.

---

### No. 39.

The Under Secretary for Lands to The Chairman, Local Land Board, Tamworth.

12 August, 1898.

A. A. SAMPSON'S Settlement Lease 96-21, Gunnedah; lease for execution apparently not as yet prepared; Chairman desires completion, so that he may issue notices of demand for payment for improvements, the property of the Crown.

It is now eighteen months since the settlement lease was confirmed, and since the extensive improvements were appraised by the Local Land Board, at Gunnedah (value of the 2,870 acres of ringbarking since appraised by the Land Appeal Court at 5s. per acre, the Local Land Board's appraisal of the ringbarking was at the rate of 1s. 4d. per acre).

The enclosed papers, Mis. Dep., 98-10,912, have been obtained from Sydney to obtain reference to a ringbarking permit for the purposes of another case, and in order that notice of demand for payment for the Crown improvements may issue in the within case.

But as a preliminary to the latter there must be execution of the lease, which kindly have attended to. L.B. 98-5,432, Tamworth, relates to this case, and was forwarded to you per Mr. Chief Inspector Curry on 9th instant, but it is not herewith.

WILLIAM FREEMAN, Chairman,  
Tamworth.

---

### No. 40.

Mr. A. H. Sampson to The Under Secretary for Lands.

Sir, Town Hall Coffee Palace, 521, George-street, Sydney, 13 August, 1898.

I have the honor to ask that you will kindly let me know the answer given by Mr. Freeman (Chairman of the Local Land Board, Tamworth) to my question to him as to whether I had argued before the Local Land Board at Gunnedah, and before the Land Appeal Court at Tamworth, "that the value of improvements to an incoming tenant could not be more than the cost at which he could effect such improvements for himself."

Under date 9th instant, Mr. Freeman writes me saying: "I am, by to-night's mail, forwarding your letter to the Under Secretary for Lands (*per* H. A. G. Curry, Chief Inspector) with information."

Mr. Freeman's fearless truthfulness enables me to feel assured as to what his answer is; but in fairness to myself, and as I believe there is no reason for secrecy, I should be glad to know the terms in which his answer is conveyed.

I have, &c.,  
A. H. SAMPSON.

---

### No. 41.

Office Memorandum.

Sampson's Case.

15 August, 1898.

It is submitted for consideration in this case whether, having regard to the attitude the Crown has taken in it, some concession might not be made so far as the Crown improvements are concerned.

The District Surveyor reported that portion 54 contained—fencing, £92; ringbarking, £108; tank, £75; and that the whole of these belonged to the lessee of Wondobar holding.

These valuations appeared in the *Gazette* notice when the land was set apart for settlement lease.

The Land Board appraised the improvements at £347 10s. 1d., and held that a part only belonged to the lessee, the Crown being entitled to be regarded as the owner of £226 4s. worth.

The Crown's improvements were described by the Board as follows:—

	£	s.	d.
Tank, 2,367 yards, at 9d. ... ..	88	15	3
Mixed fence round tank ... ..	4	0	0
27 chains of 6-wire boundary fence, 5-6, at 3s. 9d. ... ..	5	1	3
83 chains of 6-wire intersecting fence, 1-2 and 3-4, at 2s. 6d. ... ..	10	7	6
1,770 acres ringbarking, at 1s. 4d. ... ..	118	0	0

The Land Appeal Court on appeal sustained the Board's value, except with regard to ringbarking, and upon this they placed a value of 5s. per acre.

The Crown never intended to claim so high a value. The ringbarked trees have suckered. The surveyor estimated that ringbarking could be done now for about 9d. per acre, and that it would cost about 4d. per acre to remove the suckers.

It is submitted that the Crown might waive its claim to anything above 1s. (one shilling) per acre for the ringbarking on the 1,770 acres. With regard to the ringbarking on the other area, the Crown has nothing to do.

H. CURRY.

This course is submitted for favourable consideration, having regard to the exceptional circumstances of the case.—WM. HOUSTON, Under Secretary, 15/8/98. Approved.—J.H.C., 17 August, 1898. S. W. Moore, Esq., and Mr. Sampson informed, 18/8/98.

#### No. 42.

#### The Under Secretary for Lands to Mr. A. A. Sampson.

Sir, Department of Lands, Sydney, 18 August, 1898.

I am directed to inform you that, in view of the very special circumstances of the case, the Secretary for Lands has approved of the Crown waiving its claim to any amount above 1s. per acre for such of the ringbarking as is the property of the Crown on the land included in your settlement lease, quoted in the margin.

I have, &c.,

#### No. 44.

#### Mr. A. H. Sampson to The Under Secretary for Lands.

Sir, Town Hall Coffee Palace, 521, George-street, Sydney, 22 August, 1898.

I have the honor to acknowledge the receipt of your letter of 18th instant, No. 98-11,436, in which you state, in view of the very special circumstances of the case, the Crown waives its claim to any amount above 1s. per acre for ringbarking on A. A. Sampson's settlement lease at Gunnedah.

This I view as a generous recognition on the part of the Crown that, owing to its own very serious error, a great wrong has been done, which it desires to rectify, and I desire to accord the fullest measure of respect for such honorable action. At the same time it becomes my duty to point out that the wrong is only partially, not wholly, righted; and to briefly review the special circumstances to which your letter refers, I do so, feeling assured that the fuller consideration of those circumstances must impress upon the Crown the conviction that it cannot act otherwise than as any honorable man in private life would be impelled to do under like conditions, viz., to shoulder his own mistake in its entirety, and not let one who was fighting largely in his interest be the sufferer in consequence.

Leaving out of consideration for the present the refusal of the Land Appeal Court to state our contention, the special circumstances of the case are briefly these:—

The Crown, by notice in the *Gazette*, invited us to take up some ringbarked country, which ringbarking it had, by its agent, valued at (approximately) £108. The Local Land Board, acting, not upon its own judgment, but upon the Act, "as interpreted by the Land Appeal Court," fixed the value at £191 6s. 8d.

On appeal to the Land Appeal Court, the Crown appeared by counsel and contended that the value was considerably over £2,000; that the increased value of the land belonged to the outgoing tenant—an aspect of the matter which the Land Appeal Court never fails to emphasise. In effect, he argued that a portion of the capital value of the land belonged to the outgoing tenant.

We strenuously opposed this view, and contended that ringbarking was in the same category of improvements as fencing: each increased the carrying capacity of the land; each was subject to deterioration; each permitted the inherent capabilities of the soil to manifest themselves; but was no more the thing in which the wealth inhered than were the auger-hole and sixpenny tap which allowed the wealth to flow from one of Mr. Fallon's great wine-butts.

We

We contended that the value arising was a land value, and belonged to the Crown as to any other land-owner, and that the value of improvements, as of anything else, could not be more than the cost at which the incoming tenant could produce them for himself.

The Court compromised the matter, and fixed the amount at £717.

Our contention is now everywhere admitted to be unassailable in its justice, and is generally admitted to be impregnable in law.

The result of this action of ours must necessarily be that, either by obtaining a true interpretation of the Act, or by immediate legislation, the Crown will enormously benefit, for it will retain its own revenues instead of having them passed away to outgoing tenants. Necessarily, too, the future settlers upon Crown lands will be saved from that ruin which has overtaken so many of them in the past.

But, in our great struggle over this question, lasting now upwards of two years, we have had to fight for the Crown against the Crown—or rather, I should say, that we had at first to do so, for I am happy to admit that latterly we have received all the assistance the Crown could render us, though, unfortunately, this was, of necessity, but little. The greatest of all our troubles was the position of strength conferred upon the outgoing tenants by the assistance given to them by the Crown in the first instance—a position which the Land Appeal Court is very careful to particularise. This has protracted the struggle at great expense to us. Besides which, instead of having to pay 3d. per acre, the present value of the ringbarking, *i.e.*, 9d. for doing it in its original state, less 6d., deterioration by suckers (see evidence), we have now to pay them 5s. per acre.

I understand that the whole question, including the action of the Land Appeal Court, is to be brought fully before the House, when, I trust, the result will be to ensure the warrant and sympathy of Parliament to any action the Crown may take to accord the full measure of justice to us.

As I am starting for Tamworth to-morrow, will you kindly address me there.

I have, &c.,  
A. H. SAMPSON.

No. 45.

The Registrar, Land Appeal Court, to The Under Secretary for Lands.

Sir,

Office of Land Appeal Court, Darlinghurst, 25 August, 1898.

I have the honor to forward herewith certificate of the final order of the Land Appeal Court in the matter of the appeal, as per margin, and to request that you will be good enough to acknowledge receipt of same.

I have, &c.,  
J. T. KEATING,  
Registrar.

Appeal by A. A. Sampson *re* settlement lease No. 96-21, Gunnedah

[Enclosure.]

FORM I.

*Certificate of the Order of the Land Appeal Court.*

In the Land Appeal Court }  
of New South Wales. }

WHEREAS, on the 24th June and 14th day of July, 1898, a certain matter, wherein Alfred A. Sampson, Messrs. Robey and Gill, and the Minister for Lands were concerned in connection with settlement lease No. 96-21, Gunnedah, was brought under the cognisance of the Land Appeal Court of New South Wales upon the appeal by Alfred A. Sampson against the Board's decision in respect of improvements on his said settlement lease.

And whereas the Land Appeal Court duly heard and determined the said matter, and on the 14th day of July, 1898, made a final order in respect thereof: These are therefore to certify that the final order of the Land Appeal Court in the premises was as follows:—Appeal dismissed. Value of ringbarking determined at five (5) shillings per acre. The value of the remaining improvements determined at the amounts fixed by the Board. Deposit to be refunded.

The seal of the Land Appeal Court was hereunto affixed by me, this 23rd day of August, 1898.

J. T. KEATING,  
Registrar.

No. 47.

The Under Secretary for Lands to Mr. A. H. Sampson.

Sir,

Department of Lands, Sydney, 31 August, 1898.

Referring to your letter of the 13th instant, requesting particulars of Mr. Chairman Freeman's reply to your inquiry as to the arguments advanced by you before the Land Appeal Court as regards the improvements situated upon the settlement lease farm applied for by Mr. A. A. Sampson, and also to your letter of the 22nd instant, presented by Mr. Moore, M.L.A., urging some further concession in regard to the improvements in question, I have the honor, by direction of the Secretary for Lands, to inform you that the request with regard to Mr. Freeman's views as to what occurred in the Land Appeal Court cannot be acceded to, and that your request for compensation beyond what has already been conceded in the case cannot be entertained.

I have, &c.,  
WM. HOUSTON,  
Under Secretary (per F.H.W.).

No. 48.

Gazette Notice.

NOTIFICATION OF EXECUTION OF SETTLEMENT LEASES.

Department of Lands, Sydney, 12 October, 1898.

NOTICE is hereby given that the undermentioned settlement leases were, on the 3rd October, 1898, executed by His Excellency the Governor, and have been forwarded, for delivery to the lessees, to the Crown Land Agents of the respective Districts in which the lands are situated.

Each lessee is required to take delivery of the lease, and give a receipt in writing for the same in Form 52, within three months from the date of this notice, failing which the Minister may declare the lease to be null and void, and any moneys lodged with the application forfeited to the Crown.

The balance of rent for the first year should be paid to the Crown Land Agent or Colonial Treasurer within six months from date of commencement of the lease, and the rent for each succeeding year should be paid in advance to the Crown Land Agent or Colonial Treasurer.

The lessee must pay to the Crown Land Agent, at time of delivery of lease, a lease fee of 10s., together with amount of stamp duty as set out in appended Schedule.

J. H. CARRUTHERS.

CLAIM OF JAMES AND PATRICK GUIHEN, OF KANGAROO VALLEY.

---

REPORT.

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 21st November, 1899, "*to inquire into and report upon the claim of James and Patrick Guihen, of Kangaroo Valley, against the Government, for loss sustained through the action of the Government in disputing their title to certain land at Lower Brogher's Creek, Kangaroo Valley,*" and to whom was referred on the same date "*the Report of the Select Committee of Session 1897,*"—have agreed to the following Report :—

Your Committee, having considered the Report referred, find :—

1. That the land in question is and was the property of James and Patrick Guihen, which conclusion is borne out by the sworn evidence given before the Local Land Board.
2. That the Crown did dispute the title of the Guihens, by informing them that unless they applied to purchase the land under section 66 of the Crown Lands Act it would be brought to auction, and, subsequently, by stating that the Guihens should pay rent for the land.
3. That, by the Crown so disputing the ownership of the land, the Guihens were put to much trouble and loss through want of peaceful possession, and through having to incur legal and other expenses in maintaining their right to the land.

Your Committee consider that the recommendation of the Land Board should be given effect to, and recommend James and Patrick Guihen's case to the favourable consideration of the Government.

ALEX. CAMPBELL,  
Chairman.

## CONDITIONAL PURCHASES AND CONDITIONAL LEASES, EASTERN DIVISION.

(PETITION FROM CERTAIN CONDITIONAL PURCHASERS AND LESSEES IN THE ELECTORATE OF ARGYLE, IN FAVOUR OF A REAPPRAISEMENT OF.)

---

*Received by the Legislative Assembly, 19 July, 1899.*

---

To the Honorable the Speaker and the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned, representing Conditional Purchasers and Lessees in the Electorate of Argyle,—

HUMBLY SHOWETH:—

That in various parts of the Eastern Division land taken up by conditional purchasers and lessees is of a very inferior quality.

That in all cases the conditional purchasers of such inferior lands have been charged £1 per acre, while the best land in the Colony has been conditionally sold at the said price of £1 per acre.

That many holders of conditional leases of a very poor quality are now paying a rent equal to the price charged for much better land.

That the uniform rate of £1 per acre and the rentals imposed on aforesaid have subjected a large number of settlers to great hardships.

That a reappraisal of conditional purchases and leases where the land is of a poor quality would give great relief.

And your Petitioners, therefore, pray that you will be pleased to take the foregoing resolutions into your favourable consideration at the earliest opportunity.

And your Petitioners, as in duty bound, will ever pray.

## LEASES IN THE CENTRAL DIVISION.

(PETITION FROM CERTAIN SETTLERS, SETTLEMENT LESSEES, AND OTHERS, RESIDENT IN THE LAND DISTRICT OF WALGETT, PRAYING THE HOUSE TO CAUSE SUCH STEPS TO BE TAKEN AS WILL RENDER THESE PASTORAL HOLDINGS AVAILABLE FOR CLOSE SETTLEMENT.)

---

*Received by the Legislative Assembly, 14 November, 1899.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, Settlers, Settlement Lessees, and others, resident in the Land District of Walgett, in the Central Division,—

SHOWETH:—

1. That the leases of the pastoral holdings in the Central Division having terminated, it is expedient, and but an act of common justice, that the land held under and included in such leases should be immediately thrown open for settlement, in order to meet the great demand now being made for small occupation areas.

2. That the pastoral holdings of Mercadool, Yarraldool, Kercargo, Goangra, and others having been surveyed into blocks or areas suitable for settlement leases, it only requires the sanction of Parliament to ensure the speedy taking up and occupation of such blocks or areas.

3. That the lessees of the above holdings having already received an extension of five years, in addition to the original terms of their leases, all obligations of the Crown have been fulfilled, and the land should be at once offered for selection, so as to meet the requirements of the many in search of land and homes.

4. That the practical experience of a large number of persons who have taken up land as settlement leases and conditional purchases either upon or in the vicinity of these large holdings has proved that, taking the good with the bad seasons, small holdings can be made to pay; therefore the withholding of these lands from settlement will be injurious to and a sad deprivation to a large number of intending settlers.

5. That under settlement lease and compulsory residence during the whole term it is impossible for the Crown tenant, without the sanction of the Minister for Lands, to sell or otherwise dispose of his interest; thus the land remains, and will remain, an asset of the Crown, and be a source of increased revenue to the State.

6. That nearly the whole of the land, with the exception of portions in the Cobar, Hay, and Bogan districts, is most suitable for closer settlement.

7. That many of those now on the land as settlers have sons, brothers, or other relatives who, with a great number of other persons, have been waiting and watching for several years the making of this land available for settlement.

8. That it is thus evident every acre of these areas will be taken up as soon as same becomes available.

Your Petitioners therefore humbly pray you would take the prayers of your Petitioners into the favourable consideration of your Honorable House, and cause such steps to be taken, and such acts to be done, as will satisfy a great number of people, and have the surveyed portions of these pastoral holdings to be speedily made available for close settlement, and meet the wants of a large number of intending settlers.

And your Petitioners will, as in duty bound, ever pray.

[Here follow 149 signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

**CROWN LANDS ACT.**

(PETITION FROM CERTAIN RESIDENTS OF NARRABRI RESPECTING THE MODE OF TAKING UP CROWN LANDS.)

*Received by the Legislative Assembly, 20 July, 1899.*

The Honorable the Speaker and Honorable Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned, your Petitioners,—

RESPECTFULLY SHOWETH:—

The desirability of the law applying to the occupation of vacant Crown lands being administered in strict conformity with the provisions of the Crown Lands Act as embodied in the Principal Act, section 5, for the reasons set forth hereunder:—

- (a) Private contracts with individuals without competition frequently results in loss of revenue to the State.
- (b) Such contracts, while being contrary to law, deprive others of their equal right of becoming applicants for the occupation of such lands.

And your Petitioners respectfully pray that your Honorable House will take such a course as in your wisdom may be deemed necessary to ensure the strict observance of the law in this respect.

And your Petitioners will, as in duty bound, ever pray.

**INCLOSED LANDS PROTECTION ACT AMENDMENT BILL.**

(PETITION FROM CERTAIN LAND-OWNERS AND RESIDENTS OF THE ELECTORAL DISTRICT OF SINGLETON, PRAYING THE HOUSE TO PROCEED WITH.)

---

*Received by the Legislative Assembly, 20 July, 1899.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales.

The Petition of the undersigned Land-owners and Residents of the Electoral District of Singleton,—

HUMBLY SHOWETH :—

1. That on the 4th day of October, 1898, a Bill to amend the Inclosed Lands Protection Act, 18 Vic. No. 27, by repealing section 6 and substituting other provisions in lieu thereof, was presented to your Honorable House by Mr. Dight, the Member representing the Singleton Electorate, and after being read a first time was ordered to be printed, and read a second time on the 18th October.

2. That the order for the second reading was afterwards postponed until the 29th of November, but owing to the pressure of Government business the second reading was never proceeded with.

We, your Petitioners, humbly pray that your Honorable House will allow the said Bill to be proceeded with during the present Session of Parliament from the stage at which it remained in 1898.

And your Petitioners, as in duty bound, will ever pray.

# ANNUAL REPORT.

To The Honorable Joseph Cook, Esq., M.P., Minister for Mines and Agriculture,  
&c., &c.

Sir,

I do myself the honor to submit the following report upon the working of that division of the Department under your control which deals with mining interests, also the progress of mining and the results obtained during the year 1898.

It affords me great pleasure to bear testimony to the zeal and ability with which the officers as a whole perform their duties. They have at all times cheerfully worked after hours to meet any pressure of business, and I am much indebted for the valuable aid they have given me in carrying out the multifarious duties of my office.

## LEASE BRANCH.

### MINING ON PRIVATE LANDS.

The number of applications for special or owners' leases lodged in terms of section 25 of the Mining on Private Lands Act of 1894, during the year ending 31st December, 1898, was 71, covering an area of 24,224 acres 1 rood 24½ perches.

The number of general leases (other than by the owners of the land) applied for during the same period was 69, covering an area of 589 acres 1 rood 35 acres.

The total number of applications lodged during the year was 140.

The aggregate area applied for was 24,813 acres 3 roods 19½ perches, as under:—

	a.	r.	p.
Gold .....	24,575	1	32½
Silver .....	70	0	0
Gold and silver .....	70	0	0
	24,715	1	32½
Leases for machinery sites, dam sites, races, &c. ....	98	1	27
	24,813	3	19½

During the year 200 applications were finally dealt with, covering an area of 8,164 acres 2 roods 25½ perches.

Of this number, 133 were approved and 67 were refused.

Of the number approved, 55 were for special or owners' leases, and 78 were for ordinary or general leases.

The special lease applications approved covered an area of 2,888 acres 1 rood 22½ perches, as under:—

	a.	r.	p.
For gold .....	2,676	0	8½
„ gold and silver .....	20	0	0
„ silver .....	86	0	0
„ silver and lead .....	100	0	0
Machinery, areas, &c. ....	6	1	14
	2,888	1	22½

The remainder of the number approved, viz., 78, covered an area of 830 acres 3 roods 24½ perches:—

	a.	r.	p.
For gold .....	813	0	24½
Machinery sites, &c. ....	17	3	0
	830	3	24½

Of the balance of the applications dealt with, viz., 67, refused for various reasons, 23 were for special or owners' leases and 44 for general leases.

The 23 special lease applications covered an aggregate area of 726 acres 0 roods 12 perches, as under:—

	a.	r.	p.
Gold .....	234	0	12
Gold and silver .....	50	0	0
Silver.....	40	0	0
Silver and lead .....	360	0	0
Tin.....	40	0	0
Machinery areas, &c. ....	2	0	0
	<u>726</u>	<u>0</u>	<u>12</u>

The 44 applications for general leases refused covered an aggregate area of 478 acres 2 roods 6½ perches, as under:—

	a.	r.	p.
Gold .. ..	356	2	6½
Silver .....	10	0	0
Gold, silver, and lead .....	10	0	0
Tin.....	20	0	0
Machinery sites, &c. ....	82	0	0
	<u>478</u>	<u>2</u>	<u>6½</u>

	a.	r.	p.
In 1897—			
89 special leases were applied for, covering.....	1,863	3	13
109 general leases     "     " .....	1,213	0	9
<u>198</u>	<u>3,076</u>	<u>3</u>	<u>22</u>

	a.	r.	p.
In 1898—			
71 special leases were applied for, covering.....	24,224	1	2¼
69 general leases     "     " .....	589	1	35
<u>140</u>	<u>24,813</u>	<u>3</u>	<u>19¼</u>

During the year 35 agreements or leases made between the owners of private lands and holders of miners' rights were submitted for your concurrence, in terms of the 11th section of the Mining Laws Amendment Act of 1896. In regard to several of such cases your concurrence could not be given, as the land was alluvial, and consequently was exempt from the operation of the section, and in several cases the parties failed to so submit their agreements in form to admit of your concurrence being given; but in 20 of the cases your concurrence was endorsed on the agreements, and registration was subsequently effected in terms of the Act. In the cases where concurrence was not given the parties have, no doubt, taken advantage of one or other of the provisions of the Mining on Private Lands laws, and so secured their rights.

Besides the agreements above referred to, some 70 agreements to mine have been made by owners and holders of miners' rights and mineral licenses, and have been registered in terms of section 33 of the Mining on Private Lands Act of 1894.

The foregoing tables show that the number of applications for all leases lodged during last year was less than during the previous year; but, with respect to applications for leases other than "special" or "owners'" leases, this was expected. It was anticipated that advantage would be largely taken of the privileges conferred on the mining community by the Mining Laws Amendment Act, under which private lands open to the operation of the mining on private lands laws can be prospected at a comparatively small cost, so far as rent, &c., are concerned, and the delay in waiting for a lease, necessarily occupying considerable time, is obviated. Doubtless, in the majority of cases, it is only where the result of prospecting operations under the authorities to enter and prospect appear to warrant the necessary further expenditure that leases are applied for and taken out: consequently the lodging of so many applications for leases, in pursuance of authorities to enter and prospect, may be taken as a fair indication that considerable successful prospecting operations have been carried out on private property.

During the year no less than 491 authorities to enter have been granted by the several Wardens, embracing an aggregate area of 4,478 acres, the minerals to be prospected for being as under:—

Authorities.	Mineral.	Area.
462	Gold .....	3,536
17	Silver and lead .....	507
10	Silver .....	275
2	Silver and tin .....	160
<u>491</u>		<u>4,478</u>

## MINING ON CROWN LANDS.

With regard to the acquisition of Crown lands for mining purposes, the number of applications made during the year ending 31st December, 1898, was 1,022, for an aggregate area of 15,057 acres 3 roods 39 $\frac{3}{20}$  perches. The number of applications dealt with during the same period was 1,191, for an aggregate area of 19,153 acres 2 roods 20 $\frac{1}{2}$  perches.

The following shows the number of applications for leases of Crown Lands, for mining purposes, made and dealt with during the years 1897 and 1898, respectively, compared :—

In 1897—		a.	r.	p.
1,224 applications were made for gold-mining leases, covering .....		9,197	2	21
274       "       "       mineral       "       " .....		13,466	2	18
<u>1,498</u>		<u>22,664</u>	<u>0</u>	<u>39</u>
In 1898—		a.	r.	p.
811 applications were made for gold-mining leases, covering.....		4,737	1	1 $\frac{3}{20}$
211       "       "       mineral       "       " .....		10,320	2	37 $\frac{1}{2}$
<u>1,022</u>		<u>15,057</u>	<u>3</u>	<u>39<math>\frac{3}{20}</math></u>
In 1897—		a.	r.	p.
1,581 applications were dealt with for gold-mining leases, covering .....		12,707	0	3
290       "       "       mineral       "       " .....		12,412	0	0
<u>1,871</u>		<u>25,119</u>	<u>0</u>	<u>3</u>
In 1898—		a.	r.	p.
974 applications were dealt with for gold-mining leases, covering .....		5,849	3	0 $\frac{1}{2}$
217       "       "       mineral       "       " .....		13,303	3	20
<u>1,191</u>		<u>19,153</u>	<u>2</u>	<u>20<math>\frac{1}{2}</math></u>

The following table shows the areas applied for during the year ending 31st December, 1898, and the minerals and metals to be mined :—

Gold.....	a.	r.	p.	Silver, lead, tin, and copper .....	a.	r.	p.
Silver .....	4,737	1	1 $\frac{3}{20}$	Silver, lead, iron, and copper.....	500	0	0
Copper .....	730	0	7 $\frac{1}{2}$	Silver, copper, and manganese ...	100	0	0
Copper and silver .....	1,598	1	0	Limestone .....	80	0	0
Coal .....	755	0	0	Sulphur, iron, and alum .....	20	0	0
Silver, lead, and copper .....	3,390	3	10	Fireclay .....	40	0	0
Tin .....	605	0	0	Antimony .....	40	0	0
Diamonds .....	60	0	0	Infusorial earth.....	160	0	0
Tin and diamonds .....	160	0	0	Tin and wolfram .....	10	0	0
Manganese .....	767	0	26	Wolfram .....	93	2	10
Ironstone.....	80	0	0	Iron .....	40	0	0
Silver and bismuth .....	40	0	0	Chrome .....	20	0	0
Silver, bismuth, and cerium .....	32	1	0	Tin and grit .....	20	0	0
Bismuth .....	40	0	0	Uranium .....	20	0	0
Silver and lead .....	20	0	0				
Silver, lead, and zinc .....	648	0	22	Total.....	15,057	3	39 $\frac{3}{20}$
Silver, lead, lime, and iron .....	18	2	2				
	200	0	0				

The areas held under applications for leases which had not received the approval of the Governor-in-Council on the 31st December, 1898, were :—

Gold .....	a.	r.	p.	Bismuth.....	a.	r.	p.
Silver.....	1,068	3	24	Limestone.....	20	0	0
Copper .....	24	0	0	Antimony .....	40	0	0
Silver and copper .....	302	0	0	Manganese .....	40	0	0
Silver, copper, and lead.....	390	0	0	Tin and grit .....	80	0	0
Silver, copper, and manganese.....	205	0	0	Wolfram .....	20	0	0
Silver and lead.....	40	0	0	Tin and wolfram .....	40	0	0
Silver, copper, lead, and tin.....	168	0	22	Tin and diamonds .....	40	0	0
Silver, copper, lime, and iron .....	200	0	0				
Coal .....	200	0	0	Total.....	2,953	0	6
	35	0	0				

## SPECIAL GOLD LEASES FOR DREDGING, &amp;c.

During the year thirty-seven applications were lodged, covering a total area of 2,283 acres 3 roods 6 perches of river-beds, &c.

Seventeen of these applications have been dealt with, covering an area of 1,185 acres 0 roods 28 perches.

It has for some considerable time been apparent that this class of mining, viz., by dredging, would soon become a most important system for treating the auriferous deposits in the river-beds and alluvial flats of the Colony; but, on account of the large interests involved, both public and private, very considerable difficulty

difficulty has been experienced in deciding as to the advisability of favourably considering these applications. However, since you decided to deal with applications for special leases to dredge the beds of rivers abutted upon by Crown lands only, several applications have been approved by the Governor-in-Council, and promises of leases have issued, and it is understood that several dredges are now almost ready to commence operations. It is to be very much regretted that the law is not sufficiently clear to warrant the Department in so considering applications for such leases where the rivers in which it is desired to dredge run through or past lands alienated from the Crown. Numbers of these applications have been lodged, but are held over until it is made clear whether or not the leases can be properly granted. In the meantime the prospecting of leases of the river-beds passing through Crown lands will give a fair indication as to the payable nature of the auriferous deposits therein.

**MINING ON AND UNDER RESERVED LANDS, ROADS, &C., UNDER AUTHORITIES TO MINE ISSUED IN TERMS OF SECTION 28 OF THE MINING ACT OF 1874.**

The number of applications for permits or authorities to mine, in terms of the above section, during the year 1898, was 143, being 71 less than during 1897.

The number dealt with during the year was 197, of which 85 were granted and 112 were refused, being 27 less than the number of similar applications dealt with in 1897.

The following table shows the area of reserved lands comprised in permits or authorities granted during 1898, and the minerals to be mined:—

	a.	r.	p.		a.	r.	p.
Coal .....	14,152	1	21½	Gold, silver, and copper .....	3	0	0
Shale .....	3,236	0	17	Gold and silver .....	1	0	27
Coal and shale .....	22,302	2	34	Copper, silver, and lead .....	30	1	0
Gold .....	317	2	17	Ironstone.....	2	0	0
Copper.....	92	1	4				
Chrome and cobalt .....	22	0	22	Total.....	40,239	2	22½
Wolfram .....	80	0	0				

This table shows the area of reserved lands, roads, &c., held under authorities to mine, in force on 31st December, 1898, and minerals to be mined:—

	a.	r.	p.		a.	r.	p.
Gold .....	130	1	3½	Tin .. .....	122	2	28
Coal and shale .....	13,815	2	37	Shale .....	8	2	32
Coal .....	19,232	3	31	Wolfram .....	40	0	0
Copper .. .....	143	2	23	Gold and silver .....	1	0	27
Cobalt nickel .....	5	1	14				
Manganese .....				33,500	1	35½	

The areas granted under this section during last year exceed those granted during the previous year by some 11,584 acres 3 roods 13¼ perches, the increase being principally in coal and shale lands.

The area held under permits or authorities on 31st December, 1898, also exceeds that held on 31st December, 1897, the increased area amounting to some 4,640 acres 3 roods 27½ perches, the increased area being coal and shale lands.

**AUTHORITIES TO DIG AND SEARCH, IN TERMS OF THE MINING ACT OF 1889.**

During the year 195 applications were lodged in the different Wardens' offices for authorities to dig and search for gold and other minerals on conditional leases and conditional purchases. Of these, only 11 were granted, being made for authorities to dig and search for minerals other than gold, silver, lead, tin, and antimony. The balance being for authorities to dig and search for one or more of the above minerals were refused, and applicants were advised to make a title to mine, in terms of the Mining on Private Lands laws. The major part of the applications were for authorities to operate on lands held as conditional leases, but before applicants could legally get on these lands the leaseholds had to be brought under the operation of the Mining on Private Lands Acts, by proclamation in the *Government Gazette*. Some 48 of these conditional leaseholds, comprising an aggregate area of 32,625 acres 2 roods, were so proclaimed, and the lands opened to the operations of the prospector. Since the passing of the Mining Laws Amendment Act, in December, 1896, under which power is given to bring these lands under the provisions of the Mining on Private Lands Acts, about 115,000 acres have been made available for prospecting and mining.

The work of investigation of titles to land applied for under the Mining on Private Lands Act and the Mining Laws Amendment Act, although necessarily less than when the Act first came into force, is still heavy, and the officers in charge of this work report a large number of titles investigated and searches made in order that the ownership of the lands applied for may be correctly defined.

TABLE

TABLE of Conditional Leases proclaimed to be subject to the provisions of the Mining on Private Lands Laws.

Village Lands, Town of Forbes.

Allotment.	Section.	Locality.	Area.	Date of proclamation in Gazette.
3	81	Town of Forbes .....	r. p. 1 27	} 1 April, 1898.
1	82	" .....	1 27	
5	82	" .....	1 27	
6	79	" .....	2 0	

During the year 1898 seventeen applications were made by owners of alienated lands for permits to mine for and remove the minerals in the land which under the terms of alienation were reserved to the Crown. This small number may be accounted for by the operation of the Mining on Private Lands Acts, which provide for mining on these lands for gold, silver, lead, tin, and antimony. Of

Of these applications six were granted and permits issued, being to mine for minerals other than those enumerated above.

Under section 23 of the Crown Lands Act of 1895 provision is made for the granting of settlement leases over somewhat extensive areas of Crown lands. The lands embraced by these holdings are exempt from the operation of the Mining Act of 1874, and also from the provisions of the Mining on Private Lands laws, but the Secretary for Lands has made provision in the form of lease to be issued for authorised search for gold and minerals, and on discovery for the resumption of so much of the leasehold as is required for mining purposes. Under this provision any person duly authorised by the Secretary for Mines may enter and search for gold or other mineral on such portion of the settlement lease as may be suitable, but so as not to interfere with any improvements on the land; and in the event of discovery so much of the settlement lease as may be required for mining purposes may be resumed or withdrawn therefrom if the importance of the discovery warrants such a course, when the discoverer will be held to be the first applicant for a claim or lease of the land or part thereof occupied by him for the purpose of searching.

During the year twenty-four such applications have been lodged, and of these fifteen have been approved and nine refused; but it is anticipated that in the future, when it is generally known that these leaseholds can be operated upon in the above manner, a considerable number of these authorities will be applied for. It is not expected that this system of searching will prove more satisfactory than the very similar method employed in connection with conditional leases under the Mining Act of 1889, being somewhat cumbersome and, on account of delay to the prospector, by reason of the necessary action to be taken before he can make a good title to the land likely to cause serious dissatisfaction and trouble, but the method of procedure is the best that can at present be arranged. Endeavours are being made to have the system improved.

Another matter I would invite attention to is the Church and School Lands Act of 1897, which came into force on the 6th December last. Under this Act all Church and School lands become Crown lands under the Mining Act of 1874, and can be so dealt with. This has thrown a considerable area of auriferous and mineral lands open to occupation under the Mining Act of 1874, which previously could only be occupied under the Church and School Lands Mining Acts, and will probably result beneficially so far as mining occupation is concerned. Considerable areas of these lands have been applied for to lease under the Mining Act of 1874.

It is also provided that the lessee under any lease of Church and School lands for mining purposes now in force may apply within a period of six months from the date of this Act to convert his lease into a lease under the provisions of the Mining Act of 1874. In only eleven cases has advantage been taken of this provision, and all the applications have been dealt with.

During the year fourteen applications were made to lease sites for dams, reservoirs, &c, in connection with mining, the area applied for being 183 acres 1 rood 17 perches. Of these, twelve have been dealt with for an area of 166 acres 1 rood 32 perches.

Until recently these sites were applied for as *special leases* under the Crown Lands Act, but advantage is now being taken of the provisions of the Mining Act and the Regulations in terms of which such leases may be granted, and these provisions appear to give general satisfaction.

#### REGISTRAR AND ENQUIRY BRANCH.

The annexed table, giving the area of Crown and private lands held under lease on the 31st December, 1898, and the minerals to be mined for, shows a decrease on the total area under lease at the end of the previous year, the most noticeable difference being in the area held for gold under the Mining Act of 1874. On the 31st December, 1897, over 16,000 acres were under lease, whereas at the end of last year only 11,000 acres were so held. This decrease is accounted for by the fact that a considerable number of leases have been cancelled for non-compliance with the labour conditions and non-payment of rent.

The season has been a particularly dry one, water being badly needed on all the fields, and the tendency during the last twelve months has been in the direction of taking up alluvial leases for dredging purposes. In this way attention has, to some extent, been diverted from quartz-mining.

The area held for coal and shale shows an increase of about 2,000 acres.

It was hoped that during the year considerable improvement would have been made in the diamond industry, but it is to be regretted that up to the present time these hopes have not been realised. The Bingara field is still languishing for want of capital to properly develop the various properties.

During

During the year 1,201 gold leases, representing 8,782 acres 0 rood  $6\frac{2}{5}$  perches, 221 mineral leases, representing 7,834 acres 1 rood  $4\frac{3}{5}$  perches, and 50 mining on private land leases, representing 2,573 acres 1 rood 13 perches, were cancelled, throwing open a total area of 19,189 acres 2 roods  $25\frac{7}{10}$  perches. Total number of leases cancelled, 1,472, as against 567 in 1897.

A considerable amount of business has been transacted during the year in the way of transfers, mortgages, &c., and 1,002 new leases were delivered.

The rents and royalties on existing leases have been promptly paid, and there is every reason to be well satisfied with the manner in which the revenue is coming in.

Within the last few months of the year numerous inquiries were made as to copper lands, and it is highly probable that numbers of properties which have been idle for years will be reworked.

RETURN showing the area of Crown and Private Lands held under Lease at 31st December, 1898, and the Minerals, &c., to be mined for.

COAL

## COAL MINES REGULATION ACT, 1896.

With the exception of some slight differences with a few of the colliery owners regarding the weighing clauses of this Act, it has been found to work very well. A complete report by the Chief Inspector of Coal Mines on the working of the mines will be found as an appendix.

## THE PROSPECTING BOARD.

The amount voted by Parliament for prospecting purposes during 1898 was £25,000.

The time of the inspecting members of the Board has been fully taken up reporting on the applications received for assistance, which increase in number each year. These applications come to hand from every mining district in the Colony, and the limited number of inspectors at the disposal of the Department for the work of reporting on the sites keeps these officers travelling continually to meet demands.

Following is a list of the principal places visited by the Board during the year:—

## List of localities visited by the Board during the year.

Adaminaby	Bowning	Coolac	Gilgai	King's Plain	Nimitybelle	Tenterfield
Adelong	Bowraville	Coolalie	Gilgunnia	Lewis Ponds	Nine-mile	Tia
Albury	Box Ridge	Coolongolook	Girilambone	Limekilns	Nundle	Tilba Tilba

Bowling-alley	Colinton	Flyer's Creek	Kerr's Creek	Niangala	Temora	Young
Point	Condobolin	Galley Swamp	Kiandra			

It has sometimes been found that miners, after applying for aid, decide to await the result of their application in preference to proceeding with their work, which, upon inspection, proves to be very insignificant.

The Board has determined to strongly discourage this practice, and when such cases are brought under their notice will not hesitate in recommending the refusal of applications from such persons.

The *bona fide* prospector, however, who shows his faith in himself and the ground he is testing, by vigorous work on it, will receive every justifiable assistance.

It is to be regretted that none of our mine-owners have yet made any effort to earn the reward offered by the Department for deep sinking. This Colony is far behind Victoria and Queensland in the matter of deep sinking. Our deepest auriferous workings are but a little over 1,000 feet, while in the other Colonies payable stone is being raised from several shafts over 3,300 feet in depth, and numerous shafts over 2,500 feet.

The reward notice is again published as a reminder.

## AMENDED NOTICE OF REWARD FOR DISCOVERY OF PAYABLE GOLD AT A DEPTH.

NOTICE is hereby given that the following rewards are offered for the discovery of payable gold at deep levels, viz. :—

£2,000 to the person or persons who shall first discover and make known to the Minister for Mines and Agriculture a payable gold deposit at or below 1,500 feet, and £3,000 to the same or other person or persons first discovering and making known to the aforesaid Minister payable gold at or below 2,000 feet.

The depths in each case being measured from the top of the shaft, which may be vertical or inclined.

The deposit in each case shall be deemed payable when 250 tons from it have been broken down, raised, and treated (at approved works) from or below the depths named, under the supervision of officers of this Department, and when the claimant or claimants prove to the satisfaction of the Minister for Mines and Agriculture that such operations have been attended with profitable results.

The right is reserved by the aforesaid Minister to make check-tests of stone to be treated.

The reward to lapse if not claimed within five years after date of this notice.

Among

Among the principal works taken in hand during the year by the Board is the preparatory prospecting operations in the Araluen Valley. A large area of ground has been tested, I regret to say, with very poor results. This work was given up by two different contractors, and had ultimately to be carried out by day-labour under the supervision of an officer of the Department.

Then come the two deep shafts at Corowa, started with a view to work the deep leads which cross the Murray from Victoria. These leads proved very rich in Victorian territory and are extensively worked there.

It is a large undertaking sinking to these leads owing to the heavy water and beds of running sand to be contended against.

The importance of opening up the deep leads of the Colony has received the Board's very careful consideration—with the result that liberal assistance has been recommended to several mining districts.

At Gulgong the Star Lead Co. are being helped in their search for the lost lead which was so successfully worked in the earlier days of the field.

Work is also vigorously proceeding at the Forest Reefs, where a large sum of money has been allotted from the Vote to give the lead there a thorough test.

In the Log Paddock, Mudgee, Higgins and party are also making a plucky attempt to strike the lead supposed to exist in the vicinity.

Substantial offers of assistance have also been made to the miners of Nine-mile, near Deepwater, and to the Kangaroo Flat Tin Mining Company, near Emmaville, to encourage them to proceed with the work of prospecting the deep leads known to exist in these districts, and said to be rich in stream tin.

The Board recognise that undertakings of the nature mentioned are beyond the reach of local syndicates of poor miners, and this is proved by the many abortive attempts already made in this direction. When it is clearly shown that these leads are payable, then their development might safely be left in the hands of private enterprise.

Tenders have been accepted for testing by a series of bores the deep alluvial ground at the Black Range, Albury, and the River Flats at Gundagai. Important results are expected to follow these operations.

The Board has also had a diamond drill in the Sunny Corner District, thoroughly testing it for new deposits, but so far no important discoveries have been made.

The question of testing the important gold-field of Hill End to a greater depth than hitherto attained has been receiving the attention of the Board, but the method of doing so has not been finally decided upon. The Board recommended that the diamond drill be employed, but the miners favour a low-level tunnel. The matter will, however, be further considered.

It is also proposed to put down some bores at Hargraves, to test Mr. Geological-Surveyor Watt's theory as to the occurrence of a saddle-reef formation there somewhat similar to that worked so successfully at Bendigo, Victoria.

No results have so far followed the liberal reward offered by the Government for the discovery of new mineral fields, although it no doubt has had the effect of stimulating the efforts of the prospectors.

The notice is again published in full for general information. : —

#### REWARD FOR THE DISCOVERY OF NEW MINERAL FIELDS.

NOTICE is hereby given that the sums mentioned will be paid as rewards for discovering, on and after this date, new Reefing or Alluvial Gold or Tin Fields, or new Deposits of Silver, Copper, Diamonds, or Precious Opal.

The sum of £500 will be paid to any person or persons who shall first discover a new Reefing or Alluvial Gold or Tin Field, or a new deposit of Silver, Copper, Diamonds, or Precious Opal, provided—

- (1) That the site of the discovery be distant not less than 10 miles from the nearest mine in which similar payable mineral has been or is being obtained.
- (2) That such discovery be made known to the Minister for Mines and Agriculture within what he shall deem to be a reasonable time after such discovery.
- (3) That it be proved to the satisfaction of the Minister that within six (6) months after he has been notified of such discovery not fewer than three hundred (300) miners have been profitably employed in mining upon such field or deposit.

In the event of the Minister being satisfied that at the expiration of twelve (12) months after he has been notified of such discovery not less than five hundred (500) miners have been profitably employed in mining upon such new field or deposit, the discoverer or discoverers shall be entitled to claim a further sum of £500.

The Minister shall be the sole judge as to any matter in dispute in regard to an application for reward.

The Board held 38 meetings as compared with 36 during the previous year. Of that number—

Mr. McLachlan, Chairman, attended	37	Mr. Watt, Geological Surveyor ... ..	15
Mr. Pittman, Government Geologist	20	Mr. Milne, Inspector of Mines ... ..	9
Mr. Slee, Chief Inspector of Mines	24	Mr. Godfrey, „ ... ..	5
Mr. Sullivan, Chief Clerk ... ..	6	Mr. Hooke, „ ... ..	12
Mr. Carne, Geological Surveyor ... ..	8	Mr. D. McCulloch, Secretary to the Board	36
Mr. Jaquet, „ ... ..	9		

The absence of the Geological Surveyors and Inspectors of Mines in the country prevents their regular attendance.

Mr. E. C. Whittell, an officer of the Geological Branch, rendered the Board good service, as in addition to supervising the important prospecting operations in the Araluen Valley, he reported on a large number of applications for aid along the Southern Coast.

The total number of applications for aid received during the year was 1,907, an increase of 90 as compared with 1897.

These were dealt with as under:—

	1897.	1898.
Aid granted in .....	533 cases.	541 cases.
Aid refused in .....	889 „	919 „
Applications abandoned.....	68 „	70 „
Application for public batteries .....	13 „	5 „
For reward for the discovery of new gold-fields .....	9 „	10 „
For free treatment of ore .....	15 „	15 „
Miscellaneous cases.....	249 „	300 „
	<u>1,774</u>	<u>1,860</u>
Applications awaiting inspection at the end of the year ..	43	47
	<u>1,817</u>	<u>1,907</u>

The foregoing figures only give the number of the papers brought before the Board for discussion, the total number of communications received in connection with the administration of the Vote during the year being 5,595, as compared with 5,223 the previous year.

It might be mentioned here in connection with the cases of free treatment of ore, that the Board only recommend that such be done after strict inquiry into the circumstances of the applicant, and when it is clearly shown that he is not in a position to pay the usual charges; the cost of railway freight and treatment a first charge on any product from the ore.

The following are some of the discoveries made with assistance from the Vote:—

Reuben Spicer was granted aid early in the year to sink some alluvial shafts on Goobang Creek, about 7 miles north-east of Parkes. In No. 4 shaft, 38 feet deep, wash 15 inches thick was struck, which carried coarse gold in payable quantities. The discovery caused a rush, and the locality will be well tested.

M. J. Brown and party prospecting on Meryula Run, 3 miles from Mount Boppy, in the Cobar District, received aid to continue their shaft to 150 feet. Before the grant was exhausted the mine promised so well that the party disposed of the property to the Anglo-Australian Exploration Company at a satisfactory figure. The Company propose to fully develop the mine.

Wyburn and Tellefson were granted aid to prospect for cobalt ore at a point 250 yards south of the Anglican Church at Port Macquarie. During the progress of the work rich cobalt ore was struck. The prospects of this mine are considered very encouraging.

Peter Marterstick was granted aid to sink on the Fiery Cross Spur, Nerrigundah. During the operations Mr. Marterstick won over £200 worth of gold from the shaft. The prospector promptly returned to the Department the amount paid as aid.

J. V. Bartlett received aid to test some silver-bearing deposits on his property at The Peaks, Burragorang. He was successful in striking some very rich ore, and indications point to the probability of a silver-field of considerable importance being opened up.

T. Holten and party of Grenfell received aid to test the Eureka Flat for alluvial gold. At 230 feet they struck wash 2 feet thick, which prospected 6 dwt. of gold to the dish. The locality had not hitherto been tried. Work is now proceeding vigorously.

One of the conditions attached to grants made to prospectors is that should payable minerals be discovered by means of the aid granted the amount paid "is to be refunded to the Department."

It is, however, a fact that for the purpose of evading a refund the men endeavour to conceal and fail to report discoveries, consequently the Vote is not credited with all the finds made through its agency.

Fortunately, exceptions are to be found in their ranks, as will be seen in the case of Mr. Marterstick noted above. Another case worthy of special mention is that of Messrs. McLaughlin and West, of Galleymont, near Mandurama; the party were granted aid to the extent of £91 5s. to continue their 50 feet shaft another 100 feet deep. The grant induced them to carry out some work in the shaft, prior to beginning operations under the aid, when they struck payable stone. They immediately notified the Department of the fact, and at the same time withdrew all claim to the aid granted, also stating that the encouragement given them by the grant, was undoubtedly the direct means of the discovery.

#### GEOLOGICAL SURVEY.

The Geological Survey Branch of this Department, under Mr. E. F. Pittman (Government Geologist), has carried out valuable work during this year.

In addition to his other duties, Mr. Pittman was engaged examining and reporting on the following:—

- Coal seams at Hexham.
- Occurrence of tellurium in the Prince of Wales Mine, Gundagai.
- Proposal to prospect by boring for deep auriferous leads at Albury.
- Site for a bore at Hill End, proposed by Mr. Geological-Surveyor Watt.
- Auriferous nature of the Sunny Corner Mine.
- Prospects of obtaining artesian water in the Hay district.
- Water supply for Lockhart.

Mr. Geological-Surveyor Carne contributed reports on:—

- The Bushy Hill gold deposits.
- Auriferous beaches near Seal Rocks.
- Gold leases, Sunny Corner.

Mr. Carne dealt with a large number of applications for aid from the Prospecting Vote, and also a number of papers in connection with the mining reserves. The remainder of his time was taken up examining copper lodes and collecting data for a work he has in hand, dealing with the copper-mining industry and the distribution of copper ores in New South Wales.

Mr. Geological-Surveyor Jaquet, during the early part of the year, prepared his pamphlet on gold-dredging, since issued as No. 3 of the Mineral Resources. Assisted by Mr. L. F. Harper, he has also been engaged in geologically examining and mapping the iron-ore deposits of the Colony, and his memoir on this subject is now in course of preparation. Mr. Jaquet also dealt with a large number of prospecting applications and papers in connection with mining reserves, &c.

Mr. Geological-Surveyor Watt contributed the Mineral Resources No. 4, on the occurrence of bismuth ores in New South Wales, as well as a report on a deposit of specular iron ore at Gobondry, also a report on the Saddle Reefs at Hargraves and Hill End.

During the latter part of the year Mr. Watt was engaged on a geological examination of the Wyalong Gold-field, his report on which has been recently issued as No. 5 of the Mineral Resources.

The Department has lost a zealous and efficient officer through Mr. Watt's resignation early in 1899.

Mr. Card, Curator and Mineralogist, has, in addition to his current work of examining minerals, made good progress in the arrangement of the Museum, and has spared no effort to increase its usefulness. He has also contributed to the Mineral Resources a paper on the "Auriferous and Associated Rocks of the Gold and Tellurium Ores of Kalgoorlie, W.A."

Mr. W. S. Dun, Assistant Palaeontologist and Librarian, has been engaged in identification of fossils, collected by the Geological Staff, and classifying and arranging such in the Museum.

## LIMESTONE CAVES.

Mr. Harry Smith, the successful tenderer for the lease of the New Accommodation House at the Jenolan Caves, entered into possession on the 1st July last. His catering has, up to the present time, given unqualified satisfaction to visitors.

The building is surrounded by tastefully laid out paths and plantations, and presents a very attractive appearance, reflecting much credit on the Government Architect, W. L. Vernon, Esq., under whose supervision the improvements have been effected.

New entrances have been provided to the Lucas and Imperial Caves, which are greatly appreciated by visitors.

A guide-book to the Jenolan Caves, the manuscript and plans for which were prepared by Mr. O. Trickett, Inspector of Caves, is now in the hands of the Government Printer for publication, and it is thought will be highly valued by visitors.

## MINING SURVEYS.

The number of mining surveys made during the year was 844. Of these, 657 were made by surveyors on salary, and 187 by surveyors remunerated principally by fees paid by mining applicants.

At the beginning of the year, four surveyors were employed on the permanent and one on the temporary staff. In May, 1898, it was found that the permanent staff, with casual assistance from licensed surveyors, was sufficient to carry on all surveying operations required. The services of the temporary surveyor were accordingly dispensed with, but more recently he has been re-employed on surveys under the Artesian Wells Act.

At the close of the year only 68 instructions for survey of leases, &c., remained unacted on, in the hands of the surveyors. All of these also related to recent mining applications.

The 844 surveys made comprised the following:—

Gold leases ... ..	524
Mineral leases ... ..	79
Mining tenements ... ..	80
Mining permits ... ..	124
Private lands leases ... ..	112
Special gold-dredging leases ... ..	25

The dredging leases referred to were taken up in the auriferous beds of rivers, and their survey involved an expenditure of time and labour far in excess of any other class of surface measurement hitherto devolving upon the Department.

Four underground surveys of parts of the Hetton, Gunnedah, Wickham and Bullock Island, and Duckenfield Collieries were also made, mainly with the view of determining whether encroachment of coal-workings had occurred upon the land adjoining the colliery properties.

Eight surveys of artesian well schemes were made with a view to action under the Artesian Wells Act of 1897.

## CHARTING, &amp;c.

Mining Leases on Crown Land.—The number of gold and mineral lease applications, relating to Crown land, dealt with in the Charting Branch during the year was 1,144.

Mining Permits.—The number of 27th and 28th section applications dealt with was 217.

Mining Leases on Private Land.—164 applications to lease land under the provisions of the Mining on Private Lands Act were dealt with.

Mining Tenements.—133 plans of measurement under the Mining Board Regulations were examined, charted, &c.

Mining Lease cases undealt with at the close of the year.—At the close of the year there remained under action in the Branch 21 gold and mineral lease applications, no applications under 28th section, and 5 applications for lease of private lands.

Authorities and Agreements, M.P.L. Acts.—During the year 730 applications for authority to enter private land for mining purposes, and 101 agreements relating to mining on alienated land, were investigated and dealt with.

Reserves

Reserves under 26th section, Act of 1874.—167 reserves under 26th section of the Mining Act of 1874 were described, gazetted, and charted.

Mining Districts and Divisions.—In 40 cases alterations were made in the boundaries of mining districts and divisions, the results in all cases being shown upon illustrative maps for the use of local officers.

Notation of Plans.—1,754 notations of transactions relating to leases, &c., were made upon plans during the year.

Plan Drawing.—874 plans of mining surveys were drawn.

Map Records, Private Lands Work.—121 maps of parishes, &c., were prepared, charted up to date, and placed in use for charting leases and authorities under the Mining on Private Lands Acts.

Revisal of Proofs and Draft References of Lands Department Maps.—110 proofs of Lands Department maps, and 49 draft references, were revised with regard to mining surveys before publication by the Department of Lands.

Compilations.—Sixty-four maps of mining localities have been prepared with a view to heliographic reproduction. A few of these are compilations upon tracing linen, the remainder being transparencies for which published lithographs charted to date are used. The latter system has greatly cheapened the production of standard maps for the purposes of this Department.

Standard Maps.—380 standard maps were charted up during the year. The Department now possesses 1,146 of these maps.

Plans of the Delta Collieries, &c.—To facilitate the work of the Chief Inspector of Collieries a plan of the underground workings of the collieries at the Delta in Newcastle was prepared in the Branch. Plans to illustrate the Dudley Colliery accident were also drawn.

Heliography.—5,177 heliographs and ferrotypes of mining maps and plans and illustrations for the Public Watèring Places Branch were printed.

Plan-mounting and Bookbinding.—4,377 plans, maps, &c., were mounted, and 41 books bound by the plan-mounter.

Maps supplied to Wardens and others.—970 charted-up copies of maps were forwarded to Mining Wardens and Registrars, and 113 to Surveyors and others.

The work of keeping local map records up to date for the benefit of the public and officers of the Department has been vigorously carried on during the year, and as the matter is being dealt with under greatly improved methods, it is expected that in a short time the maps of the Mining Registrars throughout the Colony will be brought and kept charted closely up to date. Already the principal mining localities have been dealt with.

Resumptions.—Three cases relating to resumption of parts of the surface of leases required for public purposes were dealt with.

Illustrations for Stock Branch.—271 illustrations, comprising charted-up maps, tracings, &c., were prepared for the use of the officers of the Stock Branch. This work was previously carried out under contract by draftsmen not attached to the Department.

Digest of Mining Laws.—In order to assist the Minister in preparation of new mining laws, one of the officers of the Branch compiled a digest of the Mining Acts and Regulations of the several Australian Colonies.

Miscellaneous Papers.—In addition to lease applications, surveyors' reports, and other unregistered documents, 5,850 papers were received and dealt with during 1898.

Tracings for Surveyors.—787 tracings were made to assist surveyors in the performance of their duty.

Duplicate Diagrams.—407 duplicate diagrams were drawn in cases where leases were renewed after expiration, &c.

Artesian Well Surveys.—Plans of levels of 8 artesian well schemes, surveyed with a view to action under the Artesian Wells Act of 1897, have been examined.

Present State of Work in the Branch.—Owing to the diligence of the officers of the Branch there are absolutely no arrears of current work. The machinery and records may be claimed to be thoroughly efficient.

## THE MINING SCHOOL.

The Mining School at the University of Sydney has been open to the public since 1892, and at present it numbers about sixty students, all of whom are working for their degrees in mining engineering, or for certificates in some branch of that profession. Nearly all the students who have already passed through the school have found suitable employment on mines. Of these, thirteen have taken the Degree of Bachelor of Engineering, in mining, and are in receipt of salaries averaging over £300 a year. One of these, Mr. E. S. Simpson, B.E., holds the position of Assayer and Analyst and Mineralogist to the Geological Survey of West Australia; Mr. A. R. Weigall, B.E., has lately been appointed manager of a mine at the Celebes, at a salary of £1,000 year; Mr. E. W. Nardin, B.E., holds the position of mining manager near Solok, Sumatra, at a salary of £750; and Mr. J. T. Dixon, B.E., is mining manager at a salary of £1,000 a year, also near Solok, Sumatra. Mr. H. Twynam, B.E., was offered a similar position at one of the Netherlands, East Indies, but preferred to retain his position, which is one of considerable responsibility, at the Mount Morgan Mine, Queensland. Mr. N. Reid, B.E., is employed at present as assistant to Mr. T. J. Greenway, at Block 14, Broken Hill. Mr. F. L. Piddington, B.E., is assistant metallurgist to the Smelting Company of Australia, Dapto Works. Mr. T. H. Palmer, B.E., has lately been appointed manager of the Overflow Mine, New South Wales. Amongst others, who have been through a portion only of the course of instruction at the School, Mr. J. A. Watt, M.A., B.Sc., has held the position of Geological Surveyor to the Government of New South Wales; and Mr. T. Blatchford, B.A., is Assistant Geologist on the Geological Survey of West Australia; while Mr. H. B. Gritton has recently been appointed Assistant Assayer to the Royal Mint in Sydney.

Students in the Mining School have the use of the finely equipped laboratories belonging respectively to the Chemistry, Engineering, Physics, and Geological Departments, and attend the instruction given by the following:—Professor Liversidge, F.R.S., M.A., LL.D., Chemistry; and Mr. J. A. Schofield, Assoc. R.S.M., Demonstrator in Chemistry, Metallurgy, and Assaying; Professor Warren, Wh.Sc., M. Inst. C.E., and Mr. H. S. Barraclough, B.E. (Sydney), M.M.E. (Cornell), Assoc. M. Inst. C.E., Engineering; Mr. E. F. Pittman, Assoc. R.S.M., Government Geologist, New South Wales, Mining; G. H. Knibbs, L.S., F.R.A.S., Underground Surveying, &c.; Professor Gurney, M.A., and Mr. E. M. Moors, M.A., F.I.A., Mathematics; Professor Pollock, B.Sc., and Mr. J. H. D. Brearley, B.E., Physics; Professor David, B.A., and Mr. W. G. Woolnough, B.Sc., Geology and Mineralogy.

Mr. James Taylor, B.Sc., Wh.Sc., A.R.S.M., the Government Metallurgist, has lately resigned his lectureship in metallurgy; but the position has been satisfactorily filled by the appointment of Mr. Basil W. Turner, Assoc. R.S. Mines, London, F.C.S.

Arrangements are being made for giving students practical experience in the separation and concentration of ores and the separation of metals by amalgamation and other processes, the necessary plant having been provided at the Mining School, but the building for it not yet having been erected. The number of students in the Mining School has increased to such an extent that the accommodation in the metallurgical laboratory is quite inadequate. The question of enlarging the metallurgical laboratory, and of providing more assay furnaces, is now engaging attention. The need for increased accommodation has become so pressing that if there be a corresponding increase of students next year some will have to be refused admission to the School.

The Government Experimental Metallurgical Works at Clyde are also available for giving the students practical experience in metallurgy.

During part of the vacation the Lecturer in Metallurgy arranges to take students for excursions to works in the Colony where metallurgical operations are being carried on.

The fact should be emphasised that the University of Sydney Mining School is open to the public without any restriction, and it is not necessary for a student desirous of going through a part only of the mining engineering course to pass any kind of entrance examination, or to matriculate. Several students have, for example, studied assaying and chemistry only at the Mining School, and to those who have passed their examinations satisfactorily the University has granted certificates of proficiency in those subjects.

In order, however, to qualify themselves for the full degree of Bachelor of Engineering in Mining, the University requires students to pass an entrance examination and to attend all the prescribed courses of instruction (except in the case of students who can adduce proof of having already passed elsewhere an equivalent or partly equivalent examination, as, for example, students from the Technical College, who have passed in mineralogy, geology, &c. Such students may be excused attendance at such portions of the courses of instruction at the University as those in which they have already passed at the Technical College

College and elsewhere). Although it is possible for students to obtain certificates of having passed in special subjects at the Mining School, there can be no doubt whatever that it is a decided advantage for them to complete the whole course of study necessary for obtaining the Bachelor of Engineering degree.

Any one desirous of joining the Mining School can obtain full particulars on application to the Registrar of the University, Glebe, Sydney. A Summary, however, may be given here of the present curriculum of studies at the Mining School, together with list of fees and nature of entrance examinations, for those who wish to obtain the full degree of B.E. in mining.

Students wishing to qualify for the mining engineering degree can enter the School if they have passed—(1) The Entrance Science Examination; (2) the Senior Public Examination; or (3) if they have attended the lectures in the First Year Arts Course and passed the First Year Examination in Arts; or (4) if they produce evidence of having graduated in Arts or in Science.

As regards (1), See Calendar of University of Sydney for 1898, pp. 56–58, and appendix, pp. CLXXXVII–CXCIV. The subjects are Latin, one of the three languages—Greek, French, or German—and Arithmetic, Algebra, Geometry, and Trigonometry; that is, two languages and four mathematical subjects. It is provided, however (v. Calendar, 1898, p. 32), that “Students of the Technical Branch of the Department of Public Instruction whose certificates of attendance and examination in that branch are accepted by the Senate as an equivalent to a portion of the curriculum prescribed for candidates for the degree of Bachelor of Mining Engineering shall be considered to have passed the Entrance Examination if they satisfy the Examiners in the following subjects, viz.:—In two of the four languages—Latin, Greek, French, German—and in four of the following subjects, viz., Arithmetic, Algebra, Geometry, Trigonometry, Elementary Surveying, and Astronomy, Mechanics, Applied Mechanics.” The Technical College Students can, therefore, under the above conditions, study as subjects for examination two modern languages, such as French or German, instead of either or both the classical languages, Latin and Greek, as well as any four of the other subjects. As regards (2), the languages in any two of which the Students must pass are similar to those specified under (1); and in the mathematical subjects Students may take any four of the following:—Arithmetic, Algebra, Geometry, Trigonometry, Elementary Surveying, and Astronomy, Mechanics, Applied Mechanics. (For further particulars, see *Manual of Public Examinations for 1899*, published by Angus and Robertson, price 1s. 6d.; and *Calendar of the University of Sydney for 1899*, Angus and Robertson, price 1s.)

Any Students who are not graduates (the latter being entitled to enter the School without any preliminary examination) are strongly advised to enter the Mining School by passing either the Entrance Science Examination or the Senior Public Examination in the prescribed subjects.

The next Entrance Science Examination will be held at the University next year on 5th March 1900; and the Senior Public Examination is also held at the University, as well as at numerous local centres in New South Wales and Queensland, and commences on 13th November, 1899.

Three bursaries, each tenable for three years, are offered by the Department of Mines and Agriculture for award after competition at the Senior Examination in the following subjects:—Arithmetic, Algebra, Geometry, and Trigonometry, Latin, and one of the languages, Greek, French, or German. They are of the value of £100 a year for country students, and £50 a year for students residing in Sydney or suburbs.

At last Senior Examinations two candidates, having satisfied all the requirements, and shown a good standard of proficiency, were awarded mining bursaries. They are entering on their course of studies this term.

The fee for the Entrance Science Examination is £2, and that for the Senior Public Examination £1 10s.

By passing either of the above examinations in the prescribed subjects, students shall be able to obtain their B.E. degrees in three years, instead of in four years, as if they simply matriculate they are required to attend the lectures and pass the examinations in the First Year Arts Course before they can be admitted to the Mining School.

The courses of instruction given to Mining Engineering students during the first, second, and third years, are specified on page 33 of the 1898 calendar.

The first year is devoted chiefly to Science, Mathematics, and Drawing; the second year chiefly to Civil Engineering and Surveying, Chemistry, Geology and Mineralogy, and Mechanical Drawing; and the third year to Metallurgy and Assaying, Mining, Civil Engineering, Materials and Structures.

The

The aim throughout has been to make the curriculum thoroughly sound as regards both theory and practice, and the fees compare favourably with those charged at similar schools of mining engineering in Great Britain and America, as is shown by the comparative tables appended.

The School has been liberally subsidised by the Department, and the fact may be repeated here that any member of the community may attend any of the classes at the Mining School, on payment of the prescribed fee to the Registrar, and may be admitted to examination in any particular subject, and if successful may be granted a certificate of proficiency in that subject.

The various laboratories in connection with the Mining School are open to the public for inspection all the year round between the hours of 9 a.m. and 5 p.m., except for about a fortnight during January.

The recent great increase in the number of students is the best proof that the public appreciates the importance and usefulness of this Mining School.

APPENDIX (1) showing Details of Fees at Mining School, University of Sydney.

1st Year.	£ s. d.	2nd Year.	£ s. d.	3rd Year.	£ s. d.
Mathematics .....	6 6 0	Chemistry, practical.	15 0 0	Assaying .....	24 0 0
Chemistry, inorganic	6 6 0	Geology .....	6 6 0	Mining .....	4 4 0
Chemistry, practical	8 5 0	Mineralogy, lectures.	2 2 0	Metallurgy .....	4 4 0
Physics, lectures.....	6 6 0	Mineralogy, practical	2 2 0	Drawing .....	1 1 0
Physics, practical ...	3 3 0	Applied mechanics...	4 4 0		
Physiography .....	2 2 0	Surveying .....	3 3 0		
Applied mechanics...	4 4 0	Physics, electrical ...	4 4 0		
Descriptive geometry	3 3 0	Materials & structures	2 2 0		
Mechanical drawing..	2 2 0	Mechanical drawing..	1 1 0		
	£41 17 0		£40 4 0		£33 9 0

The total amount of fees for lectures and practical work for the whole course is thus about £115 10s. There is also a fee of £10 for B.E. degree, and experience has shown that sundry expenses, such as cost of travelling to and from mines, purchase of apparatus, may amount to about £20. This apparatus remains the property of the student, and most of it is saleable at but a slight reduction upon the original cost. Much of the travelling to mines is optional on the part of the students, rather than compulsory.

APPENDIX (2). Comparative Table showing Cost of Mining Engineering Degrees at Typical Teaching Institutions.

At the Royal School of Mines, London, which is supported by the State, the fees amount to about £88 for the subjects corresponding to those of the first two years of the Sydney University School of Mines course, and to £46 for the tuition of the third year—a total of £134. The student, however, at the Royal School of Mines can take up either mining or metallurgy, instead of both; for mining alone the third year fees are £29, and for metallurgy alone £30, or £46 if both are taken. There are also expenses for apparatus, travelling to visit mining districts, &c.

The tuition fees for the degree in Mining at the Massachusetts Institute of Technology is £41 13s. 4d. a year, or £166 13s. 4d. for the four-year course. The cost of chemicals and apparatus, however, is extra, and there are probably examination and tuition fees in addition. The cost of tuition is only partly covered by the fees—the institution loses about 150 dollars, or £31 5s. per annum, by each student.

At the School of Mines, Columbia College, New York, the fees are £41 13s. 4d. per annum, or £166 13s. 4d. for the four-year course. In addition there are graduation fees, the cost of apparatus, materials, summer excursions, &c., making apparently a total of about £240.

SUMMARISED Comparative Table of Cost of Tuition for Mining Engineering Degree.

	£ s. d.	
Sydney University School of Mines .....	*125 0 0	for Mining and Metallurgy.
London Royal School of Mines .....	*134 0 0	" "
Massachusetts Institute, Boston .....	*166 13 4	for either Mining or Metallurgy.
School of Mines, Columbia College, New York ...	240 0 0	" "

\* This does not include cost of apparatus, &c.

THE GOVERNMENT METALLURGICAL WORKS, CLYDE.

During the year one or other portion of the plant has been steadily employed. No additions have been made to the machinery, but it has been found desirable to modify the chlorination process, and with this object in view experiments are now being made with the Black-Skeet permanganate process, and with other processes.

The number of parcels received for treatment in 1898 is 72, an increase of 9 on the previous year; weight received, 236½ tons, an increase of 26½ tons; fees paid for treatment, £338 0s. 10d., less amounts refunded, £3 16s. 6d., leaving net £334 4s. 4d.; weight of gold extracted, 631·85 oz., of the value of £2,405 0s. 11d. The 72 parcels of gold were made up of 56 gold ores, 3 silver ores, 1 platinum concentrates,

concentrates, 9 gold concentrates, and 3 gold precipitate from the cyanide process. Some of the parcels were treated by more than one process, hence the total submitted to the various processes amounts to more than 72;—thus 44 were amalgamated with or without concentration, 2 were concentrated, 1 was sampled only, 28 were chlorinated, 9 cyanided, and 5 were assayed only; whilst the 3 gold precipitates were run into ingots. The gold ores yielded varying amounts from nil up to 206 oz. from a total weight of 60½ lb. of stone, or about 7,626 oz. per ton. Parcels have been forwarded from almost all parts of the Colony, but chiefly from within a radius of 60 miles around Bathurst.

Owing to the impossibility of cleaning up the zinc-boxes after each parcel treated by the cyanide process, the following addition has been made to the regulations:—“Of the gold extracted by cyanidation, as shown by assays, 90 per cent. is paid for at the rate of £4 per oz.”

The charges for the treatment of gold precipitate obtained from zinc-boxes, and forwarded for smelting, have been fixed at 15s. per cwt., with 10s. per parcel in addition.

The charges for the further treatment of tailings produced in the works, by either cyanidation or chlorination, have been considerably reduced. Particulars can be obtained on application to the Department.

Much attention has been given by the Government Metallurgist to the cyanide case, which was submitted to a ten days' hearing before the Examiner of Patents in December, the result of which has not yet been made known.

During the year 60 specifications on metallurgical subjects in connection with the Patents Office have been investigated and reported on.

During September a visit was paid by the Government Metallurgist to Broken Hill, and a report on the zinc question was made, which appears in the Appendix hereto.

The Government Metallurgist also delivered between 50 and 60 lectures on Metallurgy to the students of the Mining School at the University.

#### THE ZINC PROBLEM IN BROKEN HILL.

Sir,

I have the honor to report as follows on this subject:—The sulphide ores of Broken Hill now being raised have the composition represented by the following assays:—

Zinc.	Lead.	Silver.
15 per cent.	29 per cent.	6 oz. per ton.
14 ”	20 ”	5 ”
20 ”	20 ”	20 ”
18 ”	18 ”	13 ”
12 ”	17 ”	9 ”
15 ”	18 ”	12 ”

Four or five years ago it was first shown practically how these ores could be treated with profit by a process of concentration, which is now in general application. The direct smelting of such ores for lead and silver was rendered difficult or impossible by the presence of the zinc. By experiment it was shown that by jigging usually three classes of material could be produced, one class containing more silver, more lead, and less zinc, a second class containing more zinc, less lead, and less silver, and tailings containing less of each of the metals. At the same time experiments were conducted with the smelting in order to ascertain the maximum amount of zinc permissible in the furnace charge; this was found to be about 16 per cent. of the ore. The possibilities of concentration and smelting as applied to these sulphides being thus ascertained, the continued existence of the mines became assured. It is thus evident that most important progress has been made. Up to the present time continuous effort has been made to improve the concentrating appliances both in regard to quantity and quality of output, and 2,000 tons of ore per week is handled in more than one mill without difficulty.

As examples of the concentrates produced, the following assays may be quoted:—

Zinc.	Lead.	Silver.
9 per cent.	66 per cent.	12 oz. per ton.
8 ”	67 ”	10 ”
10 ”	63 ”	32 ”
7 ”	64 ”	32 ”
8 ”	56 ”	25 ”
10 ”	49 ”	28 ”

In the smelting of these concentrates, the zinc is entirely lost. The second class of concentrates, in which the zinc is enriched in comparison with the lead and silver, may be represented by the following assays:—

Zinc.	Lead.	Silver.
22 per cent.	12 per cent.	3 oz. per ton.
20 ”	8 ”	12 ”
20 ”	1 ”	2 ”
17 ”	11 ”	9 ”
20 ”	5 ”	7 ”
25 ”	12 ”	9 ”
24 ”	11 ”	12 ”

This material has been stacked about the various mines with a view to future treatment, so that the quantity now accumulated in the dumps is probably something like 600,000 or 700,000 tons, with a weekly production of probably over 5,000 tons. This product, spoken of as “zincs,” is not rich enough in zinc to pay for export to the zinc smelting centres of Europe, especially as no allowance is made for the other metals present; the lead, in fact, is objectionable in the ordinary process of zinc-distilling.

The tailings produced by concentration have something like the following composition :—

Zinc.	Lead.	Silver.
19	3	6
14	5	5

These are used as "filling" in the mines, and some of the zincs have been so disposed of.

The question of the profitable extraction of the zinc is now attracting much attention, not only in Broken Hill, but in Europe and America. The reduction of zinc to the metallic state is attended by a loss of from 10 to 20 per cent., or even more, of the metal. It is also costly in the matter of fuel, the production of 1 ton of zinc from 20 per cent. ore, requiring as much as 10 tons of coal in Upper Silesia according to Schnabel. The cost of fireclay is a serious item, as the clay must be of the highest quality; I do not know of any colonial clay suitable for the purpose, and as the clay required amounts to about one-fifth in weight of the metal produced, the cost of extraction would be materially affected by the employment of imported clays. The cost of labour is high in comparison with that employed in the production of the common metals, thus for 1 ton zinc per twenty-four hours four to seven or eight men are required.

From these considerations it is evident that the production of metallic zinc at Broken Hill by the ordinary zinc roasting and distillation process is altogether out of the question. Its production on the coast, or in the neighbourhood of cheap fuel, as at Newcastle, is not much more likely from the low grade "zincs."

Electrolytic processes for the production of zinc from its ores or compounds are being evolved almost daily, and notwithstanding the temporary or permanent failure of the Ashcroft process from which so much was expected, real progress has been made elsewhere, and a certain amount of electrolytically produced zinc is being put on the market. Thus, according to Mineral Industries, Vol. vi, p. 668, 800 metric tons was the output of works at Wimmington, near Chester, last year by Hoepfner's process, in which zinc chloride is electrolysed, the chlorine simultaneously produced being utilised for the production of bleaching powder. Also Diffenbach's process, as run at Duisburg, is said to produce 90 tons of zinc per month. Other electrolytic processes have passed the patent stage and may eventually reach the practical stage.

Cheap power is essential to all these electrolytic processes, and this will militate against their extensive application in Broken Hill.

Certain special processes have been devised for the treatment of mixed sulphides and one known as Fry's can be profitably run in districts where in addition to cheap coal and fireclay, the special flux "salt-cake" is also at hand. This process, in operation in Swansea, has successfully treated Broken Hill concentrates in South Wales, but not in New South Wales, as we lack the chemical industry producing the flux required.

Decidedly the most hopeful processes are those in which it is sought to partially treat the zinc-ore for the production of a compound of zinc much richer in that metal than the ore, usually the oxide of zinc being the substance obtained, which can be sold for export, the residue being smelted for argentiferous lead; or the lead may be converted into a volatile compound and be expelled by heat and collected in cooling chambers, whilst the zinciferous residue may be treated for the production of oxide by the Bartlett process. The Carmichel process, now in the experimental stage at the Proprietary Mine, is a type of the former class of processes, whilst the method proposed by Greenway, but not yet applied in its entirety, is a type of the latter class.

These operations would probably entail the transport of the "zincs" to the seaboard. But the further concentration of the "zincs" by a process of magnetic separation is under consideration, and is about to be put into operation near the mines. The outcome of this idea will be awaited with great interest, and if successful will add considerably to prosperity of the Broken Hill District.

Finally, it appears to me that the solution of the zinc problem is being gradually but certainly worked out, and will be reached ere long.

I have much pleasure in acknowledging my obligations to Mr. Greenway, Manager of Block 14; Mr. Edwards, Surface Manager, South Mine; Mr. Eustace, of the British; and Messrs. Carmichel and Pitcairn, of the Proprietary Mine, for much courtesy and information.

I have, &c.,

JAMES TAYLOR,

Government Metallurgist, 21/10/98.

The Under Secretary.

Mr. John C. H. Mingaye, F.C.C., Analyst and Assayer to the Department, reports as follows :—

*Geological Survey Branch.*

The larger portion of work performed in the Chemical Laboratory is in connection with the assays and analyses required by the Geological Survey Branch. The whole of the analytical work for the the Public Watering Places Branch has been performed in the laboratory, and consisted mainly in the analyses of artesian and well waters, with a view of ascertaining their value for human consumption, stock, and irrigation purposes. 4,428 numbered samples were received for analyses and assay; 95 complete, proximate, and qualitative analyses were furnished.

The following assays have been made for various metals :—

Antimony .....	16	Nickel .....	6
Arsenic .....	3	Iron .....	87
Bismuth .....	11	Platinum .....	3
Chrome .....	13	Tin .....	25
Cobalt .....	13	Tellurium .....	11
Copper .....	466	Tungstic acid .....	6
Lead .....	55	Titanic acid .....	39
Manganese .....	33	Zinc .....	12
Magnesia .....	1	Various determinations .....	145
Mercury .....	5		

Gold and silver, 4,394 assays.

