PLAGUE (See "BUBONIC PLAGUE").		
POINTS OF ORDER :—		
Reported from Committee of Supply, 58, 435.		
Reported from Committee of the Whole, 266.		
RULINGS OF SPEAKER :—		
That a Temporary Chairman of Committees could take the Chair, notwithstanding that the Chairman of Committees had not been appointed, 49.		
That debate in Committee of Supply on items in Resolution for specific services must be confined to the items submitted, 58.		
That the provision in clause 4 of the Darling Harbour Wharves Resumption Bill, giving power to lease or sell certain of the land, was covered by the Title and Order of Leave ; Speaker quoted decision of 17th August, 1897, in reference to the Totalisator Bill, 83.		
That amendment, for Call of the House, on a motion proposing a new Standing Order, could be admitted, 127.		
That sections 12 and 13 of the Public Works Act had been complied with by the Minister in moving motion to refer the matter of removing the Public Abattoirs from Glebe Island, to the Public Works Committee, 223.		
That an amendment to insert words "The Sydney Harbour Trust Commissioners" in clause 2 of the Industrial Arbitration Bill, before the Commissioners were appointed, was in order, 266.		
That the subject of the motion for the adjournment of the House in reference to land exchanges had not been discussed on a previous motion, 256.		
That the Fire Brigades Bill was out of order, because clause 25 conflicted with, and was contradictory of clause 65 of the Sydney Harbour Trust Bill, passed by this House, and now before the Council, 306.		
That the provision in the Racing Association Bill in regard to incorporation was not beyond the Order of Leave, and that the Bill did not require to be introduced in Committee, 313.		
That provision in clause 7 of the Early Closing Amendment Bill, which proposes to bring hotels, &c., selling tobacco, under the same law as tobacconists' shops was within the Order of Leave, 325.		
That proposal to put the motion for the adjournment of the House without debate on Friday sittings was not a contravention of the Standing Orders which gave the right to Members to debate such questions, 367.		
That although the Public Works Committee had varied the reference made to them in reference to the proposal to construct the Belmore to Fort Macquarie Electric Tramway, he would not rule the motion to carry out the work out of order, 367.		
That motion for adjournment of House in reference to thoroughfare for vehicular traffic through the Botanical Gardens, could be discussed in the financial debate in Committee of Ways and Means, and was out of order, 392.		
That as the Order of the Day was the property of the House, the second reading of the Tied Houses Bill could be moved by any Member, 409.		
That an Honorable Member discussing in Committee of Supply the estimate for "Railways and Tramways—Existing Lines—Working Expenses," was not in order in commenting in detail on a report of an officer on a new line of railway, 435-6.		
That a Minister was permitted to present papers to Parliament at any time, notwithstanding an address passed by the House requesting the production of the papers, had not been presented to the Governor, 441.		
That the introduction of the Patents and Trade Marks Bill should have been preceded by a Message from the Governor, 460.

P		
POINTS OF ORDER (continued):—		
RULINGS OF SPEAKER (continued):—		
That the motion for the adjournment of the House in reference to the Police Superannuation Fund anticipated the discussion of a motion which was already on the paper, and was out of order, 522.		
That the Federal Elections Bill was not out of order, notwithstanding the Schedule referred to in Clause 6 was not given, as the Schedules could be introduced and discussed in Committee, 541.		
That motion for adjournment on influence of Members with Federal Electorates Commissioners anticipated discussion on the Federal Elections Bill, and was out of order, 549.		
That motion approving of Government entering into a contract for the supply of steel rails should have originated in Committee of the Whole, and was out of order, 549.		
That motion for adjournment of the House in reference to contract for steel-rails anticipated the discussion of a motion given this day on the subject, and was out of order, 557.		
That in regard to the motion of adjournment in reference to consumptive patients, Liverpool Asylum, having been already discussed in Committee of Supply and being open to further discussion on the third reading of the Appropriation Bill, he thought that the item could not be discussed on the third reading of the Appropriation Bill, and he had not sufficient information as to the proceedings in supply to rule the motion out of order, 577.		
RULINGS OF DEPUTY-SPEAKER:—		
That motion for adjournment of House in reference to legalising certain Municipalities did not deal with the subject embodied in the Municipalities (Amendment) Bill, and was in order, 610.		
That certain clauses in the Municipalities (Incorporation Validating) Bill was not beyond the Order of Leave, 610.		
That the requirements of the Public Works Act had been complied with on motion to refer the work "High-level Bridge over the Hawkesbury River at Richmond" to the Public Works Committee, 615.

RULINGS OF :—		
That a Temporary Chairman of Committees could take the Chair notwithstanding the Chairman		
of Committees had not been appointed, 49.		
That Debate in Committee of Supply on items in resolution for specific services must be confined		
to the items submitted, 58.		
That the provision in clause 4 of the Darling Harbour Wharves Resumption Bill, giving power		
to lease or sell certain of the land, was covered by the Title and Order of Leave ; Speaker		
quoted decision of 17th August, 1897, in reference to the Totalizer Bill, 83.		
That amendment, for call of the House, on a motion proposing a new Standing Order, could be		
admitted, 127.		
That sections 12 and 13 of the Public Works Act had been complied with by the Minister, in		
moving motion to refer the matter of removing the Public Abattoirs from Glebe Island, to		
the Public Works Committee, 223.		
That an amendment to insert words "The Sydney Harbour Trust Commissioners" in clause 2		
of the Industrial Arbitration Bill, before the Commissioners were appointed, was in		
order, 266.		
That the subject of the motion for the adjournment of the House in reference to land exchanges		
had not been discussed on a previous motion, 286.		
That the Fire Brigades Bill was out of order, because clause 25 conflicted with and was		
contradictory of clause 65 of the Sydney Harbour Trust Bill passed by this House and		
now before the Council, 306.

S		
SPEAKER (continued):—		
RULINGS OF—continued:—		
That the provision in the Racing Association Bill in regard to incorporation was not beyond the Order of Leave, and that the Bill did not require to be introduced in Committee, 318.		
That provision in clause 7 of the Early Closing Amendment Bill, which proposes to bring hotels, &c., selling tobacco, under the same law as tobacconists' shops, was within the Order of Leave, 325.		
That proposal to put the motion for the adjournment of the House without debate on Friday sittings was not a contravention of the Standing Orders which gave the right to members to debate such questions, 367.		
That although the Public Works Committee had varied the reference made to them in reference to the proposal to construct the Belmore to Port Macquarie Electric Tramway, he would not rule the motion to carry out the work out of order, 367.		
That motion for adjournment of House in reference to thoroughfare for vehicular traffic, through the Botanical Gardens, could be discussed in the financial debate in Committee of Ways and Means, and was out of order, 392.		
That as the Order of the Day was the property of the House, the 2nd reading of the Tied Houses Bill could be moved by any member, 409.		
That an honorable member, discussing in Committee of Supply the estimate for "Railways and Tramways, existing lines—working Expenses," was not in order in commenting in detail on a report of an officer on a new line of railway, 435-6.		
That a Minister was permitted to present papers to Parliament at any time, notwithstanding an address passed by the House requesting the production of the papers, had not been presented to the Governor, 441.		
That the introduction of the Patents and Trade Marks Bill should have been preceded by a Message from the Governor, 469.		
That the motion for the adjournment of the House in reference to the Police Superannuation Fund anticipated the discussion of a motion which was already on the paper, and was out of order, 522.		
That the Federal Elections Bill was not out of order, notwithstanding the Schedule referred to in clause 6 was not given, as the Schedules could be introduced and discussed in Committee, 541.		
That motion for adjournment on "Influence of Members with Federal Electorates Commissioners," anticipated discussion on the Federal Elections Bill, and was out of order, 549.		
That motion approving of Government entering into a contract for the supply of steel rails should have originated in Committee of the Whole and was out of order, 549.		
That motion for adjournment of the House in reference to "Contract for Steel-rails" anticipated the discussion of a motion given this day on the subject, and was out of order, 557.		
That in regard to the motion of adjournment in reference to "Consumptive Patients Liverpool Asylum, having been already discussed in Committee of Supply, and being open to further discussion on the third reading of the Appropriation Bill," he thought that the item could not be discussed on the third reading of the Appropriation Bill, and he had not sufficient information as to the proceedings in Supply to rule the motion out of order, 577.		
RULINGS OF DEPUTY-SPEAKER:—		
That motion for adjournment of the House in reference to legalising certain Municipalities did not deal with the subject embodied in the Municipalities (Amendment) Bill, and was in order, 610.		
That certain clauses in the Municipalities (Incorporation Validating) Bill was not beyond the Order of Leave, 610.		
That the requirements of the Public Works Act had been complied with on motion to refer the work "High-level Bridge over the Hawkesbury River at Richmond" to the Public Works Committee, 615.		
DISSENT TO RULING:—

REPORT

OF THE

RAILWAY COMMISSIONERS

FOR THE YEAR ENDED

30 JUNE, 1900.

Printed under No. 10 Report from Printing Committee, 30 August, 1900.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND
TRAMWAYS.

(REPORT OF THE RAILWAY COMMISSIONERS FOR THE YEAR ENDED 30TH JUNE, 1900.)

Printed under No. 10 Report from Printing Committee, 30 August, 1900.

Office of the Railway Commissioners of New South Wales,
Sydney, 18th August, 1900.

TO THE HONORABLE THE MINISTER FOR RAILWAYS,—

SIR,

In accordance with the provisions of the 45th clause of the Government Railways Act of 1888, 51 Vic. No. 35, we have the honor to present, for the information of Parliament, our Report upon the working of the Railways and Tramways for the year ended June 30th, 1900.

The result of the year's working may be summarised as follows :—

	Year ended 30th June, 1900.			Year ended 30th June, 1899.		
	Railways.	Tramways.	Total.	Railways.	Tramways.	Total.
	£	£	£	£	£	£
Earnings	3,163,572	409,724	3,573,296	3,145,273	348,556	3,493,829
Expenditure	1,769,520	341,127	2,110,647	1,690,442	288,022	1,978,464
Balance after paying working expenses	1,394,052	68,597	1,462,649	1,454,831	60,534	1,515,365

		1900.	1899.		
Railway Passengers	Number	26,486,873	24,726,067	Increase	1,760,806
Merchandise and Minerals	Tons	5,342,916	5,025,315	Increase	317,601
Live Stock	Tons	188,595	223,005	Decrease	34,410
Tramway Passengers	Number	66,244,334	51,705,453	Increase	14,538,881

RAILWAYS.

GENERAL REMARKS.

The number of miles of line open for traffic on the 30th of June last was 2,811 $\frac{1}{4}$.

The following lines were opened for traffic during the year :—

	Mileage.		Date opened.
	m.	c.	
Broken Hill to Tarrawingee... ..	40	7	7 September, 1899.
Tamworth to Manilla	29	41 $\frac{2}{3}$	15 ,, 1899.
Moree to Gravesend	35	0	1 February, 1900.

The Government having purchased the line (3 ft. 6 in. gauge) from Broken Hill to Tarrawingee, we entered into an agreement with the Silverton Tramway Company to work it for a period of five years, the company to receive the receipts, pay the cost of working and maintenance, and 3 per cent. per annum on the capital outlay.

Further extensions of the Pioneer class are now under construction, viz. :—

Byrock to Brewarrina	58 miles.
Moree to Inverell (2nd section)	60 $\frac{3}{4}$,,
Goulburn to Crookwell	35 ,,
The Rock to Green's Gunyah	24 $\frac{1}{4}$,,
Koorawatha to Grenfell	32 ,,
Dubbo to Coonamble	93 $\frac{1}{2}$,,

It is gratifying to be able to record that, after having been open for eight years, the line between Nyngan and Cobar has been for the first time, and, we hope permanently, removed from the list of non-paying lines, and we have, therefore, in accordance with our usual custom, abolished the two local, and adopted the through, rates and fares.

This satisfactory result has been brought about by the development of the mines in the district.

In this connection we may mention that, while during the past year the aggregate loss on the non-paying lines was reduced by £11,368, owing mainly to the South Coast and Northern lines having improved, it still shows that on about 46 per cent. of the lines of the Colony there was a loss of £318,040, and this points to the desirability of giving most careful consideration to the location and construction of new lines.

In reporting upon proposed new lines in accordance with clause 13 of the Public Works Act, and clause 29 of the Railway Act of 1888, we invariably, after personally inspecting the routes and acquiring the fullest information as to existing and prospective business, recommend their construction if it can be shown that the prospects are sufficient to pay working expenses within a reasonable time, leaving the interest as a charge against the trunk lines during the course of their development.

The capital cost of the lines open for traffic on the 30th June amounted to £38,477,269. The interest on this sum, at 3·639 per cent. (the average interest paid on the debt of the Colony), is £1,400,187; the earnings, after providing for all working expenses, embracing extensive renewals, amount to £1,394,052, the result of the year's working being a deficit of £6,135.

REVENUE.

Passenger traffic shows the satisfactory increase of £57,025—£20,047 being from first and £36,078 from second class passengers. Parcels, &c., also yielded an increase of £9,699, and rents and miscellaneous receipts, £2,433.

Merchandise and live stock, on the contrary, show a decrease of £50,858, notwithstanding that 283,191 additional tons were carried, thus clearly indicating that the traffic from these sources has been carried at much less profitable rates, which has consequently had a serious effect upon the working expenses.

The principal increases and decreases from these sources are as follow :—

	Increase.	Decrease.
	£	£
Live stock	63,091
Wool	55,234
Hay, straw, and chaff	17,546
General merchandise	36,389
Grain	26,309
Coal and coke	10,080
Other minerals	12,235
	£85,013	£135,871

The net increase from all sources was, therefore, only £18,299.

Rebates, amounting to £40,000, have been allowed off the ordinary rates in connection with the carriage of starving stock, and on fodder in cases where the removal of stock was not considered practicable. The concessions given were of incalculable benefit to pastoralists and the country generally, as being the means of saving the lives of an immense quantity of stock which, but for the assistance afforded, would probably have perished, and although considerable increase to the expenditure has been thereby entailed, the course followed will in the future prove of advantage to the railways.

Reductions have also been made in rates and fares which have affected the past year's revenue to the extent of about £15,000, mainly affecting season tickets, general merchandise in truck-loads, and coal.

EXPENDITURE.

The working expenses increased during the year by £79,078, or from 53·75 to 55·93 per cent. of the earnings, due in a large measure to the foregoing causes; to the urgent necessity for removing iron rails from the Northern line and substituting steel; the renewal of the timber viaduct over the Murrumbidgee by a steel structure; more extensive repairs and renewals of rolling stock (the increase under this head being £28,596); increased cost of coal and material generally, and the granting of increased wages to the staff on a more extensive scale than has operated since 1892.

It may be stated that many timber bridges and culverts are now becoming due for renewal, and that in nearly all cases they are being replaced by steel and concrete structures, which, although considerably increasing the present debit against working expenses, will prove economical, as they will be of a more secure and permanent character and involve less cost for future maintenance.

CITY RAILWAY.

It is much to be regretted that such an important question as the extension of the railway into the city still remains unsettled.

The number of passengers conveyed to and from Redfern Station increased from 9,904,864 in 1890 to 13,511,096 during the year now under review, and, as the present terminus is daily becoming more congested and difficult to work, and an undue strain is being placed upon the officers and men responsible for the safe conduct of the traffic, we cannot too strongly urge that the provision of a suitable terminal station be not longer delayed.

The City Railway would, by relieving George-street of about one-half of its present tramway traffic, afford permanent relief to the rapidly-increasing congestion of the City streets, and thereby enable an improved tram service to be given to those suburbs not served by railway.

SAFETY APPLIANCES.

The interlocking of points and signals is steadily progressing. Nearly all the by-sidings on the main lines have been completed, and the signal and interlocking arrangements at several large station yards have been improved.

We are pleased to be able to state that the year has been entirely free from any passenger train accident, and that the expenditure generally under the head of Compensation is small.

RATES AND FARES.

Several important concessions have been made in rates and fares during the year, involving an annual loss of about £25,000. The fares in connection with season tickets, the rates for goods in full truck loads, coal for shipment, and sugar-cane on the Lismore line, have all been materially reduced.

ACCOMMODATION FOR TRAFFIC, AND CONDITION OF THE LINES AND ROLLING-STOCK.

The passenger and goods rolling-stock, machinery, and locomotive plant generally have been maintained in good order, and the traffic requirements have been fully met.

Pullman sleeping-cars have been placed on the Western Mail-trains, and new cars, on a somewhat smaller scale, are now being built for the Southern Mail.

With the view of improving the accommodation in connection with branch lines, 12 bogie carriages have been fitted with corridors, and the lavatory accommodation made accessible to all compartments. During the next few months it is anticipated that all the branch lines will be equipped with carriage stock of this description.

Two Pullman sleeping-carriages and 135 merchandise vehicles have been added to stock and charged to Capital.

During the year six powerful goods engines have replaced nine old ones of a smaller type. Four passenger tender-engines were rebuilt and converted into tank-engines for suburban lines, and four other passenger tender-engines and three goods tender-engines were also rebuilt and all were charged to Working Expenses.

The carriage and wagon stock has been strengthened by the rebuilding of 98 vehicles, and the construction of 251 vehicles of larger carrying capacity to replace others worn out, the cost of which has been charged to Working Expenses.

The total amount spent on repairs and renewals of stock exceeds that of last year by £28,596.

Sixteen locomotive boilers and one boiler for a locomotive crane have been constructed in the Eveleigh shops during the year.

A large air-compressor, of the Ingersoll-Sergeant Duplex Compound type, capable of compressing 950 cubic feet of free air per minute to 100 lb. pressure per square inch, has been added to the machinery plant, thus providing up-to-date appliances for working lifts, jacks, drills, hammers, riveters, and other portable tools now being introduced, so as to facilitate and economise the output of the workshops. The large new erecting-shop, referred to in our last report, has been completed, and is in full operation. All the powerful overhead, high-speed cranes, machines, and shafting in this shop are driven by electricity, generated at the Electric Power-house, Ultimo. A number of special machines of recent designs have been ordered, so as to place the workshops on the most modern basis.

The Permanent Way, Works, and Buildings have been efficiently maintained. A large amount of relaying has been done, but the work has been somewhat retarded owing to delay in obtaining rails and fastenings from the manufacturers. These are now arriving, and the work will be vigorously proceeded with.

The renewal of the Wagga Wagga viaduct with steel spans has been completed on the north side of the Murrumbidgee River, and the southern portion will, it is expected, be completed before the close of the year.

GRADE IMPROVEMENTS AND OTHER WORKS.

The grade improvements on the Northern line have been completed. Those on the Southern and Western lines have made good progress, but have been recently delayed by unusually heavy rains.

The completion of the duplication of the North Shore line between St. Leonards and Lindfield is delayed, pending Parliamentary authority in connection with proposed closing of level crossings.

FORECAST.

Owing to the serious drought of the last few years and the consequent enormous loss of sheep, no material increase in the carriage of wool and live stock is anticipated during the current year. As, however, the country has recently had the benefit of splendid rains, the present outlook with regard to grain and agricultural products of all kinds, together with the development of mining, is more encouraging than it has been for some years. It may reasonably be expected that the revenue estimated will be realised, but it will be earned under conditions similar to those of the past year; and, in view of the necessity for replacing a large mileage of iron rails on the Main Northern line by steel, renewing a number of old engines, and carrying out extensive repairs on engines purchased about ten years ago, it is more than probable that the percentage of expenditure to earnings will not be reduced.

COMPARATIVE STATEMENT of the number of Miles of Line open, Earnings, Working Expenses, and Capital for a period of years.

TRAMWAYS.

On the 30th of June, 1900, $71\frac{1}{4}$ miles of line were open for traffic. The following lines were opened during the year, viz. :—

	Miles.	Chains.
8th December, 1899—George and Harris-street line—Circular Quay to John-street, Pyrmont	3	19
24th February, 1900—Falcon-street to near Westbourne-street, North Sydney	1	4
25th June, 1900—Military Road Extension to Neutral Bay Wharf	0	74

REVENUE AND EXPENDITURE.

The capital cost of the lines open for traffic on the 30th of June amounted to £1,924,720, and the return upon the capital invested £3 16s. 5d.

The earnings amounted to £409,724, an increase of £61,168 over the previous year, and the working expenses show an increase of £53,105, the net result being an improvement of £8,063.

CONDITION OF LINES.

The permanent-way has been maintained in good order. A large amount of relaying has been done on the steam lines, where necessary, in anticipation of the conversion to electric power.

The North Shore cable line was converted to electric, and commenced running on the 11th of February last, the whole of the lines at North Sydney now being operated by electric traction.

The Dulwich Hill and St. Peters steam line was also converted to electric, and commenced running under the new system on the 2nd of April last.

ACCOMMODATION FOR TRAFFIC AND CONDITION OF ROLLING STOCK.

The condition of the rolling-stock has been well maintained. 43 electric cars have replaced a similar number of steam cars, the cost of which has been charged to working expenses. 133 new electric cars have been added to stock. Large orders are at present in hand for the manufacture in the Colony of a further supply of electric tram cars, so as to equip the various lines as they are converted to electric traction.

The introduction of penny sections simultaneously with the opening of the electric line in George-street induced a traffic that largely exceeded expectations. On the section between the Circular Quay and the Railway Station alone, an average of about 70,000 persons are carried each week day, being upwards of 50 per cent. in excess of the number arriving at and departing from the railway terminus at Redfern.

The number of passengers conveyed by the electric trams since the opening of the George and Harris Street line on the 8th December, and the conversion of the Dulwich Hill and St. Peter's line on the 2nd of April last, was 13,246,533. It has been found impossible to deal with this enormous traffic through the busiest

street in the city without overcrowding during the busy hours of the morning and evening, and particularly in the evening, consequent upon the operation of the Early Closing Act. Every effort has been made to minimise the trouble by running relief steam trams through Elizabeth-street, but they have been poorly patronised, passengers being apparently indifferent to the inconvenience of overcrowding so long as they can avail themselves of the readiest service.

We desire to point out that it will not be possible to increase the number of trams passing through George-street to any great extent during the busy hours, and the most speedy remedy appears to be the construction of the line, now under the consideration of the Government, from Belmore Park to Fort Macquarie by way of Castlereagh, Bligh, Loftus and Young streets, returning by way of Pitt-street. We therefore strongly advise that this scheme be pushed forward with all possible despatch.

Very satisfactory results with regard to traffic have followed the conversion of the Dulwich Hill and St Peter's lines from steam to electric traction, together with the introduction of penny sections and reduced through fares.

But on those sections which are still served by steam trams, and also on the North Shore Electric Lines, the reduction has so far resulted in a loss of revenue. Although there has been a considerable increase of traffic it has not been sufficiently large to compensate for the reductions and increase of expenditure. However, we look forward with confidence to satisfactory results in the near future.

FARES.

It may be stated that, having regard to the cost of material and labour conditions, the fares charged on the Sydney Tramway Lines are probably unequalled in the world.

In the United States of America, where more tramway lines are operated than in all other countries combined, the minimum fare is 5 cents ($2\frac{1}{2}$ d.) as compared with one penny (1d.) in Sydney.

ACCIDENTS.

It is exceedingly to be regretted that since the opening of the George-street line an unusually large number of street accidents have occurred. Each one has been the subject of exhaustive inquiry, and in almost every instance they have been demonstrated to be due to want of care on the part of the injured persons.

Special care has been exercised in training the tramway staff, and, by the adoption of the best known air-brakes and safety appliances, everything possible is being done to guard against accident.

WORK OF CONVERSION.

The work of converting the remainder of the steam trams to electrical traction is receiving every attention, but it will not be possible to do much more in this direction until additional machinery, now under contract, has arrived from America. In the meantime the necessary rolling stock is being constructed and housing accommodation prepared.

An extensive and complete depôt is now nearing completion at Newtown for the purpose of providing accommodation for the bulk of the electric cars working on the Western Tramway System. It will afford the necessary protection from the weather, and facilitate the working and repairs of the rolling stock.

RESULTS OF THE WORKING.

TRAMWAYS—ALL LINES.

Year ended 30 June, 1900, compared with 1899 and 1888.

PARTICULARS.	1900.	1899.	1888.

Further information regarding the working of the various sections will be found as an Appendix, page 44.

RAILWAYS AND TRAMWAYS.

Staff.

During the past four years advances have been given to the Staff, as follows :—

Year ended.	Per annum.
30 June, 1897	£24,378
30 June, 1898	£26,925
30 June, 1899	£34,976
30 June, 1900	£46,315

Of the advances granted during the past year, 83·71 per cent., or £38,023, were given to the wages staff, mainly affecting those in receipt of from 5s. to 10s. per day, and, in addition, increased expenditure to the extent of over £5,000 per annum has recently been authorised for the employment of additional staff to enable reductions to be made in the working-hours. The balance of £8,292 was given to the salaried staff, consisting principally of those engaged in working the traffic, such as station-masters, officers-in-charge, night officers, clerks, and others.

Much anxious consideration has been given to the question relating to the hours of labour, with the view, wherever practicable, of improving the conditions. In January last the working-hours of the wages staff were as follows :—

	Percentage to total Wages Staff.
8 hours a day	65·44
Over 8 and up to 9 hours per day ...	8·83
Over 9 and up to 9½ hours per day ...	10·60
Over 9½ and up to 10 hours per day...	14·78
Over 10 and up to 12 hours per day...	0·35

Since then the hours of a large number of men have been reduced, so that now no man employed on the running staff of either Railways or Tramways in the capacity of engine-driver or fireman, guard, shunter, signaller, tramway driver, or conductor is required to work more than an average of nine hours per day, and in busy station-yards and signal-boxes where the work is continuous the hours are limited to eight per day.

The duties of those who work over nine hours per day are of an intermittent and irresponsible character, a considerable number of them being gatekeepers.

We again desire to express our cordial appreciation of the efficiency and zeal of the Executive Officers and the hearty co-operation of the Staff generally.

Appeals.

During the year we personally heard, as provided for by the 71st clause of the Railway Act, 120 appeals from employees. Of these, 23 were decided in favour of the appellants; in 24 cases the decisions of the officers were modified and 73 were not sustained.

The Chief Commissioner being absent on a visit to America, where he is negotiating for the supply of further electrical appliances, and to Europe, for the purpose of attending the International Railway Congress, accounts for his name not being appended to this report.

We have the honor to be,

Sir,

Your most obedient Servants,

W. M. FEHON,

Deputy Chief Commissioner.

DAVID KIRKCALDIE,

Commissioner.

APPENDIX 1.

Sir,

Chief Mechanical Engineer's Office,

Eveleigh, 13 July, 1900.

I have to report, for the information of the Commissioners, that the rolling stock, the machinery, pumping plant, and water supplies of the Railways have been maintained in efficient order.

Locomotives.

Sixteen new locomotive boilers and 1 new boiler for a locomotive crane have been constructed in the Eveleigh shops during the year on Stores account.

Four passenger tender-engines, Nos. 149, 157, 411, and 415, were rebuilt, and converted into tank-engines for suburban lines. Four passenger tender engines and 3 goods tender engines were rebuilt. All were fitted with new boilers, and charged to working expenses.

Three hundred and twelve engines have been repaired during the year—217 of them at Eveleigh, 50 at Newcastle, and the remaining 45 at smaller depôts; 217 of them received heavy repairs, and the remaining 95 had general repairs of a lighter character.

Two hundred and eighty-nine boilers were overhauled during the year—201 of them at Eveleigh, 50 at Newcastle, and the remaining 38 at smaller depôts. One hundred and thirty-six of them, as they fell due, were internally examined, heavily repaired, refilled with tubes, and returned to locomotives. Forty stationary boilers were overhauled; 13 of them entailed heavy expenditure. The boiler repairs, generally speaking, during the year have been of a particularly heavy character. Six new stationary boilers and 1 old locomotive boiler have replaced wornout plant for stationary purposes, and 1 new stationary boiler and 5 old locomotive boilers were used to equip additional stationary plant.

Carriages and Wagons.

Ninety-eight vehicles were rebuilt as replacements during the year, of which 66 wagons of the open bogie type (Class G) were strengthened and converted into bogie bolster wagons (Class F). Twelve Redfern type bogie carriages have been fitted with corridors, thus making lavatory accommodation accessible to all compartments. One thousand three hundred and thirty-five passenger vehicles were repaired—1,049 of them at Eveleigh, and the remaining 286 at Newcastle. Three hundred and twenty-three of these vehicles received heavy repairs, and the remaining 1,012 had general repairs of a lighter character. Five thousand five hundred and sixty-six wagons and vans passed through the Eveleigh and Newcastle shops during the year, 1,917 of which were heavily repaired. Five thousand and fifty-three axle-boxes of defective designs were removed and replaced by standard axle-boxes, charged to working expenses.

New Stock charged to Capital.

Two new Pullman sleeping-carriages and 135 new merchandise vehicles were added to the stock during the year. These carriages and 71 of the other vehicles were built in the Eveleigh shops, and the remainder were ordered from contractors. The cost of these new vehicles, amounting to £25,727, was charged to Capital Account.

New Stock charged to Working Expenses.

Six powerful goods engines have been charged to Working Expenses during the year; they replace 9 smaller engines. Only 3 of them have, so far, gone into traffic; the remainder, now under erection, will soon follow.

Four 4-wheel carriage trucks have been built in the Eveleigh shops to replace similar vehicles worn out, and 251 merchandise vehicles were built as replacements, of which 221 were made by contractors, and the remaining 30 in the Eveleigh shops.

£59,782 was charged against the working expenses of the year on account of the above engines and vehicles.

A large air-compressor of the Ingersoll-Sergeant Duplex Compound type, capable of compressing 950 cubic feet of free air per minute to 100 lb. pressure per square inch, has been added this year to the machinery plant, thus providing compressed air to actuate lifts, jacks, drills, hammers, riveters, and other portable tools now being introduced so as to facilitate the output of the workshops. And during the year a large new erecting-shop 400 feet long by 111 feet wide—a very fine building—has been opened and put into full operation. All the powerful, overhead, high-speed cranes, machines, and shafting in this shop are driven by electricity, generated at the Electric Tramway Power-house, Ultimo. A number of special machines of heavy designs have been ordered, so as to place these workshops on an up-to-date basis for the purpose of manufacturing locomotive parts, such as boilers, tanks, &c., rapidly and at reduced cost.

For some years past a marked and gradual increase has taken place in the unproductive mileage when compared in percentages of the train mileage executed. In 1895 year this percentage was 37·53, and in the year just closed it was 43·63. This accounts for the increase in the Locomotive Department cost per train mile, and also for the rise in its percentage of expenditure to revenue; but it is hoped that the introduction to a greater extent of large engines and other changes will produce more favourable results in future.

The following statement shows the relative mileage executed and the working costs of the Locomotive Branch for 1899 and 1900:—

	1900.	1899.	Increase.	Decrease.
Train miles	8,894,352	8,806,647	87,705
Engine miles	12,774,883	12,557,316	217,567
Percentage of unproductive to train miles	43·63	42·59	1·04
Revenue	£3,163,572	£3,145,273	£18,299
Expenditure	£808,397	£777,087	£31,310
Do percentage to revenue	25·55	24·71	0·84
Cost in pence per train mile	21·813	21·177	0·636
Do engine mile... ..	15·187	14·852	0·335

The relative positions of the locomotive, carriage, and wagon stock on the 30th June, 1899 and 1900, are shown on the statement below.

W. THOW,
Chief Mechanical Engineer.

To the Secretary to the Railway Commissioners.

APPENDIX 2.

RAILWAYS.—RETURN OF WORKING ROLLING STOCK, 30TH JUNE, 1900.

	LOCOMOTIVES.		COACHING.							MERCHANDISE.						DEPART- MENTAL STOCK.	TOTAL GOODS.
	Engines.	Tenders.	Special and Sleeping Cars	First Class.	Composites.	Second Class.	Brake-vans.	Horse-horses, Carriage, trucks, &c	Total.	Goods open.	Goods covered.	Meat-trucks.	Live Stock Trucks.	Brake-vans.	Total.	Loco. Coal Rollers, &c., Wagons.	
Stock, 30th June, 1899...	491	408	45	171	86	267	182	293	1,044	7,697	627	110	1,130	205	9,769	1,037	10,806
Stock, 30th June, 1900...	A 489	402	45	168	86	272	164	290	B 1,025	7,771	652	110	1,130	217	9,880	1,049	C 10,929

A.—Five powerful goods engines, with a tractive power of 143,885 lb., replace 7 small type engines with an aggregate tractive power of 127,008 lb. Three goods tender and 8 passenger tender engines have been rebuilt and fitted with new boilers; 4 of the latter engines have been converted to passenger tank.

B.—Two new Pullman sleeping-cars have been added to stock; 20 4-wheel brakes have been replaced by 8 bogie brakes and 4 4-wheel brakes in the goods stock; 5 carriage trucks have been replaced—4 by other carriage trucks, and 1 by a "D" wagon in the goods stock; 10 carriages of various types have been rebuilt, and 9 converted into other classes. Three 1st class corridor cars were included in "Special and Sleeping cars," last year.

C.—Ninety-five open 4-wheel 10-ton wagons, 25 lowered vans, 14 water-trucks, and 1 gas-van have been added to stock; 88 vehicles were rebuilt, 239 vehicles with a carrying capacity of 2,187 tons replaced 264 of 1,633 tons capacity, and 12 goods brakes (8 being bogie) replaced 20 4-wheel brakes, and 68 wagons were converted to other types.

APPENDIX 3.

REPORT on Condition of Permanent Way and Works for the year ending
30th June, 1900.

Sir, Office of Engineer-in-Chief for Existing Lines,
2 July, 1900.

I have the honor to report, for the information of the Commissioners, that the Permanent Way, Works, and Buildings have been efficiently maintained during the past year.

Relaying, Reballasting, &c.

On account of the delay in obtaining rails and fastenings the operations under the head of relaying have not been so extensive as it was hoped they would be. A length of 74 miles 35 chains has been completely relaid, rerailed, or resleepered, and 22 miles 73 chains partially resleepered to strengthen the road where desirable until complete resleepering can be done. The expenditure for the year includes the purchase for immediate use of materials for 20 miles of road, and relaying—which should not be any longer deferred—is now being vigorously pushed on.

In addition to the work described above, 39,962 new sleepers and 26,456 good second-hand sleepers have been put in the road, adding a further length of 30 miles put into perfect order during the year.

Reballasting and lifting have been done over 223 miles 16 chains of road, and 90,786 cubic yards of ballast distributed, and a large quantity—11,573 cubic yards—of sand has been used for making up the cesses in the black-soil country on the North-western Branch Line, effecting a very material improvement in this part of the lines.

One hundred and sixty-six miles 23 chains of fencing has been renewed out of working expenses, and 38 miles 69 chains of new fence erected in connection with deviation works.

The station and other buildings throughout the system have been carefully maintained, repairs and painting being carried out where necessary. A large number of additional works have been completed, including many which, though fairly chargeable to Capital, have been debited to Working Expenses.

A systematic inspection has been made of all bridges and culverts, repairs or renewals being effected where necessary.

The renewal of all that portion of the Wagga Wagga viaduct north of the river has been completed. Further progress has been delayed by the difficulty in obtaining the necessary material from England.

Improvement of Grades and Curves.

The grade improvements in the vicinity of Carlingford, Berowra, and Woy Woy, and between Muswellbrook and Scone, on the Northern Line, have been completed.

On the Southern Line similar works between Harden and Cootamundra are nearly finished, while on the Western Line others between Gresham and Blayney and between Blayney and Springhill have made fair progress, but they have latterly been delayed through the heavy rains.

The greater portion of the work of duplicating the North Shore Line, between St. Leonards and Lindfield, has been carried out, but completion is delayed waiting for Parliamentary authority for some of the alterations.

The above works have been carried out by gangs working under the direction of departmental officers.

Extensions opened.

The following extensions were opened for traffic during the year :—

Tamworth to Manilla, 29 miles 42 chains, on 15th August, 1899.

Moree to Gravesend, 35 miles, on 1st February, 1900.

Both are of the Pioneer type.

I have, &c.,

THOMAS R. FIRTH,

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

Sidings laid in and extended 6 miles 69 chains.
 Sidings relaid 10 chains.

	New.	Second-hand.	Total, year ended 30 June, 1900.	Total, year ended 30 June, 1899.
Sleepers used—				
In Sidings laid in and extended	2,518	12,434	14,952	20,859
In Main Lines—				
For relaying and resleeping	155,486	66	155,552	153,867
For repairs and respacing	39,962	26,456	66,418	72,071
For deviations to improve grades and curves	24,044	7,902	31,946	20,513
Total	222,010	46,858	268,868	267,310

	Blue-metal and other hardstone.	Sandstone and gravel.	Total, year ended 30 June, 1900.	Total, year ended 30 June, 1899.
Ballast used—				
On old lines	Cubic yards. 82,524	Cubic yards. 8,262	Cubic yards. 90,786	Cubic yards. 86,128
On deviations to improve grades and curves	15,012	1,900	16,912	33,586
Total	97,536	10,162	107,698	119,714

Length of new fencing erected 205 miles 12 chains.

Length of fence wired 14 „ 68 „

Culverts and flood-openings constructed and extended, 175 s. ft. additional waterway.

APPENDIX 18.

REPORT of the Tramway Locomotive Superintendent.

Randwick, 17 July, 1900.

To the Secretary to the Railway Commissioners,—

Sir,

I have the honor to submit, for the information of the Railway Commissioners, the following report on the work performed by the Locomotive Department during the year ending 30th June last :—

SYDNEY CITY AND SUBURBAN LINES.

The rolling-stock, machinery, and plant have been maintained in efficient working order, and although the expenditure shows an increase over that of the previous year, it is mainly due to the provision made for the renewal of wornout cars.

The opening of the George-street electric tramway on 8th December, and the conversion of the steam system on the Newtown and Dulwich Hill sections to electric working on 2nd April, have resulted in a reduction of 75,768 miles in the steam-tram service for the year. It was expected that a very much larger reduction would have been possible, but the popularity of the electric cars with the travelling public, here as elsewhere, brought about a large increase in the traffic, and so marked was this that only a portion of the steam service could be withdrawn.

The following is a summary of the repairing work performed in the maintenance of the existing rolling-stock :—

Motors : 53 received general overhaul ; 64, heavy repairs ; 742, more or less extensive repairs, occupying from 1 to 8 days each, and 568 light repairs.

Cars : 103 thoroughly overhauled and repainted ; 35 repaired and partially repainted ; and 1,967 received minor repairs, occupying about 1 day each.

There were also repaired 76 trucks and road-watering tanks, as well as 122 cars for other tramway lines.

In addition to the foregoing, a very large amount of work in fitting up the new rolling-stock for the electric system was carried out, viz.,—83 motor-cars fitted with trucks, electric motors, air-brakes, and other necessary fittings ; 16 bogie motor-cars, imported from America, put together, painted, and fitted with trucks, air-brakes, and electrical equipment ; 47 trail-cars fitted with trucks, air-brakes, &c. ; 1 road-watering tank, constructed and fitted with truck, electric motors, &c.

The rolling-stock, cable, power plant, &c., on the North Shore cable tramway were maintained in good working order up to 11th February, when the system was converted to electric traction. The grip-cars have been altered to run on the King-street to Ocean-street cable tramway, and the trail-cars were fitted with the necessary gear, and continued in service as trailers behind the electric motor-cars.

The rolling-stock, machinery, and plant on the Newcastle, Kogarah to Sans Souci, and Morpeth to East Maitland lines steam tramway lines have been maintained in good working condition, and the requirements of the traffic fully met.

GEO. DOWNE,

Locomotive Superintendent.

APPENDIX 19.

Report of Engineer for Tramways.

Office of Engineer for Tramways, 20 July, 1900.

The Secretary to the Railway Commissioners,—

Sir,

I have the honor to report, for the information of the Commissioners, that the Permanent-way, Works, and Buildings have been maintained in an efficient manner.

During the past year the following additional mileage has been added :—Circular Quay, along George-street, to Redfern Railway Station and Harris-street, Ultimo, 3 miles 19½ chains of double track ; North Sydney Road to Gore Hill, 1 mile 4 chains of single track ; and Neutral Bay to Military Road, 74 chains of single track.

The following lines were also duplicated :—From Edinburgh loop to Dulwich Hill, 1 mile 58 chains, exclusive of extension of 6½ chains to form a circular loop ; also the Crown-street line, from Collins-street to Cleveland-street, 22½ chains.

Total additional mileage, 10 miles 44 chains of single track.

A fair amount of relaying has been carried out during the year. The length of track laid, however, would have been greater had the work not been greatly retarded by the continuous wet weather experienced during the last few months. The following is the relaying done :—Botany line, from Cleveland-street to Waterloo, 67 chains ; Waverley line, from Ocean-street to Bondi junction, 56½ chains ; Leichhardt line, from Nelson-street to Marion-street, 1 mile 15 chains ; Dulwich Hill line, from Victoria Road to Illawarra Road, 22 chains ; also along Oxford-street (City), from College-street to Darlinghurst junction, 50½ chains. The latter line has also been repaved with wood blocks. Total length relaid, 3 miles 51 chains.

During the year the steam line from Harris-street junction to Dulwich Hill, 4 miles 42 chains, was converted to electric traction. The North Sydney cable line, from Milson's Point to Ridge-street, 1 mile 32½ chains, has also been converted electrically. The whole of the lines, therefore, north of the harbour are now worked by electricity.

A number of waiting-sheds, the Locomotive Superintendent's offices at Randwick and Bridge-street ; store and offices, Randwick ; car and engine-house and offices, Rushcutter's Bay, have been painted and renovated, and other buildings are being similarly treated.

An addition has been made to the car-house, North Sydney ; and an addition to the car-house, Rushcutter's Bay, is in progress. A large car-house at Newtown, capable of holding 112 cars of the bogie combination, or 166 of the four-wheeled enclosed type, is approaching completion.

Owing to the large amount of rain during the last three months of the year, the use of a large quantity of metal has been necessary, 15,995 tons, as against 12,325 last year.

I have, &c.,

G. R. COWDERY.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING DECEMBER, 1899.)

Printed under No. 1 Report from Printing Committee, 26 June, 1900.

Offices of the Railway Commissioners of New South Wales,
25th January, 1900.

To THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report for the quarter ended 31st December, 1899, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.	Quarter ended 31st Dec., 1898.	Quarter ended 31st Dec., 1899.						
Miles open	2,705½	2,736						
Revenue	<table style="margin-left: auto; margin-right: auto;"> <tr> <td style="text-align: center;">1898.</td> <td style="text-align: center;">1899.</td> </tr> <tr> <td style="text-align: center;">Passenger ... £300,290</td> <td style="text-align: center;">£323,028</td> </tr> <tr> <td style="text-align: center;">Merchandise ... £634,564</td> <td style="text-align: center;">£602,256</td> </tr> </table>		1898.	1899. RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached, page 4.

IV AND V.—STAFF.

These returns are given as an Appendix, pages 5 to 8.

GENERAL REMARKS.

The Passenger department shows an increase of £22,737, all classes of traffic having contributed thereto, viz., first-class passengers, £7,194; second-class, £13,798; and miscellaneous, £1,745.

In the Goods department, General Merchandise shows an increase of £5,693; Coal and Coke, £2,194; and other minerals, £3,273. Wool shows a decrease of £15,841; Live Stock, £21,984; Hay, Straw, and Chaff, £4,928, and Grain and Flour, £714.

The net Earnings for the quarter show a decrease of £9,570.

The General Goods tonnage shows a decrease of 36,110 tons, viz., General Merchandise, 1,356 tons; Hay, Straw, and Chaff, 9,860 tons; Grain and Flour, 2,531 tons; Wool, 4,144 tons; Live Stock, 18,219 tons. Coal and Coke shows an increase of 17,967 tons, and other Minerals, 24,702 tons.

The Passenger journeys show an increase of 452,125.

In consequence of an unusual amount of necessary repairs and renewals to Rolling Stock, as compared with the corresponding quarter of last year, the expenditure shows an increase of £15,671.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The Permanent Way Lines, Works, and Buildings have been well maintained.

The grade improvements near Carlingford and Aberdeen, and the earthworks, culverts, and bridges connected with the deviation works between Harden and Cootamundra have been completed, and good progress has been made with similar works between Gresham and Blayney.

The duplication of the North Shore line has made fair progress, but several important alterations proposed to be carried out are deferred, pending Parliamentary authority.

The Wagga Wagga Viaduct, north of the river, has been completed, and satisfactory progress is being made with the remainder of the work.

TRAMWAYS.

TRAMWAYS.

The Earnings during the past quarter have increased £8,459, and the Expenditure £7,083, the net result being an improvement of £1,376.

The George and Harris Streets Electric line, Circular Quay, Sydney, to John-street, Pyrmont, a distance of 3 miles 19 chains, was opened for traffic on the 5th of December last. During the 24 days in December, 1,136,852 passengers were carried, and the traffic continues to give gratifying results.

We have the honor to be,

Sir,

Your most obedient servants,

CHARLES OLIVER,
Chief Commissioner.

W. M. FEHON,
Commissioner.

DAVID KIRKCALDIE,
Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

Report on the Condition of Permanent Way and Works for the Quarter ending 31st December, 1899.

Sir,

Office of Engineer-in-Chief for Existing Lines, 1 January, 1900.

I have to report, for the information of the Commissioners, that the Permanent Way and Works have been efficiently maintained during the past quarter.

Reballasting, resleepering, and rerailling operations have progressed steadily.

The grade improvements near Carlingford and Aberdeen Station are completed, the earthworks, culverts, bridges, &c., in connection with those between Harden and Cootamundra are finished, and good progress has been made with similar works between Gresham and Blayney.

Fair progress has been made with the duplication of the North Shore line, between St. Leonards and Lindfield, but several important alterations proposed to be carried out are deferred until Parliamentary authority has been obtained.

The work of renewing the Wagga Wagga viaduct has advanced so far that all work north of the river has been completed, and it is expected that delivery of all materials required for the completion of the work will shortly be given.

I have, &c.,

THOMAS R. FIRTH.

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No. 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, quarter ended 31st December, 1899.

Article.	Rate or Particulars.	Reason for Rate.
Horses	Twenty-three trucks, Scone to Newcastle, for shipment—25 per cent. off usual rate.	To secure traffic.
Oil	Loaded in owner's tank of not more than 9 tons capacity and carried on 4-wheels, Torbane to Darling Harbour;—£5 per vehicle, tank to be hauled back empty free.	To encourage industry.
Crude ores	Newcastle to E. and A. Copper Works, 1s. per ton in full ton truck loads ...	New rate.
Oil (kerosene)	Conveyed in owner's tanks of not more than 6½ tons capacity, Hartley Vale to Eskbank, 14s. per tank; B class rate when in drums or cases, and carried with candles, gasoline, and benzine, in 6 ton loads, Hartley Vale to Darling Harbour.	do
Alabastine	B class rates and conditions	To encourage traffic.
Pipes, castings, valves, &c.	Darling Harbour to Moree for Moree Water Supply, £4 10s. per ton in 6-ton loads, forwarded at the convenience of the Department.	To secure traffic.
Machinery—gold dredging..	B rate, in 6-ton loads, per 4-wheeled wagon	To equalise rates.

APPENDIX III.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDED 31st MARCH, 1900)

Printed under No. 1 Report from Printing Committee, 26 June, 1900.

Offices of the Railway Commissioners of New South Wales,
Sydney, 10th April, 1900.

To THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ended 31st March, 1900, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.	Quarter ended 31st March, 1899.	Quarter ended 31st March, 1900.
Miles open	2,705 $\frac{1}{4}$	2,771
Revenue		
1899. 1900.		
Passenger ... £317,025 £338,372	£753,713	£816,755
Merchandise... £436,691 £178,383		
Expenditure	£410,056	£430,904
Train miles run	2,146,076	2,304,558
Earnings per train mile	7s. 0 $\frac{1}{4}$ d.	7s. 1d.
Expenditure per train mile	3s. 9 $\frac{1}{2}$ d.	3s. 8 $\frac{1}{2}$ d.
Percentage—Expenditure to earnings	51.40	52.76
Number of passengers	6,302,432	6,807,078
Tonnage of goods traffic	1,231,700	1,386,086
Tonnage of live stock traffic... ..	55,248	50,782

TRAMWAYS.	Quarter ended 31st March, 1899.	Quarter ended 31st March, 1900.
Miles open	66 $\frac{1}{4}$	70 $\frac{1}{2}$
Revenue	£90,100	£113,099
Expenditure	£68,797	£85,929
Tram miles run	878,188	1,127,797
Earnings per tram mile	2s. 0 $\frac{1}{2}$ d.	2s.
Expenditure per tram mile	1s. 6 $\frac{3}{4}$ d.	1s. 6 $\frac{1}{2}$ d.
Percentage—Expenditure to earnings	76.36	75.98
Number of fares collected	21,324,710	26,825,200

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached, page 4.

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 8.

RAILWAYS.

GENERAL REMARKS.

The Earnings for the past quarter show an increase of £63,039 over the corresponding quarter of last year; the Expenditure an increase of £20,848, the result being an improvement of £42,191.

With few exceptions all classes of traffic contributed to the increase, viz.:—
First-class passengers, £9,079; Second-class, £7,927; Parcels, &c., £4,341; General Merchandise, £15,124; Grain, Flour, &c., £25,887; Minerals, other than Coal and Coke, £4,331; Coal and Coke, £894. Wool shows a decrease of £830, and Live Stock, £3,714.

The Passenger traffic shows an increase of 504,646 passenger journeys, and the Goods Traffic, 154,386 tons.

CONDITION OF LINES AND ACCOMMODATION FOR THE TRAFFIC.

The Permanent-way and works generally have been efficiently maintained.

The grade improvements between Harden and Cootamundra are approaching completion, and satisfactory progress has been made with similar works between Gresham and Blayney.

The first section of the pioneer line, Moree to Inverell, a distance of 35 miles, Moree to Gravesend, was opened for traffic on the 1st of February last.

TRAMWAYS.

TRAMWAYS.

GENERAL REMARKS.

The Earnings show an increase of £22,999 and the Expenditure an increase of £17,132, the net increase over the March quarter of last year being £5,867.

In connection with the increased Earnings, 5,500,490 additional fares were collected.

The George and Harris Streets Electric line continues to give satisfactory results.

A further extension of the Electric Tramway from Falcon-street to a point near Westbourne-street, North Shore, a distance of 1 mile 4 chains, was opened for traffic on the 24th of February.

The conversion of the North Shore Cable line to Electric was completed, and commenced running under the new system on the 25th of February.

The conversion of the western section of the Sydney Suburban Steam lines to Electric is being proceeded with as rapidly as circumstances permit. The Electric Tram commenced working on the Dulwich Hill-St. Peters line on the 2nd instant. The Glebe line will probably be completed for Electric running by the 1st July, the Leichhardt line by the 1st September, and the Balmain line by the 1st of November.

We have the honor to be,

Sir,

Your most obedient servants,

CHARLES OLIVER,
Chief Commissioner.

W. M. FEHON,
Commissioner.

DAVID KIRKCALDIE,
Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

REPORT on Condition of Way and Works for the Quarter ending 31st
March, 1900.

Sir, Office of Engineer in-Chief for Existing Lines, 1st April, 1900.

I have to report, for the information of the Commissioners, that the Permanent-way and Works have been efficiently maintained during the past quarter.

Owing to the difficulty in obtaining materials, only moderate progress has been made with relaying and resleepering, but better deliveries of rails are now anticipated, and work will be proceeded with more rapidly.

The grade improvements between Harden and Cootamundra are approaching completion, and the similar works between Gresham and Blayney have made satisfactory progress.

The duplication between St. Leonards and Lindfield is not quite completed, Parliament not being in session, the necessary authority required for a portion of the works could not be obtained, and progress has been retarded.

The first section of the Pioneer line, Moree to Inverell, a distance of 35 miles to Gravesend, was opened on the 1st of February last.

I have, &c.,

THOMAS R. FIRTH,
Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No. 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, Quarter ending 31st March, 1900.

Article.	Particulars of Rate.	Reason for Rate.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDED 30TH JUNE, 1900.)

Printed under No. 7 Report from Printing Committee, 2 August, 1900

Offices of the Railway Commissioners of New South Wales,
Sydney, 25 July, 1900.

TO THE HONORABLE THE MINISTER FOR RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report for the quarter ended 30th June, 1900, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.	Quarter ended 30th June, 1899.	Quarter ended 30th June, 1900.
Miles open	2,706½	2,811½
Revenue	£690,114	£696,666
{ Passenger ... 1899. 1900. } { Merchandise... £280,539 £291,296 } { £409,575 £405,370 }		
Expenditure	£399,459	448,091
Train miles run	2,170,063	2,153,053
Earnings per train mile	6s. 4¼d.	6s. 5¼d.
Expenditure per train mile	3s. 8¼d.	4s. 2d.
Percentage—Expenditure to earnings	57.88	64.32
Number of passengers	6,310,896	6,578,931
Tonnage of goods traffic	1,231,136	1,376,691
Tonnage of live stock traffic	54,643	47,895

TRAMWAYS.	Quarter ended 30th June, 1899.	Quarter ended 30th June, 1900.
Miles open	66½	71½
Revenue	£90,067	109,917
Expenditure	£76,469	99,625
Tram miles run	887,617	1,378,040
Earnings per tram mile	2s. 0½d.	1s. 7¼d.
Expenditure per tram mile	1s. 8¾d.	1s. 5¼d.
Percentage—Expenditure to earnings	84.90	90.63
Number of fares collected	21,124,905	25,911,620

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found as an appendix, page 4.

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 10.

RAILWAYS.

GENERAL REMARKS.

The Earnings show an increase of £6,552 over the corresponding quarter of last year, but owing to a largely increased volume of goods traffic of a much less remunerative character, heavier repairs and renewals of Rolling Stock, and an unusually large amount of relaying on the Northern Line, the Working Expenses show an increase of £48,632.

The first-class Passenger Earnings show an increase of £257; second-class, £5,308; Parcels, &c., £5,192; Grain, Flour, &c., £5,408; Coal and Coke, £10,929, and other Minerals, £1,839. Hay, Straw, and Chaff show a decrease of £5,682; General Merchandise, £2,065; Wool, £1,910; and Live Stock, £12,724.

268,035 additional passengers were carried, and the Goods Traffic increased by 145,555 tons.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The Permanent-way and works generally have been efficiently maintained.

Good progress has been made with the relaying and resleepering works, but owing to the recent wet weather and the scarcity of men the grade improvements have been retarded.

TRAMWAYS

TRAMWAYS.

The earnings give an increase of £19,850, and the additional fares collected amount to 4,786,715. The expenditure includes £5,713 for relaying in excess of the corresponding quarter of last year and this, together with the initial expenses connected with the electric running, shows an increase of £23,156.

We have the honor to be,

Sir,

Your most obedient servants,

W. M. FEHON,
Deputy Chief Commissioner.

DAVID KIRKCALDIE,
Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

Report on Condition of Permanent Way and Works for the Quarter ending
30th June, 1900.

Sir, Office of Engineer-in-Chief for Existing Lines, 2 July, 1900.
I have to report, for the information of the Commissioners, that the Permanent Way and Works have been efficiently maintained during the past quarter.

Good progress has been made with the relaying and resleepering works.

The recent wet weather and the scarcity of men have retarded the progress of the various grade improvements. Those between Harden and Cootamundra are still incomplete, and similar works between Gresham and Blayney have progressed very slowly.

The duplication of the line between St. Leonards and Lindfield has been practically stopped waiting for the necessary Parliamentary sanction for some of the works.

I have, &c.,

THOMAS R. FIRTH.

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No. 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, Quarter ended 30th June, 1900.

Article.	Rate.	Reason for Rate.
Coke	In owners' wagons hauled by Departmental engine from Mt. Kembla to Dapto, 9d. per ton.	To equalise rates.
Goods for Indian Famine Relief Fund.	Free, if consigned to Secretary of Indian Famine Relief Fund, and certificate is given by Secretary that goods are for purpose stated.	Special concession.
Bichromate of potash and iron liquor.	Sydney to Aberdeen, "B" rates in lots of not less than 6 tons per 4-wheeled truck.	To encourage traffic.
Milk (separated and returned to original sending station).	Half rates on certificate that the milk has passed through the process of separation.	do
Wine	Allandale to Ettamogah, through "A" rate—34s. 10d. per ton	To secure traffic.
Cement	Merrylands and Portland Siding to Newcastle, "M." rates with minimum of 5 tons per 4-wheeled truck.	To equalise rates.
Coal	Wallsend Colliery to Sulphide Association Siding in owners' wagons, 1s. per ton for large coal and 10d. per ton for small coal.	New rate.
Coal	Yass Tramway, 1s. 3d. per ton	do
Cococide	"B" rates and conditions	do

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDED 30TH SEPTEMBER, 1900.)

Ordered by the Legislative Assembly to be printed, 17 October, 1900.

Offices of the Railway Commissioners of New South Wales,
17th October, 1900.

TO THE HONORABLE THE MINISTER FOR RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report for the quarter ended 30th September, 1900, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.								Quarter ended 30th September, 1899.	Quarter ended 30th September, 1900.
Miles open	2,736	2,811½
Revenue	...	{ Passenger	...	£274,659	1899.	1900.	£288,953	£724,867	£782,625
	...	{ Merchandise	...	£450,208			£493,672		
Expenditure	£430,425	£467,720
Train miles run	2,109,762	2,351,168
Earnings per train mile	6s. 10½d.	6s. 8d.
Expenditure per train mile	4s. 1d.	3s. 11¾d.
Percentage—Expenditure to earnings	59.38	59.76
Number of passengers	6,304,724	6,686,919
Tonnage of goods traffic	1,287,334	1,527,112

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached. [Appendix, page 4.]

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 11.

GENERAL REMARKS.

The earnings for the quarter show an increase of £57,758 over the corresponding quarter of last year; the expenditure an increase of £37,295; the net result being an improvement of £20,463.

All classes of traffic contributed to the increase, viz., first-class passengers, £3,127; second-class, £6,948; parcels, &c., £4,219. Total coaching increase, £14,294. General merchandise, £128; hay, straw, and chaff, £6,536; grain, flour, &c., £15,842; wool, £6,372; live stock, £3,906; coal and coke and other minerals, £10,680. Total goods increase, £43,464.

The passenger traffic shows an increase of 382,195 journeys, and the increase in general merchandise and live stock is 240,256 tons.

CONDITION OF LINES AND ACCOMMODATION FOR THE TRAFFIC.

The Permanent Way and Works generally have been well maintained.

Relaying and resleepering operations continue to make fair progress.

The grade improvements and deviations between Jindalee and Demondrille have been completed; the works between Harden and Murrumburrah are nearly finished, and those on the Western line, between Newbridge and Blayney, have made fair progress.

Parliamentary sanction having now been obtained for closing the level crossings, &c., the work of duplicating the line between St. Leonards and Lindfield will be completed as early as possible.

TRAMWAYS.

TRAMWAYS.

The Earnings show the largest increase upon record, viz., £26,864; the Expenditure, owing to considerable additional service, an increase of £24,963, the net improvement being £1,901.

6,947,996 additional passengers were carried.

The following lines have been opened for traffic, viz. :—

	mils.	chs.
6th Aug.—St. Peters Railway Bridge to Cook's River Dam	1	78
13th Aug.—Belford-street to Glebe-road, Adamstown ...	1	2
10th Sept.—Rose Bay Wharf to Dover-road ...	1	3
12th Sept.—Cleveland-street to Kensington Racecourse ...	1	30

We have the honor to be,

Sir,

Your most obedient servants,

W. M. FEHON,

Deputy Chief Commissioner.

DAVID KIRKCALDIE,

Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

REPORT on Condition of Way and Works for the Quarter ending 30th September, 1900.

Sir, Office of Engineer-in-Chief for Existing Lines, 4th October, 1900.

I have to report, for the information of the Commissioners, that the Permanent-way and Works have been efficiently maintained during the past quarter.

Relaying and resleeping operations continue to make fair progress.

The gradient improvements and deviations between Jindalee and Demondrille have been completed, and between Harden and Murrumburrah they are nearly finished. Those on the Western Line, between Newbridge and Blayney, have made fair progress.

The duplication of the line between St. Leonards and Lindfield has been carried on, and Parliamentary sanction having now been received for the closing of level crossings, &c., the whole of the work will be completed as early as possible.

I have, &c.,

THOMAS R. FIRTH,
Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

RETURN of Goods Rates approved for the quarter ended 30th September, 1900.

Article.	Particulars of Rate.	Reason for Rate.
Broom millet	In up direction, in less lots than 6 tons per 4-wheeled truck, "A" class rates with a minimum of 1 ton.	To encourage traffic.
Cement	Merrylands to Newcastle, Miscellaneous rates and conditions	do
Coal	South Bulli to Mt. Keira, in owners' wagons and hauled by owners' engine, 3d. per ton; if hauled by Department's engine, 9d. per ton.	do
Dairy plant (old)	Aberdeen to Moss Vale, "B" rates	do
Flour and mill offal	Forwarded from stations Darling Harbour to Granville inclusive to stations on the Illawarra Line, "A" class rates and conditions—maximum rate, 5s. per ton.	do
Limestone	In full truck loads, Lime Siding to Annandale Siding, 10d. per ton	do
Cabbages and pumpkins ...	Wagga to Darling Harbour, 12s. 7d. per ton for lots of not less than 6 tons per 4-wheeled truck.	do
General goods	Taken across the temporary bridge over the Gwydir River from Gravesend, 5s. per truck to be charged.	do
Ore bags (second-hand) ...	Free on down journey when sent to country stations for purpose of being filled and then forwarded by rail.	do
Monier pipes	"B" rates	do
Coal	Ellermore Vale Colliery to Purified Coke Works, Wallsend, 7d. per ton as from 1/1/00.	do
Wire collapsible poultry pens.	Free carriage on return journey for pens sent from Sydney to country stations for use at shows.	do
Kerosene oil, in tanks	In owners' tanks and vehicles approved by the Chief Mechanical Engineer, and conveying not less than 9 tons of oil, "B" rates plus 50 per cent.; empty tanks to be returned free. In cases where the existing maximum rates for kerosene are less than "B" plus 50 per cent., the maximum rates to be charged, less 10 per cent.	do
Coal, small	South Wallsend Colliery to Sulphide Corporation in owners' trucks, 8d. per ton.	do
Coal and coke	Eskbank and Wallerawang to Annandale Copper Company's Siding, 5s. and 4s. 4d. per ton respectively, provided tonnage hauled from both stations is at rate of 7,500 tons per annum for three months, and 10,000 tons per annum afterwards. From other stations a rebate of 10 per cent. will be allowed on condition that not less than 1,500 tons are forwarded per annum in 4-wheeled truck-loads of not less than 9½ tons.	do
Copper	Annandale Copper Company's Siding to Darling Harbour, £1 per ton in 25-ton consignments.	do
Copper matte	Matte and antimonist dross from Dapto to Darling Harbour in lots of not less than 8 tons per 4-wheeled truck, 3s. 9d. per ton.	do
Crude ores	From Western Line or from stations on the Murrumburrah-Blayney Line to Annandale Siding, up journey rates throughout to be charged.	do

NEW SOUTH WALES.

RAILWAYS.

(RETURN SHOWING VEHICLES FITTED WITH STANDARD DRAW-GEAR AT EVELEIGH WORKSHOPS.)

Printed under No. 15 Report from Printing Committee, 1 November, 1900.

[Laid upon the Table of the House in accordance with a promise made by the Honorable the Minister for Railways, in answer to Question No. 12 in Votes and Proceedings No. 44, of the 19th September, 1900.]

VEHICLES FITTED WITH STANDARD DRAW-GEAR AT EVELEIGH WORKSHOPS.

(1.) *Question.*—With reference to the Eveleigh Workshops, how many vehicles have been fitted with standard draw-gear?

Answer.—About 11,189 vehicles.

(2.) *Question.*—The weight and cost of parts purchased from outside firms.

**Answer.*—Approximate weight, 1,272 tons, costing £48,414.

(3.) *Question.*—The weight and cost of parts made in the Eveleigh Workshops (cost to be given in wages, materials, and charges).

Answer.—Approximate weight, 826 tons.

Approximate cost, £27,482, made up as under:—

	£
Wages	13,677
Material	10,427
Shop charges	3,378

£27,482

(4.) *Question.*—What amount of same has been charged to capital account?

Answer.—2,302 sets of draw-gear, costing (approximately) £16,149, were fitted to new vehicles, and charged to capital account.

(5.) *Question.*—And what amount has been charged to working expenses?

Answer.—8,887 sets of draw-gear, costing (approximately) £59,747, were charged to working expenses.

* *Note.*—709 tons, costing £27,001, supplied on new vehicles, and charged as part cost of same.
563 tons, costing £21,413, supplied and fitted to existing stock.
1,272 tons, costing £48,414.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY ACCIDENT ON THE ZIG ZAG.
(PAPERS RESPECTING.)

Printed under No. 17 Report from Printing Committee, 22 November, 1900.

The Secretary for Railways to The Under Secretary for Finance and Trade.

Sir,

Office of the Railway Commissioners, Sydney, 3 October, 1900.

I am directed to report, for the information of the Minister for Railways, that an accident occurred to the goods train which started from Wallerawang for Sydney at 9.22 p.m. on the 29th ultimo.

On arrival at the Zig Zag Bottom Points, at 11.28 p.m., following the usual practice of working heavy goods trains over the Zig Zag, the train was divided, and the engine propelled twenty-three of the vehicles towards the Top Points. On passing the Top Points, the driver should have stopped his train preparatory to drawing forward on to the main line, but it would appear that he continued to push his train until the three rear waggons were pushed off the road. D 3,944, loaded with wool, and D 2,873, loaded with chaff, were pushed over the face of the rocks and fell into the valley, and D 1,744, loaded with hay, was jammed against the rocks. Slight damage was also done D 3,478, D 7,723, and X 31. The permanent way also was slightly damaged.

Steps were taken to put the permanent way in order as quickly as possible, and the work of recovering the wool, &c., is in hand. A joint inquiry is being held into the cause of the occurrence.

I am to add that the method of working over the Zig Zag herein referred to is adopted in connection with heavy goods trains only.

I have, &c.,
H. McLACHLAN,
Secretary.

Seen by Minister (Mr. See), 16/10/00. No. 792, Records.

The Secretary for Railways to The Under Secretary for Finance and Trade.

Sir,

Office of the Railway Commissioners, Sydney, 8 October, 1900.

With reference to the recent accident at the top of the Zig Zag, three trucks being pushed off the road, I am directed to inform you that the Railway Commissioners are in possession of the report of the Inquiry Board concerning the accident, from which it would appear that the mishap occurred to a goods train which left Bathurst on the night of the 29th September. On arriving at the bottom points of the Zig Zag, in accordance with the usual practice, the train was divided, the engine propelling twenty-three trucks as the first division of the train. The train was pushed up at the usual speed; but instead of stopping at the usual place at the top the driver overran it, two waggons being pushed over the end of the road, while a third waggon went off the rails.

In the opinion of the officers making the inquiry, the accident was due to the action of the driver in pushing his train too far after clearing the lock-bar at the Top Points. The permanent way was not damaged to any great extent; but the two trucks which were pushed over the end of the road were damaged beyond repair.

With regard to the fears that have been expressed as to the possibility of the accident happening to a passenger train, it is pointed out that special precautions are taken in connection with the working of the passenger traffic, and the system of working adopted would prevent such an accident occurring.

I have, &c.,
H. McLACHLAN,
Secretary.

Seen by Minister, and ret'd. by Mr. Bingle, 15/11/00. Records.

The Secretary for Railways to The Under Secretary for Finance and Trade.

Sir, Office of the Railway Commissioners, Sydney, 9 November, 1900.
The Commissioners notice by the *Herald* of this morning that the Premier, in answer to Mr. W. W. Young, said he could not understand the delay in the Railway Commissioners presenting to Parliament the report by the Board appointed to inquire into the Zig Zag railway accident.

I beg to draw your attention to the fact that a report of the accident was sent to you, for the information of the Minister, on the 3rd October, and a further communication was addressed to you on the 8th October, intimating the nature of the report made by the Inquiry Board concerning the accident. The Commissioners will be glad if you will bring this matter under the notice of the Premier.

I have, &c.,
H. McLACHLAN,
Secretary.

The Secretary for Railways to The Under Secretary for Trade and Finance.

Sir, Office of the Railway Commissioners, Sydney, 19 November, 1900.
In compliance with the request contained in your communication of the 16th instant, relative to the accident at the Zig Zag on the 29th September last, I am directed to enclose herein a copy of the report received, together with the evidence taken at the inquiry held.

I have, &c.,
H. McLACHLAN,
Secretary.

New South Wales Railways, Sydney, 2 October, 1900.

To the Chief Traffic Manager and Chief Mechanical Engineer.

29/9/00. Derailment of trucks on first portion of No. 38 Up in the wing at Top Points. We beg to report that we have this day, at Eskbank, held an inquiry into the accident to the first portion of the 6.15 p.m. Goods train from Bathurst to Penrith, on the night of the 29th September.

The train was worked by Acting Driver T. Leighton and Acting Fireman A. Clappinson, engine No. 546, "T" class.

In accordance with usual practice the train was divided at the Zig Zag Bottom Points, the "T" class engine being sent up propelling twenty-three waggons. Brakesman Fulton rode on the engine from the Bottom Points. On approaching Top Points all signals were off, and the driver when passing the signal cabin delivered up the staff for the Middle road, and took the staff for the section Top Points to Clarence, together with the bank-engine notice. According to the evidence the engine passed the cabin at the usual speed, about 3 miles per hour, but instead of stopping at the usual place about over the lock-bar, the driver continued steaming until brought to a stand by a full application of the Westing-house brake. Upon examination he found that he had pushed two waggons over the cliff and the third waggon off the road on to the rocks.

The following witnesses were examined:—Night officer, C. F. Jones; G. H. D. Fulton, brakesman; A. Clappinson, acting fireman; T. Leighton, acting driver; and Guard Robinson; after we had taken them to the scene of the accident, and had their various movements pointed out to us.

The night officer in his evidence maintains that as soon as the engine passed over the lock-bar, he set the road and lowered the starting signal, in accordance with his usual practice, and not until he found that the train did not return over the points had he any idea that anything was wrong, as it had passed his box at the usual speed. The brakesman corroborates the night officer with regard to the speed, but is unable to speak as to whether the starting signal was lowered or not. The driver states that immediately after passing the cabin he was busy signing the bank-engine notice form. Having done that he watched the starting signal expecting to see it lowered, being at some doubt as to whether he was over the lock-bar, and continued steaming gently backwards until he felt a jerk and immediately afterwards a sudden stop by the application of the air-brake, and then he asserts the starting signal was lowered. He is corroborated in this throughout by his fireman.

Conclusion.

We are of opinion that this accident was due to the wrongful action of the driver in pushing his train too far after clearing the lock-bar. We measured the distance and found that he took his engine 76 yards past the lock-bar. In his evidence he states that this was only his second trip as driver of a goods train over this part, the first having been three days previously, in daylight, but he insists that he has a thorough knowledge of the road, and admits that for about three years he was fireman on the mail. This alone should have given him an intimate knowledge of the signals and points.

We are unable from the evidence to decide whether the starting signal was lowered or not, but even if this was not done, it does not in any way exonerate the driver. The custom is for enginemen to stop after they pass the starting signal post, and there wait until the signal is lowered, and hitherto the work has been so satisfactory that we cannot recall a previous case.

The damage to the rolling stock is as follows:—

- D 2873.—Totally destroyed: will have to be burnt and ironwork recovered.
- D 3947.—" " " "
- D 1744.—Slightly damaged.
- D X 31.—Two buffer castings broken.
- D 7723.—One " "
- D 3477.—One " "

We will forward an estimate of the value of the above as early as possible, and also of the damage to the permanent way.

H. RICHARDSON,
Superintendent of the Lines.
C. H. STANGER,
Out-Door Loco. Superintendent.

EVIDENCE

EVIDENCE taken at joint inquiry, held at Eskbank on the 2nd October, 1900, respecting the derailment of trucks on the first portion of No. 38 Up goods in the wing at Top Points, 29/9/00.

T. Leighton, acting driver, states:—I have been first-class fireman for over five years, and acting driver about four years, off and on; for about three years I was working as fireman on the Sydney mail, but have not had much experience on goods trains as fireman between Bathurst and Penrith; I, however, know the road thoroughly; on Saturday night last, with No. 38 goods, was my second trip as driver to Penrith; the first trip was on the previous Wednesday, when I worked No. 84 passing over the Zig Zag during daylight; I then had a double train load drawn by a "T" class engine; the train was divided at Bottom Points, and I propelled the first portion up the middle road; on that occasion I continued pushing at Top Points until I could see my engine was clear of the points, when the starting signal was immediately lowered; before leaving Bathurst with No. 38, on the 29th, I made no objection to taking my first goods train at night with a fireman who had not much experience on the section, having confidence in my own knowledge of the road; I had no difficulty in pushing my load up the middle road; I eased off a bit on approaching the signal cabin at the Top Points, and passed it at about 3 miles an hour; I afterwards made a further reduction in the speed by partly closing the regulator, and was steaming very little when stopped by the application of the brakes; with the staff for the Clarence section the fireman handed me the bank-engine form, and after signing the latter I handed it back to the fireman; by this time I had passed the starting signal by 2 or 3 yards; I was still steaming back slightly, and looking towards the starting signal waiting for it to be lowered before stopping, as I feared, if I stopped too soon, I might have a difficulty in pushing my train further back; I then felt a slight jerk, which had a tendency to pull the engine back, then the Westinghouse brake went on with full force; I am positive the starting signal was not lowered up to the time the train was brought to a standstill by the application of the air-brakes, but the moment the train stopped the signal was taken off; directly after stopping I saw a hand signal, as if from somebody on the platform of the signal-box, waved violently, calling me ahead; shortly after the accident I saw who I thought was the brakeman, and he asked me what was the matter; I told him that a truck had been pushed on to the rocks; immediately after this the night officer came up, and he also inquired what was wrong, and I informed him; at the same time I said, "Why were you so long pulling that signal off?" but he made no reply; when I first felt the jerk, I estimate I was about 40 or 50 yards on the western side of the starting signal; at that time I was not sure that the starting signal-post stood clear of the western end of No. 10 lock-bar; since then, however, I have seen that it is clear, and that if I had stopped at the post I should have been clear of the points.

T. LEIGHTON.

Alfred Clappinson, acting fireman, states:—I have been acting fireman about ten months; I have only been about eight or ten trips to Penrith; I was fireman with Driver Leighton on No. 38 Up goods on Saturday night last; after the train was divided at Bottom Points we got the usual signals to proceed up the middle road to Top Points; all the fixed signals at Top Points were lowered for us to go into the top wing; the engine passed the signal cabin at Top Points at about 2 miles an hour; in passing the box I exchanged the Bottom Point's staff with that for the Clarence section, and at the same time took the banking-engine notice with it; so far as I could judge, we ran past the box about 50 yards before coming to a stand, when we were stopped by the air-brake going on; I watched for the starting signal to be lowered as an indication that we were clear of the points, and the road set for us to go ahead, but the signal was not lowered until we felt a jerk; I was not aware until after the accident that the site of the starting signal was a few yards clear of No. 10 lock-bar; I fired with Driver Leighton from Bathurst to Penrith on the previous Wednesday, working No. 84 goods, which passed over the Zig Zag during daylight; the driver said nothing to me while travelling up the middle road as to his not knowing where to stop his engine at the Top Points, and I said nothing to him about it; after exchanging the staff, I remained on the driver's side of the engine.

To the Driver: The brakeman jumped off the engine and went into the signal-box when we arrived at Top Points.

(Recalled). I heard nothing pass between the night officer and the driver relative to the signals.

A. CLAPPINSON.

J. F. Jones, Night Officer, Top Points, states:—I was on duty at Top Points on the night of the 29th September, 1900; I have been night officer about eleven months at Top Points; the last train to pass over the section Clarence Top Points was No. 57a down passenger, which crossed No. 38 Up goods at Bottom Points; on arrival of No. 57a at Bottom Points, I gave the staff for the first section of No. 38, and lowered the distant (No. 3), home (No. 4), and stop signal (No. 5); the train arrived about 11.35, and as the engine passed my box, I collected the Bottom Points staff and handed the staff for the Clarence section, and also banking-engine form to the driver; as soon as the engine passed No. 10 lock-bar, and the lamp was visible which was fixed on the rock opposite the Up starting signal, I placed No. 5 stop signal at "danger," set the road for Clarence, and lowered No. 15 starting signal; I do not think the engine could have gone more than 20 yards over the lock-bar before I set the road and lowered the starting signal; when I lowered this signal I turned to the train-book to enter the times, so that I cannot say whether the driver came to a stand the moment the signal was lowered, or when the train came to a stand; immediately after this, the brakeman was passing my box, and I asked him to wave the driver ahead; at that time I did not notice that the train had gone too far back; the brakeman gave the hand signal, but as there appeared to be no response to it, he went to the engine; I came out of my box on to the platform, and there waited a few minutes, but as the train did not come, I went up to it and met the driver on the other side of the engine, and he told me they had a truck on the rocks; I then proceeded to the rear of the train to look for myself, and found a truck on the rocks, but did not know whether any vehicles had gone over the cliff; I did not ask the driver why he had pushed his train so far, and he did not offer any explanation; No. 15 starting signal cannot be lowered until the train is clear of No. 10 lock-bar, and the lowering of this signal is an indication to the driver that he is clear of No. 10 lock-bar, and that the road is set for the train to be drawn forward in the direction of Clarence; I have been lowering No. 5 stop signal for the first portion of a goods train coming up the middle road, as one of the drivers complained some time ago to me that it should be pulled off; I have had no instructions from the Traffic Inspector to lower this signal for such trains;

trains; a driver on an engine propelling a number of trucks cannot, without much difficulty, see No. 5 stop signal from his engine; since I have been at Top Points, I have never given drivers a red light showing that they are past No. 15 starting signal, because they nearly all whistle as soon as they have passed this signal-post clear of No. 10 lock-bar; I have frequently had to wave them back a little because they have stopped their engines short of the lock-bar; Driver Leighton backed his train past my signal-box at about the usual speed; my only reason for not lowering the starting signal in all cases for the first portion is that I want to instruct the driver regarding the bank engine by giving him the usual form; on the night in question there was no difficulty about the movement of the bank engine, therefore I gave the driver the staff and the usual bank-engine form; in working a down goods train through Top Points, the Distant Home and No. 5 stop signals are lowered to admit the train to the Top Wing; the stop signal is put to "Danger" as soon as the rear portion of the train is clear of No. 10 lock-bar; the train is then brought back by No. 16 repeater for the middle road, which is a repeating signal for No. 16 proper.

To Driver Leighton: The brakeman did, I believe, jump off your engine, and brought a parcel and left it on the platform; I do not remember you saying anything to me with reference to my being a long time pulling the starting signal off.

(Recalled): I have heard that portion of Driver Leighton's statement read, wherein he says he spoke to me about my being slow in taking the signals off, and I am positive that no such remark was made; the driver only spoke to me of the truck being on the rocks.

J. F. JONES.

J. H. D. Fulton, brakeman, states:—I am brakeman on the Zig Zag, and have been in this position for about three weeks; prior to this I was porter at Mount Victoria; I have been temporarily employed in the Department about three years, and received my permanent appointment last month; I was on duty as brakeman on Saturday night last; on arrival of No. 38 goods at Bottom Points, I counted the trucks on the engine as they passed me, as I intended at first to cut off behind the 21st truck, but the guard instructed me to uncouple at the rear of the 23rd truck; after uncoupling I gave the driver a green light to go ahead, got on the engine, and the train proceeded up the middle road; on arrival at Top Points, I alighted at my usual place between the signal-box and the points; the engine was going at the usual speed at the time and I was able to step off easily; after getting off the engine, it is my duty to go back, clear of the crossover, to sprag the trucks to prevent them running back; as I was going back the night officer called me and told me to wave the driver ahead; I did so, and as the driver did not respond to my hand-signal, I walked to the engine to ascertain what was wrong, and found only the fireman on the engine, who told me that he could not release the brakes and that the driver had gone back to see what was wrong; I then went along the train and asked the driver what was the matter; he said he had pushed a truck up on to the rocks; I then went to the rear of the train and examined the air pipe and couplings; finding the air tap open, I remarked to the driver that I thought there were trucks over the cliff; I then counted the vehicles on the train and found that two were missing; I had a parcel in my hand when I got off the engine; there was a photo. in it addressed to Davidson, my predecessor, which had come by parcels post, and was handed to me at Bottom Points out of the mail train; it is usual for the mails and parcels to be given to me; I placed the parcel alongside the signal-box near the steps at Top Points; it was during the time I was thus engaged that the night officer asked me to wave the driver ahead; I do not always ride on the engine, but sometimes on a suitable truck, if there is one on the train, as it saves me running down to get on the engine at Bottom Points; when riding on the engines I never give any signal to the driver to stop; he always stops of his own accord after crossing No. 10 lock-bar at Top Points; as we went up the middle road, the driver made no remark to me about being strange to the job; he seemed to handle the train in the ordinary way; he had no difficulty in propelling his portion of the train up the middle road; I have never had to give a hand-signal for a driver to stop, or, before this occasion, for a driver to come ahead; when I started as brakeman, I had the previous man with me for a couple of nights; when I gave the hand-signal, at the request of the night officer, Top Points, for the driver to come ahead, I cannot say whether the points had been set or the starting signal lowered; when I got to the engine neither the fireman nor the driver said anything to me regarding the starting signal not being lowered; the night officer came to the door of the signal-box when he asked me to signal the driver ahead.

J. H. D. FULTON.

Guard W. Robinson states:—I have been running as guard and assistant for about twenty years; on Saturday last I worked No. 38 from Wallerawang to Penrith; the train was divided at Bottom Points, the first portion being taken up by the brakeman, and I worked the second part; I did not know that an accident had occurred to the first portion until I arrived at Top Points; I travelled over the middle road in my brake-van, and alighted before reaching the signal-box and spragged the vehicles; as I did not see anyone about, I walked up to the train engine, and there saw the fireman and asked him what was the matter; he replied that he thought there was something wrong; I then met the driver, and he told me that they had pushed a little too far, but he made no remark as to the working of the signals; when I reached the rear of the first portion I saw the night officer and brakeman, and they told me there was a truck on the rocks and they thought that some had gone over the cliff, but said nothing as to the cause of the accident; I have frequently ridden on the engine when it has been propelling its load up the middle road; the practice is to get off the engine at Top Points and go forward to sprag the trucks when the train stops; on some occasions when I have ridden on the engine to the Top Points, I have given the driver a signal when the engine has been clear of No. 10 lock-bar; Driver Leighton did not mention to me on the journey from Wallerawang that it was his first trip at night, and there was nothing in his working to lead me to think that he was strange to his work; the first portion left Bottom Points at 11.28 p.m., with twenty-three vehicles; trucks Nos. 3,947, loaded with wool for Darling Harbour, and 2,873, containing chaff for Redfern, were pushed over the cliff; D trucks Nos. 3,477 and 7,723 had each one buffer broken, while X 31 had two buffers broken, the latter being detached at Katoomba; truck D 1,744 was pushed off the road at the end of the top wing, and was left there.

W. ROBINSON.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ENGINE-DRIVERS, &c., HARDEN TO NARRANDERA.

(RETURN RESPECTING HOURS OF DUTY OF ENGINE-DRIVERS, FIREMEN, AND GUARDS WORKING NIGHT GOODS TRAINS BETWEEN JUNEE AND HARDEN, AND BETWEEN JUNEE AND NARRANDERA.)

Printed under No. 17 Report from Printing Committee, 22 November, 1900.

[Laid upon the Table of the House in accordance with a promise made by the Honorable the Minister for Railways, in answer to Question No. 5 in Votes and Proceedings, No. 69, of the 6th November, 1900.]

HOURS OF DUTY OF ENGINE-DRIVERS, FIREMEN, AND GUARDS WORKING NIGHT GOODS TRAINS BETWEEN JUNEE AND HARDEN, AND BETWEEN JUNEE AND NARRANDERA.

- (1.) *Question.*—Is it a fact that engine-drivers, firemen, and guards working night goods trains, Nos. 56 and 91, Junee to Harden and return, also 9A, Junee to Narrandera, and 16 up, Narrandera to Junee, are on duty never less than 12 hours, and sometimes as much as 14 hours, at a stretch?

Answer.—I am informed that the drivers and firemen working the Junee and Harden trains run a total distance of 120 miles, and are on duty 11½ hours. This time includes 1½ hours allowed at their home station for preparing engines and putting them away. The Junee and Narrandera men run an equal distance, and are on duty 11½ hours. This includes 1½ hours allowed at their home station for preparing and putting engines away. During the three months ending with October last there have not been any cases of 14 hours with the trains in question; two cases of 13½ hours occurred, and six others of slightly over 13 hours. These were due to accidental causes. In regard to the guards working the goods trains referred to, it is not a fact that they are on duty never less than 12 hours. During the months of August, September, and October, 1900, the guards of Nos. 56 and 91 were over 12 hours on duty on nine occasions only. The hours of the guards running Nos. 9A and 16 did not exceed 12 on any occasion during the same period, and in no instance were they on duty for 14 hours.

- (2.) *Question.*—Is it a fact that it occurs that some of these men are called upon to work these particular trains three days in succession?

Answer.—No. These trains are occasionally worked twice in succession by enginemen, but there are only two instances in the last three months where the firemen have worked on the same trains three times in four consecutive days. Drivers have not been employed more than two consecutive days on these trains. It is usual to run the same guard on these trains for several days in succession, in order to compensate for short trips on other trains, and make up full time within the pay period. It may be added that the regulation hours are 108 per fortnight, equalling 9 per day.

- (3.) *Question.*—Will he lay upon the Table of this House the total hours on duty on each day for each driver, fireman, and guard working these particular trains in the months of August, September, and October of this year?

Answer.—Returns showing the hours of duty are attached.

STATEMENT showing total hours on duty of Drivers and Firemen who worked Nos. 56 and 91 Goods Trains, between June and Harden, for the months of August, September, and October, 1900.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CONSIGNMENT OF STOCK FROM CAMDEN TO SYDNEY.

(RETURN RESPECTING.)

Printed under No. 19 Report from Printing Committee, 4 December, 1900.

The Secretary for Railways to The Under Secretary for Finance and Trade.

Sir,

Office of the Railway Commissioners, Sydney, 30 November, 1900.

Referring to Question No. 18 in Votes and Proceedings, No. 84, of the 29th instant, and reply thereto by the Honorable the Minister for Railways, I am directed to forward herewith categorical replies to the questions asked by the Honorable Member for Northumberland, Mr. J. Norton :—

(1) *Question* : On the 6th November did Mr. Patrick Carlon, Camden, engage and pay for a full railway truck for the conveyance of a consignment of pigs from that place to Sydney?

Answer : Mr. Patrick Carlon tendered, at Camden, on the 6th instant, forty-four pigs for conveyance to Messrs. Ellis & Co. at Sydney, but he paid no carriage.

(2) *Question* : Did the servants of the Railway Department afterwards put into the same truck a number of pigs, the property of Mr. John Devitt, Camden, who paid for half a truck?

Answer : Mr. John Devitt tendered twenty pigs, also for Messrs. Ellis & Co. in Sydney, at Camden, on the 6th instant, and there being no objection made, and as they bore distinctive marks, they were loaded in the same truck with those forwarded by Mr. Carlon. No freight was paid by Mr. John Devitt.

(3) *Question* : Has Mr. Carlon been refused a rebate by the Department?

Answer : It cannot be ascertained that any application has been made by Mr. Carlon for a rebate. Having paid no money, he is not entitled to any.

(4) *Question* : Does he approve of the action of the Department in charging a consignee for a full truck, and then reletting a portion to another person?

Answer : The Department charges Messrs. Ellis & Co., the consignees for both lots of pigs, for the use of one truck only—namely, 28s. 8d. They have been seen, and admit that this was all the money paid to the Department on the two lots of pigs in question.

(5) *Question* : Have similar cases to the above occurred before?

Answer : We have no knowledge of any such instances of charging twice for the same truck.

(6) *Question* : As a consignee engages a full truck for special reasons, such as avoiding the chance of his stock being infected by other consignments, will he see that in future the hirer of a truck shall get what he contracts for?

Answer : Senders frequently amalgamate their lots of pigs so as to get proportionately cheaper freights, but, if the sender expressly desired his animals to be loaded by themselves, this would be complied with, and charges would be levied accordingly.

I have, &c.,

H. McLACHLAN,

Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GRANVILLE RAILWAY STATION.

(RETURN RESPECTING.)

Printed under No. 14 Report from Printing Committee, 11 October, 1900.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6th September, 1900, That there be laid upon the Table of this House,—

“Copies of all letters, petitions, reports, plans, and other documents relating to the overhead passenger crossing at Granville Railway Station, and at the openings to such station, and matters in connection therewith.”

(*Mr. Nobbs.*)

Extract from the Votes and Proceedings of the Legislative Assembly.

LEGISLATIVE ASSEMBLY.—Motion carried, Thursday the 6th September, 1900.

9. GRANVILLE RAILWAY STATION (*Formal Motion*):—Mr. Nobbs moved, pursuant to Notice, That there be laid upon the Table of this House, all letters, petitions, reports, plans, and other documents relating to the overhead passenger crossing at Granville Railway Station, and to the openings to such station, and matters in connection therewith.
Question put and passed.

The Council Clerk, Granville, to The Railway Commissioners.

Gentlemen,

Council Chambers, Granville, 13 January, 1891.

I have the honor, by direction of His Worship the Mayor, to respectfully request that you will cause the necessary instructions to be issued in order that the proposed subway at Granville Station may be proceeded with as soon as possible. We notice that the station buildings are now being painted and renovated, but the matter of the subway is of far greater importance to the travelling public, who are now compelled to go outside the railway premises altogether in order to get from one platform to the other, or else by infringing the by-laws by jumping down off one platform and climbing up on the other side, thereby not only breaking the rules, but also endangering their own lives by so doing. We understand that it has been decided to have the subway, but if you are not prepared to do this, then a bridge to connect the two platforms would be a decided improvement on the present very unsatisfactory arrangement.

Your early attention will oblige.

Yours, &c.,
JOHN SCARBOROUGH,
Council Clerk.

The Secretary, Railway Commissioners, to J. Nobbs, Esq., M.P.

Sir,

4 February, 1891.

With reference to your interview with Mr. Commissioner Oliver regarding the subject of a proposed subway near Granville, I have the honor to inform you that, pending altered arrangements at Granville, it is not considered advisable to do anything in this matter.

I have, &c.,

H. McLACHLAN,
Secretary.

The Council Clerk, Granville, to The Secretary, Railway Commissioners.

Gentlemen,

Granville Council Chambers, 19 February, 1891.

With reference to your favour of the 4th instant, addressed to John Nobbs, Esq., M.P., regarding the subject of a proposed subway at Granville Railway Station, and informing that gentleman that, pending altered arrangements at Granville, it was not considered advisable to do anything in this matter, I have the honor, by direction of the Borough Council of Granville, to respectfully request information as to how soon those alterations will be commenced.

Your early attention will oblige.

Yours, &c.,

JOHN SCARBOROUGH,
Council Clerk.

The Secretary, Railway Commissioners, to The Council Clerk, Granville.

Sir,

29 May, 1891.

With reference to your letter of the 19th February last, on the subject of the proposed subway at Granville, and asking how soon the alterations at this station will be effected, I have the honor to inform you that no date has yet been fixed upon for the remodelling of the station, other works of a more pressing nature requiring first attention.

I have, &c.,

H. McLACHLAN,
Secretary.

Letter from Council Clerk, 30th July, asking Commissioners to receive Deputation.

The Secretary, Railway Commissioners, to The Council Clerk, Granville.

Sir,

3 August, 1891.

Your letter of the 30th ultimo, asking the Commissioners to receive a deputation from your Council in reference to the subway at Granville Station, and the Clyde level-crossing gates, has been received; and, in reply, I have to inform you that the Commissioners will be pleased to receive the deputation on Friday, 7th instant, at this office, if convenient.

I have, &c.,

H. McLACHLAN,
Secretary.

The Council Clerk, Granville, to The Secretary, Railway Commissioners.

Sir,

Granville Council Chambers, 5 August, 1891.

I have the honor to inform you that the time fixed by the Railway Commissioners to receive the Aldermen of the Borough of Granville, with reference to a subway at Granville Station, is convenient, and as many of the Aldermen as can get to Sydney on Friday morning will attend.

Yours, &c.,

JOHN SCARBOROUGH,
Council Clerk.

Extract from Notes of Interview.

Office of the Railway Commissioners of New South Wales,
Sydney, 7 August, 1891.

EXTRACT from Notes of Interview in reference to Accommodation for Crossing the Line at Granville at Clyde Crossing Gates and Woodville Road.

Present :—Mr. Commissioner Febon; Mr. Commissioner Oliver; Mr. Foxlee, Deputy Engineer, Existing Lines; the Mayor of Granville (Alderman Gee); Aldermen Pihner, Bennett, and Leggott; the Council Clerk.

THE deputation represented the inconvenience that was caused by the want of a subway for foot passengers to cross from one side of the line to the other at the station, and also of a direct means of getting from one platform to the other. Complaint was made about the steps from the centre platform being apparently permanently blocked, and great inconvenience had been caused by people getting out of trains on that side by mistake, and being unable to obtain egress.

The Commissioners said they could not at present make any definite promise with regard to a subway at Granville—it meant a large expenditure; but they would have inquiries made and see what could be done to remedy any real inconvenience that might be shown to exist.

The

The Secretary, Railway Commissioners, to J. Garrard, Esq., M.P.

Sir,

30 June, 1892.

With reference to your call relative to the proposed overbridge at Granville, I have the honor to inform you that it was proposed to alter the arrangements at Granville when the subject of an overbridge would have had consideration, but at present, owing to other more pressing works engaging attention and absorbing amounts voted, the question will have to remain in abeyance.

I have, &c.,
H. McLACHLAN,
Secretary.

The Council Clerk, Granville, to The Railway Commissioners.

Gentlemen,

Granville Council Chambers, 16 June, 1897.

I have the honor, by direction of the Borough Council of Granville, to respectfully request that you will cause a light overhead bridge to be erected at the eastern end of the Granville Railway Station, thus rendering it safe and more convenient for railway travellers, and obviating the danger which now exists. I am directed to draw attention to the fact that the danger is greater at this station than at any other on the suburban line, owing to there being a centre platform.

I have, &c.,
J. SCARBOROUGH,
Council Clerk.

Memorandum from The Out-door Superintendent, Railways, to The Chief Traffic Manager, Railways.

Application for Overbridge at Granville.

21 June, 1897.

In reply to your minute of the 18th instant, I beg to inform you that there is already an overbridge at Granville, at the southern end of platform, and I can see no justification whatever for the expenditure which would be incurred in erecting another overbridge at the Sydney end of the station. If the bridge were granted as being required at Granville, the same request could be made at most of the other suburban stations. I do not recommend that the application be complied with.

J.P.,
O.-D. Superintendent.

I concur with Mr. Parry.—D.K., 23/6/97. Secy. Decline.—C.O., W.M.F., 24/6/97.

The Secretary, Railway Commissioners, to The Council Clerk, Granville.

Sir,

25 June, 1897.

With reference to your letter of the 16th instant, in which you ask that a footbridge be erected at the eastern end of the Granville Railway Station, I am directed to inform you that the matter has had consideration, and it is regretted the request cannot be acceded to.

I have, &c.,
H. McLACHLAN,
Secretary.

The Council Clerk, Granville, to The Secretary, Railway Commissioners.

Gentlemen,

Granville Council Chambers, 8 July, 1897.

I have the honor, by direction of the Borough Council of Granville, to acknowledge the receipt of your letter of the 25th ultimo, 95/2,950-148, L.R.S., and in reply thereto to request that we may be informed when the Commissioners are making the next tour to Granville, in order that the Council may have the pleasure of waiting on them and showing the necessity of the work for which application has been made.

I have, &c.,
J. SCARBOROUGH,
Council Clerk.

The Secretary, Railway Commissioners, to The Council Clerk, Granville.

Sir,

10 July, 1897.

I have to acknowledge the receipt of your communication of the 8th instant, asking to be advised of the date on which the Commissioners will next visit Granville.

In reply, I have to inform you that no definite date has yet been fixed, but as soon as it has been decided upon you will be duly advised.

I have, &c.,
H. McLACHLAN,
Secretary.

The Council Clerk, Granville, to D. O'Reilly, Esq., M.P.

Dear Sir,

Granville Council Chambers, 12 May, 1898.

It having been decided to wait on the Railway Commissioners to request that they will make a subway at Granville Station, I have been instructed to respectfully request that you will kindly arrange date on which they will receive a deputation from the Borough Council and residents of the borough; also, that you will consent to introduce the deputation.

Yours, &c.,
J. SCARBOROUGH,
D. O'Reilly,

D. O'Reilly, Esq., M.P., to The Secretary, Railway Commissioners.

Sir, Parliament, New South Wales, 13 May, 1898.
Will you kindly let me know on what date the Commissioners for Railways will be prepared to receive deputation alluded to in accompanying letter. I am, &c.,
DOWELL O'REILLY.

Fix a date for the deputation, but point out that there is no intention to erect workshops or provide the subway referred to.—C.O., W.M.F., D.K., 19/5/98.

Extract from Notes of Interview.

Office of the Railway Commissioners of New South Wales, Sydney, 26 May, 1898.

EXTRACT from notes of interview *re* Granville.

Present :—D. O'Reilly, Esq., M.P. ; The Mayor of Granville ; Messrs. J. Nobbs, J. B. Price, and others. The deputation, representing a public meeting which had been held, submitted a petition signed by nearly 500 persons, requesting consideration of certain matters therein set forth.

EXTRACT from Petition dated 20 April, 1898.

"That it is necessary for the convenience of the public that a subway be constructed, in order that better facilities of communication between the northern and southern portions of the borough be given to them."

[Signed by 468 persons.]

"Another matter was that of communication between the parts of Granville separated by the railway line, as at present persons going from one part of the borough to another had to go out of their way by the existing roads ; the railway passengers were also put to considerable inconvenience by the existing arrangements. At other stations on the line subways or overhead bridges had been provided, and the people of Granville thought they were now entitled to consideration. They did not ask for a subway or an overbridge for vehicular traffic, but simply for pedestrian traffic, and they desired the Commissioners to consider the question of constructing a subway or an overbridge, and also more convenient access to the railway platforms."

In reply, the Chief Commissioner stated :—"With regard to the subway, that was a matter which had been before them previously. No doubt inconvenience was caused in connection with the entrance to the station, but similar inconveniences existed at many other stations. Subways were expensive to construct, and there were many stations on the suburban line which could be improved very much by a large expenditure in this direction. When this question was before them on a previous occasion the Commissioners could not find any justification for spending such a large sum of money as would be involved in the making of a subway. However, as the matter had been so forcibly urged, the Commissioners would have it looked into again, but he could not say what the result would be."

Minute by The Granville Municipal Council.

Four minute, 9/6/98, Granville. Plan and estimate to be submitted for footbridge over platforms.

ALTERNATIVE plans for overbridge and subway submitted for consideration. When the matter was discussed with Mr. Parry on the ground, it was considered that the removal of the centre platform at this station would be an advantage from a traffic point of view, and this has been included in the proposal for the construction of a bridge or subway.

The cost will be : Footbridge, £550 ; subway, £1,740.

The cost of removing the platform is included in the above estimates, which would, were the platform not removed, stand as under : Footbridge, £515 ; subway, £1,700.

Memorandum from the Out-door Superintendent, Railways, to The Chief Traffic Manager, Railways.

Proposed Overbridge at Granville.

17 August, 1898.

IN accordance with your verbal request, I have looked into the proposed plan for overbridge and subway at Granville Station, submitted by the engineer. So far as the departmental arrangements are concerned, the overbridge would be a great convenience in dealing with the issue and collection of tickets, as it would enable the whole of the tickets to be issued from one central ticket-office on the bridge, instead of from two ticket-offices, one on the "up" platform and one on the "down," now existing. If the bridge were provided, it would be necessary to close the entrances and exits to the overbridge at the Parramatta end of the station, and also the entrances to the "up" platform through the main buildings, otherwise the new arrangement would be of no advantage to the Department. I fear, however, that the residents will strongly oppose the removal of the entrances and exits from the overbridge, as it would necessitate second-class passengers arriving at the "down" platform having to walk back to the new footbridge and up the main parade, back to the overbridge, instead of being able to get on to the overbridge direct from the platform by the steps. I would respectfully suggest, however, that an officer be deputed to confer with the Mayor in regard to the suggestion, because I feel sure that if the work is gone on with without the concurrence of the local Council, agitation will be worked up against the arrangements.

For convenience, the overbridge is undoubtedly superior to the subway.

J.P.

Appd.—C.O., W.M.F., D.K., 18/8/98.

J. Nobbs,

J. Nobbs, Esq., M.P., to The Secretary, Railway Commissioners.

Dear Sir,

19 August, 1898.

Some month or so back a deputation appointed at a public meeting in Granville waited upon the Commissioners with respect to an overhead bridge at Granville Railway Station. The Commissioners promised to consider the matter and let the deputation know. Will you kindly let me know what has been done in the matter, and what the Commissioners propose, and oblige yours, &c.,

JOHN NOBBS.

The Secretary, Railway Commissioners, to The Out-door Superintendent, Railways.
Proposed Overbridge at Granville.

20 August, 1898.

Will you please see the Mayor, as suggested, and go into the matter with him, and report?

H. McLACHLAN,
(per G.M.M.)
Secretary.

The Secretary, Railway Commissioners, to J. Nobbs, Esq., M.P.

Sir,

22 August, 1898.

I have the honor to acknowledge receipt of your letter of the 19th instant in regard to the question of the suggested overbridge at Granville Railway Station.

This question is receiving consideration, and an officer was deputed a day or two ago to see the Mayor in regard to some details, to enable the Commissioners to come to a decision in the matter.

I have, &c.,
H. McLACHLAN,
Secretary.

J. Nobbs, Esq., M.P., to The Secretary, Railway Commissioners.

Sir,

Granville, 25 August, 1898.

I shall be glad if the Commissioners will kindly let me have a copy of the tracing of the proposed overbridge at Granville Station for the information of my constituents.

I am, &c.,
JOHN NOBBS.

Memorandum from The Out-door Superintendent, Railways, to The Secretary,
Railway Commissioners.

Proposed Overbridge at Granville Station.

25 August, 1898.

In reply to yours of the 20th instant, I beg to report that I saw the Mayor of Granville, Mr. Windsor, the Council Clerk, and Mr. Nobbs, M.P., this morning, and the whole of these gentlemen fully concurred in the proposed arrangement for the overbridge, except that the general opinion is that the centre platform should not be removed. They are agreeable to the steps being removed at the overbridge from the southern end of the platforms, together with the entrance to the main building on the "up" platform being closed, so that practically they agree to the whole of the arrangements proposed by the Department, with the exception that they consider the centre platform should remain.

In view of this, I recommend that the centre platform be allowed to remain, and steps be provided from the proposed overbridge on to the same.

The Mayor asked if the Commissioners would kindly furnish a sketch showing the proposed arrangements, so that he could bring the matter before the Council meeting next Tuesday night, and was satisfied that the same would meet with their approval.

Mr. Nobbs asked if the Commissioners would kindly forward him the sketch, so that he might submit it to the Council.

J.P.

What would be the saving in cost if the centre platform is left as at present?—C.O., 26/8/98.

Tracing in duplicate herewith, showing centre platform retained, and with access by means of steps to overbridge. The total estimated cost under this arrangement will be £655, instead of £550 under the original proposal.—T. R. FERRIS (per D.H.A.), 29/8/1900.

The Secretary, Railway Commissioners, to J. Nobbs, Esq., M.P.

Sir,

29 August, 1898.

I have the honor to acknowledge receipt of your letter of the 25th instant, in regard to the proposed overbridge at Granville Railway Station.

In reply, I am directed to say that, as all the negotiations on the subject have been hitherto conducted with the Granville Council direct, a copy of the tracing will be forwarded to the Mayor, as arranged.

I have, &c.,
H. McLACHLAN,
Secretary.

The

The Secretary, Railway Commissioners, to J. Nobbs, Esq., M.P.

Sir,

Referring to my previous letter of this date *re* the proposed overbridge at Granville Station, I have the honor to enclose, for your information, a copy of a letter which has been addressed this afternoon to the Council Clerk.

29 August, 1898.
I have, &c.,
H. McLACHLAN,
Secretary.

The Secretary, Railway Commissioners, to The Council Clerk, Granville.

Sir,

Referring to the interview which Mr. Parry, O.D. Superintendent, had with the Mayor and others on the 25th instant, in regard to the proposed pedestrian overbridge at Granville Station, I am directed to forward herewith, for your information, a copy of the plan of the proposed works. I am to say that it is an essential part of the arrangement that, if this overbridge is constructed, the steps connecting the platforms with the existing overbridge at the southern end of the station will be removed; also, that the entrance to the main building on the "up" platform will be closed. It is understood that it is desired that the centre platform, which it was intended to remove, should remain, and the Commissioners are willing to accede to that request.

I shall be glad to hear at your earliest convenience that the arrangements will give satisfaction to and be accepted by your Council.

I have, &c.,
H. McLACHLAN,
Secretary.

The Council Clerk, Granville, to The Secretary, Railway Commissioners.

Gentlemen,

With reference to your letter of the 29th instant *re* overhead bridge at Granville Railway Station, I have the honor, by direction of the Borough Council of Granville, to inform you that the arrangement as contemplated and shown on plan has received the unanimous approval of the Council. I am further requested to ask that this necessary work will be carried out at the earliest convenience, and the best thanks of the Council will be accorded to you.

31 August, 1898.
Yours, &c.,
J. SCARBOROUGH,
Council Clerk.

The Secretary, Railway Commissioners, to The Council Clerk, Granville.

Sir,

I have the honor to acknowledge receipt, yesterday, of your letter dated the 30th ultimo, in which you intimate that your Council has unanimously approved of the arrangements in connection with the proposed overhead bridge at Granville Railway Station, as shown by my letter of the 29th ultimo, and the tracing attached thereto.

I have, &c.,
H. McLACHLAN,
Secretary.

J. Nobbs, Esq., M.P., to The Secretary, Railway Commissioners.

Sir,

Referring to your last communication to me on the subject of the overbridge at Granville Station, I am sorry that, in the interests of the public, your Commissioners could not see their way clear to let me have a copy of the tracing for the public's inspection. I have been approached by a large number of residents of the town and district, and they have represented to me that they are not in favour of the proposed alterations of facilities in travelling, &c., in connection with same; and this morning I have had handed to me the enclosed petition to your Commissioners against such alterations, with a desire that I would forward it on to them, which I now do. The petition was got up hurriedly, and I am led to believe that in the course of a week 1,000 people would sign it, but it was thought that no time should be lost in sending in the protest.

I am, &c.,
JOHN NOBBS.

Petition.

We, the undersigned residents and railway-travellers of Granville, earnestly and respectfully protest against the proposed alterations at the railway station as per plan submitted to and approved by the Municipal Council.

We would further point out, gentlemen, that the convenience of the public is much better served under present arrangements; therefore it would be a waste of public money to make the alterations as proposed.

[Signed by ninety-seven persons.]

In view of the divided opinion on the subject, the matter may stand over pending an agreement being come to by the parties interested.—C.O., W.M.F., D.K., 17/9/98.

The Secretary, Railway Commissioners, to The Council Clerk, Granville.

Sir,

With reference to the question of providing a footbridge across the lines at Granville Railway Station, I have to inform you that, in view of the petition having been received adverse to the proposal, the Commissioners have decided to allow the matter to stand over until the residents interested have come to an agreement on the subject.

21 September, 1898.
I have, &c.,
H. McLACHLAN,
Secretary.

The

The Secretary, Railway Commissioners, to Messrs. D. E. Vivian, H. Frank, and others.

Gentlemen,

21 September, 1898.

With reference to your petition, forwarded by Mr. Nobbs, M.P., against the proposed foot-bridge at Granville Station, I have to inform you that, in view of the divided opinion existing on the subject, the Commissioners have decided to allow the matter to stand over until an agreement has been arrived at by the residents concerned.

I have, &c.,

H. McLACHLAN,
Secretary.

The Council Clerk, Granville, to The Secretary, Railway Commissioners.

Sir,

Granville Council Chambers, 23 September, 1898.

With reference to your letter of the 21st instant *re* overhead bridge at Granville Station, I am instructed by His Worship the Mayor of Granville to request that the Commissioners will grant them an interview on Tuesday next, and also allow him to see the petition which has been received against the erection of this bridge.

Your early reply will oblige.

Yours, &c.,

J. SCARBOROUGH,
Council Clerk.

The Secretary, Railway Commissioners, to The Council Clerk, Granville.

Sir,

24 September, 1898.

I have the honor to acknowledge receipt of your letter of the 23rd, and, in reply, am directed to say that the Commissioners will be pleased to see His Worship the Mayor, as desired, on Tuesday next, the 27th instant, at 3 p.m., if that time will meet his convenience.

I have, &c.,

H. McLACHLAN
(*per* G.M.M.),
Secretary.

Extract from Notes of Interview.

Office of the Railway Commissioners of New South Wales,
Sydney, 27 September, 1898.

NOTES of interview with reference to the proposed overhead bridge at Granville.

Present.—Mr. Commissioner Fehon, Mr. Commissioner Kirkcaldie, the Mayor of Granville (Alderman Windsor), Mr. Scarborough (Council Clerk, Granville).

THE Mayor stated that, in view of the interviews which had taken place between the representatives of the Council and the Commissioners and their officers, and the acceptance by the Council of the Commissioners' proposals, they were very surprised to receive a notification that owing to some objection being taken to the arrangement the Commissioners had decided not to proceed with the matter. His Council knew nothing whatever of this petition beyond a rumour that a certain individual had taken the petition around, and this gentleman was one of the prime movers in regard to the petition presented by the Council. He wished to point out that the Municipal Council was the responsible local body, and the proper body to deal with a question of the character now under consideration. The movement which had led up to the Commissioners' proposals was initiated by a public meeting called by requisition; everything had been done in the most open manner, and he thought it was hardly right that the Council should be set aside by a minority of persons. He would be very glad to know the terms of the petition and the signatories to it.

Mr. Commissioner Fehon pointed out to the Mayor that the Commissioners had agreed to carry out this work at what they understood to be the request of the inhabitants. For railway purposes the work was not necessary. Before being finally decided upon the protest referred to had been received by the Commissioners; in face of that they could not possibly proceed, and they would not be disposed to do so unless the parties agreed as to what should be done.

[Mr. Commissioner Fehon read the petition and the signatures thereto.]

The Mayor stated that a large proportion (he should think three-fourths) of the signatories to that petition had also signed the previous petition, in response to which the Commissioners had proposed to carry out the work. He was obliged to the Commissioners for the interview, the object of which was that he might be in a position to report to the Council at their next meeting the nature of the petition that had been presented.

Papers.

Granville—Proposed Footbridge.

THE attached papers refer to an application made by the Granville Council for the erection of footbridge at the eastern end of the station, as it is thought that there is greater danger at Granville than any other suburban station, owing to the centre platform.

As it was reported that the provision of this bridge would be a great convenience in connection with the working of the traffic, a plan was prepared showing the work proposed to be undertaken, and which provided for the closing of the steps connecting the platforms with the existing overbridge at the southern end of the station, and also the closing of the entrance to the main building on the "up" platform, the estimated cost of this work being £655. A copy of this plan was also forwarded to the local Council for concurrence (Plan B). The Council replied that the arrangements as contemplated and shown on the plan had received their unanimous approval, and asked that the work should be put in hand at once.

A short time after this a petition was presented by Mr. J. Nobbs, M.P., from the residents of Granville, protesting against the erection of the overbridge, and stating that the convenience of the public would be best served under the present arrangements.

In view of the divided opinion on the subject the Commissioners have decided that the matter stand over, pending an agreement being arrived at by the parties interested.—J.V.B., 28/2/99.

Notes on Inspection of Suburban Lines, 25th July, 1899.

GRANVILLE.

THE Mayor and several Aldermen asked :—

That the proposed footbridge at Sydney end of platform might be proceeded with. They said the Council and a very large majority of the residents were quite satisfied with the proposed arrangement, and they hoped that the opposition of a comparatively few persons would not prevent its being carried out.

The Commissioners said they would look into the question again. Write to the Council and ask for formal confirmation of the statement above.—C.O., 29/7/99.

Sir,

31 July, 1899.

With reference to the interview between the members of your Council and the Railway Commissioners at Granville on the 25th instant, when a request was made that the proposed overhead footbridge at the Sydney end of the railway station might be proceeded with, I am directed to say that the delay, as you are aware, has been due to the difference of opinion expressed by considerable numbers of the residents as to the site for the bridge.

The Mayor, however, at the interview referred to, assured the Commissioners that the majority of the residents favoured the site shown on the plan already forwarded to your Council, to which, in fact, the Council has already signified approval.

In view, however, of the objections raised, the Commissioners will be glad if your Council will confirm the statement made by the Mayor at Granville, giving at the same time an assurance that the bridge, if erected in the position proposed, the steps from the existing overbridge, and the entrance to the main building on the "up" platform are also closed, the convenience of the residents generally will be met.

Upon receipt of this communication the matter will have further consideration.

I have, &c.,

H. McLACHLAN,
Secretary.

Council Clerk, Granville.

Gentlemen,

Railway Parade, Granville, 31 July, 1899.

I beg respectfully to address you in contradiction of some statements made (according to the local Press reports) by a deputation that waited upon you at the Granville Railway Station, on Tuesday last, the 25th, re the proposed alterations at the station. The Mayor stated that, on a former occasion, when the project was on the point of being carried out, one very interested individual got up a petition against it, and got signatures to it to the number of forty. Well, gentlemen, I am the interested individual referred to. I presume you have the petition. If so, on referring to it, you will find that it was signed by the whole of the business people in the place with the exception of the few shops in South-street, where the new bridge is to be. I am prepared to give the name, address, and occupation, if required, of nearly the whole of the persons who signed it, to the number of 97, most of whom are weekly or season ticket holders or else pretty constant travellers, and I emphatically deny that any of them signed it under a *misapprehension*, as stated by the Mayor. The matter was explained to every person who signed it. It was only open for signature for two days, and after I had given it to Mr. Nobbs for presentation a good many persons called on me to add their signatures to it; and I am positive that a very large majority of the people of Granville are much better satisfied with the arrangements at the station as they are at present than they will be if the new arrangement is carried out.

I have, &c.,

J. PEGLER.

Gentlemen,

Granville Council Chambers, 5 August, 1899.

With reference to your letter of the 31st ultimo, I have the honor, by direction of the Borough Council of Granville, to inform you that the Council has by a unanimous vote of twelve Aldermen decided to confirm the statement made by the Mayor to you at Granville Station on the 25th instant; they are willing to have the steps at the overbridge removed, and the entrance to the main building on the "up" platform closed.

The Council trust that an early decision will be arrived at in this matter.

I have, &c.,

J. SCARBOROUGH,
Council Clerk.

The Railway Commissioners.

Appd., the only entrance to the station to be from the new bridge.—C.O., W.M.F., D.K., 8/8/99.

Sir,

18 August, 1899.

I have to acknowledge receipt of your letter of the 5th instant, intimating that the Council had approved by unanimous vote of the position for the proposed new overhead footbridge at the Granville Railway Station, namely, near the Sydney end of the platforms, and with steps of access to each of the three platforms, and also an approach from the northern side.

The steps now leading from the existing bridge at the western or Parramatta end of the station will be removed when the new bridge is erected, and the present entrance to the station on the "up" platform will also be closed. Thus the only entrance to the station will be from the new footbridge when the same is erected.

I have, &c.,

H. McLACHLAN,
Secretary.

Council Clerk, Granville.

Sir,

18 August, 1899.

With reference to your communication of the 31st ultimo, respecting the proposed new footbridge at Granville, I enclose herewith, for your information, copy of the letter which has been forwarded to the Granville Council on the subject.

I have, &c.,

H. McLACHLAN,
Secretary.

Mr. J. Pegler, Railway Parade, Granville.

Sir,

Granville, 21 August, 1899.

In reply to your letter of the 18th instant, enclosing copy of letter to the Council Clerk re proposed alteration at the Granville Railway Station, for which accept my thanks, I would respectfully point out that notwithstanding the note of the Council on the matter, that a large majority of the public of Granville are opposed to it, and if the Commissioners will allow the matter to stand over for a short time, before making their final decision, we will try to prove it to them by a further petition against it.

I have, &c.,

J. PEGLER.

Secretary, Railway Commissioners.

The matter cannot be further delayed.—C.O., D.K., 23/8/99.

Sir,

Sir, 23 August, 1899.
I have to acknowledge your letter of the 21st instant, relative to the proposed alterations at the Granville Railway Station.

I am directed to inform you that the matter has had further consideration, and it has been definitely decided that the alterations shall be made.

The Commissioners regret they cannot see their way to disturb the decision already arrived at.

I have, &c.,
H. McLACHLAN,
Secretary.

Mr. J. Pegler, Railway Parade, Granville.

Overhead Footbridge, Granville.

On the attached papers the Commissioners have approved of the erection of this footbridge, as per plan marked "B," the estimated cost being £655. Those concerned have been advised accordingly. Please note, and forward papers to Engineer to carry out work. 21 August, 1899.

H. McLACHLAN,

Ch. Acct. Works No. 829, £655. Mr. Dean, additions Vote, 24/8. Order No. 4,078.—R. BOURKE, 26/8/99.
Engineer-in-Chief Ex. Lines.

Gentlemen,

Good-street, Granville, 5 September, 1899.

I have been requested to enclose this brief explanation why the petition is being presented, after a report appearing in our local paper stating you have decided to proceed with the alteration at Granville Station.

In the first place, this petition was in operation before your ultimatum was published; also, we thought that you could not have been informed of the very strong feeling which exists here in opposition to the said alteration. The Granville residents are not opposed to improvements if the present conveniences are maintained, which, we think, will not be if the entrance now in use is closed, and the approach by an overhead bridge substituted.

The enclosed petition will convey a faint idea of how the matter is viewed here. Among the signatures you will find the names of many gentlemen whose judgment should, at least, meet with respect:—J. H. Goodlet, Esq. (who employs many men who arrive here by train), B. Short, Esq. (Director of the A.M.P. Society), L. Grimwood, Esq., the school-teachers and clergymen of the district, a few of the aldermen, and many others, who have given the subject much consideration.

Trusting, gentlemen, in the interest of the Railway Department, and the convenience of the Granville public, you will reconsider your decision,—

I am, &c.,
T. J. ANDREWS.

Railway Commissioners.

Dear Sir,

I beg to enclose herewith letter from Mr. T. J. Andrews, enclosing petition against proposed alterations to Railway Station, Granville. 6 September, 1899.

The Secretary for Railways.

I am, &c.,
JOHN NOBBS.

PETITION.

NOTWITHSTANDING the repeated vote of the Municipal Council in favour of the proposed alterations of the Railway Station, we, the undersigned residents and railway travellers of Granville, earnestly and respectfully protest against these alterations.

And we would further point out, gentlemen, that the convenience of the public is much better served under present arrangements.

We therefore consider it would be a waste of public money to make the alterations in question.

[Signed by 215 persons.]

Regret, as the work has been approved, no further alteration can be made.—W.M.F., D.K., 9/9/99.

Sir,

9 September, 1899.

I have to acknowledge petition presented by you, with your endorsement, relative to alterations proposed to be carried out at Granville Station.

I am directed to inform you that the matter has had very careful consideration at the hands of the Commissioners, but they cannot see any good reason why the work, which has been approved, should not be at once proceeded with; and they cannot, therefore, alter the decision which has already been given in the matter.

I have, &c.,
H. McLACHLAN,
Secretary.

J. Nobbs, Esq., M.P.

Overhead Footbridge at Granville.

On the attached papers the Commissioners approved of the erection of a footbridge at Granville, at an estimated cost of £655, but I regret to report that the work cannot be carried out for this amount. It has been usual to erect bridges of this character with condemned 80-lb. T rails, and it was anticipated that rails would be available for this particular work. The whole stock, however, has recently been used up for other urgent works, and it will now be necessary to build the bridge at Granville of ordinary angle and T irons. In addition to this, the bridge, as originally estimated for, was 14 ft. wide, but the traffic request that it should be made not less than 16 ft. wide. This, though probably necessary, adds slightly to the total cost, which will, owing to the different material to be adopted, now cost about £850.

I shall be glad if you will obtain the Commissioners' approval for this increased expenditure.

THOS. R. FIRTH.

Secretary.

Appd.—C.O., W.M.F., D.K., 11/10/99. Ch. Acct. Works No. 1,086, £195. Noted, 4,078.—R. BOURKE, 14/10/99. Engn. in-Chief, Ex. Lines.

Dear Sir,

Granville, 22 May, 1900.

I have just been informed that it is the intention of your Department to close the main northern entrance on the "up" line of the Granville Station, on the completion of the bridge now in course of erection. If such is the case, I do ask, on behalf of a large number of the travelling public, that your Commissioners reconsider the matter, with a view to leaving this entrance open. I mentioned the matter at the time of the erection of such bridge being under consideration, and I was led to believe that such entrance would be left open, and the information now furnished causes considerable astonishment. I again strongly urge that my request be granted.

I am, &c.,
JOHN NOBBS.

Secretary, N.S.W. Railways.

5 June, 1900

In reply to yours of 26th ultimo, covering letter from Mr. J. Nobbs, M.P., I beg to report that if the application were conceded, viz., to allow the entrance to the "up" platform to remain as at present, the whole object of erecting the footbridge would be defeated.

I understand that the great majority of the residents are in favour of the bridge, but that the minority, under the leadership of Mr. Nobbs, object to the same.

Were the existing entrance to the "up" platform allowed to remain open, it would necessitate a booking clerk being retained to man that office, and porters to attend to the entrance, which would be a very costly arrangement.

J.P.

C. T. Manager.

Forwarded for the information of the Commissioners. I concur with Mr. Parry.—J.H., 7/6/00. Next tour.

Sir,

8 June, 1900.

With reference to your letter of the 22nd ultimo, relative to the entrance to the "up" platform at Granville, near the bridge now in course of erection, I am directed to inform you that the matter has had inquiry, and it is reported that it is undesirable to continue the entrance referred to.

Before, however, deciding the matter as to whether the entrance shall be closed, the Commissioners will look into it personally when next inspecting Granville Station.

I have, &c.,

H. McLACHLAN,

Secretary.

John Nobbs, Esq., M.P.

Granville, 11 June, 1900.

Dear Sir,

I am in receipt of your letter of the 8th instant, wherein you say that you are directed to state that it is undesirable to continue the northern entrance of the Granville Railway Station. I beg to state that the residents of Granville and the railway travellers have been treated most unjustly in this matter, notwithstanding the large petition having been sent to your Commissioners on the subject, and the continual protests before the construction of the bridge over the line was decided on, and I again ask that the matter will receive your Commissioners' earnest consideration, with a view to meeting the wishes of a very large number of railway travellers.

I am, &c.,

JOHN NOBBS.

Secretary, N.S.W. Railways.

New South Wales Government Railways.

EXTRACT from the minutes, Commissioners' Inspection of Lines—Main Suburban, 3rd July, 1900.

GRANVILLE.

Mr. Nobbs, M.P., with several residents—

1. Asked that the present entrance to station on "up" side, which was to be closed on completion of footbridge, be kept open. They said a large majority of the residents were in favour of this, and it would be a convenience to about 2,000 residents living on that side, including many season ticket holders.

The Commissioners pointed out that before the construction of the footbridge had been authorised they had been notified of a unanimous resolution of the twelve members of the Municipal Council agreeing to the closing of the access referred to; and it was only upon this condition that they had undertaken the expense of the footbridge, which amounted to about £1,000. If this opening were continued, it would involve a heavy annual cost for additional staff, which they could not approve. They must therefore hold to the arrangements as agreed upon, and decline the request.

Please note.—H. McLACHLAN (per J.P.), 13/7/00. C. T. Manager. Noted.—Jno. H., 14/7/00. Secretary.
Please note.—H. McLACHLAN (per J.V.B.), 17/7/00. E. E. Lines. Noted.—T. R. FIRTH, 18/7. Secretary.

PLANS.

Proposed station between Garden-road and Devonshire-street.
 Existing and proposed tramway connections with the Devonshire-street station site.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

CENTRAL RAILWAY STATION AND ADMINISTRATIVE OFFICES,
DEVONSHIRE-STREET.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom was referred the duty of considering and reporting upon "the expediency of erecting a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and extending the railway system of the Colony thereto," have, after due inquiry, resolved that it is expedient that the proposed buildings should be erected, and the railway system extended thereto; and, in accordance with the provisions of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

DESCRIPTION OF THE SCHEME.

1. The official description of the scheme states that the station and approaches would occupy all the area bounded by Devonshire-street on the south, Belmore-road on the north, a line extending from Castlereagh-street to Belmore-road on the east, and Pitt-street on the west. Provision is made for eleven platforms, each 660 feet in length, and varying in width from 22 to 35 feet, with two and three roads between the platforms, and traversers at the ends, and for an assembly platform, 80 feet wide, the whole to be covered by a roof, 640 feet long and 395 feet wide, in two spans. The main station buildings, which would face the approach road off Belmore-road and have all the latest improvements, including Aspinall's patent over-head luggage carrier, would be of three storeys in height with attics, and are planned to accommodate the whole of the Railway Commissioners, and the Traffic Staff. The Traffic Offices would be on the west side in buildings two storeys in height, extending the whole length of the platforms, and on this side also suitable arrangements would be made for the interchange between the railway and electric tramway system.

It is proposed to close Devonshire-street to heavy traffic, and, in lieu of that street, to construct a new one, 75 feet wide, from the intersection of Devonshire-street and Castlereagh-street to Belmore-road. Belmore-road and Gipps-street would be widened, as would also the Pitt-street approach, a subway being made through to the platforms. Subways would be provided from Garden-road and Devonshire-street.

Devonshire-street, though closed to heavy traffic, would be open to light vehicles as well as cabs. The street must be lowered to admit of cabs passing into the station, but not to the extent necessary if it should be left open to all classes of traffic; and it will have to be bridged over the full width of the station, about 384 feet, the bridge covering commencing on the George-street side about 350 feet from the

the present steam tramway line. The main portion of vehicular traffic now using the street would be diverted to Gipps-street, Belmore-road, and the new street it is proposed to form between the intersection of Devonshire-street and Castlereagh-street to Belmore-road. Cabs passing into the station from Devonshire-street would, after setting down or taking up passengers and luggage, leave the station premises by way of Belmore-road.

The rails in the new station would be connected temporarily with those at the present Redfern Station platforms, and on the completion of the new station, the old roads at the present one would be removed and the yard and buildings remodelled.

The scheme also provides for extending six lines further into the city, if that should at any time be considered necessary, without interfering with the station buildings.

The office accommodation is similar to, but more extensive than, that provided for in the St. James' Road proposal. The scheme has been prepared by the Engineer-in-Chief in consultation with the Railway Commissioners and their officers.

ESTIMATED COST.

2. The estimated cost of the scheme is as follows:—

General Works	£138,000
Interlocking	15,000
Station Buildings and Administrative Offices	233,000
Lighting	5,000
Alterations to Redfern Station	30,000
	<hr/>
	£421,000
	<hr/>
Resumptions	£140,600

The somewhat large amount for general works is explained by the Engineer-in-Chief for Railway Construction to be due to a difference of level of 35 feet between the rails in the Redfern yard and the corner of Pitt-street and Belmore-road, and to the consequent necessity for building up, at very great expense, the north-western corner of the site for the new station buildings, and providing a raised road approach. This extra expenditure, however, he points out, may prove a good investment, as underneath the raised roadway arrangements could be made for shops and stores, from which a good return, in the nature of rents, might be obtained.

The amount set down for resumptions, £140,600, is the value of the Benevolent Asylum, Christ Church Parsonage, the Police Barracks and residence, and the Female Refuge of the Good Samaritan. Except in the case of Christ Church Parsonage, no resumption of private land is involved.

RAILWAY COMMISSIONERS' REPORT.

3. In reporting upon the scheme, the Railway Commissioners do not include in the estimated cost the amount for resumptions, but base their estimate of annual expenditure on the estimated cost of the works, £421,000. Interest on this amount, at 3 per cent., is £12,630, and the additional expenditure, representing cost of maintenance, and for traffic, locomotive, and other expenses being given as £1,830, the total annual cost connected with the scheme is £14,460. Including interest on the amount set down for resumptions it would be £18,678. A perfect terminal station, the Commissioners say, could be constructed on the site, and most desirable relief afforded to the existing Redfern Station; but while the scheme would be a convenience, so far as the railway working is concerned, commercially it would be of no advantage, and, in their opinion, it fails to meet the requirements of that portion of the public who desire that the railway should be extended into the city.

THE COMMITTEE'S INQUIRY.

4. As in the inquiry relating to the extension of the railway into the city of Sydney from Redfern to St. James' Road or to King-street, a considerable amount of evidence was taken respecting the Devonshire-street scheme, the only witnesses examined in the inquiry confined to the Devonshire-street proposal were the Engineer-in-Chief

Engineer-in-Chief for Railway Construction, the Outdoor Traffic Superintendent of Southern Lines, Department of Railways (who, in all the inquiries connected with schemes for remedying the difficulties experienced at Redfern Station, has been the principal witness appearing on behalf of the Railway Commissioners), and the Secretary to the Railway Commissioners. The evidence of these three officers, together with that given in the City Railway Extension Inquiry, deals with the scheme comprehensively.

