52. *Mr. Shepherd.*] Is there any grain growing at Narrabri? None of those districts grow grain to any extent.
53. There is no grain grown on the line at all? A little is grown at Narrabri. I had the returns extracted from the *Statistical Register*, and I could submit them to the Committee. Grain is not a factor in the traffic.
54. Are you personally acquainted with the route of the line? No, I have not been over it.
55. You are only acquainted with the traffic from the reports sent in? That is so.
56. It is anticipated that there will be a large increase in the traffic if the line is constructed, is it not? The Commissioners anticipate that the products of the district will increase.
57. *Mr. Leven.*] Pilliga is an old defunct town, is it not? It is a small town.
58. I suppose that Wee Waa is a growing place? It is a promising little town.
59. *Mr. Watson.*] Is it anticipated that this line will bring any fresh traffic to the railway? The Commissioners think it will.
60. In what way? The small settlers for instance will go in for fat stock. At present a man with a small holding cannot arrange to send small drafts of cattle 100 miles by road. The construction of this line will lead to closer settlement, and the development of the district.
61. Is there any land along the route fit for agriculture? The Commissioners do not anticipate much development in agriculture. It is a long way from the market, and the country will more likely be devoted to pastoral purposes.
62. Do the railways now get all the traffic of that district? Yes; they get the existing traffic.
63. Do you think that that prospective increase, through the closer pastoral settlement that you anticipate, will be sufficient to make the line, within a reasonable time, a paying line? I should not like to say that. I think it will be a considerable time before the development will be such as to enable the line to become a paying one.
64. A thing which strikes me as peculiar is that the Commissioners practically recommend the railway to Walgett and Collareendabri, although it will serve only a pastoral district, and would be run at a very heavy loss, without causing any large diversion of trade towards the railway system, but a little while ago they absolutely objected to a proposal to make the railway to Wilcannia, which would involve a similar loss, but which had the advantage of bringing on to the existing lines freight which does not now reach them? As far as I recollect, the Wilcannia line would not even pay working expenses, but these lines will.
65. The total loss on the Wilcannia railway would not be much more than the loss in this case, and that line would bring more traffic on to the railway system, but the lines now proposed will bring no new traffic, all the traffic from the district is brought down to the railway now, yet the Commissioners recommend these lines? The character of the country is much better than anything between Cobar and Wilcannia; the country along these lines is capable of closer settlement, but it is estimated a line from Cobar to Wilcannia would involve very heavy loss, even upon working expenses. Both the lines now proposed are expected to pay more than working expenses.
66. If they run through country only fit for pastoral production, there will only be a moderate increase in the traffic? The Commissioners look at the line from a State point of view. They do not tie themselves down to the commercial aspect entirely.
67. It seems that they have a softer spot in their hearts for the people round Walgett and Collareendabri than they have for the people further out west? Because the country is so very much better.
68. Assuming that a railway was constructed only to Walgett, could it be said that the people of Collareendabri, being concerned only in pastoral products, would be very badly hampered from want of railway communication? I should not think they would be, but the Commissioners think that the district between Collareendabri and Narrabri is entitled to railway communication.
69. If we take the line from Narrabri to Walgett, where would the extra traffic come from to pay for a branch line? It would not return a profit, but the Commissioners think that the traffic would be sufficient to pay working expenses.
70. It does not seem that there would be any great disadvantage to the people of Collareendabri in getting their wool down to Walgett if the line were constructed to that point;—and if there is no agricultural land to open up, is it worth while to make a branch line to Collareendabri? The Collareendabri people, no doubt, would be a long way better off in having to send their produce only 50 miles than they are now.
71. *Dr. Garran.*] Have the Commissioners ever considered the extension of a line from Moree to Collareendabri? They have from Woolabra.
72. Not from Moree? No.
73. You see we have made a line to Inverell from Moree, and it was stated, when that proposal was under consideration, that it would provide a very good market out west? Yes.

74. A line from Coonamble to Walgett could be made fairly cheaply, could it not? Yes.
75. But a line from Narrabri to Walgett cannot be made so cheaply? No. I think a cheaper line would be from Coonamble to Walgett. The distance from Walgett to Narrabri is 50 per cent. more than from Coonamble to Walgett. That would mean a big saving to start with. The Commissioners have never given an estimate, but I dare say that if you seriously entertain the question they would look at the traffic of the two districts. They think the matter deserving of consideration.
76. If a line were made from Coonamble to Walgett, the Collarendabri squatters would be very well off would they not? Much better off than they are at present.
77. Fifty miles is nothing for a squatter? It is not a great deal.
78. What I am thinking of is, that as it is a pastoral country, the Collarendabri people would be better off for agricultural supplies by having the Inverell products sent to them than they would be if they had to get supplies from Dubbo? I do not quite follow that.
79. Supposing a line from Coonamble to Walgett was made to Collarendabri, people would get their agricultural produce then from Dubbo, or between there and Orange? Yes.
80. Would they not be better off at Collarendabri if they could get produce from Moree? From Dubbo to Collarendabri would be about 200 miles. I do not know that there would be a great deal of difference between Inverell and Collarendabri.
81. If the Moree and Collarendabri line were made, the Collarendabri trade in wool would go down to Newcastle, which is its present port? Yes.
82. And we should have a line all the way from Inverell to Collarendabri? Yes.
83. Would that not be a very good thing for the Inverell people? Yes, it would give them a better western market.
84. And would it not be a good thing for your line to Moree? You would have this handicap with regard to Collarendabri that the two sides of the triangle would be naturally greater than the base, and as their business would be very largely with the seaport, that would be a further handicap to them. I dare say it would be far better for the Collarendabri people to have the proposed line to Woolabra, as it would bring them near to Inverell and the hill country. They would be able to get into the New England district so much more easily.
85. I am considering the possibility of a line from Coonamble to Walgett being approved of, as the Commissioners wish;—then, that being so, would not the best extension be from Moree to Collarendabri rather than from Narrabri to Collarendabri? I would rather myself, although I do not think it has been considered by the Commissioners,—give them the Woolabra line. It would be better for the Inverell country, and better for enabling the Collarendabri people to reach the coast.
86. That would not prevent the Inverell produce from going to Collarendabri? No; I think it would still go there.
87. Do you know whether a line from Woolabra would be on higher and drier ground than a line from Moree? I think it would be on higher ground until you get within 10 miles of Collarendabri.
88. There is no country much more level than the country we are now considering;—if the cost of this pioneer line is nearly double what pioneer lines are supposed to cost, that is not satisfactory? No.
89. The question is, can we accommodate the district and avoid the boggy ground? I think the question was considered by the Committee dealing with the proposed Pilliga line. They went over it, and the conclusion arrived at was that it was better to go from Collarendabri to Narrabri. I think they made a special report on that in 1894 or 1895.
90. *Mr. McFarlane.*] With regard to the trade at Collarendabri, is that an extensive trade? A good deal of pastoral business comes through there.
91. And I suppose a considerable amount of goods traffic? General goods.
92. Have the Commissioners considered this aspect of the question;—as Inverell and Moree will soon be connected by rail, would it suit the trade better to have a connection with Moree instead of Narrabri? I was explaining to Dr. Garran that the principal trade is to and from the coast. You would rather handicap the Collarendabri people by making them travel two sides of a triangle.
93. I am speaking of a connection with the district of Glen Innes? The Commissioners have not taken that into their calculations at all.
94. Do you not think that in years to come there will be a connection at Glen Innes? I think it is a long way ahead.
95. If that were done, would it not be much to the advantage of the Collarendabri people to have direct communication with the seaboard? It would still be a long distance. From Collarendabri to Moree is, I think, 100 miles: from Moree to Inverell, another 100 miles; from Inverell to Glen Innes is about 50 miles, and it is 100 miles from Glen Innes to Grafton, making altogether 350 miles.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and examined:—

96. *Mr. Dick.*] You have already indicated that in your opinion a connection between Coonamble and Walgett would be preferable to one from Narrabri to Walgett? I think that the matter before you is the question of a connection between Narrabri, Walgett, and Collarendabri. I will read my report to the Commissioners on the subject:—

PROPOSED RAILWAY—NARRABRI TO WALGETT AND COLLARENDABRI.

1. Narrabri West to Walgett; estimated cost, £250,732; length, 104½ miles.
2. Narrabri West to Collarendabri; estimated cost, £311,076; length, 101 miles.
3. Narrabri West to Point "A"; estimated cost, £255,145; length, 90½ miles.
1. Narrabri East to Walgett; estimated cost, £303,835; length, 111 miles.
2. Narrabri East to Collarendabri; estimated cost, £324,179; length, 107½ miles.
3. Narrabri East to Point "A"; estimated cost, £268,248; length, 96½ miles.

As directed by the Commissioners, I have had very careful inquiries made as to the probable traffic on the proposed lines, and the estimates are as follows:—

| Proposed railway, Narrabri West to Walgett, with branch to Collarendabri. | |
|---|---------|
| Wool, goods, and stock..... | £8,779 |
| Coaching, mails, &c. | 4,235 |
| Total | £13,014 |

J. Harper.
26 April, 1900.

| | |
|--|---------|
| Proposed railway, Narrabri East to Walgett, with branch to Collareendabri. | |
| Wool, goods, and stock..... | £9,230 |
| Coaching, mails, &c. | 4,382 |
| Total | £13,612 |
| Proposed railway, Narrabri West to Collareendabri, leaving Walgett out of consideration. | |
| Wool, goods, and stock..... | £5,494 |
| Coaching, mails, &c. | 2,187 |
| Total | £7,681 |

As far as my personal inquiry has gone, I am strongly of opinion that it is desirable that any extension in the direction of these towns should be from Narrabri West through Wee Waa, as being naturally on higher ground it would be more suitable for railway construction, and it would also possess the advantage of being 6 miles less in length and costing upwards of £13,000 less in construction. Practically, all the services which could be expected to be rendered by a railway on the north bank of the river could be expected to be rendered by one on the south bank, *via* Wee Waa.

In connection with these estimates I may point out that a reduction of £941 has been made on account of the difference between the rates from Moree and those proposed from Collareendabri for traffic which would be diverted from the former line; but I have allowed full credit for the whole of the Walgett traffic, although when the river has been practicable a large quantity of goods and wool has found its way to and from this district, *via* Bourke, on which the Main Western line secured published rates. This state of things was in a large measure due to the high rates of road carriage between Walgett and Narrabri as against steamers' freight and rail charges Bourke to Sydney, and *vice versa*. Since 1894-1895 season, however, the river has not been sufficiently navigable to be regarded as a competitor; and as a railway at Walgett will command the traffic under such circumstances, I have given the project full credit.

As the question has been raised as to the extension of the line to the township of Collareendabri by submission of an alternative scheme terminating at point marked "A" (*see* plan), about 10 miles distant from Collareendabri, the matter might fairly be considered as to whether it is desirable to build this expensive section of line or whether, by some deviation, it might be possible to cross the river at some intermediate point between Walgett and Collareendabri for the purpose of future extension towards Angledool.

97. Where does the trade of Walgett and Collareendabri now go to as a rule? At the present time, with no river, it goes north into Narrabri; but I would suggest to the Committee that the evidence which was obtained by them when they were investigating this matter in connection with the proposed extension from Narrabri to Pilliga should be carefully considered, as well as the evidence in connection with the proposed line from Woolabra to Collareendabri.

98. Is the character of the country between Narrabri and Walgett similar to that of the country between Narrabri and Moree? I should think, generally speaking, that it is. Which route are you speaking of?

99. The route through Wee Waa? Yes; it is practically the same kind of country.

100. In the case of the line from Narrabri to Moree, the original estimate of the traffic has fortunately been exceeded? Not by very much.

101. Do you think there is any likelihood of similar results being obtained from the construction of these lines? I should like to think so; but I do not expect we shall get the Queensland trade.

102. Where does the inward trade from Walgett to Collareendabri come from? That depends on the condition of the river.

103. Is it not almost universally taken along the Northern line from Newcastle and Sydney? If you will refer to the evidence which I gave in reference to the Pilliga line, you will find a complete return in reference to the river given there (Question 438, report on proposed line, Narrabri to Pilliga). Since then the condition of the river has been unfavourable to navigation.

104. Could you give us an approximate estimate of the amount of revenue to be obtained by this proposal by charging local rates instead of through rates? I think you could add about 20 per cent. to the present estimate.

105. At present the through rate would mean practically 50 per cent. of the total annual cost of the railway;—do you think that local rates would bring it up to 65 per cent.? You can generally add about 20 per cent., assuming that the trade can be realised.

106. Do you think that if this railway were constructed to Walgett the river would be a serious competitor with it? I always regard the Darling as a very serious competitor with the railways. I have always emphasised that when giving evidence on the subject before this Committee.

107. Is it not a fact that when you have got a river no wool has gone past Bourke? The railway exists at Bourke for the purpose of carrying it.

108. You say you always regard the river as a serious competitor; well, you have had good rivers there since the railway was constructed, and no wool has passed Bourke? The information you have in regard to the Narrabri to Pilliga line answers that I think. You will find that when there was a river the railway existing at Bourke was a very serious competitor as far as the business between Walgett and Narrabri was concerned.

109. You draw wool from there to Bourke, then down to Sydney? Yes; and, of course, wool will be drawn now by reason of the construction of a line to Brewarrina, which will tap a great deal of the district which a line to Walgett will serve. The line to Coonamble would touch some more of the district which a line to Walgett would serve.

110. Would any wool from Collareendabri pass Walgett, then go to Sydney instead of being sent from there to Sydney through Newcastle? If it were to be realised upon in Sydney, and there were a river, I think it might be.

111. In spite of the longer distance? That would depend upon the rates established in connection with the competition between South Australia and Victoria.

112. The distances from Walgett to Newcastle and from Walgett to Sydney are practically 345 miles in the first instance, and 439 miles in the second? Yes.

113. Do you think, if it is the intention of the growers to get their wool as speedily as possible to the seaboard, they would send it *via* Brewarrina or Bourke rather than through Walgett? In connection with the proposed extension from Narrabri to Pilliga, I mentioned that the great bulk of that wool did not come to Newcastle at all, either for export or sale; it comes on to Sydney.

114. Could you say what the rates would be for 345 miles to Newcastle as against 439 miles from Walgett to Sydney? There would be about 12s. a ton difference in favour of Newcastle.

115. What are the ordinary rates per ton to Sydney by boat? Thirteen or 14s. a ton. I thought to expedite the proceedings of this Committee by referring to the evidence given before, when the matter

was under consideration, because the circumstances have been somewhat abnormal during the last two or three years in regard to starving stock. The normal conditions may be regarded as those which prevailed in 1897, when the inquiry was made.

J. Harper.
26 April, 1900.

116. After the construction of the line from Moree to Inverell, would not the Inverell and Collarendabri people be better served by another connection from Collarendabri to Moree than by one from Collarendabri to Narrabri? I do not think so. The engineers would tell you that that country is absolutely impracticable; it is all watercourses.

117. With regard to reaching Walgett by any of the lines, you hold that Coonamble is the proper place to start from? Yes.

118. Will you give your reasons for holding that opinion? I expressed the opinion before, that the connection should be made further west. The whole of that northern country is very good fattening country, but, like the rest of New South Wales, it is subject to drought. With a line built from Brewarrina to Collarendabri, and connecting with Glen Innes, you have a connection with the New England district and the Northern line, and you give the people the alternative of using either market.

119. That would involve a connection between the North-western line and Collarendabri? Decidedly, assuming that the Committee decide upon that extension, a practicable route for the relief of the western country will be between Brewarrina and Collarendabri. It will enable them to exchange products from the northern district and the west and north.

120. Are we right in assuming that you advocate the construction of a line from Narrabri to Collarendabri however the line to Walgett may be connected? I do not know whether I would go so far as that. In my report I said it should be to a point where you would get the most suitable river crossing. I do not mean to say that Collarendabri itself is deserving of a railway; it is only a town with a very small population. You will notice from the report to the Commissioners that I have suggested that the matter should be looked into as to whether some more suitable spot could not be found in the district.

121. Do you think it would be better to make a connection from Woolabra rather than from Narrabri West? No; I do not think the same advantages would be given. In the first place, you have got settlement at Wee Waa, and a very progressive settlement too. If you start from Woolabra the Wee Waa people will be left in the position that they are in to-day.

122. Do you think a more direct route from Wee Waa to Collarendabri could be found than the one indicated on the map? I do not know.

123. Do you know enough about the proposal to say whether that bend in the line is due to the fact that it was designed to reach both Walgett and Collarendabri? I think it is for the purpose of getting higher ground.

124. *Mr. Levien.*] From Wee Waa and Pilliga to Walgett is the mail route, is it not? Yes.

125. Have you been along that line? Yes.

126. What sort of country is it between Wee Waa and Pilliga? A good deal of it is of very indifferent quality. There is a good deal of flooded country.

127. Is it very low along there? Yes; the north bank of the river is undoubtedly the best.

128. Then which line do you most favour yourself? I am strongly in favour of the south bank of the river.

129. That is round by Wee Waa and going up right away to Collarendabri? Yes; as far as the extension to Wee Waa is concerned, it could be got on the south bank, and the country through which it would go would not be too objectionable. It is a matter, however, which I think might be fairly left to the Public Works Committee to determine which of the two is the better route.

130. Both of these routes would be better country far than that going round by Pilliga to Walgett? Absolutely there can be no doubt about that whatever. I also wish to emphasise this: That Wee Waa deserves to be served; it is a progressive town with settlement of a good class about it.

131. There is a good deal of agricultural land there, is there not? Yes.

132. They are all good stations in that district? Yes. Hence the reason for recommending the extension to Collarendabri.

133. I suppose you do not know whether there is much land yet to be thrown open for selection along there? No.

134. *Mr. Watson.*] Taking the line first from Narrabri towards Walgett, is there any agricultural country on the route? That is a matter of opinion. Some of it is under agriculture; but there is no large area available for agriculture as far as I know.