Or a total of 5,344 assays.

The following analyses were made of water :—

- (1.) Water from well at Orange Grove, Jerilderie. For stock purposes. Total solid matter (dried at 220° F.) 2,891.0 grains per gallon. Reported as a strong saline purgative water and dangerous for watering stock with.
- (2.) No. 1 sample from Morton Plains' bore, from first supply struck at a depth of about 750 feet.
- (3.) No. 2 Morton Plains' bore, from 2 and 3 supplies of water, struck at a depth of between 1,658 and 1,668 feet. Temp. 120° F.
- (4.) Morton Plains' bore, from drain as the water flows away from bore with Nos. 1, 2, and 3 flows mixed. Temp. 118° F.
- (5.) Artesian water from No. 1 bore, Belalie Station.
- (6.) Artesian water from No. 2 bore, Belalie Station.
- (7.) Well water from Lockhart.
- (8.) Water from white tank at Wyalong.
- (9.) Artesian water from Woromina bore.
- (10.) Water from well at Roschill, near Hillston.
- (11.) Water from Government tank at White Cliffs.
- (12.) Water from Kilifera.
- (13.) Artesian water from Butterbone bore.
- (14.) Artesian water from near Tenandra bore, Warren District.
- (15.) Artesian water from Kenmare bore.
- (16.) Artesian water from Wallen bore.

The

The following are a few of the analyses made, which I give, as they are interesting:—

No. 61. Marly Limestone.—Analysis made with a view of ascertaining its hydraulic properties.

<i>Chemical Composition.</i>	
Moisture at 100° C. ....	.56
Combined Water .....	1.35
Silica (SiO <sub>2</sub> ) .....	22.71
Alumina (Al <sub>2</sub> O <sub>3</sub> ) .....	5.45
Ferric Oxide (Fe <sub>2</sub> O <sub>3</sub> ) .....	.70
Calcium Carbonate (CaCO <sub>3</sub> ) .....	38.41
Magnesium Carbonate (MgCO <sub>3</sub> ) .....	29.43
Magnesia (MgO) .....	.63
Potash (K <sub>2</sub> O) .....	.92
Soda (Na <sub>2</sub> O) .....	.01
Phosphoric Acid (P <sub>2</sub> O <sub>5</sub> ) } .....	traces
Chlorine (Cl) .....	
Organic matter .....	
	100.17

Most authorities consider that for hydraulic purposes the magnesia should not exceed over 2 per cent. If the material is used for harbours and submarine work, should not exceed 1 per cent. of magnesia.

(No. 3395.) Clay shale, parish Towrang.

<i>Chemical Composition.</i>	
Moisture at 100° C. ....	.67
Combined water .....	2.97
Silica (SiO <sub>2</sub> ) .....	79.54

(No. 87.) Water from well, Orange Grove, Jerilderie. If suitable for stock ?

Total solid matter (dried at 220° F.)..... 2,891·0 grains per gallon.  
Total chlorine (combined) ..... 1,173·12 „ „

The total solid matter consists mainly of soda and magnesia, combined with chlorine and sulphuric acid. The sample is a strong saline purgative water, and totally unfit for watering stock with.

(No. 615.) Well water from bore at Lockhart. If suitable for human consumption ?

Total solid matter (dried at 220° F.) ..... 946·456 grains per gallon.  
Free ammonia..... ·021 per 100,000 parts.  
Albuminoid ..... ·106 „ „

The total solid matter consists largely of soda and magnesia, with some lime, &c., combined with chlorine, sulphuric and carbonic acids. The water contained a quantity of fine suspended matter—clay and organic matter—and may be described as totally unfit for human consumption or stock.

(No. 887.) Water from White Tank at Wyalong. If suitable for human consumption ?

Total solid matter (dried at 220° F.)..... 50·064 grains per gallon.  
Insoluble mineral matter..... 39·928 „ „  
Soluble saline matter ..... 10·136 „ „  
..... 50·064 „ „  
Chlorine (equal to sodium chloride) ..... 4·99 „ „  
Free ammonia..... 0·040 parts per 100,000 parts.  
Albuminoid ammonia ..... ·188 „ „ „

The major portion of the insoluble mineral matter consists of fine clay held in suspension in the water. The large amount of free and albuminoid ammonia found shows the water to be seriously contaminated with probably both vegetable and animal organic matter, and it is a dangerous water to use for human consumption, either filtered or unfiltered.

(No. 2577.) Metallic iron, much oxydised ; also a number of small yellow brittle grains or stones. Said to have been found near the Victorian Border (?).

The occurrence of this material being exceedingly interesting, a chemical examination was made of the metallic and non-metallic portions, with a view of ascertaining if the sample was of meteoric origin.

Metallic portion.—This consisted mainly of metallic iron and iron oxide, containing a small percentage of nickel, cobalt, carbon, &c. Platinum was found to be present. The occurrence of this metal being so peculiar in this substance, a second examination of a large quantity of the material was made, which confirmed the previous result. The amount present is estimated as under 2 dwt. per ton. The metallic portion had undergone considerable oxidation, and is thickly coated with rust.

Non-metallic portion.—The non-metallic portion consisted largely of iron oxide (rust) and a number of small yellow brittle stones or grains. A number of these grains were carefully picked out and submitted to a qualitative analysis. The fine powder readily decomposed by boiling hydrochloric acid, with separation of gelatinous silica. The substance is composed of silica, magnesia, and ferrous oxide, and I think there is little doubt belongs to the chrysolite group.

From the composition of the metallic and non-metallic portions of this sample it is evidently of meteoric origin.

The occurrence of platinum is exceedingly interesting, especially so, as I can find no previous record of its having been noted in meteoric iron.

(No. 2058.) Zircon sand from Emmaville.

This sand consisted largely of zircons, titanite iron ore, cassiterite, &c. ; there is also present a very small quantity of the rare earths—cerium, lanthanum, and thorium oxides, being detected ; also a small percentage of phosphoric acid. The sample on assay for tin gave 19·46 per cent. The

The presence of tellurium was detected in two samples of stone furnished by the Government Geologist from the Prince of Wales Mine, Gundagai. Free gold was visible in both pieces of stone, sample No. 3801 containing very fine point and coarse gold. A small amount of bismuth was found present in both these samples. No. 4211. Pieces of mineral picked out of the stone from the same mine was found to be tetradyomite. This mineral has hitherto been found to occur with auriferous stone at Texas Station, near Uralla, and at Oberon; also associated with silver-lead ore at Norongo, Captain's Flat.

A large amount of work was performed in connection with the examination of iron ores and granular magnetites, containing titanium, for Mr. Geological Surveyor Jaquet's report on the Iron Ores of New South Wales.

A number of fireclays were tested as to their refractory properties for the manufacture of fire-bricks, complete analysis in most cases being furnished.

#### *Metallurgical Branch.*

Seven hundred and ninety numbered samples were received for assay, examination, &c. These consisted of average samples of crushed ore, concentrates, tailings, slimes, amalgam, zinc, chlorination residues, &c.

A number of experiments were conducted with a view of ascertaining if certain ores and tailings were amenable to the cyanide method of extraction. The following assays have been made during the year:—

Gold and silver .....	558	Lead .....	2
Platinum .....	6	Tin .....	5
Osmiridium .....	5	Manganese .....	3
Copper .....	3	Sulphur .....	1
Iron .....	1	Sulphuric acid .....	1
Lime .....	4	Moisture .....	5
KCN determinations .....	114	Consumption of KCN .....	18

or 736 various determinations.

Sixty lots of amalgam were retorted and the gold refined, and 45 samples of residues treated and the gold extracted.

Experiments were conducted for the Government Metallurgist on a substance called "Rodda's Salt," a compound which it is proposed by the sender to use in the place of potassium cyanide for the cyanide process of extraction of gold.

On two different occasions I received a subpoena to attend and give evidence before a Commission, *re* Sydney Harbour Collieries (Limited) *v.* Louthier, in connection with the Cremorne bore.

A series of experiments were made with a view of ascertaining the action of an aqueous solution of cyanogen on gold, and a sworn declaration, giving the result of experiments, furnished to the Examiner of Patents.

Acting on your instructions, the works were placed under my supervision during the Government Metallurgist's visit to Broken Hill.

#### INSPECTION OF MINES OTHER THAN COAL AND SHALE MINES.

Mr. Slee, F.G.S., Chief Inspector of Mines, reports 35 fatal and 112 non-fatal accidents in connection with the metalliferous mines of New South Wales during the year.

The number of fatal accidents during 1898 correspond with the numbers for 1896 and 1897, but an increase of 71 non-fatal as compared with 1897.

Of the 35 fatal accidents, 19 occurred in silver, 10 in auriferous quartz, 5 in copper, and 1 in diamond mining.

The percentage of fatal accidents in 1898 is 1.154, as compared with 1.120 in 1897, and non-fatal 3.695, as against 2.465 for the same period.

The number of men employed in and about the metalliferous mines of the Colony during the year was 30,311, as compared with 31,229 in 1897.

Among others, the undermentioned localities were visited and inspected:—

#### *By the Chief Inspector.*

Cooma, Adaminaby, Lob's Hole, Kiandra, Queanbeyan, Gunderoo, Bungendore, Stuart Town, Macquarie River, Cobar, Orange, Sunny Corner, Bull's Creek (near Jenolan Caves), Gundagai, Adelong, and Cootamundra.

The Chief Inspector, while visiting these districts, also dealt with applications for aid from the Prospecting Vote, and numerous other duties in connection with the Department. *By*

*By Inspector Milne.*

In the South.—Braidwood, Bateman's Bay, Bermagui, Captain's Flat, Markdale, Moruya, Nerrigundah, Pambula, Tilba Tilba, Wagonga, and Wolumla.

In the West.—Burruga, Blayney, Bobadah, Carcoar, Cowra, Clear Creek, Cargo, Canowindra, Grenfell, Gilgunnia, Girilambone, Hill End, Hermidale, Honeybugle, Lucknow, Mumbil, Mandurama, Melrose, Mount Hope, Mount McDonald, Newbridge, Nyngan, Ophir, Oberon, Pyramul, Restdown, Sunny Corner, Sofala, Tarana, Tuena, Trunkey, Wattle Flat, and Wellington.

Some of these places were inspected two or three times during the year. The regulations in connection with metalliferous mines were found to be generally complied with.

*By Inspector Hebbard.*

In conjunction with the regular inspection of the mines on the Broken Hill line of lode and the immediate vicinity, Inspector Hebbard also visited, inspected, and dealt with applications for aid, &c., at the following places, viz.:—Thackaringa, Silvertown, Purnamoota, Mount Robe, Yuba, Pinnacles, Nine-mile, Acacia, and Rockwell.

The regulations are generally complied with in the Broken Hill District.

*By Inspector Godfrey.*

In the Northern District.—Armidale Gully, Bolivia, Boonoo Boonoo, Bowling Alley, Boggy Camp, Bundarra, Upper and Lower Bucca, Coramba, Copeland, Crow Mountain, Dalmorton, Drake, Dungog, Eumore, Emmaville, Grafton, Glen Elgin, Hillgrove, Inverell, Kookabookra, Lionsville, Moonanbrook, Melrose, Nundle, Niangala, Rivertree (twice), Rawdon Vale, Swamp Oak, Stewart's Brook, Tingha, Tia, Uralla, Upper Gloucester, Wangat, Whispering Gully, Wingen, Wollomombi.

Southern and South-western Districts.—Adelong, Batlow, Blairgowrie, Billy's Lookout, Coolac, Gundagai, Hiawatha, Micalong, Mount Adrah, Temora, Reefton, Yalgogrin, and Wyalong,—in all of which places the regulations are generally complied with. While inspecting at the localities mentioned Inspector Godfrey also dealt with a large number of applications for aid from the Prospecting Vote.

*By Inspector Hooke.*

Adelong, Albury, Binalong, Bodangora, Burrowa, Byng, Coolac, Cootamundra, Forbes, Gundagai, Girilambone, Grong Grong, Gulgong, Hargraves, Hill End, Hiawatha, Junee, Lucknow, Mudgee, McPhail, Mutnama, Murruinburrah, Nanima, Oberon, Parkes, Peak Hill, Sofala, Tomingly, Temora, Tumberumba, Taralga, Wyalong, Windeyer, Wellington, Wattle Flat, Yalgogrin, and other places. In addition to visiting and inspecting the mines at the various places, Inspector Hooke also inspected and reported on a large number of applications for aid from the Prospecting Vote.

*By Inspector Polkinghorne.*

Cowra, Canowindra, Cargo, Cooma, Blayney, Burruga, Delegate, Frogmoor, Forest Reefs, Grenfell, Galleymont, Lucknow, Mt. McDonald, Peak Hill, Parkes, Pambula, Rockley, Stuart Town, Sunny Corner, Tomingly, Trunkey, Tuena, Wattle Flat, and Yass. While visiting the various places Inspector Polkinghorne also dealt with a considerable number of applications for aid from the Prospecting Vote, and found the regulations generally complied with.

*By Inspector Carthew.*

Armidale, Boonoo Boonoo, Bundarra, Bingara, Barraba, Boggy Camp, Ballala, Copeland, Coramba, Drake, Dungog, Emmaville, Glen Elgin, Hillgrove, Inverell, Kookabookra, Lionsville, Limbri, Moonbi, Melrose, Moonan Brook, Niangala, Nundle, Rockvale, Solferino, Stewart's Brook, Swamp Oak, Tia, Tenterfield, Uralla, Walcha, Wollomombi, and Wilson's Downfall. Inspector Carthew also dealt with a considerable number of applications for aid from the Prospecting Vote, and found the regulations generally complied with.

## DIAMOND DRILLS.

The total depth bored in 1898 was 1,742 feet 4 inches, or 635 feet 8 inches less than during the year 1897.

Diamonds used in 1898 cost 4s. 11½d. per foot, as compared with 4s. 11½d. in 1897.

The average cost per foot for boring during 1898 was 21s. 3½d., as compared with 20s. 2½d. in 1897.

Owing to hard and broken strata the rates per foot for diamonds and boring were higher than they otherwise would have been.

The

The earnings of the diamond drills during the year, exclusive of Funafuti, were £837 13s. 11d., but inclusive, £2,290 5s. 10d.; and the amount paid into the Treasury as revenue from the diamond drills was £376 17s., in addition to the sum of £488 12s. 2d. transferred from the Prospecting Vote to the credit of Revenue Account—Drills, in all, £865 9s. 2d.

### MINERAL PRODUCTS.

The aggregate value of the mineral products of the Colony to the end of 1893 is estimated to be £127,895,852 8s. 10d. The value of such mineral products for the year was £4,866,997 16s. 7d., a net increase of £138,723 2s. 6d. upon the value of the minerals won in 1897, as shown in the comparative table below.

As will be seen from that table, the largest increases are in gold, silver, and coal; and the decreases in silver-lead, limestone flux, copper, tin, and opal. The decreases in these minerals are in no way due to the depletion of our deposits.

The severe drought which affected all parts of the Colony during the year under review very seriously hampered all classes of mining, and it is very satisfactory in view of the difficulties our mining population had to contend against from this cause that our operations compare so favourably with the previous year. With the break up of the drought we may be justified in looking forward to a still further increase in our annual mineral production, and a renewal of prospecting work in country formerly inaccessible owing to a scarcity of water and feed.

A substantial increase to our gold yield is confidently looked forward to from the dredging operations recently started in this Colony. This is quite a new form of mining in New South Wales, which is receiving much attention from investors, and large reaches of our rivers have been taken up for dredging purposes. Operations have been started on the Macquarie River by Mr. C. L. Garland, to whose enterprise in first practically initiating this class of mining in this Colony great credit is due. Several companies have also been formed to work the Turon and other rivers; and the industry here, as in New Zealand, is likely to become of much importance.

The following table shows the aggregate value of minerals, the product of New South Wales, for the years 1897 and 1898 respectively compared:—

Minerals.	1897.		1898.		Increase in Value.	Decrease in Value.
	Quantity.	Value.	Quantity.	Value.		
Alunite.....	724·10 tons	£ 2,172 0 0	2,941·00 tons	£ 8,823 0 0	£ 6,651 0 0	.....

\* Rolled scrap iron. † The bulk of the silver produced is exported in the shape of silver-lead. ‡ Includes adjustment for an omission made in output as estimated and published for 1897. § This includes £20,000 omitted from the output of 1896; there was, therefore, actually an increase in value of 1898 output, although a decrease is here shown. ¶ Owing to the spasmodic manner in which the diamond industry has been prosecuted in the past, and the difficulty in obtaining regular and reliable information in connection therewith, this item has not been shown in reports of previous years.

The

## GOLD.

The following table shows the quantity and value of the gold won from our fields since their opening in 1851.

It was found necessary to adjust this table, as it was discovered that for some years past an appreciable quantity of gold, not previously taken into account as the product of New South Wales, had filtered from our Southern Gold-fields to the Royal Mint, Melbourne.

The Wyalong Field holds the position as premier gold-producer of the Colony, its total yield for the year being 34,582 oz. Lucknow produced 27,536 oz.; Cobar, 22,253 oz.; and Adelong, 18,268 oz.

It is pleasing to be able to say that our output of gold for 1898 is, with the exception of 1895, larger than any year since 1874. As already pointed out under the head of Mineral Products, the yield is likely to be largely augmented from the dredging industry, which, from present indications, is likely to be largely developed. The machinery in use at the mines is also being greatly improved upon, which will permit of many of the lower-grade properties being profitably worked.

TABLE showing the Quantity and Value of Gold won in the Colony of New South Wales from 1851 to 1898.

Year.	Quantity in oz.	Value.	Year.	Quantity in oz.	Value.
		£ s. d.			£ s. d.

The following information relating to our gold-fields is compiled from the reports sent in by the Wardens and Mining Registrars. Although they experience some difficulty in obtaining full information in many instances, still the data supplied is fairly complete, taking all the circumstances into account, and when the multifarious nature of the duties carried out by many of the officers is considered.

THE BATHURST MINING DISTRICT.

*Canowindra Division.*

About 70 men are employed gold-mining in this Division. No return was obtained from the Lady Burdett Coutts Gold-mine at Boney's Rocks, as the manager states that the whole of the work done last year was to pull up the old timbers of the main shaft and fit it down plumb with the very best of hardwood sawn timber. Mining for gold was retarded in this Division during the year for want of water. Many of the men stated that they could make fair wages if water was available. Several parties are in receipt of aid from the Prospecting Vote throughout the Division, in some cases with very good prospects of striking something payable. The Blue Jacket Mine is still at work raising crushing stone. A large amount of developmental work has been carried out in this mine during the past twelve months, and the owners seem well satisfied with the prospects ahead.

*Cowra Division.*

Mining operations in this Division have been at a standstill during the past twelve months. Mr. Ashcroft, after testing a considerable quantity of stone from the Broula copper lode, found it of such low grade that he ceased raising stone altogether, and, with the exception of a little prospecting at Woodstock, nothing has been done. The total amount of gold purchased by banks during the past year is 123 oz. 4 dwt. 21 grs. valued at £484 2s. 11d.

*Mount McDonald Division.*

During the year 1898 work in connection with the mines has been carried on continuously, a large number of men (about 230) having been employed. From the Eureka Mine, which belongs to the Olliver's Freehold Mines (Limited), of Hong Kong, there has been raised and crushed 6,388 tons of stone, yielding 2,251 oz. 12 dwt. of gold. In addition to this a considerable amount of developmental work is going on, from which the company expect to reap profit in the future.

The Queen Mines (Limited), of Hong Kong, a new company which recently took over the property of the late New Balmoral Company, are prospecting at a depth of 400 feet, and hope soon to strike the continuation of the Queen and Grant reefs.

The

The Great Eastern and Caledonian Company have been developing their property in various places and raising stone ready for the mill which is being erected on the mine, and which, when completed, will be the most extensive and most complete plant ever erected on this field, consisting of 20 heavy head stampers, 6 Watson and Denny pans, and 4 frue vanners. The manager intends to start crushing towards the end of January, 1899.

In addition to work carried on by these companies, several small parties having been doing profitable work in the neighbourhood, and those most interested are looking forward to a prosperous year.

During a part of the year a number of European and Chinese have been engaged fossicking on the Ambercrombie and Lachlan Rivers with varying success.

The total quantity of gold won during the year on this field is estimated at 2,480 oz.

#### *Carcoar Division.*

Mining for the year 1898 has been almost at a standstill.

The sudden collapse of the Gallymont Gold-fields (Limited) is a matter for universal regret; for apart from the immense loss to the Proprietary, it is an untold loss to the surrounding community, as it was naturally expected the working there would have brought around a considerable population, as well as that the whole locality would have been developed in a manner and to an extent not hitherto attempted; and after the enterprise shown in the undertaking and the great amount of confidence shown in the anticipated result, it is most pitiable to see the hopes of the Proprietary so crushed and such a vast amount of new and valuable machinery erected, possibly, to remain to rust. For, in the minds of many who have mining experience, the opinion prevails that after such a trial as the Gallymont works have had and producing such a disappointing result, no better will hereafter follow.

Lucky Hill Junction, Burnt Yards, after erecting valuable machinery, find that they can get no stone to crush, and are removing their machinery to Tuena.

In fact the only mining that was of any commercial utility was the sending of ironstone from Coombing Blow to Dapto. For a portion of the year about 200 tons a week have been sent by rail—about 5,000 tons—which left a fair margin of profit on the work.

#### *Blayney Division.*

The only established gold-mine in the district is the Compagnie des Mines d'Or (Limited), at Brown's Creek. The mine has not been working for a period of over two years, during which time only three men have been employed to fulfil labour conditions. The value of the plant is £13,000, consisting of crushing and winding machinery. The depth of shaft and description are similar to those furnished last year.

There are several small mining holdings, of which information is not available.

The total amount of gold received at the banks in Blayney was 163 oz. 13 dwt. 18 grs., valued at £557 18s. 6d.

The only mining for copper is carried on at the Great Blayney Copper-mine, half a mile from the town. The number of men at present employed is sixty.

The plant, consisting of winding and smelting machinery, is valued at £6,000.

The amount of ore raised was 400 tons, which was smelted at the mine. The amount of copper obtained was 27 tons, of the value of £1,360.

Two large water-jackets are being erected, and upon completion of the plant it is anticipated that a large number of men will be employed.

There are a few men in the district prospecting for gold and copper.

There are five applicants now receiving Government aid for prospecting in gold and copper.

There are no operations carried on for mining minerals other than those mentioned.

#### *Newbridge Division.*

There were eighty-nine miners' rights issued in Newbridge.

Collins' Star of the West is the only reef working. He put through about 1,100 tons of quartz for 628 oz. of gold, valued at about £2,416. A large portion of this did not return more than 9 dwt. per ton, for the last crushing of 122 tons yielded 168 oz.

Only 36 oz. of alluvial gold can be traced as having been obtained in the Division during the year. The recent dry weather has completely paralysed sluicing in the district.

#### *Trunkey Division.*

During the year 1898 the continued dry weather has had a serious effect on sluicing, and many miners were compelled to abandon their claims for want of water. The drought, however, enabled miners to get into the bed of the Abercrombie River and the Sands Creeks, from which a large amount of alluvial gold was obtained.

There were no extraordinary finds, every one getting sufficient to maintain themselves comfortably, although in other places on the field the fossickers only made "tucker."

The Sounding Rock Gold-mining Company purchased Knowles and Son's sluicing claim. They have erected the necessary appliances for hydraulic sluicing on a large scale.

They have treated about 500 loads for a return, on the average, of 1s. 3d. per load.

Messrs. Jennings and party at Pharoah's Flat on the Abercrombie River have not met with much success during the year, their water-race being the main obstacle. It is cut from the river, a distance of several miles above the claim, and in its course crosses several deep gullies, which almost every time water is available break away. As the wash they wish to treat is 20 feet below the bed of the river, their task is a difficult one. In all, the quantity of gold won from the alluvial was 1,835 oz. 2 dwt. 19 grs., valued at £7,038 18s. 1d.

Mr. Haugh, of Parkes, by a cyanide process, treated upwards of 3,700 tons of tailings, formerly treated by the old Belmore battery for a yield of 334 oz. The plant is now treating a quantity of tailings on McPhillamy's freehold at One Eye, and when these are finished intend removing the plant to a quantity of tailings at Wilson's Reef, also in this neighbourhood.

Wright's Reef, near Wilson's Reef, owned and worked by Messrs. Crees and Francis, is the only quartz reef being worked in the Division. They have crushed 88 tons of stone yielding 66 oz. 5 dwt. 9 grs., valued at £241 0s. 5d.

Their shaft is 110 feet deep. Their reef varies from 9 inches to 15 feet in thickness.

At Mount Gray, Clarth erected elaborate machinery, and after doing little or no work abandoned it and left the district. His lease was cancelled, and eventually the machinery was disposed of and removed.

Messrs. Graham and party have done a little prospecting on the hill above Mount Gray. They sent 10 tons of ore for treatment to Sydney, and the reputation of the mine depends greatly upon the result.

At Pine Ridge, Snape and party took up a considerable area, but have not met with much success. They treated several small parcels—trial crushings—but were disappointed with the result.

The Wilson's Reef battery, owned by Crees and Francis, is the only machinery in the Division, and crushes for the public when required.

The rainfall, extending over eighty-six wet days, amounted to 20.23 inches, which is about 13 inches below the ordinary season's average.

#### *Tuena Division.*

The gold won from 324 tons crushed was 189 oz., valued at £730, and that from alluvial 2,492 oz., valued at about £9,550.

The old Victoria Reef is being worked by Blay and party. They have sunk 250 feet, and have a reef 3 feet wide, their last return was 1 oz. to the ton.

The Washington is worked by Ford and party, and at the 60-foot level have an 8-inch reef showing good gold.

The Iron Clad, at Dog Trap, is being worked by Green & Co. It is in ironstone and quartz, 3 feet wide. This party have sunk 260 feet, and good prospects obtained.

The Root Hog, also at Dog Trap, is worked by Fuge and party; their reef is 8 inches wide, and calculated to yield 4 oz. of gold to the ton.

From

From the Golden Dyke Mine about 80 tons of stone were crushed, yielding in all 250 oz. The scarcity of water has prevented this party from further working the property. About 70 tons of stone have been crushed at Jones' battery, for the public.

In the Tuena Division a great amount of mining is done on freehold estates. The company, known as "The Garnet," hold 20 acres under lease application. At present the property stands in the name of T. Hoare, but has been sold to an English company represented by their own manager, who has lately arrived, and financially looked after by Mr. Hardy, of Sydney. The main shaft is 64 feet deep and a good solid reef is visible, showing stone estimated to return 2 oz. of gold per ton. The company is now erecting pumping, winding, and crushing machinery.

The Advance Claim is also in the same neighbourhood. This is held under an authority. The reef is about 15 inches wide. A shaft has been sunk 110 feet. Crushings have varied from 12 to 24 dwt. per ton.

T. Hoare has a 3-acre lease application, which shows a reef at 10 feet from the grass, about 1 foot thick.

The Jasper is a 5-acre property, which has been tunnelled. A reef is showing at 25 feet; it is probably worth  $\frac{1}{2}$  oz. to the ton.

Peeks' Reef, area 2 acres, which contains a lode of great width, is being worked by two men. This ground was originally worked by the late Mr. Peeks, who occasionally came across bunches of rotten quartz of fabulous richness.

Mr. Opie, who represents the Garnet Claim, holds an authority over 20 acres, and has men tunnelling to cut a reef (which shows on the surface) at a depth of 60 feet.

Mr. Mills, the working manager of the Garnet Co., has an authority over 20 acres. This land was some years ago worked by Cooper and McKenzie, who obtained £1,500 worth of gold out of a few tons of stone. This reef is very patchy.

William Barnett has secured an authority over an acre of ground which contains an ironstone lode of great width, which is said to assay 25 dwt. to the ton.

McIntyre holds a sluicing claim under agreement with the owner, but has no water to sluice with.

Cooper and party also hold a sluicing claim in the same manner, and whenever they have water their claim gives good returns.

Collins and party, on Crown lands near the Police Paddock Reserve, have applied for 3 acres. They are tunnelling into the hill on a reef which shows from 15 to 24 inches thick.

Owen and party have a 4-men's claim on the south end of Collins'.

In the Tuena Creek during the dry weather several parties have dropped across rich patches of gold. If this creek could be worked out of face from its junction with the Abercrombie River upwards for a distance of about 14 miles, and include the old alluvial workings in the banks, it is thought that any company would be rewarded who would carry it out.

Mount Costigan and Cordillera Mines, held by Beetsen for a long time in connection with the Peelwood Mine, have been cancelled for non-work. It is to be hoped someone will work them, if only for the copper they contain.

The rainfall for 1898 was under 20 inches, consequently sluicing was out of the question, the average rainfall for the district being from 33 to 35 inches; but, against this the diggers were able to get into the beds of the Abercrombie River, Tuena and Sands Creeks. It is from these places that the gold obtained has brought the returns up so well up in Trunkey and Tuena.

#### *Rockley Division.*

The year 1898 has been an active one in this Division. Early in the year the Mount David Gold-mining Company (Limited) started crushing, and up to the 31st of December had crushed 5,387 oz. of gold, valued at £21,592. This was all done with a 10-head battery. Their new 20-head battery is now completed, and it is anticipated that when the new battery of thirty stampers are at work that there will be a great increase in their yield of gold during the ensuing year.

During 1898 there were 298 miners' rights, 91 business licenses, and 2 mineral licenses sold in Rockley. There were also 11 gold leases, 9 mineral leases, and 9 gold leases on private lands applied for here—making up 481 acres in all. The total revenue from mines during the year was £300 10s. 3d.

Mr. Tapson, of Sydney, who has subleased M'Intosh's Gold Lease of 24 acres on private lands in the parish of Mount Lawson, on the Gilmandyke Creek, has crushed 530 oz. during the year.

The continued dry weather very much retards alluvial mining in this district; some of the old workings at Caloola Creek, Back Creek, and Stony Creek are almost deserted.

At Hope's Creek, on the old Native Dog workings, in November last a miner named Wm. Gibbons found a nugget weighing 4 oz. 18 dwt.

During the year Jameison and party took up 280 acres for copper at the Sugarloaf, on the Church and School Estate, and have sunk three shafts on same, and are well satisfied with their prospects. The Old Cow Flat Copper-mines have changed hands, and mining operations are about to start once more.

On the whole, the mining prospects are looking up, and it is believed that 1899 will show a steady increase on the 1898 returns.

#### *Burrage Division.*

Mining in this Division is confined almost exclusively to copper, particulars of which will be found under its proper heading.

At Isabella River, the Isabella River Gold-mining Syndicate has been working their 15-acre lease during the whole year, but their prospects have gradually got poorer, and the water became so strong that they have now ceased work pending different arrangements. Sixty-six tons of stone taken from this mine for the year yielded 30 oz. of gold treated at their own battery on the ground.

M'Vicar brothers are working a very promising reef about half a mile north of the Isabella Company. They are down about 50 feet, and have a reef averaging 2 feet, which prospects about 5 dwt. per ton. This is the only quartz mining that has been carried on in this Division last year.

In alluvial there are about fifty men employed fossicking, but the results have not been more than a living.

At Mount Werong, Mum and party have taken out about £300 worth of gold from their sluicing claim for the year. The dry season has been a great drawback to mining, as there has not been enough water for sluicing purposes.

#### *Oberon Division.*

There have been about 200 men employed mining during the year, the total quantity of gold won being 447 oz. 14 dwt., valued at £1,834 6s., as against 361 oz. in the year 1897.

The work carried on has been principally fossicking for alluvial gold and of a prospecting nature. At the Black Bullock Mountain Mine, at a depth of 70 feet, some very good stone has been struck, and the syndicate has every confidence in their prospects.

Clarke and party, at Slippery Creek, Hazelgrove, have expended a considerable amount of capital. The amount of stone at grass is 26 tons.

The promoters have every confidence in the stability of their mine.

Mining by Errington and party, who are driving for copper at Bull's Creek, Jenolan Caves, has been vigorously pursued during the year, and with fair success.

Bouchier and Sons, of Tuglow, have also been mining for copper, and the prospects of their mine are on the whole promising. Ore raised in quantity during the year was 34 tons, and its value being £264. They are satisfied that success will ultimately repay them for their labour.

The drought had also a serious effect on the working of the alluvial claims.

On the whole, the mining prospects of the Oberon Division are good.

#### *Bathurst Division.*

There appears to be, with the exception of that done by Sinclair and party, no mining of an important character carried on in this Division. Sinclair and party's reef is situated at Clear Creek. From 25 tons raised the quantity of gold won was 50 oz.

*Wattle Flat Division*

Owing to the exceptionally dry weather, mining in this district shows a decided falling off for the year just ended. At the Great Victoria Gold Mining Company, the "Solitary" shaft is now 500 feet, the deepest level being at 480 feet. The lode is from 14 inches to 2 feet 6 inches, with south easterly underlay, bearing being about south west and north east. Several trial crushings have been put through from different parts of the mine at Brailey's battery. At McCudden's Daisy Bell Mine, Wheatfield's deepest level is 120 feet, vein being 12 inches. Strike north and south, 123 tons of stone was crushed from the mine for a yield of 145 oz of gold, valued at £580. At Fred Williams' mine, at Casey's Hill, the lode is from 1 to 5 feet wide, with underlay south west. Bearing or strike north easterly, 200 tons of stone crushed yielded 103 oz, valued at £383 13s 6d. Prospecting work has been carried on at other mines in the Division, but results are not to hand. Nine hundred and ninety eight tons of stone put through at local batteries yielded 496 oz gold, valued at £1,834 18s 4d. Alluvial mining has been greatly retarded owing to the scarcity of water, the majority of puddling mills being idle several months during the year. The average earnings of the men were small.

*Sunny Corner Division*

It has been found difficult to obtain anything like a proper and correct return of the gold won in this Division owing to the many fossickers disposing of their gold in so many markets. A great number of those miners are migratory, who dispose of just enough of the precious metal to provide them with the necessaries of life. The numberless pedlers, such as Syrians and Asiatics, &c, all purchase gold, and miners also sell where most convenient to them, either within or outside the Division.

During the latter part of the year mining matters in the Division were brisk, though want of rain is in a great measure retarding progress. The work done on the Paddy Lackey during the year has principally been that of development. On the Paddy Lackey Deep Level, an adjoining property, the water has been troublesome. Strange, that while the former mine is perfectly dry at 500 feet from the surface, the latter is flooded out at 326 feet from the surface. Powerful pumping machinery is now being erected to cope with the inflow of water. A new public battery is in course of erection on Bob's Creek, which should prove a boon to the public who have hitherto had their stone treated at Mitchell's Creek by Messrs Lean and Murray.

A reef giving splendid results, 11/4 to 4 1/2 oz per ton when crushed, has been found by Anderson and Odgers on Little Hill.

*Orange Division*

It is pleasing to be able to report that the gold returns from this Division have largely increased as compared with the previous year. For the sake of comparison, the returns for the past four years are given—

1895	83,342
1896	29,446
1897	12,524
1898	27,536

The principal mine in this Division is at Lucknow, which is owned by The Wentworth Gold Fields Proprietary Company, Limited, the next in importance being that owned by The Aladdin's Lamp Gold Mining Company, also at Lucknow. The former mine raised and treated 10,870 tons for 17,600 oz, and the latter 4,866 tons for 7,344 oz, during the past year. Particulars of the operations of these mines for the past three years may prove interesting.

Details	Wentworth Mine			Aladdin's Lamp Mine		
	1896	1897	1898	1896	1897	1898
Men employed	385	400	291	120	150	67
Tons raised	2,368	6,225	10,870	3,052	3,027	4,866
Yield in ounces	12,048	5,281	17,600	16,718	6,064	7,344
Value	£42,564	£18,752	£61,600	£58,195	£20,710	£22,032

The increased tonnage with decreased labour during the past year is most striking.

Mr Lock, the general manager of these mines, has kindly furnished some further particulars regarding them, and as these mines have yielded, during the past year, some £83,000 worth of gold, it will be interesting to know something of their peculiarities. The increase in the results this year prove that the ore bodies are increasing at the greater depth. In reference to the difference as shown in the increase of ore raised by less men in 1898 to that raised in 1897, is accounted for by the fact that a large quantity of dead work was done in 1897, which has led to the increase of the returns for 1898. Further prospects in the larger mine are still excellent. The Homeward Bound Company and the Hon A T Kerr are likely, in the future, to prove the direction of this rich joint. At present it is merely a subject of speculation, as Mr Kerr has a similar joint, but it runs at right angles to the Lucknow joint. Mr Lock says—

"All the workings along the outcrop of the 'joint' are on the property of the Wentworth Gold field Proprietary Company, Limited, and its subsidiary, the Aladdin's Lamp Gold Mining Company, Limited, and it is to them more particularly that my remarks will apply.

"Difficulties in the way of studying the salient features of the field are interposed by a flow of basalt (probably post tertiary, and derived from the neighbouring—distant about 7 miles north west—volcanic cones known as the Canoblas) which has covered the surface over a very wide area, and had it not been for local erosion of recent age, notably where a little water course called Parker's Creek crosses the line or 'joint,' just south of the Greek's shaft, the buried mineral wealth would have been hard to discover. It was from this tiny creek bed that the first alluvial gold was panned in the early sixties.

"Concerning the 'joint' already several times alluded to, the dotted line on the sketch, following almost a north westerly and south easterly course, and connecting various shafts, indicates a zone of contact between two classes of rock which form the 'country' beneath the basalt. This 'contact' line has frequently been called 'the Lucknow lode'—a highly convenient misnomer, which has been abundantly utilised by promoters of mining schemes for many miles around in utter disregard of obvious geological facts. Admitted that this 'contact' line or 'joint' is of primary significance in relation to the auriferous deposits, it is certainly neither a 'lode,' nor, as Mr Wilkinson opined, is it a 'fissure.' It would seem to be simply a line of metamorphic action. To the south west of this line the 'country' is an igneous rock, called 'diorite' by the local miners, 'augite andesite' by Mr Pittman, the Government Geologist, 'pyroxene andesite' by Herr Schmeisser, and in part 'hornblende felsite' by Mr Wilkinson. There appears to be no true diorite present, but the changes in the rock mass are so frequent and numerous that it is next to impossible to give it any final and exclusive name. To the north east of the dividing line the rock is serpentine, but while in many places the demarcation between the two is most pronounced, in many others it is a matter of the very greatest difficulty to determine where the one begins and the other ends, and long stretches of rock are encountered possessing none of the essential features of either. Though the general 'strike' of this 'joint' is about north west and south east, there are sundry turns and breaks in its longitudinal course, the greatest yet encountered being about 400 feet. Regarded transversely, the 'dip' of the 'joint' varies from the vertical to the horizontal, and the mean angle is somewhere about 60 deg. Farther to the north east again 'diorite' reasserts itself, to be in its turn once more followed by serpentine. These other 'joints' have a more westerly course than the main one, and effect a junction with it at several hundred feet to the north west of the Jackass shaft. The main 'joint,' from which so much gold has been and is still being won, has been worked on uninterruptedly for a length of 4,000 feet, and there are many indications that its full extent, whether to the north west or to the south east, has not yet been determined. Moreover, considerable work—in all some 1,257 feet of sinking and driving—has been done by the Hon A T Kerr on his Wellwood Estate, at a distance of about a mile north west from the nearest Lucknow level, disclosing a 'joint' precisely similar, only that it runs north east and south west, or at right angles to the true Lucknow 'joint.' The discovery of other 'joints' is triumphantly proclaimed now and again by the prospectors who are hunting for

for them outside of the boundaries of the Wentworth Estate; but it has been repeatedly proved that other conditions besides a 'joint,' however well marked it may be, are also required to make it a gold mine even of the most moderate dimensions. This fact is brought home very forcibly by the knowledge that out of a total of 28,000 feet, or about 5 miles of drives on the 'joint' in the Wentworth and Aladdin mines, only about 1,400 feet carry any ore at all; so that there are 20 feet of absolutely barren 'joint' for every 1 foot that is productive—a truly phenomenal state of things.

"Without trespassing too much on the domain of the geologist, it may be permissible to hazard a conjecture that the primary source of the gold in the Lucknow Mines is to be sought in the quartz veins that occur in the vicinity of the 'joint': certainly no reef gold has ever been found at any great distance from one or the other of them. These veins live in the 'diorite,' but invariably cease abruptly where they encounter the 'joint,' the silicious matter (quartz) being there almost wholly replaced by coarsely crystalline calcite (carbonate of lime), carrying more or less free gold, auriferous mispickel, all the common sulphides (generally non-auriferous,) and in many instances metallic antimony and stibnite. The quartz veins themselves, however, away from the joint, though auriferous are not payable so, and the enrichments occur only where calcite predominates and at or near the point of contact with this joint. The payable formation consists, therefore, not of a 'lode' or 'reef,' nor indeed of any reasonably continuous body of stone, but of an erratic series of 'pipes' or shoots representing the fug ends of quartz veins, which abut against the joint, for the most part at an angle of about 55°, as shown on the sketch plan. Sometimes, it is true, the ore body will extend for a limited distance along the joint, but in no case does it cross and enter the serpentine, though in an instance or two small bunches of ore have been found on the serpentine side of the joint. What the exact agency was which effected this change in the quartz reefs cannot positively be stated, but that a leaching and re-disposition have taken place seems obvious. Moreover, appearances would indicate that the serpentine is an alteration-product of the 'diorite,' seeing that every gradation from the one to the other can be found, and in the serpentine are encountered disconnected masses of rock having an unchanged 'diorite' core and a truly serpentinous exterior, showing that for some reason the metamorphic action ceased before its work was completed. Apparently the thermo-chemical waters which accompanied and followed the disturbance which created the original rift in the 'diorite' mass, changing it within a certain zone into serpentine, were also the leaching agents. Mr. C. S. Wilkinson gave it as his opinion that 'the vein fissures have chiefly derived their metalliferous contents by infiltration from the serpentine formation'; but the knowledge to be gained from the very limited workings of his day may easily have misled even so skilled an observer.

"As if the uncertainties of mining in such a formation were not sufficient, each pipe or shoot is also extremely capricious in size and in productiveness. Sometimes for a depth of a 100 feet and more a pipe will practically disappear, nothing but the truest line of calcite indicating the course it has followed, and there is absolutely no reliable guide by which to forecast the future. Frequently the ore-body is split up and parted by masses of secondary minerals, such as dolomite and other vein matter quite barren of gold but inseparable in breaking down the ore. On the other hand, the ore itself is phenomenally rich, the clean mispickel assaying as high as 1,500 oz. of fine gold to the ton; and out of the hundreds of tons of hand-picked ore shipped to London none has ever contained much less than 50 oz., while many parcels have averaged over 500 oz. to the ton. Thus is the redeeming feature which makes it possible to work the mines profitably. A peculiarity of the mispickel found here, disdistinguishing it from the product of every other known mine so far as observation has gone, is the striking arrangement of the crystals, forming star-like masses varying in diameter from half an inch upwards, locally known as 'Prince of Wales feathers.' A less noticeable but never absent peculiarity is the occurrence of antimony in alloy with the gold. Thus both the ore and the gold from this mine can be identified with certainty—a very useful factor in detecting thefts.

"In the mine workings the most notable features are the hardness and good standing qualities of the ground, except the serpentine, which is very heavy in places; and the coolness, dryness, and airiness of even the longest ends and deepest winzes. The equipment of the mine may be classed as superlatively good, probably superior to anything else in Australasia; and the total absence of even small accidents where 500 to 600 men are constantly employed speaks for itself. Compressed air-drills are much used, and these help to perfect the ventilation. Nothing but Nobel's best explosives are admitted, and in all sinking work firing is done by battery. Electric lighting is adopted at every platt in each shaft, and wherever a winch, fan, or pump is installed. A unique system of electric signalling (the message being repeated both from and to the engine-room, and recorded at each level, rendering mistakes and accidents well nigh impossible) replaces the old-fashioned knocker and line, which remain, however, as a stand-by in case of injury to the electric cable. Telephonic communication is carried right through the mine, and into the office, and the mine manager's bed-room. Safety-catches are everywhere, and the Phoenix underlie shaft is furnished with a special cage for conveying men up and down, affording sitting room for a dozen at a time. The diamond drill is much used for prospecting; but with ore-bodies of such limited extent and uncertain course it does not prove very satisfactory. Lockers are securely built in the mine for receiving the rich ore as fast as it is shot down, and there special members of the staff supervise the operations of picking and bagging it ready for transmission to the surface, each bag being separately numbered, weighed, and checked at every stage.

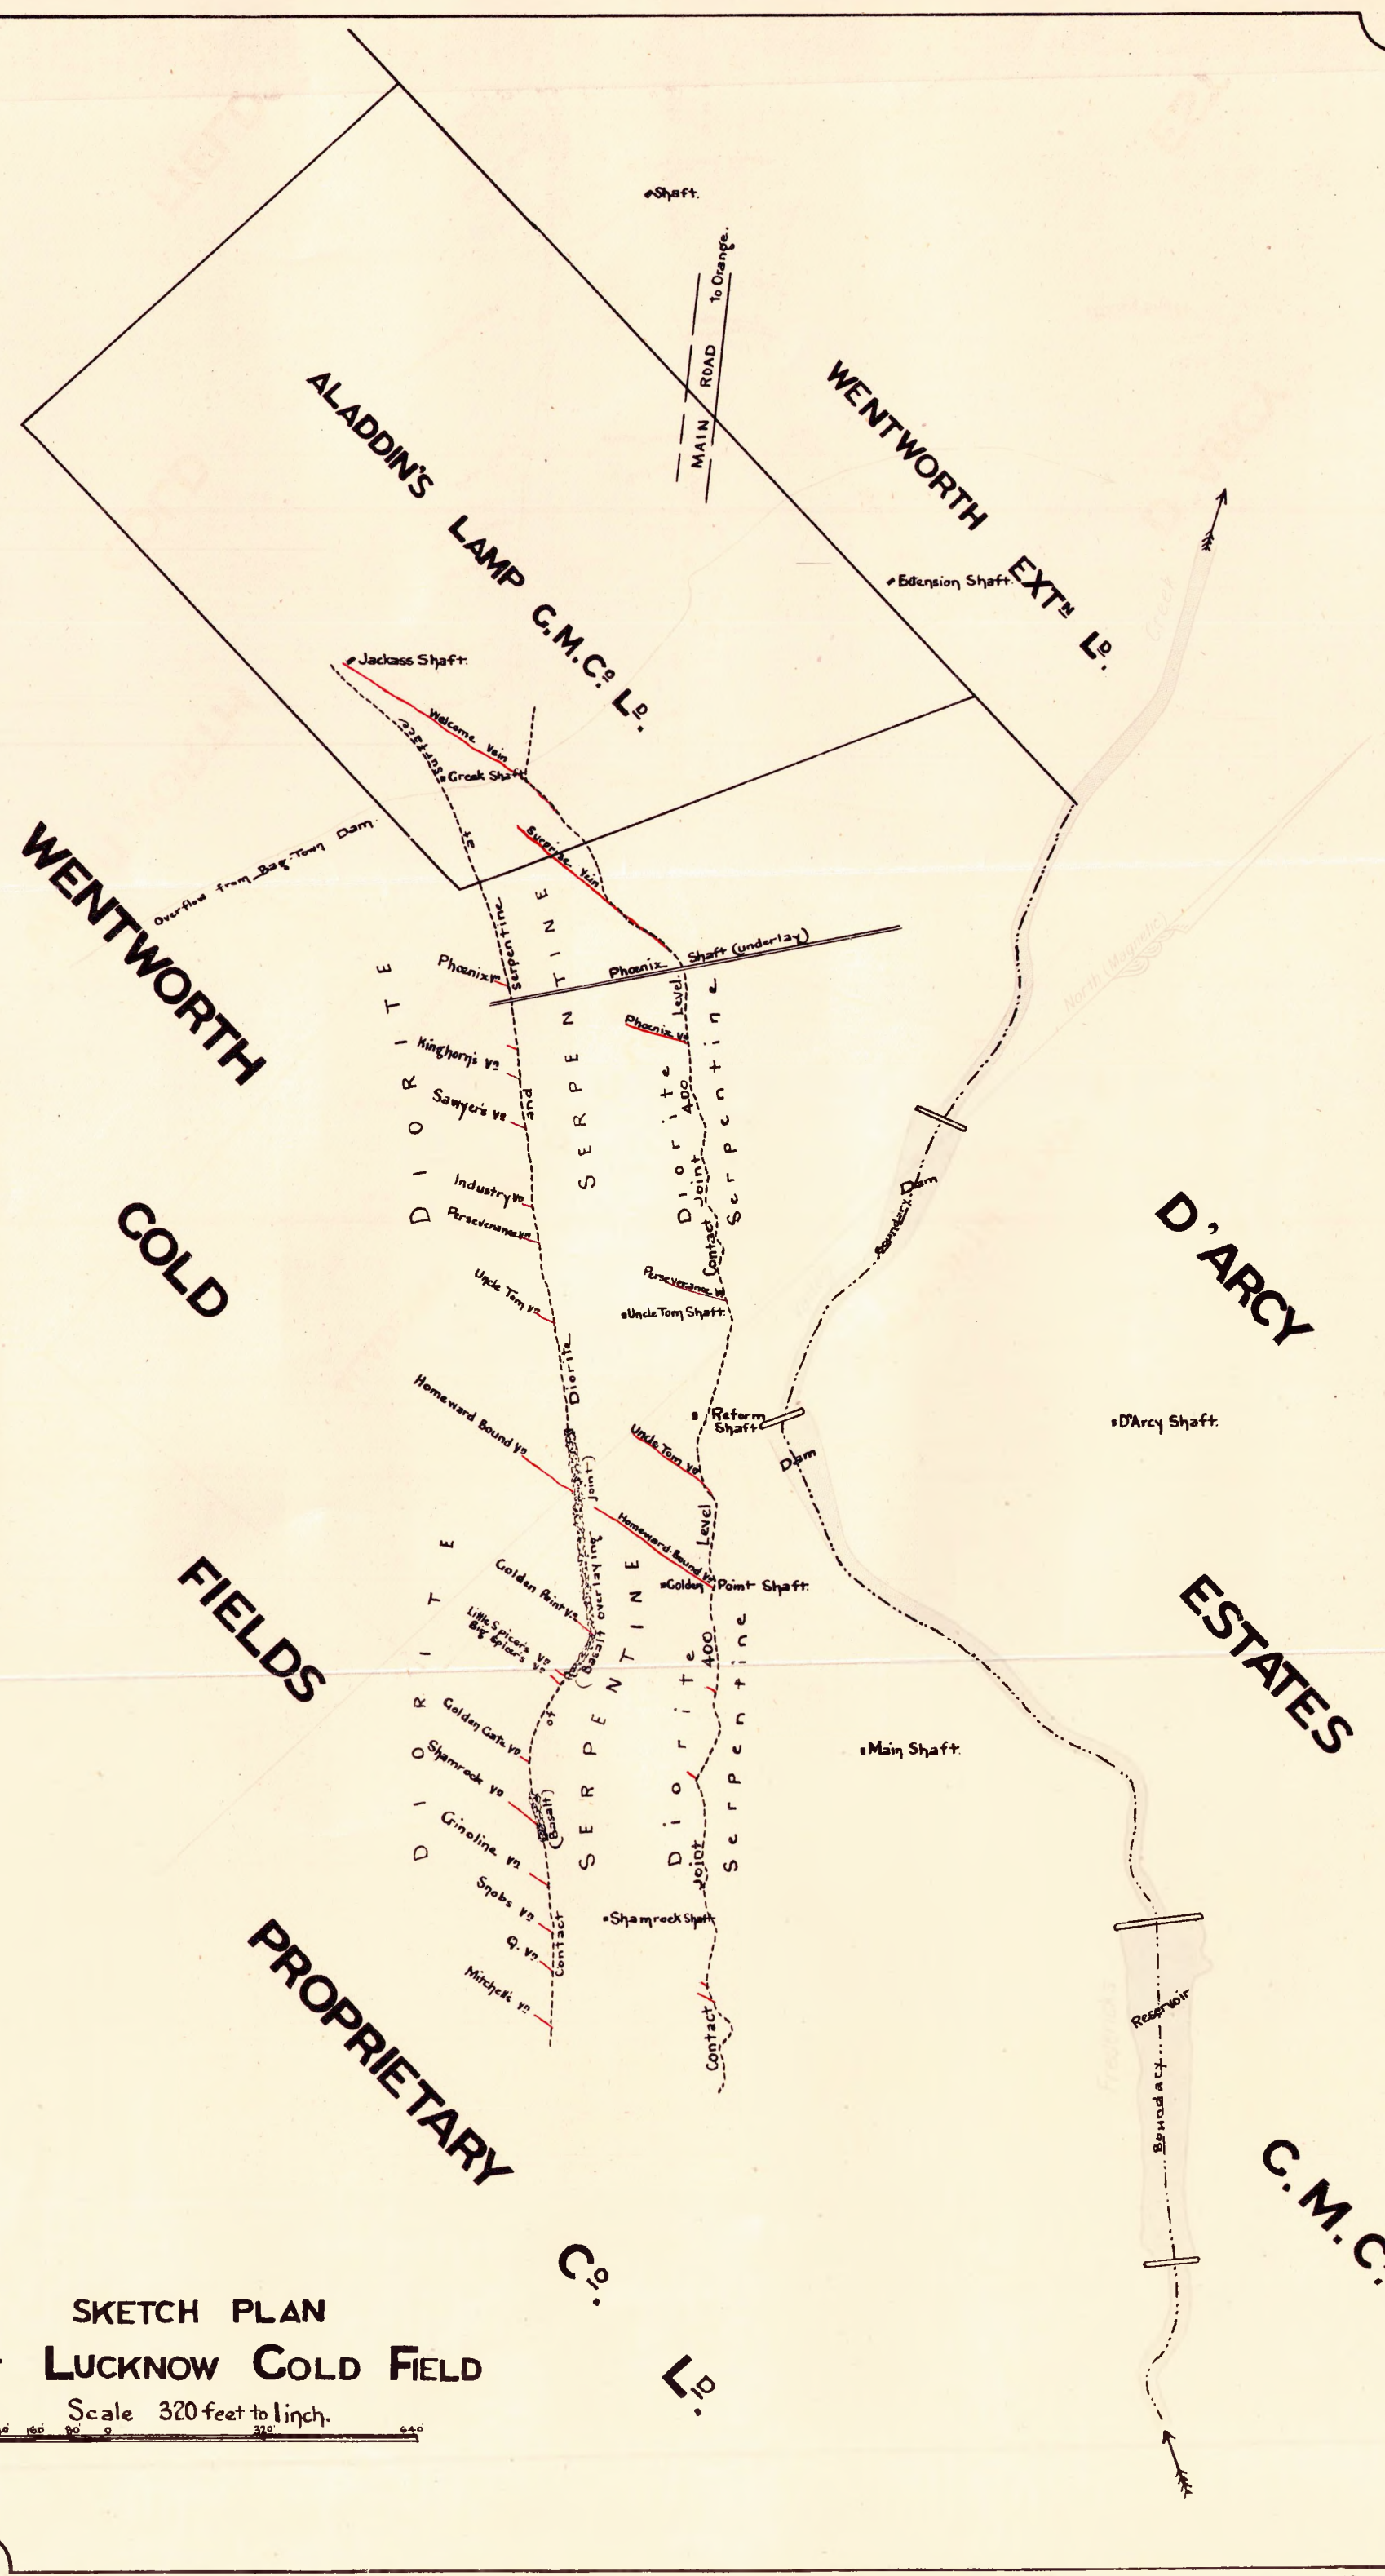

"As underground, so on the surface, no detail is neglected for securing economy, speed, and ease in handling. The grade of the tramways and the construction of the huge ore-bins, with doors so contrived that a boy can easily manage the filling of a truck, though over 100 tons of ore be lying in the bin, all show the care and forethought of the trained engineer. The rock-breakers are driven by a special engine of most suitable type, and reduce the ore to about 1½-inch cubes for the battery—an ingenious water-sprinkler being under control of the breakers attendant to minimise the dust created. The broken ore is elevated in trucks to the top of the battery, and tipped into bins of large capacity. Automatic roller-feeders are used. One man per shift (eight hours) easily manages the thirty-five stamps. These latter weigh about 800 lb., and drop 7 inches at the rate of ninety-eight blows a minute. Angle-slotted Russia iron screens (No. 7 needle) have displaced all other kinds tried. The Blanton self-tightening cam is being gradually introduced as the old (keyed) pattern wears out. Packed iron glands, invented by Mr. Robert Canning, the Chief Engineer, are being substituted with marked advantage for wooden guide blocks. Belt driving, with the aid of tightness and Smith's patent pulley covering, is in favour. After prolonged trials of cast iron, cast-steel, forged-steel, chrome-steel (both English and German), and manganese-steel for shoes and dies, by far the most satisfactory results have been obtained from shoes of Hadfield's (Sheffield, England) chrome or manganese cast-steel, working in dies of forged-steel imported from Glasgow. So hard is the gangue accompanying the milling dirt that the stamp duty per head per twenty-four hours ranges only between 1½ and 1¾ ton. Mercury and small amalgamated copper splash-plates are used in the boxes, and large copper plate tables and apron plates (no ripples or wells) outside. About 12½ per cent. of the total amalgam caught is collected in the mortar boxes. Owing to the carbonate of lime in the ore, no trouble arising from oxidising sulphides is encountered; nor is it found that the antimony and arsenic carried by the ore have any prejudicial effect on amalgamation. The pulp on leaving the outside plates passes through mercury traps, and thence goes to the frue-vanners (two 4-foot belts to each five stamps), where the pyrites is collected for subsequent drying (by waste steam) and shipment to London. The concentrates average about 3 per cent. by weight (dry) of the ore milled, and frequently contain as much as 20 oz. fine gold per ton. The tailings—elevated by a gigantic bucket-wheel to gain height for crossing a public road—flow away to a heap, whence they will soon be taken to pass through treatment by cyanide, containing as they do for the most part some 5 dwt. of gold bullion per ton. In their passage they flow through an apparatus which automatically takes a sample of the whole stream every half-hour. The average value of the milling-dirt is about 1½ oz. per ton, and the ratio of extraction, by battery and vanner, is in round figures 85 per cent.

"The establishment of the Proprietary and Aladdin Companies embraces four sets of winding-gear, four air-compressors, fourteen boilers, three dynamos for electric lighting, with foundry and fitting-shops replete with every appliance for effecting repairs and renewals. Its resources may be judged when it is said that its ordinary work includes casting battery boxes weighing over 3 tons, welding steel rods 3 inches thick, and reboring the cylinders of engines and pumps."

In addition to the work described in the Proprietary and Aladdin Mines, the Darcy Estates have done a lot of work during the year, namely, 101 feet of sinking, and 2,033 feet of drives, cross-cuts, &c., making a total of work done 6,031 feet, the deepest level being 1,021 feet. The capital of the company having been expended, the labour conditions are suspended for six months to enable the company to reconstruct. Fifty-nine men have been employed. About £1,000 worth of machinery is in use, and a trial crushing of 25 tons has only been brought to the surface.

The Wentworth Extension Mines Co. has sunk its shaft to a total depth of 760 feet, and the drives in it reach a distance of a few feet; but it is the intention of this company to sink deeper, and for this purpose the labour has been concentrated to the main shaft. Twenty-six men are employed.

SKETCH PLAN  
OF LUCKNOW COLD FIELD  
Scale 320 feet to 1 inch.

The Homeward Bound Syndicate, which are about to work 100 acres to the north of the Alladin Mine, are about to commence work at once, having prospected the land and decided upon a site for a main shaft.

The Hon. A. T. Kerr has been prospecting on his property, and has sunk seven shafts from 30 to 202 feet deep, in all 508 feet, and driven 1,257 feet. He has a winch and 10-h.p. boiler and hauling appliances for water and stone. £2,426 has been well expended on this property.

The Coolgardie Gold Syndicate, Limited, at Cadia has commenced work, the result of a small crushing being very satisfactory. The deepest old level is 120 feet, but a new shaft is being sunk to a depth of 300 feet. Eleven men are employed. Good results from this mine may be looked for with a degree of certainty.

At the Ophir, George Slater, the veteran prospector and miner of this district, has again put his battery in working order at the Bluff, and is about to start crushing from the numerous veins in the immense body of quartz situated on the bank of the creek known as the Bluff. Water is scarce, and the battery is therefore hung up. The I X L shaft looks well.

The Bletchington, which last year promised to turn out so well, has not come up to expectations. They are down 300 feet. Five men are employed.

The Ballarat of N.S.W. Gold Mining Company at Forest Reefs, alluvial, is down 241 feet, and some driving has been done toward No. 5 bore, where gold was discovered by aid of the diamond drill. Fifteen men are employed.

The Victory Gold Mining Company, Forest Reefs, alluvial, is still on gold, and has hardly come up to expectations. The water is very heavy, and the driving has to be done with great care.

Wills and party have a shaft down 145 feet through solid basalt, and they are in search of the alluvial near and corresponding with the Victory beds of wash. An engine and pump are used.

The Great Lumpy Extended Mine is still working. Harris Brothers have a shaft down 202 feet and drive 370 feet; also a drive is being put in to strike the Old Lumpy Lead. Two engines and pump are required to keep down the water, which is very heavy. There is a hauling gear, with cage and truck, &c.

The Wolaroi Gold Mining Company, near Orange, have sunk a shaft 149 ft. 7 in. x 3 ft. 3 in., and have driven 235 feet in serpentine formation. Eight men are employed, and, the country being very hard, explosives have to be used. The water has been no trouble. This is supposed to be on the line of lode passing through the Lucknow mines, and a discovery here would give mining a decided lift throughout all this part of the district.

Raphael and party have discovered an outcrop of iron gossan and a large deposit of magnetic iron. The surface carries good prospects of gold, and it is believed a large lode exists very near. A shaft is being put down now 100 feet, partly by aid from the Prospecting Vote. The Lewis Ponds and Ophir Creeks being now very low, a number of alluvial miners are making good wages therein; and the aboriginals are also turning their attention to mining. Some one or two of them are doing very well.

#### *Molong Division.*

Mining may be said to be practically at a standstill in this Division. Some thirty men have taken out miners' rights during the year.

A prospecting grant was made to W. H. Bennett, at Garra, to crosscut east from the bottom of the 37-foot shaft 50 feet. The men cut 40 feet, but were unsuccessful in striking anything of importance.

Claude Smith, the holder of a gold-lease at Delaney's Dyke, applied for and obtained six months' suspension of labour conditions in November. He stated that four men had been employed nine months, and about £260 spent.

There is a large quantity of old tailings at the Dyke. Some time ago a proposal was made to treat them, but after inspection it was thought that there was no hope of there being £1,500 in them, and the machinery necessary would cost about that amount.

There has been no gold or other metals or minerals won during the year in this Division.

Mr. Black, of Molong, crushed a quantity of quartz brought from other places, and estimates the value of the yield at about £100.

The only machinery in this Division used in connection with mining is a three-stamper crushing machine (6-horse power), owned by Messrs. J. Black & Son, of Molong, and valued at £300.

#### MUDGEE MINING DISTRICT.

##### *Cobbora Division.*

The want of water has again been the great drawback to mining work during the year. About 150 miners are at work in this Division. 15,615 loads of dirt washed for a yield of 2,395 oz. of gold, valued at £3 15s. per oz.; value of gold won, £8,981 5s.

The workings at Tucklan are now confined to surfacing, depth of dirt taken being from 1 to 4 feet.

The quartz lease at Little Stringy, held by the Yec Brothers, is being steadily prospected, and hopes are entertained by them of striking payable quartz. This lease is in receipt of aid from the Prospecting Vote.

Some miners on the Tucklan Gold-field are now turning their attention to the cement, which contains gold, and are taking some trial loads for crushing to Chapple's Battery, about 7 miles distant. The result of the crushing is not yet available.

##### *Leadville Division.*

There has been very little mining carried on in this Division during the year. The Mount Stuart Mine, after being idle for some years, has changed hands, and the new Proprietary is engaged in sinking an old shaft from 125 feet deep (where copper is showing) to 225 feet, to prospect for copper. The depth has been attained, and a cross-cut started for the lode, which is expected to be cut in about 40 feet. Twelve men are employed.

About 9 miles north-west from Leadville, A. Mason and party sank an old shaft on W. Davis' conditional lease, from 30 feet to 60 feet deep, to prospect for copper. They sent 6 tons of the lode to the Illawarra works, which returned 6½ per cent. of copper. The lode shows stronger at 60 feet, and is 2 feet 6 inches wide, but the party has disbanded.

##### *Gulgong Division.*

The number of miners employed in this Division during 1898 is about the same as for 1897, but the yield of gold shows a marked decrease. In the early part of the year special attention was devoted to quartz reefing near Gulgong. Two mines, "The Shellback" and the "Happy Valley," were successfully floated, and work was for a time busily carried on. Unfortunately, the prospects obtained fell short of expectations, work was suspended, and both companies have now gone into liquidation. On the Shellback a shaft was put down to a depth of 140 feet, and several crushings, said to have yielded good results, were obtained during the year, but the prospects at the lower level were below anticipations, and the mine closed for want of capital.

A large amount of work was done on the Happy Valley Mine during the year, one shaft of three compartments being carried to a depth of 268 feet. The work was all in the nature of prospecting, no crushings being obtained. This mine has also closed down for want of capital. Efforts are being made to re-float the property, but so far with little success.

During the year the Salvation Hill Syndicate have carried their shaft to a depth of 160 feet. There is a large body of highly mineralised ore in this mine, and some very rich specimens showing gold freely have been obtained. This mine is regarded as one of the most promising shows in the Gulgong Division, but unfortunately want of capital has prevented the lessees from properly developing it, but steps are now being taken to obtain funds necessary to work the mine to advantage, and good results may be anticipated during the present year. Several small rushes occurred during the year, on Raynor's conditional lease at Piambong, and on private land adjoining the lease some very good prospects were obtained, and under agreements with the owners of the land a good number of men were for a time employed, but only a few of the men found payable dirt, and the ground was soon abandoned.

Work is still being carried on at the "Royal George," near Cullenbone. A five-head battery is being erected by the owners of this mine. A good quantity of stone has been raised, and awaits the completion of the battery.

*Hargraves Division.*

During the year mining has not been extensively or successfully pursued. The scarcity of water has been a great drawback for the miners on the Merroo and Grattai Creeks, as there are a great number fossicking in these creeks. The Hampden Syndicate, which has been reorganised during the year, is now putting a tunnel through the hill, which when finished will be about 400 feet in length. The manager, Mr. Scott, thinks this mine will turn out well, as there are some good indications.

The Saddle Reef Syndicate (Spratt, Milton, and party) have also reorganised, and have put a large plant of machinery on their mine, estimated at £3,000. The water has been a great trouble in this mine, but now the pump erected on it has completely mastered the water. They are now raising stone from the 120-foot level, and there is every indication of the mine paying its way.

James and Thomas Laing are doing very little on their leases at present, owing to negotiations going on to float their property with a London Company. Frame Fletcher has the Eldorado Hill working on tribute; the vein is about  $\frac{1}{2}$  to 1 inch thick, but very rich, averaging from 2 to 3 oz. per ton. He has also had Government aid to prospect this hill, but got very poor results—in fact, nothing to pay.

W. McGregor and party also have had aid to prospect Tuckland Hill, but have had the same misfortune as Mr. Fletcher; in fact they have given up trying any longer to develop the mine.

The quantity of alluvial gold purchased by the storekeepers is estimated at 863 oz. 2 dwt. 22 grs., amounting to £3,138 4s. 8d.

*Mudgee Division.*

During the past year a good deal of prospecting has been carried on in this Division, but so far with poor results. At the 12-mile, Wyaldra, Messrs. Gates and party, and Wagner and party, have had seven men employed on their alluvial claims; 350 loads were raised, yielding 75 oz. of gold, valued at £296 15s., or at the rate of £3 19s. per oz.; the shaft is down on Gates and party's claim a depth of 29 feet. Another claim at the same locality, known as No. 1 East, reports having raised 200 loads, yielding 20 oz., valued at £79. In the majority of instances payable gold is not being obtained, but judging by the prospecting now going on if this Division carries gold we should soon hear of good results. As an instance of the work done with very little return for the outlay, M'Lean Bros' surface claim on the Mudgee River may be taken as an example. Three men are employed and 1,000 loads have been raised, the gold won being valued at £27 6s. The usual notices were dispatched to the various claim holders not yet abandoned, and judging from the returns to hand the yields have been so small that the interested parties have not considered it worth while to send in returns. Active boring operations were commenced during the past year by the Log Paddock Boring Syndicate. The ground has been thoroughly tested by bores, ranging in depths from 90 feet to 195. Aid was granted to the prospectors to put down two test bores which were bottomed at 145 and 194 feet respectively. A shaft is now being put down on the site of one of the best bores for which prospecting aid has been granted, and good payable wash has been found at 105 feet, and the shaft will be put down to that depth.

There are seven men employed, and a good boring plant, and two whims are in use. About £300 has been spent on the work, and the manager, Mr. James Higgins, has proved by diligent work and bore-tests that wash exists at greater depths than formerly known.

*Windeyer Division.*

Mining matters have not been very brisk during the year. Winter Bros' claim, known as the Golden Lily, have crushed 641 tons of quartz; the quantity of gold won from same is 671 oz. They have about 700 tons at grass, but are now delayed for want of water for crushing purposes. Liebenritt and party have crushed 195 tons; the quantity of gold won from same is 160 oz. This party have a deal of water to contend with. Leffley and party have had a small crushing out of their mine, known as the Golden Gate, but the results were of no consequence. The alluvial mining is almost at a standstill. There are a number of men fossicking about the various creeks, but are getting poor results. There have been 14 gold-mining leases applied for, comprising an area of 58 acres, most of which have been executed. About 1,450 oz. of gold have been bought by the local storekeepers. One hundred and ninety-seven miners' rights and 13 business licenses have been issued.

*Peak Hill Division.*

In this Division only a few mines are working, and most of them are on tribute. In the Great Eastern Reformed, the mine has been let on tribute for the last eight or nine months. The tributers are working at the 200 and 250 foot levels. In the past year, as nearly as can be ascertained, they have crushed about 700 tons of ore for an average return of about 15 dwt. of gold per ton, and have cleared about £3 per week per man. The lode will average 8 feet in width, and is described by miners as a flinty ironstone. The lode was poor to the 100-foot level; it then improved with depth. There are three or four lodes in this lease, but only the one I have mentioned is being worked. The deepest shaft is 390 feet—Wythes and Mooney's. This lease, 20 acres, is also let on tribute to four parties of tributers. It adjoins the Peak Hill Proprietary on the north. The lease contains several lodes or schutes, which have been worked from the surface to the 250-foot level. Two of these parties have made wages for the past year. The third party have made over £10 per week per man during the last year.

The fourth party have only recently started work on the northern boundary. They have a new lode, which has to be proved. Wythes and Mooney's have crushed about 2,500 tons of ore during the past year for an average yield of from 12 to 15 dwt. per ton.

In the Proprietary Mine a good deal of prospecting has been done at the 585-foot level. The main shaft is now 700 feet deep. At the 650-foot level the prospectors put in a drive to cut a new vein which was struck 29 feet north-west of the main shaft. A winze was sunk on this vein 30 feet. Twenty-eight tons of ore was raised and crushed, yielding 39½ oz. smelted gold, and 6 tons of concentrates, which gave 5½ oz. per ton. Since then the tributers are working from the surface to 150 feet. They crushed 169 tons for 5½ dwt. per ton, and since this crushing they have had another of about 70 tons for 6½ dwt. per ton. In this mine a good deal of experimental work has been done with reference to the treatment of refractory ores with indifferent success. During the past year the following crushings have been taken from the Proprietary Mine—719 tons pyritous ore yielded 135 oz. 14 dwt. 17 grs. of free gold; 210 tons of concentrates gave 104 oz. 14 dwt. 5 grs.; 202 tons from tributers yielded 34 oz. 4 dwt. of gold.

In the "Crown of Peak Hill" there are a few parties of tributers working, and some of them have been fairly successful.

The great difficulty in all these mines is to get a cheap process for treating the ore, especially in the pyritous lodes, which usually occur on Peak Hill at a depth of 200 feet. Treated at an ordinary battery from 4 to 5 dwt. free gold is obtained; when the tailings are tested at Dapto and other works a return is obtained per ton from half an ounce and upwards. In every mine on Peak Hill the greater the depth the better the ore, but the pyrites make it very difficult to treat. If this difficulty is overcome the future of Peak Hill is assured. No other claims or leases are working at Peak Hill.

The "Myall United Gold-mining Company."—This property is situated about 8 miles north of Peak Hill, and embraces an area of about 40 acres. The depth of the main shaft is 350 feet; it is 12 ft. x 4 ft. in the clear, and is closely timbered all the way down. It is connected with two reefs, being worked by three crosscuts; No. 1 reef being 10 feet wide, and No. 2, 11 feet, but in many places the lodes are double this size. The character of the lode is free milling quartz, carrying a small percentage of metals, sulphides of iron, and fairly charged with iron sulphides. The approximate number of tons of ore crushed by the Company for the last year has been 25,000, yielding 5 dwt. on an average per ton from the battery, and 3 to 4 dwt. cyanide bullion per ton. To produce the ore mentioned 22,000 feet of driving, rising, and sinking have been performed. An average of about 120 men are employed on this mine. The plant in connection with this mine is a very complete and model one, and is valued at £15,000. The profits made by this Company during the past year have been large, probably upwards of £20,000.

The total yield of gold from the Division for the year was 16,466 oz.

*Wellington Division.*

Quartz-mining has been chiefly confined to the Mitchell's Creek Freehold Gold Estate, where the hands employed numbered 200, and some 14,232 tons were raised, yielding 9,753 oz. of gold, valued at £34,418, showing an increase on last year's return of more than £2,000.

Under

Under the Mining on Private Lands Act, some quartz-mining was carried on on Mr. Samuel Taylor's property; and though the applications for authorities and leases were lodged here, as the nearest office, the land is within the Stuart Division of Tambaroora and Turon Mining District.

Alluvial mining has not been carried on to any great extent consequent on the scarcity of water, and the gold won has been obtained from the Macquarie River principally.

During the year no work was done at the Bolara Copper mines.

#### TAMBAROORA AND TURON MINING DISTRICT.

##### *Hill End Division.*

During the year just ended, the principal mining operations for quartz gold has been carried on at Tambaroora and Hawkins Hill, the total quantity of quartz treated at the various batteries for the year is 4,434 tons for a yield of 2,986 oz. 17 dwt. 4 grs., an increase of 536 oz. 5 dwt. 16 grs. on last year's returns.

In alluvial mining there has also been a satisfactory increase in the yield, due to the very dry season, which enabled miners to work the bed of the Macquarie River. The companies formed during the years 1896-7, for working the basalt hills near the Macquarie River, failed to find anything payable and have been wound up and all machinery removed. As the alluvial gold in this division is won by fossicking and ground sluicing it is not possible to give the quantity of wash-dirt treated.

During the year 150 Europeans and 55 Chinese have been employed in alluvial mining and have won 2,018 oz. 2 dwt. 16 grs. of gold an increase of 691 oz. 19 dwt. 13 grs. on last year's returns, with 57 less men employed. The prospects for the year 1899 are fairly good. The total value of gold won during the year is £19,269 4s. 2d.

##### *Rylstone Division.*

Excepting prospecting and fossicking, there has been no mining in this Division during the past year. Operations at the Cudgegong Copper Mine ceased early in the year owing to want of funds, and there appears to be no prospect of further capital being forthcoming to further develop the mine.

There is no machinery in the Division, and there were no new finds during the year.

##### *Sofala Division.*

The continual dry weather has hampered alluvial mining greatly in this Division; in fact, there has been very few fossickers working, and the few that have worked won very little gold, the only party who made wages was O'Farrell and Theobald, at the junction of Turon and Palmer's Oakey Creek, who earned about £2 per week per man. At the same place there are about 12 more working, with only fair results. At Tobin's Oakey about 20 men are fossicking, with more or less success, making only a living.

About Box Ridge there are about 40 miners making a bare living. On the Lower Turon a few have done fairly well during the year. In and around Sofala about 25 men have been digging on private property under agreements with owners, with fair results.

The bed of the Turon River has been taken up for dredging purposes. A special alluvial lease has been applied for. A dredge is in process of erection, which the company expect to float early in the year. The river and Crudine Creek have been specially prospected for that purpose, and the manager is quite satisfied that the dredging will pay dividends. About 35 miles of the River Turon has been taken up for dredging purposes.

On the whole, alluvial digging in the Sofala Division during 1898 has been the poorest on record.

No new reefs have been found during the year, and some of them which have been worked, viz., Queenslander Gold-mining Company and Turon Gold Mines (Ltd.), have not had any payable results.

Elkin's Extended Quartz Mine is the only one that has done much payable work, viz., 180 tons crushed for the year, which returned an average of 1 oz. per ton.

Leighton Bros., on same line of reef, crushed 50 tons for an average of 22½ dwt. per ton.

If the present dry season continues in this District much longer there will be no mining for gold except on the river.

##### *Stuart Town Division.*

The year has not been marked by any event of great importance. There is an increase in the yield of reef gold, but a falling off in the yield from alluvial mining, due to the continued dry weather, this being the fifth successive dry summer.

The Golden Gully Mine, after spending a large sum of money in preliminary work, has come to a practical standstill for want of capital. The manager reports that he hopes to resume operations early in 1899. In the meantime the lease is being worked on tribute, and the crushing-plant is earning something from other mines.

The "Poor Man," after being for a long time a hand-to-mouth affair, has fallen into better hands and is now being systematically worked, and better results are anticipated.

The "Post Office" has also come under good management, and a large extent of country having been opened up at 200 and 400 feet levels, and proved to contain more or less payable stone. A battery has been erected, and a good report is expected next year (1899).