SUITABLENESS OF THE STATION FOR BOTH RAILWAY AND TRAM TRAFFIC.

5. The chief want at Redfern is more room. It is admitted by the expert witnesses examined that the area on the north side of Devonshire-street, consisting as it does of 22 acres 1 rood 20 perches, is ample for all requirements. The Railway Commissioners say it will provide a perfect terminal station, and will relieve the present Redfern Station of its difficulties. From the evidence of the Engineer-in-Chief for Railway Construction it will be seen that the accommodation provided is fully equal to both traffic and office requirements, and the outdoor traffic officer, who was a prominent witness in both this and the City Railway Extension Inquiry, says that, as far as the safe working of the traffic is concerned, the station would be almost perfect; passengers would be brought about a quarter of a mile nearer the city, and the tram system could be worked in connection with the station to almost any extent, separate platforms being arranged for the trams running down each street.

The traffic results up to the present from the George-street electric tram have, in the opinion of the Committee, materially changed the situation in regard to the city railway extension question. Very few railway passengers now travel by the Elizabeth-street steam trams. From statistics relating to the railway tram traffic, given in evidence, it appears that the average number of persons arriving at and departing from Redfern by train daily is 23,500, and that of these 13,000 are carried from and to the station by the electric trams, and 1,150 by the steam trams, the balance, 9,350, walking. Recently in the Legislative Assembly a letter from the Railway Commissioners was read, in which it was stated that the public will not travel by the steam trams, presumably because the latter do not go down George-street. The George-street tram alone will not be sufficient to deal with the railway traffic connected with a new station at Devonshire-street; but the suitability of the station site for other electric tram connections can be seen from a plan accompanying this Report.

In the large centres of the world electric traction is becoming increasingly popular as a means of dealing with concentrated traffic, and the system, the Committee consider, can be extended with great public advantage here.

The central position which the station at Devonshire-street would occupy renders it peculiarly suitable for the distribution of passenger traffic to the city and surrounding suburbs. For all parts of the city down to the harbour frontages ample provision in this respect could be made, and every suburb to which trams now run, or to which it is possible to construct them, could be served. As the station would have three frontages, and be approached on two levels, it would offer very special advantages for an extensive tram service, radiating in all directions where the wants of the travelling public require to be met. In this connection, attention should be drawn to the undesirableness of the Government parting with the site of the police station at the corner of Pitt and George streets, which has been advertised for sale. Immediately opposite this site would be an opening into the main approach to the railway station, and the Engineer-in-Chief for Railway Construction emphasises the importance of having the police station site as a clear space through which traffic might pass.

ADVANTAGES IN CONNECTION WITH THE DEVONSHIRE-STREET SCHEME.

6. The views of the Committee with regard to the proposed construction of a terminal station, with administrative offices, on the north side of Devonshire-street are very fully explained in their Report upon the proposed extension of the Railway into the city of Sydney, and that Report should be read in conjunction with this.

The Committee are of opinion that a large terminal station, constructed on the site proposed in the Devonshire-street scheme, will meet all requirements.

Such a station as that proposed would have the following advantages :—

- (1.) It would meet every necessity in regard to the safe and expeditious working of the railway traffic.
- (2.) It would afford ample office accommodation for the Railway Commissioners and their staffs.
- (3.) Being in the centre of an area which comprises the city proper down to the harbour frontages, Pyrmont, Balmain, Woolloomooloo, Darlinghurst, Surry Hills, Paddington, Woollahra, Kensington, Randwick, Redfern, Waterloo, Alexandria, Chippendale, Camperdown, Darlington, Erskineville, Newtown, Ultimo, Forest Lodge, Glebe, and Glebe Point, it would be convenient to everyone within that area.
- (4.) It is so designed that an electric tram service could be carried on in conjunction with the railway, not only by way of George-street, but by way of Castlereagh-street, Pitt-street, Elizabeth-street, and if necessary, other streets, and also with the trams running to the eastern and western suburbs.
- (5.) It compares favourably with the St. James' Road and King-street schemes in regard to cost upon which no return is apparent from additional traffic or fares.

When submitting to the Legislative Assembly the motion referring the scheme to the Committee, it was described by the Honourable the Minister for Public Works as a basis for a city railway, but principally as a scheme to provide more room at the Redfern Railway Station, by extending it across Devonshire-street to Belmore or Garden Road, appropriating for that purpose the land occupied by the Benevolent Asylum, Christ Church Parsonage, the Female Refuge of the Good Samaritan, the tramway sheds, the Police Barracks, and the Devonshire-street cemeteries.

The Government, he stated, desired to lay before the House the necessity for at once carrying out the wishes of the late Chief Commissioner for Railways, Mr. Eddy. Time after time reports had been received from that expert in railway management, showing the extreme danger of attempting to carry on the business at the Redfern Station within its present narrow dimensions, and a warning was given, on more than one occasion, of the imminence of a very serious catastrophe, owing to the congested state of the traffic.

RESOLUTION PASSED.

7. The following is the Resolution passed by the Committee, as shown in the Minutes of Proceedings of 7th June, 1900 :—

“ Mr. McFarlane moved,—

‘ That, in the opinion of the Committee, it is expedient that the proposed erection of a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and the extension of the railway system of the Colony thereto, as referred to the Committee by the Legislative Assembly, be carried out.’

“ Mr. Shepherd seconded the motion.

“ The motion was passed on the following division :—

Ayes, 5.		Noes, 2.
Mr. Shepherd,		Mr. Trickett,
Mr. Dick,		Dr. Garran.”
Mr. Watson,		
Mr. Leven,		
Mr. McFarlane.		

W. T. DICK,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 20 July, 1900.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

CENTRAL RAILWAY STATION AND ADMINISTRATIVE OFFICES, DEVONSHIRE-STREET.

SATURDAY, 21 APRIL, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.	WILLIAM THOMAS DICK, Esq.
The Hon. ANDREW GARRAN, LL.D.	ROBERT HENRY LEVIEN, Esq.
JOHN McFARLANE, Esq.	

The Committee proceeded to consider the expediency of erecting a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and extending the railway system of the Colony thereto.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

1. *Chairman.*] Are you aware that by a resolution of the Legislative Assembly, dated the 7th December, 1899, it was referred to this Committee to consider and report upon the expediency of erecting a central railway station and administrative offices on the north side of Devonshire-street, and of extending the railway system of the Colony thereto? Yes. H. Deane,
21 April, 1900.
2. Have you got a statement to make in reference to the proposal before this Committee? Yes; I have a statement from the Under Secretary for Public Works, which I will read.
3. That statement you are going to hand in on behalf of the Under Secretary, who is unable to be present? Yes. It is as follows:—

CENTRAL RAILWAY STATION AND ADMINISTRATIVE OFFICES ON THE NORTH SIDE OF DEVONSHIRE-STREET, AND EXTENSION OF THE RAILWAY SYSTEM OF THE COLONY THERETO.

THE proposal before the Committee was referred by the Legislative Assembly on 7th December, 1899, for the Committee's consideration in the following terms:—"That it be referred to the Parliamentary Standing Committee on Public Works to consider and report on the expediency of erecting a central railway station and administrative offices on the north side of Devonshire-street, and extending the railway system of the Colony thereto."

This scheme may, perhaps, be best presented to the Committee by means of the subjoined quotations from the speech delivered by the Honorable the Minister, Mr. O'Sullivan, when submitting the above motion of reference. On that occasion the Minister made, *inter alia*, the following remarks:—

"I now desire to bring down from the state of uncertainty in which the question has been for the last twenty years the great idea of bringing the railway into the city. It may be supposed, perhaps, by those who disapprove of this proposal, that it is only intended to leave the station where it is now proposed to erect it, and not to extend the railway further into the city. Let me tell honorable gentlemen that this is only the beginning of the work. If this proposal be carried and referred to the Public Works Committee, it will then become my duty in a day or two to submit to the House a proposal which will embody the extension of the city railway as far as King-street, and even beyond it.

"The Government desire to lay before the House the necessity for at once carrying out the wishes of the late Chief Commissioner for Railways, Mr. Eddy, by giving more room at the Redfern Railway Station. Time after time we had reports from that expert in railway management, showing us the extreme danger of attempting to carry on the business at the Redfern Railway Station within the present narrow dimensions, and we were warned on more than one occasion of the imminence of a very serious catastrophe, owing to the congested state of the traffic in the Redfern Railway Station."

"The Government propose now to start, as the basis of the city railway, by enlarging the present railway station at Redfern in such a manner as to take it across Devonshire-street, and as far down as what is known as Belmore or Garden road. It will include the Benevolent Asylum, the Christ Church Rectory, the Good Samaritan Convent, the present tram-sheds, and also the Devonshire-street Cemetery. It will take in the whole of that block facing Pitt-street, and go along Belmore or Garden road up to Elizabeth-street, including also the Police Barracks. All those buildings and grounds will be taken in, so that the site may be converted into a central railway station.

"I know that this proposal is not altogether approved by all Honorable Members; but the Government have thought it necessary to use it as a starting-point for bringing the railway into the city. It must be distinctly understood that this is only the basis of the city railway. When this resolution has been put through, it will be my duty to lay before the House a plan for bringing the railway down as far as King-street, where there will be a city station, and for taking it even further on in a manner which I hope, later on during the debate, to illustrate."

As the resolution moved by Mr. Secretary O'Sullivan to refer the proposal to the Committee was passed unanimously by the Legislative Assembly after lengthened debate, it may fairly be inferred that there exists a general consensus of opinion that a large and commodious central station is absolutely necessary, whether there is any extension of the railway into the city or not.

The proposal referred to in the Minister's above-quoted remarks, namely, to extend the railway into the city has, I understand, already been receiving consideration by the Committee.

H. Deane. The official description of the scheme now before the Committee is as follows:—

21 April, 1900.

THE extension proposed is from Devonshire-street to Belmore-road, and the station and approaches will occupy all the ground bounded by Devonshire-street on the south, Belmore-road on the north, a line extending from Castlereagh-street to Belmore-road on the east, and Pitt-street on the west.

Provision is made for eleven platforms, each 660 feet in length, and varying in width from 22 feet to 35 feet, with two and three roads between the platforms, and traversers at the ends. The assembly platform is 80 feet wide. The whole is covered with a roof 640 feet long and 395 feet wide, in two spans. Provision is made for extending six lines further into the city without interfering with the station buildings.

A cab-road, 25 feet wide, is provided inside the station for the convenience of the country traffic, with entrance from Devonshire-street, and exit by tunnel under station buildings to Belmore-road.

The main station buildings, which will face the approach road off Belmore-road, are proposed to be three storeys in height, with attics. They are planned to accommodate the whole of the Railway Commissioners' and traffic staffs, and, in addition to an entrance hall, the usual provisions for the general public, with all the latest improvements, are made.

Aspinall's patent carrier will be provided for the shifting of luggage.

On the west side are buildings two storeys in height, extending the whole length of the platforms, for traffic offices.

On this side also suitable arrangements will be made for the interchange between the railway and electric tramway system.

It is proposed to close Devonshire-street, except for a subway for foot passengers, and for an approach to cab-road into station. In lieu thereof a new street would be constructed, 75 feet wide, from the intersection of Devonshire-street and Castlereagh-street to Belmore-road; and Belmore-road and Gipps-street would be widened.

The Pitt-street approach will be widened to 70 feet, and a subway made from here to the platform. At end of building subways are also provided for from Garden-road to end platform in station.

The rails in new station will be connected temporarily with the rails at present platforms in Redfern Station, and when the new station is complete, and the traffic brought into it, the old roads in the present station will be shifted, and the old yard and buildings remodelled, so as to be more compact and convenient for working.

(Length, 17 chains.)

<i>Estimated cost—</i>	
General works	£138,000
Interlocking	15,000
Station buildings	233,000
Lighting	5,000
Alterations to Redfern Station	30,000
	<u>£421,000</u>
Resumptions	£140,600

The following is the statutory report of the Railway Commissioners upon the proposal:—

Office of the Railway Commissioners of New South Wales, Sydney, 25 November, 1899.

Proposal to erect a Central Railway Station and Administrative Office on the north side of Devonshire-street, and extend the Railway System of the Colony thereto.

COMPLYING with the request made by letter, dated the 24th instant, at the instance of the Secretary for Public Works, and in accordance with the provisions of the "Public Works Act of 1888," section 13, we beg to report as follows:—

Cost of construction—

The Engineer-in-Chief for Construction estimates the cost of construction (exclusive of land and compensation) at

£421,000

Annual cost—

Capital expenditure at 3 per cent.

£12,630

Cost of maintenance, and for traffic, locomotive, and other expenses.....

1,830

Total annual cost

£14,460

A perfect terminal station could be constructed on this site, and relief, which is most desirable, could be afforded to the existing Sydney station, but this scheme labours under the serious disadvantage that it does not provide an extension into the city, and, consequently, no additional convenience would be given to the public for which a charge could be made, thus leaving the interest on the capital cost a charge to be borne for all time by the general taxpayer. Further, if at any future time an extension into Sydney is made, the large expenditure now proposed would be to a very large extent wasted.

The latter contingency is one that must be borne in mind. Travellers by rail have long demanded a better means of transit than now exists from the present locality to the northern or business part of the city, and the scheme now proposed does not meet that demand.

With a large traffic, which must necessarily grow, it is impossible to deal with it satisfactorily by tramways, and in our opinion a new terminus, to fully meet the merits of the case, must be located in a position more convenient to the business portion of the city. This would enable revenue to be earned on the necessary expenditure, while it would avoid the delay and discomfort of changing to and from the trams, and free the city from congestion which must result if the city passengers have still to be brought into the city by the street transit.

The Devonshire-street scheme will be a convenience so far as the railway working is concerned, but, commercially, it would be of no advantage, nor would it meet the convenience of the public. We would, therefore, urge the reconsideration of the matter, with the view to a scheme being suggested which would more likely be financially a success and a greater benefit to the travelling public.

The Common Seal of the Railway Commissioners of New South Wales was hereto affixed, this twenty-fifth day of November, one thousand eight hundred and ninety-nine, in the presence of,—

H. McLACHLAN.

CHARLES OLIVER,
Chief Commissioner.
W. M. FEHON,
Commissioner.
DAVID KIRKCALDIE,
Commissioner.

4. I suppose you are only prepared to give evidence as to the practical character of this scheme from an engineering point of view;—you do not propose to go into the traffic question? No.

5. Although this proposal has been talked about for a considerable time, is this not the first occasion on which plans and designs have been actually prepared? No; I worked out a plan some years ago for Mr. Eddy for a station on the site of the Benevolent Asylum.

6. About when was that? I think about the year 1893.

7. Was the subject gone into in detail then;—did you draw up a similar plan to that now submitted? No; it was merely a ground plan. There were no drawings prepared showing the elevation of the buildings that I can remember. I think an estimate was made at the time, which I will lay before the Committee. I remember that it was different from the present proposal in this respect: That the Railway Commissioners' offices were not to be provided for, Mr. Eddy being of opinion that the administrative offices should be in the city. It will be noticed that in the proposal now submitted, which is called No. 9 in that series, the Railway Commissioners' administrative offices are provided for. I had instructions to do that, therefore they have been included.

8. With regard to that proposal in 1893, do you remember whether it emanated from Mr. Eddy or whether it is a question of policy, and was suggested by a Minister? It emanated from Mr. Eddy, because he wished to have something ready and some other way of providing for a complete station if the Hyde Park scheme were not sanctioned. H. Deane.
21 April, 1900.
9. From that time up to the end of 1899 nothing further was done apparently in the direction of maturing that idea? No.
10. What apparently was generally kept before the public, and you might go so far as to say was favoured by Mr. Eddy, was the continuation of the railway into the city with a central station there? Yes; Mr. Eddy was always strong on that point.
11. I should like you to tell the Committee from whom you received instructions to prepare the plan now submitted? I was instructed by the Minister to prepare the plan.
12. Can you tell us when? I think it was in October or November last year.
13. You received instructions from whom? From the present Minister for Works.
14. To do what? To prepare a scheme for extending the railway over to the northern side of Devonshire-street, and providing means for carrying some of the lines on at a future date. This scheme differs from the one which I worked out for Mr. Eddy some years ago, inasmuch as the location of the station and offices is different. No. 9 scheme is arranged to carry the city lines on without interfering with the access to the station, and without altering their level in the station, whereas in the other scheme it meant the raising of a pair or two pairs of lines in the station so as to be able to get them right over the end of the approach.
15. Then it would seem that this proposal, No. 9, was somewhat hurried compared with the other schemes? I do not know whether that could be said exactly, because in working out this scheme we had the benefit of what had been worked out before, and a great deal that has been done in connection with this scheme was based on previous work.
16. What I mean is, that this seems a somewhat elaborate design to have been got ready in such a short space of time;—the plans which you got ready in 1893, though somewhat similar, could not have been similar in regard to the administrative portion? No; there was only a ground plan. As I explained, that entailed a good deal of trouble, getting all the public offices, the booking offices, and the station offices in position. Nothing was done in 1893 in the way of getting out elevations or cross-sections.
17. Were you guided in the plan of the buildings by any precedent? No; but the accommodation generally was on a par with what had been worked out for the St. James' Road scheme.
18. Did you consult the Commissioners before preparing that plan? Yes; I was constantly in communication with them and with Mr. Parry.
19. Then, in the first place, the design submitted contains ample accommodation for all administrative and official purposes in connection with the Railway Department, and was prepared after conference with the Railway Commissioners? Yes.
20. As regards the large covered-in space where the trains come in, is that supposed to be up-to-date in its character? Yes, quite.
21. Was that design, both externally and in regard to the railway arrangements, made after conference with the officers of the Department? Yes.
22. You consulted Mr. Parry in regard to the working of the train at the Devonshire-street railway station, and did you consult with the tramway authorities with regard to the tramway extension into the city? Yes. I think Mr. Kneeshaw was consulted; but the tramway connection was looked upon as one that required further working out in detail. The possibility of laying down the lines in convenient fashion was recognised; but the details would have to be further worked out. The way the lines are laid out on the plan shows how the railway trams can be brought in, and many modifications can be made, if thought necessary.
23. In 1893, when your conferences with Mr. Eddy took place, apparently there was only one line of tram communication suggested as a continuation into the city? Yes.
24. Owing to the increased traffic now, several lines are provided? Yes.
25. Is the proposed station at Devonshire-street so designed that the lines which might hereafter be brought into Sydney may be brought in with comparative ease—I mean would the levels be about the same as you would take if you were running it right into Sydney at the present time? Yes.
26. I suppose the end of the building would be so constructed that part of it could be taken out to allow trains to come through? No; it would be constructed as shown on the large plan. The building stops short of those lines which would have to be produced, so that there would be no interference, and the assembly platform is so much higher than Belmore-road that these lines can be carried across on a bridge and viaduct without interfering with the road traffic. In fact, the approach and departure from this station, booking offices, and so on are congregated in the north-west corner, instead of being in the middle of the front. In that respect the arrangement of the station differs very materially from the Hyde Park or King-street plan, but at the same time the accommodation is equal.
27. At the crossing at Devonshire-street slight difficulties are anticipated there with regard to the alterations of the levels, and so on;—will these same circumstances occur if you bring your line into the railway station at Devonshire-street? There will be some difficulty in connection with Devonshire-street; it would have to be lowered to admit of the cabs passing in; but not lowered to the same extent as if you left the street open to all classes of traffic, including teams, drays, &c.
28. Will the circumstances be exactly the same as would occur in the case of a railway coming right through into Sydney? No; the difference is this: In the case of a railway coming right through into Sydney, we only want to carry six lines over Devonshire-street. You only want to lower a portion of Devonshire-street; but if you have a terminal station on the northern side of Devonshire-street, it is most desirable that the whole or nearly the whole of that width should be covered over, or be capable of being covered over. That would necessitate a very serious lowering of Devonshire-street, if it is kept as a street for dray traffic. Therefore, in this proposal it is merely intended to lower it so much as will admit of cabs coming into the station, which, of course, as will be understood, is very much easier to do, and entails a great deal less work than the other method.
29. Could you tell us what width in Devonshire-street would be taken up by viaducts over the street for the purpose of trains crossing? About 384 feet.
30. And, coming close up to the present line of George-street, how far back from that? It would be about 350 feet from the present steam tramway line to the beginning of the bridge.
31. Do you think it would be necessary to have that as one continuous viaduct? I do. It might be made so as to let light through. That could easily be done. But it should not be left open. Prismatic glass could be used to admit light.

- H. Deane. 32. Would you have the same height over Devonshire-street by this proposal as you would by the George-street one? No. The lowering would be lessened by 3 or 4 feet.
- 21 April, 1900. 33. Especially at the George-street end, I suppose? Yes. It would be very much better in this proposal if the eastern end could be closed altogether, but perhaps that is scarcely possible; it would not be necessary to lower the whole width if it is only used as a cab approach.
34. When you get to the eastern end, by the burial ground, you would have to make a diversion by Devonshire-street? No. The main traffic would have to go round by Gipps-street, Belmore-road, and the new street.
35. Then, this present Devonshire-street traffic would be limited? It would be limited to cabs and other light vehicles.
36. Big loads of merchandise could not go that way? No, because there would not be headway enough. Piled up drays would have to go round.
37. Have you gone thoroughly into the detailed cost of this proposal as regards buildings and the construction of lines, and so on? Yes, fairly well. It is an expensive proposal, because there are a lot of building up at the northern end. If the ground were more level, much expense would be saved. At the same time I consider it necessary to push the end of the station as far forward as it is shown. By pushing it so far forward, you can build the new station quite independently of the present station, and make the connection quickly, so that the traffic can be transferred in an exceedingly rapid manner from one station to the other without inconvenience to the public. If you did anything else, the public would be excessively inconvenienced, and there would be very great difficulty in regard to alterations. The present Redfern station would eventually be abandoned, and the buildings and platforms removed.
38. That means, that you will repeat in connection, with this present proposal, your former objection to making extensive alterations to the present Redfern station as implying very serious inconvenience to the public? Yes. Redfern station cannot conveniently be altered. With a new site entirely the inconvenience would be minimised.
39. As regards the present design of the station buildings, could you indicate any modern improvements embodied in the proposal in regard to conveniences for the public? I think the most important introduction will be Aspinall's patent carriers, by means of which parcels and luggage can be carried overhead, and dropped on to the platforms for which they are intended, so that there will be a minimum of carts and trucks in use.
40. You mean passengers' luggage? Yes. It can be dealt with in that way. I cannot say to what extent this system will be used, but it will be largely used. The luggage carriers run on little rails overhead.
41. *Dr. Garran.*] Will they carry the luggage to the platform and drop it at the carriage where it is wanted? Yes.
42. *Chairman.*] Would that involve a different system of dealing with the luggage altogether? I do not think so. I should not like to say very much about it at present, but I know it is a great success; but as to details, I think it still remains to be seen to what extent it would be used. I am quite sure that eventually it will be very largely used, and that it will not only save the public and the railway staff a great deal of labour, but it will give a lot more room by clearing away porters' trucks.
43. Can you explain by the plan what the approaches will be for passengers to the station? Yes.
44. We want to see how the thing is going to be worked;—a man gets into a tram at King or Market street to go to the train, we want to see where he will be deposited? The foreground of the drawing is supposed to represent Pitt-street and Belmore-road. You are looking at the north-west corner of the building. Pitt-street contains two lines of tramways, which it is not proposed to remove. As you go along Pitt-street, up the grade there towards the old police station, you find an opening on to the main approach to the station.
45. That would be about opposite the old police station at the junction of Pitt and George streets? Yes.
46. That is where you turn off to the left? Yes.
47. *Dr. Garran.*] Is it on a level? It is practically on the level, but none of the ground there is actually level, but it would be an easy grade.
48. It is the present Pitt-street level? Yes. It might not be out of place in mentioning this entrance to point out how desirable it would be to have that space clear where the old police station was, and how undesirable it is for the Government to sell it. I believe it is advertised for sale.
49. *Chairman.*] In view of the possibility of this proposal being carried out, it would be very undesirable to sell the old police station at the junction of Pitt and George streets? Yes. There are also other considerations which I might refer to further on. I have referred to that opening in the wall. It is possible that there may not be gates there. Inside the wall is the approach to the station on an easy grade. Passengers will enter there, and proceed to the north-west corner of the station.
50. In an open space, or under cover? In an open space until they get to the station. In the north-western corner of the station, as stated, are situated the booking offices and waiting-rooms. From there passengers get on to the assembly platforms which are on the same level; from there they proceed to the various platforms.
51. With regard to this tramway connection entering the railway premises opposite the present George and Pitt streets' junction, you mentioned a tram coming up Pitt-street, would trams from George-street also enter there? I did not say that trams from Pitt-street would enter there. I mentioned trams from Pitt-street as being left. My object in mentioning that is to show that it does not interfere with the level of Pitt-street. Passengers arriving by cab or on foot would find the booking offices at the north-west corner of the station. Then they would go on to the assembly platform, and get their trains. In the same way passengers arriving by rail would pass on to the assembly platform, and would find an outlet 30 feet wide near the north-west corner by which they could depart on foot or by cab, and they could take a tram if they wish. I will now deal with the road on the north side of the station. The road at the northern end of the station drops down to the Belmore road with a grade of partly 1 in 18, and partly 1 in 20, which is not an objectionable grade for the city of Sydney, and so pass under at the eastern end any future railway extension into the city. I need not, perhaps, go much into details with regard to buildings. The accommodation for the public will be, although somewhat differently arranged, equal to what is provided in the St. James' Road scheme and the King-street scheme. On the upper floors will be situated the Railway Commissioners' administrative offices. I propose now to deal with the tramways.
- Alterations

Alterations in the tramways are shown coloured green on the plan. I have not shown all the connections that it will be possible to make, but after I have described what is shown on the plan, I will further indicate what can be done. I have shown that the lines leaving George-street pass along Gipps-street—the left-hand route passing to the right, and under the road, approach to the station—ascends a grade, and comes out on the western front of the station near pavement level. There it will be seen that a space is marked “tram platform.” The level of this can be that of the pavement, or it can be raised above it as may be considered most suitable. Passengers can take or leave their trams here. Sufficient roads are shown near Devonshire-street where tram-cars can be stationed, so as to be able to provide a number of cars in case of a rush. These lines at the tram platforms can be duplicated if required. There is a sufficient space to provide everything that is wanted. These lines afterwards connect with the left line going towards Circular Quay along George-street. The other line, shown in green on the plan, along Gipp-street and Belmore road, I have continued along the new street to Castlereagh-street. I propose to make the tram line along the new street to serve for the main Botany tram line, if it is considered desirable. The existing tram lines along Elizabeth-street can be diverted at the northern corner of Belmore Park, brought across in a direct line, and carried along the new street. As regards the connection that may be wanted with Pitt-street and Castlereagh-street, I think it is clear that the Castlereagh-street tram can be brought and junctioned with the present line, and so can a line in Pitt-street, and from some point at the corner of Pitt-street and Gipps-street, or Pitt-street and Belmore-road, which is the same thing; they can be brought into the side of the railway station in the same manner as the other lines. There is no reason why other pairs of lines should not connect with the different streets if required. It could also be arranged, as has been suggested, to have a tram station at the lower level under the station—I suppose steps could be provided for access. It will be seen on this same plan that I have shown an exit for foot passengers by means of a ramp to get on the Pitt-street level. The same ramp might be used to give access to a tram platform on a lower level. Of course, what is actually shown on the plan is merely a connection for the railway and Circular Quay trams. Only one line is necessary for that, because the trams are always going in the same direction, proceeding southward, and turning round and coming on the loop. Whatever additional tram-lines were brought into connection with the station the traffic would be run in the same direction; there would be no necessity to reverse it. A connection to the western tramways can, of course, be made as I have shown—by means of a reverse curve, at the southern end, there is thus a double connection made there for trams, and they can go either north or south, as required.

52. *Dr. Garran.*] Could you bring the ordinary suburban tram lines from Glebe, Forest Lodge, and so forth, into that station and out again? Yes; the connection would be by Gipps-street. There may be various ways of doing it, but the simplest way would be to run round in one direction.

53. It could be done? Yes. I have not described the cab entrance. Devonshire-street would be lowered to such an extent as would admit of cabs entering. I have shown the whole width of Devonshire-street lowered, but I do not think it would be necessary. A narrow width would be sufficient, seeing that the traffic would be so restricted. A cab, after passing along Devonshire-street, under the first bridge and the first two lines, would turn sharp to the left into the station, and would rise on a grade of 1 in 10. They would be empty cabs at that time.

54. The cab road to the station would be of a sufficient length to provide for the convenience of the public? I think about 300 feet. The width would be 25 feet. Then they would drop down and pass underneath in front of the station building, and come out on the level of Belmore-road, as shown on the perspective drawing. They go in at Devonshire-street, rise up to the level of the station, stand in the station, take up passengers and luggage, then come down on a ramp to a point in Belmore-road.

55. *Mr. Dick.*] In designing the system of subsidiary trams, did you consider the question of devoting the proposed Pitt-street tram entirely to railway purposes? It could readily be done if required. I will show how: assuming there are tram lines along Pitt-street, when you get to the end of Pitt-street, where Gipps-street abuts on to it, you continue it right on underneath the front wall of the station up to the tramway platform, and at the end you turn round and come back again, and enter on the old road in Pitt-street, and that would be just as easy to make as any other connection. If you came in from Castlereagh-street all you have to do is to make a similar connection with Castlereagh-street and the thing is done.

56. Taking the busy hours in the morning, when there is a very large number of people coming in who want to get to their destination in as short a time as possible, how would you distribute them, seeing that some would want to go down George-street, some down Elizabeth-street, and some along other streets? They would get into their own particular cars, which would be standing there, and they would be distributed on the various lines. If one line is not sufficient you might have more.

57. Otherwise it would be no improvement on the present system, would it, if you only had one line to make the distribution;—you would have the same delay that takes place now in getting the people away? Yes; in my opinion the best way is to run the railway into the city.

58. But failing that, you think measures could be taken to get the people more speedily away from the railway station to their places of business than is done now? I should say that the best attention would be given to secure that end.

59. In the early part of your evidence to-day you made a statement concerning the comparative ease with which the old station could be remodelled after the new one was built;—why would it be more easy to remodel the old station when the new station is built than it would be to do it now? I do not think I made myself clear. What I say is this: That having built the new station, and got everything complete, the connection could be made with the particular road shown on the plan very quickly. Then the old station would be abandoned, the buildings pulled down, and the platforms removed. The ground would be cleared, so that the lines could be drawn in closer together, and any further connections made that are required. That is a very small matter compared with the alteration of the yard as it exists at present, with all its complications of roads and connections.

60. Would the increased length you would have under that system from the tunnel to the end of the station lead to greater ease in back-shunting the trains from the station? Yes.

61. The element of danger would be eliminated? Yes; it would be eliminated altogether.

62. Then, if that were so, would it not be reasonable, seeing that that element of danger which now exists would be entirely eliminated, to make some small charge on the travelling public, as it is practically a cheap insurance for them? That is a matter for the Railway Commissioners. I scarcely think so.

- H. Deane.
21 April, 1900.
63. You said you did not think any charge could be made for the extra convenience? That is the Railway Commissioners' report. I do not think it could myself. On that point I would recommend you to ask the representative of the Railway Commissioners.
64. We had one witness before us a short time ago who took a serious objection to one point in that plan;—you will notice the steps on to the main assembly platform on the northern end? Yes.
65. That would not be very largely used, would it? No.
66. The other means of access would be largely used? Yes. I should like to point out with regard to this station that it is on exactly the same level as the present Redfern station, and it is just as easy to get to this station as it is to get to the Redfern station; in fact, it would be much easier, because you would not, in order to get into this station, have to cross a number of tramways and roads that have to be crossed now.
67. People coming in at the north-eastern corner would have a far higher climb than they have at the present Redfern station, would they not? If they are at Belmore-road now they have a climb to get to the Redfern station just the same.
68. Is it absolutely impossible, or very difficult, with the site as it is at present, to have the main assembly platform on the same level as the ordinary train platform? In this scheme it is on the same level. In No. 10 scheme the station at King-street is arranged so as to have the assembly platform on a higher level.
69. On how many sides of the proposed station can people approach the main assembly platform without using steps? They can approach it from all sides without using steps. Passengers coming in from the southern side are on a level with the station; passengers from the western side are the same as they are now; passengers on the northern side can get to it in the same way, by a ramp; it is the same on the Pitt-street side. I have a subway shown with a ramp. Suppose people had been shopping at Hordern's, and wanted to go by train. At present they have to walk across to the Redfern station, and they have to mount to the same height. The advantage of this station is that they are very much closer.
70. In the station yard they are not compelled to cross the cab-roads or tram-lines? No.
71. I suppose you have never been asked to provide plans for a main station there without the administrative buildings, have you? No. I made an estimate, as I mentioned a little time ago, for the other scheme that I worked out for Mr. Eddy about seven years ago. I worked out an estimate without the administrative offices; but that estimate would have to be revised. That scheme came to about £350,000.
72. *Mr. Shepherd.*] I think the Commissioners' chief objection to this scheme is that no additional revenue will be derived from it? That is one objection, and the other is that it does not serve the public in the same way as No. 10 does.
73. Another objection also is that by the construction of the offices it would take the staff from proximity to the Ministerial head of the Department, is it not? Of course the administrative offices could be left out, if the Committee desired to recommend it. What the Railway Commissioners would certainly like would be to have all the offices and the station staff at the same point, if they can be brought to a convenient point on a site like King-street.
74. Another advantage of this scheme would be that it would relieve the Redfern Station of its present congested condition? Yes; it would get rid of those difficulties and risks. It would provide a station which would be very much more convenient for the public, and would allow of a vast development of traffic in future.
75. Would it not also facilitate the extension of the tram traffic—facilitate its divergence into other streets? The tram connections would be more convenient than they are at the present station, no doubt.
76. I see that the cost of the station buildings is the largest item? Yes.
77. Do you think it would be absolutely necessary to construct these elaborate buildings on the site? You want a large building to accommodate the whole of the railway staff. There is nothing very much in the way of ornament on the plan at present. It has not exactly a cheap front, but at the same time it is not extravagant. The tower might be left out; but I do not think that would come to a very large amount by itself. As to the roof over the station, that is considered to be a necessity in modern stations, and it would be a mean thing not to have one big roof over the station instead of, as has been suggested, having mere covers over the platforms.
78. In the event of these buildings being constructed, so as to accommodate the whole staff, it would relieve a considerable portion of the Public Works Office? Yes; if the Railway Commissioners were induced to move down there; but I am very doubtful whether they would decide to do so. Mr. Eddy, I know, was opposed to it. I do not know whether the present Railway Commissioners have given any opinion on the subject, except in a very general way.
79. In that case, in the event of their objecting to move, could not the estimate for that building be considerably reduced? Yes; very much.
80. So that there would be a saving in regard to that? Yes.
81. There is £140,600 for resumptions;—what resumptions are they? It is the value of the Benevolent Asylum, the Christ Church parsonage, the Police Barracks and a residence, and the Female Refuge of the Good Samaritan.
82. With the exception of the Convent, all that is Government property, is it not? Yes. I have here the book of reference, which I put in. There is a Friends' Meeting House on the site—that is on part of the cemetery. The cemetery and Benevolent Asylum are Crown property. The Christ Church parsonage is in the hands of trustees, and is virtually private property. The cottage and grounds in connection with the Police Barracks are Crown property, and also the Police Barracks. The Convent of the Good Samaritan is in the hands of trustees. The tramway yards and sheds are in the hands of the Railway Commissioners.
83. Another advantage of this scheme would be the providing of a large and perfectly safe station? Yes.
84. *Mr. McFarlane.*] I see that the estimated cost of the railway buildings is £233,000;—does that include platforms? No; the platforms are included in general works. The item for general works is £138,000, and these include platforms, rails, retaining-walls, and road approaches. Buildings would include the buildings shown, and the roof over the station.
85. What is the estimated cost of the terminal station buildings in King-street? I will look that up—I think it is about £200,000.
86. That is a less amount? Yes.

H. Deane.
21 April, 1900.

87. You stated that the cause of the difference was on account of the site? Yes.
88. Is there any other particular difference between the two buildings? No; generally speaking, the conditions are exactly the same. The roof of this building would be more costly, because it would be wider. It would have to be wider, because there are more roads, and the cab approach in addition.
89. Did the Railway Commissioners point out that an additional disadvantage in connection with the new station was that it would not be revenue-producing? Yes.
90. Does not that largely hold good with regard to all these Government buildings, especially when they are the head-quarters of any Department, say, for instance, the Public Works Office—or the General Post Office—the taxpayers have to pay for them;—do you think it would be fair, therefore, to charge this extension with this extra cost? It would seem to be a fair capital charge.
91. A general charge? Yes.
92. It is anticipated that some revenue will be obtained by letting shops underneath the building? Yes, along Belmore-road and Pitt-street.
93. Has any estimate been made as to how much that would produce? No.
94. Would it be any large amount? It would be very difficult for me to say.
95. What area will be available for shops? Mr. Sievers might make an estimate.
96. *Dr. Garran.*] Amid all our distracting variety of plans, there is one thing absolutely certain, I suppose, and that is that the present station must be abandoned? Yes, as a terminus.
97. It cannot be kept on as it is? I do not think there is a doubt about that.
98. Then the alternative is this: We must adopt the Benevolent Asylum scheme, or one or other of the schemes for running into Sydney? Yes.
99. The charm of this scheme is that we really have ground there on which to make a first-class station? There is no doubt about that.
100. A permanent station that will do for all time? Yes. There is no other competing site—without making wholesale purchases that will do instead, unless a portion of Hyde Park be taken.
101. But one disadvantage is that this is not a good radiating site for tram routes going away from the station? I think that difficulty could be got over. The trams could be arranged to radiate to all parts of Sydney.
102. Should we not have to make some new streets? I think that ought to be done.
103. But the St. James' Road site is a better radiating site? Yes.
104. Even Liverpool-street would be? Yes.
105. It is a drawback to this Benevolent Asylum site that it is not central to the present passenger traffic? Yes.
106. Well, even if we go to St. James' Road to meet present requirements, might it not happen years hence that we should still want the Benevolent Asylum area for station purposes? I do not see for what purpose. I think the Benevolent Asylum area would come in very usefully for storage sidings and carriage sheds. I certainly think that the block on which the Benevolent Asylum stands is one that should be reserved for all time by the Government. No portion of it should be cut up for sale.
107. The Government should not let that land pass into private ownership? No.
108. You said that going on to Belmore-road would not give additional revenue? That is what the Railway Commissioners state.
109. Apart from the point raised by Mr. Dick, that the increase of the safety of the travelling public would be worth something, still would you not be getting revenue from the enlarged tram service? Yes. Of course, the tram service, if it could be efficiently arranged, would go on increasing in productiveness.
110. Suppose you had a station there, and four lines of tramway running down four important streets, they would all be paying trams then? Yes.
111. You would get a return then? Yes.
112. You might not get a penny from a railway line, but you would be getting it from a tram line? Yes. Provided the number of passengers travelling were the same, and the charge were the same, you would get the same revenue whether it was a railway or a tramway.
113. And the people would certainly be put down pretty close to their shops and offices? Yes; that is so.
114. The trouble is that they would have to make the change? Yes.
115. That is the real difficulty in the way of a station at the Benevolent Asylum? That is one difficulty. The other difficulty is that the tramways down the streets may not eventually be able to take all the traffic, unless they are relieved of the railway traffic.
116. Do you think that, if we had four lines, there would be any danger of a blockage? George-street, Pitt-street, Castlerough-street, and Elizabeth-street.
117. And Kent-street? I do not think Kent-street would help you much; you would have to branch off from George-street.
118. But it takes the western side of the city? It may be a convenient thing to do, and probably will come in some day; but it will not relieve the southern end of George-street.
119. Looking at it in this way: Granting the inconvenience to the western passengers having to shift, is it not fair for us to set against that the enormous increase in the convenience of putting people down close to where they want to go—I am setting one disadvantage against another? I think I would rather walk a little distance to get to a railway station, if I were living in a suburb, because when you go by train you know exactly the time when the train will start. If I take a tram, which may be very much nearer to me, in order to reach the station from which the train starts, I shall have to take a certain amount of risk. I should have to allow a considerable margin of time, over and above what is actually required in transit.
120. You have to make an allowance? Yes; with a view to the possibility of the tram being a little late.
121. People coming in would not lose much time, because there would be trams waiting for them for every street; but in going back they cannot be quite sure that if they get into the tram they will arrive at the station exactly in time for the train? No; they cannot go on with their work until the last minute.
122. A man in Sussex-street would know to ten seconds how long it would take him to walk to St. James' Road, and that if he leaves his office at a certain time he will catch his train; but if he gets into a tram in George-street he does not know whether he will arrive at Redfern in time? No; there may be a block and consequent delay.

- H. Deane. 123. I see all that, but what weighs in my mind is that you and nearly every other witness has said that if you bring the railway into the city you cannot put every man down at his own door; you accommodate a certain section, but I set against that the greater accommodation to the greater number;—is not the accommodation given to the greater number more important than the matter of compelling everybody to shift? Yes.
- 21 April, 1900. 124. We have two alternatives before us—the question is which is the better? Yes.
125. *Chairman.*] Do I understand that you agree with all that Dr. Garran is saying? No; I only say that I understand it.
126. *Dr. Garran.*] We have these two alternatives;—I want you to say, if you can, which is the greater evil or the greater benefit? It appears to me that there is a good deal to be said one way or the other. As I said, I believe that a great many—nearly everyone—would rather walk to a station in the city and take a train, even if they had an extra distance to walk, than go by tram to Redfern. But there is that other point to be considered which weighs much more to my mind and makes the one alternative—namely, the carrying of the railway into the city—so much stronger, and that is that the street tramways will not in a few years be able to carry the railway traffic in addition to their own.
127. Then we shall have to bring the railway into Sydney? Then, if you do that, after having made a big station on the Benevolent Asylum grounds, you will find a great sum of money has been wasted.
128. You would not make another big station? No. But you have spent a lot of money which will have been thrown away.
129. You would not make another administrative office? No. But you would have to bring all your trains in practically.
130. And might we not at that time make a circular line and have no big station at Sydney at all? If it would answer the purpose; but that is very doubtful, and the expenses at the big station will still have been thrown away.
131. We all understand the people living within one-eighth of a mile of St. James' Road would be best suited by a railway there? One-eighth of a mile—I do not agree with you there. You will remember what Dr. Norton said, and he is not a young man. He told us that he would use the St. James' Road or King-street station in preference to the tram, and his office is at the further end of O'Connell-street, and he said that although he is very much opposed to the appropriation of any portion of Hyde Park for railway purposes. The evidence of a man like Dr. Norton in that respect is very valuable indeed.
132. Say one-quarter of a mile? I think it is more than a quarter of a mile.
133. If the tramways were multiplied to answer the purpose we could save Hyde Park, and get our central station on a magnificent site? Yes; but I am sure that it would not answer the purpose.
134. If this new station costs £561,000, shall we not have to add the cost of two lines of trams? Yes, at the very least, I suppose.
135. Then your estimate is about £80,000 each for them, and that would be another £160,000 to be added to the cost? Yes.
136. And we should be entitled to take the income from the trams towards the interest on the debt? Yes. Still you do not get over the difficulty that I have mentioned—that in a few years time the trams will not be able to carry the traffic. Then you have to lump the whole expenditure that you have made up to the present time—that of the Benevolent Asylum station, these two lines of trams, and the further extension into the city—whereas you can now leave out the Benevolent Asylum station and simply have an extension into the city, and put a good-sized station there.
137. The St. James' Road scheme, if carried out, would not compel us to build a new Benevolent Asylum? No, it would not.
138. Your line into St. James' Road would not bring the parsonage down? No.
139. And it would leave a good deal of the barracks? We should damage the barracks; but we should leave enough land to have them restored.
140. So that it saves a good deal of destruction? It does; and I should like to point out that although the value of these lands and buildings has been put down at a certain amount, that amount does not represent the cost that would be incurred to provide for rebuilding. If the Benevolent Asylum ground is taken a new asylum will have to be built at a great expenditure.
141. I only want to balance the pros. and cons. of each scheme? That should not be forgotten in balancing the pros. and cons.

TUESDAY, 24 APRIL, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

THE HON. PATRICK LINDESAY CRAWFORD SHEPHERD.
THE HON. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of erecting a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and extending the railway system of the Colony thereto.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

- H. Deane. 142. *Chairman.*] You were to give the Committee the date of the former proposal with regard to a railway station on the Benevolent Asylum site? Yes; I was under the impression that the plans were prepared in 1893, but I find that it was before then. I have the original plan. It was finished in April, 1890, and is the proposal that was submitted to the Royal Commission in 1890, and marked "M." Later on, in 1896, I prepared a reduction to a scale of 80 feet to an inch, with one or two slight alterations, one of which was to allow of a tramway—electric or cable—to come in in a slightly different manner. I find that on this map there is a note made as to the lines of rails entering the station, that "the roads are incorrect; design to be worked out." I was asked particularly by the Railway Commissioners at the time that if anybody became possessed of the plan they should understand that those roads were simply just sketched in. I would refer the Committee to page 104 of the evidence accompanying the Report of
- 24 April, 1900.

of the Royal Commission on the city and suburban railway, 1890. I mention there the Benevolent Asylum scheme marked "M," and my estimate of the work for that scheme I find was £501,000; the estimate for the scheme before the Committee is £421,000.

H. Deane,
24 April, 1900.

143. *Mr. Watson.*] That is without resumptons? Yes.

144. *Chairman.*] That "M" scheme proposed the erection of large buildings on the Benevolent Asylum site, and also to work a couple of lines towards Hyde Park? The latter provision was not included in the estimate of the cost.

145. But it was included as part of the scheme for the extension of the railway to Devonshire-street? Yes.

146. Still recognising the necessity for bringing the people into the city of Sydney? I also stated that any extension of the kind must carry the mass of the suburban traffic to a large central station at Hyde Park—that would be a necessity. That tallies with the opinion I expressed the other day—that if this scheme were carried out, and a line afterwards carried on into the city, a lot of this large expenditure would be thrown away.

147. Because the large suburban traffic necessitates a large accommodation at the terminal station? Yes; the suburban traffic being the bulk of the traffic.

148. *Dr. Garran.*] According to the official document read to us, this Garden-road scheme for a terminus was put before Parliament before the extension into the city, and as part of the whole scheme? It was so as regards No. 9 and No. 10 schemes.

149. I understand that Mr. O'Sullivan proposed first to make a new station at Belmore-road; then he said, "That is not the whole; I am going further to make a road into Sydney";—suppose we make the Garden-road station first, with all these administrative buildings, should we want to duplicate those buildings when we go to St. James' Road? No.

150. We should only want what would just serve for that station? That is all.

151. Then the Commissioners would have their offices at Garden-road? They would not like it; but it would be so according to that scheme.

152. It was arranged in order to meet their views to have the administrative offices at Hyde Park? I would suggest that the Committee should ask the Commissioners distinctly on that point.

153. Mr. Oliver said that he would rather have the offices in town, but that he would rather go to Redfern than not be with his officials, because otherwise the staff would be far removed from him, and it is inconvenient to have a mile between them;—would that be your view? I should not like to express any opinion after what Mr. Oliver has said, as he understands the matter so much better than I do.

154. In your own opinion, if we make a station for Hyde Park with administrative buildings there, shall we want a large station or administrative buildings at Garden-road for a long term of years? No; if you had administrative offices at Hyde Park you would not want them at Garden-road.

155. The approach by tram-line on this plan of 1890 does not apparently contemplate anything more than the George-street, Pitt-street, and Elizabeth-street trams? No.

156. And if we want to have a fourth street tram we shall have to make additional arrangements? Yes; in connection with that it may be interesting to the Committee to know that it was proposed to carry a railway tram along Pitt-street. In this particular plan that is not shown.

157. This plan belongs to the 1890 system, and, as the scheme is put before us, it is up to date;—are the tram arrangements made out as fully up to date in that plan as in this? No; with regard to the tram-lines, they are simply the George-street line and the existing system, but it was contemplated at that time that there might be a tramway along Pitt-street, and one of the sketches shows a tramway along Pitt-street.

158. Then really and truly in the new plan before us we have not got anything so complete in detail as was put before the Committee in 1891? The offices are an addition.

159. With regard to tram-lines, I mean? Yes; you have quite as much as you had in 1890; but the details of the offices have not been worked out. But as the area required for all these offices, public accommodation, and administration office is perfectly well known, it can be taken for granted that they can be located, provided that the space given is sufficient. The working out of these offices for public convenience and administration is a matter requiring very careful consideration, and one which, therefore, cannot be hurried over, and it is just as well to leave it, because if it were worked out too hurriedly something might be put on the plan which would be misleading.

160. What I want you to understand is that this scheme for the new station at Belmore-road is put before us for acceptance or rejection;—therefore we ought to have the plan in all its fulness put before us? Well, as regards the accommodation provided, I would say that it would be at least equal to that of the King-street scheme, and if the Committee require it I can submit that and state generally what the accommodation consists of.

161. On this plan there are a certain number of offices—on two sides as well as on the front so that two—sides of this station are surrounded with offices? Yes.

162. They are not altogether in a compact form? No. I think that, probably, the newer station is the better one in that respect.

163. Would the new station at Belmore-road get rid of these offices on the two sides? We should only require offices at the end of the building and on one side.

164. *Chairman.*] Looking at the matter in all its bearings, you still are of opinion that the railway should come into Sydney? Yes.

165. *Mr. Watson.*] The station buildings I see under this scheme are estimated to cost £233,000? Yes.

166. The station buildings for the Hyde Park or the St. James' Road scheme are estimated to cost £200,000;—thus there is an increase of £33,000 for this Belmore-road station? Yes.

167. Can you say how the difference arises? It is chiefly due to the foundations of the building, the height of which you have to build up.

168. Had you in the Hyde Park case a lot of excavation? Yes; that is part of the general works.

169. It would add to the cost in the same way? No; the excavation would go into the general works. To correspond you have retaining walls in the present scheme right round the outside.

170. Do you purpose providing only the same accommodation, as far as buildings are concerned, at Devonshire-street as you propose at St. James' Road, or is it increased? It is about the same; just the accommodation that would be necessary for a terminal station.

- H. Deane.
24 April, 1900.
171. I want to know whether there is any difference in your ideas of to-day as compared with your ideas of three years ago? No, these estimates were made at about the same time.
172. Is it anticipated that you will get anything out of what appear to be shops at the St. James' Road station? I have not made any estimate of the revenue that would be obtained, but those shops would be revenue producing.
173. If the inner peculiarities of the site necessitate a further expenditure of £30,000, you would require to get a little revenue from the shops to make this as good a site financially as the St. James' site? Perhaps the shops might pay for it, I think they would.
174. Is that the only large item that you recollect in which there is a difference? Yes, that is about the only one.
175. Did each scheme contemplate alterations at a cost of £30,000 to the existing Redfern station? No; that amount as in the case of the Hyde Park scheme was only £20,000. The reason for the extra amount here being that the alterations would be of a more expensive character.
176. There does not seem to be any apparent reason for that? The reason is this: In the Hyde Park scheme you would simply carry the roads right through and leave them there, and there would be some other expenditure in connection with that for shelter sheds and so on; but in this scheme the old station will be abolished, there will be the cost of doing that and drawing in the lines, which, of course, means extra expense.
177. You retain none of the platforms of the existing station then? No, not in this scheme. For the convenience of working you want to draw the lines in, so as to have the connection as close to the station as possible.
178. In connection with this scheme, I understand, it is proposed to close Devonshire-street? Yes, for all except the cab and foot passenger traffic.
179. But under the Hyde Park scheme it is proposed to leave that street open and to lower it? Yes.
180. Is there any other way of arranging the cab traffic so as to obviate the necessity for that embankment near George and Devonshire streets;—could you so arrange your cab traffic as to obviate the necessity for that retaining-wall, and allow the tram-line to be taken more westerly? The northerly retaining-wall might be straightened up.
181. It seems rather an inconvenient way at present for reaching the western suburbs, the trams going round those two curves? If you straightened that line you would not get the use of the loops.
182. Is it proposed to only have one line of rails to the station for trams? Only one; the trams will come in at one end and go out at the other; but, as I said the other day, if that accommodation is not sufficient it would be the easiest possible thing to add another line or work underneath the station.
183. You would have room on the western side of the station to permit of an additional tram-line being put in, would you not? Yes; there would be no difficulty about doing that. There is no reason why the tram accommodation should not be increased two or three fold if necessary.
184. *Dr. Garran.*] If we make the railway extension to Hyde Park you must in any case cross Devonshire-street and run through the Benevolent Asylum site? Yes.
185. And that would cost a certain sum of money;—would it cost very much more to make your wayside platform there, and so shift from the present Redfern site on to the new site, and make it north instead of south of Devonshire-street;—looking to the future we could add to the new station as we want, but we cannot add to the Redfern Station as we want? You would, of course, interfere with the Benevolent Asylum.
186. Yes? I do not think the cost should be very serious; I could not tell you right off, but I should think it would be covered by about £10,000 or £15,000.
187. Can you give us a rough estimate of what it would cost to make a wayside station north of Devonshire-street instead of south of that street? I will do so.

John Parry, Out-door Traffic Superintendent of Southern Lines, Department of Railways, sworn, and examined:—

- J. Parry.
24 April, 1900.
188. *Chairman.*] You have already been examined at great length in connection with the proposal to extend the railway from Redfern into the city of Sydney? Yes.
189. I suppose that you do not desire to in any way alter the evidence which you then gave? No.
190. *Mr. Dick.*] You have had an opportunity of looking into this new plan for a station at Devonshire-street? Yes.
191. Apart from your already-expressed views, are there any objections against this scheme that you would like to offer—general objections, not detailed ones? Treating it as a part of the city railway of the future.
192. That is the view I wish to take—whether you would object to it if it was considered part of a scheme that would involve further extension later on? If it is to be considered a semi-terminal station, with the object of extending the four lines into the city in the future, I have no objection to offer. If it is to be considered as a terminal station, with any intention of extending the suburban lines into the city in the future, then I should like to see modifications.
193. In what way? In the first place, the station buildings only extend along the end of the assembly platform for a part of the width. The plan having been prepared with the object of extending the lines into the city in future. Therefore, the main building to the north, adjoining the assembly platform, has been cut short; but if it were intended to be a terminal station, without further extension, this building should be extended from end to end of the main assembly platform.
194. Why would you urge that, from the point of view of architecture or that of railway convenience? Convenience, chiefly.
195. But if you have sufficient office accommodation in the plan as set forth, what particular convenience would there be in extending the building eastward? It would be much better to have the line of offices along the main assembly platform. Everything would be compact and together. In this plan it is separate, a portion being provided at the end of the assembly platform and a portion on the longitudinal platform.
196. But if you have a large administrative building of that character, a large number of your officers have nothing to do with the handling of the traffic, have they? No; but at the same time for appearance sake and convenience I should prefer to see them all in one building and to make it a compact station.

197. Does not the same objection lie against the Hyde Park scheme, and also the St. James' Road scheme? **No**; in the Hyde Park scheme I think you will find that the end building extends the whole width of the station.

J. Parry.
21 April, 1900.

198. Do you remember the 1890 plan of Devonshire-street station? **Yes**.

199. There are offices on three sides of the station there? **Yes**, but I have never seen the elevation of those buildings, therefore I do not know what was intended.

200. You would not care to offer any opinion about the arrangements? **No**, I know nothing about them. There the building extends along the whole front of the station on the northern side.

201. Is there any other modification which you would like to propose? **No**; taking the plan generally it would be suitable for a terminal station to remain at Garden-road. I should like to see the main buildings exactly the length of the assembly platform. With regard to the arrangement of the roads entering the station, you will see that beyond Devonshire-street it is simply shown to connect the present platform lines at Redfern. That, of course, would have to be all remodelled. When the Redfern station buildings are removed the new platform roads will commence to converge at the platforms. To give the Committee an idea of the little interference there would be occasioned to the general public in altering the Redfern station in connection with the plan, it shows that the whole of the station could be absolutely complete, as far as the lines, platforms, and buildings are concerned. Then they would connect to the existing platform line in Redfern station; then we should conduct the traffic into the new stations, while the present Redfern buildings and platforms were being removed; and after the removals we should construct the shunting yard according to a proper design not shown on this plan.

202. Does the station as outlined on the plan lend itself to the convenient handling of the public during the busy hours of the day, and during all times of the year? **Yes**.

203. It has been stated in evidence that if the people were brought a few hundred feet further than they are now into the city, no charge could be levied upon them for the extra convenience afforded, and it is urged that the present station is dangerous; but if we remove the element of danger the public will have practically a better service than they have at present, will they not? The more convenience you give the better the service. Passengers would be brought about a quarter of a mile nearer the city.

204. And the element of danger existing now would be almost entirely removed? As far as the safe working of the traffic is concerned it would be almost a perfect station.

205. Would that not be a reasonable ground for making a slight increase in the fares? I do not think you could do that. The charges are made on a mileage rate. Under half a mile we charge the lower mileage, where it is over half a mile we charge the next mileage.

206. There is no law compelling you to charge that mileage rate, is there, and you do not universally charge it now? Oh, yes; we adhere strictly to the mileage rate, unless for very special reasons.

207. But a percentage increase all round would still leave the mileage rate uniform? **Yes**; you might increase the suburban rates all round, but the public would not take to that very kindly.

208. Was that scheme of charges which you outlined for the St. James' Road station and the Hyde Park scheme simply on the mileage rate—1d. each journey? **No**; it was a reduction on the mileage rate. It would be a mile from Redfern station to St. James' Road. The intention was to charge only 1d. in each direction. That would be below the ordinary mileage rate.

209. Was there any particular reason for departing from the usual practice in that case? I could not say. I do not know what the Commissioners had in their mind in determining that charge.

210. After building this large station at Devonshire-street, if we extended the railway into the city, would there be any necessity for the duplication of any of the offices at the two stations? Assuming that you built this first as a semi-terminal station for country trains.

211. Say a terminal station for the next ten or fifteen years for all trains; then, if afterwards an extension were made into the city, would that involve a duplication of many of the offices which would be put up on this site? **Yes**, I think so. It will not be satisfactory to provide a semi-terminal station at Garden-road, and then take the traffic down to some part of the city, and make another terminal station there. In that case a great portion of the expenditure to be incurred at Garden-road would be rendered, I should say, almost waste.

212. That is presuming you built another station in the city? **Yes**.

213. Would you be able for many years to deal with all the traffic which you are likely to get at that station? **Yes**.

214. Would there be any difficulty in getting the people away from that station by tram? I do not anticipate that there would be any difficulty at the present time. There would be less convenience, than by railway into the city, and in years to come there will be difficulty.

215. Presuming that at Redfern you are able to get the trams away three times as fast as now, and three times as many in the same time, do you think there would be much inconvenience and loss of time to the public then? In the congested hours of the morning there would be a loss of time in carrying the people away; but if you had to carry a very much increased traffic as compared with what you have to-day, the inconvenience would be seriously felt.

216. The Devonshire-street site lends itself to tram connection; you can go down Pitt-street, Elizabeth-street, and on down a new street on the eastern side, and also down George-street, and possibly there may be an extension down Kent-street;—with all these connections would there be much inconvenience to the people? Not for a long time to come, except loss of time.

217. Would not such a system as that distribute the people nearer their places of business than an extension into St. James' Road or King-street? **No**, I think it is far better to carry the people down to, as far as practicable, the farthest point they want to go to, then distribute them from that point.

218. Does the King-street or the St. James' Road site lend itself to the purpose of distribution as well as this site? **Yes**; a great deal better, in my opinion, and in years to come it will be found a great deal more so.

219. What is there to alter it in years to come;—does it not depend more on physical features than on population? I do not think it does.

220. The consideration as to whether any particular site is a good one for distribution? **No**; I think in future the business people of the city will concentrate themselves more and more down at the northern end; the residential sites will become business sites, and will be occupied with offices. The shopping business will be forced out further south, and as that takes place you will have a big population of
business

J. Parry.
24 April, 1900.

business men and factory hands wanting to come to this northern end of the city. They will want to come down within two or two and a half hours in the morning. Those who have to come at 7 o'clock will all want to come together at 7 o'clock, and the same with regard to those who want to come at 8 o'clock, half-past 8, and 9 o'clock. They will all want to come down quickly together. It is in the morning and in the evening that you get the congestion of the traffic, and that can only be dealt with satisfactorily by taking the traffic down to the furthest distributing point and distributing from that centre. In all probability it would be found convenient to put a station at Liverpool-street; there you could distribute the people direct from the train, but, in my opinion, the only satisfactory way of dealing with the railway traffic of the future will be to have the station at the farthest distributing point of the business centre.

221. In accordance with that opinion, any large expenditure on station buildings such as is now proposed would be a waste of money? If it is intended to extend the railway into the city in the future, in my opinion, any expenditure in the erection of this station would be practically a waste of money, because, as I pointed out before to the Committee, a large amount of accommodation at the terminal station is practically required to deal with suburban trains during the business hours of morning and evening; therefore if we erected a station there, and to-morrow we decided to extend the railway into the city, and to take all suburban trains into the city, we should have to construct a station, wherever it might be down at the city end, almost equal in size to this station which you propose to erect now, whereas the station which you have to erect in the city for the suburban business would with very little addition accommodate the country trains; because the country trains are at larger intervals apart, and run at times when the suburban business is easy; and you can utilise the suburban platforms for through trains. On the other hand, you can use the through platforms for suburban train. My opinion is that if a permanent station is erected on the Benevolent Asylum site, that will be the terminus for the main trunk lines and many suburban trains for all time. It will be useless then to extend the present lines by constructing two lines in the future as has been suggested; even if you made a loop, you could not conduct the suburban traffic on it; therefore, in considering this Benevolent Asylum site as a terminus for to-day, in my opinion it has to be considered as a terminus for all time, or else it may be assumed that the greater portion of this expenditure is going to be thrown away.

222. Does not that plan provide for the carrying of six lines into the city, and could you not accommodate your suburban traffic on those six lines if it was found necessary to extend them into the city? Yes; but you must have your terminal station to accommodate the trains to be brought in on these six lines. I think there is a common impression that if this station were constructed to-day, some time hence we can simply construct two lines down into the city, make a loop at that end, so that all our trains can go away on one line and come back on another to Redfern station, and that no terminus would be required on this line into the city. That is altogether a wrong idea. According to No. 5 scheme, submitted by Mr. Hickson, the idea is that the terminal station should be at Garden-road, then to extend the line into the city, and come back by a circle in the Domain to Redfern.

223. Would that scheme involve six tracks as far as King-street? Yes. Another one is shown in red coming down and touching the outer portion of the Domain and going back to Redfern; but these schemes provide for a wayside station at the High School site.

224. Which you condemn entirely? Entirely; it would never work satisfactorily.

225. If this large building set forth in the plan were erected at the Devonshire-street site for the administrative portion of the staff, would it be necessary, presuming that the King-street or St. James' Road station were afterwards built, to duplicate the administrative offices on that site? I should think not; that is a matter upon which I am not authorised to speak.

226. Would it be a matter of inconvenience to have them away from the terminus? It would be far more satisfactory to have them at the terminus.

227. One thing I should like to ask you about is this: Would the Aspinall carriers involve a change in the habits of the people in respect to their luggage? No.

228. People will not be compelled to hand up their luggage when they get to the station, and to trust to the authorities to place it where it should be? No; but they do that now. They give up large portmanteaux to the porters and show their tickets, the porter checks the ticket, takes possession of the luggage, labels it, and takes it to the brake-van.

229. *Mr. Levien.*] You would not take any more responsibility than you do now if the luggage were lost? It would be just the same.

230. *Mr. Dick.*] Would it do away with the necessity of wheeling trucks of luggage about the platform? To a very large extent.

231. *Mr. Watson.*] Suppose that a man wishes to take a portion of his luggage into the carriage, would he utilise the Aspinall carrier? No.

232. It would only be for the heavier luggage? That is all.

233. *Mr. Shepherd.*] This scheme is quite distinct from No. 10 scheme and the St. James' Road scheme;—would it not offer every facility for an extension of the tram system from Belmore-road into the city? Yes; you could deal with the tram system to almost any extent from this station.

234. It would be a great improvement on the Redfern station as far as facilitating the extension of the tram system is concerned? It could easily be arranged to do that.

235. And it would give you ample space to make every possible provision for goods and passenger traffic? Yes.

236. You are speaking about those two lines marked red on the map;—I understood Mr. Deane to say that those were placed there purposely so that they could be extended, if necessary, without interfering with the platform? No. If those were extended at any time, it would be necessary to put in a subway; it would cut the station in two—that is, when the extension took place.

237. I should like to have your opinion in reference to the capability of the trams to deal with all the traffic, supposing this plan were adopted; there is an extension of trams down the various streets;—do you think that they would be able to carry all the traffic? If a tram were put down in Pitt-street, it would carry the traffic at the present time, but in my opinion it is not a satisfactory way of dealing with it, looking to the future. My opinion is very pronounced on that point. The only satisfactory way of dealing with the suburban traffic is to take it to its farthest distributing centre.

238. Do you think that in every particular the King-street scheme would be a thoroughly satisfactory one? The Hyde Park scheme could be made to provide a satisfactory station.

239. Do you not think it would serve only a very small proportion of the city? I think it would be a distributing centre for a thickly-populated portion of the city. J. Parry.
240. No doubt it would, but at the same time there is a large vacant space on the east, the whole of Hyde Park, and the whole of the Domain—and you might say that it is really outside of the city;—it is on the actual boundary of the city, as far as the population is concerned? Of course you could never get to everybody's door; you must be a little distance from some of the houses. In my opinion, considering the easy accessibleness of the Hyde Park site, you will not get a better one which will give the necessary accommodation at a reasonable cost. 24 April, 1900.
241. I suppose that if this scheme were adopted you would be enabled to arrange a very much larger number of trams to leave the station in a given time than can be done under the present system, could you not? I think so.
242. In fact there could be almost a platform arranged for each street—George-street, Pitt-street, Castle-reagh-street, and Elizabeth-street—and that would greatly facilitate the traffic by the trams? Yes; that could be done.
243. And the trams would be likely to take the passengers under these circumstances without any trouble? Yes; the system would answer for the present, but I do not think it would in the future.
244. They have similar conditions in New York? Their desire is to transport the people from the up-town to the down-town end, and it is astonishing how similar New York is to the general configuration of Sydney. They would give anything to be able to bring their railway to the down-town end. They can accommodate the traffic, but it is done at a snail-crawling pace, which the people object to. What they want is quick transit from one end to the other.
245. Mr. Watson.] With regard to the possibility of an extension into the city in the future—supposing the Devonshire-street station were constructed, would it not be possible to have a loop which the trains could run right down, coming back into the station again, assuming, of course, that you went down the eastern side and came back on the western side of the city? I do not think it would be satisfactory.
246. If you had a sufficient number of lines on your loop you could accommodate the trains, could you not? Yes.
247. The people could be taken by that system quickly to their destination, could they not? Yes.
248. Then, when you have completed the round of the loop, you could dispose of your empty cars at Devonshire-street station and at Redfern, could you not? Yes; but the cost of doing that would be great.
249. You could dispose of them, and have plenty of room in the combined Redfern and Garden-road station—enough room for all the shunting of the carriages, and so on? Yes.
250. Would you not have a portion of what is now occupied for shunting purposes and cross roads at the Redfern Station available in the future if you had this Garden-road station? You will have the increased area.
251. Would you not have more room in the Redfern Station after the station has been made at Garden-road? Yes, considerably more.
252. Therefore, you could deal with the empty suburban trains as they came back from the journey on the city loop? You could store your trains.
253. Then your objection to such a system resolves itself, I presume, into running your suburban train some little distance practically empty;—is not that the main objection as to cost? That is the cost of working; when I said cost, I meant the cost of construction.
254. That would be the only objection—the cost of construction and working? Yes, and the difficulty of running at suitable times.
255. The objection would be to running empty cars and engines back to Redfern Station; but you propose to do that with your St. James' Road proposal? Yes.
256. A great amount of storing of cars would still be done at Redfern? It could be.
257. Was it not proposed to be done? It was.
258. Seeing that it is only a difference in degree, is the distinction between the cost of working in the proposed St. James' Road scheme and any proposed loop scheme that may be made afterwards? Yes; apart from the additional cost which would be required for the connection of signalling blocks, &c., but it would be far less satisfactory in dealing with the business.
259. Now as to the capital cost, unless we are prepared to take a large slice of the Park, we shall have to pay an enormous amount for resumptions? Yes.
260. It has been suggested that with the latest developments of electrical traction in other parts of the world it will be possible in a reasonable time to look forward to the working of the suburban traffic by electricity; and if that were practicable to-day it is supposed we should then do without resumptions for the city extension, because with electric traction tunnelling would not be objectionable, and wayside stations might be made; and, as far as safety of working is concerned, would it not be possible to have the extension of four or six lines from the proposed Devonshire-street terminus without the necessity for a terminal station in the city? No; I do not think so, because you must first of all in a loop system, construct a line all round the city, and take the people to the outskirts of the city; and you have to pick them up during the busy hours of the evening at wayside stations. Therefore, you run double your proper distance in going round, and in my opinion you take the people out of their way. Take the scheme put forward by Mr. Hammond, you have a terminal station at Devonshire-street, and you have to extend a loop line from the Benevolent Asylum site, along the western side of the city, to Circular Quay and back, *via* the Domain and Hyde Park, into Redfern. That would be the route. Passengers would be landed at the corner of Druitt-street and Sussex-street. Then, again, at Erskine-street and King-street, and those passengers would be right away from the business portion of the city, unless you took them right round to Circular Quay and brought them back to the Domain station.
261. Would it not be possible in the first instance to limit the diameter of your circle to contract the loop so as to get nearer the centre of the city both going and coming, assuming that you have electric traction and tunnelling? It would be very difficult to speak offhanded on that point. In my opinion, to make it part of the present suburban system, would it be a failure. If you wish to do that you should drop all your passengers at the Benevolent Asylum site and make a city railway independent of the existing lines altogether, as an electric system, then have your circular railway.

- J. Parry. 262. We were informed the other day by Mr. Deane whilst they have their metropolitan underground railway as a separate city system, two of the large suburban lines take suburban traffic for some distance alongside the metropolitan lines, and are practically part of the metropolitan underground system, and use wayside stations instead of a terminal station? It would be a few trains.
263. He seemed to indicate that there were quite a number? I do not think it is so; but not being acquainted with the place I could not say.
264. *Dr. Garran.*] If this scheme were adopted in the first instance, as the Minister seems to think possible, leaving the other extension to be made afterwards, we could only make this a success by multiplying trams? Yes.
265. And this system would lend itself to tramways coming up different streets? Yes.
266. You have two levels here; you could bring some trams on one level and some on the other, and instead of the people all having to go to one place to take trams, there are the George-street, the Pitt-street, the Elizabeth-street places, and perhaps a York or Kent street place, and they could all be worked without running into one-another? That could be arranged.
267. I mean that having three frontages and two levels you would have a very great advantage? Yes.
268. Suppose we make an extension to St. James' Road at once, would it cost very much more to shift the wayside station at Redfern to the north side of Devonshire-street, instead of into the station-yard? If anything is done for removing the Redfern Station to the Benevolent Asylum site the least that could be done would be to move the platforms and the lines at once.
269. Suppose you had a station at St. James' Road, would two platforms be enough for you? No.
270. Not for a wayside station merely? Yes; but I do not see how you are going to make it one.
271. You were going to make Redfern a wayside station, why not a wayside station on the further side; you are going to spend £30,000 at Redfern to make a wayside station, would it not be better to spend the money you have got on the north side? There would be no objection to that. I confess I do not quite grasp the intention of the question.
272. My idea is that you will be making a beginning perhaps with a large and better station on the north side; you have got the ground? No; if you made it convenient for a wayside station by placing a platform on the north side of Devonshire-street your arrangements would have to be such that they would not be suitable as part of a terminal station.
273. I presume there will always be a terminal station at the Hyde Park site, where you are going to build one? Yes.
274. Only as the traffic grows, it occurs to me that the Benevolent Asylum site might give relief twenty years hence to the Park station? Of course you could construct a wayside station to the north of Devonshire-street, but it would not form part of what would be considered a large terminal station for the future.
275. No; but I do not want us to waste more money south of Devonshire-street than we can help;—it is a bad site? It would be an improved arrangement to bring it on to the north site.
276. *Chairman.*] Since you last gave evidence, have you seen anything to indicate that there is likely to be any decrease in the pick-up traffic of the electric trams, or is it not rather on the increase? I think it is on the increase.
277. At busy times of the day, are not those trams crowded to excess? Yes; there are large numbers of complaints now about the overcrowding.
278. Is it not the daily experience, bearing out your contention, that these trams would be required for the suburban traffic and the pick-up traffic? That is so.
279. And it is impossible to run through trams from the railway station into the city of Sydney to accommodate the railway passengers? Yes, unless you set one street aside for the railway traffic.
280. So that, so far as you can see, you have no reason to change your opinion that if possible it is desirable to bring the railway into the city of Sydney? No.
281. And if that is the case, it would be a mistake to build this large station at Devonshire-street? Yes. I am very decided on that point. If a large station is built there, it should be on the understanding that the terminal will remain there.
282. That is, it will end the railway into Sydney? Yes. If anything is done, then, with regard to a city railway, it will be an independent system, apart from the principal system.

WEDNESDAY, 6 JUNE, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.

The Hon. ANDREW GARRAN, LL.D.

WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of erecting a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and extending the railway system of the Colony thereto.

Hugh McLachlan, Secretary to the Railway Commissioners, sworn, and examined:—

H. McLachlan. 283. *Chairman.*] The Committee desire to ascertain the nature of the arrangements under which the Railway Department occupy their present offices in the Public Works Buildings? We have an arrangement with the Department of Public Works, by which we are tenants of the rooms we occupy, paying for them £1,200 per year.

284. How does that compare with the rent your Department paid in Macquarie-street? It compares favourably, because we have more offices upstairs here than we had in Macquarie-street.

285. Is the total amount now paid about the same as before? Less.

286. Do you know how much? Roughly, I should say about £500 per year.

287. Have you sufficient space where you are now for all purposes? Yes, for the officers we have there.

288.

288. *Mr. Watson.*] Can you roughly state what area will be given up if you should go into the proposed new building? Yes; the rooms occupied by the Railway Department in the Public Works buildings are as follows:—

H.
McLachlan,
6 June, 1900.

Extension of the Railway System from Redfern to the Circular Quay—Report of the Engineer-in-Chief for the Victorian Railways	E

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

EXTENSION OF THE RAILWAY INTO THE CITY OF SYDNEY.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom was referred the duty of considering and reporting upon "the expediency of extending the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station," have, after due inquiry, resolved that it is not expedient that the extension of the railway system of the Colony, from the present terminus at Redfern, into the City, including the erection of a large central station in the north-western division of the Park, fronting St. James' Road, or the deviation suggested in the reference of the 7th December, 1899, be carried out; and, in accordance with the provisions of sub-section (IV), of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

CIRCUMSTANCES LEADING TO THE PRESENT PROPOSAL.

1. A proposal to make a terminal station in the north-west quarter of Hyde Park, known as the St. James' Road scheme, was submitted to the previous Public Works Committee and approved. This scheme was referred back to the present Committee, and in conjunction with it was a modification, taking a smaller portion of the Park, and described as the King-street or No. 10 scheme. The Committee, therefore, have had both schemes before them and have considered which of the two was the better, or whether either should be recommended.

Objections having been raised to appropriating the portion of Hyde Park required in connection with the St. James' Road proposal, and many persons being of opinion that an extension of the railway into the city was unnecessary, efforts were made to find some other solution of the question.

The services of the Engineer-in-Chief for Victorian Railways were obtained for the purpose of reporting and advising on the various schemes which at different times had been submitted, and his report will be found in the Appendix. The Engineer-in-Chief for Railway Construction in New South Wales was also instructed to devise certain alternative schemes, in conformity with which instructions he prepared ten, each of them being described in the evidence given by him in the present inquiry.

DESCRIPTION

DESCRIPTION OF THE ALTERNATIVE SCHEME.

2. By the King-street (or No. 10) Scheme, six lines of rails would be carried from the present Redfern terminus over Devonshire-street, through part of the Benevolent Asylum ground, and part of the Devonshire-street Cemetery and Police Barracks, and thence on viaduct from Belmore or Garden Road over Belmore Park and Elizabeth-street to a little beyond Goulburn-street, which would have to be slightly diverted. From there they would proceed on a descending grade, not steeper than 1 in 100, to the corner of Liverpool-street and Elizabeth-street, and passing under the former without altering the surface level, would be carried through Hyde Park in open cutting (with foot-bridges for pedestrians) as far as Park-street, a width of 80 feet being taken from the Park for the purpose. Then passing under Park-street, without altering its level, they would enter the main terminal station situated between Park-street and King-street. From the end of the station four lines of way would be continued under King-street, and proceed in tunnel under the Domain to a point between the Art Gallery and Sir John Young's Crescent, where, on an area of 8 acres, stabling accommodation for engines and carriages would be provided. The main station building would face King-street (the width of that street between Castlereagh-street and St. James' Church being increased to 100 feet), its eastern side extending 80 feet into the Park from Elizabeth-street, and the west side abutting on Castlereagh-street, which would be widened to 75 feet. At the main station, nine platforms would be provided, so that all classes of traffic, suburban and long-distance, could be accommodated, and the passenger portion of the building would include all the usual offices for the accommodation of the public and the station staff, as well as offices on the first and upper floors for the Railway Commissioners and their administrative staff. At the Park-street end of the station provision would be made for a parcels office and lines for docks for horse-boxes and carriages.

Under this scheme, St. James' Road, and that portion of Elizabeth-street between Park-street and King-street would be closed, the tram-lines being temporarily carried along its eastern side and taken down Phillip-street until the conversion of the eastern suburban tramway lines to electric traction, when it is the intention to carry them along Castlereagh-street, and so down to the Circular Quay. It is very probable, however, that the temporary rearrangement of the Elizabeth-street tramway would not be necessary, because, before the proposed new railway station could be constructed, it is regarded as more than likely that the overhead electric system will have been extended to all the tramways in the city, and the opportunity afforded for the construction of the permanent Castlereagh-street line at once.

On the completion of the extension into the city Redfern would become a wayside station, the station arrangements there being remodelled.

The scheme does not provide for goods traffic, nor would it meet requirements for an extension to North Shore.

ESTIMATED COST.

3. The estimated cost of carrying out the No. 10 Scheme is £1,564,000, the details of the estimate being as follows:—

Works, with office accommodation as provided in St. James' Road scheme, £731,700 (say)	£732,000	
Additional accommodation asked for by Railway Commissioners	30,000	
		£762,000
<i>Add</i> —Alterations at Redfern	20,000	
Lowering Devonshire-street	18,000	
Redfern to Belmore Road	16,000	
		54,000
		816,000
<i>Resumptions</i> —		
Belmore Road to King-street	741,000	
Damage done to Benevolent Asylum Grounds and Barracks	7,000	
		748,000
		£1,564,000

Or,

Or, with cost of resumptions as estimated by the Government Land Valuer :—

Works, with office accommodation, as provided in St. James' Road scheme, £731,700 (say)	£732,000	
Additional accommodation asked for by Railway Commissioners	30,000	
		£762,000
<i>Add</i> —Alterations at Redfern	20,000	
Lowering Devonshire-street	18,000	
Redfern to Belmore Road	16,000	
		54,000
		816,000
<i>Resumptions</i> —		
Government property, including a strip, 80 feet in depth, of Hyde Park, from Liverpool-street to St. James' Road, also Supreme Court, Registrar-General's Office, Carter's Barracks, and High School (say)	£300,000	
Private lands, business interruptions, &c.	540,000	
		840,000
		£1,656,000
Or, inclusive of the whole of the private land required, but taking a depth of 140 feet of Hyde Park, between Park-street and St. James' Road, to avoid the extension into the Domain—		
Works	£816,000	
Resumptions	860,000	
		£1,676,000

RAILWAY COMMISSIONERS' REPORT.

4. In reporting upon the proposal the Railway Commissioners deal with an estimated cost of construction amounting to £1,491,000, the difference between that sum and the present estimate of £1,564,000 being due to additions since the date of the Commissioners' report. The annual cost of working the extension and paying interest on the capital expenditure is given as £63,530, and the traffic estimate as £38,000, representing an annual loss of £25,530; or, if the cost be taken at £1,564,000, a loss of £27,720. The Commissioners, in their report, assume that the original Hyde Park scheme is not to be adopted, and on that assumption they have no hesitation in stating that the proposed terminal station fronting King-street would best meet public requirements. A terminal station at King-street, they point out, would entirely dispense with the necessity for any expenditure on a new station upon what is known as the Devonshire-street site.

FORM OF THE INQUIRY.

5. In carrying out their inquiry the Committee first had the proposed scheme and the other schemes prepared by the Railway Construction Department (including that in connection with St. James' Road) explained. They then had the condition of the present station at Redfern described, and following upon this the circumstances or reasons regarded as justifying the extension of the railway into the city. In view of the advantages offered by the electric tram system in George-street they also sought to ascertain whether the existing electric service, or its further extension along new routes, would meet the requirements of travellers to and from the Redfern terminus as it is at present situated. They next had the schemes submitted by witnesses outside the Government Departments explained. In company with a responsible officer of the Department of Railways and the Engineer-in-Chief for Railway Construction, they inspected the Redfern Station and the site on the north side of Devonshire-street proposed in connection with another inquiry for an enlarged terminus; and they carefully went over and examined the routes of the two principal unofficial schemes placed before them. They further requested the Engineer-in-Chief for Railway Construction to examine the whole of the private schemes submitted to them, and obtained his opinion thereon.

DIFFERENCE BETWEEN THE KING-STREET AND THE ST. JAMES' ROAD SCHEMES.

6. From an engineering point of view, the difference between the King-street scheme and that by which the railway would be carried to St. James' Road is chiefly in connection with the position and arrangements of the terminal stations, while

while the cost of the former greatly exceeds that of the latter owing to the necessity for extensive resumptions. In the St. James' Road proposal the site of the station was the whole of the north-western division of Hyde Park, the approach to it from Liverpool-street being through a semi-open cutting, constructed on what is designated the cut-and-cover principle, through almost the centre of the south-western section of the Park. The portion of the Park appropriated for the station and the approach to it under the King-street scheme, is a strip of 80 feet from Liverpool-street to Park-street, and of 80 feet from Park-street to St. James' Road, along the western edge of the Park, the station occupying this portion of the Park land and the area extending across Elizabeth-street to Castlereagh-street.

The portion of the Park included in the St. James' Road scheme comprised nearly 13 acres; that in the King-street scheme, about $4\frac{1}{2}$ acres, in addition to which 8 acres are taken from the Domain. To exclude the Domain extension from this scheme it would be necessary to take, from Park-street to St. James' Road, a further strip of 60 feet from the Park, which would increase the total appropriation of Park land under the scheme to 6 acres 15 perches.

At St. James' Road station there were to be eleven platforms, the Railway Commissioners being of opinion that this number would be sufficient to deal with the traffic for practically all time without extending any of the station lines beyond St. James' Road, though it was pointed out that that might be done in the future, if it should be thought necessary. With the King-street scheme the extension of four lines through the station into the Domain is a new feature, it being designed in order to allow of a reduction in the number of platforms, and thus in the width of the station.

Other differences between the two schemes are that under the St. James' Road scheme, St. James' Road and Elizabeth-street would remain open for traffic; whereas under the King-street scheme the former would be wholly closed, as would also that section of Elizabeth-street between King and Park streets.

CONDITION OF REDFERN STATION.

7. Redfern Railway Station has long been insufficient to properly meet traffic requirements, and the daily work connected with the arrival and departure of trains is carried on with great difficulty and with considerable risk to the travelling public.

In 1896, the Railway Commissioners, writing to the Minister for Railways on the subject of city railway extension, stated that "the difficulties of working the station at Redfern have increased, and are still increasing, to such an extent that a considerable improvement in the terminal arrangements is, in the interests of safety, as well as to provide for the comfort of the travelling public, absolutely necessary," and since that time the difficulties have not decreased. The traffic has outgrown the capacity of the station, and the available room for alterations or improvements is too limited to be of any service.

Only two of the station platforms are long enough to accommodate trains of more than eight cars and engine, clear of other roads, though it is frequently necessary to run trains up to nine cars. Other platforms are much too short for ordinary seven-car trains, without fouling other roads. Much difficulty is therefore experienced at holiday and other times by trains standing on one line blocking the entrance to other roads. It has been necessary to cut the northern mail train into two parts in order to discharge the passengers and luggage, the platform not being long enough to accommodate the whole of the train. Frequently, the Committee are informed, both north and west trains are seriously inconvenienced by having to load up at two separate platforms, and the two parts joined together at the last moment.

As many as 628 passenger and goods trains, and light engines, pass through Redfern tunnel, to and from the station, and Darling Harbour, on an ordinary day, and on a holiday, the number, according to figures put before the Committee, has reached 663.

But

But the number of trains and engines shown as arriving and departing does not, it is stated, represent the work done in the passenger yard, as a large proportion of the passenger trains arriving have to be drawn out from the platforms and shunted to liberate the engines which brought them in, or to place the cars at other platforms to form other trains. There is also a great deal of shunting of the engines to keep them out of the way of incoming and outgoing passenger trains, as there are no refuge sidings between the platforms or the main running lines to allow of the engines being readily shunted clear to take water or stand while other trains arrive and depart. Neither are there any sidings between or handy to the platforms where spare coaches can stand, so as to be readily available to strengthen trains, and considerable shunting across the main running lines is occasioned to get to the carriage sidings.

When it is stated that all this shunting takes place within the short distance between the platforms and the tunnel while trains are arriving and departing, the risk of accident, it can be seen, is very great. In consequence of the difficulty of shunting trains, owing to the limited length between the station and tunnel junctions, special inspectors have had to be appointed to give verbal instructions, instead of relying only on the system of fixed signals, thus introducing, it was explained to the Committee, a most undesirable element into the working of such an important yard.

METHODS OF REMEDYING THE DIFFICULTIES AT REDFERN.

8. Two methods of removing, and one of alleviating, the difficulties at Redfern Station are described in the evidence. These are—

- (1.) Extending the railway into the city, and erecting there a large central station.
- (2.) Erecting a large station on the north side of Devonshire-street.
- (3.) Improving as far as possible, by alterations, the present arrangements at Redfern.

EXTENDING THE RAILWAY INTO THE CITY.

9. The Railway Commissioners favour the extension of the railway into the city, and, if the St. James' Road scheme cannot be carried out, approve of the No. 10 or King-street scheme. They recommend a city extension as a means of both overcoming the difficulties at Redfern and affording additional accommodation to railway passengers. In compliance with a persistent demand upon the part of railway travellers residing in the western suburbs, and from passengers travelling between Sydney and Penrith, Campbelltown, and the Hawkesbury, who want to be brought as quickly as possible within easy reach of their business premises or offices in Sydney, and from a conviction that such an extension would pay, the Commissioners for years past have urged that the railway should be extended citywards, and have recommended that a large terminal station should be erected in either the south-west or the north-west division of Hyde Park, those situations being, in their opinion, the most suitable for the purpose. Such a scheme, they state, would not only fully meet the requirements of the public, but would be very advantageous to the Department, for besides providing all the station-yard accommodation required and paying interest on the capital expended, as well as working expenses, it would, in their opinion, return a substantial and increasing profit.

In their report upon the St. James' Road scheme the annual cost of the scheme, including interest, but excluding all payment for the land taken from Hyde Park, is stated as £27,500, while the traffic estimate is £33,365, made up of a saving of £1,365 in rents for offices of the administrative staff, and £32,000 additional railway revenue obtained by adding 1d. for each ordinary passenger journey, 1s. 6d. and 1s. per month for first and second-class season ticket-holders (with a percentage reduction per month for tickets taken out for three, six, and twelve months), and 3d. per week for workmen's tickets.

Additional revenue was also expected under this scheme from an increased suburban traffic and larger rents for refreshment-rooms.

ERECTING

ERECTING A LARGE STATION ON THE NORTH SIDE OF DEVONSHIRE-STREET.

10. A scheme much more desirable, in the opinion of the Committee, than extending the railway from Redfern to St. James' Road or King-street is the erection of a large station on the north side of Devonshire-street. There the station and approaches would occupy all the ground bounded by Devonshire-street on the south, Belmore-road on the north, a line extending from Castlereagh-street on the east, and Pitt-street on the west, an area of 22 acres 1 rood 20 perches, where provision could be made for everything necessary. Eleven platforms of full length and width, with two or three roads between, and traversers at the end, would accommodate all trains; suitable arrangements would be made for interchange between the railway and electric tramway systems; and the general design would permit of six lines being extended at any time further into the city without interfering with the station buildings. Under this scheme Devonshire-street would be closed, except for a subway for foot-passengers, and an approach to the cab road leading into the station, a new street being constructed from the intersection of Devonshire-street and Castlereagh-street to Belmore-road; and Belmore-road and Gipps-street would be widened. The estimated cost in connection with this proposal is given as follows:—

General works	£138,000
Interlocking	15,000
Station buildings and Administrative offices	233,000
Lighting	5,000
Alterations to Redfern Station	30,000
	<hr/>
	£421,000
	<hr/>
Resumptions	£140,600

In this scheme, the land, except in the case of Christ Church Parsonage, is practically the property of the Government already. The sum set down for resumptions is mainly intended for re-erection of the buildings now on the site.

The Railway Commissioners, in their report upon the proposal, say that a perfect terminal station could be constructed on this site, and relief thereby afforded to the existing Redfern Station; but, in their opinion, the scheme is seriously defective in not providing an extension into the city which would meet the convenience of railway travellers, and upon which a charge could be made to pay interest and working expenses. As, however, the erection of administrative offices at Devonshire-street will effect a saving of the rent now paid for the offices occupied in Bridge and Macquarie streets, to that extent the scheme will be an advantage, and the Committee are of opinion that interest and working expenses will be, to a considerable extent, met indirectly by the large increase that will take place in the traffic upon the trams connected with the railway.

The proposal to construct a new terminal station at Devonshire-street was first made, the Committee are informed, by the late Chief Commissioner, Mr. Eddy, about the year 1893, but at that time the scheme did not provide for administrative offices, Mr. Eddy being then of opinion that these offices should be in the part of the city where they are now situated. The opinion of the Commissioners at the present time is that the greatest efficiency will be secured by having the offices at the railway station where the railway staffs are employed.

IMPROVING REDFERN STATION.

11. Redfern Station occupies an extensive area, the station-yard covering $30\frac{1}{4}$ acres and the platforms and approaches $6\frac{1}{2}$ acres; but much of the area is taken up by the arrangements in connection with the traffic to and from Darling Harbour, and the produce trade. It is quite possible, by further resumption to the south, to improve the station, but it would be very costly, and would be difficult to carry through while the traffic was being conducted, and when completed the result would not be satisfactory. In the opinion of the Engineer-in-Chief for Railway Construction, the only way to improve Redfern station would be to extend it to the northern side of Devonshire-street, and to lay down lines and build platforms and station accommodation there, joining up, when everything was ready, with the existing lines at Redfern, and closing the old station directly the new one came into use.

EAST

EAST OR WEST.

12. One specially noticeable feature in the inquiry has been that the advocates of the City Extension Railway divide themselves into two classes—those who hold that the proper line should traverse East Sydney, and those who hold that a greater service would be rendered by a line that traverses the west. If we study a map of Sydney, it certainly does appear that the part east of George-street is largely taken up with the magnificent reserve of the Government House Domain, the Public Domain, the Botanic Gardens, Hyde, Phillip, and Cook Parks, while the area of West Sydney, which is greatly wanting in reserves, is pretty closely built upon. An eastern line, terminating at King-street or at Circular Quay, would accommodate those who wish to go to Parliament House, to the Hospital, to the chambers of the medical men who abound in Macquarie-street, to the Government offices, to the clubs, to the law courts and lawyers' offices, to the largest hotels, and to the places of business lying east of George-street. That in itself is a pretty considerable traffic. But on behalf of the western route it is maintained that that is pre-eminently the locality for warehouses and wharfs, for all the large produce business, and for numerous factories, and that more people come in and out of Sydney every day who make for some place lying to the west of George-street than for places to the east of it.

Even Mr. Rennick stated that but for its expensiveness the western route should be preferred. Several schemes have been put before the Committee showing possible lines through West Sydney, and Mr. Selie and Mr. Greenwood have specially assisted the Committee in putting before them lines worked out to a great deal of detail, and showing how stations might be provided at the Town Hall, Wynyard-square, and Circular Quay—three admirable centres for passenger traffic. Mr. Sievers, the Government Land Valuator, has testified that neither of these gentlemen has underestimated the cost of land resumption, nor has there been any evidence to show that they have underestimated the cost of the works. The cost of Mr. Selie's scheme is, to some extent, complicated by its being combined with proposals for reconstructing parts of Sydney. Both schemes, however, have been objected to on engineering grounds by Mr. Deane, and his objections have not been satisfactorily met. Neither of these schemes, nor that of Mr. Horbury Hunt, which has been less worked out in detail, could be recommended by the Committee for immediate adoption. All the West Sydney schemes have been advocated on the ground that they lend themselves to an extension to North Shore over the proposed North Shore bridge. Mr. Deane, however, holds that it would be a mistake to mix up a passenger service line for West Sydney with the North Shore line, and he has sketched two possible lines, one for each service. The cost of these two lines has not been worked out, and it does not at present seem likely that the Government would go to the expense of two, roughly, parallel lines through West Sydney. As matters stand at present, therefore, there is no West Sydney route submitted which is in a position to be recommended.

THE GOVERNMENT SCHEMES.

13. The private schemes offering no adequate solution of the question, the Committee were thrown back upon the schemes submitted by the Government, and these, as far as regards the question of suitability in meeting railway requirements, without excessive cost, were reduced to two—the St. James' Road and the King-street schemes—each of which would appropriate a portion of Hyde Park, and one a part of the Domain also. A third proposal was favourably viewed by the Engineer-in-Chief—that described in the evidence as No. 4 scheme, by which the terminal station would be situated on a site between King, Elizabeth, Market, and Pitt streets; but the cost would be excessive, and though Hyde Park would not be interfered with to any appreciable extent, a portion of the south-west corner would be affected.

THE ELECTRIC TRAM DEVELOPMENT.

14. Dealing with the St. James' Road and King-street schemes, in the light of the evidence before them, and the general desire to, if possible, avoid taking any portion of Hyde Park, the Committee came to the conclusion that neither scheme recommended itself for adoption so strongly as one which would provide an escape
from

from the dangers now incurred at the Redfern terminus, combined with an enlarged system of electric trams for bringing railway passengers from the terminal station into the city, and distributing them at different points within easy reach of their offices or places of business, and at the Circular Quay.

The results from the construction of the George-street electric tram-line have, in the opinion of the Committee, materially changed the situation in relation to the city railway extension question.

Electric trams, running at intervals of from one to two minutes between the Redfern railway terminus and Circular Quay, and stopping on the way at all street intersections, are now conveying railway passengers into the city so expeditiously that the number of railway travellers patronising the steam trams in Elizabeth-street are very few. George-street divides the city more equally than any other street, no time is lost by passengers waiting for the trams to start from the terminus, and in the return journeys there is no delay. During the busy hours of the morning and afternoon the electric trams are overcrowded, but that is owing to the fact that one line is insufficient to deal with the traffic. The popularity of the electric system, and the recognition by the public of its usefulness as a means of getting into and out of the city, are evident by the extent to which it is used. Additional lines down other streets between the railway terminus and Circular Quay would at once relieve the George-street trams, and be a further advantage to railway travellers.

Statistics relating to the railway tram traffic, collected at the instance of the Committee by the Traffic Superintendent of the Tramway Department, and given by him in evidence, show that the average number of persons arriving at Redfern Station and departing therefrom by train, daily, is 23,500, 13,000 of whom are carried from and to the station by the George-street electric trams and 1,150 by steam trams, the balance, 9,350, walking. Estimated on the basis of the number now carried, the number of passengers travelling to and from Redfern Station annually by the George-street electric trams is given as 8,700,000, and of passengers travelling to and from the station by steam trams, 700,000. The comparison is a striking one, and though it may be admitted that a certain portion of those railway travellers who now walk to and from the station do so because of the difficulty experienced in finding a steam tram at the moment it is wanted, the figures undoubtedly indicate that the great bulk of the railway passengers travel, after leaving the train, by way of George-street, and that their requirements are, so far as route is concerned, met by the George-street electric trams.

In relation to this subject, it is instructive to notice that in the Legislative Assembly, recently, during a debate upon the overcrowding of the George-street electric trams, the Honorable the Premier and Minister for Railways read a letter from the Railway Commissioners in which it was stated that, though to accommodate the traffic an auxiliary service of steam trams had been kept on, between which and the electric cars there was ample accommodation, "the people will not travel by the steam cars, presumably because the electric cars go down George-street, where the steam cars could not possibly go."

AS TO NECESSITY FOR CITY EXTENSION.

15. The primary question to be dealt with is, whether it is immediately necessary to extend the railway into the city.

The majority of the witnesses from the Western Suburbs contended they could not be adequately served unless this were done, though considerable difference of opinion existed amongst them as to the proper terminal site. It must be remembered that none of the proposals put forward were to deal with other than passenger traffic, and it is admitted that the Devonshire-street site is the most central for the distribution of country travellers. The remaining elements are the Western suburban and semi-suburban passengers. A proportion of these now suffer some delay in reaching their places of business daily; but on examination the inconvenience is found to be not so serious as might appear at first sight. The delay involved in changing from train to electric tram at Redfern averages, according to the evidence of the traffic officials, only from one to two minutes, with a maximum delay of three minutes.

minutes. Then the George-street tram takes, say, ten minutes to get to King-street, as against three minutes required for a continuation of the train journey from Redfern to the corner of King and Elizabeth streets. This, apparently, shows a delay of ten minutes in travelling by tram; but against this has to be placed the fact that, as a rule, the trams land passengers within a shorter distance of their business premises than could any practicable city railway. This advantage will be emphasised by the additional tram-lines which are admittedly necessary to relieve the George-street line, as passengers would then have a greater choice of routes on arriving at Redfern or Belmore-road, with a correspondingly greater opportunity of being taken near their eventual destination.

Another point, deserving of attention, is that while the Commissioners' estimate of probable revenue to be derived from the city extension is based on the supposition that the whole of the passengers arriving now at Redfern would go on to King-street or Hyde Park, it is shown in the evidence of the traffic officials that of the total passengers arriving daily at Redfern only 60 per cent. take either the electric or steam tram, the remaining 40 per cent. preferring to walk to business. The presumption is that the objective of these latter passengers is near Redfern, and that a similar proportion would find no use for a city extension.

There is little doubt but that at some future time further city railway extension for passengers will be not only necessary but profitable, and one consideration that weighs with the Committee, in expressing a preference for the Devonshire-street site, is its suitability, as a starting-point, for a circular city line, or an extension towards North Sydney, or the Eastern Suburbs, so soon as probable traffic warrants the heavy expenditure involved.

It must be borne in mind, too, that in the larger centres of the world, electric traction is becoming increasingly popular as a means of dealing with concentrated traffic. This does not alone refer to tramways, but also to what are practically electric railways, running on enclosed tracks, and at a high rate of speed. It is, therefore, probable that within a few years the whole problem of city railway extension will assume a new complexion, and the Committee feel that their present recommendation is in harmony with this anticipated development.

In the meantime, a large and well-designed station at Devonshire-street, in conjunction with additional tram-lines (which would probably be highly remunerative), will, in the opinion of the Committee, be sufficient to deal with the traffic.

THE THREE SCHEMES COMPARED.

16. It has been said that only an extension of the railway into the city will be peculiarly profitable; but an examination of this phase of the question does not prove the St. James' Road scheme to be the profitable one it has been represented to be, and in a comparison with other schemes it shows nearly as much unprofitable expenditure or dead money as the scheme for erecting a new terminal station at Devonshire-street.

The original cost of the St. James' Road scheme was £650,000, which included a sum of £100,000, the estimated value of land taken between Belmore Park and Liverpool-street. The estimated value of the section of Hyde Park appropriated by this scheme is £165,000, which would make the cost of the scheme, so far, £815,000. To this, however, must be added £30,000 for additional accommodation required by the Railway Commissioners, and £25,000 for an increase in prices, making the total £870,000. The annual charges upon this amount would be, interest at 3 per cent., £26,100, and working expenses and maintenance £8,000, or together £34,100. Against this must be placed the expected traffic, which, in their report upon the St. James' Road scheme the Railway Commissioners estimated at £32,000, but which is now estimated at £38,000. From the evidence before them, the Committee believe it would be about half that sum, the original estimate being based on the belief that the whole of the passengers arriving at Redfern would continue their journey into the city by train; whereas, in view of what the George-street trams are doing, it is probable that the number travelling to St. James' Road, or its vicinity, would not be more than half. The half of the traffic estimate being £19,000, the deficiency would be £15,100, or a sum representing interest at 3 per cent. on £503,300.

The

The estimated cost of the King-street scheme in regard to works alone is £816,000, and with resumptions, Government and private property, £840,000, amounts to £1,656,000, or, taking into account the extra 60 feet of Hyde Park land necessary to avoid appropriating a portion of the Domain, £1,676,000. The annual charges are, on the first amount, interest at 3 per cent. £49,680, and working expenses and maintenance £18,800, or in all £68,480; and on the second amount, interest at 3 per cent. £50,280, and working expenses and maintenance £18,800, or together £69,080. The traffic estimate is £38,000; but reducing this by half, in accordance with what the Committee are of opinion the traffic would be, the result is £19,000, which, deducted from the annual expenses, leaves in the first case £49,480, or interest at 3 per cent. on £1,649,300, and in the second, £50,080, or interest at 3 per cent. on £1,669,300.

Taking the Devonshire-street station scheme, the estimated cost is £561,000, the annual cost £14,460, the traffic increase nil.

But placing the three schemes in comparison, the result is as follows:—

ST. JAMES' ROAD SCHEME.

Cost as originally estimated	£550,000
Estimated value of land taken between Belmore Park and Liverpool-street	100,000
Estimated value of land taken from Hyde Park	165,000
Extra office accommodation asked by Railway Commissioners	30,000
Increase in prices since original estimate was made	25,000
Total	£870,000
<i>Annual cost—</i>	
Interest at 3 per cent.	£26,100
Working expenses and maintenance	8,000
	£34,100
<i>Traffic estimate—</i>	
Estimate of traffic on the basis that, at most, only half the number of passengers travelling to Redfern would travel by the train into the city	£19,000
Deficiency £15,100, representing interest at 3 per cent. on £503,300.	

KING-STREET SCHEME.

Estimated cost of works	£816,000
Resumptions	840,000
	£1,656,000
<i>Annual cost—</i>	
Interest at 3 per cent.	£49,680
Working expenses and maintenance	18,800
	£68,480
<i>Traffic estimate—</i>	
Estimate of traffic on the basis that, at most, only one-half the number of passengers travelling to Redfern would travel by train into the city	£19,000
Deficiency £49,480, representing interest at 3 per cent. on £1,649,300.	

or, if the scheme should not extend into the Domain—

KING-STREET SCHEME.

Estimated cost of works	£816,000
Resumptions	860,000
	£1,676,000
<i>Annual cost—</i>	
Interest, at 3 per cent.	£50,280
Working expenses and maintenance	18,800
	£69,080
<i>Traffic estimate—</i>	
Estimate of traffic on the basis that, at most, only one-half the number of passengers travelling to Redfern would travel by train into the city	£19,000
Deficiency, £50,080, representing interest at 3 per cent. on £1,669,300.	

SPECIAL ADVANTAGES IN THE DEVONSHIRE-STREET SCHEME.

17. In addition to comparing favourably with the two city schemes in regard to expenditure from which no immediate pecuniary return can be expected, the Devonshire-street proposal offers advantages in station accommodation and conveniences for passengers much greater than could be obtained in connection with either

either of the other schemes. The area of land proposed to be resumed is large enough to provide a terminal station for an indefinite time, an advantage which, in consequence of the enormous expense involved in the resumption of city property, could not be obtained in the vicinity of King-street. Every arrangement necessary for the safe and expeditious working of the railway traffic could be brought into operation at Devonshire-street without difficulty. The station building would provide large and commodious offices for the Railway Commissioners and the different staffs of officers; and the station approaches would not only meet the requirements of pedestrian and cab traffic, but also offer special facilities for the running of trams in conjunction with the trains. Electric trams could be run to and from the station, not only by way of George-street, but also along Pitt-street, Castlereagh-street, and Elizabeth-street; and there would be no difficulty in connecting the western trams with the station. Further, if in the future it should be considered desirable to carry the railway into the city towards King-street or the Circular Quay, provision is made in the scheme for extending six lines in that direction without interfering with the station buildings.

It should also be noted that the Devonshire-street site is in the very centre of the area which on the north, north-west, and north-east, includes the city proper down to the harbour frontages, Pyrmont, Balmain, Woolloomooloo, and Darlinghurst; on the east, Surry Hills, Paddington, and Woollahra; on the south-east, Kensington and Randwick; on the south, Redfern, Waterloo, and Alexandria; on the south-west, Chippendale, Camperdown, Darlington, Erskineville, and Newtown; and on the west, Ultimo, Forest Lodge, Glebe, and Glebe Point.

CONCLUSION ARRIVED AT.

18. In view of the special advantages attached to the Devonshire-street station scheme, the fact that it compares fairly well with the St. James' Road and King-street schemes in regard to expenditure, the interest upon which cannot be met by increased railway fares, and that it involves no appropriation of Hyde Park land, and of the new aspect imparted to the question of city railway extension by the electric tram development, together with the recent resumption of the eastern shore of Darling Harbour, a portion of which may be utilised for a western city railway extension for goods and passenger traffic, the Committee are of opinion that an extension of the railway to St. James' Road or to King-street is not justified, and that neither of those schemes should be carried out.

RESOLUTION PASSED.

19. The resolution passed is shown in the following extract from the Committee's Minutes of Proceedings, of 7th June, 1900:—

Dr. Garran moved,—“That the Committee having given due consideration to the resolution of the Legislative Assembly of the 20th December, 1899,—‘That it is expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James' Road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, be referred back to the Public Works Committee for further consideration and report, in view of certain proposals to deviate from the route already recommended,’ and having given special consideration to the new proposals submitted, have arrived at the following conclusions:—

- “1. That the accommodation for passenger traffic at the present Redfern terminus is wholly insufficient.
- “2. That it would be better in every respect to construct an entirely new station than to attempt a reconstruction of the present station.
- “3. That the best plan will be to extend the railway into the city and erect a terminal station there, as this will give the suburban passengers what they have so long demanded, viz., a station nearer to the business centre of Sydney.
- “4. That of all the extension schemes submitted to the Committee the simplest, the most economical, and the easiest of construction is the scheme known as the St. James' Road scheme, being that originally proposed by the Railway Commissioners. The Committee, therefore, endorses the recommendation made by the previous Public Works Committee in its report dated the 26th August, 1897.”

Mr. Trickett seconded the motion.

Mr.

Mr. Dick moved,—“That the motion be amended by omitting all the words after the word ‘station’ in paragraph 2, and inserting in lieu thereof the following words:—

“(3.) That the best plan will be to extend the railway to the north of Devonshire-street and there construct a commodious station and administrative offices.

“(4.) That in view of the foregoing it is not expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James’ Road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, nor the deviations suggested in the reference of the 7th December, 1899, be carried out.”

The question,—“That the words proposed to be omitted stand part of the motion,”—was negatived on the following division:—

Ayes, 2.	Noes, 5.
Mr. Trickett, Dr. Garrao.	Mr. Shepherd, Mr. Dick, Mr. Watson, Mr. Levien, Mr. McFarlane.

The question,—“That the words proposed to be inserted be so inserted,”—was passed on the following division:—

Ayes, 5.	Noes, 2.
Mr. Shepherd, Mr. Dick, Mr. Watson, Mr. Levien, Mr. McFarlane.	Mr. Trickett, Dr. Garrao.

The question,—“That the resolution, as amended, be now agreed to,”—was passed, on the following division:—

Ayes, 5	Noes, 2.
Mr. Shepherd, Mr. Dick, Mr. Watson, Mr. Levien, Mr. McFarlane.	Mr. Trickett, Dr. Garrao.

On the question,—“That the following be the resolution of the Committee” :—

“That the Committee, having given due consideration to the resolution of the Legislative Assembly of the 20th December, 1899, that it is expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James’ Road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, be referred back to the Public Works Committee for further consideration and report, in view of certain proposals to deviate from the route already recommended— and having given special consideration to the new proposals submitted, have arrived at the following conclusions:—

- “1. That the accommodation for passenger traffic at the present Redfern terminus is wholly insufficient.
- “2. That it would be better in every respect to construct an entirely new station than to attempt a reconstruction of the present station.
- “3. That the best plan will be to extend the railway to the north of Devonshire-street, and there construct a commodious station and administrative offices.
- “4. That in view of the foregoing, it is not expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James’ Road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, nor the deviations suggested in the reference of the 7th December, 1899, be carried out.”

The Committee divided.

Ayes, 5.	Noes, 2.
Mr. Shepherd, Mr. Dick, Mr. Watson, Mr. Levien, Mr. McFarlane.	Mr. Trickett, Dr. Garrao.

The resolution was therefore passed.

W. T. DICK,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 16 July, 1900.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

EXTENSION OF THE RAILWAY INTO THE CITY OF SYDNEY.

TUESDAY, 6 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

THE HON. PATRICK LINDESAY CRAWFORD SHEPHERD.
THE HON. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee proceeded to consider the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Robert K. P. Hickson, Under Secretary and Commissioner for Roads, Department of Public Works, sworn, and examined:—

1. *Chairman.*] You have had prepared a statement describing the proposals for extending the railway into the city which have been submitted to the Committee;—will you kindly read it? Yes; it is as follows:—

R. R. P.
Hickson.

EXTENSION OF THE RAILWAY INTO THE CITY OF SYDNEY.

6 Feb., 1900.

THE proposal before the Committee was referred by the Legislative Assembly, for the Committee's consideration, on the 20th December, 1899, in the following terms:—"That it is expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the city, including the erection of a large central station in the north-western division of the Park, fronting St. James' Road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, be referred back to the Public Works Committee for further consideration and report, in view of certain proposals to deviate from the route already recommended."

The question of extending the railway from its present terminus at Redfern into the city has been for many years so prominently before the public, and has been so thoroughly discussed and ventilated in Parliament and the public Press, that it is unnecessary for me at this juncture to enter into any lengthy review or explanation of the various schemes that have been propounded from time to time. The following brief resume of the more important steps that have been taken officially during the past ten years, with the object of arriving at a definite solution of the question will, I trust, be sufficient to enable the Committee to clearly understand the present position of affairs.

The desirability of bringing the railway into the city has been freely admitted for the past forty years. Public opinion has been practically unanimous on this point; the apparently insuperable difficulty lies in the fixing of the route and a site for the terminal station.

After long years of public discussion the Government appointed a Royal Commission in March, 1890, for the purpose of making a diligent and thorough examination and investigation into the several proposals which had been made for extending the railway accommodation into the city of Sydney, and to inquire into the whole subject, for the information of the Government. This Royal Commission was presided over by the late Mr. Sydney Burdekin, and commenced its inquiry on 2nd April, 1890, sitting in the Town Hall. Thirty-five separate schemes were submitted to the Commission, seven of which were, after inquiry and evidence having been taken upon the whole, selected for further consideration, after report by professional officers of the Government. The other proposals had been shown to be either impracticable or too costly.

The result of the further inquiry was that, in March, 1891, the Commission adopted, by a majority of one, the following resolution:—"That the Commission approve of the Hyde Park scheme, as put forward by the Railway Commissioners, and that the same be adopted."

The scheme herein referred to proposed a central station at the top of King-street, and required therefore the north-western division of Hyde Park, as well as the area comprising St. James' Road, and the sites occupied by the Registrar-General's Office, the Supreme Court, and St. James' Church. The estimated cost of the scheme was set down at £780,000.

Influential objections having been raised to the appropriation of any portion of Hyde Park for railway purposes, the Railway Commissioners submitted an alternative scheme, which proposed a central station, for long distance traffic, on the site occupied by the Benevolent Asylum, and a suburban main station at King-street, two lines being continued to a terminus at Circular Quay, and two other lines taken from King-street round to the eastern suburbs.

The Royal Commission, by a majority, favoured this alternative scheme, and reported accordingly. The estimated cost of this amended scheme was given at £835,000, exclusive of land resumption and compensation.

No action appears to have been taken on the report of the Commission, and the question remained in abeyance until April, 1896, when the Railway Commissioners brought it again under notice in a letter to the Premier and Minister for Railways, inviting serious consideration to the question of the terminal accommodation, as one calling for immediate settlement, in the interests of the safety, as well as the comfort of the travelling public; and they suggested, in order to reduce the interference with Hyde Park, the bringing forward of the railway to the south-west section of the Park bounded by Liverpool, Elizabeth, and Park Streets.

This authoritative pronouncement of the Railway Commissioners respecting the urgency of the extension of the railway into the city once more brought the subject into prominence. The Government, in due course, on 22nd December, 1896, appointed a Royal Commission, composed of all the Members of the Public Works Committee, "to make a diligent and full inquiry as to the expediency and best methods of extending the railway system of the Colony into the city of Sydney, or through the city, and to the waters of Port Jackson:—

- "1. For the convenience of passengers; and
- "2. For the conveyance of goods."

R. R. P.
Hickson.
6 Feb., 1900.

The various schemes put forward by engineers and others were closely inquired into by the Commission, and the whole subject was investigated in all its bearings in the most complete and exhaustive manner. The conclusions arrived at by the Commission, and reported 1st June, 1897, were as follows:—

1. That it is expedient the railway system of the Colony should be extended into the city for the convenience of passengers, and that the best method of doing this is by the route and according to the plan described as the St. James' Road scheme.
 2. That it is not expedient to further extend the railway system of the Colony into the city of Sydney, or through the city, and to the waters of Port Jackson, for the conveyance of goods.
- The estimated cost of the St. James' Road scheme thus recommended by the Commission was £650,000, which amount included £100,000 for land resumption.

The recommendations of the Royal Commission were then referred by Parliament to the Public Works Committee, who were instructed to consider and report upon "the expediency of extending the railway system of the Colony from the present terminus at Redfern into the city, including the erection of a large central station in the north-western division of the Park, fronting St. James' Road.

The Committee, after a further exhaustive investigation had been made into a number of other schemes, adhered to the conclusion arrived at by them at the close of their inquiry as a Royal Commission, and reported to Parliament, on 26th August, 1897, the following resolution passed by them:—"That, in the opinion of the Committee, it is expedient the proposed extension of the railway system of the Colony from the present terminus at Redfern into the city, including the erection of a large central station in the north-western division of the Park fronting St. James' Road, as referred to the Committee by the Legislative Assembly, be carried out."

Although no action was taken by the Government to give effect to the foregoing resolution, owing to its strong objections to the appropriation of the north-western division of Hyde Park, the question of bringing the railway into the city was constantly under the earnest consideration of Ministers.

The services of Mr. Rennick, the Engineer-in-Chief for Victorian Railways, were obtained by the Premier, Mr. Reid, for the purpose of advising and reporting on the various schemes submitted. Mr. Rennick pronounced the St. James' Road scheme, as put forward by the Railway Commissioners, and recommended by the Public Works Committee, as the best; but, with a view to getting over the Park difficulty, suggested an alternative scheme, which would not appropriate any portion of Hyde Park.

Mr. Rennick's description of his scheme was briefly as follows:—"Make Redfern the terminus for long-distance trains, and extend the railway to Government Grounds, near Circular Quay, for city and suburban traffic; providing stations at Liverpool-street, at the High School site, Market-street (between Castlereagh and Elizabeth Streets), and in the Government House Grounds, Albert-street."

The late Government then took up the subject, and, after giving it the closest consideration, Mr. Deane, Engineer-in-Chief for Railway Construction, was instructed to devise certain alternative schemes whereby the necessity of interfering with Hyde Park would be almost entirely avoided. Nos. 1 to 8 are those ordered by that Government, Nos. 9 and 10 being the production of the present one.

Mr. Deane thereupon furnished a number of schemes, each having its own distinctive features, but nearly all proposing a central or terminal station at or near the High School site. They may be summarised as follows:—

No. 1 Scheme—Redfern to King-street (High School site) and Fort Macquarie.

Terminal station for country trains and through suburban traffic at Benevolent Asylum site.
Through stations at Liverpool-street and King-street.
Terminal station for suburban traffic at Albert-street.
Car and motor sheds at Fort Macquarie. (Cut and cover work through Hyde Park.)
Six lines of way throughout.

Works	£1,154,000
Resumption	602,000
Total	£1,756,000

No. 2 Scheme—Redfern to King-street (High School site) with extension to back of Art Gallery.

Terminal station for country trains and through suburban traffic at Benevolent Asylum site.
Through station at Liverpool-street.
Terminal station for suburban traffic at King-street.
Car and motor sheds back of Art Gallery. (Cut and cover work through Hyde Park.)

Four lines of way throughout	£799,000
Add for two extra lines of way, Redfern to King-street	51,000
Resumption	£850,000
Total	£1,892,000

No. 3 Scheme—Redfern to King-street.

Small terminus for country trains and through suburban traffic at Benevolent Asylum site.
Through station at Liverpool-street.
Large terminus for suburban trains at King-street (between Elizabeth-street and Pitt-street). (Cut and cover through Hyde Park.) Six lines of way throughout.

Works	£523,000
Resumption	1,070,825
Deduct	£1,593,825
Total	£1,338,825

No. 4 Scheme—Redfern to King-street, with country and suburban terminus at King-street.

Through stations at Benevolent Asylum site and Liverpool-street. (Cut and cover through Hyde Park.) Six lines of way throughout.

Works	£630,000
Resumption	899,825
Deduct	£1,529,825
Total	£1,439,825

No. 5 Scheme—Redfern to King-street (six tracks), with single line, loop and sidings in Outer Domain.

Country traffic to terminate at Redfern Station, adapted.
Through station at Liverpool-street.
Terminal station for suburban traffic at King-street (High School site).

General works.....	£596,500
Resumption	£450,000
Total	£1,046,500

No.

No. 6 Scheme—Redfern to Liverpool-street (six tracks), Liverpool-street to King-street (four tracks), with double return loop, *via* Domain and Hyde Park, to Liverpool-street

R. R. P.
Hickson.
6 Feb., 1900.

Country traffic to terminate at Redfern Station, adapted.

Through station at Liverpool-street.

Terminal station for suburban traffic at King-street (High School site).

General Works	£552,000
Resumption	450,000

Total	£1,002,000
-------------	------------

No. 7 Scheme—Redfern to King-street (six tracks).

Through station at Liverpool-street.

Terminal station for suburban traffic at King-street (High School site).

Country traffic to terminate at Redfern Station.

General works	£480,000
Resumption	451,000

Total	£930,000
-------------	----------

No. 8 Scheme—Redfern to Hunter-street.

Terminus for country trains at Benevolent Asylum site.

Terminus for suburban trains at Hunter-street, with an intermediate station at Liverpool-street.

Double-line tunnel from Hunter-street to small terminal station at Albert-street. (Through Hyde Park, one-third in open cut, and two-thirds cut and cover.)

Six lines, Redfern to Hunter-street	} £1,331,000
Two lines, Hunter-street to Albert-street	

Part 1—Works	£184,000	£232,000
Resumption	98,000	

Part 2—Works	492,000	940,000
Resumption	448,000	

Part 3—Works	89,000	109,000
Compensation	20,000	

Total	£1,331,000
-------------	------------

No. 9 Scheme—Extension from Redfern to Benevolent Asylum site, and the erection thereon of a large terminal station.

Estimated cost :—

Works	£421,000
Resumption	140,000

Total	£561,000
-------------	----------

This scheme was referred by the Legislative Assembly to the Public Works Committee on 7th December, 1899.

Finally, under instructions from Mr. Secretary O'Sullivan, Mr. Deane has prepared a further scheme for the extension of the railway from the south side of Belmore Road to King-street, with a terminal station on the High School site. This last scheme is now submitted for the consideration of the Committee, in conjunction with the St. James' Road scheme, as recommended by the Royal Commission and the Public Works Committee, in 1897.

The description of this scheme is as follows :—

EXTENSION OF THE RAILWAY FROM THE SOUTH SIDE OF BELMORE-ROAD TO KING-STREET, WITH A TERMINAL STATION ON THE HIGH SCHOOL SITE.

Six (6) lines of rails are carried on viaduct from Garden Road over Belmore Park and Elizabeth-street to a little beyond Goulburn-street, which would have to be slightly diverted. From Goulburn-street these lines are carried on a descending grade, not steeper than 1 in 100, to the corner of Liverpool-street and Elizabeth-street, passing under the former without altering its level. After emerging on the north of Liverpool-street, the lines are carried in open cutting as far as Park-street, a width of 80 feet being taken from the Park for the purpose; they then pass under Park-street without altering its level, and enter the main terminal station situated between Park-street and King-street. The west side of the station abuts on Castlereagh-street; a width of 76 feet is taken from Hyde Park for the station. Four (4) lines of way are continued beyond the end of the station, under King-street, and in tunnel under the Domain, to a point between the Art Gallery and Sir John Young's Crescent, where stabling accommodation for engines and carriages will be provided. At the main station nine (9) platforms will be provided, so that all classes of traffic, suburban and long distance, can be accommodated. The passenger building includes all the usual offices for the accommodation of the public and the station staff, as well as offices on the first and upper floors for the Railway Commissioners and their administrative staff. At the Park-street end of the station provision is made for a parcels office, and lines for docks for horse boxes and carriages.

Under this scheme that portion of Elizabeth-street between Park and King streets is closed, the tram lines being temporarily carried along its eastern side, and taken down Phillip-street until the eastern suburban tramway lines have been converted, as shown on the plan, along Castlereagh-street, and so down to the Circular Quay.

The total estimate for works is £731,730, starting from Belmore-road, or, including the connection with Redfern Station through the Police Barracks, at the back of the Benevolent Asylum, and through the corner of the Cemetery, alterations at Redfern, and lowering Devonshire-street, say £786,000.

The cost of land resumption and compensation is estimated by the land valuer at £741,000.

The foregoing may be summarised thus :—

No. 10 Scheme—Belmore Road to Terminus at King-street—six lines of way with—extension to car and motor sheds at back of Art Gallery—four lines. (Open cut through Hyde Park.)

Works	£731,700
Alterations to Redfern	20,000
Lowering Devonshire-street	18,000
Redfern to Belmore-road	16,000
	£785,700

Resumptions	£741,000
-------------------	----------

	£1,526,700
--	------------

Total, say	£1,527,000
------------------	------------

The report of the Railway Commissioners on the scheme is as follows :—

Office of the Railway Commissioners of New South Wales, Sydney, 20th December, 1899.

Extension of the Railway System to King-street.

COMPLYING with the request made by letter of this date at the instance of the Secretary for Public Works, and in accordance with the provisions of the "Public Works Act of 1888," section 13, we beg to report as follows :—

Cost of construction—

The Engineer-in-Chief for Construction estimates the cost of construction (inclusive of land and compensation) at	£1,491,000
---	------------

Annual

R. R. P.
Hickson.
6 Feb., 1900.

<i>Annual cost—</i>	
Capital expenditure at 3 per cent.	£44,730
Estimated cost of maintaining permanent-way, and for traffic, locomotive, and other expenses.....	18,800
Total annual cost	
£63,530	
<i>Traffic estimate—</i>	
By adding 1d. for each ordinary suburban passenger journey, and 1s. 6d. and 1s. per month for 1st and 2nd class season's ticket holders, with a percentage reduction per month for tickets taken out for three, six, and twelve months, and 3d. per week for workmen's tickets, a revenue on existing traffic would be realised of....	£38,000

It is assumed that the original Hyde Park scheme is not to be adopted, and therefore we have no hesitation in stating that the proposed terminal station fronting King-street will best meet public requirements. It must however, be fully realised that a terminal station at King-street will entirely dispense with the necessity for any expenditure in connection with the recently proposed station on what is known as the Devonshire-street site.

The Common Seal of the Railway Commissioners of New South Wales was hereunto affixed, this twentieth day of December, One thousand eight hundred and ninety-nine, in the presence of—

H. McLACHLAN.	CHARLES OLIVER, Chief Commissioner.
	W. M. FEHON, Commissioner.
	DAVID KIRKCALDIE, Commissioner.

2. In that statement you quote the resolution of the Legislative Assembly of the 20th December last, which refers back to the Committee for consideration what is known as the Hyde Park scheme. Further on, you speak of Scheme No. 9 as a scheme which contemplates "an extension from Redfern to Benevolent Asylum site, and the erection thereon of a large terminal station." Finally, you say, "Under instructions from Mr. Secretary O'Sullivan, Mr. Deane has prepared a further scheme for the extension of the railway from the south side of Belmore-road to King-street, with a terminal station on the High School site." That would leave a gap between the present terminus at Redfern and the Belmore-road unprovided for. We have, therefore, three main schemes submitted for our consideration? Yes. The scheme for extending the railway to the Benevolent Asylum site is really merely a scheme substituting that site for Redfern as a terminal site, and it must be considered in conjunction with the scheme for extending the railway into the city to the High School site.

3. *Dr. Garran.*] Are we to understand that, in the event of the railway being extended into the city, the extension from Redfern is an essential part of the scheme? We have provided for the cost of bridging the gap that has been referred to in the item "Redfern to Belmore-road, £16,000." If the proposal to increase the terminal accommodation at Redfern by removing the station site to the northern side of Devonshire-street were rejected, you would still have a complete scheme for extending the railway to King-street, from the present terminus, at a total cost of £1,527,000.

4. If the Committee approve one or other of the schemes for extending the railway into the city, will it still be incumbent upon us to consider also the removal of the terminus to the northern side of Devonshire-street, for the accommodation of long-distance traffic? I should prefer to leave that question to the Railway Commissioners.

5. The suggestion to remove the terminus to the Benevolent Asylum site has arisen from the idea that any proposed extension into the city may be rejected, and that, in that case, a roomier terminal station will be required; but, in the event of an extension into the city being approved, would there be the same necessity for a new terminal station near Redfern? I think not; but the subject is one upon which the Railway Commissioners must give their opinion.

6. The removal of the terminus to the northern side of Devonshire-street is practically a substitute for all the schemes for extending the railway into the city? I can hardly call it a substitute for those schemes, because it does not give the same advantages; but, in the event of the Committee recommending the extension of the railway into the city to either St. James' Road or the High School site, the removal of the terminus would not, in my opinion, be necessary.

7. That answer only expresses your own opinion;—you do not commit anyone else? That is so.

THURSDAY, 8 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

THE HON. PATRICK LINDESAY CRAWFORD SHEPHERD.
THE HON. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

H. Deane.
8 Feb., 1900.

8. *Chairman.*] Have you perused the statement which was read to the Committee on Tuesday last by Mr. Hickson, and part of which I presume was prepared from information supplied by you? I have; and with the concurrence of the Committee I propose to speak this afternoon a little more in detail of the schemes therein referred to. Mr. Hickson expected that I would do this, and, therefore, made his statement as short as possible.

9. Will you describe, in order, the plans which have been prepared by your Department, and which are now before us; I understand that the small plans numbered 1 to 7 illustrate various schemes for extending the railway from Redfern into the city, in the direction of the Circular Quay? Yes.

10. Do those schemes embody your own views of what should be done, or the views of other people? The designs shown on the plans you refer to were prepared by me, acting under instructions, which I will refer to later on.

11. We have also before us a large plan showing the route of the proposed extension, which is now submitted to us for consideration? Yes. I have also put before the Committee for comparison a plan showing the proposed extension to St. James' Road.

12.

12. That extension was recommended by a Royal Commission which sat in 1897, and the Commission's recommendation was afterwards endorsed by the Public Works Committee? Yes.

13. The proposal was then submitted to Parliament by Mr. Secretary Young; but after it had been taken to a certain stage nothing further was done in connection with it? That is so. The Committee has also before it plans showing the arrangements of the proposed terminal station at the Benevolent Asylum site and the proposed King-street terminal station, and drawings showing the elevation of the Devonshire-street station and of the King-street station.

14. Will you now describe in detail the proposal which has been referred to the Committee for consideration, commencing from the Redfern end? Yes; I will give the Committee a description of the proposed scheme for extending the railway to King-street, which is dealt with in Mr. Hickson's statement (page 4) as the No. 10 scheme:—

General Description—Redfern to King-street Extension.