135. Is there not agriculture about Wee Waa? Some small areas on the river bank.

136. Do you think the rainfall and the soil are such as to encourage agriculture in that direction? They have had plenty of opportunities for it lately, in view of the number of starving stock they have had there; but they have not gone in for it to any extent.

137. If you have not formed any opinion as to the agricultural possibilities of the district, you are relying for traffic upon the pastoral industry? Yes.

138. If your estimates are only based upon pastoral products, you do not anticipate a large increase of traffic consequent upon the construction of the railways? No.

139. Do you anticipate a diversion to the railway system of traffic which now goes some other way? Probably we should get some of the Southern Queensland traffic, which now goes *via* Brisbane, and I think that from that area we shall get a great deal of fat stock traffic. There is no better fattening country in the whole Colony than the country north-west of the Barwon. During the last two or three years the people there have had their time of trouble, but I have known the time when we have been drawing all our supplies from there.

140. Would a preferable outlet for fat stock from Southern Queensland be towards the Northern railway line, then to the south, to get to the Melbourne market? I do not think they would attempt to get to the Melbourne market. I think the markets of Newcastle and Sydney would absorb all the stock that they could send. To-day, I think the Aberdeen people are operating in country where they can save a good deal of travelling to reach the railway line.

141. You think there would be some increase or diversion of trade to our existing lines, of trade that goes elsewhere now? Yes; it is one of the pastoral lines that I should look to very hopefully for good prospects. There is a good deal of close settlement along the Barwon right up to the Queensland Border. The people there have been unfortunate during the last three or four years; but I believe the country has good possibilities before it.

- J. Harper.
26 April, 1900.
142. It would seem that the Commissioners favour the projected line from Coonamble towards Walgett, as against one from Narrabri to Walgett;—can you say why? I think their motive would be to enable the produce or stock to be removed from the west to the north, as circumstances may require; the further extension from Brewarrina to Collareendabri, and a connection from Walgett may be considered, then you have a lot of western area brought within easy connection with the Northern line. It is a big scheme.
143. Assuming that you have only pastoral country to deal with, there does not seem any reason why you should have two termini so close together as Walgett and Collareendabri? No; that is the view which the Commissioners have taken. The distance between Collareendabri and Walgett is 45 or 50 miles. Collareendabri being the more northerly place, it would serve more country to the north. The Walgett country would be served to a large extent by the line between Byrock and Brewarrina. A line from Dubbo to Coonamble would serve the district south of Walgett, so that Walgett will be served by lines from at least two sides, and you are considering a third side.
144. According to what you have just said, in your view the line from Narrabri to Collareendabri ought to be the main line, and any subsequent project to Walgett ought to wait? I do not know what are the engineering difficulties, but from my knowledge of that country, I should say that if an extension is to be made to the Queensland Border, it should be made from Collareendabri, if a good crossing over the river can be found.
145. Taking Narrabri as the starting-point? Yes.
146. Looking at the map before us, and leaving out of account the desirability or otherwise of reaching the Northern line, it would look as though the line from Walgett to Narrabri and on to the Northern line would cut the country better than any other? Yes; the country immediately north of Brewarrina is one of the best fattening districts that we have in New South Wales.
147. It seems to me that taking the Byrock to Brewarrina as an existing line, and looking at the existing line to Moree, the best way of cutting up the richest pastoral country would be to run from Coonamble to Walgett, then on to Collareendabri without connecting Collareendabri with the Northern line? I do not consider that the best plan. I consider that in view of the Brewarrina line being under construction, and the Wilcannia line having been recommended by this Committee, and considering the general requirements of the Northern district, the connection when required will be better established between Brewarrina and Collareendabri, as serving a better district than that referred to.
148. In that relation you would require a connection between Collareendabri and the North-western line? Yes; that is contingent on the line to Collareendabri being carried out. The best connection that could be established between the western and northern system would be from Coonamble to Walgett, and a line from Brewarrina to Collareendabri, when the time has arrived for this connection.
149. I cannot see where the Coonamble to Walgett line is necessary to give a connection with the north and north-western system? It is only a more direct connection—that is all.
150. But you still have the disadvantage, even with the network that you suggest, of having a line to Walgett, and another at Collareendabri, all pastoral country within less than 50 miles of the railway? I assume that the question would not have been submitted to you if it had not been considered necessary that they should have the railway.
151. Every man naturally thinks that a railway is necessary against his own door? I think the Commissioners have sufficiently emphasised what their views are as to a line in the direction of Collareendabri.
152. Are we justified in taking it as your opinion that lines in pastoral country such as that are not likely to pay within a distance of 50 miles? No; I do not think that I could conscientiously tell the Committee that this line will pay. Of course, the Moree extension was extended into country purely pastoral.
153. Moree has a great stretch of country on two sides, to which it acts as a depôt? Yes.
154. The Collareendabri line would take traffic which would otherwise gravitate towards the Walgett line, and *vice versa*? Yes; they would affect each other. And the line to Brewarrina would take some of the Walgett business.
155. *Mr. Shepherd.*] Have you been more than once into that district? Yes, several times.
156. When did you first visit the district? I think in about 1882.
157. And when was the last time? In December, 1899.
158. Did you notice any great improvement in the district? Yes, I noticed a great deal of closer settlement going on; but it is only fair to the people who are settlers there to say that they have had a trying time during the last couple of years owing to drought. I do not know under the circumstances any town in New South Wales that showed more distinct improvement than Wee Waa did. That was under very adverse circumstances. I could not find any improvement in Pilliga, and Collareendabri did not show much improvement.
159. Was there any cultivation going on? They have patches of lucerne and other cultivation on the banks of the river.
160. The report says that the graziers and farmers have been labouring under disadvantages—"farmers" must mean cultivation of the soil? A man there calls himself a farmer if he puts in 5 acres of wheat.
161. What mast the great improvement chiefly consist of? Of closer holdings and the great number of people holding sheep.
162. Do you think that the construction of the line would induce any agriculture? I should not like to say that, because I do not think the people are prepared to tackle the business during such adverse seasons. It would enable the smaller holders to carry their sheep more successfully through a period of drought than they have hitherto been able to do.
163. If the soil were suitable for agriculture they would not need a railway to encourage them to pursue that industry? No, we do not expect revenue from that source.
164. The land is reported to be equal to almost anything in the country? It is the best fattening country in New South Wales.
165. Is it chiefly occupied with cattle or sheep? With sheep chiefly.
166. What is the quality of the timber there—is it suitable for railway purposes? I do not think so.
167. I notice that, in the estimate of the cost of the railway, the charge for the sleepers is put down at a little more than the charge in other districts? Sleepers are getting more expensive.
168. What is the increased tariff expected to consist of? It would consist of the possibility of being able to carry stock, instead of having to sacrifice them, as they have had to do during the last two or three years. In the past the holdings have carried stock very heavily, but the clips of wool have gone down from 800 or 900 bales to 100 bales.
- 169.

169. It seems that the estimated return from the traffic is only about 50 per cent. of the estimated cost? Yes; but the Commissioners have felt bound, in the interests of the country, to recommend the line. They have been in the district and seen the hardships that those people have had to suffer through being without railway communication, and they submitted it to the Ministry for their consideration. J. Harper.
26 April, 1900.
170. I suppose the Commissioners favour the construction of this line, believing that it will very largely increase the traffic? The Commissioners are, of course, in favour of developing the country.
171. Has this part of the country suffered very much? Yes, very severely.
172. Have they been short of water in that district? They have been short of everything.
173. *Chairman.*] You do not think that either of these extensions to Walgett or Collarendabri will bring in any new traffic? No. Beyond, as I have said, the result of enabling people to carry stock, which to-day they cannot carry.

FRIDAY, 18 MAY, 1900.

[The Committee met at the Municipal Council Chambers, Narrabri, at 10.30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LYNDESAY CRAWFORD SHEPHERD, | JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Albert Ernest Collins, storekeeper, and Mayor of Narrabri, sworn, and examined:—

174. *Vice-Chairman.*] Have you resided long in this district? Eighteen years. A. E. Collins.
18 May, 1900.
175. What is the population of Narrabri? 2,189 is the population of the Narrabri municipality, and the population of Narrabri West municipality is about 600. The capital value of the ratable property in Narrabri is £146,750, and the total value for ratable purposes is £15,817 8s. Within the municipality there are 531 buildings, inclusive of business premises.
176. Is Narrabri the centre from which supplies are sent to the district out towards Walgett and Collarendabri? Yes; Narrabri has always been looked upon as the centre and natural channel for all the business of that district.
177. Does either Walgett or Collarendabri receive supplies by river when there is sufficient water for the steamers to come up? I believe that Walgett occasionally receives supplies by river when the Barwon is in flood.
178. But the general trend of supplies is from Narrabri to the west and north-west? Yes.
179. Is the amount of business done with Walgett and Collarendabri fairly large? Yes. A good deal of business is done by the people of Walgett direct with Newcastle and Maitland, but it comes through Narrabri, and Narrabri supplies all the intermediate and surrounding country.
180. Is the district which would be served by the proposed railway from Narrabri to Walgett, with a branch to Collarendabri, one which is of growing importance? Yes.
181. Is it regarded mainly as a pastoral district? As a pastoral and agricultural district. If there were a railway through it agriculture would increase there.
182. Is it difficult under present conditions to get supplies from Narrabri to Wee Waa, Pilliga, Walgett, or Collarendabri, in some seasons? In bad seasons it is difficult because of the heavy state of the roads.
183. Is the district one in which good roads can be made? No. I should think it would be almost as cheap to make railways as to make roads in that district.
184. Is any hardship experienced because of the difficulty in getting supplies at certain seasons? Yes.
185. Is there much black-soil country along the present line of communication? Yes; it is nearly all black-soil country.
186. Has any attempt been made to make a good road? Only at particular spots.
187. Is that because the making of a road would involve great expense? I think so.
188. How much of the land would be available for agriculture if a railway were constructed? The land on the northern side of the Namoi is nearly all fit for agriculture, and only wants railway communication to develop it.
189. The proposal referred to the Committee carries the line on the south side of the Namoi as far as Wee Waa, at which point it would cross to the north side? I wish my evidence to support the construction of a line starting from Narrabri proper, and keeping on the northern side of the Namoi, first, because there are large vested interests in Narrabri which I think should be considered, and, secondly, because Narrabri is not provided with proper loading and unloading facilities at the railway station here, and we have, therefore, to cart our supplies from Narrabri West, a distance of 3 miles. If the line were started from Narrabri our station arrangements would be improved, and a larger number of people would be benefited.
190. But you think that your difficulties would be increased if the line were taken along the south side of the Namoi? Yes. We have repeatedly made a request to the Railway Commissioners to have proper facilities provided for loading and unloading at Narrabri; but they have put us off each time because of the uncertainty as to the starting-point of the line to Walgett. They have promised us that as soon as that matter is decided they will give us what facilities are required. It was suggested by a deputation which waited upon the Secretary for Public Works some time ago that, if the line started from Narrabri West, the station buildings there would be very suitable for a junction station; whereas, if the line started from Narrabri, new accommodation would have to be put up; but I would point out that in any

A. E. Collins. any case we shall want more suitable station buildings and better appliances for loading and unloading at Narrabri itself.

18 May, 1900.

191. Most of the business houses and the business premises of people connected with the forwarding and receiving of goods have been built in Narrabri proper? Yes.

192. No large business house has been built at Narrabri West? A few business houses have been built there.

193. You urge that this large business centre would be still more handicapped than it is now if the proposed line were taken from Narrabri West? Yes. A line from Narrabri West would divert business from its natural channel.

194. Could the inconvenience from which you suffer be got rid of in any other way than by the construction of the proposed line on the northern side of the river? The Railway Commissioners do not want the expense of maintaining two large stations, and, seeing that the largest vested interest is at Narrabri, and not at Narrabri West, I think that we should have the main station here. Then, too, there is very little settlement on the southern side of the Namoi, between Narrabri and Wee Waa, while the country on the northern side is thickly populated.

195. Would not the construction of a railway on the northern side of the Namoi leave Wee Waa out altogether? The railway would go within 3 miles of Wee Waa; and Narrabri was left 3 miles from the line for years, until the railway was taken on to Moree and we had to pay extra cartage for that distance.

196. Is there a bridge over the river at Wee Waa? Yes; an ordinary traffic bridge.

197. Which is larger, the population of Wee Waa or the population settled on the northern side of the Namoi, between Narrabri and Wee Waa? The population now living on the country between Narrabri and Wee Waa, on the northern side of the river, is not so large as the population of Wee Waa itself; but there is a lot of country there which should be made available for small settlement, and it is small settlement that we wish to encourage.

198. Would not the same remarks hold good as to the land on the southern side of the Namoi? No; the land on the southern side of the river is totally unfit for settlement. It is scrubby country, and the expense of making it useful for settlement would be too great. The Government have offered it almost for nothing; but people will not take it up.

199. How would you describe the country on the north side of the river as far as Wee Waa? It is magnificent pastoral country. There is no better country in the Colony.

200. What is its average carrying capacity, taking one year with another? I should think a sheep to the acre.

201. Is much of it suitable for agriculture? I think that the greater part of it is suitable for agriculture.

202. What is the character of the holdings there? There is a good deal of leased land there which is shortly to be thrown open for settlement, and it will be cut up into small holdings. That land is situated on Boolcarrol and Edgeroi holdings. The revenue obtained by a line on the north side of the river would be about £600 a year more than the revenue obtained by a line on the south side of the river, and the additional cost would be only £13,000; so that the difference in revenue would be equal to about 5 per cent. on the difference in cost.

203. Has the progress of Narrabri and the immediate district been fairly rapid during the last ten years? Yes; it has been very rapid, and it is increasing, because of the amount of agriculture that is taking place. Ten times as much cultivation has taken place during the last five years as took place formerly, and the more the district is opened up by railway communication the more the cultivation will increase. I am of opinion that almost every acre of the land on the northern side of the river is suitable for cultivation. It has been said that the team traffic from Collarendabri always came along the southern side of the river *via* Wee Waa; but I would point out that almost the whole of that traffic generally comes through Narrabri itself, and not through Wee Waa and Narrabri West. When the river is high the teams from Walgett come along on the southern side because there is no bridge at Molly. There are large areas of land on the southern side of the river which have been capitalised at 13s. 4d. per acre as settlement leases; but, although they have been open for selection for a very long time, they have never been taken up. That land is within about a mile of Narrabri West. Nearly all the land on the southern side of the river has been thrown open for selection; but it has not been taken up, and I do not think it would be taken up, even if the Government offered a bonus to those who took it up.

204. What about the land on the northern side of the river? It is taken up as soon as it is thrown open.

205. *Mr. McFarlane.*] What is the nature of the traffic from Walgett and Collarendabri to Narrabri? It is chiefly wool and fat stock.

206. Is much farm produce sent in? No; except in the immediate vicinity of Narrabri.

207. If the proposed railway were constructed, would the produce traffic largely increase? Yes; I think that wherever there is a railway agriculture is bound to progress.

208. Do you think the construction of the proposed railway would open up a large area of land for agriculture? Yes; if it were taken through the right country. If the line is kept on the north side of the river agriculture will increase there; but the conditions on the south side of the river are unfavourable to agriculture except a small patch on the river.

209. *Mr. Watson.*] The Railway Commissioners seem to favour the connection of Walgett with Coonamble rather than with Narrabri;—have you any opinion to offer on that subject? I think that Walgett should be connected with Narrabri. Narrabri is the natural channel for all the traffic from that district, and for all the Narrabri West traffic.

210. The opinion of the Railway Commissioners is that a line from Coonamble to Walgett would serve the Colony better? I have never considered the question of extending a railway from Coonamble to Walgett; but I know that Narrabri has always been the natural channel for the Walgett traffic, just as Newcastle is the natural port for this district.

211. Do you think that the Walgett people have a greater desire to go to Newcastle than to any other port? I cannot say. They are agitating for a railway; but I do not know if they care whether it comes from Narrabri or from Coonamble.

212. I suppose they would be glad to get the line which would give them most facilities to export? Yes; and a connection with Narrabri would give them Newcastle as well as Sydney for a port.

213. Is the rainfall in the Narrabri district sufficiently regular to make agriculture successful here? Yes. We are just coming to the end of a five years' drought; but people have obtained some very fine crops here even during the drought. We have had just enough rain to do the crops good, though we

have

have not had sufficient for grazing purposes. I do not think better crops could be grown in the Colony than we had here during the last twelve months, although the season has been bad for grazing. Some very fine oranges and lemons have been grown here this year. A. E. Collins.
18 May, 1900.

214. *Mr. Shepherd.*] Have you any orchards of any extent? Yes.

215. What kinds of fruit are grown here? I think that almost any kind of fruit would grow in the district. Oranges and lemons grow very well here, and no finer grapes are to be obtained in the Colony.

216. Do they grow stone fruits here? Yes; peaches, apricots, and plums grow very well,

217. Do people grow fruit for market at all? The fruit industry is gradually developing here, and I think that in a few years it will be a very important factor in the trade of the district. Grapes are very largely grown here.

218. Have they tried wine-making here? Yes, and it has turned out very successful. All our orchards are on the northern side of the river.

219. Do all those who are growing fruit here seem to be satisfied with their results? Yes; they are all doing well. A railway from Walgett, *via* Coonamble, to Sydney would leave Walgett as far from Sydney as if it were connected by rail with Narrabri; but a connection with Narrabri would give it access to Newcastle as well as to Sydney.

220. Which route would serve the Walgett people the better? I think a route giving them access to two seaports.

Walter Scott, Crown Lands Agent and Clerk of Petty Sessions, Narrabri, sworn, and examined:—

221. *Mr. Watson.*] Can you inform the Committee what Crown lands will shortly be available for settlement on the northern side of the Namoi, in the vicinity of the suggested route for a railway to Walgett? Between 50,000 and 53,000 acres within 30 miles of Narrabri. W. Scott.
18 May, 1900.

222. How far north of the surveyed route does this land extend? Roughly speaking, for 5 or 6 miles.

223. And how far south of it? About the same distance.

224. What Crown lands are available for settlement on the south side of the Namoi, between Narrabri West and Wee Waa? I do not know the total area available there, but it is very large. I do not think more than 15,000 acres have been selected on that side of the river.