Mr. C. L. Garland's dredging experiment on the Macquarie River has not yet reached the stage of actual test; but it is expected that work will be started early in the year. The barge has been launched and machinery is now being fitted thereon. Much depends upon this enterprise, and results are anxiously awaited. The freeholder is causing delay in the issue of other leases by urging his rights. The miners hope legislation will remove this imaginary right which has been imported from England where there are no auriferous rivers. They think the absolute right of the Crown to all privileges, not actually and in express terms alienated should be plainly expressed and strictly enforced.

#### LACHLAN MINING DISTRICT.

##### *Cargo Division.*

In Mount Durnard Mine all machinery is at a standstill for want of water. £12,000 worth of new plant has been erected, but, as no water has been available since, there are no results to report.

The "Ironclad" at Cargo has changed hands, and there is now every prospect of the late Mr. Dunn's valuable property being worked to advantage, which will be a decided boon to this part of the district.

The prospecting in parish of Byng is all at a standstill. The machinery required at the mines being totally insufficient for the works required. The several parties are negotiating for a further increase of capital to work on.

##### *Cudal Division.*

There has been very little mining done in this Division during the year except at Reedy Creek, where William Payne has been working a copper mine. A fair amount of work has been done in opening up this mine, but no particulars as to the amount of ore raised or treated has been obtained. The work done has been principally prospecting.

##### *Forbes Division.*

At Forbes the principal mine (referred to in the report for 1897) is that known locally as "Sinclair's" until it was sold to a private company, by whom it was formed into a limited company, called "The Lachlan Goldfields, Limited." The area of this mine is 26 acres. It is situated about 3 miles north from Forbes, near the Bald Hills. This mine is a very valuable property, and promises to become, with further development, and additional machinery, still more valuable. From 70 to 80 miners are employed, and a good deal of work has been done on the lodes or reefs. The main shaft is 160 feet deep, and is still being deepened. At the 70-foot level the lode has been followed for 900 feet, and, at the 150-foot level, 400 feet. There are four air-shafts, and mullock-passes from the surface to the 70-foot level; and 5 winzes from the 70 to the 150 feet levels—the lodes vary in width from a few inches to 9 feet. Winding and pumping engines, with poppet legs, are erected at the main shaft, and an 8-inch Cornish draw-lift. The water in the mine makes about 1,300 gallons per hour. There is a tramline from the main shaft to the crushing plant, which is erected close to the mine, and consists of a 10-head stamper battery,

battery, with ore bins and automatic feeders complete. The stampers are driven by a 20-horse-power horizontal engine on a Cornish boiler. A cyanide plant is erected on the mine (for the treatment of tailings, 130 tons per week), which consists of three 30-ton leaching vats, two sump vats, two solution vats, and two zinc extractor boxes, with pipes, pumps, tramlines, &c., complete. Two excavations, each 5,500 cubic yards capacity, have been sunk, and enclosed with dam for the storage of water, and connected with the battery by a Blake pump and line of pipes. During the past year, as nearly as can be ascertained, 3,500 tons of ore have been treated at the battery, and 1,700 tons of tailings at the cyanide plant, and about 900 tons of slimes are accumulated for future treatment. About 2,088 oz. of gold has been won from this mine since it was opened up. In consequence of the success which has attended the working of this mine, a number of leases have been taken up north and south of it. The areas (north) are 5, 3, 25, 20, 3, 10, 10, 3, 10, 10, 3, 10, and 10 acres—in all, 99 acres. South—4, 10, 20, 10, 20, 5, 5, 3, 2, and 2 acres—in all, 81 acres. In the lease known as Morris's, which adjoins the Lachlan Gold-fields Mine on the north, they have a main shaft 105 feet, and have driven 200 feet north. They have struck the lode containing gold in an ironstone and quartz formation. This party of miners have been working continuously since February, 1897. The lode has also been discovered in other properties along the line. It is confidently anticipated that various mines on this lode, or line of reef, will be proved payable in a few months. There can be no doubt that the rich leads which were worked in the days of the first rush at Forbes were fed from the lodes now being developed by the Lachlan Gold-fields Company and adjoining mines. South of Forbes a prospecting party, Messrs. Sam and others, have been working on what is known as Grossett's Lead for two and a half years without any return. Some rich patches of gold have been taken from this line of reef in time past, and it is, no doubt, the same line as that known as the Britannia. The prospecting party are still confident that they will, in the near future, be amply repaid for the work done; 130 feet is the greatest depth attained, and it is the opinion of competent miners that a much deeper shaft must be sunk before the value of the mine can be proved. No alluvial mining (except fossicking) is being carried on at present in this Division, except a prospecting claim—Doggis and Party—with Government aid, on the old Union Lead, close to the town, they have only recently commenced work, and it will be some time before the claim is found payable or otherwise.

At the Pinnacles Gold-mine, which is 24 miles south of Forbes, very little work has been done during the past year, owing to want of water, the nearest available supply being 8 miles distant. A great deal of work has been done on this mine, but without payable results. Four hundred tons of stone was crushed for a return of 3 dwt. per ton. From 35 to 40 men have been employed on the mine. The reef is a fair site but the quality of stone poor; but the manager reports that he is of opinion that at a greater depth the mine will be payable.

#### Parke's Division.

At Parkes, the principal mine, known as the New Bushman's Gold-mining Company, has suspended operations for three months. The mine was a very profitable one in the hands of tributors, who took some very valuable stone from the reef. This is the deepest mine in the district. The main shaft has been sunk 846 feet. Government aid has been granted to enable the owners to further prove their mine. A great deal of work has been done in the Bushman's and their mining plant is very complete.

The Kohinoor Gold-mining Company. In this mine some recent discoveries have greatly increased the value of the property. During the first four months of the year very little work was done, then the main shaft was sunk a further depth of 80 feet, making a total depth of 455 feet. A payable reef was cut from which very payable crushings have been taken. Encouraged by this, extensive drives have been put in at various levels, but the best gold—the mining manager reports—is undoubtedly in the bottom of the mine. At the 250-foot level, the reef varies in width from 6 inches to 3 feet. There are now thirty-eight men employed on the mine. This company have a battery of their own and probably a cyanide plant will be added, as they have a large stack of tailings ready for treatment.

In the Phoenix Gold-mining Company's Mine, a party of tributors have been working at the 400-foot level; they drove 120 feet, east; sank a winze 40 feet, and raised, and crushed 190 tons of stone for a yield of 6 dwt. per ton. They have also about 80 tons at the surface, which is expected to yield over 2 oz. per ton. The directors report, under date 31st October, last, that recent developments have made the prospects of the mine much brighter than they have been for a considerable time and that it only requires deep working to make it a very valuable property.

It is difficult to obtain a detailed account of the various mines in this Division, but the crushings during the year will give a good idea of their present value, and the number working and raising stone.

		oz.	dwt.	grs.

Quails Gold-mining Company .....	64 "	=	171	15 0
Mount Pleasant Gold-mining Company .....	98 "	=	63	12 0

In the Parkes Division there are large quantities of tailings and these have been purchased and are worked by private individuals and companies. It cannot be stated what the yields are, but, no doubt, they were very satisfactory.

At the Tichbourne, 6 miles south of Parkes, a party of four are working a reef, which, if proved payable, will be a very valuable property. It is 25 feet wide at a depth of 60 feet. A recent crushing realised 8 dwt. per ton, but the cartage lost 4s. per ton, and so far the owners do not consider the mine payable, but they hope that further depth will give richer stone. They are testing the tailings with the cyanide process but do not yet know the result.

The return of gold for this year is a little over 6,300 oz.; in 1897 the return was 9,052 oz., and in 1896, 12,500 oz., the great deficiency being largely owing to the drought in this district; and for this reason during the last year little alluvial gold has been obtained, and many of the batteries have been idle.

#### Fifield Division.

During the year just past 321 oz. 10 dwt. of gold, valued at £1,205 12s. 6d., and 1,250 oz. of platinum, valued at £2,062 10s., have been obtained in this Division. Almost all has been obtained at Platina, 2½ miles south of Fifield, the gold and platinum being obtained in the same washdirt, by the one process of puddling. The only crushing of quartz in the Division during the year was one lot of 6 tons from Rand and Party, Carlisle, which returned 5 dwt. of gold per ton, and did not pay cost of cartage and crushing.

At the present time mining is practically at a standstill at Carlisle, only a few miners being on the field, none of whom are making a living. At Fifield and Platina the miners are making a living, and the average yields during the latter months of the year have been better than during the early part, which shows that probably the men are getting into a better run of ground. Latterly much attention has been paid to those who are washing the surface. These men are obtaining more gold than those who are working in the deep ground, and it is very probable that during the ensuing year a large quantity of gold will be obtained from the very shallow ground between Fifield and Platina.

#### Condoblin Division.

In this Division, which includes Carlisle and Fifield, a good deal of interest is taken in mining, but chiefly among the townspeople—storekeepers, &c. Close to Condoblin, about 3 miles on the Melrose Road, a local company has been formed to work a prospecting claim known as Shepherd's. The company is known as the Condoblin Gold-mining and Quartz Crushing Company, 5,000 shares at 2s. each paid up. This company have made arrangements for a 10-stamper battery to be erected near the claim. The company is taking up the land in the vicinity of their mine, so that they may have sufficient scope if the mine is payable. The reef they propose to work is 3 feet wide, and the assays, carefully taken, have given 1½ oz. per ton. Carlisle and Cugong, where a few months ago a good many miners were congregated, are abandoned. At the Yellow Mountain some prospecting for copper is being carried on, but, so far, nothing of importance has been discovered, the deepest shaft being only 100 feet. Another party is working near Burns' hotel, on Melrose Station;

twenty men are employed. Copper has been known to exist for a good many years in this locality, but the difficulty has been to find a permanent and large lode. Small and broken lodes have been found, but nothing likely to develop into a payable mine. At Winter's, situated 17 miles north of Condobolin, stone crushed from this reef has been very remunerative, but for some reason the owners do not sink. At the present time they have 125 tons of stone ready to be crushed, but it is only surface stone, although the returns are very satisfactory. On the adjoining claims there is a good surface show, and the reef is apparently a continuation of Winter's.

#### *Alectown Division.*

The principal mine in this Division, the Monte Carlo, from which great profits were expected, is, for the present, idle. Some splendid specimens were got a year or two since, and the proprietors were very loathe to give up the work. They are workmen, and probably could not carry on. There is not the slightest doubt when the leases are cancelled, as they will be very shortly, they will be remarked and further prospected. Stone taken from this line of reef went as much as 10 and 11 oz. per ton. Mead and party, on private property (Beazley's conditional lease), have a fair sized reef, from which great things were expected; but, so far, the expectations have not been realised. They have raised 29 tons of good-looking stone, estimated to yield 1 oz. per ton. Alectown is an old alluvial diggings, and supports a good many families, but they have had a very hard time this last year owing to the drought. It is supposed that about 5,000 loads of alluvial dirt were washed during the past year, for a return of about 200 oz., and most of this dirt was washed with a dish, as no water was obtainable for a pug-mill. One party of miners got 3 oz. in an old prospecting claim, out of a block of wash missed by the prospectors. It is quite certain that there are plenty of payable reefs in this Division, but capital is required to find them. The ordinary miner, unless he can earn his living from the stone as he goes down, cannot prospect. The Monte Carlo has only been prospected to a small extent. More work has been done on the Young Australian and the Bachelors, but a great deal more work requires to be done before these reefs should be abandoned.

#### *Grenfell Division.*

In May last there was a rush to Toohy's Settlement Lease (private land) in this Division, situated about 20 miles from Grenfell, and in the course of a day or two sixteen or twenty claims were pegged out. Results, however, very soon proved that there was very little if anything to warrant the rush. The sinking (alluvial) was too deep, 150 feet, and the yield too scanty, a quarter of a grain to the dish, to pay, or even to make "tucker." The field is now abandoned. There is much difficulty in obtaining detailed information from mineowners in connection with their properties. It has, however, been ascertained that 3,266 oz. of gold of the value of £12,432, have been won at Grenfell during the year. This shows a considerable increase on last year's output, the figures being for 1897—1,780 oz. of the value of £6,855, thus showing a balance in favour of 1898 of £5,577. This is a satisfactory increase, and is chiefly attributable to the operations of the two cyanide works, which would appear to be in full swing, notwithstanding the dry weather during the greater part of year. Quinn and party, working under an authority to enter on private land at Arramagong, had a parcel of stone from the mine treated at one of the Grenfell batteries, which went 18 dwt. to the ton. This yield is satisfactory, inasmuch as the stone was not very difficult to raise. Quinn has now applied for a lease of the property. Reefing, however, at Grenfell, has been much retarded by the dry weather during the year. With favourable seasons mining in quartz at this place, must, it is thought, show favourable results. About 90 men find employment in the Division, say 60 in quartz, and 30 in alluvial. Little mining is being done on private lands in the Division, and the results of any work done have so far proved disappointing.

#### *Murrumburrah Division.*

The prospects of the mining industry in this Division do not grow any brighter. Judging from the quantity of gold purchased locally, as compared with the quantity which changed hands in 1897, there is a considerable falling off. In that year 1,992 oz. of the value of £7,682 passed through the hands of local people. Last year (1898), the quantity purchased was 1,169 oz., of the value of £4,503.

On the 28th day of October last, part of the police paddock at Wombat, Reserve No. 33, parish of Wilkie, was thrown open to occupation for mining purposes. The place was rushed and fifteen or sixteen claims were at once pegged out. The sinking was shallow ranging from 15 to 30 feet. The results proved very disappointing, with the exception of at Tobin and party's claim where, at a depth of 50 feet, about a dwt. to the load was stated to have been won; no other gold whatever has been discovered at the place. The miners have now all left, but it is believed to be the intention of some at least to return when the locality is favoured with a fall of rain. Brown and party followed up and sank a shaft to a depth of 52 feet and bottomed a duffer. Near the red bridge on the Murrumburrah road, Wilson and party, aided from the Prospecting Vote, have been working a reef for some time past. They have not been very successful; the place is now abandoned.

The property known as Tilden's Proprietary in this Division at Cullinga, passed into the hands of Gough and party during the year. A cyanide plant, erected at the mine by the new company, has been in operation during several months past. The Department has been unable to ascertain as to the success or otherwise of the venture. The company does not, for private reasons, care to afford any information on the subject. The plant has, however, been recently removed, and is understood to be in operation at Cowra Creek near Cooma, and the mine has been recently leased on tribute.

Boxsell and party have been working a 10-acre lease (private land) adjoining with indifferent results. A crushing of 23 tons yielded only 1½ dwt. to the ton, but later on a crushing of 10 tons gave a return of 8 dwt. to the ton. Boulderstone and party working adjoining ground are, it is said, doing little if any good.

#### *Gundagai Division.*

During the year there has been a considerable increase in the amount of gold won, the increase amounting to 5,187 oz. Total amount won, 8,627 oz., made up as follows:—From alluvial, 873 oz.; from quartz, 7,754 oz.

The principal increase in the amount of gold won is owing to the return from the Prince of Wales Mine at Mount Kimo. At this mine a 20-head stamper battery has been kept constantly going during the whole year, and as foreshadowed in last report, the development of this mine has aided materially in the increase of gold won, viz., 6,172 oz.

The deepest level of this mine is 500 feet. At the 200-foot level there is a drive of 240 feet in a northerly direction, and one of 1,100 feet in a southerly direction; and at the 300-foot level, a northerly drive of 270 feet and a southerly one of 680 feet.

The directors are now erecting another 10-head stamper battery, which fact points to the future prospects of the mines.

The great difficulty experienced is the want of water, the supply at present being very low, owing to the continuous dry weather; but a lease of a dam on Back Station Creek having been granted, the Company hope to tide over the present difficulty.

The best yield for the year was obtained from stone raised at Robinson and Rice's Mine at Kimo—500 oz., from 90 tons, realising £4 per oz.

With regard to the claims at Johnston's Hill, and Booth's Reward at Coolac, no returns have been received, no gold won, consequently no opinion can be expressed concerning their future.

At Jackalass only 90 loads of alluvial reported, yielding 120 oz.

The following applications were lodged during 1898:—9 applications for gold leases on private lands, 8 for gold leases on Crown lands, 92 for authority to enter to prospect for gold, and 18 to dig and search for chrome.

#### *Temora Division.*

There were sold during the year 1898, 250 miners' rights and 24 business licenses. The quantity of wash-dirt treated in this Division was 5,125 loads for a return of 1,000 oz., at £3 17s. 6d. per oz., value £3,875.

The stone crushed during the year amounted to 1,365 tons, yielding 1,349 oz., at £3 18s. per oz., £5,383 10s., being the aggregate value of stone crushed.

The principal portion of the crushings occurred during the last six months of 1898.

During the year, mining matters have been hampered by the following causes:—

1. Want of capital with which to develop the mines.
2. Want of water, caused by the drought.
3. Want of crushing plants.

Mining in this district extends 16 miles east and 35 miles west of Temora. The only crushing plants are about 12 miles east from Temora—that is to say, at the extreme end of the mining area—with the result that all the stone from the west end, a distance of from 20 to 50 miles, has to be carted there for treatment. Under such drawback, unless the stone is very good it cannot be worked.

With the advent of capital, this place would develop into a large quartz-reefing field, supporting a large number of miners.

There have been four fresh reefs discovered here during the year, one of which is very wide, and the assays are from  $\frac{1}{2}$  to  $1\frac{1}{2}$  oz. per ton.

In reviewing the work of the year, there is only one conclusion to be arrived at, viz., that without capital the field will be very slow of development; but with the advent of capital, for which there is legitimate and profitable employment, this district would become one of the best reefing centres in the Colony.

There are two cyanide works at Sebastopol, treating 300 tons per week, and one at Springdam, treating 240 tons per week, of tailings. Twelve men are employed on the work in question.

The bank returns show that 2,070 oz. of gold were purchased, representing in value £8,024 14s.

#### Barmedman Division.

Mining matters have been almost at a standstill, with the exception of the Barmedman Cyanide and Milling Company. Thirty-two men were employed in mining. The yield of gold was 2,950 oz., valued at £8,456 10s., being 1,743 oz. less than last year. No work has been done upon the leases held by the Fiery Cross Gold Mining Company and they have been forfeited, and applied for again by E. Butler. This application has been opposed, and this prevents work being done or capital coming in. Until the tricks of the designing mining cliques in this Division are put down with a firm hand, mining will be almost an industry of the past. Capital is required to work the reefs in this Division.

#### Recfton Division.

The work and prospects this year have not been encouraging. Four claims have been at work, viz., The Enterprise, Pioneer, Sydney, and Prospectors. These claims are below water-level, and capital is required. Twenty men were employed. The gold won was 300 oz., valued at £1,186. The machinery, including a small cyanide plant, is valued at £900. There are six gold-mining leases in force.

#### Wyalong and Wyalong West Division.

These Divisions have been dealt with as one in the usual way. The yield of gold for Wyalong has been as follows:—

1894— 9,649 oz., valued at.....	£35,946	from 6,358 tons raised.
1895—24,497 „ „ .....	91,864	„ 15,634 „
1896—33,495 „ „ .....	130,000	„ 18,279 „
1897—34,370 „ „ .....	137,490	„ 34,750* „
1898—34,582 „ „ .....	138,328	„ 30,940 „

\*Including 4,000 tons of "mullock."

The yield this year is satisfactory, considering that the mines now are more expensive and difficult to work, and that capital is required to develop them at a depth. The yield accounted for exceeds last year's by 212 oz. 11 dwt. 13 grs., and, it is believed, there is at least a couple of thousand ounces not accounted for.

Sixteen hundred miners were employed, being about 500 less than last year; but this will be soon altered, as four of the chief mines intend putting on a large number of hands.

The value of the machinery and appliances upon the field is about £50,000. The population is about the same as last year, viz., 4,200. The field is now more developed and is permanent, although there are a less number of mines at work, but as capital comes in this will be rectified. The Shamrock and Thistle claim, and the Waratah adjoining, were sold for about £12,000.

The Bantam and Lady Grace amalgamated and formed a company, and have erected good machinery, and intend to prove the mine to a great depth. The Bantam treated 593 tons for 1,414 $\frac{1}{2}$  oz.; the Lucknow (Bolte's) treated 1,675 tons for 5,518 oz., valued at £22,000, which is a splendid return. Some of the stone went 26 oz. per ton. The depth is 380 feet, and the deepest level is 336 feet.

Neeld's (leases) treated 1,813 tons 16 cwt. 3 qrs. for 5,098 oz. 4 dwt. 4 grs., valued at £21,412 8s. 8d. Depth of shaft is 300 feet and deepest level 200 feet. The value of the plant is £5,000. There are about 3,000 tons at grass awaiting treatment. This is a splendid property, and it is believed the yield for 1899 will at least be double of that for this year.

The True Blue treated 2,956 tons for 1,920 oz., valued at £8,117. The depth of the shaft is 370 feet, and the deepest level is 370 feet. The reef averages about a foot. This is a good and payable property.

The Golden Fleece treated 857 tons for 990 oz., valued at £3,803. The depth of the shaft and level is 320 feet. The reef averages about 8 inches.

The Junction treated 1,700 tons for 1,900 oz., valued at £7,600. The depth of shaft and the deepest level is 380 feet. The reef is about 12 inches.

The Klondyke crushed 707 tons for 1,926 oz. 16 dwt. 15 grs., valued at £7,202 18s. 8d. The depth of the deepest shaft and level is 260 feet.

Klink's New South Wales Company treated 1,150 tons for 796 oz., valued at £3,438 10s. 6d. The depth of shaft is 500 feet and the deepest level is about 240 feet.

The Shamrock Gold-mining Syndicate treated 183 tons for 324 oz., valued at £1,346 19s. 6d.

The White Reef treated 191 tons for 445 oz., valued at £1,670 10s.

The Currajong treated 337 tons for 515 oz., valued at £2,000.

During the early part of the year a rush took place at Hiawatha. Many claims were taken up upon Crown lands, and an enormous number of applications for authorities to enter under the Mining Laws Amendment Act were applied for, and a very large number were granted. There were about 500 miners upon the ground, but at the end of the year only six authorities were being worked. One or two parties have paid wages and working expenses. When a depth has been obtained this field may yet prove a good and payable one.

A few miners have been fossicking at Billy's Lookout, but the want of rain has retarded operations.

Duncan, Noyes, and Company have erected a dry crusher and enlarged their plant.

Improvements have been made at Sully's and also at Neeld's.

Nicholas and Raymond are making additions to their battery and are increasing the crushing power.

Another cyanide plant is to be erected.

428 tons 8 cwt. were treated at the Dapto works as follows:—Gold, 5,119.27 oz., valued at £20,477 1s. 7d.; silver, 333.58 oz., valued at £38 4s. 5d.

The Called Back mine is now the property of a Melbourne Syndicate and is likely to be worked again.

#### Yalgogrin Division.

Mining in this Division has been retarded for want of capital. The yield of gold was 1,180 oz. from 751 tons, valued at £4,130, being 451 oz. less than last year. One hundred and fifty miners were employed, and the population is about the same as last year.

Several authorities under Mining Laws Amendment Act were granted, and several leases were applied for.

If the leases upon the private lands resume work the yield next year will be far larger.

The Great Eastern in Waldron's Paddock went 16 oz. per ton, but the reef is only about 2 inches.

A list of the crushings at the local battery is attached, which shows the yields. Besides this, some stone was treated away from the field. The Piccaninny had two or three good crushings at Dapto, the last being over 3 oz. per ton. The Eureka has been worked fairly well, and has been proved to be payable. Stanley's lease at Nariah is being worked, and looks promising and likely to be a good and payable property.

## List of Crushings at Gough's Battery at Yalgogrin

165 tons of mullock for various parties for 3 dwt per ton, being 24 oz 15 dwt

*Young Division*

Mining operation in the Young Division have varied but little during the year. The year 1897 was very dry, and retarded considerably the work of the miner, but the year which has just expired has been *less* auspicious in respect to rainfall, so that, except in a desultory way, little mining is being done. The sluicing claims have done almost absolutely nothing. In the gullies and at Spring and Stoney Creeks a few men are scattered here and there fossicking, but the rich finds of former days would appear to have departed. At Tipperary Gully and Sawpit Gully some fossicking is being carried on, but no finds of any importance have been reported. A few men who combine other occupations with mining make a living, but no more.

With favourable seasons a good deal of gold might, probably, be won in the locality. All the flats without, perhaps, an exception, contain gold in more or less quantity. This alluvial gold must, it is supposed, have been shed from reefs in the neighbourhood. It is puzzling that prospecting for reefs, of a systematic nature, has not been more extensively carried on. The only reefing enterprise prosecuted in the vicinity was by the Day Dawn local syndicate about 6 miles from here, in the early part of the year. Some parcels of the stone have been treated at Dapto and the Clyde, with rather disappointing results. It is said that the sinking, although deep (180 feet) and expensive, is not sufficiently deep, and that the stone grows richer as it goes down. The reef varies in width from about a foot to 2 feet. The company has been aided from the Prospecting Vote. At present little work, if any, is being done. The property appears to exhibit a reasonably good show for the enterprising miner or capitalist. A small cyanide plant (two vats), the property of Plumb, Gaffney, and another, has been in operation at Stoney Creek for several months. About 600 tons of tailings were treated, with, it is stated, fairly remunerative results. The exact return cannot, for private reasons, be obtained. The works are now dismantled, and the plant removed to some other locality. As nearly as can be ascertained the quantity of gold won in the Division would be about 1,507 oz., value £5,838, being 628 oz. less than the yield for 1897. Only about 70 men find work in the Division, being about 200 less than the number employed last year. The Registrar issued 395 miners' rights and 7 business licenses, he registered 7 mining tenements and 1 agreement M P L; he issued 7 "authorities to enter", and there were 7 cases dealt with in the Warden's Court.

## TUMUT AND ADELONG MINING DISTRICT

*Albury Division*

Beyond some desultory mining and prospecting, principally in the neighbourhood of the Black Range, but little work has been done in this Division. At that place Messrs Turner and McGrath have treated some 300 tons, with a small cyanide plant, extracting therefrom about 65 oz. of gold.

By a joint arrangement between the Governments of New South Wales and Victoria boring operations are to be carried out in the vicinity of Doctor's Point, near Albury, and the Wodonga Flats, on the Victorian side, with a view of ascertaining the existence of deep leads in the locality. Operations have already been commenced near Wodonga.

Work of a similar nature is to be performed by the Government at a site already fixed at Black Range. Jones, Walsh, and party are also being aided to test the deep ground in this locality. They have bottomed one shaft, and have obtained very encouraging prospects.

*Walbundrie Division*

Mining at Bulgandra has been practically confined to three leases, viz., the Welcome Find, the Lone Hand, and the Goodwood, with the approximate result of about 260 oz. of gold from some 500 tons.

The provisions of the Mining on Private Property Act have not been largely availed of throughout the Division.

*Geamanton Division*

No mining was carried on in this Division during last year.

*Corowa Division*

The Corowa Deep Lead Company's Mine, upon which a large amount of money has been spent in machinery, and upon which boring operations have proved the existence of a deep lead, has now two shafts—one sunk to a depth of 97 feet, and the other to 123 feet. This company is in receipt of assistance from the Prospecting Vote to carry out the operations.

*Adelong Division*

The Adelong Gold field is still producing a large quantity of gold, the figures for 1898 being 18,268 oz. as compared with 19,690 oz. during 1897. The Gibraltar Consolidated Company's Mine contributed the bulk of the gold, having produced 13,459 oz. from 12,886 tons of stone. On an average this company employed 280 men all the year, and are operating from three shafts, particulars of which are given below—

Radcliffe Shaft—Depth of shaft, 565 feet; deepest level, 555 feet, average width of reef, 1 ft 6 in

O'Brien's Shaft—Depth of shaft, 360 feet; deepest level, 300 feet; average width of reef, 1 ft 6 in

Perkin's Shaft—Depth of shaft, 280 feet; deepest level, 260 feet, average width of reef, 12 inches

The

The strike of the reef is approximately north 60 degrees east, and the underlay is on the average about 10 degrees to the east.

Full particulars of the machinery employed by the company were given in the Departmental Report for 1897.

The Challenger Gold-mining Company raised 186 tons for 164 oz. ; the Caledonian Company 133 tons for 240½ oz. ; and the Adelong Proprietary Company 260 tons for 240 oz.

Alluvial mining was exceptionally quiet during the year, only about 635 oz. being won. This is considered a very small output for this Division, the drought being responsible for the falling off.

Large areas of land in the Adelong Creek below the Gibraltar Mines are much sought after. The depth of the land is about 45 feet, and from its nature found to be wet and expensive to work. However, the introduction of improved machinery and modern methods of working may yet create a remunerative industry in this portion of the creek.

#### *Tumut Division.*

It has not been possible to get the returns of gold won in this Division during the year, as the miners sell their gold to the different storekeepers, and keep no record of their transactions.

A large number of applications for authority to enter private lands, also applications for permission to mine on reserves, have been lodged during the last three months, by persons representing large companies, and it is considered that mining on the Tumut Gold-field will, during the year 1899, show a very great improvement on previous years.

#### *Batlow Division.*

There are no important finds to report for the year. Griffiths and party prospecting on a continuation of Walsh's Dyke have obtained fair prospects, but the lead has dipped away, and they are now sinking a shaft to strike the underlay of the dyke at a lower level. In the neighbourhood of Laurel Hill some good gold is being obtained by driving under the basalt, and Currie and Corbett, who are sluicing on Richardson's conditional purchase land, are doing very well. Several claims lower down the Gilmore Creek are being worked with very fair results, though the fact of the creek not having been made a frontage creek, and being measured into the selected lands, rather hampers mining.

Timmis and party are erecting crushing machinery on their holding known as Walsh's Dyke. This formation is about 150 feet wide, and is estimated to go from 2 dwt. to 4 dwt. to the ton. As the ground is easily worked, the proprietors consider they will be able to make it pay.

It is difficult to estimate the quantity of gold won in this Division for the year, as some goes towards Tumarumba, some again is sold at local stores, and is brought from all parts of the mining district, but the gold sold here amounts to 920 oz. for the year, valued at £3,565.

#### *Tumarumba Division.*

The gold won in this Division during the year was 1,650 oz. from alluvium and 150 oz. from quartz, which is a decrease on the quantity won the previous year.

The dry weather which prevailed during the greater part of the year was a great obstacle to all mining work in this Division, and accounts to a great extent for the small amount of gold won.

The powerful pumping machinery which was early in the year erected on the ground held by the Tumarumba Flat Gold-sluicing Company has, after an exhaustive trial, proved the large area operated upon to be quite worthless, and the enterprise of testing the ground involved a heavy loss. The machinery has now been erected on the ground lately held by the United Trades Company in the bed of Tumarumba Creek, and the prospects so far are exceedingly good, the failure of the ground higher up cannot, however, but prove seriously detrimental to the district.

During the year there were no rich finds of alluvial gold in the Division, a most promising feature as regards this class of mining being Messrs. W. and H. Bell's successful tunnelling through the basalt at Cherry Hill ; the wash has there been struck, but to the present there is no data from which to judge whether there is sufficient gold to be payable.

No forward movement of any note has taken place as regards quartz-mining, this industry being distinguished by a remarkable apathy considering the good prospects obtained from many of the reefs. Lack of water has again somewhat retarded operations.

There is undoubtedly a large diminution in the number of miners employed in the Division, 346 miner's rights only having been issued, as against 409 last year, and a larger proportion of these rights have been for six months only.

The number of Chinese employed in the Division remains the same, viz., two.

It is evident that a considerable quantity of the gold won in this Division is taken into the Colony of Victoria, but owing to the manner in which the gold is exported it is impossible to give an estimate of the quantity.

#### *Narrandera Division.*

The Grong Grong Reefs lie north of the railway line, about 22 miles from Narrandera, and 14 from the railway station at Grong Grong. The country is easy of access but waterless, except where reservoirs have been sunk and dams erected to store the rainfall. Quartz and ironstone veins abound, and there is an ample supply of timber for mining purposes.

The Harry Smith is the principal mine, and the only one on which systematic work is being carried out. The manager reports having crushed 493 tons of stone during the twelve months for a return of 251 oz. of gold, value £998. The whole of the gold won from this mine has hitherto been devoted to its further development, but it is surely, if slowly, approaching a time when it will furnish dividends to its shareholders.

When this comes to pass an impetus will be given to mining development in this locality which present appearances show is much needed.

The reefs at Cowobbie are about 10 miles from Grong Grong, and 23 miles from Coolamon Railway Station (45 miles from Wagga), in a country of low rises, where the ironstone outcrop appears to have undergone a more severe denudation and erosion than was apparent on the soil-covered undulations at Grong Grong. In past years gold was won from surfacing about half a mile from the head station on this run, and a battery was erected to crush the contiguous vein-stuff ; but although the metal was proved to exist in payable quantities, it was found impossible to save it with the machinery in use, and the venture was in consequence abandoned. There is little doubt that these reefs would pay well if worked with adequate capital and up-to-date machinery.

The country rock is of slate, and the veins frequently show a strange mixture of ironstone, quartz, sandstone, and slate.

Evans and party are at work about 3 miles from Cowobbie, under similar conditions as to the matrix and lightness of gold, but the vein is reported to be from 7 to 12 feet wide. A sample of stone from this mine sent to Sydney some eighteen months ago gave a return at the rate of 21 oz. per ton ; but with the battery in use it is found to be impossible to save this "paint gold," and the return of 41½ oz. on the labour of nine men for twelve months is not encouraging to further efforts without more perfect appliances.

This property is in the parish of Brangalga, at no great distance from the newly-discovered reefs in the adjoining parish of Yarranderry ; and it is not improbable that a connection may be traced between these through the intervening country.

Evans' Claim is on Crown land, and the reefs at Cowobbie on private property ; but both holders of the properties named, it is understood, welcome the assistance of the capitalist to aid in developing the mines.

A broad auriferous belt of rounded ironstone and quartz pebbles extends easterly about 14 miles from the town of Urana, in the direction of Lockhart, on the northern edge of which, 7 miles out, gold has been found and mined for in deep ground.

This tract of country has not been tested elsewhere. Further exploration may yet reveal the existence of deep leads under its promising surface indications. The waterworn drift has evidently been swept from a gold-bearing formation now buried in the general level of the plain.

Further south, towards Corowa, on the district boundary range, there are a few gold-miners at work ; but reliable information has not yet been obtained as to the geological formation of the range or the condition of the mines.

*Junee Division.*

Very little mining has been done in this Division during the year, a great many of the leaseholders having abandoned their mines on account of the scarcity of water and grass for their horses, &c.

With the exception of Howell and Co.'s Consolidated Gold-mining Company Mines, there is only one other mine at work at Junee Reefs, viz., H. J. Baker and party, W. C. Valentine and party's, among others, having been recently cancelled for non-fulfilment of labour conditions. There are a few alluvial mines about Wantiool and Eurongilly.

Junee Reefs.—At the Dusthole Mine and the Just-in-time Mine (Howell and Co.), which are being worked conjointly, there are about 1,000 tons of stone at grass awaiting treatment, and at the Doctor's Mine (also the property of Howell and Co.) there are 400 tons of stone at grass also awaiting treatment. The Dusthole Mine is a gold lease of 10 acres, employing fourteen men. There is no machinery on the ground, all the hauling being done with a whip, and the stone being sent away at times to the smelting works at Lake Illawarra. The deepest level is 320 feet strike E.N.E. by W.S.W. underlay about 1 in 2 feet towards S.E. In the Doctor's the deepest shaft and level is 200 feet; the reef in a N.W. and S.E. direction underlaying west. No stone has been treated during the year.

At Hy. J. Baker's Rockdale Mine, on 23rd February last, reduction of half labour was granted for three months. On resuming full labour, stoping has been carried on between Nos. 1 and 2 shafts, and driving 50 feet at the 100 feet level, the reef averaging 15 to 18 inches; they are timbering as they stop up. Also stoping and driving in No. 3 shaft, where they have driven about 9 feet in the lode, averaging a width of about 12 inches ferruginous quartz, but not fit for battery treatment. It is understood to be very expensive to the leaseholders in treating, they having sent 36 tons of stone to be treated at the Smelting Company's Works at Lake Illawarra, which yielded 51 oz. 10 dwt. 16 gr., and it is stated the treatment of the stone in this way naturally leaves no margin for the proper working of the mine by so small a party, they all being poor miners. It necessitates their sending the stone to Old Junee Railway Station by team, a distance of about 10 miles, and thence by rail to Illawarra, a distance of about 347 miles. The lessees state that the total expenditure on the mine for the year was £505 12s. 8d.

Eurongilly.—At the Pioneer Mine (G. H. Rowland) little or no work has been done during the year, consequently the lease has been cancelled for non-fulfilment of labour conditions. James Steele and party have been mining on alluvial, off and on, for some time, and for 100 loads they obtained 9½ oz. of gold, valued at £34 8s. 9d. They have now removed to another place, and applied to the Warden to mine on private property in the parish of Wantabadgery, and have erected a sluicing plant just outside the boundary of this Division. Another party have erected a small cyanide works at Eurongilly, near the site of the old Huntington mill, but since the beginning of the year have done no work owing to the scarcity of water. About 35 oz. of gold was obtained from this plant during the early part of the year, but owing to the proprietors being absent on their Christmas holidays, and the place shut up, the quantity of tailings put through was not obtainable.

Wantiool.—On C. W. Crawley's lease no work has been done this year, but he has between 70 and 80 tons of stone ready to crush at his battery, which is some miles from the mine, as soon as a sufficient downpour of rain comes to enable him to conserve enough water for the purpose. John Charlton has also about 30 tons of stone at grass, which he intends getting crushed at Crawley's mill as soon after Mr. Crawley has crushed his own as possible. Mr. Warden Martin sent some samples of stone from this latter mine to Sydney for assay, which yielded very good results.

*Wagga Division.*

In the face of the long-continued drought but little prospecting could be undertaken in this Division, and operations on the few mines at work were seriously hampered for want of water, even for domestic purposes. In consequence the output of gold has not been as great as early indications in working mines led the miners to expect, and new ground has not been anywhere opened out. There are indications that a most promising mineral field is here lying dormant for lack of that enterprise with capital which is so freely invested in other more distant and probably poorer districts. The colour of gold can be found almost everywhere, and reefs bearing more or less of the precious metal intersect the country in several directions. Many of these reefs have been worked for payable gold for a short distance down and then abandoned, it is stated, on account of the lessening yield. None of these have been tested at any depth, and it is probable that the greater skill and more perfect appliances of the present day would enable the capitalist to obtain a more satisfactory return on investment than was possible with the ruder appliances available twenty or thirty years ago. This is not now a field for the poor miner. Capital, directed by skill, would be absolutely necessary to give any chance of success, and it is thought the probabilities of success are many, and worthy the attention of experts.

Four men working the alluvial on this field report having won 32 oz. gold, valued £116, and the same party have received authority to prospect 10 acres in deep ground on portion 44, parish of Wantabadgery. A small cyanide plant worked on some old tailings recovered 35 oz. of gold, value £79, but for want of water operations have been in abeyance for some six months past.

Pullitop, 30 miles easterly of Wagga, is amongst ranges of micaceous granite, felsite, and ironstone slate, and the country has been proved to contain gold, wolfram, and tin—the latter in stream and lode. The gold has been mined for up to the present in a quartz matrix in the felsite ranges, but there is little doubt that further exploration will reveal its presence in the quartz-veined slate ranges. Spence and party hold a lease of 12 acres in the parish of Currandarra, and have crushed about 50 tons of stone, yielding an ounce to the ton, at the stamper battery they have erected on Pullitop Creek.

Water has been very scarce, and operations have been much hampered for want of it. Other parties have been prospecting over the same range of hills and report having got a good show by dollying, but had to return in consequence of the want of water.

Small leases of land carrying wolfram, in the same parish, have been applied for, but no work has yet been done in connection with the claims.

Tin is known to exist in the bed of Pullitop Creek, but no effort has been made to win it from its resting place. It has also been found further off in veins amongst the higher granite ranges.

Close to Wagga, on the town common, gold has been found in quartz veins in the slate country rock, but nothing payable has yet been discovered.

Prospecting operations are, however, still being conducted in a desultory fashion.

*Cooma and Kiandra Division.*

During the year 1898 a fair amount of prospecting work has been carried on chiefly in the vicinity of Cooma, but so far as gold is concerned nothing of any importance has been discovered, but with respect to copper the case is different. At Middle Flat, on a conditional purchase owned by Mr. T. Goodwin, there is a very bold outcrop about 5 chains wide consisting of gossan showing, it is said, copper in places. The walls on either side of this formation are slate and are stated to be very well defined. The prospectors, Molesworth, Skidmore, and party, have sunk a shaft on the outcrop to a depth of about 100 feet. At about 47 feet a strong formation of sulphides was struck yielding, it is claimed, an assay of 15 per cent. of copper and 12 dwt. of gold. This formation is stated to have been proved to the whole depth of the shaft, and to be about 7 feet wide at the 100 feet level. Water was struck at a depth of about 50 feet, and as it was found impossible to cope with it without machinery, the proprietors erected a 6-inch Cornish drawing lift, driven by a 6-horse power portable engine. This pump throws from 3,500 to 4,000 gallons per hour. Between twenty and thirty assays have been made from stone taken from the 70 feet level; these, it is stated, averaged 2 oz. 11 gr. of gold, and about 3 oz. of silver per ton and 8 per cent. of copper. This formation can be traced for some considerable distance, and is supposed to be identical with that which is now being prospected on property known as Dartmoor, owned by Mr. M. Eylemann, about 1½ miles north from Middle Flat. The same formation is also believed to run through property owned by Mr. W. Jardine, which lies about 1 mile north from Dartmoor. Should the work at Middle Flat prove satisfactory, no doubt capital will be found to prove the ground on the properties mentioned. Molesworth, Skidmore, and party claim to have expended about £800, and are at present in receipt of Government prospecting aid.

At Bushy Hills, 3 miles easterly from Cooma, work is at a standstill, it being found impossible to work the lease without costly machinery, the stone being found very difficult to treat, and as the holders of the leases are not in a position to erect machinery, negotiations are now being carried on with a view to the introduction of capital to thoroughly prospect the hill. The opinion of all the experts who have visited the place is that it is a place of great promise and well worth thoroughly prospecting. The lowest return that has been obtained from any of the ore that has been treated is a little over 2 oz. per ton.

At Bredbo, 20 miles south from Cooma, on property owned by Mr. John Clifford, a reef carrying gold has been discovered, but as only a little work has been done, it cannot be said whether it is likely to prove of any value; the surface stone assayed 6 oz. per ton.

At Kydra work has again been started on this field but nothing of importance has been discovered.

Kiandra.—The usual amount of fossicking has been done on this field, and a good many men are earning fair wages. No new finds have been made. It does appear strange that some steps are not taken to thoroughly test the deep leads that are known to exist in and around Kiandra; this result might be obtained if larger areas at a reduced rental could be granted.

Nine Mile.—At the Empress Mine, owned by Mr. J. W. Lett, good results are being obtained in the deep alluvial ground, and some large areas have been applied for as leases adjoining it; this should lead to a revival of work in this locality.

Gray Mares, Boogong.—Work is being vigorously carried on in this field, a complete crushing plant has been erected worked by water-power, and good results are being obtained from what appears to be a permanent reef; it has been tested to a depth of 150 ft.; the reef at that depth being 6 feet wide, and gives an average of about 9 dwt. to the ton. Work has only been carried on in the past during the summer months, but the manager now hopes to be able to work during the whole of the year. Twenty-five men are employed.

Cowra Creek.—At this field satisfactory progress is being made, a good number of men are at work and are making fair wages. There is now in course of erection a cyanide plant; this will be a great help to the field as nearly half the gold is lost by battery treatment, and as there is a large amount of tailings in the field it is fully expected that the returns next year will be largely in excess of any previous year.

Buckley's Crossing.—Little or no work has been done in this part of the district, but it is believed application has been made for leases covering the bed of the Snowy River near the township, and that if these leases be granted the river bed will be worked by dredging; if this should prove successful the other rivers in the district will also be similarly treated.

The Black Range.—This place is situate about 42 miles south-easterly from Cooma; only developmental work has yet been done, and this has been greatly retarded by the drought from which that part of the country is at present suffering. If capital could only be got to thoroughly prospect this part of the district some valuable discoveries both of gold, silver, and lead would be made.

About thirty applications have been made for authorities to enter on private lands in various parts of the district, twenty-five of which have resulted in failure; five are still being worked with some hope of success, but with the exception of Molesworth, Skidmore, and party at Middle Flat, the work generally done is of the most primitive character, and good results could not be expected.

#### *Captain's Flat Division.*

During the year 1898 the quantity of ore raised and smelted by the Lake George Mines Co. (Limited) was more than twice the amount treated in any previous year.

Three pyritic blast-furnaces, of a nominal capacity of 100 tons each, were in operation during ten months of the year, while a smaller 60-ton concentrating-furnace was in operation during a portion of that period. The total quantity of ore treated was 56,040'61 tons producing matte the contents of which were valued at £69,213 12s. 6d. About 300 men were employed directly on the mines during the year, whilst a large number such as teamsters, wood-cutters, &c., were also employed.

The greater part of the sulphide ores treated were raised from the Northern or Powell's Section, locally known as the Koh-i-Noor, while smaller quantities were raised from Keating's or the Southern Section, where gossans for fluxing purposes were also obtained.

During October the operations having proved unprofitable the Company applied for and obtained two months suspension of the labour conditions on all their leases. The directors, however, did not avail themselves of the privilege for a longer period than was necessary for a thorough overhaul of the machinery, and work was resumed as soon as this was accomplished. Since the resumption of operations, owing to a vigorous policy of retrenchment on the part of the management, it is understood that the operations of the Company have shown a substantial profit.

Outside the Lake George Mines there was no productive mining in the Division, although a considerable amount of prospecting was done on leases held by the Lake George Proprietary Co., the Lake George North Co., Lake George South Co., and Chas. Sacagio, which was unfortunately without successful results. A rich vein of auriferous ore was worked by tributors on behalf of the Lake George Mines Co., on the old Vanderbilt Hill, the returns from which are included in the smelting operations of the Company. Alluvial gold-mining was confined to occasional fossickers on the Molonglo River.

#### *Bungendore Division.*

Mining matters at Bungendore are very quiet, the quantity of gold won during the year being under 150 oz. A number of parties are working throughout this Division under aid from the Prospecting Vote, who have fairly good prospects ahead of them.

#### *Gundaroo Division.*

Mining matters in this Division are at a standstill. There is only one claim on gold at the present time. While there is a decrease in the amount of alluvial gold won, there is an increase in the gold won from quartz, which is attributable to the fact that a battery has been erected at Dairy Creek. This battery was erected by Mr. Thomas Coleman, of Gundaroo, at a cost of something like £200, and it consists of 5-head of stampers. No gold leases have been applied for during the year. Two applications for suspension of the labour conditions, were the only matters dealt with by the Warden's Court for the past year.

#### *Yass Division.*

There is nothing very satisfactory to report as regards mining in this Division for the past year.

Murrumbateman, the new field, about 10 miles S.E. from Yass, has turned out a failure, only one claim (the prospectors, receiving aid) being now at work.

At Nanima, a few miles further, the same result appears, the two claims on payable gold last year being still the only two on gold. These two claims (Remington's and Crocker's) are some considerable distance apart, and although a large amount of genuine prospecting has been done, the reef has not been found anywhere between them. Remington's (the prospectors) had one crushing of 11 tons, about the end of the year, from which they obtained 103 oz. 12 dwt.

At Blakney Creek, 15 miles north from Yass, the prospectors are again disappointed, as up to the present they have failed to find payable gold. There should be a good reef in this locality, as Blakney Creek for many miles along its course has carried good gold.

At Gininderra, some 30 miles south-east from Yass, a good deal of prospecting has been carried on. The prospects are very promising, as a large ironstone formation, of a gossan character, runs through the country for several miles. As this carries gold in many places, the miners look upon it as an indication of a good lode underneath. The drought has, however, been a great bar to satisfactory prospecting. When rain enables the miner to continue operations, I should not be surprised at a payable reef being discovered. As it is, the Warden has been obliged to grant suspension of work all round.

At Gooda Creek there is still only one claim (Buckmaster's) on gold. The reef worked here has not as yet been traced outside the limits of this claim.

#### *Tooma Division.*

There was little or no mining going on in the Tooma Division last year. Toolong Creek, from which place a good deal of alluvial gold has been won, is worked out, there being only three men working, and scarcely getting enough to keep them in food. Khancoban Creek, where it was expected there was good alluvial gold, has been abandoned altogether.

## SOUTHERN MINING DISTRICT.

*Braidwood Division.*

Within this Division mining has been confined to the bank of the Shoalhaven and Jembaicumbene Creek. The Colombo Company are now preparing to complete their race. This company have some good ground, but it is feared it will be found, as in other undertakings of this nature, that the work will prove deeper than the present bed of the river, also, that the current in the river is not sufficient to carry away their sludge and tailings.

At Corang a considerable amount of prospecting work has been done, proving the existence of a large body of auriferous wash, but, so far, barely payable. It is, however, well worthy of further prospecting, and the consideration of the Prospecting Board.

*Araluen Division.*

The most pleasing feature of the years' transactions has been the attention directed towards dredging in this district. We have had numerous visits from practical men from New Zealand and Victoria, who express themselves amazed at the want of enterprise in New South Wales, and say if similar country was available to the other colonies it would have been secured and worked years ago. Upwards of 1000 acres have been applied for, and although, as usual, a large proportion is held solely for speculative purposes, yet there is a considerable area in the hands of men who are so well satisfied with the results of their tests as to the value of the ground, that they are finding all the necessary capital for the undertaking.

The machinery for a dredge to be used in Lower Araluen is now in course of construction, and there is every probability of dredging operations being in full swing within the next six months.

Should this venture prove successful it will cause a complete revival in the mining industry throughout the Braidwood District. The whole of the Araluen Valley will again be worked, and, in my opinion, there is no worked ground in the colonies containing so much gold as Araluen.

A Melbourne syndicate have lodged applications for authority to enter the private land at Jembaicumbene, and are preparing to thoroughly test it, and, if satisfied, will put on the pumping machinery so successfully used on similar deposits in Victoria.

Some 7 miles of Shoalhaven River have been applied for, and, in view of the fact that hundreds of miners have from time to time won good returns from the immense bodies of drift on both sides of the river, it would seem highly probable that the dredging of these deposits will be remunerative.

It is generally believed that the drifts below the junction of the Mongarlowe River are richer than those above it—the gold is certainly heavier. We already have Mr. Geological Surveyor Jacquet's report on the upper drifts, and, in view of the success of his book on dredging, published by the Department of Mines, a further report as to the value and extent of the drift deposits in this district would materially assist and benefit the mining industry in this locality.

The gold won at Araluen is nearly a third less than last year—this is chiefly due to the severe flood in February last, which caused a complete stoppage of work for some months in all the principal claims. But it is most remarkable that in two or three months after the flood before referred to, some eight or ten fossickers obtained fair wages in Lower Araluen by simply cutting up and washing the grass and turf, showing the quantity of gold still in Araluen, most probably, in the old tips.

There are about 270 men employed gold-mining in this Division, and they won, so far as can be ascertained, over 2,100 oz. of alluvial gold.

The exceptionally heavy rains in February caused an immense amount of damage in this district, claims were filled up, dams washed away and races destroyed. Araluen especially suffered severely; nearly all the claims were filled to the top either by sand or water, and had not the Department of Mines come to the assistance of the sufferers few would have been able to recommence work. Much time was lost in effecting repairs and when this was accomplished the dry weather set in and no water was available for sluicing purposes, consequently it is not to be wondered at that the gold returns are less than last year.

*Major's Creek Division.*

In consequence of the dry season very little progress has been made in alluvial mining within this Division during the past year, the owners of what are termed flooding-off claims, *i.e.* ground sluicing on a large scale, have not done well, and the same may be said in regard to owners of puddling mills; they too have been short of water, especially at Long Flat and the Back Creek portion of what is still termed the new rush. Some half dozen mills on or near the Jembaicumbene Creek have had sufficient for puddling and sluicing.

Quartz-mining is almost at a standstill, there being at the present time only two claims at work, *viz.*, the Snob's and Hanlon's Reefs. The working miners have not sufficient means to sink deeper into the hard rock, where water has to be contended with; and the cost of carting and crushing is quite heavy enough, and more so when the pyrites have to be sent to Maryborough (Q.) or other establishment to be treated; hence the profits to the producers become too small to enable them to continue the work of developing the reefs at Major's Creek. At Snowball, some 33 miles from Major's Creek, about 16 men are said to be engaged prospecting for, or are already on reefs; but as yet no stone has been crushed, hence it is not known whether any of those already opened are payable.

It is said that the few parties working in alluvial ground are making from 3 to 4 dwt. per week, each man, which is very small to live upon. One hundred and nineteen miners' rights have been sold, as against 135 for the previous year, being a decrease of 16, which looks as if the lowering in price has not caused a greater number to be taken out, and 4 mineral licenses as against none during 1897. There is a decrease of 252 oz. 15 dwt. 6 grs. in the quantity of gold won, when compared with that of the year 1897, and which may be attributed partly to the drought, and lack of capital to develop the reefs. There are a number of puddling mills at work; the owners of these mills keep no mine books and are unable to give an accurate account as to what the wash dirt averages to the load. The dirt runs from about a  $\frac{1}{2}$  dwt. to 3 dwt. to the load.

*Little River Division.*

With the exception of a storm in February, the past year has been the driest ever known in this Division, and mining was confined to the well-worked river banks.

The water-races afforded only a few weeks' work, when nuggets of 22, 10, 8, 4, and 2 oz. were unearthed.

The Day Dawn reef, from which so much was expected in proving the reef at a depth, has been idle during the past year.

There are some thousands of acres of auriferous ground on both sides of the river that would give employment to a large number of small parties of miners if a supply of water from a main-race was on the ground, and there is no impediment to this being carried out at a small expenditure.

*Nerriga Division.*

The continued drought during 1898 acted as a great drawback to alluvial mining.

A large extent of ground has been taken up at the Oallen Crossing by C. Blacket, who intends working same with a newly-invented gold-saving machine.

Two 100-acre leases have also been applied for, to be worked by dredging. Four 25-acre water-rights for the working machinery, in connection with the Phoenix reefs, have also been taken up.

A tunnel, 600 feet in length, has been driven on the Phoenix reef, and was to be extended a further 200 feet. Tunnels to the extent of 400 feet have also been put in on Mark's leases, but have been stopped for two months.

A shaft, now down 140 feet through lignite, and dry, is at work under aid from the Prospecting Vote, and will help to define the extent of the Corang deep lead.

*Nowra and Yalwal Divisions.*

On the 30th June, 1898, there were 27 gold leases in force within the Yalwal Division, on which about 100 men are employed. There has been an increase of 431 tons of stone crushed at the various batteries, as compared with the previous year.

The total crushing at the Yalwal Gold-field for the past year may be put down at 8,951 tons, yielding 1,320 oz. of gold; and 4,750 tons of tailings, having passed through the various cyanide plants, giving 649 oz. of gold. No alluvial mining has been tried for the past year, and nothing whatever has been done by way of mining within the Nowra Division.

The Yalwal Gold-mining Company hold fourteen gold leases with an area of 81 acres 1 rood and  $\frac{1}{2}$  perch, employing fifty-two men; have a 40-head stamp battery, said to be one of the best in the Colony, which is in a thoroughly efficient working condition. During the past year a cyanide plant has been added, capable of treating 400 tons per week, and four

large Speck gaskins, 7 feet by 8 feet, were put in for the purpose of reducing the slimes, and were found to act admirably. The cyanide plant consists of four 20 foot x 6 foot circular wooden vats, and one 16 feet x 5 foot vat for the alkaline solution, two concrete sumps, 20 feet x 20 feet x 5 feet, for cyanide solution, and one small sump, 13 feet x 13 feet x 5 feet, for alkali solution, two large pumps for water supply and cyaniding are ready for use. A tramway, 30 chains in length, has also been constructed, and a small winding engine, 6 horse power, is placed above the stone crusher for bringing the ore from the claims in Saw pit Gully. The cost of these additions is about £3,000. Most of the work done during the past year on the various amalgamated leases was prospecting, with a view of testing the ground, and it is contemplated by the owners, Messrs Hay, Wright, and party, in the near future, to go in for more extensive exploration at the lower levels. The quantity of stone crushed by this company has been kindly supplied by Mr Wright—4 800 tons yielded 230 oz of gold, 3,150 tons tailings passed through the cyanide process, giving 450 oz 10 dwt of gold. The cyanide yield is very much better in a sense, but is entirely due to the fact that 200 tons of the tailings were saved and stacked from some of the rich stone or ore taken from the Caledonian Mine some years ago. The Homeward Bound Gold mining Company have also erected a large cyanide plant for treating past tailings, consisting of leaching vats, revolving distributors, also over flows on South African plan, as well as sluicing vats, and pumping engine. The arrangement is somewhat original, due to the irregularity in the ground, inasmuch as the sluicing vats are placed above the leaching vats. The sand in the vats is washed by upward percolation. This was made necessary by the impermeability of slimes. It is intended should the results of the cyanide work prove successful the company will erect other vats. The amount of cyanide used at present per ton of sand is about 1½ lb per ton, but it is thought that now the vats have been soaked the treatment in the future will be done with 1 to 1¼ lb per ton. The cost of treatment, including all chemicals, is from 4s 6d to 5s per ton. The results of crushing from 1st September to the 24th December last was 3,712 tons, yielding 971½ oz of gold, average value £3 7s 6d per oz, 300 tons of tailings were also treated by the cyanide process, producing 23 oz smelted gold. The company look forward to the future as being very satisfactory.

Moore and party have also during the past year erected three vats, 10 feet by 6 feet, and all appliances, near the creek, to work the tailings of some years' collections that have been deposited in the creek. The vats are capable of treating 250 tons per week. They have treated 1,000 tons of tailings, which yielded 100 oz of gold, this, however, does not represent the value of the tailings treated, as the extraction is said to be very imperfect, owing to the presence of charcoal in the tailings.

The Poorman Mine, Gold Lease 686, has also a 10 head stamp mill and cyanide plant, open working—lowest level attained, about 80 feet—439 tons of stone passed through the battery, giving 69 oz of gold, and 300 tons treated by cyanide yielded 70 oz of gold.

Barron and party, at Grassy Gully, are the owners of a lease formerly owned by the Anglo Exploration Company, who had a drill at work for some time, making a bore of 309 feet, and then abandoned it. After the cancellation of the lease the present holders applied for it, and have held it for six months, and during which time several parcels of stone have been sent to the Dapto Smelting Works, with the following very satisfactory results, particulars of which have been supplied by Mr Barron—46 bags crude ore assayed 8 oz 14 dwt gold per ton, 6 bags tailings assayed 1 oz 2 dwt 4 grs gold per ton, 63 bags quartz ore assayed 5 oz 1 dwt gold per ton, 83 bags crude ore taken from the mouth of a shaft 98 feet deep, left by the former company, assayed 11 oz 3 dwt 4 grs gold per ton and 4 oz 7 dwt 3 grs silver per ton, 56 bags of stone that had been thrown away and used for a track for a horse working a whip and dug up by the present owners assayed 5 oz of gold per ton and 1 oz 12 dwt of silver per ton, 55 bags crude ore assayed 7 oz 4 dwt 4 grs per ton, and several other parcels that were sent were equally as good, the bags averaged seventeen to the ton.

#### *Ulladulla Division*

No mining business has been done in this Division during the past year, except a little washing for gold from sand at Murramarang Beach, and there is at present no prospect of any fresh mining work being started. The sand washing did not pay and has been abandoned. Four men only were engaged at it. A little prospecting has been done, but with no results. There have been sixteen miners' rights and one mineral licence issued.

#### *Nelbgen Division*

Mining matters have been very slack in this Division during the past year, particularly in quartz mining as only twenty men have been employed, as against thirty five in 1897, and those employed in alluvial mining number about the same, but the yield of gold is just half, viz, 60 oz, value £240, as against 120 oz last year. The yield from quartz has also been much less, being 118½ oz, value £474, against 270 tons in 1897 which might be accounted for, to a certain extent, by the fact that McLeod and party have only crushed 60 tons this last year against 220 tons in 1897, as they have been proving their ground by sinking and driving, and will commence stoping and crushing on a large scale when they resume after the holidays.

The total value of machinery in the Division has also fallen, as one of the batteries from Bumbumalla was removed early in the year, and the horse power one at Currowan has been dismantled. The first named battery is the one that it was anticipated last year would be removed to Currowan but the leases at that place have not been worked, the lessee being unable to do so, and they have now been cancelled, and are now being worked by four miners on miners' rights, who say they intend to give it a good trial.

Two mineral prospecting areas were applied for by Messrs Backhouse and Cleaver at Sugarloaf on the Birdwood Mountains, to work a copper lode there but only prospecting has been done, and no ore raised, and the affair hangs fire.

There are six gold mining leases in force in the Division with an area of 50 acres, three have been applied for during the year, with an area of 8 acres, also one P L A lease of 15 acres.

Twenty six miners' rights and one business licence have been issued during the year.

#### *Bateman's Bay Division*

Mining in this Division is in a better state at the present time than it was in the year 1897. No doubt the cause may be attributed to the miners, who relied on making more out of the reefs than out of the alluvial. Some genuine prospecting has been carried on at Mogo, Old Mogo, Tucker Hill, Cabbage Tree, and Waterfall Creek, with the result that the diggers made fairly good wages. There are noles of auriferous country in this district not yet prospected.

Aid was granted to G A Loxton, at Waterfall Creek, to drive a tunnel 150 feet, the work has been completed. The tunnel is now 501 feet, a cross drive of 95 feet, and a shaft of 40 feet. He has a tramway from the tunnel to Waterfall Creek, a distance of a quarter of a mile. While driving the 150 feet he got 200 loads of washdirt, yielding over 28 oz of gold, valued at £112 11s 4d. He thinks the claim will last for years, and is satisfied with the prospects. Aid has been granted to Samuel Bellett, at Tucker Hill, to the amount of £20, to drive a tunnel 200 feet. He has the tunnel 164 feet, and is satisfied with the prospects ahead of him. He has washed 180 loads for 40 oz, value of gold won, £156.

Aid was also granted to James White, at Old Mogo, to drive a tunnel 150 feet or so, the work has been completed. This tunnel should be carried on some 200 feet further into the hill, then fairly good results might be expected, and would likely be the means of a lot more ground being opened up, as there have been some heavy deposits of gold obtained from near where the tunnel is now being driven.

John White and party, at Ryan's Hill, have done a lot of work during the year. Their dam was washed away in February last and part of their tunnel fell in, nearly ever since they have been engaged getting their claim put in order to start again at the beginning of the year, their tunnel is now in 500 feet. Good results may be expected from this mine during the year 1899, as the party is comprised of some practical miners.

There are other parties engaged in tunnelling and working claims in the district with fairly good prospects, and there is every reason to believe the yield from alluviums during 1899 will exceed the return for year 1898.

The Dick Consolidated Gold mining Company, situated at the Big Hill (quartz claim), when working employ about eighteen men. During the year the Company have had 506 tons of stone crushed for 318 oz, value of gold won £970. The Company have a winding and pumping plant and a 10 head stamper battery, each about 8 horse power. This Company has had three lots of suspension, two and three months under partial suspension, and in October last they obtained three months total suspension, thereby causing a lot of men to be thrown out of employment.

Fitzgerald's gold lease of 2 acres at the Big Hill is turning out well, two men are engaged working on the lease, 63 oz of gold was obtained from 67 tons crushed, value of gold won £195. The vein in this lease is fairly good, he has other stone at grass ready for crushing.

David

David Bevan, the lessee of so many gold leases at Big Hill, representing the Bateman's Bay Syndicate, has not done any work on the leases during the year. Early in the year suspension was granted for three months; Bevan left for Sydney and has not returned. The leases were cancelled on the 30th ultimo.

Very little work, if any, has been done on Veitch's gold lease, No. 52. This lease was originally known as the Big Hill Company. The owner has not the means to work the claim properly; he is evidently waiting to dispose of the claim.

The claim known as Latta's has not been properly worked during the year; very little work has been done. Believe owner just holding claim with a view of selling. Exceedingly good prospects have been obtained from this claim. Two tons of stone from this claim went 13 oz.; value of gold won, £52. That appears to be the only stone taken from the mine during the year.

Mining was started at Cullendulla, on a selection owned by Michael and Henry Ryan, under the Private Lands Act. They gave a Mr. W. H. Ferrier a lease of 20 acres for twenty-five years. They were to receive one-fifth of the gold won; subsequently Ferrier gave them £525 for their interest. A reef was worked, from which they got out 14 tons of stone, yielding 13½ oz. of gold, valued at £54. Five men were employed for about three months. The shaft is now down 42 feet. Water is the drawback in this claim. Work ceased nearly four months ago, and it is not known whether he will start the claim again. The vein is 10 inches wide, showing good gold.

During the year 78 miners' rights and 1 business license were sold.

#### *Moruya Division.*

There is a slight decrease in the quantity of gold won in this Division as compared with the yield of the previous year, the figures being 520 oz.

At Bimbimie, where a number of men have been employed and a large area of land is held under lease, a large quantity of prospecting work has been carried out, the results from which being considered very satisfactory.

At the Silver-mine, Wamban, four men have been employed raising ore for shipment to Sydney to be tested.

At Dwyer's Creek, about 3 miles south from Donkey Hill, Messrs. Crapp and Walker are opening up a reef, but up to the present have struck nothing permanent.

At Mrs. Flanagan's homestead, portion 34, parish of Bergalia, a party of men, acting under arrangement with the owners of the land, have at last erected a cyanide plant, to treat the tailings which were included in Mr. John Miller's application for authority to enter, which latter was subsequently refused.

At Francis' Hill, between Wamban and Candoni Creeks, the following parties are at work:—Ling and O'Neill, Kelly and T. Batt, junior, William Fry and Sons, and Cantlay and party. The stone raised by these has been crushed at Mr. Batt's recently-erected battery on Donkey Hill, the total up to the present being 62 tons for 16 oz. 19 dwt. 15 grs., an average of about 6 dwt. Mr. Batt, who has been at considerable expense in erecting his battery, is greatly disappointed at not having been better supported by the public, who promised to keep his battery going full time if he erected it. But no doubt the large number of local residents employed during the last twelve months in getting stone for the Government improvement works in the river has greatly lessened the number of those who would otherwise have turned to mining for a living.

At Donkey Hill Nixon and party are raising ore for shipment, the presence of other minerals apparently rendering the stone too difficult of treatment locally. The old "Een" Mine is being worked by Messrs. T. Elliott and W. Constable; they are raising stone, but have had no crushings yet.

At Pompey Point, Mr. Thomson, with aid granted by the Prospecting Board, are sinking, following an outcrop down. They are down about 25 feet, but with no satisfactory results yet.

There are the usual number of fossickers at work along the river banks, working up towards Merricumbene and Araluen. It is reported that two parties on branch creeks—R. Constable and Sons and R. Foreman's party—have done fairly well.

The total amount of gold purchased by the two Moruya Banks during the year was 861 oz. 8 dwt. 1 gr., value, £3,337 8s. 4d.; but this includes gold won outside the Moruya Division.

#### *Nerrigundah Division.*

In quartz-mining there has been an increase, both in the number of miners employed and the quantity of gold obtained, and with every indication of a still greater increase for the year 1899.

The principal quartz-mine in this Division is the Bumbo Gold-mining Company's Mine at Bumbo. The area of the Company's leases is 56 acres. There are several veins on this property, but the principal one averages about 4 feet in width. 179 tons of stone from this vein yielded about 300 oz. gold, and 55 tons from the "old vein" only yielded a trace of gold. The Company have added five head of stampers to their battery during the latter end of the year, which will in future be driven by steam instead of a water-wheel as at present. About twenty-one miners are employed.

Latty Brothers' Red Creek Mine crushed 163 tons for a yield of 232½ oz. gold. There are two veins on the leases, one averages 10 inches and the other about 3 feet. The last crushing yielded 98 oz. from 13 tons of stone. Six men are employed on this mine.

Motbay and Martersteck cut some very rich chutes in their mine during the year, a dish of stone yielding as much as 25 oz. of gold; about 48 tons were crushed for a yield of 111 oz. gold. This vein was opened up under aid from the Prospecting Board. The amount of aid received has since been refunded. The vein averages about 1 foot.

Jessop Bros., Davidge and party, Gordon and party, and others are doing prospecting work on small veins, small crushings from some of the veins yielding from 4 dwt. to about 15 dwt. per ton.

Thomas and party have discovered a vein on private land at Brassknocker Creek. So far they have only sunk a few feet on what is said to be payable stone.

Alluvial mining in the Division is almost a thing of the past. About 100 Europeans and Chinese are fossicking about in the old workings, the majority of whom are only making a very precarious living.

The following business was transacted in the office during the year:—

Miners' rights issued .....	170
Business licenses issued .....	15
Gold-mining lease applications received (area, 60 acres) .....	14
Gold-mining leases executed .....	17
Gold-mining leases transferred .....	3
Causes heard in Warden's Court .....	22
Total collections for year, £179 3s. 9d.	

The quantity of gold won during the year amounted to 1,375 oz. 14 dwt. 13 grs., valued at about £5,502 18s. 2d., being an increase of about 300 oz. on last year's return.

#### *Wagonga Division.*

There has been considerable increase in mining in this Division during the year. The Wagonga Creek Proprietary Gold-mining Company hold under lease about 300 acres, the greater part of which is held under the Mining on Private Lands Act. These leases are situated on a belt of low-lying hills, about 120 feet above sea-level, and about 2 miles in a northerly direction from the Warden's office at Wagonga. The country rock is slate, with intrusive bosses of diorite. The ore is a low grade felsite, with a large number of quartz leaders passing through same, and bulk tests have yielded up to 12 dwt. to the ton. There are six lodes running parallel, varying from 5 to 20 feet; strike of lodes, west of north dipping east. The Company has put down five shafts to a depth of 100 feet, and has made extensive arrangements for working a portion of the east lode by the open cut system. A 20-head battery, of the most modern construction, is now in course of erection and almost completed, between the first and second lodes on the side of a hill, with floors excavated for amalgamating, concentrating, and cyaniding. The ore, which will be very easily worked, will be delivered from the various lodes to the battery in trucks running over a tramline which is constructed at right-angles over the lodes. The ore will be dumped on a grizzly, the lumps being reduced to the required size by passing through a stone breaker. It will be fed to mortars by automatic feeders, and the pulp will pass over silvered copper-plates, 5 x 6 feet, through two silver wells on to a shaking table 5 x 6 feet, and then through another silver well. The tailings will then be stored for future treatment. The amount of water obtainable is limited to one creek, which is at present rather low. The company, however, has made extensive arrangements for pumping salt water with which to dress the ore. A sum of £6,000 (six thousand pounds) has already been spent in the erection of machinery, &c. The district is splendidly timbered, and will supply all requirements for mining and building purposes for many years to come. The company expects to commence crushing operations about the middle of January. About forty men are at present employed. Should

Should the operations of this company prove successful a great impetus will be given to gold-mining in this Division, as the large lodes running through the company's leases are traceable for miles.

Taylor and party, on the same line of lode, have sunk shafts 65 feet deep and one 60 feet, and have driven 500 feet. They have crushed 33 tons for 11½ oz. of gold.

There has been considerable work done by other leaseholders on this line of lode, but so far the results have not been satisfactory.

The McDonald Gold Mine (Limited), Easdown's line of reef, situated on the north side of the Wagonga River, near Barlow's Bay, prospecting shafts have been sunk 40 feet on a lode 150 feet wide. It prospects from 5 dwt. to 12 dwt. to the ton.

F. G. Gray's Lady Carrington Mine, which is situated a little north of Easdown's line of lode, have sunk the old shaft a further 50 feet and driven 40 feet north. The reef is 2 feet wide and carries fair gold. This mine is receiving prospecting aid.

The Belle of Australia line of reef is still being worked, 150 tons being crushed from Mr. Fraser's lease, giving satisfactory returns.

On the Beehive line of reef, C. Laurentz and T. P. Lynch have claims from which they are getting fair stone.

The Mount Dromedary Company have done considerable work since last year, having driven No. 5 tunnel up to 1,600 feet from the mouth, and in No. 6 they have driven in a new vein 200 feet from the mouth, and they are also in several hundreds of feet with No. 4 tunnel. There are about fifty men employed in this mine.

On the south-western side of the mountain all leaseholders are at work.

Pye and Braithwaite are putting a shaft down in their tunnel to test their vein at 100 feet. The last crushing from this mine at their own battery went within a few grams of 2 oz. to the ton.

W. Stephens, adjoining Pye and Braithwaite's, is raising stone which yields over 1 oz. to the ton.

N. Bailey has been driving in his 20 acre lease to cut the Dromedary Company's vein, which he has succeeded in doing about 500 feet from the boundary, and it prospects over 3 oz. to the ton.

On the eastern slope of the mountain W. Wilson and party are working for alluvial on Little Dromedary Creek, and are getting very good returns; they have 14 feet of washdirt, which yields ½ dwt. to the load.

R. Simpson and party, a little further down the mountain, are hydraulic sluicing, and say they are satisfied with the yield, and further down several white men and Chinamen are working and are getting fair gold.

Bowen and party, on their alluvial leases at Makin's Hill, have erected a very large and expensive pumping plant, but operations have been very much retarded owing to the scarcity of water. A very large dam has been made, but since its completion very little rain has fallen.

At Kianga Creek a number of miners are at work in the alluvial, but their progress is retarded by the water.

On Connolly's lease of 4 acres, at Whittaker's Creek, a very rich reef has been discovered. 12 oz. 11 dwt. of gold was dolled out of a small parcel of stone taken from the 35-foot level, at which depth the reef is 15 inches wide, and if the stone continues anything like this as it goes down it will be the richest ever found in this Division.

The New Hope Sluicing Company have erected a large pumping plant, and intend to work the mine by hydraulic sluicing. They have made a start, but on account of the very dry weather the water is short. The wash-dirt is from 10 to 12 feet thick and prospects ½ dwt. to the lode, which is considered very satisfactory.

At Corunna Lake, H. Reade and party have a prospecting protection area in a lode formation which appears to be felsite. The lode just below the surface is 9 feet wide and crops out at the water's edge. A shaft has been sunk some 150 feet inland to a depth of 60 feet and driven easterly 100 feet; the stone in some parts of the lode prospects from 3 to 9 oz. to the ton.

Mining is undoubtedly on the increase both in alluvial and quartz in this Division, and as several battery plants are now ready to start, the yield for 1899 ought to be larger than any previous year, and will give employment to a large number of miners.

#### *Cobargo Division.*

There is very little to report in connection with this Division. At Montreal, Mr. S. Vickery has leased 10 acres for sluicing the old ground, and has recently erected a 30-horse power engine and pumping plant. The prospects are good, but there is great difficulty with the water. Three men are employed with him, and up to the end of the year they have treated 200 loads of washdirt for a return of 5 oz. of gold. There are several other diggers fossicking amongst the old abandoned claims, and one of these obtained 30 oz. of gold during the year, which he has sold locally at the rate of £4 per oz.

Raley Bros., of Coolagolite, have sold their battery there, and it has left the district. They have also abandoned their claim at that place. No new finds of any description have been reported, and there is no indication at the present time of any increase in mining in this Division.

The business for the year derived from the sale of miners' rights, business licenses, &c., amounted to the sum of £11 15s. 9d.

#### *Bega Division.*

Very little mining work was carried on in this Division during the past year. The gold obtained comes from a patch of country about 7 miles from Bega, on the coast, in an easterly direction. The miners working there prospect the country close to the coast and for the greater part along several small watercourses in the area referred to. There are no registered claims, and the Mining Registrar was not in a position to describe the particular locality from which the 35 oz. of gold won was obtained.

No other minerals are being mined for in this Division at the present time.

#### *Wolumla Division.*

During the year 1898 the progress on the Wolumla Gold-field has been steady and satisfactory. With one or two exceptions all the leases are on payable gold; and some of the returns have been exceedingly good and encouraging to the miners to continue their exploration to greater depths; and, with depth, more settled country is being met with, and the stone is as good and in some cases better than near the surface.

Two private batteries, viz., Momsen's and Brady's and White's, have been erected, which have been crushing with satisfactory results; also a public battery and cyanide plant have been erected by Mr. J. Haugh, at which some hundreds of tons of stone and tailings have been treated, the extraction of the gold from the tailings being very satisfactory.

There appears to be room on the field for further reducing plant, as a considerable quantity of the higher-grade stone is still being shipped to Dapto, which class of stone usually returns 4 oz. to 10 oz. of gold per ton; and there is also a considerable quantity of lower grade ore awaiting treatment, for which the cost of local treatment is considered too high.

The deepest level at which payable gold is being won is 116 feet in the Pacific Mine, where a strong body of stone is being worked, yielding about 1½ oz. fine gold per ton.

There is every prospect of this being a permanent and profitable field.

There is a mining tenement about 2 miles north from Wolumla field, where a little gold is being obtained. This is in the strike of the Wolumla reefs, and probably the country between, and possibly beyond, would be found to be auriferous if systematically explored.

#### *Pambula Division.*

Mining throughout the Division has been dull during the year, owing partly to the refractory nature of the ore, which cannot be successfully treated in this district; no new payable finds have been reported during the year.

Parish of Yowaka.—On this portion of the field mining has been confined to a few companies. The Mount Gahan Gold-mining Company (no Liability), have been engaged sinking to the depth of 460 feet without satisfactory results.

The Pambula Mines (Limited), have been working gold lease portion 221, and have been rewarded by obtaining from 260 tons of ore 397 oz. of gold, valued at £1,311; depth of shaft, 80 feet.

The Falkner Company (Limited), have treated, during the year, 4,378 tons of ore, from which they obtained about £12,500 of minerals; depth of shaft, 318 feet. Approximate value of machinery, £2,000.