Six lines of rails are carried from the present Redfern terminus over Devonshire-street, through part of the Benevolent Asylum ground and part of the Cemetery and Police Barracks, and thence on viaduct from Belmore or Garden road over Belmore Park and Elizabeth-street, to a little beyond Goulburn-street, which would have to be slightly diverted. From Goulburn-street these lines are carried on a descending grade, not steeper than 1 in 100, to the corner of Liverpool-street and Elizabeth-street, passing under the corner without altering the surface level. After emerging on the north of Liverpool-street, the lines are carried in open cutting as far as Park-street, a width of 80 feet being taken from the Park for the purpose. They then pass under Park-street, without altering its level, and enter the main terminal station situated between Park-street and King-street. The main station building will face King-street, which will be widened between Castlereagh-street and St. James' Church to a width of 100 feet. The west side of the station abuts on Castlereagh-street, which will be widened to 75 feet, and a width of 80 feet will be taken from Hyde Park for the station. Four lines of way are continued beyond the end of the station under King-street, and in tunnel under the Domain to a point between the Art Gallery and Sir John Young's Crescent, where stabling accommodation for engines and carriages will be provided. At the main station in King-street nine platforms will be provided, so that all classes of traffic, suburban and long-distance, can be accommodated. The passenger building includes all the usual offices for the accommodation of the public and the station staff, as well as offices on the first and upper floors for the Railway Commissioners and their administrative staff. At the Park-street end of the station provision is made for a parcels office and lines for docks for horse-boxes and carriages.

Under this scheme, that portion of Elizabeth-street between Park-street and King-street is closed, the tram-lines being temporarily carried along its eastern side and taken down Phillip-street until the eastern suburban tramway lines have been converted to electric traction, after which they will be carried, as shown on the plan, along Castlereagh-street, and so down to the Circular Quay. It is very probable, however, that that temporary rearrangement of the Elizabeth-street tramway would not be necessary, because before the proposed new railway station was constructed it is more than likely that the overhead electric system would have been generally extended to all the tramways in the city, and the permanent Castlereagh-street line would be constructed at once.

The total estimate for works is £731,700, starting from Belmore-road, or, including the connection with Redfern station through the Police Barracks, at the back of the Benevolent Asylum, and through the corner of the Cemetery, (say) £785,700.

The cost of land resumption and compensation is estimated by the Land Valuer at £741,000.

The following is a detailed estimate of the cost of the work:—

Works, with office accommodation, as provided in St. James' Road scheme, £731,700, (say)	£732,000	
Additional accommodation asked for by Railway Commissioners	30,000	
	£762,000	
<i>Add—Alterations at Redfern</i>	20,000	
Lowering Devonshire-street.....	18,000	
Redfern to Belmore-road	16,000	
	54,000	
<i>Resumptions--</i>		\$16,000
Belmore-road to King-street	741,000	
Damage done to Benevolent Asylum Grounds and Barracks	7,000	
	748,000	
		£1,564,000

15. *Dr. Garran.*] You do not allow anything for Hyde Park? No; nothing is allowed for Hyde Park. I may explain that my first instructions were to prepare the No. 9 scheme—a scheme providing for the erection of a large terminal station on the north side of Devonshire-street. I was then asked to prepare the scheme which I have just outlined, commencing from the end of the Devonshire-street extension. That is the reason for the apparent gap which appears to have been unprovided for between Redfern and the Belmore-road. My estimate of the cost of bridging that gap is £16,000, which, added to the cost of the rest of the scheme, makes the total which I have given.

16. *Chairman.*] We should like you now to describe in detail the proposed extension from Redfern to King-street? I will do so.

Rearrangement of Redfern Station.

It is proposed that Redfern shall cease to be a terminal station, and become only a wayside station, though, as there will still be a considerable amount of traffic to deal with there, the station accommodation which is left must be ample. In order that the extension into the city may be carried out without interruption to the present Redfern traffic, it is proposed to continue across Devonshire-street, on overhead bridges, the lines which now run past platforms Nos. 8, 5, 6, and 3. These four lines will be for the accommodation of the passenger traffic into the city, two lines on the eastern side being used chiefly for the running of engines. When the line into the city has been completed, the station arrangements at Redfern will have to be remodelled, and no doubt, a great many unnecessary platforms and buildings will be removed; but, at the present time, I cannot tell you exactly what plan of rearrangement will be followed. However, the whole group of lines coloured purple on the plan will have to undergo considerable changes. Additional accommodation will also be provided for carriages, and altogether there has been put down for the Redfern alterations the sum of £20,000.

The Devonshire-street Crossing.

As the level of the rails at Redfern is not sufficiently above the level of Devonshire-street to permit of traffic going along Devonshire-street at its present level, when the railway is continued into the city, the street would have to be lowered to the extent of about 9 feet, but there will be a slight difference in the amount of lowering at the two points under the outer lines of rails. By this lowering of the street surface a headway of 16 feet will be given under the bridge girders. The alteration of the street level also involves some drainage alterations, inasmuch as there is now under the street an old sewer which runs down to Darling Harbour, and which it will probably be necessary to keep in existence for the purpose of carrying away storm-water. The lowering of that sewer is involved in the lowering of the street level. Then extensive retaining walls must be built on each side of the streets; there must also be a reconstruction of the tramway which now runs along the street, and the pavement of the street must be relaid. The cost of those alterations has been estimated at £18,000.

17. I understand that there will be a dip in Devonshire-street between George-street and the Railway Institute? Yes, with a grade of about 1 in 25, coming from the Institute.

18. And from George-street? That grade will be somewhat easier.

19.

H. Deane.
8 Feb., 1900.

- H. Deane.
8 Feb., 1900.
19. *Dr. Garran.*] Is 16 feet enough headway for an omnibus? Yes.
20. *Mr. Watson.*] Is it enough for an electric tram? The feed wire of the electric tram is at an elevation of 19 or 20 feet, but the trolleys can be lowered.
21. *Dr. Garran.*] If the electric tram could not go under the railway in Devonshire-street, you would have to alter the route of the Botany tram? I have not taken that matter much into consideration, because the whole arrangement of the tramway system there requires to be worked out. It remains to be considered whether the Botany tram should go along Devonshire-street as it does now; or whether it should be carried along Regent-street from George-street; or straight along Elizabeth-street, instead of through Belmore Park. Of course, the electric trams could go under the bridges in Devonshire-street if their trolleys were lowered when they came there.
22. *Mr. Levien.*] The trolleys would have to be lowered every time the cars came to the bridges? Yes; but probably the best thing to do would be to fix upon another route for the tram.
23. *Chairman.*] What is your alternative proposal for dealing with Devonshire-street? The alternative proposal is to make a new street across the Benevolent Asylum grounds, and through the Cemetery, from the junction of George and Pitt streets, until it joins Devonshire-street near the Institute. That would be a better street for vehicular traffic than Devonshire-street would be if a dip were made in it to enable traffic to get under the railway bridges.
24. *Dr. Garran.*] Could you give greater headway under the bridges? That might be done, but I do not think it would be desirable to increase the headway.
25. By the deviation you speak of you would get rid of the difficulty of having to alter the sewer under Devonshire-street? Yes. If the deviation were made that sewer need not be touched. After getting over Devonshire-street a little filling up would have to be done for a couple of chains, and then the lines would run through cuttings indicated on the plan by red colouring. When you reach the Police grounds, however, the land dips down rapidly towards Belmore Park, so that we should have to cross Belmore-road by means of a bridge.
26. *Chairman.*] This proposal does not necessarily involve the removal of the Benevolent Asylum, the late residence of the Inspector-General of Police, the Sydney Female Refuge, and the Convent in Pitt-street; it only involved the resumption of a portion of the Devonshire-street Cemetery and a portion of the Police ground? Yes.
27. If your suggested deviation of Devonshire-street were carried out it would involve the resumption of part of the Benevolent Asylum grounds and of part of the Cemetery? Yes. The damage that would be done to property situated between Devonshire-street and the Belmore road by the King-street extension is put down at £7,000, which is a very small amount compared with what would have to be paid if the buildings which you have mentioned had to be resumed.
28. If the Grand Central station were erected on what is known as the Devonshire-street site, that would involve the resumption of the greater part of the Cemetery, of the Benevolent Asylum ground, the Christchurch Parsonage, the late residence of the Inspector-General of Police, the Sydney Female Refuge, and the Convent? Yes. The plan showing the arrangement of the Devonshire-street station accommodation will give you an idea of what would be done. There would be a difference of about 21 feet 6 inches between the rail-level and the road-level at Belmore-road.
29. *Mr. Watson.*] But the understructure of the bridge would considerably reduce that difference? It would reduce it about 3 feet.
30. *Dr. Garran.*] Would that be a sufficient headway to allow of the passage of carts loaded with hay? I think so. A viaduct carrying six lines of rails would be constructed to carry the traffic from the Belmore-road to Elizabeth-street. At Elizabeth-street there would be an overhead bridge, and the viaduct would then be continued, as is shown on the plan, as far as Goulburn-street.
31. *Mr. Watson.*] What headway would be given by the bridge over Elizabeth-street? The difference between the rail-level and the road-level there would be about 33 feet. I might mention that the cross-streets there—Forster-street, Blackburn-street, Campbell-street, and Exeter-place—could all be provided for. Goulburn-street would have to be diverted in order to obtain sufficient headway for traffic passing under the railway, and to allow of a grade of 1 in 100 being obtained for the line between Goulburn-street and the corner of Elizabeth and Liverpool streets.
32. What headway do you propose to give at Goulburn-street? Sixteen feet. From there the line would drop, at a grade of 1 in 100, to the corner of Liverpool and Castlereagh streets, going under Liverpool-street. The level of Liverpool-street would not have to be altered so as to enable that to be done. From that point six lines of rail will be carried along the edge of Hyde Park, between retaining walls, as far as Park-street. Two foot-bridges are shown on the plan for the accommodation of pedestrians passing through the Park; but these bridges could be increased in number if necessary. The line would go under Park-street, and from there the different tracks diverge to run into the various docks and platforms at King-street station. Nine platforms are provided for at the King-street station, there being two pairs of rails between the first and second and third and fourth platforms, from the eastern side of the station, and three lines of rails between the fifth and sixth and seventh and eighth platforms, and a single line alongside the ninth platform. The four lines on the eastern side of the station would continue round under King-street, and through the Domain to the carriage-sheds at Sir John Young's Crescent. Between platforms 5 and 6 and 7 and 8 traverses would be arranged, so that engines bringing in trains could be uncoupled and run out without moving the carriages, or be hooked on to the other end of the trains to draw them out again. Running across past the head of each of the platforms will be a large assembly platform. The main station will be a large building facing King-street, in front of which will be provided a covered way for cabs and an arcade for pedestrians. The frontage to King-street will be about 328 feet. Accommodation will be given for the various offices and rooms necessary for the convenience of the public—ticket offices, waiting-rooms, refreshment-rooms, lavatories, parcels' office, and so on, and there will also be offices for the station inspectors. This accommodation will all be given on the ground floor. On the next floor accommodation will be provided for the Railway Commissioners and their executive staff; and on the other floors further accommodation will be provided for other railway officers. Going through the main building from King-street, passengers will come out upon the large assembly platform to which I have just alluded, the length of which will be about 275 feet, and its width 70 feet. From it passengers will go to the various platforms, and provision is made to prevent the overcrowding of the platforms and the regulation of the traffic. The level of the assembly platform will be almost the same as the street level

H. Deane.
8 Feb., 1900.

level near the main (King-street) entrance to the station opposite Elizabeth-street; and access will be given from the assembly platform to the train platforms by means of ramps, having a grade of 1 in 8, the difference of level being 13 feet. In the busy hours of the day, however, passengers will be able to pass out on the level, under the assembly platform, into Castlereagh-street.

33. *Dr. Garran.*] Where would cabs draw up? Either in King-street or in Castlereagh-street. No special cabway is provided inside this station, such as was provided at the St. James' Road station.

34. *Chairman.*] The level of the station will be somewhere about the present level of the ground at the intersection of Elizabeth-street and King-street? Yes.

35. Going westward, down King-street to Castlereagh-street, there is a slope of about 13 feet? Yes. The street level at the intersection of Elizabeth-street and King-street is about 190 feet, whereas the level of the assembly platform would be 186 feet, the difference of 4 feet being easily made up by allowing an easy fall outside the station and through the main building.

36. *Mr. Watson.*] And there will be a further fall from the assembly platform to the train platforms? Yes; a fall of 13 feet. The level of the train platforms will be 173 feet. The train platforms will be very nearly at the same level as Castlereagh-street.

37. *Dr. Garran.*] If a man drove up to the Castlereagh-street entrance in a cab his luggage would have to be taken up 13 ft. to get to the assembly platform? A man coming to the station in a cab would come to the King-street entrance, and from there his progress would be downwards towards the train platform. A covered way is provided for cabs, but they could also draw up along the colonnade in front of the building where the roadway is not under cover.

38. Does the colonnade extend the whole length of the front of the building? Yes.

39. *Chairman.*] What would be the length of the train platforms? Six hundred feet.

40. Is that enough for all modern requirements? That is the length arranged for by the traffic officers of the Railway Commissioners. There would be room for at least half a dozen cabs in the covered way in front of the building, the available length of platform there at which they could draw up being about 100 feet.

41. Would cabs be able to take in and to put out luggage along that length of 100 feet without any trouble? Yes.

42. *Mr. Dick.*] All people going away by train would have to go on to the assembly platform? They would have to go there in order to procure their tickets. It must be remembered that the levels in Sydney are very varied and cannot easily be altered. You must have your ticket office at a certain level, and people requiring tickets must go up to or get down to that level. People coming from Castlereagh-street would have to go up-hill to get to the ticket office, while people coming from the top of King-street would have to go down-hill.

43. *Chairman.*] In continuing your four lines of rail into the Domain, how would you cross King-street? It is proposed to go under King-street. The rails will be 3 feet below the level of the train platforms—that is, they will be at a level of 170 feet, whereas King-street is at a level of 190-feet; so that there will be a difference of 20 feet.

44. Will all the rails between the platforms be 20 feet below the level of King-street? Yes; all the rails between the platforms will be at the same level.

45. *Dr. Garran.*] The rails passing between the platforms on the Castlereagh-street side of the station could not go under King-street? No; but it is not intended that they should go under King-street.

46. If it were necessary to take trains from those platforms into the Domain they would have to be shunted back into the yard and then taken over the rails passing between the easterly platforms? Yes.

47. *Chairman.*] Is not 1 in 8 a pretty steep grade for the ramps leading down from the assembly platforms to the train platforms? It would be steep for cab or dray traffic, but not for pedestrian traffic.

48. *Mr. Watson.*] What is the grade of the ramp leading down to the subway at Redfern? I think it is 1 in 7. 1 in 8 is a better grade than we often get elsewhere; but if it had been possible I would have made the grade still less.

49. *Chairman.*] In Mr. Eddy's opinion, it was of great importance that, in building a station, you should obtain a level piece of ground as a site, to avoid these ramps and inclines that you speak of? Yes; but where you cannot get a level site, you must accommodate yourself to the levels that exist at the site which is fixed upon. A level space of ground was provided in front of the St. James' Road station by setting that station well back from the road, and the same thing could be done at King-street; but by doing it you would lose much valuable space.

50. *Dr. Garran.*] If you set the King-street station further back, you would have to go further back with your cross roads and points? Yes. I would also recall to your recollection the fact that the St. James' Road station was a terminal station, where eleven platforms were provided, the Railway Commissioners being of the opinion that that would be a sufficient number of platforms to deal with the traffic for practically all time. It was not intended to extend any of the lines running into the station beyond St. James' Road, though it was pointed out that that might be done in the future, if it was thought necessary. With the King-street scheme, however, the extension of four lines through the station and on into the Domain is a feature of the scheme, the extension being designed in order to allow of a reduction in the number of platforms, and thus in the width of the station; so that at King-street only nine platforms are provided, whereas eleven platforms were provided at St. James' Road. If at King-street the assembly platform were placed at the level of Castlereagh-street, it would prevent any of the lines being taken further. The lines which it is proposed to take into the Domain could not, upon such an arrangement, be carried on without breaking up the assembly platform, and thus spoiling its usefulness.

51. In the scheme which we are considering, St. James' Road would be closed? Yes.

52. Is it because you provide for fewer platforms at King-street than you did at St. James' Road that you take four lines of rail through into the Domain? Yes. Without that arrangement you could not work the traffic at King-street with only nine platforms. Mr. Parry will be able to explain to you the working of this arrangement, because it is really a traffic question. At St. James' Road we had a roomy station site, but at King-street we are limited to the width between Castlereagh-street and 80 feet on the eastern side of Elizabeth-street, and within those limits it is not possible to make the same arrangements as we made at St. James' Road. We had to cut our coat according to our cloth, and to adjust the traffic arrangements to the available space. Although the extra expense of extending these lines of rail

to

H. Deane. to Sir John Young's Crescent seems a very large amount to have to pay simply for shunting facilities, I would point out that if an eastern suburban extension were required that these lines would form part of it.

8 Feb., 1900.

53. What would be the cost of the extension to Sir John Young's Crescent? The total cost of the line from King-street to Sir John Young's Crescent would be £244,000, including the carriage-sheds.

54. *Chairman.*] The scheme under consideration involves the closing of St. James' Road and the resumption of the sites of the Registrar-General's Office and of the Supreme Court? Yes.

55. But it would not interfere with St. James' Church? No.

56. What would be the length of the tunnel from King-street to the Domain? About 1,000 yards.

57. The large curve shown on the plan is made, I suppose, in order to get a proper grade? Well, it is required really more to enable us to get a workable radius.

58. What is the distance from Redfern to King-street and from King-street to the carriage-sheds at Sir John Young's Crescent? The distance from Redfern to the south end of the train platform at King-street is 1 mile 1 chain, and the distance from the northern end of the platforms at King-street to the carriage-sheds is about 75 chains.

59. *Mr. Shepherd.*] There would be some difficulty in connecting the King-street extension with a bridge to North Shore, would there not? There would be no difficulty in turning off at the end of Hyde Park, and getting round to the other side of the city. I have found that that would work out quite easily.

60. *Chairman.*] Will you explain to us the manner in which the carriage-sheds of Sir John Young's Crescent will be used? I would suggest that Mr. Parry should be asked to explain the actual working of the proposed extension into the Domain. I understand that at the easterly platforms, directly incoming trains have discharged their passengers, they will proceed to the carriage-sheds in the Domain. So far as outgoing trains are concerned, they will come from the Domain, and will receive their passengers at King-street, each train, when it is loaded, being replaced by another empty train. This is an admirable arrangement for dealing with heavy traffic in a very short space of time, and enables you to load and discharge more trains than you can deal with in any other way. I believe that at the four easterly platforms the Commissioners will be able to deal with many more trains than could have been dealt with at the six corresponding platforms which would have been provided at St. James' Road.

61. I understand that the ground taken at Sir John Young's Crescent is not to be used for workshops or for anything besides carriage waiting-sheds? That is so.

62. Therefore there will be no noise of manufacturing created in the neighbourhood? No.

63. Is it intended to put up fairly ornamental buildings in the Domain? Yes, that will be done; a suitable design will be adopted.

64. *Dr. Garran.*] Have you considered whether it would cost much more to go down to the Circular Quay, and thus bring the railway into contact with the ferry traffic, and still have it available as part of an eastern suburbs extension? If the line were taken down to Circular Quay, it would not be equally available for an eastern suburbs extension, and it would not give the shunting facilities which are given by the extension into the Domain. To get to the Circular Quay, a long tunnel is required until the Domain is passed through, and the space available at the Quay is not at all as suitable for the purpose intended. If part of Government House grounds were taken, it would destroy the beauty of those grounds; but in taking part of the Domain near Sir John Young's Crescent, very little damage is done, because the land there is very steep, and is not very much used at the present time. If you glance at the map you will see that a line to the Circular Quay would not be of much assistance in the event of an extension to the eastern suburbs, whereas the proposed line to Sir John Young's Crescent goes in the direction of the eastern suburbs, and could not take a much better route to get there. You could not go much nearer the Art Gallery without doing damage.

65. *Mr. Levien.*] What would be the cost of the tunnel through the Domain? £137,000.

66. Providing for four lines of rail? Yes. If we only provided for two lines of rail the cost would be only about half that amount.

67. *Chairman.*] Are the Committee to understand that the scheme before us is one suggested by you, or one suggested to you by persons in authority? It is not my scheme. It is a scheme prepared under instructions from the Secretary for Public Works.

68. With a view to taking as little of Hyde Park as possible? Yes. I was instructed as to the direction in which to carry the line, and as to how much of Hyde Park I might take for the purpose.

69. *Mr. Levien.*] Were you instructed by the present Minister? Yes.

70. *Dr. Garran.*] You compound for not taking so much of Hyde Park by taking some of the Domain? Yes; but what we take is not very valuable ground. The Committee has before it a very workable scheme. While I do not think the King-street scheme as good as the St. James's Road scheme, by a long way, if we are forbidden to take as much of Hyde Park as the St. James' Road scheme would require, the King-street scheme is a very good substitute.

71. *Mr. Shepherd.*] The St. James' Road scheme requires a large portion of Hyde Park? Yes, nearly 13 acres.

72. *Chairman.*] I suppose there are other officials who will be able to give us information in regard to the land resumption required by the Hyde Park scheme? The figures which I have given to the Committee were obtained from Mr. Sievers, the Government Land Valuer. I have included £748,000 for land resumption.

73. Does that amount include the value of the site of the Registrar-General's Office and of the Supreme Court, and provide for the erection of new buildings in place of those that will be destroyed? Yes.

74. Have you a list of the properties which it is proposed to resume? No, but I will procure that information.

75. *Dr. Garran.*] Has Mr. Sievers estimated the value of the Hyde Park land which it is proposed to resume? No. I think that only land for which money has been paid by the Government is included in the valuation.

76. *Mr. Watson.*] New sites would have to be purchased for the Supreme Court and the Registrar-General's Office if the present building were destroyed? Yes; but it would not be necessary to purchase another piece of land to make up for the strip of Hyde Park which it is proposed to take.

77. *Chairman.*] Any extension of the railway into Sydney, and the construction of a large terminal station on the Benevolent Asylum site, involves the alteration of Devonshire-street? Yes.
78. Do you favour any particular scheme of those which have been put before us, or do you prefer to take a neutral position in regard to them all? I prefer to take a neutral position, as I have done in the past. I am prepared to show you the advantages and disadvantages of each scheme submitted; but I do not wish to recommend any particular scheme. I wish to remain perfectly neutral so that I can deal in an impartial manner with any scheme which is put forward.
79. You wish to give evidence rather upon engineering questions connected with the route than upon the question of State policy? Yes.
80. Do you think that a railway into the city should deal with passenger traffic only, or with passenger and goods traffic? It is now the practice all the world over to entirely separate passenger traffic from goods traffic.
81. And in your opinion, if the railway is brought into Sydney it should provide only for passenger accommodation? Yes. If the Committee desire to consider the bringing of goods traffic into the city the question must be dealt with as a separate problem.
82. *Mr. Leven.*] In preparing these plans you had in view only passenger traffic? Yes.
83. *Chairman.*] What area do you propose to take for station premises at King-street? I will procure that information. At St. James' Road I think a length of about 550 feet was to be covered. There the ends of the platforms were left uncovered. Under the King-street scheme the area of Hyde Park to be taken would be about $4\frac{1}{2}$ acres.

H. Deane.
8 Feb., 1900.

FRIDAY, 9 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.		JOHN CHRISTIAN WATSON, Esq.
The Hon. ANDREW GARRAN, J.L.D.		ROBERT HENRY LEVEN, Esq.
WILLIAM THOMAS DICK, Esq.		JOHN MCFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Henry Deane, Engineer-in-Chief for Railway Construction, Department of Public Works, sworn, and further examined:—

84. *Mr. Shepherd.*] Continuing our examination in regard to the proposed extension from Redfern to King-street, I should like to know what additional area of ground would be required at the terminal station to get rid of the necessity of making the long semi-circular extension through the Domain to the carriage-sheds at Sir John Young's Crescent? I think the question may be partly answered by giving you the proposed acreage of the St. James' Road station and of the King-street station respectively. The area of the St. James' Road station would be 10 acres 1 rood 24 perches, and the area of the King-street station 8 acres 3 roods 27 perches—an actual difference of an acre and a half in favour of the St. James' Road station; but, to give the same width at King-street as we should have at St. James' Road, another 3 acres would be required.
85. What additional width would be gained by taking another 3 acres? An additional width of about 100 feet.
86. Do you not think it would be better to take another 3 acres than to extend the railway into the Domain? Well, if another 3 acres were taken they would have to come out of the Park.
87. Would you require to take an extra strip of Park right back as far as Liverpool-street? No; only as far back as Park-street. At Park-street the station lines converge and join the main lines which lead into the city from Redfern.
88. What saving would there be by taking an extra 3 acres of Park? It is very difficult to say, without going into the matter carefully; but there would probably be a saving of from £120,000 to £150,000.
89. I suppose that, if the King-street station were widened, the trains would be dealt with similarly to the manner in which the trains are dealt with at the Princes' Bridge station in Melbourne? Yes; there would be traversers at the ends of the platforms to enable the engines to be got out and run back to the other end of the trains without moving the carriages. It was proposed to provide two sets of three rails each with traversers at St. James' Road, but probably traversers would also be put in the other docks as well. It must be borne in mind that, although by taking another 3 acres for the King-street station £120,000 or £150,000 might be saved, you would be without that portion of the eastern suburbs extension which would be provided by the line through the Domain.
90. Could not a line to the eastern suburbs branch off from some other point? King-street appears to be the most convenient place for it to commence at. If it came to King-street it would bring the eastern suburbs passengers right into the heart of the city, whereas if it came to Redfern it would not do that.
91. It is not proposed to have a passenger station on the line between King-street and Sir John Young's Crescent? No.
92. Would it not be possible to take a line to the eastern suburbs from Liverpool-street? The levels would not be convenient for such a line. In laying out a suburban line, one of the difficulties with which one has to contend is the need of crossing over or going beneath existing roads at such levels as not to interfere with the traffic upon them; level crossings are most undesirable. If you took an eastern suburbs extension from Liverpool-street, you would either have to make it a surface line, an altogether underground line, or an altogether overhead line; but if you went from King-street to the Domain, you could take advantage of a series of dips and ridges, and you need not inconvenience the existing traffic.
93. But would the distance not be greater if you went round through the Domain? I do not think so. You would not gain anything by going out from Liverpool-street.

H. Deane.
9 Feb., 1900.

- H. Deane.
9 Feb., 1900.
94. I do not want to confine you to Liverpool-street; I only want to know if there is not a more convenient way for starting out to the eastern suburbs than that which you have provided on the plan? I do not think that there is. After going through the Domain, the line would come out into Woolloomooloo, and cross the flat there on a viaduct. It would then tunnel under the ridge, and come out on the other side, near the Public School at the end of Liverpool-street. From there it would follow round in the direction of Hargrave-street, and in that way take advantage of a series of dips and rises all the way out. By locating the line in that way one could get over or under the existing roads without interfering with the traffic. It would be much more easy to deal with the existing roads with a line located as that line would be located, than to deal with them with a line following the surface of the ground along a ridge.
95. Is any extension of the King-street station provided for; or is it supposed that the accommodation you have designed will be sufficient for a very long period? I understand that the Railway Commissioners do not contemplate any extension, because they think that the accommodation which has been designed will be sufficient for a very long period.
96. Would the accommodation be capable of extension in the event of extension being necessary? The station could be widened on the Hyde Park side.
97. *Mr. McFarlane.*] What is the length of the Park frontage, from Liverpool-street to St. James' Road? About 2,310 feet, including Park-street; but Park-street will, of course, be bridged over.
98. How much of Hyde Park was it proposed to take for the St. James' Road scheme? Twelve acres 3 roods 39 perches, or very nearly 13 acres, including the open portion of the cut and cover work.
99. Do you consider the extension into the Domain a necessary adjunct of the King-street scheme? Yes, though the subject is one upon which the traffic officers of the Railway Commissioners could give you better information than I could.
100. If that extension were not made, could some other arrangement be made? I should prefer to leave that question to the Traffic Department; but if I had instructions to carry out the work without providing for that extension I could do so, and I could design the station accommodation in such a way that the extension could be made later on, if it were found afterwards to be necessary.
101. *Dr. Garran.*] What would be the area of the Devonshire-street station? It was proposed to take 22 acres 1 rood 20 perches there—the whole block.
102. I suppose that, ultimately, you will want the whole block? It would be very desirable to have it.
103. You would not advise the Government to take less, if it were determined to make a great central station there? No, especially as the place is so near Redfern. The land would be most useful for any extension of accommodation for carriages or other storage accommodation.
104. What is the total area of the present station yard at Redfern, including everything? The area of the Redfern station yard is 30 acres 1 rood, and the area occupied by platforms and approaches is 6 acres 2 roods.
105. At Redfern, only a part of the whole station yard is really given up for passenger traffic? That is so.
106. Would the proposed extension into the Domain interfere with any sewers? I have ascertained that it would not.
107. What is the area of the piece of land near Sir John Young's Crescent that you have set aside for carriage-sheds and for shunting purposes? 8 acres 3 roods.
108. Is that the area of all the land taken in the Domain, commencing at the mouth of the tunnel? Yes.
109. Adding to that the 4½ acres taken from Hyde Park, it is seen that altogether about 13½ acres of public reserve would be required for the King-street scheme? Yes.
110. While for the St. James' Road scheme you would require less than 13 acres of public reserve? Yes.
111. But, though you are now proposing to take more of the public reserve than you would take by the St. James' Road scheme, you think that you are taking land which would be very much less missed? Yes.
112. In a scheme which you submitted to a previous Board of Inquiry, you showed an extension running northward, with a station at the Customs House to connect with the ferry traffic;—would the King-street scheme lend itself to such an extension? The extension could be made, but the grade down to the Custom House would be a bad one. The extension to which you refer was submitted to the first Royal Commission.
113. And to the second Royal Commission? No; it was not submitted to the second Royal Commission. Mr. Eddy, finding that strong objections were raised to the utilisation of Hyde Park, submitted the extension you speak of as an alternative; but it is only right to add that he himself said afterwards that he was very sorry that he had suggested it, because, although the extension could be carried out, it did not lend itself to future requirements, not being capable of enlargement.
114. Was it proposed that the main city station should be somewhere near the Customs House? In the scheme to which you are referring, no provision was made for a main central station. There was to be a station of some size, having five or six platforms, at the High School site, and another station near the Custom House; and, while some of the trains were to stop at the High School station, others would be taken on to the Customs House. The scheme, however, is one which should be no longer considered, because I am sure that Mr. Eddy would not have submitted it again. It did not allow of extension in accordance with increased traffic requirements, and it provided for a grade of 1 in 45, which would have limited the length of the trains run upon it.
115. All I wanted to know was whether the King-street scheme would lend itself to the same extension? The extension would be possible; but it is not to be recommended. It was never proposed that there should be an extension from the St. James' Road station to the Custom House.
116. The St. James' Road station would have been practically on a level with Elizabeth-street? Yes; as nearly as possible.
117. At St. James' Road the eastern lines could be run under King-street without altering their level, and without raising the roads; but, in making an extension from Park-street, you could only get under the ground by lowering some of the lines? Yes.
118. At St. James' Road the two eastern sets of rails would not have to be altered to enable you to get under the road? No.
119. In planning transit arrangements for a city, is it not desirable to see that what the Americans call "good connections" are made;—should not one set of traffic arrangements be brought into as close connection as possible with another set? No doubt.

H. Deane.
9 Feb., 1900.

120. Your scheme does not provide for a connection between the railway transit accommodation and the ferry transit accommodation? No; but the object of the proposed extension is to bring the western suburban traffic into the heart of the city. A corresponding movement in regard to the ferry traffic would, of course, be absurd.

121. Then the ferry passengers who want to use the railway will have to take the electric tram to get from the steamers to the trains? Yes.

122. Both the Hyde Park schemes leave the railway passengers on the edge of the business portion of the city? No; they leave them close to the business centre of the city.

123. On the eastern side of either of the Hyde Park stations the ground is principally occupied by public reserves as far as Woolloomooloo Bay;—there are no business properties on that side? No.

124. Almost the only traffic east of Elizabeth-street is that towards Parliament House and the Government offices at the end of Macquarie-street? It must not be forgotten that a great many places in Castlereagh-street, Elizabeth-street, and Phillip-street are occupied by business people.

125. But the bulk of the business people go down into Pitt-street, George-street, and the streets on the other side of George-street? Yes.

126. Then you are not putting down the majority of your suburban passengers in the business centre of the city? No; but you are putting them down in a place as near to the centre of the city as you can get. You cannot get to the centre of the city.

127. It is only a question of price;—what about Wynyard-square or the Town Hall as possible sites? They would not be large enough. Ultimately, of course, the question resolves itself into one of price.

128. Every man cannot be put down at his own door; but would it not be possible, instead of going to great expense in bringing the railway into the city, to make a terminal station on this side of Devonshire-street, and from there run three or four lines of electric tramway down parallel streets into the city;—would that not distribute the traffic better? It would distribute it better, but I am very doubtful if it would give more convenience to railway passengers. If the railway were brought to King-street they would reach the terminal station from Redfern by train in three or four minutes; whereas if they had to get out at Devonshire-street they would lose as much as that in changing from the train to the tram, and, in addition, there would be the time of the tram journey to the point at which they wished to finally alight.

129. If the western platform or platforms were kept for the suburban traffic, and the electric trams run up close to the platforms, it would take very little time for passengers to transfer from the trains to the trams? One platform would not be enough for dealing with the suburban traffic, because there are often three or four trains coming in at the same time. The four lines of tram which you speak of would cost a great deal of money. The George-street tramway, and its proportion of the expense of the power-house, cost £130,000; so that four such tramways would cost £500,000.

130. But would not the use of the existing power-house somewhat reduce that cost? No. As the various tramways now existing are converted to electric traction, and the service is increased in efficiency, the power-house will not be found to be more than large enough to deal with them.

131. The power-house is only intended to provide power for electric trams on the existing tramways? Yes. For every 2 or 3 miles of electric tram constructed similarly to the George-street tramway you must put down £100,000. When you take into consideration the cost of disturbing the surface of the streets, renewing the wood-blocking, and other expenses of that kind, you find that the cost of constructing these street tramways is very great.

132. The St. James' Road scheme was to cost between £600,000 and £700,000? The works were to cost £550,000, and the resumptions another £100,000, or £650,000 altogether.

133. And Mr. Eddy estimated that a slight increase in the passenger fares would enable him to obtain a fair interest return on that expenditure? Yes; the line would have paid more than interest on the expenditure.

134. It is now proposed to expend £1,500,000, or £350,000 more than would have been expended upon the St. James' Road scheme;—do you think that interest can be obtained on that expenditure by increasing the passenger fares? If the estimate of the Railway Commissioners is right, the increase of traffic would be enough to pay 3 per cent. interest on very nearly £1,000,000; so that with a scheme costing £1,500,000, there would be £500,000 upon which no interest would be paid. I would point out, however, that if a main central station were constructed on the northern side of Devonshire-street that would cost nearly £500,000, and the capital expended would be equally unproductive, while the convenience to the public which would be given by the extension to the city would not be given by that scheme.

135. And, even if no new station is made on the Benevolent Asylum site, it will cost £500,000 to rearrange the Redfern station accommodation to make it suitable for the traffic? Yes.

136. Without any extra return? Yes.

137. So that we should have so much dead expenditure in any case? Yes; unless the St. James' Road scheme were adopted.

138. We have not kept our station arrangements up to date? Attempts have been made at various times during the last thirty years to improve matters, but the right scheme has never been fixed upon.

139. We have never taken the bull by the horns? No; because the public would not allow anything to be done.

140. Do you not think that if we do anything now we should not trifle with the question? Yes. We should carry the railway into the city by some means or another. I am sure, from what I know of the experience of other cities, that the proper thing to do with suburban traffic is to carry it to some convenient spot right in the city. In no large city is a pair or two pairs of surface tramway rails anything like sufficient for the traffic. In the American cities they have overhead lines and are preparing underground lines, as well as street tramways; but still they grumble that the means of communication are inadequate.

141. When you were in America, did you hear any comparison between the cost of bringing railways into cities, and making electric trams through the streets of cities? In America they build their elevated railways very cheaply, and indeed they would be rather flimsy for our trains, so that system is not one which I should recommend. Though, no doubt, the trains are a great convenience, the overhead running does a great deal of damage to property, and when I was in America in 1894 claims arising out of the construction of overhead railways in New York were still being prosecuted.

142. The levelness of the New York streets is favourable to the construction of overhead railways, whereas in Sydney the differences of level would be against their construction, because they would require either very tall supports or pretty steep grades? Yes.

143.

- H. Deane. 143. Is there any tendency in America to make electric street tramways supersede elevated railways or ordinary railways? No; very strong objections are raised in the principal cities of America now against the running of trains on the street level.
- 9 Feb., 1900. 144. That is, ordinary locomotive trains? Yes.
145. But is not the cost of making trains on the English system so great that there is a preference for electric street tramways in the cities? Nearly all of the suburban traffic of American cities is done by electric tramways, except where, as in New York, Brooklyn, and Chicago, they have overhead railways. These overhead railways do not connect with the main railway systems.
146. In the early days, the Americans carried their railways through the streets of the city for the sake of cheapness;—if they had been forced to stay outside with their lines, as the English companies were, would they now be bringing their railways into the city by the English method, or would they be dealing with the traffic by constructing tramways? Railway companies dealing with suburban traffic would bring their lines right into the city. At Buffalo, and some other places, the railway companies are being compelled now to get rid of level street crossings. As a rule the American railway companies do not deal very much with suburban traffic; it is nearly all done by the street tramways.
147. Could we deal with the suburban traffic in that way here, without going to the enormous expense of bringing the railway into the city? To do so, you would have to run your trams out on the suburban railway line; otherwise you would have a break at the railway terminus. Now, although the trams require the same gauge of rail as our trains, their wheel gauge is very different, and the small tram-car wheels would in some cases drop in at the points and crossings, or else cause the cars to jolt very greatly at the crossings.
148. Did your experience in America convince you that we could not do, by means of electric tramways, what must otherwise be done by costly railways? I do not think that electric tramways will altogether meet our requirements. What is needed for the eastern suburbs is an electric railway—neither the steam railway nor an electric road tramway.
149. A railway on which electricity would be used as the motive force? Yes. Such a railway could be constructed more cheaply than an ordinary steam railway, because it would permit of sharper curves and steeper grades being used.
150. If the proposed extension from King-street through the Domain is likely to be used hereafter for an eastern suburban railway, it would be hardly fair to charge its cost to the King-street scheme? I certainly think it should be looked upon as part of an eastern suburbs extension.
151. *Mr. Dick.*] Which was the main determining factor in bringing the authorities to ask for an extension of the railway into the city—the dangerous condition of the Redfern terminus, or a desire to meet the convenience of the travelling public? I think that both factors have been important. The immediate necessity of the extension into the city perhaps results more from the difficulties and dangers now existing at Redfern than from any other consideration; but the desirability of bringing the traffic into the city has always been kept in view from the very earliest history of the movement, before there was any talk about Redfern being overcrowded.
152. Taking a rough view of the present station yard at Redfern, it would appear to a non-professional observer that the large space there occupied at the present time by the produce traffic and carriage-shed accommodation, would be more than sufficient as a site for a terminal station such as you propose to construct at King-street or St. James' Road,—would it be possible to temporarily remove the Redfern goods traffic to Darling Harbour and to build a new and commodious terminal station upon the site which it now occupies, bringing it back to Redfern later on, and dealing with it on the site of the present passenger station there? That would be a very costly thing to do, and I do not think that much would be gained by doing it. The officers of the Railway Commissioners would be able to give you better information as to the result of removing the goods traffic from Redfern than I can give; but I do not think there is room for it in the Darling Harbour yard, and, consequently, its temporary removal from Redfern would be a matter of extreme difficulty.
153. If the changes which I have suggested were carried out, would there still be a serious danger at Redfern in the narrowness of the tunnel which gives approach to the station from Eveleigh? In my opinion there is, in all probability, room for a decent passenger station at Redfern, if everything else could be cleared away; but the situation would not be a very convenient one. The new site which you suggest would be further away from George-street and from the city than the present Redfern Station is, and I do not think it would meet with popular approval.
154. The advantage to be gained is so small, and the cost of obtaining it so great, that you do not consider the idea worthy of consideration? I do not. I should like to add that the rearrangement of the present Redfern Station yard, and the erection of new buildings, would be very costly, and almost impossible.
155. What necessity is there for putting the platforms at the proposed King-street station practically underground? The slope of King-street is very great, so that if you had your platforms on a level with the surface at the north-eastern corner of the station site they would be very much above the level of Castlereagh-street; whereas, if you placed them at the level of Castlereagh-street, they would be very much below the level of the eastern part of King-street. The station has, therefore, been laid out so that the train platforms shall be nearly on the same level as the north-west corner of King-street. The train platforms will be 173 feet above mean sea level, and the surface at the north-west corner of the site is about 175 feet above mean sea level, whereas the surface at the junction of Elizabeth-street and King-street is 15 feet above that.
156. Would it be practicable to have the main assembly platform open all along the front of the building; as the station is designed, all the passenger traffic will have to go through a central archway, and then spread out again inside on the assembly platform? That is considered the proper way of laying out the station. Mr. Parry pointed out to the Committee the other day the difficulties which are caused by the present arrangement of the Redfern platforms. The proper arrangement is one in which the booking-offices, waiting-rooms, and other places for the accommodation of the public are placed in the front part of the station, between the entrance and the assembly platform. There can be no hardship in requiring all passengers to go through the archway you speak of to get to the assembly platform, because all but season ticket-holders will have to go there in order to secure their tickets. From the assembly platform the traffic will distribute itself on to the various train platforms.
157. What will be the width of the main entrance? The details have not been thoroughly worked out yet, but it will probably be about 30 feet.

H. Deane.
9 Feb., 1900.

158. A railway to the eastern suburbs would practically meet with the difficulty occasioned by deficient tram accommodation? Yes; and in the course of a few years two lines of tramway will not be sufficient to carry the eastern suburbs traffic. The accommodation in Oxford-street is not sufficient now to enable a good service to be given.

159. Would a railway set passengers down as close to their residences—especially a railway running greatly over viaducts and through tunnels—as tramways would do? The lay of the country does not allow of much extension of tramways.

160. Could not cable tramways be made:—a cable tramway will go over the steepest grades? Yes; but there are only two main thoroughfares by which you can get access to the eastern suburbs—that is, the suburbs north of the Centennial Park—the Old South Head Road and the New South Head Road. Trains would carry more passengers than the present trams, and would convey quickly to their destinations people coming from long distances. Passengers by train would be conveyed into the city much more conveniently than passengers by trams which had to stop at nearly every street corner all the way in; and I think suburban residents would sooner take a few minutes' walk, and come in by train, than come in from long distances by tram.

161. The long tunnel through the Domain and the shorter tunnels further on would prevent you from using steam-power on any eastern suburbs railway extension? I think that electricity would be the proper power to use for such a line. I would not put in more tunnels than could be helped.

162. We may roughly divide the passengers which now come to Redfern by train into two classes—the long-distance class, who would be just as well served, and perhaps better served, by being put down at Redfern or Belmore-road as by being put down at King-street, and the suburban class? There are really three classes of train passengers: the suburban passengers; the passengers by what may be called semi-suburban trains—passengers who come into the city daily by trains running from Moss Vale, Katoomba, and Hornsby; and long-distance passengers; but the first two classes comprise nearly the whole of the traffic, because the long-distance trains are not very numerous, and they come in and depart either before the heavy traffic of the day has commenced or after it is over.

163. Would it not suit the long-distance passenger as well to be set down at Redfern as at King-street? I do not think so; but still it does not matter so much to him.

164. So far as the daily passenger traffic is concerned, would not a number of parallel tramways into the city be more convenient than a terminal station at King-street? I do not think so. A loss of time is occasioned by exchanging from trains to trams, which the passengers do not appreciate.

165. Which do you think occasions the greater loss of time—the changing from tram to train, as at present, or the walking from King-street down to Sussex-street? I do not know that a Sussex-street man would take the train to King-street. I do not think that such a man uses the steam trams at the present time. The Commissioners took, no doubt, as a basis for their calculation of traffic the number of passengers carried by the steam trams which run along Elizabeth-street.

166. *Chairman.*] You say that the alteration of the Redfern station arrangements, with a view to providing better accommodation there, is undesirable;—would you, as a working engineer, care to undertake the responsibility of making the alteration while business was being carried on there as usual? No; I would rather be excused.

167. Would not any such alteration be attended with a very great amount of risk to the travelling public? Yes. In my opinion the only way to improve Redfern would be to extend the station to the northern side of Devonshire-street, and to lay down your lines and build your platforms and station accommodation there, joining up, when everything was ready, with the existing lines at Redfern, and closing the old station directly you commenced to use the new one.

168. Is it not a fact that the suburban traffic amounts to three-fourths of the whole railway traffic of the Colony? I do not know; but I know that the proportion is very large.

169. If that is so, the suburban passengers would seem to be the people who are mostly concerned in any railway extension? Yes.

170. Do you think it is reasonable that people coming into the city should, after making a five-minutes' journey in the train, be compelled to change into a tram and then make another ten-minutes' journey, simply to go a distance of a few miles? No.

171. It has been suggested that electric trams might be run out to the suburbs; but you could not deal with the traffic from Burwood or Ashfield satisfactorily in that way;—trams running along a highway cannot travel with the rapidity with which trains can be run along an enclosed railway track? That is so.

172. At the present time, do not tramways run alongside the railways to many of the Melbourne suburbs? Yes; there is a good deal of competition between the trams and the trains there.

173. It takes nearly half an hour to come in from Waverley, a distance of a little over 2 miles;—is that a reasonable rate of speed? Of course a great saving of time would be effected if there were a railway.

174. What is the estimated cost of the office accommodation provided at King-street? I have put down £168,000 as the cost of the buildings there.

175. That does not include the platform covering? No; the roof over the platforms would cost £61,000. A great deal of accommodation is provided. At the present time the Railway Commissioners pay £1,200 a year for the accommodation which they occupy in the Public Works buildings.

176. How many floors do the Commissioners occupy at King-street, independent of the ground-floor? Three. The building covers a width of 275 feet and a depth of about 60 feet.

177. Would it accommodate the whole of the Commissioners' staff? It would accommodate the Commissioners and the administrative staff, which is now housed in the Public Works buildings, as well as a number of offices, like those of the Electric Engineer's Department, the Tramway Traffic Branch, and other outside offices, and the offices which are now located at Redfern.

178. The whole of the administrative and clerical staff of the Department would be under the one roof? Yes.

179. I suppose that would be a very great advantage? Yes.

180. Did you consult the Railway Commissioners in reference to the accommodation that they would require, and then draw your plans accordingly? Yes. The design was submitted to the Commissioners in December, and accommodation was then provided equal to what was required by the Commissioners at St. James' Road. Since then, however, it has been pointed out to me that the Commissioners would like to bring in a number of other officers, and I have therefore increased the estimate by £30,000. For £168,000

H. Deane,
9 Feb., 1900.

£168,000 accommodation would be provided for a parcels-office, which would be situated in the south-west corner of the building, booking offices, waiting-rooms, refreshment-rooms, lavatories, and all the space requisite for the convenience of the public, as well as the office accommodation to which I have referred. 181. Do you propose to provide for a station between Redfern and King-street? No; the Railway Commissioners object to an intermediate station between the two points. 182. Will you now describe to us what is known as the Devonshire-street scheme? Yes. The following is a description of what it is proposed to do if the railway is not taken beyond Belmore-road:—

EXTENSION OF REDFERN RAILWAY STATION TO NORTH SIDE OF DEVONSHIRE-STREET.

THE extension proposed is from Devonshire-street to Belmore-road, and the station and approaches will occupy all the ground bounded by Devonshire-street on the south, Belmore-road on the north, a line extending from Castlereagh-street to Belmore-road on the east, and Pitt-street on the west.

Provision is made for eleven platforms, each 650 feet in length, and varying in width from 22 feet to 35 feet, with two and three roads between the platforms, and traversers at the ends. The assembly platform is 80 feet wide. The whole is covered with a roof 640 feet long and 395 feet wide, in two spans. Provision is made for extending six lines further into the city without interfering with the station buildings.

A cab-road, 25 feet wide, is provided inside the station for the convenience of the country traffic, with entrance from Devonshire-street, and exit by tunnel under station buildings to Belmore-road.

The main station buildings, which will face the approach road off Belmore-road, are proposed to be three storeys in height, with attics. They are planned to accommodate the whole of the Railway Commissioners' and Traffic Staffs, and, in addition to an entrance-hall, the usual provisions for the general public, with all the latest improvements, are made.

Aspinall's patent carrier will be provided for the shifting of luggage.

On the west side are buildings two storeys in height, extending the whole length of the platforms for traffic offices.

On this side also suitable arrangements will be made for the interchange between the railway and electric tramway system.

It is proposed to close Devonshire-street, except for a subway for foot-passengers, and for an approach to cab-road into station. In lieu thereof a new street would be constructed, 75 feet wide, from the intersection of Devonshire-street and Castlereagh-street to Belmore-road; and Belmore-road and Gipps-street would be widened.

The Pitt-street approach will be widened to 70 feet, and a subway made from here to the platform. At end of building subways are also provided for from Garden-road to end platform in station.

The rails in new station will be connected temporarily with the rails at present platforms in Redfern Station, and when the new station is complete, and the traffic brought into it, the old roads in the present station will be shifted, and the old yard and buildings remodelled, so as to be more compact and convenient for working.

Length—17 chains.

Estimated cost—General works	£138,000
Interlocking	15,000
Station buildings	233,000
Lighting	5,000
Alterations to Redfern Station	30,000
	<hr/>
	£421,000

Resumptions

£140,600

The following is the report of the Railway Commissioners upon the proposal:—

Office of the Railway Commissioners of New South Wales, Sydney, 25 November, 1899.

Proposal to erect a Central Railway Station and Administrative Office on the north side of Devonshire-street, and extend the Railway System of the Colony thereto.

COMPLYING with the request made by letter dated the 24th instant, at the instance of the Secretary for Public Works, and in accordance with the provisions of the Public Works Act of 1888, section 13, we beg to report as follows:—

Cost of construction—

The Engineer-in-Chief for Construction estimates the cost of construction (exclusive of land and compensation) at

£421,000

Annual cost—

Capital expenditure at 3 per cent.

£12,630

Cost of maintenance, and for traffic, locomotive, and other expenses

1,830

Total annual cost

£14,460

A perfect terminal station could be constructed on this site, and relief, which is most desirable, could be afforded to the existing Sydney station; but this scheme labours under the serious disadvantage that it does not provide an extension into the city, and, consequently, no additional convenience would be given to the public for which a charge could be made, thus leaving the interest on the capital cost a charge to be borne for all time by the general taxpayer. Further, if at any future time an extension into Sydney is made, the large expenditure now proposed would be to a very large extent wasted.

The latter contingency is one that must be borne in mind. Travelers by rail have long demanded a better means of transit than now exists from the present locality to the northern or business part of the city, and the scheme now proposed does not meet that demand.

With a large traffic, which must necessarily grow, it is impossible to deal with it satisfactorily by tramways, and in our opinion a new terminus, to fully meet the merits of the case, must be located in a position more convenient to the business portion of the city. This would enable revenue to be earned on the necessary expenditure, while it would avoid the delay and discomfort of changing to and from the trams, and free the city from the congestion which must result if the city passengers have still to be brought into the city by the street transit.

The Devonshire-street scheme will be a convenience so far as the railway working is concerned; but commercially it would be of no advantage, nor would it meet the convenience of the public. We would, therefore, urge the reconsideration of the matter, with the view to a scheme being suggested which would more likely be financially a success and a greater benefit to the travelling public.

The Common Seal of the Railway Commissioners of New South Wales was hereunto affixed, this twenty-fifth day of November, one thousand eight hundred and ninety-nine, in the presence of,—

H. McLACHLAN.

CHARLES OLIVER,
Chief Commissioner.
W. M. FEHON,
Commissioner.
DAVID KIRKCALDIE,
Commissioner.

With regard to the estimate of cost, I should like to add a few words. It will be seen that the general works are provided for at a pretty high figure, considering the shortness of the extension and that the station building will be more expensive than the station building provided for at King-street. A glance at the drawing before the Committee will, however, show the reason of this. There is a difference of level of 35 feet between the rails in the Redfern yard and the corner of Pitt-street and the Belmore-road, and, therefore, the north-western corner of the proposed station buildings would have to be built up at very great expense, and a raised road approach must also be provided for. To a large extent this extra expenditure may prove a good investment, because underneath the raised roadway shops and stores can be arranged for, and they would bring in a good return.

183. With that exception, are the two buildings very nearly identical? The two buildings are not identical; but the accommodation provided is practically the same in each case. At Devonshire-street the approach to the station would be on the west side, whereas at King-street it would be on the north side and at the north-west corner. Then at King-street all the offices are placed in one building, which stands at the head of the train platforms; but at Devonshire-street it has been found convenient to provide for a number of offices in a wing facing Pitt-street. Such an arrangement is not practicable at King-street, because of the want of width. The road approaches have been arranged so that the first six lines on the eastern side of the station can be taken over the Belmore-road on a high-level bridge without interfering with the road traffic. As will be seen by the drawing to which I have referred the road rearrangement is very considerable.

184. *Dr. Garran.*] The shops to which you have referred will be practically situated in so many archways under the built-up roadway? Yes.

185. *Chairman.*] As regards office accommodation and accommodation for the public, the two buildings are very similar? They are practically identical. The space devoted to each service will practically be the same in each case; but there is a different arrangement of it.

H. Deane.
9 Feb., 1900.

TUESDAY, 13 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The HON. PATRICK LINDESAY CRAWFORD SHEPHERD.
The HON. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

186. *Chairman.*] When we adjourned on Friday you had stated that, as regards office accommodation and accommodation for the public, the two buildings are practically identical—that the space devoted to each service will practically be the same in each case; but there is a different arrangement of it;—will you explain how one differs from the other? The arrangement is different to suit the ground, that is all. I think I began by stating that in the design submitted by the present Government to the Committee the building is in the front. There is no room for any building at the side, but on the Benevolent Asylum site, a very large area being resumed, there is plenty of width, so that it was found convenient to put a lot of offices along the side, and also to make the main entrance to the station on the side. I think that explains the reason for the difference.

H. Deane.
13 Feb., 1900.

187. That will involve, I suppose, a much more expensive building at Devonshire-street than at King-street? Yes; not on account of its being split up in this way or lengthened, but on account of the foundations. The difference of level, as I pointed out the other day, on the centre line—the centre line as extended towards the city—is 21 feet. Down in the north-west corner it is very much greater; it is over 30 feet.

188. Seeing that you are providing for a number of shops on the north-western corner of the Devonshire-street buildings, I suppose the rent of the shops will largely compensate for the increased expenditure on the building? Yes, that will bring in revenue. I have not submitted any estimate of what it will be.

189. Will you now explain the tramway service approach to the station? Yes. I should like to say, in regard to the tramway, it is at present a mere suggestion—it requires working out. Whether it is the best which can be adopted or not is a matter for later consideration; but it is quite a workable one. I have discussed the matter with the Railway Commissioners, and I was asked by them to state to the Committee that they wished it understood that they should not be bound to adopt this particular method. Gipps-street it is proposed to widen, as I mentioned in my description of the scheme. That will not only provide room for the traffic leaving the station, but will provide for the two lines of trams leaving George-street, and going along Gipps-street and Belmore-road. The left-hand line—that is to say, the line to the station—turns off and passes under the retaining wall at the front of the station, and then rises on a grade.

190. It goes to the east of the present Benevolent Asylum? I think it will actually traverse the ground occupied by the Benevolent Asylum.

191. Would you not say that, after leaving Belmore-road, it will go through the ground occupied by the Police Barracks? Yes; and rising on a grade, it would become parallel to the offices on the western side of the station, and passengers would be able to enter and leave the trams at the footpath outside the station, which would practically become a tram platform.

192. At what level, as regards the level of the trains? At the same level as the platforms inside.

193. Much about the same as it is now? Yes. At the southern end several loops are shown for cars to stand. Then the line takes a turn round and joins on to the George-street line leading down to Circular Quay. A fork is also shown to connect with the lines going west. I have also shown two lines continuing along Belmore Road and turning into the new street which it is proposed to make along the western boundary of the property. It is proposed on this scheme to divert the Botany trams, and to take them across Belmore Park on to the new street.

194. Which would be in line with Castlereagh-street, and to the west of Elizabeth-street? Yes. There

H. Deane. is another way in which the Botany trams could be dealt with, and that also is worth consideration. It was proposed some years ago to take a branch up Regent-street, and join on to Botany-street further along.

13 Feb., 1900.

194. There is an agitation going on now with that very object in view? Yes. In that case there would be no necessity to pass under the railway at all.

195. If a person arrived at that station, and it were a terminal station, and he wanted to go out to the eastern suburbs, would he have to come right in to Sydney, and go out to the eastern suburbs by tram, or would he have to come in, as he does now, to Liverpool-street, and then go out to the eastern suburbs? He would have to come *via* Liverpool-street, which would not be very far away. The construction of a direct tram-line from the station to the top of Oxford-street—to Darlinghurst—would be a matter involving much more expense. I do not think anybody can object to going out as far as Liverpool-street, provided that arrangements could be made by resuming property to run trams round there without changing, or by having a proper and suitable changing place. At present anybody coming from the station, and wanting to go out along Oxford-street, has to get down on the southern side of Liverpool-street, and walk right across to the waiting-shed on Hyde Park. I daresay something better could be arranged if it were found desirable to provide specially for that traffic.

196. Would the approach to this station be as convenient as the approach to the station in King-street, as regards levels for cabs and such like? Yes; it would be very convenient, because the whole station is on a level, and the road approaches are laid out so as to bring all the wheel traffic and passengers on to the level of the platforms. You could not arrange a more convenient way. Passengers could get to the lower level from either side by means of subways with ramps. There is a cab-road here which is absent in the other scheme.

197. You might explain now about the cab approach? The way it is proposed to take the cab-road in this scheme is as follows: Devonshire-street will be lowered just so much as to admit of cabs getting in at the southern end of the station. Then there will be an incline or ramp of 1 in 10 for a short distance, and from there the cab-road will be at the level of the station. And towards the northern end of the station there would be another inclined road, by which the traffic would be taken down underneath the assembling platform and the station building and out through the end retaining-wall on to the level of Belmore-road.

198. *Dr. Garran.*] Your cabs will come up a pretty stiff incline to get to the station, and down a pretty stiff one to get away from it? Yes; but they will come up the incline empty.

199. Not when bringing passengers? They would not bring passengers. It is a road, not to bring passengers into the station, but to take them away from the station, so that the cabs would come up empty and go down full.

200. What proportion of the level which you see marked for rails will be level cab-roads—a third? More than a half of it.

201. *Chairman.*] More than you would have in King-street? I should say about 350 feet.

202. Then you have separate platforms for departing passengers? People wishing to depart by train and arriving in cabs or vehicles would enter opposite the old lock-up. To the south of Christ Church there is a wide entrance, so that cabs can enter and deposit passengers at the north-western corner of the station. Cabs would be compelled to enter at one end and go out at the opposite end—that is to say, to pass the front of the station—after they had discharged their passengers, and pass out on to the Belmore-road.

203. *Dr. Garran.*] As to the entrance on the Pitt-street side—where you enter there you break the retaining-wall—do the cabs have to go up a stiff incline to get on to that? No; that is at about the same level as the street.

204. You have a retaining-wall shown on the plan? That wall becomes merely a dwarf-wall when you get to the approach. Opposite the old lock-up the cabs enter, and from there they proceed by an incline of about 1 in 25 to the north-western corner of the station.

205. *Chairman.*] Have you gone into the question with the Commissioners as to the suitability of the locality for offices, as regards public convenience, at that distance from the present busy part of the city? Yes; the whole arrangements of the station have been worked out with their officers. As regards the Commissioners' administrative offices, I have provided room for these offices in this building; but some time ago, when I think this idea was first started, the Commissioners were not quite sure whether it would be desirable that their main offices should be at Redfern. I do not think they have settled that matter. That, of course, is a detail. It is for the Government to decide what is to be done in that matter. If the offices are not wanted there, then there is a certain proportion of the expense cut out.

206. Suppose this large building is erected at Devonshire-street, would it be practicable and fairly economical to bring, say, four lines of railway from there into the proposed terminus at the corner of King and Elizabeth streets, with a comparatively inexpensive station for treating the suburban traffic? No; the Railway Commissioners have always opposed the division of the traffic. If you leave any portion of the traffic behind it means a serious addition to the expense. The greater proportion of the traffic to be served being suburban, it means that the largest accommodation is really required for that traffic; so that the stoppage of the long distance traffic at Devonshire-street would go very little towards diminishing the size of the terminal station. A station like either of these two is intended to accommodate all classes of traffic. When any of the platforms are not used for the long-distance trains then, if there is additional accommodation required for suburban trains, the traffic can, as it were, overflow on to those platforms; but if these platforms are provided at some other place, then they are not available for a sudden rush of traffic. It is to be remarked that the long-distance trains—the mails and the expresses—come in at times when there is no rush of suburban traffic; either they come in very early in the morning or they come in as the Northern mail does, about 11 o'clock in the day, after the rush is over. And as regards going out, the only train which in any way cuts into the busy time is the Northern express, and the others leave at later hours when there is no rush of suburban traffic.

207. Take the space from Devonshire-street, say up to Park-street,—I suppose the expense of the resumption of properties, of viaducts, and of construction, would not be very greatly diminished if the number of lines were reduced from what you now propose to the four lines of the reduced scheme which I have just suggested? No; but with regard to that matter I would like to point out that schemes of that kind have been considered, and it is the opinion of the Railway Commissioners that where you bring all the suburban traffic on into the city, even if you leave the long-distance traffic behind, you still will want your six lines for comfortable working.

208. Even for the suburban traffic? Yes; and the reduction in width will, in any case, make very little difference to the resumptions, because you always have to resume more land than you actually want—you must go to the boundary of an allotment. You cannot take a bit of an allotment only.

H. Deane.
13 Feb., 1900.

209. So that really, if that idea were carried out, you would have this very expensive station at Devonshire-street, you would still have your expensive resumptions, and the same number of rails as far as Park-street, and from there out you would save certainly the addition of office accommodation and passenger accommodation being so expensive, but you would still have a large station required for passengers? Yes. I should like to point out that the proposed No. 2 scheme is such a scheme as you now suggest. It is a scheme for stopping the long-distance trains at the Benevolent Asylum.

210. That No. 2 scheme, which is referred to in the Under Secretary's statement, is estimated to cost £1,392,000? Yes.

211. That does not provide for a possible extension underneath the Domain towards the eastern suburbs? Yes; it provides the same sort of arrangement as you have in No. 10, but it gives you a narrow station between Elizabeth and Castlereagh streets. It avoids the removal of the Supreme Court and the Registrar-General's office, but it is a station below the level of the streets.

212. *Dr. Garran.*] It will not interfere with Hyde Park? It does not interfere with Hyde Park; but in spite of the savings effected, it comes up very nearly to the cost of the other.

213. *Chairman.*] No. 2 scheme is estimated to cost £1,336,625, and No. 10 scheme, the one which is now referred to, is estimated to cost £1,527,000? Yes. It is not altogether on all-fours with the other, because, as you will see in the description, the offices for the Railway Commissioners are not provided. It bears out what I mentioned just now—that the Railway Commissioners decided that if the main terminus were at Redfern they would not care about their offices being placed there, and in this scheme of limited accommodation for the suburban traffic, with its smaller station—you might say imperfect station at King-street—there would not be room for the offices. If the Committee wish to make comparisons between the different schemes it might be well, perhaps, for me to describe these intermediate schemes.

214. When we have exhausted this Devonshire-street proposal it is intended that you should briefly explain the various schemes;—I asked that question at the request of Mr. Watson, who has been called away on pressing business for a few minutes? You will see that in these various schemes, from No. 1 to No. 8, that idea has been carried out in several different ways.

215. *Mr. Shepherd.*] Has it been considered possible to get sufficient accommodation at the present Redfern station without crossing Devonshire-street? No, it is not possible.

216. *Mr. Leven.*] What is your candid opinion with reference to having a central station there, and doing away with all the others, or establishing a central station there as now proposed on that plan? I do not think there can be any doubt that the proper way would be to bring all the traffic together into one station in the city, if it could be arranged.

217. Further into the city than Devonshire-street? Yes, that is not far enough.

218. Considering the age of the city, and all the facilities there are now to get into the city, are we not as well accommodated as the principal places in London—that is, in proportion to the population? Possibly so, in proportion to population; but I think it is right to consider what the future requires. I am perfectly certain myself that the future does require an extension of the railway into the city—that the tramway accommodation as now laid out and proposed will not be anything like sufficient for the traffic within the next ten years. Say, within five or ten years, George-street will not be able to carry all the traffic coming in from the station and the western suburbs; you will not be able to run sufficient trams to take all the people along George-street. At certain times, as the Committee have noticed, the traffic on the electric tram in George-street is already very large, and none of the western suburbs trams have yet been brought into George-street. There is a great deal of traffic to be brought into George-street from each of those lines—not only the traffic which is running now on the steam trams, but the increase of traffic due to the development during the next period, and the increase of the traffic which the Railway Commissioners are now providing for, which is on the streets, but which is now carried by omnibuses very largely.

219. Have the suburbs which the trains communicate with advanced to such a state that they require this accommodation;—are there not thousands of acres in all these suburbs which are not yet taken up, and which are not likely to be taken up for some years? It is the suburban traffic now which you are referring to—yes.

220. Parramatta itself has not increased in population? I do not know about that; I have not made the necessary inquiries.

221. Taking all the suburbs from Parramatta to Sydney, have they increased to such an extent that they will warrant this great expenditure;—do you know that Parramatta has increased? I do not know what the increase has been. I can point however to this, that in 1896 the Railway Commissioners reckoned the traffic to produce an income of £32,000, and that now they reckoned the traffic to produce an income of £38,000—that is an increase of £2,000 a year in the three years.

222. Extending over what area, do you know? That is the suburban traffic which has to be accommodated by the city railway.

223. It is the suburban traffic mostly which we are considering in connection with this proposal? Yes.

224. It is not the traffic from the west? No; as I have explained, that is a trifle.

225. Are you prepared to say that the population of the suburbs has increased to such an enormous extent as to warrant this great outlay? I have pointed out that the revenue which the Commissioners estimate to derive from this line will provide interest on a capital of nearly £1,000,000.

226. I suppose you are not prepared to say whether the population of the suburbs from Parramatta downwards has increased or decreased? No; it has not been part of my duty to ascertain that.

227. You are not prepared to undertake to say that? I am sure that it has increased, but at the same time it is not one of the functions of my office to make inquiries of that kind, or to make reports on it.

228. In carrying the railway further into the city you have more under your immediate consideration the suburban traffic than any other kind of traffic—for instance the commercial traffic? Yes; I only go by what the Railway Commissioners say themselves.

229. As far as the mercantile portion of the traffic goes, do you think there is any necessity to bring it directly into the city? I believe there is a necessity.

230. Now, for commercial reasons, in which way would you direct that traffic—to Darling Harbour, to

- H. Deane. Circular Quay, to Woolloomooloo, or to where? I should take it to the corner of Hyde Park, because you cannot get any nearer to the centre of the city without incurring great expense.
- 13 Feb., 1900. 231. I am talking of the goods traffic? I beg your pardon; I thought you meant the commercial part of the community.
232. When I said "the commercial traffic" I meant the goods traffic? That is a matter which must be treated quite separately from passenger traffic.
233. It is not, then, for the goods traffic that you would extend the line down this way? No.
234. Your consideration, in the whole of these schemes, is directed to the passenger traffic only, and to the increase of the suburban traffic? Chiefly to the increase of the suburban traffic.
235. Putting that matter aside, where would you direct the goods traffic to if it had to come down this way? I would rather deal with that as a different subject altogether. I have not gone into that question.
236. You would not venture an opinion on that? Not at the present moment.
237. You have laid out all these schemes? Yes.
238. Now, as to your own individual scheme, which of them would you adopt? I would take the St. James' Road scheme, if I could get the Park. I would sooner have that, because there is plenty of ground there, and you can work in it as you like. Every other place is more or less cramped. I do not care where you go you will be more or less cramped unless you can go into Hyde Park.
239. It would be the cheaper? Yes; it is decidedly the cheapest of any of them.
240. It involves less resumption? Yes.
241. It is more central, and involves about half the cost? It is about less than half the cost of No. 10, and it is as near central as you can get a clear piece of ground. If you go into expensive resumptions you can get a more central position.
242. If you adopt that site the revenue derived would not be much more, the extension would be less costly, and in every way, as regards borrowing money to build the station, it would be a material benefit to the country, would it not? Yes; always assuming that the objection to the use of Hyde Park is not one which weighs.
243. That is a side issue. I suppose the enormous revenue, as pointed out by you, which will be derived from it, would be a great profit to the country if it were taken this way? Yes.
244. The increased amount which you have been told it has been increased by no doubt would be a great benefit to the country if they adopted that? Yes.
245. *Mr. Dick.*] In the Devonshire-street scheme what provision is made for accommodating standing trains, as you accommodate them in the Domain in the other scheme? They would all be shunted; but in the Devonshire-street scheme there are two extra platforms—there are eleven platforms in that scheme as against nine in the other.
246. There is not the same necessity in that scheme for a large area for stabling? No.
247. Is there any room at the old station yard for that purpose? Yes; when the existing platforms are removed, and the lines brought together, there will be a considerable addition to the standing room in the yard itself.
248. *Dr. Garran.*] You said last Friday that the area of the Benevolent Asylum station would be about 22 acres;—do you include the whole block between Devonshire-street, Elizabeth-street, Belmore-road, and Pitt-street, or do you take off that piece where you have made the new road? It includes up to the eastern boundary of the new road.
249. You cut off a part of the Cemetery? Yes. I do not think it includes that corner.
250. It does include the block between Devonshire-street, Pitt-street, Belmore-road, and your new Castlereagh-street, and that triangular piece of which you have no drawing is a kind of reserve ground for the future, I presume? Yes.
251. Do you think an area of 22 acres is unnecessarily large, looking at the future? No.
252. Seeing that Sydney is the inevitable metropolitan terminus for the whole railway system of the Colony, and that your traffic must increase, 22 acres will not be too much twenty years hence, will it? No.
253. If 22 acres will not be too much twenty years hence at Devonshire-street, will 10 acres be enough at Hyde Park? Well, you would still have that ground at Devonshire-street to go to, you know.
254. Yes; but you have been explaining to us that it will not do to have two terminal stations within a mile of each other. No. You could make use of it for carriage storage, and various purposes connected with the railway system.
255. You have been referring us to Mr. Parry to show that that scheme will not answer of keeping half of your carriages at one place and half of them at another, and doing your shunting partly in town and partly out of town? I do not know that I made any remark about that. It was the division of the train traffic I mentioned.
256. If Mr. Eddy, in his previous examination, said that this scheme at Hyde Park would last twenty years, and suppose twenty years hence we want as much room as you will have at Devonshire-street, will they have either to take half of Hyde Park or to find further accommodation elsewhere? It would be very difficult to say what the development will be in twenty years.
257. I know it is difficult to say; we cannot foresee exactly what will happen, but if we must have 20 acres for a terminal station at Sydney, and that area is not an inch too large, what are we going to do if we have fixed upon the policy of making Hyde Park a great metropolitan centre? I do not think the cases are quite parallel. You see that a portion of the 22 acres at Benevolent Asylum ground is taken up with road approaches.
258. Do you not think the road approaches to the Benevolent Asylum site are very superior to the road approaches at King-street? I have no hesitation in saying that they are.
259. Is not the Benevolent Asylum site in every respect more commodious? Yes.
260. With plenty of room for cabs? Yes.
261. For tramway access? Yes.
262. Much more so than you can ever make out of Elizabeth-street, Castlereagh-street, or King-street? Yes. At the same time I do not think you would want so much room for cabs and trams at King-street, because people would be nearer their offices and many could walk.
263. You are not going to put all the business of Sydney within a stone's throw of St. James' Church for all time, are you? No; I do not mean that all of it should be within a stone's throw.

H. Deane.
13 Feb., 1900.

264. As an engineer planning a scheme for all time with which your name would be identified, would you not like to have a scheme which would give room enough till we are all forgotten, and long afterwards? I do not like that way of putting it.

265. If another engineer were doing it, do you not think the Engineer-in-Chief would be a wise man who made ample provision? I quite approve of making ample provision, if you ask me that question.

266. Now, looking at the fine wide spaces you have around this Devonshire-street site, not a bit too wide for an immense cab trade, but very ample, does it not strike you that they are enormously superior to any you could possibly make at Castlereagh-street or King-street? Yes; but there is an answer to that. Supposing it is not in the best spot. You do not make your terminal station simply in a clear space. You could find other places some distance off, but which, of course, would be unsuitable.

267. It is a site nearer to the present centre of the city than the terminus which has lasted for fifty years? I think the point is this: That, although you could make splendid station arrangements there—everybody admits that; I am sure I do, and the Commissioners admit that you could make a splendid terminal station there—yet it does not serve the object of bringing the railway suburban traffic into the city.

268. I admit that it does not bring the suburban traffic by railway, without changing their carriages, into the city proper, but just lands them at the edge of the city? Yes.

269. The difference in the cost of the two schemes is the difference between £561,000 and £1,500,000, and the question, of course, to consider is whether that £1,000,000 is well represented in that additional cost, because it will not come back in revenue? You get no revenue from the Benevolent Asylum station, but if you spent £900,000 to bring the line into the city you do get revenue.

270. That is if you get the enhanced price for tickets? Yes.

271. But there is an agitation going on for reducing the rates? If they are reduced, you will still get the difference of the rate. If the rates up to Redfern are reduced I do not think that affects the revenue to be obtained from an extension into the city, for there would still be the same difference.

272. Still you will admit that we can never make anywhere in the city proper, unless we take wholesale Hyde Park, a station so roomy, so large, so convenient, or so suited for all time as we can at the Benevolent Asylum site? You cannot get as large a space.

273. In a previous inquiry there was a scheme submitted—and which, I think, Mr. Eddy himself rather approved of—of coming into the city, the same as you do in your plan now, but not spoiling Elizabeth-street, having two rails in Hyde Park, and taking a narrow strip off and having the other two sets of rails south of Elizabeth-street, but leaving Elizabeth-street untouched;—do you remember that scheme? Yes.

274. It was to take the through traffic on one side and the suburban traffic on the other? Yes.

275. Has that scheme been abandoned altogether by the Department? Yes; I have no hesitation in saying that Mr. Eddy did not like it.

276. What was the great objection to it? It is very awkward and costly to manage a station like that. The station would be very inconvenient. There would not be proper means of utilising all the platforms in case of a sudden rush of traffic.

277. There were to be subways under Elizabeth-street all along, so that there would be prompt access for the porters and other station-hands from one set of platforms to the other? It is mentioned in paragraph 14 of the report of the Royal Commission. The cost of working a station like that would be very much greater—I think evidence was given as to that—than the cost of working a station like this, and then of course there would be this disadvantage, that there would be two stations. They would be connected by subways, but still they would be two stations. If a passenger went wrong he might have a good distance to walk from one station to the other. There would be a certain amount of confusion.

278. But still it saved the breaking up of Elizabeth-street, which is a very serious thing? Yes.

279. It is a long street, and you come and cut one section of it clean out;—do you not think that is a great drawback to the city? It would be better if it could be avoided, certainly.

280. There was another scheme which was mentioned, and was also, I think, referred to in Mr. Eddy's evidence, of simply shoving Devonshire-street northward a certain distance towards the Benevolent Asylum, and taking off as much as would be wanted to lengthen the platforms in the present station yards;—has that idea been given up? Yes; so good a station cannot be worked out as under this Devonshire-street proposal.

281. How far back would you have to push Devonshire-street to make a thorough job of it? About 5 chains.

282. Practically, you take about half what the Benevolent Asylum scheme takes? Yes.

283. You have got the ground available, and you would take it all? Yes.

284. If you adopt the Devonshire-street scheme would you have a clear view from the old yard right along into the new one? Yes.

285. Would not the roofs of the present station buildings be in the way? They would have to be removed and the roads would all have to be re-arranged, which is a difficult thing to do.

286. You would have a clear view all the way from the tunnel right into the station-yard? Yes.

287. That would be of very great value? Yes. It would be a very costly and a very difficult thing to alter the station in that way.

288. Suppose we take the whole, we will have a clear view right into the station? Yes.

289. That would be of great value to signalmen and to drivers? Yes.

290. And great diminution of risk? Yes.

291. *Mr. Watson.* In the Devonshire-street scheme has any effort been made to ascertain how much of the £650,000 is to be spent on administrative buildings and how much on the station? Yes; I will supply the information.

292. *Dr. Garran.* You said to me the other day that if we had a system of electric trams from this station running into the city it would cost us about £100,000 to run a tramway down each street—did not you overdraw the bow then? No; it was a rough estimate. I am drawing a comparison between the George-street and Harris-street tramway. The cost of the George and Harris streets tramway, including power, is £130,000. George-street is 2 miles long and Harris-street 1 mile. Two-thirds of it goes to George-street—that is a double line. Of course the frontage to Circular Quay would be saved.

293. It works out at £86,000? I think you would have to take the cost at something like that sum. It seems a very great cost, but there are great expenses to be borne—for instance, the cost of concreting and wood-blocking.

294. You have power enough at Ultimo for the whole of the present tramways? There is not power enough for new tramways.

- H. Deane. 295. For the whole of the present tramways you have? For the present traffic.
- 13 Feb., 1900. 296. You have counted all that into the £130,000? No, only the proportion for George-street. The total expenditure is about £260,000. The power-house provided at Ultimo was intended to supply sufficient power for the existing traffic, but if the Railway Commissioners, as they intend to do, and as they have a perfect right to do—and they are very wise in doing so—increase the traffic accommodation on each line as it is converted to electricity, they will have to have a good deal of power before they have finished. So that there will not only be no surplus for new lines, but there will not be enough for the old ones.
297. If we wanted to run an entirely new tram-line from the Benevolent Asylum site down Hay-street, Sussex-street, Kent-street, and round into George-street it would cost from £80,000 to £90,000? I think it is very likely that it would.
298. With regard to the cab service you speak of here, it is only two sets of platforms you give this cab service to where you have got that one road? Yes.
299. Will that be enough? Quite. You would not have more than two long-distance trains coming in at the same time, and requiring a cab service.
300. You do not provide a cab service for the suburban traffic? No.
301. That would be most supplied by the tram service? Passengers would have to go outside to take cabs.
302. It is comparatively few suburban passengers who come in cabs compared with the through passengers? Yes; it is nothing for them to walk, if they have no luggage. The idea in taking a cab-road right into the station is to take up luggage readily.
303. In most of the great English stations they bring the cabs right into the yard? Yes.
304. It is found to be very inconvenient if they do not? It is the general practice to do it.
305. I suppose they would scarcely be allowed to do otherwise? It is generally looked upon as essential. I do not know that you would find it so in every case, but in most cases it is.
306. You think this road you have made will be a convenient one, and will work well in practice? Yes.
307. You think the 250 feet out of 600 feet will be enough for a stand for the cabs which bring passengers in? I think I said 350 feet.
308. As a rule, how many cabs are delivering passengers now at our stations? You sometimes get three or four drawn up.
309. Not more than half a dozen? No. Whatever room there is would be ample I am quite sure.
310. *Chairman.*] We want you now to explain briefly the different schemes, beginning with No. 1, and omitting No. 10, which you have explained? The Committee will remember that the St. James' Road scheme was recommended by a Royal Commission and by the Public Works Committee in 1897. Towards the end of 1898 the Premier, Mr. Reid, was very anxious to get some settlement of the question. He was very much opposed to the Hyde Park scheme, and he sent for me and discussed the matter. I pointed out to him what had been done, and the various proposals which had been made, and I showed him a number of plans. He did not appear satisfied with the choice which had been made in New South Wales by the Railway Commissioners and by myself, or with the decision of the Public Works Committee, and he decided to ask Mr. Rennick, the Engineer-in-Chief in Melbourne, to see him and report on the matter. After Mr. Rennick had been over for two or three days the Premier sent for me. This was on the 6th December, 1898, I found Mr. Oliver, the Chief Railway Commissioner, with him, and also Mr. Rennick. Mr. John Parry, of the Railway Commissioners' staff, was in attendance, and afterwards came in. The matter was generally discussed. I have here a report on the interview explaining the circumstances to the Minister.
311. Will you read the report? It is as follows:—

CITY RAILWAY EXTENSION.

I HAVE the honor to report that the Premier asked me to see him yesterday morning (6th instant), at 11 o'clock. When I entered I found Mr. Oliver, Chief Railway Commissioner, and Mr. Rennick, Engineer-in-Chief, Victoria, with the Premier. Mr. John Parry, of the Railway Commissioners' staff, was in attendance, and afterwards came in.

The Premier stated that he had requested the Premier of Victoria to let him have Mr. Rennick's services for the purpose of consultation on the question of city railway extension, and that Mr. Rennick had now come for that purpose.

After some discussion of the matter the Premier expressed a desire that Mr. Parry and myself should give Mr. Rennick all information necessary to enable him to make his report. This will of course be done. Mr. Oliver said that in deference to the wishes of the Premier he had no objection to Mr. Deane and Mr. Parry going into the matter as desired, as he had every confidence in their judgment and knowledge.

Mr. Rennick spent yesterday afternoon and part of this morning with Mr. Parry, and at 10:30 called on me, by arrangement, at my office. I have furnished him with an outline of the information he requires, and with some maps and plans to illustrate the matter. I have also directed his attention to the reports of the Royal Commission of 1891, the Royal Commission and the Parliamentary Standing Committee of 1897, and to the evidence given by myself and Mr. Parry, and especially to that of the late Chief Railway Commissioner. I have also informed him that any further information he may require is at his service.

During the interview with the Premier he seemed to consider that I was an uncompromising advocate of the Hyde Park scheme, and would submit no other. I distinctly repudiate this view, and I made to the Premier a statement to the following effect:—

"At the time of the 1891 inquiry I held the opinion that the line ought to be carried down the western side of George-street, as my evidence clearly shows. I explained to that Commission how I thought the requirements could be met. This proposal would bring the suburban traffic proper only into the city. The necessity of bringing the whole of the traffic, including the mountain and Moss Vale trains, as well as the mail and express trains, into the heart of the city had not become so strongly accentuated as it did later. The fact that this is so is proved by the Railway Commissioners submitting to the Commission a modified scheme as an alternative to bring part of the suburban traffic to a terminal station at the Custom-house.

"When, in 1896, the question of city extension was referred to a Royal Commission, I was instructed to give that Commission all information in my power. This I did, and I helped them to analyse all the schemes submitted, including about six schemes emanating from the Department, and others specially worked out at the request of the Commission. I also prepared a plan showing what routes were practicable, including, amongst others, a line along the western side. I carefully abstained, however, as will be seen from my evidence, from recommending any one particular route, as I wished it to be distinctly understood that I was an impartial witness, and had no bias in favour of one route or another. At the close of the inquiry the Royal Commission passed a vote of thanks to me, and sent me a letter conveying the same.

"I have now to say that, given the conditions that the Railway Commissioners laid down—that of bringing all traffic, long distances and short distances, to the one terminus in the city—Hyde Park is the only spot where sufficient space is available for that to be conveniently done.

"As to this fact, both the Royal Commission and the Public Works Committee satisfied themselves, as can be seen from their reports.

"If Hyde Park is not available for a terminus new conditions must be formulated, and the details of a scheme to meet them can then be worked out. At present those conditions have not been furnished to me by the only authority who can determine them—viz., the Railway Commissioners. The reports already referred to will show, however, that schemes which will more or less meet other traffic arrangements have been submitted to the Royal Commissions and Public Works Committee, and have been deliberately rejected.

"A

"A decision in this case can only be arrived at from a consideration of traffic requirements. These are absolutely necessary in the first instance, and only afterwards does it become a question of engineering design. H. Deane.

"My duty is not to dictate as to how traffic is to be conducted, but to adjust my designs to what the Railway Commissioners lay down as the requirements of the case." 13 Feb., 1900.

Mr. Young expressed his approval of the position I had taken up. After that I sent a number of plans which Mr. Rennick had asked for, and then his report arrived, being dated the 19th December, 1898. About the 28th March, 1899, I received instructions to prepare plans making a station at the High School site. I might say that this was done in order to work out Mr. Rennick's proposal. I ask the Committee to notice that Mr. Rennick does not in any way take particular credit to himself for making that proposal. He thoroughly agreed with the recommendation of the Public Work Committee, and only looked upon this as an alternative. Also I think it will be acknowledged that this was a proposal which had, more or less, been already worked out, and evidence given on it before the Royal Commission and the Public Works Committee. I will now read a description of No. 1 scheme, which is the outcome of Mr. Rennick's recommendation:—

CITY RAILWAY EXTENSION.—No. 1 Scheme.

THIS line includes a central station at the High School site, whence the railway is constructed in tunnel to a terminal station near Albert-street in the Government House grounds. A station of the suburban style is provided at Liverpool-street.

Under this scheme suburban traffic can only be brought into the city, and it becomes necessary to make a new terminus for long-distance traffic on the north side of Devonshire-street, where the Benevolent Asylum, the Christ Church parsonage, and the police quarters and residence now stand.

The stabling for the engines and carriages which have to be laid up during the day is obtained by continuing the lines beyond the Albert-street station, and making a depôt for carriages and engines at Macquarie Point. That is to say, a depôt for carriages would really be at Macquarie Point, but as it is worked out on this plan the depôt for the engines would be at the back of the Albert-street station.

This line being mainly in tunnel on a grade which is worse than the ruling grade of the suburban lines, must be worked by electricity. Sidings must, therefore, be arranged either at Devonshire-street or Liverpool-street, to enable the change of locomotives to be made.

The Railway Commissioners ask for six lines of way throughout, six platforms at the High School site, and eight platforms at Albert-street.

This scheme involves the destruction of a large amount of property on the northern side of Devonshire-street, including the Benevolent Asylum, Christ Church parsonage, and the police buildings and residence, as well as Government House and grounds, thus rendered uninhabitable as a Vice-regal residence. Otherwise it is a workable scheme. Offices for the Railway Commissioners and staff are not provided.

312. How much of Hyde Park would be taken up by that scheme? No portion of Hyde Park is taken except temporarily, because the tunnel is covered in, and the surface is restored. For about three-quarters of a mile the line will be in tunnel. The length of the southern half is 29 chains; there is an intermediate length of about 3 chains, and the length of the northern half is 27 chains. It is also important to note that being so much in tunnel, the desirability of using electric power instead of steam is obvious. This scheme was worked out by me in conjunction with the Railway Commissioners' Office, Mr. Parry especially being told off to assist me. The estimate of the cost of the works in this proposal amounts to £1,154,000, and the resumptions are put down at £602,000, making a total of £1,756,000. In the compensation which Mr. Sievers was engaged in preparing no item is included for tunnelling under buildings between the High School site and the Domain. It is clear that a great many private buildings will have to be tunnelled under, but at a depth where they can be tunnelled under, probably, without doing any damage, so that no compensation is put down. As to the right of the Government to tunnel under these buildings without giving compensation that will have to be provided for in a special Act, and provided that no damage was done to the buildings there would then be nothing to pay. That is just an outline of scheme No. 1. I can show the detail sketches, which were got out for the stations, if the Committee like, but I think it is scarcely necessary.

313. *Dr. Garran.*] In that scheme do you take the whole space between Elizabeth-street and Castlereagh-street? Yes; but it is only 150 feet, and you have consequently to go under the street on either side, in order to get sufficient width.

314. Would you be on the level of Castlereagh-street on that side? No; you would be below the level.

315. It would be a well station to some extent? It would be a well station. You have to pass on; you have not much width; the width does not enable you to get the benefit of the difference in level. It is just as if at that big station submitted to the Committee you had to pass all the lines under King-street.

316. At Fort Macquarie would you have room to do all the shunting you required? Yes; there is plenty of room in that scheme as it was worked out. There is a large shed with a number of lines converging into it with the necessary switches and crossings.

317. In some of the London stations they have a spare engine on a little siding, which runs on to a new train, and leaves the other engine ready to take out the next train, thereby saving a great deal of space? Yes; it helps. We have it in these schemes.

318. It is not shown on the plan? No, because this is only a skeleton map; it has been provided for in these terminal arrangements.

319. If you wanted to make a circle there, or a pear-shaped curve, would you have to take a disproportionate quantity of the harbour in to make room to turn round at Fort Macquarie? You can scarcely get a curve in.

320. You want a 10-chain curve? You cannot get a 10-chain curve in. You can get about a 9-chain curve in.

321. So that any idea of turning round at that end is impracticable? Yes.

322. Do you think you have not over-estimated the cost of this scheme? Not by any means.

323. I suppose it is the tunnelling which makes it so expensive? Yes, very largely.

324. And the objection to tunnelling, which every witness seems to press, would be as strong against this route as against any other, or stronger? Yes.

325. In fact, the great drawback to this route is the quantity of tunnelling to be done? It is one great drawback. I am sure the objection to tunnels has not been overdrawn. It is very great in the northern temperate countries, but here, where the climate is almost tropical for a large portion of the year, the objection would be very great indeed.

326. Although you save Hyde Park you take quite as much out of the Domain as the St. James' Road scheme would have taken out of Hyde Park? Yes; I do not think it is a scheme to be recommended. It spoils Government

- H. Deane. Government House and grounds, which are most picturesque, and the beautiful view which presents itself as you come up the harbour, would be disfigured by Albert-street station, and that terminal carriage shed at the point.
- 13 Feb., 1900.
327. The Albert-street station would be very convenient for the ferry traffic? It would.
328. None of your other schemes make a connection between the ferry and the railway? No. There is one, which I shall refer to later on, where that has been proposed.

WEDNESDAY, 14 FEBRUARY, 1900.

Present:—

The Hon. WILLIAM JOSEPH TRICKEIT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.	WILLIAM THOMAS DICK, Esq.
The Hon. ANDREW GARRAN, LL.D.	JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.	

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

- H. Deane. 329. *Dr. Garran.*] With regard to No. 1 scheme, in order to avoid interfering with Hyde Park, you carry your line in tunnel all the way through, and you turn sharp to the left to get into the station? Yes.
- 14 Feb., 1900.
330. As a rule, when it can possibly be avoided, it is undesirable to go into your station-yard immediately out of a long tunnel? Yes.
331. And if you do have to go into your station-yard out of a tunnel it is best to have your station-yard straight in front of you? It is far better.
332. This plan has the disadvantage not only of entering that station-yard immediately after a tunnel, but the station-yard is not in sight of the engine-man as he is going through the tunnel, it is away to the left;—that is a disadvantage? It is a disadvantage.
333. And to some extent that is a disadvantage to your plan, No. 10, because the portion which lies between Elizabeth-street and Castlereagh-street is not in the sight of the engine-driver as he is coming through the Park? I think that is fairly right, because he will see the signals. It is a question of the signal-man seeing the line, and as long as the engine-driver can see his own signal he is all right.
334. He goes by signals? Yes.
335. It is an advantage to him to see as well? Yes.
336. I see you get over the difficulty by not going through the Park in tunnel? Yes; I have an open-cut.
337. So that you take that slice off the southern end of the Park more than the Commissioners' scheme does—that is the St. James' Road scheme? Yes. The Railway Commissioners would prefer to have the whole length open, only no doubt there would be an outcry against it.
338. I can see that it is a compromise; but that scheme has the advantage of having the station-yard pretty well in front of the approaching line? Yes.
339. Which none of these other schemes which turn aside to avoid the Park have? No; you have to do the best you can under the circumstances.
340. I wish to bring out that all the schemes which turn to the left have that disadvantage? I think No. 10 is a very good scheme. I do not think that is open to any serious objection.
341. You think it would be quite workable? It is quite a workable scheme. I do not like No. 1 scheme.
342. It is a scheme which undoubtedly has some advantages, but the expense is very great? Yes.
343. *Mr. Shepherd.*] I see that in no less than seven of the schemes a station has been provided at Liverpool-street; I would like to know the reason why that station has been dropped out of the present scheme? I had instructions to provide a station at Liverpool-street in the other schemes, and I have had no instruction in regard to this scheme. The Railway Commissioners have always objected to a station at Liverpool-street, so that it has been left out of this last one.
344. Do you think it is wise to jump the whole way from Redfern Station to King-street? I would express no opinion about it; I should have thought myself that there would have been some traffic to pick up, but the Railway Commissioners are very much against it. They do not think anything would be gained by it; they think it would be inconvenient to make a station there, that there would be very little traffic to pick up, and that it would not pay.
345. I see that the cost of No. 1 scheme exceeds the cost of any other scheme, and I suppose that is because the line is taken down to Fort Macquarie? Yes.
346. *Mr. McFarlane.*] Do you not think a lot of traffic will be lost through not having a railway station at Liverpool-street? There are a large number of people coming by the trains who want to go to the eastern suburbs, and the nearest point for them to reach the eastern suburbs would be from Liverpool-street; and there are a large number of people going to business, who either get out at Liverpool-street, Bathurst-street, or Park-street;—if there was no railway station at Liverpool-street, is it not probable that these persons would go on to King-street and walk back;—would they not naturally take the tram from Redfern, where it would land them exactly where they wanted to go? I daresay they would. I do not think I can say anything more. I think, in answer to Mr. Shepherd, I said I should have thought that there would be some traffic.
347. Would it not be probable that there would be a considerable loss of traffic to the railway? I do not know about that. I am not in the habit of going into the traffic question very much, except for my own private consideration. The wish was expressed some years ago that I should not meddle with that question.
348. Would not that strike you, with a knowledge of Sydney? Yes; I certainly should have thought that there would be some traffic to pick up.
349. We see a considerable number of people who come from the railway getting out of the trams at
Liverpool-

Liverpool-street, and also going down to George-street and York-street? It would not be so easy to provide a station there by widening out in this particular scheme as it would in a scheme with a straight running like St. James' Road. Still it could be done, no doubt.

H. Deane.
14 Feb., 1900.

350. Comparing No. 10 scheme with the Hyde Park scheme, the principal objection to that was on account of the large area of Hyde Park to be taken? Yes.

351. Under this present proposal a considerable area of Hyde Park will also be taken— $4\frac{1}{2}$ acres? Yes.

352. That area of $4\frac{1}{2}$ acres, and the area it is proposed to take out of the Domain, would mean more than the original scheme proposed to take out of Hyde Park? Yes, the total is more.

353. Do you not think there would be an objection on the part of the public to have such a large area of the Domain taken away? I do not think that portion of the Domain is of very much use to the public. I do not think they would miss that portion.

354. You do not think the same objection would be made to taking the Domain as was made in the case of Hyde Park? Not to that bit of the Domain.

355. *Chairman.*] I think the Committee are to understand that No. 2 scheme is also in a measure the outcome of Mr. Rennick's proposal? No. 1 scheme is the practical embodiment of Mr. Rennick's recommendation, and No. 2 is the alternative scheme.

356. Will you state how No. 2 scheme comes to light? I was instructed to sketch out an estimate for No. 2 scheme, because it was considered by the Minister for Works, and I believe by the Cabinet, that it would be objectionable to interfere so much with Government House grounds. In that way No. 2 arose as an alternative to No. 1, and knocking out the accommodation for the traffic at Bridge-street and Albert-street, which was looked upon as unimportant.

357. Will you now give a brief outline of No. 2 scheme? My description reads as follows:—

CITY RAILWAY EXTENSION—No. 2 Scheme.

This line differs from No. 1, inasmuch as the station at the High School site is made the terminus for the traffic. Stabling for engines and carriages is provided at the back of the Art Gallery, connection being made by two double-line tunnels.

This scheme avoids the destruction of Government House grounds, but takes up the same amount of property north of Devonshire-street as scheme No. 1 for a long-distance traffic station. The lines are to be worked by electric locomotives.

Offices for the Railway Commissioners are not provided.

Of this scheme it is to be said that, while the long-distance traffic is left behind at Redfern, it does not appear to adequately provide for the short-distance traffic at the High School. Six platforms only can be provided without adding largely to the resumptions. The Railway Commissioners are of opinion that the accommodation is too restricted. The additional accommodation could only be provided after further resumption to the west of Castlereagh-street.

The estimate for that scheme is as follows:—For works, £850,000, and for resumptions, £542,000, making a total of £1,392,000. To that would have to be added, as in the last case, whatever compensation might be necessary for damage done by tunnelling under the buildings north of the High School. The accommodation at King-street—six platforms—is only obtained by undermining Castlereagh-street and Elizabeth-street. There is a length of tunnel, the same as in No. 1 scheme, of about 29 chains, between Liverpool-street and the King-street station. I call it a tunnel, though it is really a covered way.

358. Will it be temporary or permanent? It will only be temporarily opened up; the surface will afterwards be restored.

359. Seeing that under this scheme, and also the last one, which proposed that the country trains and the through suburban traffic should have their terminal station at the Benevolent Asylum site, and that only the strictly suburban traffic shall go into the city, what is the necessity for so much expenditure at the Devonshire-street site? I think I can show you that by the sketch plans worked out for the Devonshire-street station. This is a mere sketch, and it requires a good deal of alteration, but it shows approximately what is required; this is one of the sketches which were prepared for No. 3 scheme. The Devonshire-street station in No. 1 and No. 2 differs slightly from that in No. 3, as there will be more room required in No. 1 and No. 2, so as to admit of changes of steam locomotives to electric. You must have the suburban platforms and the long-distance platforms together, therefore you have to make your station to suit the suburban traffic as well as the long-distance traffic. The old platforms at Redfern Station would not be utilised.

360. *Dr. Garran.*] Where is the necessity for leaving Redfern Station at all, if you are going to take all the suburban traffic in Sydney? You want accommodation for the long-distance traffic.

361. Because we relieve the Redfern Station immensely? We do relieve it of a lot of traffic; but you have not accommodation left for the long-distance traffic. You have not the length of platforms to suit that traffic.

362. How many long-distance trains a day come in, and how many go out? I would recommend that that question should be put to Mr. Parry. There are not many of these trains run; but I expressed simply the determination that was arrived at after consultation with Mr. Parry.

363. You simply made a plan on the understanding that the Working Department would require it? Yes; they stated what they required, and I simply worked out the plan to suit.

364. The reason why they required it, you think, we should ascertain from them? Yes. They stated that they required this accommodation; but the whole of the passenger platform accommodation and offices must be removed to the north side of Devonshire-street, and, therefore, you have to build an entirely new station to accommodate both classes of traffic. I think this plan shows, without much further explanation, what width and length are really necessary. I would point out that this is only a sketch which has not been approved, and is only so far a guide as to show something of the area which will be required, because, as a matter of fact, if a station of that class were to be carried out the lines would not be curved round as shown; but would be run straight through, as has been done in No. 9 scheme. Still, although this plan has that defect, it shows the size of the station and the buildings, and approaches which will have to be made to suit the traffic.

365. *Chairman.*] Can you state roughly what space that station would occupy, so as to give a comparison between that station and what we would have to do if we had anything stopped at Devonshire-street? The property is so cut into that you would have to take more than you really want. You cut into the Benevolent Asylum building, therefore you would have to remove the whole of it. You cut into the Christ Church Parsonage probably, and, therefore you have to remove the whole of it. The late residence of the Inspector-General of Police is interfered with, and, therefore it has to come away. You cut into the Barracks so seriously with this scheme that you might just as well sweep them away. 366.

- H. Deane. 366. And you would break into the burial-ground? Yes. The only part which is left is the Female Refuge and the Convent of the Good Samaritan. That is under No. 3 scheme; but under No. 1 and No. 2 these properties also would probably have to be taken, on account of the lengthening out of the station which would be necessary to provide for the running off and on of electric and steam locomotives.
- 14 Feb., 1900. 367. *Dr. Garran.*] As a general question, in your opinion any scheme which tries to separate the through traffic to be kept at Redfern from the suburban traffic to come into Sydney would necessitate the use of the Devonshire-street site? It would.
368. You are sure of that? I am sure of that.
369. You say that as an engineer? I say that as an engineer, and I am sure it would be backed up, because that point has been discussed over and over again with the Commissioners and their officers.
370. That has been thoroughly worked out? Yes. It is thoroughly understood that if you carry any portion of the traffic on you cannot leave the long-distance traffic on the southern side of Devonshire-street.
371. Or if you tried to do it you must have a Devonshire-street station? Yes.
372. *Chairman*] For bringing the strictly suburban traffic on into the station you would have to use electric engines? Yes; for a tunnel scheme.
373. Would they run the whole length or would there have to be a change of engines at Redfern? There would have to be at change of engines at Redfern at present.
374. There would have to be a change of engines? That is my opinion, and I think it is backed up by those of engineers and railway managers in other parts of the globe.
375. *Mr. Shepherd.*] What delay would that create? The Railway Commissioners think it would be a delay of three minutes at first. It would probably in working be reduced to something less afterwards. It might be considered a serious delay at first. I think probably the delay would be found to be a good deal less than three minutes.
376. One of the chief objections of the advocates for the extension is the delay in changing into the trams, and if that is the case there would be no saving of time effected? There would be a delay, because the changing into the trams takes more than three minutes.
377. *Dr. Garran.*] In the early days of the London and Birmingham Railway did not the locomotive always go off at Camden Town, and was not the train pulled into Euston Square by cable? Yes; I think there was something of that sort. I am not recommending at the present time any scheme involving tunnels, and therefore I have not made it my business to go carefully into the time that will be lost in changing, and I have not discussed the matter very much with the Railway Commissioners' officers. I think possibly that an arrangement might be made so as to reduce the time lost.
378. *Mr. Shepherd.*] I suppose it is quite impossible to form any idea of what the compensation would amount to;—that I suppose depends upon the injury to buildings from concussion, blasting, and so on? There would be no injury from concussion or blasting, because there would be no blasting allowed which would do any damage. I was carrying out not very long ago the connecting link between Darling Harbour station-yard and the new sidings at Darling Island, and I did not allow any explosive to be used. The work was done without blasting. Holes were drilled, and unslaked lime was used, which in slaking swelled and split the rock. It is quite a satisfactory method. It is unsafe to be using explosives in the neighbourhood of buildings.
379. In the sewerage tunnels in the suburbs they are continually blasting, and it cracks a good deal of the ceilings, and I thought that possibly the same thing would occur in this case? No; I should make provision for the work to be done without blasting. I think there would be very little rock to remove in any of these schemes, and that only at the bottom of the excavation, because the clay extends a good way down, as the trial-holes show. If No. 1 scheme were carried out, then, between King-street and Bridge-street, or King-street, where we cross to get out into the Domain, there would probably be a good deal of rock. But in the other scheme there would be very little, I think.
380. That would occur, of course, where there are no buildings, and in the Domain? No, I mean after leaving King-street, where you pass along under the streets and buildings to get out on to the Domain, because in the Domain itself there will be no buildings.
381. *Chairman.*] In No. 2 scheme, what have you put down for the cost of the terminal station at the Benevolent Asylum, the cost of the terminal station at King-street, and the cost of the car and motor sheds at the back of the Art Gallery? The works and buildings on the Benevolent Asylum site amount to £145,000; the works and buildings at the King-street station amount to £194,000; and at the back of the Art Gallery the earth and rock excavation and retaining walls are put down at £58,000, and the sheds at £33,000, making a total of £91,000.
382. *Mr. McFarlane.*] When the railway is continued into King-street do you think it is absolutely necessary to have a new station at Devonshire-street? I do, because it is too difficult and troublesome to alter the present station.
383. It has lasted a good while? Yes, it has; but it requires alteration.
384. With the reduction of traffic which will follow from the extension of the line into the city, could it not be arranged to make the old station suitable for requirements for years to come? The Railway Commissioners do not think so.
385. It would save a considerable expense if done? I do not know that it would save very much. You would want a new station for either one or the other, and it would be very bad for the management to have them separated. You would want a new station for the suburban traffic—the wayside traffic—or you would want a new station for the long-distance traffic.
386. You would have a new station at King-street? I mean at Redfern.
387. You would want the two at Redfern? You want a new station for one or the other, and it is most convenient and cheaper in working to have the two classes of traffic in the same station. It is a much more expensive thing to work two stations than one large station.
388. I quite understand that;—but with the large area of land which is at Redfern, and the great reduction in traffic which is caused by the extension of the railway into the city, one would think that improvements should be carried out to make the old station workable? Very little reduction in the area required results from carrying the suburban traffic only beyond Redfern.
389. You reduce the traffic? Not sufficiently to enable any improvements to be made economically, or to gain any space. You would have to make a radical alteration in any case, whatever you do, but it is easier and more satisfactory to make the radical alteration by crossing Devonshire-street. 390.

390. When the suburban trains will only stop to land or to pick up passengers they will not require nearly the same room at Redfern Station? I will ask you to refer that matter to the Railway Commissioners, because it is really a question of working the traffic.

H. Deane.
14 Feb., 1900.

391. Your idea is that new stations are necessary? It is necessary to so alter this Redfern Station that it becomes cheaper and safer to make a new station on the other side of Devonshire-street.

392. *Dr. Carran.*] Have you ever gone into the expense of resuming St. Paul's School and making another approach under the road, so as to improve the access to the yard? No; but that has not been looked upon as providing adequate relief.

393. It has never been worked out? No.

394. *Chairman.*] Will you now give a brief outline of No. 3 scheme? No. 3 differs from No. 2 in this respect, that the long tunnel and stabling at the back of the Art Gallery are dispensed with, and in order to provide for the necessary shunting in the terminal station itself, a larger area of ground is taken. My description of No. 3 reads as follows:—

CITY RAILWAY EXTENSION—No. 3 Scheme.

This scheme is a development of No. 2, and has for its object the provision of sufficient accommodation for bringing all suburban and sub-suburban traffic into the city. The long-distance trains would still have to stay behind at Redfern, and the Benevolent Asylum building, the Christ Church parsonage, the police barracks, and the late residence of the Inspector-General of Police be removed to make room for the altered station. A large area must be resumed in the city proper.

On the other hand, there would be a considerable amount of ground not actually required for station purposes, which could be utilised for shops, and thus produce revenue.

No stabling accommodation for locomotives and carriages would be required, as they would be run back to Redfern, as in the Hyde Park scheme. This line would be worked by steam locomotives.

As such a large amount of resumption is involved beyond what is required, it suggested itself that the same might be utilised for a terminal station for all traffic. This is shown in the next scheme, No. 4.

The estimate for No. 3 scheme was as follows:—For works, £523,000; for resumptions, £1,070,825; total, £1,592,825. Then there is a deduction of £255,000 to be made for the unused land, from which revenue would be derived afterwards, leaving a balance of £1,338,825. As regards the greater portion of the estimate, therefore, I should have to refer the Committee to the Land Valuer.

395. What space at the junction of King-street, Elizabeth-street, and on to Pitt-street, would be occupied by the station site? The area which it would be necessary to resume for No. 3 in the city proper would be the property between Castlereagh-street and Elizabeth-street, starting from Bathurst-street, and running past Park-street and Market-street, up to that line of properties facing King-street. The King-street frontages would not be taken. Castlereagh-street would have to be absorbed between Park-street and the end of the station, and the properties would have to be resumed. The Castlereagh-street frontages would have to be resumed on the eastern side to the same length. I described a little while ago what is the Redfern Station with the accommodation necessary for the long-distance traffic, and the plan I now exhibit shows the station which was to be worked out for the suburban traffic into Sydney under No. 3 scheme.

396. Would the accommodation at Redfern be much the same as it would under No. 2 scheme? It would be the same as under No. 2 scheme, except, as I pointed out, the Female Refuge and the Convent of the Good Samaritan could be saved, because the length would be less. The room for the change of locomotives would not be required. There would only be a short distance of tunnel or covered way in this scheme, and I think the necessity for using electric locomotives need not be pressed. In this scheme eight platforms are provided.

397. Being a kind of elongated scheme, will it in any way relieve the trouble of working at Redfern which occurs under No. 2 scheme? It gets rid of the loop round to the Art Gallery, and the shunting itself is carried out at the entrance to the station. There are two more platforms provided here than in No. 1 and No. 2 schemes at King-street station. That is obtained at the expense of going across Castlereagh-street and resuming the properties on the western side.

398. What city streets would that interfere with—Elizabeth-street and Castlereagh-street? Elizabeth-street would not be permanently interfered with, and Castlereagh-street would be diverted, as shown on the plan.

399. It would be sent more westerly? A little over a chain in the centre line. Bathurst-street would be restored after the works are completed. Of course the traffic would not be stopped; a portion only would be opened out at a time, and the same would be the case at Park-street. That gives a workable scheme for suburban traffic.

400. *Dr. Carran.*] You save £250,000 that you make in your loop by this scheme, but you increase your resumption from £600,000 up to £1,000,000? Yes.

401. So that you save £250,000, and spend an extra £400,000? The total cost is very nearly the same. You save £300,000 in works.

402. *Chairman.*] But you increase your land resumptions? You increase your land resumptions by £500,000; but then you have a set-off in the property which is not required, and from which revenue could be taken, and which has been deducted from the cost of the scheme. That, you see, was worked out as a substitute for the other, to show the additional property which would be necessary in order to avoid that extension.

403. You do not mind stating that you do not favour that scheme? I do not think any scheme which does not bring in all the traffic is satisfactory.

404. *Mr. Shepherd.*] I suppose this scheme has been chiefly proposed with the view to save Elizabeth-street;—it does not block Elizabeth-street? There was no proposal to block Elizabeth-street until No. 10 scheme came forward. The closing of Elizabeth-street was always avoided. I think it was assumed that it would be objected to, and no proposal was made which would involve the blocking of that street. To show that I am right in that view I would refer to a proposal, which was mentioned yesterday, for dividing the traffic—for having the suburban traffic on one side of Elizabeth-street and the long-distance traffic on the other, leaving Elizabeth-street intact. If it had been looked upon at that time as unobjectionable to close Elizabeth-street the scheme would then have resulted in something like the present scheme which is submitted.

405. This would block Market-street and Park-street at Castlereagh-street? It would block Market-street, but it would not block Park-street.

406. I thought it went up nearly to Bathurst-street? The resumption takes place practically as far as Bathurst-street.

- H. Deane. 407. So that it would only block Market-street? It blocks Market-street between Castlereagh and Elizabeth streets. That is also the case in the St James' Road scheme. You cannot get length unless you do.
 14 Feb., 1900. 408. *Chairman.*] In this scheme you provide for a cut and cover through Hyde Park;—would that also be temporary? That would only be temporary. It is not for a long distance, and it was thought that the ventilation would not necessitate this being left open.
 409. Will you now give a brief outline of No. 4 scheme? My description of No. 4 reads as follows:—

CITY RAILWAY EXTENSION—No. 4 Scheme.

This scheme has a general similarity to the St. James' Road proposal. All trains are carried to a terminus situated on the western side of Elizabeth-street, near King-street. There are eleven platforms, and the buildings will be large enough to provide accommodation for the Railway Commissioners and the whole of their Head Office staff.

As all trains are carried through Redfern Station that station requires very little alteration; the Benevolent Asylum building, the Christ Church parsonage, and the late residence of the Inspector-General of Police remain untouched, and the police barracks lands can be adapted so as to afford room for new barracks.

A station is provided at Liverpool-street, as in Nos. 1, 2, and 3.

At the terminus eleven platforms are provided, part of one platform and one road being placed under Elizabeth-street; but in order to get the station within the area proposed, and to avoid resumption on the Pitt-street frontage, the cab-road shown running through the station in the St. James' Road proposal has been cut out. This cab-road is considered by the Railway Commissioners an important adjunct to a terminal station, but not by any means of vital importance. In this way the station and approaches can be placed between Elizabeth-street and the back line of the Pitt-street properties, the only exception in the case of the latter being the Lyceum Theatre, which appears to be rather seriously interfered with.

In order to economise the cost of resumption, the front of the building is placed about 300 feet back from King-street, approach to it being given from King-street by means of a portion of Castlereagh-street, which remains intact; by Market-street and Elizabeth-street for wheel traffic, and by the Imperial Arcade for foot passengers. The setting back of the front in this manner saves the purchase of the "Metropolitan Hotel," the *Daily Telegraph* office, and other valuable properties, although if the additional expense were not to be considered an object to be saved, it would undoubtedly be better to bring the station so as to open into King-street. This would involve, however, nearly £250,000 more for resumptions.

This scheme would be worked with steam locomotives.

The difference in the estimated cost of Nos. 3 and 4 is about £100,000; but there is not the slightest doubt as to which is the preferable scheme under the circumstances. No. 4 is a complete scheme, and is on that account alone preferable. It would also produce more revenue, and be much easier and less costly to work.

The cost of No. 4 scheme is estimated as follows:—For works at the grand central station, £630,000; for resumption and damage to property, £899,825; total, £1,529,825. From this amount has to be deducted the value of the unused portion of the Imperial Arcade and other frontages—say, £90,000—leaving a balance of £1,439,825. It will be seen that in this scheme Castlereagh-street is blocked between Market-street and Park-street. With the exception of the cost, which is about the same as nearly all the other schemes, that seems to be the only disadvantage.

410. Where would you divert the traffic of Castlereagh-street, between Park-street and King-street? It would have to go round Elizabeth-street or round Pitt-street unless further resumptions were made.

411. That scheme once adopted is incapable of expansion except at a tremendous cost for resumptions? Of course, if you sacrifice a portion of Hyde Park you could always get land.

412. Now you come back again to Hyde Park? But that is the case everywhere. Either you must resume property or you must go on to Crown land. I will tell you what might be done in the future—for instance, if the eastern suburban traffic were brought in here. If that one line could be electrically worked, as I think it ought to be, that could be made an underground station right underneath the Park, and the Park would be very little interfered with.

413. This No. 4 scheme could work in with an extension to the eastern suburbs? Yes; I think there is no doubt that among the whole lot of schemes the St. James' Road scheme, this No. 4 scheme, and No. 10 scheme are the best, because they deal with the traffic in the most effective way.

414. The advantage being that the suburban traffic and through traffic are brought to one common centre? Yes.

415. Would this scheme also be capable of extension in the direction of North Shore by way of a bridge? In the same way as the St. James' Road scheme—by curving round.

416. And by tunnelling? Or by tunnelling. There would be special sections in each case. If you have to cross the harbour overhead you have steep grades, and you want additional locomotives to push the trains over those portions; and if you go under the harbour you would also have steep grades, and you would want to use electrical locomotives like they do in Baltimore and other places now to overcome the difficulties.

417. Apparently the works in connection with No. 4 scheme cost, in round numbers, £100,000 more than the works in the St. James' Road scheme;—is that so? The difference between the estimate for the St. James' Road works is £80,000. That I might say is a full estimate. It more than represents the difference. But both St. James' Road scheme and this scheme would have to be added to to the extent of £30,000 for the additional office accommodation which the Commissioners now ask for, which I mentioned in connection with No. 10 scheme.

418. Then, as regards the cost of the works or construction, it appears that No. 4 scheme and the St. James' Road scheme are the two most economical? As regards works, they are the most economical.

419. Would the roads around this scheme afford ample approach to the station, seeing that it is to accommodate the whole of the traffic, and possibly a large intercolonial traffic;—do you think there is sufficient access to the station by these roads which are left, seeing that you are going to close up a considerable portion of Castlereagh-street? I think they would; but if they were considered inadequate, of course there is the Imperial Arcade, which might be opened up as an additional roadway.

420. The station premises, I suppose, would be entirely under cover? It would be a roof similar in character to those of the other large schemes. The level of the platform in the north-west corner would be about the level of the street. There is a great rise in the ground from there to Elizabeth-street. The levels are such that the roads on the eastern side of the station could be arranged to be continued underground without interfering with the street surface, just as in the St. James' Road scheme.

421. In that respect the sloping front towards King-street would be on the same grade as the station proposed by the main scheme now under consideration, only that it would be extended further west? Yes.

422. *Mr. Dick.*] Would there be any approach to the station on the Elizabeth-street side? No; there is no approach on that side, because it is deep down. People arriving from the Elizabeth-street side would probably have to go round to the front of the station. 423.

423. And there would be no approach, I suppose, to the south of Market-street? No; it is not proposed to have any approach there. H. Deane.
424. Practically, at the north-western corner the approach would be made to the station? The north. 14 Feb., 1900.
425. *Dr. Garran.*] In principle this scheme resembles the St. James' Road scheme, except that it is all on private property? Yes.
426. And the cost of that scheme, I believe, is estimated at £680,000? Yes.
427. The only difference between the two is that you go to the west, and on to private land? Yes; that is practically the difference.
428. The cost of the St. James' Road scheme, which I call the Commissioners' scheme, is £680,000, and the cost of this scheme is £1,429,000, which, I daresay, would be £1,500,000 by the time it was finished. The difference between the two, then, we must regard as the price which the public will pay for saving Hyde Park? Yes.
429. Between £700,000 and £800,000 is what we will have to pay for keeping our hands off Hyde Park? Yes.
430. Did I understand you to say that on this scheme there would need to be some expense at Devonshire-street? No; the lines would simply be carried through. The present Redfern Station would be used as a wayside station.
431. Precisely as proposed in the Commissioners' scheme? Yes.
432. There would be no expense at all on the north side of Devonshire-street, except for the running of six lines through? No.
433. There would be no station expense? No.
434. This scheme would have the disadvantage over the St. James' Road scheme of not having a station on the level of the road front;—St. James' Road is all on a level? No;—it is on a steep slope.
435. Is the eastern platform below the level of the ground? Yes.
436. So much so that you can tunnel under? Yes.
437. They are both alike in that respect? Yes.
438. *Mr. Watson.*] It is similar to King-street in that respect too? Yes. Take a cross-section running from the centre line of Hyde Park down towards George-street. There is a very rapid fall from the Queen's Statue or from the line of the central avenue down towards Pitt-street.
439. *Dr. Garran.*] St. James' Road is very nearly a level road? No.
440. It has not anything like the slope of King-street? You are mistaken. There is a difference of 20 feet between these two points in St. James' Road.
441. *Mr. Watson.*] Would it be any more of a level station than No. 10 scheme, which is the King-street scheme? You must make the station level, and you adopt the level of one part of the street or another; but if the ground is all irregular, or has a steep slope, you cannot make both sides of the station to correspond to the level of the street.
442. Taking the front portion of the station in each case, would not the slope be much the same at King-street as at St. James' Road? I think they are very much the same. The level of the central avenue line in Hyde Park, that is opposite the Queen's Statue, is 102 feet, and the level at the lower end of St. James' Road where it comes on to Elizabeth-street is 79 feet.
443. I understand that the fall on the King-street frontage of the proposed station on No. 10 is 20 feet from the highest point to the lowest point? Yes; it is about 20 feet.
444. It is 20 feet on No. 10 scheme as compared with 23 feet on the Hyde Park scheme? It is approximately the same in each case. The levels I have given are a little bit outside the station on each side. I think the difference of level on the station frontage in each case would be about 18 feet.
445. Would the length of frontage in each case be the same, or would it be greater in Hyde Park? A little greater in Hyde Park than it is in No. 4 scheme, because the cab-road has been cut out in the latter. I do not think there would be any difficulty about arranging the levels.
446. *Chairman.*] In No. 4 scheme you provide for a cut and cover through Hyde Park;—will that also be temporary as in schemes Nos. 1, 2, and 3? Yes.
447. After the works are completed it will be covered over, and the Park will not be interfered with? Yes; the surface will be restored.
448. *Mr. Watson.*] In the estimates for resumptions under No. 4 scheme (nearly £900,000) has any allowance been made for disturbance of business, or anything like that? I think so; but I could not say without referring to Mr. Sievers.
449. Under No. 4 scheme you practically propose to have as much accommodation as was proposed under the Hyde Park scheme? Yes; the same platform accommodation, only there would be the absence of the cab-road. Luggage would have to be brought out on to the western side of the station.
450. You would have a lane or road there? Yes; all that part which is marked brown on this map.
451. Of course you do provide accommodation for cabs, although not in the same manner as proposed in the Hyde Park scheme? Yes; but the cab does not enter the station.
452. If the estimate as to the cost of resumptions is to be relied on, the cost of No. 4 scheme would be a little less, if anything, than the amount set down for the King-street scheme? Yes. I am not responsible in any way for the estimate of the cost of land resumptions. It may be a good deal more, or it may even be less.
453. Assuming that to be fairly accurate in each instance, the cost of No. 4 scheme would be a little less than that of No. 10 scheme? Yes.
454. And it would save the taking of any part of the Domain or Hyde Park? Yes.
455. *Chairman.*] No. 5 scheme apparently branches off into three? Nos. 5, 6, and 7 have only just been sketched out. My report on the same is as follows:—"In accordance with the Minister's instructions, I have prepared a map showing two other schemes for extending the railway into the city, which I have numbered 5 and 6, and I have included a third numbered 7."
456. Will you read your description of No. 5 scheme? It reads as follows:—

CITY RAILWAY EXTENSION—No. 5 Scheme.

Six lines of way are carried from Redfern to a station at the High School site, as in the schemes already submitted. A station is provided at Liverpool-street. At the High School station three double platforms are provided about 18 feet below the level of Castlereagh-street, to which access is given by staircases; the necessary station offices are provided on the ground-level with steps down to the platforms. In order to give the greatest facilities for shunting and getting rid of the

H. Deane. the trains as they come in in the morning, and bringing up fresh trains as they go out in the afternoon—the busiest parts of the day—a loop is provided (as shown in red) at the outer part of which the trains could be stored, so that it is probable that, if not the whole, a very considerable part of the suburban traffic could be accommodated. The loop which runs under the Domain, and comes back to the same point in King-street, would be in tunnel except at the outer portion.

14 Feb., 1900.

The estimated cost of the schemes, not including the alterations for long-distance traffic at Redfern, is £596,600, to which is to be added, according to the land valuer's valuation, £150,000 for resumptions.

457. When the addition of the station at the Benevolent Asylum ground is made it probably will not differ very much from No. 2 in cost? It is practically the same in its object as No. 10. In No. 10 we have four lines running round to carriage-sheds. In No. 5 we have two lines of rails running round to a series of sidings at the back of the Art Gallery, and then they converge into two lines carried in tunnel, and come back and enter the station again at King-street.

458. Will you now describe No. 6 scheme? My description reads as follows:—

CITY RAILWAY EXTENSION—No. 6 Scheme.

THIS scheme differs from the foregoing in one particular only, namely, that instead of a loop which would be utilised for running off these surplus trains, these would be taken back to Redfern as shown by the dotted blue line. This line from the point where it leaves the central station to its return to Liverpool-street is in tunnel the whole way.

I cannot recommend that scheme. There is a great deal of tunnel. I think it would have to be worked by electric locomotives. Further, there would be considerable difficulties at the Hyde Park station, because either the trains would have to stand there till they are wanted to go out again to take passengers proceeding out to the suburbs round the loop, or else they would have to be shunted at the station. The estimated cost of the works is £552,000, and in that again the cost of the alterations at Redfern has not been included.

459. Will you now describe No. 7 scheme? I was asked to give an estimate of the proposal for a dead-end central station facing King-street. I give an estimate; but it is altogether inadequate, and not to be recommended. My description reads as follows:—

CITY RAILWAY EXTENSION—No. 7 Scheme.

THIS is a proposal for a dead-end and central station facing King-street. The accommodation is the utmost that can be provided in the limited space available. There are three double platforms and two additional roads, besides those contiguous to the platforms. As one line and part of a platform are situated under Castlereagh-street, the platform-level has to be placed 18 feet below that of the street, so that flights of steps are necessary to give access to the platforms, as in schemes Nos. 5 and 6.

I do not think that No. 7 scheme need be considered very much by the Committee, because it is altogether inadequate to the requirements.

460. Do schemes Nos. 5, 6, and 7 in any way interfere with Hyde Park? It is proposed to tunnel under the ground—to cut and cover, and restore the surface.

461. That would be from Nithsdale-street? Yes. The ventilation would be very bad unless electric locomotives are used.

462. No permanent interference with Hyde Park is proposed? No.

463. I understand from you that you do not favour either of these schemes? No; I simply worked these out for the purpose of giving an estimate. I might add that all these three schemes were informally discussed before the Royal Commission in 1897.

464. *Dr. Garran.*] Where you get the circular loop have you got several parallel sidings for trains to stand? Yes; that was the idea.

465. And in the pear-shaped loop you have no such sidings? No; there is no provision made.

466. *Mr. Shepherd.*] I have noticed that in all these schemes, although a station at Liverpool-street has been mentioned, no sum has been put down for it? That is included in the cost of the work.

467. What saving would be affected by leaving out that station? I think the saving would be about £30,000—the additional cost of the station and the works entailed by carrying the six lines through. It is not the matter of expense so much that has been objected to. I do not know that the Commissioners have objected to the expense at all, but they object to the delay involved in the trains stopping at a station at that street.

468. *Chairman.*] Will you now describe No. 8 scheme? I had instructions, in July last, to work out No. 8 scheme.

469. That scheme was suggested to you? Yes. I think it was Mr. Reid's idea to carry it through in that way, and the problem put before me was that the first part was to be an extension of the railway across Devonshire-street and a central station there; the second part was to be an extension into the city as far as Hunter-street, with a central station of eight lines and platforms for suburban traffic; and the third part is a further extension which can be made, if required, into Government House grounds.

The new station consists of two terminal docks, with four platforms for the long-distance trains, and six lines and four platforms for suburban trains, which are carried further on into the city. All the necessary offices are provided for the accommodation of the public and the traffic offices, and there is a cab-road for access to two of the long-distance platforms. Considerable expenditure will be required for the road approaches, on account of the drop in the ground towards Belmore Park, and the necessity of a wider approach from George-street immediately to the south of Christ Church.

A new arrangement of the tram lines is designed, and a parcels office is provided.

This scheme involves the lowering of Devonshire-street. The estimated cost for works is £134,000, to which should be added the land valuer's estimate of the value of the Benevolent Asylum, Christ Church rectory, police barracks and residence, or £98,000, making a total of £232,000.

That plan shows the proposed station at the north of Devonshire-street. On the eastern side of the station the suburban traffic will be accommodated. On the western side there are two docks, with three lines each for the long-distance traffic. The cab-road is shown as passing between the two long-distance terminal docks in the same way as is shown on scheme No. 9, and that plan has some features in common. Then Part 2 is described as follows:—

Part 2. Six lines are extended overhead to Goulburn-street. Between Goulburn-street and Liverpool-street a station of a suburban character is provided. From Liverpool-street to St. James' Road the same six lines are extended underground, about half the length being thrown open to the air, with low embankments on each side, and trees and shrubs planted for the sake of appearance, the other half being covered in, and the surface of the park replaced. The line passes under St. James' Road, which must be slightly deviated, and thence through the space now occupied by the Registrar-General's Office and Supreme Court, which will have to be pulled down, and the space thrown open to air and light; thence under King-street, which it is proposed to widen between Phillip-street and Elizabeth-street, to a station between that street and Hunter-street. The station has been designed to give the utmost accommodation possible under the

the limited condition of space. For the purpose of increasing that accommodation, two of the lines, with the adjoining platforms, are placed under the street on each side. In all there will be eight lines, with corresponding platforms, and Phillip-street and Elizabeth-street are widened to give a minimum of 75 feet, as compared with their present width, which is 60 and 66 feet respectively. Access will be given to the platform from both King-street and Hunter-street ends, but the station offices will be chiefly collected at the Hunter-street end. The whole will be covered with an iron and glass roof. Considerable difficulty has been experienced in the design, so as to make it as convenient as possible for the public. The depth of the platform at the Hunter-street end of Elizabeth-street will be at least 17 feet; but at other parts, and on the Phillip-street side, it will vary from 20 to 28 feet.

H. Deane.
14 Feb., 1900.

The estimated cost of the works on this section is	£492,000
To which has to be added the land valuer's estimate of resumption, viz., resumption between Belmore-road and Liverpool-street	80,000
Supreme Court	23,000
Registrar-General's Office	10,000
Block between King and Hunter streets	335,000
Total	£940,000

Part 3 contemplates the extension, at some future time, of two lines to Albert-street. My description reads as follows.—

Part 3. As the Hunter-street station will be so near Circular Quay, it is probable that further extension will be unnecessary; but in case this should be required, the station between King-street and Hunter-street has been arranged so that two lines of way can be carried on to a small station in Government House grounds, near Albert-street. As the traffic will be very small, it is difficult to say what accommodation will be necessary. I have put an amount of £89,000 for this section, but it will be costly to work, and a most undesirable extension to make if it can be avoided. There will possibly be damage to property amounting to about £20,000, making a total of £109,000.

That drawing shows the plan of the Hunter-street station. A good deal of scheming had to be done in order to get the accommodation which is there. The accommodation is very largely under the streets. The streets are widened so as to increase the facilities for access, and consequently there is all the more of the station platforms and lines underneath the streets. This plan shows a cross-section. I am sorry that the end of the roof has been coloured, because it rather takes off from the appearance. In order to get an extra width of street, I put the foot-passengers inside the station, and carry them on cantilevers. I put the footpath inside the station on each side. There are two roads and platforms provided, one on each side of the station, underground. The best use has been made of the site.

470. What depth would the station be below Phillip-street on one side, and Elizabeth-street on the other? It is variable. The depth of the platform at the corner of Hunter-street and Elizabeth-street will be about 17 feet; but at other parts, and on Phillip-street, it will vary from 26 to 28 feet.

471. This scheme only provides for the suburban trains coming to Hunter-street? Yes.

472. The country trains being put still at the Benevolent Asylum site? Yes.

473. Could you do the necessary shunting for the suburban traffic at a station like this, or would it have to come back? The surplus trains coming in in the morning would have to go back to Redfern; but otherwise the shunting, I suppose, would be done there.