225. Is the balance of that land mostly held under lease? Most of it is waste land. It has been advertised, and the annual value has been put down at £1 for 1,000 acres for improvement lease; but I think only two of these leases have been taken.

226. How are the people doing who have taken up that land? I do not know; but the land that has been taken up has been leased as a sort of standby in dry seasons, to provide scrub and a little water for the sheep.

227. Can you give us any information as to the land which has recently been thrown open for selection on the northern side of the river? I do not know that any land there has been thrown open lately.

228. Is most of that land held by conditional purchasers? Yes; and there are one or two settlement leases there. Two or three blocks of land there were thrown open in 1896, and they were rushed.

229. Are the conditional purchases on the northern side of the river being held by the original selectors, or have they been transferred? I think that the original selectors still hold them, subject, perhaps, to mortgages. Most of the selectors there seem to me to be pretty well to do; they have got on very well since I have been here, and I have seen a good deal of them.

230. Into what sized blocks will the 50,000 acres to which you have referred be subdivided? Towards the river I think that land will be cut up into blocks of 400 or 500 acres for homestead selection.

231. Further back the blocks would be larger? Yes. I think the land further back will be taken up under settlement lease in areas of, perhaps, 2,000 acres.

232. How many selectors are there residing on their own holdings on the north side of the river, within 30 miles of Narrabri? Forty-one.

233. When the 50,000 acres are made available for settlement, how many more selectors will there be on the land? It will depend upon how the land is cut up. I think that part of it will be divided into homestead selections and part into settlement leases.

234. Can you not form a rough estimate as to how many blocks there will be? I think about fifty or sixty. If all the land is made available for homestead selection, the number will be very much greater.

235. In addition to the land held by selectors, there is a certain amount of freehold property in the larger estates? Yes.

236. How many large estates are there in the district that we have been speaking of? Edgeroi holding and parts of Killarney and Boolcarrol holdings are situated in that district.

237. Has any scrub land been offered for improvement lease on the northern side of the line? About 40 miles out, and at some distance from the suggested route, some land was offered in that way.

238. Under what conditions was it taken up? I think that 5,000 acres there were leased for about £6 a year.

239. Has the land on the south side of the river any good timber on it? Yes.

240. What kind of timber? Ironbark. There is good timber from 15 to 20 miles out from Narrabri West.

241. Has most of the good ironbark been cut out? No.

242. Do they still obtain sleepers there for railway contracts? Yes.

243. Would any additional traffic come to the line in the carriage of sleepers if it were taken out that way? I do not think so. The timber goes out more to the south-west, and I think that the carriers would continue to haul it to Narrabri West.

244. *Mr. Shepherd.*] Is there much pine in this district? Yes.

245. Is it largely used? Yes.

246. Is there any regulation as to the size at which it can be cut? Yes.

247. Has any attempt been made to prevent the cutting of small trees? There is an officer here whose duty it is to look after that matter.

John Stoltenberg, farmer and grazier, Narrabri, sworn, and examined:—

- J. Stoltenberg.
18 May, 1900.
248. *Mr. Shepherd.*] What is the size of your holding? About 1,200 acres. It is situated about 4 miles from Narrabri.
249. How much land have you under cultivation? About 250 acres.
250. What crops do you grow? Wheat, barley, and corn.
251. What yields do you get? When I first tried the black-soil country, I put 2 acres of it under wheat, and 2 acres of it under barley. That was in 1892, and I got 90 bushels of wheat, and the yield of barley was also very good, but I did not register the quantity. In 1897 I put 22 acres under wheat for seed, and I got 765 bushels, and I put 20 acres under wheat for hay, and got 56 tons. From 2 acres which I put under corn that year I got 106 bushels. In 1899 I put 205 acres under wheat, 145 acres being cropped for grain. From that I got 440 sacks of grain, and a lot of grain was left on the ground by the stripper. From the 60 acres which I cut for wheat I got 145 tons of hay.
252. What is your opinion of the district generally for agriculture? I believe that it is a very good district.
253. Do you think that the average yields here are equal to those which you have got? Where the land is well worked the yield must be about the same.
254. Are you trying any crops besides those which you have mentioned? I have tried turnips and potatoes. During the first year that I grew them I got turnips nearly as big as pumpkins, and everyone seems to buy them well.
255. Have you tried fruit-growing? Yes.
256. What has been your experience in grape culture? I do not know that the black soil is very good for grapes.
257. What kinds of grapes are you growing? Both wine and table grapes.
258. Do you think that fruit can be grown successfully in this district? Yes.
259. Where do you find a market for your fruit? The Farmers' Union disposes of it.
260. Do you believe that a railway from Narrabri to Walgett would be a success? I dare say that it would. I think that a good deal of wine and fruit and vegetables could be sent out that way.
261. The interest you would have in the construction of such a line would be in obtaining a larger market for your produce? Yes.
262. Have you a ready sale for the wine that you make here? Yes.
263. Are you able to supply the demand, or do you generally run short? I generally run short.
264. It is your intention, I suppose, to enlarge your vineyard in order to meet the demand? Yes.
265. What kind of wine do you make? Red wine and white wine.
266. What grapes do you chiefly use? Hermitage, Reisling, Madeira, and table grapes.
267. Do you grow any grapes for colouring purposes? No; there is enough colour in the Hermitage grapes.
268. *Mr. McFarlane.*] Which, in your opinion, is the more suitable for agriculture, the red or the black soil? There is not much red soil here. My soil is black soil. I have seen some red soil which is very good.
269. Which do you consider more suitable for cultivation? The red soil is the more loamy. I daresay that it will grow better potatoes than the black soil; but I believe that for wheat the black soil is the better.
270. What kind of black soil have you? Mine is plain country.
271. Is there much similar land in the district? Yes; all the land in the direction of Wee Waa is similar to it.
272. Does the black-soil country stand a drought as well as the red-soil country? I think so. For a wheat crop it holds the moisture well if it is cultivated.
273. What do you think it is best suited for? For wheat, barley, oats, or anything like that. I get better results from the soil here than I used to get on the Hunter.
274. What is your average yield of wheat per acre? Last year the frost nipped it a good deal, and about half of it was blighted; but I think the average yield is from 30 to 40 bushels. I have had as many as 45 bushels from an acre of wheat.

John Butler Brake, farmer, and Chairman of the Farmers and Settlers' Association, Deep Creek, sworn, and examined:—

- J. B. Brake.
18 May, 1900.
275. *Mr. McFarlane.*] How long have you been engaged in farming pursuits in this district? I have been doing a little farming since 1878; but I have only been farming, in order to make a livelihood, for the last seven years.
276. How many acres do you hold? About 340 acres.
277. How do you use your land? For agriculture and for grazing.
278. Is your holding near the proposed railway? No; it is south-east from Narrabri.
279. Have you a knowledge of the country along the proposed route? Yes; I know the whole of that country.
280. Do you hold good agricultural land? Yes.
281. Will your land grow a variety of products? Yes.
282. What crops are best suited to the soil and climate of this district? Wheat and vines.
283. What results have you had from them? Last year we got a little more than five bags of wheat to the acre, and what we stripped for other people averaged about the same yield. That yield, however, was a very low average for this district; but we had a very severe frost in October which nipped all the tops.
284. Do you cultivate black soil or red soil? It is a mountain drift that we are cultivating. We are nearly on the last creek going west that has that mountain drift. There are about 10 feet of soil, with a gravel formation underneath.
285. Is your land of a kind that will stand a drought? Yes.
286. What is your annual rainfall? About 25 inches, according to Mr. Russell. Last year it was about 19 inches.
287. Have you had any experience with red soil? I have seen good crops of wheat grown on black soil on the edge of Galathera Plain, by a man named Morris.

288. How would you describe the country on the north side of the Namoi, between Narrabri and Wee Waa? On the river bank there is a red, loamy soil for a few miles. Then you get more into swampy country, where the creek overflows. J. B. Brake.
18 May, 1900.
289. Is there a large area of agricultural land on that side of the river? Yes.
290. Is the swamp land good pastoral country? Yes; some of the finest in New South Wales. Going due north from the Namoi the country is all the same as far as the Moberly River, a distance of about 60 miles.
291. Could that country carry a large population? I do not know what it would; the rainfall is too meagre.
292. What area of land there would be sufficient to maintain a family? I do not think that less than 2,000 acres is sufficient in this district. A man wants to be able to carry stock as well as to cultivate. I think a man ought to be able to make £1,000 on his place.
293. How many acres would maintain a family if the land were used solely for agriculture? I do not think a man could live on agriculture alone in this district; he should go in for mixed farming.
294. Is the country much the same in the direction of Wee Waa? Yes. In 1889 I saw as beautiful crops on Pian Creek as I have seen anywhere.
295. Would your description of the country between Narrabri and Wee Waa apply to the country as far out as Walgett and Collarendabri? Yes; it would apply to the country as far as the Barwon. On the other side of the Barwon you seem to get a different sort of soil.
296. How would you describe the country between Narrabri West and Wee Waa? For about 3 miles back from the river frontage it is myall country, but further back it is a sandy desert, with brigalow growing on it. The country continues similar as far as Brigalow Creek, about 13 miles below Wee Waa. On one side of the creek is brigalow country, and, on the other, ironbark country. You can do nothing with that country; it is a mass of melon holes, and hardly good grazing country.
297. Is it occupied to any extent at the present time? I do not think there are a dozen inhabitants on the south side of the river between Narrabri West and Wee Waa, and the number is not likely to increase.
298. Would the construction of the proposed railway cause a great deal of settlement to take place? A line on the north side of the river would go through the cream of New South Wales. The country there is as good as the far-famed Liverpool Plains.
299. If the railway were constructed there would a considerable area of that country be put under wheat? I think so.
300. At what distance from a railway station could a farmer grow wheat? It would depend upon the price of wheat.
301. Supposing the price were 2s. 6d. a bushel? Then it would not pay a man to cart it very far, if he had to send it by rail to Sydney.
302. What market have you for wheat? We have the local market; but our principal market is out west towards Walgett. All the produce that is not consumed in this district is taken by team in the direction of Walgett.
303. Is the western market a large one? Yes; and it is our only outlet for produce.
304. Would you over-supply that market if more people went in for wheat-growing? Yes, we could over-supply it.
305. Where would your market be then? In that case we should have to send to Sydney or to Newcastle.
306. Would that pay? It does not pay at the present time; but if freights were reduced it might pay, just as it pays to send produce there from other parts of the country.
307. *Mr. Watson.*] What do you pay per bushel to send wheat from Narrabri to Sydney? It costs about 5d. a bushel for cartage and commission.
308. And you say that 20 bushels to the acre is a low average here? Yes.
309. Do you know that people cart produce 20 miles to a railway station in the South-Western district, and pay the same railway rates as you have to pay, although their average yield is only 10 bushels to the acre? I should like to know how long they will be able to keep on doing that. The areas under cultivation here are smaller than the areas under cultivation in the districts you speak of, but the larger the area the cheaper the cultivation. The men who have been growing wheat here are men who cultivate small patches, and who get their living as teamsters. When the road traffic ceases, they commence to cultivate their land. However, agriculture is gradually developing in this district, and a very large area will be put under wheat within the next ten years.
310. How is the agricultural land round about Narrabri held,—is any large area of it locked up in large estates? I believe so.
311. We have been informed that there are only forty-one settlers on the northern side of the river within 30 miles of Narrabri? The chances are that those settlers occupy the whole of that country.
312. The explanation is not that there is not much land fit to be taken up? No; because that country is splendid.
313. Is the land all pretty well cultivated now within 10 or 15 miles of Narrabri, along the suggested railway route on the northern side of the river? I do not know that anyone is cultivating land there. I think they have been making a better living out of grazing. It is such beautiful grazing country that the people there can make more by grazing than by agriculture.
314. If a railway were taken through that land would the people there go in for agriculture, or would they stick to their grazing? I think that, as the people get educated, they will combine grazing with agriculture. Where you cultivate you can run more sheep to the acre than where you do not cultivate, and in times of drought you have straw and other waste to fall back upon for feed.
315. For what distance towards Walgett would the average rainfall justify cultivation, assuming the land to be all fairly good? I was four years on the Barwon, and we had two splendid seasons there. I saw some wheat grown there which was as fine as I ever saw in my life; but of late the rainfall has not been sufficient.
316. How far west do you go before you get beyond what is a fair rainfall? I think that the Barwon would be the extreme western limit of the agricultural country, though the wheat I saw growing on the other side of the Barwon in 1889 has not been surpassed by anything we have grown here. Of course that was a splendid season. The country on the other side of the Barwon would be as good wheat-growing

J. B. Brake. growing country as you could have, if the rainfall were sufficient. The 1890 flood sent the water out to a distance of from 60 to 80 miles, and there was an average depth of from 2 to 6 feet all over the country. I do not think 2,000 people could find dry ground to stand on in any ordinary flood. I was there for three months, and never turned a wheel.

18 May, 1900.

317. Does it take a long while for a flood to go down? Yes.
318. *Vice-Chairman.*] What is the membership of the Farmers and Settlers' Association? There are sixteen members; but the Association has only recently been formed.
319. Do you belong to the Farmers' Association? Yes; it is a co-operative association for selling produce.
320. What business is done by them? From £60 to £100 a week. The fruit season is the time that most business is done.
321. From what extent of country do the members of the Association come? Members of the Association may belong to any part of the Colony; but they mostly come from within 50 miles of Narrabri.
322. Have their agricultural operations been fairly successful in this district? I could not say; they are practically only starting. There are some fairly large holdings, and some very small ones.
323. Do you think that the farmers here are up to date in regard to implements and machinery, or are they a bit backward? I think that they have been backward.
324. With better implements, do you expect to see larger areas cultivated? Yes.
325. Would the construction of a railway along either the north or the south bank of the Namoi stimulate the progress of agriculture in this district? I think so.
326. Which line would stimulate agriculture the more, a line on the southern side of the river or a line on the northern side? A line on the northern side of the river. Three miles back from the river there is not much land on the southern side that you could cultivate.
327. Would the agricultural land on the northern side of the river extend back 20 miles? It is all similar country right through to the Mehi, a distance of 60 miles.
328. Does the rain here fall at the right time of the year for crops? The year before last we obtained a good crop with only 5 inches of rain.
329. As a general rule, does the rain fall at suitable times for wheat? Yes. The wheat becomes ripe here in October, and it is very seldom that we do not have a thunderstorm by the tenth of the month.
330. Do the farmers of the district seem anxious to cultivate larger holdings? They seem satisfied with what they have been doing. Men who have been settled here for thirty years are still on the same holdings.
331. Has there been any combination amongst the farmers of the district to get together a large consignment of wheat for export? Yes.
332. Had you anything to do with the last two consignments that were sent away? Some produce went from this district.
333. *Mr. McFarlane.*] What class of farming implements do the farmers here chiefly use? Until the last two seasons they have been in a very small way; but recently combined harvesters, cultivators, strippers, and six-furrow ploughs have been brought into the district. Formerly the harvesting was done with reaping-hooks and sickles.
334. Is it expensive to clear land here? It greatly depends upon whether the timber has been ring-barked. If it has been ringbarked for a number of years you can burn it off; but if it is green it costs a great deal to clear. Ten acres of green timber cost me £100 to clear.
335. What can you get ringbarked timber cleared for? About 30s. an acre.
336. Is the land here thickly timbered? A lot of it is.
337. Anyone who took up land with the intention of cultivating it right away would have to incur a considerable expense in clearing it? Yes; but out to the west there is very little timber to contend with.
338. It saves expense to ringbark first? Yes; and I believe it improves the land too.
339. *Mr. Shepherd.*] Have you had an opportunity of testing the lasting qualities of the different soils here? I am cultivating a paddock now off which we recently took 20 bushels of wheat to the acre, and that ground has been growing wheat without a change of crop for twenty years.
340. What formation is it? There is about a foot of red loam on the top, and a clayey subsoil.
341. Have you had an opportunity to compare the lasting qualities of that soil with the qualities of the black soil? I believe that the black soil is inexhaustible as a crop producer.
342. Do you find it a more lasting soil for cropping than the red soil? I believe that the black soil is inexhaustible as a crop producer.
343. You find it a more lasting soil for cropping than the red soil? Yes. If it can be left to the weather after it has been worked it will fall to pieces like ashes. At Boggy Creek, where we have been cultivating for twenty years, there is as fine soil as you could wish to put a plough in. The only trouble is that after rain everything on the black soil grows too rank.
344. Is the black soil superior to the red soil? Yes, if you do not get too much rain. The black soil here is very strong. I have seen grass growing near the town so high that you could tie it across a horse's back.
345. Is the black soil generally free of timber? Yes.

Richard Ford Jenkins, Road Superintendent, Narrabri, sworn, and examined:—

R. F. Jenkins. 346. *Vice-Chairman.*] Do you know the district which the proposed railway would serve? Only as far as Pilliga and Bulyeroi.

18 May, 1900.

347. What roads are there leading from Narrabri towards the western limit of your district? There is a road leaving Narrabri, and running along the northern side of the Namoi until it crosses at Molly, about 7 miles out, from which point it keeps on the south side of the river until it gets to Wee Waa. Another road goes out from Narrabri West, and keeps on the south side of the river, and a little to the south of the first road, as far as Wee Waa. Then there is a road from Wee Waa to Pilliga and Walgett, and another road from there to Pian Creek. In dry weather the traffic uses the road which crosses at Molly; but when the river cannot be crossed because of freshets or floods the traffic uses the other road.

348. Which road does the Collarendabri traffic use? A road *via* Boolcarrol and Bulyeroi. That road keeps on the north side of the river all the way, joining the Wee Waa road about 5 miles out from Narrabri.