The Falkner Company (Limited), and George Harrison gold lease, portion 37, treated some 50 tons of ore out of 160 tons raised; 25 tons yielded 52 oz. gold over the plates, valued at £200; also the tailings were treated by cyanide and yielded 60½ oz. gold, valued at £204. The yield from other 25 tons are included in the Falkner Company's return above. Depth of shaft, 240 feet.

Several other Companies have failed to make a return, but the amount of gold won would not be very materially altered by such returns.

No new ground has been taken up in this parish during 1898, and the only important development has taken place on the Pambula Mines (Limited) property, where rich ore has been struck, and a shaft is now being sunk to work the same.

Parishes of Wyndham and Gnupa.—The mineral lease 7,060 has changed hands during the year, viz., transferred from W. J. Keep to George Charles Elliott.

Forms have been sent to mine manager but not yet received back; therefore, the result of work done is not available.

Also for mineral leases 8,279, 8,336, 8,509, and 8,554, the lessee has failed to return forms sent.

The gold leases have practically been idle during the year with the exception of a little work done on gold lease 667, Southern; but in this case also, lessees have failed to return form sent.

In the parish of Wyndham, on private lands, William Cullen has applied for lease of 10 acres, P.G.L., portion 3, and also aid has been granted to him to sink his shaft (down 38 feet) to a depth of 100 feet.

Patrick Daly has applied for lease of 8 acres, measured portion P.G.L. 2; 15 tons ore raised, not yet treated.

Parish of Burragate.—Henry Grant and party have further sunk their shaft, under aid, to depth of 94 feet. Assay made locally of ore, at 90 feet depth, went 2 oz. 12 dwt. and 6 gr. of gold per ton, and 3 oz. silver, which is not considered payable, the reef being only 4 inches wide at that depth; and nearer the surface has varied a great deal. (Only obtained about 2 tons of this ore.)

Parish of Ynglamah.—Practically no work has been done in this parish during the year, although a few miners are still holding their claims. Mark Southwell reports 10 tons ore raised; sample submitted to the Department from his Prospecting Protection area yielded—gold, 2 oz. 13 dwt. 8 gr. per ton; and silver, 1 oz. 19 dwt. 5 gr. per ton, which he considered not payable, as the ore cannot be successfully treated in this district, and cost of transit of ore to nearest port for shipment would be too expensive.

Parish of Nungatta.—Prospecting is still going on by about six miners; which prospecting will most likely cause land to be applied for, as Messrs. Blissett and party report 25 tons ore raised for 14 oz. 14 dwt. of gold, valued at £42.

Parish of Coolangubra.—Wm. Haggart, Gold Lease, 790, portion 1, reports 100 tons ore raised. Trial crushing, 12 tons for 5 dwt. gold to the ton, valued at £10 10s.; depth of shaft, 40 feet; and say that they find the lode will not pay without cyanide, as the ore is mineralised—the mineral containing the greater portion of the gold. J. C. Denny and party raised 20 tons, which is not yet treated.

Parish of Howe.—N. Jensen and party have abandoned their claim, the ore being of too low a grade to pay. In many parts of this Division the ore met with is of that refractory nature that the appliances at the command of the ordinary miner have not been able to save the gold without the extra expense of the cyanide process.

#### *Delegate Division.*

There are about eighteen Europeans and twenty Chinese engaged in alluvial mining here, and as far as can be ascertained they have obtained about 110 oz. of gold, to the value of £430 10s. The alluvial working in this Division is principally done in the old river-beds, by Chinese, with poor results. There are only two reefs working, which are situated at Brown's Camp, and have given good results, considering the difficulties they have to contend with by carting their stone into Victoria for treatment.

Of course these reefs are only on a small scale, and worked by poor men. The gold obtained from these two reefs was 534 oz. 19 dwt., valued at £2,114 8s. Reefing in this Division is quite new, and only since the New South Wales Prospecting party discovered some finds has any been done.

It may be mentioned that a considerable amount of gold-digging, both alluvial and quartz, is done along the Border Line of Victoria, and the greater part of the gold obtained is brought to this town, of which I have made no mention in my returns.

#### HUNTER AND MACLEAY MINING DISTRICT.

##### *Copeland Division.*

Very little stone has been raised during the year. The Gloucester River Mine heads the list with 639 tons for a yield of 277 oz. This has not proved payable.

Prospecting aid has been granted to this party to drive a low-level tunnel to tap the reef about 200 feet below the present workings, and as some of their best stone was under foot, it is well worth further prospecting. In the Centennial very little stone has been raised, the crushing of 145 tons being taken from the surface and from old heaps of stone lying on the surface, which, when raised, was not considered good enough to cart to the machine.

The Lady Belmore has been idle the greater part of the year, but lately a party of tributors erected a small engine and took out a crushing from near the surface, which did not turn out payable.

The Mountain Maid party only took out a small crushing, which was not payable, haulage and pumping being too expensive.

A party of tributors took out a crushing from the Rainbow Mine about the beginning of the year, which did not pay, and the mine has been idle ever since. Water is excessive in this mine.

In the Mint two men are working; a small crushing was taken out. The party is now engaged driving a low-level tunnel.

The Prince Charlie Mine has been worked. A tunnel has been driven along the reef over 800 feet, but no stone has been crushed, the battery being too far away. The party is now endeavouring to raise sufficient capital to erect machinery near the mine for treating the stone.

The Jubilee Company of Newcastle has taken up the land formerly worked by the Black Prince Company, and has continued the tunnel, which is now in about 1,200 feet. They have not crushed any stone yet, but intend starting at once to take out a crushing. There is a large reef in parts of the tunnel, but does not show any gold, though fair prospects can be obtained by dollying.

The Hidden Treasure Mine has been idle during the year, but a party is now engaged pumping the shaft out, with a view to commencing mining operations.

At the Boranel Reefs no stone has been crushed during the year. McDonald and party have about 40 tons at grass, which they intend crushing shortly.

The Cobark Reefs have been at a standstill, little or no work being done during the year.

In alluvial mining, matters in this division are about the same as usual. A few old miners still make a living fossicking in the creek.

James and party, who lease the Morning Star Mine, erected a puddling machine and brought water on from Duffer Creek, a distance of about 1 mile, by means of galvanised-iron pipes, and put through 2,500 loads of the surface, but the result was not satisfactory.

A small rush occurred during the year on Mr. Thomas Laurie's private land at Rawden Vale. Gold had been found there in small quantities for a considerable time, but in last June two miners named Swinbank and Townsing struck payable gold, and the result was that a rush set in, and about 100 miners came to the place and sank holes in all directions, but only a few of them struck anything, and most of them soon left. There has not been any rich find, and only four or five claims are considered payable. Miners are leaving daily, though in all probability a few old miners may make a living there for some time. According to the returns received in alluvial, 2,810 loads have been treated for 170 oz. 10 dwt. of gold, but additional returns of alluvial gold, from two buyers at Copeland, amounting to 223 oz. 15 dwt., make up the total amount of alluvial gold to 394 oz. 5 dwt. So that the actual gold won during the year was—from quartz, 425 oz. 10 dwt., value £1,606 15s.; from alluvial, 394 oz. 5 dwt., value £1,388 2s.

##### *Dungog Division.*

In this Division matters have been fairly quiet during the year. A small quantity of good gold was obtained from Whispering Gully, and the place was inspected with a view of floating a Company to properly develop the country there, but negotiations have fallen through. The country is not easily accessible, and the miners who have prospected have worked only in a desultory fashion.

At Upper Wangat it is understood that a considerable amount of work has been done, with a view to develop the old Mountaineer line of reef, and Thomas Gurr, an old worker of the Welcome Stranger Reef, has started again with a party with sanguine expectations; however, in the absence of details, which have been asked and waited for, it is presently impossible to state to what extent, more especially as, under existing circumstances, the Warden cannot visit the workings and acquire personal acquaintance with the progress of the fields as formerly.

At Lower Wangat the Wonga Wonga Mine has been worked, and crushings have been put through which are fairly satisfactory.

*Bulladelah*

*Bulladelah Division.*

During the past twelve months several new finds of gold in quartz reefs have taken place, both at Paddy's Creek and Coolongolook, in consequence of which six applications have been received for leases, three of which have up to the present been granted, and two of them have been accepted by the applicants, though as yet none of the finds have proved payable. The Curreki and Myall Queen properties are both being worked with fairly good results.

*Kempsey Division.*

In this Division during the past year there has been very little mining of a practical or beneficial nature, and that almost entirely in the Port Macquarie portion of this Division. Some work has been done at Deep Creek Mines, to the extent of £400, by its new proprietor, Mr. Nathan Davis; otherwise, in that part of the Division there has been no mining of consequence. The machinery at Deep Creek has been sold for £400, and is understood to be in course of removal.

About Bourville four mineral leases have been applied for during the year, with a view to mining for antimony, but so far no work has been done. The Willi Willi and Moonabah Mines have done nothing during the year, as far as are to be ascertained, suspension having been granted, and matters there are in abeyance.

*Taree Division.*

Very little prospecting for alluvial gold has been done in this Division during past year, as the old creeks appear to be nearly worked out, and up to the present no fresh ones have been discovered.

During the year the entire crushing plant connected with Andrews Bros. leases at Cell's Field has been doubled (the battery now consisting of ten head of stampers, in good working order).

At the same place, about 300 tons of stone have been crushed, and several of the tunnels have been extended, also five new ones started and driven on.

The yield of gold has, it is regretted, been less than was expected; still the proprietors have every faith in the field, and intend to put on more machinery and carry out developments.

## PEEL AND URALLA MINING DISTRICT.

*Glen Innes Division.*

Very little beyond prospecting has been done during the past twelve months in this Division. The Glen Elgin Gold-mining Company have had a crushing of about 40 tons, which yielded 40 oz. Work on these leases was suspended for six months. The Klondyke, Conroy and party, hold 24 acres of leased land. They have three shafts down of 50 feet, 60 feet, and 90 feet, and one tunnel of 320 feet in length. They have had a trial crushing of 50 tons, which yielded over 90 oz.

John Lyttleton is at work on a claim on the Butterleaf Creek, receiving aid from the Prospecting Vote; he is down 35 feet.

J. B. Allen, of the Birthday Claim, at Glen Elgin, also receiving aid from the same Vote, has a tunnel driven 76 feet. There have been three special gold leases applied for by Messrs. Dibbs and Farmer, of Sydney, one of 50 acres and two of 15 acres each, for the purpose of dredging the river at Glen Elgin, the applicants undertaking to expend the sum of £11,000 on machinery for the purpose of developing these leases if granted.

*Kookabookra Division.*

Mining in this Division for the past year has been very slack, owing to scarcity of water caused through the continued drought.

Quartz-reefing is at a complete standstill. A few tons of stone was put through the Bare Hill Battery at the beginning of the year, but the returns are not available. The battery has since been idle.

Messrs. W. Ditton and M. Meehan received Government aid, the former to sink a shaft 50 feet on the Old Welcome Stranger Reef, and the latter a shaft 50 feet on Curley's Reef.

Ditton sank for 7 or 8 feet, and then abandoned the shaft, the country being too hard.

Meehan has continued his shaft to a depth of 72 feet, and is still sinking. So far there has been nothing payable struck. The only gold of any consequence obtained during the year was from the old alluvial workings at Oban, Paddy's Gully, Mitchell River, and Nowland's Creek.

The output was about 236 oz. of gold, and 4 tons of tin; value, £1,045.

About seventy-six miners, European and Chinamen, were employed during the year alluvial digging. Their earnings would be about 10s. or 12s. per week per man.

*Armidale Division.*

So far as this Division is concerned mining in any shape is at a standstill. There are only about fifty Europeans and two Chinese engaged in fossicking. There were 203 miners' rights, 30 mineral licenses, and 3 business licenses issued, and the total collections from all sources was £97 12s. 11d. The following applications for leases were lodged, viz. :—3 gold, 2 mineral, and 2 mineral purchase lands. During the year the four local Banks consigned between them about 5,130 oz. of gold, of the approximate value of £18,544. This gold was won outside the Division—probably Hillgrove.

*Hillgrove Division.*

The mines in this important Division gives employment to 586 men. The quantity of gold won during the year shows a decrease on the yield for 1897, the figures being 16,507 oz. as compared with 21,556 oz.

Baker's Creek Gold-mining Company still retains the lead as the chief gold producer for this district, and crushed during the year 12,527 tons for a yield of 9,974 oz., valued at £34,902. They also crushed 15 tons for tributors, yielding 65 oz., worth £238 5s. No dividends were paid during the year, but one has been announced which is payable early in 1899.

The main battery of 40 heads has made full time, but the north battery of 10 heads has only worked thirty-one days during the year.

The main shaft is 900 feet, and the north shaft 225 feet deep.

The deepest level is 900 feet from the brace, and 1,100 feet from top of workings.

Twelve hundred and forty-five feet of driving has been done, and 324 feet of sinking. There were 1,025 tons less quartz crushed, and a decrease of 4,078 oz. 11 dwt. compared with the yield of last year.

The reef averages about 6 inches in width.

There were no special developments in this mine during the year.

The Eleanor Gold and Antimony Mining Company crushed 3,139 tons for a yield of 4,804 oz., worth £16,824; also 25 tons crude white metal, valued at £416.

They obtained three months' suspension in December, 1897, and were closed for the first five weeks of the year. Early in February they resumed treating the old tailings with the additional advantage of a Huntingdon Mill to pulverise the hard lumps which previously had been a source of annoyance to the management. They also let a portion of the north end of the mine on tribute.

In April a portion of the battery commenced running again, but it was not until May that it was in full swing. Forty head more stampers were erected, making a total of 70 head.

Further suspension was granted, but was only partially availed of.

This Company has found it difficult to pay expenses owing to the low grade of the ore, and it was intended at the beginning of the year to reconstruct and raise fresh capital, but the directors decided to work on and give the mine another trial; but it has not proved altogether satisfactory, and they are now taking into consideration the reconstruction of the company upon a sounder basis, and the advisability of amalgamating with the Garibaldi Company, which, if decided upon, would be to their mutual advantage. They have been heavily handicapped through want of water, but latterly arrangements were made with the Garibaldi Company to use the water in their dam.

The Baker's Creek Consols crushed 1,696 tons for 1,377 oz. worth £3,567 18s. 4d.

They have a 15-head battery, 10 head of which worked 207 days, the other 5 head were only got ready about the middle of December. They have done a considerable amount of development work, and have three reefs known as Smith's Reef, Baalgammon Reef, and the Middle Reef, the last mentioned seems the most promising, the lode averages about 6 inches.

They have driven altogether 366 feet and sunk 145 feet. The outlook of this mine is very encouraging at present, and with the additional 5 head of stamps should soon be on the dividend-paying list. The

The Hillgrove Proprietary Mines, Limited, formerly known as the Baker's Creek, No. 1, Extended, and the Golden Gate were purchased and are now under the control of the United Australian Exploration Limited, of which Mr. A. S. Boucher, A.R.S.M., M.I.C.E., is the general manager in Australia.

These mines adjoin Baker's Creek on the south east. The operations during the year have been entirely exploratory.

They started at the lowest possible point in the gorge on their property and are driving a tunnel approximately on a course at right angles to the Baker's Creek and Golden Gate Reefs, and, judging by the leaders struck lately, must be in close proximity to the former.

The tunnel is of sufficient size to carry a double tram-line, and has been driven during the year 502 feet, making a total of 1,060 feet from the entrance.

The machine drills have been introduced into this mine and are worked with compressed air.

It is the intention of the Company to continue this tunnel to their eastern boundary, adjoining the Eleanora Mine, at which point it would be of a depth of nearly 2,000 feet from the surface.

Another tunnel 300 feet above the former one is also being worked and has been driven 74 feet. They are driving on a small reef here to ascertain its value.

It is confidently expected that other veins will be intersected by these tunnels, which are as yet unknown owing to the difficulty of examining the side of the gorge.

They erected during the year an air-compressing plant on the top of the gorge, the air being conveyed by 5-inch pipes to the tunnels mentioned, the main line having a length on surface of 2,508 feet, the difference in altitude being approximately 1,800 feet.

The results so far have proved very satisfactory, the loss in pressure in transit being under 1 per cent.

In that part of the property known as the "Golden Gate" they have sunk 133 feet and driven 325 feet.

No crushing has been done, and there is no immediate prospect of any, it evidently being the intention of the management to thoroughly open up these mines before erecting crushing appliances. They have a 10-head battery, erected on this property by the former owners; but it is unlikely to be used in its present position, and the appliances are crude and ineffective. Altogether 1,034 feet have been sunk and driven on these properties.

The Garibaldi Gold and Antimony Mining Company has been worked by tributors during the greater part of the year and had only a small crushing of 53 tons for a yield of 30 oz., valued at £116 5s.; but they also treated 1,000 tons of tailings for 104 oz. worth £416.

Practically no work has been done underground, and since the early part of November the plant has been idle owing to an action taken by the Eleanora Company to recover the cost of tailings treated by the Garibaldi Company, and which are claimed as the property of the former company.

At the Old Hopetoun Company, Fuller and party crushed 21 tons for 20 oz. worth £70, and also raised 1 ton 3 cwt. 3 qrs. scheelite valued at £30. They had a small chute of this mineral which soon pinched out and has not since been met with.

At the Cosmopolitan Mine 68 tons were crushed for a yield of 66 oz. 8 dwt., valued at £231.

The Carrington Syndicate, working the old Lady Carrington Mine, crushed 47 tons for 67 oz., worth £240 10s.

At Rockvale the Phoenix Gold Mine, which is still held by the New Zealand Mines Trust, Limited, under a working option, the operations have been purely of an exploratory character. During the year they have done 138 feet of sinking, 507 feet driving, 31 feet of cross-cutting, and the ground has been well prospected on the surface all along the line of lode, also some stoping has been done in various parts of the mine for the purpose of trial crushings. One thousand five hundred and ninety-seven tons of ore have been crushed, but pending a final decision of the Directors of the Company as to the future actions concerning the operations of the mine the results are not available. They have a reef which averages about 4 feet and is heavily impregnated with iron and arsenical pyrites, and in places copper pyrites have also been met with.

The main shaft has been sunk to a depth of 196 feet, and there are six other shafts, varying in depth from 40 to 98 feet. The depth of deepest level is 152 feet. Six months' suspension was granted on 8th August last, since which time the mine has been shut down. Up to that time between thirty and forty men were employed.

At "Warm Corner" very little work has been done. Several syndicates were formed and prospected this locality with fair results, but through want of capital work has been abandoned.

Burgin and party had a cyanide plant erected to the south of Baker's Creek to treat the tailings, but the results were not very satisfactory, so they ceased working and have left the district; consequently the returns were not available.

As was the case in 1897, the mines have been considerably handicapped through want of water.

It has been the driest year experienced since this field was discovered, the rainfall being only a little over half the average annual quantity registered. There is plenty of scope for prospecting in this locality, but it is a difficult matter owing to the great steepness of the gorge, which ranges from 1,600 to 1,800 feet deep.

#### *Metz Division (late Hillgrove West).*

The output of gold from this Division is certainly not up to the expectations held at the commencement of the year, as matters looked far brighter then.

Despite the continued drought there has been a plentiful supply of water at the "West Sunlight," but at the Sunlight Mine matters were not so favourable. They have had to depend on the water flowing down Baker's Creek, and as this failed they crushed interruptedly for some considerable time.

Not much prospecting is going on in the Division. Murgatroyd and party are still working their leases adjoining the eastern portion of the Sunlight Mine, but are so far unsuccessful.

Peterson and party still continue developing their G.L. 170. Prospecting in this locality is certainly very expensive, and without capital development is slow, but should prove successful. At the "Starlight" quartz claims a tunnel has been driven into the hill, for which the shareholders secured Government aid.

West Sunlight Reef Company.—The crushing power of this company consists of twenty heads of stampers with six Woodbury vanners. During the year they crushed 8,481 tons for a yield of 3,647 oz., valued at £13,190; there are 125 men employed in and around the mine; the value of the plant is estimated at £10,000.

For the past three or four months the mine has not been up to its usual standard. The quartz everywhere was poor, and the directors were forced to seek the aid of the contributing shareholders; still there are hopes of good gold coming in at a deeper level, as right through poor patches of quartz were met with, but they did not continue to exist so long as at present. It was always found the mine improved as it deepened, and better times are looked forward to.

The Sunlight Gold-mining Company.—At this mine matters are more favourable. They put through 10,997 tons for a yield of 4,597 oz., valued at £15,376. During the year sinking operations commenced. This is being done by an electrical winding plant. The whole mine is lighted by electricity generated by the surplus steam from the battery boilers, and is a great boon to the mine. For years the mine was worked by driving into the hill and stoping, but now the mine has commenced sinking, which for years has been carried on by the surrounding mines, and they are now down 200 feet, the reef averaging from a few inches to 10 feet. Its crushing power consists of 40 heads of stampers and eight Frue vanners. These were out of use, but are now being placed in thorough working order, and will be running very soon. About eighty men are employed in the mine.

The total output for the year was 19,478 tons for 8,244 oz., valued at £28,566.

#### *Uralla Division.*

About 230 miners are at work in this Division, chiefly engaged in alluvial ground. The continued dry weather has, however, very materially affected their earnings. Several grants from the Prospecting Vote have been made throughout the Division to test some recently discovered reefs, but so far nothing of a sensational character has been met with, although the men are very sanguine that they will ultimately strike payable stone. The quantity of gold won during the year was 1,200 oz.

#### *Novendoc Division.*

Mining in this Division is almost at a standstill. There have been no new finds discovered during the past twelve months.

Following is a list in detail of crushings which have been made for several parties during the year:—100 tons, 100 oz.; 20 tons, 23 oz.; 114 tons, 35 oz.; 45 tons, 8 oz.; 80 tons, 20 oz.; 200 tons, 210 oz.; 60 tons, 21 oz.; 600 tons, 300 oz.

Work is still proceeding at Cell's Creek, where six men are employed. The party are so satisfied with the prospects of the mine that they are adding to their crushing plant.

*Swamp*

*Swamp Oak Division.*

Mining in this Division has not progressed to the extent anticipated in the last Annual Report—not from want of capital, energy, or good management, but, as will be shown, through unforeseen circumstances. The Highland Mary, the property of the New South Wales Gold-fields (Limited) is still under the able management of Mr. Arthur J. Brown. Upon the prosperity of this claim, having the advantages of excellent machinery and capital, is dependent to a great extent the prosperity of this Division. If proved to be payable with a show of permanency, and that proper machinery at a reasonable cost will be sufficient to contend against the influx of water, it may be reasonably assumed there will be no want of capital to develop the good show that has been disclosed in so many of the local leases. The owners are anxiously awaiting the result of the Highland Mary at its lower levels. This claim in the past has been the mainstay of the place in the number of miners employed on wages and the capital expended in the erection of its splendid machinery. Although the expenditure has been great, in the near future it will be found that the expenditure was justified, and that the confidence of the Company was not misplaced in the value of their property. At the end of 1897 the main shaft was down 235 feet; at that depth a cross-cut was being driven west to catch the reef. The main shaft is now at a depth of 330 feet, the last 15 to 20 feet being in splendid country, full of small quartz leaders, and showing an indication of cutting the main reef on the underlay without going much deeper. During the past year the work was carried on by a greatly reduced staff, as the miners could not be profitably employed in the developmental work. After cross-cutting some 60 feet west the main reef was met with, which gave payable prospects; but on opening out north and south the returns were not satisfactory. Very rich patches, extending along the reef, were found, and are now under foot. In the level the cross cut was extended 25 feet west and cut another reef giving encouraging results. For some feet going north along the drive the good stone in this reef is also under foot. It is thought the main shaft should be sunk to a depth to intersect the two reefs, and if found to be payable, the prosperity of the claim and locality is then assured. During the past year mining operations on this lease were for a considerable time seriously retarded by a heavy influx of water, quite beyond the power of their pumping machinery. A large boiler had to be erected to maintain steam to their powerful machinery; they were then able to contend with the unexpected influx. The mine is now, however, dry, and developmental work is being actively carried on, with favourable prospects. The cyanide plant erected on this mine has justified the expenditure by its success. From 548 tons of tailings treated there resulted a win of gold valued at £1,053. This should induce the saving of tailings at the other batteries, for it is now proved beyond doubt, however fine the grating may be, the gold in this locality cannot all be saved by the process of crushing only.

For the further testing of the Mount Sheba Mine, aid from the Prospecting Vote has been granted to extend the level into the hill. The drive is now in about 200 feet. The reef is small, and the few tons raised crushed fairly well. When stoping is commenced a party of good working miners will find payable employment, with the usual mining chances of striking something rich.

The Camp Fire Leases are situated at Shearin's Creek, in the vicinity of Swamp Oak. Suspension of labour was granted for six months (now expired) but labour has not been resumed. It is expected that application will be made for the leases when available through cancellation. They were held by Sydney and Hillgrove shareholders. The surface show in these leases was undoubtedly good, but, so far, has not turned out equal to the anticipations then formed. A shaft was sunk about the middle of the chute to a depth of 120 feet, and driven southerly along the course of lode. At that level a winze was sunk a few feet from the shaft, without any encouraging prospects. Nothing has been done north at the 125 feet level—no cross-cutting. It may be that the main reef is further west. Considering the expenditure in the erecting of a battery, and the small amount of developmental work and prospecting done, these leases will not remain for any length of time idle.

From indications it is thought that Niangala will soon become an important reefing district. It has decidedly advanced in this class of mining during the past year. The principal mine is the Lady Jersey, the property of the New South Wales Gold-fields (Limited), the same proprietary, and under the same management, as the Highland Mary, at Swamp Oak. A large amount of developmental work has been done, with payable returns at every crushing, and now has every appearance of realising the favourable opinions formed at the time of purchase by its enterprising shareholders. The present main shaft has been sunk to a depth of 225 feet, and a cross-cut put in west about 30 feet. Here a fresh reef was struck, not the one worked by the previous owners of the mine. The new reef was cut in the upper levels at from 4 feet to 18 inches wide. The prospects in this mine are now so good, with a show of continuing, that it will find employment for many miners during this year, for this Company has not only the capital but the energy to develop the property, when its value is proved.

The Golden Spur lease was abandoned during the year, but recently taken up by a party of working miners, and their efforts are now meeting with success, the reef is from 3 inches to 12 inches wide, giving a return of about 1 oz. to the ton of stone. Previous to the mine being abandoned, the then owners did a considerable amount of work, but the heavy water they had to contend with prevented them with their appliances going to any depth. This is one of the mines that has benefited through the severe dry weather. Prospecting is now totally (and for some time past) suspended in this locality, through want of water.

The mine at Paradise which a few years ago, promised to become of some note, is now abandoned. Several of the reefs crushed 1 oz. to the ton; antimony is also found in the locality, but has not been worked.

At Glen Morrison, very little work has been done during the past year. Farrell and party only at work; 40 tons quartz is now going through, the result has not yet been reported.

*Tamworth Division.*

Tamworth Division comprises Limbri, Spring Creek (Moonbi), and Moore Creek. The principal mining, alluvial only, is carried on at Spring Creek, where a number of old miners, with a few new comers, are working on and near the same lead, referred to in the last report, their win of gold, averaging from tucker, to at times a little over wages.

Quartz-mining only is in operation at Limbri, the principal work in development, being at Stockyard Creek, about 2½ miles from the Limbri railway platform. Two or three lots of stone have been crushed from leases in the locality, the result was not satisfactory considering the expenses the owners were put to in having to crush at distant batteries. Prospecting is still energetically carried on, and recently aid from the Prospecting Vote has been allowed to test a claim at the junction of Stockyard Creek and the river, but so little work has been done that the first measurement has not been made or asked for.

A new find has been made at Moore Creek on the private lands of Mr. Vickers, situate about 4 miles south-easterly from Tamworth, by Mr. J. Bourke. The shaft is down about 45 feet, carrying colours from the surface, in a rubble leader. Assays from it, made by the Department for Mines, were so satisfactory that the prospectors intend carrying on their work, in the hope of striking the main reef, which from the present dip and country they expect to do within a few feet, and that it will be more than payable.

*Nundle Division.*

This old gold-field still maintains the premier position in this District as a gold producer and the number of miners employed, but from the time of its first gold discovery mining has not been at so low an ebb as during the past year. The win of gold from quartz is in a great measure due to the action of the Tamworth Gold-mining Company in permitting their machinery to crush, for the various claims in the locality, stone that would not have paid the extra cost of cartage to a distant battery. The United Australian Exploration Co. (Limited), under the direction of Mr. Boucher, have done excellent work in the prospecting of their leases without success. Although they have not met with success, their work to the field will be a great benefit as a guide to future prospecting, their work in this direction being not only extensive but also so substantial that if it was abandoned by the Company it will be a good guide, and without cost to the future prospector.

Alluvial mining in this Division has been much retarded owing to the severe drought. There was a good rainfall about the end of the year, when about 380 points were registered. The area in which it fell was so circumscribed, and the rain fell so quickly that it ran off the surface into the gullies and creeks, and was of but little benefit to the miners. The most payable claims in alluvial mining are at Bowling Alley Point, on private lands the property of the Peel River Company.

*Stewart's Brook Division.*

The principal mining fields in this part of the Peel and Uralla Mining District are Stewart's Brook, Moonan Brook, Dry Creek, and Omadale Brook. The distance of these fields east from Scone is about 35 to 38 miles. The character of the country is mountainous, and the climate salubrious. The Stewart's Brook field consists of very steep hills composed principally of eruptive rocks extending over large areas. The reefs, as a rule, outcrop on top of the hills.

There are seven batteries on the fields and are more than sufficient to meet requirements. Four of these are at Stewart's Brook, two at Moonan Brook, and one at Omadale Brook. There are also a cyanide plant, and an air-compressing plant, with pump and gear, erected by the New Royal Standard Company.

There has been a falling off in the amount of gold won at Stewart's Brook, owing to the expensive nature of the operations, viz., quartz-mining in deep ground, the alluvial workings being small. A large number of holders of claims have exhausted their capital and have been compelled to apply for suspension of the labour conditions, either wholly or partially, the greater number in order to seek for fresh capital by the formation of companies or syndicates. The following claimholders obtained suspension for periods of from three to six months:—At Stewart's Brook, Bluey Gold-mining Company, Ninness and party, the Adams Gold-mining Company, the Lady Maude Mine, the Lady Grace Mine, Henry Kilbride, and R. Hancock; at Dry Creek, Bakewell and Brown, Patrick Ahearn, and Patrick Woods; at Moonan Flat, Buckland and Sellors. In all applications for suspension of labour, where it was clearly shown that the applicants had expended considerable capital in carrying out the works and in erecting machinery, suspension of the labour conditions for the purpose above stated has been granted.

The New Royal Standard Company has been steadily working and improving its leases during the year. Recently they have expended upwards of £1,000 in erecting an air-compressing plant, pump, and gear. They are now working at the 180-foot level; the plat has been cut, and the shaft is being timbered preparatory to sinking well. The winze at the 120-foot level last month has been sunk 17 feet. All the machinery is working well. The battery is at work, though the water at the Brook is low. Their last crushing, in November, of 103 tons, gave 151 oz. 5 dwt. of smelted gold. Notwithstanding their large outlay in the year, the Company have paid three dividends, and have a considerable reserve capital.

At the new find at the upper end of the field, named the Klondyke, 6 tons produced 1 oz. 4 dwt. per ton. From the Golden Ada claim a trial parcel of a few tons was crushed, giving 1 oz. 3 dwt. per ton. Adams' Syndicate, at the Stewart's Brook Company's battery, have lately put through about 30 tons. This will be followed by another parcel, amongst which there is some nice stone, showing coarse gold freely. The reef is from 2 to 3 feet wide where it is being worked. A small crushing from Here's Luck Reef gave 2½ oz. per ton.

Wells and party's Syndicate are carrying on the work in their mine with much energy and determination, but have rather a small capital for so large an area as 13 acres. They are doing what should have been done in the first instance on this line of reef—sinking to some depth. They are down 127 feet, and have passed through slaty belts, some more than a foot in thickness. In passing through the slate they have met stone showing gold freely. Their enterprise is being watched with general interest, and if it is successful, it will encourage other enterprises all along the reef.

The total quantity of stone crushed in this Division for the year was 2,324 tons, yielding 2,585 oz. of gold.

*Moonan Brook, Omadale, and Dry Creek Division.*

Williams and party who have been working for a long time at hard dead work on their property on Simpson's line of reef, Moonan Brook, have at last been rewarded by the appearance of a strong body of stone giving payable prospects. The reef being strong, and the conveniences for working good, it will not require a large yield to give profitable results.

The Federation, Frame and party, Omadale, a week or two ago cleaned up 27 tons at Johnson's battery for a yield of 39 oz. 18 dwt. 11 grs. of gold. This is about the same return hitherto obtained from the same property, and should be highly satisfactory.

Hayes and Tilse obtained 12 oz. 7 dwt. from a trial crushing of 2 tons of stone taken from Neil's Creek. The vein is in new country, and near a battery.

At Dry Creek the Sugar-loaf Prospecting Syndicate are continuing the extension of their tunnel. The ground that they are on just now is the most favourable and settled that has been met, and it is considered probable that the large reef formation, for which they are driving, is very close.

The total quantity of stone raised in this Division during the year has been 599 tons for a yield of 634 oz. 2 dwt. of gold. From alluvial workings, of which there are very few, 29 oz. 10 dwt. were obtained worth £103 5s.

*Barraba Division.*

Mining has been very slack during the year owing to drought, want of capital, and numerous other reasons.

At Crow Mountain there are about twenty-five men at work.

Geo. Nix and party have the shaft of the Daddy Mine down to a depth of 180 feet, and from a crushing of 10 tons a return of 4 oz. of gold valued at about £15 was received; 25 tons were raised. The deepest level is 65 feet, and the quartz-vein has an average thickness of 6 inches. The bearing is east and west. The Prospecting Board is aiding this party, and as no other shaft has been sunk to such a depth, the results are anxiously awaited.

John Dyson of the Red Flag Mine has his shaft down 174 feet, with the deepest level 100 feet, and quartz-reef from 6 inches to 3 feet in width, bearing east and west. Twenty-eight tons of quartz were raised and 22 oz. of gold won, valued at £88 6s. 4d.

Wm. Singleton at the Day Dawn Mine is being aided by the Prospecting Board to sink a new shaft, and is busily engaged sinking on to the reef.

The owners of the Princess Mine have been busy most of the year, but no crushings of any importance have been announced.

Several parties are receiving aid from the Board to sink shafts and test their holdings.

At Wood's Reef the Barney Barnato Mine, owned by Phillip Rosenthal is 80 feet deep, the deepest level being 50 feet. The quartz-vein is 6 inches in width bearing north and south. Three tons of quartz were crushed for a yield of 23 oz., valued at £94 17s. 6d.

There are a few fossickers on the field. The cyanide plant movement seems to have turned out a decided failure, owing apparently to faulty construction. This is a great drawback to the Division in general as most of the ore is refractory, and requires cyanide treatment.

When cyanide works become more plentiful or an improved method of extracting gold from refractory ores is discovered there will be a great future for this Division. It is to be regretted that some parties have been persuaded to erect small and useless cyanide works where large works would be kept constantly at work owing to the largeness of the reefs.

It is simply impossible in such a scattered and diversified field to obtain a correct record of the total quantity of gold won as the Chinese send all, or nearly all, the gold won to Tamworth, and Europeans have agents outside the district to whom they forward their winnings in small parcels. The Mining Registrars only give the precise quantities they have been able to trace.

*Bingara Division.*

The only gold-mining carried on in this Division during the year was at Spring Creek, which extends about 6 miles from the town in a S.S.E. direction. This has been worked for alluvial gold for the past thirty-five years, and with sufficient rainfall will provide profitable employment for 300 miners. During the past year only some thirty-three men have been able to work from springs which occur in the creek. Several reefs are being prospected on the falls leading into the creek and its flats, but as the reefs found are refractory they cannot be profitably worked until a good cyanide plant is erected.

About 6 miles in a N.E. direction there is a 4-mile strip of broken ground known as Bobby Whitlow, to which the same observations apply as to Spring Creek, but in addition thereto a payable copper lode has been discovered for which leases have been applied for, and a good return is expected in the near future.

The total quantity of gold won was 790½ oz.

*Coonabarabran*

*Coonabarabran Division.*

The only portion of this Division which has been worked upon during 1898 is Scabby Rock or Mooren, situated about 10 miles northerly from Coonabarabran and 5 miles north of the Gunnedah Road.

On the east side of the Rock, Dalmain and party continued a shaft 20 feet deep, a further 25 feet on aid. They were satisfied with the prospects and continued the shaft to a depth of about 80 feet without any gold being obtained.

This reef bears north and south, and the dip for about 70 feet was to the east (away from the Rock); but for the last 10 feet the dip has been towards the Rock as if to go under it at a considerable depth.

On the west side of the Rock, and about  $\frac{1}{4}$  of a mile from Dalmain's shaft, Martin Hona and party have sunk a shaft which is now 65 feet deep, 5 feet by 3 feet for some distance down, narrowing to 3 feet by 3 feet 4 inches, and timbered about 15 feet from the top. This shaft has gone straight down, cutting the reefs all the way. These reefs dip towards the west and bear north and south and are ironstone and quartz, something like those in Dalmain and party's shaft.

Hona has obtained two short suspensions of the labour conditions. He intends to go a good deal deeper in this shaft before driving.

A third shaft has been sunk by a man named McIntyre at the north end of the Rock and about equally distant from Dalmain's and Hona's shafts. This shaft is now down about 60 feet on stuff looking like ironstone, but when exposed to the weather it crumbles away.

During the year numerous samples were sent from these three shafts for assay, but in none of them could gold be found, though the stone carried a yellow substance, apparently gold, which could be retained in a dish after crushing and washing.

No work was being carried on at the end of this year, but Hona and McIntyre are both about to start work again. It is also likely that during this year Dalmain will continue his shaft.

## NEW ENGLAND MINING DISTRICT.

*Drake Division.*

The results of the past year's operations in all branches of mining have not been up to expectations formed in the early part of the year, and the gold returns show a considerable decrease on the yield of the previous two years. This must not be, however, attributed to the poverty of the mines or the want of energy on the part of those engaged in the occupation of mining, but to other causes over which there is at present no control. In the first place the oxidised ores which the miners have been operating on for some years past, and which extend to no great depth from the surface, are almost exhausted and the sulphide ores have been met with, but it is found that they are of such a refractory nature that it is impossible to separate the gold from the other minerals with the gold-saving appliances at present in use on this field. Developments during the past year have revealed the fact that there are large bodies of ore at a depth in our mines, rich in gold and silver, but utterly valueless until the advent of a cheaper and more effective system of treatment than that of the ordinary stamper battery and amalgamating tables. Parcels of ore, which have been forwarded from here to Dapto and Cockle Creek for treatment, have given very high returns of gold; but the cost of conveyance of the ore from here by road and rail to distant metallurgical works, besides the charges for treatment, leave a very small margin of profit to the miner, and when the mineral is not classed up to a certain grade it is likely to end disastrously for the consignor. If local works were established, it is considered certain that a great quantity of the ore which is at present discarded as not being payable could be treated at a profit, and the mineral products of the district would be considerably increased.

Great disappointment has been experienced here with regard to silver mining, and the expectations of many who had hopes of the silver-mining industry again coming to the front have not been fulfilled. At the commencement of the year the White Rock Silver-mining Company were pushing along vigorously with the work of development of the mine and the erection of extensive milling, concentrating, and lixiviation works, which were almost completed, and the general aspect of the surroundings of the mine indicated a long term of prosperity; but early in October all operations suddenly ceased and about 113 men were thrown out of employment, and it is not known when work will be resumed. A very large sum of money has been expended in connection with this mine during the past year, and the value of mining machinery and plant on the ground is estimated at £51,200.

Notwithstanding the many failures and disappointments that have been met with on this field, the outlook of the mining industry is not by any means gloomy. It will be seen in the course of this report on the various mines that as depth is attained they do not show any diminution in the value of their ores.

What is likely in the near future to be a most important feature in the mining industry of this district is the dredging of the Clarence and Timbarra Rivers, which streams in their course intersect a large area of auriferous country, and have acted as sluices for ages past for the collection of auriferous gravel. In dry seasons, when the water is low in each of those rivers, many parties of miners find remunerative employment by sluicing the gravel beaches.

At and around Drake the principal mining carried on is quartz-mining, and what is the most important mine on the field, and from which a large quantity of gold has been obtained, is the Lady Jersey Mine, at Long Gully, distant about 6 miles south of the township of Drake. This mine has, during the last ten years, given employment to from twenty-six to thirty men, and has paid large dividends to the shareholders, and the output of gold has been steady and regular during that time. The deepest workings on this mine are about 150 feet from the surface, but at this depth the same difficulties are met as in other mines on the field, inasmuch as when the oxidised ore belt is passed through, great difficulty is experienced in the extraction of the gold contents from the other minerals, and in consequence of this difficulty in dealing with the refractory ores in the lowest parts of the mine work has been discontinued. The principal source from which the milling ore is now obtained is from open cuts on the back of the lode, as a number of oxidised quartz-veins traverse the felsite formation, and some of these veins are extremely rich in gold. During the present year 1,550 tons of this stone has been crushed for a yield of 1,082 oz. of gold, of the value of £2,997. The plant used for crushing and gold-saving purposes is a 5-stamp battery and amalgamation tables, driven by an 8-horse power portable steam-engine, to which there is also attached a Frue Vanner, over which the tailings from the battery are allowed to pass, and by this means a large quantity of concentrates are saved, of which there are about 500 tons collected and reserved for special treatment on some future occasion.

The Pioneer Mine is the next of importance on the field, and is situated on the crown of Mount Carrington, which overlooks the village of Drake. The area of this mining property is about 34 acres, and is owned by a syndicate of Sydney gentlemen. There are several auriferous veins of quartz traversing the property, also some promising looking copper-veins. The mine is not supplied with any further plant than the ordinary windlass, although a great deal of work has been performed on the property during the past four years. The number of men employed on the mine this year has varied from five to thirteen. The main shaft of the mine is down to a depth of 200 feet, and an adit level has been driven from the south side of the mountain, at the 200-foot level, and from this point the principal operations have been carried out during the year, with the exception of opening up and prospecting other veins on the surface, which traverse the felsite porphyrite formation, from which about 35 tons of quartz have been obtained. About 20 tons of this is on the ground awaiting treatment, and is estimated to contain 2 oz. of gold to the ton. Eight tons, estimated to contain 7 oz. to 9 oz. to the ton, are now on the way to the Australian Smelting Works, at Dapto, for treatment, and about 6 tons have been treated, which yielded 9½ oz. of gold, of the value of £3 10s. per oz. During the year 76 tons of ore, raised from the main shaft at the 200-foot level, were forwarded to the Australian Smelting Works for treatment, which resulted in a yield of 2 oz. of gold and 3½ oz. of silver to the ton, and 3 per cent. of copper. A parcel of 7½ tons of this ore, from the same level, was forwarded some time ago to the Ballarat School of Mines, and was treated by the Wynn and Tregartha riffle plates and barrel amalgamation, and they succeeded by that method in extracting 1 oz. 5 dwt. of gold to the ton, leaving about 12 dwt. in the tailings. This result is considered a vast improvement on the ordinary battery treatment when applied to this class of ore. About 25 tons of carbonate of copper ore has been taken from the oxidised zone in the main lode, which is estimated to yield, as it lies on the surface, without picking, about 10 per cent. of copper and 1 oz. of gold to the ton. About 50 tons of sulphide ore, taken from between the 65-foot and 110-foot level in the main workings, and now lying on the surface, is estimated to average about 2 oz. of gold to the ton and 3 per cent. copper. The total percentage of pyrites in the stone will average something like 20 per cent. of copper, though in some parts of the mine it may amount to 60 per cent., or even 70 per cent. A few experiments have been made with this stone by hand crushing and concentrating to find the proportion of free gold. Stone not showing a colour in the dish has assayed 10 to 12 dwt. of gold to the ton, and stone showing

showing from 10 to 15 dwt. to the ton by the dish have yielded on assay from 2 oz. 3 dwt. to 5 oz. 7 dwt. of gold to the ton, and stone showing about 1½ oz. of free gold to the ton has given on assay a yield of 12 oz. 7 dwt. to the ton. These latter samples of stone were taken from a depth of 110 feet from the surface, numerous pieces of stone have been picked from the ore heap and broken out of the stopes at the 100 and 110 foot level, showing dense splashes of fine gold which become almost invisible when the stone is dry. The gold in this mine occurs generally in a free state where the reef has a distinctly banded nature, the splashes of gold usually following the bands of white quartz, which are sometimes found on the hanging wall and then perhaps in the centre of the reef. The bands alternate to the quartz bands partake of the nature of the felsitic country and very often the gold may be seen in these bands, one small block of stock which brought up from the 100-foot level and which was about 6 inches wide, appeared to be literally covered with fine gold, and if crushed would contain at least 1½ oz. of gold. Contrary to expectations the ore from the sulphides in the deep levels of this mine appear by assay to be richer in gold than that obtained from the gossan formation, and also as far as operations have proceeded the richness increases with depth. This verifies the statement of the late Mr. Wilkinson, Government Geologist, who said on one of his official visits to this district that when the sulphide formation was met with, the ore would be found to be richer in gold but more difficult to deal with than the oxidised ores. Though the gold is extremely fine it is as patchy as it is in reefs where coarser gold is found.

In addition to the parcels of mineral already referred to which have been taken from the Pioneer Mine. A parcel of 16 tons of mixed ore was forwarded to the Australian Smelting Works at Dapto for treatment in the following lots, viz. :-

- 4 tons battery tailings yielded 2 oz. 4 dwt. 14 grs. of gold to the ton.
- 3 tons copper carbonates, 16 dwt. 5 grs. of gold per ton and 21·2 per cent. copper.
- $\frac{3}{4}$  of a ton of tailings of picked sulphide ore, 4 oz. 14 dwt. 14 grs. gold.
- $\frac{1}{4}$  tons picked ore from the 100 to 200 foot level yielded 16 oz. 8 dwt. 19 grs. gold and 3·5 per cent. copper.
- 1 ton tailings from battery, 3 oz. 8 dwt. 5 grs. gold to the ton.
- 7 tons of copper ore yielded 19 grs. gold to the ton and 17 per cent. copper.

This latter parcel of ore consisted of boulders of copper ore occurring in clay apparently shed from a lode which has not yet been traced. The ore had the appearance of copper matte and was not picked but simply bagged as it was broken out. The boulders had the appearance of a clay ironstone on the outside but were very dense towards the centre and contained fully 30 per cent. of copper. The total of the ore treated from this mine during the year was 117 tons yielding, 205 oz. of gold, and 4 per cent. copper.

Besides the ore treated there is at grass about 115 tons estimated to contain 225 oz. of gold and from 4 to 5 per cent. copper.

It will be seen by the returns from the various parcels of ore from this mine which have been treated at different works and by different methods that the mineral on this field is rich in gold but unfortunately we have not the means at hand for its proper extraction.

The Perseverance Mine is the next mine of importance which is gradually making its way to the front, and is the property of Messrs. Hunting and Ryan. The reef runs nearly north and south and varies from 18 in. to 2 ft. in width. In the first part of the year whilst operating in the oxidised belt which extends to a depth of 40 feet the proprietors took out about 48 tons of stone which was locally treated at the All Nations battery for a yield of 243 oz. 12 dwt. 21 grs. of gold. After passing through the oxidised ore it was decided to continue the sinking of the shaft, and as the sinking was proceeded with, the ore was found to be of a very mixed character being composed of zinc blende, copper pyrites, and quartz, and as there was no hope of having it locally treated with any degree of satisfaction it was decided to forward 11 tons to Dapto for treatment with the result that the parcel yielded 85 oz. 17 dwt. 15 grs. of gold making a total of 59 tons of ore treated from this mine during the year for a yield 329 oz. 10 dwt. 12 grs. of gold of the value of £1,192 3s. 10d.

The Rainbow Mine is the next that may be classed with the payable mines of the district, having during the last three years yielded a large quantity of gold. Although in the returns for this year it shows a considerable decrease in the yield of gold of the previous two years. This mine is situated on the western boundary of the Perseverance, but is a distinct line of lode. The deepest shaft on this property is 110 feet deep, but at this depth the ore is highly charged with copper pyrites, which renders the extraction of the gold contents very difficult. Several parcels of this mineral have been forwarded for treatment to the Dapto Smelting Works which resulted in a yield of a little over an ounce of gold to the ton and 4 per cent. copper. With the ordinary gold-saving appliances in use on the field it would be impossible to save even one-third of that quantity of gold from the baser metal. The owners of the mine, Messrs. Parker and O'Connor, have during the latter part of the year been operating at a higher level in the oxidised ores where the vein is much smaller, but free from base mineral, and have taken out 30 tons of stone which yielded 57 oz. of gold of the value of £172. The lode varies in width from 6 inches to 2 feet.

The Lone Hand Mine is adjacent to the Rainbow, and is situated a little to the south-east, and lower down the southern slope of the mountain. In this mine there is no distinct lode, but a number of small veins of quartz traverse the felsite formation, the veins varying from an inch in width to bunches six inches thick, and extremely rich in gold. During the year 35 tons of stone have been taken out by two men from a depth of 60 feet, which, when crushed at the local battery yielded 150 oz. of gold, of the value of £560.

On the northern slope of Mount Carrington there are still a few payable mines, prominent amongst them are the Nil Desperandum and the American Barber. Both those mines during 1897, produced a large quantity of gold, but in the early part of this year after passing through the oxidised belt very good copper ore was met with, on which they have been operating with satisfactory results for some time past.

In the "American Barber," a very large copper formation occurs at a depth of 80 feet, the ore body being composed of blue and green carbonates, and varying in width from 2 to 4 feet. 30 tons of ore treated at the Australian Smelting Works, at Dapto, gave a return to the owners of this mine of 7 tons 12 cwt. 3 qrs. of fine copper, of the value of £395 10s., besides gold of the value of £31 10s.

The "Nil Desperandum" Mine is a gold lease of 4 acres of land, held by Edward Hancock and party, and is situated on the northern slope of Mount Carrington, and for some years past has been the principal gold producing mine in that locality, and from which, up to the end of 1897, a large quantity of gold was obtained. At the 100-foot level the veins of oxidised ore appeared to cut out or merge with a very promising copper lode, which this party have since continued to operate on with very satisfactory results, and have during the present year taken out a few parcels of black oxide of copper, some of which assayed as high as 25 per cent. copper. Some of this ore was forwarded to the Australian Smelting Works at Dapto for treatment, yielding as follows :-

	£	s.	d.
8 tons 5 cwt.—Copper of the value of .....	71	18	0
And gold of the value of .....	20	16	3
3 tons 16 cwt.—Copper of the value of .....	40	4	3
Gold of the value of .....	14	15	10

Besides the above parcels of copper ore, they have also had treated at the same smelting works, 6 tons 8 cwt. of battery tailings, which yielded gold of the value of £136 1s. 4d., or a total of £283 5s. 8d. from 18 tons 9 cwt. of mineral. The prospects of this mine at the present time indicate a large output of mineral during the forthcoming year.

Hawkins and Tubman's mine is on the same line apparently, but a little to the north of the Nil Desperandum and on the fall into Sawpit Gully. This mine has been worked exclusively for copper, and at a depth of 80 feet there is a well-defined lode, varying from 1 to 2 feet in width, and is composed principally of black oxide of copper assaying from 20 to 26 per cent. of metal. During the year the proprietors of this mine have forwarded to the Australian Smelting Works, 16 tons 7 cwt. 1 qr. 14 lb. of ore, from which they have obtained a yield of 3 tons 4 cwt. 1 qr. 3 lb. of fine copper, of the value of £172 19s. 4d. They have also a large parcel raised and ready to despatch to the Australian Smelting Works, which assays over 20 per cent. copper. There are several promising copper lodes in this locality, and as there is a tendency to a rise in the price of the metal in the London market, there is no doubt that a good deal of attention will be directed to the development of our numerous copper lodes during the incoming year.

Work was resumed in the Adeline Mine in the latter part of the year, the mine, which has been idle for some years past, having been purchased from the original proprietors by an English syndicate. Nothing has yet been done beyond the preliminary work of pumping out the mine and putting the machinery in order and making preparations generally for going earnestly to work at the commencement of the incoming year. This

This mine was formerly worked for gold, but operations were not carried to any great depth in consequence of the gold-bearing veins being so much impregnated with copper that the extraction of the gold by the gold-saving appliances in use was impossible. The deepest workings in the mine are over 100 feet deep, and at this level a main drive has been taken along the course of the lode for a considerable distance, showing a well-defined copper formation varying from 3 to 5 feet in width. I believe it is the intention of the new syndicate to erect furnaces and treat the mineral on the ground, as the class of ore is not rich enough to send to distant smelting works.

At the Sawpit Gully Gold and Silver Mining Co.'s property, which is situated about one and a half mile east of Drake, a good deal of exploratory work has been performed during the year. Shafts have been sunk at different points, and the mine has been proved payable at a depth of over 100 feet, and also proved in length over 300 feet. Drives have been put across the auriferous and argentiferous formation, proving the width to exceed 20 feet.

The ore in bulk is not of a very high percentage, but patches of extremely rich mineral are frequently met with.

It is probable that Mr. Edgar Hall, who is the managing partner in the syndicate, will see his way to advise the erection of reduction works very soon to deal with this large body of auriferous matter.

In the outside parts of this Division there are indications of a revival in quartz-mining. At Lunatic Reefs, distant about 8 miles from Drake, there are several parties engaged in prospecting work on the various reefs in that locality. Messrs. Jordan and party are sinking a shaft on the "Golden Crown" line of reef with a view to cut the underlay of that reef at a depth of 100 feet. On the "Morning Star" line Messrs. Pateman and party have met with a fairly rich patch of gold at no great distance from the surface, and the prospects appear to improve as the sinking proceeds. Barker and party are also prospecting on the old "Lunatic Reef."

At Tooloon, distant about 33 miles from Drake, attention is being directed to quartz-mining, and prospecting is extensively carried on on the numerous quartz-veins in that neighbourhood. A quartz mill has been erected by a Mr. Payne in a very central part of the Tooloon Gold-field for the purpose of crushing parcels of stone for the public, and this has given a strong impetus to this class of mining in that part of the Division.

At Lionsville, in the southern portion of this Division, a good deal of activity is displayed in mining, and the claims on the various reefs are being energetically worked, notably on the "Lion," "Shillamalca," "Garibaldi," "Solferino," "Waterloo," and "Sedan" Reefs.

The scarcity of water in this locality, however, has been a great drawback to mining during the greater part of the year, there not being sufficient for battery purposes. Several parcels of stone have been lying at Bassetti's mill at Solferino for some months past awaiting treatment.

The want of water has also retarded operations on the alluvial fields to a great extent during a long period of the year, and sluicing claims have had to suspend work, and alluvial-mining has, for a considerable portion of the year, been reduced to fossicking, which, in a great measure, accounts for the shortage in the returns of alluvial gold for this year.

The alluvial workings are spread over a very large area of this field, and the largest number of men are employed in alluvial-mining on the old diggings. The principal centres where alluvial-mining is carried on are Tooloon, Mosquito Creek, and Pretty Gully, in the north; Solferino, Cedar Creek, Millera Scrub, McLeod's Creek, Timbarra, and Poverty Point, in the south. There are no complaints of poverty amongst the alluvial miners, and all say that they can make a good living, and in favourable seasons, when they have a reasonable supply of water, can make 25s. to 30s. per week, and in some cases as much as £3 per week.

It is very difficult to arrive at an accurate estimate of the quantity of gold won in this Division during the year, in consequence of a number of the miners sending their gold away privately, particularly the Chinese miners who send parcels of gold to the Chinese merchants in Sydney and other places, of which no account can be got. For the returns of alluvial gold obtained, the Mining Registrar is indebted to the storekeepers who are the purchasers of gold.

The total of gold and other mineral products for the year are as under:—

	oz.	dwt.	grs.	value,	£	s.	d.
Alluvial gold ... ..	2,681	15	1	9,386	2	7	
Quartz gold .....	2,404	11	16	8,416	0	10	
	5,086	6	17				

#### *Centerfield Division.*

The yield of gold during the year has not been so good as formerly on account of the want of water, and miners had to seek employment elsewhere. The men employed on the field are about thirty. Eighteen of them are mining for alluvial and twelve are working for several companies. The yield of the field is about 60 oz., at a value of £3 3s. per oz.

The following parties are at present at work in the Division:—Caponi and party, Dismal Swamp; Wilson, Stevenson, and Co., Buck Reef; A. Fetz and Roberts, Dismal Swamp; Beck and party, for silver, Dismal Swamp.

At Bolivia, Five Bull Creek, Luke Devon and party are prospecting for gold and receive Government aid. They have sunk 75 feet and driven 30 feet with no result at present, but are putting on two more men and a pumping machine, and have excellent prospects.

R. Patterson and party have also Government aid, but have no result at present.

Lambert and party have made slow progress and are waiting to form a company; their property shows indications of gold and silver.

Several prospecting parties have been employed for wolfram and antimony on the Bolivia Range, and they will start work again shortly.

#### CLARENCE AND RICHMOND MINING DISTRICT.

##### *Grafton Division.*

Very little mining of any kind has been done within this Division during the past year. The Walter Scott Gold-mining Company's leases, from which great results were expected, did no work during the year and were cancelled in September for non-payment of rent. A few of the former holders have re-applied for three leases, embracing an area of 59 acres, and as the machinery is already on the ground, capital, it is anticipated, will be forthcoming to further develop this property.

During the year six applications for gold leases have been received and 200 miner's rights issued.

At Yulgilbar the owners of the Rise and Shine Mine have a shaft down 80 feet, and have raised 32 tons of quartz, yielding 78 oz. At Mr. Penrose's Mine 30 tons have been raised, yielding 60 oz.

##### *Coramba (late Nana Creek) Division.*

The anticipations indulged in last year as to the permanency and increased richness of the various reefs in this Division, and the larger employment of experienced miners, have unfortunately not been realised. There is a large decrease in the quantity of gold won, the output being only 5,583 oz., as compared with 11,234 oz. won during 1897. To what cause this is attributable is accounted for by the want of capital, the importation of which is the dream of a large section of the leaseholders, their own limited means not allowing the purchase of the machinery requisite to develop the resources of their holdings; or, as has been pointed out on more than one occasion, the taking up of leases, not singly, but in various parts of the field, by speculative miners, who could never hope to keep them efficiently worked without monetary assistance, but hold in expectation of being able to sell out to syndicates or companies before the crucial test of payment for wages is applied.

The Department has dealt with a very large number of complaints received from the Division for non-fulfilment of the labour conditions, resulting in many cases in cancellations, cautions, or extensions of time. At the present moment the case of one of the largest leaseholders is under review by the Department.

Another reason assigned for the non-progress of the field is that up to the present the reefs in most instances have not increased in richness as lower depths are reached. This, with the influx of water and greater expense of working, account for the cessation of work on many of the smaller holdings.

It is pleasing to be able to say, however, that reports recently received show that in the parishes of Cunglebung, Cowan, Wellington, Bardool, Urania, &c., prospects are looking much brighter, and very good returns are being obtained by those able to crush.

The following is a short account of work done and output from some of the principal mines during the last year:—  
 New Year's Gift, G.L. 441, C. and R., portion 156, 4 acres.—This is situated at Tallewadjah Creek. In it is a shaft 75 feet deep. A tunnel is in from the north-west side of the hill of 200 feet; and from the south-east side another of 140 feet. The reef is to the east on the underlay, and in thickness is about 18 inches. 40 tons quartz at grass. The lessee is Oliver Anderson.

Beacon Gold Mines (Limited), Upper Bucca Bucca.—In the leases are two shafts—The Reward 180 feet deep, and Perseverance 200 feet, which is the deepest level. The lode is 1 foot in width. The dip in the Reward is 50 degrees east, and in that of the Perseverance 33 degrees east, bearing 25 degrees west of north.

Alfred Cadell, Coramba.—His leases are all in and about Coramba, and no work has been done in any of them during the year.

John Pumfrey, Upper Bucca Bucca.—His lease is 546, C. and R., portion 178. There are two shafts, depths 30 feet and 12 feet. The lode is in width 4 feet; its dip north-west, and bearing north-east.

John Nord, Coramba.—The lease is No. 443, C. and R., portion 214, situated at Eleven-tree Creek. The shaft is perpendicular, and in depth 175 feet. The lode is 25 feet wide, its bearing north-west by south-east. A tunnel is in, cutting the shaft at its deepest level—175 feet; its length, 350 feet, 250 feet of which was worked by aid from the Department.

J. Stennett and L. F. Machiavelli, Lower Bucca.—Their lease is 562, C. and R., portion 88. In it is a shaft sunk to a depth of 60 feet. The vein therein is about 6 inches wide, and its bearing north and south.

Wm. Vanderkolk and party, Coramba.—This lease is on W. J. Chapman's conditional purchase No. 61, and consists of 10 acres. A winze has been sunk 35 feet—20 of that under aid. A tunnel has been driven 250 feet. The depth of the deepest level below the surface is 63 feet. The reef is from 8 inches to 2 feet wide; dip, 2 feet in 5. Its bearing north-north-east and south-south-west, and underlies to the east. 41 tons of quartz yielded, at the Coramba Queen battery, 8 oz. 12 dwt.

R. S. Keats and party, Mole Creek, G.L. 487, C. and R., portion 6.—In this is a shaft sunk 70 feet. Depth of deepest level, 110 feet. This was cut by a tunnel put in from the east, a distance of 168 feet. From that level there is a drive north of 25 feet, where green stone shows, and the gold is better than any yet met with. The vein is a foot wide, and on the underlay, its bearing not given. They state that the quartz raised is 112 tons; yield, 116 oz.; value, £437 18s.

D. Pont, Lower Bucca, G.L. 381, C. and R., portion 73.—In this lease of 1 acre a well timbered shaft is down 105 feet. The lode is 2 feet 6 inches in width, and its dip 6 inches to the foot, bearing north and south. He has experienced much trouble from water; in fact, until he procured suitable machinery it was impossible for him to do anything with the mine.

James Denning, Denning and Flintoff, E. Francis.—The party own gold-leases portions 172, 122, 157, all of which are situated at Upper Bucca Bucca and are amalgamated. The depth of the deepest level from the crown of the hill, vertical, is 180 feet. The works are carried on by drives at various levels. The reef is from 1 foot to 7 ft. 6 in. in width; its dip north-east, and bearing north-west. Five hundred tons of quartz have been raised, 350 of which have been crushed, yielding 280 oz. of gold, valued at £880.

E. F. Sharpe and J. J. Morrow, Tallewadjah Creek, G.L. 553, C. and R., portion 118.—The depth of shaft herein is 12 feet, carrying a vein 1 foot in width. Its dip is to the west, and bears north and south. Twenty tons of quartz have been crushed for 42 oz., value £157 10s. G.L. 554, C. and R., portion 119.—The depth of the shaft in this lease is 34 feet, stoping done. The vein is 5 inches wide, dipping to the west, and bears north and south. G.L. 386, C. and R., portion 714.—There is a shaft in this lease of 68 feet; there is also a tunnel, dimensions not given. The vein in the shaft is 8 inches, dipping east, and bearing north and south; 60 tons of quartz raised and crushed for 28 oz., value £105. From G.L. 554 was raised 30 tons of quartz, yielding 18 oz., value £67 10s. The lessees have a battery of their own, at which they crush the quartz obtained from their several properties.

Advance Orara, Upper Orara, G.L. 353, C. and R., portion 1.—This is worked by W. Robinson and three others. The shaft is down 60 feet, and the vein averages 12 inches in width; its bearing, east and west. Gold—64 oz. 14 dwt. has been obtained from 207 tons of quartz, valued at £220.

E. R. Smith, South Grafton, G.L. 549, C. and R., portion 125, Lower Bucca.—In this lease are three shafts, depth 20 feet, 34 feet, 45 feet. The reef is 2 feet wide, dips north, and bears east and west. Twenty-five tons of quartz raised, 10 of which have been crushed for a yield of 3 oz. 15 dwt.; value, £12.

Charles Beagley, Tallewadjah Creek, G.L. 552, C. and R., portion 117, Avery's Creek.—The depth of the shaft in this lease is 28 feet; the vein is 3 inches wide; underlies to the west; its bearing north and south. A crushing of 2½ tons gave 4 oz. 5 dwt.; value, £16 12s.

An important discovery has recently been made about 6 miles from Mole Creek, known as the Kangaroo King. The reef is 3 ft. 6 in. to 4 feet wide; shaft about 30 feet deep. It is 12 dwt. per ton stone—it crushes that. The Caledonian Reef is proving good near Tallewadjah Creek, also the Lilla at Mole Creek. On Kangaroo Creek, W. Shipman has opened a large reef; 8 tons crushed for 13 oz. 5 dwt. There are a number of men fossicking at Kangaroo Creek. Three men are working at Black Bull Creek, and several are prospecting towards the Bobo.

The total quantity of stone raised and treated within the Division during the year was 7,800 tons for a yield of 5,583 oz. A number of parties are receiving aid from the Prospecting Vote, but have not yet been successful in striking anything payable.

#### Dalmorton Division.

The figures of the gold won show an increase on last year's returns of 257 oz., viz., alluvial 35 oz. and quartz reefs 222 oz., which must be considered fairly satisfactory, remembering the many checks there have been upon the mining industry by drought, &c.

The only new find in the Division for the year is that known as "Mosquito Creek," discovered by "Yellow Jack," a noted prospector in this Division. The locality is about 22 miles from Dalmorton, and is comparatively new country; no prospecting has been done there until the finding of this reef by "Yellow Jack." The reef was about 15 inches on the surface, and carried a splendid show of gold. On sinking, it widened to 4 feet at a depth of about 12 feet, and narrowed again in driving, but still carries good gold. A trial crushing of 13 tons, taken as it came, gave a return of 33 dwt. per ton, and about 100 tons is now raised waiting crushing, which has been delayed for want of water, and it is estimated that this 100 tons will yield 30 dwt. per ton. A great deal of interest is taken in the working of this mine, for if it continues to go down there will be a considerable stir in mining in that locality.

Several other small but rich leaders have been found round about this reef, and when rain comes more prospecting will be done.

The Mount Rea Mine, at Mann River, has shut down indefinitely. A lot of money has been spent upon this property for a very poor return, and there is nothing in sight to induce the shareholders to continue the expense at present. The crushings for the year show 700 tons for 208 oz., which is a very poor average, and not nearly sufficient to pay expenses. Most of the reef carrying gold has been worked out, and a considerable amount of prospecting done since failed to discover any more of a payable nature. The plant alone on this mine has cost £4,000, and it is a pity to see it lying idle, and a probability of it becoming utterly useless in its present position.

The Little Dora Mine, Mann River, has been working constantly during the past nine months with fairly good results. 455 tons of stone were crushed for a yield of 566 oz. gold, which may be considered a payable yield. Besides, through judicious management, the mine has been systematically opened up for further operations.

It is said there is a probability of an English company taking this mine for a twelve months trial at a stated price. The great drawback to the efficient working of these Mann River Mines has been the heavy cost of landing goods there (about £6 per ton); but the Government have lately cut a good bridle track from Copmanhurst direction, which is a great advantage to all concerned.

The Crushed Dog Mine at Cungilbung was crushed with its first trial. This is an old mine, but it was thought by the owners that payable stone existed in quantity; but 20 tons only yielded 6 dwt. per ton, and work was at once suspended.

The Old Abercrombie, at Dinner Creek, has again been leased, and a new reef found near the old one which gave a result of 8 oz. 2 dwt. for 3 tons. There is no battery handy to this reef, and the lessees contemplate the purchase of a small battery to treat their own stone.

The old Surprise has also been re-opened at Cungilbung, and a crushing of 10 tons yielded 10 oz. 12 dwt. of gold. This mine will also be worked early in the year, and may yet prove worth the trouble. The

The only work done close to Dalmorton for the year was on the Carbine Mine. A prospecting tunnel was driven 200 feet along the reef, but nothing was found. One hundred and fifty feet of this driving was aided by the Prospecting Vote, and the owner (Mr. Ford) still hopes to continue the drive with the possibility of striking the reef in a payable way. Good gold has been taken out of this mine, and much may still be left.

Mr. H. Martyn's mine at Stockyard Creek has been well prospected and opened up, and the owner considers it a payable mine. He has, therefore, decided to erect machinery thereon to crush the stone.

The Black Slate Mine is still lying idle with all its perfect plant of machinery, tramways, &c.; but it is rumoured that a syndicate has taken it on tribute to start work shortly. Thus, with the exception of the Mount Rea, the prospects of the reefs in this Division are quite as bright as last year, and it is believed that the year 1899 will either put most of them on a sound footing or see them indefinitely abandoned. Capital is the one great thing required at Dalmorton, and, although persistent efforts have been made to get it into this Division, the fact remains that it is still wanting.

Very little new work has been done in alluvial, and, indeed, there seems very little chance of any, for the only place any quantity of gold has been got in the Division is in the bed of a creek or river, and these have been so often worked that very little can remain. Two miners struck a small patch of unworked ground in Jackass Creek recently, and washed some dirt for a yield of 2 oz. to the load, but about 12 or 14 loads will cut it out. Another party had a fair patch on the Mann River Beach, which yielded as high as 1½ oz. to the load, but that also ran out after yielding about 60 oz.; still some fifty to sixty fossickers continue to raise enough to live upon, and may do so for years to come.

#### *Woooolga Division.*

During the past year 188 tons of quartz were crushed for a yield of 227 oz. of gold, valued at £851 5s.; and 96 oz. of alluvial gold was won, valued at £345 12s.

Mining in this Division is in a very languishing condition. A number of the mines have been closed down, and apparently abandoned. Only two mines have been worked during the last five months.

Mr. Peter has removed his battery to Bucca Creek, and a number of miners have left the district. Most of the mines appear to have been abandoned owing to the influx of water into the workings, and the want of capital to erect machinery to contend with it.

At the Louisa Mines aid has been granted to assist the owner, S. G. W. Small, to put down the shaft 100 feet; but slow progress is being made, owing to the influx of water into the shaft. 20 tons of quartz has been raised ready for crushing, which is expected to give a return of 8 dwt. to the ton. The reef at the 52 feet level is 5 feet wide.

At the Golden Area Mines (Thos. McCallum), McCallum and party's main shaft is down 75 feet. 18 tons of stone taken out at this level yielded 32 oz. of smelted gold. This mine has proved payable from the surface.

It is asserted by the prospectors of the district that this field contains many payable reefs, and, if properly tested, would give employment to a large number of men.

#### *Ballina Division.*

Mining in this Division has fallen off considerably, only thirty-two miner's rights having been issued during the year. Very little gold has been won, the returns for labour expended in stripping the terraces being very poor and unsatisfactory—in some cases not providing rations for the men engaged. It is difficult to arrive at the exact quantity of gold won in this Division, as it nearly all passes through the hands of the storekeepers for the purchase of rations.

#### *South Woodburn Division.*

Mining in this Division is at present at a very low ebb. There is, however, some prospect of a revival, a mining agent and civil engineer, named J. S. A. Taylor, having applied for a special lease for gold-mining of 16 acres, at McAulay's Lead, Jerusalem Creek, for the purpose of working the ground abandoned in that locality by means of a large cyanide plant, which, if erected, will undoubtedly give an impetus to mining matters in this Division. There have also been two extended claims applied for for the purpose of working by cyanide.

### COBAR MINING DISTRICT.

#### *Cobar Division.*

The past year has been a very disastrous one, owing to the very severe drought with which the whole of this western portion of the Colony has been stricken, being the most severe drought that the oldest resident of the district has ever experienced. The Warden of the District, Mr. Walterus Brown, who has had twenty-five years' experience in this Western District, has never seen anything approaching it in severity, caused probably by it having been one continuous drought, extending over a period of four years.

This severe drought has been very detrimental to the mining industry, and much mining and prospecting has been deterred by the want of water; but, notwithstanding this stumbling block, the Cobar Mining District has made good progress, and may be fairly looked upon as one of the most important mining districts in the Colony. It is only a few years ago that Cobar was looked upon as dead; but to-day, in spite of all the difficulties that there have been to contend against, the mineral production and population have gradually increased.

The mine of the District—the Great Cobar Company's Mine—is dealt with under the heading of copper.

Besides the big mine, we have, within a distance of about 6 miles of Cobar, several really good gold-mines, viz., Fort Bourke, now called The Cobar Gold-mines (Limited), The Occidental, The Peak, The Berribungie, and other minor mines, such as the Young Australian, Great Western, and many others, also Chesney Copper-mine, all of which show good indications of turning out good, profitable mines.

The Fort Bourke and the Chesney have not done much mining work during the past year, their labour and capital having been devoted to the purchase and erection of extensive machinery.

In this respect large amounts of money have been expended, showing that great faith is placed in the mines by the management and shareholders. This confidence has not been misplaced, and they will in the near future reap their reward.

The Occidental has done good work during the year, and has been a steady-going, self-paying mine from its inception. The management have considerably increased their plant, among the additions being a cyanide plant which is proving a great success, and it is hoped the shareholders may at no very distant date expect to receive regular dividends. This opinion is held by the general public, if the steady increase in the price of shares is any criterion. Getting a little further from Cobar, we come to Drysdale, where the "Mount Drysdale," "Eldorado," and "Old Billagoe" gold mines are situated. These mines during the past year have been doing very little work owing to the scarcity of water, but they are mines with fair prospects before them, and will yet give the shareholders a fair return for their outlay.

About 25 miles in north-westerly direction from Drysdale, at Gundabooka Mountain, some good gold prospects have been found, and six leases have been taken up in the locality, but, though good assays have been obtained, the want of water has prevented any work being done to properly test the ground, which is expected to prove payable.

Coming to Boppy Mountain, we find the Boppy Mines held by the "Anglo Australian Exploration Co., Limited," under the management of Mr. F. H. Granstedt. This company has done remarkably good work under great difficulties. The prospects of the mine are very good and will, in time, repay the company for their plucky enterprise. Here again the want of water has been greatly felt, having been carted some considerable distance for domestic purposes only, and now the source from which the water had been received has given out, and there is every chance of work having to cease in consequence. Owing to the scarcity of water this mine has been plodding along with from fifteen to forty men employed; whereas, if there was a permanent water supply, they would probably be employing about 200, and a considerable amount of other work and prospecting would be carried out in the locality.

Besides the company's leases there are other leases in the locality which would be worked if there was water. Budd's lease in this locality has done good work, but where there is one man working in the locality now there would be ten if there was a permanent water supply.

At Restdown work has been almost at a standstill during the past year, there having been only some ten or twelve men working; again the want of water being the cause.

This is to be regretted, as there have been some good gold prospects from this locality, and if water was available the field would be well tested—thoroughly well prospected—with every prospect of good results. The

The total value of the minerals won in this Division during the year :—

Gold .....	22,254 oz.,	valued at	£78,809
Silver .....	170,704 „	„	14,556
Copper .....	4,424 tons,	„	203,742

These figures would have been largely increased had the season been at all a favourable one.

*Gilgunnia Division.*

There is nothing noteworthy to report concerning this Division. The total quantity of gold won was 503 ozs. There are only twenty-six men at work on the field, a number of them under aid from the Prospecting Vote, who propose testing the reefs at a depth.

ALBERT MINING DISTRICT.

*Milparinka and Tibooburra Divisions.*

There is a very great falling off in the return of gold won during the year 1898, caused by the continued drought that has held throughout this district for the year. No rain of any consequence has fallen since February, 1898. The small falls of a few points since then were of no use for the benefit of the miners.

Gold Leases.—Warratta West is now altogether abandoned, first from want of water even for domestic use; further, the lessees who had taken up the ground as leases had not means wherewith to work them. They tried to float some of them into companies, but, not being successful, the lessees then virtually abandoned them. At present there is no lease being worked upon on that field, nor could they do so for want of water.

Warratta East.—At this locality there are two gold leases in force and one prospecting claim, but in the present waterless state of the country work cannot be carried out.

New Bendigo.—There is only one gold-lease on that field in force, applied for in May last and granted November last. Until there is a fall of rain no work could be carried on. All other claims and leases there are abandoned.

In the Tibooburra Division all the leases granted have been cancelled for non-payment of rent. The reason arises from the same cause—want of means to carry on with.

There is a battery erected at the old Warratta Reefs, but it has now been closed down for many months, for the reason that there was not stone to crush, the leases not being worked.

Alluvial.—There is a very great falling off in this class of mining, as compared with the quantity of gold won on all the alluvial fields in these Divisions in 1897. The Mount Brown and Good Friday fields are almost deserted. The few miners left are now stacking their wash-dirt; from want of water to go on with they cannot wash. In consequence the return of gold actually won shows a decrease. All the puddlers' dams are dry and the machines idle. There are five claims on deep sinking; so far they have not met with good returns. One, Glover and party, is receiving aid to drive at the 250-foot level. They are not raising the mullock until rain falls. These fields are not true alluvial; the finds are in pockets—"marine gold." A pocket very soon cuts out, and there is no guide to the miner as to where he may strike another. At all events there will be much dead work to be done before he does. A true gold lead has never been known on any of the fields, although occasionally beautiful specimens are found.

If there was plenty of water there is much virgin ground not prospected on all the fields; but this dry waterless country will always be a drawback to real vigorous mining.

The total yield of gold won is—

Tibooburra—Alluvial, 818 oz. 14 dwt. ....	£3,274 16 0
„ Quartz 12 oz. ....	48 0 0
Milparinka—Alluvial, 389 oz. ....	1,556 0 0
„ Quartz, nil .....	.....

The regular price paid for gold is £4 per oz.

£4,878 16 0

*Broken Hill District.*

Mining in this Division is confined to the production of silver, which is dealt with under its proper head. The Broken Hill Proprietary Company however saved, in connection with their operations, 1,040 oz. of gold, and the Jubilee Company 27 oz.