474. *Mr. McFarlane.*] What is your opinion about having a terminus at Hunter-street;—would it be as central as one at King-street, in regard to the suburban traffic? I think it would be a very good position. I have arranged for access to the station being provided at King-street and at Hunter-street, so that people making use of King-street could get on to the station in the same way as people making use of Hunter-street.

475. How far will the station be from King-street? The end of the platform, access to which is provided, is about 100 feet back from the corner of King-street, or light overhead bridges could be run direct from King-street. Probably this would answer equally well.

476. *Chairman.*] This scheme would be entitled to be credited with the Government property occupied by the High School? That would be saved.

477. Would the Registrar-General's Office and part of the Supreme Court have to come down? They would have to come down. You see with all these converging lines it would be impossible to get underneath the buildings without disturbing them. You could put no support over the whole of that area.

478. Would there be any way of making a shunting loop at this end, instead of having to go back to Redfern? I think it would be very awkward. You might run down to the end of the Government House grounds; you might make a dead-end down there. I do not think a loop would come in very well.

479. *Mr. Shepherd.*] Do you not think, in any of these schemes it would be preferable to have a traversing platform than these long loops? That would not answer the same purpose. A traversing platform would only take a single carriage, or an engine and tender; it would not take the whole train. Traversers are nearly always provided where you have dead-ends; but that would not help you out of the difficulty of disposing of the surplus trains which come in in the morning and go out in the afternoon.

480. Would the form of these traversing platforms require more space? No; they are provided here in No. 10 scheme; they are shown on the plan.

481. There seems to be very little delay occasioned with these traversing platforms? They are very quick in action, but that does not do away with the whole of the shunting. You could not have traversing platforms on through lines. Where you have to continue your lines on for any purpose, you could not have traversing platforms there, and you could not shift the whole train with them. You could only shift an engine from one end of the train to the other.

482. Could you not have a traverser at each platform? If there was any advantage in doing that, but I do not think there would be any advantage in this particular case. What is done in this particular scheme is to have some dead-ends for engines at each side, so that when a train comes in, and is ready to go out, an engine is backed on to it from a dead-end, and runs away with it, and the engine which brought it in goes into a dead-end siding, and waits for the next train to come in.

483. *Dr. Garran.*] This is one of the schemes which separate the through traffic from the suburban traffic? Yes.

484. Therefore, according to your previous evidence, it necessitates a station north of Devonshire-street? Yes.

485. But it seems to me your sketch here of what you will have at Devonshire-street for this plan is lighter and cheaper than what you have given for other plans where you would have to do the same thing at Devonshire-street—it is not so expensive or so elaborate? I do not know that there is any difference. This plan is on a smaller scale than the others; it is on just half the scale of the others. Why it is made on that scale I could not exactly say.

486.

- H. Deane. 486. Does it give the same accommodation? It is practically the same accommodation as I showed you in regard to No. 3 scheme.
 14 Feb., 1900. 487. And the same expense? Yes.
 488. *Chairman.* Have the Railway Commissioners made a report on No. 8 scheme? Yes, a general report and a special report on the line in sections.
 489. Will you kindly read the reports? The reports read as follows:—

Office of the Railway Commissioners of New South Wales, Sydney, 28 August, 1899.

Proposal to construct a line of railway from Redfern to Devonshire-street, and thence to Hunter-street, in accordance with reports, plans, and estimates prepared by the Public Works Department.

COMPLYING with the request made by letter, dated the 22nd instant, at the instance of the Secretary for Public Works, and in accordance with the provisions of the "Public Works Act of 1888," section 13, we beg to report as follows:—

Cost of Construction—

The Engineer-in-Chief for Construction estimates the cost of construction, inclusive of land and compensation, at..... £1,222,000

Annual Cost—

Capital expenditure, at 3 per cent. £36,660
 Estimated cost of maintaining permanent-way, and for traffic, locomotive, and other expenses 21,020

Total annual cost..... £57,680

Traffic Estimate—

By adding 1d. for each ordinary suburban passenger journey, and 1s. 6d. and 1s. per month for 1st and 2nd class season ticket holders, with a percentage reduction per month for tickets taken out for three, six, and twelve months, and 3d. per week for workmen's tickets, a revenue on existing traffic would be realised of..... £38,000

This proposal appears to be based on the assumption that it will be proper to continue to deal with all trains, other than suburban, at Redfern, and bring on only the purely suburban trains to the city terminus, consequently the whole of the travellers from beyond the suburban area, and even all other regular passengers within the suburban area who travel by the non-suburban trains will still be required to stop short of the recognised city terminus.

The holiday excursion traffic to such places as Como, the National Park, Sans Souci, the Hawkesbury, &c., would also have to be dealt with at Redfern.

We desire to record our opinion that in the arrangement of the platforms and roads the Engineer-in-Chief for Construction has made the best possible use of the available space in the position of the proposed station, and yet the accommodation falls very short of what is necessary to work a large suburban traffic, and there is no possibility of extending it, except at enormous cost, to meet such a development of the traffic as should be provided for.

In the proposed station there are no roads to enable the engines to run round their trains, nor can they be provided within the allotted space without reducing the already limited platform accommodation. Neither is there any provision for storing trains at the busy times of the day when every platform will be fully occupied even with the present traffic, and during those times many of the empty trains would require to be moved from the terminus to Redfern, and brought back from Redfern to the terminus at considerable cost.

The platforms, too, are largely curtailed by the stairways at each end, and two of them are entirely underneath the streets.

Practically, the whole station would be underground, being 17 feet below the street level at one end, and 27 at the other.

Such an arrangement is most undesirable even at a wayside station, where it can possibly be avoided, and particularly so at the future terminus for the city of Sydney.

It is, of course, well known that underground stations are not uncommon in other parts of the world; but they are adopted from necessity—never from choice.

The ingress and egress would be inconvenient, and discomfort and uncleanness would always be experienced from the smoke emitted by the engines, to say nothing of the objections on hygienic grounds.

Looking at the station arrangements from a safe working point, they cannot be regarded as at all satisfactory. The train entrance to the station is covered by St. James' Road overbridge, 70 feet wide; King-street overbridge, 90 feet wide; and the overhead booking-office at the King-street entrance, &c. These bridges divide the shunting space in such a manner as to seriously interfere with the view of signalmen working the points and signals, and of the officer directing the train working. Moreover, the junctions between the various lines at the entrance of the yard are entirely in tunnel, so that the view of signals by the drivers will also be much obstructed.

There are other defects in the arrangements, all of which arise from the want of space; but they, with those already mentioned, may be characterised by the broad statement that the proposed station, as a whole, will not prove more convenient for working the suburban traffic than the present Redfern terminus, whilst it will entirely fail to improve the existing facilities for dealing with a considerable portion of it.

It is necessary, also, to point out that the office accommodation is limited to the requirements of the traffic staff immediately connected with the station. A properly arranged terminus should provide for the whole of the Commissioners' staff and that of their principal officers at headquarters, as much inconvenience is now, and has been for years, experienced in consequence of its being distributed in various places.

As regards the station at Liverpool-street, it is open to considerable argument as to whether this is required.

The proposed station on the Benevolent Asylum grounds would be wholly unnecessary if adequate terminal accommodation were provided, and consequently the expenditure could be avoided.

The proposal to deal with the suburban traffic at the terminus, and the other traffic at Redfern, would necessitate a considerable increase of the staff beyond what would be required if the whole were dealt with at one station, and this has been provided for in the estimate of working expenses.

A liberal estimate has been made of the value of the probable additional traffic, yet it falls short of the annual expenditure on account of interest and cost of working by £19,680 per annum, and this could only be averted by increasing the fares on the suburban lines.

It should be mentioned that in the estimated cost of the line is included a sum of £98,000, being the value of the Benevolent Asylum site, Christ Church Rectory, and the Police Barracks and residence as given by the Public Works Department; but if this was wholly left out of consideration the annual charge for interest would only be reduced by £2,940.

The Common Seal of the Railway Commissioners of New South Wales was hereunto affixed this twenty-eighth day of August one thousand eight hundred and ninety-nine, in the presence of,—

	CHARLES OLIVER,
	Chief Commissioner.
	W. M. FEHON,
	Commissioner.
H. McLACHLAN.	DAVID KIRKCALDIE,
	Commissioner.

Office of the Railway Commissioners of New South Wales, Sydney, 31 August, 1899.

The Hon. The Minister for Public Works.

With reference to the desire of the Minister for Works to be furnished with a report on the proposed extension of the Railway to Hunter-street, in sections, viz., Redfern to Devonshire-street, and thence to Hunter-street, we beg to point out that the scheme as a whole is fully dealt with by our report, under seal, dated the 29th instant, and therefore all that remains to be done is to endeavour to separate the cost of working each section. This, however, can only be given in the most approximate manner.

The new station at Devonshire-street is designed on the assumption that the Hunter-street section is to be constructed with a terminus for suburban trains only at Hunter-street. If

If the Hunter-street section were not to be constructed, then the design of the station at Devonshire-street would have to be entirely remodelled to meet the requirements of both country and suburban trains, which would very considerably modify the staff required. H. Deane.
14 Feb., 1900.

As regards working expenses, the staff at Redfern shunting yard and the staff at the Devonshire-street station, as proposed, would be to a large extent common to both the new Devonshire-street station and the Hunter-street terminus, inasmuch as the trains for both would have to stable and be marshalled at Redfern, as to-day.

Approximately the cost of working the Devonshire-street station would be £1,400 per annum less than the cost of working the present Redfern terminus.

The extension from Devonshire-street to Hunter-street would involve an annual expenditure of £22,420, the net increase in working expenses in connection with the whole scheme being as stated in our report, £21,020.

The interest on capital expenditure has not been taken into consideration in these figures.

CHARLES OLIVER,
Chief Commissioner.
W. M. FEHON,
Commissioner.
DAVID KIRKCALDIE,
Commissioner.

490. That completes your explanation of the various plans now before the Committee? Yes.

491. I understand that you wish to add a few general remarks? Yes, the position in which the railway question stands is in my mind represented by the following propositions:—

1. The railway should be extended into the city. No extension of tramways will thoroughly meet the case.
2. The Hyde Park terminus scheme is the most economical, and, therefore, the best, as reported upon by the Royal Commission and the Public Works Committee in 1897.
3. Failing approval to use Hyde Park some other scheme should be adopted, even at the expenditure of £1,500,000.
4. Of alternative schemes to Hyde Park, Nos. 4 and 10 appear to meet the requirements best, and are satisfactory ones.
5. The Railway Commissioners' report of July, 1897, on the St. James' Road proposal gives the estimated working expenses (not including interest) at £8,000, and traffic receipts at £32,000, and the difference, £24,000, is left to pay interest on capital. This, at three per cent., means interest on £800,000.
6. Reference to the Railway Commissioners' report of December, 1899, shows that their estimate of traffic receipts has exceeded their previous one by £3,000, which means interest on a further sum of £200,000, or a total of £1,000,000 if the working expenses are assumed to be the same in both cases.
7. It follows from this that out of an expenditure of, say, £1,500,000, £1,000,000 is interest bearing, and the balance, £500,000 only unproductive.
8. The railway terminus at Redfern must be altered.
9. The required alteration cannot be conveniently or even safely made on the area now occupied.
10. If no extension into the city is made the only practicable proposal is that embodied in No. 9, or some modification of it.
11. No. 9 scheme involves an expenditure of £560,000, which is unproductive. To this should be added part cost of extending the tramways along additional streets in the city, and also in my opinion the cost of making proper radial thoroughfares from the Benevolent Asylum terminus towards the Eastern Suburbs.
12. This scheme does not fit in with any Eastern Suburban railway scheme, which is becoming an absolute necessity.
13. It is, therefore, commercially speaking a far inferior scheme to either No. 4 or No. 10, not to speak of the St. James' Road proposal.

492. That is a summary of your views? Yes.

THURSDAY, 15 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT, (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.

WILLIAM THOMAS DICK, Esq.
JOHN CHRISTIAN WATSON, Esq.

JOHN McFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Robert R. P. Hickson, Under Secretary and Commissioner for Roads, Department of Public Works, sworn, and further examined:—

493. *Chairman.*] On the 6th February you produced a report of the Railway Commissioners dated the 20th December, 1899, on the proposed extension of the railway system to King-street? I did. R. R. P. Hickson.

494. *Dr. Garran.*] In their report the Commissioners say that the Engineer-in-Chief for Railway Construction estimates the cost for construction, inclusive of land and compensation at £1,491,000;—does that sum of £1,491,000 include the cost of the proportion of Hyde Park which is proposed to be taken? No. 15 Feb., 1900.

495. *Mr. Watson.*] Are they independent estimates? No; I think the explanation is, that since the estimate was made on which the Commissioners reported, some additional accommodation was required by them.

496. In the summary supplied by Mr. Deane, there are three items mentioned as additions to the original estimate of the cost of the works, and those three items come to £54,000;—if they are added to this item of £1,491,000 it still does not bring the sum equal to that which was mentioned? No. I think Mr. Deane will tell you that something else has been added since then.

497. It brings it rather above the total of your estimate? Of the first estimate.

John

John Parry, Out-door Traffic Superintendent of Southern Lines, Department of Railways, sworn, and examined :—

J. Parry.
15 Feb., 1900.

498. *Chairman.*] Have you prepared a statement with regard to the proposal before the Committee? I have.

499. Will you be good enough to read your statement? It reads as follows :—

I WAS examined before the Royal Commission on City Railway Extension in February, 1897, and furnished various returns shewing the number of trains and engines dealt with at Redfern Station, and passing through Redfern Tunnel on certain dates. I also described fully the accommodation at Redfern Station, and the difficulties experienced in dealing with the traffic at that time.

I have now prepared similar information for your Committee, brought up to date, as follows :—

1. Return shewing the number of trains and engines arriving and departing through Redfern Tunnel on up and down lines during each hour on a holiday, viz., Boxing Day, 26th December, 1899.
2. Return showing the number of trains and engines arriving and departing through Redfern Tunnel on up and down lines during each hour on an ordinary day, viz., Friday, 2nd February, 1900.
3. Return showing the number of through passenger trains and number of suburban passenger trains arriving at and departing from Sydney in each hour on an ordinary day.
4. The approximate number of passengers arriving at and departing from Redfern Station during the busy hours of morning and evening on an ordinary day; also the total number of passengers arriving and departing from Redfern Station on an ordinary day.

It will be seen from return No. 1 that the total number of passenger and goods trains, and light engines, which passed through Redfern Tunnel to and from the station and Darling Harbour on Boxing Day, 26th December, 1899 was 663; and return No. 2 shows the total number on an ordinary day, viz., Friday, 2nd February, 1900, was 628. Return No. 3 shows the total number of through and suburban passenger trains in and out of Redfern on an ordinary day is 329.

The number of trains and engines shown as arriving and departing, however, does not represent the work done in the passenger yard, as a large proportion of the passenger trains arriving have to be drawn out from the platforms and shunted to liberate the engines which brought them in, or to place the cars at other platforms to form other trains. There is also a great deal of shunting of the engines to keep them out of the way of incoming and outgoing passenger trains, as there are no refuge sidings between the platforms or the main running lines to allow of the engines being readily shunted clear to take water or stand while other trains arrive and depart. Nor are there any sidings between or handy to the platforms where spare coaches can stand, so as to be readily available to strengthen trains, and considerable shunting across the main running lines is occasioned to get to the carriage sidings.

The distance between the ends of the passenger platforms and the junction of the goods yard and the Darling Harbour branch with the main passenger lines is much too short, and frequently causes delay to shunting operations, both in the passenger yard, the goods yard, and to the goods trains on the branch. The arrangements of the points and crossings is also unsuitable to conduct the traffic satisfactorily in consequence of the limited length, and being hemmed in by the Darling Harbour branch, the yard having been added to, piecemeal, from time to time. And in consequence of the difficulty of shunting trains owing to the limited length between the station and tunnel junctions, special instructions had to be issued to the staff for the purpose of superseding the safe working instructions in connection with fixed signals, and introduce a most undesirable element into the working of such an important yard.

The sidings between Darling Harbour branch and Mortuary for storing carriages necessitate trains of cars to be shunted through the tunnel in the face of the incoming passenger trains when drawing the empty trains out of the sidings to set back into the passenger platforms, besides blocking goods traffic on the branch while the shunting is being done.

Platforms.

There are thirteen platform roads, but of these, two, viz., Nos. 4 and 7, are useless for trains to arrive at or depart from, they being only 173 feet and 233 feet long in the clear respectively. Nos. 9 and 10 platforms are also much too short to accommodate ordinary seven-car trains without fouling other roads, they being only 313 feet and 248 feet long in the clear; whereas the length of a seven-car train with engine is 410 feet and 424 feet long, according to the class of engine, and it is frequently necessary to run trains up to nine cars, the length of which is about 530 feet, and on holidays it would be an advantage to run even more cars at times.

The lengths in the clear of the eight platforms, Nos. 1, 2, 3, 5, 6, 8, and A and B, are as follows, viz.: Nos. 1 and 2, 469 feet each; Nos. 5 and 6, 624 feet each; No. 8, 405 feet; A, 486 feet; B, 482 feet; so that it will be seen that only Nos. 5 and 6 platform roads will hold trains of more than eight cars and engine clear of other roads. Much difficulty is, therefore, experienced at holiday times by trains standing on one line blocking the entrance to other roads. This difficulty militated very seriously against the proper conduct of the business during the last Christmas holidays; the Northern mail arriving had to be cut into two parts in order to discharge the passengers and luggage, the platform not being long enough to accommodate the same. Frequently North and West trains are seriously inconvenienced through having to load up at two separate platforms and the two parts joined together at the last moment, and during the time the portions are being placed together the approaches to platforms Nos. 8, 9, 10, and 11 are completely blocked.

None of the platforms are provided with roofing or awning sufficient to admit of passengers' luggage and parcels of long country trains being discharged under cover, and in wet weather this gives rise to complaints.

Main Entrance Platform.

The end platform at the front of the station is most inconvenient and too narrow. There are no means of keeping it clear of persons who are not travellers but who congregate and stand about blocking the way and inconveniencing passengers. Passengers arriving and departing meet each other on this narrow platform, which at busy times becomes so congested that the porters and officers are unable without much difficulty to pass along from one platform to another, and it is only with the greatest difficulty and risk to passengers that parcels and luggage barrows can be got through. In fact, we have had a number of accidents during the last few months of passengers being injured by the parcels and luggage trollies through trying to force their way through a congested crowd.

Cloak-room.

This room is too small, most inconveniently situated, and gives rise to much irritation to passengers at busy times. On one of the recent busy days no less than about 2,000 different parcels were dealt with by passengers depositing and calling for same, and although the maximum number of men who could work in the space were employed, still delay to passengers could not be avoided.

Parcels Office.

The Parcels Office is small, and the cart approach to same is too contracted in space to admit of a sufficient number of carts to draw up to the platform to deliver and receive parcels during busy times, and delay to carts takes place in consequence. The difficulty of conveying the parcels on barrows to and from the trains through crowds of people on the end platform is very great.

Refreshment-room.

The present room is much too small and inconvenient, both from a public and departmental point of view.

Passenger trains having to be run into goods yard.

On holidays a number of passenger trains arriving in Sydney have to be run into the goods-yard, and passengers discharged at the goods platform. As the goods-yard points are not interlocked and signals are not provided for the various roads inside the yard, it is most undesirable that this mode of working should be allowed to continue longer than is absolutely necessary, as it is impossible to avoid risk under existing conditions of running passenger trains into the goods-yard without any signalling or interlocking of points.

Office

Office Accommodation.

J. Parry.

The general business is seriously hampered in consequence of the inconvenient situation of the offices; the staff being located at so many different places considerable distances apart inevitably results in much waste of time of officers going to and fro between the same.

15 Feb., 1900.

Siding Accommodation.

The siding accommodation in Redfern for storing passenger coaches is too limited, even for the present business, and distributed in such inconvenient positions that much trouble is occasioned in shunting away and marshalling trains.

500. Will you now give the Committee a summary of the returns which you have compiled in regard to the traffic (*vide Appendix A*)? The first return shows the number of trains and engines running between Sydney and Eveleigh on Boxing Day, 26th December, 1899. I have divided the traffic into each hour of the day of twenty-four hours, so that in analysing the statement the Committee will be able to see that the traffic congests itself in certain hours. This return shows that on last Boxing Day no less than 663 trains passed through Redfern tunnel—that is, including both goods, passengers, and light engines, as well as the Darling Harbour trains. The second statement I have prepared shows the number of trains and engines running between Sydney and Eveleigh on an ordinary day. It shows that on the 2nd February, 1900, 623 trains passed through the tunnel—that is, including both goods, passengers, and light engines. The third return I have prepared shows the number of passenger trains, including goods and light engines, in and out of Sydney on a Friday in November, during twenty-four hours, as per regular time-table. It shows that 329 passenger trains arrived and departed during the day. The number arriving during any particular hour is shown. The maximum number of thirty-nine trains arrived between 5 and 6 o'clock in the evening. The fourth statement I have prepared shows the approximate number of passengers arriving at and departing from Redfern Station during the busy hours of the morning and evening. I wish the Committee to understand that the figures I give in this return are approximate; they were obtained by putting special officers on to count the passengers arriving by each train, and totalling the number. The return shows that on Monday, the 22nd January, 1900, between 6 a.m. and 10 a.m., and between 4 p.m. and 10 p.m. there were about 17,609 passengers arriving in Sydney, and 16,769 passengers departing from Sydney. It might be said that these figures should balance; but you see we have not taken all the trains, and of course the counting is necessarily approximate. It is about as good an arrangement as we could devise for counting them. The return shows that between 6 a.m. and 10 a.m., and 4 p.m. to 10 p.m., about 34,378 passengers came into and out of Sydney. The total number of passengers arriving at Redfern on that day was estimated at 23,823, and the total number of passengers departing from Redfern at about 21,187. I have given three returns showing the traffic for three days. You will see that the figures vary a little.

501. *Mr. Watson.*] These are ordinary days, not holidays? Yes; ordinary days, namely, Monday, 22nd January, Tuesday, 23rd January, and Wednesday, 24th January. The total number of passengers arriving at and departing from Redfern on these three days was as follows:—22nd January, 45,010; 23rd January, 43,228; and 24th January, 45,640.

502. *Chairman.*] There is no other tram service direct from the railway, except into Sydney? There are the Botany trams, and on holidays the trams, *via* Cleveland-street, to the Cricket Ground.

503. On ordinary days, except the branch off from Redfern, the trams come into Sydney? All the trams come into Sydney from the railway station, except on special occasions.

504. Have you any means of telling us the proportion of passengers who, on ordinary days, alight from the trains and get into the trams coming into Sydney;—is there any check on that traffic? I think it will be possible to get the approximate number. The Tramway Superintendent would be best able to give that information to you. But from observation and particulars which I have obtained it seems to me that between 7 a.m. and about 9.30 a.m. there would be between 4,000 and 5,000 passengers who join the trams at Redfern to come into Sydney.

505. I suppose the majority of those ride by train? The approximate number arriving by train between 6 a.m. and 10 a.m. would be between 10,800 to 12,500.

506. And out of this number how many would come into Sydney by tram? Approximately, I should say between 4,000 and 5,000.

507. *Dr. Garran.*] Can you say whether a good many walk into town? A good number do walk into town.

508. Can you guess how many do walk? No; it is impossible to guess.

509. Some of them would take the Redfern trams? I would like it to be understood that my statement that between 4,000 and 5,000 passengers join the trams refers to the passengers who depart from the station by the electric trams. Then, of course, there are the Botany trams. A large number of people would go down Elizabeth-street, and, also, some would walk over to join the trams from western suburbs if there were no Redfern tram, rather than go down George-street. For instance, many of the civil servants would not go down George-street, because it would take them out of the way. They would walk to George-street to catch the steam trams at the entrance gates to the station.

510. Cannot they pick up trams at the mouth of the subway? Some of them; but the Botany trams are not running very frequently.

511. So many steam trams can be picked up outside? Yes.

512. *Mr. Shepherd.*] When the estimate was taken of the number of passengers who arrived by the trams at King-street there were means taken to ascertain the greatest number arriving at any given point, I believe, and King-street was supposed to be the principal focus for passengers;—that estimate was taken, I believe, before the George-street tram was started;—do you think the George-street tram would materially affect the number who usually reached King-street by steam tram? I do not think so. They would be distributed now. A number of passengers who used to go down by the steam trams still go by the steam trams to King-street, but a large portion of them go down George-street to King-street or Market-street.

513. I mean passengers who go to King-street at the site of the proposed station;—at the time this estimate was taken, it was taken as an estimate of the passengers who arrived at King-street and Elizabeth-street? I have not any estimate which has been taken of the passengers using the steam trams and electric trams.

514. But do you not think that it would very materially affect the number arriving at that point now—that a large number who used to go down Elizabeth-street, now go down George-street? Yes; I estimate

J. Parry. that there would be about 4,500 passengers between 7 a.m. and 9.30 a.m. or 10 a.m. who originally went down George-street by 'bus or by steam tram to King-street, but the majority of them now go down in the electric trams to King-street.

15 Feb., 1900.

515. Do you think it is wise to go right through with the trains from Redfern to King-street without any intermediate station? I do.

516. The extension to the city would be almost exclusively in the interests of the suburban passengers? Yes; when I spoke of suburban passengers, I meant all trains coming in, not from Parramatta, but from Penrith, Campbelltown, and the Hawkesbury. Take Monday morning, for instance, when the tourist trains come in from the mountains and Moss Vale. These are what we would call practically suburban passengers, although they are outside the suburban area, because they are simply passengers who run out for a day or so to get fresh air, and who want to go straight to their offices from the train in the morning, instead of going home.

517. Is it the intention to run the through trains down to King-street? It would not be confined to suburban passengers; it would include all trains.

518. The point at which they would arrive here would certainly not be very convenient for the larger part of the city? Those who wish to go to Goulburn-street, Liverpool-street, Bathurst-street, and Park-street would hardly care to come on to the station at King-street, and then go back to any of those streets? No; those passengers for south of Liverpool-street would get out at Redfern, as they do now.

519. We might take Market-street as the boundary on the south, Pitt-street as the boundary on the west, and Hunter-street as the boundary on the north;—do you think it would convenience persons going to places of business beyond those boundaries? I think if you landed them at King-street the great proportion would take it as a comfortable walk to their offices and warehouses. Each person cannot be landed at his office door. Therefore, when you have brought him to a central position, say King-street, you have brought him to a position from which he can take a comfortable walk to his business.

520. It is usual for persons to want to get to their offices as rapidly as possible from their homes, so that they would like to reach the nearest point to their offices that they can;—do you not think that is reasonable? Of course, it is a reasonable proposition.

521. For instance, take the persons in the large Government offices down here, would they not be more conveniently served by the George-street tram going round to Circular Quay than by being dropped at King-street and coming on down here? I do not think they would. I think they would save considerable time by going on to King-street in the train.

522. Would they not be nearer to their offices if they were dropped at Circular Quay? Yes; but the tram is not by any means the most desirable method of travelling such a large distance as that from Redfern—that is, to discharge the great bulk of your passengers at Redfern and make them go down George-street by tram right away to the Circular Quay, would not be anything like as convenient as running through to King-street by train and then allowing them either to walk or to take tram from that point.

523. If they took a tram at King-street the delay in changing from train to tram would be equal to that in changing at Redfern? About the same.

524. So that they really would not gain any time so far as that was concerned? You gain time in the difference between the speed of the train from Redfern and the speed of the tram, which I should estimate would be at least seven minutes.

525. Under No. 10 scheme the trains will reach the station at King-street, and then take a long turn of about 1,000 yards in tunnel under the Domain to the back of the Art Gallery;—would you not think that that was rather an inconvenient mode of dealing with the trains? It is the only method in which you can arrange to deal with them under the scheme. The space is limited for the width of the station, and, in consequence of that limited width, a large number of trains which arrive there, after they have discharged their passengers, run straight away to the sidings at the back of the Art Gallery. The engine there is shunted round its train, or another engine is attached, and the train is brought back empty, and picks up its passengers, similar to suburban through stations. By this method an increased number of trains can be dealt with at the through platforms than could be done if each train had to be pulled out after arriving and shunting. Therefore, if the station is limited to the width which is shown on the plan, you must have the through lines so as to enable trains to get quickly away, after discharging and to avoid having to shunt them. In other words, if you do not have the through lines, you must have more platforms. For instance, you will see that this scheme has five bay platform roads and four through platform roads, viz., two up and two down or nine platform roads, whereas I think the Park-street scheme had twelve platform roads. So that unless there are through lines, so as to get away with empty trains, you must have additional platforms, and that means increased width in space.

526. Have you noticed that two of these platforms are intended to be traversing platforms—that is, to traverse the engine in the same way as is done at the Princes' Bridge Station in Melbourne? Yes.

527. Could not that be applied to all these platforms? If you had a sufficient number and sufficient width. If we had a greater width—that is, if you choose to give us that much more of the Park—then we can provide for sufficient platforms, and dispense with the necessity of going to the back of the Art Gallery.

528. That pencil line which you see on the map is drawn to show the extra width which would be required;—do you not think it would be preferable to take in that extra 100 feet than to run the trains in that semi-circular tunnel round to the back of the Art Gallery? I do.

529. That line takes 8 acres out of the Domain, and costs from £120,000 to £150,000;—that expenditure will be saved by taking a few extra acres out of Hyde Park? I think it would be far and away a superior arrangement. I think it would be far preferable to take in the additional width in Hyde Park, and deal with the trains by traversing platforms at each end of the bay roads.

530. *Dr. Garran.*] If it were allowable to take enough of Hyde Park to put in two more platforms, you could save the expenditure of £250,000, which you would have to incur by going round to the back of the Art Gallery? There would be no necessity for the extension beyond King-street, and it would be a superior arrangement too.

531. *Mr. Shepherd.*] I think it is estimated to take in about 3 acres more of Hyde Park;—it would mean a saving of time? Yes. The busy traffic commences about 5 o'clock in the evening. The suburban trains which go out at that hour run to Ashfield, Homebush, or other station, then they run back to Sydney, and go out from Sydney again. Under arrangement in scheme No. 10 every train which returns here from Homebush or Hurstville, as the case might be so, would have to run away round to the back of the

the

the Art Gallery, a distance of a mile, and then come back to King-street station the same distance. If we had in Hyde Park additional width to give sufficient platforms to accommodate the traffic terminating at King-street, it would mean that instead of the suburban trains, after discharging their passengers, requiring to run round from King-street to the back of the Art Gallery, and there shunting and coming back empty to King-street before taking up passengers, they would terminate at King-street, a second engine would be standing by or the same engine would run round its train to take it out again. In that way all that additional mileage would be avoided.

532. Can you form any idea of the time it would save? It would save at least ten or twelve minutes in some cases.

533. *Dr. Garran.*] How long does it take to do the shunting now? Some of the trains during the busy time will arrive in Redfern Station, another engine then hooks on to the other end of a train, and can be got away in three minutes with another load of passengers.

534. How long will it take you to do the other? At least twelve minutes.

535. *Mr. Shepherd.*] Will you kindly explain why you think it is desirable not to have any intermediate station between Redfern and King-street? I should say the great bulk of the passengers come down to King-street—to this end of the city. I do not think there is a very large number of passengers who want to go to Bathurst-street, or Liverpool-street, or Goulburn-street, and these would simply walk down from Redfern, or get into a penny tram, and be delivered at their doors. What is required in coming down to King-street is to save the time of passengers to outlying suburbs. If you have a train loaded with passengers joining at King-street, you do not want to stop that train at Liverpool-street. If you did, it would mean a delay of from two to two and a half minutes. The trainload of passengers do not want to be stopped there—they want to be whirled away to Strathfield or Burwood. You, Sir, know very well what suburban travelling is. It is annoying to you if you join a train at Redfern, and it stops at Eveleigh. You see that the train is full, and you say, "Why do we want to stop at Eveleigh? Let us go right away to the far-distant station." If you can save the time, people will go out further from the city. If you can run out to Strathfield in twelve or fourteen minutes, people will go out to live there, and they will delight in living out there; but if you extend the time to twenty or thirty minutes by stopping at more stations, you will not get people to live out there. It is by fast service that people are induced to go farther out from the city. I do not think that can be exemplified more than in the case of Strathfield. The population of Strathfield has increased to an enormous extent, and it is solely owing to there being fast through trains to that station.

536. Do you not think it is treating hardly the persons engaged in business in the immediate vicinity of Liverpool-street; for instance, by not giving them an opportunity to come straight in instead of changing at Redfern? If their shops are between Liverpool-street and the Haymarket it would be just as easy for them to get out at Redfern and take the tram and alight at their shop. They would in all probability take a tram if they come to Liverpool-street.

537. The same argument would apply pretty well everywhere? I recognise that, but I think it would be the greatest convenience to the greatest number to run through to King-street.

538. The great objection, so far as I can understand from a great many persons I have spoken to, is the delay in changing at Redfern;—people residing between Liverpool-street and Market-street fancy that they are as much entitled to the privilege of coming right in without this delay in changing as are people residing about King-street? Of course, the electric trams, as time goes on, will be really the distributors of the street traffic. The railway then becomes the proper means for dealing with through business. In other words, the railway will be the wholesale shop and the electric trams will be the retail. The trains will bring the people to a central position, and the trams will distribute them.

539. From a financial point of view, do you think it is desirable to come right on to King-street without any intermediate stoppage? If a satisfactory scheme can be adopted, in my opinion, it would.

540. You think a larger number would actually travel by coming direct to King-street than by having intermediate stoppages? I think so.

541. It was estimated some time ago that £38,000 a year would represent the additional fares collected between Redfern and King-street when the railway was extended to that point;—do you not think that the estimate would be largely affected since the George-street trams have been running? I would rather not answer that question, because I am not sure as to the basis on which that estimate of £38,000 was made. I believe it was made on the then number of tickets issued and the season tickets. If it did not include any prospective traffic, I should say that the estimate would be under the mark, because we would very considerably increase the traffic if we came down to King-street.

542. Taking the general bearing of this scheme, it interferes considerably with Hyde Park, it blocks Elizabeth-street from Market-street to King-street, and it would considerably cut up the Domain;—taking all these matters into consideration, do you think it is more desirable to bring the trains on to King-street than to enlarge the accommodation at Redfern—to take in the Benevolent Asylum ground and the burial-ground, and make a very large and convenient station there? From a traffic-working point of view, of course the terminus at Belmore-road would be suitable, but from a financial point of view there is no doubt that there is more to be gained by coming down to King-street.

543. *Mr. McFarlane.*] From your experience in the position which you occupy, it is your opinion that there is not sufficient accommodation for the passenger traffic at Redfern? That is my opinion.

544. You consider that the present arrangements at Redfern are insufficient for the passenger traffic? I do.

545. With regard to bringing the passengers into the city, do you consider the proposal to make the extension to King-street—that is No. 10 scheme—the best scheme for doing that? No. I should only adopt that in the absence of not being able to get a better one.

546. Which scheme would you recommend? The only scheme which I should consider satisfactory is the St. James' Road scheme, and I am speaking now from a railway-working point of view.

547. What advantages does it possess over the present proposal? In the King-street scheme passengers have to ascend and descend, I think, 20 feet from the main entrance to the station to the various platforms, and the luggage has to be brought into the King-street entrance, and lowered down 20 feet to the level of the platforms. And then, to get their luggage to and from the through platforms, the passengers have to go under, through subways or to go overhead. The great inconvenience of this site is the distance between the level of King-street at which passengers enter and the platforms.

548. The cost of the Hyde Park scheme, also, is much less? It is much less.

549. And it would save any necessity for that extension to the back of the Art Gallery? Yes.

J. Parry.
15 Feb., 1900.

J. Parry. 550. With regard to the passenger traffic, do you think King-street is the most central place to have a central station? I would not say that. It seems to me that if there could be a suitable site found on the western side of George-street it might, perhaps, be more convenient than King-street for the majority of the passengers, but for all practical purposes of working the railway I think the King-street site is a suitable one.

15 Feb., 1900.

551. That is from the Departmental point of view? Yes.

552. With regard to the passengers' point of view, which would suit best the majority of the travelling public who go from the city;—would it not be more central to some of the places you suggested? Supposing you put the station on the western side of George-street, then you would find that the great number of business people, merchants, and others would take what must inevitably come in the future, electric trams to get to their various offices or warehouses, because none of them are landed close to their doors, though a few would be. From King-street a number may take the trams down to, say, the western side of George-street, to the warehouses in York-street. If there was a suitable site which could be found, then I should say that west of George-street may be, perhaps, a little more convenient to the greater number.

553. In view of a future extension to North Shore, would not North Shore be more easily connected by rail from George-street than from King-street? I would like to answer that question in another way. I think there is a plan in the room which shows the scheme for that arrangement. It is in the Report of the Royal Commission on City Railway in 1897. My opinion is that the traffic from North Shore will be chiefly Sydney passengers, that is passengers coming into Sydney to business and going out of Sydney from business, and therefore do not require to come into the great central station. The traffic from the western suburbs to North Shore and from North Shore to the western suburbs will not be very large.

554. There will be no direct passenger traffic between the western suburbs and North Shore? There will be some; but I think we might almost term it infinitesimal compared with the traffic into Sydney. Therefore, North Shore will be served at any time, should it ever be decided to make a railway there, by putting an independent terminus on the western side of George-street, and then it could be connected by trains running to this central station at King-street round by the Haymarket.

555. You are of opinion that it is not necessary, in the event of any connection with North Shore being made, to connect with the proposed central station at King-street, but to connect the North Shore line with some part of the proposed extension from Redfern to King-street? Yes.

556. You are aware that a lot of passengers who travel by the suburban trains go to Manly, North Shore, and different places down the harbour? Yes.

557. Would it not be a somewhat considerable distance for them to have to walk from the King-street station to Circular Quay? I suppose it would be nearly half a mile.

558. Would not these people, coming from the suburbs, prefer to get out of the train at Redfern and take the electric tram, rather than walk that distance, seeing that they could be landed on Circular Quay? I do not think so, because of the extra distance by the tram and therefore extra time. But apart from that, in my opinion the trams will have more than they can do satisfactorily to deal with the western suburbs traffic, apart from the railway traffic, when the steam trams are all converted into electric trams.

559. You mean the people who travel by the trams now? Yes.

560. You think the existing trams will be kept pretty well going to convey them without the railway trams? Yes.

561. Would it not be possible to make more lines in different streets, say in Pitt-street and Clarence-street? I think it will be necessary, even without the railway traffic.

562. Would it not require a very great increase for that to be necessary at the present time;—you anticipate that it will not take place for some years to come? When the trams are converted to electricity there will have to be a largely increased number of trams to deal with the present traffic. Instead of running three, and sometimes four vehicles, the number of trams will be increased under the electric system; the fares will be remodelled, and there will be a great additional traffic brought on to the tram-lines from the western suburbs when the electric system is opened and the new fares come into operation.

563. Dealing more particularly with the present time, and assuming that the railway is extended to King-street, a large number of those who come in by the suburban trains have their places of business in York-street, George-street, and Sussex-street;—do you not think it would be more convenient for them to take the trams at Redfern than to land at King-street? No; because they would be able to take a tram at King-street.

564. But that will be at an additional cost? It will be at an infinitesimal cost, compared with the time saved.

565. Another penny? Yes; but the great bulk of the people will not take the ordinary fare. The Commissioners propose to put only 1d. each journey on the ordinary fare, 1s. per month on the second-class season ticket, and 3d. on workmens' weekly tickets.

566. I do not understand what you refer to? The whole of the people you are speaking of as coming to their places of business, say in York-street, travel by season ticket on the railway.

567. If they went in a tram they would have to pay the fare on the tram—one penny? Yes; but they will be brought down by the train to King-street, and it will not cost them a penny to come down to that point.

568. The Commissioners, in reckoning the income from the proposed extension, estimate to get a penny for each journey from passengers taking ordinary tickets; on the season tickets they reckon to get 1s. 6d. for first-class per month, and 1s. for second-class? With twenty-six journeys second-class, that is only about a half-penny per journey.

569. What I mean is this: That passengers will have a choice between taking at Redfern, at a cost of one penny, a tram which will land them exactly where they wish to go, and riding in the train as far as King-street, at some additional cost, and then taking a tram at a cost of a penny to do the remainder of their journey? You would still find that the great bulk would come to King-street.

570. You still think that the great bulk of those who intend to come to Circular Quay would come to King-street? I do.

571. On holidays a lot of people go down the harbour for pleasure by the different steamers;—do you think these persons will get out of the train at King-street, and walk to Circular Quay, when a tram from Redfern Station will bring them to exactly where they want to go? I think they would ride to King-street by train, and then take a tram from that point—that is, those who would not walk.

J. Parry.
16 Feb., 1900.

572. Would it not be better for them to get out and take a tram at Redfern, and save the additional cost of taking a ticket from Redfern to King-street? I do not think they would get out at Redfern.
573. Would they not save by doing so? They may save a little in money, but they would lose in time, convenience, and comfort. I think it takes nine or ten minutes for a tram to go from Redfern Station to King-street, whereas a train would do it in three minutes.
574. If they had to walk from King-street to Circular Quay it would take them more than the additional time;—seeing that the electric trams are paying so well, and are so well patronised, is it not likely that they will be extended to a number of streets in the city? I should imagine that there will be a large extension of electric trams in the city before many years.
575. You stated, in reply to Mr. Shepherd, that a very large number of passengers that arrive by train do not come by the trams to Sydney? There are a considerable number that do not.
576. Would that not interfere with the estimated income of one penny for suburban passengers using the extension? I do not think so, but I do know how the estimate was made up.
577. But if the extension of the railway would take passengers to King-street, it would be taking so much traffic away from the existing electric trams? That I should consider an advantage.
578. In what way? At the present time the electric trams do not deal with the railway traffic satisfactorily. Yesterday morning when we had that heavy rain, people were standing about waiting for trams. On Redfern Station in about three minutes we may land between 1,200 and 1,300 persons, and the electric trams cannot deal with that number satisfactorily at once. The people must of necessity wait for a number of trams to pass, and as they pass so they fill. You will always have overcrowding with electric trams, because you land such a large number of people into the station at once. A four-wheel electric car only seats about twenty passengers. Therefore, you see the number of trams you require to deal with the number of passengers you land in Sydney by about three trains.
579. But would not the revenue derived from the electric trams now be to a large extent reduced when the passengers were taken in another way by the railway? It would be diverted from the tramway to the railway.
580. To the detriment of the tramway? Yes; but that would be an advantage. If you have more business than you can well cope with, it is better to dispose of some of that business and do what you have satisfactorily.
581. Do you think that you cannot get a sufficient number of trams to carry the passengers who land at Redfern? Not satisfactorily—not with the passengers having to wait for trams.
582. In the case of passengers wishing to go to Liverpool-street, or Bathurst-street, or Park-street, would they go on to King-street by train, and then walk back that distance, or would they take another tram to bring them where they wanted to go? According to the distance from either place. If it were nearer to Redfern they would get out there.
583. I am speaking of people wanting to go to places in the locality from Goulburn-street down to Market-street? Goulburn-street people, I take it, would get out at Redfern and take the tram; and the Market-street people, of course, would go through to King-street.
584. Considering the distance between Market-street and Goulburn-street, would it not be highly probable that those who wished to go there would take a tram at Redfern instead of coming on by train? Probably they would up to Liverpool-street, but not so far as Market-street.
585. Not as far as Market-street? You would find that the majority of those would come on to King-street and walk back.
586. It would greatly depend upon the state of the weather, I think? Possibly so.
587. *Mr. Watson.*] You say that the necessity for having that shunting-yard and carriage-shed in the Domain arose from the decreased width which is available in the King-street scheme as compared with the St. James' Road scheme? Yes.
588. Was the Hyde Park scheme thought by yourself to be sufficient for many years to come? Yes.
589. Do you think that the amount of convenience given by the extension into the Domain from King-street is only equal to the two extra platforms which were provided in the Hyde Park scheme;—what I mean is, do you think that that tunnel and carriage-shed only make good the deficiency of giving the extra platforms, or does it really give a great deal more accommodation than was given by the eleven platforms in the Hyde Park scheme? For purely suburban trains the four lines of railway through very materially increase the accommodation of the station; but when you come to deal with through trains—that is, country trains—the through lines are not so useful. You are unable to allow the train to stand at the platform to discharge the luggage and parcels, milk, and such things as come in by these trains, because you would be monopolising a through platform too long. Therefore, you are suffering by not having sufficient bay platforms to deal with the through traffic, whereas with the Hyde Park scheme you could use any platform for any train, either suburban or country.
590. But in the King-street scheme you would still have five platforms available for the country or through traffic you speak of? Yes.
591. Would not that be sufficient to deal with the traffic other than suburban? In our very busy time we should not have very much to spare.
592. The way it presented itself to me was that this King-street scheme, with the extension into the Domain, was actually providing accommodation for more trains than was proposed at Hyde Park, having in view the fact that you could utilise the four platforms for which through communication was provided to a much greater extent than any bay platforms could be used? During the busy evening traffic, for instance between 6 and half-past 6, then it is that the return trains—that is, trains which have taken one trip out to suburban stations—comes in, and the moment it arrives an engine is attached to the other end and out it goes again. In the case of these trains you might save a considerable amount of time with the Hyde Park scheme, because the train does not have to go through the tunnel. Of the four platforms for which through communication is proposed, the westerly ones would be for arrivals and the easterly ones for departures only.
593. Whereas with bay platforms you could use them either for arrivals or for departures? Yes.
594. Another point presents itself here, namely, that with the construction of a station at King-street, there would be a decreased pressure at Redfern so far as the volume of traffic was concerned? Yes.
595. You would have more of the Redfern space made available for other than mere platform arrangements? Yes.

- J. Parry. 596. Is the distance from Redfern to the King-street station about the same as the distance from the King-street station to the carriage-shed in the Domain? Yes.
- 15 Feb., 1900. 597. Would it not be possible to save the £250,000 proposed to be spent in extending the line into the Domain, and shunting back to Redfern for your carriages? Yes, assuming the Hyde Park scheme were adopted, it would.
598. Under the Hyde Park scheme, did you propose to shunt back to Redfern? Yes; that is, certain trains which are finished with and require to stable. Many trains coming in would not require to go back empty to Redfern, they fill at once and go back to the suburbs.
599. During a certain period of the day you have a lot of carriages on hand? Those we would send back to Redfern.
600. Could you not still utilise Redfern for that purpose with the King-street scheme;—you still have six lines of way, two of which, I presume, could be used for shunting purposes? For through trains we would do that.
601. Even if you had an extension into the Domain you would do that? Yes; we would still take some trains back through Redfern to Macdonaldtown for cleaning purposes.
602. Would it not be possible, with nine platforms at King-street, to do that with all the trains which required to be shunted and rearranged, and marshalled at Redfern? No, we could not do it with nine platforms.
603. Why could you not do it? The time occupied in shunting will be about the same, seeing that the distance is about the same, and you have six lines of road between Redfern and King-street, of which only four, I understand, will be used, generally speaking, for passenger purposes, and the other two will be available for shunting and departmental work? The platforms would be insufficient to accommodate through and suburban trains, the six lines would be used for passenger trains at times.
604. On emergencies, but not usually? They would all be used as passenger lines, to avoid crossing and recrossing further up the line.
605. I understood from Mr. Deane that the present arrangement in providing six lines of railway was that four of them would be usually occupied with passenger traffic, and that the other two would be used for shunting, and such purposes? Of course, the four lines would be chiefly used for passenger traffic; but at the same time we would use the extra two lines for passenger trains also. For instance, we use the sixth line between Redfern and Illawarra Junction for a number of passenger trains in the evening during our busy time.
606. Assuming the same arrangements to exist or to be entered upon in respect of the six lines between Redfern and King-street during the busy time you would not require to be marshalling trains backwards and forwards? No, except through trains.
607. It is only during the comparatively slack time of the day, when four lines for passenger traffic would probably be sufficient, that you would require to be shunting your carriages or marshalling out at Redfern? Generally speaking, that would be so; but take (say) holiday times.
608. Exempting holidays? It is the maximum of business we have to deal with. If we break down on a holiday, we break down absolutely. For instance, last Christmas the Northern mail arrived considerably late on a Saturday—I think between 12:30 and 1 p.m. In consequence of our not having a long platform to turn that train to, we had to turn it into a shorter platform, to cut it into two, so as to discharge the luggage and part of the passengers at one platform, and discharge the remainder of the passengers at another. That blocked the whole of one side of the yard, and upset about half a dozen trains—that is to say, they could not get into their platforms, and they had to run late. It disorganised the suburban working.
609. On a holiday? No, it was on a Saturday.
610. You contend that the six lines into King-street station will not be sufficient to allow of your using any of them on holidays for marshalling trains out at Redfern? Yes, it would; if we had suitable termini to deal with the trains.
611. I am speaking of nine platforms as proposed at King-street? Not with the arrangements proposed at King-street under No. 10 scheme.
612. One of the complaints made in respect to the Redfern Station yard, I understand, is that it is too much of a bottle shape, and that consequently there is not space enough from the end of the platform to where the points must be to allow crossing on to the different lines;—do you get over that difficulty to any extent in the yard as proposed at King-street;—have you a greater length available for crossings, and so on? There the great bulk of your suburban trains go right through; you dispose with the shunting of those trains altogether.
613. Assuming that you were given at King-street a sufficient width of land for another two platforms, bringing it up to the number of platforms provided in the Hyde Park scheme, and that I understand would necessitate shunting your suburban trains;—in that case would you still have a roomy enough approach to your platform to allow of shunting? In that case we should run them away to Redfern at once over the six lines. We should not attempt to shunt them here.
614. It seems to me that the length of approach in this King-street scheme, between where the lines begin to widen out and the actual beginning of the platform was not much better than at Redfern? You see at Redfern there is the goods-yard and the Darling Harbour branch, all the engines coming down from Eveleigh which have to cross at these points, and those engines crossing from the goods line—over to the George-street side of the station,—all clash with the in-coming trains and out-going trains; and in order to draw the passenger-trains out to shunt them away to the carriage sidings you have to foul these junctions. You would not have to contend with this at King-street. We should provide sidings between the platform lines for engines to refuge in, so that they will be able to go direct into and refuge in them and thus be out of the way. The carriage trains from suburban lines would either run straight away through to the back of the Art Gallery, or else they would run straight away back to Redfern, so that the minimum amount of shunting would take place at King-street.
615. What additional width of station would you require to put in two more platforms;—I heard 100 feet mentioned; but that seems rather wider than would be necessary? Roughly speaking, I think 80 or 90 feet. I should like to see it plotted before I spoke definitely.
616. If you did not have the third or refuge line between the two platforms, you would not require so great an additional space? About 80 feet.

617. With an additional width of about 80 feet, would that be making provision for a refuge line of rails between the platforms? No; to make a job of it you want about 90 feet. J. Parry.
16 Feb., 1900.
618. If you do that, which I presume would be done to allow a third or refuge line to be put down? Yes.
619. In that case, you take more than was proposed to be taken in the Hyde Park scheme, because, in that you only provided for two sets of platforms with a refuge line between—that is, out of eleven platforms there were only two with a refuge line between? It would be an advantage to have the three.
620. You have those already provided for in the King-street station, similar to what was provided in the Hyde Park station? Yes.
621. The two additional platforms, which would give you as much convenience as you proposed at Hyde Park, could be put in if an additional width of 80 feet were taken? I think about 80 or 90 feet.
622. You will see that the actual platform space at the King-street station ends in about a line with the Hyde Park side of St. James' Road, taking the fuller part of the frontage? Yes.
623. It would not be necessary to extend the frontage of the main building because of the extension of the yard space? I should prefer you to put that question to the engineers. I should like to see it plotted before I expressed a definite opinion.
624. But this scheme is supposed to provide a sufficiency of office accommodation to work all the yard—the administration and the extension into the Domain? Yes.
625. Would the concentration of business at King-street, by taking the additional width for the station, necessitate any more office accommodation? No. What you require to consider is the dealing with passengers in a more convenient way. I think if you purpose doing that the station could be modified by being set a little further back from King-street, and then taking an increased width.
626. The main thing I wish to get from you is whether, in the event of increased width being given in Hyde Park, it will be necessary to touch St. James' Church or the grounds adjoining that Church? I think it could be arranged without doing that; but I am not sure.
627. But you have had a good deal of experience? I think that could be done.

FRIDAY, 16 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.	WILLIAM THOMAS DICK, Esq.
The Hon. ANDREW GARRAN, LL.D.	JOHN CHRISTIAN WATSON, Esq.
	JOHN MCFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the city, including the erection of a large Central Station.

John Parry, Out-door Traffic Superintendent of Southern Lines, Department of Railways, sworn, and further examined:—

628. *Mr. Watson.*] In order to allow two more platforms to be constructed at King-street station it will require another strip of at least 80 feet to be taken out of Hyde Park? I have thought over that matter and I think that by taking another strip of from 70 to 75 feet you could get another platform in. What we could do would be to push the eastern platform further east, and in its place to put a platform 20 feet wide, with three roads between, also increase the width of the eastern platform from 25 to 30 feet. J. Parry.
16 Feb., 1900.
629. That would mean two new platform roads? It would give two additional platform roads.
630. With the addition as you now suggest, you would be able to do without the extension into the Domain for the present? Yes.
631. With the additional platform space, and the triple roadway between the two new platforms, you would then have three triple roadways instead of two, as proposed in the Hyde Park scheme? Yes.
632. Do you think it would be necessary, because every additional roadway between the platforms means taking an additional strip off Hyde Park? The convenience of working with triple roads is so great that it would be desirable, looking to future requirements.
633. To that extent it would be an additional accommodation as compared with Hyde Park? A slight addition.
634. Do you think it would be possible, if the additional space suggested were taken, and new platforms were put in, and an extension made towards St. James' Road of the assembly platform, to have a passenger outlet and inlet at St. James' Road? I should think there would be no difficulty.
635. The level of the assembly platform, which is some 13 feet, I understand, above that of the ordinary line platforms, would not be a great deal below St. James' Road? You would be able to easily ramp from the assembly platform down to St. James' Road.
636. It is higher there? I do not think I had better give an opinion as I am not conversant with the levels.
637. You think there would be no difficulty in making a connection? I can see no difficulty myself.
638. At what point in Hyde Park would that additional strip begin? North of Park-street.
639. Immediately north of Park-street? You could narrow in a little even to the north of Park-street, say for about 5 or 6 chains, perhaps, and then you could have a smaller width, but in my opinion it would be more desirable to take the full strip from Park-street to St. James' Road.
640. A strip of about 75 or 80 feet wide? From about 70 to 80 feet wide.
641. You are not aware what additional area that will represent? No; I do not know the length.
642. As to the station which it is proposed to erect between Devonshire-street and Belmore-road, at that site, you can get, practically speaking, almost an unlimited area? I think so.
643. Quite as much as it is probable that you will ever require? Yes.
644. Do you think it is necessary to bring suburban passengers directly into the city without changing cars? I think so; that has been the experience of all great railways, to take their passengers to the terminus, which should be the centre at which the majority want to alight. In all great cities the effort has been to extend the trunk system into the heart of the city with the busy traffic.

- J. Parry.
16 Feb., 1900.
645. Contrasting two proposed sites for terminal stations—Belmore-road with King-street—would there be a very much greater proportion of people requiring to take trams or other methods for getting to their offices from Devonshire-street than from King-street? Yes.
646. Of course immediately round King-street there are only a comparatively few persons who would be engaged either in offices or in other business avocations? Yes; but take the whole of the offices and warehouses round Circular Quay. With the extension of the wharfage accommodation at Woolloomooloo settlement will take out in that direction, and business settlement too will follow the shipping. I take it that all the clerks and warehousemen and people visiting the harbour would not take a tram from King-street to Circular Quay, but would walk during the greater portion of the year. They might take the tram during the very hot weather, but during the cool winter months I think they would prefer a little walk from King-street within the Circular Quay area.
647. A great portion of those who arrive in the city are employed away up towards York-street and further down towards the shores of Darling Harbour? I think they would walk from King-street.
648. If they were brought in to a terminal station at Belmore-road they would get nearer, if anything, by the George-street tram to their destination than Elizabeth-street would be to the western part of the city, would they not? To the extent of the distance between Elizabeth-street and King-street, but it is down hill. When you look at the distance the little walk is not much to consider.
649. It seems to me that to justify the extra expenditure we want to be able to show considerably greater convenience to the people and not merely a slight difference. I want to ascertain whether, in your opinion, that great difference of inconvenience would exist as between Devonshire-street and King-street;—you see, there is an expenditure of about £1,000,000 extra involved in the construction of the station at King-street as against the station at Belmore-road;—of course the suburban people who come into business in the morning and depart in the evening are those whom you would consider in the question of inconvenience? Yes. As regards the country people it would be almost as convenient either way if they had to take a cab; but as regards the suburban people, in my opinion, this end of the city will always remain the great business centre—the warehouses, the shipping, and the offices. Therefore I think, at the present time, a vast number of people would be greatly inconvenienced by coming down to King-street. Looking into the distant future, and judging from the experience of other large cities, I do not think the tramways will be sufficient to cope with the traffic from Redfern to this end of the city in a satisfactory manner.
650. Would it not be possible to arrange some system of electric communication, not exactly in the nature of electric tram traction, but more in the way of an electric railway, to provide, perhaps, only one or two lines of tram from Devonshire-street towards Circular Quay, and then run towards the eastern suburbs and back to Devonshire-street, making a separate system? That could be done. Of course, the difference then is the time of exchanging from the terminal to an electric service, and the slower service which the electric tram would give.
651. I was not thinking so much of an electric tram as a railway operated with electric locomotives, and within an enclosed track, so as to give them a chance of getting up speed? Then the cost of your electric railway would, I think, in the end be almost as expensive as the present railway.
652. In that case you would only require one or two lines of track as against six lines in this instance, where you attempt to bring the whole terminus into the city? Yes; but additional requirements in the way of station accommodation and getting round again. You would require to form that in a sort of loop, and I think, in the end, it would come to pretty well the same cost.
653. But you would not require any elaborate resumptions in the city for your station buildings, for instance; you would only want, practically, the width of your track, and sufficient for platforms, with very small station accommodation at various points along the road? Of course it would not require great width, but then you are restricted to the eastern side of Elizabeth-street, unless you tunnel under or take private property.
654. Would tunnelling be so objectionable with an electric system for such a railway? No. I do not think there would be great objection to the tunnelling with an electric system. During portions of the year with us there is no doubt it would be very stuffy at times, but the electric system has worked satisfactorily in London, and I do not see why it should not be worked so here, apart from the fact that we get a longer period of hot weather.
655. The weather conditions in London are very trying for a portion of the year? For about three months. If you ask me for my opinion I should say it would be far preferable to take your trunk line straight away to the heart of the city at once, and then to have a distributing service of electric trams on a street level, with the system of cross trams which you see mostly in America. In San Francisco there is scarcely a cross street which has not its subsidiary tram to the main street. We could land the people for the southern portion of the city at Redfern, and distribute them by trams from Redfern to the southern portion; and then the passengers who come to the northern end of the city you could carry in through trains, say, about three minutes from Redfern to the new terminal, and distribute them from that point to various places by street trams. That is my idea of future developments.
656. Do you think our present population and traffic prospects warrant that, from the financial standpoint? I do not think the full extension of cross street trams as indicated would be justified at the present time; but of course, in dealing with a large city terminal, we should be looking a great many years ahead.
657. *Mr. Dick.*] You spoke of the difficulty and inconvenience of working your system of trains at the present terminus;—will you indicate which service suffers most, and at what time from the disadvantages which you have at present at Redfern? In the morning between 8 and 9, and in the evening between 5 and 7.
658. Those are suburban trains wholly? No; we have the through trains mixed with the others. It is the mixture of through trains with the suburban trains, which, of course, necessitates the additional room. Take, for instance, the Northern mail, which starts at 6.15 p.m. The Northern mail must be up to the platform, at any rate, twenty minutes before it is due to start, so that passengers arriving with luggage may take their seats. You cannot keep through passengers who are going, perhaps, to Brisbane, hanging about the platform, and then rush them into the train at the last moment when it comes to the platform. Therefore to deal with the through business suitably, the trains should be at the platform at least from fifteen to twenty minutes before the train is due to start.
659. Wherever you have your terminus, that would be the case? Yes. Again, take the 5.30 train to
Kiama

J. Parry.
16 Feb., 1900.

Kiama. That train requires to be at the platform, at any rate, from ten minutes to fifteen minutes before it is due to start, so that passengers can take their seats. Or you can take the Moss Vale train, or the Mount Victoria train. In the summer you have a 4.50 Bathurst train on Friday night, and a 5.25 daily train. These are all through trains, which it would be most inconvenient to the passengers to bring to the platform two or three minutes before starting time; it would not be dealing with business satisfactorily. Therefore these through trains occupy a platform longer than suburban trains do, and hence the necessity for the additional platforms.

760. May we gather from that that the most objectionable feature in the present terminus is want of sufficient platforms? A want of sufficient and convenient platforms.

761. Another objection which is levelled against the present terminus is that the entrance to the station yard is of a narrow character, and difficult to work, and in their opinion that, practically, the whole of the goods traffic—hay and corn on one side, and the Darling Harbour trade on the other—and the various engine workings are all combined on one ground;—taking these various elements of inconvenience or difficulty, could you say which, in your opinion, is the most important of them, and then place them in their order of importance? The contracted space of the yard and the inconvenient way in which the yard is laid out. As I explained to the Committee, I think, on the ground, we have no spare siding between the main running lines where the engines can refuge and be out of the way, or where you can hold a few additional carriages for strengthening purposes. As these engines have no refuge sidings between the various platforms to stand in, it necessitates them being moved about from main line to main line out of the way of incoming and outgoing trains, purely for the purpose of clearing the road.

762. That is the main difficulty? Yes. Then I would instance the short length of the platforms and the inconvenience of their position. For instance, No. 11 is right away in George-street, and you can only use that one properly for a train arriving now and again. Then I would instance the inconvenience of the main station buildings with the lavatories. The station buildings are arranged simply between Nos. 3, 5, 6, and 8 platforms, and everyone has to go on to the main platform to get to the lavatories and waiting-rooms. Then the main entrance platform becomes so congested at holiday times, and crowded at other times, that it is impossible to get the parcels from the parcels' office to the trains, and from the trains to the parcels' office, or to get the luggage through this crowd of people satisfactorily.

763. That will all come under the head of inconvenience of platform and station accommodation;—what is the next element in importance to that—the fact that you have all the business, the farm produce and the rest, concentrated at the one yard? Yes, the fact of all being bunched together—of the main passenger station being so close to the junction of the goods line, where all the marshalling of the goods business has to be done, to the Darling Harbour branch line—where the whole of the trains passing to and from Darling Harbour have to cross the main lines.

764. That practically seems to be the main objection to the present yard? Yes.

765. Do you think it possible with the space at your disposal at Redfern to temporarily remove the farm-produce department (say) to Darling Harbour, build more commodious and convenient platforms and station accommodation on that part of the yard, and then bring back the farm-produce department to the place now occupied by the present station;—do you think that could be done without any very great inconvenience or very great expense? I think it would be both very costly and most inconvenient; in fact, I think it would be a most serious matter to attempt to remodel Redfern Station as it exists to make it anything like suitable for a proper terminal and keep the traffic going. It would necessitate temporary arrangement after temporary arrangement being made. It would, to my mind, involve a considerable risk, as well as be most inconvenient to the working for a very long time.

766. Have you considered, in connection with the King-street proposal, the possibility or the necessity of a future eastern suburbs extension? Yes.

767. In what way do you think that could be accomplished with a station at King-street? By simply taking the lines to the back of the Art Gallery and branching off from the Domain into the eastern suburbs.

768. Presuming that that plan of No. 10 scheme was altered in the direction indicated by Mr. Watson—that is, by taking a little more of the Park, and cutting off the long tunnel tail and the carriage-sheds;—in what way, then, could you make an extension from that station to the eastern suburbs;—would it be necessary even then to carry the lines right round the Domain, and from that point to the suburbs? I think that would be about as convenient as any.

769. Presuming that we extended the stations indicated by Mr. Watson a few moments ago, would it then be a convenient method of connecting with the eastern suburbs to go by tunnel direct from the main station under Hyde Park and to work the service by electric traction? I should not think there would be any difficulty.

770. In your evidence yesterday you referred to the number of trains which could be filled up immediately after their arrival at the platforms;—have you calculated what proportion of the suburban traffic could be treated in that way? (*Vide Appendix A1.*)

771. We have been furnished with several estimates of revenue and expenditure in connection with these various schemes, which evidently were made up before we had had any experience of the working of electric trams;—do you think any considerable modification of these estimates would be necessary now that we have had some experience of the working of electric trams; take, for instance, the estimate of the revenue expected to be derived from the original Hyde Park scheme;—do you think that estimate would have to be modified now that you have the George-street railway tram? I did not prepare that estimate; it was prepared in the office of the Railway Commissioners, and I am not conversant with the basis on which it was made.

772. As a matter of ordinary railway experience, do you think an estimate made up under 1897 conditions, without taking into consideration the construction of that tram, would be much modified by its construction? Not if it did not forecast increased traffic. If the estimate was only based on the then traffic, I should say there would be no occasion to modify it now, because the natural increase of traffic which will accrue by bringing the station down into King-street will be very considerable. Therefore it will depend upon whether the estimate was based on the then traffic or whether there was anything added to it for prospective traffic. Take the number of ordinary tickets—that is, passenger journeys—during the last ten years, for the whole of the lines. According to the annual reports in 1889, the number was 10,284,980, and in 1899 it had increased to 14,072,685, being an increase of 3,787,705 passengers, or

- J. Parry. 36 per cent. That gives you the increase in the passengers travelling on the whole of the lines—of course, irrespective of season tickets. During the same period the number of season tickets issued—monthly, quarterly, and yearly season tickets—increased from 28,231, in 1889, to 42,805, in 1899, being an increase of 51 per cent. Then take the weekly tickets, or workmen's tickets, which permit of two journeys a day, one in and one out; the weekly tickets increased from 149,710, in 1889, to 406,087, in 1899, or an increase of 256,377 in number, or 171 per cent. So that, judging from this increase in the ordinary traffic—my view is that if we extend the railway to King-street a large number of passengers who now live at the eastern suburbs will then go out into the western suburbs, and settle along the railway. The reason why they go out to the eastern suburbs now is that they can get into a tram and go home without any changing. If they go to places along the railway they have first to take a tram to Redfern and then change, which, of course, means time and inconvenience.
- 16 Feb., 1900.
773. I suppose you have been consulted as to the allotment of space and the design of the main station building, both at Devonshire-street and at Hyde Park;—you have indicated what you required in order to deal properly with the general public? Generally I have.
774. Do you think a maintenance and a main exit 30 feet wide will be sufficient for your purpose to either station? Yes. With the outlet on to Castlereagh-street.
775. You think ample provision is made for allowing people to get on the main assembly platform and to get away from it? Yes.
776. *Dr. Garran.*] You have given the Committee a very clear idea of the difficulties you have to contend with in the Redfern Station as it is now laid down;—have you seen the suggestions made by Mr. Norman Selve for alterations in that yard? I have seen a plan showing resumption of a large strip of land between Eveleigh and Redfern.
777. Have you not seen a plan for reconstructing the platform accommodation? No.
778. I suppose during the time you have been in charge you have often taxed your brain to consider how you could improve that yard? As a matter of fact I have designed many of the improvements, because I was engineer for a considerable time in connection with the Redfern arrangements.
779. Have you served your time as an engineer? Yes.
780. You are by profession an engineer? Yes.
781. Suppose the Government were to say, "It is impossible to devise any scheme to suit everybody, we must do the best we can with the station yard," and to call upon you for a report as to the very best use that could now be made of the property you have, practically a triangle it is;—for all practical purposes what changes would you recommend in order to make the very best use of that station yard? I should reluctantly set to work to design something; but I should not like to say that I was going to make a satisfactory arrangement of it.
782. You must distinguish between the difficulty of making changes in a yard which is being used every five minutes in the day, and constructing an entirely new scheme over the whole area;—I mean what could you do under existing conditions for the best? To justify the expenditure which an effective alteration would make, in my opinion it would necessitate the removal of the whole of the existing arrangements.
783. Could you not plan something additional to go on with before you touched anything which is existing? I have no doubt that could be done, but would be unsatisfactory.
784. You know it has been suggested frequently that we should resume St. Paul's School, make another bridge to the tunnel on that eastern side, and have four lines of railway laid down there, two for the produce station, and two for some new platforms;—could not that be added on to the existing rails without materially disturbing the traffic? The rails could be laid down without materially disturbing the present traffic through the resumptions; but the whole of the goods yard would have to be taken up to connect with these lines and be remodelled.
785. You would have to take up the part now occupied by the sheds for carriages? Yes.
786. If you look at the plan on the wall you will see that between the eastern extremity of your eastern platform at present and the goods shed there is a space quite as broad as the whole of the platform property at present? No, it would not be a satisfactory arrangement. The plan is wrong, because there are four more sidings in that space.
787. On the whole, after the thought you have given to it, have you come to the conclusion that a first-class permanent central station can never be satisfactorily made in the present yard? That is my opinion.
788. After years of local experience in the yard itself? Yes.
789. Then there are only two things in your view to be done, either to go north of Devonshire-street and make an entirely new station, or to go into the city? Yes.
790. Those are the only two alternatives? Those are the only two alternatives I would suggest.
791. If you go north of Devonshire-street, I presume you are satisfied that we should make a really first-class station there? Yes.
792. And that we should have room enough there practically to have a permanent station there for all time? The only fault alleged by others, and I think by yourself, against that idea is that it is not in the right place, that it is not central enough? In dealing with the trains that would give every satisfaction, but the questions now to consider are the convenience to the large number of the general public, and the revenue to be derived from the extension.
793. That is to you as dealing with the station-yard, it would give entire satisfaction? Yes.
794. But it may not give the travelling public the same satisfaction? Exactly; nor does it bring in additional revenue.
795. You could get north of Devonshire-street everything you ask for? Yes.
796. And it would last for you and your successors? Yes.
797. And so far as you can see, it would last for all time? Yes.
798. I suppose that in thirty or forty years that will practically be very central to Sydney as a whole? I daresay it will; but although it is central to Sydney as a whole, as the city grows, so will the business part of the city concentrate itself down at the northern end.
799. You told us the other day that you sometimes on a wet day have a wonderful accumulation of passengers coming in on your assembly platform? Yes.
800. And that the get-away by the electric tram is not enough? No; I do not think I intended to convey that exactly.

801. I understood you to say that you got from 1,200 to 1,500 people landed on the platform from three trains, and that as each tram-car can only sent about twenty persons, you cannot get 1,500 persons away in time? I did not put that forward as congestion of the end platform, but as an inconvenience to passengers having to wait. J. Parry.
16 Feb., 1900.
802. When the steam trams ran into your yard, did they take away the people more rapidly than the electric tram is doing now? I think the steam-trams would accommodate more quickly, but I think the electric trams would get them away. I do not think the delays to passengers on the whole are as great with the electric system as they were with the steam system.
803. Because they do not have to wait so long? No.
804. Suppose, instead of only one electric road, which is what you have at present, you had three electric roads, one in George-street as at present, one which the Commissioners are going to lay down in either Elizabeth-street or Castlereagh-street, and one in Kent or Sussex streets, to take the Shore traffic, do you think they would take away your passengers fast enough? With the present business it would. But strange to say a gentleman was only complaining to me last night that the electric trams do not run through, that they are too slow. He wants them to run through like the steam trams do now between Redfern and Liverpool-street, but there are too many trams on the road to do that.
805. One tram cannot overtake another on the road with any advantage? No. They are also complaining of the slowness of the journey.
806. The reason why I ask these questions about the trams is because in many cases, supposing we had this station at King-street, a person would have to combine a train service with a tram service to get to his business. You were telling Mr. Dick that if we have the terminus in King-street we shall still to some extent have that in cases of people who live a little distance from King-street;—for instance, a man at Sussex-street would probably take the King-street tram down to Darling Harbour? Some would, perhaps.
807. There would be a combination of train service and tram service, only that it would be at this end instead of at the other end? Yes; but, of course, considerably minimised.
808. Shorter for trams? Yes; I estimate that the great proportion would walk, except on special occasions.
809. They would save no time by doing that? No.
810. You think for the present the traffic could be distributed pretty quickly, if there were three electric trams instead of one? I should think so.
811. You have formed no estimate, I suppose, and perhaps you have not heard any estimate formed of what it would cost to lick the Redfern Station into shape? I do not think any plan of that has ever been prepared.
812. You have never gone seriously enough into figures? No, but they would save the tram fare.
813. It could not be done under a quarter of a million, I suppose, to make it thoroughly up to date? No; not to make a great central station.
814. Suppose you could even accommodate the traffic, you could not put up a first-class station there for less than a quarter of a million? I should not think so.
815. Suppose that it would cost us that amount to build there, and suppose it would cost us £500,000, or a little more, to go over to Devonshire-street, which do you think would be the better investment of public money? If it were my property, I would not spend the money on remodelling Redfern Station.
816. You would rather spend twice the amount in making a good station on the other side of the road? I should say I was spending an enormous amount of money in remodelling what will then be only sufficient for to-day. I am trotting Redfern as it is. If you resume a large amount of property towards Eveleigh, it may alter the conditions.
817. I may say you think this, supposing the time to have arrived when it is proper or necessary for us to have a really first-class central station, Devonshire-street will be a far better site for a station yard, even if it costs twice the amount? In every way.
818. But you think, instead of building a great central station there, it would be better to go on into Sydney, and have a station in Hyde Park, sufficient for all present purposes? Yes.
819. That is best for present purposes? Yes; from the financial point of view.
820. Even although, as Mr. Eddy says, they may not be adequate for more than twenty years? Yes.
821. Taking the map of Sydney, and what you have said to Mr. Dick about the people crossing George-street to come up the hill, would in not be a fairer thing to say that this Hyde Park scheme or its substitute is a good station for East Sydney rather than to say it is a good station for Sydney altogether? No, I should say Sydney as a whole.
822. Would the Sussex-street man get into the electric tram in George-street and go up to the station, or would he cross that tram-line, and climb up King-street to get to that terminus? I think he would climb up to the terminal, excepting, perhaps, in very extreme hot weather, because he could get comfortably into his train and read his paper, and he would have the nuisance of changing.
823. You do not think the electric tram in George-street would captivate him, and carry him off to Redfern? No.
824. Do you think the electric tram in George-street now is taking traffic away from the steam line in Elizabeth-street? Yes, considerable.
825. The traffic on that street now is not all new traffic? No.
826. It is partly robbing the old line? Yes.
827. The old line is becoming less profitable? I should think so. Mr. Kneeshaw will be able to furnish full particulars on that point.
828. Is it your opinion that it is most impracticable to separate the through traffic from the suburban traffic? Economically, and to suit the convenience of the public, I think so.
829. You think it would give you more trouble than it would be worth? A great deal more trouble.
830. And that with the accommodation you have here you can deal with both satisfactorily? Yes.
831. Do you concur in the suggestion which has been made that you can deal with four times the traffic on this Hyde Park plan than you can at Redfern now? That statement requires a little explanation. We could deal with four times the number of passengers; but not four times the number of trains as they run.
832. We have had it given generally as four times the traffic? That means four times the number of passengers. If the trains came suitably we could deal with four times the trains; but unfortunately the business

- J. Parry. business compresses itself into four hours of the day. Therefore, if you commence to multiply your business in these very busy hours of the day by four, you get a very different thing to carrying the traffic throughout the day. Take King-street station as it is sketched on the plan. the connections between the various lines, the points and crossings would, of course, be modified in the detailed working out.
- 16 Feb., 1900. 833. On the map there it looks simpler than it will be in reality as to the connections? Yes.
834. There will be more points and crossings, and interlocking arrangements, than are shown there? Yes. So far as the connections are concerned, that plan only represents a general idea, and it would mean an enormous amount of labour to work out the details thoroughly.
835. Will you not have to do a good deal of your shunting and interlocking on the south side of Park-street? Yes.
836. That is not shown at all on the plan—it looks like a straight run;—have you width enough for all that? Yes.
837. You want more than six lines? No.
838. Have you got room for a signal-box at the station there? That would take up a very small place.
839. As broad as a railway? I anticipate that we would work it by the electric pneumatic system by which the signal-boxes are reduced to an almost infinitesimal size.
840. About the cab and the dray service, does that come under your management at Redfern? The parcels do.
841. How many cabs have you connected with Redfern Station? I could not tell you.
842. How many drays and carts? Last Christmas I took particulars of the numbers of carts and drays which came for the parcels business during the busy hours of the afternoon, between 4.50 and 6.30. As many as 22 carts arrived at the parcels' office alone, and, I suppose, in addition to that number, ten or twelve carts arrived for luggage.
843. You have not too much room there? No; the whole thing was perfectly congested. Between seventy and eighty carts were dealt with in half an hour.
844. Where do you put all your cabs under the new arrangement? A number, I suppose from twenty to thirty, stand inside Devonshire-street, and the remainder stand alongside Devonshire-street, right away to George-street.
845. Looking to the narrowness of Devonshire-street, and to the fact that the Government monopolises the middle of the street with tram-lines, do you think it is reasonable to occupy both sides of that street with cab-stands? No.
846. Has the rest of the traffic a fair chance? I do not think so.
847. As a matter of fact, you are short of cab room at Redfern Station now? Yes.
848. That is one of your troubles? I would not like to say that it is a trouble to us.
849. It is still a trouble to the general public;—do not a good many cabs stand in George-street along the kerb in front of the Benevolent Asylum? Yes. There really is not room for the cab service properly.
850. The public are inconvenienced very much? Yes. There ought to be more street room, or else more room inside the gates.
851. That being the case, will you say whether there will be more or less room for cabs and carts in King-street than you have at present at Devonshire-street? The carts will be transferred from the main passenger station to the parcels' room which is separated. The whole of the carts which come and deliver parcels will be transferred to this space. [Referring to plan.]
852. *Mr. Watson.*] Would the parcels' office be in lieu of the office at Martin-place? In lieu of Redfern.
853. What will you do with the other office? It will be transferred almost directly to the General Post Office. I am inclined to think we shall retain that office for the convenience of customers.
854. *Dr. Garran.*] On that plan the parcels' room abuts right on to the street? No; it is twice as long as the present office.
855. Looking at the fact that trams are running in the street, and that cabs will arrive off the rank there, will there be room for your twenty or thirty carts at a time? Yes; because the street will be widened from 66 feet to 75 feet, and the parcels' office will be set back 10 or 12 feet from the widened street.
856. In addition to the carts which are going to bring you parcels, there are always half a dozen parcel delivery carts waiting for the arrival of trains to take parcels away? Yes.
857. Will there be room for them to stand there too? They will stand either along Castlereagh-street or along Elizabeth-street.
858. You would ask the street to provide accommodation for them? Yes.
859. Do you think there will be room for 100 cabs round that station? In the streets adjoining. For instance, the trams would be removed to Elizabeth-street and Phillip-street, I take it.
860. Elizabeth-street will be removed? I mean north of King-street and Phillip-street which is very rarely used.
861. You think they will have to overflow into those streets;—it is rather a clumsy arrangement, but still I suppose they will have to go? Of course it would be a more satisfactory arrangement if we could have space away from the street. I do not see why they should not be dealt with in the streets.
862. If you are going to bring all your through and local traffic into this station, you will want as many cabs in Hyde Park as you have at Devonshire-street? I do not think so. I think as the electric system extends, as, in my opinion, it is almost bound to do, the number of cabs will decrease.
863. The parcel delivery carts will, perhaps, increase, because the people all bring too much luggage in their trams to carry it in the electric trams? I think we shall deal with that all right.
864. Have you any idea how many cabs are used on the arrival of the northern, the western, or the southern trains? In the case of the southern express, I daresay on a busy morning we may deal with thirty cabs, or more.
865. Would you not want as many if the express pulled up at King-street? I hardly think so. Take, for instance, the "Australia Hotel." When the trains arrive at King-street the "Australia Hotel" people would simply meet the passengers with their luggage, and the passengers would simply walk to the hotel.
866. Do they not meet them now? They do take some of the luggage, but in a large number of cases the passengers take a cab with their luggage, and drive down to the hotel.
867. You think they will not do so when the station is at King-street? I think a large number will not.
868. On the whole you think the cab service will be diminished? Yes.
869. But that the parcels' service will be as great as it is now? Yes.

870. You do not anticipate any trouble from a congestion of cabs around the station? No, not by utilising Phillip-street and Elizabeth-street; from these streets they are easily called up.

871. I suppose the Transit Commissioners, or whoever are going to succeed them, will have a voice in the locating of these cabs? Yes.

J. Parry.
16 Feb., 1900.

872. The Corporation have expressed no opinion at all about that matter? I have not heard any opinion expressed.

873. With regard to the St. James' Road scheme and the new scheme, practically they are both much alike as to working arrangements; they are very similar in general construction, because there are a number of parallel platforms and an assembly platform at right angles at the end? Yes; and the difference is that at the King-street station the assembly platform is about 17 or 18 feet above the platform.

874. Do you think that design allowing these ramps will be an inconvenience? It will be a certain amount of inconvenience, especially to elderly people. It will be more inconvenient than the Hyde Park station, where the people enter on the platform level.

875. The Hyde Park one is absolutely level so far as the outside ground is concerned? I understood that it was only a question of a very easy grade. I have always understood, without seeing the levels, that the St. James' Road scheme was practically on the Elizabeth-street level. I am not conversant with the levels.

876. Can you say whether we shall have to have a dug-out arrangement, and to make a level road in front of the building, where the cabs will have to go in and turn round in that level road? My idea is that in the cab approach the street level will be maintained, that is on the incline, and that the cabs will be able to drive up to any portion of the frontage to the station, and the passengers will then alight on the steps. They may have to rise one, two, or three steps to get into the colonnade.

877. The cab road will be just the same level inside as outside;—there will be no dug-out for the cab road? That is my impression.

878. You told us that one of the troubles of the station at Redfern is the very awkward mixing of the ins and outs, which we are so conscious of when we happen to go up there at a crowded time;—how are you going to get rid of that at either of these two model stations? The assembly platform at King-street station is very wide, and for all ordinary purposes there will be ample room.

879. You are going to trust to the greater width of the platform to accommodate the general public? Yes; but parcels and luggage will be dealt with by Aspinall's overhead carriers. Instead of having wheelbarrows passing to and fro along the assembly platform, parcels and luggage will be dealt with by overhead carriers.

880. You mean to say that as the luggage will be taken out of the cab it will be taken up? It will be sent into the luggage-room in front of the station, and it will be dealt with by lifts to the platform level, and then picked up by these carriers and distributed to any platform.

881. That arrangement has never been explained before;—you cannot keep your eye on your own luggage in that case? It will be taken into the luggage-room.

882. At Redfern Station is there any single platform which is exclusively an arrival platform, or any single platform which is exclusively a departure platform, or are they all used indiscriminately? Indiscriminately.

883. Would it be a great convenience if you had some platforms only for arrivals and some for departures? It would be practically a waste of space; it would be very costly. There is no station in modern times—that is, a dead-end station like this—constructed in that way.

884. You trust to prevent this intermixture of passengers partly to breadth of platform and partly to various exits which you are going to give the people? Yes; and if that should not do, by closing the gates at any moment you can exclude passengers from the platform.

885. You think there will not be so much trouble from the jostling of people together under this plan? No.

886. But it will not be perfect; there will be some ins and outs meeting together? I think it will be satisfactory.

887. *Chairman.*] There seems to be an impression growing that the electric trams will be a reasonable substitute for a railway into the city;—with your large experience do you think they can possibly cope satisfactorily with the traffic? Not in the future. At the present time, take the railway tram by itself, the electric tram would compete with it; but when you get the western suburbs converted to electricity, you will require to have trams down other streets than George-street to anything like cope with the traffic. I think it would be a great advantage to take the railway traffic off the street as much as possible.

888. Is it not based on experience that the more facilities for railway communication you give to bring the people to their destination the greater the passengers increase? That is so.

889. In Melbourne they have about 1,200 miles of suburban railways, whereas our mileage does not amount to half that;—is not their suburban traffic double what ours is? I should think it would be. I could not quote their figures. They branch out in all directions with the suburban traffic. Ours is concentrated into one main trunk line for about 2 miles out; then you branch off the Illawarra line, and then the whole is concentrated right away to Strathfield, where you branch off to the North Coast line. In Melbourne they have their south suburban lines and north suburban lines, coming into different stations and in different directions; the traffic is not converging on to one point.

890. Do you not think if the railway were brought into Sydney, and it being, I think, pretty well admitted all round that the railway into Sydney is chiefly for the suburban passengers, not long-distance passengers, it would be a profitable concern for the passengers that use it, in the busy part of the day, particularly, and that the trams would still be used largely for local and short-distance passengers;—do you not think that that would be the result? Yes; and in my opinion, the railway traffic would very largely increase.

891. Is that an opinion based upon an experience of other large cities? That is the experience of other large cities.

892. For short-distance passengers from the suburbs would not the saving of a quarter of an hour each way a day be a considerable advantage to them that would be affected by the train? It means the difference between their going on the suburban line to live and not going out. For instance, if we had extended the running time to Strathfield to half an hour Strathfield would never have developed and increased in anything like the proportion in which it has done.

893.

- J. Parry. 893. I think it takes fifteen or twenty minutes to come into Sydney from Redfern;—have you taken into account the time taken to get out of the train and get into the tram? Mr. Knecshaw will be able to state the time it takes. From the starting of the tram to its arrival at King-street I think it is about ten minutes, and in the busy times from three to six minutes to change and wait for trams.
- 16 Feb., 1900. 894. There is the interval between? We would allow that to be the same in both cases, except the waiting for trams.
895. Would it not be a great saving of time and labour in the way of administration by your aiming to take season ticket-holders into Sydney instead of having to collect fares in the trams? For instance, a man would take his ticket for Sydney, and there would be no occasion for him to buy tram-tickets, or for the Government to collect tram-tickets from Redfern to Sydney;—is not that an advantage? That advantage would accrue to passengers who walked to their offices or workshops from the terminal at King-street. These passengers, of course, would simply show their season tickets. Those persons who walked from the terminus to their places of business would get the advantage of not having to bother with tram-tickets at all.
896. If a man rides straight to Sydney in a train, he will be saved the inconvenience of having to bother about tram-tickets, and the Department will be saved the expense of collecting them? Yes; but my point is that every passenger who came to the terminus, and from that point walked to his office, would get the advantage you speak of; he would not be bothered with tram-tickets at all. Of course, there are some who might take a tram after coming to the King-street terminus. Now, coming to the workmen's side of the question. In the morning and the evening there is a large traffic to and from the wharfs. To working men and to working girls a penny is a very great deal. If you bring them down to King-street—which leaves a reasonable distance for them to walk to their places of business—on a workman's ticket the additional cost is 3d. a week. Therefore, a working man or working girl would be able to get from Redfern to King-street by train for 3d. a week, whereas, if they go by tram, it would cost 1d. in each direction, or 1s. per week. That is a very great consideration to a large number of smaller paid working people. They would not think of taking a tram from King-street. Working men have to be at their work at from 6 to 7 o'clock in the morning. If they can go by train at a fast speed to King-street it simply means that they will not have to leave their homes so early, and that they will get back so much earlier in the evening.
897. Since the line to Parramatta has been quadrupled and coming under the Redfern bridge, do you find that that quadrupling has increased your troubles or reduced them? It has reduced them.
898. Although you had more lines and more couplings it has reduced the inconvenience,—how does that happen? We could not possibly conduct the business on two lines. For instance, you could not deal with [the fast traffic, viz., the through trains and the slow trains on the same line, because the fast trains would be overtaking the slow trains.
899. That is where the trouble chiefly arises at the Redfern bridge? No. The chief trouble there is between the goods lines from Darling Harbour and the goods lines of Redfern crossing on the station side of the tunnel, and the inconvenience of the existing arrangements of the four lines inside the yard there being no refuge sidings between them.
900. On the western side of the Darling Harbour line there is a resting place for carriages—a number of carriages are collected there? Yes.
901. And you often have to take these carriages right out through the tunnel in the face of incoming trains? Every night.
902. Is it not very dangerous, or rather, very undesirable in a tunnel like that? I would not say it is dangerous, because they are worked under the block system, but it is very undesirable.
903. Again, with regard to the long platforms, your shunting operations come too close up to the tunnel, and hence the necessity of getting a lot of this work done more to the north? Yes, and this trouble is increasing very materially. During last year we shipped a very large quantity of coal at Darling Harbour, with the result that coal trains were passing to and from Darling Harbour branch to the far side,—that is the Regent-street side of the main line. Every one of these coal trains had to cross the whole of the main lines to get to the Illawarra line. That trade we expect to increase, so that the difficulties will increase rather than remain stationary at those points, even from the goods traffic and coal traffic.
904. *Mr. Watson.*] Even if you got the King-street terminus, you would still require to stop at that point? Yes; but we should hope to get rid of some of the shunting.
905. *Chairman.*] In the plan of the main station, whether it is at Devonshire-street or at King-street, I understand that you have three pairs of rails between each platform? Two sets of three.
906. Will you explain how the system works? Say between 5 and 6 o'clock the trains commence their work at Redfern. Before a train is due to start away, the carriages are shunted down to the platform, and the engine is at the outgoing end. In doing that you do not want a third line; but after the trains are all put into service, then as a train comes in another engine still picks the train up at the outgoing end, and goes away with it loaded up. But during a certain portion of the day the passenger traffic is not so brisk, and therefore you have time as the train arrives at the platform for the engine to move over to the centre road, run round its train, and come back on to the other end, and take the train out again. That saves engines; instead of having two engines to a train, the engine which brings it in will take it out again.
907. That, I suppose, is in accordance with modern practice in stations of this importance? Yes.
908. You have nothing of that kind now, and consequently you have to do all your shunting right out in front of your platform? Yes. Say the northern mail arrives with two engines on, these engines cannot be liberated to get away to their shed till all the luggage and the mails have been discharged on the platform. The northern engines stand at that platform sometimes for fifteen and twenty minutes, and sometimes half an hour. At the King-street station, however, when the northern mail arrived, the first engine would simply go on to the traverser, move to the centre road, and go away to Eveleigh, and the men put off duty, and after the train was properly discharged a shunting-engine would simply come along, pick up the train, and run away with it to the siding, so that you would save those two engine-men half an hour or twenty minutes each remaining on duty.
909. This state of things, I understand, has occurred by the great expansion of the traffic into Redfern Station? That is really what has caused it. The station has been added to piecemeal, and each time you have added to the station you have sought to do it as economically as possible.

910. You think you have used every means you can to cope with the traffic, and you can see such a trouble ahead of you that something ought to be done at once? That is my opinion. I can assure the Committee that last Christmas season, commencing on the Thursday before Christmas, the difficulty of the staff in coping with the business in Redfern yard was too much for any men. The strain in dealing with the business with the existing accommodation was too much for any set of men. J. Parry.
16 Feb., 1900.

TUESDAY, 20 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

THE HON. PATRICK LINDESAY CRAWFORD SHEPHERD.

THE HON. ANDREW GARRAN, LL.D.

WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

John Knoeshaw, Traffic Superintendent, Tramway Department, sworn, and examined:—

911. *Chairman.*] How long have you held the position of Traffic Superintendent of Tramways? Between four and five years. J. Knoeshaw.
20 Feb., 1900.

912. During that time have you paid particular attention to the traffic between Redfern station and the city? Continued attention.

913. Perhaps you would prefer to make a statement? In the first place I have ascertained that there is an average number of 23,500 persons arriving daily at Redfern station, and a corresponding number departing by train. From careful counts made, I estimate that we carry in either direction an average of over 13,000 persons daily by electric trams from Redfern station, or 55·8 of the total number of passengers arriving at the station. Over and above that we carry about 1,150 passengers by steam trams. That equals 4·8 of the total number arriving, leaving a balance of about 9,200 people, or 39·2 of the total number, who walk from the station.

914. *Mr. Shepherd.*] They leave by some other means? They do not travel by the trams. I wish it to be clearly understood that that return of 23,500 persons is the traffic in one direction only. All the figures I am giving refer to the traffic in one direction only, so that if you want to ascertain the traffic to and from the station you must double the figures.

915. *Chairman.*] So far as you know, the figures each way are about the same? They are about equal. I have further ascertained, by careful checks, that of that 13,000 odd who travel by the electric trams, 90 per cent. are in the trams when they reach Market-street, and 80 per cent. in the trams when they reach King-street; but very large numbers leave at King-street and the General Post Office, and also at Hunter-street.

916. *Dr. Garran.*] Can you tell us how many there are in the trams after they leave King-street? I have not got these particulars; but the greater number of the passengers leave the trams at King-street and the Post Office.

917. Would 80 per cent. go on as far as Hunter-street? Between 20 and 30 per cent.

918. When you get to the so-called terminus in Bent-street, what have you left? It would not be Bent-street in this case; it would be Circular Quay.

919. You are talking of the electric trams? Yes; it would be very difficult to judge how many persons who, actually leaving the station, are in the trams when they reach Circular Quay. On account of the vast pick-up you have, you cannot separate your passengers.

920. Have you had special officers to watch to make up these figures? Yes.

921. You are quoting from quite a recent return? The figures were taken within the last week or two.

922. *Chairman.*] Can you indicate the nature of the traffic on the electric trams? The number of passengers travelling to and from Redfern station by electric trams annually is estimated at 8,700,000; it may be divided by half to get the traffic in either direction. And by the steam trams at the present time we carry about 700,000 passengers to and from Redfern station, or a total of 9,400,000. I will now give you the information in regard to the steam trams before the George-street electric line was opened.

923. *Mr. Watson.*] Was the count of the traffic taken immediately before that line was opened, or some considerable time afterwards? The count I am going to give now was taken in 1897, but it would not vary appreciably. The number carried by the steam trams to and from Redfern railway station was 2,700,000.

924. *Chairman.*] Mr. McLachlan, the Secretary, gave the number as 3,000,000,—I suppose it was round figures that he used? It would be about the same thing. The 'buses have practically ceased running to the railway station now.

925. *Dr. Garran.*] They do not run now from your gates? Only two or three 'buses, which run to the eastern suburbs.

926. The old 2d. 'buses are off? Yes.

927. *Mr. Watson.*] This estimate of 9,400,000 would include only those who go right through, not the mere pick-ups? No.

928. It is an estimate of those who go on the trams to and from the railway? Yes; and it includes train passengers only. That sum could be made much larger were I to count the Redfern passengers who walk down and join the electric trams outside the station.

929. *Chairman.*] You have stated, in regard to the electric system, that the chief point of exit is between Market-street and the Post Office? King-street and the Post Office.

930. In regard to the old steam service, which was the chief point of exit for people arriving by train? Market-street and King-street.

931. And those points, I suppose, would be the chief points of entry on the return journey? Yes; King-street was always the principal point of entry, and Market-street next. Of course, in the evening we get fairly large crowds from Park-street coming from the theatres. 932.

J. Kneeshaw. 932. As regards the daily direct regular railway passengers, you may say, I suppose, that the traffic extended chiefly from Market-street to King-street? Market-street and King-street were the two principal points.

20 Feb., 1900.

933. *Mr. Watson.*] In that allowance of 3,000,000 for the traffic on the steam trams in 1897, did you take into account those who travelled on other than railway trams to the railway station—for instance, on all the western trams, as well as the Botany trams which stop at Redfern station to drop or pick up passengers? We tried to make allowance for the whole of them. We could get a fairly reliable estimate then by the number of passengers who actually travelled from the railway station. There were very few who walked down to the trams.

934. Of course a great number of those who used the railway trams proper to go from that station to the city would use the suburban trams to get from the city to the railway station, just as it happened to suit their convenience? Yes.

935. *Chairman.*] Have you any more figures that will assist the Committee? Not as far as the number of passengers carried is concerned.

936. Can you give the revenue from the railway traffic? I have not worked out the figures.

937. Will you prepare a return showing the revenue derived under the strictly steam service, and the revenue derived under the electric service, and under the steam service, separately, and the totals? Yes.

938. It appears that since the electric tram service has been started the passenger traffic to and from the railway station has risen from 2,700,000 a year to 8,700,000 by the electric-system trams, and 700,000 by the steam trams, making a total of 9,400,000 passengers, or an increase of nearly 7,000,000;—will you give us what reason you think there is for that large increase? It has been principally brought about by the opening of the tramway in George-street tapping a portion of the city which was not previously dealt with by any railway or tramway.

939. I think you might follow that up by saying, that although the great mass of the people left the trams between Market-street and King-street, the bulk of them were not deposited at their offices, but went westerly towards the great business centre of the city? Certainly; they were not deposited at their offices by the old steam trams; but neither are they deposited at their offices now, because they have to walk into Pitt-street, and even into Castlereagh-street. There is another reason for this large increase in the number of passengers, and that is the reduction of 1½d. to 1d. It is possible that had the fare been 1d. before the number of passengers travelling by the steam-trams would have been much greater; that is, if we had been in a position to carry them, which we could not have done, because the shunting facilities at Bridge-street would not have enabled us to run more trams.

940. But the result is the same;—the extra accommodation has increased the number of the travelling public by the trams? The extra facilities provided, in addition to the reduced fares, have increased the traffic as stated.

941. Would not another reason be that you run your electric trams much more quickly in succession than you did your steam trams? I do not think that would have much bearing on the traffic actually coming from the railway station, because there were always trams waiting there under the old arrangements, by which people could get in, and we did not miss many of them on that account. The reduced fare and, no doubt, the more frequent service have had a great deal to do with the increase of the traffic.

942. Do not you think that really would have an effect on the increase of the traffic? It would have an effect.

943. Will you state how you think the electric tram serves as a means of filling up the gap in bringing people into Sydney;—is it an effective means, and one that meets with modern and present requirements? I think not. Unfortunately we are not able to deal as satisfactorily with the traffic as we should do. I would like now to give some reasons why we are not. It was originally suggested that the rolling-stock sufficient to run the electric tramway was forty cars. When we actually started that line we had eighty-nine cars already built, and we put the bulk of them into service; but even with that large number there is, at times, greater crowding than should be the case, and we are not in a position to lift the crowds of people during the very busy hours, avoiding that inconvenience as we should do. There is another difficulty,—we have contemplated diverting the western suburban tramway traffic into George-street, in order to relieve the great congestion which exists in Elizabeth-street; but, owing to the abnormal railway traffic we have to deal with, George-street will not be able to carry the western suburban traffic in addition to the present railway traffic. This is so patent that I have already had to represent the matter to the Railway Commissioners, and to point out that it will be absolutely necessary to afford some relief, at an early date, before we complete the conversion of the western suburban tramway system. There is also another difficulty, and that is that this immense number of railway trams have to cross the western suburban lines running into Redfern station, and the traffic is so great that risk is involved. That I have also had to report to the Railway Commissioners. Of course, if the whole of the western traffic could be diverted into George-street we would avoid that crossing; but knowing that we cannot get the whole of the western suburban traffic and the railway traffic into George-street, we will still cross at the George-street junction signal-box, that risk will continue. For these reasons I am of opinion that the electric tramway is not effectually serving the purposes of the railway. If the George-street tramways were relieved of the large railway traffic they would have a very good opportunity of earning good revenue by pick-up traffic alone, in addition to the immense number of passengers carried to and from the ferries at Circular Quay. The pick-up traffic and the Circular Quay ferry traffic is very nearly equal to the whole of the railway tram traffic. In other words, we are carrying at over the rate of 17,000,000 passengers per annum in George-street, 8,700,000 being passengers from the railway, and the rest the pick-up traffic. This large pick-up traffic would be greatly increased if the trams were not so crowded during certain hours of the day. It would be larger, and we would earn sufficient to make George-street pay without the railway passengers at all.

944. *Mr. Levien.*] You seem to be carrying more people on the tramway than we have in the suburbs? During the month of January, the actual number of tickets issued on the George-street trams, including the tickets to Pyrmont, was 1,570,000.

945. That is the number of people jumping on and off? No; the number of tickets issued.

946. *Dr. Garran.*] On a hot day they will take a tram to go two streets? Yes.

947. *Mr. Levien.*] According to your records there are more people travelling in half the year than we will have in population in the next ten years;—will you state the greatest number you have carried in one day? 83,229.

948. *Chairman.*] In answer to opinions which we now hear pretty freely expressed by some persons, that the George-street tramway has largely done away with the necessity for a railway into Sydney, do you think, taking the busy times of the day, when trainloads of people are deposited at Redfern station, the tramway service will be effectual at all times for doing what a train has done, in bringing the people conveniently up to the city? I do not think so. J. Kneeshaw.
20 Feb., 1900.

949. How many people are deposited by one of your busy morning trains at Redfern station? They get up to about 460 persons in one train.

950. How many persons will your two trams carry? Two trams will carry fairly comfortably 140.

951. And how many will two cars carry? Two cars will hold 70 persons.

952. And a train brings 460 persons? That is hardly a fair criterion. They can bring two trains into Redfern station at once. For instance, at 7.25 a.m. two trains arrive at the station, one bringing 428 passengers, and the other 358 passengers, so that 786 passengers will arrive at once.

953. For 460 passengers you would want six trams, or twelve cars, to take them away? Yes.

954. And for nearly twice the number of passengers you would want twice the number of trams and cars? Yes. Our belief is that all these people do not want to use the trams. If they did we could not grapple with the position satisfactorily.

955. As regards those who do want to go on to the chief point of exit between Market-street and King-street, do you, as a man who has control of the traffic, think it is convenient for 600 or 700 persons, or for half that number, to have to get out of the train, and get into trams, to do the remainder of their journey;—is that a convenient way to finish-up a short run? It is not, for more than one reason. One very particular reason is, that if the train continued its journey, these passengers could arrive at their destination (say) King-street, in three or four minutes. The people must lose at least one or two minutes in transshipping from train to tram, and the time of the tram journey from Redfern station to King-street is about ten minutes.

956. That would involve delay to travellers; but in answer to that, advocates of the extension of the railway to the city say, "We can run through trams";—can you run through trains when, on the same line, you are running trams which have to stop at cross streets? It would not be possible to run through trams. It might be possible with certain heavily-laden trams to miss one or two stopping-places; but during the busy time of the day, by the time you missed one or two stopping-places you would be on top of the tram in front of you. That difficulty will be intensified as any portion of the western suburban traffic is placed in George-street, and the trams are increased. The increased traffic in George-street will have a tendency to lengthen the time of the journey.

957. At what intervals do you run your trams to the railway station at slack times and at busy times? During slack times we endeavour to maintain a two-minute service—that is, two minutes between the trams; and during the busy portions of the morning and the evening we endeavour to maintain a one-minute service. In despatching trams from Redfern station we would not adhere to that, and we might despatch three trains within a minute—that is, at intervals of twenty seconds as quickly as we could get headway and load the passengers. But it not infrequently happens when passengers are crowded out some see that it is useless to go on the first tram, and they go to the second tram and the third tram, as the case may be; and we have three trams loaded simultaneously, and starting all at the same time.

958. What are your stopping-places for the railway trams between Redfern station and Circular Quay? We have the same stopping-places for the railway trams as for the others, because we cannot get through with them.

959. Under present arrangements, are the railway trams taxed very heavily? They are taxed beyond their proper capacity during the busy hour of the morning and the busy hour of the evening, particularly, say, from a few minutes after 5 o'clock until a few minutes after 6 o'clock going towards the railway station; they are taxed beyond their proper comfort.

960. I noticed that the electric tram service always consists of two cars;—is there any special reason for that, or could you attach more cars? We could not attach more cars. The general practice in the United States is to run a motor-car only. We are now adopting a step beyond the general electric practice in running a larger carrying unit.

961. Will you explain why you do? The motors that are adopted would not be capable of hauling more than one trail-car; they would not have a sufficient adhesive power.

962. There is a motor in the body of the car which works in with the overhead wire? It receives its power through the trolley-pole from the overhead wire.

963. It is taxed to its utmost in dragging its own car and the one behind it? I would not like to say that it is taxed to its utmost. It is fairly well loaded in hauling one trail car; but there is another question to be considered, and that is the adhesive or attractive force. If you put more than one trailer beyond the motor-car, the wheels of the motor-car would not have sufficient attraction or pressure on the rails, and they would revolve without the tram advancing.

964. You must have a certain amount of grip in the system? Yes.

965. *Mr. Leven.*] You are estimating the total annual traffic on the George-street—Harris-street electric line on an average of so many persons per day? Yes; the total number of passengers on the line would be over 17,000,000 a year.

966. Was not the traffic on that line in January of an extraordinary nature? No; on the contrary, during the first fourteen days in February we earned £9 more than we did during the first fourteen days in January, notwithstanding that we had the holiday traffic in January. For the first fourteen days we earned £3,029 in January and £3,037 in February.

967. That is the pick-up traffic and all the rest? Yes. I wish to show you that January was not an abnormal month.

968. How many tickets would you collect, say, from Pyrmont to Circular Quay? I can give you the total number of tickets in the month from between Harris-street and Circular Quay. They may not have gone right through, but they are passengers who have paid 2d. each. They must have come from or gone to some portion of the Harris-street line; they have gone beyond the railway. For the month of January 55,000 passengers went to and from Harris-street.

969. That would not assist the railway at all? No; the traffic has not been included in the figures I have given the Committee.

970. How many 2d. tickets from Harris-street to Circular Quay were issued? 55,000 in January—say, 27,500 each way.

- J. Kneeshaw. 971. Suppose they turn just into George-street, the moment they get into George-street that means a penny ticket? Yes.
- 20 Feb., 1900. 972. They must have absolutely gone from Harris-street to make that total of 55,000? Yes, and in addition to that there is a certain percentage of children who would receive another class of ticket. I cannot give you the exact number. Between the terminus of John-street at Pyrmont and the junction of Harris-street with George-street we issued, in January, 72,000 odd penny tickets. They never got into George-street at all.
973. *Dr. Garran.*] That is purely Pyrmont traffic? Yes; that belongs to the Harris-street line, and has nothing to do with the George-street line.
974. *Mr. Levien.*] 72,000 to and fro were carried on that line in Harris-street during January? Yes.
975. *Dr. Garran.*] The Harris-street line is a profitable line in itself? I have not worked that out, but I think it would, when to the 72,000 pennies you added the proportion of the 55,000 twopences.
976. *Mr. Levien.*] These 72,000 penny tickets had nothing to do with the 55,000 twopenny tickets? Nothing.
977. As regards these 72,000 penny tickets, I suppose you do not know whether they are used by children or adults? The bulk of them would be adults, but a proportion of them would be children.
978. Now, taking the railway traffic, do you know how many passengers travel between Sydney and each suburb on the railway line as far as Parramatta;—how many tickets are issued daily? I do not know.
979. You are merely talking of the number of passengers who travel from the railway station itself? Yes.
980. What is the number of suburban passengers direct from the railway station who travel generally? I could not tell you; I merely know the total.
981. How many railway passengers leave Redfern station absolutely? 23,500 a day.
982. How many persons get out of the trains and go into the trams? 13,000 a day by the electric trams, and 1,150 by the steam trams.
983. How many passengers from the railway suburbs are carried daily by the two tram services? Fourteen thousand one hundred and fifty.
984. That includes passengers both going and coming? Fourteen thousand one hundred and fifty passengers come from the railway station into the city, and I estimate that we carry an equal number back to the railway station to go away again.
985. Does the same number come back that way? I am rather inclined to think that more people come back in the evening; we have not counted them.
986. From Redfern station, what is the tram fare to and fro? By the electric tram and by the steam tram it is 1d. each way.
987. You do not say that all these people getting into these trams are suburban passengers? I will not say that they are suburban passengers; they arrive by train; but I cannot say where they arrive from.
988. You stated, in reply to the Chairman, that 13,000 railway passengers a day leave Redfern station by the electric tram;—have you ever ascertained whether there are 13,000 suburban tickets issued daily by the Railway Department? No.
989. Have you ever compared the actual issue of tickets at the suburban railway offices on any day with the actual issue of tickets on these trams;—are there 13,000 railway tickets issued a day? I have not compared the traffic on the trams with the number of railway tickets issued. I have compared that traffic with the actual count taken by the railway authorities of passengers leaving the trains, which averages 23,500 daily.
990. That is, actually counted at Redfern Station? Yes; on several mornings.
991. As they come out of the station, do your tickets account for that number, or is there a haphazard chance of your officers counting them correctly? The tickets would be an unreliable check, because there are so many weekly tickets and season tickets, the whole of which might or might not be used on a particular day.
992. It is a pretty hard task to count a few thousand sheep;—and how do you count the number of people who come out of the trains? I cannot tell you how they were counted. The information was given to me by Mr. Parry.
993. You do not know how they were counted? No; it would not be a very difficult task to send a man through the suburban trains to count the passengers.
994. I would like to see a return of the population in each of these suburbs, because it seems a pretty large number to come out of these places daily? I have no doubt but that the number of season tickets and workmen's issued annually could be ascertained.
995. The tickets which are issued on the trams are no criterion as to the number of people who come in by the trains? The total number of tickets issued on the trams would not be a criterion as to the number of people travelling by train.
996. Because the trams may pick up and let down people as they go along the road, whereas these figures, 23,000, are taken from what others tell you, and not from your own count? The 13,000 taken to be travelling by tram were taken by two men, directed by me, and that count I know to be accurate.
997. If you carry 13,000 people the number of the tickets ought to be in accord with the number of the people you carry? The same ticket which is used for a passenger coming from Redfern station is also available for the pick-up traffic in George-street. The actual number of tickets issued would be thousands more than the actual number of people that leave Redfern station.
998. I suppose you do not know the population of each western suburb as far as Parramatta? No.
999. Considering that you have the steam trams and the electric trams, is not that sufficient to carry the suburban traffic? It is not sufficient, and not as convenient as it should be.
1000. You said it was reckoned that forty-nine cars would be sufficient for the George-street electric line? I said forty cars was the original estimate of the rolling stock sufficient to meet George-street requirements; but, although we opened with eighty-nine cars, we still found that we could not satisfactorily deal with the people at certain hours of the day.
1001. Who is the gentleman who recommended forty cars when they wanted eighty-nine cars? I could not tell you.
1002. I suppose you gave certain information to the Department, as well as other officers, and the enormous traffic required more than twice the increase of cars recommended? I did not give any information to the

the Commissioners when forty cars were stated as the number required. I am not aware whether any information was obtained from the Commissioners. I used my efforts to have the number increased, as I knew that forty would not cope with the traffic satisfactorily. J. Kneeshaw.
20 Feb., 1900.

1003. Whoever gave the information must have been very much out in their calculations? There has been an abnormal increase in the traffic since that time.

1004. How long ago? That estimate was given probably in the middle of 1895.

1005. You must have read some report to have found out that? I know that the number of forty cars and the cost were stated in the evidence which was given in connection with the George-street electric tram.

1006. No report has been made within the last five years as to the increase of population and the number you required? No.

1007. How many cars do you think they really will want to deal with the traffic satisfactorily? Not to keep the public waiting, to keep on going, we should not be able to get the total number of cars required into George-street. George-street would not deal with the traffic.

1008. How many do you think are wanted to keep the public going along George-street itself? I could not answer your question in that way.

1009. Can you give us an idea—you are pretty good on statistics, you know—as to how many cars you would require? It is not a question of the number we would require to deal with the traffic, because you could not deal satisfactorily with it with the number you have. If we had another twenty trams we could deal satisfactorily with the traffic which is now offering, but then there are other circumstances which would arise; you could not deal with these trams, you could not get them away expeditiously.

1010. How many could you deal with now and get away expeditiously? We get away from Redfern station, in the busy hour of the morning, as many trams as can be properly dealt with there now.

1011. And how many is that number? One tram a minute.

1012. How many do you say they ought to have on the line? It is not a question of getting more trams. As I say, if you had twenty more trams you could not satisfactorily deal with them. We shall have in George-street presently the western suburban traffic which, if George-street would hold it all, would increase the number of trams in that street possibly by three times. That would assist the pick-up traffic very largely, but still it would not enable you to deal with the whole of the passengers arriving by train at any busy time.

1013. Do you think that to deal with the absolutely suburban traffic which comes by rail these eighty-nine electric cars and the steam trams are sufficient? Not to deal with it satisfactorily in the busy times of the day.

1014. What do you call the busy times of the day? Between 8 and 9.30 in the morning, and between 4.30 and 6.15 in the afternoon on an ordinary day, and between 11.45 and 1.15 on a Saturday.

1015. I understand that there are only about 110,000 persons living in the railway suburbs between Sydney and Parramatta? I think it might be pointed out that some portion of the 23,500 persons who use the trains are counted twice. For instance, some men who come in the morning to their work go home to their lunch, and others come back to town in the evening. So that a very fair portion of this number might be counted twice. We could not say how many individuals there are in this total of 23,500 who might be counted twice.

1016. We have only three theatres and they will not hold above 3,000? I cannot tell you how many people are doubled in that number.

1017. You favour the extension of the railway into the city right away? Yes.

1018. Would that relieve the tram traffic? It would relieve the tram traffic very much indeed, and enable us to deal with the pick-up traffic satisfactorily. It would increase the pick-up traffic, because there is no doubt that it frequently occurs now that people desiring to travel a short distance, do not take the trams at the busy times because they are full.

1019. At what number do you estimate these persons who get out at Redfern station and walk into town—the gentlemen who think a lot of their health? There are 9,200 a day, or 39 per cent. of the total number of passengers arriving by train, who leave the station by some other means than a tram. Some of them may go up Devonshire-street; others may go down Parramatta-street West, and others walk down George-street.

1020. *Chairman.*] Or go by 'bus? Very few go by 'bus now. Only a few by the two or three 'buses travelling to the eastern suburbs direct.

1021. *Mr. Levien.*] You think that those 9,200 persons would pay an extra fare into town to ride by rail? I think the great proportion of that number would, because every morning you can see large numbers of people going through the sub-way down into Pitt-street and into George-street. I have given very great study to this question. For several weeks I have been there from 7 o'clock in the morning, and watched the traffic. I have noticed this large crowd of people going towards the Haymarket and Goulburn-street, who, I think, would pay another fare, particularly if there happened to be another station in the vicinity of Liverpool-street. I think if there was a sub-station there, a great number of these 9,200 passengers would pay an extra fare to go on in the trains.

1022. If these 9,200 passengers did so, it would not relieve the tram traffic one bit? No; they do not travel by tram now, except on a wet morning.

1023. If they go down by that way now, they would still go down by that way, so that the tram traffic would still be the same? Yes.

1024. If the population of the suburbs were to increase, and the same people or the same families were to ride in the trams, that would still go on;—you would want the same tram services? As the population of the suburbs increases, so will your tramway difficulties in carrying the people increase, and we shall not be able to deal with them as well as we do now within two or three years to come. The crowding would be all the worse, and complaints would arise.

1025. Do you ever hear any complaints from those persons who have to walk? No; they do not complain, because they have no desire to use the trams unless the weather is bad, and then they crowd in. I have no doubt that if these trams were not as crowded as they are a number of those who now walk would take the trams.

1026. *Dr. Garran.*] Do you take more people in bad weather than in good weather? Yes; when the business people are going into town or going home; but during the middle of the day our traffic falls off, because the ladies do not come out to shop. As a rule we hardly take as much revenue on a wet day in the aggregate as we take on a fine day; but in the busy time of the morning and evening we have much heavier loading.

- J. Kneeshaw. 1027. *Mr. Levien.*] Have you ever calculated the average number coming to and from the suburbs between 11 a.m. and 3 p.m.? About 900 an hour.
- 20 Feb., 1900. 1028. That is from as far as Parramatta? I cannot say where they come from.
1029. What number do you think you carry by the trams during those hours? We would not carry more than about 700 an hour. We carry a greater proportion of the passengers arriving after 10 o'clock and during the rest of the day than we carry between 7 a.m. and 10 a.m. There is a greater percentage of passengers who walk or go by other means than trams between 7 a.m. and 10 a.m. than there is at any other time in the day, and that might be partially ascribed to the fact that we are not in a position to satisfactorily deal with them. It has been remarked to me several times, "Oh! I prefer to walk away to a steam tram, which is nearly empty, so as to have a quiet seat."
1030. *Mr. Shepherd.*] Do you think it would not be possible to cope with all this passenger traffic if additional lines for traffic were laid down, for instance, in Castlereagh-street? It would be absolutely necessary to have additional lines of trams made in Castlereagh-street, and Pitt-street also, to deal with the western suburban traffic. And as far as Pitt-street is concerned, there is a very good pick-up traffic to be dealt with there. I feel that the tramways will have a fair legitimate work to deal with in those three streets apart from carrying passengers to the railway station.
1031. Suppose the railway were extended to King-street, do you think the people would walk from King-street, even as far as George-street, in preference to going down George-street in the electric trams? I feel sure that they will, because we must bear in mind that they have not to change their seats. They are saved that inconvenience, and they are taken to their destination in, say, four minutes, as against ten minutes by tram, and two minutes loss of time in transferring, so that they gain eight minutes on the road. That will enable many people to leave their homes and travel by a later train than they now do.
1032. You seem to think that a saving of time would be a great consideration in the King-street plan? I feel sure that it would.
1033. Supposing they have to walk half a mile after they get out of the train at King-street, there will not be a saving of time? Not if they have to walk half a mile. But is not that rather a long distance to suggest, because very few persons would have to walk as far as that from the tram or Elizabeth-street?
1034. If they have to go to the east of George-street, it will be very little less than half a mile? We have a cable tram to take them down that way.
1035. I take it that the principal portion of the city to be served by the extension is that bounded by Market-street, Pitt-street, and Hunter-street? Yes.
1036. Do you think there will be any saving beyond those boundaries if they were carried straight to King-street, and then have to walk outside those boundaries? There will be a saving in George-street, too. The traffic we get in George-street now is not wholly and solely George-street traffic. People walk to the electric trams from as far as Castlereagh-street, and even from Elizabeth-street, and on the other side from York-street and Sussex-street.
1037. Have you estimated the time it will take to go from Strathfield to King-street by train? No; I cannot give you a reliable estimate; but I think eighteen to nineteen minutes is a fair estimate.
1038. Before the electric trams were started from the platform at Redfern station—that is, when they only ran down George-street—I have left my home at Strathfield and reached my office to the south of Pitt-street, beyond Market-street, in twenty-three minutes;—do you think I could do that, supposing I went straight to the station at King-street, and from there walked back to my office? I think you could.
1039. You do not suppose the people would go into King-street station and then walk back to Bathurst-street? No; they might not do that. It might still suit a number of people to leave the train at the present site.
1040. You are aware, I suppose, that it is not proposed to have any intermediate station between Redfern station and King-street? I was not aware of that.
1041. That is the proposal, so that the whole part of the city between Market-street and Goulburn-street would hardly be served by the extension to King-street? But then there would be such a number coming forward to King-street that the balance could be very satisfactorily dealt with by trams, because the trams will be running in George-street for the pick-up traffic. There is no reason why they should not run to the railway as they do now, with, perhaps, different shunting arrangements—and they would satisfactorily deal with the balance of the passengers who did not wish to go right through to King-street. But from the figures I have shown you here the greatest percentage of the people come through as far as Market-street and King-street by the electric trams.
1042. Of course, the increase since the opening of the electric tram has been something tremendous? Abnormal.
1043. That shows that the electric tram is very popular? It is popular because it is a frequent service, and because we have introduced the popular fare.
1044. Have you ever considered what other streets could be used for electric trams in the event of a very extensive central station being made on the block between Devonshire-street and Belmore-road? The objection, from a tramway point of view, to that scheme is that you would bring all your immense volume of George-street traffic right across your western suburban traffic—your present steam lines, which will be eventually electric lines—at the busiest part of your thoroughfare. My difficulty now is that where we have to run the trams across into the railway station there is risk. This plan does not show the shunting arrangements; there is no comparison between the shunting arrangements here and the shunting arrangement which exist on the cable tram in King-street, because the cable trams are few.
1045. Do you not think a good deal of the inconvenience experienced at present arises from the fact that there are not enough of these trams? We cannot satisfactorily deal with a much greater number; in fact, it has been a question of mature consideration as to whether we have not a greater number of trams crossing and shunting in the immediate vicinity of the George-street junction tramway signal-box than we ought to have at present. There are ample cars to run at a regular interval of a minute, but if we get blocked by a horse or a vehicle on the road we may have four, five, or six trams bunched in a few minutes.
1046. I suppose you have all the tram-cars engaged on the George-street line? Except such as we have to keep out of traffic for overhaul or emergencies.
1047. Have any more been ordered, or is it proposed to get any more? There are a number of cars ordered—not necessarily for George-street, but for tramways generally. The Commissioners will be perfectly safe in ordering cars for the conversion.
- 1048.

1048. For the convenience of the public generally, do you not think it would be wise to have an intermediate station between King-street and Belmore Park? That is a question I have not given very much consideration to. I understood that there was some talk of having an intermediate station at about Liverpool-street. J. Kneeshaw.
20 Feb., 1900.

1049. Of ten plans which have been explained to us here, seven show an intermediate station at Liverpool-street, but the three we are supposed to consider do not show a station there;—do you not think an intermediate station would be an advantage? It would certainly meet the convenience of a number of people, but I should like to know how far it is going to interfere with the working of the traffic. It might result in delays to trains which would more than compensate for the benefit derived. In other words, it might inconvenience the majority of the passengers in order to give facilities to the minority; but I could not say that without going into the question. I have not studied railway matters so much during the last two or three years, when we have been so busy with tramway questions.

1050. If I remember aright, the chief objection to that station was on account of the delay it would entail? The chief point, I think, was that it might seriously interfere with the comfort and delay the transit of a majority of the passengers simply to suit the minority, and it might be a small minority.

1051. You say that 9,200 persons leave the station by other means than the steam and electric trams;—I think a great many of them walk into the city for the sake of the exercise? A number of them do; but the bulk of them go away from the station between 7 a.m. and 8.30 a.m., and a great proportion of them are young boys and girls—probably apprentices—and those receiving a small rate of pay, who go in on workmen's tickets. If there were only a small fee added to the price of the workmen's tickets by the Railway Department these persons would probably travel on to King-street. A fee added to the workmen's tickets would not amount to anything like 2d. a day, as the tram charges do.

1052. *Mr. Dick.*] It is proposed by the Commissioners to add 3d. a week to a workmen's ticket? I think the workmen would pay 3d. per week. They cannot afford to pay 1s. a week tram fare. I think a large number of these 9,200 persons would go forward in the trains.

1053. *Mr. Shepherd.*] What other streets could be made available for running electric trams down? Castlereagh-street certainly would be a very good street, and I trust the Government will see their way to put a tram down there before very long. From a tramway point of view, I should be very pleased to see a tram down Pitt-street. I should be very glad to have to work both streets to-morrow if we could.

1054. A tram in Castlereagh-street would serve people to the west of Pitt-street quite as well almost as a train to King-street? Except for the inconvenience of transshipping, and the fact that fetching such a large number of people out at one time we cannot successfully deal with them in the small units that we have, whereas, on the other hand, to put on large units, such as ran under the old steam arrangements, four cars, would be very unsightly, expensive, and troublesome.

1055. Do you not think it is a great deal more convenient for people to be dropped close to their places of business, as they would be by tram, than to have a considerable distance to walk;—for instance, in wet weather it will be very inconvenient to have a considerable distance to go from the station, whereas, with some trams, they would be dropped, if other lines were opened close to their places of business? It would be a great convenience to people to be able to drop near their places of business. That only applies, as you say, in wet weather. Take, for example, fine days, and on the majority of days it is fine. It will be more convenient for a passenger to continue his journey in the vehicle he is seated in, perhaps calmly reading his newspaper, or, if he is a smoker, smoking his pipe. In the train he is comfortable until he is landed at his destination, and there is no transshipping to another vehicle, and a vehicle, too, in which he may have to stand.

1056. You have arrived at the conclusion that the only way to effectually deal with the traffic which is likely to arise in a few years is by the proposed extension to King-street? I have arrived at that conclusion after careful consideration. I know that it is an expensive scheme, but I feel that it is the only way to relieve the streets of Sydney, and to enable the pick-up traffic to be satisfactorily dealt with.

1057. You think that that would really meet the convenience of the people better than an extension of the trams? Yes.

1058. We must have an extension of trams whether the city railway comes or not; still you think that the trams cannot meet the requirements of the traffic? I am satisfied that they cannot deal with the traffic satisfactorily.

TUESDAY, 27 FEBRUARY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

John Kneeshaw, Traffic Superintendent, Tramway Department, sworn, and further examined:—

1059. *Dr. Garran.*] Before the electric tramway was at work, and when all the railway passengers were accommodated by the steam trams, did that tramway fully accommodate the public? No. J. Kneeshaw.
27 Feb., 1900.

1060. In what respect was there a short-coming? Undue crowding at certain times of the day, and we were not in a position to put on more trams for the railway, because we could not deal with them at Bridge-street.

1061. You had not a shunting yard big enough? That was one of the weak points.

1062. Did you ever hear complaints from the passengers that they were not accommodated? I cannot remember any specific complaints, but I know there was grumbling at times. The passengers could not get seats.

1063. Do you consider that the steam tram was a more effective method of carrying a large number of persons in a given time than the electric tram is now? No; because you can run the electric trams much more frequently.

1064. But you cannot put on three cars? That is the case.

1065.

- J. Knecshaw. 1065. Which is the more effective method of carrying a crowd of passengers? We have not had any great experience in lifting large crowds with the electric tram. I refer to lifting a large crowd from a racecourse, for instance. We have loaded up 6,000 or 7,000 people in twenty minutes with the steam trams. It would, however, be possible to do the same thing, I think, with the electric trams.
- 27 Feb., 1900. 1066. Have you not had a public holiday since the electric tram has been running? Yes.
1067. Were you blocked then? No. On Christmas Eve we carried 83,000 people in George-street. There was overcrowding in that case, but we got them away.
1068. For railway traffic purposes, is there any advantage in steam over electric, or electric over steam trams? I think the electric would be the better.
1069. Do you think that the electric tram has come to stay, and that it will supersede the other? Yes. There are 20,000 miles of electric trams in the United States, and they are building more every year.
1070. Are not the Americans a very practical people? Yes.
1071. Do you think that we have seen the last of the steam trams? Yes, we shall have seen the last of them in two or three years.
1072. Will you build any more of them? I do not think so.
1073. Have you taken off most of the railway steam trams now? Yes; there are only a few in the morning, and none in the evening. We put a railway destination sign on some of the Botany trams; but that is all.
1074. Do you keep a tram waiting for the suburban trams? Yes, in Devonshire-street, and we start it on a time-table. We do not interfere with the Botany trams.
1075. Do you think that the mere alteration from the yard to the street discourages the people from taking the steam trams? I do not think so, because they can get to the trams just as readily as before by means of a subway.
1076. And people who prefer Elizabeth-street can go that way? Yes, that is the case early in the morning; but perhaps later in the day they take the western trams.
1077. Do you remember when Elizabeth-street was first used for trams? No.
1078. Elizabeth-street was then chosen because we wanted to get from the Railway Station to the Domain? Yes; and it was horse traction at first. I believe that the first tramway ran down Pitt-street; but it was pulled up and the tram laid in Elizabeth-street on account of the Exhibition.
1079. The Elizabeth-street tram was originally built purely for the Exhibition? Yes, as far as I can see from the records.
1080. Would you, or anybody else, suggest Elizabeth-street in order to serve the whole of the city? No.
1081. Elizabeth-street suits people who want to go to Parliament House, and also the civil servants? Yes, but only some of the civil servants; it does not suit people going to the Lands Office, and other places lower down.
1082. Does not Elizabeth-street suit some of the large hotels, and the people engaged at the law courts? Yes; but after all those are only a small percentage of the people who want a tramway. Business people are in the majority.
1083. Although the people I have referred to would prefer Elizabeth-street, the great mass of the people want to go west? Yes; about Pitt or George Streets.
1084. Would it not be fairer to say that King-street, or St. James' Road, would be a good East Sydney station, rather than a good Sydney central station? As a railway station, I think it would be fairly central. One could not expect a railway station to be as close to one's door as a tramway, particularly as people would be brought to their destination in a train without transhipment.
1085. Still you cannot say that St. James' Road is really central for the business part of Sydney? I think it is fairly central. A number of people who come in want to travel to the eastern suburbs, and it is a good place to tranship, and then towards Woolloomooloo business is increasing very rapidly.
1086. Do you notice that a great many of the people who come by trams take the cable line and go east? A fair sprinkling do.
1087. Is that more for domestic purposes than for business? Yes, except at certain times of the day, when those engaged in the shops go to places of business in William-street.
1088. Has a large portion of the Elizabeth-street traffic been captured by the George-street tram? Yes, a very large proportion.
1089. Would those people like to be sent back to Elizabeth-street? Not to a tram in Elizabeth-street.
1090. Would they not complain if they were taken back to Elizabeth-street? Yes.
1091. Does not that show that George-street is more convenient for them than Elizabeth-street? Yes; to a tramway.
1092. It is not because it is more speedy or cheaper? No; the fare is the same now.
1093. Then it must be the convenience of taking them up and putting them down? Yes.
1094. Would they like to be sent back to the top of King-street, even by railway? I think they would be quite satisfied to be dropped there by railway if it came right through, taking only three or four minutes.
1095. Now that the people have become used to George-street, do you think that if a railway were opened three months hence the people who now travel by George-street would go back by the railway to Elizabeth-street? Yes; apart from the additional comfort, it would be more economical transit.
1096. That would only be the case with season-ticket holders? Yes.
1097. Then you think they would not grumble at being sent up the hill again? No.
1098. Supposing it is decided to make a station at Liverpool-street, would not that cause a delay of four minutes, and, therefore, do away with the economy in time? Yes; that might cause complaint.
1099. Would that tempt people to go by the George-street tram? No; the delay would not be serious. It would be only a minute or two.
1100. We have statistics which were made up in Mr. Eddy's time showing the profit that would be made by bringing people to King-street;—do you think that the numbers then given would be reduced owing to the running of the George-street tram? There may be some reduction on account of the tramway; but there has been such a great increase in the number of the travelling public from Redfern since that estimate was made, that I think it would still hold its own.
1101. Do you think we need not make any discount on those figures? No. On the contrary, assuming that the Committee decide in favour of the city railway, it cannot be constructed before eighteen months, and there would be such a large increase of traffic in that time that the estimate would be under rather than over.