349. Would it cost much to make a good approach from Wee Waa to a point on the northern side of the river, distant about 3 miles. It would cost a good deal.
350. £1,000 a mile? Not as much as that; £700 or £800 a mile.
351. What is your opinion as to the relative value, for agricultural purposes, of the land on the north and south sides of the river within 20 miles of Narrabri? I think that the land on the southern side of the river is practically worthless, while the land on the northern side is very good. The expense of clearing the land on the south side would be so great that people would not make anything of it.
352. How far does the good land on the north side of the river extend? With the exception of small belts of scrub, it extends as far as Collarendabri.
353. How far are the timber forests in this district from the route of the proposed railway? The timber comes from a district about 20 miles distant from either Narrabri or Wee Waa.
354. What sort of timber is that? Ironbark and pine.
355. Is there an extensive tract of timber country? Yes, of ironbark country.
356. Is the timber of good quality? It is of fair quality; but it is not as good as the ironbark further south.
357. Is it good timber for piles? I have had difficulty in getting piles over 35 feet in length and 12 inches in diameter at the small end.
358. Would there be plenty of ironbark for railway construction? Yes, any quantity of it.
359. Would ballast be easily obtained for a railway? No; there is no ballast to be got.
360. Is there any ballast near Narrabri? There is the Woolabra gravel, which is the best, and there is some fairly good gravel about Narrabri. It seems to me that if the line were taken on the south side of the river it would be bordering country which is of very little value, and have only a narrow strip of good country on the other side of it; whereas, if it kept on the north side of the river, it would have good land on each side of it. Then, too, the southern route would not be much nearer to the timber country than the northern route.
361. Do you think the disadvantage of leaving Wee Waa out of direct communication with the railway is more than counterbalanced by the advantage to be gained by going through the richer country on the northern side of the river? I certainly think that it is.

R. F. Jenkins.
18 May, 1900.

Arthur Herbert Farrand, Inspector of Stock, Narrabri, sworn, and examined:—

362. *Mr. Watson.*] How would the construction of the proposed railway from Narrabri to Walgett *via* Wee Waa affect the stock traffic to Narrabri? The stock on the south side of the river between Narrabri and Wee Waa number about 20,000 sheep, while on the north side, within the area which would be affected by a line on that side of the river, there are 150,000 sheep. The country on the north side of the Namoi, out to the Thalaba Creek, is all good country. The Thalaba Creek is about 35 miles in a direct line north from Wee Waa. On the south side of the river, along the frontage between Narrabri and Wee Waa, there are about 25,000 acres of good country, and the balance is scrub land. I have had considerable experience in dealing with scrub land. For ten years I was managing holdings which comprised a great area of scrub land, for banks and other companies, and I have never known anyone to go on to that kind of country who did not come off it insolvent. I consider that the land from Narrabri West to Wee Waa, with the exception of 25,000 acres mentioned above, is virtually useless to the present generation, because it could not be used without a rabbit-netting fence, and it would cost about 4s. an acre to kill the scrub and make it available for grazing. After another three years another 3s. an acre would have to be expended in cutting down the scrub again. I think they will have the same experience on the Bogan. Immediately the large box timber is killed, suckers come up, and these can only be got rid of by grubbing them out. After you have gone to all that expense, you have only second-class grazing land. So far as farming is concerned, no one but a madman would attempt to farm such country, because the initial expenses are so great that by the time a man has got his land ready for cultivation he would have expended as much per acre as would have purchased far better land in a better district, and he would be in possession of soil which would only stand cropping for a very limited number of years.

A. H.
Farrand.
18 May, 1900.

363. At Wee Waa the proposed line crosses to the northern side of the river;—what is the country like between Wee Waa and Walgett? The country from Wee Waa to Walgett, on the north side of the river, is black-soil plains, with occasional belts of timber; but it is all first-class grazing country.

364. Would the timbered land be fit for cultivation if it were cleared? Yes.

365. How would you regard the black-soil country from an agricultural point of view? Mr. Charles Reid, of Forbes, was the only man in that district who made money at farming, and he cultivated the black soil on the edge of the Grawlin Plain. Then Cannon Brothers, of Wallanbillan, on the Bogan, who were neighbours of mine, ploughed up 200 acres of a black-soil plain without taking out more than half a dozen stumps, and they got about 30 bushels of wheat to the acre off that land.

366. Was that in an average season? It was in a fairly good season, but they got their crop in very late. I do not know what other crops they got. Mr. Reid cultivated the black soil successfully for ten years to my knowledge.

367. Do you think that the black soil between Wee Waa and Walgett is suitable for agriculture? A large part of it is.

368. How would you differentiate between what is good and what is not good? The swampy country is not suitable for agriculture, but there are large belts of timbered country running through the black-soil country. The soil in the timbered country is not so stiff as the black soil generally, and is first-class agricultural soil.

369. It has been suggested that a branch line might be taken from Burren to Collarendabri;—would the land between Burren and Collarendabri be similar to that between Wee Waa and Walgett? I can only speak generally of that country. I believe that it is similar to the country towards Walgett.

370. Is the land beyond Wee Waa heavily stocked? It is heavy, stock-carrying country.

371. What has been the recent experience in connection with it? During the last three years the people out there have had a very bad time.

372. Does the annual rainfall rapidly diminish as you go towards Walgett? I do not think there is a great difference between the annual rainfall of Narrabri and Walgett.

373. Do the plains out towards Walgett require more rain than is sufficient for the district around Narrabri? From Wee Waa right through to Walgett the country is all about the same.

374.

A. H.
Farrand.
18 May, 1900.

374. That country has recently suffered more from drought than the country immediately around Narrabri? Yes; but we had a break in the drought. We had one good fall of rain which they did not have.
375. In an average season what stock will that country carry? About a sheep to an acre and a half.
376. Do they go in largely for fattening? Yes; it is the best fattening country I have seen in the Colony, and I know New South Wales fairly well.
377. Is it as good as the Liverpool Plains? I think it is better. We have the same spring as they have; but in the winter there is such a large quantity of herbage that stock fatten more rapidly than in the spring.
378. They have a more regular rainfall on the Liverpool Plains? They may have better seasons generally; I am speaking of the fattening qualities of the country.
379. If a railway were taken out towards Walgett, would agriculture be largely entered upon in that country, or would people continue to use it for breeding and fattening stock? I think that agriculture has got a fair start within the last two years, and people have been so successful that they are likely to increase their cultivation.
380. Has most of the land between Narrabri and Walgett been alienated? A great part has been alienated, including what is held under settlement lease.
381. Are the holdings there very large? There are a great number of settlement leases. As the leasehold areas fall in they are taken up under settlement lease. Beyond Wee Waa there are a number of people holding from 8,000 to 10,000 acres who are fairly well to do.
382. Has any considerable area of the country out that way been secured by large holders? The large holders in that country are people holding up to 10,000 acres, and a few stations which contain still larger areas. Beyond Wee Waa there is a large area of Government land to be cut up for settlement.
383. Do you think that people holding 10,000-acre blocks would go in largely for agriculture if there were a railway nearer to them? I think there is every prospect of it, judging by the way in which the people have increased their area of cultivation round about Narrabri during the last three years.
384. Where does stock travel from Collarendabri and Walgett? There are three main routes coming into Narrabri—from Walgett, Collarendabri, and Moree.
385. Do large numbers of fat stock come here from Queensland? I think that more of the Queensland stock goes to Moree, but the stock from further out west comes to Narrabri.
386. Does pretty well all the travelling stock that goes to Walgett come towards Narrabri to be trucked, rather than to the Western line? Nearly all of it comes to Narrabri. Narrabri is either the first or the second trucking station in the Colony.
387. If the proposed railway were constructed, would it carry store stock, or would the traffic be confined to fat stock? Store stock will not use a railway except in times of drought.
388. I suppose fat stock would sooner use a railway than travel? Yes; owners get advice of the state of the market, and want to send in their stock quickly.
389. The Railway Commissioners favour the construction of a line from Coonamble to Walgett, and of another line from Narrabri to Collarendabri? I think that it would be better to take the railway from Narrabri to Walgett. By doing that the Walgett people would obtain a connection with Newcastle as well as with Sydney. Then, again, if Walgett were connected with Coonamble, all the traffic to Sydney would have to be brought across the Blue Mountains, which is a very great drawback.
390. The mere crossing of the mountains is no great difficulty? I should think it would interfere with the railway traffic. As a rule, people sending stock from here leave two or three truck-loads to be disposed of at Maitland.
391. Is there any essential difference between the land between Wee Waa and Walgett and that between Coonamble and Walgett? The land is good in both districts.
392. The Railway Commissioners think that their proposal would parcel out the country better, and give the pastoralists the best facilities for reaching a market? I have always thought that the Mudgee line should be taken further.
393. Would you take that line on to Walgett? I should prefer a line from Narrabri to Walgett.
394. The proposed Collarendabri branch makes rather an acute angle with the proposed Walgett line;— is there any other way in which a branch could be taken to Collarendabri? The Collarendabri branch would get a great deal of traffic from the country lying to the north of it, and out towards the Queensland border.
395. Do you think that the traffic in that country would go to a line to Walgett if there were no branch to Collarendabri? It would drift either to Walgett or to Moree.
396. Would a line to Walgett, in conjunction with the Moree and the Brewarrina lines, reasonably serve the traffic of the north-west district? The traffic in that district would certainly drift to the three points you have named; but I think that the country to the north of the route of the proposed Collarendabri branch merits the construction of a railway.
397. It would seem wasteful to construct a branch line if you could collect all the traffic on the main line? I think that if the branch line would pay it would be a reasonable thing to construct it. It is all good country from Burren to Collarendabri.
398. Has that country a fair rainfall? Yes.
399. Then you favour the construction of a line from Narrabri to Walgett, with a branch to Collarendabri? Yes; I think that the Collarendabri branch would pay.
400. *Vice-Chairman.*] Is much stock sent from this district to the meat-works on the Northern line to be frozen for export? Yes; a lot of stock goes from here.
401. Is that traffic likely to increase if the proposed railways are constructed? Yes; I think it will increase very much. They buy very heavily in this part of the country for the meat-works.
402. Do they go in for large stock there? Not very much; it is principally sheep country. They get their water almost entirely from wells.
403. With fair seasons there would be considerable consignments of fat stock from this district for export? Yes; except in times of drought. There are two men who are kept busy in this district buying for Richards and Son and for the Aberdeen Company.
404. How does the average clip of the district which would be served by the proposed railway compare with that of other parts of the Colony? Very favourably. The average weight of a fleece would be about 6½ lb.

405. *Mr. Shepherd.*] You say that you find the black soil here superior to the red? For grazing purposes.

406. Do you find that the country on which no timber is growing is inferior to that on which timber is growing? The plain country is sweeter for grazing than the timbered country. Until the stock have eaten out the plain country they will not go to the timbered country.

407. What sort of grass grows in the district? Trefoil is the principal herbage.

408. Which soil do you find best for cultivation—black or red? Very little of the black-soil country has been cultivated. I have not seen much cultivation in this district; farming here has only received an impetus within the last three years. As far as the country on the south side of the river is concerned, I would point out that it is proposed to construct a rabbit-barrier fence from Yarraldool, down by Comeby-chance, to Narrabri West, to shut out this scrubby land which is infested with noxious animals of all kinds. Rabbits are becoming very thick there, and we want to shut off that country as being useless, and only a trouble to the district.

409. Who is paying for the erection of that fence? It is being erected by the Government, and land-owners are subscribing. The people on the north side of the river are subscribing £2,000.

A. H.
Farrand.

18 May, 1900.

George Gregory, senr., farmer, Narrabri, sworn, and examined:—

410. *Mr. Shepherd.*] How far is your place from Narrabri? It is 6 miles above the town.

411. What is the size of your holding? At the present time I hold about 324 acres of freehold.

412. How long have you been residing there? I have resided forty years in this district.

413. How much land have you under cultivation? About 35 acres at the present time. I sold the farm on which I had my largest area of cultivation.

414. What has been the result of your farming? I grow wheat, barley, corn, and potatoes, and I keep a few sheep. On the average, I have lost one crop in twenty years, and I have got from 25 to 30 bushels of wheat to the acre each year. My other crops have been similar. We very seldom miss a crop. If we lose the early crop of corn we generally make it up with the late crop, and if we lose the late crop we generally make it up with the early crop.

415. What kinds of fruit do you cultivate? Apples, pears, peaches, grapes, nectarines, and nearly all descriptions of fruit.

416. Do all those fruits do well? Yes; this is a great fruit-growing district. I have seen the finest fruit grown here that I have ever seen in the Colony.

417. What kind of soil have you got? Some black soil and some chocolate soil; most of it is chocolate loam.

418. Do you find it all equally good? Yes; but the black soil is stronger and more durable than the chocolate soil, and it gives heavier crops.

419. Have you any distance along the route of the proposed line of railway? I have been to Walgett and Collarendabri. On the north side of the river the land is all good.

420. For what distance from the route of the proposed line? From the Namoi pretty well to the Thalaba it is nearly all good country. Nearer the river the soil is stronger and heavier than it is further out; but out on the plains there is as good agricultural land as you will find anywhere, if it is properly used.

421. To what distance along the route of the proposed line does the good country extend? I think pretty well to Walgett.

422. What proportion of the land would be fit for agriculture? I think at the very least a person might use two-thirds of that land for agriculture, and the balance of it would be fit for grazing. I should not like to undertake agriculture on the south side of the river, because I think that by the time I got the land ready to cultivate it would have cost £4 or £5 an acre, and it would not stand cropping for more than two or three years. It is a spewy kind of country, and that sort of country will never stand cropping for any length of time. In a wet season you can hardly go on it. There are patches of good country on the river bank on the south side; but they are very small.

423. What is the country like beyond Wee Waa and south of the route of the proposed railway? On the whole, it is inferior.

424. All the way to Walgett? Yes; pretty well.

425. How much of the land between Wee Waa and Walgett would be fit for agriculture, and how much for pastoral purposes? I do not think one-twentieth of the land would be fit for agriculture.

426. Is any of it useless, or would the whole of it be fit for pastoral purposes? Plenty of it is useless, unless you spend a lot of money on it. Without ringbarking it is altogether useless, and no one will take up the land to improve it.

427. Is there any good timber on the useless land? Not within a long distance of the river.

428. What kind of timber is there? Pine and ironbark; but the best timber has been picked out. The scrub is mostly brigalow, and it is very thick, and the ground is full of melon holes.

429. Do you think that the proposed railway would be self-supporting within a reasonable time? Yes, if it is taken on the north side of the river, but not if it is taken on the south side. It has been said that the line would have to be built on piles if it were taken on the north side of the river: but I think that a 4-foot embankment would carry the railway anywhere from Narrabri to Walgett, except through the creeks and gullies.

430. Would the construction of the proposed railway assist you in any way? No; it would be of no benefit to me.

Herbert Leigh Walker, auctioneer, Farmers' Union, Narrabri, sworn, and examined:—

431. *Vice-Chairman.*] What are the objects of the Farmers' Union? The farmers of the district join the union by paying a certain sum per annum, and the whole of their produce, or a fair proportion of it, is brought to the union sheds for sale by auction on Tuesdays and Fridays, and on other days of the week it is sold privately. There are two sheds in which the produce is stored. The returns are made up once a week, and Friday is pay-day. The average payments out for the last nine months have come to about £60 per week.

432. How long has the union been in existence? Six or seven years.

433. Have agricultural operations progressed satisfactorily in the district during that time? They have progressed wonderfully during the last three or four years.

434.

G. Gregory,
senr.

18 May, 1900.

H. L. Walker.
18 May, 1900.

- H. L. Walker. 434. Do you think the increase will be as rapid in the near future? More rapid.
- 18 May, 1900. 435. Are the farmers of the district, on the whole, progressive, and ready to adopt modern methods in agricultural operations? Yes. They have been going in extensively for machinery during the last two or three years. One farmer has invested £500 in machinery during the last three or four weeks.
436. Do many of your clients live further than 10 miles from Narrabri? Yes; I have sent stuff out 40 or 50 miles.
437. Have those who lived more than 20 miles from Narrabri been handicapped by the want of speedier means of transit? Yes.
438. Would the construction of a railway on the north side of the river lead to an improvement of conditions? I think that a railway on either side of the river would increase the prosperity of the district.
439. Then you differ from those who say that there is no good land on the south side of the river? I am speaking of the district about here.
440. What kinds of produce are brought in by the farmers week by week? We start our sales first with butter; then come eggs, bacon, vegetables—including cabbages, cauliflowers, pumpkins, potatoes, and other kinds—poultry, corn, chaff, and we shall shortly have bran and pollard to sell.
441. Is most of this produce sold for local consumption? Ninety-five per cent. of it is sold for local consumption. I am also doing a large turnover in wheat.
442. Is that in connection with the union? Apart from the union, and in connection with the union; but in connection with the farmers. The wheat is grown locally, and is sold for export.
443. What market do you expect to find for wheat if large areas are placed under crop? We can sell it in Walgett, Collarendabri, Pilliga, Millie, and the western districts.
444. I suppose any surplus would be sent to Newcastle or to Sydney? Yes. There has been a very large consumption of wheat here.
445. Can you supply wheat or flour to places further west than Walgett or Collarendabri? Not further than Walgett. My wheat has been carried mostly by Wright, Heaton, & Co., and Pigott, Martin. I have supplied them, and they have supplied the back country. I have sent wheat to Millie, Glen Roy, and all that district. Only yesterday I sent away very nearly a ton. We can grow the finest vegetables produced in the Colony in this district.
446. Can you beat the Chinese? The farmers here can beat the Chinese. Last year the Chinese had to come to us for vegetables. We have grown cauliflowers weighing as much as 26 lb., and cabbages weighing 28 lb.
447. Do you dispose of the whole of your stock by auction? Yes.