The following table will be found a very valuable one, as it gives, in addition to other information, full particulars of the yield of gold and the number of men employed in each Division of the Colony. The statistics are collected as carefully as possible by the Mining Registrars, but they experience a difficulty in many instances in obtaining the correct information.

TABLE showing approximately the number of Miners employed in the Metalliferous Mines, the Quantity of Gold won, the Area of Ground worked, and the Value of Machinery employed, in the Colony of New South Wales, during 1898.

Localities unknown ..	108,522·97	110,167·74
	203,414·55	208,916·04

The above Tables show that the quantity received at the Mint during the year exceeded that of 1897 by 5,502 oz.

The system adopted in the past by the Department in arriving at the output of gold for the year has been to add the quantity received at the Royal Mint to that exported through the Customs, deducting, of course, the quantity exported by the Mint which appears in the Customs Return. It having been ascertained, however, that an appreciable quantity of New South Wales gold (other than that included in the Export Returns furnished by the Customs) annually finds its way from outlying districts to the Royal Mint at Melbourne, in order to in part compensate for this leakage it has been decided to in future add,

add, to the result obtained by the foregoing method, the New South Wales gold received at the Melbourne Mint in excess of the quantity accounted for through the Customs. The following figures show how the yield for the year 1898 is arrived at:—

	oz.	£	s.	d.
Gold exported in bars, dust, quartz, and concentrates ... ..	120,505·50	435,346	0	0
Gold received by the Mint, the produce of the Colony... ..	208,916·04	765,793	7	7
	<u>329,421·54</u>	<u>1,201,139</u>	<u>7</u>	<u>7</u>
Less the quantity exported by the Mint through the Customs ... ..	4,761·66	20,141	12	6
	<u>324,659·88</u>	<u>1,180,997</u>	<u>15</u>	<u>1</u>
Add the difference between the New South Wales gold received at the Melbourne Mint and the quantity passed through the Customs ... ..	15,833·00	63,332	0	0
Estimated yield for 1898 ... ..	<u>340,492·88</u>	<u>1,244,329</u>	<u>15</u>	<u>1</u>
The yield for the year 1897 was ... ..	292,217·55	1,088,413	7	9

Towards the beginning of the year, arrangements were completed whereby, since April, the Department was enabled to issue monthly returns of the gold won within the Colony—instead of quarterly—and the figures are forwarded to the Agent-General in London for publication. The following statement gives the yield for the first quarter and for each month thereafter:—

	oz.	£
Quarter ending 31st March ... ..	82,530	303,860
Month ending 30th April ... ..	12,892	47,646
„ 31st May ... ..	20,925	79,206
„ 30th June ... ..	37,376	136,743
„ 31st July ... ..	28,097	101,952
„ 31st August ... ..	15,640	54,677
„ 30th September ... ..	41,777	155,390
„ 31st October ... ..	13,199	43,987
„ 30th November ... ..	33,492	116,024
„ 31st December* ... ..	54,565	204,845
	<u>340,493</u>	<u>1,244,330</u>

The gold received by the Mint during the quarters ending the 31st March, 30th June, 30th September, and the 31st December was, respectively, 45,090 oz., 51,567 oz., 61,433 oz., and 50,826 oz.

RETURNS of Gold for 1898 from Mint and Mining Registrars compared:—

District.	Mint.	Mining Registrars.	Excess.	Deficiency.
	oz.	oz.	oz.	oz.
Bathurst .....	5,570·83	49,898·60	.....	44,327·77

Localities unknown .....	110,167·74	.....	110,167·74	.....
	<u>208,916·04</u>	<u>300,148·27</u>	<u>146,116·67</u>	<u>237,348·90</u> <u>146,116·67</u>
The returns from Mining Registrars exceed returns from Mint by .....				91,232·23

The large difference of 91,232 oz. between the returns of the Mining Registrars and the quantity of gold received at the Mint is explained by the fact that a large quantity of our gold is sent out of the Colony in the form of matte and in copper ore and bullion, and, of course, never reaches the Mint.

MINING

\*The quantity and value of New South Wales gold received during the year at the Melbourne Mint, in excess of quantity accounted for through the Customs, are included in the yield given for this month.

## MINING Registrars' Returns of Gold for 1897 and 1898 compared.

Less Decrease .....	.....	.....	17,999	.....
Increase in yield for 1898 .....	.....	.....	20,773	.....

The returns sent in by the Mining Registrars are less by 24,512 oz. than the year's production as shown by the Mint and Customs returns. As already pointed out, our Mining Registrars have much difficulty in obtaining correct information from mineowners, and it is abundantly clear that the figures supplied by them are incomplete.

## COMPARATIVE Statement of Average Yields from Alluvial Mines for 1897-98.

Note.—The above Table only shows the yield where the quantity of stuff treated is ascertainable.

It can be seen at a glance that the above Table is far from complete, which, without full and correct data, is of little service for the sake of comparison. It is admitted that it is not an easy matter for the miners working alluvial ground to keep a correct record of their operations all the year round; but if they would do so, the information would be of much use to the mining community.

## COMPARATIVE Statement of Average Yields from Quartz-mines for 1897-98.

\* Exclusive of 71 tons of exceptionally rich stone, obtained near Yass, which yielded 15 oz to the ton.

Note.—This Table only shows the yield of gold where the quantity of stone treated is ascertainable.

The above Table, showing the average yield of stone from our quartz-mines, is fairly complete; but still there is much room for improvement. There is less difficulty in keeping a record of the stone crushed from a quartz-mine than the quantity of wash-dirt treated from an alluvial claim, still our mine and battery

battery owners show no anxiety to assist the Department in this respect. Until they do so, and get rid of the opinion that the public have no right to know the result of their operations, the Table cannot be improved on, which, if completed, would be of great benefit to the miners themselves.

The number of miners employed in gold-mining during the year was as follows —

	1897.	1898.
Alluvial .....	8,028	7,439
„ (Chinese) .....	1,002	864
Quartz .....	12,256	11,616
	<u>21,286</u>	<u>19,919</u>

The above figures show a reduction of 1,367 men employed in the gold-mining industry in the Colony, the reduction being, no doubt, due to the severe drought which affected our mineral fields during the greater part of the year, and drove large numbers of miners to seek other occupation. In any case, the class of miners termed “fossickers” fluctuate greatly in their numbers.

Dividing the total quantity of gold won by the number of men employed, it shows that each man won, on an average, 17·09 oz., valued at £62 9s. 1d. A large number of the men were no doubt engaged prospecting, or carrying out deadwork; so the average earnings can only be a rough approximation of the total earnings of each man. Still, the figures are sufficient to show that, with energy, a living is still to be made on the gold-fields of the Colony, with the ever present prospect of ultimately striking something sufficiently rich to provide him with a competence for life.

#### COAL.

As anticipated in the Report of the Department for 1897, the past year has been a record one so far as output is concerned, the quantity raised being 4,706,251 tons, or 322,660 tons in excess of the output for 1897. There is a substantial increase in our exports to intercolonial ports, but a slight reduction in our foreign exports. A very large increase is noticeable under the heading of “Home Consumption,” no doubt due to the large quantities used at the immense smelting works now in full swing at Dapto and Cockle Creek.

The Sydney Harbour Collieries Company are carrying on sinking vigorously at Balmain. A full description of the operations was given in the last report. It will be some time yet before the coal is reached, which lies some 3,000 feet from the surface.

At the 31st December, 1898, there were 91 coal and 4 shale mines under inspection, which is an increase of 4 coal mines and a decrease of 1 shale mine as compared with 1897.

#### QUANTITY and Value of Coal raised from the opening of the Coal-seams to 1857, inclusive.

There were 10,519 men employed in and about the New South Wales Coal and Shale mines during 1898 as compared with 9,979 during 1897.

There were nine accidents which caused the deaths of 25 persons, and there were 107 accidents which caused more or less serious injury to 110 persons. This is unfortunately an increase on the number during the year 1897, in which there were 16 fatal and 63 non-fatal accidents.

The following table is intended to show that the safety of our coal-mines can bear favourable comparison with the coal-mines in the United Kingdom.

SUMMARY of persons employed, number of fatal accidents (deaths), and ratio of the number of persons employed, and the number of fatal accidents in and about the "United Kingdom" and "New South Wales" Coal-mines, since 1874.

Year.	United Kingdom.				New South Wales.			
	Persons employed.	Lives lost by accident.	Persons employed per life lost.	Death-rate from accidents per 1,000 persons employed.	Persons employed.	Lives lost by accident.	Persons employed per life lost.	Death-rate from accidents per 1,000 persons employed.

\* Excessive number of falls of coal and Lithgow disaster caused this high death-rate.

† Bulli catastrophe and excessive falls of coal caused this high death-rate.

‡ Hamilton pit crush, excessive falls of coal, and over-winding of four men at South Burwood sinking pit caused this high death-rate.

## COKE.

The coke-making industry continues to make steady and permanent progress in this Colony. This is doubtless owing to the greater care exercised in its manufacture, and by the employment of a better class of kiln and appliances for cleaning the coal. The improved quality of our coke is quickly driving the imported article out of the market.

TABLE showing the quantity and Value of Coke made in the Colony of New South Wales.

The shale-mining industry does not show any improvement during the year; and although a large amount of prospecting work was done in search of this mineral, no new discoveries of any importance were reported. At the present time shale-mining is confined to Hartley, New Hartley, Joadja, and Genowlan, which gives employment to 261 men.

## SILVER AND LEAD.

QUANTITY and Value of Silver, and Silver-lead, and Ore exported.

NOTE.—It was found necessary to adjust this Table up to the end of 1898. The bulk of the silver produced in New South Wales is exported in the form of silver-lead.

Despite

Despite the continued low price of silver it is satisfactory to note that the result of the past year's operations shows an increase on the preceding year. The famous mines at Broken Hill continue to produce the bulk of the silver won in the Colony; and the continued improvement the companies are making in their plant for the more effective treatment of their ores is increasing the output as well as reducing the cost of production.

The following notes on the progress of the silver-mining industry in the various Divisions may prove interesting:—

THE ALBERT MINING DISTRICT.

*Broken Hill Division.*

The year 1898 has been one of steady prosperity for this Division. Although the Proprietary Company transferred their smelting operations to Port Pirie in April, and the Tarrawingee flux quarries thereupon ceased work, there has been an increase in the number of men employed on the mines, the average number employed during the year being 6,000. The returns from the mines compare very favourably with previous years, and the gross value of the product shows an advance on 1897.

The total value of the product of the field for the year is estimated to be—

		Value.
Ore .....	393,829 tons	£1,662,021
Concentrates .....	160,242 "	1,543,197
Silver-lead .....	2,977 "	117,176
Roasted sulphides .....	68 "	59,726
Lead carbonate .....	1,072 "	31,571
Undressed slimes .....	4,190 "	22,772
Roasted sulphides (copper) .....	18 "	940
Copper ore .....	43 "	146
Ironstone flux .....	132 "	132
Limestone flux .....	9,253 "	5,783
Gold .....	1,067 oz.	4,264
		£3,447,728

The value of the output from the Broken Hill Proprietary Company's Mine was £1,293,896 6s. 9d., made up as follows:—

		Gross Value of Contained Metals.	
		£	s. d.
Silver-lead bullion .....	2,976 tons	117,144	2 3
Containing lead .....	2,955 "		
Assaying 234·91 oz. silver per ton .....	.....

Assaying 47 % pb., 207 oz. ag. per ton .....	.....		
		£1,293,896	6 9

The Broken Hill Proprietary Block 14 Company (Limited) employ over 700 men. They raised 160,313 tons of ore gross value of which was estimated to be £349,841. The Block 10 Company had 860 men at work, and raised 124,214 tons of ore, which is valued at £524,804. The Sulphide Corporation (Limited) employ 820 men, and raised 181,990 tons, valued at over £410,000. The Broken Hill South Company have 450 men at work; they raised during the year 85,185 tons, valued at £239,985. The Junction Company employ 397 men, and raised 87,136 tons of ore, valued at £195,280. The British Broken Hill had about 500 men at work during the year, and raised 93,310 tons of ore, valued at £266,091. The Junction North Company employ 250 men, and the 33,297 tons of ore raised by them was estimated to be worth £126,259. The North Broken Hill Silver-mining Company employ about 175 men on an average during the year; they raised 32,107 tons of ore, worth £74,589. These are the principal mines at work on the field.

The total quantity of silver produced during the year is estimated to be 12,222,309 oz., which is a slight decrease on the quantity won during 1897.

The population of the Police District of Broken Hill at the end of the year was 27,493, an increase of 1,327 for the year.

BATHURST MINING DISTRICT.

*Mitchell Division.*

The Sunny Corner Silver-mining Company have seven men at work in their mine, which has been idle for some considerable time. It was reported to the Department that this property should be held under gold lease, as it was payably auriferous. Mr. E. F. Pittman, Government Geologist, visited the mine, and carefully examined and sampled the deposit, with the result that he declared it not to be so. Mr. Pittman's report on the result of his examination is appended.

NEW ENGLAND MINING DISTRICT.

*Fairfield (Drake) Division.*

The well known White Rock Silver-mine at Drake, where from seventy to 100 men were at work, and from which so much was expected after its many failures, unfortunately closed down, as results were not satisfactory; the machinery and plant used at this mine, said to have cost at least £60,000, is now idle, just when it was thought that the management had by additional plant overcome all difficulties, and were about to receive back some of the great expenditure that has taken place. It is believed this company contemplated completing the plant with a view of treating ores from other mines in the locality, and so fill a very great want, but so far as is known nothing has been done towards this most desired end.

The total value of the silver won throughout this Division during the year was only £270.

*Emmaville*

*Emmaville Division.*

Webbs', or the Little Plant, is the principal silver-mine in this Division; it is about 9 miles from Emmaville, and employ sixty men and boys. The main shaft is down 650 feet, the lode at that depth being about 4 feet, and very rich.

The output of concentrates for the eleven months of the year was about 850 tons.

Mount Galena, the Consol's Silver Prince, and other mines have been worked at intervals during the year, but there does not appear to have been a great amount of silver obtained from them. The ore was sent away for treatment, so that it is impossible to get any result. Total quantity sent away during year, 936 tons 10 cwt. The total quantity of silver produced in this Division during the year is estimated to be 234,000 oz., valued at £27,300.

*Wilson's Downfall Division.*

Wilson's Downfall is situated about 30 miles north of Tenterfield, and close to the border. There were 69 tons of ore raised, which yielded 16,509 oz. of silver, valued at £1,829. This was all obtained from the mines at Rivertree by eight parties of silver-miners. All the low-grade ore is thrown over the tips, only that which will pay for sending away for treatment, labour, &c., being saved and sent to Cockle Creek and Illawarra,—Cockle Creek being preferred as giving the best results. Mr. C. T. McDonald's mine, M 76, continues to look well. The ore he has been sending for treatment, mostly to Cockle Creek, averages 200 oz. per ton from a lode of 3 feet.

The discovery made by Messrs. Peoples and party proved to be but a pocket, and is now abandoned.

Messrs. Coalson & Co. have been prospecting at the head of Cullen's Creek for silver ore and other minerals, but they have not come across anything good enough to send away for treatment. In prospecting during the past year they have spent over £300. Messrs. Barnett and party have also been prospecting in the same locality with about equal results, having spent over £190 in the work.

Principally the silver ore won in Rivertree has been taken from the old abandoned mines, and in some cases the old workings have been shamefully abused.

*Tenterfield Division.*

There are only about forty miners engaged in this portion of the district altogether, and most of them are about Boonoo Boonoo, 15 miles north of the town of Tenterfield, some fossicking for alluvial gold and the remainder engaged at the silver reefs. Messrs. Baker and Conlon, at Basket Swamp, at a depth of 50 feet, are turning out very nice looking stone containing a high percentage of native silver, the vein at present being 1 foot wide, and the returns of stuff sent away for treatment are said to be satisfactory; the return sent in by the proprietors showing 17 tons treated for 3,659 oz. of silver, realising £422 17s. At Bolivia and Sandy Flat gold-mining is practically at a standstill, but a show of wolfram at Bolivia is receiving attention, and may be found to be worth working at present value.

## PEEL AND URALLA MINING DISTRICT.

*Hillgrove Division.*

The Ruby Silver-mine at Rockvale, which is still held by the New Zealand Mines Trust (Limited), has been explored, by sinking shafts and winzes, totalling in depth 846 feet, and by driving levels covering 1,500 feet, crosscutting 197 feet, and by rising from levels 64 feet, making a total of work done 2,607 feet. The main shaft has been sunk to a depth of 306 feet, and there are six other shafts ranging from 60 to 128 feet deep. The deepest level is 300 feet; the lode averages 2 feet 6 inches. There has not been any ore raised except what has come out of the above enumerated workings, and with the exception of about 30 tons, which has been sent to different smelting works for experimental purposes, none of the ore has been classified or prepared for treatment. A parcel of 558 tons of very low-grade ore has been sent to the Phoenix Battery for the purpose of making some concentrating experiments, and up to date no returns are on record. Until recently between forty and sixty men were employed; at the present time only about twenty are at work.

*Tingha Division.*

There were 9,018 oz. of silver won in this Division, and about 33 tons of lead, valued at about £1,094. Operations are being carried on by the Conrad Silver and Lead Mining Company, at Bora Creek, where the company employ fifty-three men. The prospects of this company are considered very bright; they have proved the lode to a depth of 100 feet, from which level they sent away 66 tons for treatment, which yielded 138 oz. of silver per ton and 50 per cent. lead. Concentrating machinery is now being erected, and the company have a large quantity of ore at grass awaiting its completion. This lode can be traced for some considerable distance on the surface, and further developments are likely to take place.

## THE SOUTHERN MINING DISTRICT.

*Picton Division.*

In February, 1898, two parties, Messrs. Webb and Mackie and J. V. Bartlett, applied for authorities to enter on a conditional lease owned by Harold C. Manning, to mine for silver. This conditional lease is situated about 10 miles from the Wollondilly River, about 40 miles from Picton, and about 43 from Camden. Both the parties referred to have been actively engaged mining on the areas they applied for. Webb and Mackie have had treated about 60 tons, which returned them 3,420 oz. silver, averaging 2s. 3d. per oz.; 20 tons of lead, averaging £12 15s. per ton; and 6 oz. gold, averaging £3 17s. 6d.; or a total value of about £660. An average of eight men have been employed. J. V. Bartlett has raised and sent a large quantity of ore, reputed to be richer than that of Webb and Mackie's. In October a fresh stir took place, and four other applications were made, chiefly for 40-acre blocks, on the same lease. Later on eight other applications were lodged, and at present 302 acres of this lease are held under authorities to enter. Work is progressing well on all the areas, and about sixty men are employed there in mining. On an adjoining conditional lease two areas, to the extent of 80 acres, are held under authorities to enter, and are worked by eight men. Besides those mentioned, there are 120 acres now applied for awaiting allotment. Altogether there are about eighty men at work on the field. On Crown lands a number of claims have been pegged, and are being worked as mineral prospecting areas. A large company is now being formed to work the mines systematically.

*Burroua Division.*

Massey and party at Rye Park are still working the Wallah Wallah Silver-mine, and are sending ore to Dapto. Scarcity of water has, however, retarded their operations and has also considerably hampered further prospecting in the locality. There are several silver-bearing lodes being tested in this locality, which have a fairly promising appearance. The advent of capital to this field to open them up is now a necessity.

*Captain's Flat Division.*

The Lake George Mines (Ltd.) at Captain's Flat own the principal mine in this Division, which produces gold, silver, copper, and lead. The number of men employed during the year was 294, and the quantity of silver produced was about 140,000 oz. The mine unfortunately closed down for a time during the year, but is again in full work, the ore being taken from the higher levels, and the working expenses materially reduced. The mine is equipped with up-to-date machinery, and is now in a position to treat a large quantity of ore.

*Pambula Division.*

A little silver is being obtained by the Jinger Mineral Proprietary Company in connection with their bismuth-mining operations, but the figures are not available.

The district is being well tested both with and without Government aid. No discovery worth noting has been made up to the present.

*Cooma Division.*

A considerable area of land has been taken up in the vicinity of Buckley's Crossing to mine for silver and lead, and at Dartmoor for silver, copper, and lead. Work is being pushed on vigorously with the object of proving the deposit at depth.

## COBAR MINING DISTRICT.

*Cobar Division.*

The mines at the Peaks are still producing silver in fair quantities, the quantity won during the year being 170,704 oz. This quantity will be increased probably during the coming year.

*Bobadah Division.*

The mining industry in this Division is of comparatively recent date, and the difficulty to advantageously treat the ore has been the cause of such little progress being made with mining in the district.

Recently, however, Mr. Weidemann, General Manager for the Overflow Silver-mining Company, has succeeded in obtaining very high percentages of gold from the gossan formation in their property. With proper machinery, which he asserts will not be expensive, he promises to give very handsome returns.

If affairs go well with this mine, there can be scarcely a doubt but that in the near future this Division will be studded with a great number of mines. So far as prospects and indications are concerned, there is a vast area of country similar to that held by the Overflow Silver-mining Company, (Limited).

## COPPER-MINING.

TABLE showing the quantity and value of Copper exported from New South Wales, from 1858 to 1898.

Year.	Ingots.		Ore and Regulus.		Total.

Includes copper refined from New South Wales and imported ores.

A memoir, dealing with the copper-deposits of the Colony, is now being prepared by Mr. Geological-Surveyor Carne, F.G.S., and will be ready for issue about the middle of 1899. The whole of the known copper-deposits of the Colony will be carefully located and described. The following notes briefly give the progress of copper-mining in the various Divisions of the Colony where copper is being mined for:—

## NEW ENGLAND DISTRICT.

*Drake Division.*

The returns show an output of some 17½ tons of copper. Some few months ago it was thought that a very much larger quantity would have been won; it all came from Drake where several of the mines previously worked for gold were closed, because as they went down the lode became so impregnated with copper that the usual battery-saving appliances in use failed to extract the gold, but now the ore is being sent to the reduction works at Dapto, and notwithstanding the cost of carriage by road and rail is giving good returns, and from present appearances the yield of copper for next year will be a fair item in the annual report.

PEEL

## PEEL AND URALLA MINING DISTRICT.

*Barraba Division.*

The Cornish Copper Mine at Gulf Creek has had suspension of the labour conditions for the whole of the year. It is reported that work will be resumed shortly to the satisfaction of many, as a considerable number of men are employed by the company in working the mine.

In the same locality Mr. William Uren has erected a cyanide plant for the purpose of treating the surface of the land for gold. If this process prove to be payable, it is intended to sink and prove the land at a depth. Towards the end of the year, a considerable amount of capital has, it is thought, been attracted to the district, and mining matters generally may be expected to improve.

The Inverell Copper Prospecting Company was testing some land for copper, about 2½ miles south of Bundarra, during the year, but after eight months' work operations were suspended—temporarily, it is said.

*Bingara Division.*

More attention is being directed to the copper lodes of this rich mineral district. A copper property has been taken up by a company, and the lode has been found in settled country, although it is adjacent to the serpentine. There are several very promising lodes lying between Bingara and the Gulf Creek Copper Mine, a distance of 10 miles south, or trending generally southerly, which are well worth the attention of prospectors.

*Hillgrove Division.*

Very little work has been done at Hall's Peak. The mine known as the "Sunnyside" was under offer to a Melbourne company early in the year, but a sale did not take place, and through want of capital little has been done since.

*Dungowan.*

Nothing has been done in this Division in copper-mining during the past year. Assays from two mines in this locality have on several occasions been made, and found highly encouraging, but for some cause unknown the mines, though deserving of a fair test, still remain unworked.

## SOUTHERN MINING DISTRICT.

*Burrowa Division.*

In this Division the same difficulty has been experienced, want of water preventing any continuous prospecting. Considering the season, it is surprising the amount of work done. Although the country abounds in copper indications no new discoveries have been made. There are one or two lodes being worked by small parties of miners, who make good wages by sending the ore to the smelting works at Dapto, but the deposits are not important enough to attract capitalists.

At Frogmore, the two copper mines which in years past were profitably worked are still lying idle; being on private lands, and not open to the miner, they cannot be interfered with. Several parties are prospecting for copper in the vicinity of these old mines with very encouraging outlook; nothing can be done unless these old works are started again.

There is no doubt that the long continued drought has had much to do with the unsatisfactory state of mining in this district, and until copious rain falls there is no chance of improvement.

*Nelligen Division.*

Very good indications of copper are being met with on the Sugar-loaf Mountain, where a party of three have been prospecting for some time. As yet only prospecting work has been done in search of a defined lode.

*Captain's Flat Division.*

The Lake George Mines (Limited), the principal copper-mine in the Southern Mining District, produced, in addition to large quantities of gold, silver, and lead, 722 tons of refined copper, which is a large increase on the yield for 1897.

## COBAR MINING DISTRICT.

*Cobar Division.*

The principal mine on the field is, of course, the Great Cobar Copper-mine, employing about 700 men, which, some four or five years ago, was looked upon as done and non-payable; now it may be fairly reckoned among the foremost copper-mines of the world. The success of this great mine has caused the prosperity of the whole field, as it has encouraged other mines to be worked, and the expenditure of a large amount of capital, not only in the development of other mines but in the erecting and establishment of large business places in the town. The success of this mine, and, in consequence, the prosperity of the whole district, is due to the able and judicious management of the Messrs. Longworth Brothers, who undertook the management some four or five years ago on behalf of a syndicate, who, pinning their faith to the Messrs. Longworth, took over the mine to work on tribute, thereby making their own fortunes, and establishing Cobar as one of the most wealthy mining fields in the Colony. The total quantity of copper won during the year in the district was 4,424 tons, valued at £203,742, as compared with 2,461½ tons, valued at £108,306, won the previous year.

*The Nymagee, Bobadah, and Mount Hope Divisions.*

At Nymagee two mines, both copper, viz., "The Nymagee and Nymagee North Mines," are owned and worked by "The Great Cobar Copper-mining Syndicate." Both these mines have been regularly and consistently worked during the year, with good results. The "Nymagee Mine" has been very fortunate, as things go, with regard to water. They have been obliged to shut down two or three times, but on every occasion sufficient rain has fallen within a few weeks to enable them to again blow the furnace in.

About 38 miles from Nymagee, in a south-easterly direction, we come to Bobadah. Here is situated that much-talked-of and most unfortunate mine belonging to The Overflow Silver-mining Company, which is virtually a gold-mine, but has indication of developing into a copper-mine. This mine has been regularly worked, and a large amount of money has been expended on it, but up to the present all the shareholders have had out of it is notices to pay calls. This mine has always shown remarkably good prospects, but somehow or other the management has not, up to the present, succeeded in making it pay. That it is a good mine is firmly believed. The management and shareholders have always been, and still are, very sanguine about it, and from the way they have persevered with it and lavished money upon it, they certainly deserve some day to have their most sanguine expectations realised. There are several other leases in the same locality, but no work of any consequence has been done except at the big mine. The only other mine worthy of mention is the "Girilambone Copper Mine." During the year there has been no very great amount of work done upon it. It has been plodding along under difficulties, building up hope upon hope, but at present it is at a standstill. Again the cry, "No water." Besides these mines mentioned, there is a considerable amount of work and prospecting being carried on in different portions of the district which would be more than doubled if water were available.

On the whole, the Cobar Mining District is in a very prosperous condition, and with a bright future in front of it. At present it is only in its infancy, and with a few years of good seasons and plenty of water, it will proceed with rapid strides and double its population in a very short space of time.

## THE LACHLAN MINING DISTRICT,

*Forbes Division.*

At Eurow, which is situated 16 miles east of Forbes, near Eugowra, two copper-mines are working—one, called the "Eurow Copper-mine," has been recently floated in Melbourne. The main shaft is 80 feet deep, and a drive has been put in on the lode 30 feet north and 25 feet south. The lode was discovered near the surface and followed down to the depth already stated. Forty-six tons of ore was raised and gave a return per ton of 18 per cent. of copper, 2 dwt. of gold, and 4 oz. of silver. To the 35 feet level the lode contains carbonates of copper and red oxide; below this depth the sulphides come in, and at the 80-foot level this ore is of good quality. The lode is 4 to 6 feet wide in the bottom of the shaft, and the ore occurs in bunches. What is known as the "Vychan" mine adjoins the "Eurow" on the north. The main shaft is sunk 109 feet. Two parcels of ore, carbonates, gave 20 per cent. copper, 3 dwt. 12 grains of gold, and 4 oz. of silver. These mines are far from being proved, but it is probable that a payable lode will be discovered. *Condobolin*

*Condobolin Division.*

The principal copper mines in this Division are the Anaconda and the Big Ben Mines, situated about 29 miles from Condobolin, on the Melrose Mountains. The mines have very fair prospects, and development work is being vigorously carried out. The Prospecting Board have recommended aid to several parties throughout this Division to prove promising copper lodes.

## MUDGEE MINING DISTRICT.

*Leadville Division.*

The Mount Stewart Mine is now being prospected for copper, and three shifts of four men have been constantly employed for the past few months. A few parties are also prospecting in the vicinity of Cudgong for copper, but little success has so far attended their efforts.

## BATHURST MINING DISTRICT.

*Bathurst Division.*

There are several parties still at work in this Division prospecting for copper lodes, principally on private property. A large amount of work has been done, but so far they have not struck anything payable.

*Oberon Division.*

In Bouchier's Tuglow Mine, about 29 miles from Oberon, a rich copper lode has been discovered, which has been sunk on for 50 feet. The lode is 5 feet wide. Thirty-four tons of ore were raised and sent away for treatment, the return giving upwards of £271. The copper, it is stated, contained nearly an ounce of gold per ton. Mr. Bouchier informs me that he had discovered another promising outcrop of copper in the same locality, but whether on Crown or private land he declined to say.

The proprietors of the Black Bullock Mountain Mine, 4 miles from Oberon, are sending 160 tons of ore to Dapto for treatment.

Over forty men are now employed prospecting for copper lodes in this Division.

*Rockley Division.*

Quite a revival has taken place in copper-mining in this Division, an English company having purchased the Cow Flat Copper-mine from Gannon and Quinn. A large number of men will shortly be employed upon this and the adjoining properties. About 4 miles south Mr. McGregor has twenty men employed prospecting for copper on account of Messrs. Jamison and Wallace, of Melbourne. The manager states that the prospects are very encouraging. This is situated on Church and School Estate, about 280 acres being leased.

*O'Connell Division.*

Messrs. Rea and party, in the parish of Jocelyn, and Wilson and Hunter, at Wiseman's Creek, have a fair show of copper ore. They are down over 100 feet, and are sending ore away for a bulk test.

*Burrage Division.*

The mining in this Division is almost exclusively confined to copper, the chief mine being that owned by Mr. Lewis Lloyd, where about 300 men and boys are working on and in connection with this mine. The total output of copper ore during the year was 8,518 tons, and when reduced is valued at £36,310. The lowest level is 930 feet, and the lode is from 8 to 12 feet wide.

Mr. Hockey's mineral conditional purchase has been sold on terms, and is now being prospected by the purchasers. The shaft is 100 feet deep, and is being slabbled to the surface. They do not expect to strike the Burrage lode until a depth of 400 feet is attained, though from indications they think that they may strike another branch of the lode at any moment.

Mr. Hackney's mineral conditional purchase, adjoining Lloyd's property, has also been sold conditionally, the purchasers being The Mount Lyell Company, of Tasmania. This property is also being prospected, and rich ore has been cut in the shaft at 25 feet, and on Martin's selection, which adjoins this property, very rich ore has also been discovered by the same party, who are in treaty for the purchase of a small portion of this selection where the copper has been found. About twenty men are employed prospecting these two properties.

*Blayney Division.*

At the present time this Division is being thoroughly tested for copper, both by private enterprise and with the help of the Prospecting Vote. Ore to the value of about £1,500 has been sent away for treatment. Some work was done in the Annandale Copper Mine during the year, but it is understood that arrangements have now been completed to open it up systematically.

Nearly 100 men are at work around Blayney in search of copper lodes.

*Orange Division.*

At Byng the North Karangara Gold and Copper Mining Company are busily engaged erecting plant for the treatment of their ore. This lode is from 6 to 16 feet wide, and it is expected that the Company, which is a Melbourne one, will soon be in a position to employ a large number of men.

## ALBERT MINING DISTRICT.

*Broken Hill Division.*

The only companies producing copper in this Division are the Broken Hill Proprietary Silver-mining Company and the Diamond Jubilee Mining Company. The former Company saved in connection with their silver-mining operations 18 tons of roasted sulphides, valued at £939 12s. The Diamond Jubilee Company raised a little ore, but work is confined principally to prospecting the property.

The advance in the price of copper has led to the taking up of several abandoned leases in the neighbourhood of Eurowie.

*Wilcannia Division.*

Two mineral leases, for the purpose of mining for copper, were applied for by Messrs. Connell and Lucas, on the 15th September last. The leases are on Grasmere Holding. Prospecting work will be started early in the year.

*White Cliffs Division.*

The copper deposits on the old Nuntherungie silver and copper field are receiving attention from prospectors and speculators. Preparations are being made to thoroughly test some of the deposits immediately water and grass are available.

*Milparinka Division.*

Early in the year a prospecting protection area, of 80 acres was taken up with a view to carrying on work in search of copper in the vicinity of the Kooningberry Ranges. A lode was traced, and a bulk sample of about 6 cwt. was sent to Broken Hill to be tested. The result proved very satisfactory, the ore yielding about 45 per cent. of copper. A pretty strong syndicate has been formed to work the ground, and two areas of 40 acres each have been taken up under lease.

## TIN MINING.

TABLE showing the quantity and value of Tin exported from the Colony of New South Wales, since the opening of the Tin-fields in 1872.

Year.	Ingots.				Ore.				Total.

Includes tin refined both from New South Wales and imported ores.

As will be seen from the foregoing table our annual export of tin shows a very marked decrease as compared with past years. This is, no doubt, due to the partial exhaustion of the shallow alluvial deposits in the Tingha District which, for many years, provided profitable employment for hundreds of men; the unusual scarcity of water, and the low price obtainable for the metal during the year, have also had their effect. The substantial advance in price has, however, stimulated tin-mining to a large degree; some miles of Cope's Creek (Inverell), have been applied for—for the purpose of dredging for tin—and a large area of abandoned ground has also been applied for. The deep leads supposed to exist in the Deepwater District, at Nine-mile, and at Kangaroo Flat, in the Emmaville District, are likely now to be tested.

Syndicates have taken up the land, and the Department has promised to afford liberal assistance in the event of work being started at an early date. Several attempts have been made by parties of working miners to test this deep, wet ground, but the costly nature of the work was beyond their means.

The following notes give a fair idea of the progress of the tin-mining industry in the several districts during the past year:—

## PEEL AND URALLA MINING DISTRICT.

*Bendemeer Division.*

In this Division the drought has caused alluvial mining to be almost abandoned, and prevented prospecting.

Tin-mining.—The result from tin-mining is small, but holds its own with the win of the previous year, and has been a source of more profit to the miners engaged in it than to the miners in this locality employed in gold-mining.

*Glen Innes Division.*

It is questionable if tin mining in this Division during the past year has been profitably carried on, owing to the operations of the miners being hampered through the great scarcity of water for mining purposes. At the end of the year the number of men employed in this work had diminished to about thirty.

*Tingha Division.*

The output of tin ore for the year ending 31st December, 1898, in this Division amounted to 400 tons, at a local value of £16,800 sterling, there also being about 1,000 loads of tin washdirt stacked on the field waiting for water.

The output of silver and lead during the year amounted to 9,018 oz. of silver and 33 tons of lead, of a value of £1,094 sterling. There is also 1,100 tons of ore awaiting completion of concentrating works. There has also been obtained in this Division 14,920 carats of diamonds, of a local value of £5,625. About 2,000 loads of good diamond wash has been stacked, awaiting a supply of water.

The European and Chinese mining population has slightly increased during the last twelve months, there being 360 Europeans and 120 Chinese miners in the Division. The principal mines employing labour are the Elmore Valley Tin-mining Co., who employ sixty-five miners, the Inverell Diamond-fields Mining Co., who employ about sixty men, and the Australian Diamond-fields (Ltd.), who employ about forty men.

*Emmaville*

*Emmaville Division.*

Mining in this Division has been greatly retarded throughout the year, but more particularly for the last three months. Many men on alluvial tin, cart it a great distance for the purpose of washing and dressing it for market. This is done by poor men, who are unable to get the necessaries of life without cash or its equivalent. As a result of the dry weather the yield will be a great deal below what it would have been in an ordinary season.

During the year a company was formed to work the ground at Kangaroo Flat adjoining the properties of the Messrs. Hall. The ground is deep and wet. Several parties have tried it during the last twenty years but were unable to make any progress owing to the water.

A shaft has been put down 150 feet and the drive is in 100 feet, a 14-horse power engine being employed to keep the water down. The land adjoining that now being worked yielded some hundreds of tons of good tin ore. Should this deep ground prove payable, together with the price which tin is now bringing, mining will go ahead in this Division in 1899.

Rose Valley Company wound up during the year and abandoned the ground, it being of such a treacherous nature and so expensive to work that the whole of the money obtained for the tin sold was swallowed up in expenses. Tin at the time was selling at £32 per ton where it now brings £51.

A tunnel has been put in at the Two-mile by R. Wilson and party a distance of 200 feet. They expect to cut the wash in another 150 feet. More than usual industry is required to make anything more than a living among the old workings.

The Graveyard, Y Water Holes, Glen Creek, The Gulf, Paradise, The Grampians, Vegetable Creek, and Ruby Hill have their attractions but very few of those working on the places named make more than wages.

The lode known as the Ottery has been worked continuously throughout the year. This mine is situated at Tent Hill where extensive crushing and smelting works have been erected. About sixty men and boys are regularly employed. The output of tin for the year was 161 tons 4 cwt. 3 qrs. 3 lb., valued at £6,210 11s. 9d. The value of the machinery is £2,000, and the lode appears to be improving.

The Great Britain Tin Mine, situate at Emmaville, employs about thirty men throughout the year, the output being about 50 tons, value about £2,000. A dam to hold 3,000,000 gallons of water is being constructed on this property, and when full will ensure the continuous working of this mine.

The Rothschild has also worked continuously throughout the year, the output being 4 tons 11 cwt.

At Kangaroo Flat about twenty men are employed by the Messrs. Hall, also about seven at the Grampians by the same persons. The output of tin for the year was about 328 tons.

*Hillgrove Division.*

A Hillgrove syndicate sent two experienced tin miners, Messrs. Merritt and Murray, to prospect for lode tin near Guy Fawkes, which is situated 26 miles from Hillgrove. They discovered tin almost anywhere in the locality, but not in payable quantities. The country rock which occurs in this locality is of granite, closely abutting on trap rock, and some 2 miles away the basalt commences.

The syndicate, with the limited means at their disposal, did not attempt to pierce the basalt, but from the indications they obtained, are confident that tin exists beneath the basalt. This country is well worth testing. It resembles in appearance the country found near Stanthorpe (Queensland), Ruby Creek and Herding-yard Creek (New South Wales).

## NEW ENGLAND MINING DISTRICT.

*Deepwater Division.*

Tin was the only metal won in this Division during the year, all the silver-mines at Castlerag and other places in the District remaining idle. The tin industry was crippled by the low price ruling, and want of water when the price did rise, as it did, from £32 to £51 per ton. There is not much energy shown here. Any great increase in the yield for next year is not expected.

The total quantity of tin ore won in the Division was 150 tons, of an average value of £35 per ton, or a total value of £5,250.

*Wilson's Downfall.*

Wilson's Downfall is about 30 miles north of Tenterfield, and close to the Border, where mining is carried on principally for tin and silver, and the year's return shows an increase in the yield of both metals. The silver is nearly all from Rivertree, 19 miles east of the Downfall, and here again all the ore has to be sent to Dapto or Cockle Creek for treatment, with a consequent loss of profits, and all but high-grade ore has to be discarded. The quantity of tin given as won, viz., 65 tons, valued at £2,275, is certainly below the actual quantity won, as the holdings are scattered over a very large area and are held in small areas under mineral licenses, so it is almost impossible to get the exact returns of metal got. The low price of tin and dry weather also considerably retarded the work, many claims having to stop work altogether for want of water.

## HUNTER-MACLEAY MINING DISTRICTS.

*Kempsey Division.*

The Jubilee Tin-mining Company has suspended work with the object, it is said, of amalgamating with the adjoining claims, and placing them on the market for sale. This mine has been working for six years past, with varying results. The tin is of such a fine nature that it is found troublesome to save. Improved machinery would no doubt overcome this difficulty. A few men were employed in the Gundle Mine, and about 160 tons of ore were raised but not treated. About 405 tons of ore, valued at £572, were raised in this Division during the year.

## IRON.

A considerable amount of iron ore has been raised from the ore deposits situated in the Marulan, Goulburn, Bredalbane, Mittagong, and Carcoar Districts, and despatched to the smelting works at Dapto and Cockle Creek where it has been used as a flux. This new industry is giving employment to a large number of men. Parcels of iron oxide have also been despatched from the Fitzroy and other ironstone deposits in the Mittagong District to the various gas-works of the Colony. The oxide is used in purifying the gas.

Mr. Geological-Surveyor Jaquet is now engaged in surveying and testing the various ironstone deposits in the Colony. He has already completed his examination of the beds of ore occurring in the Williams River and Port Stephens Districts, and mapped the majority of the deposits occurring along the Southern railway line. The memoir, embodying the result of this work, will be published as soon as the requisite surveys, &c., are completed.

No definite action has yet been taken to establish iron-works in this Colony, although the question is still receiving the serious consideration of capitalists.

Mr. Sandford, at Lithgow, still continues to turn out large quantities of finished iron from scrap, and during the year his output was 5,200 tons, the estimated value of which was £42,250, which is a very large increase on his previous years operations. About 200 men and boys are employed in and about these works.

#### ANTIMONY.

At the Hillgrove Antimony Mining Company no work has been done, but a party of six men started tributing there about the middle of December.

The market price of this metal is not sufficiently high at the present time to induce extensive operations. Although the ore is plentiful in this Division, the total quantity raised during the year was only 25 tons, valued at £416. Prospecting for antimony is being carried on at Bellinger, where some very promising lodes have been discovered. The total quantity exported from the Colony in 1898 was 82 tons, valued at £916, a decrease of £2,696 on that exported in 1897.

#### BISMUTH.

The total quantity of this metal exported during the year was 29 tons, valued at £4,615, or an increase in value of £3,815 on the previous year. The bulk of the year's product was raised by the Jingera Mineral Proprietary Company, whose mine is situated in the parishes of Wyndham and Gnupa, in the Pambula District. The bismuth is found associated with silver, but details of the company's operations for the year were not available. No work has been done during the year at the bismuth mine situated at Kingsgate, in the Glen Innes District. Prospecting for bismuth is being carried on in the vicinity of Nimitybelle. It may prove of interest to the mining community to know that the output of this metal throughout the world is controlled by a "ring." Mr. J. A. Watt, late Geological Surveyor of this Department, drew the Minister's attention to the fact. Mr. Watt says:—

Through the courtesy of Mr. W. H. Yates, the Australian representative of the Bismuth Association, I am enabled to give some particulars in regard to the so-called "ring," which regulates the output of nearly all the bismuth-producing mines of the world.

In my report entitled "Notes on the Occurrence of Bismuth Ores in New South Wales," published as No. 4 of the Mineral Resources, and on page 3, I stated that "the limited demand for the metal, and the manipulation of the market by a "ring," are factors that have greatly retarded the development of our bismuth deposits."

Mr. Yates explains that while the above statement is quite correct, it should be explained that the existence of the so-called "ring," known as the Bismuth Association, is an absolute necessity for the maintenance of the price of the metal at a figure remunerative to the mine-owners. The necessity for this mutual arrangement is owing to the available supplies being so considerably in excess of the demand.

The Bismuth Association consists of the producers of the metal, viz., Johnston, Matthey, & Co. (Limited), and the Saxon Government, and the producers of ore in the different parts of the world. In accordance with the arrangement with the Association, each mine is permitted to anticipate in the annual sales to a fixed extent, according to its producing capacity. At the present time 20 tons per annum is the amount allotted to the Australian mines, including Mount Biggendon and Eukalunda Mines, Queensland, and Kingsgate and Jingera Mines, New South Wales.

The Association pay for the bismuth contents of the ore at the selling price of refined bismuth to the trade, less charges for treatment, &c.

The arrangement, as it exists at present, was arrived at in January, 1897. Immediately previous to this date the metal was selling for 3s. per pound, the mine-owners selling in the open market. At the conclusion of the arrangement the price of the refined metal rose to 5s. per pound, at which figure it has remained.

Under the existing agreement, ore delivered at the works would yield approximately, after deducting all expenses, the following returns:—

Ore containing (by assay) 10 per cent. metallic bismuth	£30 per ton.
"                    "          15                    "          "	50          "
"                    "          20                    "          "	70          "
"                    "          30                    "          "	110         "
"                    "          40                    "          "	150         "
"                    "          50                    "          "	200         "

#### PLATINUM.

Platinum mining in New South Wales is still confined to the Fifield District, the yield for the year being 1,250 oz., valued at £2,062. The miners working for gold obtain the metal in the auriferous wash-dirt. The year's yield is 716 oz. less than the quantity won during 1897, the drought being responsible for the decrease.

Beach mining in the Ballina District, where platinum was found associated with the gold in considerable quantity, is now a thing of the past. A special lease of abandoned ground at Macaulay's Lead, Jerusalem Creek, has been applied for, the intention of the applicants being to try the ground by the cyanide process. Should this prove successful our output of platinum will be largely increased, as an effort will be made to save any platinum met with in the concentrates.

#### CHROMIUM.

## CHROMIUM.

There is no improvement to report in the Chrome Mining industry during the past year the total quantity exported being only 2,111 tons, valued at £6,301, as compared with 3,379 tons, valued at £10,269, the exports for 1897. The industry is confined to the Gundagai District, the principal mine being owned by Messrs. Quilter, Bros., who raised during the past twelve months 1,924 tons, valued at £4,760. With an increase in the value of the ore large quantities would be sent away from the Gundagai District where the ore abounds.

## COBALT.

The only districts in the Colony where cobalt is being mined for at the present time is at Port Macquarie. Messrs. Telfesten and Wyburn, the owners of the mine, have opened up a very promising deposit, and have sent 20 tons to London to test that market. The returns are not yet to hand, but they anticipate that it will realise about £20 per ton.

## WOLFRAM, SCHEELITE, &amp;c.

Small parcels of wolfram were obtained during the year in the vicinity of Deepwater and Emma-ville, about 9 tons in all, valued at £280, but although there appears to be a better demand and price for this metal, and prospecting work is still being carried on for further deposits, there are no indications that the output is likely to be increased to any extent in the near future. About 1½ tons of scheelite, valued at about £30, was got in the old Hopetoun Mine at Hillgrove. It appeared as a small chute, but soon pinched out.

## PLUMBAGO.

The plumbago deposits at Wilson's Downfall have not been worked during the year. A syndicate has, however, been formed to test the ground at a depth, and the Department has granted assistance to carry out the work.

## DIAMONDS.

There can be no doubt that, sooner or later, as our diamantiferous areas become more thoroughly exploited and developed, and with the advent of more favourable seasons, the diamond-mining industry in this Colony is destined to become one of magnitude and importance.

The occurrence of diamonds in New South Wales was recorded by Stutchbury (on the Turon River), and by Hargraves (at Reedy Creek, near Bathurst) as early as 1851. In 1859 the Rev. W. B. Clarke reported their occurrence at Burrendong and at Pyramul Creek, while a year later he also stated them to have been found at Calabash and at Suttor's Bar, Macquarie River. Since then diamonds, in single specimens, have been recorded in many widely separated portions of New South Wales, and have likewise been found in Victoria—chiefly Gippsland, while the late Dr. J. J. Bleasdale stated them to have been discovered also at the Echunga diggings in South Australia.

In 1867 they were found to occur at the Cudgegong River (Mudgee), at which place, during that year, between 3,000 and 4,000 diamonds were won from the claims of the Australian Diamond Mining Co., Messrs. Scott and Allen, and Messrs. Cooney and party. In 1872-73 a somewhat extensive rush took place to Bingera, where a large number of mineral leases were applied for, and it was anticipated that diamond-washing would become a permanent and payable industry. Unfortunately, however, the stones being small and the Sydney jewellers declining to buy, there was no outlet, and the work was suddenly abandoned. In 1881 the Bingera field was visited and examined by Mr. Geological-Surveyor E. F. Pittman (now Government Geologist), and the result of his investigations was furnished in a report by him, published in the Annual Report for that year. Following this report renewed interest and attention seems to have been paid to that locality, and since 1883 mining, of a more or less desultory and spasmodic character, has been conducted there—the great scarcity of water experienced in the district having greatly retarded operations both in that and later years. In 1883-84 diamonds were found in the Tingha Division, near the Big River, Auburn Vale, and here also the industry has since been prosecuted in a more or less languished condition.

Owing to the great difficulty experienced by miners in finding a ready market for their diamonds, in 1886 advantage was taken of the exhibit of New South Wales diamonds at the Colonial and Indian Exhibition (a collection of which had been purchased by the Government, in 1885, for that purpose) to obtain, through the kindness and courtesy of the Agent-General, some information concerning the prospect of a market in London for the products of our mines. The exhibit referred to having been carefully examined by Messrs. Thos. Davies, F.G.S., and R. Etheridge, jun. (and several of the gems having been cut and polished by Messrs. Ford and Wright, of London), a lengthy and interesting report was furnished by them. In bringing this to a termination the following conclusions, among others, were specially emphasised:—1. That the diamonds of New South Wales in their physical characters are more nearly allied to those of Brazil than any other country. 2. They have been largely sold in London as such. 3. As regards colour, they differ practically but little from those of other fields. 4. The general absence of “cleavage” and “macles” is a point in their favour. And 5. That the greater hardness of the New South Wales gems would probably raise the cost of cutting, but this would be compensated for by their extra “brilliancy.” Indeed, as a matter of fact, in brilliancy and refractive power the New South Wales gems surpass the African, and one of those cut in London, by the firm above alluded to, was stated to have been as fine a brilliant as it was possible to obtain in any part of the world.

The principal diamantiferous deposits in this Colony occur in outliers of Tertiary river drifts and cement representing old river accumulations, of more than one geological age, lying at various distances from present river channels, and once forming portions of widespread and continuous deposits resting on the bedrock of the country. They also occur in the more recent drifts derived from them.

There has been great diversity of opinion as to their origin and true matrix, and several theories have been advanced, but the question still remains in abeyance. The late Mr. Norman Taylor believed them to have been chemically formed in the older Tertiary drifts; and, in support of this view, adduced what at first sight might appear very cogent reasons. The late Mr. C. S. Wilkinson held the same view at one time; but after an extended examination of the various diamantiferous deposits in the Northern District, he suggested that if the Tertiary drifts be not the original matrix of the diamond, possibly its source may be in the metamorphosed Carboniferous or Devonian beds, where they have been intruded by granite or porphyry. Professor David came to the conclusion that the Cope's Creek diamonds were probably derived from the tourmaline granite. It is, however, now believed that their source will ultimately be traced to volcanic “pipes” analogous to those found in the celebrated Kimberly Field of South Africa. Whether or not this solution of the conundrum will prove correct, time alone can determine—certainly up to the present there is no evidence of any such “pipe” having yet been found. But, as pointed out a few years ago by the present Government Geologist, Mr. E. F. Pittman, even presuming the existence of such “pipes,” the probabilities are, unfortunately for the prospector, that their ancient surface outcrops lie effectually concealed beneath the basalt flows, which, to such a considerable extent, cover the diamantiferous areas.

In 1894, in consequence of statements which had been made to the effect that such a volcanic “pipe” had been discovered at Bingera, Mr. Geological-Surveyor Stonier was instructed to make an inspection and report. Mr. Stonier spent several months in examining the field, but found no evidence to warrant the statements made. Again, so recently as June, 1897, in compliance with a petition from the residents of Bingera for a specific report upon a volcanic “pipe” alleged to have been discovered in the Australian Diamond Company's Mine, Mr. Geological-Surveyor J. B. Jaquet was deputed to inspect and report upon the so-called “pipe.” Samples of the rock, stated to be volcanic breccia, had previously been forwarded to the Department by Mr. Wingate, the manager of the mine, and, upon examination, the Government Geologist had pronounced them to be of sedimentary origin. The result of Mr. Jaquet's examination, locally, was to completely bear out the opinion which had been expressed by the Government Geologist. The so-called breccia proved to be Carboniferous claystone, which is the prevailing rock underlying the diamantiferous river drifts of Bingera; nor was anything found by him to suggest the presence of a volcanic pipe upon the property.

The diamonds found in this Colony generally average from 5 to 6 to the carat, although gems of 2-2½ carats are occasionally found, and one of 5½ carats has been recorded. The number obtained per load varies very greatly; the Round Mount Co. (Cope's Creek, Inverell) in 1886 washed 722 loads for 2,685 carats—from 6 loads obtaining the exceptional yield of 1,080 diamonds, weighing 296 carats, which probably establishes a record so far as our fields are concerned.

Very great difficulty is experienced in procuring accurate and reliable information as to the quantity and value of the gems which, up to the present, have been won, especially as regards to the earlier

earlier years of the industry. The following table, compiled from such information as is available, can only be regarded as an approximation, and is believed to considerably understate the actual output.

Year.	Diamonds.	Carats.	Value.	Year.	Diamonds.	Carats.	Value.
1867-85.....	12,000	2,856	£ s. d. 2,952 0 0	1893 .....	.....	15,000	£ s. d. 15,375 0 0
1886 .....	23,000	5,151	5,151 0 0	1894 .....	.....	1,772‡	858 13 6

\* Estimated. † Result only of 19½ loads washed in January (Cope's Creek). ‡ Output of Malacca Co. (Inverell) only. § From "Monte Christo" mine (Bingera) alone. || Output from Bingera only. ¶ From Boggy Camp (Tingha) only. \*\* No information obtainable.

It is a significant fact that, in spite of the severe drought with its attendant drawbacks, the output for this year is, in quantity though not in value, the largest recorded since the opening of the industry. The Boggy Camp Diamond and Tin Field yielded 14,920 carats of diamonds during the year, valued at £5,625, the gems being associated with tin in considerable quantities. This field has been considerably developed during the year, but work was greatly hampered through the scarcity of water. There are indications that the field will now be thoroughly tested, as foreign capital has been attracted to it. The next diamond field of importance is situated about 6 miles from Bingera. This field has been practically idle during the year, owing to the water difficulty, the only work being done by Capt. Rogers in the "Monte Christo" Mine, from which 1,573 carats were won, valued at £434. As soon as rain falls, work will be started by several large companies, and work should then prove highly successful, judging from the returns from the "Monte Christo."

Considerable interest has lately been centered in these fields, and as some indication of the progress of the Northern District, generally, it may be mentioned that a local "Mining Exchange" has recently been opened at Inverell—the only one established in any part of the Colony outside the capital, with the exception of Broken Hill. Indeed, at the present moment there are not wanting signs of a tendency towards what is termed a "boom." The Department is, however, not in possession of any new facts which would seem to warrant this, and the general interests of the district would, it is thought, be much better served by a steady and progressive development of its undoubted resources.

#### EMERALDS.

The emerald mine near Emmaville, which was worked for some time during the year, has now obtained suspension of the labour conditions. A great amount of work has been done on this mine, and some £5,000 has been expended on it.

#### OPAL.

The opal-mining industry is still confined to White Cliffs, situated in the Wilcannia District.

Prospecting operations are now spread over a very large area of country, and it is thought that opal will yet be found to exist in the country extending to the Mount Browne Gold-field.

The total value of the output for this year is estimated at £80,000, but, as pointed out by Mr. Warden Fletcher, whose report on the field is appended, much difficulty is experienced in procuring reliable returns.

Mr. Warden Fletcher in his report states:—

The principal mining interest in this Division centres in the progress and development of the White Cliffs Opal Field. There can be no doubt that this progress has been of an eminently satisfactory character. Though the area of country worked may not be greater, yet the work done is of a more thorough nature, and the output of opal has been largely increased. The town itself has extended considerably, and is beginning to show the characteristics of a settled population. A large number of people appear to have made their home at White Cliffs, and at every Land Court a large number of improvement purchase applications are made.

The area of opal-bearing country available for serious mining operations would seem to be limited to a narrow belt of country, running from south-west to north-east, in length over 10 miles, by from 1 to 2 miles in width, the main field lying about midway, though opal no doubt is to be found outside these limits.

The discovery of opal on this field dates back to about 1889; but the field was not really started till 1893, at which time only about thirty miners were engaged in digging for opal. It was in April of this year that the tribute system was first adopted.

Since

Since the first inception of this opal field, the tenure of land has undergone several changes. Land was originally taken up in leases of from 20 to 80 acres. It was felt, however, that leases of this extent would soon exhaust the available country, and create a monopoly. It was, therefore, decided, on 29th March, 1894, that no more leases should be granted, and that the field must be worked under mineral license, a regulation which was afterwards modified on 3rd July, 1895, when it was decided that no leases "of any size" should be granted, which was interpreted to mean that no more than 4 acres should be allowed to be taken up. Finally, these decisions were superseded by the Regulations of 28th May, 1896, under which the field is at present being worked. By these regulations miners are allowed to take up, for the purpose of winning opal, only 100 feet by 100 feet. There still remain in force about twenty of the original leases, and of these seven are held by the White Cliffs Opal Mining Company (Ltd.), commonly called the English Company. The area of this company's blocks amounts to 300 acres.

On these leases the system in vogue is the tribute system, which, at present, appears to work satisfactorily. On the English Company's leases, which are not amalgamated, at the present time about 350 tributors are employed, who are allowed 75 per cent. of the value of the find, the miner finding tools, &c., and that is the rate almost universally adopted. This increased percentage is found to have produced a great increase in the value of the opal handed in by the tributors. When the tributors' percentage was only 50 per cent., comparatively little opal appeared to be found; but directly the percentage was increased to 75 per cent., the value of opal handed in by the tributors increased in an extraordinary manner. For a considerable time prior to the middle of this year, the company had adopted what was known as the open cut system, the men being employed on wages, from which great results were expected; but the results were far from satisfactory, and about six months since the company abandoned this open cut, and fell back on the 75 per cent. tribute system, with the results above indicated.

On other parts of the field not taken up in leases, or where leases have been abandoned, a very large amount of work is being done on 100 feet by 100 feet blocks, and a large amount of opal obtained. On one part of the field known as Quin's Block, these workings are packed very close together, and are being carried to much greater depths. In some the shafts have been carried to a depth of 60 feet, and good opal is founded at a depth of 40 feet, and even 50 feet.

The results of the mining operations are exceedingly uncertain, and success seems to depend in a great measure on what is commonly known as luck.

The output of opal during the present year is very hard to estimate. The Warden last year put the estimate at £75,000, and it is certainly more than that for the present year. In some quarters it is estimated at £150,000, and from calculations made the output for 1898 is undoubtedly not less than £80,000. By far the greater part of this large output is sold locally to buyers on the field. The present population of White Cliffs is probably about 1,250, of whom about 700 at least are miners.

The permanency of the field would seem to depend in a very great measure on the durability of the market for opal as a gem. There seems to be a practically unlimited supply of the opal itself—at all events enough to last for many years—and there is only wanted to secure the permanent prosperity of White Cliffs that the price of the gem should be maintained in the European market. Opal at the present time in the rough brings on the field all kinds of prices from 5s. to £10 an oz., but it may of course in special instances go to £20 an oz. and more.

The town itself is very badly situated, lying in a gully running east and west between rising ground, which in wet weather makes the main street a watercourse, and puts much of the business part of the town under water. In spite of this disadvantage, much activity and energy are shown, and the area of the town is steadily extending. Most of the town and suburban land is held under business license, and during the last six months a steady increase has taken place in the number of Improvement Purchase applications, a very large number of the inhabitants evidently intending to make a permanent home there. Besides the town proper there is a large mining population camped in tents, workings, &c., on the blocks themselves, chiefly on what is known as the Table-land.

The water supply is the cause of the gravest anxiety. The average rainfall is about 7 inches, and even this small average is hardly likely to be received this year, reckoning from last June. No rain has fallen for months; the rain-water is nearly exhausted, and the town is practically dependent on the Government Tank, about 2 miles from the centre of the town, and on one or two private tanks. The outlook is very serious.

Last year White Cliffs suffered greatly from an outbreak of typhoid fever, in a great measure attributable to the wretched sanitary conditions on the blocks. It is feared that, unless rain shortly comes, there will occur a further outbreak. Representations have been made to the Department of Health with a view to having a sanitary area proclaimed, and it is hoped that this will be shortly done. The necessity of this course is shown by the fact that the Government Tank itself is affected by the drainage from the watershed of one part of the field.

The extension of the telegraph to White Cliffs has taken place during the last six months, and there are constant movements in the direction of building churches, enlarging the school, post office, &c.

The Parnanga Opal-field, some few miles from White Cliffs, has not gone ahead. At present there are only three or four men working there. The want of water appears to be the difficulty.

#### MARBLE.

Although the Colony abounds with numerous deposits of marble, nearly all of commercial value, very little effort is being made to open them up. In the Orange and Bathurst Districts, especially, beautiful stone is obtainable. The only quarry in active operation is that at Calula, owned by Mr. T. J. Robinson, of Orange. Machinery has been erected to dress and polish the stone. Specimens from the various districts are on view at the Mining Museum attached to this Department.

#### LIMESTONE.

The removal of the Broken Hill Proprietary Company's smelters to Port Pirie has had a marked effect on the operations at the Tarrawingee limestone flux quarries, near Broken Hill, as the quantity raised during the year was only 9,253 tons, valued at £5,783, as compared with 67,590 tons, valued at £41,798, the output for 1897, a decrease in value of £36,015. Mr. W. W. O'Neill is still raising limestone at Myall Lakes, and sent away about 200 tons during the year. Preparations are being made to increase the output, and a tramway is being laid down from the quarry to the waters of the lake. A large quantity of limestone is likely to be required in the near future at the Cackle Creek Smelting Works. The Lime Works at Cullen Bullen are still doing a large business in prepared lime and cement.

#### ALUNITE.

The alum mine is still being worked at Bullahdelah, and the company during the year exported to their works at Runcorn, England, about 3,000 tons of alunite for treatment. This is a large increase on the quantity sent away in 1897, which was only 724 tons.

#### FIRECLAY.

## FIRECLAY.

Fireclay of excellent quality is found on the Lower Myall River. A special lease is worked intermittently, but it is thought if the business was gone into systematically, a large and profitable industry would be the result.

Pigment clay of good quality has also been found in this locality, but the deposit has not yet been sufficiently proved to form an opinion as to its extent.

Total value of mineral products to the end of 1897, as per summary in the Annual		£	s.	d.

\* The readjustment of the gold and silver tables to the end of 1898 reduces our mineral products by £57,719 18s. 0d. ; but the taking into account (not hitherto done) of the diamonds raised, to a large extent sets off this difference and leaves a net reduction of £24,257 7s. 6d. in the total value of our mineral products. † Rolled scrap iron.

In concluding my last report I ventured to predict that the year 1898 would see an expansion in the mining industry in New South Wales. This has taken place, more especially in gold-mining, and in face of a drought which has seriously hampered all classes of mining. The interest evinced in gold-dredging, which has affected the whole of the Colony, promises to add considerably in the future to our gold yield. The extensive adoption of the cyanide and other new processes in the treatment of our refractory ores will also have a good effect. The immense deposits of low-grade ores in this Colony are well worth the attention of investors, as it has been clearly proved that, with economical and scientific treatment, they can be made to return handsome profits.

I have the honor to be,

Sir,

Your obedient Servant,

A handwritten signature in cursive script, reading "W. C. Lachlan". The signature is written in black ink and is underlined with a long, sweeping flourish that extends to the left and right.

Under Secretary for Mines and Agriculture.

Department of Mines and Agriculture,  
April 3rd, 1899.

---

CHIEF INSPECTOR OF MINES AND SUPERINTENDENT OF  
DIAMOND DRILLS' REPORT.

Sir,

In submitting my annual report for the year 1898 I have again the honor to perform a pleasing duty in acknowledging, with thanks, the assistance given me by the Wardens, Coroners, Inspectors of Mines, and Mining Registrars, in reporting to me, at the earliest opportunity, any mining accidents occurring in, or in connection with, the Metalliferous Mines of their respective districts.

During the past year I visited and travelled on official duties in the districts of Cooma, Adaminaby, Lobb's Hole, Kiandra, Buckley's Crossing, Lower Potong, Queanbeyan, Gundaroo, Bungendore, Gundagai, Adelong, Cootamundra, Stuart Town, Macquarie River, Orange, Cobar, Rydal, Sunny Corner, Lithgow, and Bull's Creek near Jenolan Caves.

A new system was, at the latter part of the year, adopted in connection with the offices of the Inspectors of Mines, inasmuch that, instead of all the Inspectors of Mines having their headquarters in Sydney, definite districts have been fixed, namely:—The Senior Inspector of Mines is now stationed at Cobar; an Inspector has also been stationed in the Adelong and Southern Districts, in the Orange and Western Districts, and in the Hillgrove and Northern Districts. The Broken Hill District has had a Resident Inspector of Mines since 1890.

I am able to acknowledge, with pleasure, the great assistance given me in the various duties of my office by the Inspectors of Mines and the clerks of my Branch. A keen interest has always been taken by them, not only in everything appertaining to the Chief Inspector of Mines Branch, but they have always shown a great willingness to do everything possible in the interest of the whole Department.

There has been a steady increase both in the work of the inspection of mines and in clerical work.

The papers registered in the Chief Inspector of Mines and Diamond Drill Branch during the year were 3,420; letters written, 2,479; papers to and from Records numbered 1,231. The number of fossickers assisted with free railway passes was 601, as against 982 during 1897.

The diamond-drill work has been confined to Junction Point, in Mandurama District, Sunny Corner; Tarro, in Hexham District; and Funafuti Island, one of the Ellice Group.

At the Junction Point 157 feet were bored for the Lyndhurst Gold-field Company.

The Sunny Corner boring operations were carried on with a view of prospecting, and, if possible, discovering the continuation of the rich deposits of gold and silver ores which were formerly worked in the Sunny Corner Mine. So far a total of 763 ft. 4 in. were bored on two different sites, including a shaft of 20 feet, without any promising results.

At Tarro, in the Hexham District, 405 ft. 6 in. were bored in the Coal Measures, seeking for a payable seam of coal. The total bored on the island of Funafuti during the year is 416 ft. 6 in.

Now that the Funafuti boring operations have been completed, as far as the Department of Mines is concerned, I will give a *précis* of the case, for future reference if required. In my annual report of 1896 and 1897 I drew special attention to these boring operations, but as they were at that time not completed, it would have been futile to say more than was then stated by me.

The proposal to forward a diamond drill to bore on one of the islands in the Ellice Group was first brought forward by Professor Anderson Stuart in 1892, who approached the Honorable Thomas Slattery, then Minister for Mines, on the subject, on behalf of the Royal Society of London. Mr. Harrie Wood, Under Secretary for Mines, who took a great interest in the proposal, at once recommended, with the approval of Mr. Slattery, that the use of a diamond drill should be granted for the purpose named above. However, nothing more was heard of the matter for some years; in fact, it was generally thought that nothing further would be done. In 1896, Professor Anderson Stuart, of the Sydney University, in company with Professor David, also of the Sydney University, interviewed the Hon. Sydney Smith, who was then Minister, as to the use of a diamond drill, and after several interviews, the request was granted. However, authentic information could not be obtained by me as to the exact time

time a diamond drill was likely to be required; nor as to the strata likely to be met with in the boring operations. At last a hurried notice was given me that the British Government had, in furtherance of science, selected H.M.S. "Penguin" to take the whole of the diamond-drill plant (about 30 tons), the scientific staff, and the foreman and assistants selected by me to work the drill, from Sydney to Funafuti Island. Professor Sollas, F.R.S., LL.D., had been selected by the Royal Society of London to take charge of the scientific part of the expedition; the practical part, that of the boring operations, I was responsible for. However, the time allowed me for preparing, from the time of the arrival of Professor Sollas, 18th April, 1896, and the departure of H.M.S. "Penguin," was totally inadequate; hence the many new appliances required could not be obtained, although the drill was equipped with all the appliances used in the most difficult boring in New South Wales. The want of knowledge as to what really was expected of the diamond drill to pierce through had a great deal to do with the partial failure of the first expedition, which left Sydney on 1st May, 1896, and returned on 22nd August, 1896.

The second expedition started from Sydney 1st June, 1897, and returned 18th December, 1897, and was under the leadership of Professor David, B.A., F.G.S. The scientific members of the expedition as well as those who were supplied by the Department of Mines to work the drill, all left in good spirits, and with a determination to do their best to make the enterprise a success. They reached the island of Funafuti in safety, and started to work; but after the bore had reached the depth of 698 feet work was stopped. Unfortunately Professor David was obliged to leave the island earlier than the rest, having to take up his duties in the University of Sydney, and very little work was afterwards accomplished. I have already given a full description of the second expedition in the Annual Report of 1897.

The third expedition started on 1st June, 1898, and returned on 8th January, 1899. A Mr. Fink accompanied the expedition, representing the former scientific leader, Professor David, and the societies concerned. The 698 feet bore was recommenced by clearing it of *débris*, and fixing tubing as required, and it was then put down to the total depth of 1,114 ft. 6 in. The original intention was to bore about 600 feet only. In the upper part of the bore-hole the strata consisted of honey-combed corals, with sand mixed throughout, and constantly varied. The drill would be at times in cavernous coral rock, the boring of which caused a violent jarring, leading to frequent breakages of the machinery and great fracturing of diamonds. Then it would suddenly pass into a bed of quicksand or coral rubble; and again, without a moment's warning, into a bed of rather dense limestone. Owing to the above strata, it became necessary to line the bore with the best artesian tubing. But the tubing could not be driven down without first resorting to the process of under-reaming, after which the artesian tubing had to be driven down with a heavy wooden "monkey." Special steel shoes were made in Sydney to screw on the bottom of said tubing. In the latter part of the bore, for the last 300 feet, the strata became a very dense and hard limestone; so much so, that the grinding down of diamonds and fracturing of same was very considerable. However, the second and third expeditions have been successful, and I have no hesitation in saying that a large amount of the success is due to the Department of Mines. The action of the Government in this matter must redound to the credit of the Colony. Already New South Wales has been honored and extensively advertised, not only by the Royal Society, London, and kindred societies, but by the whole scientific world, for furthering the cause of science. Taking the whole case from beginning to completion, the results obtained cannot be considered otherwise than satisfactory.

I also have the honor in submitting herewith thirteen (13) Tables marked from A to M.

*Table A.*—Showing fatal, serious, and minor accidents during 1898, which may be regarded as true mining accidents.

*Table B.*—Showing fatal, serious, and minor accidents on surface as distinguished from true mining accidents, during 1898.

*Table C.*—Number of men employed in the Metalliferous Mines in New South Wales and value of machinery at the end of the year 1898; also percentage of persons killed and injured.

*Table D.*—Fatal accidents on and under surface (exclusive of Broken Hill) during 1898, with verdicts of Coroners' Juries or Magisterial Inquiries.

*Table E.*—Fatal accidents, both on and under surface, Broken Hill District, during 1898.

*Table F.*—Fatal accidents, under surface, Broken Hill District, during the year 1898.

*Table G.*—Minor accidents, under surface, in the Broken Hill District, during the year 1898.

*Table H.*—Fatal accidents, on surface, in Broken Hill District, during the year 1898.

*Table I.*—Serious accidents, under surface, in Broken Hill District, during the year 1898.

*Table J.*—Serious accidents, on surface, in Broken Hill District, during 1898.

*Table K.*—Minor accidents, on surface, in Broken Hill District, during the year 1898.

*Table L.*—A comparison of accidents recorded during the years 1896, 1897, and 1898.

*Table M.*—Lead-poisoning returns from Broken Hill mines for the years 1895, 1896, 1897, and 1898; also returns from other parts of the Colony which, however, are nil.

In perusing Table L, it will be seen by a strange coincidence that during the last three years the total number of fatal accidents is 35 each year; 16 of these fatal accidents in 1898 occurred in the Broken Hill mines, and 3 occurred on the surface in connection with said mines. By the accompanying tables it will be seen that the total number of accidents from all causes as reported during the year is 147, of which 35 were

were fatal, 27 serious, and 85 minor. Out of this total of 147 accidents in the whole of the metalliferous mining in New South Wales, 119 can only be considered as true mining accidents; and 28 were surface accidents, which, although noted in this Colony, are overlooked in other colonies. Again, in the case of minor accidents, it will be seen by the table dealing with such accidents that some of them are very trifling, as the injured person could go to work the same day, or within a few days.

Looking through the list of verdicts given by Coroners' Juries or Magisterial Inquiries, it will be seen that the majority of accidents could have been avoided by the injured persons. Frequently these accidents occur by the injured person's want of forethought or practical knowledge of the work he has undertaken to accomplish. There can be no two opinions on the matter that in the largest and most extensive mining operations a large number of persons present themselves as miners, and are engaged as such, with very little, if any, knowledge of actual practical mining. Such persons not only become a source of danger to themselves but also to others, hence it should be the recognised duty of every *bonâ fide* miner to report the non-competency of such persons to the management. No good manager of any mine will wilfully encourage an incompetent person, as by such action he may not only cause incidental injury to the life and limb of persons employed in or about the mine under his charge, but he may also cause great and unnecessary expenditure to his company or employer. Generally speaking, those who have even the slightest pretence to the name of mining manager do everything possible that skill, ability, practical knowledge, and even money can devise to prevent accidents, as one accident in a mine generally costs far more than the cost of a preventative, if such can be provided.

It can, however, not be denied that as long as mining operations are carried on, so long will there be mining accidents, even under the most careful mining managers. Remarks have been made and circulated by interested persons that the fatal accidents in our Metalliferous Mines are more frequent than those in the other colonies. Broken Hill Mining District is also frequently cited as a place where mining accidents (especially fatal ones) occur more frequently than in similar mining districts in other colonies. My argument has been, and is still, that there is not another mining district in the whole of the Australian Colonies where there are carried on on such wide, extensive mining operations as has been, and is now, carried on at Broken Hill. Miners and others interested in mining, who have not seen the underground workings of the Broken Hill mines, cannot form the slightest idea of their magnitude. Say, within about 1 mile in length by a half ( $\frac{1}{2}$ ) mile in width, there are 6,003 persons employed. The whole district employed at the end of 1898 no less than 6,842 persons. Out of these, about five-eighths ( $\frac{5}{8}$ ) may be put down as *bonâ fide* miners, as good as can be found in any part of the world, but the remaining three-eighths must be set down as doubtful. This deficiency in the supply of *bonâ fide* practical miners may, perhaps, principally be caused by the severe hot climate and the great distance from other mining centres, and consequent cost in case of removals necessitated by slackness of work.

For the sake of comparison in the mining accidents occurring in the Colony of Victoria and New South Wales, I recommended that a letter be written to the Honorable the Minister for Mines of Victoria, requesting the following information:—

Question 1.—The number of men employed on the mines in the Bendigo District, and the fatal and serious accidents of said district, during the year 1898?

Question 2.—The number of men employed in the Ballarat District, and the fatal and serious accidents, during the year 1898?

Question 3.—The total number of persons employed in the Victorian mines, and the total number of fatal and serious accidents, during the year 1898?

Answer 1.—The reply received is as follows:—Number of men employed in the Bendigo District, 4,911; No. of accidents, 52; No. of men killed, 14; No. of men injured, 46.

Answer 2.—No. of men employed in the Ballarat District, 6,561; No. of accidents, 28; No. of men killed, 13; No. of men injured, 17.

Answer 3.—Total number of men employed in the Victorian mines, 32,095; No. of accidents, 131; No. of men killed, 44; No. of men injured, 98.

Thus it will be seen that in the Colony of Victoria, where there were 32,095 persons employed in the mines, the fatal accidents reached 44; and of injured or serious accidents, 98. Whereas the persons employed in the Metalliferous Mines of New South Wales for the same period was 30,311 (or 1,784 miners less than were employed in Victoria), and the fatal accidents in connection with the mines in New South Wales reached a total of 35, or 9 fatal accidents less than in Victoria, and out of these 35 only 31 can be considered as true mining accidents. Again, as stated above, although the total number of accidents for the year reach 147, of which 35 were fatal, 27 serious, and 85 minor, 119 out of the total can only be considered as true mining accidents, and 28 as surface accidents, such as are not noted in the other Australian Colonies as mining accidents; and as for the minor accidents, some represent such injury that the injured party can go to work the same day; hence such accidents, although noted in the Annual Report, are nevertheless hardly worth noting.

In the Broken Hill District, where at the end of 1898 no less than 6,842 persons were employed in mining, 16 fatal true mining accidents and 3 fatal surface accidents occurred; whereas in the Bendigo District (Victoria), where 4,911 persons were employed in mining, 14 fatal accidents were recorded, and in the Ballarat District (Victoria), which employed 6,511 persons in mining, 13 persons were killed.

By

By the courtesy of the Honorable the Minister of Mines of Victoria, I am enabled to give the above comparison of the mining accidents which occurred in the Colony of Victoria and New South Wales during the year of 1893. It shows that notwithstanding it is generally conceded by those interested in mining that the Victorian miner is certainly equal, if not superior, to any miner from other parts of the Australian Colonies,—and the workings in some of our silver and copper, and even a few of our gold-mines are more extensive, and hence more dangerous to work in than the generality of the Victorian mines,—no matter how careful a mining manager may be, and how strictly an Inspector of Mines may carry out his duties, as long as there is mining carried on so long will mining accidents occur. It is, however, the smaller mines which are frequently guilty of gross carelessness. The managers of larger mines have reputations to lose, and they therefore do their utmost to prevent mining accidents in their respective mines; this any observer will notice on any of the larger mines in New South Wales, where he will find numbers of different notices and rules for the guidance of persons employed in or about said mines, for the purpose of preventing accidents, and I may be allowed to state that few, if any, of the mining managers in New South Wales are careless in preventing accidents in their respective mines; but, on the contrary, they do everything in their power for the prevention of such accidents. Notwithstanding the severe drought during the year 1898, there were only 918 persons less employed in the Metalliferous Mines than in 1897, and this in view of the fact that some of our crushing batteries and ore-production works were compelled to stand idle for months on account of said drought. This proves, beyond doubt, that the developments of our mineral deposits are steadily progressing, and are of such a vast extent and permanency that even a severe drought can check but little of their progress.