1102. No matter how many passengers go by George-street, you think that the full number that Mr. Eddy calculated would still come in by train? Yes. As an illustration I may refer to the annual report for 1897. During the financial year 1897, the number of passenger fares collected on the tramways was estimated at 72,000,000. In 1899, only two years later, the number was 82,000,000. That is an illustration of the natural increase in the traffic. J. Kneeshaw.
27 Feb., 1900.
1103. Of course, a great deal of that increase is due to the cheapening of fares? Yes.
1104. That affects a great many people who receive only small remuneration? Yes, and encourages people to live in the suburbs, where rents are very low.
1105. Have you noticed any increase in the suburban traffic? Yes, I think there is a tendency for people to go to the outside suburbs; but I have no actual figures on the subject.
1106. Is the steam tram a little quicker at present than the electric tram? It may do the journey in a minute or two minutes less.
1107. What would be the difference between the time taken in travelling by the tram and by the proposed railway, if there be no stoppage at Liverpool-street? There would be a difference of about five or six minutes in favour of the train, that is, apart from the time occupied in transshipment from the train to the tram, which may be taken as one or two minutes. The front passengers in the train now get away in the electric tram in one minute, those in the rear portion of the train get away in two minutes.
1108. Is there not a great deal of business done along the wharfs to Sussex-street? Yes.
1109. Except the King-street tram you give no accommodation whatever to that traffic? Not directly. People have to walk to and from George-street.
1110. Do you think that persons coming from the wharfs, or business men engaged about there, would go to the King-street railway station, or would they go by the George-street tram to Redfern? I think they would walk to King-street.
1111. Do you think that a woman with a baby would do so? Yes, there would be every facility for getting to the railway station. There would be the cable-tram right up to the station, and that will be an electric tram before long.
1112. Could we accommodate the waterside traffic by carrying a line down Sussex-street to Dawes' Point and Miller's Point into George-street? There will be an extension to Miller's Point from George-street at an early date. Arrangements have been made so that a junction can be made with the loop at Miller's Point, so as to run a line down Kent-street. There would be no difficulty in running a line down Kent-street; but there would be in the case of Sussex-street owing to the congestion of traffic.
1113. But is it not undesirable to lay down more lines than are necessary in the streets? There would only be a single line.
1114. But is that not only half a convenience? There would be no great difficulty between Clarence and York Streets. People would not mind walking a few yards there.
1115. But is not the tramway a great disturbance to ordinary vehicles in the street? Yes, in the case of a double line in a narrow street.
1116. Is it desirable to disturb more streets than are really necessary for the traffic? No; but on the other hand public convenience would probably ask for a great extension of the trams before long.
1117. Is it contemplated to run a tramway down Kent-street? I cannot go so far as to say that, but in preparing the plans for the extension to Miller's Point we have taken the precaution in making the loop to allow for a junction there at some future time.
1118. Would it not be of value to run the line down Kent-street into George-street, and to run the trams in a circle? That would be the best course in order to avoid shunting. If the line were carried down to the Haymarket it would be more suitable to go in a circle.
1119. If we had this multiplication of trams in Kent, George, Elizabeth, and Castlereagh streets, do you think that all those trams running together could take away the people fast enough? I do not think it would be satisfactory.
1120. But you have only two at work now, and yet you practically get all the people away? If a tram were run along Kent-street there would be so much traffic engendered that the railway traffic would again become a nuisance.
1121. Is it not a nuisance now, and is not the legitimate tram traffic blocked? Yes.
1122. As a tramway manager, do you consider that the legitimate object of tramways is to serve the pick-up traffic? Yes; or to deal with suburban traffic which does not warrant a railway, or which would not be profitable for a railway.
1123. But when you have a huge congestion of traffic morning and evening, does it overtask your apparatus? Yes; and when you get into inter-suburban traffic there should be railway connection.
1124. You say that you now have more than three-fourths of the traffic concentrated on one electric line;—if you had three lines giving equal accommodation, would that distribute the traffic? I do not see how you could distribute it from your starting-point, because you would have such a congestion of traffic at the junction, wherever it might be. Assuming that the railway were to come on only to Devonshire-street, and we constructed tramways along Pitt and Castlereagh streets, which would also carry the western suburban trams, a number of the trams would still be bound to cross each other, and wherever they cross in that manner we run a great risk.
1125. You want more room than you have now? Yes.
1126. You could not do it with one line? No; and to work it without risk, it would be necessary to have the tram lines at different levels, that is, one would have to run over the top of the other.
1127. I want your opinion clearly on this point, because it has occupied the attention of a great many people;—will the new facilities afforded by the electric trams be sufficient to dispense with the necessity for a city railway? I am strongly of opinion that no provision that could be made in the existing streets for electric trams will overcome the necessity for a city railway.
1128. You feel quite sure of that? Yes.
1129. Do you think that the morning and evening traffic cannot be dealt with otherwise than by a continuation of the railway line? Yes; it might be possible for a year or two to deal with the traffic, if there were extra outlets to the electric trams, but I am satisfied that the natural increase in the traffic would be so great that in a few years it would be absolutely impossible to deal with it.
1130. You have talked about the extreme inconvenience at present, owing to the electric trams having to cross the steam tram lines, but would not that be the case when you alter your trams to electric trams as long

J. Kneeshaw. long as we have the railway station at Redfern? Yes; the conversion will not make any difference. Of course there will be a slight alteration, because a certain amount of the western suburban traffic may be taken into George-street. That will ease a certain amount of crossing. But we expect that there will be so many additional trams rendered necessary that possibly as much crossing will be required as ever.

27 Feb., 1900.

1131. If you had a railway tram line up Pitt-street, and going straight into the station without entering George-street, would not that get rid of all the crossing? You would avoid the crossing, if you ran the railway trams into Pitt-street, but you cannot avoid the crossing altogether.

1132. Would there not be some objection now to taking the railway traffic up Pitt-street? Yes; it would require consideration. There is a great deal of traffic in Pitt-street, and it is narrow. However the same objection applied to George-street, and there is no difficulty now.

1133. If railway extension is made to Hyde Park, or close to it, you will not want to have a direct tram into the railway station? We should have to terminate our trams somewhere in the vicinity of Redfern. The pick-up traffic would exist between the Cyclorama and Circular Quay or Dawes' Point.

1134. Will not a great many George-street people always take the tram to Redfern in spite of railway extension into the city? We may always expect to have a large amount of that traffic.

1135. So you must provide for some of the trams going into the station? Yes.

1136. Then you will still have to cross the western traffic? Yes; but if you reduce the number of trams you will diminish the risk very much. We can avoid sending the bulk of the pick-up trams by terminating them at the Cyclorama.

1137. You will diminish the danger, but not get rid of it, unless you make the railway people get out at the gates? That would be objectionable, and it would be more risky for the people to cross the lines than for our trams to do so.

1138. If we had a new station at Belmore-road, or an extension across Devonshire-street, you would still have all the difficulty of the trams crossing? There would be exactly the same difficulty.

1139. That will be the case unless they come up three different streets and do not cross? If you could work the whole of the railway traffic in Pitt-street, and prevent any of the western traffic going into Elizabeth-street, you would avoid crossing; but that would not be a good way of dealing with the business. Naturally some of the western suburban people will want to go into Elizabeth-street. Similarly the railway passengers will not be satisfied if they are all taken into Pitt-street.

1140. Supposing the original scheme submitted by the Railway Commissioners is carried out, will you still keep the trams in Elizabeth-street? I think so.

1141. But if the new scheme is adopted, which will block Elizabeth-street, will you then have to take the trams into Castlereagh-street? Yes.

1142. You would not take them back to Elizabeth-street? No; they would probably be taken right down to Circular Quay.

1143. You have a loop at Circular Quay at present; would it not be more convenient to carry that on to the Fort and turn round there? It would be convenient to take it to the Fort, and that is under consideration. It does not follow that the whole of the trams would be taken on to the Fort. The additional running time would probably be four minutes. That would mean that so many more trams would be necessary, and there would be great expense, while there is not sufficient traffic to render it necessary. Therefore, a great many trams would continue to shunt at the present loop for a number of years. Such an extension would be a very great convenience to the public, because it would be the only satisfactory means of taking people from the western suburbs to the harbour and the gardens.

1144. When Mr. Jackson was examined with reference to the Woolloomooloo wharf, he suggested that in order to get rid of the isolation of Woolloomooloo from Circular Quay a tunnel should be run underneath the gardens into Woolloomooloo Bay through which the trams should be extended, and they could turn round there;—would that be convenient? That would be a very expensive matter from a tramway point of view; it would render more rolling stock necessary, and it would make the running time longer; there would be no intermediate traffic, and the working would be a dead loss. It would only be a convenience to people going to Woolloomooloo, and I do not think the people would travel such a long way round. With the introduction of electric trams I imagine we could devise a much better scheme than such a tunnel.

1145. Would you suggest a branch from the William-street line? Yes; I think that would be better.

1146. At certain times of the day is your present electric tram worked up to its full power? We work it with the maximum amount of rolling stock available.

1147. Then you are able to find accommodation for people from the Glebe, Annandale, Leichhardt, and other districts about there? As I have already stated, I am satisfied we will not be able to take the whole of the western suburban traffic into George-street, and I have already made representations on the subject to the Commissioners.

1148. Are you looking for another relief street? Yes.

1149. You think that is absolutely necessary? Yes.

1150. Would the railway extension into the city help you in that? It would in this way. If we had not to run such an immense number of trams to the railway, the space taken by the railway trams would be occupied by the western suburban trams.

1151. Still your trams bring into the city a large number of Newtown people, who, if forced to do so, could take the railway, but they prefer to be brought up into the streets rather than be dropped at Redfern? Yes; and those people are quite content to be dropped at Elizabeth-street at present.

1152. Although it is not close to where they want to go? Yes; but they are quite content, and they prefer to take the tram from Newtown and be landed in Elizabeth-street in preference to taking a train to Redfern.

1153. If we get the railway extended to Hyde Park, do you think that part of the Newtown traffic will go to the railway? We may lose a certain amount, but I do not fear that loss.

1154. You do not think it will materially diminish your tram traffic? No. With the conversion to electric trams, the possibility is that a large number of people who now travel by 'buses will travel by tram, and we may naturally expect during next year an immense increase in the number of tramway passengers on the western suburban tram lines.

1155. Then it is a very urgent case, because you would not be justified in converting the trams until you have

have permission to take them through other streets? We may overcome the difficulty by running a certain number into Elizabeth-street. There may be some relief in Elizabeth-street by taking in some of the electric trams. J. Kneeshaw.
27 Feb., 1900.

1156. But would people who want to go to George-street approve of that? They are content to be landed in Elizabeth-street at present.

1157. That was before you had the trams in George-street, but now they will not like it? A large number of people will not care about it, but a great percentage of the passengers will be contented. It will not be as satisfactory to take them into Elizabeth-street; but we shall be compelled to do that unless there are some other outlets found.

1158. Can you make the conversion into electric trams in sections? Yes. We shall convert the Dulwich Hill line first; there will be a partial conversion possibly next month, and perhaps a complete conversion within a couple of months afterwards. The steam trams will continue to run together with the electric trams over that portion of the line between Newtown Junction and the railway station. Subsequently another section will be converted; it may be the Glebe or Leichhardt, to be followed by Balmain.

1159. Will you be able to see your way with regard to the congestion of traffic? Yes, we shall be able to see that clearly.

1160. *Vice-Chairman*] When you were examined before, you stated that one train brought 460 persons into Redfern Station, and that two trains brought 786, both arriving at the same time? Yes.

1161. You stated that by running electric trams at intervals of twenty seconds each those trams would be able to accommodate that number of people;—that involves a delay in order to get the last of the passengers accommodated, on the electric tram, of only two minutes from the time that the first person enters the first tram until the last person enters the last tram? That is so; but we only carry 460 passengers; that is not the total number that arrived by the trains.

1162. Assuming that that is the number you take, at the busiest time you are able to get away with the trams in two minutes? I dare say we could, but it would be very quick loading; it would be difficult to keep it up as a regular thing.

1163. As a regular thing you would not have so many passengers deposited? We have nothing like that in the existing work.

1164. If, instead of having only one electric tram down one street, you had two or more going down other streets, would you not be able to accommodate the whole number of 786 if they wished to take the tram during the busy portion of the day? You would require to go to considerable expense to make suitable loading and unloading arrangements for the trams. It might be possible to lift the whole of the railway traffic by trams, but you would have to sacrifice the pick-up and western suburban traffic, which is legitimate tram traffic.

1165. But they will not suffer until you have the whole system converted into an electric system? No; but we will have the western suburban trams converted next year, if we can find a way of dealing with the traffic.

1166. Then you think there would be difficulty and inconvenience by such an arrangement? Yes; it is not legitimate tram traffic.

1167. Does the King-street site possess any advantage of position apart from the eastern suburbs to people from the western suburbs, who have to come in a long distance by the railway? It does not of necessity offer any advantage. The people from the western suburbs could alight at the present Redfern Railway Station; but for the eastern suburbs the proposed city site is infinitely the best.

1168. From the point of view of business people, is the proposed site in any way central, seeing that, practically, to the east of it there is only park land, or portions not thickly inhabited, which do not provide much railway traffic? The proposed site may be a little away from the thickly-populated parts of the city, at the same time it does suit the convenience of the public to be landed there now by tram, and if they were landed there by train it might be much more convenient.

1169. Presuming the railway were extended to the city, what convenience of rapid transit would be afforded to those people to the west of George-street;—would not they still continue to use the George-street tram? I think not. If the station were established, say, at King-street, people would be quite content to walk that small distance in consideration of the much more rapid way in which they would be brought to town. There would also be the cable tram there to suit them.

1170. Take the district lying west of George-street and north of George-street, do you think the people who use the trams at present to go to business would go by train into King-street? I am satisfied they would. They had to walk down there before, or travel by the steam tram, and having the railway at King-street would be much more advantageous to them. Then the season ticket-holders and those who pay workmen's fares would enjoy a very great saving.

1171. Do you think that the King-street site is practically within easy reach of the most thickly populated part of the city, as far as business is concerned? Yes.

1172. A large number of people at present do not use the electric trams? Yes; about 9,200 per day who arrive at the Redfern Station do not use the tram.

1173. Have you any scheme for trying to capture that portion of the traffic? Not from a tramway point of view. If the railway were extended into the city I am satisfied a great many of these people would remain in the trams and pay the extra fare.

1174. Did you not state that it was the daily tram fare which prevented those people from using the tram? Yes; I believe a large percentage of the people who walk from the station in the busiest parts of the day are probably young women and apprentices who are not in a position to pay 1s. per week for tram fares; but they could pay 3d. per week.

1175. Can you state in general terms what use or improvement the construction of the George-street tramway brought about with regard to your tram traffic? It released about five motors and seventeen cars, and enabled us to use those on other tram lines, so as to give better facilities. We could not have put on additional trams without that relief, because we could not have managed the shunting in Bridge-street.

1176. *Mr. Shepherd*.] Has there not been an enormous addition in the number of passengers since the electric tram started? Certainly there has been an immense increase. We carried on the steam trams about 2,700,000 passengers per annum to and from the railway station; but we now carry from the railway station on the electric tram 8,700,000 per annum.

- J. Kneeshaw. 1177. The electric tram is run at much shorter intervals than the steam tram? Yes.
- 27 Feb., 1900. 1178. Did you ever know the steam trams to be crowded to the same extent as the electric trams are? Not as a general rule. There might have been very great crowding on a wet morning or night from the railway, but not as a rule.
1179. Can you give the number of steam trams which left the railway, compared with the number of the electric trams? I have not got that information with me. The number of electric trams leaving the railway daily will average about 490.
1180. Were there half that number of steam trams leaving? Nothing like half.
1181. So that the electric tram has really induced a very much larger number to travel? Yes; it may have induced some to travel that way; but you must understand that an electric tram will only hold about one-third of what the old steam tram could hold, so that we must necessarily run more of them.
1182. I think you said you run as many as six trams in two minutes? Yes; we could do that.
1183. It was estimated that it took two minutes to reach the tram from the train;—are the two statements consistent? I think so. It might be that the first tram was not started until fully a minute after the arrival of the train. The last tram in that case would go three minutes after the arrival of the train. Under the old arrangement we had to allow a margin of three minutes from the arrival of the train to the departure of the tram. We rarely found that we could get it away before then. With the electric tram it is different. The first-class passengers arriving at the end of the platforms A and B, and 1, 2, and 3 were right at the tram. The second-class passengers, who get out at the rear, may take one and a half or two minutes to get to the tram.
1184. I see you have several designs for the electric-tram carriages—one with cross seats in the front, and also in the rear, with an apartment between them, which would carry nearly double the number of an ordinary carriage? Yes; that carriage is known as the St. Louis car. We have a number of them, but they are not suitable for pick-up traffic in George-street, as too much time is occupied in loading and unloading. They are intended for suburban traffic.
1185. *Mr. Levien.*] Where would you recommend the central railway station to be placed? In the absence of any better site, I think that the King-street one is the best.
1186. That is the proposal now made? Yes; it does not matter where you have a station, somebody will have to walk.
1187. Is not most of the traffic centred about Market and King streets, and not very much beyond Hunter-street, so far as business places are concerned? Yes; that is our experience with regard to the George-street traffic.
1188. Then that would be the most central place, and also with regard to Sussex and Kent streets? Yes, so far as the available sites are concerned. I think that the wants of Kent and Sussex streets will be well served by a tram. I think the Ministry have that question under consideration. People living in those streets could take advantage of the cable tram, or if they alighted at the present railway station they could be taken by the electric tram *via* Sussex-street if they preferred it.
1189. Is it the experience that most of the passengers get off George-street and Elizabeth-street trams at King-street? Yes; that is where the bulk of the traffic goes. About 80 per cent. of the electric tram passengers leave at King-street and the Post Office. When the steam trams arrive from the western and eastern suburbs, the majority of the people leave them at Market and King streets, with a sprinkling at Hunter-street.
1190. Have you watched the direction which passengers take? Yes; I have done so for the last four or five years.

John Upward, Chairman, City Railway Extension Alliance, sworn, and examined:—

- J. Upward. 1191. *Vice-Chairman.*] Do you wish to make a statement to the Committee? Yes. The Alliance was the outcome of a municipal movement in 1896, which took place mostly on the western and southern suburban lines. The people there thought that their convenience had been ignored for so long, and so many steps had been attempted without any success to have the railway extended into the city, that they organised a joint municipal movement and formed this Alliance. We did not recommend any particular scheme, we merely wanted to have the railway carried into the city. We merely tried to impress upon the authorities that our convenience was very badly served, and that we wanted something better. After all the evidence had been taken by the last Royal Commission, and endorsed by the Public Works Committee, the Alliance did everything in their power, and are still doing so, to further the recommendation then made, in spite of the alternative routes which have since been proposed. They feel that the old route is the best one, seeing that it will cost something like £550,000, exclusive of the value of the park land, and compares favourably with the other routes, which will cost anything from £1,000,000 to £1,500,000. They cannot conscientiously work for a scheme which would cost so much more, while it gives so little extra accommodation. The new scheme brings the railway station to the same eastern point, but certainly a couple of hundred feet nearer to the centre of the city, and that will cost an extra £1,000,000. In consequence of that, the Alliance do all they can to forward the scheme recommended by the last Royal Commission and the Public Works Committee. The great objection, I take it, to the St. James' Road scheme is that it trenches on Hyde Park. There has been an outcry about taking away the people's park. Personally, I would point out that that is only maudlin sentiment, because we should take into consideration the immense amount of park land in that part of the city. Hyde Park is only a continuation of the Doman, which is bounded by the harbour, so that there are plenty of lungs to the city without the portion of Hyde Park which it is proposed to take away. I may be permitted to refer to a remark which was made by the present Premier when a deputation waited on him on the subject four or five months ago. The deputation was organised by the Alliance. We strongly advocated that the matter should be brought before Parliament to be dealt with. Mr. Lyne objected, and his principal objection was, "You now say you only want to take up half of the northern section of Hyde Park, but my experience of railways in other parts of the world leads me to believe that if the Railway Commissioners get their present demand they will eventually take up the whole of the Park." It will be remembered that Mr. Eddy, who was one of the greatest railway authorities we ever had, told us that in twenty years time the Park would not be sufficient, and that other provision would have to be made. In the scheme now under consideration—No. 10—we have a way shown to us out of that difficulty.

difficulty. If the proposed tunnel is applicable to No. 10 scheme, it could also be made to apply to the St. James' Road scheme. I would urge the business point of view in this matter. I think it was pointed out at the last Public Works Committee inquiry that an increase of 1d. in the fare would yield about 5 per cent. on the cost of the construction of the railway extension to St. James' Road. That cost was to be £550,000, exclusive of the Park. I believe the present scheme is estimated to cost three times as much; so that a penny increase in the fare would only yield about $1\frac{2}{3}$ per cent. on the cost of construction instead of 5 per cent. It would, therefore, require an increase in the fare to 3d. to give anything like the same return. An increase of 1d. in the fare would be borne without a murmur by the public, but I imagine that that would not be the case if the fare were increased to 3d. Then there is the question of convenience in the neighbourhood of the station. In the St. James' Road scheme you would have Elizabeth-street widened about half a chain from Park-street to King-street. No. 10 scheme proposes to close up Elizabeth-street altogether. As a layman, it seems to me that the shutting up of Elizabeth-street will entail a vast amount of inconvenience to the public. Then there will be a very nasty double curve in the tram-line which will not be desirable. I would like to refer to the expressions of opinion given by the people along the various railway routes. In 1897, when I gave evidence, I was authorised by the mayors of about fifteen or eighteen principal municipalities, going from Petersham to beyond Parramatta on the western side, and as far as Hurstville on the Illawarra line, and also the mayors of other municipalities not directly interested, but which hoped to be, such as North Sydney, Woollahra, Waverley, and Randwick,—they authorised me to support strongly the St. James' Road scheme. I think the Alliance sent circulars to every municipality in the Colony, asking them if they were in favour of the St. James' Road scheme, and asking them to pass resolutions to that effect. The result was that within a radius of 30 miles of Sydney the Councils, representing 230,000 people, were strongly in favour of the St. James' Road scheme; so that if public opinion goes for anything, the St. James' Road scheme is well backed up.

J. Upward.
27 Feb., 1900.

1192. What other evidence have you that there is a general desire for this extension, apart from the resolutions passed by the Councils? I can speak from my own experience as a railway traveller for the last twenty years on the Western line. There is very grave dissatisfaction, and it is becoming more marked every year. They feel that their convenience is ignored, and they are greatly dissatisfied owing to the danger they know they run every day that they come into the Redfern station. That has been pointed out on three different occasions by the Railway Commissioners.

1193. Apart from the danger, what is the particular inconvenience which leads people to desire an extension of the railway into the city? There is a great loss of time to people coming to Redfern station, they have to wait from one to three minutes before they can get on their way again. Then there is the annoyance of having to change; and there is the extra time lost in travelling from Redfern to King-street. The statistics of the Tramway Department show that that is the chief point of debarkation. It makes a difference of about ten minutes. People going to and from the station every day must lose nearly half-an-hour.

1194. How do you make up that time? Travelling on the tram takes up seven or eight minutes each way, and it takes perhaps about three or four minutes to tranship; that makes up twenty-four minutes. The train would go much faster.

1195. Have you noticed any improvement in the rapidity of transit since the opening of the George-street tram? I believe the steam tram travels a little faster; but the steam tram had to serve nearly the whole train, whereas the people who now first leave the train get away at once.

1196. Are you aware that it was the custom before to allow a margin of three minutes for every steam tram to wait after the arrival of a train? I think it would take quite that time.

1197. At present Mr. Kneeshaw says he can take away 480 people—the largest number he is asked to cater for in six electric trams in a total period of three minutes? Yes, that is what I mean. The passengers who get out of the train first get away before those in the rear. Those in the rear of the train are in much the same position as they were before. There is a slight improvement.

1198. If we are also assured that the electric tram is faster than the steam tram, there is another gain in that direction? I do not think that is the case; the railway steam tram has fewer stoppages than the George-street tram.

1199. Have you any figures to show what time it takes by the tram? It takes me sixteen or seventeen minutes to get from the railway station to Circular Quay by the George-street tram.

1200. Do you find that a large number of people travel by the George-street tram down to the Circular Quay in the busy portion of the day? Not a very large number. After you pass the Post Office, they thin out considerably.

1201. If the railway were extended into the city, how would your position be improved in the matter of time? There would probably be some scheme of tramway extension from King-street to Miller's or Dawes' Points; it brings me nearer my business, and I might not take the tram at all. That would apply to the vast majority of business people. King-street is fairly central, although the site might be a little too much to the east.

1202. Would there not be a loss of time, if you had to walk from King-street to Circular Quay? It would be much about the same.

1203. Would that be nearly so convenient in hot or dirty weather as the present electric tram? I do not think my case is a good one to take as an example. My office is at Dawes' Point, but the destination of the bulk of the passengers are between Park and Hunter streets.

1204. Take the case of business men in Sussex-street from one end to the other;—would they be benefited by the city railway? Yes; very much. If it is a matter of walking, it would be only one-third of the distance. On the other hand, I presume the cable tram would still run, and that would take business people right down to Sussex-street.

1205. What would give the maximum amount of convenience—an extension of the railway into the city with the present tram arrangements, or the construction of a main station at Belmore-road and the Benevolent Asylum, with a system of parallel tram-lines in George, Pitt, and Sussex streets? There would be the same time lost in transshipping, if you had to go by tram from the station.

1206. Would not that be made up for by the greater convenience in landing people at their places of business? It might give people in Clarence and other streets more convenience, but I understand that the proposed station at Devonshire-street would cost £500,000, while it would not give one penny return. Commercially that would be a very bad speculation for the Railway Department.

1207.

- J. Upward,
27 Feb., 1900.
1207. You will notice by the map that the proposed station at King-street is practically on the east of a block which embraces the main portion of the business part of Sydney;—do you think that a station in such a position could possibly be convenient for the greater number of people who have their places of business in that block? Certainly not, if the question of cost did not come in. If it were not for the question of cost a circular railway all round the city would be the best.
1208. Have you considered the question of an extension of trams through the city as against the extension of the railway? No; not with so many proposed parallel lines.
1209. Would you care to offer an opinion on that question? I would not like to do so off-hand.
1210. *Dr. Garran.*] Have you any idea whether more suburban people have their places of business on the east of George-street or the west? I think George-street would make a very good dividing line.
1211. Are the professional people mostly on the eastern side? Yes.
1212. Are the majority of the business people on the western side? There are a large number of people in business in Sussex, Kent, and Clarence streets.
1213. Do the suburban people find that the George-street tram puts them down much nearer their places of business than the Elizabeth-street trams? Yes.
1214. Would they like to go back to Elizabeth-street? No.
1215. Would they like to have the continuation of the railway so carried out as to put them down in Elizabeth-street? As against the saving of time, and the saving of danger which they now have to undergo, they would be only too pleased to go there. The people living along the railway for a considerable time have been agitating for this extension, and they do not care much where it goes so long as they get it. They will back up the proposal which is most likely to be carried out.
1216. The greater convenience offered by the electric tram has not diminished their desire, and is not likely to? No.
1217. Is it not true that the suburban residents have, for some time, been pressing the Commissioners to reduce the fares? Two or three deputations have waited on the Commissioners within the last five years for that purpose, for the reason that it was pretty well known that the western suburbs were paying very considerably for other lines which do not pay.
1218. The proposal of the Government is to increase the fares if the railway is made into the city;—will there be objection to that on the part of the people? No, because so many would be saved the expense of the tram.
1219. Do you think it would do away with the demand for a reduction of the general fares? Yes; they could not very well ask for increased accommodation, and at the same time for a reduction of fares. The people understood that it was proposed to increase the fares by about one penny if the railway were extended. I have been working up this question for three years, and I have not heard a dissentient voice against that proposal. After all it does not mean any increase, as it would save tram fares, and be a great saving in point of time.
1220. The scheme now before us will cost, in round numbers, about £1,500,000;—in order to pay interest on that amount, instead of having to pay an extra fare of one penny, you would have to pay three-pence in order to get the same return;—do you think the suburban people would be content to pay that? I am sure they would not.
1221. Do you notice that the scheme now before us does not altogether save the Park? I believe about 80 feet of the Park is to be taken.
1222. It takes a strip at Elizabeth-street, in the first part, and an equal strip, in the second part, and it takes part of Elizabeth-street right out of the roads of the city;—is that a strong objection? Yes, there is a strong objection to closing up any street.
1223. It is only a partial saving of the Park, and if Hyde Park is to be sacred every inch of it should be sacred? Yes; there should be the same objection to taking a small strip of the Park.
1224. Then it is proposed to take a very large area of the Domain for a carriage shed and shunting, so that so far as public reserves are concerned, this proposal takes as much public park away from Sydney as the other scheme, only it does so in two places instead of one? Yes.
1225. Has the increased expense been considered by the suburban people? I cannot say that it has; because this plan has only been made public recently, and there have been no meetings during the last few months. Still that must occur to them.
1226. I suppose the feeling with regard to the Park is not so strong in the suburbs as it is in the city? No.
1227. Would you be quite prepared to give up part of Ashfield Park for railway purposes? Yes; if it would be more convenient for the greater number of people.
1228. Do all the people in the western suburbs hold that opinion? Yes. We would assume that if part of the Ashfield Park were taken there would be a certain amount of benefit to the Ashfield people themselves.
1229. *Mr. Shepherd.*] Are you in business in Sydney? Yes; at Circular Quay.
1230. In the event of the railway being extended to King-street, would you go to the King-street railway station in preference to the George-street tram? Yes; it would not make much difference in time; but my case is not the same as others, as I am at the extreme point of the city.
1231. What portion of the city would benefit by the extension to King-street? I think most people disembark between Hunter-street and Park-street, and thence westward.
1232. Do you think it is likely that persons whose business is situated in Park-street, would come all the way to King-street and walk back to Park-street, in preference to using the George-street tram? It is very hard to say; probably they would find it to their advantage to do so, as it would save time. The crowds who get out at King-street show that that is the most convenient place to get to business. The trams show that every day.
1233. Do you think that persons whose business premises are in George-street would prefer to go to King-street and walk down to George-street, rather than go by the George-street tram, and be dropped almost at their own door? Yes; except in wet weather. People have a great objection to breaking their journey in the train.
1234. Have you ever calculated the exact time which it takes to reach King-street from Strathfield when the train comes straight in? A through train from Strathfield to King-street would do the journey in seventeen or eighteen minutes.
1235. Have you ever taken the actual time which is occupied in reaching your place of business when you use the George-street tram? A through train from Summer Hill will take eight minutes, and the electric tram would take me down to the Quay in about a quarter of an hour.

1236. Would not the only portion of the city that would be benefited by the railway extension be the block between Park-street, Pitt-street, and Hunter-street? That would be the block that would be most benefited, but you cannot possibly have a station which will benefit every part of the city equally. J. Upward.
27 Feb., 1900.
1237. There is no intermediate station proposed between Redfern and King-street, and, therefore, only those in the neighbourhood of King-street would be benefited? I am only dealing with the St. James' Road scheme, in which I believe an intermediate station is provided for.
1238. The plans now submitted to the Committee contain no intermediate station, so that it would be simply that part of the city within easy reach of King-street which would be benefited by the extension; it is estimated to cost £1,500,000; it would take up a large portion of the Park; it would block Elizabeth-street;—supposing it does suit a portion of the city, do you think it is desirable to destroy the Park to a certain extent, and to block Elizabeth-street in order to give a portion of the city a little more convenience in reaching their place of business? No; I do not advocate the Government scheme at all. What I advocate is the St. James' Road scheme, which does not block Elizabeth-street.
1239. But that would take up a large portion of the Park? As I have said before that is merely maudlin sentiment, considering the large area of Park land which we have there.

THURSDAY, 1 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

John Upward, Chairman, City Railway Extension Alliance, sworn, and further examined:—

1240. *Mr. Shepherd.*] You stated previously that you considered at least half an hour would be gained by the extension of the railway to King-street;—will you explain how that is made up? There is first the time wasted in transhipping at Redfern; it is now two or three minutes; it used to be longer by the steam tram. It takes from eight to ten minutes to travel from the station. Now that we have the electric tram it would be, perhaps, more correct to say that the saving would be from twenty to twenty-five minutes. J. Upward.
1 Mar., 1900.
1241. Have you not also to allow for the time occupied by going from King-street to your place of business in the case of the railway extension as well as from the tram? Yes.
1242. In the case of the steam tram, passengers can be dropped close to their places of business between Pitt or George street? Yes.
1243. They stop at every street, whereas the railway extension to King-street would drop the whole of the passengers at King-street;—those living at a considerable distance would therefore have to give up as much time as it would take to change at the railway and reach that spot by tram? Do you mean people whose business is south of King-street?
1244. I am speaking of the whole thing, because passengers who do not get out at Redfern would have to be brought to King-street;—do you think there would be any saving of time in the case of people who have to go to York-street, Sussex-street, or below Bridge or Hunter streets? I do not think there would be any saving. The tram will take them much nearer to their destination than the train.
1245. Would the extra advantage of the extension of the railway to King-street be confined to the vicinity of that station? That is the busiest centre.
1246. *Dr. Garran.*] Contrasting the use of the tramway with the railway, do you think that people coming from Sussex-street would take the electric tram to the station, or would they go up to Hyde Park to take the railway? Coming from Sussex-street, when they reach George-street they have walked two-thirds of the way, and I should think the greater portion of the people would walk the remaining third, so saving time and expense.
1247. Would they not think that they had walked enough on a hot day when they reached George-street? I daresay they would.
1248. *Mr. Levien.*] As a question of public convenience, do you think it would be wise to have an intermediate station between King-street and Belmore Park? I think that is more a question for railway authorities. They know what distances stations should be apart. I do not know whether it is possible to work stations so close together. Supposing that the intermediate station would be at Liverpool-street, I should say it would not be desirable to have a station there, judging from the small number of people who leave the trams at that point.
1249. Have you seen all the plans? Yes.
1250. Which scheme would you recommend? The old one, known as the St. James' Road scheme, which was recommended by the last Public Works Committee. I support that on the ground of economy and utility, and it does not close up any streets.
1251. If that recommendation were carried out, would not people still require cab accommodation? Yes; no matter where the station is.
1252. Would it bring the whole of the passenger traffic into that station if there were a break in the journey between Redfern and St. James' Road? I think if any intermediate station were erected it would be used by a very small percentage of travellers.
1253. Is there a great deal of difference in summer and winter in the number of people who travel by tram from Redfern? A great many people in winter walk for the sake of exercise. If the railway be extended into the city, those who wish to do so can still walk from Redfern. Once in the train they would be likely to remain in it until they reached the terminus.
1254. Would they be willing to pay a small extra charge for coming right into the city? Yes; and the charge would be less than we have to pay at present. I believe the Commissioners recommended about one penny per day, whereas we now pay twopence per day by tram.
1255. Would it save time or money? Both. 1256.

- J. Upward.
1 Mar., 1900.
1256. Is not the change advocated more to save money than time? Time has its value.
1257. Would people still take family tickets if the railway were run into the city? Experience teaches that the more facilities you give for travelling the more they are availed of.
1258. Is there not a great outcry against taking any part of Hyde Park? Yes; from various quarters.
1259. I suppose the suburban people do not complain of that? I have not heard any such objection raised. I think the objections come a great deal from interested quarters—that is, from people who, for their own reasons, wish the railway to go to the western part of the city. Others wish the station to remain where it is.
1260. Apart from that, in your opinion, the Hyde Park scheme would be the best? Yes, undoubtedly.
1261. Have you had many years experience in the city? Twenty-two or twenty-three years.
1262. Would it be an inconvenience to the public to use the Park for the station? Only to a very small extent. The only portion which would be closed to the public would be a small portion between Park-street and King-street. The portion between Park and Liverpool Streets would be just as open to them as it is at present.
1263. Have you ever heard complaints from the eastern suburbs, or the western suburbs, against the proposal to take the railway through Hyde Park? Certainly not from the western suburbs. Some time ago there was a public meeting held in Paddington, at which there seemed to be very strong objections to the proposal.
1264. Do you think they would be inconvenienced in any way? No. The objection comes from people living in Paddington, Surry Hills, or Woolloomooloo who walk across the Park into town every day. They would have to make a slight detour between Park and King Streets. For instance, if they wanted to go down Market-street, that avenue would be closed to them.
1265. But they could still get into King-street? Yes.
1266. You have heard of complaints, well grounded or otherwise, from the eastern suburbs? Only from Paddington; the other three suburbs, Waverley, Woollahra, and Randwick, were strongly in favour of the St. James' Road scheme.
1267. Are the western suburbs absolutely in favour of the scheme? Yes.
1268. Do they think it would be sufficiently central and cheaper? Yes.
1269. Do you think that the area which would be served by the extension would be between Liverpool and Hunter Streets? Yes; but not so far back as Liverpool-street. I should say as far as Park-street.
1270. *Vice-Chairman.*] Does your Alliance pin its faith to the St. James' Road scheme, as recommended by the Royal Commission and the last Public Works Committee? Yes.
1271. Do you remember that the late Mr. Eddy stated that that scheme would only make provision for the railway requirements of the next twenty years? Yes.
1272. Would there not then be an almost irresistible temptation to take more of the Park to meet the demands? I do not think so, for this reason—it may be fairly assumed that long before that time the people of the eastern suburbs will clamour so strongly for a railway in their direction that it is almost bound to be made. It would greatly relieve the terminus if that railway were made in a circle to the western suburbs, rejoining the railway system between Eveleigh and Newtown.
1273. Have you considered the details of that scheme as to what effect it would have upon the Domain instead of the Park? No; I think that is more a question for the experts in the Railway Department.
1274. I presume Mr. Eddy must have been conversant with the details when he said that in twenty years the St. James' Road station would not be large enough? I have already stated that No. 10 plan shows a way out of the difficulty. It shows a tunnel extension into the Domain, behind the Art Gallery, and that would be just as feasible in the case of the St. James' Road scheme as in the present plan.
1275. Would not that be taking from the people a larger area of their recreation ground at the expense of the Domain instead of the Park? I think it has been pointed out by some of the railway experts that a line going to the eastern suburbs would considerably relieve the proposed terminal station.
1276. Do you think it is a serious matter to take away such a large portion of the Domain as is now proposed, seeing that that reserve is close to the thickly-populated parts of Woolloomooloo? You would certainly rob that part which was intended as a place of recreation, and not for business purposes; but sentiment must give way to business requirements.
1277. Will this plan not only take away a certain area, but also make access to the remaining part of the Domain difficult? Yes.
1278. Do you think that the necessity for a city railway extension outweighs any idea as to the convenience afforded by the Park? Yes, to a certain extent. Very few people would advocate taking a public park if that course could be avoided.
1279. *Mr. Levis.*] I suppose you will admit that the citizens of Sydney should have a great deal of park lands? Yes; but I think they are far better off for parks and recreation grounds than are the people in the suburbs.
1280. But you have a larger area in the suburbs? Yes, but with less conveniences.

Joseph Henry Maiden, Director of the Botanic Gardens, sworn, and examined:—

1281. *Vice-Chairman.*] Do you wish to submit a statement to the Committee? Yes; it is as follows:—

J. H. Maiden.
1 Mar., 1900.

On the 8th June, 1829, a descriptive list of reserves in the town of Sydney was gazetted, and in that list the Government Domain is described as starting from the position of the mouth of the Tank Stream, thence by Macquarie-place and Bent-street, along that street to King-street east; thence to Elizabeth-street; thence by that street to Liverpool-street, to the commencement of Oxford-street; and thence by a line in a north-easterly direction to the waters of Woolloomooloo Bay, leaving John Palmer's grant of Woolloomooloo, lying outside it to the east, but excluding out of the said reserve two allotments which had been granted to J. Buckley and J. M. O'Connell, which are the present sites of the Domain and Richmond Terraces. This reserve, Mr. J. G. Hay holds (he investigated the facts when an officer of the Lands Department, and gave evidence before a former Commission on Railway Extension) is practically the same as the Government Domain of Governor Phillip in 1792.

The Domain as here defined, of course, includes what is known as Hyde Park.

In addition the Domain included Garden Island, which by order of Governor Macquarie, dated 7th September, 1811, "should be comprised in and considered in future as forming a part of the Government Domain."

Garden Island has been taken away, and perusal of maps dated about 1830, will show to what a large extent the Domain has, in the course of time, been further encroached upon. Other officers of the Government can give you precise figures to what extent this appropriation of the Domain has proceeded, and I humbly ask that the Committee may not countenance any further encroachment upon this unique people's park.

Although

Although the Domain has only been under my care for nearly four years, for eleven years (1882 to 1893) I was in J. H. Maiden's charge of the old Technological Museum in the Domain, and my knowledge of this park is of a very detailed character.

The objects of the Domain are rest and recreation of the people, to promote their mental and physical health and enjoyment, and no steps should be taken which will limit the realization of these objects. 1 Mar., 1900.

It is a truism that no structures should be erected in a public park which are not necessary to carry out the objects of the park. Thus administrative offices and workshops are necessary, so are buildings for the public refreshment, lavatories, &c., band-stands, shelter-pavilions, fountains, and so on. All these buildings should be designed so as to be neat and ornamental in appearance, and in harmony with their surroundings. Thus the park is treated as one harmonious whole, and it should be the object of the Director to continually add to its attractiveness and convenience. He has in charge the people's park, and they entrust him with certain funds to maintain and improve it. The first essential of a park is inviolability. If a man sets himself to improve a certain area from a landscape point of view his plans may be destroyed, and the public money expended on the park largely thrown away if an area be excised or the park cut into two. New conditions thus arise, and he has to prepare new plans with the view of meeting the changed conditions. And while he is progressing in this matter there is no guarantee that a fresh interference with the people's park may not again destroy what has been done. Again trees which are planted for shade and sylvan effect, or simply to hide unsightly views or objects are of slow growth. Suppose a farmer to cultivate a 20-acre paddock, if 2 acres of this be resumed, in most cases the result is that his operations continue on the smaller area just as they did on the larger, the only difference being that his work and crop are alike reduced 10 per cent. But the matter is usually totally different in treating a landscape. The resumed area may become an eyesore to the main portion, distinctly injuring it from an æsthetic point of view.

In the present case it is proposed to introduce into the Domain a railway, partly in tunnel and partly in open cutting, with an extensive flask-shaped area of 9 or 10 acres, to be used as an engine-yard. This is a very large proportion of the Domain, which now stands at 90 acres; but in addition it will sever portions of it, and existing paths will have to be carried over the railway by bridges. The area in question is a restful and beautiful portion of the Domain, and is immediately adjacent to the densely-populated Woolloomooloo Valley. In place of the repose that at present obtains, we would have, besides losing 10 per cent of the park, the noise and dirt of trains and the hideous appearance of station yards, which would very seriously diminish the value of the remainder. The park belongs to all, well and strong alike; but in this trying climate of ours, where people too readily become jaded and reduced in tone, it seems cruel that weary and physically-impaired people should be driven away to a distant portion of their own park. How can a citizen quietly rest or read in the vicinity of shrieking engines? Why should those who are careful of their personal appearance be driven away by the smoke and smut that are inseparable from railway traffic? The vegetation must also suffer; that is so self-evident that I need not dilate upon it.

And lastly, but certainly not least, how can a man view with equanimity the presence of a large engine-shed, grimy and hideous, for it is not possible to make such a structure blend into a harmonious picture of sylvan scenery.

"You will find that sentiment is not dead yet," a distinguished citizen wrote to me a few days ago; and it would be a sure sign of national decadence in New South Wales if feelings of sentiment in regard to the beautifying of our beloved city were to be blunted. It is only the smug and untravelled provincialist who says that Sydney has open spaces enough and to spare. In this respect we should take a lesson from our friendly rival, Melbourne, who has made better provision for the future in this respect than we have.

I am aware that the scheme in regard to which I am addressing you is but one out of a large number dealing with the bringing of the railway into the city; but I respectfully and earnestly ask you in the best and truest interests of the people of New South Wales to give your preference to one which does not involve the further disfigurement and whitening away of the people's Domain.

1282. *Dr. Garran.*] Naturally, your feeling is this, whatever the people have got in the way of reserves keep them? Yes; that weighs largely with me.

1283. Supposing you had been called upon fifty or a hundred years ago to lay out park lands for Sydney, embracing the area it now occupies, would you have concentrated so large a portion of park in one place and left so little in other parts? I think that largely depends on the individual requirements of the city. In a military country you would have to take care that you had large areas for exercising grounds. There might be other special conditions which might render it necessary for large areas to be set apart.

1284. But you could not have these very large areas in the middle of a busy city? No; but if you did not reserve them it would be difficult afterwards to obtain them. I remember the enormous expenditure which the citizens of London have incurred to buy back little bits of ground.

1285. If you look at the matter not exclusively from the point of view of the custodian of public parks, but as we have to look at it in the interests of Sydney as a whole, would you not be obliged to say that some parts of the city have been very scantily supplied with open-air spaces? I must answer that in the affirmative.

1286. If you look at the maps, is there not a very large area of park land beginning at Rushcutters' Bay, going as far as the south end of Hyde Park, and north to Mrs. Macquarie's Chair? Yes.

1287. Is not that, roughly, equal to the whole populated area of East Sydney—say, everything east of George-street? Yes.

1288. Is not that a very large allowance for a populated area? Yes.

1289. Apart from the Observatory and Wynyard-square, what open-air spaces are there in West Sydney? I think West Sydney is very poorly supplied.

1290. Are not the people in West Sydney practically out of the reach of any park near enough for families to take advantage of them daily? Yes; they are a very good distance away compared with the people in Woolloomooloo.

1291. Take the case of a woman with children who cannot afford to keep a servant, should there not be some little open space to which she could send her children so as to be within call? That would be most desirable.

1292. If you were planning the city, would you not like to put a little open space within 100 yards of every house in the city? Yes.

1293. In West Sydney we have only two lucky reserves, and in Pyrmont we have absolutely nothing;—are we obliged to sit down and say that that is irremediable? I hope not.

1294. You have spoken of the great expenditure in London in order to get back small pieces of land for parks;—could we not avoid that great expense by exchanging a corner of Hyde Park for small spaces which could be bought in the western and southern parts of the city? I have not come prepared with any evidence regarding Hyde Park, which is governed by a trust, and I should prefer the Trustees to answer any questions on that subject. But with regard to the Outer Domain, I may be allowed to say that if we could get an absolute grant of a reserve in West Sydney, or in some other densely-populated part of the city, in exchange for the portion which it is proposed to excise from the Domain, my objection would largely fall to the ground.

1295. I do not wish to rob the people, but to distribute the blessing we have got more uniformly; therefore, would it be a bad thing, apart from the railway question, for the Government to say West Sydney has been neglected, we shall take a portion of the surplus belonging to East Sydney, estimate its value, and spend that amount in buying up little open spaces wherever we can get them in West Sydney? I think that would be a very wise policy.

- J. H. Maiden. 1296. Two gentlemen, accustomed to land-valuing, have valued the piece of ground which Mr. Eddy wanted to take from Hyde Park, at £180,000;—let us put down £200,000 to cover the whole thing;—could not that be charged against the railway capital and be spent by the Government in buying up little open spaces in West Sydney, where they are most needed? I think that would be the only equitable way of dealing with the matter. If you take Hyde Park or the Domain, it is only fair to provide open spaces in congested districts. That would do away with a great deal of the opposition to these schemes.
- 1 Mar., 1800. 1297. Mr. Eddy offered £100,000 for the land to be taken, but he made no stipulation as to what should be done with the money. My suggestion is that the Railway Commissioners should pay the full value of the land, and that amount should be spent in parking the neglected part of the city? I think that would be good policy. The railways are a commercial undertaking, and the Commissioners have no right to take land from Hyde Park, or the land which I have charge of, for nothing.
1298. If they wanted a portion of your Domain, do you think they should do the same thing? Yes.
1299. Do you agree that that scheme would not be whittling away the people's Domain? Yes; in fact it would be a transference of some of the sites.
1300. Taking it from those who have plenty, and giving to those who have none? Yes; that is my personal view.
1301. Would there still remain the objection of the æsthetic spoiling of Hyde Park by a railway? Yes; I have given some attention to that scheme, and I do not want to take any step which might appear to transfer my anxiety with regard to the Domain to the Trustees of Hyde Park, but I do sympathise with the trust as to any interference with the Park. My predecessor is a member of the Hyde Park Trust, but I am not.
1302. Are you simply called in to deal with the ornamentation of the Park? No; not even that.
1303. Supposing it were proved to the satisfaction of the Committee and Parliament that the scheme before us is really the best, and we are called upon to give up a portion of the Domain for a carriage-shed, would you still say that if the value of the land were given for other parts of the city, it would not be a wrong thing? It would be quite proper if an absolutely equitable exchange were made. I should want to be paid for the area taken away, the damage for severance, and all the expense in that way.
1304. *Mr. Shepherd.*] Is the portion of the Domain which is proposed to be taken away thickly supplied with trees? I have been over the ground, and I can give some exact figures. The proposed scheme to bring the railway into the Domain will involve the immediate destruction of 224 trees, as enumerated below. Doubtless other trees will also be destroyed during the contractor's operations, for he must have what we may term elbow-room.—57 fig-trees of sorts, 35 Norfolk pines, 30 other pines of sorts, 25 poplars, Lombardy and others, 22 oaks, 20 gum-trees (an old original clump), 17 *Tristania conferta*, 7 *Robinia* (false acacia), 3 carobs (male and female), 2 plane trees, 2 pencil cedars (*Dysoxylon*), 1 coral tree (*Erythrina*), 1 turpentine, 1 elm tree, and 1 old honeysuckle; total, 224.
1305. Not more than one-tenth of these are indigenous trees? Yes. Most of them are from fifty years old downwards.
1306. Are they in a healthy state? 95 per cent. are healthy, and 85 are first-class trees. Within the last few years I have been taking out all the rubbish.
1307. Does that include the whole area? Yes. The tunnel goes under the fig-tree avenue for 11 chains, and I am informed by one of the railway officers that the crown of the tunnel at one place is 7 feet under the ground, and for a great portion of the distance it goes underneath the ground from 7 to 14 feet. I am anxious about the fate of that avenue on account of the immense amount of drainage which will take place. The roots of the fig-trees search for moisture, and the sulphurous fumes from the tunnel may have a very bad effect upon the trees. I look upon that fig-tree avenue as a noble one. People walk up and down there all day.
1308. I presume the tunnel would be thoroughly cemented so that it is unlikely that the fumes from the engines would reach the roots? I do not know anything about that; but if the fig-trees are in a kind of flower-pot it will do away with a portion of my objection.
1309. Would the open cutting interfere with any of your paths or roads? Yes; that is shown on the plan which I produce. There is quite a network of roads and paths which would have to be taken over the line by bridges, and a portion of the Domain would be cut off entirely.
1310. Would it set off nearly the whole of Sir John Young's Crescent? Yes. There is another matter which I do not think has yet been dealt with. I produce a sketch of the Art Gallery as it will be when completed. In conjunction with the Government Architect I have arranged for the construction of a drive on the western side to go from the Domain, and make a promenade around the completed building. It will be absurd to have only one entrance to the Gallery when completed; there should be a terrace around it. But I could not recommend this expensive work if the land were taken away as proposed.
1311. Would the railway enclosure encroach upon that? The nearest point goes 120 feet from the buildings. To complete the Art Gallery's scheme means that the railway would go a great deal nearer, and I am afraid the pictures would be speedily converted into old masters, and you would have to use the Art Gallery for something else. Then towards the Palmer-street entrance, most of the trees will have to give way, and the road will have to be extended. The trees will be largely destroyed, and the path will have to be deviated and supported on walls or an embankment.
1312. Do you regard the whole thing as a disfigurement of the Domain? Yes; I have no hesitation in saying so. It is a scheme which has caused me a great deal of anxiety.
1313. Would the area actually taken up by these works be 8 acres? Mr. Deane told me they would take up 8 or 10 acres; I am referring to scheme No. 10.
1314. Have you heard the matter discussed by visitors to the Domain? A number of people have come to me; but it was only a week or two ago that I understood the details. I do not think that people, as a rule, know the details of the scheme.
1315. What do you think is the general impression? I have not heard any persons speak in favour of the scheme, and some people have spoken very strongly against it.
1316. *Mr. Levien.*] Do you object to any part of the Domain being taken away, and do you think the area sufficiently limited now? Yes, unless you adopt Dr. Garran's idea of exchanging what is taken away for land of equal value to be used as parks in densely-populated districts, where the people have no playgrounds at all.
1317. Do you object to this proposal, No. 10, altogether? Yes.
1318. Have you a good knowledge of the suburbs and city? Yes; I lived between Ashfield and Homebush for thirteen years.

1319. What scheme would you propose? I do not propose any scheme. I always felt when I lived in the western suburbs, that there should be some means of getting into the city. J. H. Maiden.
1320. Have you seen any of the schemes before the Committee? I have only casually examined them. 1 Mar., 1900.
1321. Are the people in the western suburbs always complaining of the want of quick communication with the city. That was the general topic in the trains.
1322. Did you ever suffer any inconvenience yourself? Yes; I wanted to get quickly to my office.
1323. Where would you suggest that the central station should be? I have always thought that it should be somewhere near King-street, judging from the number of people who get out of the trams there.
1324. What do you think of proposal No. 3, which suggests taking the land from Park-street two-thirds of the way from Elizabeth to Pitt streets? If I were still a traveller on the railway, I should be quite satisfied to be put down anywhere about King-street.
1325. If you had an office in Bridge-street, would you still be of the same opinion? No; I might then make another recommendation.
1326. If you had an office in Sussex-street, would that suit you? No; I would have other means of getting to town—the electric tram, for instance.
1327. Any scheme would suit you so long as you would get near your own work? Yes; and I realise that everybody cannot have the railway station close to them—somebody must give way.
1328. Considering the limited area of business places, where would you suggest that the central station should be placed? I would be satisfied with a station anywhere between George-street and Hyde Park, and it must be near the northern end of Hyde Park.
1329. You would not touch the Park at all? Not if I could help it.
1330. Do you think it would injure the Park much by taking a small part of it? It is only a question of area. I think the great fear is that the railway authorities would not stop at what was first taken. I would not allow the Park or the Domain to be touched if it could possibly be avoided.
1331. Are you speaking in your professional character, or as a citizen, for the benefit of all? I am a man of the world, and have travelled a good deal, and I am trying to give you my honest opinion—which is that you should preserve the open spaces as much as possible. With regard to the suburban traffic, you should bring it into the city if possible, but it is ridiculous to suppose that a station could be placed in the city which would suit everybody's perfect convenience.
1332. But you would not allow any portion of the Park or the Domain to be interfered with? I have always stood firm on that ground. When I was a citizen living in the western suburbs, I was always sorry that Hyde Park should be touched.
1333. Have you ever heard of any complaint from people living in the eastern suburbs about interfering with Hyde Park for the railway? Some people have come to me and have objected, but it is generally known that I have more to do with the Domain, and they would not come to me to make their complaints about Hyde Park.
1334. Do you not think it is the general impression that Hyde Park is more used by the loafing community than by people seeking health? I think that is largely a matter of police. If the matter were suitably taken up, the condition of Hyde Park might be a great deal better than it is. I know a good deal about my lodgers in the Domain, and if I were given magisterial powers for twelve months I would make a great improvement there. Hyde Park is under a trust.
1335. Do you think it is the want of supervision which makes the Park objectionable? Yes.
1336. Who are the Trustees? Dr. Norton is one, and I think half the aldermen of the city are on the trust. I think it is altogether a question of policing Hyde Park. More police are required. If it is still in such a condition that you cannot walk across Hyde Park after dark with your handbag, it is an evidence of weakness on the part of a civilised community. I would have the Park lighted with electricity, and I would have bands and light refreshment-rooms. It should be lighted all night with electricity. Then you would find that respectable people would go there, and would drive out the loafers. That is also my idea with regard to the Domain.
1337. You admit that the police do their duty thoroughly as far as the number engaged there are concerned? Yes, certainly. I see the police nearly every night. I am in close contact with them, and I never say a word against them. With regard to the construction of railway works in the Domain, I have taken no cognisance of the permanent embankments and other works which would be erected after their construction. I have simply referred to the effect during their construction. The trees if removed or injured cannot be made to grow again, except during the period of the lifetime of a man.
1338. *Vice-Chairman.*] What was the last encroachment on the Domain? The last important one was the Art Gallery.
1339. You do not regard that as serious from an æsthetic point of view? The land was obtained for nothing, and as Director of the Domain I hold very strong ideas about placing a building like the Art Gallery in the landscape. I think it is a terrible blot. Of course from the point of view of the Art Trustees it is a desirable site; but you shut out the people from an exquisite site, and you raise a heap of stone in its place.
1340. Was that erected since the Technological barn was erected? Yes, in 1884.
1341. Assuming that you had both Hyde Park and Domain under your control, from your point of view, which would be the better scheme, one which would take part of Hyde Park at present, and later on absorb probably the whole northern end of it, or this scheme now before the Committee which, although not professing to do so, does take a portion of the Park, and injures the rest of it, and also takes a portion of the Domain? I cannot answer that question without seeing exactly what area would be taken. I would distinctly disclaim any idea of desiring to shunt the burden on to Hyde Park. I do not want to save the Domain at the expense of Hyde Park. Unless I could see the different schemes in plan, I could not say which I would prefer.
1342. Presuming that Dr. Garran's suggestion were carried out, and the railway authorities paid for the value of any land taken by them, would the amount of money credited to you be sufficient to give anything like adequate park accommodation for West Sydney? I cannot express an opinion; but I think it would go a considerable way towards doing so, because if I had a free hand, I would buy cheap property and neglected land for the purpose.
1343. Would not such an exchange mean this, that you would only be paid the value of unoccupied land, while you would have to buy land which was built upon? Yes.

J. H. Maiden. 1344. Do you think you would have sufficient money, under those circumstances, to obtain parks for West Sydney? No; but you would go as far as you could, and you would be going in the right direction. Perhaps West Sydney would not want such a large park area as East Sydney, because it is largely taken up with factories and stores, whereas in East Sydney the parks are the natural outlet for Woolloomooloo, Darlinghurst, and Surry Hills.

1345. You very strongly objected to the construction of wharfs in Woolloomooloo Bay;—what would be the combined effect of the construction of wharfs, and the carrying out proposal No. 10? It would be very deleterious to the Domain as a park; it would prevent necessary alterations and improvements to it as a park.

John Stinson, member of the City Railway Extension Alliance, sworn, and examined:—

J. Stinson. 1346. *Vice-Chairman.*] Were you at one time Mayor of Burwood? Yes. I now reside on Liverpool Road, on the Enfield side.

1347. Would you give the Committee a statement of your views on this question? I would like to speak as a resident for ten years in the western suburbs, and as one who travels on the railway almost daily, sometimes twice a day. During that time I have seen the constant necessity for the extension of the railway into the city. That I think is generally admitted, and it is simply a question of method. I have also had an opportunity of hearing the opinions of other residents expressed privately and at public meetings. I can speak of the general desire of such an extension into the city. A very large number of municipal councillors were approached during the early stages of the Extension Alliance, and I do not think in any case there was opposition to the scheme. Some of them did not co-operate, but I do not know if any objection was offered. One of the great objections is the change from train to tram at Redfern, and the loss of time and the inconvenience occasioned. It was hoped at one time by a great number of travellers that when the electric tram was constructed along George-street it would obviate a great deal of the inconvenience and loss of time, but I have noted very carefully the result of that change. Personally, I feel that it is worse than before, so far as the railway travellers are concerned. The cars are excellent, but they do not give anything like adequate accommodation for so large a suburban traffic as there is in the busy hours. There is a constant rush for trams, and it is almost impossible to get accommodation without a great deal of unpleasantness. Consequently there is a greater loss of time than when the steam trams were running. I have watched carefully as a member of the Alliance the various schemes which have been put forward, and, in my opinion, nothing has been put forward so far which can equal what is known as the St. James' Road scheme, which was before the last Public Works Committee.

1348. You know that that involved the resumption of a considerable portion of Hyde Park, and to meet that difficulty to some extent, scheme No. 10 has been referred to the Committee;—can you give any opinion on that scheme? From the point of view of accommodation and convenience of the public I think that would probably meet the case. The only difficulty is the additional expense which would probably make it prohibitive. Then there is the inconvenience which would be caused by closing a portion of Elizabeth-street. The resumption of land will probably cause an additional expenditure of £1,000,000.

1349. Would railway travellers be prepared to pay for such an increase of outlay so as to meet the interest on nearly £1,000,000 additional? They might pay it, but they would not pay it willingly.

1350. Would they be prepared to pay the amount necessary to meet the interest charged on the St. James' Road scheme? Yes; I feel sure all *bona fide* travellers would pay an increased price to be brought into town—say, up to King-street. That would be paying what they are now practically called upon to pay for tram fares.

1351. Where is your office? In Castlereagh-street, opposite Moore-street.

1352. Taking the site of the station now proposed, or in St. James' Road, do you think that the great majority of the travellers would be inconvenienced by those schemes? As far as my observation goes, the great majority of travellers by the trams leave at Market-street or King-street.

1353. Do they go east or west? They go both ways, and some north.

1354. In what direction do the majority go? I think the great majority go down King-street, to the west.

1355. Is not the station proposed on the eastern border of that part of the city which contains the business people? Yes.

1356. Do you think that that would not involve any great inconvenience? It would not involve any great inconvenience; and there is the additional advantage that people would be landed alongside the cable tram.

1357. Would not that continue the existing difficulties as to moving from train to tram? No; because there would be a saving of several minutes by coming in the train to King-street.

1358. What time would that save as compared with the present method? It would depend upon the distance that a man had to travel by the cable tram. Speaking of my own case, where I would walk to my office from the terminus at King-street, it would save about ten minutes. That is, assuming that I can now get the tram at once at Redfern; but a great many people do not get the tram at once. They do not care to scramble for a seat, and consequently they are delayed.

1359. You say that you think the present state of things is worse than the old state:—is that due to the want of a sufficient number of cars or electric trams? I do not think that a single line of cars is sufficient to accommodate the travelling public during the busy hours. Previously two trams used to be waiting, and each tram would carry off a larger number of people than the small electric trams can do.

1360. Mr. Kneeshaw told us that the electric trams can take away the maximum number asking to be carried on any day in practically three minutes—that is to say, half the people get away in one and a half minutes, whereas under the old system a tram had to wait three minutes after the arrival of the train; suppose we had two or three electric tram lines going down Pitt and Castlereagh streets or Sussex-street, do you think the electric system would be able to take the whole of the people to their business? Yes; but it would not get over the transhipping.

1361. Would it be a material improvement? I think so.

1362. Supposing a station were built on the Benevolent Asylum site, obviating the present danger, and supposing there were a system of parallel trams, would that to some extent meet the present objection as to delay? It would get over the element of danger in the first place. That would be some advantage; but it would not wholly meet the case, because the present change from train to tram would still have to be met.

1363. Do you think that is an element worthy of serious consideration? I think it is a very important matter. J. Stinson.
1364. Against that, with a system of parallel tram lines, would you not be able to distribute the people better, and would not a majority be able to get to business more speedily than if they were taken to a station in King-street? I should not regard it in that light. As far as I can see, the great majority leave the tram at Market or King streets. A slight percentage would get out on the road. 1 Mar., 1900.
1365. Are you referring to the electric trams? To either the steam or the electric trams. It is to be noted that some of the railway passengers still take the steam train in Devonshire-street; but it is not at all a convenient method of getting to business.
1366. What prompts these people to take the steam tram in preference to the electric? I presume it suits their convenience to be put down in Elizabeth-street instead of George-street. I do not think they have any objection to the electric tram.
1367. Supposing a station were erected at the proposed site in King-street, would a man who has his place of business, say, in George-street, go right into King-street, or would he leave the tram at Redfern, and take the George-street tram? It would depend upon where his place of business was.
1368. What portion of George-street would a station at King-street accommodate? That is a question I would scarcely like to answer.
1369. Would there be a percentage of people who would still patronise the tram from Redfern into the city after the railway was extended? Yes; a great many take the electric tram, and go to Sussex-street, and a good number get out at the Victoria Markets.
1370. With the multiplication of electric lines, would there not be an increase in the number who patronise them, as against travelling in the railway to King-street? I think the electric trams create a traffic for themselves in addition to the railway traffic.
1371. *Dr. Garran.*] Do you agree generally with the view that we should not needlessly spoil our public reserves? I do not think we should. I should not be disposed to take any portion of the open spaces if there was any other reasonable way out of the difficulty.
1372. Did you hear me ask Mr. Maiden some questions as to transferring the open spaces from East to West Sydney? Yes; and I thought it would be a very reasonable and desirable exchange.
1373. If you lived in East Sydney, would you object to that? So far as I am able to judge of the effect of taking a portion of Hyde Park, I cannot see any reasonable objection to it. As far as my observation goes, the portion of the Park which would be taken is not utilised for health-giving purposes or recreation, it is utilised by a lot of people, amongst whom one would not care to go.
1374. Do you ever go there? Yes, occasionally; but not at night.
1375. Personally, you would not object to have a railway station there? No. It is urged over and over again that it is the people's park. But a great many more people would use the park if a railway station were there than they do at present.
1376. As a citizen, would you object to some of the open spaces being transferred from one portion of the city to another? No; I think it is a capital idea. The objection that we ought not to do away with the breathing space, has not much in it when we consider how much breathing space the harbour gives us in addition to our park reserves.
1377. Can you say that the park lands are well distributed at present? No; they could be much better distributed by an exchange.
1378. *Mr. Shepherd.*] Do you consider that the electric trams are not so convenient as the old steam trams? Yes; for railway travellers, because the electric trams have created a traffic of their own, which pretty well monopolises them.
1379. Have you found that there is greater delay with the electric trams than with the steam trams? Yes, in this way only: I sometimes go down to George-street to get an electric tram, and I find I have to wait for three or four trams to come along before I can get standing room—people are standing all over the platforms.
1380. Would not the multiplication of trams do away with that? Yes; to a large extent.
1381. If they were started every half minute, would not the objection be done away with? The more frequently the trams are run the less objection there will be; but that would not get over the difficulty of having to change from the train to the tram.
1382. Does not the fact of trams being overloaded show that they are used more than formerly? It shows that they are catering for a class of travellers who probably used to take other conveyances. They take up a large number of people who only travel for a short distance.
1383. Do you agree with the principle that the convenience of the greatest number should be the principal consideration in extending the railway? Yes.
1384. Do you not think that a more central position, say in George-street, would be a greater convenience than a station at the top of King-street? I would not object to that if it could be brought about. In favouring the Hyde Park scheme I take into consideration the probability of its being carried out as compared with any other scheme.
1385. Would you favour any other scheme which would meet the convenience of the whole population instead of a small portion? The convenience of the greater number must be taken into account in fixing a site.
1386. If you look at No. 3 plan, and the plan of the city, can you say that landing at King-street will convenience the largest number of business people in Sydney? I think it would convenience the public of Sydney as well as any other scheme I know of.
1387. There has been a scheme proposed, but not placed before us, to form a station under the Victoria Markets, and another at Wynyard-square, continuing the line to Dawes' Point;—do you not think that a scheme of that kind would be of more convenience to the public than the one before us? I do not think so. It would not give the accommodation which the other schemes afford. You could not get the space there, and I suppose the expenditure would be prohibitive.
1388. Your view is that the great advantage would be the saving of time? Yes. Personally I would pay an additional fare to get in earlier. Twenty minutes every day is a considerable item.
1389. It would be a convenience within a certain area of the station, but outside of that area would it be any saving of time? Yes. Supposing you had a terminal station at King-street, that would not prevent a large number of people from getting out at Redfern if it suited them, and taking their own mode of conveyance.
- 1390.

- J. Stinson.
1 Mar., 1900.
1390. There are a large number of business places between Park and Hunter Streets and up to George-street, and also back to Sussex-street;—do you not think it would be more convenient and quicker to come down by electric tram to get to these places than to come by train to King-street? I do not know that there would be much difference in the time.
1391. Supposing you had an office in Hunter-street, on the corner of George-street, would you prefer to come by rail to King-street? Yes. I would save time by having a straight run through from Redfern to King-street by rail. There would be a saving of time by not having to change to the tram at Redfern, and then there is the whole journey by electric tram from Redfern.
1392. Do you bear in mind that the trams stop at every street, and that, according to this plan, the railway will come straight to King-street without any intermediate station? I think an intermediate station will be necessary, if not now, within a short time.
1393. Would not that take up considerable time? Every train would not stop there.
1394. Do you know most of the schemes submitted? Yes.
1395. Which scheme do you prefer,—the St. James' Road scheme, which would take a large portion of the Park up to Macquarie-street, or the King-street scheme, which would block Elizabeth-street and take up some portion of the Park as well as 8 acres of the Domain? As a traveller, I would not mind much which plan was taken; but viewing it in a business light, it is improbable that the expense of resumption in what is known as the King-street scheme, will be undertaken, and, therefore, it is not likely that that scheme will be accomplished. The continuation, by means of a tunnel to the Domain, would get over the difficulty which has been long in the minds of those opposed to the St. James' Road scheme, because it has been generally thought that a larger area will have to be taken ultimately than is set forth in the scheme at present. However, the continuation of the line from King-street to the Domain could be just as well applied to the St. James' Road scheme, and it would obviate the necessity of taking any more of Hyde Park.
1396. The King-street scheme could be designed so as to take in 100 feet more, and it would obviate the necessity of taking the semi-circular course to the Domain;—do you think that would be preferable to continuing the line? That would still involve the closing of a portion of Elizabeth-street. I think that in order to preserve Elizabeth-street it would be much better to take the St. James' Road scheme, and, if necessary, continue it so as to take a portion of the Domain. I am in favour of the St. James' Road scheme.

FRIDAY, 2 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Hon. James Norton, LL.D., M.L.C., Chairman of the Trustees of Hyde Park, sworn, and examined:—

- Hon.
J. Norton,
LL.D.,
M.L.C.
2 Mar., 1900.
1397. *Mr. Shepherd.*] Are you acquainted with the different plans before the Committee for the extension of the railway to the city? I know something of them, but not all the details.
1398. Have you studied the plan now before the Committee, which proposes to block off Elizabeth-street? Yes.
1399. Do you think that is a desirable plan? I hardly think so. I do not like the destruction of Elizabeth-street, and the destruction of two valuable blocks on the west side of that street, where the Synagogue and the High School stand. As far as Hyde Park is concerned, the scheme No. 10 will do the least possible damage to the Park, looking at that question solely.
1400. Still it blocks Elizabeth-street? Yes; that is a very serious objection.
1401. Have you made much use of the railway? Yes.
1402. Do you think it is desirable, under the circumstances, to bring the railway into King-street without any intermediate station? I think there ought to be an intermediate station. The railway is supposed to be brought into Sydney for the purpose of giving the people better access to the railway, but if you take them from Redfern to King-street without a stopping-place many people will be taken a long way from their homes or places of business.
1403. The opinion of the railway authorities is that King-street is a focus for passengers, and that there ought to be no intermediate station, because it would cause delay;—their object is to deposit the whole of the passengers, who do not get out at Redfern, at King-street? There is a very good reason in that.
1404. How much of the city would that serve? It would only serve the immediate neighbourhood completely. As far as the rest of the city is concerned, it would not serve it very much more than the present Redfern railway terminus. It will save very little time, unless people have their places of business just at the terminus; but you cannot bring the railway to every man's door. The great bulk of the people will not be served, no matter where you put the station.
1405. No doubt those people between Market-street, Pitt-street, and Hunter-street would be largely benefited? Yes.
1406. But all the people beyond those limits would not save much time, and people living near George-street would take the George-street tram in preference to the railway? Yes.
1407. Is it desirable to go to the large expense of £1,500,000 to injure the Park, and block Elizabeth-street, for the purpose of serving a small portion of the city? I do not think it is. The best thing would be to make the terminus at the Benevolent Asylum, where there is plenty of space. That would bring the people a little nearer to the city, and it would do away with the objection that there is not sufficient space in the railway premises to work the business of the railway.
1408. There is a proposal to take the asylum grounds, the old burial-ground, and the police barracks, and to form a large station fronting Garden Road, and from that station various electric tram lines could be carried down Pitt, Castlereagh, and Elizabeth Streets;—do you think such trams would be able to take the

the whole of the passengers by the railway? The trams take all the traffic at present. Of course, the electric trams are an immense convenience, and they have taken away a great deal of the difficulty of having the terminus at Redfern.

1409. If these additional trams were constructed, do you think that they could conveniently take the passengers by the railway? I think so.

1410. On the whole, are you not in favour of extending the railway? No; mainly, I may say, on account of the enormous expense, and, of course, the damage done to Elizabeth-street and the Park.

1411. There was a scheme proposed to run the line of railway down George-street, forming a large station at Victoria Markets, another at Wynyard Square, and continuing the line to Dawes' Battery, with the view of ultimately crossing the harbour; do you think that would be better than the present proposal? Before offering an opinion I would have to give the question a great deal of consideration.

1412. That line would be underground? Underground railways are not nice, and we ought to avoid them if we can. In London they are driven to have underground railways, and perhaps we shall be, but they are not desirable.

1413. If the scheme before the Committee were carried out it would cause the destruction of a lot of valuable trees within the Domain, many of them fifty years old;—do you think that would be a very serious thing? That is something to be considered. That is one of the damages which the proposed station would bring about.

1414. Would you be inclined to favour a scheme coming as far as Belmore Park only? I suggested the Benevolent Asylum, but Belmore Park would be still better. I think that ought to be amply sufficient, and considering the expense it is the best plan that has been proposed to my knowledge.

1415. Do you think that the saving of time in running straight from Redfern to King-street, instead of changing into a tram, ought not to be taken very much into consideration? There is not very much time saved or lost in that way; there would be a little, but I do not think it is worth while going to such enormous expense to save the amount of time involved.

1416. Do you find it very inconvenient to have to change into a tram? I would rather not do so; it is inconvenient, but it is not a serious inconvenience.

1417. Would King-street be more convenient to you personally? Yes; it would be more convenient. My office is in O'Connell-street, near Bent-street.

1418. Would you prefer to come to King-street by railway and walk to your office, instead of using the George-street tram? Yes.

1419. Did you and your trust strongly object to the original St. James' Road scheme? Yes.

1420. Did you entertain a fear that the scheme as proposed would eventually require extension, and that more of the Park would be taken? Yes.

1421. This scheme before the Committee has been proposed as a means of doing away with that objection; the station is removed further west and a smaller amount of the Park is taken with a large amount of the Domain; it has been stated in evidence that this arrangement will do for a much longer period than that originally proposed under the St. James' Road scheme;—does a proposal of this kind commend itself to you more than the original proposal? The objection is a good deal lessened as far as the Park is concerned, because by this scheme you will take less of the Park and do less damage to it than would have been done by the scheme on which I was examined before.

1422. We are also assured that taking a line into the Domain will probably do away with the necessity for taking any more of the Park? If it does not do that it is not worth while making it.

1423. The scheme also includes the closing of Elizabeth-street from Park to King street? As a trustee of the Park I do not take that much into account, but as a citizen I think it is very objectionable.

1424. From the point of view of a trustee of the Park, will not the people under this scheme be practically shut out from the western side of the Park from Park-street to King-street; and do you regard that as a serious blemish in the proposal? Yes; we cannot afford to block any of our leading thoroughfares. The city and the traffic are growing, and if you stop any of the thoroughfares you will put the people to great inconvenience.

1425. Do you anticipate much damage to the trees and plants in the Park from the proximity of the engine and railway works? The whole of the trees along the west side of the Park would be destroyed absolutely. I do not think much damage would accrue to the others.

1426. Practically we may divide the travelling public who come to the main terminus into two classes—suburban people who come day by day to their places of business in the city, and the long-distance passengers? The long-distance passengers would not be inconvenienced in any way by a change of terminus from Redfern to King-street, as Redfern is practically more central than King-street for the major portion of the city.

1427. Of the suburban travellers, do you think that a very large proportion would be inconvenienced by this extension of the railway to King-street? I think a great many would be inconvenienced; to these people it is most desirable that they should cut off any loss of time that is avoidable. They want to get from their homes to Sydney in the shortest possible time. If they can save five or ten minutes' time in the journey, they will regard it as a great benefit.

1428. Have you travelled sufficiently often to say whether the construction of the George-street electric tram has enabled the people who now use it to get more speedily to their places of business than before when they had to go to King-street? Certainly. I have travelled on the electric trams often, and I find they are a very great convenience; they give very great advantages to the suburban people.

1429. If we had more electric trams, one running down Pitt-street, another running down Kent or Sussex Streets, do you think the advantage would be increased in proportion to the number of lines laid down? Yes; but I do not think it would be increased in proportion to the expense of laying down the trams. George-street, of course, is a very useful street, and so are Castlereagh and Pitt streets, but I do not know that when you go further west, the advantage would be very great.

1430. Is not the west of George-street thickly populated? Yes; but there is a different class of people there. Of course they would be benefited to some extent by the new tramways; but the question with me is: is it worth the expense of laying down the trams in these streets.

1431. Do you view that question solely on its own basis, or in relation to the expense of bringing the railway into the city? The expense of laying down trams would be much less than bringing the railway into the city.

Hon.
J. Norton,
LL.D.,
M.L.C.

2 Mar., 1900.

- Hon. J. Norton, LL.D., M.L.C.
2 Mar., 1900.
1432. Do you think the convenience would be nearly as great? I think it would be a great convenience to some people. Almost everybody is benefited by the George-street tram.
1433. I suppose the Hyde Park Trust are practically unanimous on the question of saving Hyde Park from invasion as far as possible? Quite unanimous.
1434. Have they had an opportunity of seeing the new proposal? I do not think they have seen it; but they know what the proposal is. They are absolutely opposed to taking any part of the Park. I am not authorised to approve of any resumption of any portion of the Park.
1435. If it came to a matter of deciding upon this plan now before us as against the St. James' Road scheme, to which of the two would the Trust offer least objection? The trustees approve of the scheme now before the Committee rather than the old one. If the railway is to be taken through the Park at all, scheme No. 10 will do much less damage than the original proposal; that we are agreed upon.
1436. *Dr. Garran.*] You have expressed a preference for a station on the Benevolent Asylum site? Yes.
1437. I admit that there is a great deal to be said in favour of that; but two experts in the railway service, Mr. Parry and Mr. Kneeshaw, say that three or even four tramways into the city would not give the same accommodation as carrying the railway itself into King-street;—of course, they speak from the traffic management point of view;—can you speak from the passengers point of view, and say whether you think three or four trams would accommodate the public? The railway as now proposed to King-street would really accommodate more than the trams; but not to a very large extent.
1438. The site at King-street is a very good site for all people whose business is east of Castlereagh-street? Yes.
1439. Is it as good for those whose business is west of Castlereagh-street and George-street? No; the further west you go the less advantage it is.
1440. If a lady were coming from the suburbs to go to David Jones' shop, would she rather get out at King-street and walk, or take the electric tram at Redfern and be put down at the door? The electric tram would suit her much better.
1441. Would the electric tram suit the wholesale people better, who have warehouses in York-street? Yes.
1442. Can we call the proposed railway station central for the whole of Sydney? No; it is not very central.
1443. If, as Mr. Eddy seemed to foresee, we should in twenty years want further railway facilities, would there not be a cry then, if not now, to carry the railway to the western part of Sydney, so as to accommodate people on the western side of George-street? I think that would be asking too much.
1444. Will people with business at the Town Hall be largely accommodated by the King-street scheme? No; they must rely on the electric tram.
1445. Will the produce people in Sussex-street be greatly benefited by the railway extension to King-street? No.
1446. Take the case of passengers by steamer at Darling Harbour;—will they be greatly accommodated? No.
1447. Would not a West Sydney railway line suit them much better? Undoubtedly.
1448. Mr. Eddy seemed to think that there never would be any danger of taking the other corner of Hyde Park, because the traffic of Sydney would require more than one station, and that some other arrangement would have to be made to meet the pressure;—do you not think the pressure would come from West Sydney, which is neglected in this matter? Of course, they would try to get accommodation for themselves.
1449. Have you been a cultivator, all your life, of trees and flowers? Yes.
1450. Do you know the value to a city population of green grass and trees and open spaces? Certainly.
1451. Do you think that the open spaces in Sydney are at present well distributed through the whole of the population? They might be better distributed; but they are fairly well distributed.
1452. In West Sydney, what have we beyond the Observatory and Wynyard Square? There is nothing.
1453. Looking at the quantity we have in East-Sydney, is it not very large? The Observatory gives the people in West Sydney an open space. As for Wynyard Square, you do not see it much frequented, except by loafers.
1454. I asked Mr. Maiden yesterday whether it would not be an advantage to the citizens as a whole if we exchanged one quarter of Hyde Park for a number of small open spaces to be bought up in West Sydney;—do you not think the people as a whole would gain by that? I do not like that plan; you must not have the reserves too small.
1455. Large reserves have a very great value, but have not small reserves also a value? Certainly; they are all beneficial.
1456. Of what use is a large reserve to a poor mother if it is half a mile away; she cannot send her little children there? I do not regard half a mile as a great distance for that purpose.
1457. Would it not be a great advantage to have little reserves scattered about the residential parts of the city? Yes.
1458. Would it not be a fair exchange to take a quarter of Hyde Park for some public purpose and make it up to the citizens by establishing a number of small reserves? I cannot say; I do not know.
1459. Have you thought out that subject? No.
1460. You say that a good deal of Wynyard-square is occupied by loafers;—do you think the public get the full benefit of Hyde Park which they ought to? No; the loafers destroy the value of the park to a very large extent.
1461. Have the police power to prevent them from lying at full length on the seats and grass? I believe they have; but they do not exercise it. The trustees are powerless.
1462. The trustees have no power, and can only speak to the police? Yes.
1463. Is there any regulation preventing the people from lying full length on the grass? No; but if there was such a regulation, I do not think we could enforce it. Whenever we proceed against people the Police Magistrates go against us; they seem to look upon us as nuisances, and that we are persecuting these men.
1464. Are you in favour of lighting the Park by electricity, and keeping it lighted all night? Yes; by electricity or gas. It is now lighted with gas, but not with incandescent burners. They would be equal to any electric light we are likely to get, and the expense would be much less.

1465. Is that main walk, which is called the Lover's Walk, through the Park, accessible to women and children up till 11 o'clock at night? It is quite accessible, but it is not advisable for women and children to go there at that hour. The place is filled with loafers, and we cannot help that.

1466. Are not many of them accustomed to knock people down? Such cases have happened over and over again.

1467. Are there always some police patrolling the Park in the evening? Yes.

1468. But not enough to keep down the nuisance? Yes.

1469. *Mr. Lavien.*] Is the supervision of the Park left principally to the police? Yes. We are trustees more for property than for personal matters. Our business is to look after the beautifying of the Park, and keeping it in good order. Some of our people are sworn in as special policemen, and they have some power.

1470. Do you ever hear any complaints as to the management of the Park? Very few complaints; practically none, except as to loafers lying about there. We do not get many complaints even about that, but we know it is a matter of great offence.

1471. You could not stop that whatever you did? No.

1472. As one of the trustees, have you any objection to a small portion of the Park being taken in the interests of the travelling public? The trustees have unanimously decided that they object to any part of the Park being taken. I agree with them that no part should be taken except in a case of absolute necessity. It would do very much damage in various ways, so that I would rather see it avoided if possible.

1473. What is the real objection to taking a portion of the Park in the interests of thousands who travel on the railway? One objection is that if one portion be taken now, further portions may possibly be taken hereafter; another objection is that you take a large strip of the Park and destroy the whole of the trees there, which are certainly an ornament to Sydney and an advantage to the citizens. There is a path under those trees, and everyone who has occasion to go along the street walks in their shade instead of on a dusty road. Then there is the closing of Elizabeth-street; that has not much to do with the Park, but is one of my objections. The plan closes in a road which is really wanted.

1474. Do you think we ought not to encroach upon the Park in any way whatever? If it be possible in any way whatever that ought to be avoided.

1475. Are you in favour of a railway into the city? As an abstract principle, yes.

1476. Where would you propose that it should terminate? As I have already said, if the terminus were brought to Belmore Park it would be a very great advantage. The expense would be so much less than that for the present plan that I would be quite satisfied. That would do for a good many years to come.

1477. Are you opposed to No. 10 scheme? Yes.

Edward Johnstone Sievers, Government Land Valuer, Department of Public Works, sworn, and examined:—

1478. *Dr. Garran.*] Before a previous Committee, did you, in conjunction with Mr. Perdriau, make an estimate of the north-western corner of Hyde Park, which the St. James' Road scheme would take out? I had forgotten that I had done so, but I see by the evidence that that is the case.

1479. Would that be a fair present value—that is, £200,000 for a quarter of the Park? Yes.

1480. That does not include the strip taken out of the south-west portion of the Park? That was not taken in. That would be approximately the same area as the other.

1481. If you were valuing for a private person, would you not value for severance and disturbance? No; we would say the balance was benefited so much that it would reduce any such compensation.

1482. Could you apply that to a public park? No; but I take it that the value for recreative purposes is not increased by virtue of an improvement of that sort; it rather diminishes, on account of the noise and smoke.

1483. Would the proposed railway under the scheme now before us do any damage to Belmore Park? Judging from the plan shown to me by Mr. Deane, I do not think there would be any damage done to Belmore Park.

1484. Do you know a great deal about the city? Yes.

1485. Do you think there still remain in West Sydney any blocks not built upon, either from bad titles or for other reasons, or blocks with wretched slums which might be pulled down, and where small reserves might be created now between Darling Harbour and George-street? No; I am not asked for an opinion as to whether it is desirable, but I think we have sufficient lungs for the city now.

1486. Are not the lungs all in one place? We have the Observatory and Wynyard Square in West Sydney.

1487. What else? We have the whole of the harbour. We have no other reserves in West Sydney until we come to Wentworth Park.

1488. Are there any in Pymont? Wentworth Park borders on Pymont, but there are no parks in Pymont.

1489. Did not Blackwattle Creek originally form the boundary of the city? Yes. I think the city boundary now runs through Wentworth Park.

1490. I have been trying to get information as to whether we could not improve West Sydney by purchasing small areas of ground there? There is no land with bad titles there which could be purchased for that purpose. There is no land there of any size which could be bought for less than the value of the surrounding land.

1491. Still, if you could get £250,000 for a quarter of Hyde Park, would that not go some distance towards buying some open space? Yes; it will buy a number of open spaces.

1492. Would it not be an improvement to West Sydney? Yes; but I would like to point out that the residential population is going out of that part of the city, and it is being utilised for storage purposes.

1493. Are there not a large number of people living near the wharfs and in the neighbourhood of Sussex-street? Sussex and Kent streets are certainly not supplied with recreative grounds.

1494. Take a poor woman at the foot of Druitt-street, where could she send her children? Certainly the Park is practically useless to her.

1495. Would it not greatly mitigate the objection to taking some of Hyde Park if we gave it back in small pieces in other places? I think the objection to taking a portion of Hyde Park is chiefly sentimental, and that your proposal would remove the objection.

1496.

Hon.
J. Norton,
LL.D.,
M.L.C.
2 Mar., 1900.

E. J. Sievers.
2 Mar., 1900.

E. J. Sievers. 1496. What would be the value of the private property lying between Elizabeth-street and Liverpool-street, when you emerge from Belmore Park? About £107,000. The value of the buildings and the land is about equal.

2 Mar., 1900.

1497. When you come to Liverpool-street, is there not some valuable property there which would be disturbed? It would mean the demolishing of the corner of Liverpool and Elizabeth Streets—I think three houses would go there. Then there is the Oddfellows' Hall, which would have to come down, and also several terraces. The strip of the Park between Liverpool-street and Park-street I value at about £60,000, or about £36,000 an acre. Roughly, there is about $1\frac{1}{4}$ acres. The private property which will have to be resumed between Park-street and Market-street will cost £262,000; that is, nearly £60,000 an acre. Then there is a piece of land north of the Government property which I value at about £102,000. There would have to be an allowance made of 10 per cent. for forced sale, and an allowance of about the same amount for damage to business.

1498. Have you allowed for the cost of replacing the High School with another one? The improvements on that property are practically worth nothing. The charge which is made the Commissioners for that property, of £80,000, could be utilised in building another High School, and a much better one. Then there is a piece of land occupied by the Supreme Court and Registrar-General's Office; I think that is worth £30,000. Mr. Vernon estimates the buildings in his books at another £30,000; that would make £60,000.

1499. Do you think that St. James' Church will be damaged? I am informed by the engineers that it will not be.

1500. What do you make out to be the total, including the percentage for forced sale and disturbance of business? The whole of the items aggregate about £800,000. The total for private properties, as opposed to the public properties, would be £550,000, including forced sale. All the private property, in my opinion, could be resumed for that amount.

1501. Attached to the report of the Royal Commission, which consisted of the Public Works Committee, there is a route marked through the western side of the city; but I do not see in the evidence any estimate of the cost of land resumption on that route;—have you had anything to do with that? No, except some vague question which was asked as to what it would cost to resume a strip 100 feet wide on the western side of the city.

1502. Was there an estimate that the land in the west would cost so much a foot? Yes; but that would be useless.

1503. Have you been asked to inquire as to the effect on the rates received by the city if all this property were taken out of private hands? No.

1504. It has not been looked into? No; but I am inclined to think that the reduction would not be anything like the total amount now received from that source, on account of the betterment of a large portion of the property in the neighbourhood.

Norman Selfe, M.I.C.E., sworn, and examined:—

N. Selfe,
M.I.C.E.
2 Mar., 1900.

1505. *Vice-Chairman.*] Have you a statement prepared in connection with a scheme of your own for bringing the railway into the city? Yes; I have prepared the following memorandum *re* city railway, Sydney, New South Wales:—

In submitting to this Committee the scheme for the extension for the railway lines into Sydney, with which my name has been so long identified, I may premise that, although a great variety of changes may characterise other schemes that have been proposed, mine has hardly varied a hand's breadth since it was first made public thirteen years ago.

My general views on this subject were very fully set out before the first Royal Commission in 1890, and as printed they occupy pages 26 to 30 of its report. They were at the same date published in the Sydney daily papers, and have since then from time to time received a great deal of official and public attention. No satisfactory estimates, however, have ever yet been submitted as to their probable cost. I desire to say now that I practically stand by everything I said to the Royal Commission ten years ago, that as I then looked well ahead the altered conditions of the Colony at the end of another decade do not affect the leading principles then laid down, and suggest small modifications in details only. Under these circumstances, I have thought that the Committee would not desire me to repeat at length what is already on record, and that it might be better to open the way to a consideration of my proposals if I were to submit first what I have taken as axiomatic truths in preparing plans for improving the urban and suburban railway services to the metropolis of New South Wales.

Even should it not be admitted that the whole of such propositions are axioms, they will, when set forth, show that the scheme is founded upon a well-defined basis, and they may facilitate the consideration of the whole question before the Committee.

The propositions which follow are submitted as having the force of facts. The statements in parentheses which accompany them may be matters of opinion:—

1. No scheme of railway extension should be based upon the requirements of to-day or to-morrow, but should have in view the possible conditions of the Colony twenty or twenty-five years hence. (A central railway terminus at Hyde Park or King-street would certainly not satisfy the requirements of suburban railway travellers if it was opened at once.)
2. The railways exist for the people, and not the people for the railways. (Therefore, the requirements of the people as represented by the passengers who travel by the trains should be the first consideration in the adoption of any scheme of railway extension.)
3. The evidence of the leading railway authorities, as well as common observation, shows that by far the greater part of the railway traffic is made up of regular travellers who journey daily between the suburbs and their places of business in the city. (If they could continue their journey by train they would prefer it to changing into a tram-car.)
4. The evidence of expert officials supports the contention that no system of tramways can do away with the necessity for an extension of the railway lines northward from Redfern. (Such being the case, the lines should run as near to the passengers' destinations as possible; and it may be mentioned that there are said to be between 2,000 and 3,000 places of business west of George-street, north of Goulburn-street.)
5. No single station or terminus outside the business quarters of Sydney can possibly be of such service to regular daily travellers as a series of stations distributed through those districts of the city where the business premises are situated. (Therefore, a series of stations should be distributed through the city in any scheme to be adopted. See Mr. Rennick's opinion that the western side of George-street is the proper route.)
6. The fact that economy in the cost of management might be effected by bringing the whole volume of the present railway passengers to one central station does not guarantee a continuance of such economy when other suburbs are connected up by railway in the future. (The eastern and northern suburbs are ripe for connection even now, and can both be put on circular lines.)
7. No proposal whatever for the extension of the railway from Redfern to the centre of the city should receive serious consideration unless it shows clearly the routes proposed and approximate cost of further lines in the city necessary for the eastern, northern, Balmain, and Leichhardt suburbs. (These questions have been treated in a very vague and airy way before previous Boards of inquiries, in order, apparently, that the Hyde Park scheme might not be prejudiced thereby.)

8. Improvements in the physiography of the city and its surroundings are matters which pertain at present to the mayor and alderman, and in the future, perhaps, will come under a Greater Sydney Council. (That should not justify railway lines being laid out in a way to cut up and depreciate the value of public or semi-public districts of the city now awaiting improvement, if equal or greater advantages to the community would attend the adoption of another route.)
9. The present terminus at Redfern is situated in a neighbourhood where the two principal streets of the city—George and Pitt streets—converge upon Devonshire-street; and Devonshire-street is the only main thoroughfare which crosses the city from west to east, between Cleveland-street to the south and Liverpool-street to the north. A great congestion of both tram and ordinary traffic characterises this locality. (Therefore nothing should be done to close one of these streets or to make its grade steeper, but rather more open space at the terminus and wider thoroughfares for the traffic should be provided.)
10. The evidence of the principal railway authorities is to the effect that, owing to the proximity of the Redfern tunnel, and to the roads of approach being limited in number, the present terminus is worked under great difficulties and at a great risk of accidents. (Therefore, any grand new terminus buildings that might be erected in front of and to the north of it would probably be looked upon by the Railway Commissioners as "whited sepulchres," unless it was at the same time provided that there should be ample room behind to meet the present and prospective requirements for the shunting and marshalling of trains.)
11. A terminus should, if possible, be approached on the level. This axiom was emphasised by the late Mr. Eddy. (If, therefore, a terminus be sunk 25 feet in the ground as at King-street, or be raised 35 feet in the air as at Garden-road, it would not compare for an instant with the present terminus, extended to level ground on the Benevolent Asylum site.)
12. The experience of other great cities of the world has demonstrated the advantages of circular railways for suburban and interurban traffic, and shows that in most cases the connections from the main to the local lines turn off from the rear, and do not run through the front of the terminus. (No such proper architectural effects could be got at Redfern with the city extension running out of the front door of the terminus, and making it a wayside station, as would be possible if the city lines diverged at Eveleigh.)
13. The railways are supposed to be worked on business principles; they were placed under Commissioners for that particular purpose. (Therefore no proper comparison can be made between the cost of different schemes for railway extensions, if the value of the land required to be resumed for the purpose is omitted from some of the estimates, and included in others.)
14. Brickfield Hill, within comparatively recent years, and the author's memory, was practically a suburb, where water troughs for the bullock teams were set in front of every hostelry. The city has since extended to the south, and is ever extending that way. Devonshire-street is much closer to that part of Sydney centred around the General Post Office than the termini of railways in other countries are to the centres of their greatest cities. (Therefore Devonshire-street, or its neighbourhood, is quite far enough north for a grant central terminus, if we look ever so little ahead to forecast the future expansion of Sydney).

N. Selie,
M.I.C.E.
Mar., 1900.

CITY RAILWAY INQUIRY (Section 1).

Line on West Side of the City.

NOTEWORTHY features of official evidence that has been given with regard to the valuations of land required for a railway extension on the west side of George-street, Sydney, with remarks on the same.

- (a) In the Report of the first Royal Commission of 1891 (page 99), Mr. Foxlee sets down the resumptions necessary for—

Mr. Selie's scheme—Redfern to Argyle-street, at	£1,747,770
And the excavation of "Rocks" site.....	120,000
Making total cost of resumptions	£1,867,770

Observe that this included many acres, which it was suggested by the author of the scheme should be utilised for new streets; but, being a private proposal, no allowance was made by Mr. Foxlee for the resale of the street frontages, and the large part of the area not required for railway purposes (*see* Q. 1469). Such a resale would, however, have been possible if it had been an official scheme. (*See* Mr. Eddy, Q. 1, 3/7/91).

Observe here the inconsistency of estimating for the resumption of 30 acres, and then charging the western railway scheme with it, if only 10 acres are required for a terminus and carriage sheds.

- (b) In the report of the second Royal Commission of 1897 (Q. 1781), Mr. Stephen Perdriau, of the Department of Lands, stated that, in his opinion, the value of the resumptions for a line passing through the city from Redfern to Circular Quay, where the land is privately owned, would not be less than £1,750,000.

In subsequent questions (1797 and 1798) the Chairman took the amount of this witness' valuation based upon land in Castlereagh and Elizabeth streets—*i.e.*, £90,000 per acre—and applied it to a running road down to the Quay on the Darling (harbour side, making the cost of resumption alone (without taking severance into consideration) amount to

Observe here, first, this estimate does not include the "Rocks" site, which was included in Mr. Foxlee's estimate of 1891.

And if to this is added Mr. Perdriau's estimate for the "Rocks," as per Q. 2280, on a twenty years' purchase

The total cost of necessary resumptions would appear as

Secondly, this estimate for the running road is apparently based upon a length of 130 chains by 100 feet wide, equal to 20 acres at £90,000 per acre (*see* Appendix J, and Q. 1797). Thirdly, this would make the average estimated cost of the resumption required for a line by the western route come to £210 per lineal foot.

- (c) As an illustration of the extraordinary fallacies which underlie the above valuations when applied to Mr. Selie's proposals (and omitting for the present further reference to the fact, that under such a scheme there are at least 40 chains out of the whole 130 on his route which do not affect private property at all), it may be here mentioned that no consideration appears to have been given to the important point, that such a length of resumption would carry the rails to Argyle-street, nearly twice as far from Redfern as to St. James' Road. Now it is understood that the City Council will lease the basements of the Victoria Markets for £2,000 per annum; this amount capitalised would be, say, £50,000, and that sum divided by the length of the building (500 feet) gives £83 6s. 8d. per foot, as the capital price to be paid for both the land and the building, instead of the much greater sum of £210 per foot for the land alone. *Verb. sap.*

- (d) As neither of the Royal Commissions went over the ground, or had the route of Mr. Selie's proposed western scheme surveyed before it was officially reported upon, the valuations actually submitted were rather for theoretic or imaginary routes, and not for exactly that one contemplated by the author. Although his scheme has now been before the country for over ten years, no proper steps have yet been taken to obtain an official and satisfactory valuation of the route approved by him, and he would most respectfully ask the Committee to allow him to show them over the ground during the course of this inquiry.

The author has pointed out this route to Mr. G. H. Reid and to Mr. Rennick; but Mr. Perdriau says in his evidence, 19th August, 1897.—"I have compiled two plans which show Mr. Selie's and Mr. Greenwood's schemes as nearly as I could ascertain them," and immediately afterwards he puts down £33,000 for the resumptions of churches and schools assumed to be taken, when only £4,000 out of that amount is actually required. Mr. Selie has, therefore, had to obtain valuations at his own expense, and to that end has ascertained the rentals of several hundreds of properties in the city. No reflection attaches to Mr. Perdriau in this matter, as he had no instructions to confer with Mr. Selie, and it will be admitted that his general valuation of the "Rocks" sites at £600,000, on the basis of £30 per foot frontage, is probably a very fair one. It has been confirmed by subsequent detail valuations ascertained by Mr. Selie, and will be again referred to.

N. Selve,
M.I.C.E.
2 Mar., 1900.

(c) From the most careful valuation available it is believed that the total resumption of every piece of property affected by the extension of four lines of rails from the railway bridge, George-street, to Druitt-street, including an acre for shunting at and about Goodlet and Smith's timber yard, would not exceed	£220,000
The capitalised value of the market basement.	50,000
The gross value of the buildings under which the tunnel would run from Market-street to King-street is not more than £550,000, and as their street frontages would not be affected (only their basements or cellars being disturbed) it is certain that, including the resumption of some blocks for ventilation, the whole compensation involved in the extension from Market-street to King-street should not exceed	£200,000
Compensation between King-street and Wynyard Square is estimated at	30,000
Total cost of resumptions for route, Redfern to Wynyard Square station.....	
Seven and a half acres of the "Rocks," bounded by Essex, Cumberland, Argyle, and Harrington Streets, for stabling or car sheds.....	£220,000
Approach from Wynyard Square.....	114,000
Excavation of smaller area	66,000
	£400,000
Making a grand total cost for the resumptions, Redfern to Argyle-street, with land for shunting yards and three stations	
(Or less than one-half the official estimates).	£900,000
(f) If the proposal for improving the northern part of the city, in conjunction with the railway extension, and for resuming 30 acres at the "Rocks"—instead of only 7½ acres—is looked into, then—	
The resumption on Mr. Perdriau's basis would cost	£812,500
The excavation on Mr. Foxlee's estimate	120,000
Total cost of levelled site	£932,500
This total area of 30 acres, however, will provide for a new street, 80 feet wide, extending in a straight line with George-street, about 2,000 feet northerly from Essex-street, the area of which would be about	3½ acres.
Allotments on about 3,000 feet of frontage with a depth up to 80 feet would approximate to	5 "
A strip on the western side of the block along Princes-street would afford a route for 2,000 feet of the North Shore connecting line amounting to (say)	1½ "
Leaving for shunting yards and railway terminus.....about	20 "
Out of the total	30 acres.
As this new George-street would be straight, level, and wide, instead of crooked, uneven, and narrow, like the present Lower George-street; and would be moreover in the centre of the mail steamer and shipping quarter; then £150 a foot would be a modest price for its frontages, and 3,000 feet at £150 would come to	£450,000
Allow for the route of the North Shore extension (not £210 per foot run, as official estimate, but only £50 per foot); then 2,000 feet would equal	£100,000
Which would reduce the actual cost of the 20 acres to be utilised for railway purposes, with 1,000 feet of the street frontage, to	£382,500
Out of the total amount of costs of "Rocks" site, as above	£932,500
Taking the above estimate for resumptions and compensations—	
Redfern to Wynyard-square, as before	£500,000
Twenty acres of "Rocks" site, as before (after resales)	382,500
Approach to "Rocks" from Wynyard-square, as before	114,000
Makes the total resumptions from Redfern, with 20 acres on "Rocks" and new street	£996,500
(g) In all previous inquiries no official credit seems to have been given to the fact that any western extension to the "Rocks" site, through the business centres of the city, would be a longer line of railway than one to St. James' Road; or to the possibility that it would serve many more passengers than those who desire to be carried to the top of King-street. Further than this, it is a fact that in all the estimates presenting the Hyde Park scheme many principal debits for resumptions have been omitted, while with the western schemes (as already shown) the credits have been left out in considering their probable cost.	
The following is probably a fair estimate of what the cost would be for four lines of railway to Wynyard Square, with the Victoria Station between Market-street and Druitt-street, a station at Christ Church, and a terminal station, with 3 miles of standing sidings, on the "Rocks" site:—	
George-street to Market-street resumptions.....	£220,000
Market basement (capitalised).....	50,000
Additional to and conversion of same	21,500
Works, George-street to Market-street.....	122,500
Christ Church Station	10,000
	£424,000
Market-street to Wynyard Square, compensations and resumptions for ventilation	£200,000
Double tunnel	72,600
Permanent way	3,630
Wynyard-square Station	23,770
	£300,000
Wynyard-square to Grosvenor-street	£26,500
Twenty acres on the "Rocks," levelled with frontage to New George street	382,500
About 4 miles of roads and sidings and carriage sheds	100,000
	£509,000
Total cost of city extension, 1¼ mile from George-street bridge to Argyle-street	£1,233,000

Say one million and a quarter, for a line running westward of George-street, right through the city in its densest part; and having still further to the west of it—and north of Goulburn-street—over 2,000 places of business. A line which has the further advantage that it will connect directly with future lines to the Circular Quay and to the North Shore; and will become an integral part of a circular line that will unite the eastern suburbs with Redfern, via Kensington and Eveleigh.

NOTES ON CITY RAILWAY INQUIRY (Section 2).

Improvements at Redfern in connection with city extension:—

- If all the suburban railway passengers are to be taken north from Redfern into the city, then it is certain very little alterations will be required for some time to come, to enable the present station to accommodate the smaller traffic represented by the purely country and intercolonial passengers that will be left for it.
- No more patchwork than possible should take place at Redfern until something is decided upon; anything done there from this time forward should be part and parcel of a completely matured scheme, based upon the accommodation likely to be required up to from twenty-five to fifty years hence.
- As at present the difficulties at Redfern arise largely from the contiguity of the tunnel, and the constriction of the traffic thereby into six lines of roads only—as clearly shown by Mr. Eddy and Mr. Parry—no devolution of a new and grand terminus should be attempted without first providing abundant and easy access to it. Any short-sighted policy which would defer this important matter until after a new terminus was built and brought into use would be calculated to lead to enormous additional cost and inconvenience. (d)

- (d) As any improvements between Eveleigh and Devonshire-street would immensely improve the access to the platforms at the terminus, and would also lower and improve upon the present steep grade on the Darling Harbour branch, it is manifest that the cost of such improved roads should be distributed among these works, and not be all charged to a city railway extension.

N. Selke,
M.I.O.E.
2 Mar., 1900.

The proposals of the author in this connection are shortly:—

- (1) That the whole of the property between the present railway lines and Eveleigh-street should be resumed, and that property in Regent-street and Cleveland-street also should be resumed; and that Regent-street should be diverted slightly,—the object of the resumptions being the provision of ground for twelve or fourteen lines, in place of the six at present laid from Eveleigh through the tunnel. (Value of these resumptions, 24/8/97, £92,900—Q. 3027).
- (2) That the present tunnel should be done away with, and its chief materials be utilised to make three spans of an ordinary bridge over twelve lines of rails—four lines to a span.
- (3) That the city railway extension lines, both fast and slow, should not pass through the terminus at all, but turn off from the main “fast” and “slow” lines at Eveleigh, and then proceed (by a grade of about 1 in 75) down to George-street, without crossing any of the lines, to the main yard at Redfern, or without in any way interfering with the integrity of the terminus proper, after the system adopted in the great termini of European cities.
- (4) That the Darling Harbour branch should share in the improved grade made possible by carrying the points back to Eveleigh.
- (5) That the railway tracks running towards the terminus from the junction at Eveleigh should be regraded for a sufficient distance to enable the city extension lines to turn out from the main lines without crossing them in any way “on the level.”
- (6) That the George-street bridge should be widened to take six lines of rails, or four in addition to the present branch to Darling Harbour. As these works are necessary for the complete connection of the author's scheme for city railway extension, quite apart from the improvement of the approach to the terminus, and the grade of the Darling Harbour branch, the estimated cost of them is kept separate from that of proposed works at the terminus itself, and will be referred to again in due course.

CITY RAILWAY INQUIRY (Section 3).

Improvements at Redfern in connection with new and enlarged terminus—

- (a) It is obvious that any works required for improving and enlarging the Redfern terminus to the North, can be carried out nearly to completion, without in any way disturbing the working of the present yard and station, if the new terminus buildings are first erected on the north side of Devonshire-street, and then either the present, or a modified arrangement of platforms is afterwards extended over the street to the new ground.
- (b) If a new connection of Devonshire-street is first made from the Railway Institute to the junction of George-street and Pitt-street, at Christ Church, then the ordinary road traffic can be diverted clear of the terminus, and afterwards the whole of the intervening space—including the present street—will be free for the undisturbed use of the railways.
- (c) If the platforms are to be lengthened until they are from 600 to 800 feet long, and an “assembly” platform of, say, 80 feet wide, is extended across the ends of them, it will bring the front building on to the high ground at the rear of the Benevolent Asylum, to which access by trams and cabs can be made from the surrounding streets without any steep or special ramps.
- (d) If the entrance to the station for departing railway travellers is made through the booking offices in the front of the main building, and the exit for arrivals by train is to be by stairways from the platforms to a subway which will carry both foot and tramway traffic, then the streams of incoming and outgoing passengers will be kept quite clear of one another, and the delivery and pick-up of the railway trams will be separated and simplified.
- (e) If a large parcel depot is made under the terminus, with a roadway from west to east for the parcel-delivery vans, and also lifts are provided to send up the goods to the various platforms opposite the brake-vans of departing trains, then the present method of wheeling trucks of parcels among the passengers can be superseded if the suggestion commends itself to the Railways Commissioners.
- (f) If it is considered unnecessary for some years to come to erect a costly and appropriate architectural structure at the head of the new terminus, or to roof in the whole of the lines and platforms until the long-distance traffic has developed to a much greater magnitude than it attains at present, then it will be possible to leave the greater part of the terminus open, with simple and comparatively inexpensive booking offices and roofs over the platforms.
- (g) The resumptions, permanent way and platforms, street approaches and sub-ways, would be the same in either case; but the first cost would be much reduced if the erection of the expensive buildings is deferred.

The following is an approximate estimate of the cost of the cheaper arrangement:—

Resumptions, Devonshire and Pitt streets	£90,000
Removal of remains and monuments from cemeteries to Rookwood	10,000
Grading, concreting, and wood-blocking the deviation of Devonshire-street	7,750
Grading and blocking open space around terminus, apart from street	5,000
Additions to platforms	7,200
New permanent-way and interlocking	20,000
Three subways, 30 feet wide, with asphalt floors, &c., with six parcel lifts	17,000
Extension of buildings and roofs	10,000

(Total for minor scheme, say £170,000.) £166,950

If it is considered that any alteration and improvements to be made at Redfern in the near future should include the large structure for railway offices, with clock tower (the building being about 350 feet by 60 feet) and also that the whole of the platforms and tracks of the terminus should be enclosed and roofed over in an appropriate manner, somewhat as is shown by the large perspective drawing No. 15,—then the estimate of expenditure will have to be increased by not less than £140,000.

The estimate for complete new terminus in extension and utilisation of a great part of the present works would thus be under the greater and more complete scheme—

Resumptions, roads, and railway works (as above)	£170,000
Permanent buildings (in addition)	140,000
Total	£310,000

If the resumption of the whole of the grounds contemplated in the proposal for a terminus to face on Garden-road is still adhered to, then the total cost of land so taken would be £140,000, instead of £90,000, and the cost of removing additional tombs from the Cemetery might be another £10,000, making a total increase of £60,000; but with the possession of this ground it would be possible to increase the area of the open plaza in front of the terminus to about 5 acres, to make wide avenues of approach from all quarters on good inclines, and to have between 4,000 and 5,000 feet of frontage to new streets available for disposal in the new city centre thus created.

If only 3,000 feet of that were sold, and at the very moderate price of £100 per foot, then the whole transaction would result, not only in the utilisation of a now comparatively waste area, but it would go very far to pay for the new terminus itself. Thus:—

The total estimate for the terminus was (as above)	£310,000
Extra resumptions to Garden-road, and expenses with cemeteries, &c. (say) ..	60,000
(New streets to be made by Municipal Council in anticipation of rates receivable not charged to Railways)	
Total expenditure	£370,000
Anticipated receipts from sale of frontages after the terminus is erected	£300,000
Net cost of new terminus on the greater scale	£70,000

The

2 Mar., 1900.

The following maps, plans, and illustrations are exhibited:—

1. Map of the country from Botany to Hornsby, showing the present railways and a series of extensions to the surrounding suburbs of which the proposals advocated by the author would constitute integral parts.
2. Map showing a line of city railway extension on the west side of George-street, from Redfern to Argyle-street, with a connection to the North Shore line at Bay-road, possible extension to Balmain, and to the eastern suburbs, *via* the Circular Quay; also, indicating the site of large resumptions suitable for railway purposes and the improvements of the city—on the "Rocks," at the north end of the city. Further, showing a diversion of Devonshire-street with an improved Redfern terminus, and a scheme for laying out new streets in the neighbourhood.
3. Similar map to No. 2, but showing only the city extension proper, with $7\frac{1}{2}$ acres for railway purposes—such as shunting grounds and carriage sheds—at Argyle-street.
4. Map 18ft. long, showing in detail the route proposed for a city line, from the George-street bridge at Redfern to the Queen Victoria Markets; also, the Hyde Park scheme, and Mr. Rennick's suggestion. (Scale, 40 feet to the inch.)
5. Section of the line west of George-street, from Railway Bridge to Queen Victoria Markets; shown by plan 4.
6. Map extending from Eveleigh to George-street and Devonshire-street, showing the resumptions proposed at Chippendale for the connection of the City Railway lines at Eveleigh to George-street Bridge, and for widening the ground for new tracks to the terminus and Darling Harbour. (40 feet to the inch.)
7. Smaller plan showing the proposed enlargement of the terminus, the diversion of Devonshire-street, and the remodelling of the locality. (Scale, 80 feet to the inch.)
8. Section giving grades of the lines from Eveleigh to Devonshire-street for the terminus, and also from Eveleigh to George-street bridge, for the city extension, with provision to allow the fast and slow lines to the city to turn off the main lines without crossing any other lines on the level. (Scale, 80 feet to the inch.)
9. Plan of route with four lines of railway from Queen Victoria Markets to Wynyard Square station. (40 feet to the inch.)
10. Section of the lines from Queen Victoria Markets to the junction of George and Cumberland Streets.
11. Plan of route and continuation of lines shown on plan 9, from Wynyard Square to Dawes' Point, including the "Rocks." (Scale, 40 feet to inch.)
12. Section of a railway line from Wynyard Square across the harbour to a junction with the Milson's Point line, near Bay-road station. (Grade 1 in 50.)
13. A bird's-eye-view of the neighbourhood of the present Redfern terminus, with the Asylum grounds, cemeteries, Belmore Gardens, &c., &c.
14. A perspective of the same site; but showing Devonshire-street widened to 150 feet on the north side, and regraded, an enlarged railway terminus for country trains, the cemetery grounds laid out with the streets and buildings, and a branch with four lines passing under George-street for city extension.
15. A perspective of the same site, but with Devonshire-street diverted altogether, instead of being widened, and made to run from the Railway Institute, north of its present position, to the junction of George and Pitt Streets. Also showing new streets laid out with public and private buildings, and imposing terminus buildings.
16. A bird's-eye of the "Rocks" district—extending from Charlotte-place to Dawes' Point, and from Circular Quay to Fort-street—as it is at present with its maze of lanes and alleys set forth in detail.
17. A perspective of the same site as it would appear if it were remodelled, with an extension of George-street over the site of Harrington-street, with railway yards and terminal station, and with an extension of the railway lines to a North Shore bridge.
18. A diagram showing by comparison the relative sizes of the present Redfern terminus, a Redfern terminus enlarged without crossing Devonshire-street, and the proposed Hyde Park terminus.
19. A duplicate plan of part of plan No. 6, showing an alternative arrangement of the lines branching off for the City and Darling Harbour.
20. Plans and sections of the Mansion House station when it was the terminus of the Metropolitan Railway, London, and the basement of the Queen Victoria Markets, Sydney, arranged as a railway station. This plan shows that the Sydney station, if constructed, would be twice as large as the very important one in the heart of London City.
21. A perspective view of a North Shore Railway and Road Bridge on the "Double Cantilever Principle," as suggested by the author in 1891, to the City Railway Royal Commission.
22. A new design for a bridge with steel arches, embodying the latest ideas in bridge building, now officially submitted for the first time; as being suitable for connecting the city with the North Shore.
23. The ground-plan of the Queen Victoria Markets, modified to make it suitable for a railway station, with four lines of rails and wide platforms. (Large working plan lent by courtesy of the Mayor.)
24. A cross section of the Queen Victoria Markets, with additions under George-street, and showing four lines of trains passing through the immense station in the basement. (Companion to No. 23.)
25. A plan showing all the resumptions required for four lines from Redfern to Bathurst-street, with the possible valuations of the several blocks.
26. A plan showing how the through station at Wynyard Square, as per plan No. 9, can be made a terminus 740 feet by 320 feet, if required in future years, by resumptions in York-street and Margaret-street.

TUESDAY, 6 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Norman Selfe, M.I.C.E., sworn, and further examined:—

N. Selfe,
M.I.C.E.
6 Mar., 1900.

1506. *Mr. Shepherd.*] Would you give the Committee a detailed description of your proposal as we inspected it on Saturday? I left off on Friday without reading the list of plans which are exhibited. I will now refer to these plans in detail. I start putting my opinions on record with the Plan No. 1, which is a map of the whole district around Sydney as far north as Hornsby. On this plan you will notice Milson's Point and the North Shore line running up to the Hornsby Junction. At present the Government own two lines of railway from the city up to Pennant Hills, where they are close to the district known as Castle Hill. The plan shows the whole of the country from Milson's Point right round, *via* Strathfield to Sydney, and shows, further, that by a connection over a bridge through the western side of the city the route would make a complete circle, from which circle a future line could diverge to the Castle Hill and Dural districts. Then there is the Balmain district and Leichhardt, which at present has a population of about 30,000 people. The survey already exists for a line down the north-west side of Balmain to Long Nose Point, and a very short connection across the harbour to that line from my route would make another complete circle. That would give the people in this district communication in one-fourth the distance they have to travel at present to Sydney. This western scheme dovetails with all those schemes. The eastern suburbs scheme would be no different under my proposition to what it is under the Engineer-in-Chief's proposition, except that instead of turning into Hyde Park from the north,

so that there would have to be a great deal of shunting in order to get to Circular Quay from Randwick or Waverley, it turns off from Circular Quay itself, where there is to be a station, and completes the circle by a junction with the present lines at Erskineville, so that anyone living in that district could travel in two directions to the city on either the inside or outside of the circle. It is well-known that if this circular line were completed now it would be a paying line. It was thought that it would pay ten years ago, and the population has increased wonderfully since then.

1507. Where would it strike the main line at the southern end? At Eveleigh Station, or really at Erskineville Station. There is really no difference of opinion about the eastern suburbs line; it has been surveyed and approved of by the Railway Commissioners and the Engineer-in-Chief for years past. Plan No. 2 shows a map of the city of Sydney with the whole of the land coloured red that would be required to be resumed in order to carry out my complete scheme, including improvements at Devonshire-street, the resumption of "The Rocks" and new streets laid out in both localities for the remodelling of the city. As that may not come within the exact scope of the Committee's inquiry, I have made Plan No. 3, which is the same as No. 2, except that it omits everything but what directly concerns the working of the railway, allowing $7\frac{1}{2}$ acres at "The Rocks" for carriage-sheds and shunting. It refers only to an extension from Redfern to the carriage-sheds on "The Rocks," with no improvements to the city, or any modification of the Redfern terminus. No. 4 is a large map, 18 feet long. It shows every piece of property to be resumed on the route, which the Committee went over on Saturday. The line starts at the railway-bridge crossing George-street, thence it goes to the sale-yards for poultry; it crosses Quay-street, running parallel to Thomas-street, which falls about 15 feet; then across Engine-street by a bridge. Underneath the plan I exhibit the section of the line No. 5. Between the bridge and Engine-street there is an embankment, with the station on the top of the bank, very similar to the present Burwood station. Engine-street is crossed by a girder bridge. The railway running from Engine-street is on a viaduct running from 30 to 35 feet above the level of the street, crossing Hay-street on one span; then through vacant ground and wood and coal yards to Little Hay Street; then through very poor property to Factory-street. The corner of Goulburn and Dixon streets is crossed on an angle. The line passes at the back of the Trades Hall, and through Messrs. Foley's factory to Sussex-street. Then it crosses Sussex and Liverpool streets diagonally through the Mission Church, passing at the back of Tillock's store in Kent-street. By this time the ground is rising, so that it may be desirable to lower the end of Kent-street slightly. Crossing Kent-street it strikes into the lower end of Goodlet and Smith's yard, which rises at such an angle that when it is excavated to the level the upper end will be deep enough to allow the line to pass under the branch Bank of New South Wales through a short tunnel under George-street to the basement of the Queen Victoria Markets. The Committee will see that, while the streets run down to a low level from Redfern to the Haymarket, the railway line keeps practically level, there being a 1 in 80 rise to get up to the station at George-street bridge; 1 in 90 from Goulburn to Sussex streets; and 1 in 80 in Goodlet and Smith's yard. The rest is practically level, being 1 in 138. From this it will be seen that I have no difficulty in getting the line in by that route. The estimate of the total resumptions between George-street and the Markets, marked in detail on Plan 25, is about £220,000. I do not put in my valuations of land as an expert, I base them on a rental of twenty-two years' purchase—that is, 5 per cent, with 10 per cent. added. I have gone to the expense of having this large plan (No. 25) prepared, in order to assist the official valuator in seeing what particular pieces of land will be affected or require resumption. The £220,000 refers to nothing else but the resumptions from the west side of George-street, at the railway-bridge, to the Queen Victoria Markets. Plan 6 is a map from Eveleigh to George-street and Devonshire-street, bringing the line from Eveleigh Station to where No. 4 Plan commences, and showing the whole of the railway lines and adjacent properties from Eveleigh Station to Devonshire-street. Exhibit No. 7 is a smaller scale plan of the proposed new terminus on the Benevolent Asylum site, with the diversion of Devonshire-street and new streets of approach, and No. 8 is a section which shows the present and proposed grades, with the present and proposed terminus. Under this plan and section it is proposed to resume sufficient ground from Eveleigh Station to enable twelve, or even fourteen lines, to be run where there are now only six, it being intended that four of these should be for purely local traffic in the city extension. With the ground available it is possible to make the lines which would run down to George-street (where they would be about 30 feet lower than at the present terminus), in such a way that they will not cross the lines to the main station on the level. From Eveleigh there is a gradual descent of 1 in 73 to George-street bridge. The line to the terminus runs up at 1 in 70 until it is able to pass over the top of the city extension, and then it runs on practically level to the terminus.

1508. How do you deal with the Darling Harbour line? The Darling Harbour lines and the city lines will practically run together. There will be six lines instead of four, only two of them will be the present lines modified. The present Darling Harbour lines come to the surface—that is, they join the main line—at a point just at the northern entrance to the tunnel. The line is extremely steep. By carrying these lines back to Eveleigh they will work on the same grade as the city lines.

1509. Is your proposed line on the same level as the Darling Harbour line? Yes. From Eveleigh to the George-street bridge it would be practically making six lines where there are now two.

1510. *Dr. Garran.*] Do you improve the grade of the Government line as well as for your own? Yes. I understand it is a great disability to the present Darling Harbour line to have such a heavy grade; but the alteration could not be undertaken as a work by itself except at great expense, whereas if it is undertaken in conjunction with the city line, the extra expense would be very little. Plan No. 7 shows that by extending the lines and platforms of the present terminus across Devonshire-street on to the high ground of the Benevolent Asylum site, you could build a terminus to which access would be possible from all sides without steep or artificial ramps. The drawings show a double tram-line, bringing passengers to the station, running in front of the main building, and passing round by an easy curve it returns by a subway (on or about the site of the present Devonshire-street) under the terminus building. In that way all passengers arriving by train would pass down from the platform by stairways to the trams which would convey them to the city, and they would in no way come in contact with the passengers arriving at the terminus for the outgoing trains, which is the cause of so much trouble at the present terminus. If the terminus is carried on still further to Garden Road, it makes a difference of about 35 feet between the street level and the platforms, and it presents a great many difficulties which do not belong to the scheme for having the terminus on the Benevolent Asylum site. Another feature of my scheme is the proposal to utilise what will

N. Selve,
M.I.C.E.
6 Mar., 1900.

N. Selve,
M.I.C.E.
6 Mar., 1900.

will be a large open space under the station (now Devonshire-street) by converting it into a huge parcel depôt, from which all passengers' baggage and parcels would be sent up to the different platforms by little platform lifts, and thus do away with the necessity for wheeling trucks with parcels and goods among the passengers on the crowded platforms. Plan No. 9 is a large one, drawn to a scale of 40 feet to the inch. It shows the proposed situation of the line from the Queen Victoria Markets to Wynyard-square, and thence onward to the terminal ground, on the site known as "The Rocks," with a continuation to North Shore by a bridge, and an extension across Circular Quay to the eastern suburbs. Dealing for the present with the extension to Wynyard-square only, the line turns out from the Queen Victoria Markets and passes under what are now known as Kidman's Buildings, which, I think, should be resumed for ventilation. Then by a curve in double tunnel under Lassetter's and adjoining buildings into York-street. York-street, as shown by a section in the report of the First Royal Commission, of 1891, is amply wide enough for four lines of railway without encroaching on private property on either side, at any rate from King-street to Barrack-street. From Barrack-street the line curves into Wynyard-square, of which it is only proposed to take sufficient to give two double lines and platforms, making it really a wayside station. As the question may arise, would it be possible, if the railway were brought to Wynyard-square and the traffic developed very much to make a much larger station there, I have prepared a rough plan this morning, No. 25, to show that if, in ten years, Wynyard-square were unable to cope with the traffic, it would be possible, by resuming the buildings between York-street and Clarence-street, from Margaret-street, back to Barrack-street, and making Clarence-street 100 feet wide, to erect a station 740 feet by 320 feet, which, I think, is larger than the station proposed alongside St. James' Church. It would be very little hindrance to the city traffic to shut this short length of York-street, because by making a short diagonal from the corner of Barrack-street across to the corner of Clarence and Erskine streets, that would be a more direct route for people going to the Balmain ferries than it is now. That I look upon as merely providing for future possible contingencies. I would like to point out that by this proposed railway across Circular Quay, with a station at John Bridge's wool stores, that such station would be immediately opposite the Water Police Office, and closely adjacent to all the harbour-river steamers. I take it that there is as much reason for considering the people who live in the water suburbs as in some of the land suburbs, because there is a tremendous traffic every day from the eastern and the western suburbs to the steam-boats, and any system which left a wide gap, such as that between Hyde Park and the steamers, would be defective. Under this scheme the western line would have a small terminus on "The Rocks." This is where, when the first proposal was made ten years ago, it was proposed to put three lines of traversers. It was held by some members of the last Public Works Committee that that site would not be big enough for the traffic; but as I pointed out, I never attempted to give any opinion as to managing the traffic. If six lines are not enough there is room there for twenty. I leave it to the proper authorities to say how many platform lines should be there. That station, as shown, would run from the Fire Station on Circular Quay to Argyle Cut, and would be a sufficient distance back from George-street on the site of Harrington-street, the map also showing the proposed new George-street, running through Ives' Bond, and coming out at Lower Fort-street. It would be at the level of Argyle Cut, where it crosses there, and it would be 8 or 10 feet above the present George-street. The present George-street descends from Bridge-street down to Queen's-place, whereas the new George-street would be level from Argyle-street. A certain amount of land on the western side of the railway, and the whole on the eastern side, would be available for other purposes, and instead of being worth only about the value of the resumed properties, I think, as a citizen of nearly fifty years' experience, that for the shipping offices and business places of that kind it would be a most valuable property.