Burnett Morris Cohen, grazier, near Narrabri, sworn, and examined:—

- B. M. Cohen. 448. *Mr. McFarlane.*] What area of land do you occupy? About 7,300 acres of conditional purchase, conditional lease, and freehold.
- 18 May, 1900. 449. Do you run sheep or cattle? Principally sheep, but I have a few cattle.
450. What have been the results of your operations? For the last five or six years things have been pretty bad; before that we had fair seasons. We have not been half stocked for the last six years.
451. That is on account of the drought? Yes.
452. Do droughts frequently occur? I have been here about fourteen years, and the seasons were fairly good up to within five or six years ago.
453. What would be the carrying capacity of the improved land? In a good season we could not overstock the country, and in a bad season we could not carry anything.
454. Take an ordinary season? About a sheep to 1½ acre.
455. How would the other station property there compare with yours? All the land on the north side of the river is about the same in quality.
456. What is the character of the country on the south side of the river? It is useless country; I know that to my cost. Last year I started about 3,200 sheep on the road to Coonabarabran. The drover told me that the country was good; but when he got about 20 miles up Bohina Creek he said there was no water further on. He had the sheep there for five weeks, and in that time I lost 1,800 through the rottenness of the grass. He brought me 1,400 back.
457. Is any of the land on the south side of the river suitable for agriculture? I did not see any that is. I went 20 miles up the creek, and I was quite satisfied; I did not want to go any further.
458. Your station is 25 miles from Narrabri? Yes.
459. Do you send your wool to Narrabri? I send it through Narrabri to Newcastle.
460. What does it cost you to send it to Narrabri? In good seasons, about 1s. per cwt., and in other seasons, from 1s. 3d. to 1s. 6d. per cwt.
461. Have you any knowledge of any other district? I think this would be as good a district as any in the Colony if it got the same seasons. I have been out on the Macintyre, and I had a small place at Werris Creek; but this country is better than the country at either of those places.
462. What is your idea of the country on the north side of the river for agriculture? I think that in a fair season the plain country will grow anything. I have not done any cultivation myself, but some of my neighbours have. They have got very good crops of hay. One of my neighbours has got a crop of hay each season for the last five years, notwithstanding the drought. Another man that I know only harrowed the ground and got a crop of hay.
463. If a railway were constructed to Walgett, with a branch to Collarendabri, would the country through which it passed support a farming population? I think so, if the seasons were good; but the best of country is no good for agriculture if it does not get rain.
464. Have you been out as far as Walgett? I do not know much about the country more than 22 or 23 miles out in that direction.
465. Would the railway be much used for sending fat stock from Walgett or Collarendabri to the Sydney market, or to any other market? I am sure that it would.
466. Does much store stock travel from those places through Narrabri? Yes; a good deal.
467. Would store stock use a railway? No; because I do not think it would pay to send them by train; but, with fat stock, the sooner you get the animals to market the better.

468. If the railway were constructed, would there be a considerable increase in the traffic? I think so. As soon as there is any land thrown open for settlement lease north of Narrabri there are forty or fifty applicants for it. B. M. Cohen.
18 May, 1900.
469. Have you any knowledge of the leased land which will shortly be thrown open for selection? Yes; there is a lot of it within the 22 miles that I have spoken of.
470. Is it land which would attract settlement? Yes; it is very good land—timbered land and black-soil country. It is all cut up into areas of 600 acres or thereabouts, and if the line were kept on the north side of the river it would go through a lot of it.
471. Do you think that all that land will be taken up? I think so, judging from the way in which other land has gone.
472. What sized block would maintain a family, with mixed farming? A man would want about 2,000 acres, I think.
473. But a much smaller area if he went in for agriculture alone? Yes. I heard it said this morning that in a wet season wheat grows too rank on black soil; but it would not grow too rank for hay. I consider the country on the south side of the river useless, and there are very few settlers there.
474. *Mr. Watson.*] To take the line on the north side of the river would be to increase its length? Only very little. It will depend upon the position of the platforms as to whether people will be able to use the railway when it is built. Every one will want to get to the line at the nearest point.
475. Would you go in for agriculture to any extent if the line were made? I think I should.
476. How near would the line be to your property, if it were kept on the north side of the river? At one point it would go within half a mile of my land, and a platform on the travelling stock route would be 5 or 6 miles away. It would not pay to grow grain on my land now, because it would cost 6d. a bushel to send it to the railway station, and the carriage might come to as much as 7½d. and even 9d. a bushel.
477. Would it be an advantage to you to be able to get your fat stock away in small lots? Yes. At the present time you cannot afford to send away fewer than 500 sheep at a time, and they may all strike a bad market; but if you could send them in in small lots some of them would be sure to hit a good market. The country would be used to better advantage if stock could be sent away from it more frequently, and in smaller lots.
478. The Commissioners estimate that there will be a loss of about £13,000 a year on the working of the proposed lines;—would it be worth your while to guarantee a contribution towards getting rid of that deficiency? I do not see why the Government should come upon us for a guarantee when railways have been built in other parts of the Colony without them. If the people in the district through which other non-paying lines were run made any contribution to get rid of the deficiency I should be willing to do likewise, but not otherwise.
479. As a pure business transaction, would it be worth the while of the landowners here to make a contribution in order to obtain the line? If other landholders fell in with the arrangement I should not stand out.
480. *Vice-Chairman.*] Where do you generally get your supplies from? From Narrabri.
481. Not direct from Sydney or Newcastle? I used to get them direct, but I find it cheaper now to buy them in Narrabri. The Commissioners make a reduction to storekeepers for truck loads, and therefore the storekeepers can supply us more cheaply. A question was asked about growing grapes on black soil. At my place I have a few vines on black soil, and they do very well, although they are right out in the middle of the plain.
482. *Mr. Shepherd.*] Do you favour the construction of a line from Narrabri East to Walgett, or from Narrabri West to Walgett? I think the line should start from Narrabri East, because such a line would go through very good country, whereas a line from Narrabri West would go through bad country.
483. You would save something in carriage if the proposed railway were constructed;—do you not, then, think it fair and reasonable that you should be asked to contribute something towards the reduction of any deficiency on the working of the line? I do not agree to that; but if the other landholders fall in with the arrangement I shall also do so. What with one tax and another we are very nearly working for the Government.

Charles Alexander Ross, Member of the Local Land Board, Narrabri, sworn, and examined:—

484. *Mr. Watson.*] How far does the Local Land Board district extend from Narrabri? In an easterly direction it goes about half way to Boggabri, to a place called The Rock, and in a westerly direction to Come-by-chance, about 15 miles from Pilliga. C. A. Ross.
18 May, 1900.
485. Does it comprise a considerable area of the land which would be served by the construction of the proposed railway? Yes; it takes in two-thirds of it.
486. How would you describe the land in the direction of Walgett? On the north side of the river the land is of uniform quality almost the whole way. Here and there it is black-soil country, with occasional patches of red soil, and there are places where the ground is lightly timbered with coolabah, or heavily timbered with belar. On the south side of the river the country is sandy and very poor, for a distance of about 11 miles. Then on to Wee Waa there is a fringe of good country near the river, with an average width of about 2 miles. That country has all been alienated. The country to the south of it is sandy country, and heavily timbered, and the same description would apply to most of the country on that side to a little below Pilliga.
487. Would your description of the country on the northern side of the river apply to the country between Burren and Collarendabri? Yes; it is all similar country.
488. What is the carrying capacity of the black-soil and coolabah country? I managed a station on black-soil country for a period of twenty years, and I think that country is capable of carrying a sheep to an acre and a half. It has recently been carrying a sheep to an acre, but I think that is overstocking it. For thirteen years I carried a sheep to an acre and three-quarters in all seasons, but the country was very good.
489. Is most of the country out that way secured, or is any large proportion of it held under lease? A number of the leases are falling in now. Some of the land has already been cut up for settlement, while other leases which have been determined have not been gazetted yet. All the leases in the Central Division fall in this year.

- C. A. Ross.
18 May, 1900.
490. Will any considerable area of land become available for settlement? Yes; a large area.
491. What rent has been paid by the pastoralists? On first-class country the rental has varied from 3d. to 4d. an acre on the north side of the river between Narrabri and Collarenebri.
492. Do you expect the construction of the railway to result in an increase of cultivation in this district? I cannot speak on the subject of agriculture, because I have seen very little of it, though what I have seen has been fairly successful.
493. Would the railway be of use to stockowners in enabling them to get fat stock away? There would be a large increase in the fat stock traffic. No owner will drive fat stock now, when he can send them by train.
494. Would the line pick up fat stock from Queensland? The Queensland border is only 60 or 70 miles distant from Collarenebri, and you would get all that traffic there. At Walgett you would get the traffic from the Narran, the Culgoa, and the Birrie country, which is good fattening country.
495. Is that country used for large stock? No; it is nearly all sheep country, though it used to carry large stock.
496. I suppose that it is of advantage to save only a few miles in the travelling of fat stock? Yes; except in the very best of seasons stockowners seem to prefer to truck fat stock to market.
497. Would the line be of any advantage to starving stock? It would be of enormous advantage to the Walgett people at the present time in enabling them to get their starving stock away.
498. I suppose starving stock could only be sent away at reduced rates? That is so. A good deal has been said about timber. I was seven or eight years in the timber trade in Narrabri, and I think that the quality and value of the timber on the south side of the river has been overrated.
499. Do you mean that the good timber has been cut up? The best of the timber for a distance of 20 miles from Narrabri has been taken. I never found that there was any market for any of the timber outside the district.
500. Not even for ironbark? No, except for railway sleepers. I never sent any timber away, though I have imported all sorts of hardwood from Brisbane Water, and other places, for sale here.
501. Why did you not send timber away? The ironbark here is very little good for sawing, because there is so much waste in it, and the pine will soon be almost a thing of the past. It was a great mistake to allow it to be used for fencing in the first instance, and even now it is cut indiscriminately, without regard to the restrictions. I used to make protests, when I was running a sawmill, against people cutting immature timber which should have been allowed to grow.
502. Then you would not look upon timber as a probable source of revenue to a line on the south side of the river? I should not. I do not think it would be a source of revenue at all.
503. Would any considerable number of people be inconvenienced if the line were kept on the north side of the river? I do not see that anyone would be inconvenienced, except the people at Wee Waa. There is very little settlement on the south side of the river between Narrabri and Wee Waa.
504. *Mr. Shepherd.*] How far is it from Narrabri to the source of the timber supply? You cannot get any timber worth having within 20 miles. When I commenced sawing, in 1881, I could get timber within about 7 miles.
505. Twenty miles is rather a long way to haul timber? They are hauling timber 20 miles at present; but another 5 miles would make the distance too great. According to the regulation, they should not cut trees of less than 12 inches in diameter, but they do not keep to the regulation.
506. Is this timber cut on Crown lands? It is mostly cut in the forest reserves, and a special royalty is paid for it.

Edward Hart Wall, grazier, near Narrabri, sworn, and examined:—

- E. H. Wall.
18 May, 1900.
507. *Vice-Chairman.*] How far is Wollongabba from Narrabri? Eight miles. The proposed railway, if taken on the north side of the river, would go right through it.
508. What is the area of it? About 2,300 acres, and the area of the stud paddock is about 600 acres. I had other properties out there, but I sold them.
509. Do you know the country which would be served by the construction of the proposed railway? Yes; I have known it for many years.
510. What is its average carrying capacity? In a good season you could put on two sheep to the acre, and in other years about a sheep to an acre and a half. I think we could always carry a sheep to an acre and a half; but nearly all of us have overstocked, and have been carrying more than that. At the present time I have one and a quarter sheep to an acre, and, of course, I have very little grass in consequence. Until three or four months ago I had two sheep to the acre.
511. Do you agree with what has already been said about the land on the south side of the river? I know a good deal about that land, because for the last two or three years I have rented about 20,000 acres of it. About two and a half years ago I stocked it with cattle, but when I mustered, ten months ago, I was 325 head short, and I have only heard of two of them since. At the present time I have cattle starving, and I am selling them for whatever they will bring; but, although I am paying rent for the place that I speak of, and it is fenced, I would not put a beast on it. That property runs up Bohina Creek for a distance of about 15 miles, and a railway on the south side of the river would go through it.
512. Have you ever tried farming on any part of your holding? Some years ago we had a drought, but my brother, who has a place about 20 miles from here, told me to send four bags of wheat to his place, which he had sown, and which turned out to be one of the finest crops of wheat in the district. My brother put men on to cut it with reaping hooks, and he had the hay stacked up; but as he did not understand farming, the work was not done properly, and the result was that the whole stack rotted. Then last year, at Wollongabba, one of my men ploughed up a hard, dry patch of ground and sowed a crop of wheat in it, and I reaped about 30 tons of hay, which is in my shed now. I think that any part of the plain country would grow almost anything if there were rain. I have large oranges on my trees at Wollongabba at the present time.
513. Would you go in for agriculture if there were a railway? I cannot promise to do that, because I do not understand much about farming; but I would do a certain amount of cultivation. Last year I paid £860 for hay to save my stock, but it would not have cost me nearly so much to grow more hay than I bought. I intend, in the future, to grow a crop of hay, and to stack it away in the paddocks.
514. Where do you usually consign your fat stock? To Homebush and to Maitland.
515. Do you send any to Aberdeen? Not unless they come and buy from me.

516. Do you get your supplies locally? I buy some in Sydney and some here, but most of them here.
517. If the proposed railway were constructed, small settlers would be able to send away small consignments of fat stock at frequent intervals, which their distance from the railway at present precludes them from doing? Yes; if they had trucking-places nearer their holdings they could send away a truck load at any time.
518. That traffic would be a source of revenue to a railway? Yes; it would be of great advantage to a railway.
519. Do you regard the country out towards Walgett and Collarendabri as good grazing country? Yes; it is all splendid country. I think that a line should be constructed to Collarendabri. One witness spoke about a railway being a cheaper thing to make than a road. I think it would be nearly as cheap. I lived on the north side of the river for a time, but the road there was so heavy that we had to send out rations on a packhorse. On the south side of the river, however, people can always get along. I have property at Wee Waa, at Narrabri West, and at Narrabri, and though I would sooner lose £1,000 than have the railway go through my Wollongabba paddock, I think that the line should be kept on the north side of the river, and if it is kept on that side of the river it will go through my paddock. It has been said that a line on the north side of the river would be more expensive than a line on the south side; but if the line is taken on the south side of the river they will have to build two bridges for it, and that will cost nearly as much as it would cost to make a railway from here to Boolcarrol. At Bohina Creek the bridge would have to be nearly a quarter of a mile long. That is a great sandy creek over 200 yards wide, and a great force of water comes down it at flood-time. Then there would be another very expensive bridge to build at Wee Waa. It has been said that the country on the north side of the river is flooded at times; but I never saw it in such a state that a man could not ride from here to Boolcarrol. It is not the water that keeps people from travelling here; it is the sticky nature of the soil. No doubt the people about Wee Waa will give evidence in favour of the line being taken to Wee Waa, because that would suit them; but they would also be served by a line on the north side of the river. There are 30,000 or 40,000 acres of land on Gundemaine holding which are to be thrown open shortly.
520. Is that land which can be cut up into small farms? Yes. With mixed farming an industrious man could make a good living on 640 acres of that land, and there is no comparison between the land on the north side and the land on the south side of the river. I believe, too, that you have heard the truth about the timber. It is not a matter which should be considered at all.

E. H. Wail.
18 May, 1900.

Theodore Morath, saw-mill proprietor, Narrabri, sworn, and examined:—

521. *Mr. Shepherd.*] How long have you been here? I have been a resident of Narrabri since 1865, and a saw-mill proprietor since 1876.
522. What kind of timber do you generally use? Mostly pine; but some apple-tree and some iron-bark.
523. Where is your market? The local market. I have got price lists from Sydney, and I find that the price of Richmond River pine and of New Zealand pine is about the same as we sell our pine for. I have had letters from Newcastle to know what I could deliver pine at the railway station for; but I knew that it was of no use to make a quotation, because they could get it more cheaply down there.
524. Does your timber come from Government land or from private land? Most of it from Government land.
525. How far have you to cart it? From 20 to 25 miles out from Narrabri West, and from 15 to 20 miles from the foot of the mountains. Of course, you can get saplings and rubbish a little nearer.
526. What is the average size of the timber you get? They are not supposed to cut trees of less than a foot in diameter, and nine out of ten of the logs are from a foot to 1 ft. 3 in. in diameter.
527. Do you consider the small timber equal to the larger timber? No. In a very small tree the sapwood rots quickly.
528. Is ironbark still plentiful in the neighbourhood of Narrabri? Ironbark for sawing is very scarce, and we have to go a long way to get it. Most of it is very faulty, and we have to throw half of it away. I have logs in my yard now that have been there for three or four years, and they are not worth cutting up. A person who is not a practical man may go through the scrub and see a patch of timber that looks splendid; but you will find when you come to fell them that many of the trees are hollow. I have cut timber that was solid at the butt, and solid again 12 or 15 feet up from the ground, but hollow in between. In my opinion a dry season stops the growth of the trees, and the timber rots. Then rain comes, and the trees commence to grow again. Some people commenced to cut timber for a bridge here; but they had actually to buy timber in Singleton to finish the contract. There is no market for ironbark here, except for Government work. The ironbark that is good is very good. I have had timber from down the country; but it is not half as hard as our ironbark.
529. Is much improvement going on in Narrabri? Yes. When I first came to Narrabri it was a very small town, but it will be a very big town.
530. Are you kept pretty busy at the saw-mills? Sometimes; but the work is very irregular. Sometimes we have more than we can do, and at other times we have nothing to do at all. A lot of timber is sent to Moree and out that way from here.
531. Is there a plentiful supply of timber within 20 miles of the route of the proposed railway, on the same side of the river? There is no timber within 20 miles of that line. There were two mills out there, but I think they have been closed. Seven years ago my teams went out from the railway line to the country behind Molly, while the Wee Waa teams were working this way, until they finally met, so that there cannot be any timber worth cutting, except for railway sleepers. You cannot get good timber for other purposes anywhere but at a long distance from the river.
532. Is the timber good beyond Wee Waa? There is good timber beyond Pilliga.
533. Would the timber trade create traffic for the proposed railway? The proposed railway would not be of the slightest benefit to the timber trade, because we could not get timber any nearer to the line than it would be to Narrabri West. The scrub really runs in the direction of Baradine. If you made a railway there, you would get some revenue from the timber traffic for a year or two; but after that the timber would be cut out.