I have, &c.,

W. H. J. SLEE,  
Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

TABLE A.

Showing Fatal, Serious, and Minor Accidents during 1898, which may be regarded as True Mining Accidents.

No	Date	Name of mine	Locality	Person killed	Person seriously injured	Minor accidents	Occupation	Nature and cause of injury or death
1	7 Jan	Lake George	Captain's Flat			Thos Corn sh	Miner	Premature explosion—lacerated chest
2	8 "	B H North	Broken Hill	Jas Sinclair			"	Explosion of unburnt charge while drilling in old socket
3	8 "	"	"			Jos Brannigan	"	Explosion of unburnt charge—injured face
4	8 "	Central	"	Wm N Byrne			"	Fall of rock—crushed to death
5	8 "	"	"			Hy Heyer	"	" slightly injured
6	11 "	British	"			J Hocking	"	" cuts on head and face
7	13 "	B H Proprietary	"		.....	C Pedler	"	" shock to spine and sprained ankle
8	15 "	Central	"			W Bennet	"	Fell down ladderway—injured internally
9	17 "	Junction	"			Wm Murley	"	Stone fell—injured foot
10	24 "	White Cliffs Opal mine	White Cliffs		Wm Thomas		"	Fell down shaft—broken leg
11	26 "	Graham G M	Yalgorn	Louis Sharkey			"	" fatal injuries
12	2 Feb	Perseverance	Wyalong	John Stanford			"	Premature explosion—fatal injuries
13	16 "	Girilambone Copper	Girilambone			— Uren	"	Struck by cage
14	17 "	Great Cobar Copper	Cobar			Thos New	"	Slipped and sprained ankle
15	18 "	"	"			A McLachlan	"	" received flesh wound
16	19 "	Mystery Claim	Araluen			Wm Mundy	Alluvial miner	Timber broke and injured nose

Report on the Kiandra Gold-field.

Sir,

Kiandra, 26 February, 1898.

I do myself the honor to furnish the following information in connection with the Kiandra Gold-field:—

Owing to the very dry seasons sluicing operations have been greatly retarded during the last two years, but notwithstanding this the Kiandra Gold-field has, during the said period, contributed a fair amount of gold to the general output of New South Wales.

In view of the hopes of a wet season extensive preparations and improvements in the mode of working have been made by claimholders, and should these hopes be realised a considerable increase in the production of gold throughout this district may be looked forward to.

So far the hills covered by basalt have not yielded the return of gold which was anticipated, nor have, so far, even paid the cost of tunnelling. But this is principally due to the parties, because nearly all the tunnels have been started too high, and in some instances where the tunnels would have been deep enough to drain the deepest part of the channels the parties, owing to driving said tunnels, were too eager to reach the wash, and, therefore, allowed their bottom of tunnel to rise too fast; hence, when the wash was struck, it was found that the face of the tunnel was too high to drain and systematically work the deepest ground. This can now only be remedied by extra labour and expense, either by cutting down the bed-rock in the bottom of said tunnels or to drive fresh ones.

My present visit of inspection has not in the least altered the opinion expressed by me some years ago, that the Kiandra Gold-field will again become an extensive gold-producing district, not only in alluvial but also in quartz, notwithstanding that powerful pumping machinery will be required to cope with the heavy flow of underground water which is met with in the working of quartz-veins throughout this district at a comparatively shallow depth.

At Toolong, about 30 miles southerly from Kiandra, there are about a dozen men working in the alluvial; and at Grey Mare's, Boogong, 30 miles south of Kiandra, some twenty-five men are at work, sixteen of whom are working in connection with Johnson and Party's reef, where two Huntington mills are now in course of erection, and will be ready to start crushing immediately.

About twenty men are working in the alluvial at the 15-Mile, south of Kiandra; and at the 9-Mile, south of Kiandra, there are about twelve men working in the alluvial. Mr. Lett, one of the oldest and most highly respected identities and miners of this district, has just completed a tunnel 900 feet in length for the purpose of working the old Empress Mine. It was formerly intended to work this extensive deposit by hydraulic sluicing, but the depth from the surface to the bed-rock is in some parts 250 feet, and the available water supply being insufficient, Mr. Lett has come to the conclusion to work the Empress Mine on the blocking-out system, and extensive operations will be commenced within a few days.

At the 8-Mile Sheaffer and Party are working on a quartz-reef, but are troubled with influx of water at their lower level. This party has a five-stamp battery, with the usual gold-saving appliances at work.

The old 3-Mile Reefs have been taken up by Dunn and Party, and they are now erecting a five-stamp crushing battery.

Tunnelling is still carried on under the basalt at the Township Hill, and payable results would have been the consequence long ere this had the parties carried in their tunnels in such a manner as to reach the lowest parts of the alluvial deposits, of which they had ample opportunities.

At the New Chum Hill a stoppage of the hydraulic sluicing took place, owing to some required repairs; but as soon as this is accomplished, Mr. Patterson, the manager, will at once start active sluicing operations, and payable results are anticipated.

On

On the Giandara Mine, of which Mr. John Robyns is manager, a great deal of prospecting and opening up the mine for future development has been accomplished. This mine is owned by a Sydney company, who have already spent some considerable capital, so far without any payable returns; nevertheless, the prospects of the mine, as far as can be seen, are such that, with economical and systematic working and a good water supply, the mine ought to be turned from purely developing to a dividend-paying one.

A rough plan shown me by Mr. Robyns was accurate enough to prove a good guide during my inspection of the underground workings of said mine.

The length of the main tunnel is 787 feet. Mr. Robyns informed me that payable gold was obtained at the 747 feet; that the width of the gold deposit was very considerable, and that prospects had been obtained on the deepest levels as high as 3 dwt. per dish; that 290 superficial yards blocked out had yielded little over 40 oz. of gold, and that 3 dwt. of gold per superficial yard could be made to yield payable returns.

The ventilation and timbering of said mine are excellent. A contract has also been let for the construction of a large reservoir on Racecourse Creek, and when completed, and filled with water, actual sluicing operations will be proceeded with.

In time to come it may be advisable to drive another tunnel at a lower level, to reach and drain the deepest alluvial deposits.

I have gone more into details in connection with Giandara Mine, because, should it become a dividend-paying mine, of which there is a great probability, then a new era in the gold-mining industry of the Kiandra Gold-field will commence.

Reckmann and Party are sinking on the old Charcoal Reef, which has been abandoned for about twenty years. They are now 20 feet below the old workings, and would have struck the reef only for the breakage of their pumping-gear, which has caused a temporary stoppage.

At the 12-Mile, situated 12 miles north of Kiandra, Cahill and Party are sinking on a large reef. They have had two trial crushings of 6 tons each, which yielded 6 dwt. of gold per ton, and 4 tons are now on transit to Adelong for treatment. This reef is fully 2 feet thick, and has been traced a fair distance. The gold being fine, and disseminated throughout the thickness of the reef, the latter may become of greater value after further development.

Some thirty miners are working in the Murrumbidgee River, within 14 miles of Kiandra. At Lobb's Hole Copper-mine, about 12 miles west of Kiandra, sinking operations are carried on; but, unfortunately, a breakage occurred in the pumping machinery, which caused temporary stoppage. The shaft is down 80 feet from surface, from which a good sample of yellow sulphide ore was obtained. From wall to wall is about 2 feet 6 inches, but the actual ore deposit varies from 6 to 18 inches in thickness. Between 2 to 3 tons of said ore are now on transit to Sydney. On the Tumut River, within 15 miles of Kiandra, there are about forty miners at work, and fossickers can be seen all over the district.

I would draw especial attention to the Providence Valley, part of which was rushed and worked before Kiandra was opened in 1858. The valley is very extensive. It is drained by the Eucumbene River, which river rises about 6 miles from Kiandra, flows through the latter gold-field, also through Providence Valley, about 11 miles from Kiandra, and the same distance from Adaminaby. There are also numerous tributaries. Few, if any, have been prospected, although the whole district has a decided auriferous appearance.

I have, &c.,

W. H. J. SLEE,

Chief Inspector of Mines.

#### Report on Mining at Bushy Hill.

Sir,

Cooma, 9 March, 1898.

I have the honor to inform you that, during my present inspection of several parts of the Monaro District, I have several times visited and inspected the auriferous deposits of Bushy Hill.

In September last, soon after the gold discoveries were made in quartz-veins at Middle Flat, I drew public attention to the fact that the indications for extensive and permanent auriferous deposits were far superior at Bushy Hill than at Middle Flat, and, in view of that belief, I strongly advised a thorough prospecting of said Hill. My predictions have not been disappointing, but have rather been verified.

The striking of payable gold by Perkins, Solomons, and Party, to whom I previously recommended aid out of the Prospecting Vote, caused a great rush; some twenty different parties made applications for gold leases totalling over 100 acres. But so far the principal mines at Bushy Hill, which can be classed as payable, or with very promising indications, are Perkins, Solomons, and Party's prospecting claim, and adjoining lease No. 1 North, Blake and Party, and McKenzie and Party.

Perkins, Solomons, and Party are now about 70 feet in depth, No. 1 North 64 feet, and McKenzie's 46 feet in depth, which are the deepest shafts on the Hill.

A crushing of 6 tons from Blake's Mine, sent to Mr. John Howell, yielded a return of £123 1s. 6d., the total expenditure for treatment, carriage, &c., leaving a profit balance of £90, which is highly payable. The prospectors, Perkins, Solomons, and Party, forwarded 3 tons 18 cwt. to the Government Metallurgical Works, yielding, I was informed by Mr. Solomons, 13 oz. per ton, and No. 1 North has also forwarded 6 tons to Dapto, but so far have not received results. The pyrites assay up to 10 oz. per ton in bottom of shaft. The pyrites on bottom of Perkins' shaft are very strong, and are associated with free coarse gold, which can be seen with the naked eye.

As formerly expressed by me, I am still of the opinion that there are no well-defined lodes on Bushy Hill; but the auriferous deposits seem to occur in mere cracks of the country rock; hence to sink a small shaft on one of the cracks does very little, if anything, towards prospecting the real value of the mine. By observations made, I cannot come to any other conclusion than that the auriferous ore deposits of Bushy Hill are of a fairly large extent, and that the country rock appears to be thoroughly impregnated with minerals. In fact, that part of the Hill between the mines known as Perkins', Blake's, and

and No. 1 North, may, after thorough prospecting, be found payable auriferous; hence, as I informed the Cooma people about three weeks ago, that crosscutting rather than sinking should be done, at least until such a time as the width of the auriferous deposits have been proven. The present system of working is very unsatisfactory, as it can hardly be termed mining; hence a judicious, economical system of improved modern mining should be introduced. The whole of the numerous small areas and leases should be amalgamated into one area, and, if this is done, then no doubt capital will be forthcoming, and instead of only a few men working, a few hundred persons may find profitable employment. Capital is the real requirement for the development of Bushy Hill, sufficiently large to cope with all contingencies, and that cannot be obtained on small areas.

The ordinary quartz-crushing battery with the ordinary blanketing table would be worse than useless in connection with the treatment of Bushy Hill ore. The gold, although of high quality, is very fine, and it would require not only an extensive battery, but also improved up-to-date gold-saving and concentrating plant—one plant for the whole hill. It would be great waste of money for separate claims to erect separate crushing and gold-saving plant.

I have, &c.,  
W. H. J. SLEE,  
Chief Inspector of Mines.

---

#### Report on the Mining Industry in the Queanbeyan District.

Sir,

Queanbeyan, 12 March, 1898.

I do myself the honor to furnish you with the following information in connection with the mining industry and future prospects of same in the Queanbeyan District:—

For many years past some of the most enterprising inhabitants of the district, and, foremost of all, J. J. Wright, Esq., J.P., one of Queanbeyan's oldest identities, spent time and money to add to the district mining, which, if successful, would greatly help to facilitate the agricultural and pastoral industry, but so far those efforts have proved futile.

Lately, more attention has been paid in prospecting the various gold, silver, lead, and copper deposits occurring in lode formation, and there appears now a probability that in the near future the Queanbeyan District will rank largely in silver and copper if not in gold producing. There certainly occur various silver and copper deposits well worth a thorough prospecting.

Commencing near the south-east corner of the town boundary, D. Wright and T. Penny have a promising little vein about 10 inches in thickness of green and blue carbonates, which at a greater depth may develop into a payable lode. Following this in a northerly direction there is the old Primrose Valley, which more than thirty years ago produced some rich assays. But it is only within the last twelve months that prospecting and developing have been commenced in earnest by Mr. Trewenicke, metallurgist and general manager of the Lake George Mines, Captain's Flat. Some of the silver and lead lodes are very extensive, but may be classed as low-grade ore, whereas very high assays of silver have been obtained.

Should the market value of silver take an upward tendency, then a large number of men will be employed. Even as it is, by the continual new and improved methods and appliances, the Primrose Valley is likely in the near future to become the centre of an important mining industry.

Following the same course towards London Bridge, a bridge formed of limestone through which the creek now flows, there are several fairly good indications for gold, silver, and copper deposits in payable quantities.

A high mountain, known as the Diggers' Hill, is well worth a thorough prospecting. There is a great natural facility for prospecting this hill or mountain by driving a tunnel about 30 feet above the river or creek bed in a south-east direction for about 400 feet in length, which would intersect the whole of the veins and lode formation, all of which have a dip towards the creek.

Cadden and Wright's gold, silver, and copper deposits on Mr. J. Macnamara's property are also worthy of further development. Considering all circumstances, the out-look for the establishment of the mining industry in the Queanbeyan District is more hopeful at present than it has been in the past.

I have, &c.,  
W. H. J. SLEE,  
Chief Inspector of Mines.

---

#### Report on important Discoveries of Gold, Silver, and Lead Deposits in the southern parts of the Manaro District.

Sir,

Sydney, 28 March, 1898.

I have the honor to inform you that during my recent visit through different parts of the Manaro District I inspected an important new discovery of gold, silver, and lead made by Messrs. Litchfield and Lamb, in a locality known as the Black Scrub, Lower Paupony, about 20 miles from the border of Victoria, 10 miles from Buckley's Crossing (Snowy River), and 42 miles from the Cooma Railway Station.

The locality referred to is one of Nature's greatest handicrafts; the sublime, wild, rugged, and well-timbered mountains and the valleys through which flows the Snowy River are such that must be seen to be thoroughly appreciated.

The Lower Paupong mineral discoveries are very opportune, occurring in a part of the Colony where agricultural and pastoral settlement is out of the question, but where a wilderness might be turned into a centre of an industrious mining population, and hence the at present almost unknown Lower Paupong may in the near future take its rank as one of New South Wales prosperous mining towns.

Few,

Few, if any, of the energetic persevering *bonâ fide* prospectors who are used to quartz and lode mining have ever made their appearance in this locality, and it would be worse than unless to attempt prospecting there unless amply supplied with provisions, tools, and explosives, as the nearest place such could be obtained is Buckley's Crossing. Horses also are requisite.

One of the discoveries made is in an open cutting about 8 feet in the deepest part, where the lode is exposed to view fully 8 feet in thickness, and can be traced a considerable distance along the surface.

The lode is well defined, with a slight underlay towards the creek, and has a few inches of a dig on the foot wall; the lodestuff also, being of a soft nature, greatly helps to reduce the expenditure of development.

Outcrops of parallel lodes are also noticeable on the surface.

Being informed by the discoverers that a number of private assays had been made which yielded up to 10 dwt. of gold per ton in addition to a good percentage of silver and metallic lead, and that one assay made at the establishment of Mr. John Howell had yielded gold a trace under 2 dwt. per ton, silver 26 oz., and metallic lead 38 per cent., I thought it advisable to take samples across the lode, one sample for each foot in width of lodestuff, eight samples in all, for assay by the Department of Mines, the following result having been given and certified as correct by the Government Geologist:—

- (737) 1. Galena and cerussite with some pyrites, yielding—  
 Gold, nil.  
 Silver, 21 oz. 9 dwt. per ton.  
 Metallic lead, 47.26 per cent.
- (738) 2. Galena and cerussite in a breccia, yielding—  
 Gold, nil.  
 Silver, 20 oz. 5 dwt. 1 gr. per ton.  
 Metallic lead, 30.21 per cent.
- (739) 3. Siliceous carbonate of lead ore, yielding—  
 Gold, nil.  
 Silver, 15 oz. 0 dwt. 12 grs. per ton.  
 Metallic lead, 24.79 per cent.
- (740) 4. Quartz with earthy oxidised lead ore, yielding—  
 Gold, a trace, under 2 dwt. per ton.  
 Silver, 3 oz. 19 dwt. 11 grs. per ton.  
 Metallic lead, 5.94 per cent.
- (741) 5. Breccia with carbonate of lead and specks of galena, yielding—  
 Gold, nil.  
 Silver, 32 oz. 16 dwt. 14 grs. per ton.  
 Metallic lead, 41.58 per cent.
- (742) 6. Quartz with yellow earthy oxidised lead ore, yielding—  
 Gold, nil.  
 Silver, 7 oz. 15 dwt. 17 grs. per ton.  
 Metallic lead, 11.10 per cent.
- (743) 7. Quartz with yellow earthy oxidised lead ore, yielding—  
 Gold, nil.  
 Silver, 7 oz. 11 dwt. 8 grs. per ton.  
 Metallic lead, 12.65 per cent.
- (744) 8. Quartz with yellow earthy oxidised lead ore, yielding—  
 Gold, a trace, under 2 dwt. per ton.  
 Silver, 7 oz. 0 dwt. 2 grs. per ton.  
 Metallic lead, 12.65 per cent.

It will be seen by the results of assays made that, so far, nothing extraordinarily rich has been discovered, and that the samples taken by me yielded but a very small percentage of gold; nevertheless, in justice to the prospectors, Messrs. Litchfield and Lamb, I may state they informed me, at the time I took the above samples, that ore could be obtained on the surface within a short distance of the open cutting which would assay over 10 dwt. of gold per ton.

There is almost an unlimited supply of timber and wood for all purposes in the vicinity of the lodes, and water could also be easily stored. A tunnel could be driven at a comparatively small cost to intersect the lodes at a great depth, and underground water is not likely to be met with during the first 500 feet in depth.

An easy-graded road could be cleared and levelled for about 3 miles in length to connect with a good road to Buckley's Crossing and Cooma.

As stated above, these parts of the Australian Alps have seen but little, if any, of the *bonâ fide* reef and lode miners, and I was informed by Mr. Cripps, one of the oldest mountaineers of the Australian Alps, that there were localities between these mountains which have so far never been visited or seen by man or beast, but once let these new discoveries make a fair start all obstacles and privations will be overcome, and all so far unknown localities in these Alps will be prospected by a class of men known as the brave, large-hearted, energetic, and persevering Australian miner—as a rule, a class of men any district or country may well be proud of.

I also inspected a quartz reef known as the Litchfield Reef, situated about 9 miles southerly of Buckley's Crossing, and 6 miles from Motong. This reef can be traced for about half a mile in a west by south direction, underlaying southerly. The average thickness is about 2 feet, occurring in lenticular blocks. Four shafts have been sunk—63 feet, 20 feet, 44 feet, and 40 feet respectively. No bulk samples have ever been crushed, and the prospecting so far has been done by Messrs. G. F. Litchfield and Party, the land being freehold, and is the property of the above-mentioned gentlemen. Several samples of the quartz

quartz were crushed in my presence on the spot, and were taken promiscuously from the various heaps, each and all yielding fair prospects of fine gold, with a small percentage of bismuth, the gold yielding from about 5 dwt. to 15 dwt. per ton.

There is a splendid site for a large reservoir within a quarter of a mile, on which a small compact crushing and up-to-date concentrating and gold-saving plant could be erected, but before the erection of machinery it would be prudent to have a few bulk samples thoroughly tested.

A small river dredge may very probably find payable employment on the Snowy River, near Buckley's Crossing, provided means can be adopted by which the difficulties of large granite boulders in the river-bed can be overcome.

I am informed that miners have made good wages in this river, and have frequently stuck to their work up to their waist in water, but were compelled to give in after every little fresh or small flood of the river.

There is also a locality worth prospecting, being of a slate formation, intersected by diorite dykes and hornblende granite, easterly from Berridale, which crosses the road between the latter place and Cooma.

Taking that part of the Manaro District through which I have lately travelled, signs and indications are certainly not wanting in arriving at a conclusion that in the near future Cooma, the principal town in the Manaro District, will become the centre of a fairly large and prosperous mining population, which will not only put new life into the town and municipality, but will also be the means of minimising, if not totally reversing, the loss now sustained by the Railway Commissioners in running the Cooma Railway line.

I have, &c.,

W. H. J. SLEE,  
Chief Inspector of Mines.

---

Inspector Milne's Annual Report.

Sir,

Cobar, 5 January, 1898.

I have the honor to submit my annual report for the year 1898.

The following localities have been inspected during the year in the south:—Braidwood, Bumbo, Bodalla, Bateman's Bay, Bermagui, Dromedary, Captain's Flat, Markdale, Moruya, Mogo, Nerigundah, Pambula, Tilba Tilba, Wagonga, and Wolumla.

In the west:—Burruga, Blayney, Back Creek, Bathurst, Bobadah, Carcoar, Cowra, Clear Creek, Cheshire Creek, Cargo, Canowindra, Grenfell, Gilgunnia, Girilambone, Galleymont, Hill End, Hermidale, Honeybugle, King's Plains, Lewis Ponds, Lucknow, Mumbil, Mandurama, Melrose, Mount Hope, Mount McDonald, Newbridge, Nyngan, Nymagee, Ophir, Orange, Oberon, Palmer's Oakey, Pyramul, Restdown, Sunny Corner, Sofala, Tarana, Tuena, Trunkey, Wattle Flat, and Wellington.

Some of these districts were inspected two or three times.

The total number of mines inspected, 276, some of which were in reference to aid from the Prospecting Vote; in the execution of this work I travelled 7,469 miles.

The first nine months of the year I was engaged generally throughout the South and Western Districts, after which I was stationed in the Cobar District, and, in compliance with your instructions, reached Cobar on or about the 5th October, making that place my headquarters.

I attended and inquired into the cause of two fatal accidents, both of which were returned as accidental by the jury.

The first occurred at Girilambone, and should not be termed a true mining accident, owing to the fact that the deceased was not at the time employed on the mine, but was going home from the town late at night in the dark, and by some means got off the usual track and walked into an old shaft used as a mullock pass from the surface.

The second accident occurred at the Chesney Mine (Cobar) at the 260-foot level, where the platman, according to the evidence, appears to have been looking down the shaft and was struck by the passing tank, and then fell from the 260-foot to 300-foot level.

It will be seen that by ordinary precautions by the deceased both of these accidents could have been avoided.

The general conditions of the mines might be regarded as safe, and I am pleased to note that in the general management I have very little trouble, as most of the managers do all they can for the safety of those in their employ, and are always willing to accept any suggestion I may make for the safe working of their mines.

In many of our larger and older mines the hauling-shafts are not as good as might be, and are a source of care and trouble on the managers to keep safe for working purposes, and is only done by frequent overhauling and repairs.

Travelling roads underground are, in general, good and secure, and little fault can be found in this respect.

Ventilation, as a rule, is fairly good, especially in the large mines.

There is still some trouble with the miners in regard to the special storage of explosives underground and for immediate use.

Although special storage is insisted on, there is a tendency to make the boxes a store-room for candles, caps, fuse, and dynamite.

Another source of trouble, and one very hard to put down, is the dangerous habit the miners have of biting the detonator on the fuse instead of using the nippers or knife, owing no doubt to the frequent loss of nippers and trouble of always having a knife handy for use, and the fact that it is no one's special duty to prepare explosives.

In reviewing my work for the year, I have been practically employed in the South and Western Districts; but as I am now located in the Cobar District, I shall confine my remarks to the mines embraced in that district.

The

The main locality is Cobar, my headquarters, and, as in the past, the Great Cobar Copper Mine the principal. As anticipated in my last year's report, the output from this mine has been considerably increased, and I am pleased to say the coming year will again see a still further increase in the returns from this mine.

The same system of working is in vogue as described in last year's report.

In the old stopes worked under the previous management, when only the rich oxidised ores were mined, leaving large bodies of low-grade ore on either side of stoped ground, there is some particularly dangerous ground to work, principally on the south end of the mine, but as only picked men are engaged on the work, and the dangerous nature of the country thoroughly understood, I do not anticipate any accidents from this quarter.

The system adopted is to mine up from underneath, first securing the weight of the stope on pig-styes, well wedged; then rise up, as the case may be, either on the east or west side for the height of about 10 feet; then shoot away the burden, secure the back with stulls until the pig-styes are built up to the back; then fill with mullock, which is kept as close as possible to the back.

It has been found by crosscutting that bunches of ore occur on the east and west side of the main lode.

There are now five blast furnaces in regular work, and a hot-air furnace in course of construction, and a material increase in the output from this mine may be looked for in the coming year.

It may be interesting to know the amount of ore smelted, timber and filling used for securing the depleted stopes, also the amount of driving and sinking for the year:—

Ores raised and smelted	...	...	...	...	...	...	111,557 tons
Filling depleted stopes	...	...	...	...	...	...	81,117 "
Mine timber	...	...	...	...	...	...	1,812 "
Driving	...	...	...	...	...	...	1,358 feet
Sinking	...	...	...	...	...	...	503 "

There are at the present about 600 men employed on the mine.

Taking the prospects of the mine as a producer, there can be no doubt as to its permanency, there being at the present time more ore in sight than at any previous time during the life of the mine. This body of ore has been proved for some considerable distance by the deepening of the "N" shaft, where the immense body of sulphide ore worked in Baston's shaft has been met with.

This shaft is now on the same level as Baston's, and will in a short time be connected with the 90-fathom level.

The machinery on the mine is in fair condition, but up to the present no regular system of periodical overhaul is made; such parts as may show signs of wear or break are at once repaired. If a periodical overhaul were made (say) once in six months the engineer would have a chance to thoroughly repair where required, and would in a considerable degree prevent many of the short vexatious stoppages that must necessarily occur in so large a plant.

I must repeat my remarks of last year in reference to the want of a main shaft, and must say this mine will not have justice done until a large shaft is sunk off the lode and properly equipped with suitable winding engines.

The Fort Bourke Mine.—I am sorry to say the expectations of regular returns have not so far been obtained, owing, principally, to the extreme fine nature of the gold and very slimy character of the ore.

It was found that the amount of gold saved by amalgamation was not sufficient, and the funds being exhausted, the mine was shut down for a time.

There is again considerable activity showing this time in the erection of a cyanide plant in conjunction with the 100-stamp mill now on the mine, and no doubt early in the coming year the stamps will be again dropping, and a direct course of cyaniding carried out.

In this instance the development of the mine is not altogether forgotten; a main shaft has been sunk to the depth of 236 feet, and is, without doubt, one of the most substantial shafts in the Colony. It is the intention to continue sinking this shaft, and (although the last mine on the line to intersect the copper zone) there is very little doubt but a regular system of development will be carried out, but with the machinery now on the mine it will be only the oxidised ores near the surface which will be operated on for some time to come.

At the Chesney Mine a steady system of development has been done during the year—sinking the main shaft and driving at the different levels being the principal work done. This is now the deepest shaft on the line of lode. The future method of treatment has not yet decided on, owing, no doubt, to the want of iron in the ore bodies so far developed. The sinking done during the year in shaft and winzes was 450 feet and driving 860 feet.

Recently a prospecting shaft on the south end of the Berribungie Mine was started, and is now down over 100 feet. Should the same body of iron be intersected as is now being worked in the adjoining mine, it will very soon settle the question as to what class of a reduction plant is required.

Berribungie Mine.—A fair amount of development has been done; the main shaft sunk to the depth of 300 feet, and crosscut east some distance, showing a strong lode formation, in which occur narrow shoots or veins carrying a high percentage of malleable copper.

A syndicate was formed to develop this mine, erect a smelting plant, and buy ore from the different mines. This will be, as the field now shows, a very desirable assistance to some of the smaller mines, and is likely to materially assist in the further development of the copper zone. The ore raised will be sold on assay value, and the cost of railway carriage saved. A plant of this description will be a great benefit to the Cobar District.

At the Young Australian extensive preparations have been going on for the thorough opening up and development of this mine.

A new main shaft has been sunk, well equipped with winding plant, which will in the coming year prove beneficial in systematically opening and working the mine.

There is also a cyanide plant on this mine, and the old heap of tailings has now been nearly all treated, with a very satisfactory return.

Occidental Mine.—The same steady system of work has been done as in previous years; but I am pleased to say the directors appear to have suddenly discovered that they have a big reserve fund in the immense stack of tailings on hand. To cope with this a cyanide plant has been erected and a few vats only put through before the water run out, and so far are standing waiting for the rain so long looked for in this district.

I am glad to say that the results from this mine must be very satisfactory during the coming year, as, besides the immense amount of tailings, the lode is a large one, of a fair grade, and in the lower level a very good shoot of gold has been proved, which will considerably add to the value of the ore mined from the open cut. I look to this mine as one of the mainstays of the Cobar District.

Recently a new 20-inch cylinder engine has been added to the crushing mill, also a new multitubular steam-boiler, and it is the intention to erect a further ten stamps, which will then give them thirty stamps, so that an extra output may safely be counted on.

All the ore obtained from this mine for the year was from the open cut on the south side of the shaft, where the lode is about 40 feet wide, and yielded by amalgamation from 3 to 5 dwt. per ton.

The Great Western Mine in the early part of the year was on the dividend list, but towards the end of the year, owing to the prospecting work not being kept well ahead, has again fallen back from regular returns, and until the directors fall in with the advantages to be gained by properly developing the mine they cannot expect regular returns.

A fair start was made towards the end of the year to systematically work the mine and a new main shaft sunk to some depth, but I am sorry to say this has now been discontinued.

At the Peak very little work has been done for the past year, but what work has been accomplished has given very satisfactory returns. A considerable quantity of the ore mined is smelted at the Great Cobar Company's Mine.

There is on the mine a 10-stamp mill, but, owing to scarcity of water, has been idle for most part of the year.

The Conqueror Gold Mine adjoins the Peak, and has been giving very good results for some time. The deepest level is 100 feet, where a strong body of ore occurs.

I look forward to this mine giving a much larger output and increased value in the coming year.

There is very little doubt but the mines at the Peak will, like those nearer Cobar, develop into copper at a depth, and, with the present price and every appearance of further increases in the copper market, they should be pushed on with all speed, instead of simply rooting out all the easily-obtained ores, which appears to be the favourite system of working most of the smaller mines in the Cobar District.

Girilambone Copper Mine.—So far the returns from this mine have not been up to expectations, owing, principally, to the want of good fluxing ores.

During the year a large amount of development work has been done. The main shaft has been sunk 200 feet—making a total depth of 560 feet—and from this and the 460-foot levels drives are now being extended to prove the existence or otherwise of a body of sulphides which, from the appearance of the levels above, should exist.

The May jigger, erected early in the year, has done good work, but still the output of concentrates has not been sufficient to keep the furnaces running full time. To further assist this, a new Hancock jig on the latest improved principle is now being erected, and will, as soon as sufficient water is obtained, add to the concentrates by about 100 tons per day.

On the surface the winding plant has been renewed, and now a compact hauling plant, consisting of a double-cylinder horizontal engine, 18-inch cylinders, 3 ft. 6 in. stroke, link motion, direct action, with drums 8 feet diameter, safety-cages with detaching hooks, is fixed, and is one of the best hauling engines in the Western District.

Steam is generated in a nest of three Cornish boilers, each 27 feet long, 6 feet diameter, 3-foot flue, and three Galloway tubes.

At Restdown very little progress has been made during the year, owing principally to the fact of there being no crushing-mill on the ground and the veins of ore not sufficiently rich to pay for carting to Cobar.

This will, I have every reason to believe, be remedied in the coming year, a Cobar syndicate having decided to erect a small mill, which will give the miners a chance to crush the poor stone now at grass and encourage further prospecting on the field, which I am sure will give some fair returns for systematic prospecting. The veins are small and irregular, with the shoots very short, and so far have not continued to any depth. There is a fair extent of auriferous country to prospect, and it is possible some fairly good veins may be discovered and a fair number of miners find profitable employment for some time to come.

Mount Boppy G. M. Co.—This is a mine recently bought by the Anglo-Australian Exploration Company.

It was originally worked by O'Grady and Reid, who were aided from the Prospecting Vote. After some twelve months or so of prospecting they sold to the above company, who have still further proved the lode by sinking at intervals, and have now proved it for over 1,000 feet in length and 130 feet deep; on the north end a winze has been sunk 70 feet and another on the south end of workings, thus proving a fair body of stone at each end of the mine at a depth of 200 feet.

The reef averages about 8 feet, and a bulk sample of ore treated at Dapto gave a return of 16 dwt. per ton, and as this sample (260 tons) was taken promiscuously from the heap, it may be reckoned as a fair test. A further test of 1,000 tons is to be treated before it is intended to erect a plant of their own for treating the ore.

This is a locality well worthy of a thorough prospecting, as similar bodies of quartz are likely to be obtained.

At Nymagee the mine has only worked intermittently, owing to the extremely dry season, the water in the tanks having run out, and what little water caught from the passing showers being all they had to depend on. Very little can be said further than was expressed in my report of last year. There is abundance of ore in sight, and with anything like a fair season I expect good results in the future.

At the N. Nymagee Mine prospecting is still being pushed ahead, but so far without any beneficial results.

At Whulong a very promising copper show has been discovered, but up to the present very little work has been done, but there is every indication of it proving a payable mine.

At the Overflow the expectations of last year have not been realised. This is not through any fault of the mine, as there is a strong body of ore, which is of a very slimy character, yielding by assay from 8 to 16 dwt. per ton. The cause arises from the unsuitable machinery erected for treating the ore, and the principal part of the gold (which is extremely fine) being in the slimes.

Some considerable difficulty occurs in the treatment of these slimes by cyanide owing to defective filtration.

Certainly a small return of gold has been won, but nothing like what is expected from the ore on its assay value.

It is to be hoped that in the coming year a satisfactory method of treatment will be discovered and a fair percentage of gold known to be in the ore saved, and the shareholders get some return for their pluck and energy.

I have, &c.,

DAVID MILNE,  
Inspector of Mines.

---

Inspector Hebbard's Annual Report.

Sir,

Broken Hill, 18 January, 1899.

I have the honor to present my annual report for the year 1898 as follows:—

During the year my time has been occupied in regular and frequent visits of inspection to the mines on the Broken Hill line of lode and the immediate vicinity.

In addition, I have reported on applications for aid from the Prospecting Vote at Thackaringa, Silverton, Purnamoota, Mount Robe, Yuba, Pinnacles, Nine-mile, Acacia, and Rockwell, and some considerable time has subsequently been occupied in revisiting and measuring up the work of parties to whom aid has been granted. So far the results of this prospecting work have not been very encouraging.

Work in any of the outlying districts has only been carried on intermittently; but some of the mines continue to produce ore in small but payable quantities, as, for instance, the Maybell, the Caledonian, and the Pioneer at Thackaringa.

In the Purnamoota District a few small parties are at work in the vicinity of Mount Robe, and but for the cost of cartage and smelting charges I believe the small veins of copper and galena would pay small working parties handsomely.

In and around the Day Dream country the claims are all idle, with the exception of a party of prospectors in the Apollyon Valley, and two or three men in the old Hen and Chickens Mine, which continues to yield very rich chloride ore in payable quantities.

Some efforts have been made to work some of the lead shows in the neighbourhood of Poolamacca Station, but the efforts have failed owing to the cost of transit.

Considerable activity has resulted from the advance in the price of copper, and several parties are out with a view of exploiting the numerous copper lodes and veins known to exist.

Of those at present being actively operated, I may instance Trezise's Claim at Silverton, the Fairy Hill, near Euriowie, the Invincible, near Acacia, the New Era, near Pinnacles, and the Diamond Jubilee, near Yuba.

In tin-mining nothing has been done, though a great number of leases in the Euriowie District have been repegged.

I anticipate a good deal of activity in prospecting for the ores of tin and copper should the metals continue to be high in price.

At the Pinnacles Mine during the year mining operations have been almost at a standstill pending the construction of a concentrating plant. This is now completed; a trial run has been satisfactorily made, and mine and works will soon be in full swing.

There seems every reason to hope that after all its vicissitudes this mine is to enter upon an era of prosperity.

On the Broken Hill line of lode the prosperity of the mining industry has been greatly advanced by the production and sale of very large quantities of zinc product, formerly laid aside as unmarketable.

A large trade in the zinc concentrates and tailings produced by the mills has arisen, and has led to the establishment of a company known as the Australian Metals Co., controlling a special process for the extraction of zinc.

The company's engineer is now engaged in erecting large works.

Evidently there is a great future before this particular branch of the mining industry.

The year's work in concentration shows considerable improvement on that of previous years in the way of more thorough and complete extraction of the metals, mainly attributable to improvements and additions to the machinery employed.

*Lead Poisoning Act.*

The regulations under this Act are very generally complied with, though the opportunities for changing dresses and bathing are not availed of by the workmen to nearly the extent desirable for their health; one great cause of this disinclination on the part of the workmen to use the changing rooms is the prevalence of petty thieving.

This must, of necessity, be carried on by some of the workmen, as the rooms are locked except at relief of shifts.

*Lead*

*Lead Poisoning.*

Fourteen cases have been reported to me during the year as against seventeen for 1897 and forty-four for 1896.

The fourteen cases have all been certified to by duly qualified medical men.

The length of time employed before being laid off averages about eighty-five weeks.

*Machinery and Boilers.*

All machinery and boilers have been thoroughly well looked after, and the requirements of the regulations in regard to them fulfilled in every respect.

*Open Cuts.*

Besides the Broken Hill Proprietary, the Central and South Mines are now operating open cuts, though, in the latter instances, only for the purpose of underground filling; the permanent sides have been kept at a safe angle, and, generally, the safety of the workman secured as far as human foresight can secure it.

*Underground.*

The development of a new system of stoping has been the outcome of new conditions, arising out of the extreme hardness of the sulphide ore now being mined, and the absolute necessity of, as far as possible, minimising the risk of fire.

The systems now obtaining have been fully described in my reports on the British disaster.

The number of men employed in the district is 5,956, an increase of 490 as compared with the same period of 1897. I had anticipated that the increase would have been much greater, but the general adoption of rock-drills for boring in the stopes and various workings of the mines has prevented any very marked advance in the number of men employed.

The complaints often heard from the managers regarding the incompetency of a very large proportion of the men obtaining employment as miners is well grounded, and I have no hesitation in saying that the employment of this unskilled labour has been a most prolific cause of accident.

In my opinion the accident list would have been much heavier were it not for the constant vigilance of the mines foremen and the shift bosses, who have immediate control of the details of the work.

*Accidents and Fatalities.*

Of accidents and fatalities reported on by me as occurring in and around the mines of the district, the total number for the year is 90, including 19 fatal, 16 serious, and 55 slight accidents. In addition, several accidents of a very slight nature have been reported to me, which, on investigation, did not seem to call for further report.

*Prospects of the Mining Industry.*

The developments in prospecting the deeper levels of the various mines are, in every instance, favourable, and a noticeable feature in the half-yearly reports of the managers is the largely increased reserve of ore available. As experience is gained the extraction in concentrating is becoming more complete and rapid, and it is owing to these facts that very large bodies of ore formerly regarded as too poor for profitable treatment are now being made available.

I have, &c.,

JAMES HEBBARD,  
Inspector of Mines.

Sir,

Broken Hill, 31 January, 1899.

I have the honor to submit the following figures made up from information supplied by the various mining companies in Broken Hill, which, I hope, will be of interest as supplementary to my annual report for 1898.

Tonnage of ore raised, 1,139,873 tons; cubic yards of material extracted from open cuts exclusive of ore, 360,756 cubic yards.

Timber used underground, 13,666,945 superficial feet; filling put into depleted stopes, 233,300 cubic yards.

Lineal measurement of work in the way of shafts, levels, crosscuts, winzes and rises, 15,294 feet.

Quantity of explosives used—dynamite and other high explosives, 400,960 lb.; powder, &c., 80,000 lb.; fuse, 65,049 coils; detonators, 495,500. The value of this material is given as £28,544.

Horse-power of boilers, 5,070 n.h.p.; horse-power of engines, 4,850 n.h.p.

Value of machinery and plant, £491,300.

Value of plant and machinery erected during 1898, £67,633.

Value of gross metal contents of ore extracted, exclusive of zinc, £5,368,211.

Value of material shipped as zinc product, £84,824.

I have, &c.,

JAMES HEBBARD,  
Inspector of Mines.

Inspector

Inspector Godfrey's Annual Report.

Sir,

Sydney, 5 January, 1899.

I have the honor to forward you my annual report for the year 1898.

The localities visited by me during the year are as follow :—

Northern District—Armidale Gully, Bolivia, Boonoo Boonoo, Bowling Alley, Bora Creek, Boggy Camp, Bundarra, Bucca (Upper and Lower), Coramba, Copeland, Crow Mountain, Dalmorton, Drake, Dungog, Euenga Creek, Enmore, Elsmore, Emmaville, Grafton, Glen Elgin, Gilgai, The Gulf, Hanging Rock, Hillgrove, Inverell, Kookabookra, Little Nimboi, Lionsville, Moonanbrook, Melrose, Nana Creek, Nundle, Niangala, Omadalebrook, Rivertree, Rockvale (twice), Rawden Vale, Swamp Oak, Stewart's Brook, Tallewudjab, Tingha, Tent Hill, Tia, Timbarra, Uralla, Upper Gloucester, Upper Orara, Wangat (Upper and Lower), Whispering Gully, Wingen, Woods' Reef, Wollomumbi, Webb's.

Southern and South-western District—Adelong, Balow, Blairgowrie, Billy's Lookout, Coolac, Gundagai, Hiawatha, Kimo, Micalong, Mount Adrah, Nariah, Quartzville, Reno, Sebastopol, Scrub Yards, Temora, Reefton, Yalgogrin, and Wyalong.

During the year I inspected 350 mines, and reported upon a large number of applications under the Prospecting Vote. These inspections entailed upwards of 6,420 miles of travelling by train, coach, horseback, &c.

I only served nine written notices as against forty last year, the decrease being principally due to the smaller number of mines working at Wyalong, and their increased efficiency.

During the year I had four accidents to investigate—one fatal, two serious, and one minor. These were :—

J. Bullen, who fell down a shaft at Rockvale and was blown up. He had a miraculous escape, as the shaft was 72 feet deep, and his worst injury was a lacerated leg caused by the explosion; he was at work again in three weeks.

Samuel Lamprell, who was injured at the Gibraltar Consolidated Mine at Adelong. He gave a wrong signal to the engine-driver, and then attempted to get into a cage when in motion; his foot slipped, and he was crushed between the cage and the plat. His spine was injured, and his injuries, though not fatal, are very serious.

Francisca Vecerina, who was killed in the old Barmedman Mine, at Barmedman, by a fall of ground. He worked under dangerous ground, and omitted to put in timber. The jury returned a verdict of accidental death—no one to blame—with which verdict I concur.

William Johns, Alexander Cleghorn, and Thomas Asquith were blown up at the Phoenix Mine, Rockvale, through boring into an old socket left by the previous shift. Johns lost his left hand. The others were only temporarily blinded. Boring into old sockets is frequently done to save time, and is a fruitful cause of explosions.

The Southern District now being in my charge, I have taken up my headquarters at Adelong, where I arrived on October the 4th, according to your instructions. Reviewing, rapidly, the mining centres in this district visited by me since taking charge, I may report that Wyalong has settled down into steady, unobtrusive work, and, though there are fewer mines, yet the output is larger than during any previous years. Neeld's line of reef in particular has proved very valuable, and several mines along the line are paying well—the Lucknow yielding as high as 40 oz. to the ton on bulk treatment.

Yalgogrin has given several good crushings up to 6 and 7 oz., but the development of this field is slow; considerable prospecting is being done in the locality, notably at Nariah and Blairgowrie.

Temora is in a very quiescent state, the reefs being only worked intermittently, though some rich nuggets of alluvial gold have been obtained on a false bottom in the old lead below the town.

Scrub Yards is also very quiet—the Great Victoria Mine being under suspension, and other reefs being prospected. Hall's Reward Mine, however, has a fair number of men employed, and is under offer for sale.

Gundagai is notable principally through the Prince of Wales Mine at Reno, the name of a small township which has sprung up, and is maintained by the mine. At the present time the mine is in full work. The Mount Kimo Mine is under partial suspension, and other mines are merely prospecting, with the exception of Rice's Long Flat Reef, where some sensational yields have recently been obtained.

Adelong is comparatively quiet owing to the Gibraltar Consolidated having been idle for some time; but several parties are now opening up the old lines of reef at the Challenger and Caledonian, and this may lead to increased activity in the near future.

Quartzville is being prospected more thoroughly than in the past, but owing to the wetness of the ground and the shallowness of the water-level (30 feet), prospectors find it difficult to sink.

Many defects to which I drew attention in my last year's report have been remedied, and it is gratifying to note the improvements which have been effected. It is only fair to say that in my official dealings with mine managers my work has been rendered much easier by their readiness on most occasions to carry out any improvements which I considered necessary.

Safety-catches are being largely adopted on cages, and I make it a practice to test them every half-year. Some of these catches were inoperative owing to faulty design, but they have been readjusted, and are in perfect working order at the present time. Over-winding gear is also being adopted, and is an extra safeguard in case of the cage being pulled to the poppet-heads.

Reverting once more to the Prince of Wales Mine at Gundagai, I may mention that the lode is a wide one, and the country very rotten in places; the stopes are kept close-filled by means of mullock run from the surface, and the roof is kept up by pig-styes put in at frequent intervals. Up to the present time this has worked most satisfactorily.

There has been a decided improvement both underground and in machinery in all the larger mines, and I hope to be able to report a consistent advance in the future.

I have, &c.,

J. R. GODFREY,

Inspector of Mines.

Inspector

## Inspector Hooke's Annual Report.

Orange, 3 January, 1899.

Sir,

I have the honor to submit my report on the operations during 1898 of the regulations for the inspection and regulation of mines other than coal and shale mines, and on other matters.

During the year I travelled 9,100 miles, and made 249 inspections, of which 112 were in connection with applications for aid from the Prospecting Vote.

The following vicinities were visited, viz., Adelong, Albury, Binalong, Bodangora, Burrowa, Byng, Coolac, Cootamundra, Forbes, Gundagai, Girilambone, Grong Grong, Gulgong, Hargraves, Hill End, Hiawatha, Junee, Lucknow, Mudgee, McPhail, Muttama, Murrumburrah, Murrumbateman, Nanima, Nariah, Orange, Oberon, Parkes, Peak Hill, Sofala, Tomingley, Temora, Tumberumba, Taralga, Wyalong, Windeyer, Wellington, Wattle Flat, Yalgogrin, Yass, and other places.

During the year I attended three inquests; the first was due to the death of two miners who were killed in the Girilambone Copper Mine through a fall of rock, and the unfortunate victims, if any negligence were the cause, were themselves mostly to blame. The second fatality was in the Kangaroo Mine at Grong Grong; in this instance the accident happened through the breakage of a sling in which deceased was standing while being lowered, thus causing his fall to the bottom of shaft; deceased himself was in charge of the mine, and the sling, which was defective, was, with the other gear, under his supervision. In the third case the deceased, a lad, by some means became entangled in some belting in motion at the Eleanora Mine, Hillgrove, and thus received injuries which caused his death.

In each instance the jury returned a verdict of accidental death, adding a rider that no blame was attributable to anyone; and I may add that none of the accidents were due to any breach of, or omission to comply with, the regulations.

Up to time of writing I have traversed but a portion of that allotted me, hence am unable to state the condition of the mines within it; but so far as I have inspected, the continued absence of water, due to drought conditions, has rendered the mining industry itself excessively dull. The dry season, however, has enabled many alluvial miners to gain access to river deposits, and satisfactory yields have been obtained from this source.

In this connection it should be recorded that river-dredging, by means of bucket-dredges, has also been commenced during the year under review, as two of large capacity are in course of erection—one on the Macquarie River, and one on the Turon River, and these will be in operation shortly. One, at least, of these dredges has been designed to cope with the dry-weather conditions so prevalent in this Colony, and a minimum of flowing water in the river will be utilised and permit of work being continued, and occasionally be of advantage in rendering it possible to "clean-up" the bed-rock by hand.

During the year the numerous sites tested with assistance from the Prospecting Vote have met with but a small measure of success in such districts as I have traversed, but it is hopeful that the new endeavours to test deeper ground will prove successful.

It is also interesting to note that the Lucknow Mines are now in two instances down to depths of 1,000 feet—in one case to 1,021 feet—and at these depths stone of as high a grade as usually obtained at upper levels is now being gained. This is simply referred to as evidence in refutation of views sometimes expressed that our veins do not yield satisfactorily as depth is attained; and also as indicative of further advancement, it may be added this high-grade complex ore, formerly sent to England, &c., for treatment, is now satisfactorily treated at the metallurgical works within the Colony.

I have, &amp;c.,

HENRY HOOKE,  
Inspector of Mines.

## Acting Inspector Polkinghorne's Report.

Sydney, 5 January, 1899.

Sir,

I have the honor to submit my report on the inspection of mines performed by me since my appointment on the 10th day of May to the 31st December.

During that period I examined and reported upon 226 mines, &c.

The following places were visited:—Cowra, Canowindra, Cargo, Cooma, Blayney, Bathurst, Burranga, Delegate, Frogmore, Forest Reefs, Grenfell, Galley Mont, Lucknow, Mount McDonald, Orange, Peak Hill, Parkes, Pambula, Rockley, Stuart Town, Sunny Corner, Tomingley, Trunkey, Tuena, Wattle Flat, and Yass.

The total number of mines which came under my notice was 226, of which 107 were in connection with applications for aid from the Prospecting Vote, and in the execution of which 5,541 miles were travelled.

I also served 16 written notices, drawing attention to defects in mines, where the work done was, in my opinion, not satisfactory or safe.

I have, &amp;c.,

JOHN POLKINGHORNE,  
Acting Inspector of Mines.

Acting

## Acting Inspector Carthew's Annual Report.

Sir,

Sydney, 5 January, 1899.

I have the honor to submit my report on the inspection of mines performed by me during the seven months 1st of June to the 31st of December, 1898.

During that period I have been engaged in the Northern District. I examined and reported on 184 mines in the vicinity of the following places, viz.:—Armidale, Avery's Creek, Boonoo Boonoo, Bundarra, Bingara, Barraba, Boggy Camp, Bora Creek, Ballala, Copeland, Cobark, Corinda, Coramba, Crow Mountain, Chichester, Drake, Dungog, Deepwater, Enmore, Elsmore, Emmaville, Grafton, Glen Innes, Glen Elgin, Glen Reagh, Hillgrove, Inverell, Kookabookra, Lionsville, Limbri, Lower Bucca, Moonbi, Melrose, Moonan Brook, Maitland, Niangala, Nundle, Nana Glen, Nymboi, Nine-mile, Rockvale, Rawden Vale, Scone, Solferino, Stewart's Brook, Swamp Oak, Tia, Tenterfield, Tallawadjah, Uralla, Undercliff, Upper Bucca, Walcha, Wollomumbi, and Wilson's Downfall.

The number of mines which came under my notice were 184, but some of these have been inspected twice and some three times. I have also inspected and reported on 90 cases in connection with applications for the Prospecting Aid Vote.

This has occasioned the travelling of 6,775 miles, made up as follows:—Horse, buggy, &c., 2,399; train, 1,897; coach, 1,989; boat, 408; and on foot, 82 miles.

I have served 20 notices on owners and mine managers in different mines where, in my opinion, the places were defective, and in almost all cases these defects have been attended to.

I have, &amp;c.,

JOHN CARTHEW,  
Acting Inspector of Mines.

## COAL AND OIL-SHALE MINES.

Report on the Inspection of Mines under the Coal Mines Regulation Act, in the Colony of New South Wales, for the year ending 31st December, 1898. By  
A. A. ATKINSON, Chief Inspector of Coal Mines.

Sir,

Department of Mines, Sydney, 18 February, 1898.

As required by section 21 of the Coal Mines Regulation Act, 1896, I have the honor to submit the following report of inspection, together with a detailed list of fatal and non-fatal accidents, and other statistical information relating to coal and shale mining generally.

The report is divided as follows :—

- Section I. Persons employed.
- "   II. Output and export of mineral.
- "   III. Accidents.
- "   IV. Prosecutions.
- "   V. General remarks.

The quantity of coal wrought during the year amounted to 4,706,251 tons, the quantities in each District, and the comparative figures for the year 1897, being as follows :—

	1898.	1897.	Increase or Decrease.
	Tons.	Tons.	Tons.
Northern District .....	3,355,600	3,176,869	+ 178,731
Southern and South-western Districts .....	1,068,367	918,862	+ 149,505
Western District .....	282,284	287,860	— 5,576
<b>Totals .....</b>	<b>4,706,251</b>	<b>4,383,591</b>	<b>+ 322,660</b>

The quantity of oil-shale wrought during the year amounted to 29,698 tons, the quantities in each District, and the comparative figures for the year 1897, being set out hereunder :—

	1898.	1897.	Increase or Decrease.
	Tons.	Tons.	Tons.
Northern District .....	5,378	5,486	— 108
Southern and South-western Districts .....	24,320	28,604	— 4,284
Western District .....			
<b>Totals .....</b>	<b>29,698</b>	<b>34,090</b>	<b>— 4,392</b>

### SECTION I.

#### PERSONS EMPLOYED.

TABLE showing the number of persons employed in and about Coal and Shale Mines, divided according to ages and occupation below or above ground, and in the several districts :—

Districts.	Number of Mines.	Below ground.			Above ground.				Total number of persons employed below ground and above ground.
		Ages.			Ages.				
		Boys under 16.	Males above 16.	Total below ground.	Boys under 14.	Boys of 14 and under 16.	Males above 16.	Total above ground.	
Northern .....	62	168	6,079	6,247	...	99	1,421	1,520	7,767
Southern and South-western .....	13	67	1,607	1,674	...	28	455	483	2,157
Western .....	20	9	459	468	...	5	122	127	595
<b>Totals, 1898 .....</b>	<b>95</b>	<b>244</b>	<b>8,145</b>	<b>8,389</b>	<b>...</b>	<b>132</b>	<b>1,998</b>	<b>2,130</b>	<b>10,519</b>
<b>Totals, 1897 .....</b>	<b>92</b>	<b>277</b>	<b>7,800</b>	<b>8,077</b>	<b>1</b>	<b>149</b>	<b>1,752</b>	<b>1,902</b>	<b>9,979</b>

These figures are obtained from the statutory return made by the mine owners under section 27 of the Coal Mines Regulation Act, 1896.

### SECTION II.

SECTION II.  
OUTPUT OF MINERALS.

TABLE showing the output and value of Coal and Shale from mines under the Coal Mines Regulation Act, 1896, in the Colony of New South Wales, during the year 1898:—

*Output.*

Districts.	Coal.	Oil-Shale.	Shale used for other purposes.	Total.	Value at Mine.	
	Tons.	Tons.		Tons.	£	s. d.
Northern .....	3,355,600	.....	.....	3,355,600	957,505	17 4
Southern and South-western .....	1,068,367	5,378	.....	1,073,745	262,184	5 9
Western.....	282,284	24,320	.....	306,604	83,976	7 11
Totals, 1898 .....	4,706,251	29,698	.....	4,735,949	£1,303,666	11 0
Totals, 1897 .....	4,383,591	34,090	.....	4,417,681	£1,270,652	16 1
Increase or decrease.....	+ 322,660	— 4,392	.....	+ 318,268	+ £33,013	14 11

TABLE showing the Output of Coal and Shale per person employed in and about Mines under the Coal Mines Regulation Act, 1896, in the Colony of New South Wales, during the year 1898:—

*Output per person employed.*

Districts.	Below-ground.	Below and Above-ground.
	Statute tons.	Statute tons.
Northern .....	535	432
Southern and South-western .....	641	497
Western .....	655	515
	} 564	} 450

The corresponding figures for 1897 were 546 tons per person employed below-ground, and 442 tons per person employed above and below-ground, whilst for the United Kingdom the figures (for all mines under the Imperial Coal Mines Regulation Act) for the year 1897 were 385 tons per person employed below-ground, and 309 tons per person employed below-ground and above-ground.

Showing Coal and Shale separately, we obtain the following figures:—

*Quantity raised per person employed.*

Districts.	Below-ground.		Below and Above-ground.	
	Coal.	Shale.	Coal.	Shale.
	Statute tons.	Statute tons.	Statute tons.	Statute tons.

Decrease .....	58	212	.....	.....	.....
Western, 1898 .....	75	349	282,284	0 0	59,639 7 11
"    1897 .....	69	344	287,860	0 0	58,709 1 2
Increase.....	6	5	.....	.....	930 6 9
Decrease .....	.....	.....	5,576	0 0	.....

From these returns it appears that in the Northern District, during the year 1898, there were 538 more persons employed in and about the collieries, and 178,731 more tons of coal raised.

In

In the Southern and South-western Districts there has been a decrease of 270 persons employed in and about the collieries, and an increase of 149,505 tons in the amount of coal raised.

In the Western District there has been an increase of 11 persons employed in and about the collieries, and a decrease of 5,576 tons of coal raised.

Chili .....	10	14
Mauritius .....	6	8
Hong Kong .....	5	6
Total .....	9,644	11,693

The total quantity of coke exported during the year 1897 amounted to 10,448 tons valued at £13,064.

SECTION III.  
ACCIDENTS.

The total number of accidents reported during the year 1898, including accidents on private branch railways, &c., was 116, the corresponding number for the previous year being 76. During 1898 there were 9 fatal accidents and 107 non-fatal, resulting in the deaths of 25 persons and injuries to 113 persons, the figures for the previous year being 16 deaths and injuries to 63 persons.

The explosion of gas and coal dust at Dudley Colliery, on March 21st, caused the loss of 15 lives, and the fall of roof at East Greta Colliery, on November 18th, resulted in the loss of 3 lives. The remaining 7 fatal accidents caused the death of one person each.

In addition to the above a fatal accident happened on November 26th to Charles Dalby, aged 52, diver, who was fatally injured whilst in the sea repairing the Mount Kembla Jetty. This accident was not reported by the colliery owners, as it does not come within the jurisdiction of the Coal Mines Regulation Act, and is therefore not included in the list of fatal accidents.

## SUMMARY of fatal and non-fatal accidents, classified according to place and cause.

#### LIST of Non-fatal Accidents.

Date of Accident, 1898.	Name of Mine.	Situation of Mine.	Name and Occupation of Person Injured.	Cause of Accident and Remarks.
3 Jan. ..	Stockton .....	Stockton .....	Henry Garrigan, miner .....	Fall of coal which knocked out a sprag and fell on his leg as he lay holing. Not serious.
5 " ..	Burwood .....	District of Newcastle .....	Robt. Hargraves, miner .....	Fracture of left leg by a fall of coal from a grey-back in face of place.
6 " ..	" .....	" .....	David Inglis, miner .....	Shock to system by being knocked down by a runaway horse on main road.
7 " ..	Stockton .....	Stockton .....	Wm. McDonald, deputy .....	(Knocked over by a runaway horse. Deputy suffering from scalp wounds; miner from shock.
10 " ..	Metropolitan ..	Helensburgh .....	Geo. Baker, miner .....	Injuries to back by fall of coal.
19 " ..	Dudley .....	District of Newcastle .....	James Wall, miner .....	Powder burns on left arm and hand.
24 " ..	Burwood .....	" .....	Wm. Cuthbert, miner .....	Fall of coal in face, causing fracture of left collar-bone, shoulder-blade, and ribs.
28 " ..	Genowlan .....	Capertee .....	R. Dowling, miner .....	Injury to eye by a piece of shale.
31 " ..	Zig Zag .....	Lithgow .....	Wm. Wright, onsetter .....	Big toe injured by cage at bottom of shaft.
7 Feb. ..	Dudley .....	Newcastle .....	Chas. Knight, miner .....	Fall of coal in face, causing fracture of right thigh.
9 " ..	Stockton .....	Stockton .....	John Morgan, miner .....	Fall of coal which knocked out sprag. Injured man was cutting coal on one side. Not serious.
17 " ..	Wallsend .....	Wallsend .....	Wm. Hinds, miner .....	Severe injury to foot by fall of coal.
19 " ..	Brown's No. 2 ..	Minmi .....	Wm. Waite, miner .....	Leg broken by a fall of coal while he was knocking out a sprag. His mate, Joseph Kirk, had meanwhile lighted the fuse of a shot they had prepared. While the fuse was "running" Kirk very courageously returned and carried Waite out of danger from the shot.
24 " ..	Osborne Wallsend ..	Mount Keira .....	Ed. Chapman, miner .....	Rib broken by a fall of coal.
26 " ..	Bulli .....	Bulli .....	John Sherring, miner .....	Leg-broken by a fall of coal.
28 " ..	" .....	" .....	Thos. Morris, miner .....	Head cut by a fall of stone.
28 " ..	Stockton .....	Stockton .....	Jas. Scotman, wheeler .....	Kicked in stomach by a horse.
7 Mar. ..	Burwood .....	Newcastle .....	Ed. Hughes, miner .....	Fall of coal in face, causing compound fracture of right leg near ankle. Lower leg afterwards amputated in Wallsend Hospital.
8 " ..	A.A. Co.'s No. 2 ..	" .....	Thos. Walters, miner .....	Fracture of right fore-arm by fall of top band coal.
9 " ..	Dudley .....	" .....	Wm. Allenby, miner .....	Injury to right ankle by a fall of coal from face.

Date of Accident, 1898.	Name of Mine.	Situation of Mine.	Name and Occupation of Person Injured.	Cause of Accident and Remarks.
12 Mar.	Osborne Walls-end.	Mount Keira	Wm. Richardson, deputy	Injuries to back and head by fall of stone.
14 "	Stockton	Stockton	Gillot Ardron, engine man	} Scalded by steam and water while caulking a defective joint in steam pipes leading to fan
15 "	Killingworth	West Wallsend	John Doohan, fitter Lawrence Moran, sinker	
16 "	Newcastle Co.'s A pit.	Newcastle	Thos Medlicott, minei	Skull fractured by laden bucket as it swung across shaft bottom when lifted by engine Compound fracture of right leg The leg was afterwards amputated in the Newcastle Hospital. Fracture caused by a piece of coal blown from a shot. Leg broken by a fall of stone.
29 "	Osborne Walls end	Mount Keira	John Shipp, miner	Scalp wound caused by a plank falling upon him.
2 April	Wickham and Bullock Isld.	Newcastle.	Frank Croft, minei	Collar bone fractured by fall of roof
18 "	Duckenfield	Minmi	Simon Shields, miner	Three ribs broken and leg fractured by fall of stone.
19 "	Genowlan	Capertee.	Alex Horn, minei	Fracture of leg by empty skip.
21 "	Pacific	Teralba.	Geo Griffin, wheeler	Head cut by falling before empty skip
26 "	South Clifton	Clifton	Peter Young, wheeler	
3 May	Stockton	Stockton	Charles Butt, wheeler	Leg broken while riding between tubs, first one got off the way
5 "	"	"	Stanley Digby, fireman	In act of firing Babcock boiler when flame flashed out and burnt his face
16 "	"	"	Saml. Smith,rolley wayman	Leg broken by haulage rope in shaft siding. Binding sheave gave way and rope flew over, hitting Smith on the leg
17 "	Brown's No. 4	Minmi	Geo Gibson, screen boy	Crushed about loins between buffers and waggons while stepping in to couple
18 "	Burwood	Newcastle.	Saml Spence, miner	Injury to both hips by fall of coal from face
20 "	Wallsend	Wallsend	Patrick McGurk, miner	Fall of coal (little tops) causing fracture of right shoulder blade, also fracture of three ribs on left side.
20 "	Osborne Walls-end.	Mount Keira.	Herbt Brownlee, wheeler	Hip dislocated by skip on surface incline.
21 "	New Winning	Newcastle	Wm. Peek, surface labourer	Loss of left eye by a blow from a piece of steel whilst cutting a skip axle
25 "	Stockton	Stockton	Charles Usher, flat man	Jaw broken by a kick from a horse
28 "	Bull	Bull	Jas. Pack, miner	Leg broken by a fall of coal.
30 "	Maryland	Plattsburgh..	Thos Finley, miner	Abdominal injury by fall of coal which caught him against a prop.
6 June	New Winning	Newcastle	Evan Thomas, shunter	Injury to chest and back whilst shunting waggons on surface
6 "	Wickham and Bullock Island	"	Elijah Shakespere, wheeler	Injury to back while riding on full tubs To avoid striking his head against a catch, he threw himself backwards, with the result as above.
13 "	Wallsend	Wallsend	John Meiklejohn, horse driver	Right foot severely bruised by loaded skip.
16 "	West Wallsend	West Wallsend	Geo. Jefferson, miner	Hand burnt by powder Small plug had been left lying on some debris near to where Jefferson was trimming his lamp, a spark from which caused ignition
20 "	Wallsend No 2	Wallsend	Patrick O'Keefe, minei	His mate accidentally stuck a pick into his buttock
22 "	"	"	John Dryden, minei	Fracture of lower jaw and compound fracture of right leg by fall of roof in pillar workings
22 "	"	"	Thos Lewis, miner	In same accident Lewis was badly bruised
22 "	Wickham and Bullock Island	Newcastle	Michael Lorraine, miner	Burnt and bruised by shot blowing through from adjoining bord into his wall
23 "	Stockton	Stockton	Wm Roy, wheeler	Kicked by his horse
24 "	"	"	Jas McDonald, miner	Leg broken by fall of coal, which he was pulling down from the face
24 "	Newcastle Co.'s B. Pit.	Newcastle	Thos Wood, shunter at surface	Fracture of right arm by bottom board of a waggon.
28 "	Hetton	"	Andrew Mordue, horse keeper	Kicked or knocked down by a horse in the stable
28 "	Cullen Bullen	Cullen Bullen	John Fitzgerald, miner	Hand hurt by empty skips
4 July	Hetton	Newcastle	Robt. Stevenson, driver	Leg broken by a fall of stone. Riding on limbers, when horse knocked out a prop
5 "	Genowlan	Capertee	Peter Cartells, miner	Arm broken by a piece of shale bursting from face.
11 "	Stockton	Stockton	Patrick Collins, wheeler	Knocked down by a horse Dislocation of shoulder.
15 "	Newcastle Co.'s B Pit.	Newcastle	Frank Hawthorne, switch boy	Right hand run over by a loaded skip at pit bottom, causing fracture of several bones
18 "	Seaham	West Wallsend	Joseph Pease, junr, driver	Injury to head, back, and shoulders through falling in front of his set of tubs Riding with one foot on chain and other on buffer of first tub.
21 "	Brown's No. 4..	Minmi	Henry Murnane, driver on refuse heap.	Crushed between tubs of stone on refuse heap. Fractured ribs
29 "	Osborne Walls end.	Mount Keira	John Causley, miner	Foot hurt by a fall of stone.
1 Aug.	Corrimal	Corrimal	Alex. Masters, wheeler	Leg broken by empty skips
2 "	Newcastle Co.'s A Pit.	Newcastle	James Ford, wheeler	Back badly bruised by a slab of timber which fell after a prop had been knocked out by a loaded skip
11 "	New Winning	"	John Harvey, miner	Fall of coal in face caused fracture of right leg
11 "	Co-operative	Plattsburgh.	Herbert Hancock, clip boy	Thumb crushed, tub ran over it while he was attempting to detach same from endless rope.
18 "	Metropolitan	Helensburgh	James Wood, clip boy	Scalp wound by empty skip.
19 "	New Winning	Newcastle	Archd. Livingston, miner	Severe injury to back by a fall of shale roof (stone) whilst working top band coal
23 "	Dulwich	Singleton	Wm. Heny Hughes, under manager	Injury to left thumb by fall of stone.
26 "	Seaham	West Wallsend	Wm Ramsey, driver	Crushed between tubs and wall side whilst attempting to get into refuge hole
30 "	Newcastle Co.'s A Pit.	Newcastle	Thos Shufflebotham, miner	Fracture of right leg near ankle by a fall of shale roof (stone).
5 Sept.	New Park	Singleton	John Rowley, miner	Injury to leg by blow from prop.
12 "	Hetton	Carrington	Mattw Foster, miner	Broken leg by piece of top coal, which fell while being wedged
20 "	Stockton	Stockton	Joseph Wardle, wheeler	Kicked in stomach by horse He was standing behind and flogging it
23 "	Bellambi	Woonona	John Crowther, miner	Leg broken by fall of coal
27 "	East Greta	West Maitland	Albert Whiteley, Assistant brakeman.	Fracture of leg (afterwards amputated below the knee) by being struck with wire rope used for hauling coal into hopper.
29 "	Elemore Vale	Wallsend	Joseph Smith, minei	Bruises on back of hip by fall of coal.
1 Oct.	Duckenfield	Minmi	Jas Gibson, miner	Severely injured by fall of top coal
3 "	Stockton	Stockton	Geo Barnicott, miner	Leg broken and back cut by fall of coal while holing.
3 "	Burwood	Newcastle	Josh Fenwick, miner	Fall of coal in face, causing fracture of right leg.
6 "	Wallsend	Wallsend	Andrew Drummond, miner	Fracture of leg by fall of stone

Date of Accident, 1898.	Name of Mine.	Situation of Mine.	Name and Occupation of Person Injured.	Cause of Accident and Remarks.
7 Oct. ..	Greta .....	Greta .....	Peter Ford, miner .....	Fracture of leg by fall of coal.
11 ,, ..	South Bulli ..	Bellambi .....	H. Richards, miner .....	Leg broken by fall of coal.
11 ,, ..	Wallsend No. 2	Wallsend .....	Thos. Peacock, miner .....	A piece of coal wedged down by his mate grazed his thigh ; no bones broken.
20 ,, ..	New Winning..	Newcastle .....	James Pearce, miner .....	Injury to right arm by the point of a pick which his mate was using at the time.
20 ,, ..	Wallsend .....	Wallsend .....	Matthew Bailey, shiftman .....	Injury to head by falling slab.
22 ,, ..	Sydney Harbour Collieries.	Balmain .....	John Bennett, stoker at boilers	Left hand caught in a feed-pump, and resulted in loss of forefinger.
26 ,, ..	Wickham and Bullock Island.	Newcastle .....	James Wilson, landing boy .....	Hit on leg by hauling-rope. Compound fracture below the knee.
31 ,, ..	West Wallsend.	West Wallsend .....	Archd. Gray, shiftman .....	Caught on horse-road by horse and set of full tubs while cleaning road. Knocked down and crushed; concussion of brain; collarbone and five ribs broken.
3 Nov. ..	Bellambi .....	Woonona .....	Thos. Ralph, miner .....	Bruised arm and back by fall of coal.
4 ,, ..	New Lambton..	New Lambton .....	John Tattersall, surface labourer	Severe injury to back by a fall from screen platform.
7 ,, ..	East Greta .....	West Maitland .....	Wm. Henderson, miner .....	Fracture of ribs by fall of coal.
7 ,, ..	" ..	" ..	Geo. Rowley, miner .....	Fracture of thigh and internal injuries by fall of coal.
12 ,, ..	South Bulli .....	Bellambi .....	Geo. Johnston, surface labourer	Head slightly cut by coal falling off waggon on surface incline.
14 ,, ..	Cullen Bullen..	Cullen Bullen .....	H. Flude, surface labourer .....	Foot hurt with skips at screens.
15 ,, ..	Wickham and Bullock Island.	Newcastle .....	Hugh Riddle, miner .....	Arm broken by fall of coal. He was pulling some loose coal over when tops fell.
16 ,, ..	Pacific .....	Teralba .....	Jno. Redman, miner .....	Shock from premature explosion of shot.
16 ,, ..	" ..	" ..	Benjn. Lewis, miner .....	Burns on hands and arms by premature explosion of shot.
16 ,, ..	Bulli Pass.....	Bulli .....	H. Cropper, miner .....	Hand burnt by plug of powder exploding.
2 Dec. ..	Ferndale Shafts	Wickham .....	T. J. Evans, manager .....	) Rendered unconscious by carbon-monoxide gas, which was exuding into the shaft where they were at work taking out cylinders.
2 ,, ..	" ..	" ..	John Patmore, fitter .....	
5 ,, ..	Metropolitan ..	Helensburgh .....	Evan Parrot, miner .....	Fractured leg by fall of coal.
5 ,, ..	A.A. Co.'s No. 2 Pit.	Newcastle .....	Wm. Brien, ,, ..	Injury to right knee by a fall of coal in pillar face.
7 ,, ..	Hetton .....	" ..	John Hales, ,, ..	Thigh broken by fall of coal while drawing sprag.
15 ,, ..	Sydney Harbour Colliery	Balmain .....	Joseph Butler, sinker .....	Blow from a hammer whilst drilling a hole, causing loss of two fingers on right hand.
15 ,, ..	A.A. Co.'s No. 2 Pit.	Newcastle .....	Wm. Williams, miner .....	Fracture of three ribs on right side by a fall of top band coal.
19 ,, ..	" ..	" ..	John Willmot, miner .....	Burnt by flame from a powder shot. One hole had been drilled into another old one, and the flame from the powder, after being lighted, was emitted from the latter, which burnt Willmot somewhat severely, although at a considerable distance from shot.
20 ,, ..	Duckenfield ..	Minmi .....	John Lindsay White, screen-boy	Collar-bone broken by falling off a waggon. He had no business there.
22 ,, ..	Lambton .....	Lambton .....	Thos. Brown, under-manager ..	Fracture of leg and bruises by full skips.
27 ,, ..	Hetton .....	Newcastle .....	Geo. Ayliffe, wheeler .....	Arm broken through being jammed between empty tub and prop.
28 ,, ..	Seaham .....	West Wallsend .....	John Morris, miner .....	Ignition of fire-damp, which burnt his back, shoulders, arms, and face.
28 ,, ..	Metropolitan ..	Helensburgh .....	Jas. Oswald, wheeler .....	Hurt about the abdomen by a skip.

The following table shows the death-rate from accidents in the Coal and Shale mines of the Colony:—

#### DEATH-RATE from Accidents in the Colony.

Per 1,000 persons employed below ground.	Per 1,000 persons employed above ground.	Per 1,000 persons employed below and above ground.
2·741	0·939	2·376

The following figures afford a comparison of the death-rate, &c., in respect of Coal and Shale mines in this Colony for the year 1898, and those in Great Britain and Ireland for the year 1897 (including the persons employed on private branch railways, &c., and accidents to such persons):—

Place.	Death-rate from Accidents per 1,000 persons employed.	Number of persons employed per Fatal Accident.	Number of persons employed per Life Lost.	Tons of minerals raised per Fatal Accident.	Tons of minerals raised per Life Lost.
New South Wales, 1898 .....	2·376	1,168	420	526,216	189,438
Great Britain and Ireland, 1897.....	1·32	810	754	240,331	223,830

Of the three tables following, which are made up for the twenty years ending with 1897, two afford comparisons as between Great Britain and Ireland and this Colony, and the third shows the Fatal Accidents here, classified according to place and cause.

STATEMENT showing the tons of mineral raised, persons employed, lives lost, &c., in Great Britain and Ireland for twenty years, 1878-1897 (both inclusive).

Year.	Output of Mineral.	Persons employed.			Tons of Mineral raised per life lost.	Persons employed per each life lost.	Lives lost per 1,000 persons employed.	Tons of Mineral raised per each person employed underground.	Number of deaths.	Death-rate per 1,000,000 tons of mineral raised.

## EXPLOSIONS of Fire-damp and Coal-dust.

During the past year there was one fatal explosion of fire-damp and coal-dust, which occurred at the Dudley Colliery on 21st March, causing the deaths of 15 persons.

There was also one slight explosion of fire-damp at the Seaham Colliery on 28th December, which injured 1 person.

On the 21st March, 1898, 15 lives were lost by an explosion of fire-damp and coal-dust at the Dudley Colliery. This accident was the subject of a lengthy inquest, held by the coroner, Mr. G. C. Martin, at which 51 witnesses were examined. At its termination the jury returned the following verdict:—"That the said Thomas Dorrity and John Benson met their deaths in the Dudley Colliery, at Dudley, in the district of Newcastle, and in the colony of New South Wales, on the 21st day of March, 1898, from carbon-monoxide poisoning, and that there is not sufficient evidence before us to determine the cause of the explosion in the said colliery."

At the inquest the Crown was represented by Mr. E. H. Wilshire; the owners by the Hon. Alex. Brown, M.L.C., who is also agent for the colliery; the miners and the relatives of the deceased by Mr. Jas. Curley, who is the miners' general secretary; and Mr. H. Humphreys, the manager of the colliery, by Mr. W. H. Baker, solicitor.

At the time when the inquest was opened only 5 of the bodies had been recovered, the pits having been sealed down on 29th March, in consequence of underground fires and the possibility of another explosion.

The pits were reopened on the 17th June, and the work of exploration continued, with the result that the last of the bodies was recovered on 4th August.

In accordance with the provisions of section 23 of the Coal Mines Regulation Act, 1896, an inquiry was held by Mr. C. G. Wade, Barrister-at-law, which commenced on 15th August, and lasted thirteen days, during which time 45 witnesses were examined, many of whom were able to give the result of their examination of the workings after the pits had been reopened.

The result of this inquiry has been presented to the Minister for Mines in a report, which has been printed and laid on the Table of the House.

The conclusions were:—

"(I.) The explosion was caused by the ignition of fire-damp at a naked light.

"(II.) The explosion was intensified by the agency of coal-dust.