1511. *Mr. Shepherd.*] Do you propose to go underground all the way from the Victoria Markets to Argyle-street? No; only underground to Wynyard-square. It will be seen by No. 10, which is a section of the route, that starting from Market-street there is an open space at Kidman's. There is an open space for ventilation about half way between Market-street and King-street, and another open space between King-street and Barrack-street. The whole of Wynyard-square is open. The whole of the ground between Margaret-street and Margaret-lane is open. Then there is a bridge over Margaret-lane. There is a bridge over Jamieson-street, and Jamieson-street opens out into a pear-shaped end. Then there is an open space through old St. Phillip's triangle of ground. There is a short tunnel to bring it out on to "The Rocks" site proper, which is at the back of St. Patrick's Church. It runs into a short tunnel until it gets clear of St. Patrick's Church. When it gets through it is practically open the rest of the way, only running over Essex-street by a bridge. Altogether, from Redfern to the terminus, there is not as much tunnel as there would be in getting from King-street to Circular Quay under the Hyde Park scheme. Plan 11 shows the route from Wynyard-square to Dawes' Point, and to the station at the Water Police Court; but as its principal features have been described when referring to No. 9, it is not necessary to repeat them, and I would only point out that the branch to North Shore would run parallel to Princes-street on a grade of 1 in 50. No. 12 is a section from Wynyard-square to the Bay-road station on the North Shore, and shows that by a grade of 1 in 50, which is the ruling grade on the North Shore line, this line could join the Milson's Point railway at or about Bay Road station without any additional resumption, so far as the Sydney side goes if the whole of "The Rocks" site in the large scheme is taken. In the plan No. 11, two lines are shown running along the east side of Princes-street. They would be underground where they pass Charlotte-place, but they would rise above the ground when they pass Essex-street, and then they would be on the surface of a cutting for a short distance. At Argyle-street they would be practically on the same level as Princes-street. From there they would continue to rise until they were 130 feet above the water at Dawes' Point at the water's edge. That would give 160 feet to the third arch of the bridge (exhibit No. 22), which is in perspective. Of course, there is a great difference of opinion as to what height the bridge should be. I have had many conversations with ship-masters, having had a large experience with shipping in my position as scientific engineer in Mort's Dock Company for so many years, and I am of opinion that to erect a bridge 180 feet high would cost more per day for interest and extra haulage than it would cost per year to lower the masts of ships which might go under a 160-foot bridge. That is a very important point for the Committee to consider in discussing the railway, because it has been made out that it would cost a great deal to lower ships' masts. The cost of lowering a ship's mast might be £5 or £10. If there were 100 ships per day incurring that expense it might be important; but there might be only two or three in a year. I find that the "Olan Buchanan," at Dawes' Point, which is now flying light, is 162 feet above the water at the highest point. The plan
before

before the Committee has been prepared with the idea that it would be better to spend a few pounds in lowering ships' masts than to spend an additional £200,000 in building a bridge high enough to allow of the passage of any possible ship. Exhibit No. 13 has reference to the present site at Redfern. It is a bird's-eye view of the burial ground and Benevolent Asylum, and all intervening sites between Devonshire-street and Garden Road. Exhibit No. 14 was prepared some years ago for illustrating the proposal for a new terminus without the deviation at Devonshire-street. Exhibit No. 15 is a bird's-eye view, which I now submit to the Committee as being an improvement on the one submitted ten years ago, inasmuch as it gives a much greater open space in front of the terminus. There would be in front 500 feet plaza, and very large ways of access. It shows pictorially the features which I have referred to, with the trams coming up to the front of the building and then turning underneath; also the provision for parcels, and plenty of room for cab-stands.

1512. Where is that supposed to be? That is at the junction of George and Devonshire streets. The picture also shows the city line turning off just there. I do not speak dogmatically about the situation of the station at Thomas-street, because the Commissioners might prefer to have the station on the eastern side of the railway bridge in the position, so that the porters could change from the main station. The next plan, No. 16, is one which has been exhibited before; it shows every house on "The Rocks," with all the lanes—some of them only 7 or 10 feet wide. The peculiarity about the locality is that by buying 15 acres you would get about 11 acres of streets thrown in. No. 17 is the companion bird's-eye view showing entire "Rocks" site laid out afresh, with a new George-street railway terminus and branch line to the North Shore bridge. The next plan, No. 18, is a diagram comparing the Redfern and Hyde Park terminus. A great deal was said about the Commissioners carrying on the traffic for twenty years with the land which it was proposed to take from Hyde Park, and about there not being sufficient ground at Redfern. This diagram goes to show that by a very little addition at Redfern you could take in more ground than the whole that it was proposed to take from Hyde Park. The next plan, No. 19, is an alternative arrangement of the lines between Eveleigh and Devonshire-street, requiring a little more ground than under plan 6, but less costly works. No. 20, has been prepared in case exception was taken to the Queen Victoria Markets being sufficient to accommodate four lines of railway. This diagram shows the Mansion House Station as designed by Sir John Fowler and many other eminent engineers, which has worked for many years as a terminus, and since as a chief metropolitan station in London. It shows that the markets are longer than the Mansion House Station. At the latter station there are trains running in every three minutes. The same plan could be carried out at the Queen Victoria Markets, and there is a great deal more room to do it. In my scheme I have had in view the use of coal for the engines; but I believe that by the time the eastern suburbs railway can be built, even supposing it is decided now to do so, we would be ripe to run the trains by electricity. The next two plans, Nos. 21 and 22, are two designs for bridges. The cantilever one was designed some years ago when such designs were in vogue. It was not then known exactly what the difficulty would be in getting across the water at that particular site. The Government have since had the bottom of the harbour surveyed, and it is now found that the foundations would have to go 160 feet below the water-level. It therefore becomes desirable to do away with piers altogether, or to have as few as possible. The three-arched bridge shown on plan No. 22, is after the style of two bridges just erected over the Niagara Falls, and two over the River Rhine. It is designed to take advantage of the very latest system of bridge building, both American and Continental. Sentiment is sure to be a governing factor in such a question as a bridge; and speaking as one guided by sentiment, apart from my engineering ideas, I say that a one-span bridge across that space would be a very great mistake, because it would destroy the poetry of the whole scene. When you realise that you could pass St. James' Church under these arches, and that each of these towers is as high as the Post Office tower, you can get an idea as to what it would be if the bridge went over the top of the piers, because if a suspension bridge is put there to meet the conditions in the designs the Government are now calling for, the towers would probably have to be over 300 feet high. A design is called for with 180 feet clear headway. The next two plans, Nos. 23 and 24, have been furnished to me by the courtesy of Sir Matthew Harris, the Mayor. They are the contract plans for the City Markets, so I know that they are correct. They show what very small alterations would be necessary to make the basement into a railway station. The City Council in its wisdom made the basement very deep, which was a wise thing to do, even though full use is not made of it at present. That facilitates the conversion of the basement into a railway station. The section No. 24 shows four full-sized railway carriages, and members of the Committee will see how small they seem in proportion to the immense area available, the platforms being about 30 feet wide. The easterly line is under George-street, excavated, and the estimates include the sum of money necessary to add to the basement. By putting only three lines through the building instead of four, none of the main supports are interfered with. No. 25 is the plan of resumption, with their values marked, I have before referred to. No. 26 is the plan of Wynyard-square which I have already referred to. The exhibit No. 7 is really a plan by Mr. Deane, which the Secretary of the Committee has kindly obtained for me. I have put on it the new terminus at Redfern, showing, by a tinted mark, where my terminus would come, and where Mr. Deane's terminus would come to. The part tinted brown would be the part which would be available for resale, if the whole of the block up to Garden-road were resumed. I have taken the whole of the resumptions at the official valuations, as printed, for the terminus at Garden-road, but I have put down about £20,000 for removing the remains from the burial ground in addition. I do not notice in the estimates connected with the different schemes propounded officially anything for that purpose; but I have taken here the resumptions given by the Government Valuator, presuming that they are correct, and then I have credited this scheme with the resale of certain frontages at the price put down in my evidence as printed and now before the Committee. I am quite prepared to be shown that I am a little out in my valuations for resumptions, as I do not speak as an expert in such matters.

1513. How long is it since your valuations were made? From six to twelve months ago.

1514. *Dr. Carran.*] You have gone a great deal into detail, let me ask you, now, to take a general comprehensive glance at your scheme, as a whole; comparing the West Sydney route with the East Sydney route, I understand you first propose to begin at Eveleigh, resuming land at the side of the present line? Yes.

1515. Then you multiply the number of lines, and you make six lines to go under George-street as well? Yes, altogether.

1516. Do you propose to leave the hay and corn shed as it is? Yes.

1517.

N. Selfe,
M.I.C.E.
6 Mar., 1900.

- N. Selfe,
M.I.C.E.
6 Mar., 1900.
1517. Then you make a new station by extending the present station to some distance across Devonshire-street? Yes.
1518. You mean that, I presume, for the long-distance traffic? Yes.
1519. Therefore your scheme proposes a separation between the long-distance, short-distance, and intermediate-distance traffic? Yes; that is the first point of my scheme.
1520. Then you abandon the idea of making the present yard good enough without crossing Devonshire-street? Only in deference to the view of looking to the future. The present yard could be made to do for the next ten years if you divert the suburban traffic; but I say that these improvements at Redfern can be carried out as the Commissioners find that they are required, after they have removed the great bulk of the present traffic, which is the suburban traffic.
1521. Could you for the next twenty years meet all the requirements if your West Sydney line were made without crossing Devonshire-street? Certainly.
1522. And without removing the produce shed? Yes.
1523. If you do not remove that shed, can you get sufficient length for passenger trains 600 feet long without crossing Devonshire-street? Yes; when the tunnel is done away with, because there would be fourteen lines under the substitute for the tunnel.
1524. You have no plan showing a revised station-yard without crossing Devonshire-street? No; there is no necessity for that, because it is very evident that if the constriction which now exists within 600 feet of the platforms were shifted back another 1,000 feet, then what they call the "bottle-neck" would be so many hundred feet further back also.
1525. You would shift all the interlocking at the points to the south side of the tunnel? I would shift very little, because the long-distance traffic only consists of a few trains night and morning.
1526. Practically, you would only want a few platforms at Redfern? You would not want half the present platforms for a long time, except for holidays.
1527. The other scheme—according to Mr. Eddy—will do for twenty years;—will your scheme do for twenty years without enlarging the present station-yard across Devonshire-street if you make resummptions at Eveleigh Station? It could be made to do it, but I do not think it would be wise. As a progressive people, we should contemplate an important terminal station. Although it is not necessary to make a grand building at once, the cost of extending the platforms over Devonshire-street, and making longer platforms, would be relatively small, and I do not see why that should not be done at once, or at any rate within the next five years.
1528. Considering the fact that the ground on the north side of Devonshire-street is not private land, would there be any more difficulty in resuming it twenty years hence than at present? I had not merely the railway improvements in view in the alteration of Devonshire-street. There is the question of ordinary traffic in Devonshire-street, which is very great. There are the steam and electric trams, as well as the ordinary vehicular traffic, and there is continual risk. Every man who now crosses George-street takes his life in his hands, and it is almost as bad in Devonshire-street. The deviation which I have shown would be a great advantage to ordinary traffic. It would pay for itself, and it would go a large way towards paying for the terminus—that is, if my figures are borne out as to what the land will be worth.
1529. Would not land be worth as much in twenty years as it is now? It will be worth more.
1530. I wish to get from you that, as far as the mere difficulties of the railway are concerned, you could do without crossing Devonshire-street? Yes; for some years to come. I am only assuming that we may have good times again in Sydney, such as we had fifteen years ago, and it would then be a very small matter for the Colony to put this work in hand. At present I do not think that the country would be justified in spending a great deal of money at Redfern for works, if provision is made for the traffic by securing ground.
1531. Looking to the future, you are of opinion that Redfern Station must some day cross Devonshire-street? I would not say that it must, but I think that it would be desirable.
1532. If that be so, the question would be merely, shall we do it now, or wait until we are obliged to do so? There is one governing factor—the Commissioners I understand are very desirous of being housed in a building of their own. The large building shown in plans Nos. 7 and 15 is intended to afford accommodation for the railway staff. That might influence the matter.
1533. I think they are not so desirous of going to Redfern as of having a building of their own at St. James' Road;—it is more important to them to be close to the business people than to their own officials? Then perhaps they had better take the whole of the Victoria Markets, and so ease the citizens. There is plenty of room there, and they would make splendid offices.
1534. Taking your plan as it is, have you any estimate of the alterations as far as Devonshire-street, supposing you do not cross it, and another estimate in your plan of crossing Devonshire-street for some distance? Yes. The total estimate to complete new works and the extension and utilisation of a great part of the present works would be under the lesser scheme. That is only to carry the platforms across—to carry them over with temporary roofs, the same as the present head station at Redfern, instead of putting this main roof and big building as shown on the picture. That would be for resumption, roads, and railway works, £170,000; permanent buildings, £140,000. That is only for taking the land required for the terminus, £90,000. If you take the whole of the land shown on these plans and erect a building for £70,000, with a tower, and put a roof over, you will increase the expenditure to £370,000.
1535. That would be quite irrespective of the city line at all? Yes.
1536. One witness told us that it is a mistake to roof in a terminal station, as it keeps in the steam and corrodes the iron? I do not think it is necessary in our climate.
1537. Would it be quite sufficient to roof it in as we do the wayside stations? Yes; that would save £30,000 or £40,000. If extra money is paid to acquire land at the terminus, I estimate that you could sell 3,000 feet frontage at £100 per foot. That would give a larger terminus roofed in for £70,000, instead of a small one which would cost £170,000.
1538. I see you have a great idea of recouping the cost by the resale of land;—is that why you have gone so short a distance, so that you may have a larger amount of land to resell? No; it is in order to get a better access to the station. By going to Garden-road the railway platform will be 40 feet above the level of Anthony Hordern's front door.
1539. Are you aware that the Department have prepared two plans—one to go half way to Garden-road, and the other to Garden-road? No.

N. Selfe,
M.I.C.E.
6 Mar., 1900.

1540. The plan for taking the line over Devonshire-street half way to Garden-road carries the line further than you do, and therefore it would leave less land for sale? That might be only a modification of detail. The only Government scheme I have seen propounded is one going to Garden-road. My scheme, which has been out for years, was only for going sufficiently far to get on the high ground, so that trams and cabs could go up as nearly as possible to the level of the platforms.

1541. Practically, would the grade be the same as we have now from George-street up to the Benevolent Asylum? Yes; it is 1 in 24, I think.

1542. Does £310,000 represent merely the cost of new Redfern Station and its approaches? Yes.

1543. You have not included the four additional lines under George-street, or dealing with the Darling Harbour branch? No, because they belong to the city extension. I have always commenced at the railway bridge, seeing that from the railway bridge to Eveleigh is on the Commissioners' own ground, and the improvements going out to Eveleigh Station should be charged as much to the terminus almost as to the other. It improves the approach to both. It is a question open to consideration as to how much should be charged to the city railway. In the same way some of the cost should be charged to the Darling Harbour line. I will prepare estimates as to the cost of the different sections.

1544. Comparing the eastern and western routes, could your line as far as the markets be fairly compared with the scheme of the Commissioners stopping at Park-street? I think my scheme would really go as far at the Markets as the St. James' Road scheme would go. Under the latter, the passengers would really be carried no further than Market-street. They would be practically the same as far as north and south goes.

1545. Then, as far as cost is concerned, you might contrast the two lines up to that point? Yes.

1546. Then it would be simply a question as to which would cost the most, and which would accommodate the most? Yes; only that I make no pretence that the Victoria Markets would be a terminus; it would be merely a wayside station.

1547. Supposing you stopped at the Markets, as the Commissioners stop at St. James' Road, could you, even with traversers, with your limited amount of room, accommodate the traffic? I do not think you could accommodate more than twenty trains an hour. According to Mr. Eddy's evidence you could accommodate forty, but I will say half that.

1548. Supposing you wanted more room, could you get it in George-street without interfering with the sewerage? Yes; I propose to go into George-street about 20 feet.

1549. Before you get into the Markets, will you explain why you are bound to go into George-street in front of the Town Hall, instead of getting in at the back of the Town Hall? The principal object in keeping in front of the Town Hall is to avoid paying for ground between Bathurst-street and Druiitt-street. Secondly, you avoid sharp curves. To get to the back of the Town Hall you would come on to the property at an angle, and you would have to resume a block which, according to the evidence given before the last Public Works Committee, would be very costly. At that time the Markets were only just begun. I stated that as I knew nothing about the plans of the Markets I could not say whether my old idea of seven years previously could be carried out—that was, to utilise the site when it was only a police court. I put a red line on the map showing a possible alternative route at the back of the Markets. That was taken as my scheme, and a great deal of the report of the Committee dealt with that alternative route, which I never surveyed, and never set out in detail.

1550. If you went to the back of the Town Hall, could you get under the Markets without a sharp curve? It is absolutely impossible, unless you went under the Town Hall.

1551. Paying a rental of £2,000 a year for the basement would be cheaper than buying the land on the other side of York-street and making a station there? The cost of that is in the report of the last Public Works Committee. There is not much difficulty in turning off from Liverpool-street and getting at the rear of the Town Hall, but it crosses Liverpool and Kent streets at an angle. That would necessitate resuming an immense amount of property there at the back of the Town Hall. You must go either under the streets or over them. Owing to the steep fall of Druiitt-street and Market-street, you must have a station that would be below the street on one side and much above the street on the other. Then you would have to close either Kent or Clarence streets to get a station of any width. It does not work out at all well. At the same time, if the Government engineers can find a better route than mine, I shall be only too glad to admit it.

1552. As far as you see at present, both as a matter of cost and engineering facility, it is better to go to the front of the Town Hall than to the back? Yes.

1553. How are you going to get rid of the steam and smoke in the basement of the Markets? The distance is so short from Goodlet and Smith's yard, where it would leave the open, that the tunnel would present no inconvenience to passengers. But for the smoke that would naturally arise from engines standing in the markets, there are great facilities in the construction of the building itself to get rid of it. Over the chimneys of the engines there would be large funnels, as in round-houses. It is very common in buildings in which engines stand for them to be run in so that their chimneys stand under a funnel leading up to a ventilator, so that all the smoke passes away.

1554. Would you require any artificial draught? I do not think so. There would be great natural draught with the prevailing winds, and a proper ventilating shaft at Kidman's buildings which would exhaust all the foul air and smoke.

1555. Would there be sufficient length in the basement of the markets? There is 600 feet in the building, and the platforms could be run into the tunnel as much longer as might be required.

1556. What about light? The basement is well lighted, even on a dull day. I would reckon on several of the shops being utilised for ticket arrangements, and at the back they could be utilised for ventilating shafts up to the top of the building.

1557. Would the existing lifts in the basement be available? They would have to stop at the ground-floor. It would be very easy to put in other lifts to take the passengers from the basement, but they would be of different construction.

1558. Would you have room for them? I think so.

1559. Do you think that the trains underneath—the noise, vibration, heat, and smoke—would destroy the lettable value of the shops, or would the railway traffic make the shops more valuable? That is a question on which there might be a great difference of opinion. I have heard people say that the shops would be worth double their present rental value if there was a railway-station there. I do not think the noise would amount to anything; I do not think it would depreciate the value of the shops.

WEDNESDAY, 7 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD, | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large central station.

Norman Selfe, M.I.C.E., sworn, and further examined:—

N. Selfe, M.I.C.E. 1560. *Dr. Garran.*] Have you prepared figures as to the entire cost of your scheme from Eveleigh to the Markets? Yes; I have prepared the following figures:—

7 Mar., 1900. THE Committee having asked for estimates commencing at Eveleigh Station, I give in more detail the probable cost of the different sections, and the complete scheme.

The resumptions necessary to make fourteen roads between Wells-street and Cleveland-street would, according to my original estimate, cost £86,000, and according to Mr. Perdriau's, £92,900.

If we allow a little extra for contingencies, and take the figures as £98,000 for fourteen lines, it will amount to £7,000 per line. To this must be added the removal of tunnel at Cleveland-street and construction of bridge with its materials; regrading and relaying of four present fast and slow lines, with formation and permanent-way for two additional lines to terminus; construction and permanent-way for four city lines to George-street; regrading and relaying two lines to Darling Harbour; new bridge for four additional lines under George-street; making good roadways, &c.

Estimate on page 75, £164,500 say £166,000

To be apportioned somewhat as follows:—

To the city lines £81,000
To the terminus for passengers and goods 66,000
To Darling Harbour branch 19,000

£166,000

Adding the first and second of these sums to the amount of estimates on pages 74 and 75, we have the following totals—for the city railway line, from Eveleigh to Argyle-street, about 2½ miles long:—

Eveleigh to George-street £31,000
George-street to Market-street 424,000
Market-street to Wynyard-square 300,000
Wynyard-square to Argyle-street, with 20 acres for yards and carriage sheds 509,000

£1,314,000

For a new terminus at Devonshire-street, on the lesser scale, with buildings of a light character:—

From Eveleigh (as above) £66,000
Resumptions, Devonshire-street and works (as on page 75, £166,950) say 170,000

£236,000

For a new terminus at Devonshire-street, on the larger scale, with buildings of an imposing character, somewhat as proposed for the Hyde Park scheme:—

From Eveleigh £66,000
Resumptions and works, less resale of frontages (from bottom of page 75) 70,000

Net cost £136,000

Adding this latter sum to the previous estimates for the City Railway will give for complete scheme, starting with fourteen lines from Eveleigh, a terminus at the Benevolent Asylum site, as projected for Hyde Park, and 1½ mile of railway with four tracks to the Circular Quay, and an immense area for railway purposes at the north end of the city . . . £1,314,000
Net cost of new terminus as above 136,000

(Say, 1½ million.) Grand total £1,450,000

1561. Could you go right on to "The Rocks" with your scheme for £1,500,000, which is the estimated cost of this semi-Hyde Park scheme now before us? Yes; and included in that amount would be a terminus somewhat similar to that now proposed at Hyde Park, but on the Benevolent Asylum site.

1562. In this £1,500,000 do you include the improvement of the present station yard, by prolonging it over Devonshire-street, and the improvement of the Government grade down to Darling Harbour as it is now? Yes.

1563. And right on to "The Rocks," only you have taken as a set-off for your scheme the amount of money obtained by selling the surplus cemetery land, Carter's Barracks, and at "The Rocks"? Yes.

1564. Does the surplus land at "The Rocks" include the triangular piece north of Argyle Cut? That, I assume, is not required for railway purposes. I included that in the area with 2,000 feet frontage, which I proposed to resell in George-street.

1565. If you were to resell that, would it stand in the way of the future North Shore line? No; the North Shore line would be still reserved on the western side.

1566. We left off dealing with your line at our last examination, at the Markets;—from the Markets do you go under very valuable city property? Yes; until we get into York-street.

1567. Is that the most valuable city property you touch? Yes.

1568. Do you take the whole of Kidman's property? Yes; I have estimated for it.

1569. In going under Lassetter's and other large wholesale stores, will you interfere with their basements? Yes.

1570. Would you have to pay compensation? Yes; I have allowed one-fourth of the estimated value of the buildings for the privilege, and I think that will be excessive.

1571. Will your railway shake those buildings? No.

1572. Are they sufficiently solid to stand the vibration? The backbone of the city, the sandstone ridge, comes up nearly to the surface at York-street. I would go under Lassetter's in two brick tunnels until I came to York-street; it will then be a cut and cover like the Redfern tunnel. The street would be dug out, and the roof would be put on.

1573. Are there any sewers or pipes in York-street which you would disturb? Yes, there is a very large gas-main; but others have since been laid in Kent and other streets, so that there would be no inconvenience. There is no large sewer there that I am aware of.

1574. When you have got to York-street, as far as Wynyard-square, do you turn a little to the east to get to Wynyard-square? Yes.

1575.

N. Selfe,
M.I.C.E.

7 Mar., 1900.

1575. Why do you not go on without touching the reserve? We propose to make that an open station.
1576. But you take four-fifths of that reserve? Yes.
1577. West Sydney is very badly off for reserves, and you are going to take four-fifths of one of them? I do not think West Sydney is very badly off for reserves; there are four or five, and a magnificent one at Dawes' Battery, on which there has been some unaccountable encroachment.
1578. But does not Dawes' Battery belong to East Sydney? It does municipally, but not physically. The reserve is contiguous to West Sydney, and there are no East Sydney residences there. Many years ago Dawes' Battery used to be a promenade for all the people in that district. Then there is a reserve under the Flagstaff, at the end of Kent-street, and there is a small garden and reserve in Argyle Place.*
1579. Is it not very small? Yes; but it does not seem to be appreciated. Then there is Flagstaff Hill itself. Then, of course, there is Wynyard-square, which, from many points of view, is the most important; but it does not seem to be used by those for whom it is intended. It seems to be used by those who lie full length on the grass, the same as Hyde Park.
1580. If the railway scheme is charged with the current value of the land taken from Hyde Park, ought not your scheme to be charged with what is taken from Wynyard-square? Yes.
1581. Have you put down anything for that? No; because in the estimate for the other scheme there has always been a straight line for the value of the whole of the property from Devonshire-street until you get to Liverpool-street. Then there was about £92,000 for the resumption of private property. When you get to Hyde Park there is a blank again from Liverpool-street.
1582. Still, if your scheme comes to be fairly estimated, we shall have to add to the £1,500,000 the cost of the land taken from Wynyard-square? If the semi-public properties are added to the cost of the other schemes, I am quite willing that it should be done in my case.
1583. Do you go through the triangular reserves on the site of the old St. Phillip's Church? Yes.
1584. Do you do that in the open? Yes.
1585. You cut out a piece of that? Yes.
1586. Do you go under Essex-street? Yes.
1587. When you come to Argyle-street you cross on the level? The line has to descend slightly from Wynyard-square;—that is, the city line—while the North Shore extension rises from Wynyard-square.
1588. If you throw the triangular piece of land, north of Argyle-street, into the railway yard, will you not have to cross Argyle-street on the level to get into that? It is not proposed to use that for the city railway at all, except the strip running parallel with Princes-street when the time comes for making the North Shore line.
1589. What is the length between Essex-street and Argyle-street? About 1,000 feet.
1590. What is the breadth of the space resumed for the new street? The mean breadth is about 400 feet.
1591. How many platforms do you propose to build there? There is room for six tracks and about twenty standing sidings. That includes room for the platforms. The large plan has an area coloured red, which corresponds with the small No. 2 plan. The piece north of Argyle-street was only included in that plan because you would have to take away the frontage to Princes-street on one side, and with the continuation of George-street on the other side, you would leave nothing but land of no practical value between.
1592. Then throwing out for the present the North Shore extension, and the route down by Circular Quay, you would have with that terminus a complete West Sydney line? Yes.
1593. Would you have room at your terminus for all the carriages which would have to stand there in the middle of the day? Yes.
1594. Would you have more room than there is at Hyde Park? Yes.
1595. Would you have more room than there would be in the St. James' Road scheme? I measured the standing room provided in the King-street scheme at the back of the Art Gallery, and I found that it amounted to $7\frac{1}{2}$ acres. I have $7\frac{1}{2}$ acres in the smaller scheme, which only extends from Cumberland-street to Harrington-street.
1596. You must remember that in the scheme before us now there is not only the standing room in the Domain, but there is 8 acres in Hyde Park, and between Elizabeth-street and Castlereagh-street, whereas you have only one block? That is so; but they have to run half a mile or three-quarters of a mile from their terminus.
1597. But I am talking of the area to accommodate the trains? The area provided in the whole of my scheme is much greater. In the large scheme there are 20 acres for railway purposes.
1598. Have they more room in the scheme before us in two separate blocks than you have in your one block? I think it is somewhere about the same.
1599. Do you think you would be able to give all the accommodation required? If they can get all the accommodation for twenty-two sidings at the Art Gallery, they can do the same in my proposal; but it must also be remembered that my scheme contemplates an extension across Circular Quay, which would divert a lot of the traffic.
1600. But I am leaving that out for the present, and I assume that this will be a city terminus;—do you think you will have abundant room for all the suburban traffic, without sending back any of the trains to Eveleigh? Yes; for they can take the whole block as shown up to Argyle-street, and right up to the North Shore line at Princes-street.
1601. In your estimate of the suburban traffic do you include the Penrith and North Shore line as far as the Hornsby Junction? Yes.
1602. Do you include the Illawarra line as far as George's River? I have not gone into that question, but there is no reason why those trains should not come down.
1603. Then it is only the great trunk line traffic that you deal with? Yes.
1604. What acreage have you? It is over 20 acres.
1605. If you stopped there, you would have no circular railway of any kind; it would be simply a line backwards and forwards? That would only be until the eastern line was made.†
1606. That is to say, you would stop there as they stop at Hyde Park? Yes; but nearly twice as far on.
1607. The only difference is that you go by the west side, and they take the east? I take my line right through business Sydney, while the other schemes stop on the fringe of Sydney—outside the business quarter.

1608.

* NOTE (on revision):—There is also a large site reserved for ferry and public landing-place on the west side of Kent-street, north of the gas-works, but the public have not the use of it.

† NOTE (on revision):—The railway management would, no doubt, arrange that some trains reversed at the Markets and some at Wynyard-square, as well as at Argyle-street, if one station became unable to cope with the increasing traffic before the circular line was completed.

- N. Selve,
M.I.C.E.
7 Mar., 1900.
1608. Do you consider there are more people coming in from the suburbs who have business in West Sydney than those who have business in East Sydney? It is a matter about which there can be absolutely no doubt. The evidence before previous inquiries showed that more than nine-tenths of the traffic goes to West Sydney.
1609. Then how is it that the self interests of the people using suburban lines does not induce them to advocate the western route instead of being apparently in favour of the Hyde Park route? I do not think they are in favour of the Hyde Park route. The mayors of municipalities who gave evidence in the matter were under the impression that the inquiry had dragged so long, that unless they accepted the Hyde Park scheme they would get nothing. Then Mr. Eddy's powerful personality had a great deal of influence with many people.
1610. Do you think that if they were called upon to give a vote a majority would be in favour of the western line? Judging from the conversations I have had with many people who are interested, there would be a majority of six to one in favour of the western line. That has been a large factor in inducing me to go to so much expense; otherwise I should not have backed up my opinion at great expense as I have done.
1611. If the eastern line is carried it is admitted that the people whose business is to the west of George-street will take the George-street tram, or a tram which may be made down Kent-street;—if your scheme is carried, will the people in East Sydney have to trust to the tram-lines also? If the St. James' Road or Hyde Park scheme is carried, all the people in West Sydney will use the George-street tram. To-day I asked a well-known business man who is close to the Post Office, whether he would use a railway station at Hyde Park. He said, "Certainly not; I will take the George-street tram, as I do now."
1612. If your scheme is carried, will not the people in Macquarie, Phillip, and Elizabeth streets have to take the tram to their places of business? Yes. I think it is very probable that many people east of Castlereagh-street would prefer to use the trams if they are continued in Elizabeth-street.
1613. Whatever route is adopted the people will have to use the tram to one side of the city? No. Wynyard-square is about half-way between the eastern and western boundary of the business part of the city. The Markets are about half way between Hyde Park and Sussex-street. Hyde Park is entirely to the east of a circle of a quarter of a mile drawn round Queen Victoria Markets. That circle would take in more than double the business places which would be included in a circle drawn from Hyde Park.
1614. If your scheme is carried, the people whose business lies near Castlereagh-street and east of it will have to use the existing trams? Yes, if they prefer it.
1615. So that one railway would not serve equally well the whole city? Yes.
1616. Do you contend that the western line would serve the majority? What I contend is that the western line runs right through the centre of the business quarters of the city, and the business people and the visitors from the suburbs, who come to town to visit the business places constitute nine-tenths of the railway traffic. The amount of the traffic that goes to the east of Elizabeth-street is a bagatelle.
1617. Do you think that your line would relieve the George-street tram, or would it increase the traffic on that line? I think it would relieve the George-street tram of the great bulk of the regular railway passengers. From my conversation with many railway travellers, I have formed the opinion that a man would sooner walk 300 or 400 yards after he got out of his train than change from a train into a tram, and then have to walk 50 yards. He would be prepared to walk down to Sussex-street from the train, or eastward as far as Castlereagh-street, rather than go down George-street in the tram, and then have to walk.
1618. Take the George-street tram as it is now, and imagine the St. James' Road scheme at work;—would people cross the George-street tram and climb up King-street in preference to taking the George-street tram? No. As traveller to the suburbs for many years, I think that very few people in George-street, or west of George-street, would cross the tram in that street to go up to the top of King-street.
1619. You know that a certain estimate was made of the number of passengers who would be brought in by this railway to Hyde Park; it was made years ago by Mr. Eddy, before the George-street tram was in existence; that tram now takes nearly the whole of the railway traffic from Redfern Station;—do you think the traffic on the proposed railway would be the same as if the George-street tram had not been built? I think that since Mr. Eddy made that estimate the business has increased so much that it nullifies the effect of those figures.
1620. Then you think the profit would be as great as Mr. Eddy anticipated? Yes.
1621. For your Wynyard-square station, could you have a subway in George-street? Yes; that is shown on the plan. There is a subway from the neighbourhood of Hurst's jewellers' shop which would go under Carrington-street; it would be nearly level from George-street.
1622. On the other side, would you require a much longer subway? Yes; it would be an advantage there, although it is not shown on the plan. The subway should come out in either Clarence or Kent streets, and it would be a great advantage to people who used the Balmain ferries.
1623. Would it also accommodate the people engaged in Clarence and Sussex streets? Yes. I do not think the average distance for those people to walk would be more than one-fourth what it would be to the Hyde Park terminus.
1624. In your scheme you would carry the line across Circular Quay, in front of the Custom House, on a viaduct? Yes.
1625. Would that not be very unsightly? I think it might be safely left to architects, so that it would be an ornament instead of a disfigurement. Nothing is ugly which serves its purpose and is consistent. A thing is ugly when it violates certain canons of taste, and is inconsistent in its proportions. Many people think the Forth Bridge is one of the ugliest structures in the world, but to those who look upon it as embodying certain scientific principles applied to a special purpose, there is nothing ugly about it.
1626. You mean that to the eye of an engineer it is beautiful, while to the eye of an artist it is ugly? It depends upon the sort of artist. An artist may consider nothing but external effect, without the slightest regard to symmetry. There are viaducts in different parts of the world which are not unsightly. There is the Holborn Viaduct across Farringdon-street; that is a beautiful structure, as well as a useful one. There is no reason why a viaduct on steel girders should not be light, airy, and graceful, while at the same time it would fulfil its functions perfectly.
1627. There is a viaduct across Ludgate Hill which spoils the view of St. Paul's; it is regarded by many people as an atrocious structure, and you propose to have a viaduct in front of the Custom-house? It would not necessarily be such a solid structure, and Ludgate Hill is comparatively narrow. In the city of Rotterdam there is a railway carried on a steel viaduct, and it runs right through the centre of the city;

city; it is not considered to be ugly. I am aware that a proposition has been made to run the railway under Circular Quay, but that would be below water-level, and you would have a difficulty in keeping out the water, and there would be steep inclines.

1628. Could you avoid the difficulty by crossing to the south of the Custom House between it and Bridge-street, and starting at once from Wynyard-square? The resumption would be very serious, and there would then be no Circular Quay station. Under my scheme it is proposed to have a station near the Water Police Court, and the eastern line would come out at Woolloomooloo. That line would run out exactly where the sidings are proposed under the official scheme at the rear of the Art Gallery, but it will be merely a running line, instead of having coaling yards and standing yards for getting up steam. There would be difficulties in many ways in carrying out what is proposed. By keeping down to the edge of the Quay we go to a point where the streets are low; we are able to cross George and Pitt streets at a good height, so as to keep the railway 25 feet above the traffic on the Quay.

1629. You could not descend sufficiently to get under Pitt and George streets? It would be absolutely impossible.

1630. Would it be impossible to go near to Bridge-street? The cost would be enormously increased.

1631. You recommend the Circular Quay route because it makes a good connection with the eastern suburbs and so makes a circular line, but we do not want all those suburban trains to go careering round the eastern suburbs to get back to Eveleigh; the traffic there is very much lighter than from the western suburbs? Anybody living in an eastern suburb such as Randwick who required to go to the south end of the city would take the route which would bring them round by Alexandria. People who required to come to the north end of the city would probably come by Paddington and Woolloomooloo.

1632. Would you propose that the trains should run both ways all day long? Yes; an inside and outside line.

1633. If you had separate circular trains, would not people have to get out at Redfern and change into another train? They would have to change at Eveleigh only for the main line.

1634. Then we would have the same changing from trains that is so much deprecated at present? That would only occur where people coming from one line wished to get on to another. Any person living in the eastern suburbs would be able to get into the city in two ways. If a person leaving the Western line wants to get on to the Southern line, he has to change now, and if he wants to get to the eastern suburbs, when the circular line is built, he will only have to do the same thing.

1635. In a scheme which you proposed some years ago, you had a circular line only within the city;—have you abandoned that? I have, for the present; but I consider that the line shown in that old scheme, joining the present proposal somewhere near Woolloomooloo Bay, or near the back of St. Mary's Cathedral, will be built, perhaps, within twenty or twenty-five years as a return line. If the goods traffic developed at the Woolloomooloo wharfs, and there is a necessity for taking goods directly out of the city, it would enable them to be taken up to the main lines through the city without interfering with the passenger traffic at all.

1636. Some day you think we shall have an inner-circle line? Yes, purely for relieving the other line; but hardly for passengers.

1637. As a passenger line you have given it up for the present? Yes; it would be 30 or 40 feet underground in places.

1638. The expense would be against it? The expense would be principally for tunnelling, and not for resumptions. I think it ought to be considered as an alternative to having standing-room on "The Rocks." Tunnelling is much cheaper than it was a few years ago, and it becomes a question whether it would not be better to go on at once with that scheme so as to let the trains run down the western side of the city and return by that line to stand at Redfern.

1639. If you made this Circular Quay line, and this inner-circle line, would you want the station at "The Rocks" at all? No; all that you would want would be a little ground on which to shunt your engines from Wynyard-square, and that would not be so much wanted if you had traversers. The whole thing depends upon the amount of traffic which the Commissioners propose to bring down. I have had in view sufficient ground to meet every possible contingency. If they propose to bring down all the traffic, there is sufficient ground at "The Rocks" to do the shunting. They propose to bring all the traffic to Hyde Park, without any ground in front of them to shunt. I say, here is twice as much ground as you propose to take at Hyde Park.

1640. Instead of going to Woolloomooloo, do you see any objection to returning by way of Hyde Park? I do not see any objection to adopt any route for the return line, which is simple and cheap.

1641. If you could return by way of Hyde Park, would you accommodate both East and West Sydney? If you could return that way from Circular Quay, curving in under Hyde Park, and putting a station on a portion of Hyde Park, then going up underground, you would get a perfect circle within the city.

1642. Then the problem between East and West would be solved? Yes; and that return line would cost very little for resumption.

1643. You would have a station at Bridge's warehouse, and the line would run very largely through or under public land? Yes; the return line.

1644. Have you made any estimate for such a scheme? No. Having abandoned that scheme so long ago, I have not returned to it. Ten years ago there was so much agitation in Parliament and among the people in the eastern suburbs, that it was thought the eastern suburbs line was within measurable distance. That seems to have died out a great deal since an improvement has been made in the tram service.

1645. Do you think the substitution of electric trams for steam will still further accommodate the eastern suburbs? I think the substitution of trams for railway purposes is an absolute mistake. Since George-street has been converted into a railway track it is absolutely dangerous, and people are sacrificing their lives for the sake of convenience.

1646. Will the substitution of electric trams for steam to the eastern suburbs diminish the desire for a railway? I do not see that it will make any difference; there is plenty of legitimate scope for trams.

1647. *Vice-Chairman.*] You said that the Hyde Park scheme would not do for more than about twenty years;—does the same objection apply to the scheme now before the Committee? I do not think the scheme now before the Committee—that is, the King-street scheme—is as good as the St. James' Road scheme; it is not such a convenient station. I think the Hyde Park scheme for a central terminus is admirable as far as it goes, especially if the Supreme Court, and the Registrar-General's Office are removed, but it does not meet the requirements of the travelling population. It meets the requirements of the Railway Commissioners in the management of a large property, because they will receive £34,000

N. Selfe,
M.I.C.E.
7 Mar., 1900.

N. Selfe,

7 Mar., 1900.

a year for bringing the people a little further on, but it will not be a penny better to nine-tenths of the people who come into town. When they get to the top of King-street, or St. James' Road, nine out of ten will have to walk a quarter or half a mile to get to their places of business. They can get much nearer to their places of business now by the George-street tram.

1648. Simply as a means for serving the people for a number of years, you indicated that the Hyde Park scheme would not do for more than forty years? The scheme now referred to the Committee gives greater facilities for receiving and marshalling trains than the Hyde Park scheme will.

1649. Do you think, from that point of view, the new scheme referred to us is better than the old Hyde Park scheme? From the point of view of providing standing room for more trains, and meeting emergencies, it is better; but from the point of view of meeting the general requirements of railway passengers I do not think it is so good. It introduces another element by having these marshalling yards, and stables, as they are called, in the neighbourhood of the Art Gallery, and the principal cathedral in the city, which makes it very objectionable to me as a citizen.

1650. What led you to prefer a route more to the west—was it with a view of serving the greater number of people, or avoiding expensive resumption? No; it was simply to take the people where they wanted to be delivered. Nine men out of ten do not want to be delivered at the top of King-street; they want to be delivered somewhere near George-street. Nothing has better demonstrated what I have contended during ten years than the marvellous success which has attended the George-street tramway. That has put the seal on what I have been contending for all that time.

1651. You say that your scheme lends itself to certain connections with North Shore, Balmain, the eastern suburbs, and Circular Quay, do you object to the official proposal as not lending itself to those connections? I object to the Government scheme because, up to the present, no estimate has been made public, if it has ever been made officially, as to what the cost would be of connecting Hyde Park with Dawes Point. I respectfully submit that that estimate should be before this Committee before they can properly compare the two routes. Under my proposal, you have the whole route in West Sydney and down to the site of the bridge embodied in the scheme. According to the evidence printed with the last report of the Public Works Committee, to get from Hyde Park to Dawes Point you have to return by a semi-circle shown in black on the little plan I have had printed; and in order to build a road from Hyde Park to Dawes Point and Circular Quay, it would be as long and as costly as my whole scheme from Redfern to Circular Quay.

1652. Are there any engineering difficulties in the way of making a connection from Hyde Park, or the King-street station, to North Shore, Balmain, or the eastern suburbs? The difficulty is, that you have to go back to Liverpool-street and make another line which is as long as my whole line—that is to say, when you have got to King-street, according to the plan printed with the official report, you have then to make a line which makes it as long and as costly to get from Hyde Park to Dawes Point as it is to make my line from Redfern to Dawes Point.

1653. Do you look upon that site which you have selected on "The Rocks" as the natural centre from which those connections should radiate? No, Wynyard-square. The Engineer-in-Chief in his evidence ten years ago stated that Wynyard-square is the best site in the city for connecting with Circular Quay, the eastern suburbs, and the North Shore. I agree with him.

1654. In reply to a question by Mr. Shepherd, the Engineer-in-Chief said that there would be no difficulty in turning off at the end of Hyde Park and getting round to the other side of the city, for the purpose of making a North Shore extension? There is no difficulty if you are prepared to spend £1,000,000. He was not asked what would be the cost of carrying out that work. The plan printed with the Report of the Royal Commission shows a line connecting with North Shore on the western side of the city, which is practically the same as I advocated many years ago. I believe no estimate has been made for those connections, and I would respectfully ask the Committee to have such estimates before them.

1655. I notice that in your eleventh axiom you say that a terminus should, if possible, be approached on the level; this axiom is emphasised by the late Mr. Eddy; if, therefore, a terminus be sunk 25 feet in the ground, as at King-street, or elevated 35 feet in the air as at Garden-road, it would not compare favourably with the present terminus extended to the Benevolent Asylum site;—does the objection to a sunken or raised terminus apply with equal force to such a station as you propose at the Markets? I do not think it does, because you find that at the average wayside station you have either to go up steps or down them. The objection is not so great at a wayside station as at a terminus, where people come with luggage.

1656. But in this case the majority of the suburban passengers would disembark at the Markets? No doubt thousands would.

1657. So that to that extent it would be a terminus? Yes, to a great number of passengers.

1658. Do you think that you could provide all the usual conveniences for dealing with so large a number of passengers in the basement of the Markets? I think so, for the class of passengers who would come in would do so without any impedimenta.

1659. Could you make more places of ingress or egress to prevent people from interfering with each other? I think the ingress and egress should be kept entirely separate.

1660. Do you think you have room under the Markets to deal with such a large daily traffic? It is only a question of expense. The Markets could be made practically an open station, by taking up a great deal of the floor, and by letting the enclosure be open to the sky. At present that large arcade is simply a resort for a lot of people who seem to have no business there. It is a question I have not gone into very deeply for this inquiry, because you could not tell where it would lead you to. If anyone goes to the Markets he could see that you could remodel them, and make them into a very fine station. It is only a question of paying more rent.

1661. Would your station at the Benevolent Asylum site be available for the large holiday traffic? That would probably enable you to deal with twice the traffic that is dealt with now at Redfern.

1662. Presuming it was thought desirable not to go to "The Rocks"—stopping, say, at the Markets for the present—would you be able to make such arrangements there as would successfully deal with the urban and suburban traffic and enable the trains to get back? You would deal there with at least twelve trains an hour each way. I think you could deal with twenty; but that is a question I would prefer not to go into, and it could be dealt with better by gentlemen like Mr. Parry.*

1663.

NOTE (on revision):—If an additional bay line be made under George street, we have the authority of Mr. Eddy twice repeated (Questions 1 and 22—3/7/91) that forty trains an hour each way, or a total of eighty trains an hour, could be worked from a station such as the one proposed at the Markets.—(Addendum to the Report of Royal Commission on City Railway.)

N. Selfe,
M.I.C.E.
7 Mar., 1900.

1663. Would you prefer, in any event, to see your scheme extended as far as "The Rocks"? No; at first only as far as Wynyard-square. Then you could double the number of trains, because one train could shunt its engine at the Markets and the next train could go on to Wynyard-square and shunt. At the same time, if the railway were only carried to the Markets at first, an immense traffic could be done even there.
1664. One of the strongest points urged upon us as to the necessity for this extension is the loss of time involved in changing from the train to the tram, and that in extending it even to Hyde Park the time consumed by a suburban resident in getting from home to his business would be considerably shortened. In your scheme to Wynyard-square there would practically be three stations—at Christ Church, the Markets, and Wynyard-square. Owing to the stoppages thereby involved, would the time taken by a suburban passenger in going from his home to his business be much shorter than is taken up under present circumstances? I do not think it would be much shorter than travelling by the tram if the passenger gets his tram at once; but it will have the advantage that he need not get out of his train until he arrives at his destination. As Redfern would be missed there would be only two more stations.
1665. But does he not only object to that only on account of the loss of time? I do not think the objection arises from that only. You have to alight from the train, and you have to start on another journey. The station opposite Christ Church is only shown as a possibility. I do not say that it is required, because there does not seem to be very much traffic on that site; but that station is admirably suited for persons who have business in the great district about Pyrmont, and students for the Technical College.
1666. Do you think that by placing passengers nearer to their places of business, the result to the passengers would be an improvement under your scheme, as compared with the present state of affairs? Yes; infinitely. That seems to be the opinion of nine out of ten people with whom I have discussed the question.
1667. Is not Oxford-street a fairly busy and populous thoroughfare? Yes.
1668. A great number of the work-people in that district live in the other suburbs, what provision would be made for them under your scheme? They would probably continue to use the trams until the eastern suburban line is made.
1669. Would you have any room at your "Rocks" site to compensate for the small park sites, which you would have to take? There is the triangular block between the extension of the North Shore line from Argyle-street to Dawes' Point. That would afford room for a small park. Allowing the George-street block to be 80 feet deep, it would give a piece of ground about an acre and a quarter in area. That would be very close to Dawes' Battery. There is a little reserve in Argyle-place, so that there might not be any necessity for that, but that land could be used as a little recreation ground, and it would be accessible from Argyle Cut.
1670. What special advantage would there be derived from the two circles, one going round Hornsby way, and the other by Balmain;—would you have the same system of traffic there as you would have on the eastern suburbs extension? The advantage of the Balmain route would be that the great population of Balmain and Leichhardt would be able to get into the city by the right or left hand route, according to whichever way suited their business, and trains could be run to much greater advantage when running on a circle, so that no shunting would be required. The Commissioners do not like trains to go in such a way that they have to reverse them. By going on a circle they would always be going the same way.
1671. *Mr. Levien.*] Is it your real object to bring the passengers right into what you term the heart of the city? Yes.
1672. Do you regard the Victoria Markets as the absolute centre of the city? Yes.
1673. Have you taken in all the resumptions, and put what you consider a fair valuation on them? I think when the official valuers get to work they will find that I am over rather than under the mark. I think it will be more to my credit if it is shown that I have over-estimated the cost of resumption.
1674. Have you had considerable experience in the valuation of property? I have had some.
1675. Is your scheme really intended to connect with North Sydney? It is part and parcel of that scheme.
1676. Is it your opinion that that must come about? It is a requirement of the immediate future.
1677. When Mr. Rennick came from Melbourne do you know whether he had your scheme under consideration? He was under my charge for the first day. Mr. Reid sent for me, and as soon as Mr. Rennick came into town I was with him for the whole of the first day. For the rest of the week he was in charge of the railway authorities; but he was so impressed with my scheme that you will see from his report that in his opinion it is absolutely the best scheme. He had no statistics as to cost, except what he could derive from the reports by the Royal Commission and the Public Works Committee. From these Mr. Rennick naturally deduced that my proposals were extremely costly. He, therefore, says, "If cost does not govern the question the western scheme is the best, and it must come some day." He told me personally, "I think Sydney must have two schemes—one through the centre of the city and one down the west, and I have recommended going down Hyde Park, because it appears that costs nothing for resumptions." He was led to understand that the Hyde Park scheme would not be debited with any public or quasi-public property. Therefore, as he simply made estimates on the data put before him, the Hyde Park scheme seemed much the cheaper, and he recommended it.
1678. Had he any knowledge of his own with regard to the cost of the western line? No. The reports were handed to him, and although Mr. Sievers was sent by Mr. Reid to accompany Mr. Rennick and myself, we had no advice from Mr. Sievers. Mr. Sievers did observe, "My goodness, how did you find such a lot of cheap property for your line?"
1679. At all events, Mr. Sievers did admit that he did not know, until you had shown him over the line, that there was so much cheap property? Mr. Sievers never valued the resumptions for my scheme; I think he said as much before the Committee only two or three days ago.
1680. Did Mr. Rennick go with you over your line from end to end? Yes; we spent the whole day, from 10 in the morning until 6 at night.
1681. Did you tell him what you thought would be the cost of resumption? No.
1682. Had he any data to go upon as to what you estimated the resumption would be? No.
1683. Then he came to a conclusion without knowing what the amount of your resumptions was? Yes.
1684. So that he had no information as to what the actual cost of resumption would be? Yes, except that he was with the Railway Department for nearly a week, and could there obtain information.
1685. He had no communication from you as to the value? No; Mr. Rennick was shown over the ground by me. Mr. Sievers was introduced to him, but, so far as I know, gave him no values.

N. Selfe,
M.I.C.E.
7 Mar., 1900.

1686. Had he from Mr. Sievers anything as to the value he put on the resumptions to your line? I know that Mr. Sievers had never valued my resumptions, and he could not have valued them for Mr. Rennick.
1687. Where do you live? I lived for many years at Balmain, and also at Ashfield, I now live at Hornsby, and I come in either by Strathfield or the North Shore line. I travel 40 miles a day on the railway, and I have a good deal of knowledge of it.
1688. From your conversation with passengers, what is the general tenor of their opinions? It is that, if we cannot get anything but the Hyde Park scheme, we had better take Hyde Park than nothing; but if we get what we want it is a line through the centre of the city. They look upon Hyde Park as outside the city with regard to business. The bulk of the travellers want to come where they will be delivered near the business centre of the city.
1689. Has not all the bus traffic for years past, from the eastern suburbs and all round, gone to Barrack-street, or Circular Quay by George and Pitt streets? Yes; right down to Miller's Point, even in spite of the electric tram, it runs still.
1690. Are you fortified in your opinion as to the necessity for a railway down George-street by the great traffic now carried on by the electric tram? Yes.
1691. That is supported by the evidence given by the tramway authorities? Yes.
1692. What is the length of the viaducts on your line? The viaduct is from Engine-street to the corner of Liverpool and Kent streets; it is about 1,920 feet.
1693. Would it interfere with the traffic in the city? Not in the slightest, because the streets are covered in one span. Liverpool, Kent, and Goulburn streets are spanned by iron or steel, and the small streets are spanned by brick arches. Ten years ago I proposed to carry the whole of them on iron girders, after the style of the elevated railway in New York, but bricks have become much cheaper, and I propose now to do it with brick. Mr. Foxlee, who was then the advising engineer for the Commissioners, objected to the viaduct as proposed, and there was a good deal of force in what he said. He said that utilising the additional ground under the iron viaducts would not compensate for its extra cost. The viaduct going across Circular Quay is of a totally different character; it will be of an ornamental character.
1694. It would not be offensive to the eye? It would simply stand on steel columns, and it could be made an ornament to the city, just as the proposed bridge across the harbour could be made an ornament or a disfigurement.
1695. How many lines does it carry? Four.
1696. In the proposed line to Hyde Park, will there be viaducts? Yes; the line will be carried across Belmore Park on a viaduct.
1697. Would the station at Victoria Markets be large enough for many years? I reason by analogy. If you can carry on the traffic in a place half the size of the Victoria Markets surely it can be carried on where I propose to do so.
1698. Are you satisfied that it will be sufficient for a long time? Yes, for a through station. There are many through stations on the underground railway in London which take the local traffic, and which are not as large as this station.
1699. No matter where the terminus is placed, will there not always be a necessity for cab traffic? Yes; and in York-street, on the west side of the Victoria Markets, there is plenty of space for cabs.
1700. Would the proposed station at Christ Church be merely a passing station? Yes; it would be practically a duplicate of the Burwood station.
1701. Would that accommodate all the people who would require to get out between Eveleigh and Liverpool-street? Yes.
1702. Did you ever see Mr. Rennick after the first day, and did he ever ask you for further information? Not on business; but I have sent him some information. It will be seen by his report that Mr. Rennick is one of the strongest supporters I have ever had for my scheme. He had no idea of its cost, however.
1703. Do you think that if Mr. Rennick had come here quite disinterested, apart from any Government control, and if he had positive evidence as to the cost of your resumptions, he would have absolutely favoured your scheme? I could not say that he was not disinterested; but I would say that if he came here with a clean sheet, without the influence of the Blue Books, which he told me he had carefully read, and had to make an examination for himself, without any extraneous influence, he would have recommended this western line.
1704. You do not impute anything to the Department? Certainly not. Only what is called *esprit de corps* might influence him unconsciously.
1705. Have you ever had any conversation with Mr. Sievers as to the cost of your resumptions? Never, since the day he went round with Mr. Rennick, when he said they had never valued the resumptions for my scheme, and that it was utterly wrong to apply the estimate for resumptions in other parts of the city to my scheme.
1706. They are different in every way? Yes.
1707. By your scheme you wish to avoid taking away Hyde Park, or any portion of it, besides giving the public the most central accommodation? Yes, the second consideration having most force with me. I would not object so much to taking part of Hyde Park if it was part and parcel of a complete scheme of which we knew the cost, that is connecting the whole of the suburbs as well as North Shore. North Shore ought to be connected within the next five years.
1708. Is there a good deal of agitation to connect Balmain with the railway? There is a desire to have it connected. Balmain is on high land, and the people have to walk down to the water, and they have a tiresome time up to the Post Office when they get here. A high-level railway would bring them into the heart of the city in a very short distance. At present they have to go a great deal more than 4 miles by tram, and it takes three-quarters of an hour.
1709. *Mr. Shepherd.*] What area would you consider would be efficiently served by the King-street scheme? From Pitt and George streets to the west, and from, perhaps, Hunter-street and Bathurst-street north and south.
1710. Do you think that passengers would rather come to King-street station and walk down to George-street than change at Redfern, and go by the George-street tram? They would not. I would take George-street as the medium line which would separate passengers to the tram and train. That would only be for a short length of George-street. If they were going north of Hunter-street they would go by tram, or if they were going south of Park-street they would go by tram. So that King-street would only serve efficiently the two blocks from Park-street to King-street, and from King-street to Hunter-street.

1711. Would people be likely to go as far back as Park-street in preference to using the tram? Some might; but very few. No one would be mad enough to go into George-street and go back to Park-street.
1712. What is the actual area of the Markets? About 600 feet long by 100 feet wide, and the portion I propose to take under the street would make it 30 feet wider.
1713. Would your four lines be in the street, or would they occupy any portion of the Markets? Three lines would be under the roof of the building, and one line would be under George-street.
1714. Would you have ample room for shunting? There would be no shunting at all—that would be done either before we got to the Markets, in Goodlet and Smith's yard—or it would be done in the tunnels between York-street and the Markets.
1715. Would not that be likely to cause confusion? No; it could be arranged without any difficulty.
1716. How long would it take a train to come in and change the engine from Goodlet's yard to the Markets? It would take no longer than at Redfern at present. It is entirely a railway question, and cannot be affected by locality. Speaking as an outsider, I should say they could work twenty trains an hour in the Markets. I have put down twelve to be certain. Mr. Eddy said forty, both ways, with a bay line.
1717. Would there be sufficient room there to adopt the traverser platform system? There is sufficient room to work a platform by making a large vacant space under Market-street, but I should not advise that. The traverser platform was first proposed by me, in 1890, for the station on "The Rocks," but that is a dead end. It might be adopted at the Markets as long as they were a dead end, but it could be removed when the line was continued to Wynyard-square.
1718. Would you approve of two lines being constructed into the city? With our present population it would be superfluous. Looking to the development of the city, which must go to the south, I cannot see that with a main central terminus at Redfern admitting of development, and a circular railway line connecting with the eastern suburbs and Balmain, we need make any further provision for 50 or 100 years; other termini would be right out south.
1719. Do you agree with Mr. Deane that a branch line could be easily run from Hyde Park to connect with the North Shore line? I believe it could be easily done if money did not matter, but it would be a long and costly line.
1720. Mr. Deane stated that there would be no difficulty in turning off at the end of Hyde Park and getting round to the other side of the city;—I find that that would work out quite easily, but do you think it would be expensive? It is easy. He says in another place that it would be a semi-circular line. It is on the strength of Mr. Deane's evidence that I drew the different lines on my pamphlet plan for making a comparison.
1721. *Vice-Chairman.*] You maintain that your extension would give greater convenience to the majority of people than would be given by the Hyde Park scheme; the Commissioners propose to make an extra charge to passengers on the Hyde Park route;—if your scheme were adopted, do you think that a higher charge would be readily paid by passengers for the greater convenience which would be afforded? I am sure that the great bulk of the season ticket-holders would willingly pay more if my scheme were adopted than is proposed by the Commissioners. I am sure the holders of workmen's tickets would gladly pay a $\frac{1}{2}$ d. per day more if my scheme were adopted.
1722. Had you taken out your valuation for resumptions on the basis of twenty-two years' purchase before you had a conversation with Mr. Rennick, or have you made that valuation since? It was made since then.
1723. You had no opportunity of giving in your figures? No. Until I came before this Committee I always abstained from going fully into such matters. Until now I have always thought it was due to me that the resumptions required for my scheme should be sent on for valuation to experts. I have made a valuation now, but my valuation will carry no weight compared with that of an independent expert.

N. Selfe,
M.I.C.E.
7 Mar., 1900.

THURSDAY, 8 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Archibald Forsyth, rope manufacturer, sworn, and examined:—

1724. *Vice-Chairman.*] What are you? Rope manufacturer, merchant and importer, Kent-street and Waterloo. A. Forsyth.

1725. Are you an ex-Member of the Legislative Assembly? Yes; I do not appear before you as an expert, but I have been a great traveller in the principal parts of the world, and while there was not unobservant. I paid particular attention to the various stations and means of distributing railway passengers. I may give the history of this city railway from my point of view. Twenty years ago the residents of the western suburbs got up an agitation to have the railway extended into the city, but there was no talk of a large central station. Subsequently the Railway Commissioners rightly complained that they had not sufficient room, and that they required a new station. The suburban residents in the western district fastened on to that as a means of forcing what they required—that is, a railway extension into

A. Forsyth.
8 Mar., 1900. into the city. I have no hesitation in saying that any of the proposed schemes will only benefit a limited number of people who reside sufficiently near the proposed station to be able to walk to their places of business. I admit clearly that increased accommodation is required at the railway station. I have been of opinion for years that the piece of land between Devonshire-street and Belmore-road, occupied partly by the cemetery is peculiarly fitted for enlarging the station up to any capacity which will be required for the next 100 years. I think the Committee can have no hesitation in carrying out that part of the scheme. I have observed, in the large majority of the cities that I am acquainted with, that the distribution of passengers is mainly carried on by the employment of light lines of railways, elevated and otherwise, and tramways. The first place of importance is London. There the Great Eastern railway terminus comes right into the heart of the city, and they are in the best possible position—that is the Liverpool-street station. They have only brought the passenger traffic to Liverpool-street. There is another railway of a similar character, but it does not extend to any distance in the country, it simply goes down to Dover, that is, the Holborn Viaduct Station.

1726. Is that the Old London and Dover or the London and Chatham? It is for both. It was first the station of the Greenwich line; it goes fairly into the business centre. When I have mentioned those two, I have stated all that occupy that position.

1727. The South-western railway station comes to Charing Cross which is a very good central position? That is true; but except to a particular part that necessitates a change. There are only two trains a day by which you can go without changing. There is the Victoria station. That comes very well into the centre of the population; but it is very far from the centre of business, it is at least 3 miles. Those are all that I can speak about in that line. I now come to the great lines which go through the great breadth of England. The first one that comes to my mind is the Great Western station, at Paddington, that is fully $3\frac{1}{2}$ miles from the boundary of the city of London, it is close on 4 miles from the centre of business. Some of their passengers are distributed by the underground railways, and some by tramways, the great bulk by the underground railways, and, of course, a great number who come some distance use cabs, which are absolutely necessary where people have much baggage. Now there is the North-Western, which I suppose, is the largest railway in England. Euston Square, its terminus, is fully 3 miles away from the business part of London, at all events it is not less than $2\frac{1}{2}$ miles.

1728. Do you mean from the Bank of England? Yes, anywhere about there. The Exchange is what I have in my mind's eye as the business centre. No doubt Euston Square is not so very far out of position as a population centre; but it is very far from the business centre. They have a branch of the Metropolitan railway which joins in a few miles outside the station. That was intended to distribute the passengers throughout London; but owing to the great time which it takes passengers do not go by that line at all, they prefer to come to the principal station, and take the underground railways or the buses which play a very important part in the distribution of railway passengers in London. Then we come to the Midland railway, which is in a similar position. It is slightly nearer to the centre of business, it is about $2\frac{1}{2}$ miles from the centre. The Great Northern is in exactly the same position. The exchange of passengers is very inconvenient at both the Great Northern and Midland, inasmuch as they have to walk through tunnels below the streets, a distance of very nearly $\frac{1}{2}$ of a mile; but still they go there to reach the underground railway. You will say, perhaps, that these are not Government railways, and that they are not called upon as companies to go in for the benefit of the public.

1729. But there is intense competition with each other? That is the spur, and not patriotic action, such as you are endeavouring to take here.

1730. Are they not bound to study their customers more than our Railway Commissioners are, seeing that the latter have a monopoly? What they rely upon is that there will be proper means of distributing the passengers. Although the metropolitan railway taps these railways a few miles out from the station, they are in the same position as the Midland. Scarcely any one goes by it, because it is very circuitous. Anyone going to the central part of Holborn can walk down from King's Cross, and reach it in less time than by the outer system of metropolitan railways. When you take that into consideration, the idea suggests itself: can the same means of distribution not be used here. Is it not almost open now to the people from the Redfern Station? There is a good tram running along George-street, and it distributes the people, not only to Liverpool or King streets, but within one block of where any one wants to go. It is said that the electric tram is insufficient to carry the present traffic safely. That may be the case; but if a tram were made along Pitt and Kent streets it would be ample for more passengers than will ever pass during the next fifty years. Many people say, "Yes; but they change into a railway in London when they change out of a large station." There is practically not a particle of difference between the underground railways and the tramways, the only difference is that the railway goes a little faster. Now, I would direct attention to New York. The great bulk of the American lines come into New York, and have their termini at Jersey City. Of course, that is separated by a river about 2 miles wide from New York. On the northern part of New York there is a station, built about fifteen years ago, called the Grand Central Station. The New York Central and the other New England railways came in, and get accommodation there. They had the same means of carrying it down town further as they had to carry it as far as that; but they considered that that was a convenient place, and that the proper mode of distributing passengers was by means of overground railways or trams, which are very numerous about New York. When I was there last there was a discussion going on as the propriety of putting a bridge across the North River at Yonkers. I was under the impression that the bridge was going on; but I found on inquiry that they had elected not to go on with the bridge. They have built one about 20 miles up the river, and they cross into the same line, and they are going to use the present Central Station at New York. It is 4 miles from the actual centre of business, and I will admit that the business part of New York comes up to "Fifth Avenue Hotel" on Broadway. After years of experience they have taken no means of bringing the station nearer, simply because they find that the means of distribution is ample. I hold that the same condition of affairs exists here.

1731. Do not so many people live in the suburbs on the other side of the rivers that they land in the ferry steamers, and do not use the tramways at all? That is on the Brooklyn side.

1732. But on the New Jersey side also? Yes; but I am now speaking about the railways. There are not so many ferries on the North River as there are on the East River. I think the ferries are confined to four between New York and Jersey city, whereas between New York and Brooklyn there are at least a dozen, besides the bridge.

1733.

1733. Still these ferries are crowded with business gentlemen in the morning? Yes. New York is very wealthy, and more able to put a bridge over the North River, than we are to put one across our harbour, which is less than one-fourth the distance; but still they have never done so. In conversations which I had with gentlemen in New York it was pointed out that to create a great station in that part of New York would cost so much that it could not be faced. It is on valuable land, and would involve an enormous amount of compensation. The passengers, of course, have to cross over in a ferry. Then, to reach their places of business, a great number have to take trams or omnibuses. That shows that the New York people are not labouring under the idea that it is their duty to bring railway stations into all parts of the town, or even into the centre of the town, because it is too expensive. It would be a great benefit to those living in the immediate neighbourhood, but it is no benefit to others. Now San Francisco is situated similarly. The main part of the railway is across the bay at Oakland. They have a railway coming in on the southern side which goes down to San Jose and likewise embraces the South Pacific Railway. That comes in on the southern side of San Francisco, but it does not come into the town at all, it stops on the margin, the same as if our station stopped at Eveleigh. There has been no attempt to bring it into the city, because they have ample means of distribution by tram, omnibuses, and cabs. Calcutta is a very large place, and stands in exactly the same position. The main railway stations are over on the Houra side, opposite the city. Its approach is on a pontoon bridge, and the bridge is broken once every second day to allow vessels to pass. That portion of the line at Houra is not a government railway, but upon the eastern side of Calcutta there is a government line, and it stops at the margin of the city—it is about 1½ mile from the main part of the town. Passengers have to be distributed in exactly the same way, although it is nearly all done by omnibuses. Cairo is in a position to have the railway brought into the heart of the city if it is thought proper, but the railway on the eastern side stops outside the city. The railway which goes up the Nile is on the opposite side of the Nile, and you have to cross a long bridge to reach it. Then there is Naples, a very important city of 800,000 inhabitants. A great number of transformations were made there lately, and if they had thought necessary they could have brought the railway near the centre of the city, but they have not touched the railway since I was there, fifteen years ago. Rome is exactly the same, and also Milan. Vienna is a very large and important place, and the whole of the railways there are on the margin of the city. There are only two sets of stations there—the one serves the western and the north, the other serves the southern and the south-eastern. None of them come into the city at all. Paris, of course, is very mixed. One of the Parisian railways comes right into the very centre. The northern is at a moderate distance rather out of the centre of population; but, on the whole, somewhat in the same position as our railway station with regard to population and business. The other railways from the south-west are situated at a considerable distance from the centre of the city, at least 3 miles. Now, there is Melbourne. The Engineer-in-Chief for Railways in that city came here to report on the city railway extension. He submitted a valuable report, on the whole, but he must have come here under the impression that he was not called upon to decide whether the railway should be brought into the city, but that it must be brought in, and that the only question was, which was the best place. Any one reading the report carefully will see that that is the case. Although the stations in Melbourne are very near the centre of business, they are altogether on one side, and they are altogether away from the centre of population. There is no station within miles of the centre of population in Melbourne, they are situated at the extreme south corner. One would have thought that if the Engineer-in-Chief had been impressed with the necessity of extending the railway into this city he would have endeavoured to carry out such an extension in Melbourne; it certainly requires it much more than Sydney. I believe that the Redfern Station wants enlarging, and that there is ample means of doing so by extending it to the block between Devonshire-street and Belmore Park. The height of it is such as to bring it to the level of the present railway. Whether Devonshire-street is diverted or not the height is sufficient to enable them to pass over it as if it did not exist. From that point any system of railways to the North Shore and other suburbs can be carried out better than from King-street. I hold that a railway along the western side of the city is by far the most suitable, but I do not think such a railway is required at the present time. Whenever it is determined to connect the North Shore with Sydney the railway must be carried along the western ridge and not on the eastern side. In my opinion, it is the duty of the Committee to recommend the construction of a station at the old cemetery, that would be an enlargement of the present Redfern Station, and that would be adequate for all the traffic. With regard to the scheme which takes a piece of Hyde Park, closes up Elizabeth-street, and occupies two squares of buildings, and likewise the site of the Supreme Court, I look upon that as a perfect scheme of madness. People have been driven into it through a number of circumstances joined together. If any person had proposed it a few years ago, before all these schemes were discussed, it would be said that he was mad, and it would be perfectly correct. Take the proposal to have a station at King-street; if a person wants to go down to Brickfield Hill it would be easier for him to do so by leaving the train at the present station than by going to King-street. If you wanted to go as far as Hunter-street, or farther, it would not be easier to reach it from the present station than the proposed one. The attention of the Committee may not have been directed to the formation of Kent-street. Kent-street runs from Liverpool-street right down to Miller's Point in a straight line. There is no doubt that a tramway along that street would offer very great facilities to the citizens of Sydney. The present station, with increased means of distribution, is far preferable to the proposal to make a station at King-street, and the cost would not be one-fourth.

1734. I gather that you are of opinion that the distribution of passengers can be better effected by a multiplicity of tramways than by any one railway which we can run into Sydney? Yes.

1735. Has your opinion on that point been at all influenced by the great success of the George-street tram? Yes.

1736. It is a very natural suggestion which has occurred to a great many people that we might use tramways instead of going to the expense of a great station, but we have had before us two of the most experienced officers in the railway service specially identified with the transit of the suburban passengers, and they both say that if we had three or even four tramways into the city it would not give the same accommodation to the suburban passengers as the Hyde Park station would? I do not like to advance opinions contrary to those of experts, but I hold the opinion that four tramways would carry more people than the railway could convey.

1737. You know that the great suburban traffic consists of people coming in during the morning and going out during the evening? Yes.

1738.

A. Forsyth.
8 Mar., 1900.

- A. Forsyth.
8 Mar., 1900.
1738. Will not that increase, seeing that Sydney is rapidly becoming a city of warehouses and offices and people are living outside of it? Yes.
1739. So that the number of people going to and from the city every day will increase as years roll by? Yes.
1740. Mr. Kneeshaw, who is in charge of the tramways, tells us that in the morning the George-street tramway now carries as much traffic as George-street can carry, and that he cannot put anything more on? I believe that is so.
1741. At present in George-street the natural street traffic is about half the business, and twice a day an equal amount of traffic is congested into one or two hours;—do you not see the difficulty? Yes; but the same difficulty will occur here with the King-street trams that is now stated to occur in George-street.
1742. We were also told by people who represent the western suburbs that they estimate that they lose twenty minutes a day by having to move from the railway to the tram;—do you think that is a fair estimate? Yes.
1743. Whereas they say if they were brought into King-street they would save a good deal of that? Yes; but what about the other people who do not carry on business near King-street?
1744. They airily think that the other people will be equally inconvenienced;—is your business in the west of Sydney? Yes.
1745. The distance from Elizabeth-street to George-street is not very great; but it turns out that the George-street tram has captured nearly the whole of the traffic to the railway from the city, so that they have taken off the railway trams altogether;—does not that prove that the George-street tram puts the people down closer to their places of business than the other trams do? Most decidedly. Far more people come in and out to the western part of the city than to the eastern.
1746. But still is it not curious that all the people in the western suburbs, through their spokesmen, advocate a station at Hyde Park? Yes; I cannot attempt to account for that.
1747. Do you think that if a railway were made down the western side of the city, as Mr. Selfe proposes, it would accommodate more people than a railway to Hyde Park? With the various stations which he proposes it would; but if it was confined to one station, the same as the Hyde Park proposal, I do not suppose the difference would be much in favour of the western side.
1748. If he had only one station at the Markets, would it be much more convenient than one station at St. James' Road? I do not think so.
1749. But if he had three stations as he proposes, would he distribute the people much more successfully? Yes; he would distribute a larger number who could reach their places of business without changing into a vehicle, but it would be most expensive to do so. I say the proposal is not within reason. What is to recompense the other classes of people who do not get any benefit from the railway for the tremendous expense of bringing some people closer to their places of business.
1750. Mr. Eddy calculated that 1d. added to the fare would make the line to St. James' Road a self-supporting line? I am prepared to accept that.
1751. That would not put any extra burden of taxation on the public? I think that was on the supposition that the cost of the line would not exceed about £450,000, because he then proposed to get a portion of the park free of charge.
1752. It is not proposed that they should pay for the value of the land taken from the Park, and that would add about £200,000 to the cost of the line? They will never pay for the value of the Park, for they will never get an inch of it. I rely upon the good sense of the Legislature to prevent such a spoliation.
1753. You will admit that the streets of Sydney are very narrow, and are not very well adapted for tramways? Yes.
1754. We cannot make a tramway in Sussex-street on account of the traffic, and because it is so narrow? Yes.
1755. But we could make a tramway down Kent-street? Yes.
1756. Would not that take up a great deal of space? Yes; and as far as I am concerned, I would sooner be without it.
1757. Do you think that most of the business people would rather do without it? Yes. At the same time, it is one of the streets which distinctly invites the construction of a tramway.
1758. Does it lend itself to going on to Miller's Point, and joining the George-street tramway, so as to make a circular tramway? Yes.
1759. It is rather tempting to an engineer; but do you think the public would rather not have it? Yes; I mean the business people in the street, not the public generally.
1760. Do you think the business people in George-street would rather not have the tramway? Before it was constructed they were against it, but now they are in favour of it.
1761. You remember the old tramway down Pitt-street;—did the shopkeepers like that? No.
1762. Do you think they would like an electric tram running down there now? I am sure that if you took a vote of the people in Pitt-street now, more than two-thirds of them would be in favour of such a tramway.
1763. Do you think the merchants and office people would like it? I cannot say.
1764. Would not it block the traffic? Yes.
1765. Is not that all an argument in favour of making a city railway if you could make it pay? Yes, the argument tends in that direction most decidedly.
1766. You will admit that a railway can dispose of passenger traffic much more quickly and effectively than any tramway? Yes, than any one tramway; but if they liked to run sufficient tram-cars in George-street they will convey quite as many passengers as any one line of railway. Of course, the other traffic would not admit of that. But four lines of tramways could carry more passengers than the railway could take, and they could carry on the ordinary traffic of the city as well.
1767. The officers of the Department say that that is not the case, and that if you take the railway into the city it would carry all the suburban trains to the city terminus without stopping? One thing which makes me oppose the King-street station is the narrow outlet for it. There is no space in King-street to take away the traffic, and there will be a block.
1768. They propose to widen Elizabeth-street and St. James' Road? I understand they are going to take the whole of Elizabeth-street, between King and Park streets.

1769. Do you think that is objectionable? Yes, very objectionable. There is another objection which I have not stated, and it will not be realized until later on—that is, the immense amount of smoke and the smell from burnt grease—which will create a great nuisance in the city. I had the misfortune to live in Melbourne, right opposite the Flinders-street Station, and I positively went away from there on that account. It is the same now at Redfern Station.

A. Forsyth.
8 Mar., 1900.

1770. But they tell us that steam will be superseded by electric motors before very long? That would take away the objection. I might be reconciled, even to taking a portion of Hyde Park, under certain conditions. When the agitation started it was merely asked that the railway should be taken further into the city. It was only years afterwards that a large new station was advocated. They might, without much detriment to the Park, have a station there if they covered it in, and had the station only on that part at the back of the Registrar-General's office. Now, however, they talk of taking the railway into the city, and having a great railway station there.

1771. The principal difficulty under the scheme which you propose, of distributing the railway passengers by means of electric trams, is that, when all the tramways are converted into electric trams, there will be such a concentration of traffic in Elizabeth and George streets that the railway traffic will be too much, and we must make separate provision for it? If you have four tramways there will be much less concentration than with two.

1772. Then you would have to spoil four streets? I consider it would benefit the streets, because the traffic would be better distributed.

1773. *Vice-Chairman.*] You practically make a distinction in your remarks on the railway extension between centres of business and centres of population? Yes.

1774. You said that the result of your observation of other large cities beyond the colonies is that railway termini are really brought to the centre of population, and not to the centre of business? They are brought more to the centre of population than to the centre of business; but they are not even brought far into the centre of the city, so as to be near the centre of population.

1775. Do you think that our present railway-station, or a new one on the Benevolent Asylum site would be close to the centre of population? I think it would be as near as possible.

1776. Do you think that nothing further should be done in the way of railway extension, and that the convenience of the people could be met by further tram extension? Yes.

1777. In making these comparisons between Sydney and other cities, have you considered whether there are any peculiarities in Sydney which would render peculiar methods necessary? There are some difficulties, but they could be easily surmounted at slight expense. For instance, the tramway that comes up Elizabeth-street need not go into Pitt-street at all from the new station; it might go straight through Belmore Park to Elizabeth-street. The Pitt-street tram need not go into Pitt-street until it passes Belmore-road, so that there would be only two trams going into the station. It would be a great improvement if the tramway went round Miller's Point by Kent-street, so as to form a circular route.

1778. Is there anything in the irregular conformation of Sydney and its narrow streets which would make the method of distribution which you advocate more difficult than it is in some of those cities which have wide streets, and a regular conformation? It would be more difficult in Sydney than in many of the cities I have referred to. For instance, in Melbourne they have to do the whole of the distribution through their streets, but they are so wide that they offer ample accommodation.

1779. Have you fully considered that point in arriving at a conclusion as to the relative merits of railway and tramway accommodation in Sydney? Yes.

1780. You do not think the irregular conformation of Sydney is an insuperable difficulty? The conformation of Sydney is not very suitable for the extension of railways or for increasing the tramways.

1781. Do you think that the amount of convenience which will be afforded to suburban and other travellers in carrying out the scheme before the Committee will be commensurate with the cost of £1,500,000? I certainly do not. I say that the passengers can be distributed better and easier from a station at Devonshire-street than they can at King-street.

1782. Do you express a preference for a railway into the city by a western route rather than the one now before the Committee? I do; only I qualify it by saying that I do not think the extension into the western part of the city is required, unless you are going to connect it with North Sydney.

1783. Would you wait until the connection is made with North Sydney first? No; you must determine that question beforehand. If you construct the railway to King-street, and then determine to go to North Sydney, it will cost an immense sum of money.

1784. Leaving out the North Sydney connection, what route do you think would give most convenience? The western route. A far greater number of passengers go to the west than to the east of the city. The eastern passengers are mainly lawyers and professional men of other classes, whereas the great bulk of the people—storekeepers, shopkeepers, and manufacturers—are engaged in the west of the city.

1785. The great advantage of distribution by trams is that you have many stoppages, and thus place the maximum number of people as close as possible to their places of business? Yes; it distributes them better for all classes.

1786. Your main objection to the railway extension is the impossibility of having frequent stoppages, and putting down people close to their places of business? Yes; and I wish to emphasise the fact that I am only advocating the system which is carried out in large cities in every part of the world.

1787. Do you advocate it because it will give the greatest convenience to the greatest number of people? Yes.

1788. *Mr. Shepherd.*] One of the principal arguments in favour of the extension into the city is that it will save time;—would the saving of time only affect those living in the immediate neighbourhood of the King-street terminus? Yes.

1789. Would there be any saving of time for those who had to go half a mile? There would be a loss of time; many of them would have to go back towards the old station for a long distance.

1790. Within what area would there be any saving of time if people were landed at King-street? You might fairly take Hunter-street to Pitt-street, and up to Park-street; that would embrace one-fourth of the passengers.

1791. Do you think that a person coming by the railway would gain time by going to King-street in preference to taking a George-street tram, when he would be dropped close to his place of business? No, he would not gain time. Only those immediately alongside the railway station would gain any advantage.

If

- A. Forsyth. If I wanted to go near Park-street, I would not be nearer to it if I went to King-street, than if I got out at Redfern and went by the tram.
- 8 Mar., 1900. 1792. Do you think that anyone living outside the boundaries of Market-street, Pitt-street, and Hunter-street, would take the George-street tram, instead of going to the King-street Railway station? Yes.
1793. There is another scheme proposed by Mr. Selfe; are you acquainted with that proposal? I do not know the details; but I understand generally what he proposes.
1794. Which do you think would give convenience to the largest number of people—going by railway to King-street, or by railway to the Victoria Markets? If the railway were carried out as far as Mr. Selfe proposes, I would hardly choose between the two; but if Mr. Selfe's proposal stopped at Wynyard-square I should say that his proposal was by far the best. That would simply make it a passenger station for the suburbs alone. The connection with North Shore might be made afterwards.
1795. Have you come to the conclusion that there is no necessity to bring the railway into the heart of the city? There is no necessity whatever. If you make up your mind to go on with the connection at North Shore, Mr. Selfe's line is the best. But if that is not decided upon, neither the Western line nor the King-street line is required at present.
1796. *Mr. Levien.*] Would you recommend the erection of a new station at Belmore Park and doing away with the Redfern station at the present time? I would not do away with the Redfern station, I only propose its enlargement.
1797. Would you recommend the erection of a new station at Belmore Park? Yes, as quickly as it could be done.
1798. Then would you follow that up with a regular system of tram service throughout the whole city? Yes.
1799. Would you make a circle around Miller's Point, so as to connect the whole of the other systems? Yes? I would circularise the whole of the trams.
1800. Do you think that the service which you propose would be sufficient to meet all requirements for many years to come? Yes; for the next thirty or forty years. Practically, we have not got tramways in Sydney; we have simply railways in the streets.
1801. Supposing the present system were changed into electric tramways, do you think there would be sufficient facilities for the passenger traffic? Yes; you would give more facilities than by having a railway station at King-street.
1802. With regard to Mr. Selfe's proposal, do you think that the viaducts there proposed would be offensive to the eye? I do not think they need necessarily be offensive. They have two kinds of elevated railways in New York, and they are not offensive; one is carried on pillars, and the other on brackets.
1803. Mr. Selfe has a number of viaducts in his proposal;—do you think that they would in any way militate against his scheme? No; in Berlin, in the circular railway, a great portion of it is carried on brick arches. There are miles and miles of them.
1804. Do you think that a station at Victoria Markets would be the most central we could have? It may be justifiable to use the Markets for that purpose, as they are of no other use, but I am not in favour of that proposal.
1805. Where would you have the central station? I would have it somewhere in that locality; but I think it is very much cramped.
1806. He says that it is larger than the Mansion House Station in London? Yes; but that is only a sort of passing station for the underground railway; it is not a railway station in the proper sense of the word. At the same time, I think the Markets would be large enough for all that he proposes.
1807. He proposes it as a central station? No; he carries his line on to "The Rocks."
1808. Does his proposal to connect with North Sydney meet with your approval? Yes; I think it is inevitable that there should be railway communication with North Shore within the next ten years. There is bound to be a bridge and a railway there.
1809. Would you advocate his proposal as going in that way? Yes; but until you make up your mind to connect North Sydney with the City I do not think Mr. Selfe's railway is required. I think if Mr. Selfe's railway stopped at Wynyard-square, it would be preferable to the King-street scheme.
1810. What is your impression as to the opinion of travellers by the train with regard to this proposal? The people from the western suburbs want to come to Hyde Park, but if you take the general public, I think opinion is about equally divided as to whether the railway should be taken to the east side or to the west side. I think very few now advocate any line which would go through Hyde Park. The Ashfield people do not now dare to advocate going through the park, with perhaps the exception of half a dozen who are very brazen, audacious men.
1811. Are you opposed to a railway going through the park at all? Yes.
1812. *Vice-Chairman.*] Why do you advocate the extension of the railway down the western side of the city in connection with the North Shore extension? Because it is the only way you can take it, otherwise it would require a tunnel.
1813. You do not advocate that to bring in the suburban passengers, but simply to connect the city with North Sydney? I do so in order to bring in the country people from Newcastle and elsewhere who are coming to the city.
1814. You do not advocate it to bring the suburban people into the city? No; but to accommodate the country beyond, so as to bring them into the city, and then distribute them.

John Shewan, laboratory attendant, Medical School, University of Sydney, sworn, and examined:—

- J. Shewan. 1815. *Vice-Chairman.*] Are you an engineer? No, but I have taken a very great interest in engineering all my life. I intended to follow that profession, but I was unable to do so. Perhaps I owe an apology for sending in this scheme, but at the time the late Premier sent to Melbourne for an engineer I had my holidays, and as I have a good deal of knowledge of engineering, I thought it would be a piece of amusement to go over the ground, and scheme out a city railway on my own account, on a line which had often occurred to

to me to be a good route. I was so struck with the suitability of the route that I made plans, and I had them in my possession when the advertisement was put in the paper inviting those who had any plans to bring them before the Committee. I thought it was only my duty to send in the scheme, which I wish to submit. J. Shewan. 8 Mar., 1900.

1816. Have you a description of the scheme? Yes, it is as follows:—

I HAVE the honor to submit, for the inspection of the Public Works Committee a set of drawings which embody a suggestion for a City Railway for Sydney. During the last fourteen years I have taken a great interest in the City Railway question, but do not remember having seen a plan such as I have sketched. This plan would only serve for suburban passenger traffic; it is generally admitted that Redfern is quite central for long distance trains, and only requires extending. A tunnel in a climate like Sydney is no doubt very objectionable; but if we must take one, it should be the most comfortable that can be built, and as free from curves as possible. The tunnel shown in my drawings may have some novel points; large and airy, it is lighted in daytime by glass-frames, let into the kerb at intervals of about 50 feet (see plans B and D), and, if required, at night by electric glow lamps. The tunnel being placed under the street, no land need be resumed, except where station accommodation is required.

Trains from Homebush, Belmore, Hurstville, &c., leaving Redfern Station would cross Devonshire-street, Belmore Park, and Markets, 20 feet or so above street level, where they would stop at Haymarket Station (see plan A). The property to be resumed here cannot be said to be very valuable. Leaving this station, by a gentle curve, trains would enter the tunnel under Castlereagh-street at Goulburn street, the street level now being above the railway. The next stop would be at King-street Station (see plan B). Although the platforms are partly under the street, this is practically an open station, the street being carried over the station as a bridge. There are no buildings on the part of the east side of the street to be resumed, but several would have to come down on the west side. The tunnel extends to Bent-street. The trains would emerge at the south of the present Education Office, which would be resumed, as shown in the map and plan C, and would cross Bridge-street 20 feet or so above street level, entering the Circular Quay station. The land to be resumed here has no very valuable buildings on it, if we except the Macquarie-place frontage. This station would be a considerable height above the level of the Quay, and, if built on arches, the space thus obtained would, no doubt, be valuable enough as shops, cold or other storage, to pay interest on the station building.

The principal point I claim for this scheme is that I have not seen a suggestion giving three stations, reaching to the waters of the harbour, and resuming less land, or land of less value.

I cannot afford to send scale drawings; this would require a special survey; nor can I risk making a statement of the probable cost, but hope that what I have sent may be sufficiently interesting to merit inspection.

FRIDAY, 9 MARCH, 1899.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD, | The Hon. ANDREW CARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

John Shewan, laboratory attendant, Medical School, University of Sydney, sworn, and further examined:—

1817. *Vice-Chairman.*] You promised, yesterday, that you would go through the plans and give a detailed description of what you proposed? There are a number of people in the suburbs who require a railway, and who have an idea that unless it is an inexpensive line they will not get it for a long time. I share that opinion myself. The scheme which I submit is worked out in order to give the very cheapest line of railway that I think is possible. A small station at Goulburn-street would be a great convenience. It is a great distance from Redfern Station to King-street, and a station south of Liverpool-street or Goulburn-street would be a very great convenience. The line I propose goes across the top of the Belmore Markets. The green space to the west of Castlereagh-street, fronting on to it, is land to be resumed for a station. There are no valuable buildings on that block of land. The ground rises at Goulburn-street. The south end of the platform will be very much above the level of Campbell-street—about 20 feet. The north end will be below the level of Goulburn-street so that it will be convenient for the line to take a gentle curve to get under Castlereagh-street. The line is continued right under Castlereagh-street for the whole length of that street. In my drawings I have shown the section of the tunnel, not the scale, but quite sufficient to give an idea of the treatment of the whole subject. Here are the walls of buildings on each side of the street, and the footpaths and roadway are shown. The whole of the street is simply scooped out. There will be brick retaining walls built on each side. A section of the Cleveland-street tunnel will give a very good idea of what is intended. I have shown a set of iron gratings set into the kerbstone with pieces of glass in them, similar to the arrangement in the Victoria Markets for lighting the basement. That is not an absolute necessity, because now that electricity is cheap, the trains could be fitted with electric lamps, and could be automatically lighted up every time they entered. That would reduce the expense of the tunnel. I propose to have a station approaching King-street on either side of Castlereagh-street. Land would have to be resumed for the station between King-street and Market-street. A number of people would object to a fine, straight, level street like Castlereagh-street being broken up, and a section of it taken away altogether. Taking that into consideration I have shown the street carried over the station as on a bridge. If there was no objection to the street being removed altogether, the whole of the Castlereagh-street frontage from Market-street to King-street might be resumed, and the result would be an open and perfect station. It would, of course, be below the level of King-street and Market-street and Castlereagh-street. The tunnel would continue under Castlereagh-street and would make a slight bend under Bligh-street. It would come out under Bent-street near where the Education Office is. It would cross Bridge-street and would then be above the level of that street. Bridge-street would have to be lowered a little and Bent-street would have to be raised a little. The trains would cross Bridge-street by a bridge. The work of raising and lowering would not be very great. There is a block of land having a frontage to Pitt-street which is bounded by Circular Quay on the north, and there is the land which is on the eastern side to Macquarie-place, that would form the terminal station. J. Shewan. 9 Mar., 1900.

1818.

- J. Shewun.
9 Mar., 1900.
1818. *Dr. Garran.*] What is the length of that? It is about 750 feet from Circular Quay to Bridge-street.
1819. What is the breadth of it? I reckon it would easily accommodate four platforms. Possibly, if the waiting rooms and booking offices were kept below on the level of Bridge-street, there would be ample room for six platforms, about 300 feet in width, from one side to the other.
1820. Have you provided for the shunting of return trains? I allow that to be done along the platforms. An engine could shunt on the middle line.
1821. Would that be for suburban, and not long-distance trains? Yes, the scheme is for suburban trains.
1822. *Vice-Chairman.*] Would you have to interfere with any sewers or gas mains? I have not made inquiry on that subject.
1823. How long is the tunnel under Castlereagh-street? Three-quarters of a mile.
1824. What provision have you made for ventilation? From the side of each section of the tunnel there would be a passage, which would go horizontally to a convenient place, and it would then be formed into an upright chimney.
1825. Would you rely upon mechanical appliances for drawing out the hot air? I would suggest an electric motor, of four or five horse-power, so arranged that the station-master by turning a switch could clear the tunnel of foul air.
1826. What important buildings are on the west side of the station in Castlereagh-street? The principal ones are the Arcade and Tivoli Theatre, the others are small shops.
1827. What depth do you take on the west side for the station? That would have to be determined by circumstances.
1828. Would you interfere with the buildings on the Pitt-street frontage? No; I think the line would have to be drawn between the Pitt and Castlereagh streets frontages. Up to that point the land would have to be resumed.
1829. How much below the level of King-street would the proposed station be? The same depth as the tunnel—probably 20 feet.
1830. What means would you adopt for raising the passengers up to the top of the street? By means of stairs.
1831. What part of Bent-street do you propose to raise? Since I made these drawings, Dalgety and Co.'s offices have been built on the corner of Bent and O'Connell streets. I have altered my plans so as to avoid that.
1832. Do you propose to raise the street in front of Dalgety's new offices? Yes; but the work would not be worth speaking about. It would only have to be raised about 5 feet.
1833. Would that increase the declivity from Dalgety & Co.'s office to the Lands Office? Yes.
1834. At your terminal station, would the trains have to come in diagonally? Yes.
1835. Do you practically take the western side for platforms? I intended that the platforms should be on the diagonal.
1836. If your total length from Bridge-street to the north-western corner of George and Pitt streets is only 750 feet, how could you get a platform at your terminal station 600 feet long if it is diagonal? There would only be four platforms, and coming in diagonally would limit the amount of depth which could be got for the platforms.
1837. Would it not also diminish the length? No; it would add to the length.
1838. Would it not be very difficult to get four platforms 600 feet long in that station? There would be some difficulty. The approach leading to the station would have to be used to some extent for shunting purposes. The platforms would extend up over Macquarie-place.
1839. What objection would there be to making the line straighter, coming between Young and Loftus streets? I think the Custom-house building is there. There are no valuable buildings where I propose to resume land in Pitt-street and Bon Accord-lane. There is no valuable land such as there would be on the block occupied by Mort's buildings.
1840. What is your estimate for the cost of the whole line? I have already said that I could not risk giving an estimate, as it is out of my line. I am simply one of the public who would like to see the railway made. If it is an expensive proposal it will not be carried out for some time, and I simply give this as a contribution towards the solution of the difficulty. I do not believe that anything cheaper can be devised, and I firmly believe that it would answer the purpose.
1841. *Vice-Chairman.*] Why do you want those large resumptions on each side of Castlereagh-street to the King-street station? For waiting-rooms and commodious stairs leading down to the platforms. If you resume the land from King to Market streets, there will be very wide stairs going down from King-street on both sides, and also from Market-street.
1842. Does not that seem to be a large quantity of land to resume in a valuable part of the city merely for approaches to a station? Yes. In the smaller scheme the resumption is not long enough for platforms, and they are shown as continued under the tunnel. The ends of the platforms would be under cover.
1843. *Dr. Garran.*] Have you taken into consideration any other street besides Castlereagh-street? Yes; and I think I am safe in saying that it is not possible to get the same arrangements in any of the other streets east or west of the line I suggest.
1844. Have you considered all the streets on the west side of George-street? Yes. There is only one point I wish to claim anything for, and it is this—that neither at the Haymarket, nor at Circular Quay, nor at the King-street station, are there any valuable buildings to be taken down, as would be the case in any other part of the city.

William Greenwood, A. M.I.C.E., sworn, and examined:—

1845. *Vice-Chairman.*] Are you an engineer? Yes.

1846. Are you practising in Sydney? No; for some time I have been contracting.

1847. Do you wish to submit a scheme for a city railway to the Committee? Yes; it is as follows:—

CITY RAILWAY—1900.

The design for the line I am about to describe was prepared by me some thirteen or fourteen years ago, and notwithstanding the changes due to the growth of the city, I am of opinion that the view I then took was the correct one, viz., that Redfern should remain the terminus for all long-distance traffic, and that the suburban traffic, after passing through Redfern station, should be taken along the western side of George-street, by way of Wynyard-square to the Circular Quay.

Description of route.

Starting from Redfern Station, the line would pass through the Benevolent Asylum grounds: thence on viaduct across Belmore-road, Belmore Park, Hay-street, Belmore Markets, and Campbell-street; thence in embankment and cutting would run between Pitt and Castlereagh streets, passing under Goulburn and Liverpool streets, and curving in a north-westerly direction passes under Pitt-street, skirting the offices of the Water and Sewerage Board; thence in cutting crosses under George-street at its intersection with Bathurst-street, passing in front of the Town Hall; thence in tunnel under York-street, and in open cutting through Wynyard-square, and with a north-easterly curve would pass under Margaret and Jamieson streets, Church Hill reserve and Grosvenor-street, crossing under George-street at its intersection with Essex-street; thence under Pitt-street and Alfred-street, and across the Circular Quay, where the line would enter into tunnel at Phillip-street, passing under Albert and Macquarie streets into Government Domain.

This may be said to complete the city portion of the line; but as I hold very strong opinions on the question of terminal stations in the heart of a large city, I intend that the city railway shall form a part only of a circular line, which will continue from the Circular Quay, through Woolloomooloo, Darlinghurst, Rushcutter Bay, Paddington, Woollahra, and Waverley, round the Centennial Park and Randwick (with branches to Randwick and Kensington Racecourses), skirting North Botany and Waterloo, and joining the Illawarra railway near Erskineville, thus completing a circular railway back to Redfern. From Redfern to Wynyard-square there would be four lines of way, and thence to Circular Quay and on the suburban line two lines of way.

In connection with this scheme I propose to construct a loop-line from near Stanmore to a 70-acre shunting ground near Shea's Creek, on which I propose to build self-acting gravitation sorting sidings—thereby virtually increasing the size (or working capacity) of Darling Harbour Goods Yard to three times its present capacity—and relieving the main line near Eveleigh of all goods traffic passing from South Coast district to South, West, or Northern lines.

The railway passes through the business centre of the city, does not interfere with any valuable buildings—public or private—and, having stations at the Cathedral, Wynyard-square, and Circular Quay, affords accommodation to all passengers resident in the railway suburbs; and the proposed stations at Wynyard-square and the Circular Quay, being adjacent to the wharfs at which the ferry traffic centres, will serve the ever-increasing population resident on the shores of the harbour.

The location of the line is such that it admits of easy and direct extension to North Shore, either by high-level bridge, train-ferry, or subaqueous tunnel.

I suggest that the electric tramway should be taken on the eastern side of the Custom House, to connect with the proposed electric tram system at Bent-street, thereby leaving the Bridge-street terminus available for Government buildings.

The line is designed primarily as a passenger line, but goods depôts would be provided at Paddington, Woollahra, Waverley, Randwick, North Botany, Alexandria, &c., and in the future, should it be deemed necessary, the levels are so adjusted as to admit of sidings being laid to the various Government wharfs at Circular Quay and Woolloomooloo.

The essential feature of the scheme is that, being a circular railway, all delay and danger consequent on shunting at a terminal station is thereby avoided.

I propose (when increase of traffic warrants it) to build a new central station on the Benevolent Asylum grounds, which would be used as a terminal station for all main-line (or long-distance) trains; but would only be used as a through or bye-station for all suburban traffic.

I estimate the cost of a combined line of railway, including resumptions, as follows:—

Redfern to Phillip-street, Circular Quay	£719,548
Circular Quay—through eastern suburbs to Erskineville	£850,000

£1,569,548

This sum will provide 12 miles of remunerative railway, whereas the St. James' road and King-street schemes, costing the same amount, will only build about 1 mile of unproductive line. I estimate the city and suburban circular railway will pay 10 per cent. on the outlay, whereas any Hyde Park or King-street lines must result in an absolute loss, as they cannot even pay working expenses.

1848. Do you agree that a city railway extension is primarily necessary in order to bring suburban passengers closer to their places of business? Yes; the suburban traffic is 91 per cent. of the whole, and if you include the mountain and tourist trains it is 95 per cent.

1849. Is that the main consideration which prompted you to draw up a scheme of this kind? Yes.

1850. Do you think it is possible to deal with that traffic by having a railway station on the Benevolent Asylum site and distributing passengers by electric trams? I said three years ago that when the George-street tram would be built it would not affect the railway question. The George-street electric tram has more work than it can do without carrying the railway passengers at all. It will be much worse when the Forest Lodge and other trams are diverted into George-street.

1851. Is it not a fact that the main part of the traffic during busy hours consists of railway passengers so far as the George-street tram is concerned? No; Mr. Kneeshaw says that out of 50,000 passengers only 26,000 are railway passengers, and 24,000 are ordinary passengers, and he said that the 26,000 railway passengers ought not to come by the tramway, because it would block the other passengers.

1852. He does not want the railway traffic on his trams at all? No; and he wants to drive them up to Hyde Park, which he will not do.

1853. Do you admit that it is a primary necessity which does not admit of doubt that we should carry the suburban passengers further into the city? Yes.

1854. Apart from the question of expense, what objection have you to a site either at King-street under the No. 10 scheme or under the St. James' Road scheme? In the first case you would simply repeat the trouble experienced at Redfern. You simply move Redfern up to St. James' Road, and have a dead end there.

1855. But the scheme before us has not a dead-end station at King-street? It circles round to the carriage sheds in the Domain.

1856. Does not that avoid the objection you mention about a dead-end? Yes, at an expense of £200,000 which will not be productive.

1857. Have you any other objection apart from the duplication of the difficulties at Redfern with regard to the proposed site for the station? It is useless for long distance and suburban passengers.

1858. In what way for suburban passengers? Mr. Kneeshaw says that only 1,150 passengers travel by the steam trams from the railway now that the electric tramway is working.

1859. *Dr. Garran.*] But they have taken off the steam trams? They run the steam trams whenever the traffic warrants them in doing so, and that is in the morning.

W.
Greenwood,
A.M.I.C.E.
9 Mar., 1900.

1860. Does not that mean that they have diminished the convenience for travelling by the steam trams? No; in the morning they start the steam trams from Devonshire-street.
1861. *Vice-Chairman.*] Is the proposed King-street station a good place to distribute passengers to their places of business? No; judging by the small number which now travel by the steam trams.
1862. Do you think that is conclusive evidence that a station further west is necessary to distribute the people to their places of business? Yes.
1863. Has that induced you to put your extension further west? We always put a railway where there is traffic, not where there is no traffic as at King-street.
1864. What are your reasons for proposing to close Devonshire-street? Simply for the convenience of the railway.
1865. Could you not extend your passenger lines across the street and still leave it open for traffic? Yes. There are a lot of sidings in the present Redfern yard, and eventually you will require to prolong those sidings into the site of the cemetery.
1866. Are they practically on a level with Devonshire-street now? Yes; therefore I propose to close Devonshire-street to admit of their being taken over to the cemetery side.
1867. As compensation to the people engaged in traffic there, do you give them a new street on the eastern side of the cemetery? Yes, with a better grade.
1868. *Dr. Garran.*] Would that give you an equally convenient access to the produce yard? Yes; it would leave the produce yards at the site of the Institute, as they are now. Two sidings on which the produce stands cannot be brought forward on account of the Institute, but the others can be taken across the street.
1869. Does the continuation of Castlereagh-street to the cemetery form the central part of your plan? Yes.
1870. Would you continue Castlereagh-street through Belmore Park? No; I would stop there.
1871. Would it not be very convenient to carry Castlereagh-street through Belmore Park if you carry an electric tram up that street? That would not be necessary, as far as the railway is concerned, although it might be necessary for the electric tram. As you have taken possession of Elizabeth-street for the trams, I think you should keep it.
1872. Could we not get to the station more easily by Castlereagh street than by Elizabeth street? No; I think Elizabeth-street trams should stay there. To build a tramway in a street does not do the property any good.
1873. We find there is very great difficulty in the railway traffic, owing to the electric trams crossing the other trams in George-street; might we not get rid of that by not allowing the railway traffic to go up George-street, and by carrying it along Elizabeth-street or Castlereagh-street? The tramway arrangements will have to be dealt with when you decide the question as to the railway route. My view would be not to allow the electric trams to go into the railway station at all. The trams could not run through the station in the way they do now if the sidings were continued.
1874. They could, if the plan now before us were carried out? That assumes that the new Benevolent Asylum station is built. I do not propose to erect that station for the next ten years.
1875. Whenever we do cross Devonshire-street, shall we not have to rearrange the tram service? Yes.
1876. Could we now or hereafter bring the tram service up to the railway direct instead of going round into George-street? I daresay you could do that.
1877. Would there be any difficulty in rearranging it? No.
1878. Supposing your scheme were carried out, and we did not at present cross Devonshire-street, do you see any difficulty in dealing with the long-distance traffic at Redfern without danger, and also the intermediate traffic? There would not be the slightest danger.
1879. What would be the cost of your scheme from the present station-yard to the Town Hall? According to the cost per mile it would be £350,000—that is, for everything, works and land.
1880. Is the tunnel more costly per mile than your overhead work up George-street? The tunnel is the most expensive part for works.
1881. From Druiitt-street to Wynyard-square, would it be all in tunnel? Yes; there is no tunnel beyond Barrack-street.
1882. As you are on the ridge of George-street at the Town Hall, there would be no big sewer there? No; only some small pipe sewers. I do not think there are any sewers in York-street.
1883. Have you charged yourself with paying for the land you take out of Wynyard-square? No; but I have charged one thing. If I go 25 feet under property with a tunnel, I charge the scheme with it as if the land were bought; but, as a matter of fact, you will not have to buy it, you will only have to pay a certain charge as an easement.
1884. Your purchase of property is at the beginning of the line; and from Wynyard-square to Albert-street, you have estimated the value of the land there as well as the works in the sum of £720,000? Yes.
1885. Do you give a separate estimate for the land and works in that? The land on the combined scheme is £325,000—that is, 8½ acres at £100,000 per acre.
1886. How far is that? The whole distance, from Redfern right on to Phillip-street at Circular Quay; that is for the absolute resumption.
1887. What is the estimate for the works for the same distance? £202,000, stations £147,000, making a total of £349,000. To that I add contingencies £30,000, engineering £15,000, making a total of £394,548.
1888. Does that include the whole thing to Phillip-street at Circular Quay? Yes.
1889. Would you not want a little more than that to do the shunting? I do not think so, but we might. The remaining portion I have charged to the other line.
1890. If we stopped there for the present would you have to go under the Domain? No; I have 15 chains available.
1891. How far do you interfere with the roadway at Circular Quay for omnibuses and drays? I propose to interfere very little. At the most what I propose to do is to divert Alfred-street, which is a narrow lane. I propose to divert that road slightly south or to close it.
1892. Would your cutting come into that? Yes.
1893. How much of the space between the Custom-house and the other side of Circular Quay would you take up? Practically none.
- 1894.

1894. Would you not be in an open cutting there? The railway would only be 28 feet in width for a double line of rail. I would couple Loftus-street and Young-street together in front of the Custom-house, and pass them over the roadway on one bridge.

1895. It is the other way that I am thinking of. You have first the space for your railway, then there are two lines of tramway, and standing room for omnibuses and the ordinary traffic? There is plenty of room for that. The distance from the Paragon Hotel to the water would be about 120 feet.

W.
Greenwood,
A.M.I.C.E.

9 Mar., 1900.

TUESDAY, 13 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEWIS, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

William Greenwood, A.M.I.C.E., sworn, and further examined:—

1896. *Dr. Garran.*] You know that there has been a great difference of opinion as to whether a city railway extension should be by what is called the eastern route, or by what is called the western route? Yes.

1897. I presume that you call yours a line by the western route? Certainly.

1898. And that notwithstanding the fact that your Bathurst-street station and your Circular Quay station—two out of your three stations—are actually east of George-street? Yes; but still it is what I term a western line.

1899. That is to say it will give accommodation to the people whose places of business are west of George-street? Yes.

1900. I presume from the fact of your selecting the western route that you are of opinion that the proposed line to Hyde Park would not accommodate the western side of the city? It would not accommodate even the centre of the city.

1901. It would accommodate all the people who wanted to go into Macquarie-street? Yes.

1902. And a number of people who would want to go to the Clubs? Yes.

1903. And some of the principal hotels? In connection with the suburban traffic the people do not go to hotels, and so far as long-distance passengers are concerned they have luggage, and, having luggage, they must have a cab.

1904. It is said that if they could come right into the city by railway the luggage would go into the vans sent by the hotels to the station? That goes on now. The "Grosvenor" and the "Hotel Australia" both send vans to the station for luggage.

1905. The Hyde Park line would accommodate the law people? Yes.

1906. Would it also accommodate all those who have business in Castlereagh-street and Elizabeth-street? Yes; but a building of a given size on ground in Phillip-street or Elizabeth-street does not contain one-tenth of the day population that a building of the same size in York-street contains.

1907. That line would also accommodate most of the Civil Servants on their way to Government offices? No. Civil Servants employed in the Lands Office, the Mines Office, the Custom-house, the Income and Land Tax Department, and the Treasury, would be far nearer to a station at Circular Quay than to one at King-street.

1908. That is to say, they would be far better served by your line than by the 'St. James' Road route? Far better.

1909. Although the people to whom I have referred would be fairly well accommodated by the Hyde Park scheme, the opening of the electric line along George-street has thrown a great deal of light upon the movements of the suburban population? Yes.

1910. And we find from Mr. Kneeshaw's figures that his present traffic on the electric line is at the rate of 8,700,000 per annum? Yes.

1911. And the steam trams running from the railway into the city now carrying at the rate of 700,000 per annum;—does not that seem to show that the old steam trams used to take the people not so near to where they wanted to go as the electric tram does? I am not sure that those figures are correct; but it shows that since the electric tram was constructed it has taken traffic from the steam trams.

1912. Is not the main reason of that because the electric tram puts them nearer to where they want to go? Precisely.

1913. You are aware, I suppose, that the first line laid down along Elizabeth-street was constructed simply in view of the International Exhibition, which we had in the Government Domain? I am.

1914. And it was put down for no other purpose than to carry the crowds of people from the railway station to that exhibition? That is so.

1915. And it proved to be an exceedingly profitable line, because of the congestion of the traffic on that route, and then there began a great multiplication of trams to the suburbs? Yes.

1916. And then there was an extension from Hunter-street to the back of the Treasury, and the Elizabeth-street line in that way became the trunk line of trams into Sydney? At that time the whole of the shunting was done in Elizabeth-street, in front of Dean's.

1917. At first, but afterwards they made an extension to the back of the Treasury? Yes.

1918. But Elizabeth-street would not be chosen now by an engineer as the best route for a trunk line into Sydney? No; it was purely an accident.

1919. If the steam tram down along Elizabeth-street cannot now stand the competition of the electric tram along George-street, does that not show that a railway to Hyde Park would not bring the people to where they want to go? I think I will prove that later on by Mr. Kneeshaw's figures.

1920. Now we will begin at the station-yard;—you admit, I suppose, that the present station-yard is not a very convenient one for the present traffic? No, it is not.

W.
Greenwood,
A.M.I.C.E.

13 Mar., 1900.

W.
Greenwood,
A.M.I.C.E.
13 Mar., 1900.

1921. And that most of the platforms are too short? They are too short for long-distance trains.
1922. Looking at the fact that the land on the north side of Devonshire-street is land on which the Government can lay its hand, do you think it would ever be worth while to try to make the present station-yard a central station-yard for all time? Looking to the future, no, certainly not.
1923. But with certain modifications and extensions it might be made to answer for a time? It is not a modern, up-to-date station, and cannot be made so unless you lengthen it.
1924. Mr. Selve put before us proposals for going back as far as Eveleigh, and making wider lines and giving better access to the yard in that way? The trouble is the shortness of the length between your tunnel and the end of your platforms.
1925. But he increased the length by beginning the widening of the lines at Eveleigh? Yes. But if you extend your station across Devonshire-street you will do the same thing.
1926. There are two methods of doing this thing—either by going back south and beginning at Eveleigh, or by pushing northward and lengthening the platforms by crossing Devonshire-street—of the two plans which is the better? By going further north.
1927. If we were to cross Devonshire-street with our line to go into the city, as all the plans do, we might as well cross Devonshire-street to extend the platforms that are at present too short, might we not? Yes. You would put your suburban train platforms in the Benevolent Asylum grounds.
1928. I mean that we must either partly or wholly take possession of Devonshire-street to go into the city, either by your route or by the Government route? Yes.
1929. If we are going to keep Devonshire-street open we must lower it by 9 feet, or if we are going to close it we must leave it open only for railway purposes? That is so.
1930. What I mean is this: If we are going to carry two lines of rails northward for your city extension you might as well while about it carry your other platforms northward in order to lengthen them—the long distance ones? I do not think there is any need to take the long distance ones northward for some years to come. If you can now accommodate both the long-distance and the suburban trains in the present station, and if you were to take 90 per cent. of that traffic through you must have sufficient platforms left there for the long-distance trains.
1931. But although you talk of taking it away you run it all through the station? Yes; but a train that would have to stop at a platform now perhaps for five minutes would stop there only for half a minute.
1932. That is true; but supposing we were to reserve for the suburban traffic the two original lines? No; I would reserve those for long-distance trains—at the present stage certainly.
1933. Then you would take the suburban on two sides or on one side? I would take them on No. 3, and east from No. 3.
1934. Towards the produce sheds? Yes, and I would keep Nos. 5 and 6 and west of them for long-distance traffic—for the present, mind you.
1935. You would throw the suburban traffic altogether to the east of the original main lines? Yes.
1936. And keep the rest for the longer distance traffic? Yes.
1937. In that case, you would not want to lengthen the original lines? Not until such time as I built a new station.
1938. It is only to the west of that you would want to lengthen them? I think that one platform, No. 8, is long enough for them. The Northern train is started from No. 8 or No. 9, I am not sure which.
1939. We have had it in evidence that proper platforms ought to be 600 feet long at the least;—do you agree with that? No; I do not.
1940. Not for suburban traffic? Not for suburban traffic. Certainly not; and I doubt it very much for long-distance traffic. If you go to the station on Monday night, you will find that they put two engines on the Northern train, and those two engines and the cars as well do not measure 500 feet; but if I were building a new station in the Benevolent Asylum grounds. I would certainly make the platforms 600 feet long.
1941. We are going to make an improved station, and are certainly going to spoil Devonshire-street for general traffic, and there will be no difficulty in lengthening those platforms on the western side by running them across Devonshire-street on an archway, as well as the suburban lines? You can do it, but if you run them back as far as Devonshire-street, you might as well go right through and make your new station in the Benevolent Asylum grounds.
1942. I mean that, if you simply want to lengthen those Western platforms, we can do it by simply crossing Devonshire-street with them? As a matter of construction there is no doubt you could do that; but, supposing you were to lengthen No. 6 platform, it is clear that people who wanted to go to No. 5 could not cross, as they now do, at the end of the platform.
1943. Of course the moment you cross with suburban trains you spoil the crossing at the dead end? Yes. But I do not prevent your getting to No. 5 platform the same as you can now. If you do not lengthen Nos. 5 and 6, but merely No. 3 and east of it, it does not prevent your getting to No. 5, as you can now.
1944. But your two suburban lines would spoil the crossing from east to west? Yes. But if you were approaching the station from George-street you could get to No. 5 the same as you do now; but the moment you lengthen No. 6 across Devonshire-street you cannot do that.
1945. You could do it underneath Devonshire-street by means of steps? Yes. I think it will be possible for a considerable time to work your long-distance trains in your present station without lengthening your platforms.
1946. And if it be proved that we cannot do that, we shall have simply to cross Devonshire-street and lengthen the platforms? At the present time you sometimes use Nos. 5 and 6 platforms for suburban trains, but I propose that they shall be used exclusively for long-distance trains, and there are not two long-distance trains that start at the same time. Those two platforms, if kept for nothing but long-distance trains, should be sufficient with occasionally, perhaps, No. 9 platform.
1947. Your scheme separates the long-distance from the suburban? Yes.
1948. And you see no difficulty in working the station by doing that? No.
1949. It has been put before us that many people at Strathfield get into the long-distance trains simply because they run to Sydney without a stop, and therefore those trains become *pro tanto* suburban trains; do you think that that is a sufficient reason why we should bring those long-distance trains into Sydney? If I, as a stranger, go to-night to the Redfern Railway Station to catch the 6.15 train to Brisbane, and
have

have a ticket to Strathfield only, they will not allow me to travel to Strathfield. That train stops at Strathfield merely to pick up passengers, but a number of the people who are well-known to the railway employees are allowed to alight there.

1950. What I mean is, that if I get into a train that I know to be a long-distance train at Strathfield, can I complain if I am put down where the long-distance trains always stop—that is at Redfern? No.

1951. I have no right to say that it is a hardship that that train is not carried into the City of Sydney; but apart from that, what reason is there for carrying the long-distance trains into the city? I say nothing. Fully 90 per cent. of the long distance travellers are better served at Redfern than they would be at King-street. People residing to the east of Victoria-street, Darlinghurst, and from there right round to Darling Point, Rose Bay, Randwick, Waverley, Woollahra, Paddington, Moore Park, Alexandria, Botany, The Glebe, Forest Lodge, and Pyrmont are served better from Redfern than they would be from King-street. It is only one-tenth of those in the town who would be better served from King-street than from Redfern.

1952. Supposing that the long-distance trains were to go on to the city terminus, do you think that they would have unloaded more than 50 per cent. of their passengers at Redfern before they went into the city? They would have unloaded 90 per cent. I think.

1953. And we should take all that string of carriages in for the sake of a very few people? Yes.

1954. It would be a waste of power? There would not be 3d. in cab fares saved even to those who did go into the city.

1955. Simply an extra expense to the Railway Department? Yes.

1956. You are clearly of opinion that the two traffics ought to be separated? Yes.

1957. Looking to the future and also to the fact that some day we must have very much more accommodation at our central station, do you see any better place for a permanent main central station for Sydney than the ground lying between Devonshire-street and Belmore-road? It is most suitable in every way.

1958. You do not think that we could wish for a better site? No; I think it is a very suitable site.

1959. And you do not see any objection in the fact that Belmore-road is 35 feet below the level of our platform rails at present? It is only 26 feet where I cross.

1960. And supposing we continue Castlereagh-street, as we propose, from an angle at the corner of Devonshire-street, in a line with the other Castlereagh-street to the north, you think that the space between Belmore-road and Pitt-street and Devonshire-street will be ample for a great station? Yes.

1961. And that looking to the future we shall have to take that ground for a station? I think so.

1962. But that there is no necessity at present to go to the expense of building a big station there? I do not think so. It will produce no revenue.

1963. So in your opinion we can make a city extension with a very moderate additional expense to the present station-yard? Yes.

1964. There will have to be something done to adapt that to the change? Yes; I think that Mr. Deane in one of the schemes puts down £20,000 for alterations at Redfern.

1965. You think that £20,000 will be enough to do all that is really essential at present? Yes.

1966. Is there anything more in regard to that station you would like to say beyond what I have asked you? Mr. Goodchap, who, I think, was an excellent authority, and had a good local knowledge of Sydney—he had been here a good many years, and knew the requirements of Sydney—invariably advocated Redfern as being the terminal station for long-distance traffic. My meaning is this: Mr. Goodchap had spent practically a lifetime here and knew Sydney thoroughly well, but Mr. Eddy, the late Chief Commissioner, had been here only a few years when he was examined on the point, and he could not have had as good a local knowledge of Sydney as Mr. Goodchap had.

1967. You adduce that, I suppose, as an additional authority in favour of the present Redfern yard and the area north of it being the terminal station for Sydney? Yes.

1968. And you would not attempt to take out of the city proper an area large enough for a second terminal station? Certainly not.

1969. Sydney is not a city that will bear having taken very much out of it for a purpose like that of a terminal railway station—it is rather cramped at present? It is rather cramped. Sydney is situated really on one long spur.

1970. It is jambed in between Darling Harbour on the western side, and the Park lands and Domain on the east, and cannot push out either way—it can only go south? Yes.

1971. Looking at the increasing value of city property for warehouses and other business premises, must it not necessarily be very expensive to get an area large enough for a really good terminal station in the city? You could not get a terminal station in the city unless you went to great expense.

1972. Unless we took part of Hyde Park? Well, that land at a fair valuation is worth something.

1973. The portion proposed to be taken is valued at £200,000;—you could not get the same size area elsewhere in the city for that sum? Not even if it were bare.

1974. Now take the section between Belmore-road and your first station, at Bathurst-street—you are in the open all that distance? To Bathurst-street, yes.

1975. Your station will reach to the corner of Bathurst-street and George-street? Yes.

1976. Will any part of the station be under George-street? Possibly there may be 50 feet of platforms beneath it.

1977. Not more than that? The Secretary to your Committee has asked me to mark on a large scale plan the exact route of the line, and I will mark, approximately, the positions of the platforms and stations.

1978. That station will be an open station? Yes. It will resemble Newtown Station more than anything else.

1979. You will have four lines of rails there? Yes.

1980. You do not run four lines all the way? Yes, from Redfern I run four lines to Bathurst-street, and I run those four on the same level. From Bathurst-street the lines rise to the North Shore and fall to the Circular Quay.

1981. How many lines do the Government propose to make through to there—four or six? Some years ago there were, I think, about twenty-five various schemes submitted to the Government—some were Government and some were private schemes. Mr. Deane and Mr. Foxlee examined and reported on the whole of those schemes, and the whole of those twenty-five schemes, including one or two by Mr. Deane, provided

provided for two lines of rails only, which shows that every one was of opinion that two lines of railway would be ample for the traffic.

1982. You are providing four lines of rails only for your city extension and for the line to North Shore, whereas Mr. Deane provides not less than six simply to go to a dead-end station at King-street? Granted.

1983. If he wants six for that, can you make four do for what is a double railway? Yes. Mr. Deane's own opinion was that only two lines were necessary, and he designed his scheme for two lines, and everyone else who sent in a scheme designed only for two lines. The Commissioners have gone in for six lines now, but their scheme in 1891 was for only four lines. The 1896 scheme provides for six. Those six lines consist of up and down fast, up and down slow, and two service lines. Those two service lines simply go into the Redfern yard and no further.

1984. But you see that the original idea of two lines was when they had not reduplicated the line from Sydney to Homebush? That is so.

1985. Having reduplicated that line, they found that two lines would no longer carry the traffic? Two lines would carry double the present traffic on the lines if the whole of it were slow; but they want to run a fast train alongside a slow one, and they could not do that on two pairs of rails, and that is the reason why they have constructed four lines of rails. I propose to let the four lines remain there, and they will still run fast trains from Strathfield to Redfern; but at Redfern they must stop.

1986. You cannot run fast trains through the city? No; you must run them slow.

1987. I suppose that $\frac{1}{4}$ of a mile is a fair distance for city stations to be apart from one another? Yes. You have four lines from Homebush to Strathfield; but notwithstanding the fact that you have a double line joining at Strathfield, you do not put on an additional line to convey that traffic to Sydney; and although you have two lines from Illawarra joining near Eveleigh, you do not put on two more lines to carry that traffic.

1988. I suppose that the four lines we have now will carry a great deal more traffic? Yes.

1989. With your line you cross the Belmore Markets? Yes; I cross by a continuous viaduct. From the south side of Belmore-road to the north side of Campbell-street there is one continuous viaduct.

1990. You go over the old part of the markets? Yes; old Paddy's Market.

1991. You would have to make provision for piers there? Yes.

1992. You put those inside the market buildings? Yes.

1993. You simply spoil two or three of the stalls there? Yes.

1994. Nothing worse than that? No.

1995. Is there a good foundation there? Provision is made for that. In the worst part of Belmore Park you may have to go down 12 feet or 15 feet for your foundations; but I have reckoned for that in my estimate.

1996. Now go from Bathurst-street to Wynyard-square, the next station;—the moment you emerge from Bathurst-street station I understand the levels of your North Shore line begin to differ from the levels of your city line proper—one goes up and the other goes down? Yes.

1997. You must go down from Bathurst-street to get to the level you want to be at at Circular Quay? Not necessarily; but I must go down to get beneath the line that goes on to North Shore.

1998. You would have to go down somewhat? Yes; but I need not do that until I got to Wynyard-square.

1999. But must you begin to rise at Bathurst-street? Yes, so as to cross the North Shore line over the Circular Quay line.

2000. You cannot possibly get the elevation by starting from Wynyard-square? I should be 17 feet lower than at the present time, and that would mean so much greater rise to the bridge.

2001. Are you estimating for a 150-foot bridge or 180 feet? 160 feet. The reason for that is that the Royal Commission that reported on that question decided on 160 feet.

2002. What is the worse gradient on the present North Shore line? I believe 1 in 40.

2003. Well, if that is the gradient there, what is the objection to having a 1 in 40 rise to the bridge? None, so far as I know.

2004. We can afford to go as steep with our train to the bridge as trains have to go on the present North Shore line? Yes.

2005. Though you accept 1 in 40, could you not begin your rise at Wynyard-square? No, because it would be 1-in-40 grade now from the higher level in Wynyard-square, and if I were to go down lower it would make it a steeper grade.

2006. Then you are already going to accept a 1-in-40 grade from Wynyard-square? Yes; from Wynyard-square it would be a 1-in-40 grade to the North Shore.

2007. Will you explain to the Committee how these two lines are going one to cross or overlap the other? Simply by the fact that, starting from Bathurst-street, the one line rises and the other falls with a 1-in-60 grade until such time as the difference of level between the two rails is 17 or 18 feet—sufficient to carry one line over the other.

2008. Until one goes over the other they are abreast? Until they start to rise they are abreast.

2009. But they must be abreast, must they not, until one is tall enough to go over the other? No; when they cross one another they are vertical to one another, and they gradually converge. They cross one another before they get into York-street.

2010. Between Bathurst-street and Druitt-street they have got high enough to cross? That is so.

2011. But in passing between the Town Hall and the Markets, you must have for some part of the journey room for four lines abreast? No.

2012. The moment you cross Druitt-street you can put one above the other? Yes.

2013. So in York-street you really only want sufficient breadth for two lines? I want more than sufficient breadth for two lines, for there the two lines are not vertical—one beneath the other. One may be on one side of the street and the other on the other side.

2014. Would it not be an engineering advantage—for the strength of foundations—to have them one over the other? No. When I leave York-street to get to Wynyard-square, if I were on the east side of the street, I would have a very sharp bend to get to Wynyard-square; but if on the western side, it gives a better curve for the Circular Quay line.

2015. The lower arch will be strong enough to stand whatever is put on it? It will have to be made strong enough.

2016. What is the exact length of the tunnel;—you are to be in tunnel from Bathurst-street to Wynyard-square? No; I do not consider that at all a tunnel. Where you cross Newtown-road Bridge it is a bridge, not a tunnel.

2017. What is the length of it—bridge, or tunnel, or whatever name you like to give it? It is, approximately, 9 chains—that is, from Bathurst-street to Druiitt-street.

2018. That would not be a longer tunnel than one from Hyde Park to Circular Quay underground? Then you have the tunnel from Druiitt-street to Wynyard-street.

2019. But one of the schemes before us—the Hyde Park scheme—involves an extension from Hyde Park to Circular Quay? Yes.

2020. That would be quite as long a tunnel as yours? Longer, I think.

2021. Is there anything more between these two stations you want to speak about? No; excepting that there are no sewers in the way.

2022. Nothing but the ordinary house sewers and the gas and water pipes? Yes.

2023. Do you propose to have side ventilation? I do not propose to have it. I think that natural ventilation will be quite sufficient for that tunnel.

2024. It has been stated by many witnesses that in this hot climate tunnels are more objectionable than they are in England? I say emphatically, no. Half the year in England you have dull, damp, foggy weather, and at no time of the year there have you a clear atmosphere such as you have in Sydney.

2025. What tunnels have we on our railways more than 39 chains in length? You have a tunnel at Lapstone, which is 38 or 40 chains long. It has a curve at both ends. Half the tunnel at least is on curve, and it has a 1 in 33 grade. Since that tunnel has been built, I do not think that fewer passengers have gone over the mountains than used to go previously. It has not affected the passenger traffic in the slightest.

2026. You have to shut up all the windows in going through? Yes; but still you travel.

2027. Would it be necessary to shut up all the windows in going through this tunnel? No; I do not think so.

2028. This tunnel of yours I do not suppose would be more lofty than the Lapstone tunnel? No; I think the Lapstone tunnel is in a spur where you cannot possibly get ventilation. My tunnel will be of the same height as that.

2029. Then it will be quite as choky? Yes.

2030. If you were to get some ventilation shafts at the side, would that not relieve the chokiness of the tunnel? Yes; I think you can get some in the street.

2031. Up through the gratings? Not the gratings, but a daylight space.

2032. Without blocking the street? Yes; there is a large space near the Markets. The east side of York-street is not parallel to the Markets.

2033. But if you have a ventilator immediately in front of the Town Hall, you will not want one when you get to the Markets? I shall want one at Market-street, and I can get plenty of room there for a ventilator.

2034. In the street itself? Yes.

2035. You do not anticipate any difficulty from closeless of atmosphere? I do not.

2036. How long will people be running at a city rate of speed between Bathurst-street and Wynyard-square? Something less than one minute.

2037. Not more than that? No; it cannot be. The difference in time between the trains leaving Burwood and the trains leaving Croydon is, according to the time table, about two minutes.

2038. Is that the same distance? No, that is about a mile, and that time includes stoppage at station; therefore, the time occupied in travelling cannot possibly be a minute in this case.

2039. With regard to Wynyard-square, will you give us a little sketch plan of square showing, for the information of the valuer, the amount you are going to take out? I will mark that on the plan.

2040. Then, going out from Wynyard-square you are in open cutting pretty nearly all the way to the Circular Quay? Yes.

2041. And when you get on to the Quay, are you still in open cutting? Yes. I do not propose to roof it in.

2042. A question has arisen with us whether in these stations it is wise to cover over the whole of the roof, or not? I should not do so at Circular Quay. I should treat that as a passing station, and cover the platforms, but not the rails.

2043. Will you explain why you cannot make a curve so as to get behind the Custom-house instead of going in front of it? Because there would be some most expensive property to resume.

2044. The reason is economy? Yes.

2045. Any other reason? There is another reason, and that is this: you want to get as near to the North Shore Ferry as you can possibly get, and by putting the station where I have fixed mine at the Quay, you are within 100 feet of the ferries. I take it that the North Shore, the Neutral Bay, and the Mosman's Bay ferries carries fully 80 per cent. of the ferry traffic from the Circular Quay. The Watson's Bay traffic is very light.

2046. And judging from the trade with the present line on the Circular Quay, a good many of those people would want to take either a train or a tram to some point in the city? If you notice the trams in the morning, you will see that those from the Circular Quay are fairly well filled up to King-street.

2047. They would still take that tram, I suppose, if your railway were built? Into the town they would, but not passengers who wanted to go into the suburbs.