T. Morath.
18 May, 1900.

- T. Morath.
18 May, 1900.
534. Are you in favour of the construction of the proposed railway? I do not think its construction would affect me at all, because I would not get timber any cheaper.
535. Do you own land in the district? I own about 130 acres and some town allotments here, and I also hold a conditional purchase of about 100 acres on the Moree line. I have about 12 acres under cultivation in the town, to provide hay for my own use.
536. Do you find the soil productive? Yes; it grows a very good crop of wheat. I have had from 2½ to 3 tons of hay to the acre. I believe that the line will pay if it is taken through good country. Even if it does not pay it will increase settlement. If it is taken through barren country you cannot expect to get any benefit from it.
537. Do you think that, on the whole, the construction of the proposed line will benefit this district? Yes; it will benefit the district more than it will benefit the town. People living on the black-soil country find it very difficult to travel in wet weather, so that a railway would be of great convenience to them. Then, the summer months are very trying to women and children in this district, and if there were a railway they could get away to Armidale, or some cool district. Many people cannot stand the jolting of the coach. I do not consider that the country outside Narrabri and Moree is fit for a white family to live in during the hot weather. A railway would be of advantage to pastoralists, in enabling them to get their sheep away in a time of drought.

Charles Martin, forwarding agent, Narrabri West, sworn, and examined:—

- C. Martin.
18 May, 1900.
538. *Mr. McFarlane.*] How long have you been in business here? Seventeen years; ever since the railway came here.
539. How would you class the country between Narrabri and Walgett and Collareendabri, for pastoral purposes? It is good country. I think it is as good as any country, except the Liverpool Plains, and it compares very favourably with that country.
540. From what direction does traffic come to Narrabri? From Collareendabri and Walgett. The Collareendabri traffic comes in through Boolcarrol, or around by Burren.
541. What is the nature of the traffic from Walgett—fat stock? Yes. All the district that we are speaking about is sheep country; there are no cattle stations here.
542. Is there any considerable traffic from Narrabri into that district? Yes, especially for Walgett.
543. General merchandise is sent out there, I suppose? Yes.
544. Has that traffic materially increased during the seventeen years that you have been in business? Yes, very much. I followed the train from Murrurundi to Willow Tree, Quirindi, Tamworth, Gunnedah, and on to Narrabri, and I think there is more traffic now from Narrabri than there used to be from Murrurundi when the railway stopped there.
545. Do you think that there would be a similar increase of traffic if the proposed railway were constructed? I do not think that the increase would be so great, because there is not so much country beyond.
546. The line could not go further west than Collareendabri? There are no towns further on; it is all pastoral country.
547. Would the country between here and Walgett carry a good population if railway facilities were given? Yes; on the Pian Creek side, from the Namoi right out to Collareendabri.
548. What is your opinion of the country on the north side of the river as compared with that on the south side? There is no comparison possible. The country on the south side is scrubby country, until you get to Come-by-chance, when it begins to open out. Below Wee Waa, and out towards Pilliga, the country is covered with coolabah, pine, and a good deal of ironbark.
549. Which line would get most traffic—one from Narrabri East to Walgett, or one from Narrabri West to Walgett? A line from Narrabri East, because it would go through more settlement.
550. And through more land fit for settlement? Yes. There is no good land between Wee Waa and Narrabri, except for occasional patches, whereas, on the north side of the river, the whole of the country is good, and all of it is settled.
551. Would it carry a large population? I am sure that it would.
552. Will the Crown land that is shortly to be thrown open for settlement be selected? Yes; it will be rushed.
553. When the proposed line is constructed will there be a material increase in the traffic of the district? Yes.
554. Do you endorse what has been said about the desirability of making the proposed railway? Yes.
555. Does the Collareendabri traffic come through Wee Waa to Narrabri? No; it comes through Boolcarrol.
556. *Vice-Chairman.*] At all times? Carriers who lived at Wee Waa would go through there and out by Burren, but 90 per cent. of the traffic would come through Bulyeroi and Boolcarrol.
557. *Mr. McFarlane.*] Where do the supplies that you send to Walgett and Collareendabri come from? From Sydney, Newcastle, and Maitland, and flour from Tamworth. Most of the goods come from Sydney. A lot of wool is sent from this district to Newcastle.
558. *Mr. Watson.*] Does it afterwards go to Sydney, or is it shipped direct from Newcastle to England? It goes to England. I think that all the wool-growers who ship direct send to Newcastle.
559. *Mr. McFarlane.*] What is sold in the Colony goes to Sydney? Yes.

SATURDAY, 19 MAY, 1900.

[The Committee met at the Municipal Council Chambers, Narrabri, at 10.30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDSAY CRAWFORD SHEPHERD, | JOHN CHRISTIAN WATSON, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

John Bissett Brodie, station manager, Boolcarrol, sworn, and examined:—

560. *Vice-Chairman.*] How far is Boolcarrol station from Narrabri? It is 30 miles north-west from Narrabri. If the line is made on the northern side of the Namoi it will go through Boolcarrol. J. B. Brodie.

561. What is the extent of the holding? Roughly speaking, 100,000 acres.

19 May, 1900.

562. What is its average carrying capacity? That depends entirely on the seasons. In very good seasons we carry a sheep to an acre and a half, and in particularly good seasons even more; but in seasons like the present we cannot carry a sheep to 20 acres.

563. How much of your holding is secured land, and how much is leased land? There are about 50,000 acres secured, and 50,000 acres leased.

564. What difficulties do you labour under at the present time in the matter of road carriage? Our wool and other traffic all comes or goes to Narrabri, and we labour under no exceptional difficulties, except when floods or droughts make travelling almost impossible.

565. Where do you send your wool? *Via* Narrabri West to Newcastle, and from there it is shipped to England.

566. What are your views with respect to the proposal to connect Walgett and Collarendabri by rail with Narrabri? My impression is that the best line would be obtained by going out from Narrabri West to Wee Waa, crossing the river there, and then going along the Pian Creek road until you come to the point where it is proposed that the Collarendabri line should branch off from the Walgett line.

567. The witnesses yesterday were almost unanimous that the land on the south side of the river was not fitted for settlement; but that on the north side there was already a considerable amount of settlement, and a considerable area of good land suitable for agriculture? I do not know about the land on the north side of the river being suitable for agriculture; but it is the best pastoral land. If there is ever to be settlement on the southern side of the river it will have to be small settlement, and there will never be small settlement there without a railway. The timber which grows on that side might enable small holders to get enough capital to commence agriculture with, but whether they would make a success of agriculture it is hard to say.

568. What leads you to the opinion that the railway should be taken on the southern side of the river? Because on the northern side of the river a vast area of the country is subject to floods.

569. Is it all flooded country on the northern side of the river? Yes, pretty well; from Greenbar to Kelaher's.

570. How far do the flood-waters go out from the river on the northern side, in an ordinary flood? All the country is flooded. I understand that it is suggested that a railway station might be put somewhere on the Tulladunna Creek; but there is not enough high ground there for a railway station. There is only a narrow piece of land on the bank of the creek which is above even ordinary floods, so that there would not be enough dry ground for trucking-yards.

571. Would it be any great disadvantage to Wee Waa if the railway were taken 3 miles away from it? Yes; the Wee Waa people in that case would require to have a bridge made across the river in order to give them access to the railway station.

572. There is a bridge across the Namoi at Wee Waa now? Yes; but it is on the road to Collarendabri, whereas the railway station site at Tulladunna is in quite a different direction.

573. To what depth is the land on the northern side of the river covered by water in an ordinary flood, and how long is it before the water gets away? One of the chief anabranches of the river breaks out just above Tulladunna. We have to remove our stock as soon as we hear that the water has broken over at Gunnedah, and to take them about 6 miles towards the head station before we can consider them safe.

574. Does it take long for the water to go off the land again? Sometimes the water remains on the land for weeks, and at other times for only a few days. In a very wet year, like 1890, the flooded country is under water for months.

575. What is the average depth of the water on the flooded country? In many places it is up to the tops of the fences. Near Tulladunna the water would be about half a mile wide and about 5 feet deep in a flood; but all the country is more or less under water for miles back towards Greenbar.

576. Has Boolcarrol any business connection with Wee Waa? Very little; all our business is done with Narrabri at the present time.

577. The Departmental route keeps the line back from the river on the northern side;—looking at the plan do you not think that on that route the railway would be kept out of the reach of flood-waters? It would be on dry land 20 miles out from Narrabri East, though, if there were heavy rains in the ranges, the creeks would break over and flood even a part of that country.

578. After you get 20 miles out, for what distance would the line go through flooded country? For 11 or 12 miles, until it reached Pian Creek, though there are patches of high country here and there.

579. On the southern side of the river, is the land free from flood as far as Wee Waa? Yes; Wee Waa is the natural capital of the district out there. Before the railway came to Narrabri Wee Waa was the recognised capital of the whole district, because of its central position. The roads diverge from there in all directions, and the Police Magistrate used to live there. I think that near Wee Waa the land is better adapted for a railway station than any of the land on the northern side of the river. In my opinion

J. B. Brodie. opinion the Railway authorities could not find a suitable railway-station site on the northern side of the river, opposite Wee Waa. Roads go out from Wee Waa to Narrabri, Pilliga, Pian Creek, Collarendabri, Boolcarrol, and Moree.

19 May, 1900.

580. *Mr. Watson.*] Whichever route is taken, there will be some flooded country to go through? Yes; but there is more flooded country on the northern side of the river than on the southern side. Wee Waa will always be approachable in any season, whereas we have many seasons when a station on the northern side of the river, near Wee Waa, would not be approachable, unless high viaducts were constructed to give access to it. Mr. Surveyor Little proposed bringing the railway within 2 miles of Boolcarrol head station, and he thought that he could get the line from there through to Pian Creek; but in high floods that country would all be under water. A good many of the settlers there have now in times of flood to remove their stock on to country belonging to Boolcarrol. The higher patches of land were purchased very early, because they afford safety to the sheep. They are box ridges, and were bought by Mr. Moseley when he owned Boolcarrol. My brother has selections down towards Pian Creek, and there is not an acre in his place where the water is not over the sheeps' backs in flood-time. A selector named Hardy, whose land lies close to the route of Mr. Little's proposed line, has not an acre of dry ground in anything like high floods. His stock would have to come on to our land then.

581. *Vice-Chairman.*] Have you to cross the flooded country to get into Wee Waa from your place? Yes; we should have to cross a good deal of it.

582. But you have stated that Wee Waa would always be approachable? I mean by the railway. There would be no stoppage of railway traffic if the line were taken to Wee Waa, though during floods Wee Waa would not be approachable from the northern side of the river.

583. *Mr. Watson.*] Would a station at Wee Waa suit the people to the west and to the south? Yes. Wee Waa would suit them as well as any other place. If a station is made at Wee Waa the Boolcarrol wool and sheep will have further to travel to it than to a station at Tulladunna; but once the wool was on the drays the extra distance would not mean much. Our nearest distance to the proposed railway would be 9 miles if the line kept on the northern side of the river, whereas from Wee Waa we are distant about 12 miles by the direct route, or about 15 miles if we had to go round by the bridge. I think that a station at Wee Waa would suit the district better than a station at any other place.

584. *Vice-Chairman.*] If the line were taken on the south side of the river, and close settlement took place on the north side, the settlers on the north side would be shut off from railway communication? Yes, in times of flood; but at other times they could go either to Wee Waa or to Narrabri.

585. Could the river be crossed between Wee Waa and Narrabri? Yes; there are one or two points at which it could be crossed.

586. Would a railway on the north side of the river attract more traffic than a railway on the south side? I do not think there would be much difference.

587. You think that what traffic would go to one line would go to the other? I think that most of the traffic from the country between Narrabri and Wee Waa would come to Narrabri, unless it could get to a railway station at some nearer point on the proposed line. If there were a bridge there would be no difficulty in getting across from the north side to a railway station on the south side.

Charles Wall, hotelkeeper and grazier, Narrabri, sworn, and examined:—

C. Wall. 588. *Mr. Watson.*] Have you resided long in this district? I have known the district nearly thirty years, and I have been living in it for twenty-two years.

589. Do you think the proposed railway should be taken on the northern or on the southern side of the Namoi as far as Wee Waa? I think there is far better country on the northern side of the river than there is on the southern side. The land on the northern side is all rich land, and is suitable either for agriculture or grazing. There is very little flooded country there, though there are a few swamps. I think that the land on the northern side of the river would support ten times as many people as the land on the southern side would support. The land on the southern side is scrubby country, only fit for wallabies, except for a few strips along the river, and it is more subject to floods than the land on the northern side.

590. Does the water go out any great distance from the river in flood-time? In a very heavy flood like that of 1890 it goes out a long way; but you can always ride through it, and it soon runs off. I rode from Narrabri to Moree in a day and a half in 1890, when the flood was at its highest, and in no place was the water up to the horse's belly. You do not get on to any flooded country until you get below Tulladunna.

591. What is the country like between Wee Waa and Collarendabri? Until you get out a little from the river the country is pretty low. The ridgy parts are high country.

592. Is the land good there? Yes. All the country from the Namoi to the Mehi is good land. I have been over all of it.

593. Is the rainfall sufficiently regular out about Burren to encourage men to go in for agriculture there? There is not much difference between the rainfall there and the rainfall here. We have grown crops down on the plains close to Greenbar. Last year we got a very fine crop. The first crop that we sowed was the finest I have ever seen. That wheat was grown out on a plain which, according to Mr. Brodie, is flooded country; but I have never seen it flooded. I have heard of sheep being shifted away from the river frontage on the other side of Wee Waa, but I have never heard of sheep being drowned on the country Mr. Brodie was referring to. We never had any sheep drowned there, and we never had to shift our sheep.

594. Where is your place? This side of Greenbar. The company had sheep through all those paddocks in 1890, but none were drowned. A few days after the rain ceases all the water is gone, except what remains in the swamps, and you could ride through them.

595. Would you say that the country from Burren to Walgett is fair country? All of that country is very fair. On the south side of the river, however, the country is not good, though down by Come-by-chance it opens out a little, and you get away from the scrub.

Albert Robert Stafford, storekeeper, and saw-mill and flour-mill proprietor, Narrabri, sworn, and examined:—

596. *Mr. Shepherd.*] How do you think the country on the north side of the river compares with that on the south side? I endorse Mr. Wall's comparison. The floods on the north side of the river are not so great as those on the south side, and the land on the north side is very much superior to that on the south.

A. R.
Stafford.
19 May, 1900.

597. Does the good country extend for any considerable distance from the route of the proposed railway? On the north side the country is all good.

598. For 20 miles? Yes.

599. And on the south side? A narrow fringe close to the river is very good; but the rest of the country is scrubby and useless.

600. What about the timber on the south side? I can speak about the timber, because I have been running a sawmill here for four years, and I have cut about 80,000 feet a month. Ninety per cent. of the pine which I have cut has come from the mountains to the north of Narrabri. I can obtain logs from there more cheaply, and of a better quality, than from the south side. The nearest good timber to Narrabri, on the south side of the river, would be about 20 miles from Narrabri, and about the same distance from any point on the proposed line from Narrabri to Wee Waa. The pine there is just as near to Gunnedah or Boggabri as to Narrabri, so that there is no chance of its being sent from Wee Waa. Teams have gradually gone back from the different railway stations, until now the good timber is about the same distance from each of them.

601. Is the supply nearly exhausted? It is practically exhausted within 20 miles.

602. Would the construction of the proposed railway enable you to procure timber more easily? No, because the timber is nearer Narrabri than Wee Waa, or any point on the proposed line between Narrabri and Wee Waa. There is no timber beyond Wee Waa. With regard to ironbark, I have a mill 20 miles from Narrabri, out in the ironbark country. I have been forced to put a mill there, because of the great waste in haulage if ironbark is sent in in the rough. We consider that we lose 30 per cent. of every log that we cut.

603. From defects in the timber? Yes. That timber costs 17s. per 100 feet on the railway at Narrabri, and the timber at Singleton costs 12s. on the railway there; so that it is impossible to export ironbark from Narrabri to other places along the line.

604. You can only cut ironbark for local use? Yes; and ironbark could not be used in this district for building purposes, even if it were the same price as pine, because it is subject to destruction by white ants.

605. I thought ironbark was exempt from the ravages of white ants? On the plains it is almost impossible to keep them out, except from pine. There is no possibility of an export trade in timber from either Narrabri or Wee Waa.

606. What is your opinion about the proposal to construct a railway from Narrabri to Walgett, with a branch to Collarendabri? I think such a line would be very successful, and should induce close settlement. There can be no doubt about the quality of the land through which it would pass, both for agriculture and for grazing. Between Narrabri and Wee Waa there is a very large area of land to be thrown open for settlement, and I think that that land will be settled upon very closely, and will be used for agriculture. I think it will be taken up in small areas.

607. What do you call a small area? From 640 acres to 1,000 acres. I think it will be very easy for a man to make a good living by agriculture on 640 acres on the north side of the river, if he is close to a railway. A wheat crop only occupies the ground for four or five months of the year, and during the balance of the time the farmer could run as many sheep on his holding as he could carry on the whole area, if he did not cultivate. I am farming 640 acres just outside the town, and I found last year that I could carry as many sheep when I farmed the land as I could without farming at all.

608. In what direction is your farm? It is about 3 miles south from Narrabri.

609. Then you are already well served by the railway? Yes. Mr. Harper informed the Committee that there was no grain grown at Narrabri; but that is not so. About three years ago we had to import seed; but this year I estimate that we have grown 100,000 bushels of wheat, and I anticipate that next year we shall obtain just double that quantity. This wheat is grown on land similar to that through which a railway on the northern side of the river would pass. It costs very little to put that land under cultivation. It can be ploughed for from 2s. to 2s. 6d. an acre. I am having my land ploughed under contract for 2s. an acre.