"(III.) Evidence did not show what was the approximate quantity of fire-damp, or what the circumstances were under which it assumed an explosive character.

"(IV.) Ventilation was not 'constantly' produced in accordance with the terms of section 47, Rule 1 of the Act.

"(V.) Inspections were not conducted in accordance with General Rule 4.

"(VI.) There was in the mine a quantity of fire-damp which rendered the use of naked lights dangerous.

"(VII.) Locked safety-lamps should have been used at the time of the explosion."

With reference to the description of lights to be used in the mine in future, Mr. Wade states:—"For the future, the use of safety-lamps is entirely a matter for the discretion of the management. Responsibility in this respect is removed by section 20 from the shoulders of the inspectors and transferred to the mine officials, and I have no doubt that they will show the same regard for the interests of all associated with the mine as has been exhibited in the past."

When the mine was ready to recommence coal-getting operations, the management had arranged to use safety-lamps in all places but the downcast pit bottom and the main intake airways.

The miners, however, demanded an extra payment of 3d. per ton for working with safety-lamps, which the management refused to concede. In consequence of this, the mine has not yet recommenced working.

It is unfortunate that the question of the price to be paid for getting the coal should stand in the way of the adoption of the precautionary measure of using safety-lamps, and it would be well if some satisfactory arrangement between the management and the miners could be arrived at on this matter.

Totals .....					17	22

This statement shows that so long ago as 1879 in the Wallsend Colliery, then working coal comparatively speaking near the outcrop and at a shallow depth, fire-damp was an enemy that had to be dealt with. Since that time the fact cannot be lost sight of that many of the mines are now working coal at a greater depth, and that fire-damp is more frequently met with than when the shallower coal was being worked.

In addition to the danger arising from an explosion of fire-damp, it has now been abundantly proved that coal-dust is, under certain conditions, an important element in initiating or spreading an explosion.

In this connection I cannot do better than quote the conclusions arrived at by the Royal Commission appointed in Great Britain to enquire into explosions from coal-dust in mines, and which are set forth in their report dated June, 1894:—

"1. The danger of explosion in a mine in which gas exists, even in very small quantities, is greatly increased by the presence of coal-dust.

"2. A gas explosion in a fiery mine may be intensified and carried on indefinitely by coal-dust raised by the explosion itself.

"3. Coal-dust alone, without the presence of any gas at all, may cause a dangerous explosion if ignited by a blown-out shot or other violent inflammation. To produce such a result, however, the conditions must be exceptional, and are only likely to be produced on rare occasions.

"4. Different dusts are inflammable, and consequently dangerous, in varying degrees; but it cannot be said with absolute certainty that any dust is entirely free from risk.

"5. There appears to be no probability that a dangerous explosion of coal-dust alone could ever be produced in a mine by a naked light."

The explosion at Dudley Colliery, although initiated by a naked light igniting fire-damp, was carried into nearly every part of the pit through the medium of coal-dust. It also appears from the evidence on the Bulli Colliery explosion (1887) that coal-dust played a very important part in carrying the explosion along the main haulage road to the tunnel mouth.

It was therefore deemed advisable, on the conclusion of the investigation of the Dudley Colliery explosion, to specially call the attention of all the colliery managers to the dangers of coal-dust, and a circular on the subject was issued.

At the same time their attention was drawn to the necessity for a strict observance of the conditions laid down in general rule 8 (as to the use of safety-lamps) and general rule 12 (as to blasting).

These rules are the same in our Act as in the Imperial Act of 1887; but as explosions continued to occur in Great Britain, it was found necessary to introduce there further legislation bearing on these, amongst other kindred matters, and a short amending Act was accordingly passed on August 14th, 1896.

Under

Under the authority of this latter Act the "Explosives in Coal Mines" Orders have been made, the most recent of which is dated July 11th, 1898. Hereunder will be found copies in full, both of the Act and Order.

## CHAPTER 43.

## An Act to amend the Coal Mines Regulation Act, 1887. [14th August, 1896.]

A.D. 1896.

BE it enacted by the Queen's most excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

Special rules.  
50 and 51 Vict.  
c. 58.

1.—(1.) The power to propose, amend, and modify special rules for a mine under the Coal Mines Regulation Act, 1887 (in this Act referred to as the principal Act), shall include powers with respect to any of the following matters:—

- (a) the nature and description of the lights or lamps to be used in the mine, and their custody and the mode of using and trimming them; and
- (b) the description of explosives to be used in the mine, the mode of using and of storing such explosives, and of making and stemming holes, and the times at which and the manner in which shots are to be fired in the mine; and
- (c) the number or class of persons, if any, to be permitted to remain in the mine or any part thereof whilst shots are being fired; and
- (d) the watering or efficient damping of the mine or any ways or places therein; and
- (e) generally the precautions to be adopted for the prevention of accidents from inflammable gas and coal-dust.

(2.) While any special rules made under this section are in force in any mine, any general rule contained in section forty-nine of the principal Act, and any special rule established under the principal Act, shall, if and so far as it is inconsistent with any special rules made under this section, be suspended in relation to that mine.

Representation  
of workmen on  
arbitration.

2. Where any matter in difference is referred to arbitration under the principal Act, a majority of the workmen employed in the mine to which the arbitration relates may, on giving such security, if any, as may appear to the arbitrators or umpire sufficient to provide for the costs occasioned by such representation, appoint any person to represent the workmen, or any class of them, on the arbitration, and any person so appointed shall be entitled to attend and take part in the proceedings of the arbitration to such extent and in such manner as the arbitrators or umpire may direct, and be subject to the same liability with respect to costs so occasioned as if he were a party to the arbitration.

Plan of mine in  
working.

3. The plan required to be kept in pursuance of section thirty-four of the principal Act shall show the position of the workings therein mentioned with regard to the surface, and the position, extension, and direction of every known fault or dislocation of the seam with its vertical throw.

Plan of  
abandoned mine.

4.—(1.) For subsection (1) and (2) of section thirty-eight of the principal Act shall be substituted the following subsections:—

"(1.) Where any mine or seam is abandoned, the person who is owner of the mine or seam at the time of its abandonment shall, within three months after the abandonment, send to a Secretary of State:

- (i.) An accurate plan of the mine or seam, being either the original working plan or an accurate copy thereof made by a competent draftsman, and showing—
  - (a) the boundaries of the workings of the mine or seam, including not only the working faces but also all headings in advance thereof, up to the time of the abandonment;
  - (b) the pillars of coal or other mineral remaining unworked;
  - (c) the position, direction, and extent of every known fault or dislocation of the seam with its vertical throw;
  - (d) the position of the workings with regard to the surface boundary;
  - (e) the general direction and rate of dip of the strata; and
  - (f) a statement of the depth of the shaft from the surface to the seam abandoned; and
- (ii.) A section of the strata sunk through, or, if that is not reasonably practicable, a statement of the depth of the shaft with a section of the seam.

Every such plan must be on a scale of not less than that of the ordnance survey of twenty-five inches to the mile, or on the same scale as the plan used at the mine at the time of its abandonment, and its accuracy must be certified, so far as is reasonably practicable, by a surveyor or other person approved in that behalf by an inspector of mines.

"(2.) The plan and section shall be preserved under the care of the Secretary of State; but no person, except an inspector under this Act, shall be entitled without the consent of the owner of the mine or seam, or the license of a Secretary of State, to see the plan when so sent until after the expiration of ten years from the time of the abandonment. Provided that such license shall not be granted unless the Secretary of State is satisfied that the inspection of such plan is necessary in the interests of safety.

(2.) The High Court, or, in Scotland, the Court of Session, may, on application by or on behalf of the Secretary of State, make an order requiring any person who has, for the time being, the custody or possession of any plan or section of an abandoned mine or seam to produce it to the Secretary of State for the purpose of inspection or copying.

Amendment of  
general rules as  
to lamps,  
inspection, and  
tamping.

5.—(1.) The inspection before the commencement of work required by Rule 4 (i) contained in section forty-nine of the principal Act, shall extend to all working places in which work is temporarily stopped within any ventilating district in which the men have to work.

(2.) A safety-lamp shall not be used in any mine or part of a mine by any person employed therein unless it is provided by the owner of the mine, and no portion of any safety-lamp shall be removed by any person from the mine while the lamp is in ordinary use.

(3.) In Rule 12 of the general rules contained in section forty-nine of the principal Act, for the words "nor shall coal or coal-dust be used for tamping" shall be substituted the words "and only clay or other non-inflammable substances shall be used for stemming, and shall be provided by the owner of the mine."

Provision as to  
explosives.

6. A Secretary of State on being satisfied that any explosive is or is likely to become dangerous, may, by order, of which notice shall be given in such manner as he may direct, prohibit the use thereof in any mine, or in any class of mines, either absolutely or subject to conditions, and the provisions of the principal Act as to contraventions of general rules shall apply to contraventions of any such prohibitions.

Short title.  
57 and 58 Vict.  
c. 52.

7. This Act may be cited as the Coal Mines Regulation Act, 1896, and the principal Act and the Coal Mines (Check Weighers) Act, 1894, and this Act may be cited collectively as the Coal Mines Regulation Acts, 1887 to 1896.

STATUTORY RULES AND ORDERS, 1898.

No. 515.

MINES.—COAL MINES.

*The Explosives in Coal Mines Order of the 11th July, 1898.*

WHEREAS by section 6 of the Coal Mines Regulation Act, 1896, it is enacted that a Secretary of State, on being satisfied that any explosive is, or is likely to become, dangerous, may by Order prohibit the use thereof in any mine or in any class of mines either absolutely or subject to conditions:

I hereby, in pursuance of the power conferred on me by the aforesaid section, make the following Order:—

*Absolute prohibition of certain explosives in unsafe mines.*

- 1.—(1) In all coal-mines in which inflammable gas has been found within the previous three months in such quantity as to be indicative of danger, the use of any explosive, other than a permitted explosive, as hereinafter defined, is absolutely prohibited in the seam or seams in which the gas has been found.
- (2) In all coal-mines which are not naturally wet throughout, the use of any explosive, other than a permitted explosive, as hereinafter defined, is absolutely prohibited in all roads, and in every dry and dusty part of the mine.

*Conditional*

*Conditional prohibition of other explosives in unsafe mines.*

2. In all such coal-mines or parts thereof as aforesaid, the use of permitted explosives is prohibited unless the following conditions are observed:—

- (a) Every charge of the explosive shall be placed in a properly drilled shot hole and shall have sufficient stemming :
  - (b) Every charge shall be fired by an efficient electrical apparatus, or by some other means equally secure against the ignition of inflammable gas or coal dust :
  - (c) Every charge shall be fired by a competent person appointed in writing for this duty by the owner, agent, or manager of the mine, and not being a person whose wages depend on the amount of mineral to be gotten :
  - (d) Each explosive shall be used in the manner and subject to the conditions prescribed in the Schedule hereto :
- Provided that nothing in this Order shall prohibit the use of a safety fuse in any mine in which inflammable gas has not been found within the previous three months in such quantity as to be indicative of danger.

*Conditional prohibition of all explosives in main roads.*

3. In every coal-mine the use of any explosive is prohibited in the main haulage roads and in the intakes, unless all workmen have been removed from the seam in which the shot is to be fired, and from all seams communicating with the shaft on the same level, except the men engaged in firing the shot, and in addition such other persons, not exceeding ten in number, as are necessarily employed in attending to the ventilating furnaces, steam-boilers, engines, machinery, winding apparatus, signals, or horses, or in inspecting the mine; or unless a permitted explosive is used, and every part of the roof, floor, and sides of the main haulage road or intake, within a distance of 20 yards from the place where it is used, is, at the time of firing, thoroughly wet, either naturally or from the application of water thereto.

This section shall not apply to such portions of the main haulage roads and intakes as are within 100 yards of the coal face.

This section shall not authorise the use of any explosive in any case where the use of such explosive is prohibited by section 1 or 2 of this Order.

*Application of Order.*

4. This Order shall not apply to mines of clay, or stratified or nodular ironstone, nor shall it apply to shafts in course of being sunk from the surface, or deepened, or to drifts and other outlets being driven from the surface, if such shafts, drifts, or outlets are not ventilated by return air.

Where a mine contains several separate seams this Order shall apply to each seam as if it were a separate mine.

*Definitions.*

5. In this Order the term "permitted explosives" means such explosives as are named and defined in the Schedule hereto: Provided that where the composition, quality, or character of any explosive is defined in such Schedule, any article alleged to be such explosive which differs therefrom in composition, quality, or character, whether by reason of deterioration or otherwise, shall not be deemed to be the explosives so defined: Provided, further, that an owner, agent, or manager shall not be responsible for the composition, quality, or character of an explosive, if he shows that he has in good faith obtained a written certificate from the maker of the explosive that it complies with the terms of the Schedule, and that he has taken all reasonable means to prevent deterioration of the explosive while stored.

The term "road" includes all roads of any description extending from the shaft or outlet to within 10 yards of the coal face.

The term "main haulage road" means a road which has been, or for the time being is, in use for moving trams by gravity or by steam or other mechanical power.

*Revocation of Former Order.*

6. This Order shall come into force on the 18th day of July, 1898, from which date the Explosives in Coal Mines Order of the 4th February, 1898, is revoked.

*Citation.*

7. This Order may be cited as the Explosives in Coal Mines Order of the 11th July, 1898.

M. W. RIDLEY,  
One of Her Majesty's Principal Secretaries of State.

Home Office, Whitehall, 11th July, 1898.

*Schedule.*

## LIST OF PERMITTED EXPLOSIVES\*.

*Ammonite*, consisting in every 100 parts by weight of the finished explosive of not more than 89 parts and not less than 87 parts of nitrate of ammonium, with not more than 13 parts and not less than 11 parts of thoroughly purified di-nitro-naphthalene, and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a case of lead and tin alloy thoroughly waterproofed with pure paraffin wax;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6½ (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 19 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6½ detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Amvis*, consisting in every 100 parts by weight of the finished explosive of not more than 92 parts and not less than 89 parts of nitrate of ammonium, with not more than 6 parts and not less than 4 parts of wood-meal, and with not more than 6 parts and not less than 4 parts of thoroughly purified di-nitro-benzol and chlorinated naphthalene, and with no other ingredient, provided that the chlorine does not exceed 1 per cent. by weight of the finished explosive;

Provided—

- (1) That the explosive shall be used only when contained in a case of stout paper thoroughly waterproofed with ceresine;
- (2) That the explosive shall be used only with a special detonator or electric detonator fuse containing not less than 15 grains of a composition consisting in every 100 parts by weight of 95 parts of fulminate of mercury and 5 parts of chlorate of potassium; and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with a special detonator"; and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Bellite*

\* This list is subject to revision in accordance with the results of experiments made from time to time in the Government Testing Station at Woolwich.

*Bellite No. 1*, consisting in every 100 parts by weight of the finished explosive of no more than 85 parts and not less than 82 parts of nitrate of ammonium, with not more than 18 parts and not less than 15 parts of thoroughly purified di-nitro-benzol, and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a case of linen paper thoroughly waterproofed with a mixture of carnauba and paraffin waxes;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 7 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 23 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That, in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used with not less than No. 7 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Bellite No. 3*, consisting in every 100 parts by weight of the finished explosive of not more than 95 parts and not less than 92 parts of nitrate of ammonium, with not more than 8 parts and not less than 5 parts of thoroughly purified di-nitro-benzol, and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a case of linen paper thoroughly waterproofed with a mixture of carnauba and paraffin waxes;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*British Gelnignite*, consisting in every 100 parts by weight of the finished explosive of not more than 62 parts and not less than 58 parts of thoroughly purified nitro-glycerine, with not more than 5 parts and not less than 3 parts of nitro-cotton, carefully washed and purified, and not more than 31 parts and not less than 26 parts of nitrate of potassium, and not more than 9 parts and not less than 6 parts of wood-meal, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper.
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium).
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives." And, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Carbo-gelatine*, consisting in every 100 parts by weight of the finished explosive of not more than 40 parts and not less than 37 parts of a mixture of carefully washed nitro-cotton and thoroughly purified nitro-glycerine, with not more than 51 parts and not less than 48 parts of nitrate of potassium, and with not more than 12 parts and not less than 9 parts of a mixture of wood-meal and charcoal, provided that the charcoal shall not exceed 3 parts by weight in every 100 parts by weight of the finished explosive, and not more than 2 parts of carbonate of magnesium, and with no other ingredient; the whole to be thoroughly mixed or incorporated so as not to be liable to liquefaction or exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed parchment paper wrapper.
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and marked with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients;
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Carbonite*, consisting in every 100 parts by weight of the finished explosive of not more than 27 parts and not less than 25 parts of thoroughly purified nitro-glycerine, with not more than 36 parts and not less than 30 parts of nitrate of barium and nitrate of potassium or either of them, and with not more than 43 parts and not less than 40 parts of wood-meal, with or without not more than half a part of sulphuretted benzol and not more than half a part of carbonate of sodium and carbonate of calcium or either of them, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use..

*Dahmenite*

*Dahmenite A*, consisting in every 100 parts by weight of the finished explosive of not more than 93.5 parts and not less than 91 parts of nitrate of ammonium, with not more than 6.5 parts and not less than 4 parts of naphthaline, and with not more than 2.5 parts and not less than one part of bichromate of potassium, and with no other ingredients;

Provided—

- (1) That the explosive shall be used only when contained in paper wrappers, waterproofed with paraffin wax and resin;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 7 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 23 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 7 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Electronite No. 2*, consisting in every 100 parts by weight of the finished explosive of not more than 96 parts and not less than 94 parts of nitrate of ammonium, with not more than 6 parts and not less than 4 parts of wood-meal and starch, and with no other ingredient;

Provided—

- (1) That the explosive shall be used only when contained in a waterproof metal case made of an alloy of lead and tin or in a paper wrapper waterproofed with ceresine;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That, in addition to the marking on the outer package, required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and the proportion of the ingredients.

*Elephant Brand Gunpowder*, consisting in every 100 parts by weight of the finished explosive of not more than 76 parts and not less than 74 parts of pure saltpetre, with not more than 15½ parts and not less than 14½ parts of charcoal, and not more than 11 parts and not less than 9 parts of pure distilled sulphur, and with no other ingredient, the whole being thoroughly well incorporated, and to be of such strength as, when exploded in a lead cylinder as used at the Home Office Testing Station, will give a result not inferior to that obtained with an equal weight of R. F. G.<sup>2</sup> gunpowder; and to be in the form of grains of a size to pass through a sieve of 11 meshes to the linear inch;

Provided—

- (1) That the gunpowder shall not be taken into or used in a mine except when contained, together with neutral oxalate of ammonium in the proportion of 1 part by weight of oxalate of ammonium to 2 parts by weight of gunpowder, in a spark-proof brown paper case or cartridge (Elephant Brand) in which there shall intervene between the gunpowder and the oxalate of ammonium a diaphragm of such strength and character as will effectually prevent any admixture of the two;
- (2) That there shall not be taken into or used in a mine any case or cartridge containing more than 9 oz. of the said gunpowder; that every case or cartridge shall be inserted intact in the hole, and that not more than one case or cartridge at a time shall be inserted;
- (3) That no shot with the said gunpowder shall be fired unless properly stemmed with an amount of stemming not less than would be sufficient for a charge of 9 oz. of ordinary gunpowder;
- (4) That the cases or cartridges shall be packed in thoroughly waterproof wrappers, bags, or other receptacles, each containing not more than 5 lb. of gunpowder; and
- (5) That in addition to marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each cartridge shall be clearly marked with the words "Permitted Explosive," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Faversham Powder*, consisting in every 100 parts by weight of the finished explosive of not more than 87 parts and not less than 83 parts of nitrate of ammonium, with not more than 14 parts and not less than 9 parts of thoroughly purified di-nitro-benzol, with not more than 2 parts and not less than 1 part of chloride of ammonium, and not more than 3 parts and not less than 2 parts of chloride of sodium, and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a case of paper thoroughly waterproofed with paraffin wax, and with or without a lead nozzle;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as 6½ (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 19 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than 6½ detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Kynite*, consisting in every 100 parts by weight of the finished explosive of not more than 27 parts and not less than 25 parts of thoroughly purified nitro-glycerine, with not more than 36 parts and not less than 30 parts of nitrate of barium, and not more than 43 parts and not less than 40 parts of wood-meal, and with not more than half a part of carbonate of sodium, and with no other ingredient; the whole being uniformly incorporated, and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of vegetable parchment;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosives, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Kymoch Gelnignite*, consisting in every 100 parts by weight of the finished explosive of not more than 63 parts and not less than 54 parts of thoroughly purified nitro-glycerine, with not more than 5 parts and not less than 3 parts of nitro-cotton, carefully washed and purified, and not more than 34 parts and not less than 26 parts of nitrate of potassium, and not more than 9 parts and not less than 6 parts of wood-meal, and with or without not more than 1 part of chalk, and with no other ingredients; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Nahusen's Gelnignite*, consisting in every 100 parts by weight of the finished explosive of not more than 63 parts and not less than 54 parts of thoroughly purified nitro-glycerine, with not more than 5 parts and not less than 3 parts of nitro-cotton, carefully washed and purified, not more than 34 parts and not less than 26 parts of nitrate of potassium, and not more than 10 parts and not less than 6 parts of wood-meal, and with or without not more than half a part of chalk, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*National Gelnignite*, consisting in every 100 parts by weight of the finished explosive of not more than 64 parts and not less than 56 parts of thoroughly purified nitro-glycerine, with not more than 6 parts and not less than 4 parts of nitro-cotton, carefully washed and purified, and not more than 32 parts and not less than 24 parts of nitrate of potassium, and not more than 9 parts and not less than 5 parts of wood-meal, and with or without not more than half a part of chalk, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a special detonator or electric detonator fuse containing not less than 15 grains of a composition consisting in every 100 parts by weight of 95 parts of fulminate of mercury and 5 parts of chlorate of potassium;
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with a special detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Nobel Ardeer Powder*, consisting in every 100 parts by weight of the finished explosive of not more than 34 parts and not less than 31 parts of thoroughly purified nitro-glycerine, with not more than 14 parts and not less than 11 parts of kieselguhr, with not more than 51 parts and not less than 47 parts of sulphate of magnesium, and with not more than 6 parts and not less than 4 parts of nitrate of potassium, with or without the addition of not more than half a part of carbonate of ammonium and not more than half a part of carbonate of calcium, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 3 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 8 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked by the words "Permitted Explosive, to be used only with not less than No. 3 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Nobel Carbonite*, consisting in every 100 parts by weight of the finished explosive of not more than 27 parts and not less than 25 parts of thoroughly purified nitro-glycerine, and not more than 36 parts and not less than 30 parts of nitrate of potassium and nitrate of barium, or either of them, and with not more than 43 parts and not less than 40 parts of wood-meal, with or without not more than half a part of sulphuretted benzol, and not more than half a part of carbonate of sodium and carbonate of calcium, or either of them, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Nobel*

*Nobel Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 63 parts and not less than 54 parts of thoroughly purified nitro-glycerine, with not more than 5 parts and not less than 3 parts of nitro-cotton, carefully washed and purified, not more than 34 parts and not less than 26 parts of nitrate of potassium, and not more than 9 parts and not less than 6 parts of wood-meal, and with or without not more than half a part of chalk, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Oxalate Blasting Powder*, consisting in every 100 parts by weight of the finished explosive of not more than 73 parts and not less than 69 parts of nitrate of potassium, with not more than 15½ parts and not less than 12 parts of charcoal, and with not more than 16½ parts and not less than 13½ parts of oxalate of ammonium, and with no other ingredient; the whole being thoroughly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of an alloy of lead and tin;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Pembrite*, consisting in every 100 parts by weight of the finished explosive of not more than 96 parts and not less than 93 parts of neutral nitrate of ammonium, with not more than 6 parts and not less than 3 parts of vegetable oil, of a character approved by the Secretary of State, and with not more than 2 parts and not less than 1 part of sulphur, and with or without not more than 1 part of nitrate of barium, and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in non-waterproofed wrappers of metal-coated paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 8 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 30.9 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required in the case of this explosive by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 8 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Rhenish Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 59 parts and not less than 57 parts of thoroughly purified nitro-glycerine, with not more than 3 parts and not less than 2 parts of nitro-cotton, carefully washed and purified, not more than 31 parts and not less than 28 parts of nitrate of potassium, and not more than 10½ parts and not less than 9 parts of wood-meal, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Roburite No. 3*, consisting in every 100 parts by weight of the finished explosive of not more than 89 parts and not less than 86 parts of nitrate of ammonium, with not more than 13 parts and not less than 9 parts of thoroughly purified di-nitro-benzol, with or without not more than 2 parts of chloro-naphthaline containing of chlorine not more than 1 part, and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a case of paper thoroughly water-proofed with ceresine;
- (2) That the explosive shall be used only with a special detonator or electric detonator fuse containing not less than 15 grains of a composition consisting in every 100 parts by weight of 95 parts of fulminate of mercury and 5 parts of chlorate of potassium; and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with a special detonator," and also with the name of the explosive, the name of the manufacturer, date of manufacture, and the nature and proportion of the ingredients.

*Sun Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 59 parts and not less than 57 parts of thoroughly purified nitro-glycerine, with not more than 3 parts and not less than 2 parts of nitro-cotton, carefully washed and purified, not more than 31 parts and not less than 25 parts of nitrate of potassium, and not more than

10 parts and not less than 8 parts of wood-meal, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Westfalite No. 1*, consisting in every 100 parts by weight of the finished explosive of not more than 96 parts and not less than 94 parts of neutral nitrate of ammonium, with not more than 6 parts and not less than 4 parts of resin, consisting of pure pine resin which does not melt below a temperature of 200 degrees Fahr., and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 8 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 30.9 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 8 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Westfalite No. 2*, consisting in every 100 parts by weight of the finished explosive of not more than 92 parts and not less than 90 parts of neutral nitrate of ammonium, with not more than 5 parts and not less than 3 parts of nitrate of potassium, and with not more than 6 parts and less than 4 parts of resin, consisting of pure pine resin which does not melt below a temperature of 200 degrees Fahr., and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 8 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 30.9 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 8 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

A perusal of these show that very large powers are given in Great Britain in regard to the use of safety-lamps and explosives, in mines which give off fire-damp.

During the past year fire-damp has been reported, under General Rule 4, at the following collieries in the Colony, viz. :—Dudley, Burwood, Lambton No. 2 (late Durham), Seaham, West Wallsend, Killingworth, Brown's, Duckenfield, Waratah, Wallsend, and East Greta, in the Newcastle district; and at Metropolitan, Bulli, South Bulli, South Clifton, and Mount Pleasant Collieries, in the Illawarra district.

Whilst the quantity of gas reported in some of the above has been small, yet in others a more or less regular discharge is given off. The Metropolitan and Killingworth Collieries are the only ones at present using safety-lamps for purposes other than that of examination.

The explosion of a small quantity of gas may, if there is a deposit of coal-dust to carry it on, lead to a very serious explosion. Outside the mining profession, and sometimes amongst those associated with coal-mining, a somewhat popular error exists that it requires a comparatively large quantity of gas to cause a serious explosion; but with finely-divided coal-dust, according to eminent authorities, the explosion of not more than 20 to 30 cubic feet may result in a disastrous and widespread explosion.

It is therefore necessary, in the interests of safety, that the smallest quantities of gas should be reported; and I desire to call the attention of the officials and workmen to their responsibilities in this matter, which are fully provided for and explained in the provisions of the General and Special Rules.

It is also a popular notion that mines generating a quantity of gas insufficient to produce an explosive atmosphere with the ordinary current of ventilation are free from the dangers of explosion. It must not, however, be overlooked that in the ramifications of a mine producing fire-damp, even to a slight extent, the various arrangements by which continuous ventilation is effected and the gas diluted may wholly or partially become deranged by human frailty, or other causes over which the management has little or no control, and result in a local or general accumulation of gas, requiring only to be brought in contact with a naked light to cause disastrous consequences. It is not necessary to go beyond the Colony for an example of a mine giving off a little fire-damp, worked with naked lights, becoming dangerously charged with fire-damp, through a door being left open, and loss of life resulting. All the accidents from explosions of fire-damp in the Colony have so far occurred in mines regarded as only slightly fiery, and in which safety-lamps were very little used. If colliery managers and miners would only grasp the fact that the difference between a slightly gassy mine and a very gassy mine is after all only one of degree, and that the conditions necessary to produce an explosion in either case may arise sooner or later, the necessity for the more extensive use of safety-lamps, coupled with the more rigid discipline which usually prevails where safety-lamps are in use, would become apparent.

There are now a few safety-lamps with special appliances which can detect as little as  $\frac{1}{4}$  per cent. of fire-damp in the air, and the managers of those mines in which gas has recently been seen would do well to obtain one of these. I have found from experience the Clowes hydrogen lamp to be the best for this purpose. It has been used by the manager of the Metropolitan Colliery, who has found it very useful.

It has sometimes been argued that the use of safety-lamps in a mine leads to carelessness in the matter of ventilation; but in practice the reverse of this has been found to be the case, as in mines where safety-lamps and other precautionary measures have been adopted it is generally admitted that the most rigid supervision and discipline prevails.

Portable electric lamps have been used on a small scale for special purposes in mines, and at present about 600 are being used in one of the largest and most fiery mines in the north of England, with considerable satisfaction. No doubt, as further improvements are effected in their construction, they will become more used in the future.

Blasting with gunpowder has been greatly restricted in Great Britain, in consequence of the explosions caused by its use (see section 1 of the "Explosives in Coalmines" order). Great care should be exercised to see that all the provisions of General Rule 12 are complied with, and if the necessity arises, one of the safety explosives should be adopted. In connection with the adoption of the latter, I desire to call the attention of colliery managers to the danger attending the use of a fuse in the presence of gas, as explosions have been traced to its use in such cases. On this matter, Mr. Henry Hall, Inspector of Mines in Lancashire, states in his report for 1895: "In the year 1890 I sent a circular letter to each owner, pointing out the danger of using fuses with safety explosives, and declining to accept such a method as being in conformity with General Rule 12 (2)." This subsection is the same in our Act, and it is therefore necessary, when safety explosives are used, that they should be fired by means of electricity.

A non-fatal accident occurred at Seaham Colliery on 28th December, when a miner was slightly burned by the ignition of a small quantity of fire-damp by the naked light on his cap, the gas being found in a cavity of the roof near to the face of his working-place. He was off work a few days in consequence of the burns received.

ACCIDENTS FROM FALLS OF ROOF AND SIDE, classified according to the place where they happened:

Place where the fall occurred.	Number of Fatal Accidents.	Number of Deaths.	Number of Non-fatal Accidents.	Number of Persons injured.
At the working face .....	4	4	47	49
On roads while repairing or enlarging .....	.....	.....	.....	.....
On roads while otherwise working or passing ..	1	3	.....	.....
Total from falls underground.....	5	7	47	49

During 1898, 52 accidents were reported as having been caused by falls, which resulted in the death of 7 persons, the corresponding figures for the previous year being 42 accidents, 9 deaths, and 34 persons injured.

One fatal accident, which happened at the East Greta Colliery on 18th November, caused the death of three men. The fall took place in the main engine dip of No. 1 tunnel, where the gradient varies from 45 degrees to 47½ degrees. The three deceased were engaged extending the tunnel, and it had been driven 387 feet below the lowest pair of working levels, when a fall took place about 7 a.m. (the usual time for changing shifts), the out end of which was 127 feet from the lowest levels, and extended for a distance of 60 feet. The top of the fall was about 15 feet above the top of the coal, and probably 300 tons of material fell, which, in consequence of the high inclination, rolled down into the face, doubtless causing the almost instantaneous death of the three men, all of whom were afterwards found within 30 feet of the face.

In consequence of the dangerous and difficult character of the work to be done in recovering the bodies of the deceased men, and the large quantity of timber which it was necessary to put in to secure the fall and strengthen the other timbers, in order to ensure safety to the rescue parties, it was not until 23rd December, or five weeks after the fall occurred, that the first body was recovered; the second was recovered on 24th December, and the third on 26th December.

The tunnel was driven in the seam from the surface a total distance of 933 feet, and the last pair of working levels were at a point 546 feet from the surface. As stated before, the main tunnel was being extended at the time of the accident, and had reached 387 feet from the lowest levels. A place parallel to the main tunnel was also being driven, but had only gone 129 feet below the levels, and no cut-through or stenton had been driven between these two places.

Whilst the work in connection with extending the tunnel, in order to win the dip coal, was proceeding, all other work was suspended in No. 1 tunnel, as the hauling-engine which hauled the coal from the face to the surface was constantly required.

Electric signals were kept within a few yards of the face of the main tunnel.

Manholes or places of refuge were made at intervals of 20 yards, in accordance with General Rule 14, and it was stated in evidence at the inquest that one was to be prepared close to the face during the night before the accident.

The seam of coal is about 11 feet thick, and usually overlaid by a hard conglomerate. From the lowest levels towards the face of the tunnel, a band of shale, a few inches in thickness, had made its appearance between the top of the coal and the conglomerate. Where the fall occurred the conglomerate, which was very variable in thickness, had thinned down in places to 4 or 5 inches in thickness, although it did not altogether run out.

Above the conglomerate at the fall was a considerable thickness (5 or 6 feet) of rotten argillaceous shale or mudstone. This stone was not laminated, and presented many slippery facings and joints, as revealed by the fall. When immersed in water it decrepitates very rapidly.

From the lowest levels to the face the sets of timber were put in 5 feet apart between centres. These consisted of—

- (a) One sill or floor piece of ironbark 16 feet long, 8 inches diameter at the small end. Let into each side.
- (b) One cap piece of ironbark next to the roof 15 feet long, 8 inches diameter at the small end. Let into each side 8 or 10 inches.
- (c)

- (c) Two legs or props of ironbark 10½ feet long, 8 inches diameter at the small end. These were mortised into sill and cap about 4 inches deep.
- (d) Slabs of hardwood 6 feet long, 6 to 8 inches wide, and 2 to 3 inches thick, which covered the whole surface of the roof, floor, and sides of the tunnel.
- (e) Pieces of ti-tree for packing behind the slabs in order to make all secure.
- (f) Sole pieces of ironbark between the sills, near to the sides, and parallel with the tunnel.

The props were 12 feet apart at the top and 13 feet at the bottom, measured between inside and inside. They were fixed at right angles to the dip of the strata, which is the correct method in order to resist the greatest pressure. In order to get sufficient height for these timbers, it was necessary to remove some of the stone below the seam. Occasionally, also, a little cutting had to be done in the stone above the coal, although much the greater portion was taken out of the floor, as it was much softer than the roof stone.

The inquest occupied thirteen days, on one of which the jury made an underground inspection of the No. 1 tunnel. They retired to consider their verdict at 5 p.m. on 27th January, and, as they failed to agree, were discharged at 8 a.m. on 28th January.

The cause of the accident, in my opinion, was due to roof pressure, consequent upon the conglomerate having been replaced by mudstone, which, by virtue of its jointy nature and the presence of water, rested on the timbers, and caused the caps to break.

Although the fall might have occurred without much warning of timber breaking at the last, I am of opinion some days before it actually took place evidence of pressure would have been afforded by the bending of the caps.

A good deal was said in evidence at the inquest about the unchangeable character of the conglomerates in the Greta measures, and, in view of this, a quotation is given from Professor Archibald Geikie, an acknowledged authority on geology, with reference to conglomerates:—"Coarse conglomerates which represent ancient shingles and gravels thicken and thin out rapidly, and do not usually cover a large area; they pass laterally and vertically into grits and sandstones, which have a much wider distribution, and these again shade off into clays and shales, that range also over large areas."

This opinion, coming from such an authority, coupled with the East Greta accident, should have the effect of causing the managers who have conglomerate roofs to deal with to place less reliance on their consistent character in the future.

The inquest disclosed what was, in my opinion, a breach of General Rule 4, inasmuch as the deputies who examined No. 1 tunnel were "contractors for getting minerals."

The under manager also committed breaches of Special Rules 3 and 7.

None of the other fatal accidents by falls require particular comment.

The non-fatal accidents from falls of roof and side show a large increase as compared with the previous year. In 1897 there were 33 accidents, injuring 34 persons, whereas last year there were 47 accidents, causing injuries to 49 persons.

This class of accident can only be reduced by a more rigid supervision on the part of the colliery officials, and more attention to the setting of props and sprags by the miners.

There is a disposition on the part of some of the officials not to enforce the use of sprags, in accordance with the terms of General Rule 23, but to leave the setting of them to the discretion of the miner. The officials in the exercise of their duties should enforce the rule, as the miners sometimes refrain from putting them in when necessary, and unless the officials do this their supervision loses some of its usefulness in the prevention of accidents.

Most of the accidents from falls of side coal have occurred in the Borehole seam of the Newcastle district, which contains many slippery backs and facings, and consequently demands particular attention as regards sprags. Where the seam is thick, the system known as "cockerleg" sprags might be used to advantage; but in any case the long or "soldier" sprags, as well as short ones under the holing, are necessary when the holing is done next to the bottom of the seam.

*Shaft Accidents.*—A fatal accident occurred at Killingworth Colliery on 8th May, when a contractor named D. C. McGeachie accidentally fell into the sump below the Borehole seam and was drowned.

Of the two non-fatal accidents, one was caused by the cage at the Zigzag Colliery, crushing the big toe of the onsetter, who was only off work a few days. The other one was more serious, and occurred at the Killingworth sinking shaft, when Lawrence Moran had his skull fractured by the laden bucket as it swung across the shaft bottom.

Sundries and unknown.....	.....	.....	2	2
Totals.....	.....	.....	7	8

The two accidents "while conveying explosives" were caused by sparks from the lights carried by the injured men.

The premature explosion of a shot at the Pacific Colliery resulted in injuries to the two men, and was caused by friction exploding the charge when being rammed into the hole by means of an iron drill, which was a breach of General Rule 12.

Of the two accidents by blows from stones or coal projected from shots, one occurred at the Newcastle Coal Company's A Pit, when a miner was struck by a piece of coal blown from a shot, in consequence of which his leg had to be amputated. The other one was caused by a shot blowing through into a wall from the adjoining bord at the Wickham and Bullock Island Colliery, which burnt and bruised a miner. This accident illustrates the necessity of warning men to keep clear in cases where shots are being fired when two places are nearly holed into each other.

The two accidents under the head of "Sundries and unknown," one of which happened at West Wallsend on 16th June, and the other at the A.A. Company's No. 2 Pit on 19th December, are fully described in the list of accidents.

#### UNDERGROUND Haulage Accidents.\*

Nature of Accident.	No. of Fatal Accidents.	No. of Deaths.	No. of Non-Fatal Accidents.	No. of Persons Injured.
While engaged in pushing tubs or skips .....	.....	.....	5	5
While engaged in coupling or uncoupling tubs or skips .....	.....	.....	.....	.....
Run over while passing along or across levels or engine planes.	.....	.....	4	4
Crushed between tubs, or between tubs and sides of levels or planes and props.	.....	.....	6	6
In other ways .....	.....	.....	2	2
<b>Totals .....</b>	.....	.....	<b>17</b>	<b>17</b>

\* These include all accidents on inclined and engine planes, and by trams and tubs. (See table headed "Summary of Fatal and Non-fatal Accidents, classified according to place and cause.")

It is satisfactory to notice that there was no fatal accident during the year under this head, although there were four more non-fatal accidents than during the year 1897.

On inclined and engine planes there were two accidents, both caused by hauling ropes, one resulting in a broken leg and the other a compound fracture of the leg below the knee.

By trams and tubs there were fifteen accidents, the most serious of which were the following:—31st May, at Stockton, when a wheeler had his leg broken whilst riding between tubs. 6th June, at Wickham and Bullock Island, when a wheeler injured his back whilst riding on full tubs. 18th July, at Seaham, when a driver injured his head, back, and shoulders by falling in front of his set of tubs whilst riding with one foot on the chain and the other on the buffer of the first tub. 1st August, at Corrimal, when a wheeler had a leg broken by being jammed between empty tubs. 31st October, at West Wallsend, when a shiftman was knocked down and crushed, causing concussion of the brain, and collar-bone and five ribs to be broken. 22nd December, at Lambton, when the under manager's leg was fractured and bruised by full tubs. 27th December, at Hetton, when a wheeler had his arm broken by being jammed between an empty tub and a prop.

Although these injuries were received accidentally, in some cases the injured persons were riding on tubs in dangerous positions, which requires careful supervision on the part of officials to prevent.

By underground fires Mr. T. J. Evans and John Patmore, on 2nd December, were rendered unconscious by carbon monoxide gas in one of the Ferndale old shafts, where they were engaged taking out the tubbing cylinders.

*Sundries.*—There were seventeen accidents under this head, causing injuries to eighteen persons, all of which are explained in the list of non-fatal accidents.

#### ACCIDENTS ON Surface—Railways or Tramways.

Description.	No. of Fatal Accidents.	No. of Deaths.	No. of Non-fatal Accidents.	No. of Persons Injured.
While engaged in moving waggons .....	.....	.....	2	2
While engaged in coupling or uncoupling waggons .....	.....	.....	.....	.....
Run over while passing along or across railways or tramways.	1	1	.....	.....
Crushed between waggons or between waggons and structures.	1	1	1	1
In other ways .....	.....	.....	12	13
<b>Totals .....</b>	<b>2</b>	<b>2</b>	<b>15</b>	<b>16</b>

*Accidents on the Surface.*—There were two accidents, causing the deaths of two persons. One occurred at South Bulli, when a deputy named Alexander Learmonth was accidentally knocked down and run over by the waggons on the surface incline.

The other happened at Seaham Colliery, when John Richardson, traffic manager, was crushed between a waggon and a retaining wall whilst attempting to use the brake with his foot.

The non-fatal accidents on the surface are sufficiently explained in the list of non-fatal accidents.

All the accidents have been investigated and reported on by the Inspectors, and the inquests attended in the cases of fatal accidents.

SECTION IV.  
LIST OF PROSECUTIONS.

SECTION V.

GENERAL REMARKS.

TRADE.

As the statistics show, there has been an increase in the output of coal from the Northern and Southern districts, and a slight decrease in that of the Western district.

During the latter half of the year the collieries, generally speaking, worked better than in the first half. In consequence of negotiations between the coal-owners and the miners, the price of the best Newcastle coal was raised from 6s. 9d. to 8s., f.o.b., after the 31st December, 1898, and at the same time the getting price for large coal was raised from 2s. 11d. to 3s. 2d. per ton.

SEAHAM COLLIERY.

At the end of the year the east side workings of this colliery were reopened, after having been sealed off since February, 1896, in consequence of an underground fire, caused by a naked light. This accident, which has caused serious loss to the proprietors, and some loss of work to the miners, points to the necessity of providing a naked light less exposed than the usual form of Scotch miners' lamp now commonly used, especially for those persons whose duties compel them to be moving about, such as drivers, wheelers, &c.

It is also worthy of the attention of colliery owners and managers to reduce the quantity of timber going into the mines which have loose barks of a highly inflammable nature. The use of non-inflammable brattice cloth, if obtainable of a good quality, might be used with a greater degree of security than the ordinary brattice cloth, especially for canvas doors, where open lights are constantly passing to and fro.

## SYDNEY HARBOUR COLLIERIES, BALMAIN.

During the year ended 31st December, 1898, a considerable portion of the permanent plant has arrived from England, and has been erected. Of this, five boilers, the ventilating-fan, and the electric lighting plant will be used during the further sinking of the shafts. Sinking work, which, pending the arrival from England of the boilers, was begun by using steam-cranes, was resumed at the end of June, and the depth of the Birthday shaft on 31st December was 585 feet, and of the Jubilee shaft 225 feet. The amount of water met with is so trifling that it is sent up in the sinking buckets. The shafts have been walled throughout with brickwork set in cement mortar, the thickness of walling being 9 inches. Both shafts are 18 feet diameter in the clear. The buntons for the permanent-cage guides are being built into the walling as it proceeds. The distance between the buntons is 6 feet, centre to centre, and one side of the shaft is being bratticed with tongued and grooved boarding for ventilating the sinking. The upcast area thus formed is 12 square feet, and this is connected in each case with the permanent ventilating fan. At present, however, only a small steam jet, playing into the upcast, is required to produce ample ventilation.

The building of the quay wall is nearing completion, and provision is being made for the berthing of the largest vessels at a distance of about 300 feet from the pit's mouth, the minimum depth of water at ordinary tides being 25 feet. The sinking engines at the Birthday shaft are of the horizontal coupled type, having cylinders 28 in. diameter x 5 ft. stroke and drum 14 ft. diameter, while at the Jubilee shaft the sinking engines, which are of the same type, have cylinders 30 in. diameter x 5 ft. stroke and drum 13 ft. diameter. Both have Cornish valve-gear. The boilers for use during sinking form the first section of the permanent installation. They are 30 ft. long x 8 ft. diameter, and are constructed for a working pressure of 120 lb. per square inch. The fittings are of the most modern type, and include wrought-steel steam and feed mains, forced draught apparatus, &c. The boiler feed-pumps, in duplicate, have H.P. cylinders 8½ in. diameter, L.P. cylinders 12 in. diameter, rams 8 in. diameter, the length of stroke being 9 in. The ventilating fan is of the Walker type, 24 ft. in diameter x 8 ft. wide. The fan engines are of the compound horizontal coupled type, having cylinders 19 in., and 33 in. diameter x 4 ft. stroke. On the crank shaft of the engines is a rope pulley 18 ft. diameter, driving, by means of eleven cotton ropes, a pulley 9 feet diameter on the fan shaft. The electric lighting plant consists of a Crompton dynamo of 230 volts, and 112 amperes output.

The dynamo driving engines are of the compound coupled horizontal type, having cylinders 8 in. and 15 in. diameter x 2 ft. stroke. The permanent steel headgear and capstan engines are expected to arrive from England shortly. The former will have a height from cage landing to centre of pulleys of 70 feet, while the capstan engines will have cylinders 14½ in. diameter x 2 ft. 6 in. stroke, with drums 6 ft. 4½ in. diameter driven by gearing having a ratio of 8 to 1, and capable of lifting a load of 8½ tons at the rate of 120 feet per minute. Each pair of capstan engines will have two cylinders and two drums, and will support the walling cradle in each shaft by two steel wire ropes, which will also serve as guides for the sinking buckets.

## VENTILATION.

After the close of the inquest on the Dudley Colliery explosion, it was deemed advisable, in consequence of the custom of stopping the ventilating fans during the week-ends, &c., to address the following circular letter on the matter to the colliery managers:—

Circular No. 60.  
98-7,621.  
Sir,

Department of Mines and Agriculture,  
Sydney, 1898

I have the honor to invite your attention to the provisions of General Rule 1, section 47, of the Coal Mines Regulation Act, 1896, respecting the ventilation of mines, and to request that you will be good enough to cause them to be strictly complied with.

I may point out for your information that, so long as a mine is being worked, it is necessary that an adequate amount of ventilation shall be constantly produced therein, even during the temporary suspension of work between shifts, at week-ends, &c.

I have the honor to be,  
Sir,  
Your obedient Servant,

The Manager,

Chief Inspector of Coal Mines.

In most of the small collieries, and in some of the larger, the stoppings put in to force the air nearer to the face workings are made with small coal and rubbish. Although this custom is probably prompted by motives of economy in the first place, it would generally pay better to erect stoppings which will give the least possible leakage of air, and thus ensure good ventilation in the face.

In some collieries very fair stoppings are made with stones and mortar, and in others bricks and mortar are used.

Fans are being erected, or are to be erected, at the Sydney Harbour Collieries, Brown's Minmi, Killingworth, and Burwood Collieries.

It is customary in many of the mining districts in England and America, where fans are used to produce the ventilation, to have a stroke counter attached to the engine, so that the manager may see for himself how many revolutions the fan has made during any period. Special Rule 72 in the Yorkshire inspection district on this matter is as follows:—"The fan and fan engine shall be carefully attended to by the person or persons in charge thereof, who shall keep the same running at the speed ordered by the manager, and a self-registering indicator shall be attached to the fan or fan engine."

At some collieries here the manager places written instructions about the speed of the fan in the engine-house, and this practice is to be recommended.

A form of ventilation report, which should be useful in those cases where fans are in use, is given below.

Colliery.

#### PLANS OF COLLIERY WORKINGS.

The regulations bearing on this matter are contained in section 23 of the Coal Mines Regulation Act, 1896.

In many of the colliery plans there is an absence of much detail, which detracts materially from the value of the plan as a guide when laying out workings, &c. If the plans were kept up by efficient surveyors, who had passed an examination and obtained a certificate approved by the Department, it is probable that this deficiency would be supplied, and more reliance could be placed on the accuracy of the plans than at present. In the case of a few collieries, however, the plans are accurately kept up, and full of useful details.

#### METHODS OF WORKING COAL.

All the coal in the Colony is worked on the "bord and pillar" system, or a modification, viz., the double or Welsh stalls.

Although coal is now being worked at much greater depths, the pillars in many cases are not being left of sufficient area, having regard to the extra pressure they are required to support, and the consequence is that they become crushed in the first working, and the coal in the pillars is therefore reduced in commercial value. Besides this, the success of a broken or second working (which is the removal of the pillars) is rendered much more unsafe by small pillars being left than is the case where the pillars are large. In the former case, if there has not already been any evidence of "creep" or "crush" in the first working, it is then much more likely to take place when a commencement is made to remove the pillars than when the pillars have been left large.

Where the surface conditions admit of the future removal of the pillars, the system known as "following up the whole with the broken" is much practised in Great Britain, and has many points to commend its adoption here. In such cases the removal of the pillars is commenced soon after they are formed, care being taken to have the "whole" places two or three pillars in advance of the broken, and to leave pillars of sufficient size to protect the intake and return airways.

In order that systems of working entailing a minimum loss of coal, and the production of the coal in the best marketable condition with a maximum of safety, may be arrived at, the whole question of leaving suitable pillars, and methods of working the pillars, deserves great consideration from the colliery managers.

#### WORKMEN'S INSPECTION OF MINES.

There are many collieries in the Northern and Western districts where the miners do not avail themselves of the privilege afforded by General Rule 39, of appointing two practical working miners to make an inspection of the mine on their behalf.

#### COMPLAINTS.

Several complaints have been received during the year, all of which, whether anonymous or not, have been carefully investigated.

BOILERS.

## BOILERS.

It is desirable, in my opinion, that the regulations as to the inspection of boilers should be more definite than is indicated in the special rules. In the regulations for mines other than coal and shale, we find that No. 17 General Rule states:—"And at least once in every six months every boiler shall be subjected to a hydraulic test." There is no regulation to this effect in the Coal Mines Act, and in those cases where the boilers are not under the charge of thoroughly qualified engineers, it is a good precaution to adopt, to have the boilers put under hydraulic pressure, to about double the working pressure, at stated intervals.

## COLLIERIES WORKING UNDER TIDAL WATERS AND UNDER THE SEA.

The special conditions contained in the leases for coal being worked under tidal waters or under the sea demand the special attention of the colliery owners and managers.

In the event of the necessity for increasing the size of pillars beyond those indicated, for any special local conditions, the manager should not refrain from doing so, if he thinks it advisable.

Special conditions under tidal waters are as follows:—

- a. The minimum width of pillars to be left shall be six yards,\* and the maximum width of bords or other excavations shall be six yards; but the lessee or manager of the colliery is free to exercise his discretion in altering the above by increasing the minimum width of the pillars or decreasing the maximum width of the bords or other excavations so as to increase the general safety.
- b. That the six-yard pillars shall be left unwrought.
- c. All headings and bords to be driven by plumb lines.
- d. All coal workings to be accurately surveyed every three months, the plan thereof to show the area worked out during the previous three months, and every year's workings must be indicated thereon by some distinctive colour. The dates of each survey must be noted on the plan.
- e. The colliery plans to contain a faithful and honest record of all dykes, fissures, and occurrences that are met with in the mine, and the workings delineated thereon as they are, and not as they are intended to be.
- f. In one road of every pair of winning-off or leading headings a bore shall be kept going ten feet in advance, for the purpose of foretelling the presence of any fissure, wash-out, open joint, fault, dyke, or otherwise, and all winning-off headings shall be driven at least fifty yards in advance of the working bords.
- g. Owing to the tendency that faults, dykes, wash-outs, and such like possess of weakening the roof and of permitting the passage of water through the broken material that is frequently found along their lines or through open fissures, or joints, the lessee, or his mining manager, must, on discovering a fault, wash-out, dyke, or fissure in a bore at the face or side of the leading headings or levels, take all necessary precautions against possible danger before opening it up by the drive.
- h. In addition to the special facilities which shall have been provided for the escape of the men by the shafts, the coal under the                    should not be attacked until after a large goaf has, if possible, been made by extensive coal workings under the mainland.
- i. That the most accurate and trustworthy information be obtained by the lessee or his mining manager, as to the thickness and character of the strata and estuary deposits overlying the coal seam before commencing to work it.

Special conditions under the sea are as follows:—

- a. The minimum width of pillars to be left shall be eight (8) yards, and the maximum width of bords or other excavations shall be six (6) yards; but the lessee or the manager of the colliery is free to use his discretion in altering the above by increasing the minimum width of the pillars or decreasing the maximum width of the bords or other excavations so as to increase the general safety.
- b. That the eight (8) yard pillars be left unwrought.
- c. All headings and bords to be driven by plumb lines.
- d. All coal workings to be accurately surveyed every three months, the plan thereof to show the area worked out during the previous three months, and every year's workings must be indicated thereon by some distinctive colour. The dates of each survey must be noted on the plan.
- e. The colliery plans to contain a faithful and honest record of all dykes, faults, fissures, and occurrences that are met with in the mine, and the workings delineated thereon as they are, and not as they are intended to be.
- f. In one road of every pair of winning-off or leading headings a bore shall be kept going ten (10) feet in advance, for the purpose of foretelling the presence of any fissure, wash-out, open joint, fault, dyke, or otherwise, and all winning-off headings shall be driven at least one hundred (100) yards in advance of the working bords.
- g. Owing to the tendency that faults, dykes, wash-outs, and such like possess of weakening the roof and of permitting the passage of water through the broken material that is frequently found along their lines or through open fissures, or joints, the lessee, or his mining manager, must, on discovering a fault, wash-out, dyke, or fissure in a bore at the face or side of the leading headings or levels, take all necessary precautions against possible danger before opening it up by the drive.
- h. In addition to the special facilities which shall have been provided for the escape of the men by the shafts, the coal under the ocean should not be attacked until after a large goaf has, if possible, been made by extensive coal workings under the mainland.
- i. That the most accurate and trustworthy information be obtained by the lessee, not only of the depth and character of the sea-bottom, but also of the strata overlying the coal seam, which strata shall be bored through, and proved a minimum thickness of thirty (30) feet at the face of the leading headings or levels so soon as they have driven one hundred (100) yards in advance of the working bords; and after the first borehole has been completed other bore-holes shall be so put up in advance of it at the face of the headings or levels at distances not exceeding twenty (20) yards.

## AMBULANCE.

\* Now eight yards.

## AMBULANCE.

The table below which affords information in regard to the classes formed during the year, may prove of interest:—

Name of Class.	Number of Successful Candidates.	Name of Surgeon-Instructor.	Name of Examining Officer.
West Wallsend .....	13	Dr. J. Preston Hocken .....	Dr. W. L'Estrange Eames.
Merewether.....	30	Dr. W. Clarke .....	Dr. G. P. M. Woodward.
Wallsend .....	22	Dr. H. K. Bean .....	do
Minmi (No. 2) .....	23	Dr. A. Crawley .....	Surgeon-Colonel W. D. C. Williams.
Lambton .....	16	Dr. Stapleton .....	Dr. W. L'Estrange Eames.
Stockton .....	7	Dr. J. W. Hester.....	Surgeon-Colonel W. D. C. Williams.
West Wallsend .....	8	Dr. J. Preston Hocken .....	Dr. W. L'Estrange Eames.

Only one class, and that a class at Wallsend, instructed by Dr. H. K. Bean, received the secondary or advanced course of instruction. It is gratifying to be able to state that all of the members of this class who presented themselves for examination were successful.

It is still a matter for surprise that a much larger number of the miners do not avail themselves of the advantages offered by the corps. The books, bandages, and blankets required by each class are supplied to it free of cost. The corps also provides an instructor and examiner, and, where it is necessary to hire a room for the use of the class, bears half the expense thereby incurred. Handsome certificates are awarded to candidates who are successful in obtaining the prescribed number of marks in the primary examination, while to those in the secondary or advanced examination silver medallions are awarded.

The sub-committee on life brigades at mines has held several meetings during the year, but has not been able to complete its labours. It has supervised certain experiments which were carried out at Newcastle during the year with the pneumatophor and Fleuss life-saving apparatus. As the experiments in connection with the pneumatophor did not prove satisfactory, the sub-committee urged that a sample of the Fleuss apparatus should be obtained. This was done, and soon after its arrival at Newcastle some experiments were made by the sub-committee, in the presence of a representative of Messrs. Siebe, Gorman, & Co.'s Australian agents (Messrs. Scott, Henderson, & Co.). As a result, certain alterations were suggested which it was thought would have the effect of reducing the weight of the apparatus and increasing its value as an agent in rescue work at mines. These suggestions have been duly transmitted to Messrs. Siebe, Gorman, & Co.

Inquiries were also made during the year with a view of obtaining an electric light and telephonic outfit suitable for use in mines in connection with rescue work.

## EXAMINATIONS FOR CERTIFICATES OF COMPETENCY UNDER THE COAL MINES ACT.

The constitution of the Board is as follows:—

Jesse Gregson, Esq., J.P. ( <i>Chairman</i> ), Australian Agricultural Company, Newcastle.	}	Mine Owners.
Wm. Sandford, Esq., Eskbank Iron Works, Lithgow ... ..		
Thomas Saywell, Esq., 16, York-street, Sydney ... ..	}	Mining Engineers.
D. A. W. Robertson, Esq., J.P., Metropolitan Colliery, Helensburgh... ..		
Richard Thomas, Esq., J.P., Brown's and Duckenfield Collieries, Minmi... ..	}	Miners.
L. B. Blackwell, Esq., The Vale Colliery, Lithgow ... ..		
Adam Cook, Esq., Wallsend ... ..	}	Miners.
J. G. Hutton, Esq., Thirroul ... ..		
David Leake, Esq., Lithgow ... ..	}	Miners.
John Dixon, Esq., F.G.S. ( <i>Vice-Chairman</i> ), Inspector.		
Secretary to the Board—H. D. Wood, Esq., B.A., LL.B., Mines Department, Sydney.		

During the year Mr. W. T. Philpot resigned his seat on the Board, having been appointed as the manager of a mine, and Mr. J. G. Hutton was appointed in his place. The appointment of Mr. Hutton took effect from the 10th October last.

The examiners appointed by the Board for conducting the examinations were:—

Messrs. W. Humble, F.G.S., H. Osborne MacCabe, J.P., and T. Cater.

Examinations were held at Sydney on the 19th, 20th, and 21st January, 1898, and at Newcastle on the 20th, 21st, 22nd, and 23rd July, with the following results:—

## RESULT of the Examinations for Certificates.

	First-class Certificates.		Second-class Certificates.	
	Number of Candidates.	Number of Passes.	Number of Candidates.	Number of Passes.
Sydney .....	7	2	18	15
Newcastle .....	11	2	19	16
Total .....	18	4	37	31

By permission of the Board for appointing Examiners, the questions put at the Examinations in 1898 are given herewith:—

EXAMINATION FOR FIRST-CLASS CERTIFICATE OF COMPETENCY—19TH, 20TH AND 21ST JANUARY, 1898.

First Day: Morning, 9 a.m. to 12 (noon). Technical College, Ultimo, Sydney.

Marks.

*Arithmetic.*

- 6 1. 1,800 tons of large coal, at 8s. per ton, are mixed with 1,200 tons of small, at 3s. per ton: At what price must the mixture be sold to realise  $7\frac{1}{2}$  per cent. profit?  
7 2. A mine reservoir covers 1 acre of ground, and contains 4,000,000 gallons of water: What is its average depth?

*Geology.*

- 5 1. When is strata said to be (a) conformable, (b) unconformable? Explain your answer by sketch.  
6 2. In which system of rocks are the Newcastle, Illawarra, and Lithgow Coal-seams found? Are these seams of the same geological age as the principal beds now being worked in Europe?

*Surveying.*

- 6 1. The full dip of a mine is due south, at the rate of 6 inches per yard: At what bearing must a place be started to dip 3 inches per yard?  
8 2. Plot the following to a scale of 2 chains to an inch:—

S. 30° E.,	5	chains.
N. 80° E.,	8.50	„
N. 4° E.,	6.00	„
N.	4.00	„
N. 85° W.,	9.30	„

and find bearing and distance of the "tie" line.

- 5 3. Why is it necessary to make deductions in the chainings to the rise and dip of steep workings; and how would you find the correct measurement?

*Ventilation and Mine Gases.*

- 9 1. A staple, situated near one of the return airways, is fouled with black-damp: Explain, by sketch, how you would remove this gas.  
10 2. A shaft is divided into two compartments for the purpose of ventilation; the area of one compartment is (say) 370 feet, and of the other 25 feet: Which, in your opinion, will naturally become the upcast?  
12 3. If sent to a colliery to report on the efficiency of a ventilating plant, to what points would you direct your attention?  
8 4. If, with a water-gauge of .25 inches, 40,000 cubic feet of air per minute is obtained, what height will the water-gauge be, when the quantity is 120,000 cubic feet per minute?  
11 5. What indications would you expect to get from the heating of gob débris, or from an incipient underground fire? Name the gases given off at such a time.

First Day—Afternoon: 2 p.m. to 5 p.m.

*Coal Mines Regulation Act, 1896.*

What are the requirements of the Act regarding—

- 7 1. Returns by owner, agent, or manager?  
6 2. Employment of boys?  
8 3. Duties and responsibilities of certificated managers?

*Winning and Working of Coal and Shale.*

- 13 1. You have to sink a 15-foot finished shaft through 400 feet of water-bearing strata: State the kind and thickness of lining you would use, and show by sketch how you would start and complete the work, so that it would be water-tight and safe.  
8 2. With a head of water 265 feet, what pressure would the lining have to resist? If tubing is used, how thick must it be to safely resist this pressure?  
10 3. What, in your opinion, is the best explosive to use in (a) shaft-sinking; (b) getting coal in dry and dusty mines; (c) damp and non-friery mines? Give the approximate composition of each explosive mentioned.  
10 4. If you had a hard roof and soft floor, how would you secure your pit-eye (bottom)? Would you adopt the same method if the floor was hard and the roof soft?  
8 5. If you are about to work a seam by long-wall in which the lines of cleavage (facings) are smooth and well defined, and bearing north and south, in what direction would you have your working face? Give your reasons.

*Machinery, Boilers, Pumps, &c.*

- 13 1. Enumerate, with appropriate dimensions, the machines which you would consider it necessary to have on the surface in order to deal with an output of 1,000 tons per day from a colliery 1,200 feet deep, and an underground haulage of an average distance of a mile.  
7 2. What size of pump would be required to drain a mine 600 feet deep, if the inflow was 9,000 gallons per hour? Give the horse-power.  
9 3. What should be the thickness of steel plate for a double riveted Lancashire boiler, 30 feet long and 7 feet in diameter, to work *safely* at 80 lb. pressure per square inch? Show how you arrive at your result.  
11 4. You wish the steam to blow off at 80 lb.: Sketch and describe the valve you would use, and give the weight you would apply to balance the above pressure.

Second Day—Morning, 9 a.m. to 12 (noon).

*Arithmetic.*

- 6 1. Find (a) the square root of 96,728,543; (b) the square of 799; and (c) the value of  $\frac{3}{4}$  of half a guinea +  $\frac{1}{4}$  of 25s.  
6 2. If 7 men and 5 boys get 350 tons of coal in 15 days, how long will 10 men and 3 boys take to get 250 tons, assuming that 2 boys are equal to 1 man?  
7 3 A shaft 18 feet in diameter and 500 feet deep is full of water: How many shifts, of 8 hours, will be required to take it out, with a bucket 40 cubic feet capacity, if 30 buckets per hour are raised?

*Geology.*

- 7 1. What is a dyke? Name the igneous rocks (if any) in your district, and say if they affect your coal-seams.  
7 2. What do you understand by the terms denudation, detritus, outcrop, strike, flora, fauna, trilobite?  
7 3. How would you distinguish between igneous and aqueous rocks?

*Surveying.*

Marks.

*Surveying.*

- 5 1. Find the area of a block of land 550 links square, in acres, roods, and poles. What amount of coal is under it in a seam 8 feet thick? 18 cwt. = 1 cubic yard.
- 7 2. Show how you would determine the tangent points of a curve of 20 chains radius on two lines meeting at an angle of  $150^\circ$ ; and show your tangential angles for chords 1 chain long.
- 5 3. The diagonal of a square pillar of coal is 3 chains: If the seam is 9 feet thick, how many cubic yards are there in the pillar?

*Ventilation and Mine Gases.*

- 7 1. If 90,000 cubic feet of air per minute passed through your workings with 2.75 inches of water-gauge, what would be the H.P. of ventilation?
- 12 2. It has been claimed on behalf of panel working, that the disastrous results of an explosion in one part of a mine, worked on that system, are not carried into other parts. In the light of recent events, is this claim a valid one? If not, why not? Answer fully.
- 11 3. Give the chemical symbol, composition, specific gravity, and characteristics of each of the gases usually met with in coal-mines. Give also their effect on human beings.

Second Day--Afternoon : 2 p.m. to 5 p.m.

*Coal Mines Regulation Act, 1896.*

What does the Act require concerning—

- 6 1. Ventilation?
- 8 2. Use of explosives below ground?
- 5 3. Use of safety-lamps in certain places?

*Winning and Working of Coal and Shale.*

- 8 1. Under what conditions does timber rapidly decay in mines? What methods have been proposed to preserve it?
- 14 2. Your upcast shaft is 8 feet in diameter, and you find it necessary to make it 12 feet in diameter; you wish the work to proceed day and night, but so as not to retard the output of coal at the downcast: How would you carry on the work so as to interfere with the ventilation as little as possible?
- 10 3. Two seams of coal, similar in quality, and separated by 80 feet of strata, are available for working: Which would you work first, and by what system, assuming that—(a) both seams are fiery, (b) the goaf is likely to yield water?
- 10 4. State what you know of Electricity as a force available for use under ground. Would you recommend its use in—(a) a fiery mine, (b) a non-fiery mine? Give the reasons for your answers.
- 9 5. The shaft of a ventilating fan breaks during working hours: What would you do, assuming the mine was fiery?

*Machinery, Boilers, Pumps, &c.*

- 13 1. Describe the class and size of engine boilers and other plant that you would put down to work 1 mile of road by endless rope, the road rising 1 in 50 against the load, and the output to be 700 tons in 9 hours.
- 10 2. Sketch the side elevation of a good head-gear; give also the measurements and strengths of all—(a) pieces of timber; (b) steel, used in its construction, supposing it to be required for a pit where the load is about 6 tons.
- 9 3. Sketch and describe the scroll or spiral drum, and state the advantages claimed for it over the ordinary cylindrical drum.
- 8 4. Do you know of any means to counteract the strain on the capping of a winding rope when the engine takes the lift? If so, describe and sketch the arrangement.

EXAMINATION FOR SECOND-CLASS CERTIFICATE OF COMPETENCY—19TH, 20TH, AND 21ST JANUARY, 1898.

First Day—Morning: 9 a.m. to 12 (noon).

*Arithmetic.*

Marks.

- 6 1. How many bricks would be required to put in 10 stoppings 9 in. thick, average size of each opening 7 ft. by 8 ft.?
- 5 2. How many yards of tramroad, laid with rails weighing 30 lb. per yard, would  $4\frac{3}{4}$  tons lay?

*Winning and Working of Coal and Shale.*

- 6 1. What means would you adopt for driving your headings and roadways straight?
- 8 2. Describe, in detail, the process of boring a shot-hole, putting in the charge, and firing it safely in—  
(a) A sinking shaft.  
(b) A working bord.
- 8 3. The roof of a main haulage road, 12 ft. wide, 8 ft. high, is to be secured. The immediate cover is 10 ft. of soft shale, and the thickness to surface is 350 ft. Describe the material you would use, giving dimensions.
- 6 4. If the sides of the road mentioned in Question 3 were weak, show by sketch, giving dimensions of material, how you would secure them.
- 6 5. Describe briefly one of the methods which have been proposed to keep down the dust in dry and dusty mines.
- 6 6. In working pillar and stall work, how would you guard against creep?

First Day—Afternoon : 2 p.m. to 5 p.m.

*Coal Mines Regulation Act.*

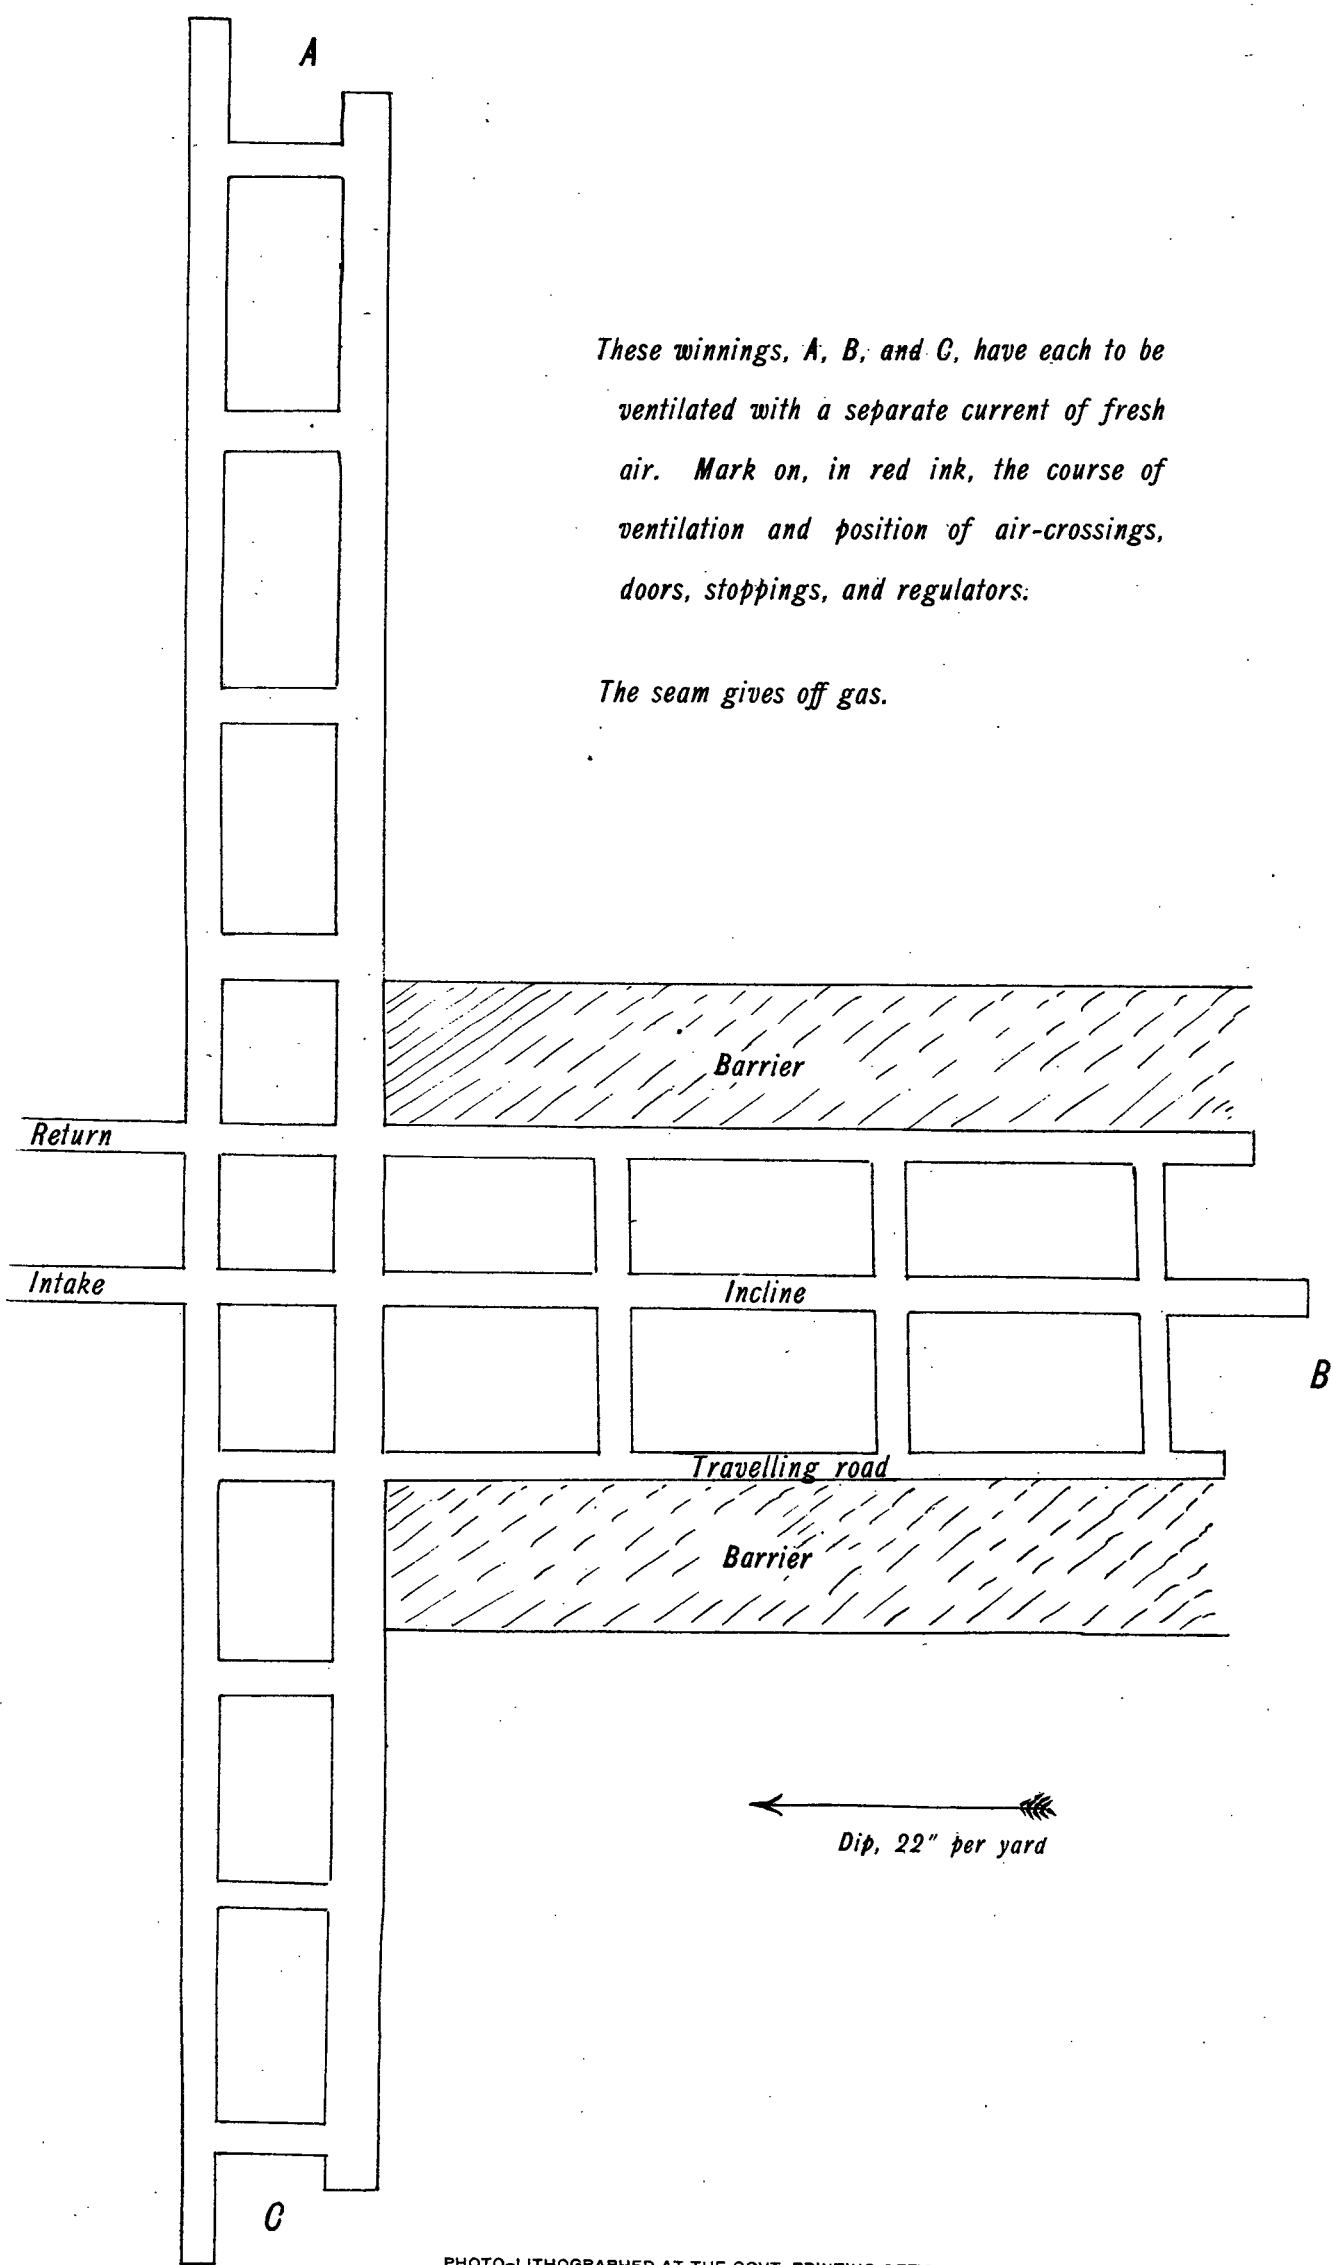

What does the Act require as regards—

- 7 1. Use of safety-lamps in certain places?
- 6 2. Fencing of entrances?
- 6 3. Boreholes in places approaching drowned workings?