2048. But for purely city traffic you would not cut out the George-street tram business? The public will have the option of taking which they choose.

2049. For all those reasons you prefer going right on to the Circular Quay? Yes.

2050. You do not see any objection to taking a good strip out of the road in front of the Custom House? No. You would take about 28 feet out of the road.

2051. You do not think that that would cramp the ordinary traffic too much? No; I think it is more likely to regulate the traffic.

2052. It sometimes happens that when traffic is forced into defined lines it goes along better than when it has a very wide *place* round about? Yes. The cable trams in Melbourne confine the traffic to the two sides of the street, instead of its being allowed to spread all over the street as formerly.

2053.

W.
Greenwood,
A.M.I.C.E.
13 Mar., 1900.

- W.
Greenwood,
A.M.I.C.E.
13 Mar., 1900.
2053. This station of yours at Circular Quay will practically extend from Pitt-street to Phillip-street? No; from Pitt-street to Loftus-street.
2054. What length will that be? I provide for 400-feet platforms.
2055. You have marked on this plan a possible branch-off for a tunnel to the North Shore? Well, if in the future it should be decided to make a tunnel to the North Shore, the junction would be at that station, and run down either for train-ferry, or for a tunnel.
2056. Would you have descent enough between Circular Quay and Fort Macquarie to get under the water for a tunnel? That depends on whether you are going to put the tunnel through the rock in the bed of the Harbour or put it in tubes and form a foundation on which to lay your tubes.
2057. We are told that the tube plan is the only possible plan? Then you would want to be only about 60 feet below Fort Macquarie.
2058. I presume, from your making this provision, that you are not one of those engineers who think a tunnel impracticable? It is very seldom that an engineer says that a thing is not practicable. If you find the money it can be done.
2059. Do you think it would be as expensive as a bridge? More expensive.
2060. Then, of the two plans, the bridge has only the disadvantage of blocking the navigation? Without having the soundings I am not sure whether you could put a tunnel across at that point. It might be preferable to put it from Lady Macquarie's Chair; it might be preferable to make a long tunnel touching at Fort Denison and going to Kirribilli Point and rising thence to the Milson's Point station; but that is a question we could not settle without having soundings and borings.
2061. But would a tunnel have any advantages but that of economy over a bridge? None.
2062. You give your preference to a bridge? Yes.
2063. You think Dawes' Point is a good site for a bridge? Yes. Another reason for preferring a bridge is that you might possibly have to make a road-bridge to North Shore, and when you are doing that the additional cost of a railway bridge will not be very great.
2064. Mr. Eddy was of opinion that for railway purposes there was no immediate justification for a railway bridge—that the traffic would not give enough to pay for it? He said the same in regard to a tunnel. He said the population of North Shore did not warrant connection with Sydney. That was his view I think to the last.
2065. You go to some extra expense in order to make provision for this possible extension to the North Shore line? Yes.
2066. Could you eliminate that extra expense from the cost of your city line, supposing the Government only took your city line and left the North Shore to take its chance hereafter,—for it is hardly fair to charge that extra cost to the mere city line;—if the eastern line makes no provision for the North Shore it is hardly fair to charge the western line with provision for extension to North Shore? The length from Druitt-street to Barrack-street would be 800 yards, which, at £50 per yard, would make £40,000 in connection with the North Shore tunnel.
2067. That is to say, you are charging your city extension line with £40,000 worth of work which will really be money spent towards the North Shore line? Yes; but my reason for that is this: at a later stage, in taking the estimate of traffic, I treat it as though the station were at Wynyard-square, and the toll from Wynyard-square to North Shore would be chargeable to the North Shore line; whilst the toll from Wynyard-square to the railway station, Redfern, would be chargeable to the city railway.
2068. On whichever line the passengers ran—the upper or the lower? Yes; or, to put it in another way: supposing the railway to North Shore were made, it would bring a certain amount of traffic on to the city railway between Wynyard-square and Redfern.
2069. If your Western line were made, do you think that the existing Elizabeth-street tram—without being altered to electric—would fairly well accommodate passengers from Redfern to the east side of Sydney? They would be no better served than they are now by the steam tram.
2070. I am speaking merely of passengers who come in at Redfern, and want to get out somewhere in the neighbourhood of King-street;—you think that a tram along Elizabeth-street will be enough to accommodate that traffic? Yes.
2071. So they will be sufficiently well served by trams? Yes.
2072. You have connected with your scheme, as part of it, an eastern suburbs extension? Yes.
2073. No eastern suburbs extension has been remitted to us, and if the Government intend merely to make a city railway for the present and no more, I have to ask you how you can make your scheme fit in with such a determination as that;—to stop somewhere about Albert-street or some adjoining place, and find shunting room and standage for carriages, and so forth? The Royal Commission appointed to inquire into an eastern suburbs railway recommended that that line should be made. That was in 1891, and subsequently both a Commission and the Public Works Committee have said that no line through the city would serve sufficiently unless it were connected with the eastern suburbs, and therefore I have made that as part and parcel of the complete circuit, and I think that it is an essential part of the line.
2074. But still the Government have not said so to us; they have asked us to consider schemes for coming into the city;—therefore, we want to know whether you can make this serve as a city scheme without an eastern suburbs extension, at present, at any rate? Yes; but to do that you must go back to the Government House grounds, or as far as the Government House stables, in an open cutting—construct, really, the eastern suburban railway as far as the fence of Botanical Gardens.
2075. Then the difference between your scheme and the one before us now is that you take a carriage standage out of the Government Domain, only you take it out of the Governor's private Domain, and the Government scheme takes it out of the public part of the Domain? No, it is not so. They provide stables, as it were, for their carriages for the whole day long, and I do not. I merely propose to shunt the train, and run it back to the Redfern yard, whither it goes now.
2076. That would involve some unproductive running? Yes.
2077. Would that be less costly than taking all this ground out of that land? Far less.
2078. There would not be very much traffic to Redfern in the early morning or late in the evening, would there? I think there are eight trains now every day which come into Redfern and run back straight to Homebush.
2079. The traffic is all one way, then? Yes.

2080. That is necessarily the case in all great cities? Yes. At a busy time like that they have not sufficient rolling-stock, and they gallop their trains back to Homebush and Ashfield to bring in fresh passengers; and the same thing takes place at night in the reverse direction.

2081. So all you want to do is to shove your trains from one line to the other? Yes.

2082. If you could do that the Government could do that with the six lines they have here? Yes.

2083. We are told that if we were to widen the scheme before us so as to make it as wide as the original one was, they could do without this long route? No; they could do nothing of the kind. The additional standing room on the St. James' Road plan is only two more platforms. The standing room would hold only two more trains.

2084. You are going to accept the necessity of running the trains back to Redfern? Yes.

2085. Therefore, you want no standing room at all? No. That is merely as a temporary measure.

2086. Then in that case you would not want to make an open cutting into the Governor's Domain? Yes; I want to get length. When a train arrives at a platform, if the next train is following in two minutes you must pull that ahead and draw it through, and if by chance two or three trains come in together, you must have sufficient room to pull your train further down to cross over to the next road. Another advantage of the western line is this: There is a probability of a line being made to the north-western suburbs, and whenever a line is made to those suburbs if the railway is already on the western side of the city you will save the expense of crossing to the eastern side of the city from the western side.

2087. So far as respects the cost of working, it does not matter whether we go into the city on the eastern or on the western side? The cost per mile ought to be the same.

2088. We have had put before us estimates of the cost of working the St. James' Road scheme, and Mr. Eddy's estimate was that 1d. put on to the fare would more than pay 3 per cent. on the cost of working that line;—do you think that is a fair estimate? The Commissioners estimate the traffic at £32,000 per annum, which is really 10,240,000 passengers at $\frac{1}{4}$ d. Although they put 1d. for each passenger, a workman's ticket is only $\frac{1}{4}$ d., and a season-ticket holder pays only about $\frac{1}{4}$ d. So taking it all round it comes to $\frac{3}{4}$ d. at that number of passengers. Then the Commissioners say that the working cost is £8,000. Since then they have given the working cost at £18,800. That is for No. 10 scheme. As a matter of fact, the working expenses of No. 10 scheme will be no more than the working expenses of the St. James' Road scheme. Roughly speaking, from King-street to the carriage stabling sheds would be three-quarters of a mile of dead running. In the St. James' Road scheme the dead running would be $1\frac{1}{4}$ miles to Redfern station. Therefore, the dead running on the St. James' scheme must be more than the dead running on that scheme. The train running must be the same in both cases, therefore how does the difference come out in the working expenses? I think that the £8,000 put down as the working expenses is put down low purposely to prove that the scheme is a paying one. The cost per train at £8,000 works out about 1s. 4d. per train mile. The Railway Commissioners state in their yearly report that the working expenses per train mile are 46d. Of course, the Railway Commissioners do not state the sectional expenses of the different sections; but give the working expenses of all their lines at 46d. per train mile, and at the date of that report the number of trains arriving at Redfern multiplied by train mileage gives only 1s. 4d. per train mile, if you divide it into £8,000. During the inquiry made by the Public Works Committee in 1897, Mr. Parry gave evidence and furnished returns showing the number of trains arriving at and departing from Redfern, namely, 324 trains per day. Now 324 trains running 1 mile multiplied by 365 days gives 118,260 train miles, and if you divide that into £8,000 it gives the train mileage cost as 1s. 4 $\frac{1}{4}$ d. per train mile.

2089. But would not the traffic be much concentrated on this line—a great deal more going over it? If the Commissioners can work that line for 1s. 4d. per train mile I want to take my expenses at the same rate.

2090. But for years we have estimated the cost roughly at 4s. per train mile? Yes; but if the Commissioners in their scheme on which the Public Works Committee reported, and on that based their finding that the line would pay, take credit to themselves that they can work that line for £8,000, I think that I can take credit for working my line for £8,000 for the same mileage.

2091. You must not take their estimate, but make your own? But as they are traffic managers and I am not is it not fair for me take their figures.

2092. Now, as to the cost of construction, what do you put the cost at from Redfern to your terminus in the Governor's Domain—that is, complete from end to end? I think you have that down already at £720,000 to Phillip-street. I have made it £850,000 for the suburban portion. I want to put £10,000 on to the city section, and deduct it from the suburban section, because I make the line so much further on the suburban section.

2093. Well I am asking you how much it will cost you to make this line to the city with the necessary shunting arrangements at the city end? £730,000.

2094. Supposing the Government say, "Make a city line and nothing more," you can do it for £730,000, and put it in workable order for that? Yes.

2095. Do you anticipate that your traffic will be equal to or more than that estimated by the Commissioners for their traffic to Hyde Park? Their traffic estimate to Hyde Park is altogether wrong, because you have made an electric tramway since, which has taken traffic away.

2096. Their estimate was made before the George-street line was designed? In that case it was—in 1897.

2097. Now that the people have taken to the George-street tram, and shown the extent to which that accommodates them, do you think that there will not be as heavy traffic on the Hyde Park line as there would have been if the George-street line had not been built? I am quite clear about it. Mr. Kneeshaw says that the total number of passengers now travelling on the Elizabeth-street line from the railway is 1,150 a day—that is, in each direction.

2098. But a Government witness has stated that an increase of the trade will make up for all that is taken away by the George-street line;—do you think it will? Not on the Elizabeth-street trams.

2099. I mean supposing they make a railway to Hyde Park, do you think that the general increase of the traffic on the railways will make up their figures to what they estimated them at, notwithstanding the George-street traffic? No; there cannot be more travel by railway than by tram.

2100. They say that people would not get out to make a change, but would rather go straight on to their destination, and therefore that there would be more passengers by a railway to Hyde Park? I say not one more.

- W.
Greenwood,
A.M.I.C.E.
13 Mar., 1900.
2101. You think that their traffic is over-estimated by them? Certainly, a long way.
2102. And that the profit will not be so good as they say? No.
2103. And therefore they will not make $3\frac{1}{2}$ per cent.? I will show you that they cannot make it pay working expenses.
2104. Do you think that they have under-estimated the cost of making the railway to Hyde Park? I will not say anything about that, because I do not know.
2105. Will you tell us what you think your traffic will be on your western line? I am going to use the Government figures for this. Mr. Kneeshaw stated that the number of passengers arriving at Redfern was as follows (I am speaking of one direction all the time):—He said the electric tram carried 13,000 daily. He further said that if there were no railway traffic at all—and he did not want it—his cars in George-street would still be filled. I contend that those 13,000 people will go down by the train on the western line, and I contend it for several reasons. In the first place, there would be no changes; in the second place, the trains would take six minutes to go to the Quay, whereas the time-table for the electric tram is sixteen minutes. Then the fare by the electric tram is 1d. The railway fare for a workman would be only $\frac{1}{4}$ d. a journey if he had a workman's ticket; and a person who now pays 1d. will pay $\frac{1}{4}$ d. if he gets the chance. A railway season-ticket would be $\frac{3}{4}$ d. instead of 1d., and that is another reason. So I contend that the whole of those people will travel by the train instead of by the tram.
2106. I suppose that the Government would charge them the same fare if they went only as far as Bathurst-street as if they went on to Circular Quay? I have estimated for one rate of fare right through. I do not know what the Government might do in that case. Possibly they might rearrange their fares. I am speaking of railway passengers. Mr. Kneeshaw also said that there were 9,000 persons who walked from the Redfern Station into the city, and that the bulk of these were between 7 and half-past 8 o'clock in the morning, and that they were mostly people who were paid low wages, and that if there were a train so that they could take out workmen's tickets, they would travel by train. I contend that he is right to this extent: That fully two-thirds—that is, 6,000 out of the 9,000—would travel by train if it were on the western side of the city. That is practically what Mr. Kneeshaw says. The eastern suburbs contain a larger population than the western suburbs do. We have 19,000 a day who go by the railway from the western suburbs, and if the eastern suburban line were constructed I claim that 15,000 would come in over that line. Supposing that a passenger were to start, say, from Rankwick, the toll from Rankwick as far as Circular Quay would be chargeable against the eastern suburban line; but whatever toll was collected between Circular Quay and Redfern would be chargeable to this line.
2107. But what would the traffic be if you were simply to make a short city line down to the Domain? Supposing there were two distinct companies, the toll for travelling over this line would have to go to the company that owned the city line, and the toll from the city to, say, Paddington, would go towards paying the interest on that line.
2108. I am supposing that one company had made a line to Circular Quay, and that the other company had not come into existence? I do not think that is quite a fair way to put it.
2109. Taking the city line by itself, can you give us an estimate of your working expenses, and an estimate of receipts from your traffic? I think I am fair in estimating that from Circular Quay I could get 3,000 passengers a day, and that I could also get 2,000 from local pick-up traffic. I have already 13,000 electric tram passengers who arrive by tram, and 6,000 out of the 9,000 who now walk, which, together with the 3,000 from the Circular Quay and the 2,000 for local pick-up traffic, make a total of 24,000 a day. That number has to be multiplied by two, because that traffic is only in one direction. That makes 48,000 fares per day at $\frac{3}{4}$ d., which amounts to £150 a day. That gives £54,750 a year. From that I take the £8,000 which the Commissioners say is the working cost; but I put that down at £10,000. The Commissioners put down £8,000, taking in the long-distance as well as the suburban, and giving them credit for 10 per cent. as being long-distance, would reduce the working cost of the suburban to £7,200. Then I allow for the difference in length, which brings mine up to £10,000 in round numbers, and that leaves a net profit of £44,750 per annum. I stated the other day 10 per cent. Of course, the reason for the 10 per cent. is that I include the traffic, which I claim I have a right to assume will come from the North Shore and the eastern suburbs. Taking the lowest, I have shown a profit of 6 per cent. on the capital—that is, with the present population and the present number of trains. Now the growth of traffic is that it doubles in twenty-five years.
2110. The difference between 1s. 4d. a train mile and 46d. per train mile is very great? Yes; but if it were increased to 46d. per train mile, instead of £8,000 the Commissioners would show no profit, whereas the Public Works Committee were induced, on the strength of those figures, to recommend the construction of the line.
2111. Supposing you had to pay 46d. per train mile, what would your profit then be? The working expenses, in that case, would be £36,728.
2112. That leaves you a profit of £18,000? Yes. But the Commissioners give that as the cost of working per train mile for the whole of their system. To justify their estimate of £8,000 they may possibly say that the working cost of the suburban line is very much less than the working cost of a country line; they may, indeed, give a variety of reasons. So you have no right to assume an estimate of 46d. unless you assume that 46d. is to be the cost to be charged against both the King-street and the St. James' Road schemes. Mr. Deane gave evidence the other day in reference to the various schemes, and used the £8,000 as an argument in favour of those schemes, and you will find what he said, I think, on page 17.
2113. *Vice-Chairman.*] I suppose you will admit that the larger portion of the traffic you hope to get on your completed scheme would go through Redfern down to Circular Quay? Since the Commissioners have introduced penny fares on the electric tram, I take it that it would be impossible for them to charge mileage rates on the railway to Circular Quay. If a person can ride $1\frac{1}{2}$ mile on the tramway for 1d. you cannot charge mileage rates on your railway if it is to compete with the tramway. I am assuming that the fare will be $\frac{1}{4}$ d. for every journey made over the railway. In five years from the time the railway is made to the eastern suburbs I think you will have a greater amount of traffic coming in through Woollloomooloo than from the other direction.
2114. But will not the main line coming through Redfern drain a much larger area than an eastern extension could? I mean that a line 7 miles from the Circular Quay in a general easterly direction will serve a greater population than will 7 miles of line along the western suburbs railway. The western suburbs do not grow at all—the railway traffic from those suburbs is not growing. The tramway traffic
- is

is not growing; it is stationery, and has been for some years. You can see that from the Commissioners' returns.

2115. Do you hope to gain for your extension the whole of the traffic from the eastern suburbs? Not the whole of it.

2116. In your opinion, the eastern extension of your proposed scheme would, in time to come, serve a far larger number of people than would be served by the extension into the city? In time to come; there is room for growth. At the present time people within a certain distance of the western suburban line have built pretty well as thickly as they will do, but on the eastern suburban railway route there is plenty of room for population yet.

2117. But is it not a fact that all the best building sites in the eastern suburbs are pretty well occupied now? There is a lot of ground in Waverley and Woollahra not built upon. You may put it in another way: That every mile of railway to the eastern suburbs will carry as much traffic as a line of railway through the western suburbs.

2118. Judging from the map, I think you have more possibilities of extension in the western suburbs than in the eastern? No. Persons do not now choose the western suburbs as places for residence, because they cannot get land within a reasonable distance, but they go to the northern suburbs because they can get land there, and the moment that they are certain that there will be a bridge across the Harbour a great deal of additional population will go there. The traffic on the western line will not grow for many years to come, but it will grow wherever new lines are built.

W.
Greenwood,
A.M.I.C.E.
13 Mar., 1900.

WEDNESDAY, 14 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

William Greenwood, A.M.I.C.E., sworn, and further examined:—

2119. *Vice-Chairman.*] One of the other schemes we have before us branches off from Eveleigh, and does not go through the main Redfern Station at all; yours, of course, starts from the Redfern Railway Station; the other scheme will render necessary the duplication of certain offices and the construction, practically, of a new station which will add to the working expenses, and so on;—do you think, as compared with your scheme, that is a serious matter? I would rather not say anything at all about that scheme. I have not considered it.

2120. Is it a serious matter, the construction of practically a new station somewhere near Christ Church to do work which could be done at the Redfern Railway Station? I think it is a great mistake not to go through the Redfern Railway Station.

2121. For what reason? Because Redfern Station must be one of your stopping stations. My scheme is not for long-distance traffic. Under Mr. Selge's scheme the whole of the traffic, I suppose, both long-distance and suburban, would go through the new station you are speaking of.

2122. Not necessarily? Oh, only the suburban. That is not a scheme I would adopt; I would go through the main line station.

2123. I would like you to separate the cost of resumption from the cost of works in that part of your scheme which reaches as far as the Circular Quay? I have already done so. I think it is £325,000. On page 2 of the report of the Public Works Committee in 1897, the Railway Commissioners give an estimate of traffic of £32,000. I take that to be for 10,240,000 passengers at $\frac{3}{4}$ d.—that is, they carry their passengers from Redfern to King-street for $\frac{3}{4}$ d. each for each journey. In my scheme, on the western side, the passengers that travelled as far as Wynyard-square would have gone rather a longer distance than those that would travel to King-street, and possibly 25 per cent. of my passengers would go to the Circular Quay, but I have taken credit for only $\frac{3}{4}$ d. each for them, no matter whether they went to the Quay or not. I want to show you that I have taken an under-estimate rather than an over-estimate. It is possible that for season tickets the fare to the Quay might be greater than to Wynyard-square. But for the same price I would carry the passengers a longer distance than the Commissioners would do. With regard to the estimate of the traffic from Redfern to either the King-street or the St. James' Road station, I may say that at the time the Commissioners prepared this estimate of traffic they assumed that the whole of the passengers that came to Redfern would travel to King-street. Since that time the electric tramways have been constructed, and Mr. Kneeshaw states that previously to the electric trams construction, 2,700,000 passengers per annum travelled by steam tram from and to King-street, or beyond, in going to or coming from the Redfern Railway Station, and that since the electric trams commenced to run on the western side of the town, that number has been reduced to about 700,000; in other words, Mr. Kneeshaw says that 1,150 passengers per day travel from the Redfern Railway Station by the steam trams to King-street. Assuming that a railway to King-street or to St. James' Road would carry the whole of the passengers which Mr. Kneeshaw says now travel by the steam trams—I do not think it would, but we will give credit for that—then 1,150 multiplied by two journeys, multiplied by 365 days, at $\frac{3}{4}$ d. per journey, gives a total gross revenue of £2,623 8s. 9d. per annum.

2124. Do you think that that is all the traffic that would be captured by that extension? I am sure of it, because I have given credit for all the passengers that Mr. Kneeshaw says. I might even go below Mr. Kneeshaw's figures if you were to take my opinion.

2125. A great number of people have their places of business situated between George-street and Elizabeth-street;—presuming that the proposed extension to Hyde Park were carried out, would not the majority of those persons prefer to go by the railway on account of the speedier transit than to go along George-street by means of the tram? Not more than do now.

2126.

W.
Greenwood,
A.M.I.C.E.
14 Mar., 1900.

W.
Greenwood.
A.M.I.C.E.
14 Mar., 1900.

2126. The conditions are not the same now as they would be if an extension of the railway were carried out; they would then have a speedier method of getting into the city on the west, which would bring them probably more rapidly to their places of business than the electric tram does now; you must make some allowance for a large number of those? No; I do not think so. More than that, I think I should have a right to deduct this—the tram will be running alongside the railway, if the railway is constructed to St. James' Road—a steam or electric tram will run in Elizabeth-street competing against the railway; now a person coming to this building, or going to the Custom-house, or to the Treasury, would not ride to the railway station at King-street and then walk down as far as this, but would come by the tram to this point. Therefore, some of those people would still prefer the tram to the railway, which would quite compensate for those who might not.

2127. Do you know what difference in time an extension to King-street will make as against either the steam tram at present, or an electric tram, for that class of passengers you have just mentioned;—I mean people employed in this building, or the Custom-house, or other places about here—would it not be at least ten minutes quicker for them? That is between an electric tram running along Elizabeth-street and a railway running to St. James' Road. An electric tram running along Elizabeth-street would take less time than would be occupied by going round by George-street to Circular Quay. It is less distance—the line would be a direct one. I think that if I were in a train, and were carried to St. James' Road or King-street, and then had to walk to this building, I could be brought here just as soon by the electric tram along Elizabeth-street as I should be by the train, plus the walk.

2128. Would it have the effect of allowing suburban passengers to wait for a later train than they do now, and still get to their places of business at the same time as they do now? The total difference could not be more than two or three minutes. You see you would have to walk from King-street to this point, plus your train journey.

2129. Which would be ten minutes faster, we are told, than the tram journey? That cannot be.

2130. You will have to put your walk from King-street to the place of business against the gain of ten minutes? Your total tram journey according to the time-table is now sixteen minutes; as a matter of fact, it does take less. The electric tram along Elizabeth-street would have a much shorter distance to travel than one going round by George-street, and would travel in less time. So if you put that at ten minutes instead of sixteen, and if you put your train journey to King-street at four minutes, that leaves you eight minutes to walk from King-street to this point, which practically means there is no saving. Assuming it in that way, that gives only a total gross revenue of £2,623 8s. 9d. Now the lowest working expenses which the Commissioners put down is £8,000. That leaves a dead loss of £5,377 per annum. There is just the same number of trains to run whether those trains contain 10 per cent. or 90 per cent. of the passengers. The whole of those trains have to be brought to King-street, you cannot drop any of them at Redfern; therefore, the working expenses must be just the same, that is £8,000. Now assuming, as Dr. Garran suggested yesterday, 46d. per train mile for the running cost, the working expenses would then be £36,728. If you assume that in this case the working expenses would be £36,728, that would leave a total loss of £31,000 a year. To that gross loss you have to add this: Supposing the line costs £1,000,000 to construct—that is £700,000 plus the value of the Hyde Park land—3 per cent. interest upon that is £30,000 per annum, and that £30,000 has to be added to the loss I have already stated.

2131. The scheme before us will cost £1,500,000? Well, I am taking the cheapest one. Of course, the Railway Commissioners may be able to give an explanation of that £8,000; but it will suit me whichever way they give it. Now as to the capital cost of those schemes. Dr. Garran said yesterday that, for the purpose of comparison, we should go to the same points. I may mention that the ferry traffic now is very great, and within the next ten years we may expect that the whole of the shores from Manly to Mosman will be thickly populated, and those people will always be carried by ferry, and must go to the Circular Quay. The St. James' Road scheme is estimated to cost £650,000; but to extend the St. James' Road or the King-street scheme to the Circular Quay, in order to serve the ferry traffic, will cost no less than £500,000 for land resumption and works. Mr. Deane says that you can get to North Shore from the St. James' Road or the King-street station, and there is a plan somewhere here showing which way he proposes to get there. Mr. Deane states that either from the St. James' Road or the King-street station he could get to a bridge to North Shore by going back to Liverpool-street and forming a junction, and then going in the direction of Darling Harbour and Sussex-street, and so getting back to the proposed bridge at Dawes Point. The distance from Liverpool-street to Wynyard-square is as great as the distance would be from Redfern to Wynyard-square, and that line could not be constructed for less than £1,000,000 for land and works. There would be a junction, which is, of course, a most inconvenient thing to do, at Liverpool-street, and the whole of the traffic that came in from Redfern would have to be first carried to the St. James' Road or the King-street station; then change carriages into another train, and run back to Liverpool-street and round to Wynyard-square. So that you have first of all the cost of the line, £650,000; you have £500,000 to get to the Circular Quay, and you have £1,000,000 to get to that common point at Wynyard-square. That gives a total of £2,150,000 to bring either of their schemes to the same point as my scheme does at a total cost of £730,000. To that you have to add the cost of the land to be resumed at Hyde Park, which I think has been stated at £250,000, so that you have a capital outlay, roughly speaking, of £2,500,000, as against my £730,000. Those schemes would also involve a tunnel from Hyde Park or St. James' Road to the Circular Quay. That tunnel would be just as long or longer than the York-street tunnel. I want to show that the same distance of tunnel will occur in any of their schemes as will occur in mine. If they want to get to the Circular Quay by any of those schemes, they will have a tunnel quite as long as the York-street tunnel, and on a grade of 1 in 45. If you take No. 10 scheme, which I believe you are considering, if they utilise a portion of the line marked and dotted round to the carriage-sheds, as a means of making a railway to the eastern suburbs, then there will be a tunnel of 1,000 yards in length for the eastern suburbs traffic, besides which there will be practically a junction formed at the station in the St. James' Road scheme. The King-street or the St. James' Road station will be no better than the Redfern Station is for working. There will be the same inconvenience of shunting at either of those stations as at Redfern, because they are terminal stations.

2132. It has been suggested, in reply to a question, that by taking 80 feet from Hyde Park on the east we might dispense with a long tunnel under the Domain, and with large stabling yards at Sir John Young's Crescent, thus making the station practically a dead-end one;—what objections can be urged against such a scheme? The first is one that has not been mentioned so far, namely, the blocking up of the streets.

2133.

W.
Greenwood,
A.M.J.C.E.
14 Mar., 1900.

2133. We are now on the question of working the station? Assuming that from Liverpool-street to Park-street the line will be in cut and cover, practically the whole of the shunting will be done in tunnel.*
2134. What objections have you to urge against that? At Redfern they say the trouble now is shunting in the tunnel, and that tunnel is possibly only 150 feet in length. It is really only a big skew bridge, and they say there is difficulty in shunting in that tunnel; and this will be a long continuous tunnel* to shunt in.
2135. Every train must have access to every platform? Yes.
2136. And for that purpose a large number of points would be necessary? Yes.
2137. Over what distance would the points necessary to produce that result extend? Possibly 800 or 1,000 feet south from Park-street.
2138. Practically, three-quarters of the tunnel*? Yes. Practically the whole length of the tunnel* would be occupied by shunting operations.
2139. That is on the presumption that we dispense with the long tunnel and the stabling sheds in the Domain, and resume some land in Hyde Park? Yes.
2140. Are there any other points you would like to urge against the scheme as it stands? Yes. The late Chief Commissioner, Mr. Eddy, stated that no terminal station should be built below the level of the roadway. It does not matter for a passing station, but for a terminal station, where the whole of the luggage has to be taken down to the platforms and lifted from the platforms. Roughly speaking, I believe that in this case the assembly platform is 13 feet above the other platforms, and there is provision for ramps in every one of these cases. Therefore, the whole of the luggage has to go down 13 feet, or be raised 13 feet.
2141. On that subject Mr. Parry said this: "Instead of having wheelbarrows passing to and fro along the assembly platform, parcels and luggage will be dealt with by Aspinall's overhead carriers"? That is all very well, but, as a matter of fact, the whole of the luggage that comes there in cabs will have to be taken down to the train. Mr. Deane also has said that a terminal station ought to be on the level.
2142. You regard as a serious objection to the King-street station the fact that the general assembly platform is not on the same level as the platforms of arrival and departure? Most assuredly. But this objection does not apply to the St. James' Road station, because there is a cab road on the level of the platforms. Where the cab road crosses the two western lines it must be 17 feet above the rails. If you assume a grade of 1 in 15 it will take 255 feet before the cab road can get down to the level of the rails. The cabs cannot get down to the level of the rails until they get about one-quarter of the distance along the platform when they come in from Park-street.
2143. But for the remaining three-quarters or more of the cab road, access can be gained to the level of the rails from Elizabeth-street all the way? Yes. My comparison, so far, has been based on the cost of the St. James' Road scheme, whilst all the other schemes, including No. 10, would cost on an average about £1,500,000. Mr. Deane stated that, under Mr. Rennick's scheme, a tunnel from Hyde Park to the Circular Quay could not be worked except by electric traction—that the grades would be so steep between St. James' Road and the Circular Quay that they must be worked by electric traction—and he has said generally that he would not advocate a tunnel scheme, unless it were worked by electric traction. The late Chief Commissioner, Mr. Eddy, objected to electric traction, and Mr. Thow, the mechanical engineer, strongly objected to electric traction, stating that it was not practicable. I also say that it is not practicable. It is practicable in London for one circular railway, but it would not be practicable here because you would have to work the trains from Redfern to Homebush, and from Redfern to Hurstville, with electric traction if you worked any portion of the railway with it.
2144. But we have had a statement that the changing of engines at Redfern from steam to electricity would not be a serious inconvenience, and could be done very rapidly? I think it would.
2145. Have you seen such a system in operation? No. With regard to tunnels, Dr. Garran asked yesterday did I think there would be an objection to a tunnel in this climate. I forgot to state then that in Brisbane they have two tunnels in the heart of the town. There is one tunnel between Roma-street station and the central station and another tunnel between the central station and Brunswick-street station. I think the longest is about half a mile—an ordinary double-line tunnel. I believe that that tunnel is now lighted with electricity, but there is only natural ventilation.
2146. Have you any idea what is the maximum number of trains going through one of those tunnels during the busiest hour of the day in Brisbane? I cannot tell you that.
2147. Do you know that as many as forty suburban trains would require to go through your tunnel, or any other tunnel connected with a city railway extension scheme here, in one hour in two of the busiest portions of the day? Yes; twenty in each direction probably.
2148. Do you think it is possible that any natural system of ventilation could keep the air pure in a tunnel under such circumstances? Yes.
2149. No artificial means would be required? I do not think so. The central station in Brisbane is practically between two tunnels. There is little or no open space before you are in a tunnel—almost the moment you leave the station you are in a tunnel in whichever direction you go in Brisbane.
2150. In summer we frequently have hot, close, muggy days, with little or no wind;—would your tunnels be ventilated under those circumstances? I think so.
2151. You consider your eastern extension as an essential part of your scheme? The general idea is that the line should be a complete circular railway.
2152. That being so, will you kindly state why you have selected the particular route you have indicated on the map, which you have placed before the Committee, to bring the loop back to the main line? I think that line indicates the most suitable piece of ground, both from an engineering point of view and from a traffic point of view.
2153. *Dr. Garran.*] I suppose you have had a good deal of difficulty in avoiding level crossings in going round there? I never make level crossings.
2154. All your approaches on the eastern suburban line either go over or tunnel under? For the eastern suburban line I have prepared no sections, but, as a matter of fact, you would not put in level crossings. Level crossings are more expensive than bridges. If you have a level crossing, you must have a gate-keeper, and a gatekeeper's wages come to more than the interest on the bridge would. It is cheaper to have a bridge.
2155. In tracing that line, you have been guided partly by engineering considerations and partly by traffic considerations? Just so.

2156.

* NOTE (on revision):—I find the plan shows No. 10 Scheme to be in open cut through the Park.

- W.
Greenwood,
A.M.I.C.E.
14 Mar., 1900.
2156. *Vice-Chairman.*] Your total cost for a complete scheme is practically £1,500,000? Yes.
2157. You say that that includes a distance of 12 miles, or practically £130,000 per mile? Yes.
2158. You state that the whole length of the line is likely to be profitable? Yes.
2159. Do you expect to get, on the average, as much profit per mile on the 10 miles of the eastern suburban line as you expect to get from the 2 miles down to the Quay? No, not per mile—certainly not; but I say that 7 miles of the eastern suburban line would serve as great a population as 7 miles on the western suburban line would serve, and consequently there would be the same amount of traffic coming into Sydney daily from that side as there would be from the western side.
2160. To support that, would you kindly give us—what I think you have prepared—a statement of the traffic that you expect from this railway, and also the working expenses—that is, of course, for the complete scheme? Yes. Yesterday I put down a total of 24,000 passengers in one direction for the city line. Now I assume 15,000 will come in from the eastern suburbs, and 1,000 from the North Shore bridge. That makes a total of 40,000, which, multiplied by two, multiplied by 365 days, gives a gross yearly total of 29,200,000 passengers, at $\frac{1}{2}$ d. per journey, which gives a gross revenue of £91,250. The working expenses would be the same for the city portion. For the outer circles, or the suburban line, I assume that you will run sixty trains a day each way, which, multiplied by two makes 120 trains a day. The Railway Commissioners give the net profit per train at 3s. 4d. per train mile. Therefore, that is £20 net profit per day, multiplied by 365 days, which makes £7,300 per mile per annum on an outlay of £85,000 per mile, or practically 9 per cent. That is exclusive of goods traffic on that line, and I see no reason why the goods traffic on that 7 miles of line should not be as good as the goods traffic on the 7 miles of the western suburban line, which is roughly £30,000 per annum.
2161. For the purpose of comparison, if you can institute one between these, I may say that according to the Railway Commissioners' report we have 66 miles of tram which, on the average, cost only £22,400 a mile—that is, taking the electrical, the steam, and the cable altogether—going through all the main streets, tapping all the main centres of population, and on that outlay we get a net profit of 3.75 per annum; you, on the other hand, have 12 miles of railway at an average cost of £130,000 per mile, which you anticipate will yield 9 per cent. per annum? Yes.
2162. Do you think that you will earn more than the whole of the tram system—that is, taking everything into consideration? I do not think you can compare railways and tramways; it is a very difficult thing to do. According to a statement given on page 8 of the Railway Commissioners' report, the results of the working of the railways in 1899 show that the working expenses were 54 per cent. of the revenue. On the next page there is a statement that the working expenses of the tramways were 83 per cent.
2163. What sort of station do you propose to have at Circular Quay? No more than an ordinary passing station.
2164. Will that be an "island" station? I do not think so; but that is a thing you can decide upon only when you work out your details. Under many circumstances an "island" platform is preferable, but not always. I may state that there are no "island" platforms on the Metropolitan Railway, London, and there are many cases in which "island" platforms are not advisable. The Wynyard-square station will be rather a complicated one as regards that, there being two different levels; but it is only a matter of detail whether you put in an "island" platform or two side platforms. On two lines of rails I can work all the traffic that will come into Redfern during the next twenty-five years. Mr. Parry, in the report for 1897, states the number of passengers arriving at Redfern daily at 20,000. Mr. Kneeshaw says that at the present time it is 23,500. That is a growth of about 17 per cent. in three years. Roughly, it will be a matter of twenty or twenty-five years before the number of passengers doubles. In 1897 the number of trains arriving and departing in a day is stated at 324. At the present time they number 329. Practically, the number of trains arriving at Redfern is stationary; there has been no increase in the last three years. In an Appendix to the 1897 Report, Mr. Parry gives them at 324, and now he gives them at 329. Although the passenger traffic has increased 17 per cent., there are no more trains; and it is possible to double the traffic without increasing the number of trains.
2165. In what way? I have stated that, according to Mr. Parry's figures, there are just about the same number of trains arriving at and departing from Redfern now as there were three years ago, but the number of passengers has increased 17 per cent. During the busiest time of the day, at the present time—from 8 o'clock until 9 o'clock in the morning—there are twenty-two trains arriving at Redfern. They carry, on an average, 253 passengers each. These are the Government figures. A train of eight cars has seating accommodation for 480 passengers, so that you can carry double the number of passengers that you now carry, with the same trains.
2166. But the increase in the passenger traffic would not be spread equally over the whole of the day, would it? No.
2167. And, therefore, could not be applied equally to every train? But I am taking the busiest time of the day—from 8 o'clock until 9 o'clock. The Government figures show that there are 5,565 passengers carried between 8 and 9 o'clock in the morning. That is in twenty-two trains, which gives an average of 253 passengers per train. I say that a train of eight cars will seat 480 or 500 passengers; therefore, if you were to have double the number of passengers you would not need to increase the number of trains, because the trains are only half full, according to the Government's own figures. It is shown that in the busiest part of the day there are only twenty-two trains arriving at Redfern. If you deduct four of those as being long-distance and semi-long-distance trains, that will leave only eighteen trains per hour to be taken along the western line. Mr. Rennick, Engineer-in-Chief of Victoria, says that twenty-four trains an hour can be worked on one pair of rails. Mr. Eddy's evidence practically endorses that. I contend that you can work thirty trains in an hour through—that is, a two-minute service. At the present time you have only eighteen, and if you were working a two-minute service, that would be thirty trains an hour, and if each train were filled, which it is supposed to be during the busy time of the day, it would carry 500 passengers; that is, 15,000 an hour could be carried over one pair of rails. At the present time you have only 5,000 arriving during the busiest hour of the day. I mention this to show that the carrying capacity of my western line is very much greater than the traffic you have now, or will have for the next twenty or twenty-five years. I want to show that the amount of traffic coming into Redfern is not an extraordinary amount at all. At St. Enoch's Station, Glasgow, there are, every working day, nineteen trains arriving in a space of forty-three minutes. That is on one pair of rails. That is at the rate of twenty-eight trains an hour arriving on one pair of rails at a terminal station in Glasgow. This information

is copied from the *Railway Magazine*, for November, 1898. At the present time twenty-two trains arrive at Redfern on four lines of rails; but, as a matter of fact, in Glasgow there are twenty-eight trains arriving in an hour on one pair of rails every morning in the year.

2168. Is it a dead-end station? I believe so. Therefore, when I say that I can work thirty trains in an hour in a through station that is no very great thing, when they receive twenty-eight in an hour at Glasgow on a single pair of rails in a dead-end station. Even if that is a through station, the amount of traffic is practically only the same amount as I say I can deal with. I mention this, because I may be told it is absolutely necessary to have four lines of rails. I think I have shown that I can deal with double the number of passengers there in twenty or twenty-five years' time, carried over only a single pair of rails; but, as a matter of fact, there are to be two pairs of rails as far as the Wynyard-square station. If the North Shore line be not built, the four lines of rails will be available only as far as Bathurst-street, and then the trains would have to run on a double line as far as the Quay.

2169. Would not the increased amount of convenience in having six lines be commensurate with the increased expense which they would occasion? Two lines are said to be required for fast traffic, and two lines for slow traffic, and the other two lines for service lines. I have no fast traffic; it is all slow traffic. It is all going at the same speed, and I do not require the service lines.

2170. *Mr. Shepherd.*] Yesterday you said the King-street scheme would serve only 10 per cent. of the people; in other words, you said that the Redfern Station would serve 90 per cent. of the people better than the King-street scheme would? That is for long-distance traffic.

2171. I did not notice that you were speaking merely of the long-distance traffic? Well, 90 per cent. of the total traffic that arrives at Redfern is suburban traffic. Then, of the long-distance traffic that remains, I said that 90 per cent. of the people would be nearer their homes with their luggage at Redfern than they would be at King-street.

2172. What area would you mark out as being conveniently served by the King-street scheme? Bounded by Macquarie-street on the east, by Bent-street or Bridge-street on the north, by Market-street on the south, and by Castlereagh-street on the west.

2173. About what proportion of the city do you suppose that would represent? I do not think it would represent 5 per cent. of the day population of Sydney. The night population of the city is very small, but the day population is very great.

2174. So that really that extension to King-street, as proposed, would be of very little value? I think so.

2175. Now, with regard to your own scheme, what portion of the city do you suppose your Bathurst-street station would serve? Down to the water side on the west side, and to Castlereagh-street on the eastern side.

2176. And then north and south? Very few people would go south; north, midway to Wynyard-square.

2177. From Wynyard-square to what boundaries do you suppose people would be inconvenienced? The whole of Pitt-street on the eastern side, Darling Harbour or Sussex-street on the western, Margaret-street on the northern, and possibly King-street on the southern.

2178. I suppose that all outside those boundaries would be better served by a tram? Well, a tram runs through a portion of those boundaries.

2179. But I say outside those boundaries? Yes.

2180. You would imagine that people would prefer the tram in coming either to Bathurst-street or to Wynyard-square? Excepting with this difference, that if they come in the train they do not have to change, they go more quickly, and the season ticket rates and the workmen's ticket rates would be less; therefore, people would save both in time and in money.

2181. Of course, within a certain area? Yes, within a certain area. Mr. Kneeshaw stated that if the railway tram traffic were not in George-street—and he said he would be glad to get rid of it—there is plenty of local pick-up traffic. So the railway would not rob the trams, because they have already as much traffic as they can carry.

2182. It is very evident that the electric tram is a very popular conveyance? It is. It ought to have been made some years ago.

2183. Because Mr. Kneeshaw said that prior to the electric tram running, the average number of railway passengers per annum by tram was 2,700,000, and at the time he gave evidence the other day, the average number was 8,700,000 per annum—nearly four times as many? That is so.

2184. I do not think you have given any opinion about the third proposal which has been laid before us, and which is called the Asylum scheme? I think I have in this sense: I say I would not propose to make a new station there for the next ten years, because I say that whatever money you spend there will be unproductive—that you could not get increased fares from the passengers.

2185. But do you not think that if that station were constructed, it would entirely relieve Redfern Station from the pressure under which it has been suffering for some time; the Commissioners really consider that about the most urgent thing is to relieve the Redfern Station from that pressure, because they say it is positively dangerous;—and there is no doubt that that scheme, if adopted, would entirely relieve the Redfern Station from pressure? It would do so, but you would get no revenue from it.

2186. Leaving the question of revenue aside, would not that be a very convenient station from which to run tram-lines, say, through Pitt-street, Castlereagh-street, and Elizabeth-street? No; I do not think so. I myself think that the function of the tramway is to serve purely local pick-up traffic, and there should not even be a connection with a railway station. Mr. Kneeshaw practically adopts that view himself by saying that he would run the trams to the Cyclorama, and not go to the railway station at all, and my opinion also is that the trams would have sufficient traffic for themselves. You mentioned the danger at Redfern. You have had one or two railway accidents at Redfern. These are caused solely by drivers going against signals, and if you build a new station, and a driver goes against signals, you must have an accident; so it is not really the fault of the station.

2187. Still, if they had more room, and had not to shift the trains so frequently, I suppose accidents would be less likely? Yes, they would be less likely; but so long as a driver obeys his signals, the interlocking gear prevents an accident.

2188. With regard to your proposal to cross the Circular Quay, you propose to have an underground line there 15 feet deep? A daylight station.

2189. Would not a viaduct be serviceable? Most objectionable. My name will never be put to a viaduct there.

2190. A viaduct could be built in such a way that vehicular and other traffic could readily pass through? Yes;

W.
Greenwood,
A.M.I.C.E.
14 Mar., 1900.

W.
Greenwood,
A.M.I.C.E.
14 Mar., 1900.

Yes; but if you were to have a viaduct it would be a matter of 25 or 30 feet in height above the roadway, and people would have to rise that much to get up to the station, and the damage to the front of the Custom-house would be very great.

2191. In what way would it damage the Custom-house? The viaduct being in front of the Custom-house would spoil the architectural effect of the Custom-house.

2192. It has been given in evidence that a viaduct could be made an ornament to the place? Not in front of the Custom-house.

2193. The great argument of travellers—suburban people particularly—is the saving of time that would be effected by going by railway to King-street or by any other railway extension into the city; but, of course, that saving of time would only be for persons going to places within easy reach of the station? But every one going to places west of my proposed line must be taken nearer to their places of business by that railway than they could possibly be taken either by the electric tram or by a train to the King-street station.

2194. But still it is a fact that there would be no saving of time, except in the particular instance you have named? Yes; the whole of the population west of George-street would be taken nearer to their places of business by my railway than they would be by the tram.

2195. You think, then, that the tram traffic would not be facilitated by the carrying out of this proposed extension to Belmore Gardens;—of course, it would be dead money so far, because nothing more could be charged for fares; but still I should imagine that the carrying out of that proposal would facilitate the running of trams in directions other than George-street? No; my opinion as regards trams is that the local pick-up traffic will always pay for itself—that there should be sufficient traffic in George-street or, say, in Pitt-street to make it pay. But Pitt-street is not wide enough for a tramway. Kent-street might be.

THURSDAY, 15 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD, | The Hon. ANDREW GARRAN, LL.D.
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

William Greenwood, A.M.I.C.E., sworn, and further examined:—

W.
Greenwood,
A.M.I.C.E.
15 Mar., 1900.

2196. *Mr. Shepherd.*] I want to ask you a little more about crossing Circular Quay—your scheme would be an open cutting, would it not? Yes.

2197. Would that not interfere more with the traffic on the Quay than a viaduct would? No. I do not close any street. I put one bridge in the centre of the Custom-house, diverging to the two sides of the Custom-house.

2198. Still, you would alter the course of the street? Yes. The railway being through the centre really divides the traffic.

2199. With a viaduct there would be no occasion whatever to alter the direction of the street? Yes. The viaduct piers would take just the same width from the street for traffic that is going east and west.

2200. But the viaduct would have openings all the way;—you would simply put piers here and there, and the traffic would be just as free as it is now? Yes. But if the traffic were going from east to west the piers would take up the same width north and south as the railway would take.

2201. But still it would be of advantage the other way—it would leave a freer access north and south, would it not;—you see that an open cutting there would block the traffic north and south altogether? No. There would be a bridge in front of the Custom-house. The whole of the traffic going to Young-street and Loftus-street would pass over that bridge.

2202. But there would be only a bridge, I suppose? Yes.

2203. At all events the crossings could be more frequent with a viaduct than they could be with an open cutting? Yes.

2204. You have admitted that the electric tram is very largely patronised now? Yes.

2205. In fact, you stated yesterday that the present railway station at Redfern would accommodate about 90 per cent. of the people as compared with the King-street station? That is as regards long-distance passengers.

2206. I think you afterwards included the others also? Yes, for convenience.

2207. If the tram system were considerably increased, do you not think that it could be made sufficient for any extension into the city? Utterly impossible. Increased facilities cause increased traffic, and if you were to put down another tramway, say in Castlereagh-street or in Kent-street, it would create its own traffic on that line of tramway.

2208. That would be a division of the traffic, would it not? Yes.

2209. A tram certainly is more convenient for business people, in dropping them near to their places of business than a train could possibly be; for instance, in your scheme, you propose to go for your first section the whole way to Bathurst-street? Yes.

2210. And then from Bathurst-street to Wynyard-square? Yes.

2211. Well that leaves a tremendous gap, whereas the tram drops passengers at every street? Yes, that is so.

2212. If there were convenience in the different streets for trams, do you not think that people would prefer to use the tram to being brought somewhat out of their way by the train? The tram will never take the place of a railway. There will always be sufficient railway traffic to make the railway pay, and in a few years' time there will be sufficient traffic on those streets to make the tramway pay.

2213. You think that there is ample room for both railway and tramways? Yes. Sydney is a very peculiarly-shaped town. Kent-street is really the only street where you could properly put a tramway, and even there I would not like to put a double tramway. In Castlereagh-street you might put one, but I would prefer to keep to Elizabeth-street for a tramway, even for an electric one. 2214.

2214. How deep do you propose the cutting shall be at the Circular Quay? The rails will be about 13 feet below the wood blocks.

2215. Would that leave ample room for a bridge? Yes. I think I pointed that out to the Committee. You would have to raise your road about 3 feet in front of the Custom-house.

2216. The Railway Commissioners seem to think 17 feet at least should be the depth of the cutting? Yes; that is so—from 16 to 17 feet. Therefore, you would raise your road 3 feet or 4 feet in front of the Custom-house.

2217. That would be just arching it? Yes.

2218. *Dr. Garran.*] Do you mean raising the road only for the bridge, or the whole of the road? No. One bridge would be built in the centre of the Custom-house, say 66 feet long, and diverge to Loftus-street and to Young-street.

2219. But do you mean the whole of the road would be raised near the Custom-house? No; merely for the bridge. The front line of the Custom-house building would be practically about the same level as the raised road when raised 3 or 4 feet.

2220. Would you raise the pavement in front of the Custom-house? You would have to make two wing roads. At the present time the road in front of the Custom-house is higher than it is at the Quay—it falls to the gutter.

2221. Will you tell me what the depth of your lower station at Wynyard-square would be? The platforms would be about 30 feet below York-street.

2222. Do you propose to have a lift or only stairs for the people? No lift—certainly not. The ground from York-street to Carrington-street, going towards George-street, falls very fast, so that the outlet from the station, coming out at the corner of Carrington-street, will be a very slight rise from the platform.

2223. You would not go to George-street? No.

2224. Would you go to the corner of Carrington-street? Yes. In arranging a station of that kind, you would probably have different means of access and outlets from your station; the two traffics should not meet one another.

2225. Can you tell the length of the tunnel under the Domain, so as to compare it with the length of your tunnel under York-street;—in going round to the eastern suburbs you will have a tunnel under the Domain to go out at Woolloomooloo Bay? I could not tell you unless I were to plot a section; but it would be very short.

2226. Would it be more than 30 chains? No, less.

2227. What would be the length of your tunnel under Darlinghurst? About 24 chains.

2228. Will those be the only three tunnels on the whole of your scheme? I cannot say that, because in going through the suburbs before you got to Randwick it might be necessary to put in some short spurs of tunnels.

2229. At any rate, so far as you can see now, the tunnel under York-street would be the longest tunnel in your scheme? Yes; the tunnel under Darlinghurst would be common to all the schemes.

2230. *Mr. Levis.*] Throughout your line, from start to finish, I suppose you frequently cross the gas-pipes? There will be no difficulty with those at all. You can always deal with a gas-main. I do not think that I interfere with the principal main anywhere.

2231. Are you sure of that? Not absolutely sure.

2232. But if you were to interfere with the principal main it would cause a good deal of difficulty, would it not? No; what we do in England is this —

2233. No matter about what you do in England;—what are you going to do here? In lieu of a circular main we put in a flat one. We give the same area of space in the pipe, but flatten it. The crown of the arch would be about 18 inches, or 1 foot 9 inches, thick; and we should flatten the pipe and give it a greater width and less depth, and so give the same area to the pipe.

2234. So that there would be no difficulty whatever with the gas-mains? No, nor with water-mains.

2235. Have you considered whether, in the whole of your scheme, you cross the water mains, and where you do cross them? There is no trouble with the water main. I may tell you that the large water main in Sydney crosses Cleveland-street to go to Crown-street. Both the mains that come from Pott's Hill reservoir cross the railway at the Cleveland-street bridge.

2236. So you would not cross it more than once? I never cross a main coming from Prospect. I cross only ordinary service pipes.

2237. Then you do not cross the water-main itself at any point? No.

2238. Where does the service pipe start from? I think that, at the present time, the whole of the town of Sydney is supplied from the Centennial Park reservoir. Some of the low levels may be supplied from Crown-street, but I think not.

2239. You are positive that you would not cross any of the mains? Yes; not the larger mains.

2240. There is only one main, after all is said and done? The water and sewerage people call only the pipe that supplies a building a service pipe. The other pipes are called smaller mains, and principal mains.

2241. Will your scheme cross any of the principal mains? No.

2242. You will not interfere with the water supply in any way? No.

2243. What about the sewerage? The main sewer to Bondi passes at the junction of Harrington-street with Grosvenor-street.

2244. Would you interfere with it in any way? No; I go over the top of it.

2245. How many feet above it? I cannot tell you that, now, from memory. It is four years since I made the survey there.

2246. There has been no alteration? Not in the levels.

2247. Have you any idea at all? A few feet; sufficient to clear it.

2248. Without interfering with it in any way whatever? Yes.

2249. From start to finish, how many cuttings are there in your scheme? Practically only two cuttings.

2250. What is the length of each of those cuttings? About 25 chains and 35 chains.

2251. Where does the first cutting—the 25-chain one—commence? Near to Goulburn-street.

2252. How far would that continue? Until it got to the junction of Bathurst-street and George-street.

2253. It would be beyond Goulburn-street? Yes; south of it.

2254. Would you have to bridge Goulburn-street? I go beneath Goulburn-street with a bridge. I do not disturb the permanent level of the street.

W.
Greenwood,
A.M.I.C.E.
15 Mar., 1900.

W.
Greenwood,
A.M.I.C.E.
15 Mar., 1900.

2255. What about Bathurst-street? I do not disturb that. I go beneath George-street.
2256. So that all vehicular traffic will pass over? Yes; just as it does now.
2257. What would be the width of the bridges passing over those streets? About 46 feet or 47 feet between the abutments, for four lines of rails. You would not see them at all if you were on the road.
2258. At the bridge above it, where it passes over, what width would it be? There is no bridge that passes over a road, except the viaduct at Belmore Park.
2259. But you go along Bathurst-street? I am beneath Bathurst-street.
2260. So there is a cutting at Bathurst-street? That is so.
2261. Then there must be a crossing over that from Bathurst-street into George-street. Yes.
2262. What is the width of that? You do not see it on the surface, but the abutments themselves would be 46 feet apart.
2263. What would the street itself be from path to path? Just the same as it is now. The width of it is not interfered with at all.
2264. Have you calculated the area of private land that you require to have resumed from start to finish? Yes.
2265. What is the area? $3\frac{1}{2}$ acres.
2266. That is from start to finish? Yes.
2267. What do you value that at? At an average price of £100,000 per acre, making altogether £325,000 for land.
2268. That is absolute expenditure the Government will require to make under your scheme for land resumed? Yes. I should explain: I put the land and the buildings upon it at £70,000 an acre.
2269. When you say £100,000 an acre, what do you mean? I was going to explain. I put the land at £70,000 an acre—that is for the land and the buildings upon it; I allow 10 per cent. for compulsory sale, 10 per cent. for lessees' compensation, and 20 per cent. for severance—that is, 40 per cent. on top of £70,000, which makes £98,000 an acre. By lessees' compensation I mean this: If a piece of property at the present time is under lease to a man, say, for seven years, and you were to take that from him, the owner of the property would have to compensate the lessee for the time his lease is unexpired, and I put 10 per cent. for that. That occurs in very few cases in Sydney, where the bulk of the property is let on a yearly rental, but I put down 10 per cent. in case of any compensation.
2270. Have you considered how many places are upon leasehold or upon freehold in those $3\frac{1}{2}$ acres? Yes; very little leasehold.
2271. Have you made personal inquiries? I know Sydney thoroughly well.
2272. Have you the slightest idea how much of the $3\frac{1}{2}$ acres is under leasehold;—have you made any inquiries from persons who are tenants there as to the nature of their tenure? No, I have not.
2273. Then how do you make that calculation? If the property were put up to auction to-morrow —
2274. How do you make that calculation? Simply from experience.
2275. Can you tell me how many leaseholds there are on the first acre? No.
2276. On the second acre? No.
2277. On the third acre? No.
2278. On the fourth acre? No; and I cannot tell you the owner of a single piece of property; I purposely avoided getting to know.
2279. But did you not think that it was a most important element in the consideration of this question, how many acres were under leasehold, or how much was freehold, so as to come to a valuation? No, I did not.
2280. Then how do you come to your valuation;—leasehold land you would value at a certain price, and freehold at so much? Yes.
2281. And tenancy from year to year at so much? Yes.
2282. Have you considered that at all? Yes, I have. Some one must own the freehold of the property, even if it is leasehold.
2283. But do you not know that if I had a leasehold, the freeholder would expect something to come to him ultimately by way of enhancing the value of it? I have put the freehold at £70,000 an acre.
2284. On the $3\frac{1}{2}$ acres, £70,000 an acre is absolutely for the freehold? Yes.
2285. What is the leasehold worth? As regard compensation to the leaseholder, I say that taking his lease from him is worth 10 per cent.
2286. How many leaseholders do you think there are? I cannot tell you how many there may be.
2287. Then how can you come to any conclusion as to the value of the land unless you have made the necessary inquiries as to how many leaseholders there are? The basis of that is the municipal assessment.
2288. Have you seen those? I got it from the Town Hall authorities.
2289. Did they show you leaseholders or freeholders? They did not show me either of them.
2290. So you can give us no information at all as to the number of leaseholders, can you? No.
2291. You do not know whether they hold the land under leasehold for a year, or for ten, or fifteen, or ninety years? I know there is very little held on lease.
2292. Do you know of your own knowledge? No.
2293. So your valuation, taken as you have admitted, is a very rough estimate? No; indeed it is not.
2294. Will you tell me why it is not? For this reason: whether property is let on a yearly lease or on a seven years' lease does not increase its value very much; property is of the same value whether let on a one year's lease or seven years' lease.
2295. Do you know whether a foot of it is let on lease? No; but that does not affect the question of value. Frequently a lease injuriously affects it. A property is for sale to-morrow, and you can give possession in a year's time. If it is let on a lease that has been running twenty or thirty years, the rent now received is much lower than the rent you would now receive if the lease had expired; therefore that makes the property of less instead of more value.
2296. But you cannot tell us whether the lease of this property has two, five, or ten years to run, and you could not arrive at the actual value of the leasehold unless you knew that? Yes; I think so for the purpose I want this for—the purpose of an estimate.
2297. Tell me then how you come to your conclusion? I take the city assessment, the rental.
2298. But you have said that you do not know whether they are leaseholds for terms of years or for a year, or whether there are any leaseholds? No, that is so.

2299. How can you, unless you have that information, come to a conclusion? I simply make an estimate of what I think is the value of the land.

2300. But, in the consideration of the question of the cost of the construction of this line, would it not materially alter the whole aspect of the case if your valuation—which you say is £70,000 an acre—ought to be £100,000 an acre? There is not a piece of land on the whole of the place worth £100,000 an acre.

2301. But supposing it is so; you are taking a basis with nothing to support it? I think not.

2302. Well, what is the land absolutely worth, taking it on its freehold basis? £70,000 an acre.

2303. That is, the absolute freehold of the $3\frac{1}{4}$ acres is not worth more than £70,000 an acre, including the buildings upon it? That is so.

2304. Are you seriously considering the answer that you are giving? Yes. The Government Valuator has practically endorsed that already.

2305. Coming to the conclusion, then, that £70,000 an acre is the value of the land, including the buildings, at what do you value the whole of the $3\frac{1}{4}$ acres? £230,000, roughly.

2306. That is all it would cost the Government to resume this land? No. I have already told you £325,000, after allowing a percentage for compensation for forced sale, and so on.

2307. That is all it is worth? Yes.

2308. If it were your property to-morrow, you would be willing to take £325,000 for all that property? I do not think that if I were to go into court I could get as much as that if I had to fight the matter.

2309. Mr. Norman Selve belongs to the same institute as you do? Yes.

2310. You will admit, I suppose, that he is an experienced man in his profession? Yes.

2311. You have seen his proposal? Yes.

2312. What do you think of his proposal? Well, as an engineer who has propounded a scheme myself, it is not likely that I am going to say that his is as good as mine.

2313. You do not think much of his scheme compared with yours? Most assuredly not.

2314. And as to all these Government schemes, I may take your answer is the same answer? There is not one I would put my name to, saying that I, as an engineer, designed that scheme as a scheme for a city railway for a city like Sydney. I would be ashamed to put my name to it as a means of producing revenue on the capital you would have to spend. I say it cannot possibly produce such revenue.

2315. *Vice-Chairman.*] Have you anything to add? In reference to the question generally of building a terminal station, either at King-street or at St. James' Road, I would point out that if you build a station at either of those places, it will necessitate two terminal staffs, for this reason: You may take a horse to the water, but you cannot make it drink; and you may build a station at King-street or at St. James' Road, but the public will not go there. The greatest portion of the public will leave the train at Redfern, and consequently you will have to keep two terminal staffs—one at Redfern, and one at King-street, if you have a station there. All the long-distance trains will call at Redfern, and, having called there, the bulk of the passengers will leave the train at Redfern, but inasmuch as you bring your long-distance trains into the King-street or the St. James' Road station, you must keep a staff there as for a terminal station; therefore you will have the expense of two terminal stations, if you make a terminal station at King-street or at St. James' Road. If you make a station at King-street, you cannot dispense with Redfern as a terminal station.

2316. You state that we will require a staff at Redfern station for long-distance traffic, and also another staff at the King-street or the St. James' Road terminal station for the suburban traffic and such of the long-distance traffic as goes there? I was referring to the long-distance traffic.

2317. Well, that is only about 10 per cent. of the whole of the traffic of the railways? Yes.

2318. Then the staff at Redfern required to cope with that 10 per cent. will not be a duplication of the staff that would be wanted at King-street to cope with the 90 per cent.? Not quite, but you must have a cloak-room, a refreshment-room, and porters, and trucks for luggage. Suburban passengers are supposed to shift for themselves, but at a terminal station you have to provide suitable accommodation for a terminal station—that is what I mean. So I think that, even though you build a new station at King-street, you will not convert Redfern into a wayside station, and you will have the expense of two terminal stations. I should like to say that in reference to the Royal Commission of 1891 the result was even voting on the question of the Hyde Park scheme as against the western side scheme. As a matter of fact, there were five votes given for it, and five against it. Mr. Kethel was not present, and he telegraphed that he was in favour of the western side scheme. Then the Chairman's vote went against his, and that made level voting at that time on the question of the Hyde Park scheme as against the western route. As may be seen from page 61 of their Report, the Royal Commission came to the conclusion that a bridge connection with North Shore was impossible from Hyde Park. On page 63, the Royal Commission recommended that a bridge should be constructed with a height of 160 feet headway. Now, if the Royal Commission recommended that a bridge should be constructed, and if they said that you cannot get a connection from Hyde Park to the bridge, it follows that you must go on the western side to get to the bridge, according to their recommendation. Acting upon that statement, the Railway Commissioners submitted the Benevolent Asylum scheme, because an extension could be made from there along the west side of the city to the bridge. You will find that on page 7 of their Report. The same Royal Commission recommended, at page 15, the construction of an eastern suburban line, and on the same page, they also recommended that that line should be a circular line, with loops to the Randwick and Kensington race-courses. They likewise recommended that a north-western suburban line should be made. The Royal Commission in 1897, on page 20 of their Report, under heading of "Future railway extensions," said:—

In dealing with the extension into the city there are four questions which, though not of such pressing importance as the matter specially under consideration—

That is the city railway—

must not be lost sight of. (1.) An extension to the Circular Quay.

By the method they would get to the Quay, the extension would be in tunnel. Then they say:

(2) An extension to the eastern suburbs.

That also, according to their scheme, would be in tunnel. Thirdly, they recommended an extension to North Shore. That, as I have shown from the Report of the first Royal Commission, is impossible from Hyde Park by means of a bridge. Then they recommended a circular railway under the city. If I do not provide
for

for and carry out the whole of their suggestions, it is very strange to me. My scheme, which was prepared years before then, fulfils the whole of those requirements. On page 10 of the Report of the Public Works Committee in 1897, on proposed railway extension from Redfern to St. James' Road, there is the following paragraph:—

Though these extensions involve considerable tunnelling their mention must not be regarded as an approval of the tunnel system; they are merely an admission that underground construction is inevitably connected with railway extension in the directions indicated.

That is to say, they admit that no railway could be made to the Circular Quay or to the eastern suburbs without tunnels. I think that in my scheme I have met all the objections and recommendations of either of the Royal Commissions or Public Works Committees that ever sat on this matter.

Alexander Wilson, stock and station agent, sworn, and examined:—

A. Wilson.
15 Mar., 1900.

2319. *Vice-Chairman.*] I understand you come here prepared to give the Committee details of a scheme which you have elaborated for railway extension into the city? No. I have come only to lend what I think is a little weight in support of what I consider to be the competent authorities on this question, and, if possible, to help to remove some of the difficulties that the public appear to find in connection therewith. For that purpose I have brought the map which I submitted to the last Committee. I also submitted it to Mr. Reid some years ago, and since then to the present Government. It is chiefly recognising the sentimental objections against taking any portion of Hyde Park. I do not attach very great weight to that; but still recognising that it is a force, I have suggested that an equivalent area of land should be given in other parts of the city in connection with the St. James' Road scheme, showing how a corresponding area could be given elsewhere, and enormously improve and beautify the city, so that the whole of the last mile of the approach by railway into the city should be through parks; in fact an unbroken park would extend from St. Paul's Redfern—that is at the present tunnel—to Lady Macquarie's Chair. That would sweep away—what I daresay you have had enough evidence of, either personally or here from witnesses—one of the worst slums in Sydney, namely, Wexford-street. In giving evidence in 1897, before the Parliamentary Standing Committee on Public Works in relation to the proposed railway extension from Redfern to St. James' Road, I said:—

I propose that the Government should resume the whole of the blocks enclosed by Liverpool-street, Elizabeth-street as far as Gipps-street, Macquarie-street South, and a line which is a parish boundary, and is almost continuous with the main part of Foster-street. I also suggest the resumption of the little block upon the ridge between Randall and Devonshire streets. I believe that the Royal Commission recommended the extension of the Elizabeth-street tram to Devonshire-street; but I am not sure by what route. I propose that the tram-lines should be taken straight along Elizabeth-street to Prince Alfred Park, though the hill at the end of Elizabeth-street would have to be cut down, and, in order not to disturb the levels of some of the other streets there, resumptions would have to be made. I suggest the resumption of the whole corner. One feature which has not been noticed, I think, in this connection is the congestion of traffic in Oxford-street, especially upon race-days. I find, however, that from Hyde Park corner—that is, the Liverpool-street corner—to Randwick by the present tram route is only 20 chains shorter than by the route going straight up Elizabeth-street. The Elizabeth-street route would have the advantage that there would be no grades to speak of. Thus you would save the Oxford-street hill, and you would not mix the Randwick traffic up with any other tram traffic, except the Botany traffic. I feel sure that the trams could run the extra 20 chains in the same time as, if not in five minutes less than, they take to make the journey to Randwick now. This is a matter which I think must force itself upon the attention of the authorities every day. My proposal would also relieve the tram traffic in the upper end of Pitt-street, and would avoid a certain amount of the danger which occurs in shunting trams from one line to another near the Redfern terminus. Even if it took two or three minutes longer than it takes at present to reach Randwick by the route I propose, there would be a gain in the lessening of traffic in Oxford-street.

I also gave the following evidence:—

2028. I notice that you propose the resumption of properties above Wexford-street? That is included in the resumptions necessary for the line. There are several churches and a public school on that block, but I do not see any reason for removing them. I do not set up as an expert upon the subject of land values, but I have consulted, though merely in a friendly way, a gentleman who is one of the recognised authorities upon this subject in the city. As to the value of the buildings, neither of us could go into that. The block which I propose to resume will practically be gutted by the present proposal, and I contend that to have an approach to and an exit from the city through park land for the first $1\frac{1}{2}$ mile, instead of through slums, with views of back yards, is worth paying something for. My scheme would also provide park land where it is more valuable to the resident population than is that part of Hyde Park which it is proposed to take for the railway station. There is a dense population immediately to the east and south-east of these areas, and a great number of people walk through that part of the city every day.

2029. Your scheme would very much disturb the properties near Wexford-street;—that might not be a very serious evil? Yes. The people whose residences would be destroyed might probably be able to find more desirable residences out towards Waterloo, or in other suburbs where they could get more fresh air.

2030. You provide for a continuous line of park from Prince Alfred Park right down to Mrs. Macquarie's Chair? Yes; something like what they have in Adelaide.

2031. Such a park would scarcely be surpassed in any part of the world? I think not, and the resumptions could be made without disturbing any business premises. All that would be taken would be an occasional butcher's or baker's shop.

2032. The properties that you propose to resume are not very high-class, so that the cost should not be very much? I think that the cost should not be large. The country should not feel the expenditure of £100,000 upon a matter like this.

2033. You contend that if this scheme were adopted it would meet with the objections of many good-meaning people to the resumption of any part of Hyde Park? I think so. I wish to defer to their objections to the taking of park land, though it must be remembered that park land is public land, and is to be used, if need be, for any public purpose. A man may have an acre of land surrounding his house, all of it in gardens, but he may later on feel it necessary to keep a horse and trap, and thereupon take some part of the garden to provide for the building of a stable. He says to himself, "We shall have less ground at home, but we shall have an opportunity to go a little further abroad for fresh air." I think that is an analogous case. At the same time, however, I recognise the weightiness of the sentiment against the taking of any park land.

Towards the end of that inquiry, one of the Government officials gave evidence as to the value of the properties referred to. At page 167 Mr. Perdriau says:—

In his evidence before the Public Works Committee, Mr. Alexander Wilson suggested for resumption, for conversion into a park, in lieu of the portion of Hyde Park resumed, those blocks of the city extending from Liverpool-street to Gipps-street, bounded on the west by Elizabeth-street, and the east by Macquarie-street South and Foster-street. For convenience in considering Mr. Wilson's suggestions, I have divided the area proposed by him to be resumed into three blocks, in such a way that if the Committee approve of the suggestion, either in part or the whole, they would probably recommend its purchase. No. 1 is bounded by Liverpool, Elizabeth, Goulburn, and Macquarie streets. The mean length is 535 feet, and the mean width 490 feet; area, 6 acres. The total of the municipal assessments for the block is £9,840; capitalising £9,840, at twenty years' purchase = £196,800; add for the Lutheran Church (approximate estimate), £2,000; add for the Unitarian Church, £13,000; public school, £9,000 (this building would probably be allowed to remain); total, £24,000. No. 2 is bounded by Goulburn, Elizabeth, Foster, and Macquarie streets. The mean length is 550 feet, and the mean width

width 415; area, nearly 5 acres. The total of the municipal assessments for this block is £5,459. Capitalising £5,459 at twenty years' purchase, £109,180; add for the Chinese Church, which is not rated, £1,000. No. 3 is bounded by Campbell, Foster, and Elizabeth streets. The mean length is 240 feet, and the mean width 200 feet; area, 1 acre. The total of the municipal assessments for this block is £2,445. Capitalising £2,445 at twenty years' purchase, £48,900. The total estimated cost of resumption as above would, therefore, be £354,880; to which, if the buildings not rated be added, £26,000; total, £380,880.

A. Wilson.
15 Mar., 1900.

My position to-day is exactly the same in regard to that as it was then. In view of the changed aspect of the city traffic from the point of view of the present electric tramway and prospective openings of other electric tramways, I should like to make a few suggestions as to the access to the city. I have seen all these plans, and I leave it to people whose business it is to find out which is the best engineering route. But it appears to me that the only feasible scheme, outside the St. James' Road scheme, is No. 4 scheme, and to take a further slice out of Hyde Park to bring the accommodation up to something like what the original St. James' Road scheme proposed. I have looked at No. 10 scheme, and whatever little feeling I may have about park land, would be more against taking land in the Domain and having an engine stable there, than it would be against taking a piece of Hyde Park. That would be my choice in the matter. Allowing for the convenience in the one case, and the disturbance in the other, I prefer the taking of the extra land at Elizabeth-street to having an engine stable in the Domain. Judging from the reports that have appeared of the evidence given so far, and the questions asked, it seems to me that there is a good deal of an idea that the electric tram should more or less do away with the necessity for any railway extension past Belmore. I had the distinct opinion that the Belmore extension was intended to kill the city railway extension. I hold that opinion still. That was the intention of it, and to make the trams do the work. I have taken an active interest in this matter for a great many years, and have been a member of the executive committee of the City Railway Extension Alliance for some years, and that is one reason why I appear to speak with some definiteness. On the question of the trams, I would say that anyone who has travelled in other large cities will have discovered by this time that practically tram traffic cannot take the place of railway traffic in handling large numbers of people. It has become more and more recognised that tram traffic is only for moving people short distances in and around where there is a dense population, and the more I see of it the more I am convinced. George-street affords the most distinct illustration we could wish for as to that. When people want to get home, you can often see four, five, or six trams go by, as low down as Hunter-street, before you can get on, unless you choose to do so at the risk of life or limb. It is quite evident in the case of the George-street tram, and I believe that if there were three or four other tram-lines into the city, in a year or two they would find lots of work to do without taking a single passenger to the railway-station—that is, as the railway-station is at present. Of course a great deal depends on the disturbance of your journey, and the gross length of time occupied between your departure and your arrival at your destination. I will suppose that a person wants to go from Redfern to the corner of Erskine and Kent streets. That is pretty well to the west—that is, at the back of Wynyard-square, it is the first block down towards Darling Harbour. If he were to go by tram, the time would be as follows:—Tram, twelve minutes; walk from the tram, four minutes; total, sixteen minutes. Then, supposing he went by railway from Redfern Station to King-street by train, the time would be as follows:—train, three minutes; walk from King-street, ten minutes; total, thirteen minutes. That would be the time occupied by him in going to the corner of Kent and Erskine streets by train to King-street and walking thence, as compared with getting out of the train at Redfern, and then taking the tram. I have made a calculation as to distance in chains, and have allowed the rate of walking to be 3 miles an hour. Redfern to King-street, three minutes by train; Redfern to King-street, ten minutes by tram. I have made another calculation, for the journey to the Merchants' Exchange:—Tram journey, fifteen minutes; walk, three minutes; total, eighteen minutes. Train journey to King-street, three minutes; walk, nine minutes; total, twelve minutes. For the tram journey, I am taking the present George-street tram. Those are two very fair illustrations—one nearly to the Quay, and the other to what is practically the central place for all traffic supposed to be west. Now as to the traffic supposed to be west, we know that a greater portion of the business part of the city is to the west of George-street than to the east of it; but that does not prove that there is a great deal more traffic. I think that any one who goes as far as York-street will see how the streets thereabouts are unoccupied compared with Pitt-street, George-street, and King-street, and streets thereabouts. People who go to Kent and Sussex street go there mostly to stop for the day. They come in and go out once in a day, and the traffic is limited to people who have business there. But there are, perhaps, 500 people a day who go to one spot in Pitt-street or George-street, and those are the people who want to be accommodated. Whilst business men come into town from 8 to 10 o'clock in the morning, women and children are coming in all day long, and they seldom or never go west of George-street. I think that there ought to be a very clear distinction drawn between the number of business premises, and the amount of travelling done, and where the people want to travel to and from. You take the blocks between Market-street and Hunter-street, from George-street to Castlereagh-street, and I will guarantee that if a census could be taken it would show that more traffic, either tram or train, comes out of those blocks than out of all the rest of the city put together—I do not care whether casual or long-distance traffic. That area includes nearly all the big shops, the large hotels, and banks, where people have to come and go frequently.

2320. Admitting that, would you not also admit that the two periods of concentrated traffic, for which either a tram extension or a train extension would have to cater, is when large numbers of people are going straight to their business in the morning, and when they are going straight away to their homes in the afternoon? The great rushes are then—more in the afternoon.

2321. Why more in the afternoon? Because a great many people come in late in the morning, but go home at the same time as do people who come in early.

2322. But the going of women and children to shops is spread over practically the rest of the day? To some extent it is. But the thing is to bring the people to where they want to go to.

2323. *Dr. Garran.*] The evidence before us is that these very business people have deserted the steam tram for the George-street tram? Quite so; and for a very good reason too—because the steam tram is an anachronism for one thing, and you cannot step off the platform at Redfern Station now in order to get into it. The arrangements are quite changed, and you have to go into the roadway to get into the steam tram at Redfern.

A. Wilson. 2324. *Vice-Chairman*.—But that alteration did not take place until a change in the direction of the traffic took place;—they kept the steam trams on until they found there was a necessity for a change? I see every day the local traffic that has been created by the penny fare; the cheap and comfortable service has created an enormous traffic. For instance, people who get off the Manly boat in the morning, and want to go only a little way up George-street, now go by tram. I know two Bank managers, and the farthest that either of them goes is to the Bank of New South Wales, and they step on to the tram because it is in front of them when they come off the wharf, whereas they always walked previously, unless the day were a wet one. Now they pay their penny, and are put down at the Bank door. If the people want to go to the Victoria Markets or to the Town Hall now they get into a tram. There is another feature of this traffic: If you want to go, say, from Hunter-street or Bridge-street to catch a train, you cannot depend on the tram. You may have to wait until five or six trams pass before you can get a seat. I say that unhesitatingly, because it is my own experience. If I want to catch a train I get quite uncomfortable, and have to allow five, six, or seven minutes' latitude for fear that I may be humbugged in trying to catch my train. I would rather walk further to a railway station, because I would not have to run the risk of delay or breakdown. I would very much rather go to a railway terminus with a little more trouble than go by tram. I suppose that three or four trains might practically arrive simultaneously at King-street, and I presume that there would be 500 or 600 in each train. Therefore, 2,000 people might arrive at the terminal station almost at the same instant. No tram system could deal with that—at least it does not seem that we have an opportunity. I should like to make a suggestion in connection with the King-street scheme, and also for the convenience of people going to the west. I understand that we are to have a tramway down Castlereagh-street, going towards the Quay, instead of down Elizabeth-street as now. If a tram were to start from Castlereagh-street, abreast of the proposed King-street station, and go along Market-street, Kent-street, Argyle-street, or up Windmill-street and along Dawes' Point, to George-street and back, so as to connect with the Castlereagh-street extension to Circular Quay, you would have a circular tramway which would go back to the railway station. Pymont Bridge seems to me to be one of the outlets of the business part of the city, and I think that a tram should also go across Pymont Bridge to Pymont, the Glebe, and on to Balmain. I notice that in connection with some of the proposals a good deal has been said about tunnelling and the possibility of steep grades to or from the Quay station, or something of that kind. I am not prepared to discuss engineering matters, and I do not presume to do so, but it does occur to me that there must be some one in the Public Service who knows something of the details of the working of Lime-street station, Liverpool, where this question was a matter of great concern for many years. There there is a steep grade down the last mile and a half into the station, and the traffic used to be worked by a stationary engine. An enormous amount of money has been spent by the London and North-western Railway Company to obviate the difficulties that formerly existed there. It seems to me that it would be worth the Committee's while to get some evidence on that point. The tunnel there is a long one, and goes down steep grades to the station. The company have spent an enormous sum of money to make the station safe and to get expedition in going in and out. As to the time occupied by the two routes in this city, I may say that from Redfern to the Town Hall the time occupied in travelling by tram is eight minutes, whereas in going by railway from Redfern the time would be as follows:—Train, 3 minutes; walk, 9 minutes; total 12 minutes. Then take the case of a person wishing to go to Pymont Bridge: Tram, 9 minutes; walk, $3\frac{1}{2}$ minutes; total, $12\frac{1}{2}$ minutes; train to King-street, 3 minutes; walk, $8\frac{1}{2}$ minutes; total, $11\frac{1}{2}$ minutes. So a passenger could go to King-street by train and get to the end of Pymont Bridge a minute earlier than he could by going to King-street by tram along George-street and walking the rest of the distance. That makes rather a startling illustration of the supposed capacity or usefulness of the George-street tram to serve all the people west of George-street as against the railway. If my suggestion were carried out, I feel sure that a tram run through that part of the city would pay well, simply to take business people from one part of the city to the other during the day, independently of the morning and evening traffic to and from King-street. I do not myself care particularly whether the railway goes to the St. James' Road station site or to No. 4 site. As to the question of getting to North Sydney, I think it is quite feasible to have a connection from Hyde Park to the North Shore.

2325. You suggest, in connection with this scheme, a further scheme of tram extension—one north and one west;—is not that an admission, to some extent, that you would not bring people to where they wanted to go by bringing them by railway to King-street? You cannot bring all the people to where they want to go. I said that my so-called circular tramway would be a good investment for purely business purposes, even if it did not pay people to go by it from King-street as well, but it would undoubtedly take passengers to and from King-street.

2326. You stated that you thought that people who come into town right through the day would place a larger burden on the extension of the railway or of the tramways than those who come direct to their offices or places of business in the morning, and go straight away to their homes in the afternoon? If you mean that I meant that more people would come in at that time than at the other, I certainly did not mean that. What I was speaking of was the majority of those people who want to go and do business in the shopping-blocks from Market-street to Hunter-street, and between George-street and Castlereagh-street. I did not intend to convey that they are a majority of the whole of the travellers during the day.

2327. Mr. Parry supplied the Committee with a set of statistics giving the number of passengers to and from the railway at Redfern Station on three typical days—not holidays;—the first of them gives a total of 45,010 passengers, out of which 34,378, or 75 per cent., came into the city during the busiest hours in the morning, and went back during the busiest hours in the afternoon;—is it not reasonable to conclude that those are the people who go to their places of business in the morning and go away in the afternoon? Quite so.

2328. And is it not a fact that the majority of those are situated, not around the proposed King-street station site, but to the west of that? Undoubtedly. The whole of the business part of the city is to the west of Elizabeth-street.

2329. Do you also know that the railway authorities, in their evidence before us, look upon that traffic as being the most difficult to deal with, and the one in whose interest they desire this extension? Undoubtedly.

2330. Are you prepared to offer any opinion as to the respective merits of the eastern extension of the railway as against the western? I have an opinion, and think I have some good reasons for it. I am speaking more particularly of Mr. Norman Selve's scheme, or any scheme somewhat similar to his; and

one

one reason is that it must be largely in tunnel. That is admitted. Every scheme of that kind which has been submitted lately proposes to go under the new markets. I am not an engineer, but if I were I do not think I would undertake to make a railway under the basement of those markets and make a satisfactory job of it. Of course, they are all large heavy buildings along that portion of the route, and I do not know what the risk is, or what the cost is, or what the rights of the owners are—how far into the earth the landowners' privileges go. The buildings along the whole line of that traffic, until you get to Wynyard-square, are mostly very heavy ones—they are all large warehouses, and I have no doubt the foundations go down a long way. Lassetter's building, just finished, would be one of the first places that would come in. They are all large buildings—in some cases four, five, or even six storeys high. That fact must lead to great difficulty. Now you get to Wynyard-square. The matter of open spaces seems to be a great stumbling-block in the way of the settlement of this question, and Wynyard-square is now the only open space on that side of the city, with the exception of a little triangular piece in front of St. Phillip's Church. It is actually proposed to appropriate Wynyard-square in order to make a third-rate station there. That station must be largely underground, because the Square is wedge-shaped. For the line to be put in tunnel I do not know how deep it would have to be, but it would have to be a long way down. There would be some advantage to the city, especially in view of recent occurrences, if there were a compulsory "Baron Haussmann" clearance about Clarence and Sussex streets, but I do not think that that is under consideration now.

A. Wilson.
15 Mar., 1900.

2331. Presuming that Hyde Park had been a part of the city as thickly built upon as places to the west are, do you think that it would have been selected as a site for a terminal railway station? If the question of cost were on an even balance, I should say that the block situated about where the Joint Stock Bank is would be the best place to go to for a main central station—that is, if you had to consider both schemes on the basis of cost, and of convenience.

2332. You think, then, that the present proposal has been largely determined by the fact that it was previously proposed to build the station on park land? If you use the term "park land," I should like it to be understood that that does not apply altogether to Hyde Park. You get to Hay-street in the Hyde Park scheme without touching any private land at all. In connection with any of the western schemes you get into difficulties of land resumption, overhead and tunnel arrangements, the moment you begin to leave Redfern: whereas in the other case you get to Hay-street without touching a foot of alienated land, and, as I have explained, you go through one of the least valuable parts of the city, where there are scarcely any business premises of any value. But the moment you leave Redfern to go on the western side, that being one of the old business settlements, and it being such an irregularly-shaped place, it would take a surveyor and a land valuer a long time to arrive at what the trouble would be, or what the cost would be, either above or below ground.

2333. I think you have made the statement that no scheme, except the official scheme, got into the city without going through private land? "No scheme" is such a very big phrase. I suppose that the schemes now number about forty.

2334. Well, none of the schemes before the Committee;—have you seen the scheme for a circular railway that has been put before the Committee by Mr. Greenwood? I do not know his scheme very well; but, looking at the map, it looks to me more difficult from an engineering and a land-resumption point of view even than Mr. Norman Selife's.

2335. He gets over the Belmore Markets before he starts to touch private land? In that respect he follows the idea of getting to Hay-street as I have said. That is the main difference between his scheme and the other.

2336. *Dr. Carran.*] I understand that you propose to make a substitution of park land from one place to another? Yes.

2337. To surrender the north-west corner of Hyde Park, and to make another park at Wexford-street? Yes; of fully the same area.

2338. Do you think that the values would be about equal? Oh, no.

2339. Which would be the more expensive? The Hyde Park land would be more valuable than the Wexford-street land.

2340. In the evidence placed before the last Committee, Mr. Sievers and Mr. Perdriau valued the north-west corner of Hyde Park at rather less than £200,000;—that is without including a strip that will be taken out of the south-west corner, and Mr. Perdriau values what you want at £380,880; so there will be £180,000 to be added to the cost of the railway in order to carry out your scheme? But you must remember that that includes all the improvements.

2341. Never mind that;—we would have to pay the money? Quite so; but there is no reason why you might not sell frontages in Elizabeth-street back to the railway line, and have park land only on one side, and the sites there would realise very good prices.

2342. That is not the scheme you put before the Committee just now;—you did not say that you were going in for land speculation, to improve other property by knocking down the slums and building afresh? I would propose that the Government should resume the whole of the property, whatever happens.

2343. And sell what they did not what? If they were to think the cost for additional park purposes too great, they could sell a considerable portion of it.

2344. But the piece you are going to take is supposed to be worth only £200,000, and the piece you would get the Government to buy and substitute would cost £380,880? Yes. But Mr. Perdriau himself pointed out that there is no reason why the churches and the schools might not be left standing enclosed in their present area. None of those buildings would be interfered with by the railway line.

2345. If we are going to substitute other park land for the portion of Hyde Park that we take, would it not be more reasonable to put that substituted land in parts of the city where there is no park land at present? South of Oxford-street to Goulburn-street is one of the most populous districts, and is almost without an open space in it.

2346. But you would have continuous park land from Redfern Railway Station right to Lady Macquarie's Chair? Yes; from Redfern-street.

2347. Now, look at West Sydney and Pyrmont, and show me what there is green there? There is Wentworth Park.

2348. But that is out of the city? Yes. You suggest why not clear out some of the rookeries about "The Rocks." I think that nature is doing that in any case. It is recognised by the authorities that population

A. Wilson.
15 Mar., 1900.

population in that part of the city is steadily decreasing. If you keep on making improvements and bringing business more into that part, every year some of those blocks of wretched dwellings will be swept away and large warehouses will be built in their place, and the people now living there will have to go either by tram, or train, or boat to somewhere else to live, instead of remaining in the little back slums there. That process will go on, and in a few years you will not have many people there.

2349. You must have a certain residential population there in any case;—there is an immense shipping business there, and there will always be lumpers and labourers? No doubt; but a great many of them now live in Balmain and Pyrmont. They can take the pony ferry and then have only a few blocks to walk. A great number of that class live in those suburbs.

2350. Would you not put the substituted land where people have no park land? But I believe that a great many of the properties to which I referred will be cut in half; they will still have to be paid for as if the whole of them were taken, and it would be better to make a thorough job of it. Immediately to the south and east is one of the most densely populated parts of the city, and yet there is practically no park land for them until you get to Redfern Park on the south and Moore Park on the east. A great many of those people walk into the city every day, and would it not be better for them to cross park land instead of having to go through slums. My scheme would give a park to the people about Forcaux-street and right up to Surry Hills.

2351. *Mr. Shepherd.*] I think your scheme is based chiefly on considerations of economy? I have no scheme.

2352. Well, it is approaching one? I support the scheme put forward by the Railway Commissioners, and which has been practically accepted by two Royal Commissions.

2353. Your reason for that is chiefly based on the grounds of economy? Partly that; but I do not go as far as was proposed. I do not see why that extension should not be loaded with the operation I have explained. I think it ought to be.

2354. Do you think that that scheme would serve the largest number of railway travellers—suburban and others—would that scheme take the largest number to their places of business? It would take as many of the gross number of travellers close to their destination as any other scheme I know of, and more so.

2355. Will you say that that scheme would take as many to the proximity of their places of business as, for instance, a station at the George-street Markets? Certainly far more.

2356. You think so? I feel satisfied of it. There is even in the eastern part of the city a large number of people coming in and going out every day—going to Elizabeth-street, Phillip-street, Macquarie-street and to counting-houses further down the town, to whom the King-street delivery would be preferable to the George-street by a long way.

2357. Will you name the boundaries that you consider that scheme would serve? I tried to convey an idea of that somewhat by showing how long it would take to get to different places—to any other likely spots covering most of the business parts of the city.

2358. Will you define the boundaries? I have done that practically already in saying how long it would take to get from King-street to those various points.

2359. What streets would be within reach of that station? Bathurst-street on the south —

2360. Will you give an opinion as to the area which the King-street station would serve conveniently? I contend that it would conveniently serve the whole of the city north of Bathurst-street, and it would serve the whole of the west down to the water.

2361. And on the north? Right down to the water.

2362. I ask you to define the boundaries that that station would serve conveniently? If you ask me is it the best place in the whole city to serve the greatest number of people in the whole city, I say no. I have already said that probably the block where the Joint Stock Bank stands would be the best site for the station; but that has not been proposed, because nobody has had enough courage to enter into the cost of it. No one station would serve everybody, and put him down at his own door; but I say, generally speaking, that the King-street station would serve the whole of the city north of Bathurst-street; but, of course, it would not compare with a station on the block west of George-street, including the Joint Stock Bank, because that would be about the centre of the city.

2363. Of course we have the George-street tram running, and to conveniently serve the people by railway you want to get the certain points where that tram would not be more convenient than the railway;—you talk about the King-street station serving all the people north of King-street? Yes.

2364. Do you think that a person would be likely to go to King-street and get out there and walk to Miller's Point, in preference to going as far as he could by the electric tram? No, certainly not.

2365. That is what I wanted to ask you? I indicated what I thought would be a natural sequel to the railway station being at King-street. I indicated a tram to serve the whole of that area.

2366. If you had an office at the corner of Hunter-street and George-street, would you prefer to go by railway to King-street, and walk from there to your office, rather than to go by the George-street tram? I would prefer to walk to King-street from my office to get into my train, and go straight away, instead of being humbugged.

2367. Supposing you are coming into town, and your place of business is at the corner of Hunter-street and George-street, do you mean to say that you would go to King-street and walk to that point, rather than come in by the electric tram, and be set down at your office door? I would, allowing for the discomforts of the tram travelling as we know them, and the uncertainty of getting there.

2368. Do you think that the majority of people would not rather use the George-street tram if their places of business were situated outside this boundary—that is, Market-street on the south, Pitt-street on the west, and Hunter-street on the north;—do you not think that they would be better served by coming down by the George street tram than they would be by coming down by railway to King-street? Certainly not.

2369. You swear that is your honest opinion? I say so distinctly. Not very long ago I waited for seven minutes at the corner of George-street and Hunter-street for a tram at a quarter past 6 in the evening, and in an ordinary case that would cause me to miss my train.

2370. The great object with suburban people at all events is the saving of time? Exactly.

2371. If they have to walk half a mile after getting out of the train at King-street, where is the saving of time as compared with going down George-street in the tram and being set down near their places of business? I do not know whether you are aware that half a mile from King-street station would take you

you past the German wharf, on the Circular Quay, towards the old A.S.N. Company's wharf, or to the Balmain ferry landing-stage, and even beyond that. A distance of 40 chains—not in a straight line, but going up and down our irregular streets—would take you from the King-street station to the B. and A. Company's wharf, on the west side of Circular Quay, and that is practically outside what you may call the business part of the city; and 26 chains would take you from the King-street station to the approach to the Pyrmont Bridge, on the city side.

A. Wilson.
15 Mar., 1900.

2372. Can you conscientiously say that it is your opinion that the proposed King-street terminus would be more central than the George-street markets? Certainly; I was asked, I think, during the last inquiry where I thought the centre of the city was, and I said it was at the corner of King and Pitt streets, and my opinion is still the same. I say that that is the centre of the city for business purposes.

2373. You have only to look at the map and you will see where the centre of the city is;—there is all Hyde Park and the Domain to the east, and the densely-populated part of the city is to the west? The dense mass of buildings is, undoubtedly, to the west, but as near as possible, geographically, the Joint Stock Bank is the centre of the city, and the distance from that to the centre of the proposed King-street station is exactly 16 chains.

FRIDAY, 16 MARCH, 1900.

Present:—

The Hon. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.

WILLIAM THOMAS DICK, Esq.
ROBERT HENRY LEVYEN, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Thomas Alderson, sworn, and examined:—

2374. *Chairman.*] I suppose you have studied the question of railway extension into the city? I have, T. Alderson, for many years.

2375. Have you watched the various schemes that have been suggested from time to time? Yes, in the press reports. 16 Mar., 1900.

2376. You yourself now suggest a scheme as the result of observation in regard to the requirements and necessities of the city and country generally? Yes.

2377. When did your scheme first suggest itself to you? I have had the suggestion for some considerable time; but when I saw by the action in Parliament that the matter was likely to arise, I put my brains together, in order to place the suggestion before the public in this manner. I said to myself, "They have not struck the exact scheme needed to meet the requirements of the fast-increasing demand of the public, both as regards passenger traffic and goods."

2378. What are the main features embraced in your scheme? The main features are economy, very little property resumption, comparatively, and the carrying of a largely-increasing suburban traffic and long-distance traffic, and also goods. That is up to a certain point. I do not make any suggestion about a bridge crossing the harbour to North Sydney.

2379. Does your proposal contemplate bringing both suburban traffic and through up-country traffic into the city? Yes.

2380. And terminating where? At Princes-street. An advantage which I claim for that route is very slight interference with the present Redfern station. I submit that that station will meet all requirements for the southern and the western traffic.

2381. Have you a written statement explaining your scheme? Yes, I have; it is as follows:—

CITY RAILWAY EXTENSION SCHEME.

HAVING given the Premier (The Hon. W. J. Lyne,) my ideas and suggestions in writing, accompanied with a large city suburban map (showing the routes, high and low levels) last September, I give your Committee, now sitting, my present views, on account of some Government changes, *re* the Pyrmont Bridge, having been a strong supporter of a railway into the city, but a bitter opponent of any encroachment on Hyde Park. I now hope your Committee will give my plain explanation of its advantages over all others I have seen a fair consideration. My principal object is meeting the fast increasing traffic (*re* goods and passengers), cheapness in the construction, and comparatively small resumptions. It will not interfere with any one of our congested city streets, and very little inconvenience to vehicle traffic; the route will give a large central city station with offices, &c., with three other stations on the west, east, and north of the city. The present Redfern Station can remain as it is, but with slight alterations will supply all the south and west portions of the city for many years to come. By giving the city stations and our new electric tram service this, large outlay can be saved by distributing the goods and passengers. The Hospital, Barrack, and Devonshire-street site can be dispensed with for the present. Four lines of rails will be ample to carry all goods and passengers with very little risk. Goods can be brought from all over the colonies when a bridge makes the connection over the harbour. This item, I propose a high-level bridge to Milson's Point from Princes-street and Argyle Cut. The low-level scheme is from Dawes' Point to Milson's Point, by a heavy modern hydraulic swing-bridge. This, no doubt, may meet with strong objection, *re* the shipping interests. This I submit should be made subservient to the railway by having the swing opened at certain times, *re* "London Docks and other places." Ships have to wait their turn at a great cost, so why not a little inconvenience in Sydney by adopting this scheme. The bridge elevation could be so as to allow small craft or river steamers to pass under; the lines could meet on the present levels, or according to the formation of the ground near first tunnel at Milson's Point. There are many advantages in my scheme over all others, which you will observe in the route description, by widening the present railway bridge at Redfern for a four-line railway to Pyrmont (which was my first suggestion), but on account of the new Pyrmont bridge now being started, I would advise resuming all the foreshores from the head of Darling Harbour to Drmitt-street on the east side to allow the railway to enter Market-street by a tunnel at the corner of Kent-street, by reclaiming the head of Darling Harbour to the north of Drmitt-street. This would give a large area of ground, about 22 acres, for goods, stores, &c. A high-level bridge across the line from Pyrmont-street to Liverpool-street or Drmitt-street would be a great city improvement, and an easy outlet to our eastern suburbs for all vehicles and foot traffic from this increasing industrial centre of Pyrmont.

T. Alderson.

THE PROPOSED ROUTE (CITY RAILWAY).

16 Mar., 1900.

REDFERN Station to remain for south and west traffic, with suitable alterations of lines back to Eveleigh, for the widening of George-street Bridge to Darling Island, or the east side of Darling Harbour to Drutt-street by a viaduct. Fill in head of Darling Harbour to north of Drutt-street if necessary; over-head bridges across the railways from Pymont to Liverpool-street; the western railway station at foot of Drutt-street or thereabouts; tunnel under Market-street, at the corner of Kent-street, to the High School site of Market, Castlereagh, and Elizabeth streets. This will be the large city central station, with all offices for English mails, goods, clerical offices, passengers (city, suburban, and long distances). There will be underground platforms, which can be extended a long distance under St. James' Road, for holiday traffic, &c., &c., by continuing this tunnel to the south of Hyde Park Barracks, or Chancery-square, through the drill-ground; along the same to behind the caretaker's cottage at St. Mary's gate; thence by open cutting or tunnel to the lower part of the Domain, which is not much used by the public—opposite Sir John Young's Crescent. This site can be made a most central dock or reserve depôt for trains, &c., goods shed, or shunting grounds; by taking the line on to Cowper's wharf, or station at the edge of the Domain, near ladies' baths, will be the first section of the eastern suburbs; by resuming the old properties facing the wharf a large space will be required for the fast-increasing and largest cargo boats coming to our port. By tunnelling under the highlands in Victoria-street to Rushcutters' Bay Reserve you can place a station thence across, or under, Bayswater-road, through the Chinamen's gardens, to a small Government reserve near Gleimore-road; thence up to the heights of Paddington, Woollahra, Waverley, and Randwick, &c., &c.; from Cowper's wharf (Domain) continue on behind the baths by a tunnel, and open cuttings, and over-head bridges through that portion of the public Gardens that is not much used. A neat covered station and ways could be placed to meet all traffic on holidays, &c., from all over the colonies. By continuing on behind the Government House stables to Albert-street a strong steel elevated railway would make its start from this point, a little further back to allow an easy grade up to Princes-street to Argyle Cut levels. This railway would run in front of Goldsbrongh, Mort, & Co., Customs, and "Packer's Hotel," to the angular piece of ground adjoining McMahon's office, and the hotel at the corner of Pitt-street, where passengers' station could be built. This will not interfere with any of the increasing boat passengers' traffic, electric trams, or vehicles. A shunting line could be run round the Quay for goods from the mail boats by a tunnel near McMahon's spirit stores, on to the lower Domain levels (goods can be sent all over the colonies); thence from the corner of Pitt-street and the Circular Quay over to the old Commissariat Stores. I would resume some of the old places on "The Rocks," *via* Globe-street, on the line up to Princes-street. Those resumptions would not be much, and this portion of the city wants improving. This finishes up the high-level route, *via* Dawes' Point, proposed bridge.

The lower-level scheme referred to before makes it start from the old Commissariat Stores, along the Queen's Wharf, to Dawes' Point. This section will be at an elevation to be decided upon *re* swing bridges and Milson's Point. You will kindly note that I have gone through mostly all Government properties up to George-street and Queen's wharf. This, I claim, is of great importance *re* a financial return; the construction will be easy work, being all freestone for tunnels and open cuttings. The elevated rails and bridges can all be made in the colony, giving our own industries a show; all the excavations, &c., &c., can be trucked into the head of Darling Harbour for filling up to a sea-wall. The value of the reclaimed land will be a large set-off against the cost of constructing. The grades from the foot of Market-street to Elizabeth-street are easy. The grade from Albert and Macquarie-streets to Princes and Argyle streets is 1 in 60; this can be made 80 by going back in the Governor's Domain. The distance from foot of Market-street or Pymont Bridge for the high-level scheme is about 247 chains.

The low-level scheme is about 265 chains. In carrying the lines from the head of Darling Harbour to Drutt-street, this will be extra to the above figures. I have only taken rough measures, not including the Pymont or high and low-level bridges into the above, but simply dealing with the city only.

Not being in a position to produce plans or specifications (but a tracing on a map) of cost, I leave that to the Government officials. I would prefer private competition for the costs, &c., of this important work. The rough estimates of costs submitted I have given outside value from my own travels and experience in commercial business all my life in the Colony. I have no doubt in my own mind this scheme can be constructed at considerably less cost to the country than any other I have seen submitted; the public convenience will be better supplied for goods and passengers. The valuable city properties will not be interfered with. Little compensation will be made. Our city Hyde Park will remain to the public. Our present trams need not be disturbed, nor our old and valuable Supreme Court site taken, but left for the future. You will note when North Sydney is connected by bridge my scheme makes a continuous route there, avoiding risks of accidents, &c. If in the future, and when suitable, a shunting line around Circular Quay can be carried around the western and eastern wharfs by tunnels to the point of entering near McMahon's stores, *via* Woolloomooloo and Cowper's wharfs.

P.S.—In noting Mr. Maiden's (Director of Botanical Gardens), objections to the proposed resumption of the lower part of the Domain and the trees, I have obviated this by transferring the reserve train-sheds, docks, &c., to the resumed land at Darling Harbour. The only ground required will be a strip for four lines of rails and passenger station, near the steps coming from Macquarie-street to Cowper's wharf. To this I feel sure the public will not make the slightest objection, when such a long felt public convenience for railway purposes is required.

One most important fact in connection with the reclamation of the head of Darling Harbour, is that it will be doing away with one of the most dangerous localities for rats in spreading the now most serious Bubonic Plague in our city. This very spot, up to Drutt-street, was the slaughtering yards for our meat supply many years ago.

ROUGH ESTIMATED COST OF CITY RAILWAY EXTENSION.

From Redfern Station, *via* Darling Harbour, along to Drutt-street, to Market-street, *via* Kent-street, to High School site, to Lower Domain, *via* Botanical Gardens to Albert-street, across Circular Quay to Globe-street, up to Princes and Cumberland streets to approach of high level bridge about opposite Observatory Hill (four lines of rails to bridge approaches *re* North Shore), *viz.*:—

Resumptions.

Water frontages east side of Darling Harbour to Drutt-street, north side (say 1,022 feet)	£128,550
Properties Drutt, Sussex, Kent streets, and Market street corner	24,850
Properties Albert and Macquarie-streets (land, bridges, and hotel)	29,500
Pitt-street and Circular Quay (hotel, offices, shops, &c.)	14,000
(J. McMahon's office, shop, and weighbridge, Government.)	
<i>Re</i> street about 127 feet—George and Globe streets (two hotels, two shops, and old houses) ...	15,000
" 130 " —Globe and Harrington streets (old properties)	1,800
" 122 " —Lane 10 feet, Gloucester-street, east and west side (old properties) ...	3,660
" 122 " " 10 " Cumberland-street, east side (old properties)	1,586
" 500 " — <i>Re</i> Cumberland-street, west side } to Argyle Cut	14,000
" 500 " —Station, Princes-street, east side }	
	£232,946
<i>Less</i> —Reclaimed land head of Darling Harbour, Baker-street to Drutt-street, about 22 acres, at £2,000 per acre	66,000
	£166,946

No. 1, £166,946; No. 2, £357,300; No. 3, £394,400—Total, £918,646.

2382. Whose valuations are those? My own. I have been a resident in this city for fifty-eight years. I saw the first sod cut for the railway at Redfern, and I have travelled the world over, and think I am in a position to express a reliable opinion on the requirements of our fast-increasing population. The tramway, of course, must continue to exist. Our streets are getting congested every year more and more, like the city of London, and the time has come, I think, when we should have a railway extension partly under the surface, and partly elevated. I think that my scheme shows advantages over many of the other schemes. For instance, it does not interfere with the general traffic of the business portion of the city. As regards expressions of opinion about the Domain, I may say that for thirty years I have been opposed to interfering with the Park; but we cannot get an eastern suburban railway extension unless we go through some portion of it. In 1876 I suggested to the then Minister for Public Works (Mr. Lackey), Mr. Goodchap, and Mr. Hay, the construction of an eastern suburban line, for which a survey was made afterwards. I said to Mr. Lackey, "If you will make a branch line of railway from Eveleigh, past the Albert Ground, to Randwick Racecourse, and then round to Randwick, you will have the best paying railway in the Colony." Sir Daniel Cooper would have given the land required for nothing.

2383. You propose to leave the Redfern Station as it is? Yes; barring the necessary alterations to make the fast trains come into the city by a separate service.

2384. You will retain Redfern as a station? Yes; and all the sheds at the back could be utilised for goods. Under my scheme the Government would have 22 more acres at Darling Harbour.

2385. The decline which you propose to utilise, and which now leads down to the Darling Harbour goods sheds, has a steep grade? No, not from the levels of the Redfern Station, but from the Redfern Station itself it has.

2386. I mean where you would branch off? Yes. But I have put down £15,000 for alterations to the bridge. I could go down towards the Mortuary and use the grade there.

2387. You would have to go right back beyond the Redfern tunnel, I think? That is a matter for the engineers. You might have to go back to Eveleigh for all I know, but that would not be very considerable.

2388. Have you put down a sum for filling in that portion of Darling Harbour at Druitt-street? There is no necessity to put it down, for the contractors would have to get rid of the debris, and would save expense by using that as the tip. The contractors would take the contract more cheaply with such a good tip to which they could run a temporary tram.

2389. Have you calculated as to whether what you took out of the tunnel would be sufficient to fill that up? No, I have not.

2390. Do you propose to have a station at the foot of Druitt-street? Yes. That is to serve the West Sydney traffic. Passengers, instead of getting out at Redfern, could go to Druitt-street, and thence walk along Sussex-street, Kent-street, and Clarence-street.

2391. Those persons who would land at Druitt-street station would be pretty nearly all people going to the west of York-street? Yes. A very dense population goes to that part of the city in the morning.
York-street,

- T. Alderson. York-street, Kent-street, and Sussex-street on to Miller's Point, constitute, perhaps, the principal business centre.
- 16 Mar., 1900. 2392. The evidence that we have from the tramway authorities is to the effect that 90 per cent. of the people who come in by tram go as far as Market-street or the General Post Office? That may be the case. Well, I would drop them at the High School site.
2393. Would your Druitt-street station be an open station or underground? It would be open, but a little elevated; but if the Government would resume the ground up to Sussex-street and Bathurst-street the station-yard would be pretty nearly level, and vehicular traffic could easily go into it.
2394. Then you go to Market-street and Elizabeth-street by tunnel? Yes.
2395. What is the length of that? The viaduct from Druitt-street to Market-street would be 18 chains, and I think that the distance from Market-street to the High School site is about 26 chains. From Elizabeth-street to St. Mary's gates is 23 chains, and from St. Mary's Gate to Cowper wharf is 28 chains, and that is open cutting.
2396. From Druitt-street to Elizabeth-street, I suppose, would be about a quarter of a mile? A little more.
2397. How would you ventilate that? I do not think it would require ventilation; but if these short tunnels were ventilated at all, I would suggest that they should be ventilated by means of a shaft carried up the sides of the houses, for they would be on the building line. My two tunnels would cause ventilation.
2398. Another thing to be considered from Druitt-street to Elizabeth-street is that you pass under the streets and private property? Up to the corner of Market and Kent streets there will be a viaduct. The opening of the tunnel will be at the corner of the western side of Kent-street.
2399. And from Kent-street to Elizabeth streets you go by tunnel? Yes.
2400. Have you thought about interfering with our sewerage, telephone, gas, and water pipes, and that kind of things? Yes; I have inquired into that, and there is not the slightest danger. Mr. Smail and a gentleman connected with the Water and Sewerage Board told me that the sewers are on the average only from 8 to 9 feet deep. There will be a very great depth between that and the top of the tunnel.
2401. You will be a long way underneath those? Yes. The present telephone tunnels could be utilised for the conveyance of mails from the main station, which would be at the High School site, to the General Post Office, by placing the mails on small trucks, which could be worked by electric power, and run right into the Post Office. That could be provided for at very little extra cost.
2402. You propose to have your central station near to King-street? Yes, as nearly as possible in a line with St. James' Road. I do not propose a resumption up to King-street; but simply take the Government property as it is.
2403. That station, I suppose, would be an underground station? Yes, you cannot avoid that.
2404. Do you know what depth you will be below the present level? Judging from the slight grade up to Kent-street, I think it could be done at about 18 feet—perhaps 16 feet; but I would not like to express a definite opinion, it is a matter for surveyors.
2405. I suppose you are aware that the modern idea is that to have a large passenger station for suburban traffic is not desirable, if you can avoid it? Yes. But I obviate that by dividing the suburban traffic, and having four stations so as to avoid congestion.
2406. After you leave the station at Elizabeth-street, you go by tunnel all the way to St. Mary's gates? Yes.
2407. Where would you come out? At the rear of the caretaker's cottage. The ground falls away there, so there would be an open cutting there.
2408. And then you take up a large corner of the Domain? No, I take up a narrow strip—a chain wide for the rails, &c.
2409. But then you would not be able to have much in the way of docks there:—you propose not only a station, but also a dock? I did; but I have varied that proposal in order to meet Mr. Maiden's objection, and have transferred the docks, &c., to the resumed area at Darling Harbour. I do not think I would destroy twenty-five or twenty-six trees, and Mr. Maiden said that over 200 trees would be destroyed. You could have a very wide approach to the railway station at Cowper wharf by utilising the street near Sir John Young's Crescent.
2410. From Cowper wharf, to get to Albert-street and Circular Quay, do you go in tunnel all the way? Right through the Gardens would be in tunnel until you got near to the Government House stables.
2411. I suppose there would be a great objection to any part of the Gardens being used for a railway? By taking the line where I suggest I think it would be in tunnel all the way at that portion, until the station was reached, and that would be covered in.
2412. I think you said that you had had some assistance in preparing the scheme from Mr. Parrott? No; he promised to render me assistance, but left for South Africa without doing so.
2413. Did you ask him about the grade between Cowper wharf and Albert-street;—I do not see how you could manage very well there without interfering with the Gardens, considering the levels; the Botanical Gardens are very little above high-water mark—3 or 4 feet? But you are taking the lower portion of the Gardens. I go through the higher portion. It is all high ground until you come to the Government House stables. I do not go through the lower portion of the Gardens at all.
2414. You do not have another station until you get near to the corner of Pitt-street, Circular Quay? Yes.
2415. What land are you going to utilise for a station there—the corner hotel? I resume that, and also the wedge-shaped piece of land where McMahon, the carrier, is, and the weigh-bridge.
2416. That will be a very small station? Well, there is a narrow street there that could be utilised for making a square. But you do not want a big station there.
2417. Do you know the length of one of our long suburban trains on a holiday? No.
2418. It is 500 or 600 feet on some occasions, and that would be a very congested place on holidays? That could be done on the elevated principle right up to "Packer's Hotel." It is immaterial to me whether the station is to be on the east side or on the west side; but I thought that the Government land would be the most suitable. You could put the station on the Domain side, or on resumed ground at Macquarie-street.
2419. From there you go on by a partial elevation? Yes; up to Globe-street and George-street—that is, the north side of Globe-street.
2420. Do you go up Argyle-street? No. I have a gradual ascent up to Cumberland-place—cross over Harrington, Gloucester, and Cumberland streets, into Princes-street. That is on the route for the high-level bridge. The eastern side of Princes-street and the western side of Cumberland-street are supposed to be the line of the railway to the high-level bridge.
- 2421.

2421. You said yourself that you had not gone into details as to grades, and so on? No; but I got those grades from the City Surveyor and the Water and Sewerage Department T. Alderson.
2422. Looking at it as one has it in his mind's eye, it would seem as if you could not get up there? Well, I got the information from the best authority, the City Surveyor. 16 Mar., 1900.
2423. Did he say what the grade was? One in 60 from Macquarie-street.
2424. That would make it a pretty high level where the route crosses the Quay? About 25 feet. It would cover the present electric tram uprights.
2425. Of course all these grades and other figures are subject to professional revision? Yes; but I have got them from professional men.
2426. I understand that you are not a professional man, and have not the means of going into all these figures yourself? No; but I got them from professional men, and they kindly gave them to me from the maps.
2427. You put your scheme forward as a route? Yes. Dividing the traffic is a great thing.
2428. You also keep in view in your scheme a connection by a bridge with North Shore and an extension to the eastern suburbs? Yes.
2429. Those are the two leading ideas? Yes. I think that a bridge to North Sydney must be made sooner or later; North Sydney is getting such an enormous place. The case is something like that of Brooklyn and New York.
2430. When you were reading your statement about the Circular Quay you spoke of high level and of low level—does that mean a kind of alternative scheme? No. I suggested a low-level scheme to the Premier, and Mr. Parrott said "No one else has struck that idea," and he added that it was worth watching. In my low-level scheme I go by the Queen's Wharf to Dawes' Point, and propose to have a low-level swing bridge (hydraulic) to join with the Milson's Point line of railway. I see no difficulty in that.
2431. Your other proposal fits in with a high-level bridge to North Sydney? Yes.
2432. *Mr. Dick.*] What advantage, either to the general public or to the railway system, have you mainly in your mind in selecting this route for your scheme? The convenience of passengers on the west, in the centre, and on the east.
2433. Both the convenience of the passengers and the relief of the congestion at Redfern? Yes.
2434. Have you made any calculation as to the time it would take a passenger to go from Redfern to your station at Druiitt-street, where a stop would be made, and thence to King-street? No, I have not; but I think it would be only a very few minutes.
2435. It is, practically, very nearly twice the distance from Redfern to King-street by your scheme as by tram, is it not? Yes. But the outcry of the people of Redfern is against getting out of the trains into the trams. They want to avoid that.
2436. They want to avoid it because it means loss of time? Not only that; it is loss of time and inconvenience.
2437. Do you think that under your scheme there would be a gain of time to those passengers? I think so.
2438. Judging from your plan, you have made no provision whatever for shunting your trains when they have come into the city; how do you propose to deal with the shunting of trains in order to get them back after you have taken them to any part of your scheme? You could have a shunting line at the top of Church Hill, or at the Domain, or at Darling Harbour.
2439. You have made no provision, so far, for that? No; but there is ample room. It is a chain wide all through. There will be ample room for the present, until a bridge were erected over the harbour, and then the trains would go on.
2440. Then, until a bridge were erected, your scheme, to that extent, would be incomplete? No; shunting could be done as it is done now at Redfern.
2441. One of the most serious matters in connection with the congestion at Redfern, is the fact that the shunting there is in the way of the trains? That is a different thing entirely.
2442. Will you indicate how you would overcome the difficulty? Yes; when you come to Cowper wharf you could shunt there and go back, or you could have shunting points at other places to turn the train on to another line. I do not profess to be an engineer.
2443. During two portions of the day, we should have at least twenty trains per hour running into the King-street station? Yes.
2444. How are you going to deal with those twenty trains—to get them out of the way, or get them back again to Redfern? All trains will go on to Princes-street or the Domain.
2445. How would you get them back from there? They would have to be shunted there until a bridge is constructed.
2446. Have you made any provision at Princes-street for a shunting reserve? There is ample room there. Between Princes-street and Cumberland-street I think there is about 2 chains or more.
2447. Have you allowed for that in your estimate of cost of resumption? I have allowed for 2 chains, but no more; but I put down £15,000 for signals and interlocking gear at various stations, and also £5,000 extra for unforeseen expenses, making altogether £20,000.
2448. The scheme before us, known as No. 10, has a large reserve in the Domain of about 8 acres for shunting purposes, and for stabling purposes? Yes.
2449. It is so serious a matter that the railway authorities consider that is just about sufficient to carry out the shunting operations properly;—can you get anything like it at Church Hill in your scheme? No, not 8 acres. That is a matter of resumption. You can get plenty of ground on the top of Church Hill. People would be glad to get rid of old properties there. But I have not taken that into consideration.
2450. If that is a necessary element in the scheme, that would have to be added to the cost? Yes. I was leaving that point until a bridge was really constructed, there being more space and land being cheaper at North Sydney.
2451. We must regard your scheme then to some extent as incomplete in that direction, until a bridge were constructed? Yes, a little, unless temporary provision were made.
2452. Do you think that an extension by the route you propose would compare favourably with the George-street electric tram? Yes. But no matter what railway may be constructed, a very large percentage of the people will always travel, a short distance, by the tram.
2453. Will you give us the distance from Redfern to the King-street station, and also the distance from Redfern to the Circular Quay station on your route? The distance is 54 chains to William Henry street;

- T. Alderson. 26 chains from William Henry street across the Darling Harbour sheds; 18 chains from Darling Harbour to Druiitt-street, *via* Kent-street and Market-street; 26 chains from Market and Kent streets to Elizabeth-street; 23 chains from Elizabeth-street to St. Mary's gate; 28 chains from St. Mary's gate to the Domain station; 26 chains from the Domain station through the Gardens to the Government House stables; and 34 chains from the Government House stables to George-street; making altogether 235 chains.
- 16 Mar., 1900. 2454. Just a trifle under 3 miles? Yes. The total distance to Princes-street is 247 chains.
2455. Do you think that you would get any quicker, with your two intermediate stops, from Redfern to Circular Quay, than you could by the electric tram? No. But I think that if a person could get to Circular Quay without the inconvenience of changing from train to tram he would prefer to go by railway, even if it were not quicker.
2456. You do not go through the main Redfern station with your scheme, do you? That is a matter I would leave to the engineers. It is a matter of levels to get down to the Darling Harbour level. I think the line could be constructed from the present Redfern station. I do not know what the fall is from the Redfern lines to the lines at Darling Harbour.
2457. In the scheme you have placed before us, you have not made any provision for stopping at the main Redfern station? I start from the main Redfern station.
2458. But you have not made any provision for allowing people to get out at that station? No, I have not.
2459. That would be another element of expense, if that were necessary? Naturally it would. But I have put down £15,000 for altering the bridge near the Redfern station in George-street, and £10,000 for extra work at Darling Harbour line, making altogether £25,000.
2460. You have left for future revision the question of making provision to allow passengers to get out at the main Redfern Railway Station? Well, I took it into consideration, but I thought that £15,000 or £20,000 would make any necessary alteration. The station itself need not be moved, but additional accommodation could be provided without much extra cost.
2461. With regard to the resumption at the head of Darling Harbour, the foreshores are practically in the possession of the Government now? Yes; on the western side.
2462. They have built an expensive iron wharf, have they not? At the head of Darling Harbour they did; but I do not know if there is an iron wharf on the western side.
2463. There is a considerable amount of Government wharfage accommodation at the head of Darling Harbour, is there not? Yes; but it is not greatly used.
2464. But I suppose you know that it has been paid for out of loan money? I suppose so.
2465. Have you made any allowance for the destruction of that property by filling in the head of Darling Harbour? No; but that wharf could be largely reused; it could be taken up and used elsewhere.
2466. If you were to do that, you would only get the value of the old materials from it? Yes.
2467. Do you make any allowance for the value of this in your estimate? No, I do not; but even supposing that the head of Darling Harbour were filled with *debris*. I do not think there would be much loss, because you would get a far better wharf at the sea-wall.
2468. Still those wharfs cost a great deal of money, and stand there now as an asset of the Government? Yes.
2469. Do you know also that there is a marked disinclination on the part of people connected with these matters to attempt any further filling in of the harbour, excepting where it is absolutely necessary? No, I do not. I am a strong advocate for the filling of all the shallow bays right up to Parramatta, and there are many thousands of people like me.
2470. You do not call the head of Darling Harbour a shallow bay? Yes, I do. I think it is a nuisance to the whole neighbourhood, and a dangerous spot.
2471. At the previous inquiry it was made pretty evident to us that the foreshores now available for wharfage accommodation are of very small extent, and that any attempt to further constrict them would not be in the public interest? Yes; but other places are getting more in the centre of the harbour. No large ships now go into Darling Harbour, except beyond the bridge on the north side of Druiitt-street.
2472. But do you know that the fact of those large vessels using the wharfs to the north of the bridge has rendered it necessary to provide some sort of overflow wharf for the intercolonial vessels? I have seen small colliers at Russell's wharf. There is plenty of wharf accommodation for ships.
2473. With respect to the Druiitt-street station, what district do you propose to serve by having a station there? All the western portion of the city up to that point—right along to the old A.S.N. Co.'s wharf.
2474. How far east do you think it would serve the people? To York-street.
2475. Do you mean that it would serve all the people west of York-street? Yes.
2476. It would give them a good deal of distance to walk to their places of business in most cases, would it not? You have to walk some distance in all cases.
2477. Would they not be taken much closer to Sussex-street by the electric tram? No.
2478. To York-street? Yes; but then they do not like changing from train to tram. If a man did not care to walk up the hill, he could go to the High School site, and walk from the Castlereagh-street station to York-street.
2479. Your scheme, as placed before the Committee, would practically prevent all those people who come in by that extension from using the electric tram, will it not? A certain percentage it would.
2480. Where would the people be able to get to the electric tram from your extension, say at Redfern? They would get out of the train at Redfern if they wanted to go by the tram.
2481. But you have not made any provision at Redfern to enable them to get out of the train there? They could get out at Redfern the same as they do now.
2482. But you turn off at the Redfern tunnel before reaching the station? I take a gentle curve on to the Darling Harbour route.
2483. You widen the tunnel to the west? Yes.
2484. Is not that getting further away from the Redfern Station? Yes; but the Redfern station will remain as a passenger station.
2485. But how do you propose to land the passengers there by your extension if you start west of the tunnel;—is it part of your scheme to have a selection, making some of the trains run into the Redfern station, and some into the city? No; it would be a continuous train right through; but it would drop passengers at Redfern station, near the George-street bridge. 2486.

2486. But Redfern station would be to the east of where you turn off? But an alteration of the station would be made, so that the train would pass through it on the west, and passengers could get to the trams near the bridge.
2487. *Mr. Shepherd.*] Can you give me the distances from one station to the other;—which station do you propose for the first stopping-place after leaving Redfern? Druitt-street.
2488. How far is that from Redfern station? About 98 chains.
2489. What is the next station? At the High School site, Elizabeth and Castlereagh streets, and, I think, the distance from Druitt-street is 26 chains.
2490. Which is the next station? Cowper wharf, and the distance is 77 chains.
2491. Which is the next station? Circular Quay, and the distance is 60 chains.
2492. I think that your principal argument in favour of your scheme is based on the ground of economy? Economy and the avoiding of the congestion of traffic at Redfern station.
2493. Do you not think that a more direct line would meet the convenience of passengers more; this is certainly a round-about course? All circular lines are round-about, and this is a sort of half-circular line.
2494. You go through a good deal of what I may call barren country in crossing the Domain—nearly half the line is in the Domain, where there is no population? I want to avoid going through the populated part of the city.
2495. On the ground of economy? Yes.
2496. Do you think that that is a ground that should prevail, even if the line is not so convenient to the public? Yes, I do.
2497. The great argument of the suburban people in favour of city railway extension is the saving of time;—they complain of the delay at Redfern station from changing into the trams? Yes, they complain of the discomforts of changing as well as loss of time. I think that they could get into the city in less time by my route than they do now by changing at Redfern, and getting into the trams.
2498. We have been told that something like 90 per cent. of the people get out of the trams between Market-street and the General Post Office;—would your scheme be more convenient to those people than going down on the George-street tram? I think it would be equally convenient by dropping them at the High School site, where the central station would be.
2499. Do you think that that would be as convenient for persons who have offices or other places of business to the west of George-street as the George-street tram is? It would be equally as convenient, I think, towards York-street and Clarence-street, because people could get out at Druitt-street. Passengers could get out either at Druitt-street or Castlereagh-street.
2500. Do you not think that people like to be dropped as near to their place of business as possible? Some people would like to be put into their chairs.
2501. If they could get to their places of business more conveniently by the tram than they could by railway, do you not think that they would use the tram? Yes, no doubt.
2502. You consider this scheme of yours less expensive than any other scheme that has been proposed? Yes.
2503. And you consider it is equally convenient for the majority of the business people in Sydney? I do.

T. Alderson.
16 Mar., 1900.

TUESDAY, 20 MARCH, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.	}	WILLIAM THOMAS DICK, Esq.
The Hon. ANDREW GARRAN, LL.D.		JOHN CHRISTIAN WATSON, Esq.
		JOHN McFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

Norman Selfe, M.I.C.E., sworn, and further examined:—

2504. *Chairman.*] I understand that you desire to add something to your former evidence? Yes. I desire to add to the exhibits connected with my evidence another plan, marked 27. This is a Government map of Sydney to the scale of 8 chains to the inch. On this map a number of concentric circles are drawn from three different centres, as follows:—A yellow disc half a mile in diameter, and yellow circles at intervals of one-quarter of a mile, drawn from the centre of the proposed railway station on Hyde Park, facing St. James' Road. Blue discs, half a mile in diameter, and blue circles at intervals of one-quarter of a mile, drawn from the centre of the Queen Victoria Markets, and the centre of Wynyard-square respectively. The following results are shown by the diagram:—(1.) Within a radius of one quarter mile from the proposed Hyde Park station there are about 3.6 miles of frontage to business streets. (2.) Within a radius of one-quarter mile from the Queen Victoria Markets there are about 7.6 miles of frontage to business streets, or much more than double that around Hyde Park. An inspection of the plan shows that the business frontages are very similar around Wynyard-square, being about 7.4 miles. I may explain that in this I have not taken small lanes or portions that are partly residential. (3.) Although a circle with a half-mile radius has four times the area of a circle with a quarter-mile radius, yet the business area in the city, within a quarter-mile radius of the Markets and Wynyard-square, is much larger than that within a half-mile radius of Hyde Park. For instance, the half-mile circle from Hyde Park does not reach the Lands Office, but that building is well within a quarter-mile radius from Wynyard-square. The gas-works in Kent-street are within one-quarter mile of Wynyard-square, but three-quarters of a mile from Hyde Park. Argyle-street, in the centre of the great shipping wharfs, is crossed by the half-mile circle from Wynyard-square and the one-mile circle from Hyde Park. As it may be advanced that Hyde Park is much nearer to other business localities, such as Oxford-street, and that the circles should have been completed, it is only necessary to point out that if such were done it would show that the business streets of Pyrmont and Ultimo, and, in fact, the greater part of Pyrmont, from the Technical College

College to Darling Island, are within a circle whose extreme distance is about as near to the Markets as Darlinghurst Court-house is to St. James' Road. Half a mile from the Markets reaches the Darling Harbour goods station. Half a mile from Hyde Park does not get near it. With regard to a connection with North Shore, according to the official plans appended to the report of the inquiry in 1897, passengers starting from St. James' Road would have to travel at least $1\frac{1}{4}$ miles longer distance than those starting from Wynyard-square. In other matters the plan tells its own tale, and gives a graphic answer to many questions which are asked as to the relative convenience for passengers of the principal sites that have been proposed for railway stations. The deep-red groundwork on the plan is supposed to represent the purely business part of the city. Where there is no colour, as on "The Rocks" I do not reckon that as a business part. Around the wharfs I reckon as only partially business portions; there are, of course, offices on the wharfs. I may say that I have included Phillip-street, where there are principally lawyers' offices, as being just as much a business part as George-street. I may mention that those lengths I have given are both sides of the street. In York-street I have not counted the side of Wynyard-square where the park is. In places where there is only one side of the street business and the other residential—for instance, in Kent-street—I have taken only half. In case it may be objected that I have taken the circles from the centres of these blocks, I may add that some passengers might be in the front end of a train on the eastern side, and other passengers in the rear end of a train on the western side, of the station, and I have therefore taken the circle from the actual centre of the station itself—not from where the people would alight.