610. What do you pay for ploughing, sowing, and all other operations, up to harvesting? It costs me 5s. or 6s. an acre for everything, including seed. The ploughing costs me 2s. an acre, I finding the plant; the seed costs me 2s. 6d. an acre, and harrowing 1s. an acre. The cost of harvesting is very difficult to estimate; but I would put it down as 5s. an acre, on the average, for everything, including bagging.

611. With what yield? With our average yield of 25 bushels to the acre.

612. Then the whole of your operations would cost 10s. 6d. an acre? Yes.

613. Do you think 25 bushels is a fair average yield for the country on the north side of the river? I think that it would be a low average. Up to three years ago the average size of the areas cultivated was not more than 20 or 30 acres; but now we have several farmers who are cultivating areas of 300, 400, and 500 acres. They are mostly cultivating on country similar to that on the north side of the river.

614. What is the average size of the holdings about here? From 100 to 200 acres.

615. Are the farmers able to get a fair living on holdings like those? Yes; but not by growing wheat. They live largely by growing vegetables and small produce, such as is sold by the Farmers' Union. They are all close to the town. If people lived any distance away from the railway they could not go in for wheat-growing. The country here is so good for grazing that unless it is made easy for people to go in for agriculture they will continue to use their land for grazing purposes.

616. What is a fair distance from a railway at which to grow wheat? Any distance from which a man may go to the railway station and back again to his home in a day.

617. *Vice-Chairman.*] What market would the agriculturists of this district have for their produce if they went in extensively for agriculture? There would be a local market out in the west as far as the railway would take their produce. All the flour that my mill can turn out would go that way; any surplus production would no doubt go to Newcastle for export. It has been stated that the Railway Commissioners estimate that there will be a loss of £13,000 a year on the construction of the proposed railway.

A. R.
Stafford.
19 May, 1900.

railway. In my opinion, if the country is occupied by small settlers between here and Wee Waa that will give a very large return to the line. The Railway Commissioners say that they do not anticipate much agricultural development in this district; but I consider that they have not allowed enough for agricultural traffic. If the line were taken on the north side of the river, and closer settlement followed, a great part of the estimated loss in the working would be made up by the traffic within 30 miles of Narrabri, whereas if the line is taken on the south side of the river there will be no traffic within that distance. Mr. Harper also stated that the country from Narrabri to Walgett on the south side of the river was as good as the country between Narrabri and Moree, but it certainly is not as good. A witness stated yesterday that a farmer should be able to make £1,000 a year by cultivating his land. Well, men have been making nearly that sum by pastoral pursuits, so that there is hardly any inducement to go in for agriculture under present conditions.

618. How far west from Wee Waa is the rainfall sufficiently good for the prosecution of agricultural operations? I think that nearly all the land as far as Walgett and Collarendabri is suitable for agriculture; but the rainfall becomes 3 or 4 inches less as you go west.

619. Is it more than 20 inches right through? I believe so. In this district the best rain comes just when the crops want it. I have been here for seventeen years, and I have only known of one failure during that time. Three or four persons have experimented with the black soil country during the last year or two. A man named Hunt harrowed in 40 acres of ground last year, and his return was about 36 bushels to the acre. Two other people, named Dickson, have had 110 acres under cultivation in black soil country, and they sent nearly 190 tons of chaff to Sydney. Then, a man named Watson, living a little further out than Wee Waa, had 40 acres under cultivation last year. I wanted to sell him a binder, but he said that the wheat was 6 feet high, and would not go through a binder. He estimated it at $3\frac{1}{2}$ tons to the acre. This year he has put in 100 acres, and he says if that is successful, he will put in 1,000 acres.

620. Is that land subject to floods? It is ordinary, black-soil country.

621. Was it timbered country? I think not; it is plain country. People were induced to cultivate that country because of the cheapness with which it can be cultivated. Cultivation improves the ground, and, even if the crop is a failure, you get something to feed the stock on. If the railway were taken on the south side of the river, nearly all the country on the north side would be cut off from railway communication, and consequently people would, to a great extent, be prevented from growing produce, because of the difficulty of getting it to market.

Andrew Brown, farmer, near Narrabri, sworn, and examined:—

A. Brown.
19 May, 1900.

622. *Mr. McFarlane.*] Is your farm near the route of the proposed railway? No; it is 9 miles from it. I am closer to the Moree line.

623. Do you cultivate a large area? At the present time I am cultivating about 130 acres.

624. What is the area of your holding? 1,096 acres.

625. Are you growing wheat? Yes. In 1897 I obtained 28 bushels of wheat to the acre.

626. Had you the same area under cultivation then? No; I had a smaller area under cultivation at that time. I have been increasing my cultivation every year. In 1898 I only got 14 bushels to the acre, because the season was a very dry one, and last year I only got 16 bushels to the acre.

627. Do you consider such crops profitable? Yes.

628. What is your opinion of the country along the route of the proposed line? I have been through the country to Wee Waa, and as far as Walgett, but not along the route of the proposed line. I consider that that country is good country.

629. Is it similar to the country that you are cultivating? Part of the country which I am cultivating is similar to that between Narrabri and Walgett.

630. If the proposed railway is constructed, will people go in for cultivation to any large extent? Yes.

631. Do you think that the land is suitable for wheat-growing? Yes.

632. Would you extend your agricultural operations? Under existing circumstances I intend to increase my area of cultivation, and no doubt the proposed railway, if constructed, would give me a larger market out Walgett way.

633. How many acres in the district we are speaking of would be sufficient to support a family? 640 acres—if the land were used partly for farming and partly for grazing.

634. Which do you consider the best soil in this district? I believe that the black soil is a lot the stronger, and far heavier crops have always been obtained from the heavy black soil than from any other soil.

635. Does black soil stand a drought as well as chocolate soil? Yes, with me.

636. Do you think that the Crown land would be taken up for agricultural and pastoral purposes if the proposed railway were made? I do.

637. Do you endorse generally the evidence which was given yesterday? Yes; generally speaking, I endorse Mr. Stafford's evidence. I have been a carrier, and have carried from Walgett and from Collarendabri. I consider Mr. Stafford's description of the ironbark timber in the district a very true one. I endorse what he has said about the waste in an ironbark log.

John Lehaine, junr., grazier, near Narrabri, sworn, and examined:—

J. Lehaine,
junr.
19 May, 1900.

638. *Vice-Chairman.*] How far is your holding from the route of the proposed railway? It would be about 5 miles from the proposed railway if the line were taken on the north side of the river.

639. What is your opinion of the proposal into which the Committee are inquiring? The country on the north side of the river, commencing about 7 miles out, has been surveyed in blocks of about 600 acres. It is good grazing land and is suitable for farming, some of it being plain country, and some of it country which is timbered with box and rosewood. I have grown barley, vegetables, grape vines, and fruit trees on my land. I have been living in the vicinity of the route of the proposed line since 1880, and I know the country well on both Edgeroi and Boolcarroi holdings. The country between Gunnidgera Creek and the Namoi is more heavily flooded than is the country on the north side of the Gunnidgera Creek. From my place to Wee Waa is 17 miles; but I have to go on sufferance through private land, and in the winter time,

time, if it is wet, I cannot get there with sheep. If the railway were taken on the south side of the river I would send my stock to Narrabri to be trucked, rather than send them to Wee Waa. I know the country on the south side of the river well, having, in 1898, taken up about 4,000 acres, which I considered picked land, and for which I paid £2 a section under annual lease. I had 4,000 sheep there for a time, but I left with only 2,400, which I trucked to New England. Most of that country is sandy, and the cost of clearing the best of it would be from £2 to £5 an acre. Even then it will not last long, as there is very little soil. I do not own land in either Narrabri or Wee Waa.

J. Lehaine,
junr.
19 May, 1900.

640. What is the area of your holding? 9,400 acres. My father and I were partners, and we divided a holding of over 13,000 acres. The division was made in 1894. In 1897 I sheared 27,151 sheep, and sold 4,848. In 1898 I sheared 6,324 sheep and sold 2,000, and in 1899 I sheared 7,837 sheep, and sold 858 sheep and 130 bales of wool.

641. Where do you send your fat stock, as a rule? To Sydney; but I very often sell to the Aberdeen works, and to Mr. Richards, of Riverstone.

642. Would the construction of the proposed railway facilitate the sending away of small consignments of live stock? Yes. When I send sheep away I send nine or ten truck loads; but if the railway were nearer to me I should send two or three truck loads.

643. Would it be an advantage to many people to be able to send away small consignments? Yes; it would be an advantage to everybody. Farmers could send away half a truck load of sheep or pigs or other stock, at any time, if they were close to a railway.

644. Where the route of the proposed railway cuts the main stock route—about 23 miles from Narrabri—is the land well out of the reach of floods? Yes.

645. You are of opinion that if there were a railway station at Wee Waa it would be difficult for people living out towards Boolcarrol to send stock there to be trucked, in times of flood? Yes. They would have more difficulty in trucking their stock at Wee Waa than in trucking at a station on the northern side of the river, particularly if yards were at the place where the line crosses the main stock route, and it would suit people north-west of Boolcarrol well.

John Riddle, Member of the Local Land Board, Narrabri, sworn, and examined:—

646. *Mr. Watson.*] Have you resided in the district long? Very nearly thirty-three years.

647. Can you offer any opinion as to the desirability of constructing the proposed railway;—which side of the river do you think it should be taken? I prefer the northern route, as passing through better country than a line on the south side of the river would pass through. The country on the north side of the river is first-class agricultural land—good wheat-growing country. Some of the best wheat-growing land we have is black-soil country. I think, too, that a line on the north side of the river would keep mostly on high ground.

J. Riddle,
19 May, 1900.

648. What would be the effect of the construction of a railway upon production, and, consequently, upon traffic? I think that a line on the north side of the river would get a great deal more traffic than a line on the south side. On the south side of the river there would be no traffic at all. It is nothing but a dense scrub between Narrabri and Wee Waa. I think that a railway to Wee Waa would be very valuable.

649. Do you think that the country is sufficiently good to justify the construction of a railway? Yes; the country on the northern side of the river.

650. Do you think the construction of a railway from Burren to Collarendabri is justifiable? Yes.

651. Is the land likely to be largely placed under cultivation if a railway is constructed? I think so, within a short time.

652. What is it that prevents immediate development? If there were a railway I think the land would be opened up by agriculture. People are going in for agriculture now to some extent, although they are so far from a market that the cost of carriage is very great.

653. Are the larger landholders around Narrabri going in for agriculture themselves, or are they letting out the land to others who desire to farm it? I think there is a tendency that way. For years to come the production from the country on the south side of the river, between Narrabri and Wee Waa, will be nothing. I have been living in the country that we are speaking of ever since 1867. I was living on Gundemaine in 1870, during the floods. The proposed railway would go through part of that land.

654. It has been stated that the country between Greenbar and Kelahor's is subject to flood? There is not very much flooded country there. In a very high flood the river sometimes spreads out a little, but the floods are not serious.

655. Would the floods interfere with the trucking of stock? Only at times, when travelling would be altogether impossible. After you pass Wee Wee the line goes through country which I saw under water seven or eight times in one year. By adopting the northerly route you escape that country.

656. Have you cultivated any of the black-soil? Yes; and I find it very good soil for wheat.

657. Are you cultivating plain country? It is black, tenacious clay—myall country.

658. Has your experiment turned out well? Very well, indeed. The land grows splendid crops of hay and good crops of grain. It is more difficult to work than the red soil, but it lasts longer, and it will hold moisture longer.

659. Are crops more frequently burnt off on black soil than on red soil? No; not so frequently. My experience is that the black soil country will grow wheat when the crops are burnt off the red soil.

660. Which soil lasts the better under cropping? The black soil. I think you could get crops from the black soil for thirty years. Recently a considerable area of land on Edgeroi has been resumed, and has been cut up into small holdings.

661. Since 1895? Yes. The northern route passes through part of that land. The only recommendation that the southern route has is the existence of timber on the south side of the river; but there is not very much timber between Narrabri and Wee Waa; it is further west and south-west, a long way out from the line. As a matter of fact, the northern route would be nearer the timber; but within a year or two there will be no timber at all within many miles of Narrabri.

[The Committee met at the Municipal Council Chambers, Narrabri West, at 2:45 p.m.]

John Gately, storekeeper, saw-mill proprietor, and Mayor of Narrabri West, sworn, and examined:—

- J. Gately.
19 May, 1900.
662. *Vice-Chairman.*] How long have you resided in the district? Nearly twenty years.
663. How would you compare the country on the north side of the river with that on the south side of the river, first, with regard to its agricultural and pastoral capacities, and, secondly, with regard to its liability to flooding? The land on the northern side of the river is better pastoral country than that on the southern side; but I think that the southern side of the river is more suitable for agriculture than is the land on the north side of the river. So far as I know, the land on the south side of the river, along the route of the proposed line, is entirely free from flooding, while I am given to understand that the land on the north side of the river is greatly subject to floods, and more particularly near the site of the proposed railway station, opposite Wee Waa. I believe, too, that the land on the northern side of the river has already been alienated, while that on the south side of the river is pretty well all Crown land. If the railway were to be taken on the south side of the river, its construction would create a great deal of settlement.
664. On which side of the river is there the more settlement now? On the south side of the river.
665. It has been stated that country on the south side of the river has been thrown open for settlement, and has not been taken up; what is the reason for that? I think that the areas offered were too large.
666. What was the average size of them? Some of them were about 20,000 acres in extent; they were quite unsuitable for small settlers.
667. Has cultivation been carried on to any extent on the south side of the river? To a very fair extent at the Wee Waa end, but not to a great extent at this end, though 4 miles from here a 20-acre farm yielded 80 tons of hay last season.
668. Is it a fact that the good land on the south side of the river is confined to a narrow strip which follows the course of the river? No; in my opinion there is better land 6, 7, and 10 miles from the river than along the river bank.
669. What is the width of the good land on the south side of the river? In some places the good land is wider than it is in other places, because here and there the sand-beds run right into the river.
670. Is the land on the south side of the river more heavily timbered than that on the north side? Yes. Some of the finest ironbark and pine in the Colony grows on the south side of the river.
671. Is it not necessary to go more than 20 miles to get good timber now? No; we are getting good timber within 7, 8, and 10 miles. Of course, there is timber 20 and 30 miles out, but all the good timber within that distance has not been cut out.
672. What is the average diameter of the pine logs that are cut within 6 or 10 miles of the river? From 10 to 15 inches.
673. What is the character of the ironbark country which you go through? It is very fair. Of course, the best of the ironbark is being cut out, but there is plenty of it out in that direction. I think that about 200 men are getting their living in connection with the timber industry now.
674. Is the ironbark suitable for railway sleepers? Yes: we are sending sleepers from here to Warialda, and all up the Northern line.
675. Is there enough softwood on the south side of the river to give traffic to a railway? Yes; there is sufficient pine and other timber to give traffic to a railway, in connection with building operations out west.
676. Can you find any market for your timber down south? I have often been asked to quote prices, but I have sufficient trade here. I send most of my timber to Moree.
677. The route on the northern side of the river cuts the main stock route from Boolcarrol, 22 miles out from Narrabri;—if the railway were constructed on the south side of the river, would stock continue along that route to Wee Waa, and be trucked there? Mr. Thompson said that he would go to Wee Waa, because in wet weather he could not get his stock to the station on the north side of the river.
678. Can they get to Wee Waa from Boolcarrol when they could not get to a station on the northern route? In the evidence which he gave before the Railway Commissioners he said that he could get to Wee Waa at any time.
679. *Mr. McFarlane.*] It has been stated in evidence that the ironbark on the south side of the river is of a very inferior character, and that only short lengths of it are suitable for mill purposes, because it is pipey;—is that a fact? I do not think so. We are supplying the Railway Construction Branch at the present time with timber which is very good. We are also sending piles to Warialda for them.
680. It has also been stated that it is subject to the attacks of white ants? I never heard of it.
681. Is the country on the southern side of the river very heavily timbered? In places it is heavily timbered.
682. Would it be costly to clear it for agriculture? Not very costly. I have made application for 200 acres, and I am willing to clear it and to cultivate it.
683. Do you consider it better for agricultural purposes than is the land on the north side of the river? Yes.
684. What sort of soil is it? Red and chocolate, loamy soil. A great deal of it is of a sandy nature.
685. Have you had much experience in agriculture? A good deal.
686. Which is the better for agricultural purposes, the black soil or the chocolate soil? I think the chocolate soil. I do not believe in the black soil to any great extent.
687. Which stands the drought the better? The chocolate soil. The black soil opens up too much in dry seasons.
688. Have you had any experience in cultivating the black soil here? No; but a few years ago Mr. Buchanan cultivated a large paddock on the other side of the river, and I am sure that the experiment was a failure.
689. What crops would the land on the south side of the river be best adapted for? For wheat and for oats.
690. Would the construction of a railway from Narrabri to Walgett open up a large area of land for agriculture? I think so.
691. Do you think that when the land in the district is thrown open for settlement it will be applied for for farms? I think so. On the south side of the river the land is nearly all in the hands of the Crown, and it may be alienated at any time. I have no doubt that if the railway were taken on that side of the river

river people would take up the land there; but I do not know that there is an acre on the north side of the river which has not been alienated. The line on the north side of the river would run through Killarney holding, which is already accommodated by the Moree line. It would also run through Edgeroi holding, and that station, too, is accommodated by the Moree line. There may be a few settlers on the northern side of the river; but the construction of a railway there would not accommodate very many; whereas, on this side of the river, if you include Wee Waa, it would be a convenience to 1,000 people, excluding the population of Narrabri West. Then, again, on the south side of the river, the land is always free from floods, and you can get good timber very close to the route of the proposed line. I believe that there is splendid timber within 10 miles of it. You also save 10 miles by keeping on the south side of the river. If the line is taken on the north side of the river people living beyond Wee Waa will have 10 miles further to send their produce for all time. The 10 miles that I speak of are made up of seven miles additional construction, and the 3 miles between Narrabri and Narrabri West. The people of Pilliga say that they will patronise the railway if it come to Wee Waa, but that if it go on the northern side of the river they will not use it because the rates will be too high. I am satisfied that if the railway is kept on the south side of the river there will be a good many settlers there before very long. I have it on good authority that there is some splendid land out at the back where the timber-getters have been. Men accustomed to agriculture say that 10 or 12 miles out there is some of the finest land you can get in the Colony. Then, at Narrabri West, there are all the conveniences for a junction station. The people who should really have a say in this matter are the people of Wee Waa, and the people west of Wee Waa, not the people of Narrabri or Narrabri West. I would also point out that the railway-bridge over the Namoi, near Narrabri, was only built for light traffic, and would not carry heavy engines.