*Ventilation and Mine Gases.*

- 5 1. In an airway 7 ft. 6 in. x 8 ft. 6 in. the velocity of the air current is 390 feet per minute. What is the volume of air passing?
- 6 2. Describe the method of ventilating headings in process of driving.
- 6 3. Write down what you know concerning the properties and composition of black-damp and fire-damp.
- 6 4. Give the position which the various gases usually occupy in a mine.
- 6 5. What is the advantage of noticing the changes in barometer at a colliery?

Second

*These workings, A, B, and C, have each to be ventilated with a separate current of fresh air. Mark on, in red ink, the course of ventilation and position of air-crossings, doors, stoppings, and regulators.*

*The seam gives off gas.*

*Mark on, in red ink, the course of ventilation and the position of air-crossings, doors, and stoppings you think are required. The mine is fiery.*

PHOTO-LITHOGRAPHED AT THE GOVT. PRINTING OFFICE, SYDNEY, NEW SOUTH WALES.

Second Day—Morning : 9 a.m. to 12 (noon).

*Arithmetic.*

Marks.

- 6 1. Multiply £28 10s. 9d. by 307 and divide the product by 28.
- 7 2. An airway is 1,000 yards long, 7 feet high, 6 feet wide : What is the rubbing surface in square feet ?

*Winning and Working of Coal and Shale.*

- 6 1. A curve has to be laid on an engine plane. Explain by sketch how you would do it so that the rope may have a straight lead from the last binding sheave into the centre of the roadway.
- 5 2. If in driving in the coal you met with a fault which was perpendicular, how would you ascertain whether it was an up-throw or down-throw ?
- 8 3. Show by sketch how you would extract pillars 20 yards x 35 yards where the roof is—
  - (a) Hard.
  - (b) Soft.
- 8 4. If the roof was very strong in a 4-foot seam, giving no material for packs, how would you work it by long wall ?
- 7 5. Show by sketch how you would fix sprags to a tender coal 6 feet thick, so that it may be safely holed to a depth of 3 feet.
- 6 6. Show by sketch how you would fix a door so that it will close by itself.

Second Day—Afternoon : 2 p.m. to 5 p.m.

*Coal Mines Regulation Act.*

What does the Act require as regards—

- 6 1. Ambulance appliances ?
- 7 2. Timbering ?

*Ventilation and Mine Gases.*

- 5 1. How can you reduce the friction of air in mines ?
- 6 2. In your morning inspection as deputy you find a large quantity of fire-damp in a bord, and there are nine other bords on the return side of it ; the mine is worked with naked lights : What would you do ?
- 5 3. If a mine gives off 1,000 cubic feet of fire-damp per minute, how much air would be necessary to work this mine safely with 100 men, boys, and horses ?
- 5 4. Enumerate the rules you would enforce for the safe use of safety-lamps.
- 6 5. If a workman were rendered insensible by breathing after-damp, how would you treat him ?
- 8 6. Show by sketches two modes of constructing an air crossing capable of passing 30,000 cubic feet of air per minute—give dimensions of materials used, and area of opening.

EXAMINATION FOR FIRST-CLASS CERTIFICATE OF COMPETENCY.

First Day, 20 July, 1898—Morning : 9 a.m. to 12 (noon).

*Arithmetic.*

Marks.

- 5 1. I have to divide 54,000 cubic feet of air between 3 districts, A, B, and C ; leaving power, area, and friction out of the question, the quantity is to be so divided that A gets twice as much as B, and B three times as much as C : What quantity of air will each receive ?
- 8 2. A pit is sunk 18' 6" diameter and walled throughout with 9" ordinary sized bricks ; the diameter of the shaft when walled is 17 feet in the clear ; the pit is 600 feet deep : How many cubic feet of excavation will be taken out ? And if the S.G. of the stone is 2.4—(1) what will be the weight of stone excavated in tons ? (2) how many bricks will be required for walling ? and (3) how much would they cost at 36s. per thousand ?

*Geology.*

- 5 1. How do you account for the fact that in some districts the coal-seams are comparatively level, while in adjacent districts the same seams are highly inclined ?
- 6 2. (1) What is a basin ? (2) Show by sketch section the principal coal basin with which you are acquainted in New South Wales, marking on the localities where the coal-seams have been proved to exist.

*Surveying.*

- 6 1. A main engine plane is going north, and it is required to drive it east ; a 4-chain radius curve is required to connect the roads : State the bearings and lengths you would drive.
- 6 2. Plot the following survey to a scale of 2 chains to an inch :—N. 30° 45' E. 1,110 links, S. 70° E. 1,135 links, S. 50° 15' W. 1,610 links, N. 41° W. 340 links : What is the length and bearing of the line necessary to close the survey ?
- 7 3. You are provided with a plan of old workings connected to surface at well-defined points A and B ; the scale of the plan is unknown, and the direction of the north point is not shown ; a survey made by you determines that the point A is N. 20° E. 25 chains from B ; the distance from A to B on the old plan is 13 inches : How would you proceed to plot correctly to a scale of 2 chains to an inch the old workings on your new plan ?

*Ventilation and Mine Gases.*

- 11 1. Give (a) an illustrated description of one of the following lamps :—Marsaut, Museler, Hepplewhite Gray ; (b) upon what principle do all safety-lamps depend ?
- 12 2. State the chief constituents of pure air, and give their chemical properties. Give the chemical properties of fire-damp and black-damp, and their weights as compared with atmospheric air.
- 9 3. What methods have been tried to guard against outbursts of gas ? What is your opinion as to their efficacy ?
- 8 4. The total pressure on a separation door is 390 lb. ; the W.G. is 2.5" : What is the width of the door if its height is 6 feet ?
- 10 5. Ventilate the workings shown on the accompanying plans.

First Day, 20 July, 1898—Afternoon : 2 p.m. to 5 p.m.

*Coal Mines Regulation Act.*

What are the requirements of the Act regarding—

- 7 1. (a) Certificated managers ; (b) Under-managers ?
- 7 2. Notice by Inspector of causes of danger not expressly provided against ?
- 7 3. Notice to be given of accidents in mines ?

*Winning*

Marks.

*Winning and Working of Coal and Shale.*

- 13 1. Sketch a district of bord and pillar workings in a 6-foot seam of tender coal 600 feet from the surface. Show 13 working places of this district, which is supposed to contain the maximum number of men allowed by the Act. Show how you would ventilate the district generally, and each of these places in particular. Give dimensions of pillars and widths of working-places in yards.
- 10 2. Describe the method of putting in a bricking ring (walling crib) in a sinking pit, and putting in a length of bricking; also the method of putting in a water ring. What precautions should be taken during these operations—(a) if inflammable gas is given off; (b) if the sinking is in hard ground?
- 8 3. What would you suggest to prevent accidents by—(a) falls of roof and coal at the face; (b) falls of roof and sides on the roads?
- 10 4. Show by sketches how you would work two seams of coal, the top 8 feet, the bottom 5 feet thick, with 14 feet of stone between, and a cover of 400 feet.
- 8 5. A fire takes place in one panel of a gassy mine, necessitating the sealing off of that district. Bearing in mind the double danger from explosion, from poisonous gases given off by the fire, state how you would proceed to do the work with the utmost safety to the workmen engaged in sealing off the fire.

*Machinery, Boilers, Pumps, &c.*

- 10 1. What thickness of steel plate will be required for a Lancashire boiler 30 feet long, 8 feet diameter, which is required to work at 120 lb. per sq. inch; the longitudinal seams to be lap joints, double riveted.
- 10 2. (a) What is the object of annealing chains and couplings? (b) why is it necessary? and (c) how often should it be done?
- 10 3. What size of steam-pipe would you put in for a pair of 36" cylinder engines working with a piston-speed of 360 feet a minute?
- 10 4. A cistern 20 feet long, 10 feet wide, and 10 feet deep is full of water: Find—(a) pressure on each of the four sides; (b) pressure on base; (c) weight of water.

Second Day, 21 July, 1898—Morning: 9 a.m. to 12 (noon).

*Arithmetic.*

- 6 1. 200 tons of coal are taken from a bord 6 yards wide in a clean seam 7 feet thick: What is the distance driven if 1 cubic yard weighs 18 cwt.?
- 6 2. A heading 6' x 7' x 233' is filled with an atmosphere composed by volume as follows:—N., 79%; O., 20.96%; Co<sub>2</sub>, .04%: What number of cubic feet of each gas is contained in the heading?
- 7 3. In a geared winch the spur wheels have 120, 100, and 80 teeth; the pinions 24, 18, and 12 teeth; the barrel or drum is 24" diameter; and the length of lever handle 15": What power applied at the latter will balance 1 ton on the barrel (friction neglected)?

*Geology.*

- 7 1. Illustrate by sketches the way in which coal-seams are often "thrown" by faults and igneous dykes, and explain the common effects of such faults and dykes upon the adjacent coal.
- 7 2. (a) How do fossils aid in the search for coal?  
(b) Suppose in your search you found the surface strata to contain fossils belonging to the trilobite family—  
(a) Would you be likely to find coal?  
(β) If not, why not?
- 7 3. What do you understand by the terms—overlap, underclay, hade, delta, conglomerate, erosion, metamorphose.

*Surveying.*

- 5 1. How would you adjust a transit theodolite for collimation in azimuth?
- 5 2. How would you adjust a dumpy level?
- 7 3. How would you determine the width of a river across which your chain will not reach?

*Ventilation and Mine Gases.*

- 12 1. A stone drift, 9 feet square, has to be driven 400 yards at a rise of 1 in 6. The strata gives off a large amount of fire-damp. The maximum ventilating pressure being insufficient, state what steps you would take to provide efficient ventilation of the drift, and show, by sketch, your appliances.
- 9 2. Sketch a regulator, and state in what part of the workings you would fix it so that it may be most effective, and state why. Sketch, also, an air-crossing with dimensions sufficient to pass 32,000 feet of air per minute over a main haulage road 10 feet by 7 feet.
- 8 3. What, in your opinion, are dangerous explosives to use in dry and dusty mines? Where you permit explosives to be used in such mines, what precautions would you take, and what orders would you give?

Second Day—21 July, 1898—Afternoon: 2 p.m. to 5 p.m.

*Coal Mines Regulation Act.*

What does the Act require regarding—

- 7 1. Ventilation of mines?
- 7 2. Stations and inspection of conditions as to ventilation, &c.?
- 5 3. Places of refuge on hauling roads?

*Winning and Working of Coal and Shale.*

- 14 1. Write down a list of mine officials (from manager down to and inclusive of deputies) you consider necessary in a fiery mine employing 250 men and boys in one shift. Briefly enumerate the duties of each class.
- 10 2. Give your experience in taking out pillars. Describe how you would protect yourself from falls of coal and roof, illustrating by sketches.
- 9 3. Show, by sketch, how you would arrange your main and tail rope connections in order to work roads branching off at right angles to the main engine plane.
- 8 4. Give a section of a coal-field that is not adapted for long wall, and state why.
- 10 5. A pair of rise headings, 6 feet high, 9 feet wide, have been driven up to a fault in a seam with 2 feet of soft floor, when a feeder of 100 gallons of water per minute is released. This water has to be dammed back. Explain, by sketches if necessary, how you would do the work. (The head of water is about 300 feet.)

*Machinery, Boilers, Pumps, &c.*

- 13 1. Sketch a side and front elevation of pit head-gear, with pulleys, guide-rods, also frame and arrangement for detaching in case of overwind.
- 9 2. (a) What kind of ropes do you consider most suitable for colliery purposes?  
(b) What steps would you take in the care and preservation of winding ropes?
- 8 3. What amount of expansion do you expect in a vertical range of steam pipes 163 yards long? How would you provide for such expansion?
- 10 4. Sketch some suitable automatic contrivance for detaching the haulage rope from a set of tubs while in motion.

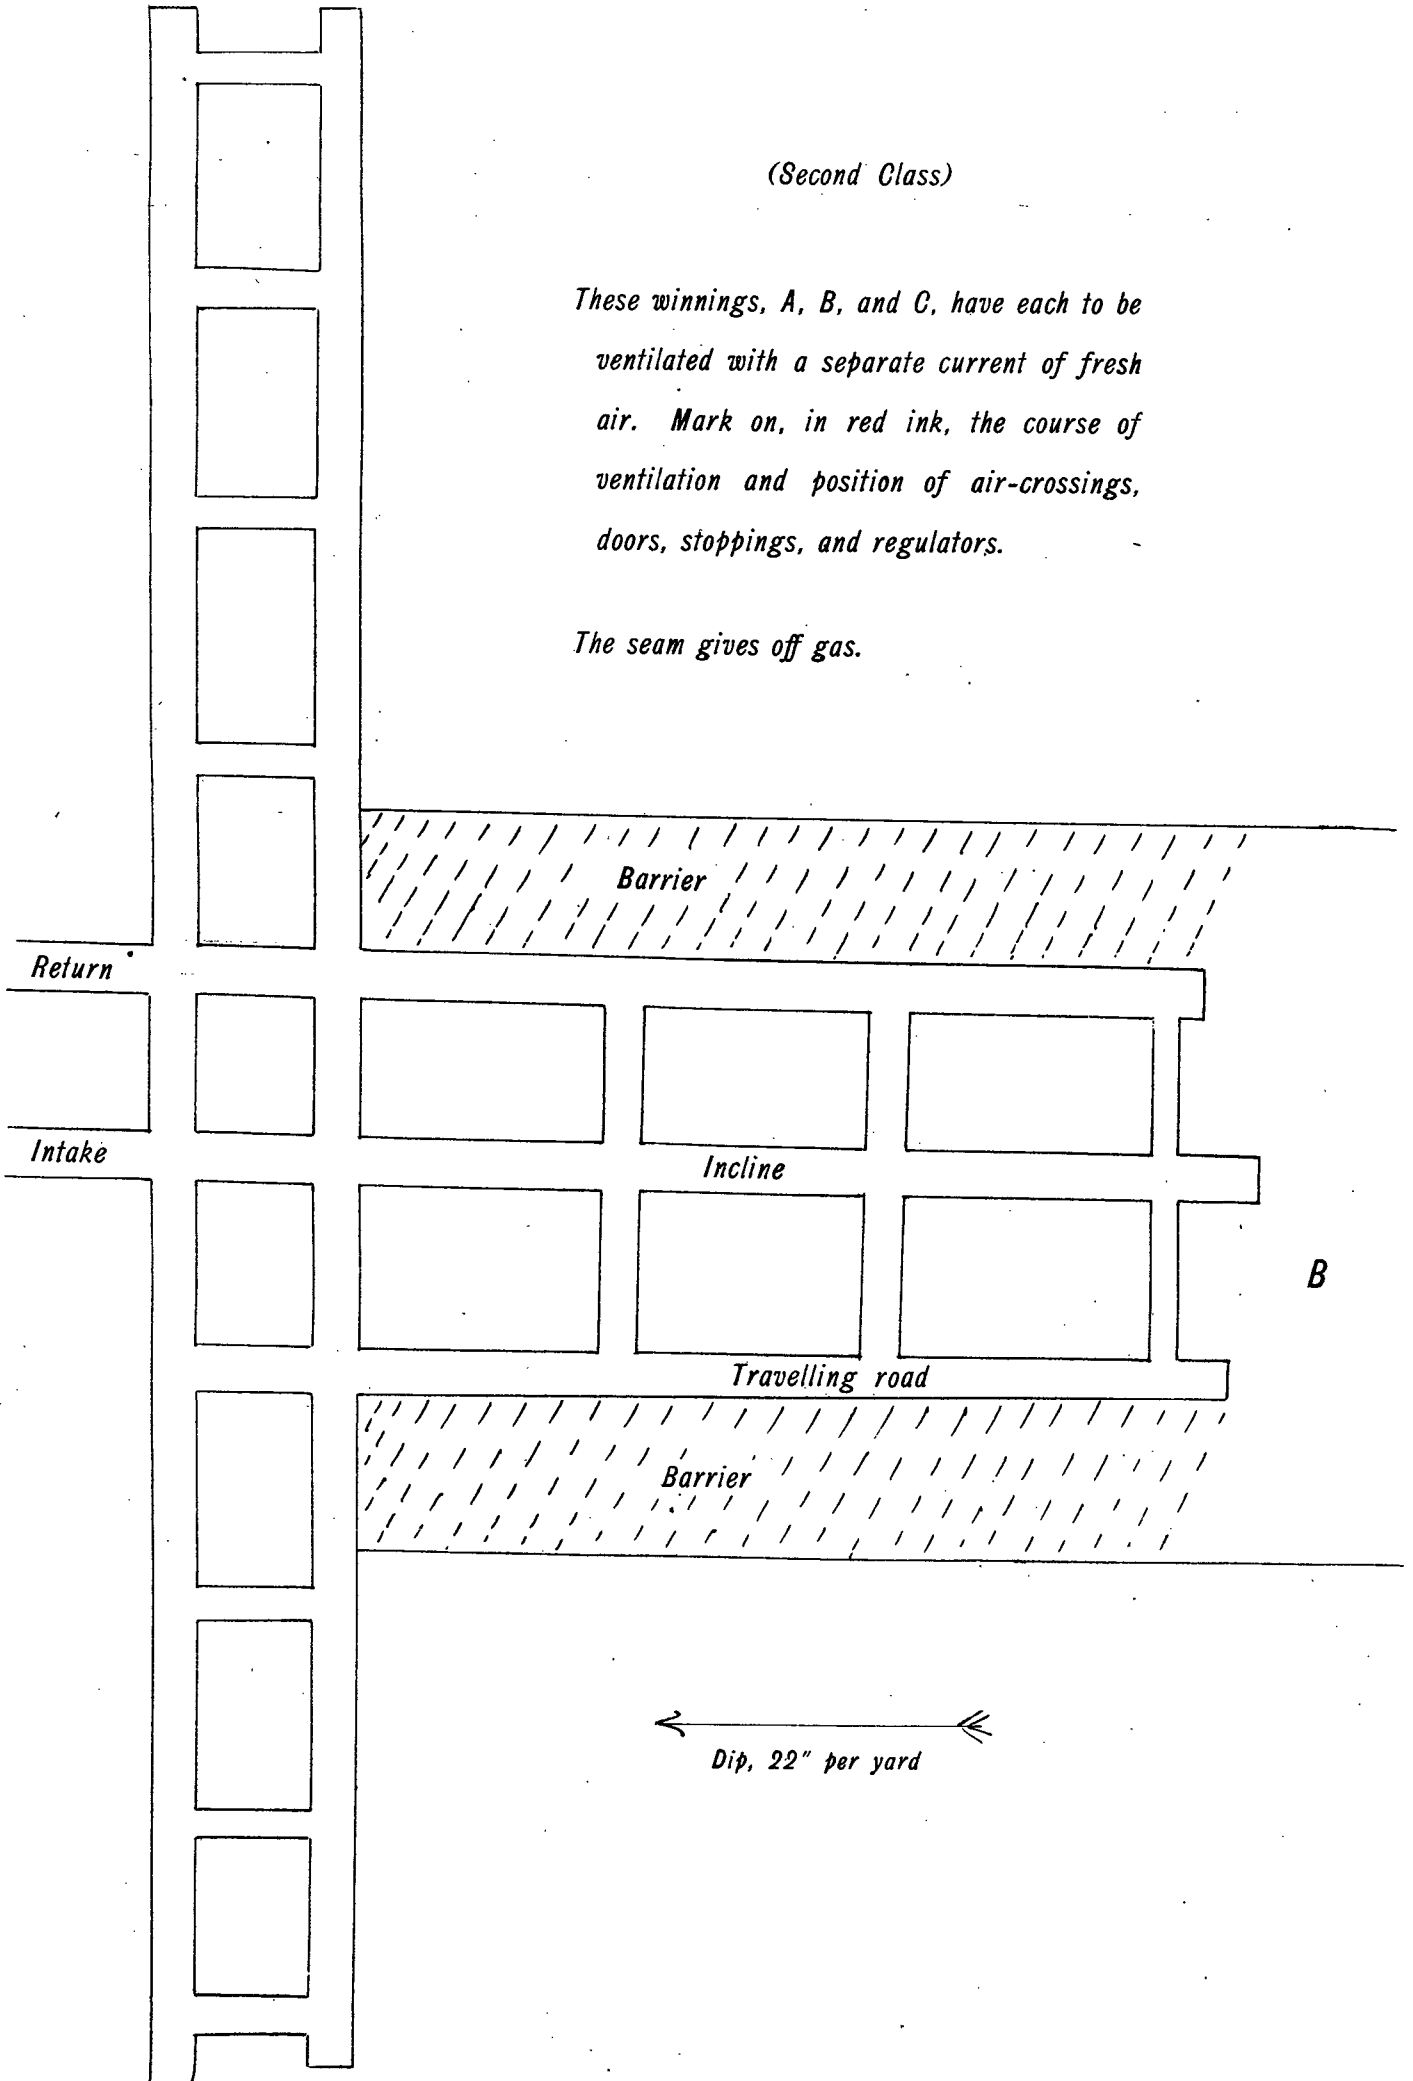

EXAMINATION

A

(Second Class)

These winnings, A, B, and C, have each to be ventilated with a separate current of fresh air. Mark on, in red ink, the course of ventilation and position of air-crossings, doors, stoppings, and regulators.

The seam gives off gas.

## EXAMINATION FOR SECOND-CLASS CERTIFICATE OF COMPETENCY.

First Day, 20 July, 1898—Morning: 9 a.m. to 12 noon.

Marks.

What does the Act require regarding—

*Coal Mines Regulation Act.*

- 6 1. Fencing of entrances?  
7 2. Examination of safety-lamps?  
6 3. Dimension of travelling roads?

*Ventilation and Mine Gases.*

- 6 1. What is indicated by the water-gauge? If the quantity of air be 72,560 cubic feet per minute, and the H.P. producing ventilation 12, what will be the height of W.G.?  
6 2. Whence arises the danger of using the Davy or Clanny lamp unprotected? What is the most explosive mixture of gas and air? And what is the mixture containing the least proportion of gas that will explode?  
6 3. In the event of an explosion on a main intake roadway, leaving men uninjured at the face, what is the best thing for them to do? Should they try to get out, which way would be safest for them to take?  
6 4. Give the dimensions, perimeter, and area of an airway through which a current of 35,000 cubic feet per minute will pass at a velocity of 6.5 feet per second.  
5 5. Ventilate the workings shown on the accompanying plan.

First Day, 20 July, 1898—Afternoon: 2 p.m. to 5 p.m.

*Arithmetic.*

- 6 1. If a set of timber weighs 176 lb., how many sets will it take to weigh 1 ton 19 cwt. 1 qr. 4 lb.?  
5 2. An airway is 7 feet high and 8 ft. 3 in. wide—what volume of air is passing when the velocity is 6 feet per second?

*Winning and Working of Coal and Shale.*

- 6 1. What, in your opinion, is the cause of the majority of accidents in our mines; and what suggestions have you to make for their prevention?  
8 2. Describe the method and precautions you would use in driving a place through a heavy fall of roof.  
6 3. When inspecting the workings of a colliery, to what points would you direct your particular attention? Assume a fiery mine with pillar extraction following up the boards.  
6 4. State what is the cause of a "creep," and show by sketch its effects on the roadways.  
8 5. What means would you suggest to guard against blown-out shots, and what is the great danger of such shots in a dry and dusty mine?  
6 6. If a miner whilst in his working-place is badly injured with a compound fracture of his leg, what steps would you take as to "first aid"?

Second Day, 21 July, 1898—Morning: 9 a.m. to 12 noon.

*Arithmetic.*

- 7 1. For a fortnight's work 2 men get 66 tons of large coal at 2s. 10½d. per ton, 21 tubs of slack at 6½d. per tub, set 9 slabs at 5½d., and wheel 65 skips at 2s. 6d. per score: What amount is due to them?  
6 2. Add together £513 10s. 3d., £72 6s. 9d., and £34 12s. 7½d., subtract £53 12s. 0½d., and divide the remainder by 17.

*Winning and Working of Coal and Shale.*

- 5 1. In long-wall working, what is the advantage of having the "weight" on the face? How would you get, and how keep it there?  
8 2. To ensure the greatest possible safety, what explosives would you use, and what regulations would you enforce, when firing shots in a seam of coal that gives off explosive gas, and is dusty also?  
6 3. Why is it necessary that Officials, such as Deputies, should periodically travel the main and branch return airways of a mine?  
7 4. Describe how you would timber a drift 12 feet wide and 7 feet high, rising 1 in 4 through a fault; the roof is shale, 6 feet thick, under 300 feet of cover. State the sizes of material you would use.  
8 5. An accident occurs in the working shaft during working hours, completely blocking it. The mine is ventilated by furnace. You are below-ground and in charge, and are required to give in detail the steps you would take to get the men out safely.  
6 6. Give a rough sketch of the system of working at any mine with which you are acquainted, stating thickness of seam, quality of roof, floor, &c.

Second Day, 21 July, 1898—Afternoon: 2 p.m. to 5 p.m.

*Coal Mines Regulation Act.*

What does the Act require regarding—

- 6 1. Water and boreholes?  
7 2. Timbering?

*Ventilation and Mine Gases.*

- 5 1. If with furnace ventilation you found it necessary to make a dumb drift, at what height above the furnace level would you connect it with the shaft? Give your reasons.  
6 2. What are the chief points to be kept in view when constructing an airway, with the object of passing a large quantity of air with a minimum expenditure of power?  
5 3. In what direction would you travel the returns of a fiery mine? Give reasons for your answer.  
6 4. If a mine is ventilated by four splits of air, how would you ascertain whether any split was passing more than its share of air? And if you found a split passing more than its share, how would you reduce it to its proper share?  
8 5. Describe the safety lamp you consider safest for use in a fiery mine, by (a) Miners, (b) Officials.  
5 6. In what proportion does the ventilating pressure vary in two airways, one 30 feet area and another 60 feet area, both passing the same quantity of air?

## LIST of Exemptions granted during the year 1898.

Date when granted.	Name of Mine.	Description of Exemption.
1898.		
26 January .....	Killingworth .....	From provision as to cover overhead. Expired 14th July, 1898.
1 April .....	Northumberland .....	From payment by weight. Expires 31st March, 1899.
12 July .....	Killingworth .....	From provision as to cover overhead. Expired 31st December, 1898.
14 September .....	„ A Pit.....	From provisions as to means of signalling for working shafts. Expired 31st December, 1898.
28 November .....	A. A. Company's No. 2. A new winning.	From so much of General Rule 12 as forbids the taking of explosives into mine, except in cartridges.

The following notices were received during the year of new mines opening out or in course of development, mines reopened, sinking pits, driving tunnels, change of ownership, and names of collieries; also, colliery management :—

On the 5th January, Mr. Archibald Fairley notified that, in accordance with clause iv, section 30, Coal Mines Regulation Act, 1896, that the Seaham Colliery Company (Limited) is now the owner of the Seaham Colliery; also that the principal office and agent of the company is Mr. Isaac Chapman, 38, Pitt-street, Sydney.

On 21st February, Mr. Frank Croudace notified that in future the Durham Colliery, the property of the Scottish Australian Mining Company, will be known as the Lambton Colliery, No. 2.

On 1st March, Mr. W. Hall, General Manager of the New South Wales Shale and Oil Company, gave notice that his company intended to reopen No. 1, or main tunnel, at Hartley Vale.

Mr. Percy H. Goldsmith, Superintendent of the Great Cobar Copper Mining Syndicate, notified that the above syndicate intend to sink trial shafts for coal prospecting purposes on land acquired from W. Sandford, Esq., situate at Lithgow.

Mr. John McKinnon notified, on the 7th July, that he was about to open the Bulli Pass Pit on a small scale.

On 27th July, Mr. W. W. Johnson notified that he had opened a tunnel on his property situate near Cardiff, and getting coal therefrom.

On 1st August, Mr. J. R. Henderson gave notice that he had made a start at the pit known as Louisvale Colliery, near East Maitland.

On 11th August, Mr. Frank Croudace notified having commenced sinking a new ventilating shaft at the Burwood Colliery, in close proximity to our present No. 3, or winding-shaft; also of having discontinued drawing coal at the Lambton B, but will shortly have men employed underground doing shift work.

Mr. Goodhew, manager of the Singleton Coal and Coke Company, gave notice of his intention to sink an air-shaft for the New Park Colliery, on what is termed Longworth's mineral lease, south side of Government road from the present tunnel.

Mr. James Erskine notified that work had been resumed at the South Hetton Colliery on the 25th July.

Mr. A. Thomas, manager of East Greta Colliery, gave notice on the 16th September that it was intended to resume operations at Stanford Greta Collieries. As only a few men will be employed, asks that a permit may be granted to Mr. Thomas Innis to act as manager under the Coal Mines Regulation Act.

Mr. A. Thomas notified on the 10th of October that they would commence working the upper seam, at a point near No. 2 tunnel (East Greta Colliery) during the week.

Mr. J. Campbell, manager, on 9th November, reported that operations had been commenced at Cardiff Colliery.

Mr. J. M. Sawyer gave notice, on the 5th December, that he had started to sink on land held by Mr. J. Ruttley, on the Newcastle Pasturage Reserve.

Mr. H. O. MacCabe, manager of the Osborne Wallsend Mine, Wollongong, gave notice on 13th December of his intention to drive two (2) headings in the 4 feet seam for water standage.

## APPOINTMENT OF COLLIERY MANAGERS.

*Bulli Pass Colliery.*—Mr. William Thompson Philpot notified on 15th August that he had been appointed manager of the mine.

*Hartley Vale Shale Mine.*—Mr. W. Hall, general manager, gave notice that Mr. Alex. Woodburn had been appointed, under the direction of Mr. John Blackley, to take charge of the above mine.

*Joadja Shale Mine.*—Mr. R. Vernon Saddington, on 6th October, gave notice that Wm. McMillan, from Capertee, had been appointed under-manager at Joadja; also that Joseph Edwards had been appointed manager of the Joadja mine.

*Genowlan Shale Mine.*—Also that Henry Williams had been appointed under manager at the Genowlan mine.

*Wickham and Bullock Island Colliery.*—Mr. James Fletcher, colliery manager, notified on 3rd June, that Mr. Joseph Packer Hindmarsh had been appointed under manager of the abovenamed colliery.

*New Lambton Colliery.*—Mr. Alex. Brown, on 4th November, notified that Mr. James Thomas would resume the position of manager of the New Lambton Mine, on and after Monday, the 7th instant.

## COAL-MINES ABANDONED OR OPERATIONS SUSPENDED DURING THE YEAR 1898.

On the 18th February, Mr. Archd. Gardiner gave notice, in compliance with clause 30, subsection III, that the working of Cardiff Colliery would cease, and likely to be so for over two months.

On 7th April, Mr. W. Mawks notified having closed his small pit, known as Mawk's Colliery.

On 20th May, Mr. James Salisbury notified that he had abandoned Hill End Colliery, near Bulli, Illawarra, on 17th December, 1897.

On 30th May, Mr. R. J. Taylor notified that he had abandoned Louisvale Colliery situate near East Maitland.

On 7th November, Mr. Benjamin Tonks notified that he had given up the Quarry Colliery as a non-paying concern.

On 10th November, Mr. Walter Jenkins notified having abandoned the colliery known as Jenkin's.

*Dudley Colliery.*—The Honorable Alexander Brown, M.L.C., Managing Director of Dalgety & Co., agents for Dudley Colliery, gave notice, under section 30 of the Coal Mines Regulation Act, 1896, of the intention of the owners of Dudley Colliery to discontinue the working thereof on and after Saturday the 1st proximo.

*Wallarah Colliery, Catherine Hill Bay.*—On the 9th January, Mr. William Scobie, colliery manager, gave notice of having stopped the D shaft mine on 31st December, 1898.

*Ferndale Colliery, Upcast Shaft.*—Messrs. Morrison and Bearby notified their intention to at once take out the cylinders from the Ferndale shafts, and had appointed Mr. J. J. Evans (a certificated colliery manager) to supervise the work.

In the performance of my official duties, I have at all times had the willing assistance of all the inspectors.

In addition to inspection of collieries underground, a considerable amount of time was taken up by attending the inquest and second inquiry into the circumstances of the Dudley explosion.

I have also had several special reports to write on different matters, and a good deal of work in connection with mineral leases, mining authorities, royalty accounts, &c., which pass through my hands in the ordinary course.

I beg to send herewith the annual reports of the Inspectors Dixon, Rowan, Bates, and Humble.

I have, &c.,

A. A. ATKINSON,  
Chief Inspector of Coal and Shale Mines.

Honorable Joseph Cook, Minister for Mines and Agriculture.

## Senior Inspector of Collieries' Report.

Merewether, 1 February, 1899.

To the Honorable Joseph Cook, Esq., M.P.,  
Secretary for Mines and Agriculture, &c., &c.,—  
Sir,

In accordance with the provisions of section 21 of the Coal Mines Regulation Act, 1896, I have the honor to submit my report for the year ending 31st December, 1898.

During the term embraced by this report I made 213 inspections, investigated 28 accidents, and travelled about 6,500 miles (exclusive of underground travelling). The collieries usually inspected by me are—22 in the Newcastle District, 1 in the Muswellbrook District, 2 in the Gunnedah District, and the Sydney Harbour Colliery.

Of the 28 accidents investigated by me during the year, 13 were caused by falls of coal, 2 by falls of roof, 1 by a runaway horse, 1 by a chip of steel from a skip axle, 2 by powder burns, 1 by premature explosion of a shot, 2 by loaded skips, 1 by bottom board of waggon falling on his arm, 1 by a blow from a pick, 1 by a blow from a hammer, 1 by falling from a screen platform at surface, 1 by machinery, and 1 by a slab of timber in a heading.

One of the accidents, I regret to say, proved fatal. This accident happened to a miner named William Walter Thomas in the Newcastle Co.'s B pit, on 2nd May, by a fall of coal. The poor fellow was removed to the Newcastle Hospital as soon as possible, and after great suffering he succumbed to his injuries on 12th of same month. I attended the inquest on the body, and heard all the evidence, and fully agree with the verdict of "Accidental Death," as returned by the Jury.

After visiting the scene of accident and obtaining the fullest information I made a full report as to cause, &c.

## COLLIERIES.

1. *A.A. Co.'s No. 2.*—In this mine, about 70 men, &c., are employed on the two shifts during the day. The whole of the face work is pillar coal extraction in the several districts. The officials and workmen are, however, well used to the intricacies of this work, and the utmost care appears to be taken by all concerned to avoid accident. The ventilation is produced by a Guibal fan, and about 45,000 cubic feet of air per minute is circulated in the mine.

2. *A.A. Co.'s New Winning.*—About 480 men, &c., are employed in this colliery. The ventilation is produced by a Schiele fan, and about 94,000 cubic feet of air per minute is circulated in the mine.

3. *Newcastle Co.'s A. Pit.*—In this colliery about 340 men, &c., are employed. The ventilation is produced by furnace, and about 90,000 cubic feet of air per minute is circulated in the mine.

4. *Newcastle Co.'s B Pit*.—About 312 men, &c., are employed in this colliery, and a current of about 98,000 cubic feet of air per minute is produced by furnace power.

5. *Burwood*.—In this colliery about 282 men, &c., are employed. The ventilation is produced by furnace, and a current of about 55,000 cubic feet of air per minute is circulated in the mine. In connection with this colliery another shaft is being sunk. A depth of over 300 feet has been reached. This shaft is known as No. 4.

6. *Waratah*.—About 170 men, &c., are employed in this Colliery, and a current of about 56,000 cubic feet of air per minute is circulated in the mine, and is produced by furnace.

7. *New Lambton*.—In this colliery about 46 men, &c., are employed and supplied with about 12,000 cubic feet of air per minute produced by furnace.

8. *Ebbw Vale*.—About 26 men, &c., are employed in this colliery, and the total quantity of air is about 10,000 cubic feet per minute, produced by furnace. The seam of coal worked at this colliery is the No. 2 or Burwood seam.

9. *Hillside, Merewether*.—In this mine about 6 men, &c., are employed, and about 6,000 cubic feet of air per minute is produced by natural ventilation. The No. 2 or Burwood seam is also worked at this colliery.

10. *Shortlands*.—The No. 2 or Burwood seam is worked at this mine. The mine is in close proximity to New Lambton Colliery. About 8 men, &c., are employed and supplied with a current of about 1,200 cubic feet of air per minute, which is produced by a small furnace.

11. *Lambton B Pit (late Durham)*.—About 36 men are now engaged in connection with this colliery. Some are employed in keeping the workings free from accumulations of water, and others are working at the surface, putting in sidings, &c., with a view to commencing full work at no distant date. During the year a few men have at times been employed below-ground getting fire coal for the steam-boilers at surface.

12. *Burwood Extended*.—This mine is still idle, and there is a great quantity of water in each shaft. During the year the headgear has been painted, and the machinery properly cleaned. I have visited this colliery a few times during the year to see that everything at the surface was kept secure.

13. Side Colliery, Waratah, Newcastle Pasturage Reserve, only 1 man employed.

14. Quarry Colliery, Waratah, 2 men employed prospecting for pillar coal.

15. Wright's Colliery, Waratah, 1 man employed below-ground.

16. Morris's Colliery, Lambton, 2 men employed below-ground.

17. Bayley's Reward, Lambton, 2 men employed below-ground.

18. *Jenkins's Lambton*.—This mine was under inspection during the year, but is now worked out and abandoned.

19. *Mawk's Lambton*.—This mine was visited by me during the early part of the year, but it is now abandoned.

20. *Rosehill, North Lambton*.—Only 1 man employed below-ground.

21. *Electric, North Lambton*.—One man employed below-ground.

22. *Kayuga, near Muswellbrook*.—Only 1 man employed below-ground.

23. *Centenary, Curlewis*.—About 20 men, &c., are employed in this mine and supplied with a current of about 8,000 cubic feet of air per minute. This current is produced by two fire-lamps at bottom of upcast shaft.

24. *Gunnedah Colliery, Gunnedah*.—About 17 men, &c., are employed in this mine, and supplied with a current of about 4,000 cubic feet of air per minute, produced by a fire-lamp at bottom of upcast.

25. *Johnson's Colliery, near Cardiff*.—This is a new mine where one of the upper seams is being worked. Two men are employed, and the ventilation is good.

26. *Harbour Colliery, Sydney*.—In connection with this colliery the "Jubilee" shaft has been sunk to a depth of about 220 feet, and the work of erecting machinery is being carried on. When this is completed, sinking will be continued. What is known as the "Birthday" shaft is now over 600 feet deep, and lined with brick and cement almost to the bottom. A Walker ventilating fan, 24 feet diameter and 8 feet wide, has been erected for the purpose of ventilating both shafts. Each shaft is connected by drift with the fan. Over 100 persons are employed in and around the colliery. A most interesting method of banking off has been adopted at this colliery. For instead of running the trolley over the shaft opening as is usually the case, folding doors are used, and, of course, must be closed before the trolley can be run over to receive the bucket. The following is a description of the doors, and how they are manipulated. The opening through the covering at the pit top is 10 feet by 9 feet. It is covered by two folding doors each 9 feet by 5 feet. Each door has three wrought-iron hinges keyed on to a shaft 3 inches diameter. The doors are exactly balanced by arms and balance weights, one arm being keyed on one end of each shaft. On the other end of each shaft is keyed a worm-wheel quadrant, and these quadrants are made to turn in opposite directions through a quarter of a revolution, by means of right and left hand worms. On one end of the worm shaft is keyed a pinion 5 inches diameter driven by a wheel 30 inches diameter. This wheel has a handle fixed in one of its arms, and this handle is worked by the banksman. The doors are fully opened by  $5\frac{1}{2}$  revolutions of the handle, and the time occupied is about 5 seconds. The doors will stand in any position, and cannot either be knocked, or blown shut. When open, the doors themselves fence in two sides of the opening. The worm-shaft fences in the third side, and the other side is fenced by rail.

This, in my opinion, is a splendid arrangement for safety in banking off at a sinking pit.

I have, &c.,

JOHN DIXON,

Senior Inspector of Collieries.

Mr.

### Mr. Inspector Rowan's Report.

To the Hon. Joseph Cook, Esq., M.P.,  
Minister for Mines and Agriculture,—

Wollongong, February, 1899.

Sir,

In accordance with section 21 of the Coal Mines Regulation Act, 1896, I have the honor to hand you my annual report for the year 1898.

The total number of collieries under inspection in the southern and western districts during the year was 33, and in addition I inspected several of the collieries in the Newcastle District during the month of December.

In carrying out my official duties I have made 190 underground inspections, and travelled about 10,060 miles.

All accidents reported have been investigated, and inquests attended, in the case of fatal accidents.

#### GENERAL REMARKS.

During 1898 several meetings have taken place between the colliery proprietors and miners of the Southern District, with reference to the weighing of coal, and it is to be hoped that before long a satisfactory settlement of the question will be arrived at, without causing any stoppage of work at the collieries.

The proprietors and miners are unanimous in their approval of the decision of Parliament to provide better harbour accommodation for the Southern District, by the construction of the Port Kembla Harbour. This will enable vessels of the largest size to be loaded, and the loading will not be so much at the mercy of the weather, as at present. This should give greater stability to the trade and enable collieries to work with more regularity.

I have, &c.,

JAMES ROWAN,  
Inspector of Collieries.

### Mr. Inspector Bates' Report.

To the Honorable Joseph Cook, Esq., M.P.,  
Secretary for Mines and Agriculture, Sydney.

Newcastle, 1 February, 1899.

Sir,

Pursuant to section 21 of the Coal Mines Regulation Act, 1896, I have the honor to submit my annual report on the coal-mines inspected by me during the year ending 31st December, 1898.

In the year under notice I have inspected at frequent intervals collieries in the Northern District, also the following collieries in the Western District, viz., Eskbank, Hermitage, Vale of Clwydd, Zig Zag, Lithgow Valley, Oakey Park, Vale, Folly, and Black Diamond Collieries.

I have also visited South Clifton, Coal Cliff, Bulli, South Bulli, and Corrimal Collieries and Wollongong in connection with the colliery plans.

#### COLLIERIES.

*Wallsend Colliery, Main Tunnel Workings.*—There are 529 men and boys employed underground in this portion of the Wallsend Colliery. The ventilation is produced by means of a Guibal fan and a furnace, and the quantity of air circulating through the workings is about 120,000 cubic feet per minute.

*Lambton Colliery.*—There are 173 men and boys employed underground in this mine. The ventilation is produced by a furnace, and the quantity of air in circulation is about 27,000 cubic feet per minute.

*Elemore Vale Colliery.*—About 48 men and boys are employed in this mine. The ventilation is produced by a furnace, and the quantity of air in circulation is 10,000 cubic feet per minute.

*Pacific Colliery, Teralba.*—There are 137 men and boys employed underground in this mine. A furnace is used for producing the ventilation, which amounts to 26,000 cubic feet of air per minute.

*Northern Extended Colliery, Teralba.*—About 52 men and boys are employed underground in this mine. The ventilation is produced by means of a furnace, and the quantity of air circulating through the workings is 23,000 cubic feet per minute.

*South Wallsend Colliery.*—There are about 35 men and boys employed in this mine, which is ventilated by means of a furnace, and the quantity of air in circulation is 17,000 cubic feet per minute. No coal has been drawn from this mine during the latter part of the year, owing to an influx of water. This water is now being pumped out, and operations will shortly be resumed.

*East Greta Colliery, West Maitland.*—There are 236 men and boys employed underground in this mine. The mine is worked in three shifts of 8 hours each. The quantity of air in circulation is about 30,000 cubic feet per minute.

*South Greta Colliery, Farley.*—There are 38 men and boys employed underground in this mine. The ventilation is produced by a furnace, and the amount of air circulating is 9,000 cubic feet per minute.

Greta

*Greta Colliery, Greta.*—There are 161 men and boys employed in this mine. The ventilation is produced by a Guibal fan, and the quantity of air circulating through the workings is 70,000 cubic feet per minute.

*New Park Colliery, Singleton.*—There are 36 men and boys employed underground in the two tunnels. The ventilation is produced by a furnace, and the quantity of air in circulation is about 13,000 cubic feet per minute.

*Dulwich Colliery, Singleton.*—There are 9 men and boys employed underground in this mine, which is ventilated by means of a furnace, producing about 4,000 cubic feet of air per minute.

#### COLLIERIES WORKING UNDER PERMITS.

*Cardiff Colliery, Cardiff.*—There are 19 men and boys employed underground in this mine. The ventilation produced by a furnace is of a satisfactory nature.

*Northumberland Colliery, Fassifern.*—There are 15 men and boys employed underground in this mine. The ventilation is satisfactory, and produced by a furnace.

*Rosedale Colliery, Singleton.*—Eight men are usually employed underground. The ventilation is satisfactory.

*Oakvale Colliery, Singleton.*—Four men are employed in this mine, the ventilation of which is satisfactory.

*Granbalang (Elliott's) Colliery, Singleton.*—Three men are employed in this mine. The ventilation is satisfactory.

*New Anvil Creek Colliery, Greta.*—Only one man is employed in this mine, attending to the steam pump and keeping the mine free from accumulation of water.

*Stanford Greta Colliery, West Maitland.*—Six men are employed prospecting for coal on the Stanford and Heddon Greta coal properties, about 8 miles in a southerly direction from West Maitland.

#### Accidents.

I have investigated 15 accidents in the Northern District during the year under notice.

There were 2 fatal accidents involving the loss of 4 lives, and 13 non-fatal accidents, causing injury to 15 persons. Of the fatal accidents, the first occurred to a miner named Edward Marsh at Greta Colliery on 21st April by a fall of coal. An inquest was held, which I attended, and the jury returned a verdict of "Accidental Death."

The second occurred at East Greta Colliery on 18th November by a fall of roof in the extension of the No. 1 tunnel, causing the deaths of D. Gronow, B. Moncrieff, and S. R. Barnes, miners. An inquest was held, which I attended, extending over thirteen days; but the jury failed to agree, and were accordingly discharged without a verdict being given. This accident necessitated my making 22 inspections from 18th November to the end of the year.

With regard to the non-fatal accidents, 4 were caused by falls of coal, 2 by falls of roof, 2 by skips, 2 by props or slabs, and 1 by premature explosion of shot.

#### Surface Accidents.

There were 2 surface accidents during the year, both being non-fatal.

The first occurred whilst shunting wagons at screens, and the second by a wire rope slipping whilst hauling small coal into hopper.

#### Prosecutions.

The manager of Lambton Colliery instituted proceedings against two miners on 18th February, for neglecting to set sufficient sprags whilst holing. Defendants were fined 10s., and 5s. 6d. costs of court each.

The manager of East Greta Colliery proceeded against a miner on 30th May, for "going into a part of the mine other than where he was employed." Defendant was fined 1s., and 4s. 10d. costs of court.

The manager of Lambton Colliery proceeded against a deputy on 5th August, for neglecting to make a report of his inspection of the working. Defendant was fined 5s., and 5s. 6d. costs of court.

Proceedings were instituted by the Department on 2nd June against the manager of South Greta Colliery for breach of General Rules 1, 4, 5, and 32, also a breach of section 57 of the Coal Mines Regulation Act, 1896. Defendant was fined 1s., and 4s. 10s. costs of court in each case.

#### General remarks.

In the discharge of the duties above-enumerated I have made 174 inspections, investigated 15 accidents, and travelled 6,711 miles to and from the various coal-mines, in addition to a considerable amount of walking underground.

I have, &c.,  
THOS. L. BATES, F.G.S.,  
Inspector of Collieries.

Mr.

## Mr. Inspector Humble's Annual Report for 1898.

Hamilton, 7 January, 1899.

The Honorable Joseph Cook, Secretary for Mines and Agriculture,  
Department of Mines, Sydney,—

Sir,

I have the honor to report that, in pursuance of section 21 of the Coal Mines Regulation Act of 1896, I have exercised the duties of an Inspector of Collieries in the Northern and Southern Districts during the twelve months ending 31st December, 1898.

In doing so, I have inspected the collieries set out in the following table, which shows also the number of days' inspection given to each colliery, and, for those in the Northern District, the approximate number of men and boys employed above and below ground:—

No.	Name of Colliery.	Approximate number of Men and Boys employed above and below ground.	Number of days' inspection given to each.
1	Stockton .....	350	24
2	Hetton .....	410	19
3	Wickham and Bullock Island .....	300	14
4	Co-operative .....	376	10
5	Wallsend, No. 2 .....	72	7
6	Maryland .....	40	5
7	Brown's, No. 2 .....	99	6
8	„ No. 4 .....	354	5
9	Duckenfield .....	334	9
10	Seaham .....	264	9
11	West Wallsend .....	296	10
12	Killingworth .....	40	9
13	Dudley .....	292	25
14	Wallarah .....	209	4
15	Morrisett .....	7	4
16	South Hetton .....	2	2
17	Thornley .....	4	4
18	Bloomfield .....	17	4
19	Marshall's .....	1	3
20	Louis Vale .....	2	6
21	Ingancee .....	3	5
22	Ferndale Shafts .....	5	8
	East Greta No. 1 tunnel (since accident on 18th Nov.) .....	.....	3
	In Southern District during December—Mount Kembla, 2 days; Metropolitan, 3; Bulli, 3; Osborne Wallsend, 1; Bulli B. Pit, 1; Bellambi, 1; South Clifton, 1; Mount Pleasant and Corrimal, 1 .....	.....	13
		3,477	208

In addition to the 208 inspections made, I have been in attendance at Court of Inquiry, District Court, and inquests, on 33 days; in Coal-fields Office, writing reports, &c., 54 days; engaged as one of the examiners in examination work for colliery managers' certificates of competency on 17 days; making in all 312 days work for the year.

*Accidents.*

I am sorry to say the number of accidents I have investigated is again large, the total being 4 fatals and 42 non-fatals.

The 4 fatals caused the death of 18 men and boys—15 at Dudley, by the explosion on the 21st March; 1 at Wallsend No. 2, by fall of roof; 1 at Killingworth, by drowning in sump; and 1 on the surface at Seaham, when the traffic manager was fatally injured by being crushed between a moving waggon and a retaining wall near to the screens. The 42 non-fatals are responsible for injuries to 46 persons; 15 of them were caused by falls of coal and stone, a considerable reduction on last year's number.

Of the others, 7 were caused by runaway and kicking horses, injuring 8 persons—7 at Stockton; and 1 at Hetton. As far as I could ascertain, some of these, from kicking, were brought about by harsh treatment on the part of drivers, who were prone to using the whip a little too freely; but in one case it was not so, and here I took the necessary steps to have the horse placed under greater restraint, which seems to have had the desired effect. Those under the heading "Miscellaneous" occurred from a variety of causes as set forth in the list given to the Chief Inspector for his report.

*Ventilation and Fans.*

At the time of last inspection of each mine the ventilation was fairly satisfactory. In my last annual report, I mentioned that a Waddle fan, 30 feet in diameter, was in course of erection at the Stockton Colliery. This fan was started on the 9th April, and is certainly an improvement on the furnace it superseded, although not giving the quantity of air that might reasonably have been expected. During the year Messrs. J. & A. Brown, of Minmi, have been engaged in enlarging one of their shafts from 6 to 10 feet in diameter, so as to use it as a fan shaft. Simultaneous with this work was the erection of a Schiele fan, 10 feet in diameter, which, when finished and the shaft ready, will be used to ventilate the whole of the No. 2 and part of the No. 4 colliery, the fan now at work at the latter doing the remainder, and probably helping in the ventilation of the Duckenfield Colliery also. All three mines are connected.

*Notable Work at Mines.*

*Stockton.*—In October and November last the Stockton Coal Company, in order to comply with the terms of its lease from the Crown, had soundings made of the ocean overlying part of the ocean takings. The data supplied to me shows that 304 of such were made, and that the depth of water varied from 16 to 60 feet. Subtracting this maximum depth from the levels taken for the Department by Mr. Mining-Surveyor Thomas, there remains about 200 feet of strata overlying the coal-seam now being worked.

*Killingworth.*—On the 14th November the sinking of the second shaft at Killingworth Colliery was completed, and a connection effected with the No. 1 shaft. Both are upwards of 600 feet deep, and a large fan is to be erected to ventilate the mine.

*Seaham.*—On the 24th December the east side workings of the Seaham Colliery were re-opened after being sealed up since February, 1896, because of a fire which was caused in the previous August by a naked light.

I was present on the day of re-opening, and have made two more inspections since then. Large volumes of explosive and other gases were successfully dispersed, and the workings explored by Mr. D. A. W. Robertson, manager of the Metropolitan Colliery (who was directing operations), Mr. Fairley, the manager, and his officials. The site of the fire was reached, and it is believed by those who got there that the fire has been extinguished.

*Ferndale abandoned shafts.*—In September last I invited the attention of the agent of A. A. Dangar, Esq. (owner of the land on which the shafts were sunk), to noxious gases issuing from one of them. These gases were coming from an underground fire, and I suggested that, in order to abate the nuisance, the shafts be sealed off. Subsequently, the agent agreed with Messrs. Morison and Bearby, ironfounders, of Carrington, for them to try and recover the cast-iron cylinders from the larger of the two shafts.

This work is now proceeding, and about 40 feet of the 150 feet of cylinders have so far been recovered, the shaft being filled in with sand and debris as each "ring" is taken out from the bottom upwards. The work is in the charge of Mr. T. J. Evans—a certificated colliery manager.

*Exemptions.*

Two exemptions were granted during the year, both for Killingworth Colliery. The management asked that the No. 1 shaft be exempt from the provisions of General Rules 26 and 28, which require that "Every working shaft used for the purpose of drawing minerals or lowering or raising persons shall, if exceeding 50 yards in depth, be provided with guides," and "a sufficient cover overhead shall be used for every cage or tub employed in lowering or raising persons in any working shaft."

Both exemptions expired on the 31st December, and I think their renewal will not be asked for. The wire-rope guides are now being hung, and the cages will probably be in in a short time.

*Prosecutions.*

In the last week of December the Hetton manager reported that on the 23rd of that month he proceeded against two of his firemen or deputies for failing to "record without delay in a book" the result of their inspections under General Rule 4.

One case was dismissed, and in the other a fine of 10s. was imposed, with 5s. 6d. costs of Court.

The manager of Brown's No. 4 Colliery, Minmi, also reports that on the 28th December he proceeded against a miner for failing to comply with General Rule 23, *re* spragging of coal while holing, with the result that the defendant had to pay a fine of 10s., and 6s. 8d. costs of Court.

*Distance travelled.*

In the performance of my duties during the year I have travelled (exclusive of the distance underground) 4,836 miles by train, tram, boat, coach, and saddle.

I have, &c.,

WILLIAM HUMBLE, F.G.S.,  
Inspector of Collieries.

## GEOLOGICAL SURVEY OF NEW SOUTH WALES.

Geological Survey Branch, Department of Mines and Agriculture,  
19 January, 1899.

Sir,

I have the honor to submit my report on the Geological Survey Branch for the year 1898. A considerable portion of my own time, and of that of the three geological surveyors, has, as usual, been occupied in routine work connected with the examination of mineral-bearing areas, with a view to recommending their reservation from conditional sale, or the modifying of existing reserves, so as to render such areas as are not required for mining purposes available for alienation, settlement lease, &c.

A large number of inspections has also been made in connection with the distribution of the Prospecting Vote; as, however, the Inspectors of Mines have now had definite districts allotted to them, and as two additional inspectors have been appointed, it is hoped that the services of the Geological Survey Staff will not in future be required, to any great extent, in connection with the administration of the Prospecting Vote, and that their time will be available for really scientific work, at which there will be no difficulty in keeping them fully employed.

*Publications.*—In 1897 a new series of publications was begun, entitled “Mineral Resources,” and two numbers were issued. No. 1 was entitled “Notes on Chromic Iron-ore,” and No. 2, “Notes on the occurrence of Tungsten Ores in New South Wales,” both being from the pen of Mr. Geological Surveyor J. E. Carne. The object of these publications was to draw the attention of the public to the valuable mineral deposits of the Colony, and it was thought that this would be best attained by publishing the information available in regard to each metal or mineral in a separate pamphlet of handy size. So eagerly were the first two numbers sought after that they were very soon out of print, and it was thought advisable to publish a second edition of No. 2 (Tungsten Ores). During the year just ended two more numbers were issued—No. 3, “Notes on Gold-dredging,” being by Mr. Geological Surveyor J. B. Jaquet; and No. 4, “Notes on the occurrence of Bismuth Ores,” by Mr. Geological Surveyor J. A. Watt. The pamphlet on gold-dredging caused a considerable amount of interest amongst mining men; it was republished in several leading journals, and there is no doubt that its circulation has led to the taking up of the beds of many of our rivers for dredging purposes. The issue of this pamphlet (No. 3) was expended in about a fortnight.

A fifth number, on “Copper Ores,” by Mr. Carne, will be ready for publication shortly, and others are in course of preparation.

Two numbers of the “Records of the Geological Survey of New South Wales,” viz., Vol. V, Pt. 2, and Vol. VI., Pt. 1, were published during the year, and a third, viz., Vol. VI., Pt. 2, is now going through the press.

One “Memoir” was issued in 1898, viz., a translation of the late Professor De Koninck’s Palæozoic Fossils of New South Wales,” the original manuscript being in French; and another Memoir, by Mr. Licensed Surveyor W. D. Campbell, on “The Aboriginal Carvings of Port Jackson and Broken Bay,” is in the press.

During the year I was at work in the field for ninety-three days, and I visited the following places in connection with my official work, viz.,—Cooma, Bulli, Tamworth, Narrabri, Moree, Colarindabri, Angledool, Fingerpost, Goodooga, Grawin, Warren Downs, Walgett, Warren, Corowa, Cherry Gully (Queensland), Inverell, Borah Creek, Elsmore Valley, Ashford, Fraser’s Creek, Bonshaw, Hexham, Woodford, Guyra, Emmaville, Harden, Trundle, Jumble Plain, Fifield, Barraba, Uralla, Hill End, Sofala, Albury, Coolac, Wattle Flat, Mudgee, Young, Chiltern Valley, Black Range, Gulgong, Sunny Corner, Lockhart, Gundagai, and Wongwibinda.

A considerable portion of my time was occupied in connection with artesian water; a number of samples of drillings were examined from time to time, and advice was given as to the advisability of staying or continuing boring operations. A large area of the artesian basin between the Barwon River and the Queensland Border was also geologically examined. A further detailed examination of the radiolarian rocks of Tamworth was made in conjunction with Professor David, and a paper on the subject of these interesting marine Devonian sediments was written by us jointly, and was read before the Geological Society of London on the 9th November.

Copies of a number of reports submitted by me during the year are appended.

*Work of the Geological Surveyors.*—During the year Mr. Geological Surveyor Carne has been engaged for a considerable period in investigating applications for aid from the Prospecting Vote, and in reporting on questions relating to the proposed cancellation or amendment of mining reserves. He has also furnished the following special reports, viz. :—

1. On the Bushy Hill gold deposits, Cooma.
2. On the coast between Seal Rocks and Smith’s Lake Bar.
3. On Gold Leases 34 and 37, Sunny Corner.

The remainder of Mr. Carne’s time was occupied in examining copper lodes in various parts of the Colony, with a view of preparing a report on the copper-ore deposits of New South Wales. This report is nearly completed, and will shortly be issued as No. 6 of the series on “Mineral Resources.”

The earlier portion of the year 1898 was devoted by Mr. Jaquet to the preparation of his pamphlet on “Gold-dredging,” which, as already stated, was published as No. 3 of the “Mineral Resources” series. The information embodied in this report was gathered by Mr. Jaquet during a visit to New Zealand in February last.

As the question of the extent and value of the iron ores of the Colony has for a considerable number of years excited much interest in the minds of commercial men, I deemed it advisable to obtain, as soon as possible, complete information on this point. I therefore deputed Mr. Jaquet to geologically examine and map all the known iron-ore deposits, and to report generally as to their quality and extent. A start was made with the Williams River and Port Stephens deposits, and Mr. Jaquet’s report has now been

been received, accompanied by a geological map of the district. It will be seen by the report, which is submitted herewith, that the iron ores in question contain a large proportion of Titanic acid. The effect of this substance is to render the ores very infusible, and they are not likely, therefore, to be of value for smelting purposes.

Mr. Jaquet, who is being assisted in his field work by Mr. L. F. Harper, is now engaged at the iron-ore deposits of the Southern District, and I propose that he shall continue at this class of work until the examination of all the known deposits in the Colony has been completed. A Memoir will then be published giving the fullest information in regard to this important subject. Careful assays are being made of each deposit examined, and samples of each ore are being forwarded to the Geological Museum as permanent exhibits.

Mr. Geological Surveyor J. A. Watt has during the past year devoted much time to the investigation of applications for aid from the Prospecting Vote, and in reporting on Lands papers referring to the cancellation or amendment of gold-field reserves. He also furnished the following special reports, viz. :—

1. On a deposit of Specular Iron Ore at Gobondry.
2. On the occurrence of Saddle Reefs at Hargraves.
3. On the Quartz Reefs of Hill End and Tambaroora.
4. On the Bald Hill, Hill End.

Mr. Watt has also written a brochure on "The occurrence of Bismuth Ores in New South Wales," which has been published as No. 4 of the "Mineral Resources" series.

As several years have elapsed since the publication of my report on the Wyalong Gold-field, and as mining operations have progressed considerably there in the meantime, I assigned to Mr. Watt the duty of making a thorough examination of the field. He was engaged at this work during the latter months of the year, and has furnished a comprehensive report, accompanied by a geological map of the field. These I propose to publish as No. 5 of the Special Series on "Mineral Resources."

Mr. E. C. Whittell has been occupied during the greater part of the year in connection with the Prospecting Vote. He was for a short time employed in collecting and arranging exhibits for the proposed Departmental display at the Greater Britain Exhibition, but relinquished this work when it was decided that New South Wales should not be represented at the Exhibition.

Mr. G. W. Card, Curator and Mineralogist, has, in addition to describing a large number of minerals and rock specimens, made good progress with the Geological Museum work. The Geological Museum is daily becoming of more value to students and mining men, and the Curator spares no effort to increase its usefulness. During the year a number of collections of rocks and minerals, chiefly for educational purposes at schools and country institutions, have been prepared by Mr. Card.

Mr. W. S. Dun, Assistant Palæontologist and Librarian, has also devoted much of his time to the museum, his special work being the arrangement of the collection of fossils. This is now classified in such a way that examples of the principal fossils from all the geological formations of the Colony can be readily referred to by the student. Mr. Dun has made up and named a number of collections for exchange with other institutions. He has determined a large number of fossils collected by the Geological Staff, and he has, as usual, attended to the routine work of the library, and to the correcting of proofs, &c., of the various publications.

Mr. Licensed Surveyor O. Trickett has devoted a considerable amount of labour to the preparation of a guide to the Jenolan limestones caves. There has been a considerable demand for a reliable guide-book to these caves, and I think that Mr. Trickett's efforts will be appreciated. The book is now going through the press.

Mr. Trickett has, in addition to performing a considerable amount of field-work, drawn all the plans and sections to illustrate the reports of the geological surveyors.

In conclusion, it gives me great pleasure to state that all the officers of the Geological Survey Branch have worked with enthusiasm during the year.

I have, &c.,

EDWARD F. PITTMAN,

Government Geologist.

The Under Secretary for Mines.

#### APPENDIX I.

##### Report on Coal Seams at Hexham.

I HAVE the honor to report that I have made an examination of the country between Minmi and Woodford, with the object of advising as to the probability of payable coal-seams occurring at the Ironbark Brush, viz., under portions 11 and 12, Parish of Hexham, County of Northumberland.

This country lies to the north of the outcrop of, and therefore geologically below, the Newcastle Coal Measures, and the surface rocks consist of those forming the Dempsey series, which separate the Newcastle or Upper Coal Measures from the Tomago or Middle Coal Measures.

The dip of the rock formations in the district examined by me is extremely variable, owing to the occurrence of numerous rolls in the strata; but the records of the work done by Professor David show that the general dip over this area is more or less to the south, and that it is probably a little to the east of south. It is clear, therefore, that a shaft put down on either portion 11 or portion 12 could not possibly intersect the "Borehole" or any of the seams belonging to the Newcastle Coal Measures, but would pass through all the seams included in the Tomago or Middle Coal Measures.

The old Woodford Colliery is situated about a mile to the north of portion 12, and here two seams were intersected in the shaft. The upper seam, which is said to be 4 ft. 6 in. thick, was passed through at 40 feet from the surface, while at a depth of 180 feet a seam, said to have been 7 feet thick, and known locally as "Big Ben," was worked. A considerable amount of coal was extracted from this seam, as shown by a plan of the colliery which I had an opportunity of inspecting, but the quality of the coal in both seams appears to have been inferior, and it was found that mining operations could not be conducted at a profit. The colliery was twice opened, but was finally abandoned about four years ago.

There is good reason to believe that the seam "Big Ben," which was worked in the Woodford Colliery, is identical with Marshall's seam in the Thornley Colliery, East Maitland, and if this supposition be correct, then the upper and lower Rathluba seams would be found beneath it.

SIG 38

A bore, marked A on plan, was put down at Ironbark Brush in the year 1885 by the late Mr. John Coghlan, and a number of coal seams are believed to have been intersected by it. A portion of the core is still in the possession of Mr. S. E. Laidley, but some doubt appears to exist as to the value of the coal passed through, although Mr. Laidley has, I believe, a record of an analysis of coal from one of the seams which shows it to be of fair quality.

I am decidedly of opinion that the owners of this land would not be justified in incurring the expense of sinking shafts until at least another bore has been put down, with the object of proving beyond doubt the thickness and quality of the underlying seams. The real question to be decided is, as to whether there is sufficient justification for incurring the expense of boring.

The Tomago Seams generally have been proved to be decidedly inferior to the Borehole Seam, and operations at Ash Island have not resulted in the profitable working of these seams there. This was probably, to some extent, owing to the influence of intrusive dykes, as the bore at Ash Island showed that the coal seams had been considerably disturbed by them. It is possible, however, that at Ironbark Brush the same causes of deterioration may not exist, and that the lower Rathluba Seam, which Professor David's investigations show to be the best of the Tomago Series, may prove to be of workable quality under portions 11 and 12.

The Greta Coal Measures undoubtedly underlie this area, but the depth at which they would be met with must be so great (probably about 5,000 feet) that they may be disregarded in considering the possibilities of available coal under this area.

If, in view of the statements which I have made above, the Messrs. Laidley consider that the prospects are sufficient to warrant their incurring an expenditure of £400 or £500 in proving their property, I would recommend the putting down of a diamond-drill bore somewhere about the position indicated by a cross on the accompanying lithograph, viz., about the centre of their property.

EDWARD F. PITTMAN,  
Government Geologist.

#### APPENDIX 2.

The occurrence of Tellurium in the Prince of Wales Mine, Gundagai.

SINCE the discovery of the extremely rich telluride of gold deposits at Kalgurli, in Western Australia much interest has been excited by the question as to whether similar ores may not be found in this Colony, and with the object of enabling the miners to become familiar with the appearance of the telluride minerals, a collection of Kalgurli ores is being sent by the Department of Mines to the different mining centres in New South Wales for exhibition. Hitherto telluride of gold has not been recognised in New South Wales, although telluride of bismuth has been found in small quantity in several localities.

One of the products of the decomposition of the telluride ores of Kalgurli is a substance known as "Mustard gold." It consists of free gold in an extremely fine state of division, and it has the appearance of dull yellow clay until pressed with the blade of a knife, when it is readily burnished.

Mr. G. H. Blakemore, General Manager of the Prince of Wales Gold Mine, near Gundagai, recently recognised some "Mustard gold" in the ore of that mine, and presented a sample to the Department, at the same time suggesting that it might have been derived from the decomposition of telluride of gold. A portion of the specimen was accordingly forwarded to Mr. Mingaye, the Analyst to the Department, with a request that he would test it for tellurium. Mr. Mingaye has detected the presence of both tellurium and bismuth in the sample, and suggests that the two are most probably in combination.

In view of the great interest attaching to the occurrence, I visited the Prince of Wales Mine in the hope of being able to detect some of the undecomposed mineral in the lower levels. By the courtesy of Mr. Blakemore I was able to carefully examine the ore in the different parts of the mine, which has been tested to a depth of 500 feet, but did not succeed in finding the mineral sought for.

The mustard gold occurred in a small leader running into the country rock from the footwall of the lode at the 100-foot level, and this leader was not continuous to any depth. The gold throughout this mine is in a remarkably free state, the only minerals observable being occasional small quantities of carbonate of copper (malachite) and copper pyrites. A massive sample of the latter, which is rich in gold, is now being tested for tellurium.

The mustard gold found at the Prince of Wales Mine only differs from that occurring at Kalgurli in being of a dull reddish brown, instead of a dull yellow colour. A fact of considerable interest is that the Prince of Wales lode is associated with a rock of almost precisely similar character to that in which the telluride minerals occur at Kalgurli, viz., a quartz-felspar porphyry which has been much crushed and foliated.

In conclusion, I may state that the evidence appears to point to the probability that telluride of gold will be found at deeper levels than have yet been opened in the Prince of Wales Mine.

E. F. PITTMAN,  
Government Geologist.

The Under Secretary. 28/11/98.

#### APPENDIX 3.

Report on the proposal to prospect, by boring, for Deep Auriferous Leads near Albury.

I HAVE the honor to report that in company with Mr. James Stirling, Government Geologist of Victoria, and his assistant, Mr. Hunter, I have inspected the country in the neighbourhood of Albury and Wodonga, with a view of considering the advisability of testing for deep auriferous leads by boring.

Four bores have already been put down on the Victorian side by the Wodonga Prospecting Association, and in these alluvial drifts with colours of gold were obtained. The depths of these four bores to bed-rock were 50 feet, 86 feet, 323 feet, and 323 feet respectively, and their positions are shown on the accompanying tracing at A. The deep lead whose existence is indicated by these bores may be the old main (Murray River) channel, or it may possibly be a tributary of the latter coming through the gap marked B. (The accompanying copies of reports by the Victorian officers refer to this question in detail.)

If

If a deep auriferous lead trends down the main valley of the Murray (and there are reasonable grounds for expecting that one does), it must pass through the comparatively narrow gap (at C on the tracing) between Doctor's Point, on the New South Wales side, and Huon's Hill, in Victoria, because this is the only place, within a considerable distance on either side of the river, where the elder rocks do not outcrop at the surface. This gap is about three-quarters of a mile wide, and its surface is composed of alluvial flats, through which the Murray River has cut its present course.

The rocks forming Doctor's Point and Huon's Hill consist of foliated mica schists, with dykes or sills of coarse pegmatite, containing much tourmaline. The dip of these schists is S. 15° to 20° E. at an angle of 25°, and they are thus seen to be shelving from Doctor's Point in the direction of Huon's Hill. Consequently, it is reasonable to expect that the deepest part of the old valley, along a cross-section from Doctor's Point to Huon's Hill, will be found near the latter point—or, in other words, on the Victorian side. At the same time there is no certainty about this; and the only way to ascertain where the lead, or, in other words, the deepest part of the old valley is situated is to put down a series of bores along the line shown in the tracing at C.

Mr. Hunter, Assistant Government Geologist of Victoria, states that these bores could be put down for about 3s. per foot, and he estimates that the total cost of the six bores necessary to prospect the gap would not exceed £300.

In view of the fact that the country on both sides of the Murray, above Albury, is of an auriferous character, and that the old river which received the drainage from this country must, apparently, have passed through the gap under consideration, I am certainly of opinion that the proposal to prospect for a deep lead by boring across this gap is a legitimate one, and is deserving of the assistance of the Government.

Mr. Stirling and I concur in recommending, therefore, that five or six bores be put down in the positions indicated at C on the tracing, and that the expense be borne jointly by the Governments of the two Colonies. All the bores except one (or at the outside two) will be on the New South Wales side of the river; but, as I have already stated, there is some probability that the deepest ground will be found to be in Victorian territory, an equal division of the cost would therefore be equitable.

It is probable that the Victorian Government will assist the Wodonga Prospecting Association to continue the line of bores at A, and will also put down some bores at B, with the object of proving whether the deep lead already found is the main Murray lead or a tributary; and as this work will probably provide some additional evidence, it will perhaps be advisable to await its completion before the other bores are started by the Governments of the two Colonies.

The Under Secretary.

E. F. PITTMAN,  
Government Geologist.

#### APPENDIX 4.

##### Further Report of the question of a site for a Bore at Hill End.

I HAVE again visited Hill End for the purpose of ascertaining the best position for a bore to test the auriferous reefs at a depth, and I find that the question is surrounded with some difficulty. The average dip (to the east) of the productive reefs appears to be about 55°, and in order to intersect them at a depth of 1,500 feet below their outcrop it would be necessary to put down the bore somewhere in the vicinity of the lines VWXY which I have shown on the accompanying lithograph. The sites which would appear to have the best chances of success are those shown by the letters A and B. Of these, A is immediately to the east of the zone where the phenomenal yields of gold were obtained in Hawkin's Hill, in the year 1872, and the limits of which are shown by cross-hatching on the lithograph. The site A is on Crown lands, and a reserve of some extent could be made to cover it; but it must be remembered that the areas distinguished by hatched borders to the west of it are all held under gold-mining lease, and the majority of them are at present under offer to an English syndicate, whose proposal is to float them into a large company. It is necessary therefore to consider whether the putting down of a bore to the east of this leased land would confer undue benefits on the holders. Another point is, that the site A is on the side of an extremely steep spur, and at a distance of about 7 chains from the top. I have no doubt whatever that it would be possible to lower the diamond-drill plant to this position, but I am unable to state what it would cost to do so; and it is a question for the Board to consider whether the cost would be prohibitive.

The site B is to the east of another line of shafts in which productive stone was obtained down to a depth of several hundred feet; and this would also appear, therefore, to be a favourable spot in which to bore with the object of ascertaining whether payable shoots of gold do not make again at greater depths. Unfortunately it would not be possible to make a reserve here, as the land is all alienated in small areas. In this connection it may, I think, be questioned whether it is really necessary that a reserve should be proclaimed round the site for a bore. I take it that the primary object which the Minister has in view is to ascertain by boring whether payable gold exists at considerable depths in these reefs. If it were proved that payable gold does exist at any one point there would be every reason to expect that it would also be found at other points along the line, and encouragement would therefore be given to mining companies to thoroughly prospect the reefs by deep shafts. As this land is alienated in small lots, no individual holder would have a monopoly of a large area near the bore; and therefore I am personally of opinion that a reserve is not absolutely necessary. I think that a small allotment could be purchased by the Government, as a site for a bore, at very small cost.

In conclusion, I would repeat that in my opinion the two sites, A and B, are those in which bores would be most likely to be successful, so far as it is possible to judge from the evidence available; and of the two I think that marked A is most worthy of a trial, provided the objections I have indicated be not considered insuperable. If a bore were authorised at the point A it might afterwards be considered, in the light of the evidence therein obtained, whether a second bore at B would be advisable.

The Prospecting Board.

## APPENDIX 5.

## Report on the proposal to bore for Auriferous Reefs at Hill End.

In connection with the proposal to grant aid from the Prospecting Vote to put down a diamond-drill bore at Hill End for the purpose of ascertaining whether auriferous saddle reefs exist at a depth, I have the honor to make the following report:—

In the year 1878–1879, I made a geological survey of the Hill End Gold-field, and showed that the reefs, which a few years previously had yielded very large quantities of gold, traversed the Hill End Gold-fields in a north and south direction, and that an anticline or acute fold of the rock formations extended right through the centre of the field tilting them in such a way that the reefs on one side of the anticline dipped at a steep angle to the east, while those on the other side of it dipped to the west.

Section through Hill End from West to East.

Nearly twenty years have elapsed since my examination of this district was made, and I had not in the meantime revisited Hill End; when, therefore, it was recently suggested that saddle reefs, similar to those worked at Bendigo, in Victoria, existed on this field, it occurred to me that recent developments might possibly have thrown some new light on the character and mode of occurrence of these reefs. I therefore revisited Hill End on the 27th August, with the object of making a further examination of the deposits, and of choosing a site for a bore, in the event of there being any evidence of saddle reef formations.

After spending three days in inspecting the various parts of the field, I am of opinion that no such evidence exists. The Hill End veins are not similar in character to those known in Bendigo as saddle reefs.

In Bendigo the rocks have been crumpled and contorted in such a manner that a cross-section of the country shows a long series of *curved* arches and troughs (anticlines and synclines), while the spaces which have been formed between the beds, as a consequence of their folding, have been subsequently filled with auriferous quartz. These quartz deposits have received the name of saddle reefs because of their fancied resemblance, in cross-section, to saddles.

A—Saddle Reefs. B—Sandstone. C—Slate. D—Inverted Saddles.

These saddle reefs have several notable characteristics which bear directly upon the question of their value as auriferous deposits, and which are a direct consequence of their mode of origin. In the first place, they attain their greatest thickness in the upper part, or "cap," while the "legs" (which correspond to the "flaps" of a saddle) taper out to nothing as they are followed to a depth. Moreover, it is found that these saddle reefs recur, one below another, at greater or less intervals, and in this way a series of productive reefs has been worked within a depth of over 3,000 feet from the surface. The cap of one reef is not, as a rule, found quite perpendicularly below the one above it, but slightly to one side; nevertheless a vertical bore put down from the surface through the cap of a saddle reef would generally intersect several other similar formations within the limit of depth just mentioned, and if the Hill End reefs were similar in character to those of Bendigo, no better method of proving the productiveness of the field at great depths could be adopted than that of putting down a diamond-drill bore through the "centre country," or, in other words, through the cap of one of the reefs.

If

If a comparison be made, however, between the two preceding sketches, the points of distinction between the saddle reefs at Bendigo and the reefs at Hill End will be apparent. Instead of the series of curved folds, repeated vertically as well as laterally, which characterises the Bendigo Gold-field, we have at Hill End one acute-angled arch or anticline, with the reefs dipping at regular angles to the east on the one side, and to the west on the other.