Albert Christopher Brownen, licensed victualler, sworn, and examined:—

A. C.
Brownen.
20 Mar., 1900.

2505. *Chairman.*] Where do you reside? In Erskine-street, City.
2506. At a former inquiry of the same character as this one, you gave evidence before the then Committee? Yes. •
2507. You then advocated the construction of a permanent terminal railway station upon the site of the Benevolent Asylum, and the bringing into Sydney of the suburban traffic by a system of trams? Yes.
2508. You contended that a railway station at Redfern would answer all the purposes for the up-country traffic? Yes; for long-distance traffic.
2509. Is your object in coming here to-day to confirm the views then expressed by you? Yes.
2510. Your views now on this great subject are the same as they were when you gave evidence before the Committee on the 28th July, 1897? Yes.
2511. In all probability you have looked at your evidence given on that date? Yes: I have run it over.
2512. And you generally agree with its terms? Yes; just the same as I did at that time.
2513. And you have no objection to its being embodied in your evidence in connection with the present inquiry? Not the slightest objection.
2514. I understand that you wish to make some explanations or modifications? Yes.
2515. Having ascertained that you agree in general with your former evidence, will you please explain to the Committee anything you wish to add? Yes. In the first place, it has been said that the George-street traffic on the new line that has recently been opened is already congested—that the accommodation is not sufficient. As a citizen, I have taken particular notice of the traffic on that line during the busy time in the evening, and I must say that the number of cars appears to be plenty, but the passengers seem to do as they like. The traffic managers do not seem to control the people; I mean, in this way: During the busy time, say from half-past 4 to half-past 5, the trams run one close after another to the railway. There may be a train leaving for the western suburbs, say at 5 o'clock or a quarter to 5, and that train may carry 500 or 600 passengers. Naturally the people waiting in George-street rush the trams as they come up. You see a tram come up about only three-quarters full, but some of the passengers stand on the foot-boards, and thus prevent other people from getting into the tram. That tram goes on, and it is supposed to be crammed, although there is really plenty of room in it to seat nearly all the people waiting if they would only take their seats, and if the conductors insisted upon people using the trams properly, and not standing on the foot-boards. Two or three yards away you see another tram waiting to take the place of a previous one, which, owing to the people standing on the foot-boards, is detained perhaps a minute, or one and a half minutes longer than it otherwise would be, and thus delays the other tram in coming up to take its place. People cram into the first tram that comes along, and do not see another tram two or three yards away, which will get to Redfern at practically the same time. The second tram comes up, and then goes away about only half-full. I was standing at the corner of Market-street the other day from half-past 4 to half-past 5, and I do not think that more than three or four trams during that time were what I would call crowded. The majority of the trams that went by were not more than three-quarters full, and some not more than half-full, but the foot-boards were all crowded. I contend that if people were educated to take their seats, and not allowed to stand on the platforms, they would wait for the next tram, which is only two or three yards away, and they would get to Redfern all the same, and catch their trains; there would be no congestion whatever, and no bother if the traffic managers would educate the people to use the trams as they are intended to be used. I consider that there are enough cars on the George-street line to take half as many people more if they were properly managed; but they are terribly managed. I have never seen anything of the kind in any other place where I have been. One afternoon when I was looking at the trams I saw a man standing on the foot-board with a baby about twelve months old in his arms, and if the tram had knocked against anything he and the child must have been thrown off, and he, by standing there, prevented other people from getting in. Last Sunday evening I saw a young girl with five or six larrikins around her standing on the foot-board, though there was plenty of room inside the car. I may also say that I have found from experience that the trams do not take so long in getting to the railway station as has been said they do. It is also foolish to say that the trams cannot take the traffic in George-street. As regards running the trams into a railway station, supposing that a new station were built on the Benevolent Asylum site, the trams could be run into that station, and up to the side of the platforms by a new principle such as I suggested when I gave my evidence previously. Mr. Keeshaw has said that it could not be done, because of the western tram traffic—that is, from Botany, Leichhardt, Newtown, and other places having to cross the railway tram-lines. But in connection with my circular system, my intention is to divide the western traffic at the railway station, one-half going down Castlereagh-street and the other half down George-street and turning into Kent-street. There is plenty of width there to enable this to be done. It has been

been said, I think, that all the western traffic could not go down George-street, as there is too much traffic there already. I do not say that, if you were to dump all the western traffic into George-street, all that traffic could go along that street. But if my proposal were carried out, the conditions would be different, owing to the diversion of the traffic in that way. In the same way, as regards the railway-station trams from Devonshire-street, you could have so many for the western side of the city, and so many for the eastern side of it, and so many for George-street, and the people would go into whichever tram would take them nearest to where they wanted to go. It has been said that you could not take any of the extra western traffic down George-street, even as far as Liverpool-street, but I do not see why not. I do not say that you could take all the western traffic right through George-street, past the General Post Office, and on to Circular Quay; but if people were coming in, say, from Leichhardt or Newtown, and they wanted to go to the Post Office in George-street, they could change from a western side tram or an eastern side tram, and get into a George-street tram at Liverpool-street, or at the railway station. As I have explained, my idea is to commence the circular tramway at Liverpool-street, and, as regards the eastern traffic, my proposal is to bring all the eastern trams down Oxford-street to Liverpool-street, and there divide the traffic as I have already mentioned, half going down one side of the city and the other half going down the other side of it. The reason why the George-street trams are rushed to such a large extent is in consequence of the flow of people from Castlereagh-street and Kent-street, and other streets in those directions, to George-street, because at present George-street is the best route to the station. But if trams were running to the station from Kent-street, as well as along George-street, there would be plenty of room for everybody, and people would not be crushed. If my system were adopted it would do away entirely with the Elizabeth-street to Belmore Park trams, and it would also do away with the shunting-yard in Bridge-street. If you wanted a shunting-yard you could make one at Redfern, where there is plenty of room for that purpose. I presume that Circular Quay would be the terminus for all the tram traffic. There is no doubt that the traffic at the Redfern Station wants regulating. A tunnel might be made from the bottom of Brickfield Hill to the new railway station, which would be on high land, or there might be an open cutting with a bridge over it. But I do not think that any such arrangement would be necessary, inasmuch as the traffic would be divided before it reached that point, and there would be only about half the traffic going to Belmore Park.

2516. *Dr. Garran.*] Your place of business is in Erskine-street, I understand? Yes.
2517. Supposing that the Railway Commissioners' scheme, with a station in Hyde Park, were carried out, and that the electric trams in George-street were still running, would people in Erskine-street, who were going to the railway at Redfern, pick up a George-street tram when they crossed George-street, or would they walk right to the top of the hill and go to the Hyde Park railway station? I think they would take the tram to Redfern.
2518. And not walk up the hill to the railway? No; I do not think they would walk up there.
2519. Being an Erskine-street man yourself, what would you do? I would take the George-street tram. I would not walk to the railway station at King-street.
2520. You really think that the traffic coming from the west of Sussex-street and that part would not go across George-street? No; it would not.
2521. You think that that traffic would be intercepted at George-street and carried by tram to Redfern? Yes; I think that nine people out of ten would do that.
2522. Have you noticed whether a great many people coming from the railway along the George-street tram-line go to the west when they get out of the tram? I cannot say that I have noticed that; but I presume they do, especially the working classes, because all the factories and similar things are on the western side of the city.
2523. Supposing that a tram-line were laid down in Kent-street, do you think that that would take a lot of traffic to Redfern? I think so. It must relieve the George-street traffic to the railway a great deal.
2524. You mean that people coming from the wharfs would get into the Kent-street tram? Yes; I know of a number of people who live at Leichhardt, Annandale, and Balmain who would do so. I should like to say that I think the tramways will meet the requirements of city traffic for the present; but that as time goes on there is no doubt that the railway will have to be extended into the city. I produce a plan on which I have indicated a line of railway into the city which I think would meet future requirements. Starting from the present Redfern Station, I should continue the railway line to the proposed site for a station at Devonshire-street—the Benevolent Asylum grounds—and go on to Liverpool-street. My ideas are, I think, similar to those of Mr. Kennick, so far as a circular railway is concerned. From Liverpool-street I should take the line to the Victoria Markets, and for a station should take that block of land bounded by Druitt-street, Market-street, Kent-street, and York-street. My idea in having a circular railway is that it should act the same as the tramways. I would not have any shunting-yards in the city, but would simply have a circular line to take the people round. From the Markets the line would go to Wynyard-square. I think it has been said that you cannot tunnel across from Liverpool-street in front of the Town Hall and under the Victoria Markets. I am not an engineer, and cannot say anything about that; but, if the line could not be brought that way, I think you could have a station somewhere in Goulburn-street, which would serve all that neighbourhood, and answer the purpose as well, and thence you could take a line in open cut behind the Town Hall. The property round about there is not of tip-top value, and I think that a lot of the work could be done in open cut, the same as in the case of the underground railway in London, where the railway was made in open cut wherever possible, and where the property was not very valuable. I suppose that all the line in York-street will be in tunnel. The line would then go pretty well as far as Little Essex street, near Cumberland-street, and then turn round to a station near Circular Quay. I presume that the station would reach from near the fire station in George-street and go over or under Pitt-street to Macquarie-place, near Bulletin-lane, and that the railway-line would then go north under Macquarie-street and the "Hôtel Métropole," and on to King-street. You could make a station bounded by Phillip-street, Hunter-street, Elizabeth-street, and King-street, if it were found desirable to take the line to King-street, and then go on to Liverpool-

Brownen.
20 Mar., 1900.

NOTE.—(on revision) : I desire to suggest as an alteration in my evidence and plan, that it would be preferable in selecting a route on the eastern side of the city to resume the premises known as the Creswick Club Hotel, at the corner of Bent and Bligh streets. By diverting the tram line from Bligh-street across this corner an almost direct route to the Circular Quay may be secured *via* Young-street, which would be better than that originally suggested by me *via* Loftus-street, or across the land now occupied by the Department of Education and Labour.

A. C.
Brownen.
20 Mar., 1900.

street, and that would complete the circle, and then the line would run to the Benevolent Asylum grounds new station. The reason why I think this circular railway would be best is this: The railway people say they want to have a railway station at King-street for the long-distance traffic. We know that property there is very valuable, and if we were to have a terminal station at King-street you would bring congestion on to congestion, because all the traffic round about King-street and George-street is very congested. If you were to start the long-distance trains from King-street you would naturally bring into the King-street station luggage vans, mail vans, cabs, and many other things which would create more congestion than ever, and, besides that, if, in a few years, you should want to make an extension of the railway-station it would cost a great deal of money; whereas in the neighbourhood of the Benevolent Asylum grounds you could get property that already does not belong to the Government, for next to nothing comparatively, in order to make whatever improvements you might desire. My idea is that the new station at Devonshire-street should become what I may call the "Clapham Junction," for our railway traffic. There is some talk about taking a circular railway through Woolloomooloo. I do not think you want to go near there with a railway, because you have the Oxford-street and the William-street tramways to serve that neighbourhood. In having a circular railway you want to know how you are going to feed it, and how the people will run round the circle. I propose to run a circular railway line right round the suburbs, but not at present. I will tell you how far I propose to go now. In the case of the eastern suburbs you would start from the new station at Redfern, and take a line across Surry Hills to Darlinghurst. You would have a station in Surry Hills, where there is a big population, another at Darlinghurst, and another in Paddington—or, perhaps, two stations in Paddington, because there is a very big population there—and another at Waverley—at Charing Cross. You could then whip the people in from that thickly populated suburb, and take them round the circle in a very few minutes. You would then relieve Oxford-street of a great deal of the present heavy traffic. I forgot to say that the circular tramway, if properly worked—from Liverpool-street, one half of the traffic going through Castlereagh-street, and the other half through Kent-street—would knock the biggest portion of the bus traffic out of Oxford-street. The circular railway would give still greater relief to the traffic from Waverley to the new station on the Benevolent Asylum grounds. Now take the other branch through George-street West, the Glebe, and Annandale, and on to Leichhardt. There is a big population there, the same as there is in the western suburbs. The western suburbs are served better than any of the other suburbs. You can travel only by tram from Leichhardt or from Waverley to the city; but if you live at Summer Hill, for instance, you can come in by train. I think that the people at Waverley want good railway accommodation as well as those on the Western line.

2525. But you want to bring them in through Redfern? Yes; if I were living at Waverley and wanted to go to Melbourne or Bourke, and did not want to have a cab, I could then go by railway to Redfern, get out here and go on to the terminal platform and get into another train. That would be the proper thing to do. The circular railway would go to Waverley in one direction and to Leichhardt in the other, and as years went on you could take the line through Alexandria and Randwick, and across Marrickville to Stanmore, and junction there with the ends of the two portions I now propose. That might be in twenty years time from now, because the scheme altogether would cost some millions of pounds, and I do not think it is all required now, inasmuch as the population in most of those places is not very great at present. I propose to have those two branches—eastern and north-western—where there is already a large population. The stations would be long and narrow, and you would not require to resume much property, as some of the stations would, I suppose, be underground—some distance below the surface. As time went on you could put out as many branches as you liked to where the population would then be. In my scheme I have also provided a railway for the goods traffic to be taken round to Woolloomooloo. Mr. Eddy always said that you ought not to mix the passenger traffic and the goods traffic. I would run a line from Darling Harbour, *via* Sussex-street, to the west side of Circular Quay, and then have a branch from the west side of Circular Quay, by tunnel under Government House grounds, to Woolloomooloo. For a connection with a bridge to North Shore, you would run off the circle at Wynyard-square, or somewhere near there, and thus have a railway over the bridge for the northern traffic.

2526. I understand that you still adhere to the idea that the Devonshire-street station is to be the great central railway station? Yes.

George Neville Griffiths sworn, and examined:—

Griffiths.
20 Mar., 1900.

2527. *Chairman.*] You are a very old resident of Sydney, and have studied this railway question for a considerable time? Yes.

2528. On the 15th February, 1900, you sent a letter to us, and perhaps it will be well for you to read that letter, in order to refresh your memory as to the evidence you wish to give? Yes; it is as follows:—

THE CITY RAILWAY.

Sir,

15 February, 1900.

As your honorable Committee is engaged in considering the various plans and suggestions in reference to above, the scheme put forward by the late Mr. C. A. Goodchap when Commissioner for Railways under the Jennings-Dibbs Government in 1885-6 will, I hope, be kept in view.

This scheme contemplated bringing the railway by a viaduct over Belmore Park to a tunnel just south of Liverpool-street; then by an open cutting alongside of Elizabeth-street through Hyde Park to a central station on the sites now occupied by St. James' Road, the Lands Titles Office, the Supreme Court Buildings, and St. James' Church; thence by underground tunnel beneath the Mint and part of the Inner Domain and Garden Palace Gardens to a point below Government House gates in Macquarie-street; thence by open cutting to Fort Macquarie, which was to be removed, and the whole point occupied as railway premises and shunting station.

This scheme contemplated the removal of the Supreme Court (and it must soon be removed or rebuilt) and the Lands Titles Office to the land now occupied by the District Court and Patents Office at the top of King-street, where there is ample space and a splendid site for noble law offices and buildings.

The main difficulty was about St. James' Church, which, it was suggested, should be rebuilt in an improved and modern form in Phillip-street.

The chief features of the scheme, too, were its inexpensiveness and the splendid central site for the station. No person can controvert the latter part, and as to the inexpensiveness, I believe the total cost of construction of line and resumption of land up to St. James' Place was estimated as under £500,000 as against the several millions involved in other rival schemes. As against the resumption of 1 or 1½ chain frontage of Hyde Park to Elizabeth-street was the great set-off that it was contemplated to remove Government House, and throw the whole of the Government House grounds into the Domain and the Botanical Gardens, building the Government House further out of town.

Now

Now that Federation is assured, and that the Governor of Federated Australia will have to reside over 100 miles from Sydney, Government House will no longer be necessary, for the State Governor will not require so palatial a residence, grounds, and stables.

Mr. Goodchap's scheme went further, too. It contemplated the sale of 1,000 to 1,500 feet of the east frontage to Macquarie-street from Government House gates down towards Macquarie Fort for stores and warehouses, with the railway at their back.

This land, it was then estimated, would realise about £200 per foot, and its disposal would very materially, if not wholly, pay for the resumption of the Law Courts, the Deeds Branch, and St. James' Church. One other great advantage of Mr. Goodchap's scheme was, and is, that ample space is available at Macquarie Fort for shunting, and that bringing the wool to Macquarie Fort would do away with the transport of the wool through Sydney streets. I have only mentioned a few salient points of this scheme—than which none better has, to my mind, yet been proposed—in the hope that whilst your honorable Committee is sitting on this long vexed question of a city railway, the plans, and estimates, and papers, from 1884 to 1886 may be brought before it and considered.

I am, &c.,

G. N. GRIFFITHS.

The Chairman, Parliamentary Standing Committee on Public Works.

2529. Would you like to amplify that before we ask you any questions? This vexed question of the city railway has been in existence at any rate since 1881; I have known of it since then. A Royal Commission was appointed in 1890 on the subject which has been before the Public Works Committee on several occasions since then. There are some main features which I wish to point out, so that they may not be lost sight of in the present inquiry, and the first is that whereas it is considered undesirable by many people that the public should be deprived of even a portion of Hyde Park, there was in the old scheme a compensation to be given, by the resumption of the whole of the Government House grounds, which would have been thrown into the Domain and to the Botanical Gardens, so that where the citizens lost a little, they would gain very much in the open grounds around the city. Next the idea was mooted that by bringing the railway to the top of the high ridge in the centre of the city, as it would be at that end of King-street, you could have a very central station there, the ground on which the Lands Titles Office, the Supreme Court, and St. James' Church stand, and also St. James' Road all being used as the site for a central railway station, with the addition of a little portion of Hyde Park, that space affording ample room. That line was absolutely surveyed, and I think that about the year 1884, borings were taken right through the Domain and the Government House grounds, and the line was almost planned out at that time. Then the other great idea was that there was ample room for a shunting station at Fort Macquarie, and it was also recognised then, and is recognised even more now, that the Supreme Court buildings must necessarily before very long be removed to what is called "Chaucery-square" at the top of King-street, and so the two things might be done at the one time. As regards cost, I have looked up some old papers. Mr. McElhone and I held a large meeting at the Protestant Hall in advocacy of this plan, and it was well received by the citizens; but since then so many schemes have been proposed, that I think this one has been partly lost sight of. There was one other point which was always much insisted upon, namely, that the bulk of the heavy goods (wool) traffic would go straight away from the Circular Quay or thereabouts, and that the present heavy wool traffic from Darling Harbour through Pitt and George streets would be done away with. A suggestion was made, which I think is a feasible one as regards monetary matters, namely, that it would be quite possible, without interfering with the public parks very much, to run the railway as proposed to the Government House gates, and then along near Macquarie-street to Fort Macquarie. We had a valuation made by Mr. Gorman, of Hardie and Gorman, of the frontage to Macquarie-street at that part, and his valuation was that land having a frontage to Macquarie-street there, with access at the back to the railway, would be worth about £200 a foot.

2530. That scheme, in your opinion, embraces economy, a direct line, a station at King-street, and a continuation to the waters of Port Jackson, at Fort Macquarie—those are its chief recommendations? Yes.

2531. Have you considered the question more recently, having in view the great traffic, and also the convenience which, apparently, is given to the citizens by the tramway along George-street? Yes, I have. My opinion is that it is still desirable to have the main railway station centrally situated, so that passengers arriving at Redfern may be able to go straight on, and not have to get out at Redfern, and avail themselves of the tramways.

2532. If that position were granted, do you still think that a station in the vicinity of King-street and Elizabeth-street would be sufficiently central, or do you think that the large traffic by the trams along George-street has indicated that the station should be more in the direction of George-street, if possible? The proposed station would be situated on the top of the ridge—where St. James' Church and St. James' Road are now—and it would give easy access to all parts of the city, with the exception, of course, of the lower end of Miller's Point, and down there, and no central station could give easy access to those portions of the city.

2533. Have you considered this scheme in view of further extensions possibly in the direction of North Shore and of the eastern suburbs? Without giving any engineering view of it, I have considered it in this way: That it is quite feasible to have a branch-off from a tunnel under the Domain beyond the Mint to Wookloooloo Bay, and also, as was proposed, to have a railway line going round the Circular Quay, with a branch to Darling Harbour, joining with a line that was proposed at one time to be run as a goods traffic line at the back of the wharfs at Darling Harbour. Of course, there was a great scheme for a bridge; but for my part I have always thought that a tunnel under the harbour would be a more feasible scheme. And if the tunnel scheme were adopted, there could undoubtedly be a line running round the Circular Quay, and then tunnelling and meeting a line of railway, which would run along the wharfs at Darling Harbour.

2534. The scheme before us contemplates an open cutting along the length of Hyde Park from Liverpool-street to St. James' Road? Yes.

2535. As you know, for some time past any interference with Hyde Park has been a great difficulty? Yes; I propose to give a *quid pro quo* for that in the resumption of the Government House grounds.

2536. And throwing that resumed land into the Gardens and the Domain? Yes. That was one of the original portions of the scheme, which appears to me to have been lost sight of recently.

2537. In the scheme before us, no large block of Hyde Park is contemplated to be taken for the purposes of a railway station or anything of that kind, but merely a sufficient width for the trains to run along? In addition to the sites of the Lands Titles Office, the Supreme Court, and St. James' Church, I believe that the original scheme contemplated taking a further block of about 100 feet, and to square off that end of Hyde Park. The idea was to have four lines of railway—two in and two out lines. 2538.

G. N.
Griffiths.

20 Mar., 1900.

G. N.
Griffiths.
20 Mar., 1900.

2538. *Dr. Garran.*] You say that no person can controvert the splendiddness of the central site at St. James' Road; but we have heard a great many witnesses who do controvert it? Well, perhaps I should say that no one can properly controvert it.

2539. You think they have all done it improperly? My opinion is that that is the most central site for a railway station in the heart of the city.

2540. But it has been shown that the bulk of the people who used to be by the Elizabeth-street trams now use the George-street line in preference, because it takes them nearer to their places of business? As far as my experience goes, the electric tram is much pleasanter riding than the steam tram, and just at present the steam tram—owing to using far less coke and more coal—gives off a mass of dust and dirt.

2541. You think that is the reason? I think that is partly the reason. Everybody knows that the electric tram is pleasanter and runs more smoothly than the steam tram.

2542. You propose a tunnel all the way from St. James' Road to a little below the Government House gates in Macquarie-street;—have you measured the length of that tunnel? I have been along the route many times, but my recollection is not sufficient to say the length. The whole of the necessary plans and specifications were drawn up at the time and were approved of by the Railway Commissioners, and there were shafts contemplated to ventilate that route.

2543. Some of our witnesses say that in this climate anything like a long tunnel is to be deprecated? Very likely; but still at the same time I do not think the whole length of that tunnel would be, as far as I recollect it, more than 500 or 600 yards.

2544. You would not venture to propose an open cutting through the Domain, to get rid of that? No. It was at a depth, I think, of 45 feet from the surface. I lived at that time at Richmond Villa, in the Domain. I watched all those borings going on, and the boring in the Domain in front of where I lived was about 45 feet down to the roadway of the proposed tunnel.

2545. Do you think that an open-cutting by Government House would be objected to as spoiling Government House? I take it that Government House would be done away with.

2546. That is part of your idea? Yes. I think that at that time it was contemplated to move Government House.

2547. *Mr. Dick.*] You proposed to bring both people and goods along your extension, did you not? Yes, we did.

2548. Do you know whether any calculation has been made as to whether you would have room for shunting operations at Fort Macquarie? It is so many years ago that I cannot answer that question.

2549. Your station at Hyde Park or St. James' Road would not be in any sense a terminal station? No.

2550. You would not do any shunting there? No.

2551. If shunting had to be done along the extension it would have to be done at Fort Macquarie? Yes.

2552. *Mr. McFarlane.*] Have you considered the other schemes that are under our consideration? I have read them time after time, and have watched them; but I cannot say that I have considered all the various schemes.

2553. Well, some of them? We have recognised that it would be an enormous advantage to do away with the great traffic of heavy goods through the city, even from Darling Harbour. The Darling Harbour extension was carried out since the time I have spoken of, and that afforded great relief to the main traffic. A large quantity of wool—that for direct shipment—instead of being hauled on lorries and carts through the city, is now carried from Darling Harbour on lighters to the vessels that take the wool away. I do not mean the wool that is to be put up for sale by auction here; but the wool for direct shipment, and it does not come through the city at all.

2554. Have you compared this scheme with the other schemes you have seen? I have, but not in such a way that I think my evidence would be of any value.

2555. Do you consider this scheme superior to the others? I think there are many features in the old scheme which I have taken the liberty of saying I think are well worthy of the attention of the Committee. In a general way I think it has so many advantages that it commends itself to me as about the most feasible scheme. I think the best scheme of any would be a line going straight away from Redfern along Castlereagh-street; but it would cost such an enormous sum for resumption of land.

2556. You favour a scheme through Castlereagh-street to what point? I would still go for my shunting to Fort Macquarie, which, as far as I can see, is the only place available for that purpose.

2557. What is your opinion in regard to continuing the railway extension to St. James' Road or King-street only;—do you think that that would answer the requirements? I am afraid it would hardly be practicable, on account of the necessity of turning the trains round in shunting.

2558. You are aware, I suppose, that most of the schemes under consideration make provision only for carrying the extension to King-street? I am aware of that.

2559. I should like to know your opinion as to whether that would meet the public requirements? I do not think it would, because I do not think there would be a sufficiency. I suppose it would require something like 200 trains in and 200 trains out to carry on the traffic of the city now. In those days, as far as I remember, it was calculated that 150 trains each way each day would be sufficient.

2560. Do you consider also that it is necessary to carry the goods traffic from Redfern to some convenient point on the harbour? I think it would be desirable to do so, if it could be done.

2561. Most of the schemes submitted deal only with passenger traffic;—would you consider a scheme complete, even for passengers, if its termination were at King-street? I would not consider it complete; but I would consider it a great advantage for passengers to be able to run straight in, and not have to change into the trams at Redfern.

2562. When this scheme of yours was first made there was no Darling Harbour extension, and no electric trams? The Darling Harbour line then ran to Darling Harbour, but it was only a small line, and afterwards that line was increased, and various lines were run out from it. Therefore, you cannot say that there was no Darling Harbour line, but it was a very small line in those days, and has been very much enlarged since.

2563. Since the electric trams have been running, have you considered the general aspect of the matter, and as to whether they would be sufficient for the travelling public without railway extension? It is an immense disadvantage for a person coming into town to have to change from a train at Redfern, particularly if he has any luggage.

2564. You are, no doubt, aware that a large number of people who come into the city from the suburbs have offices, or other places of business, in different parts of the city—say in Kent-street, Sussex-street, and George-street;—if the railway were extended to King-street, would those people take the train to King-street in preference to taking the electric trams that run along George-street? Perhaps those who went as far as King-street would avail themselves of the electric tram; but I think you would find that for those people who went beyond King-street the advantages of the through train would be superior to the advantages of getting out of the train at Redfern, and changing into a tram. Any person going to a place between Redfern and King-street, and on the western side of George-street, would, perhaps, travel by the electric tram; but I think that those people going to places between King-street and Circular Quay would find that they would gain time by running through by train to King-street, because they would not have to lose time in getting into the tram.

G. N.
Griffiths.
20 Mar., 1900.

2565. But even if those going to the Circular Quay might save time by taking a through train to King-street station, they would have to walk from King-street to Circular Quay, whereas the electric tram would take them all the way to the Circular Quay? Yes; but the line I advocate would take them to the Circular Quay.

2566. In that case, which way do you think they would go? The majority of the people who had no luggage, and who wanted to go to that locality, would, I think, go by tram; but those who had luggage would go, I think, as far as they could by railway.

Charles Trimby Burfitt, property valuer, sworn, and examined:—

2567. *Chairman.*] Where do you reside? At Glebe Point.

2568. What is your occupation? I am a sworn valuer under the Real Property Act, carrying on business in Market-street, Sydney.

C. T. Burfitt.
20 Mar., 1900.

2569. You wrote a letter to the Committee on the 7th March, 1900? Yes.

2570. Will you kindly read it? Yes; it is as follows:—

Sir,

7 March, 1900.

For more than twenty years I have been actively engaged in the sale of properties located along the railway, and consequently I have given much thought to the question of the extension of the railway from Redfern through the city. I am of opinion that the requirements of the travelling public would be met by extending the line from a central station on the Devonshire-street cemetery site on a viaduct across Belmore Park, entering a tunnel a short distance above where Wexford-street joins Elizabeth-street, thence along that tunnel to a point near the Water Police Court, thence on piers to the western side of the Circular Quay, and on to a station on Dawes Point; or from the point near the Water Police Court to Fort Macquarie. For passengers other than suburban the Devonshire-street station would be sufficiently central; therefore only platform space need be provided at certain points along the extension, with sufficient surface area to allow for getting to and from the platforms in the tunnels, and for ventilating-shafts. This scheme, besides meeting the requirements of the public, would do away with the necessity for erecting a costly and, to my thinking, most objectionable building in the business portion of the city, as well as allowing Hyde Park to remain practically intact.

I would state further that I strongly hold to the opinion that any extension of the railway stopping short of the Circular Quay will be found unsatisfactory alike to the public and the Department.

Trusting the suggestion here offered will receive consideration by your Committee,

I beg, &c.,

C. T. BURFITT.

The Secretary, Public Works Committee, Sydney.

2571. *Mr. Dick.*] Have you for some time held the same opinion concerning the direction in which the extension should go? I have.

2572. Has your opinion been at all modified by the results of the working of the George-street tram? Not in the slightest.

2573. Do you know that the George-street tram now brings in about fourteen out of every fifteen of the people who go to and from the Redfern station? Exactly.

2574. Would not that fact suggest that the people are more satisfactorily inconvenienced by that route than by one more to the east? No, for this reason: At the present time that is the most convenient way of getting into the city; but if they had an opportunity of remaining in the train, and going by it, say, to King-street, or to any other point at which they wished to get out, they would prefer remaining in the train, and going by it to that point rather than getting out of the train at Redfern and taking the electric tram. I may say that what I claim for this scheme is that it would be the least costly in the matter of resumptions; that it would supply the wants of those of the travelling public who are likely to use a railway extension scheme; that it would be patronised by most of such people, and that it would do away with the necessity of interfering with Hyde Park, and also the erection of a central station at King-street—which, I believe, is favoured by the Railway Commissioners. It would also take the train directly to the Circular Quay, where a large number of the people using the train would wish to get to.

2575. You say you think it is the least costly of the various schemes that have been put before the Committee;—have you estimated the cost of your scheme in the way of land resumption? I have not gone particularly into it; I merely judge by the number and locations of resumptions that would be required compared with other schemes. For instance, I take it that the principal resumption of private land would be at Wexford-street, where the entrance to the tunnel would be. Practically, the remainder of the land required is already Government property.

2576. Where would you have your station at King-street? I think the most advantageous place would be the site now occupied by the Land Titles Office, or the site now occupied by the Supreme Court. One of those sites would be ample for the purpose, because all that is necessary is to have sufficient space to get an approach to the underground platforms. The platforms being underground, you require only sufficient area for a stairway to get to and from the same. Therefore, the site of even the Lands Titles Office would be ample for that purpose, and it is generally acknowledged that the Lands Titles Office will have to be removed very soon because the area is so limited.

2577. You have not gone into a detailed estimate of the cost of resumption, either under your own scheme or under any of the others? No.

2578. You have taken a general view of it? Yes.

2579. Your scheme would be mainly in tunnel? Yes.

2580. Have you any estimate of the length of the tunnel? No, I cannot say further than that it would be from Wexford-street to Albert-street. In suggesting that the line should be taken on the further or western side of the Circular Quay, I do so with the view of ultimately extending the line to North Shore, and also to gain a larger area at Dawes Point for a terminus for shunting purposes. Of course, if it were taken to Fort Macquarie, and the area there found sufficient for shunting purposes, that would be a much cheaper route, and would answer the purpose I have in view.

2581.

- C. T. Burfitt. 2581. With respect to the tunnels, have you considered the most important question of ventilation;—do you propose that they should be ventilated artificially or by natural means? By shafts, they would be sufficiently ventilated. Of course, smoke from the locomotives would be very objectionable to the citizens, but by having the line in a tunnel you would minimise that to a considerable extent.
- 20 Mar., 1900. 2582. That is, so far as the people who are not in the trains are concerned? Yes. As to those in the trains, I think that the current of air through would be sufficient to take away the sulphur fumes and smoke, and prevent them from being disagreeable. Furthermore, I hold that if it were once admitted that a railway station at King-street were necessary, then undoubtedly the whole of Hyde Park would be taken some day for a terminus, and I hold to the opinion that a railway station located in such a busy part of a large city would be found objectionable—that the smoke and smut, and so forth, inseparable from a railway station and its surroundings, would be found very objectionable. For long-distance passengers the proposed new station on the Devonshire-street site would be central enough, because many of them, if they are coming into town, have to employ a conveyance to take their luggage, and it would cost them no more to take it from that station to wherever they intended to stop than it would cost to take it from the top of King-street. The city railway extension is largely for the accommodation of suburban residents who come into town and go out each day, and it is to their requirements that I think the greatest consideration should be given.
2583. With respect to that class of traffic, considering that in the busy portion of the day over twenty trains come in, where do you propose to do the shunting of those trains? At Fort Macquarie.
2584. Have you ascertained whether there is sufficient room there to do the shunting? I should think there is; I have looked over the site, and from what I can see I think that where the trains would emerge from the tunnel there would be ample space for a circle for the purpose of turning the trains.
2585. Have you considered your scheme in its relation to a possible extension, either by tunnel or bridge, to the northern side of the harbour;—do you think it would lend itself to either of those? Not beyond an extension to Dawes Point.
2586. Would it lend itself to an extension by bridge from Dawes Point? I take it, from my knowledge of the locality and so forth, that branches could be taken, one to the west for the purpose of taking the railway across a bridge to North Shore, and the other for an eastern suburban service.
2587. *Dr. Garran.*] You say you would have a circle to turn your trains round at Fort Macquarie? Yes.
2588. We have it in evidence from the engineers that you cannot turn our engines round on a circle of less than 10 chains radius;—do you think there is room at Fort Macquarie for a circle of 10 chains radius? Barely, I think. But as regards that, I may point out that if you had your station at King-street, which I believe the Railway Commissioners favour, you would have to do the shunting in the ordinary way, and you could do it in that way at Fort Macquarie. If the circle could be made, there is no doubt that in the working of the railways it would be a convenience. But you could do your shunting at Fort Macquarie with as great convenience as you could do it at King-street.
2589. I only wanted to know whether you had gone into any careful examination of the matter? Yes.
2590. You propose to begin your tunnel at the junction of Wexford-street and Elizabeth-street? Yes, in that neighbourhood.
2591. Do you cross Elizabeth-street on the level, or underground, or overhead? I propose to take it sufficiently far up from Wexford-street to enable Elizabeth-street to be continued under the viaduct.
2592. Without altering its present level? Yes; without interfering with it in any way.
2593. Looking at the large extent of tunnelling on your line, do you think that people coming into the city from the suburbs would prefer to remain in their railway carriages, and go through a smoky tunnel, or get out at Redfern and take the open-air tram along George-street? My own impression is that they would prefer to go through the tunnel, and so avoid the loss of time and trouble associated with changing.
2594. *Mr. Watson.*] As I understand your proposition with regard to Fort Macquarie, it is that the train should be shunted there, not turned round end to end, by a circular line? If there is sufficient space to turn them on a circle, or semi-circle so much the better; but, if not, adopt the same principle as it is proposed to adopt at King-street, and shunt in the ordinary way.
2595. Mr. Parry, the traffic superintendent at Redfern, stated that there was an objection to turning trains round owing to the necessity of always keeping the first-class carriages and the second-class carriages at the same ends of the platform, which, of course, turning round would reverse? That is a mere detail in railway management.
2596. Do you think that Fort Macquarie would lend itself sufficiently to shunting? Yes, amply.
2597. How many lines had you in your mind when you thought of this tunnelling? Four.
2598. The proposition at present before the Committee is to bring six lines into the city? That is merely a matter of increasing the size of the tunnel.
2599. But it would affect the amount of resumption and the cost of the scheme? My scheme is more a matter of which is the best route, and whether it should be underground or in open cutting.
2600. Do you contemplate having the long-distance trains brought to your terminus at Circular Quay, or would you let them remain at Redfern or Devonshire-street, or wherever the central station might be? If the matter were left to my management alone, I would bring them simply as far as Devonshire-street, but nothing in my scheme would prevent their being brought to Circular Quay. If the long-distance trains were used to pick up passengers at Strathfield, then by all means bring them into the city, but if the last stopping-place for those trains were, say, at Penrith, I do not think there would be any necessity to bring them beyond Devonshire-street. I may add that if the station were on that site I should prefer that all the frontage to Pitt-street be taken for it, including the Benevolent Asylum grounds and the convent and the other buildings on that portion of the street frontage.

WEDNESDAY, 21 MARCH, 1900.

Present:—

WILLIAM THOMAS DICK Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. |
The Hon. ANDREW GARRAN, LL.D. |ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the creation of a large Central Station.

Frederick James Miller, timber merchant, sworn, and examined:—

2601. *Vice-Chairman.*] Where is your place of business? Duncan-street, off Bathurst-street.
2602. *Dr. Garran.*] Where do you reside? At Croydon.
2603. I suppose that on ordinary days you come in and go out by the railway? Yes.
2604. Before the electric tramway was put down in George-street, did you walk to your place of business from Elizabeth-street? I either walked from Redfern or went by 'bus from Redfern.
2605. Which 'bus suited you the best? A George-street 'bus.
2606. Now that the electric tram is running in George-street, does that suit you better than the old steam-tram did? I never used the old steam-tram for business.
2607. Do you use the electric tram? Yes.
2608. In preference to the omnibus? Yes.
2609. That electric tramway has captured some of the omnibus traffic, and also some of the Elizabeth-street tram traffic? Certainly.
2610. If that electric tramway were pulled up for any reason, would the people in the west think it a hardship to have to climb up all the way to Elizabeth-street again? I do not think they ever did that.
2611. They took the omnibus? Always.
2612. But considering the large number of people in the west, who come from and go to the railway station every day, was the omnibus traffic equal to the requirements of all that large number of passengers? I can hardly say that. The traffic was carried somehow.
2613. Did a good many people walk? Yes.
2614. Do you think that some of those who walked now use the electric tram? I think they do.
2615. Let us suppose that the Commissioners' original scheme, or a substitute for it, were carried out, and that the terminus were made at King-street, near the Supreme Court, do you think that the people from the west would take the George-street tram to the railway, or would they go up to King-street? My opinion is that they would take the George-street tram.
2616. Would you do so yourself? I would.
2617. The tram is said to be a little slower than the train would be? Well, for the short distance I do not think that makes much difference.
2618. On a hot day, or on a wet day, you would get into the first conveyance that came along, I suppose? Certainly.
2619. And I suppose that men carrying bundles would prefer to get into the first conveyance that came along? I suppose they would.
2620. And so also would women carrying babies? Yes; I should think they would.
2621. The importance of the question lies here: before the electric tramway was opened, the Commissioners made a careful estimate of the number of passengers that came on from the railway station at Redfern to King-street in the trams; then they booked all those to the proposed new railway, and they calculated that on an outlay of £650,000, that they would get a good percentage interest on the expenditure; assuming that there was a penny more paid for single fares, and about $\frac{1}{2}$ d. more for season tickets, and about $\frac{1}{4}$ d. more for workmen's tickets, do you think, now that the electric tram comes in as a competitor, that the Railway Commissioners would get the whole of the tram fare they calculated upon? I do not.
2622. In that case their estimate of profit would have to be revised? Certainly it would.
2623. And we should either have to put a larger percentage on to the ticket fare or suffer a loss? Yes.
2624. Do you think that the people generally would bear 1d. or $\frac{1}{2}$ d. extra on the ticket fare? I do not suppose they would, but I am not in a position to say.
2625. Supposing they preferred, as we are told they would prefer, the railway to the tram, because they would not have to get out at Redfern and change carriages, would they use the railway if they were charged 1 $\frac{1}{2}$ d. more instead of the tram at only 1d. more? My opinion is that they would use the tram.
2626. The $\frac{1}{2}$ d. difference would be a consideration to a great many people? I think so.
2627. I suppose that there are a great many people coming in by the railway in the morning whose remuneration is really very slight—people employed in different establishments? Yes.
2628. And $\frac{1}{2}$ d. each journey would be 1d. a day? Yes; to them it would be a consideration.
2629. You think that that would be a sufficient difference to make them use the tram in preference to the train? Yes; I think it would. In fact, I think that they would use the tram by preference even at the same cost.
2630. We are told that there is a very strong objection, on the part of the railway customers, to getting out at Redfern and changing their vehicle;—do you hear much of that? I have heard of it. I have no objection to it myself—not the slightest.
2631. If the tram is brought up close to the platform where you get out at Redfern, and there is no delay in starting the tram, is there any very serious difficulty connected with it? There is no difficulty at present. That is my experience.
2632. I have been speaking hitherto about men of business going to their offices, but now take the case of ladies who want to go, say, to David Jones', or to some other shop in George-street;—would they take the train to King-street and walk from King-street to George-street, or would they take the tram at Redfern and be put down opposite the shop door in George-street? I do not know much about what the ladies would do, but I suppose that they would take the tram. What ladies I know now take the tram.
2633. For convenience? Yes, for convenience.
2634. I suppose that, in common with a good many other people, you have been a little surprised at the very large traffic on the George-street tram line? Yes, I have.

F. J. Miller.

21 Mar., 1900.

2635.

- F. J. Miller. 2635. Does not that prove that it has met a very great want? Yes, it has.
- 21 Mar., 1900. 2636. And so far as the railway suburban passengers are concerned, does it not prove that the electric tram puts them down nearer to where they want to go than the old steam tram line did? Certainly.
2637. There is no doubt about that? None whatever.
2638. Supposing that a tram line were made down Kent-street and on to Miller's Point and Dawes Point, do you think that would serve any considerable number of persons? I do not know that it would be much better than the present tram line. I do not think it would.
2639. Would the Sussex-street people be better served by it? Kent-street is such a very short distance from George-street that I do not think it would make much difference.
2640. The reason I ask you that is because some persons have the idea that if a new station were made on the Benevolent Asylum site, and if three or four lines of electric tramway were laid along parallel streets in the city, they would really accommodate the whole of the suburban people who come in;—do you think they would? My opinion is that they certainly would.
2641. The officials of the Railway Department do not think so? Well, of course, they know better than I do.
2642. Their traffic is not distributed evenly over the whole of the day—there is a large quantity coming in in the morning, and a large quantity going out at night? Yes.
2643. And the railway officials say that they want a powerful haulage to dispose of that traffic—more powerful than the electric tram has at present;—when you come in in the morning do you see anybody waiting unable to get into the electric cars? I have noticed on different occasions, lately, that the tram has started immediately, and another tram has been behind it to take away the other passengers. I have not seen any delay.
2644. It has not struck you that the arrangements are unequal to the traffic? It has not. Of course I generally travel in a first-class carriage, and that gets into the station first, and probably I am away before the people from the back part of the train get out of the station.
2645. The first-class passengers get a "pull" over the others? Yes, in coming in.
2646. But is your carriage generally full? Yes, generally full.
2647. I mean the electric tram; it does not go until it is full? I think so. There has been no delay at any rate; whether full or not the tram has gone.
2648. Then, so far as you can see, the electric trams at present are equal to dealing with the traffic that arises at Redfern station? Yes; with the traffic that arises at Redfern station coming in.
2649. And going out the same? Going out it is very difficult to get a seat in the tram the other side of Market-street.
2650. Then the going out trams are more crowded than the coming in ones? In the evening they are.
2651. *Mr. Shepherd.*] What time do you generally come in in the morning? Generally 9 o'clock.
2652. That is said to be about the busiest time—I think the railway authorities say so? Well, I suppose it is.
2653. And you never find any difficulty in getting a place in the tram? I have never had any delay; in fact I have never had any difficulty in getting into a tram. I have seen people waiting for the next tram which was always standing close behind the one I got into.
2654. And, of course, if the trams were run more frequently there could be no possible difficulty in getting seats? Certainly not.
2655. You have always found that the electric trams are under thorough control—have you not? Yes; except in the event of accident.
2656. I mean that they are easier to stop, and seem to be more under control than the steam trams, so far as that is concerned? Yes.
2657. Therefore, they can run very close to each other without any danger? They can.
2658. Have you thought over the Government scheme at all? No.
2659. Speaking just casually, from your own idea of the matter, which do you suppose would be the more central station to suit the greater number of people, a station at the George-street Markets or a station at the top of King-street? A station at the George-street Markets.
2660. You have no doubt about that being the more central position of the two—that is, embracing the largest number of people in the city? I think that of those two positions the Markets are the more central.
2661. So that if any extension of the railway at all were made, you think that a railway with a station at the George-street markets would be more central to a railway going to a station at the top of King-street? Yes; that is, supposing that I were to consider railway extension into the city at all necessary.
2662. We have had several schemes suggested to us, and one is to have a central station at the George-street Markets, while the Government proposal is to have it at the top of King-street;—you think that, as a position for a station, the George-street Markets would be preferable to the top of King-street? No; you said more central. I do not think that George-street Markets would be preferable, for that is a very crowded place.
2663. In the event of a station being made at the top of King-street, and supposing that the electric trams in George-street were running, what boundaries of the city do you suppose that station would conveniently serve;—how far do you think it would be convenient for people to go back who landed at King-street from the train? Of course, I can only say what I would do myself. I reckon that if I were at Pitt-street I would take the train at King-street. If I were below that, I would either walk or take the electric tram to Redfern. I do not suppose that you would get any passengers by the train further west than Pitt-street at the outside.
2664. How far do you think railway passengers would be willing to go back south from King-street in preference to coming in by tram? This is a matter I have not thought of. I am only telling you my own opinion on the spur of the moment. I do not think that anybody would go further back south than Park-street, even if anybody would go that far back.
2665. Do you think they would go as far back as Park-street in preference to getting out of the tram at the corner of George and Park streets, and walking thence to their places of business? No, I do not.
2666. And what, on the north? I suppose that from Pitt-street people would go to the George-street tram; but that from anywhere east of Pitt-street they would go up to the King-street station.
2667. All these large Government offices would be nearer to the tram at Circular Quay than they would be to the railway at King-street? They would. 2668.

2668. Do you think that people would rather get out at King-street, and walk down to this part of the city, than come round in the tram? I do not know. I would rather take the tram myself. F. J. Miller.
2669. Supposing that the electric trams were multiplied—that is, supposing there was a tramway along Pitt-street, another along Castlereagh-street, and another along Elizabeth-street—do you think that it would be more convenient for people to be dropped at each street by these trams than it would be for them to come on by train to King-street and to disperse from there? Without the least doubt, I do think so. 21 Mar., 1900.
2670. So that really you think that a good system of electric trams would be more convenient than extending the railway? I do.
2671. *Mr. McEarlane.*] According to your statement, you do not appear to think it is necessary to have the railway extended into the city for passenger traffic? I have thought so little of the matter that I would not care for my opinion to be put against the opinion of those who have thought more of it.
2672. I am speaking of your own opinion? In my own opinion it is not necessary to bring the railway into the city.
2673. That is in view of the new electric tramway along George-street to the railway station? Certainly.
2674. Previously to the establishment of the electric trams, what was your idea? The same as it is now—that the Redfern railway station, with more accommodation for the trains, is central enough.
2675. With regard to the traffic at Circular Quay, do you think that people from the western suburbs would, in the event of the railway being extended to King-street, take the train to King-street, and thence walk to Circular Quay in preference to taking the electric tram? I do not think so.
2676. Where is your place of business? At the foot of Liverpool-street.
2677. You do not use the steam tram at the present time? No; I have never used the steam tram.
2678. I mean, previous to the running of the electric trams? No, I did not.
2679. Did business people in your locality generally do the same as yourself? Yes; they generally walked to the railway station.
2680. And, in view of the electric trams, do you not consider that it would pay interest on the outlay to construct a railway into the city? I suppose that the Commissioners would make it pay by increasing the fares.
2681. Would that not reduce the railway traffic? Yes, it would.
2682. With regard to the city railway extension generally, do you think it advisable to have the terminus at King-street, or to continue the line to the harbour at Circular Quay? I do not consider it necessary.
2683. *Vice-Chairman.*] Admitting that it were necessary to have some extension of the railway into the city, where do you think the extension should go in order to meet the convenience of the greater number—along a route as proposed by the Railway Commissioners, skirting the eastern edge of the business portion of the city, or along a route going to the centre of the business portion of the city? All other things being equal, I think that the route going through the centre would be the better one.
2684. I suppose you have frequently heard this matter discussed by your fellow-travellers on the suburban line? Yes, I have.
2685. Can you give the Committee an idea as to why there is a general consensus of opinion in favour of a railway extension into the city? I have never heard anyone give a reason for it, excepting that we are behind the times as compared with other cities. That is what they say.
2686. You have heard no definite reason—for instance, the increased convenience if such an extension were made? Never.
2687. I think you stated in reply to a question put by Mr. Shepherd, that you did not think that the station at the Victoria Markets would be preferable to one at King-street, on the ground that you thought the place was too crowded? No. Mr. Shepherd asked me which was the more central, and I said the Markets. There can be no doubt about that.
2688. But you would not admit it was preferable? Well, it would require a practical engineer to see how the difficulties would be overcome, and I am not a practical engineer.
2689. I was going to ask you why you made that reservation—that you did not think it was preferable to the other; you think there is not enough space at the Victoria Markets? Yes, that is my opinion; but I am not an engineer.

James Cobban Smith, merchant, sworn, and examined:—

2690. *Vice-Chairman.*] Where do you reside? Strathfield.
2691. We may then take you as being a typical suburban traveller, whose place of business is west of George-street? Yes. J. C. Smith.
21 Mar., 1900.
2692. Will you indicate to the Committee what your views are on the main question of railway extension into the city? My opinion is that it is absolutely necessary to bring the railway into the city.
2693. On what grounds? That even with your electric trams you will not be able to cope with the traffic. My office and warehouse being in Clarence-street, my nearest point to the tramway is at Market-street. I take the tram from Market-street, and I do not exaggerate when I say that four times out of six I have to stand all the way to the railway station, and frequently I have to allow two, and sometimes three, trams to pass me before I can even get standing room. Certainly that is generally soon after 5 o'clock, when I leave my office on most days of the week, or soon after 1 o'clock on Saturday. At that time the electric trams do not, and cannot, cope with the traffic. How it will be when the electric trams are extended further out into the suburbs I cannot imagine. You will have one line of trams all up George-street. I have frequently waited at Market-street, and then have walked down to King-street to try and get a tram there, only to find when I got to King-street that all the trams were full.
2694. What method of conveyance into the city did you use before the George-street tramway was opened? Sometimes the steam tram, but more often the bus.
2695. And I suppose that the majority of business men situated to the west of George-street practically used the same mode of conveyance, did they not? Yes, practically the same.
2696. In what way do you think that an extension of the railway into the city along the proposed route would benefit gentlemen like you who have their places of business to the west of George-street? If the station

J. C. Smith.
21 Mar., 1900.

station were made at King-street or St. James' Road I should unquestionably take the train to King-street, and come down King-street into Clarence-street.

2697. Would that be to gain time, or because the present tram along George-street is not sufficiently convenient? I should unquestionably save time by coming in by train to King-street.

2698. Have you made any calculation of the saving that you would make in that way? I should think from ten minutes to a quarter of an hour each way. You have to leave your office in time to catch a tram, then you must allow five minutes to catch your train after you get to the Redfern Station; therefore you lose at the very least ten minutes or a quarter of an hour, besides the extra time that the tram takes as compared with the time that a train would take in getting to Redfern.

2699. But presuming that a further extension of the electric tramways took place along the streets parallel with George-street, with the result that there would be a more speedy transit of passengers to the railway station at Redfern, do you think that then you would gain very little by taking the train at King-street rather than by taking a tram at one of the parallel streets? No; you would still lose the five minutes at each end—five minutes to catch a tram, and five minutes to catch a train—in addition to the extra time a tram takes, stopping at every street corner, as compared with a train that would run through from King-street.

2700. Have you ever inquired into the respective merits of a route down the eastern portion of the city and a route down the centre of it? No; I have only looked to the evidence that has been given with respect to bringing the railway to King-street or St. James' Road. I have always looked upon that as the most feasible and economical way of bringing the railway into the city. The other route would be so extravagant in expense that the probabilities are that the expense would always prevent it from being carried out.

2701. Do you know the estimated cost of the scheme now before the Committee? Yes; I do from the evidence of Mr. Deane. I have read all his evidence.

2702. Practically £1,500,000? Yes. Personally, I favour the St. James' Road scheme.

2703. On what grounds? As being the most economical. I have no sympathy with the objection to taking part of Hyde Park. I think that that portion of Hyde Park is practically of little value to the public. The few that benefit by it are as nothing compared to the multitude who would profit by it if it were utilised for a railway coming into the city.

2704. You say that that part of the Park is practically of little value;—do you not think that that was a determining element which led, not only the officials, but also the general public to select that site for a terminal station—I mean the fact that the land there was, so far as its value is concerned, not very important? Yes; I presume that would be the case.

2705. Supposing that all that area had been covered with buildings the same as any business portion of the city, do you think that there would have been a general agreement that that would have been a good place to which to bring the city railway? That is another matter altogether. I presume that if it had been covered with valuable buildings that fact would have very seriously affected the opinion of the authorities as regards bringing the railway into the city by that particular route.

2706. But what about your own opinion;—presuming that that area were covered with buildings, would you ever think of bringing the railway on that side of the business portion of the city, or would not you prefer to take it to the centre of it? If that area were all covered with valuable buildings, I should say that the lesser of two evils would be to take the railway to the other site, which would be more central.

2707. Do you really think that having a station at St. James' Road or King-street would be of any considerable benefit, as compared with the electric tramway, to a large number of people who now daily come into the business portion of the city? I do unquestionably. There is an immense traffic coming in by the railway in the morning, and going home in the evening, and it is an increasing traffic.

2708. I suppose you know that the George-street electric tram practically knocked the steam tram from Redfern station out? I presume so.

2709. Does not that show that people prefer to be taken further west than the line of the present steam tram? No doubt George-street is very central, and an immense number of people travel by the electric tram who do not go to the railway.

2710. But still during the busy hours of the morning and afternoon a very large traffic is taken by the George-street tram, a considerable portion of which used to go by the steam tram? Yes. I sometimes walked up to Elizabeth-street and went by the steam tram, but naturally now I take the electric tram in George-street.

2711. Do you think that your views on this question would be modified if a further extension of the electric trams were to do away with the present inconvenience of waiting for a tram, or getting into a crowded tram, and the delays consequent upon that? I do not see how any system of trams could do away with that.

2712. Supposing that you had a tram-line down Pitt-street, and another down Kent-street, in addition to the one in George-street, do you think that the three would not be able to cope with the traffic to the railway-station? You might cope with the traffic then, but still lose time. There would be still the inconvenience of changing carriages.

2713. That seems to be the main determining factor in the minds of the people who are clamouring for this railway extension, is it not? Yes; that, and, I think, the saving of time, and the avoiding of the inconvenience in getting to the station now. I admit that the convenience now is much greater since the electric trams were established compared with what it was before, when we had nothing but the wretched 'buses going up George-street; but what I foresee is that the electric trams will not be able to cope with the traffic.

2714. Not if they were further extended as suggested? You might cope with the traffic if you put them down Kent-street; but the traffic of Kent-street—in fact, everything comes into George-street in the end.

2715. But so far as those two periods of congestion during the day are concerned—that is, in the morning and in the afternoon—people travelling at those times generally are going to or coming from their places of business? Quite so.

2716. And they would invariably take that tram which would deposit them nearest to their places of business? Yes.

2717. Do you not, then, think that an extension of that kind would do away with the congestion during those particular periods? To some extent it would, no doubt.

2718.

2718. But you still hold that the delay in changing from train to tram in coming into town, and the delay in waiting for a train in going back, would outweigh any convenience of that kind in making a comparison between tram and train extension? Yes, I do. I hold that the railway ought to come into the city, and bring the people as near as possible to the business part of the city. J. C. Smith:
21 Mar., 1900.

2719. Do you also hold that the St. James' Road or Hyde Park scheme does that? Practically it would meet the difficulty. You come down hill from King-street, and I would always walk down King-street, and I suppose that nine-tenths of the people coming in would do the same.

2720. Do you think that your opinion is fairly representative of the opinion of suburban residents on this question? I think so. I have been living in the western suburbs twenty years, and have talked this matter over hundreds of times with suburban residents, and I think that that is generally the view they take of it.

2721. *Dr. Garran.*] When the Hyde Park scheme was first launched by the Railway Commissioners there was no other scheme seriously proposed? Quite so.

2722. And the opinion of the western suburban residents was that they would get that scheme or none? Yes.

2723. Supposing that there had been a scheme to bring you to the Victoria Markets, Wynyard-square, and Circular Quay, and that scheme had been put in opposition to the other, would the residents of the western suburbs have voted for the eastern line or the western line? I am of opinion that the residents on the western suburban line are not particular as to whether the railway extension comes in by the eastern or the western route through the city, so long as you bring the railway into the city. Speaking for the residents of the western suburbs, I may say,—Bring the railway into the city, and we do not care whether it comes in this way or that way, so long as you bring it in. What we fear is that if you recommend that way—and it means an enormous resumption of property—the expense will probably block it altogether.

2724. You want the railway extension somewhere? Yes.

2725. And you think it is safer to vote for this scheme than to go further afield for possibly a better one? Quite so.

2726. Which you might lose? Yes; which we might lose.

2727. You admit that the George-street tram has captured a large part of the Elizabeth-street tram business as regards the railway traffic? I do not know it of my own knowledge, but I should certainly conclude that that would be the case.

2728. If the proposed railway is made through to King-street, will the railway recapture what the steam tram has lost? Undoubtedly, I think so. The convenience that the railway extension would afford would be such that I think the larger portion of the railway passengers would make use of it.

2729. There are a great many people now getting out at Redfern whose business takes them into Elizabeth-street, or Market-street, or Park-street;—would they all go on to King-street by train and then walk back to those streets? There are not a great many that go to that part of the town. I have been travelling for a long time, and I found that the 'buses very seldom stopped until they got as far as the Town Hall, or even further than the Town Hall, in George-street. There was very little stopping before that.

2730. Then a station either at or near to the Town Hall would accommodate a great many people? Undoubtedly; if it were practicable, a station at the Victoria Markets, another station at Wynyard-square, and another at Circular Quay would undoubtedly accommodate the greater number.

2731. That would be a very complete scheme? Yes.

2732. If it could be carried out at a price that would pay? Yes, exactly—if it is practicable.

2733. In estimating the cost and the returns of the Commissioners' scheme, they expected to get for the proposed extension the whole of the passenger traffic that now goes as far as Market-street or King-street? Quite so.

2734. And they calculated that that would give them a fair interest on their outlay? Quite so.

2735. But if the scheme now before us be substituted for that scheme, and we are to spend £1,500,000, do you think that the suburban residents would pay 2d. or 2½d. more to be brought to King-street? Well, I should say that the suburban residents would pay whatever was demanded as the price of their season or daily tickets. They would certainly grumble if they had to pay an extra 2d. or 2½d. for the accommodation. But I have no doubt that an extra 1d. would meet the views of all the travellers.

2736. I want you to recollect that, at the same time, the Commissioners would be running a penny electric tram down George-street in opposition to their own railway? There is plenty of traffic for the electric tram down George-street.

2737. But that is not the question;—would the railway passengers, in order to save the 1d. or 1½d., get out at Redfern and take the electric tram? I would not.

2738. But there are a great many people who have to live on much smaller incomes, I suppose, than you do, and who come in from the western suburbs? If the railway fare from Redfern to King-street were 2d. or 2½d., in my opinion the majority of the people would have season tickets, and would travel by the railway right to King-street.

2739. But a great many employees with very small salaries would save the penny extra? They might save the extra penny; but there is not a large number of that particular class. If you see the trains coming in in the morning, you will notice that the passengers are nearly all first-class.

2740. You mean business people going to counting-houses and warehouses? Yes.

2741. They are not shop hands or factory hands? No. There is not a large population of that class living out in the western suburbs.

2742. The railway fares would be too dear for them to pay? Yes; and then there has been always the additional fare by either tram or 'bus to pay. I think that with the railway coming right into the city, you would find that the population of the western suburbs would, in a very short time, largely increase, and that the traffic would accordingly increase.

2743. You said in reply to the Vice-Chairman that the traffic on the line, as you see it, is now increasing? From my own knowledge and experience I know it has increased enormously in the last ten years.

2744. But we have had some evidence that it is now pretty well stationary? I think that one reason for that is the difficulty and trouble in getting into the city proper. I have no hesitation in saying that that has been the one thing that has kept the western suburbs back.

- J. C. Smith. 2745. You think that if this line were made to King-street the western suburbs would take a fresh start? I do, unquestionably.
- 21 Mar., 1900. 2746. And so there would really be a bigger traffic coming in than the Railway Commissioners originally counted upon, which was the existing traffic? I say that there would be an additional income arising from increased settlement in the western suburbs.
2747. And that would help to pay interest on a larger capital? It would.
2748. But still you would not venture to say that it would pay interest on £1,500,000? I am not competent to give an opinion on that point.
2749. If it were put to the western suburbs people, "To save Hyde Park we must spend £1,500,000," would they say, "Spend the extra money"? No; they would say, "Take Hyde Park." I think there is very little more than a sentimental objection against taking Hyde Park. Sentiment is no doubt worthy of respect at all times, but I think that a larger number of people would be benefited by the taking of that strip of Hyde Park for the railway. As a place for loafers to sleep upon that portion of Hyde Park is all right, but you dare scarcely go through it at night, and very few people make use of it at night.
2750. It has been suggested that if the park-land, taken for railway purposes, were to be valued, and if the money representing its full value were spent in making air spaces in other parts of the city not yet supplied with them, that would be a fair exchange? I think that that would be fair.
2751. And the sentimental objection would be got over? Yes. There is always that objection about touching the people's park; it is a lot of bosh, but still it exists.
2752. There are a great many people living in Sydney who are not close to a park? Yes, more than are close to one.
2753. A poor woman, with no servant to send out with her children, has, in some instances, no park near her into which she can send her children? Yes. All that park talk is only a cry.
2754. Then I understand your objection to the western line through the city to be purely a matter of expense? Yes, purely a matter of expense.
2755. If the proposed line to Hyde Park were estimated to cost £750,000, and the other scheme would cost £900,000, which do you think it would be better for the Government to undertake? For the sake of £200,000 I should say take the one that would serve the greatest number of people.
2756. That is the one going along the western route? Yes.
2757. You think that the extra £200,000 would be money well spent for the accommodation? Yes; it would be worth while for the sake of £200,000 perhaps, but not when the difference comes to be twice as much as that.
2758. *Mr. Shepherd.*] I think you said you found some inconvenience in travelling by the electric tram? Yes.
2759. At what time do you come in in the morning? I generally come in by the twenty minutes to 9 train in the morning from Strathfield.
2760. That is about the busiest time? Yes; I have never found great inconvenience in coming into town, but inconvenience in getting out.
2761. At what time do you generally go out of town? About from 5 to half-past 5 on most days, and 1 o'clock on Saturday, and I say that at those times, especially on Saturday, the electric trams are dangerously overcrowded.
2762. Do you not think that that could be modified to some extent by increasing the number of trams? It would, of course, if you could increase them. But they run now about every two minutes, the traffic is so enormous in George-street.
2763. They seem to be so thoroughly under control that they can be run within a few yards of each other with safety? I presume they can, but if you are going to extend them, as I understand the Railway Commissioners intend to extend them into the suburbs, you will have to have a line of trams right down George-street in order to cope with the traffic, unless you have trams in some other streets as well. I think that the trams in George-street have as much to do now as they can do, and that if you extend the electric system to the suburbs and put on more electric trams you will not be able to cope with the traffic in George-street.
2764. As it is now the whole of the traffic is crowded into George-street, because the steam trams have been practically taken off? Yes.
2765. If other streets were utilised for trams, do you not think that that would relieve George-street to a great extent? Undoubtedly it would; but I hold that nothing can take the place of a railway. In changing carriages you lose time, and in going back you must go five minutes early in case the tram should be delayed and arrive at the railway station late.
2766. In constructing a railway, do you think that the expense should be largely considered, it being a matter for all time? I should think that expense must be considered if you want to get a return on your money. If you go to an abnormal expense, any reasonable fares that you might charge would not give a return on your capital expended.
2767. In the construction of railways it is generally considered that at the first start they are not likely to pay? Yes.
2768. But as the traffic grows they return a good dividend on the outlay? Yes.
2769. In this case, of course, as the population increases so will the traffic of the railway increase? Quite so.
2770. Under those circumstances do you not think it would be better to place the railway in the best possible position? Certainly.
2771. With regard to expense, I mean, to a certain extent; I do not say anything outrageously expensive, but to the extent of a few hundred thousand pounds? Quite so.
2772. Do you not think that it would be better, subject to that qualification, to place the railway in the very best possible position? I do. I think that if you were to take the railway to the Victoria Markets, Wynyard-square, and Circular Quay the traffic would be simply enormous, especially to the harbour in the summer.
2773. Of course the ultimate result of this addition to the railway will be railway connection across the harbour to North Shore? Quite so.
2774. Do you not think that that ought to be kept in view? Yes, and also railway extension to the eastern suburbs.

2775. There is evidence to show that if the railway be extended to King-street, the railway authorities will have to go back as far as Liverpool-street to form a circular line to bring the railway down to Dawes' Battery; do you not think that that would be very inconvenient? It would, undoubtedly.

J. C. Smith.
21 Mar., 1900.

2776. And in the King-street scheme, there is no provision made for any intermediate station—the trains are to run right through from Redfern to King-street; do you think that is wise? Yes. I would run the trains right through from Redfern to King-street, if they are not going any further—I would not have an intermediate station between those two places.

2777. Do you not think that that is giving rather too much consideration to the people who would be served by the King-street station—this is, those living, or whose place of business was in the immediate vicinity of King-street? Well, you must always give it to somebody.

2778. We have had ten schemes explained to us, and seven out of those ten included a station at Liverpool-street, but in the last two schemes which have been placed before us that station has not been proposed, but only one station has been provided for, namely, the King-street station? You see that the distance by train from Redfern to King-street is so very soon run over that you hardly want an intermediate station. Then I take it that in one of your schemes, which I think is a very good one—I believe it is called No. 10 scheme—you run the railway right out to the Domain, and thus make it form part of an eastern suburban railway system. I think that, sooner or later, you will be obliged to take your railway to the eastern suburbs, and that railway scheme seems to me to offer advantages in that respect which none of the other schemes offer.

2779. But still, that scheme is very inconvenient for an extension to North Shore? That is the difficulty.

2780. That scheme goes to King-street, and then to the back of the Art Gallery, and takes in $8\frac{1}{2}$ acres of the Domain for a shunting station? Quite so. I think that that is the next best scheme to the St. James' Road scheme, if you are going on that side of the city. But if you can go on the other side of the city, then by all means go on the other side of the city.

2781. Then we have another scheme proposed, to leave the main line at Eveleigh, to cut under by the Cyclorama, and go along by a lot of inexpensive properties—in fact, a lot of hovels which, in my opinion, it would be a good thing to clear away,—to have a station just opposite Christ Church, and to go through Goodlet's yard up near Bathurst-street, tunnelling under there to George-street, and thence to go along underground below George-street to the Victoria Markets, and to have a station in the basement of the Victoria Markets;—do you not think that that would be a more central position than King-street, if that scheme could be carried out? I think it would if it could be carried out. I suppose that the line would go on from the Markets to Miller's Point.

2782. The proposal is to tunnel under Kidman's and Lassetter's into George-street, continue *via* York-street to Wynyard-square, and from Wynyard-square to Argyle-street, and from Argyle-street to Dawes' Battery, with a view of ultimately crossing the harbour;—do you think that a scheme of that sort would be preferable to the King-street scheme? I do, unquestionably. If it could be carried out that would be a magnificent scheme. There is an enormous number of people coming from Balmain and other places in that direction whom that line would serve.

2783. One of the other Government schemes—there were three to which we were really supposed to give our particular attention—is called the Benevolent Asylum scheme, taking in the Benevolent Asylum grounds, and the Cemetery and the Police Barracks for the purpose of forming a very large station there; if that were done, it would afford great convenience for trams to be run in from various points? Undoubtedly it would.

2784. Supposing that a tram-line were laid in Sussex-street, or at any rate to the west of George-street, there being already one in George-street, and supposing that there were another in Pitt-street, another in Castlereagh-street, and another in Elizabeth-street, do you not think that that would be a very complete scheme to provide for the convenience of the public? It would be a complete scheme, but still you would not have brought the railway into the city. A railway will sooner or latter have to be brought into the city to go to North Shore and to the eastern suburbs, and why not bring it in now.

2785. I think you have been arguing chiefly on the ground of saving time? Yes; that, of course, is one of the chief things to which a business man looks.

2786. That saving of time would be confined to those whose places of business were within a certain distance of the railway station;—there would be no saving of time to anyone who had to go, say, a quarter of a mile, or anything over a quarter of a mile, from the railway station; for instance, if a person had to go to the corner of Bridge and George streets it would be no saving of time for him to be landed by the train at King-street, and have to walk to his place of business in preference to coming from Redfern by the electric tram, and being landed at his door by it? There would be no particular saving of time; but I think that he would save a little.

2787. The object, of course, is to give the greatest convenience to the greatest number? Quite so.

2788. It has been estimated here by one person that the King-street scheme would not convenience more than one-fifth of the business population, and another witness said one-tenth;—if it were even one-tenth do you think that we should be justified in going to the expense of carrying out that scheme for the purpose of conveniencing one-tenth of the business people of Sydney? I think that whoever made that calculation has made a very erroneous one. Take the traffic which the Railway Commissioners estimated the George-street electric tram would carry, and take the traffic they are now carrying, and you will see that the estimates were very wide of the mark, and so, in my opinion, would the estimate in regard to the railway be. The extension of the railway to the city would increase the traffic so much that I am sure that when people estimate one-tenth or one-fifth they do not know what they are talking about.

2789. Then I take it your view is that for an extension of the railway into the city it would be preferable to run the line that I have described on the west of George-street, having a central railway station under the Victoria Markets, and the line continuing thence to Wynyard-square and Dawes' Battery? I have no hesitation in saying that that would accommodate the greatest number of people.

2790. You think that that scheme would be preferable to the King-street scheme? Yes, I do from that point of view. Of course, in the matter of £ s. d., I am not prepared to say how it would "pan out," but for the accommodation of the travelling public that scheme would be the best.

2791. Supposing that the cost of the two schemes were the same, which do you prefer? Undoubtedly the western scheme, because I believe that it would accommodate the larger number of people. I have some idea of the enormous number of people that cross by the ferries into Erskine-street and to King-street from

J. C. Smith. from the Parramatta boats, and the Lane Cove and other boats, and surely it would accommodate them more if they could get to a railway station at Wynyard-square or at the Victoria Markets rather than having to go up to King-street. It stands to reason that that would accommodate an immense number of people whom the King-street station would not so well accommodate.

2792. *Mr. Leves.*] Of course you are daily in and out from Strathfield? Yes.

2793. You have read all the different schemes? Yes.

2794. You are favourable to the western scheme—that is, Mr. Norman Selve's scheme? Yes. That would accommodate the greater number of people. I do not think there can be any question about that. The matter of expense is simply the one to be considered. It is my confirmed opinion that the railway ought to be brought into the city not only for the convenience of the travelling public, but also because of the danger to which the travelling public are submitted daily owing to the congested traffic of Redfern. I think there is a danger there which some day will astonish us if we allow it to continue, and I think for that reason alone this matter ought to be dealt with once and for ever.

Jabez Brown, timber merchant, sworn, and examined:—

J. Brown. 2795. *Vice-Chairman.*] You reside at Church-street, Randwick? Yes.

2796. *Mr. McFarlane.*] Where is your place of business? I have had none for the last eighteen months.

2797. Previous to that period where was it? At Pyrmont.

2798. Are you in favour of railway extension into the city? No. I do not think it would pay.

2799. Have you considered a number of the schemes submitted for our consideration? Yes. First of all I wish to say that I do not consider that a railway into the city is needed. I was born here sixty-six years ago. I was here when the first sod of the railway was turned, and when the first train was run. When the first sod of the railway was turned there were not twenty houses between the present railway station at Redfern and Botany, nor were there fifty houses between Mr. Shepherd's place and the 4-mile stone on the Newtown road. It is only about forty or forty-one years since the railway was started, and the Redfern station must now be really in the heart of the city. It is of no use thinking that the population is going to increase to such an extent as to make the railway pay better if it be brought into the city, for as the population increases, the trade of the city must go south, and not north. But, if it is necessary to extend the railway into the city, it ought to come along the western side of George-street. Our streets are so monopolised by the tram and other traffic that it would be monstrous to put a railway in King-street and Elizabeth-street. It is only a matter of waiting twelve months longer, and you will find that the tramways in George-street cannot carry the traffic there. Even before the electric trams are run out to Dulwich Hill it will be found that the George-street line will not carry them. There will be 80 trams running to Dulwich Hill, and about 120 running to Glebe Point, Balmain, and other places in that direction. How will the George-street line carry all those. It can hardly carry the trams running along that street now, running one every minute; and if the other electric trams were taken along George-street, then the trams would have to be run one every quarter of a minute. If you begin to monopolise our streets for the railway, what are you going to do with the trams.

2800. It is not necessary for them all to run down George-street throughout its entire length? If the electric trams continue to run to the present station at Redfern, the tram traffic will have to be divided somewhere, for the line along George-street, from Circular Quay to Redfern, will never accommodate all the electric trams. Three hundred and fifty trams would have to be run along George-street each hour, and how could that be done? You must have the streets east of George-street to run the trams in, and therefore if the railway is to be brought into the city, it must go to the west of George-street. I have here a plan showing the route that I suggest for a railway to go on that side of George-street. This sketch shows how I would bring the railway into the city at a cost of less than nothing if the Government would only do what I desire. I would not ask them to do anything wrong, but only to put £500,000 into the public Treasury. I was born at the corner of Bathurst-street and Sussex-street, in 1834, therefore I know a little of what I am talking about.

2801. Where is your starting point? My scheme starts from the tunnel at Redfern station—on the northern side.

2802. How do you proceed from that point? I quadruple the existing line to Darling Harbour, as far as Hay-street, and tunnel from Hay-street to Harbour-street, and utilise the square formed by Clarence-street, York-street, Market-street, and Druitt-street, for a railway station. I then tunnel to Wynyard-square, and have a station there; and thence I continue the line underground to Dawes' Point, where, if necessary, I would have a station; but I do not think it would be necessary to have a station there.

2803. Have you made a calculation of the length of tunnel to Dawes' Point? You could either tunnel from Wynyard-square to Dawes' Point, or you could make an incline, and come out at the top of Dawes' Point, and by adopting one of those plans you could go on by either a low-level bridge, or a high-level bridge to North Shore, whichever you liked.

2804. Have you made any calculation as to the height which would be necessary to have the line at Dawes' Point, with a view of carrying it over to North Shore? No, I have not.

2805. Which is the scheme you favour? I have alternative proposal, which I most favour.

2806. Where do you make the deviation? At Hay-street; and thence I propose to carry the line to Druitt-street, on the west of the other proposed line, and to go by Druitt-street by open cut to the square previously described by me for the other scheme, and then to continue by the other route suggested to Dawes' Point.

2807. You stated that this would be a very inexpensive line? Yes.

2808. Will you show how it would be inexpensive? The portion from Redfern station to Hay-street would follow the existing Darling Harbour railway line, and would not entail any additional expense, except for widening the cutting. From Hay-street to the Darling Harbour shed, the line would go through private property, which is partly built upon, but with very poor buildings. It would not be expensive to resume that land and pay for the buildings. From the Darling Harbour shed as far as Druitt-street the line would pass through what is really Government land.

2809. Is that land occupied and built upon? Yes.

2810. Is it leased from the Crown? No.

2811. From whom is it leased? Nobody. But when the Government sold the land, they sold the land fronting Sussex-street or Kent-street, only down to high-water mark, and when I was a boy high-water mark was in Sussex-street. For instance, Mr. Wentworth bought a large piece of land in Kent-street down to high-water mark, and when I was a boy they made Sussex-street. J. Brown.
21 Mar., 1900.
2812. You mean to say that that is reclaimed land? I mean to say that all the land from Liverpool-street to Erskine-street belongs to the New South Wales Government.
2813. That is, between Sussex-street and Darling Harbour? Yes. There might, perhaps, be odd cases here and there that do not belong to the Government; but I have been over the land with Mr. Perdriau, the Government Surveyor, and I know that different people have claimed the land lying between Bridge-street to Bathurst-street to high-water mark.
2814. With what result? They are holding it, and getting about £20,000 a year out of it.
2815. Is there any of what you call Government land further than Druitt-street? Yes; right along to Erskine-street.
2816. In making your calculation, you are estimating that the land between Darling Harbour shed and Erskine-street is Crown land? Yes.
2817. In the event of its not being proved to be Crown land, that would make a material difference in your calculation? Yes; it would make a difference of £150,000 if I am not right in regard to that.
2818. Continuing from Druitt-street to Market-street, you cross Sussex-street a little above Market-street? Yes.
2819. How do you propose to cross Sussex-street? There would be a bridge level with Sussex-street, and a cutting for the railway.
2820. After crossing Sussex-street, would you go in tunnel; Yes; right up on to Wynyard-square.
2821. Have you made any calculation as to how much that would cost? About £90,000, I think.
2822. Have you made a calculation sufficiently accurate to be able to state that positively? No, it is merely a guess; but I go by what I have read. I heard what Mr. Alderson said his tunnel would cost, and this tunnel will not be a bit larger or longer than his.
2823. Proceeding from Wynyard-square to Dawes' Point, do you mean to tunnel the whole distance? No; I would have an open cut after I got past Church Hill, and come out on the top.
2824. You said at first that you would tunnel down there? You could do that if you liked, and have a low-level bridge across the harbour.
2825. Supposing you were going to tunnel, what route would you take? Go along York-street.
2826. You would close that part of York-street altogether? Yes, from Margaret-street. I would have a station at Wynyard-square, and go out from the station at a high level at Church Hill.
2827. But what track would you follow to Dawes' Point from Church Hill? Follow the street all the way.
2828. You would have to have a central station somewhere? Yes, in Wynyard-square.
2829. What would you take for that? The park.
2830. You mean to take the park for a station, and the street for the railway line route? Yes.
2831. Have you anything to add in regard to your scheme? No; only that I am certain that whatever scheme may be adopted it must go along the west side of the city.
2832. But you have said that you do not consider that a city railway is at all necessary? I do not think it is. If you were to have a station near the mortuary and another at Victoria Markets there would be no necessity to run the railway trams at all.
2833. The Railway Commissioners say that the trams will not carry the railway passenger traffic, and, therefore, there is a necessity for railway extension into the city? In that case the railway must go along the western side of the city. I am sure that my scheme is the cheapest and easiest scheme that has been promulgated up to the present time.
2834. Have you given consideration to the number of passengers likely to travel by train, supposing that the railway were extended into the city? Yes; two-thirds of the people who travel now would travel by that route.
2835. You say that you would quadruple the present line to Darling Harbour? Yes.
2836. Do you think that that would be sufficient to carry all the passengers who would travel by that line? Yes.
2837. The Commissioners have said that they consider six lines necessary to come into the city? By my scheme I would not bring the country trains into the city, but would take them to the present station at Redfern.
2838. Your line is for the convenience only of the suburban residents? Yes. The extra money that would be obtained from ordinary travellers by the northern, western, and southern lines for conveying them over the extension into the city would not pay for the extra grease that would have to be used for their accommodation.
2839. You propose to leave them at Redfern, as at present? Yes.
2840. *Mr. Leven.*] What is the length of the tunnel from start to finish in your scheme? I suppose the longest tunnel would be 300 yards.
2841. All this tunnelling and everything else would only be for suburban traffic? Yes.
2842. You do not propose to utilise the line for any other purpose than that of suburban traffic? No, I do not.
2843. Therefore, the whole of the country traffic—north, south, and west—would still go into Redfern station? Yes.
2844. What object, then, would you have in extending the line to North Shore? I said that that was how it could be extended.
2845. You said that it must ultimately be connected with North Shore? Yes. And when we got that we could carry the north-country people by it.
2846. Do you not think it would be necessary to do that? Yes, I think so.
2847. What would become of your scheme then? It would be just the same. The same plant would carry the trains. There are only five platforms at Redfern, and I think only four lines of rails coming through the tunnel.
2848. According to your proposal, it would mean that the line would have to go to North Shore? I have not brought this sketch here to show what is to be done, but to show that what I propose is the nearest, easiest, and cheapest line into the city.
- 2849.

- J. Brown.
21 Mar., 1900.
2849. Yours is only a suburban line? You could make it only a suburban line if you like. If I were in a train at the Redfern tunnel station, and you were in a train at the Devonshire-street station, and were going to get into a tram, I would be in George-street at the markets by my train sooner than you would be by the tram.
2850. The whole of your scheme is a suburban scheme, is it not? No; it is a scheme for a railway into the city—you can use it for what you like.
2851. Does that include the main trunk line to the north? Yes.
2852. You recommend that as part of the scheme? Yes.
2853. What about levels? I daresay that you gentlemen have seen the way that the railway has been continued from Spencer-street station to Flinders-street station in Melbourne by a series of viaducts or bridges, and until we got to the streets where we would have to go over, we would have plenty of room to make a cutting, and could have one bridge to enable the drays to go over the railway. There is plenty of height to enable trains to be taken up to Wynyard-square.
2854. So in a main thoroughfare right in the middle of the city you would have a cutting and a bridge? Yes.
2855. *Vice-Chairman.*] The fact that you think that certain lands from Liverpool-street down to Market-street still belong to the Government determined you to take your line the way you have proposed? No, not exactly that; but my knowledge of the fact that the expensive tram system that the Commissioners are carrying out will not permit of a railway going the other way at all, because they will want all the room they can get from George-street to Elizabeth-street.
2856. The low cost of your scheme as set out by you is due to the fact that you think that certain lands now held privately are really the property of the Government? Yes.
2857. And could be used as a set-off against the cost of the railway? Yes.
2858. Presuming that the Government could not establish their right to those lands, have you any idea what the cost of your scheme would be then? It would be £150,000 more. But even if the Government had to buy the whole of the land necessary to take the railway from Liverpool-street to Margaret-street, it would not make more than £150,000 difference; but I am as sure as I stand here that they would not have to buy a foot of it.

THURSDAY, 22 MARCH, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LANDESAY CRAWFORD SHEPHERD.	JOHN CHRISTIAN WATSON, Esq.
The Hon. ANDREW GARRAN, LL.D.	ROBERT HENRY LEVIEN, Esq.
WILLIAM THOMAS DICK, Esq.	JOHN MCFARLANE, Esq.

The Committee further considered the expediency of extending the Railway System of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station.

John Spencer Brunton, merchant, and ex-President of the Sydney Chamber of Commerce, sworn, and examined:—

- J. S. Brunton.
22 Mar., 1900.
2859. *Chairman.*] Where is your place of business? My city office is 189, Clarence-street.
2860. You have also a place of business in Melbourne, have you not? Yes, we have.
2861. You are acquainted with the present proposal to connect the railway at Redfern with some part of the city proper? Yes.
2862. I understand that you wish to make a statement giving your views chiefly as to the direction which any connection of that kind should take—whether it should be more in the direction of the western portion of the city, or whether it should be near the junction of King-street and Elizabeth-street;—and also giving your own observation of the trend of passenger traffic to any particular part of the city,—is that so? Yes.
2863. At present you are residing in one of the western suburbs? Yes, at Strathfield.
2864. And have been doing so for some time? Ten years at Strathfield and two years at Ashfield.
2865. And, consequently, you are pretty well a daily traveller by the suburban trains? Yes. I understand it is acknowledged that the railway ought to be extended into the city, in view of the largely increased suburban traffic which, inwards and outwards, I am given to understand, amounts to nearly 50,000 passengers daily. I recognise that, situated as Sydney is on a peninsular, so to speak, and the eastern suburbs being crowded, people must, as time goes on, seek for fresh air and more room out on the cheaper lands of the western suburbs, or on the North Shore line, or on the line in the direction of Rockdale. The first thing to consider is the daily risk that passengers now run at Redfern, the railway traffic having to come through what I may call the neck of a bottle, it is admitted is very dangerous. Experts of the Railway Department have shown us that the present state of things cannot be allowed to continue, and in my opinion the time for making the necessary improvement is now opportune, and what is required to be done should not be delayed. If I may, I will read an extract from an address which, as President of the Chamber of Commerce, I delivered at the close of my year of office, and which is embodied in the report of the Chamber of Commerce for the year 1898–9, at page 34. This address was given by me before the Members of the Chamber of Commerce last August, and I have not altered my views on this subject since then. I then said:—

The necessity of bringing the railway into the city is now admitted on all sides. Notwithstanding the sentiment that has been displayed over the surrender of a few acres of Hyde Park, it appears to me that the original scheme of the Railway Commissioners (backed up by the Public Works Committee), which takes the railway to St. James' Road, is the most practical and economical one. As for the people dreading the encroachment on the parks land, it must be considered that Sydney has a larger area of park and recreation grounds in the city itself than in any other city in the world, taking park acreage to population into account. Also a railway going alongside Hyde Park need not destroy it for purposes of recreation, as is proved by the Princes-street Parks, Edinburgh, the railway through which is neither objectionable, nor an eyesore. With the provision already made for the shipment of raw products, such as grain, shale, and coal at Pyrmont, there is not the necessity for Darling Harbour railway along Sussex-street as formerly, as there is ample railway berthing accommodation for vessels at Pyrmont wharf and Darling Island, whereas with imports the goods have to be landed and stored

stored before they can be finally distributed in the city and suburbs or despatched inland ; but what is required is increased accommodation for Sussex-street for the cartage of freight to the intercolonial and coastal steamers. The blocks in traffic affect the despatch of goods from the port, and maintain high rates of cartage. Something will have to be done sooner or later by the City Council in widening the western or lower side of Sussex-street from Kent-street, so as to deal with this increasing trouble.

J. S.
Brunton.

22 Mar., 1900.

I am not going into the technical part of the scheme, nor the cost, because the several schemes that I approve of seem to cost within a few thousand pounds of one another. The only alteration that I would make is an idea that was thrown out by the Premier, the Honorable Mr. Lyne, to a deputation of the residents of the western suburbs, when he spoke about making a grand central depôt on the Devonshire-street site. A suburban railway into the city appears to me to be what is required, having in view a future extension to North Shore, and also one to the eastern suburbs, and also the fact that probably it will eventually become a circular railway. I consider that at this stage the question of goods traffic should not be taken into consideration at all.

2366. *Mr. Watson.*] Do I understand you to mean that, on further consideration, you now favour the Devonshire-street scheme as against the St. James' Road scheme, or in addition to it? In addition to it. I consider that the grand central station should be at Devonshire-street; but I would not accept that as the terminus, inasmuch as that would only bring suburban railway passengers 150 yards nearer, say, to the General Post Office. The Devonshire-street scheme would get over a great difficulty, I consider, in the way of the country and the holiday traffic, for it would relieve the suburban centre at King-street. Arrangements could be made by the Department for the despatch of certain country trains at two places, and thus avoid the rush and struggle which now takes place in getting to any particular platform. This railway, I consider, would be more beneficial to the suburban people within a radius of about 40 miles of Sydney than to the country people. The traveller to the country takes his luggage in a cab, and pays 1s. for conveyance to the railway, and he would have to pay the same amount for a cab even if he were to go to the St. James' Road station, and it would be better for him to go to the Devonshire-street station, where he could get quick despatch. Some people think that the grand central station should be made at St. James' Road, but my idea is that that should be on the Devonshire-street site, and that the St. James' Road station should be for the suburban traffic. I propose to separate the traffics. I maintain that there is a false sentiment about surrendering the Hyde Park land, considering that only half, or, perhaps, not half, the width up to the dividing track would be required for a station at that portion of Hyde Park. The area of the park land which would be surrendered would be nothing, considering Sydney's splendid position—its high land—surrounded, as it is, by the sea breezes from the harbour, and its perfect drainage. If you look at the map of Sydney you will see that from Darling Harbour across to Woolloomooloo Bay fully one-half of the area is taken up by park lands, and it is evident that the pioneers of the Colony were too liberal in granting that valuable space for that purpose, considering that the city of Sydney is somewhat analogous to New York, its business being all concentrated on a certain spot, just in the same way as the business centres of New York are on Manhattan Island, which is being bought up almost daily by the Astors, the Vanderbilts, and other rich men, because they know that there is really only one New York so far as business is concerned, and that is on Manhattan Island. The business portion of Sydney is analogous to that of New York, as it all seems to be concentrated on a certain point, jammed in by Circular Quay, Darling Harbour, and Woolloomooloo Bay, and I say that the dividing line of this peninsular is along Elizabeth-street, and that three-quarters of the travelling public coming to Sydney want to get into Pitt and George streets. That would not entail more than a four or five minutes walk from St. James' station. The remainder of the traffic goes to the west of George-street, but they can get only as far as Sussex-street. You must not consider that for the western side scheme you would get travellers from Ultimo or Pyrmont. The people who live there are not travellers. The reason why they live there is because they are poor, and they cannot afford to go further afield now; but I maintain that as time goes on people, with rapid transit and cheap fares, will get away from the business centres the same as the population in Castlereagh and George streets is getting less every year. I believe that residence in Castlereagh-street and other streets will in time become a thing of the past. You have to take into account the fact that new traffic has sprung up in the western suburbs. I refer to the theatre, night traffic which does not go any further west than the Town Hall or York-street. You have also to bear in mind that Saturday, Sunday, and holiday traffic would be to a considerable extent made up by people from the large and overcrowded districts of Woolloomooloo, Paddington, and Darlinghurst. That is a feature that seems to have been overlooked. People in those suburbs would go into the country in order to get fresh air. They are forced to reside near the city on account of their occupations. I consider that with the blessings of the Early Closing Act many shopkeepers who now live over their shops, and other people of that class, will be able to live to a very large extent away from the city, and with proper railway communication much more easily than they could have done hitherto, and without any personal loss. I would accept what I call the central station at Devonshire-street, only contingent on the extension of railway passenger traffic into the city, holding in view an extension to North Shore either by a tunnel or overhead bridge from Macquarie Fort, or by an overhead bridge from Dawes Point, and also holding in view a possible extension to the eastern suburbs. The question of a railway along the frontages of Circular Quay and Woolloomooloo Bay can be dealt with later on. A railway for imports is not so necessitous as some people think, inasmuch as the majority of goods are taken to the distributing stores direct from the ship's side, and for the export of raw products ample provision is made for direct communication to the ship's side at Darling Harbour and Darling Island. As to the question of a railway for goods along Darling Harbour, it must not be overlooked that the question of water frontages for private wharfs must be dealt with sooner or later by a harbour trust, and that scheme would take in railway communication along Sussex-street and Darling Harbour. I would refer to the overhead bridges that run through the main streets of New York. People going along the streets soon get used to the bridge and archways, which are also made the means of profit. I would also refer to the railway viaduct in Melbourne between Flinders-street and Spencer-street stations where the arches are made into useful stores for people who carry on business in that part of the city. I believe that the railway authorities obtain a considerable amount of revenue in that way. When I was in Chicago, and San Francisco also, I noticed that the passenger trains passed through the main streets. Those trains go at the rate of about 7 or 8 miles an hour, tolling a big bell. I think that a railway to St. James' Road would be very profitable to the Railway Department, and consequently to the public, for, of course, whatever capital is invested in a railway, it is the travellers who really have to pay for it. The increased

J. S.
Branton.
22 Mar., 1900.

cost to the passengers in the way of fare would not be very heavy, and as time went on, no doubt, it would be less. I notice that one scheme includes the resumption of all the available business frontages from Park-street up to King-street; but, in my opinion, that is unnecessary, and would be expensive, and would also be a great sacrifice of city property, the area of which we all admit is now very limited. In my opinion the country passenger traffic should be dealt with at the Devonshire-street station. The country passengers, that would alight from a train there, would not have to pay any more for a cab to convey their luggage from that station than they would have to pay for a cab from either Redfern or St. James' Road. It is the passengers of the city and suburbs, who represent 450,000 people, daily increasing in the western suburbs on account of the overcrowded state of the eastern suburbs, who must be considered. I consider railway extension into the city would result in advancing suburban property fully 10 per cent. in value. People would then be able with cheap fares and quick transit to have their own little homes and gardens away from the humid atmosphere and sea air of Sydney, which to a very great extent are not suitable to those who are delicate, or who suffer from asthma or lung complaints. I am not speaking as an expert, but am only speaking of the greatest convenience to the travelling public from my point of view.

2867. *Chairman.*] I understand that, as a commercial man, you take first the commercial aspect of the question—that it is desirable to get the best investment for the State in constructing a railway of this kind? I take that hand in hand with the convenience to the public. Even if the cost were more the public would be satisfied with the convenience of a central station, considering that in years to come the extra cost would gradually evaporate. I consider that this scheme is doubly commendable on account of its splendid position, and its small cost.

2868. You think that the St. James' Road scheme, which has already been inquired into and reported upon to Parliament, combines both economy and convenience? Undoubtedly.

2869. As regards the question of economy, there is no doubt that it is the cheapest scheme we have before us;—now with regard to convenience, we should like you to tell us whether, in your opinion, the results of the construction of the present electric tramway into the city have not shown us in a practical way that the greater number of people prefer to go more in the western portion of the city than in the direction of Hyde Park? No, I think not. The charm about the electric tram is that you have not to wait for a time-table. A tram starts every minute or two. People who go down by the tram move off towards Castlereagh-street, the same as I move off to Clarence-street. The traffic on the electric tramway has exceeded all anticipations, but it is not dependent merely on the traffic to the railway-station. It is to a great extent made up of what I may call pick-up traffic—people going from one part of the city to another. I do not think that since that tramway was opened, I have walked once even from King-street to Bridge-street.

2870. The pick-up traffic has developed enormously? Yes.

2871. But looking at it solely in respect to a connection with the railway system, do you think it is a satisfactory substitute for a railway into the city? No, because of the break of journey and the time you lose. People who go for a train at Redfern have always to be three or four minutes before the time, and they therefore lose that amount of time. Besides that there is the changing of carriages which is inconvenient, especially to ladies and children. Undoubtedly a through continuous service is best, even if you were to come at a slower pace from Redfern into the city.

2872. In your experience the changing of carriages has always been regarded as inconvenient? Yes; it is very tiring to delicate people.

2873. I suppose that you also have to put up with great crowding in the trams? Yes; there is no doubt about that.

2874. Especially in going out of town in the evening, during the busy times of the day, the crowding is very great, is it not? Very great. I live at Strathfield, in a place which cost me nearly £7,000. I am negotiating with two or three persons for a tenant; but I decline to put a sale price on the property, because I believe that in three or four year's time I will get more for it. I would let it now to a good tenant for very little interest on my money. If the sea-air does not agree with me where I am going to live, I shall go back to my own home. I think that the value of property in the western suburbs must advance.

2875. You resided in Melbourne for a good many years? Yes; until I was 25 years of age, and I have been here thirteen years.

2876. Is it not a fact that in Melbourne they have railways to their suburbs, and in many instances also tramways running to the same suburbs? They have.

2877. And is not the experience there that during the busy times of the day, morning and evening, notwithstanding the trams, the trains are filled with suburban passengers who prefer to go by a train to a station, and walk a little way to their homes so as to get there quickly, and avoid the delays of tram travelling? That is the case. There is ample traffic for both. The population of Melbourne is larger per square mile than the population of Sydney. Melbourne is very central. Everything seems to concentrate at the Town Hall; but here if you take a circle from Sydney about 15 miles, there is nothing out on the North Shore line at all. Some thirteen years ago we selected a site at Granville for carrying on our milling business. We spent £40,000 there, as we believed that the population must go up the western suburbs, and the population is working out that way every day. The question of local trade was not considered by us at all. A question was the junction of the two lines near Parramatta, shunting, and other accommodation, water and coal; but the main thing was that the population of the western suburbs must increase.

2878. Many people use the very argument that you have advanced, but to a modified extent, regarding the railway extension into the city—they say that the Redfern railway station will be the centre of the city directly, and why bring the people further in to the extreme limits of the city? But now that we have an opportunity of doing it, it is better to bring the railway right through to St. James' Road, because the North Shore scheme must be taken into account sooner or later. The same argument might apply to such stations at the Midland, Paddington, or St. Pancras, in London. Those are all centres for their own particular radius; but there is an underground railway which connects one with the other.

2879. You think that the railway should be brought right into the city; but that the place where the main central station, with all the large offices, should be, is the Devonshire-street site? Yes, I think so. At present great inconvenience is caused by the heads of departments having either to go from this part of the city to the Redfern railway station, or to bring men away from their work there if they want to give them instructions.

2880. I take it that you are still an advocate of what is called the St. James' Road scheme; but that you are not an advocate of the large central station with all the necessary offices being erected there? That is so. J. S. Brunton.
22 Mar., 1900.

2881. You would erect those at Devonshire-street, and you would largely do away with the objection to the St. James' Road scheme by narrowing the portion of Hyde Park that would be required to bring people to that station? Yes. I think that the matter is fairly compromised with the sentimentalists about Hyde Park in that way. I can understand some of them fighting as they have done, because if the grand central railway station were there, it might lead to further encroachments on the Park in years to come; whereas if the grand central station were at Devonshire-street there would be no necessity to widen the track in Hyde Park, and yet this line might become part of a circular railway. There might be three or four lines at the outside. I would have the grand central station at Devonshire-street used as a shunting station, one train coming in and another going out in the same way as the different platforms at Redfern now deal with their own traffic. You never see a train from Parramatta, for instance, at the Hurstville platform. I think that four lines of railway only would be required.

2882. You would not bring the up-country trains right into Sydney? No; I would leave them at the Devonshire-street station. It must be remembered that with the Eveleigh tunnel there is always some risk; but there would not be so much risk of collision or other danger if the base were further away from the neck than it is now. Trains puffing out with full steam on are not so controllable as they would be coming from further back.

2883. I suppose that, in suggesting this modified St. James' Road scheme, you have not thought out the number of parallel lines of railway that would be required? No; I have not. But, roughly speaking, I think that you would not want more than four sets of lines.

2884. *Dr. Garran.*] In Melbourne the railways come up to the edge of the town, do they not, in Flinders and in Spencer streets? Yes.

2885. And the street traffic is dealt with by the tramways? Yes.

2886. Has there ever been any demand in Melbourne for taking the main railways right into the city? No. They are as near the centre as they can pretty well get. There is the river Yarra on one side, and south of that there is South Melbourne and factory sites. Then, on the Spencer-street side, there is the West Melbourne swamp that is being filled up with silt from the river Yarra, and converted into docks.

2887. I asked you that question for this reason: Supposing we were, as you suggest, to make the main station on the Devonshire-street site—right up to Belmore-road—would a variety of tramways into Sydney, with that central station, practically answer all our present purposes? Well, we have stood the inconvenience for a long time, and I daresay we could continue it, but as a route is now proposed to Hyde Park, and the public are ready for it, and as the Railway Commissioners say that the danger is getting worse daily, I think that to relieve that alone is sufficient inducement to run the railway into Sydney.

2888. But the danger would be removed by the new station between Devonshire-street and the Belmore-road? We must connect the railway with North Sydney sooner or later, and the eastern suburbs are also entitled to a railway.

2889. I asked that question because some witnesses have said it would be sufficient, and I wanted to know what your opinion was? Now-a-days everything is done with such convenience and despatch that the question of time is considered, and some people are getting lazier every day, and they never think of walking as they used to do.

2890. We had only one tram into Sydney until a few months ago? Yes.

2891. That was obviously insufficient? Yes.

2892. We have now the George-street tramway, and that is already overcrowded? Yes.

2893. Supposing we had a tramway along Pitt-street for railway traffic purposes, and another along Kent-street or Sussex-street to meet the requirements of the wharf traffic, do you think that the four tramways would then meet present requirements? No; I do not think they would. I think that owing to the fact of George-street being a main artery, you there get the people who go into Pitt-street and Castlereagh-street the same as those who go to Kent-street and Clarence-street.

2894. As a passenger on the western line, you would rather give your extra penny to be brought by railway into Sydney than take either of the four trams which might put you down wherever you might wish to go? I think I would in wet weather, in order to save changing at Redfern. It is a struggle and bustle there morning and evening.

2895. You know very well that people like to be put down as near to their places of business as possible? Some do.

2896. And the ladies who come in in the afternoon to go shopping like to be put down pretty near to where they wish to go? Yes.

2897. The Elizabeth-street tramway has not thoroughly met that want, has it? Well, with the cross cable-line now it does; but even to walk from Elizabeth-street to George-street is not a great walk. A person cannot object to walking two blocks, and that is all that is.

2898. You spoke very strongly of the central character of the site at St. James' Road;—but supposing that that had not been practically open, but built upon, and had to be resumed at its value, do you think that it would have occurred to anybody that that was the finest central site in Sydney? I do. If it were even built over I would prefer to purchase it in preference to the other site down as far as the *Daily Telegraph* office.

2899. You do not think that the fact of this being park land, and therefore seizable, has had anything to do with its selection? No, I do not.

2900. Are you aware that in the present estimate of £650,000, £100,000 is included as the purchase price of the Hyde Park property? No; I did not know that.

2901. It is;—but we have had it in evidence that the real value of that piece of land is not less than £200,000; do you not think that if the Government take the people's park they ought to pay a fair price for it—to give half the value is to do neither one thing nor the other? I think that half would be a fair thing. That land may be worth £200,000, if you take the values of other lands in the city; but the Railway Commissioners have to work out the cost on a commercial basis. They say at 1d. they can earn £38,000 a year for the extra cost on the capital expenditure.

2902. But you would not say that we cannot afford to give the full value for the land we take, because if we did so 1d. would not pay us? I would not let £100,000 stand in the way. Whether the expenditure is to be £650,000 or £750,000 is not worth considering. 2903.

- J. S. Brunton. 2903. Supposing you agree to the extra £100,000, do you think that the western suburban people will agree to 1½d. being added to the fare? Yes, I do.
- 22 Mar., 1900. 2904. Paying for that land, and then using the money to provide open spaces in other parts of the city, would not diminish the public access to open ground? No.
2905. It would be taking it from one place and putting it in another? Yes.
2906. Supposing that were done, we might have to charge a little more to make this scheme pay? Yes, you would. But I consider that probably in ten years' time, owing to the increased traffic, you will be able to lower the fares, the same as is done by the railway authorities in regard to the carriage of goods when there is increased traffic.
2907. At any rate, you agree to the principle that, if for the sake of the suburban passengers, for whom this line is to be made, we have to go to the expense of nearly £800,000, it is fair that the suburban passengers should pay a shade extra to meet the cost of that? I do.
2908. You think the Railway Commissioners would be justified in making this a paying investment? I do.
2909. To give them at least 3½ per cent.? Yes; I think they could do that easily by adding 1d. It would be only 1s. 6d. a month for a first-class ticket, or 1s. a month for a second-class ticket.
2910. The well-to-do people might not object to 1½d., but do you think that the poorer class of people who come in by train would object to their proportionate increase? No, I think not. I think that those people who live in the western suburbs would continue to live there, and that more people would go to those suburbs. They not long ago paid 4d. by tram from Redfern to the city and back.
2911. But you must remember that the Railway Commissioners have a competitor of their own in the shape of the electric tram down George-street, for which they charge only 1d.; do you think that a workman would pay more than 1d. to go on by the railway if he could get out at Redfern and come into town by tram for 1d.? You should give them the option. The train would stop, and those who so wished, could get out at the Devonshire-street station, and the others could go on to the station at St. James' Road.
2912. You think that nothing less than a railway into the city will meet the traffic demands? That is my opinion.
2913. You say that you are very strongly in favour of an ultimate North Shore connection, and also an eastern suburban connection? Yes.
2914. Do you think that the site at Hyde Park lends itself as well either to a North Shore connection or to an eastern suburban connection as one at Wynyard-square would do? I do. I think that an extension could be made to North Shore from the railway at Hyde Park either by a bridge from Miller's Point, or by a tunnel from Fort Macquarie; also, that a future extension to the eastern suburbs could be made better from Hyde Park than from Wynyard-square.
2915. Mr. Deane's scheme for a railway to North Shore is not by going straight on from Hyde Park, but by going back and making a detour the whole length of the line from Hyde Park to Dawes Point, and that scheme is as long, if not longer, than the distance from Redfern to Hyde Park? I did not know that. But it is not the North Shore people that you have to consider altogether in this matter, but rather the people who live in the western suburbs.
2916. Do you think that there is no importance in the ferry traffic that comes into Sydney, and that those people should not be considered? No. But the railway to St. James' Road would give those people an opportunity of getting out of Sydney. A lot of those people go to the western suburbs to see their friends, but I admit that the traffic from the ferries is provided for sufficiently by the electric tramway from Circular Quay.
2917. That makes the North Shore people go down by tram to the water, shift into a boat, and shift again into the electric tram, and at last get into a train, and yet you are objecting to a single transfer at Redfern? At the present time the North Shore people want to get into the city principally; they do not want to go on to the Redfern-Burwood line. Their main contention is "We want the North Shore railway continued into the city, and then we will be contented." People who live at North Shore live there, to a great extent, on account of being near to the harbour, and fares being cheap, and they have the electric tram at Circular Quay, which takes them into the heart of the city.
2918. Do you think that they would want to be brought to Hyde Park? All that they ask for is to be connected with the city.
2919. Do they not really want what the electric tram is doing for them now—to be taken right up George-street? They want to get a high-level bridge connection if possible.
2920. Would it be possible to exact from them an additional fare that would pay for the cost of that bridge and that high-level railway? I do not think that the population over there is sufficient for that.
2921. They have a cheap ferry and cheap trams;—do you think that an expensive Government railway going across the harbour would carry enough people who would pay a fare sufficient to pay the interest on the cost of that expensive work? I know that experts have given their views. They have taken into account the big increase of traffic which they say would take place there in time to come; but I am sure that it would not pay for many years. All the passenger traffic of the North Shore would not be provided for by railway across a bridge over the harbour. People living at Blue's Point are entirely out of touch, for instance, with people living at Milson's Point, or at Lavender Bay, or Mosman's Bay, and ferry boats would still have to be run to those places.
2922. Some witnesses have given it as their opinion that there is plenty of traffic, and that it is growing very rapidly? I know that I may offend many of my North Shore friends by what I have said; but I cannot help that.
2923. *Mr. Watson.*] Admitting that the suburban lines around Melbourne are a convenience to the people whom they serve, what has been the financial result? The Victorian railways as a whole pay only a little over 2 per cent.
2924. I was anxious, if possible, to ascertain how those particular lines stood in that respect;—I am speaking of both the inner and outer circle lines, and I was wondering whether you had any information as to how they pay? I should imagine that the Kew, Hawthorne, and Richmond lines would be very profitable as sections, but they are all merged into one common account.
2925. *Mr. McFarlane.*] You are a strong advocate of what is known as the St. James' Road scheme? Well, I think it is the best.
2926. You are aware that the construction of that line would take up a considerable portion of the Park—some 13 acres, I believe—as proposed by the Railway Commissioners? Yes.
- 2927.

J. S. Brunton.
22 Mar., 1900.

2927. Have you considered any of the other schemes for the extension of the railway into the city? Yes; I have a fair idea of Mr. Norman Selfe's scheme, and I have seen the other sketches whilst I have been waiting here.
2928. Well, failing the adoption of the St. James' Road scheme, what would you suggest? The adoption of the one going to the back of the *Daily Telegraph* office.
2929. You made a remark about making a compromise with those who are opposed to any of Hyde Park being taken by taking a smaller area? Yes; I think that would satisfy them, because if the grand central station were made there, there might be a probability of the Park being further encroached upon.
2930. The Government had an idea of making such a compromise by No. 10 scheme? Yes; but still you would run into the block facing Castlereagh-street.
2931. That takes a smaller area of the Park than the St. James' Road scheme would? Yes.
2932. How would you regard that scheme? It is not a bad scheme, but I like the Hyde Park scheme, because it is more economical and gives more room. You are not jammed up against a narrow street like King-street. You have to consider all that, because of the traffic in and out of the railway station. Near the St. James' Road station you would have the Queen's Square, and all the space up to St. Mary's Cathedral, affording a splendid open air space and plenty of room. However, I do not like that as a terminal station for all traffic. I would rather have the grand central station at Devonshire-street, and the suburban station at St. James' Road, and leave Elizabeth-street intact.
2933. But, under that scheme, they propose to take 7 or 8 acres of the Domain for shunting purposes, there not being sufficient room at the St. James' Road station? I would rather keep all the shunting at Devonshire-street.
2934. But would not the passenger trains have to go to King-street, and some considerable space would be necessary to allow them to shunt? Not necessarily. They could run on to a dead end, the same as for the last thirty years has been done at the St. Kilda platform. There is a traverser which moves the train, or a spare engine which draws away the train from the platform.
2935. Have you considered, in the event of another scheme being adopted, the revenue likely to be derived from it;—have you considered the cost of the resumption of property near the *Daily Telegraph* office, in the event of a station being built there? It would be something considerable; but failing to get this scheme, I would advocate a station on that site.
2936. Do you think that that line would be a paying speculation? I do. I have great hopes of the future population of the western suburbs, and also of the country people and holiday excursion people.
2937. You were asked, I think, by the Chairman how the electric tram would affect a railway into the city? The George-street tram in my opinion would lose a considerable amount of the railway traffic, but the pick-up traffic would always make that a paying line.
2938. I am speaking more particularly with regard to passenger traffic from the western suburbs; in view of the electric tram running along George-street, do you not think that a large number of the western suburban passengers would travel by the tram in preference to going by the train to King-street? I do not think so, except those going to the immediate vicinity of the Haymarket, to places within walking distance, who might get out at Redfern. I think that those who were not going to within half a mile of Redfern would go right on to the terminus.
2939. Would anyone having a place of business in Park, Bathurst, or Liverpool streets go to King-street and walk that distance back? No; they probably would go by the electric tram, or walk the whole way from the Redfern station as some do at present in the winter time.
2940. Do you not think that the majority of those people going to the west of George-street would travel by the electric tram, seeing that it would be more convenient than to walk from King-street? As regards those going out of the city at night, I daresay the traffic would be pretty well divided. I would rather walk from Clarence-street to King-street and catch the train there. I used to walk to King-street and go by the steam tram, because the George-street 'buses in the evening were so crowded and dangerous.
2941. As regards passengers going to North Shore or Manly from the railway station, would they not be likely to get out at Redfern and take the electric tram which will convey them to the Quay rather than to walk from King-street to Circular Quay? No; I think the majority of the holiday seekers would walk from King-street to Quay.
2942. *Mr. Shepherd.*] The great argument in favour of the extension of the railway into the city is the saving of time chiefly to suburban passengers; the question is which is the best site for the largest number of persons who would use the railway—the King-street site or the George-street site, for instance, the George-street Market;—which site do you think would serve the largest number? The two sites are not very far from one another, and either would be good; but I would give the preference to the St. James' Road on account of the accessibility and room; and the expense, of course, would be considerably less.
2943. What boundaries would you consider the St. James' Road station would serve conveniently, looking at the matter as a saving of time? People coming from places with three-quarters of a mile of St. James' Road, would, I think, walk up as far as that station. I suppose that the distance from Sussex-street to the Supreme Court is about half a mile, and people would walk up from their offices. But you have to consider, also, all the people in Woolloomooloo, Paddington, and the eastern suburbs, and they are considerable. I think that, with cheap fares, they would just as soon go into the country as down the harbour for a change.
2944. Looking at the map you will see an enormous blank space to the right of the proposed station;—do you think that is the most central position in Sydney, so far as the day population of Sydney is concerned? I think so. You must not consider that, because there is the Park, there is no population on the other side of it.
2945. The people living at Woolloomooloo or Paddington would hardly require to use that line at all, because they would be brought in by tram? I was speaking of those who would go for a holiday trip, and also those who have business there, but who can afford to live in the western suburbs.
2946. The great object of the extension of the railway into the city is to serve the business population of Sydney—people who come into business every day—and the question is, which is the best site to serve the largest proportion of the day population of Sydney—those people who come in every day to their business? Three-quarters of them would be on the north-west side of that site. But still it would not be any great hardship for a person to walk even three-quarters of a mile to the railway. However, this railway would bring a certain amount of new traffic, and you must take that into account when you consider

- J. S. Brunton*, consider the commercial aspect of the scheme. The railway authorities have to consider the holiday traffic on the Prince of Wales' Birthday, for instance, and other holidays when the traffic is enormous.
- 22 Mar., 1900. 2947. I do not think that the holiday traffic weighs much with the Government in proposing their scheme, but the chief thing is to accommodate the business people who come into town every day;—can you really say that you consider the St. James' Road more central for the business population of Sydney than, for instance, the George-street Markets? No; I do not suppose it is more central; but there is so little difference in length between the two places that I would still give the preference to the Hyde Park scheme. Some people would argue that Wynyard-square would be an excellent spot for a station. On that side of the city there are warehouses, but they do not carry a population anything like that of George-street and Pitt-street, where there are clerks and others employed, who live on the western line.
2948. Your business place is situated in Clarence-street? Yes.
2949. Which would be the most convenient place for you to be set down at—the George-street Markets or King-street? The George-street Markets would be more convenient for me.
2950. Do you not think that it would be more convenient for all these west of Pitt-street than for them to be set down at King-street? Well, although you may lose in one way you gain in another. At King-street you are nearer to the harbour than at Market-street, and people shopping, say, at Farmer's or Jones' could walk from King-street more easily, or quite as easily, as they could from the other place.
2951. You are acquainted with Mr. Norman Selfe's scheme? Yes.
2952. One object of that scheme is to make preparations for a line to North Shore? I can see that.
2953. In connection with the St. James' Road scheme, for a connection to North Shore, they would have to go right back to Elizabeth-street, and that would add quite a mile to the length of the line;—do you suppose that the St. James' Road scheme would be preferable to the other, looking ahead to a junction with North Shore? I do not know how they are going to North Shore—whether by bridge or by tunnel, but I think that a connection could be made by taking the railway in front of Goldsbrough, Mort, & Co.'s, at Circular Quay, by an overhead loop-line to Dawes' Point. That is what I would advocate if it were found that the only place where they could make a bridge was from Dawes' Point.
2954. You are aware, I suppose, that the Government scheme for bringing the railway into the city provides for no intermediate station between Redfern and King street? I think there should be an intermediate station.
2955. We have had ten plans explained to us, and seven out of the ten provide for a station at Liverpool-street; but in the recent plans proposed by the Government that station has been taken away? I think there should be a station somewhere about Liverpool-street.
2956. It is admitted that the electric trams are inconveniently crowded now; but if there were an extension of the system to other streets, do you think that that extraordinary crowding would be done away with? Yes; the traffic in George-street would be relieved if you were to have a tramway along Pitt-street, which I should be very sorry to see on account of the narrowness of Pitt-street, which is now the only main artery in Sydney which is clear.
2957. These trams would stop at every street;—do you not think that it would be considered more convenient by the majority of business people if they could be set down somewhere near their places of business rather than to be carried on to a particular point of the railway, and then have to walk a considerable distance to their places of business? Well, at King-street you get a cross service by means of the cable tram-cars, which could be taken by anybody who did not like to walk. The electric cars are crowded morning and evening by workmen living at Pyrmont and elsewhere, and that would still go on; but the principal traffic is undoubtedly the pick-up traffic from block to block, and it will continue to be so. The question of the railway traffic by tram was only a side matter, because it was thought that the railway would be taken into the city sooner or later; but at present the trams in George-street are getting a large percentage of the railway traffic.
2958. *Mr. Dick.*] I think you said that the business portion of Sydney was practically situated on a peninsular, bounded on the west by Darling Harbour and on the east by Woolloomooloo Bay? I think I did say that; but what I meant was that it was bounded on the east by the Park lands.
2959. You said that you thought that a line in Elizabeth-street practically divided that area into two equal portions? Yes.
2960. While you said that Elizabeth-street divides the whole of that area into two equal portions, it divides the business area in such a way that there is three times the amount on the western side of Elizabeth-street than there is on the eastern;—does not that suggest the propriety of either making the extension of the railway further to the west, or providing for the convenience of the public by a system of trams down the western side? Against that I say that the night traffic, the theatre traffic, and the traffic of other people who come to town at night, is really in George-street. They go into places within a short distance of the Town Hall, and that would be all within touch of the railway station at St. James' Road. If you were to bring the railway up to Wynyard-square, it would be certainly out of touch with places like the Criterion Theatre, the School of Arts, the churches, and such like. As I said, three-quarters of the business people who come to Sydney want to go to Pitt and George streets.

Edward Richard William Denham, J.P., produce merchant, sworn, and examined:—

- E. R. W. 2961. *Mr. Dick.*] Where are your business premises? 154, Sussex-street.
- Denham, J.P. 2962. Where do you reside? At Summer Hill.
- 22 Mar., 1900. 2963. You have given some attention to this question of railway extension? Yes, incidentally.
2964. Many reasons have been urged in favour of extending the railway into the city; one is the unsuitability of the present station yard and station at Redfern; another is the inconvenience to which passengers are subjected by having to get out of the train into the tram, and as a result of that the loss of time;—in the first place I may ask you, do you advocate an extension of the railway into the city? Yes; I advocate it for three reasons: the first is, safety; the second is the saving of time in transit; and the third is economy.
2965. Do you advocate the proposal as set forth by the Railway Commissioners—that is the St. James' Road scheme—or do you advocate the scheme now before us, known as the King-street scheme, or do you advocate some other scheme? If it is not a question of expense, I would certainly advocate the station being at the George-street markets, with a view to further extension to North Shore; but seeing the

the enormous amount of money that has been spent on the city markets, rendering that, in my opinion, practically impossible, it seems to me that one is thrown back to what is called the St. James' Road scheme, for the purposes of economy chiefly.

E. R. W.
Denham, J.P.
22 Mar., 1900.

2966. Presuming that the difficulty of the markets, or a station further to the west than the proposed station could be got over without any very great increase in the cost, would you then advocate such a western extension? Certainly.

2967. For what reason? First of all, to save time. I was brought up in a very peculiar school, where I learnt that time is money. By travelling in the train from Redfern through either to George-street markets or to St. James' Road, the journey could be accomplished in two or three minutes, whereas at the present time it takes either the steam or the electric tram ten or twelve minutes, or even longer, to get there. I could walk from Redfern station, *via* the Haymarket, to my premises in Sussex-street, between Market-street and King-street, in sixteen or seventeen minutes, and I could get there and meet people who had gone by the steam tram and walked down from King-street. On account of economy of time, for the last three or four years I have given up using the railway, and I drive in every morning, because I can do the journey in about twenty-five minutes, and the other trip takes much longer.

2968. Does not that suggest to your mind that even if the railway were extended to King-street, there would be no actual gain to you by coming in that way by train as against going by tram along George-street or Kent-street? On the contrary, because I take it that the train would run through from Redfern to King-street. Assuming that the train ran through from Redfern to King-street, the saving of time in going that way would amount to the best part of ten minutes each trip.

2969. How long would it take you to walk from King-street station to your place of business? I should say eight minutes at the outside.

2970. What, then, would be your total gain in time if the railway were extended to King-street? I should say, roughly speaking, fully ten minutes, because there is the time in stopping the train, and coming out of the station, and walking down with the crowd.

2971. Do you think that that consideration has swayed a number of the people of the western suburbs with respect to their advocacy of this proposal;—I mean the gain of time? I think that is one of the main things; but first of all is essentially safety. Safety is unquestionably the first thing. Whilst living along the line, I have seen how the traffic has grown during seventeen or eighteen years, and to me it really seems not to be safe; but it is for the experts such as the railway people to give an opinion on that point.

2972. You mainly support the St. James' Road extension on the ground of low cost? On the grounds of economy. I think that if the railway were at St. James' Road an extension could be made to the eastern suburbs, and possibly by tunnelling go to the North Shore ultimately. But if it were not a question of the cost to be incurred I would support what is called the George-street Market site scheme.

2973. You would support that because you think it is more central, and would convenience the greater number of people? Yes; but the question of cost seems to make it prohibitory.

2974. Presuming that we had an electric tramway from Redfern along Kent-street, which would be a more expeditious route for you to take—to go to King-street by train, and then walk from King-street down to Kent-street, or to go by tram to Kent-street? I should most certainly go to the terminus by train, because the tram stops at every place on the line, and that does away with the time you are desirous of saving.

2975. But by stopping along the line it sets down a greater number of people close to their places of business than the train would? Yes; but I take it that when the Railway Commissioners were issuing either suburban or long-distance tickets, the extra length of the ride would be included in the cost of every ticket, and whether people used it or not would be immaterial to the Railway Commissioners, because they would receive that money whether the ticket were used for the extra distance or not.

2976. You mean that they would charge practically the same from Strathfield to Redfern as from Strathfield to King-street? Yes; that is, they would add the extra fare on for the extension.

2977. In their calculation they added for the distance from Redfern to King-street a slight amount—1s. 6d. a month for first-class and 3d. a week for workmen's tickets and corresponding rates for other tickets—indicating that they will not charge as much from Strathfield to Redfern as from Strathfield to King-street? Well, if people have to pay for it, they will be only too willing to do so, especially at those low rates, for once in the train they would prefer to go on by it rather than to get out at Redfern and change.

2978. Then you do not think that even with an electric tram along Kent-street, parallel to George-street, running at the low rate of 1d., there would be much chance of its successfully competing against the extension to King-street? No, I do not; because the tramway and the railway would provide very largely for different classes of traffic.

2979. *Dr. Garran*] You say that your preference for an eastern route is based on economy? Yes.

2980. We have before us one scheme by a professional engineer, who says that he can take a line along the western route to Circular Quay for not more than £730,000;—now, supposing those figures to be verified, and that can be done, do you think it would be better to spend £730,000 on an eastern route or on a western route? That would depend on which part of the western side it was taken through.

2981. There would be a station at the corner of Bathurst-street and George-street, another at Wynyard-square, and another at Circular Quay? If that could be done it should meet practically all requirements, but I should very much question it.

Walter Sewell Buzacott, J.P., ship chandler, sworn, and examined:—

2982. *Mr. Shepherd*.] Your place of business is in Market-street? Yes, close to Sussex-street—within 30 yards of it.

2983. You use the train, I suppose, every day? Yes, and so do all my family.

2984. In coming into your business now you come in, I suppose, by the electric tram? I come in by the electric tram, but I seldom return by it without first going towards Circular Quay. It is more inconvenient to me than the omnibuses were, simply because it is so crowded, and it has created a traffic which it is not able to carry at certain times of the day.

W. S.
Buzacott, J.P.
22 Mar., 1900.

W. S.
Buzacott, J.P.
22 Mar., 1900.

2985. At what hour of the day do you generally return? About 6 o'clock, and take a tram at Market-street and go to the General Post Office, and get a tram back, and then sometimes I lose my train.
2986. That difficulty would be obviated, I suppose, by an increase of the trams? To some extent.
2987. You have noticed, I suppose, that these trams are under most thorough control? Yes.
2988. The drivers are able to stop them in a few yards? Yes.
2989. There does not seem to be any fear of collision, therefore they can be run at very short intervals one after the other;—at present they have only a limited number, I believe, and the difficulty of crowding no doubt would be obviated if the number of trams were increased? From 6 o'clock to about half-past 6 they run very quickly—I think every minute.
2990. Are you aware of the various schemes that have been proposed to extend the railway into the city, or any of them? I have not given much thought to the matter recently, but in the past I have taken a great deal of interest in it. I think there ought to be a central station, and that the train should be brought from Redfern into the city; and so much do I believe in that, that I am not a partisan for any particular route, so long as you can bring the railway into the city.
2991. You are of opinion that there should be an extension of the railway into the city? Yes.
2992. Various schemes have been proposed, and of course the great object is to suit the suburban passengers, because it has been shown by expert evidence that the Redfern station would suit about 90 per cent. of the country people; therefore it is almost exclusively in the interests of the suburban passengers that the extension would be made; the great majority of the suburban travellers by the train are business people located in various parts of the city, and the question is what portion of the city would be most convenient to extend the line to; the Government proposal at present is to have a railway station at King-street; there are other proposals to go along to the west of George-street, and strike the George-street Markets, for instance, and then to go on to Wynyard-square;—which system do you think would suit the largest number of the day population of Sydney? I have heard the evidence given this afternoon, and I think that the line which would have a station at Bathurst-street, the Markets, and Wynyard-square would serve the largest number of business men—those who generally travel daily by train from the suburbs; but I know nothing about the cost of such a scheme.
2993. I suppose you are of opinion that the great convenience of the majority of the people is the principal object, and that cost, to the extent at all events of some thousands of pounds, ought not to stand in the way of the adoption of the most convenient plan;—is that your opinion? Yes.
2994. Apart from the proposed extension into the city, there has been a proposal to make an enormous station by taking in the Benevolent Asylum, and the burial grounds, and the Police Barracks site, abutting on Belmore Park;—do you think that it would be possible, in order to meet the convenience of the business people of Sydney, to form a station of that kind and from that point to run electric trams along the various thoroughfares, and for the passengers to change from the railway carriages there into the trams? I should think it would be much more convenient for them to go straight into the city without changing.
2995. Do you not think that whatever position the train might be run to, it would serve only those within a certain area of the station, whereas the trams drop people at every street? I think that the railway passenger service from the distant suburbs, and the country, is perfectly distinct from the tramway service, which provides for the nearer suburbs and the city—the two things are distinct, and each capable of doing a very large traffic. I do not think that you can make the one interest subserve the other.
2996. As I have indicated, the extension is almost entirely in favour of the daily passengers? My opinion is that Sydney is situated somewhat similarly to New York, and that it will need not only a tramway system for the city itself, but also a kind of circular railway, either underground or overhead, as well, as time goes on, and the city grows.
2997. Of course, Sydney is only a long strip, and therefore it is not likely that any parallel railway would ever be extended into the city; but there will only be the one railway whichever way it goes, and any further service required would no doubt be by tram, and, therefore, the great point if the railway is extended into the city is to adopt the plan which will serve the largest number, and I think you have said that you think the George-street line would serve a larger number than the St. James' Road line? Yes; but failing that I would be glad to get what is called the Departmental scheme.
2998. You think, then, that no system of trams would meet the requirements of the business people of Sydney? Not fully with the station at its present position.
2999. Of course, the Government proposal is to stop at St. James' Road? The weakness of that proposal is that there is to be no stopping-place at Liverpool-street. I think that there ought to be an intermediate station there.
3000. You must admit that only a certain area would be served by the King-street station—it would not serve the whole of the city? Not the King-street station alone.
3001. What boundaries do you really think it would serve—that is, the distances you would prefer going to King-street to travelling by the trams? I should think Market-street to Hunter-street, and then from Sussex-street across to Woolloomooloo; but the main traffic does not come from Woolloomooloo at all, but from the western side of Elizabeth-street.
3002. On the north how far do you think it would serve? I am not able to say; but I think that a good many people going to Bridge-street or that part of the city would take the tram.
3003. Do you think Sussex-street, on the west, would be favourably served by a station at King-street;—do you think that persons whose business was situated in Sussex-street would prefer to go to King-street and then walk from there to Sussex-street rather than go by the tram and be put down in George-street? Yes. But my own impression is that before long the Government would see the necessity of having trams from the ferries to the King-street station. I think there will be a thorough system of trams through all those streets where there is any amount of traffic. In other cities of the world I find that is the case.
3004. As far as the extension into the city is concerned it would not affect the ferry passengers at all, it would simply affect the people coming in by tram, and the object is to ascertain the best possible site for a railway station to serve the largest number of the people who come in every morning to their business, and I ask you again if you think it would be more convenient for them to be dropped at King-street, and to walk to Sussex-street, than to get out at George-street and walk to Sussex-street from George-street;—do you think that there would be any saving of time in going to King-street? I think there

there would be, because the trains would go direct from Redfern to King-street, and there are now, occasionally, blocks of the trams in the Haymarket, and as traffic develops those will increase. Take the case of Broadway, New York. If you get into a tram it takes you an hour to go into the city, but if you take the overhead railway, which stops at every alternate street, you can go into the city in ten minutes. When in New York I invariably took the overhead railway. The traffic in the street there gets blocked and the trams are not able to travel fast. We are frequently blocked now in the Haymarket on the trams.

Buzacott, J.P.
22 Mar., 1900.

3005. There is a great difference of opinion about the area which the King-street station would serve—in the opinion of some the area which it will conveniently serve is bounded by Market-street on the south, Pitt-street on the west, and Hunter-street on the north; that would not be much more than 5 per cent. of the whole of the city of Sydney? That would comprise a large proportion of the daily travellers, though.

3006. No doubt it would; but still, according to your idea, it would leave all on the south of Market-street unserved? Yes, unless there were a station at Liverpool-street.