J. Gately.
19 May, 1900.

Charles Parker, hotelkeeper, Narrabri West, sworn, and examined:—

692. *Mr. McFarlane.*] Have you resided in the district long? Somewhere about twenty years. I came here before the railway was opened to Narrabri. C. Parker.
19 May, 1900.
693. What is your opinion of the country on the south side of the river, between Narrabri West and Wee Waa? It is high and dry and free from floods, and there is any quantity of timber on it—ironbark, box, pine, &c.
694. Has that timber any market value? Pine and ironbark are always valuable timbers.
695. What is the country like for agricultural and pastoral purposes? It is very good. I have seen several crops growing on it within 10 miles of Narrabri West, and along the route of the proposed line.
696. Is it expensive country to clear? No.
697. Is any of it used for agricultural purposes at the present time? Yes.
698. To what extent? Thirty or 40 acres are about all that is under cultivation in any holding. There is a farm out on Bohina Creek, which belongs to Mr. Malone, of Narrabri. Ten years ago it was nothing but a dense pine scrub, one of the most barren places a man could put his eyes on; but since he has cultivated it he has obtained first-class crops, and fruit-trees have grown splendidly there.
699. What crops has he grown? He has grown wheat, oats for hay, maize, potatoes, and pumpkins—as good as I have seen growing on the banks of the river.
700. What distance is he from the river? It is 4 miles from here to the creek, and he is 4 miles up the creek from the river.
701. How far is his land from the route of the proposed line? Between half a mile and a mile.
702. Is there any large extent of similar country? Yes.
703. How far south from the line does it run? About 25 miles up the creek it is really good land—land which is fit for anything. There is a farm up the creek 6 miles from here, and they have had as good crops of wheat there as you will see anywhere. They had one crop 5 or 6 feet high. They have also grown some of the finest vegetables that I have seen.
704. How would you compare that land with the land on the north side of the river? I imagine that it is far superior for agriculture to the country on the north side of the river.
705. Is it as good for pastoral purposes? No.
706. If it were cleared, would it be as good? If it were cleared, I believe that, for pastoral purposes, it would be as good, if not better, than the land on the north side of the river, because it will carry grass when there is no grass on the north side of the river. The people on the north side of the river, in bad times, send their sheep to the scrubby country on the south side of the river.
707. How is it that the land on the south side of the river has not been alienated? When this district was occupied every one was going in for grazing, so that the land on the north side of the river was taken up first. The land on the south side of the river has been surveyed in blocks too large for a man with a small capital to take up. A man with only £200 could not take up 10,000 acres or 20,000 acres and comply with the conditions as to ringbarking, fencing, and clearing.
708. How much of that land would you consider sufficient for the maintenance of a family by agriculture? I think that if a man had a 500-acre block it should be quite sufficient for him.
709. Do you think he could make a good living on it? A first-class living.
710. Do you think that the land is sufficiently good for people to settle upon, with a railway? Yes; if the Government cut it up into small enough blocks. The smallest block that has been offered on the south side of the river is about 7,700 acres, I believe.
711. What sort of soil is there on the south side of the river? A red, sandy loam.
712. And on the north side? There it is all black soil.
713. Have you had much experience in farming? A good deal, off and on.
714. Which is the better suited for agriculture—the black or the red soil? The red, sandy soil; it holds the moisture better, and stands droughts better than the black soil.
715. It has been said that there is no timber within 20 miles of the proposed southern route suitable for mill purposes? There is any quantity of pine within 10 miles of Narrabri West, and they have been cutting ironbark in the district for railway purposes for the last ten or twelve years. I do not say that you could get a pile 50 feet long within 10 or 12 miles of Narrabri West; but there are piles 30 feet long lying in the yard now, which came from places within 18 or 20 miles of Narrabri West.

- C. Parker. 716. How far would the pine be from the route of the proposed railway? In places it would not be 2 miles off the line.
- 19 May, 1900. 717. And the ironbark? The ironbark might be a little further off, but not much. You touch on pine, ironbark, and box country, off and on, right through to Wee Waa.
718. It has been stated that the ironbark in the district is of inferior quality? I have seen a good deal of it in the yards, but I have not heard any complaints about it. There is very little in the forests which the timber-cutters do not use either for sleepers, for girders, or for piles.
719. Where is the land that you are farming? On the north side of the river, between Narrabri West and Narrabri.
720. What results have you obtained during the last few years? I have grown very good wheat for hay, and I have grown maize. The soil will grow anything.
721. Have you at any time suffered from droughts? Yes.
722. Have you an irrigation plant? Yes.
723. Do you find it satisfactory? Yes.
724. Where do you get your water? From a well.
725. What yield of wheat have you had? I never gathered a crop for grain; but I have had as much as 4 tons of hay from an acre.
726. With irrigation? No; without it.
727. Has irrigation been a marked improvement? Yes; I have irrigated 5 or 6 acres of garden, where I have fruit-trees, melons, and pumpkins growing. Things like that will not do without water.
728. Do you think that if the railway were taken to Walgett it would create much closer settlement? I have every belief that it would.
729. *Mr. Shepherd.*] What crops have you irrigated? Fruit-trees, maize, barley for green feed, potatoes, pumpkins, and other vegetables.
730. What kinds of fruit have you grown? Oranges, peaches, lemons, quinces, and plums.
731. Have you had satisfactory crops? Yes.
732. When you speak of chocolate soil, do you mean red soil? Red, sandy loam.
733. Which soil is the best for agriculture—black-plain soil, red soil, or the dark soil on which timber grows? The red, loamy soil.
734. *Mr. Watson.*] You say that the land on the Bohina Creek is very good? Yes; and there is always plenty of water there. When there is no surface water you can get water in the sand.
735. At what distance does the good land run back from the creek? In places it runs back 3 miles.
736. Is it better than the average country down towards Walgett? There is creek land down there that is quite as good.
737. Is the bulk of the land between Narrabri West and Wee Waa? Yes. There is some good box forest land, which is the best land for cultivation. Out at Yarry Lake there are miles of forest country, and the land would be splendid for agriculture if it were cleared.

Lewis Snelling, timber contractor, Narrabri West, sworn, and examined:—

- L. Snelling. 738. *Mr. Watson.*] You have had very extensive contracts in connection with the construction of branch railways? Yes; and for the Railway Commissioners. We have delivered about 400,000 sleepers in the Narrabri West yard within the last five years, and a very large quantity of bridge timber.
- 19 May, 1900. 739. What timber is there on the southern side of the river between Narrabri West and Wee Waa? The timber there is not very large, but for railway purposes it is unusually good. The late Mr. Eddy had a very good opinion of this timber, and I have known him to send timber from Narrabri West round to Bathurst. We cannot get large timber here very well.
740. How far back have you to go for large timber? We have to go 40 miles back for some of it. We are supplying the Public Works Department with timber 30 feet 6 inches, and 12 by 12. I think that the construction of the proposed railway would be of great assistance to the timber-getters, and timber would come to it, not only to be drawn to places in the neighbourhood, but to be sent all over the Colony.
741. What kind of timber? Ironbark. Ironbark is used mostly for sleepers. Mr. Bishop Lyne informed me that between Narrabri West and Pilliga he had driven through magnificent ironbark forests lying within 5 or 6 miles of the route of the proposed railway.
742. Do you mean within 5 or 6 miles of the route of a line to Pilliga? Yes.
743. You have not been through this country yourself? No.
744. How far are your sleepers sent now? Our sleepers come from places 18 or 20 miles from Narrabri West. If the line went nearer the forests the timber-getters would not have to draw the timber so far.
745. The best timber has been cut within 18 or 20 miles of Narrabri West? Yes.
746. Would a line to Wee Waa go nearer to the places from which you are now drawing timber than Narrabri West? I understand so. Mr. Bishop Lyne said that it would go near some large supplies of ironbark.
747. We have been informed that most of the ironbark for some distance from Narrabri is pipey, and that when it is being worked up there is a great deal of waste? I do not think that that is the case. The timber here is small in comparison with the ordinary ironbark; but it is unusually suitable for railway work. It grows very slowly, and is very hard. I do not know that it would be altogether suitable for mill purposes; but for sleepers and small railway timber it is very suitable. I think it is a mistake to say that it is soft or pipey. The Narrabri forest has always been a favourite source of supply with Government Departments.
748. *Vice-Chairman.*] Is it a fact that a good many of the sleepers for the Narrabri-Moree line came from Wyong? No; I supplied every sleeper for that line in the Narrabri West yard. We have supplied 90,000 sleepers here for the Moree to Inverell railway, and we are supplying 50,000 up at Warialda.

John Joseph Morris, carrier, Narrabri West, sworn, and examined:—

749. *Mr. Shepherd.*] Have you any land outside of the town? A little.
750. Do you cultivate any of it? About 12 acres.
751. What do you grow on it? Wheat.
752. What is your return from it? I have not had a return from it yet; it is still in the stack.
753. How far out from here is your land? About a mile. It is on the river bank between Narrabri and Narrabri West.
754. Where do you chiefly carry to? To Collarendabri and to all the northern districts as far as the Queensland border.
755. What do you chiefly carry? Station produce, and flour, tea, sugar, and supplies generally.
756. I suppose the supplies come mostly from Sydney by rail? Yes.
757. What is the rate of carriage from Narrabri West to Collarendabri? At the present time it is about £5 or £6 a ton. I am not now engaged in the carrying business.
758. What is the country like between Narrabri West and Wee Waa? The country on the north side of the line is that which is traversed chiefly by teams going to Collarendabri, there being no bridge at Molly, where the road on the south side of the river crosses.
759. Is there much agricultural land on the north side of the river? Very little. In my opinion that country is not adapted for agriculture.
760. What proportion of agricultural land is there? There is any quantity of good land there, but the seasons are too dry for agriculture.
761. Would 10 per cent. of the land be fit for agriculture? I think not.
762. Is that country highly suitable for pastoral purposes? Yes; it is best adapted for pastoral purposes.
763. What is its carrying capacity? It is generally supposed to carry about a sheep to the acre.
764. Is there any good timber on the north side of the river? Not that I am aware of.
765. Would the good country extend any distance from the route of the proposed line? Yes; 100 miles.
766. What is the country like on the south side of the river? It is higher than on the north side.
767. Is it more thickly timbered? Yes. There is no timber on the north side.
768. Is it good country for agriculture? Part of it is.
769. Is there a greater proportion of agricultural country on the south side of the river than there is on the north side of the river? Yes, a much greater proportion.
770. Would half the land within 20 miles of the route of the proposed railway, on the south side of the line, be suitable for agriculture? About one-third of it would.
771. Would the balance of it be good for pasture? Some of it is not very good land. The low land is swampy, but it would do for pasture.
772. Where does the good timber commence on the south side of the river? Some of the timber-getters go out 3 or 4 miles, while others go out from 10 to 20 miles.
773. Can they get good timber within 3 miles? The best timber has been cut out.
774. How far would you have to go for good timber? Twenty miles from Narrabri.
775. What is the country like between Wee Waa and Collarendabri? It is principally black-soil plains, with patches of box.
776. Is the country similar on both sides of the proposed line from Wee Waa to Collarendabri? Yes.
777. Is it chiefly black-soil country? Yes.
778. Is it good agricultural country? I would not like to take it up for agriculture.
779. It is good pastoral country? Yes.
780. Is it well timbered? Portions of it are, but the timber on it now is hardly good enough for fencing purposes.
781. Is the country between Wee Waa and Walgett fairly good for pasture or agriculture? Yes, on the north side of the river. It is black-soil country, with occasional, small, sandy ridges.
782. What about the country on the south side of the river? That country improves as you get further out.
783. Would the construction of a railway to Walgett with a branch to Collarendabri increase settlement? Yes.
784. Do you think that country would be largely taken up by small farmers? In small portions. The land from Wee Waa to Pilliga is still better than that from Narrabri to Wee Waa, with the exception of one belt of brigalow; it is more adapted for small farms.
785. Do any of the settlers now complain of the expense of carriage? Those out in the back country have been complaining for some time past. I consider that they have wanted a railway for years. I think there is a great deal to be said in favour of the construction of a railway from Narrabri West out in that direction, even if it is only to assist the timber trade. From Narrabri West to Wee Waa and on to Pilliga, Baradine, and Coonabarabran, it is all one belt of ironbark and pine. The sleepers which have been delivered in this yard for years past have all come from there. I have heard it said that the white ants attack our ironbark; but my experience is that white ants will attack any kind of ironbark. White ants will attack any timber which is laid on the ground. They will attack both ironbark and spotted gum.
786. *Vice-Chairman.*] Is not the timber that you speak of as near to Boggabri or Gunnedah as to Narrabri or Wee Waa? It is not as close to Gunnedah as it is to Wee Waa. There are patches of ironbark close to Gunnedah, but the best timber has been cut years ago.
787. Was there ever any traffic along the railway line from Gunnedah or from Boggabri? Yes.
788. Where was the timber consigned to? I could not tell you.
789. Does the timber still go down the line? Yes. There has been a sleeper depôt at Emerald Hill, this side of Gunnedah. There is a belt of timber—the Trinkey Scrub—30 miles from Gunnedah, which is not connected with the belt to which I have already referred; but parts of the forest to which I have referred are quite as good as the Trinkey Scrub.

John Goodyer, hotelkeeper, farmer and grazier, Narrabri West, sworn, and examined:—

790. *Vice-Chairman.*] How long have you resided in this district? About twenty-seven years.
791. Do you corroborate the evidence of previous witnesses? To a certain extent.
792. On what points do you differ from them? My knowledge of the route of the proposed line does not

J. J. Morris.

19 May, 1900

J. Goodyer.

19 May, 1900.

J. Goodyer.
19 May, 1900.

not reach much further than Wee Waa. In my opinion the country on the south side of the river is much better for railway purposes than that on the north side of the river. If the line were taken on the south side of the river it would open up a great forest of timber which extends from Narrabri West to Pilliga, and it would also go through land which is better adapted for cultivation than is the land on the north side of the river.

793. What width of good land is there on the south side of the river? The good land extends 20 miles back from the river. You will find patches of country which are not good, but most of the land is suitable for cultivation.

794. Why has it not been settled upon so quickly as the land on the north side of the river? The land on the north side of the river is more adapted for grazing.

795. Do you think it is a fair statement of the agricultural possibilities of the land on the north side of the river to say that 25 bushels of wheat to the acre is an average crop on large areas, year in and year out? I should feel inclined to contradict the statement that that is the average yield.

796. What average yield might be expected from the land on the south side of the river if it were cleared? From 18 to 20 bushels to the acre.

797. How would you describe the soil on the south side of the river? It is a close, alluvial soil, and will not crack. It lies closer, and is more adapted for cultivation than the land on the northern side of the river.

798. What is the average cost of clearing land on the south side of the river? I have seen a lot of land cleared on the south side of the river, and I have known the work to be done for 15s. an acre.

799. *Mr. Watson.*] Do you mean where the timber is dead? Where there is both dead and green timber.

800. *Vice-Chairman.*] Would it be a fair description of the land on the south side of the river to say that it would cost so much to clear that, by the time a farmer had cleared it, he would find very little profit in his agricultural operations? I do not think so.

801. Have you cultivated any large areas on the south side of the river? I have cultivated about 50 acres annually.

802. Does the soil stand continuous cropping? Yes, fairly well.

803. Which is the better soil in that respect, the black or the red? The red.

804. Which soil stands drought the better? The red soil.

805. It is better in every way? Yes.

806. Why is the country on the south side of the river not so well adapted for grazing purposes as the country on the north side of the river? Because of the timber on it.

807. *Mr. Watson.*] It does not pay to clear land for grazing purposes? That is so.

808. *Vice-Chairman.*] I understand that 20,000 acres on the south side of the river which have been thrown open as an improvement lease have never been taken up;—why is that? Because the Government will not classify the land and make a reduction for the extra labour which would be required on it. I do not consider that the land on the north side of the river is adapted for cultivation at all; it is heavy, black soil which is only fit for grazing, and in dry seasons it cracks and lets the moisture out.

809. Why has the land on the south side of the river not been put under the plough before this? Because of the thickness of the timber, and because the Government has asked the same price for it as for land naturally clear of timber.

John Langley, saddler, Narrabri West, sworn, and examined:—

J. Langley.
19 May, 1900.

810. *Mr. Watson.*] How would the construction of the proposed railway affect the district generally through which it would pass? I know the country fairly well from here to Wee Waa, and thence to Walgett, but I know nothing of the Collarendabri district. I think that the route from Narrabri West to Wee Waa, on the south side of the river, would be the most suitable one for a railway, because the ground there is high and dry; there is a good river frontage, and the line would be on the borders of a good timber forest.

811. There is a good frontage on both sides of the river? The frontage on the south side is better than that on the north side of the river. It is 22 or 23 miles from Narrabri West to Wee Waa on the south side of the river, and, on the average, there are 6 miles of good country between the railway route and the river—some of the best agricultural country that could be ploughed up. The soil is good, red loam. Mr. Schwager has made an experimental farm on some sandy country on the south side of the river, and in a very dry season he has been able to grow vines, wheat, cabbages, and cauliflowers. He is right in the middle of a pine forest.

812. Do you corroborate generally the evidence of previous witnesses with reference to the character of the country between Narrabri West and Wee Waa? Certainly.

813. How would you class the land 6 miles back from the river? I would class it as good land.

814. Is it as good as the land nearer the river? No; the river frontage is superior to it.

815. Is the land that is more than 6 miles back from the river suitable for cultivation? Certainly.

816. Is it red soil? It is more of a sandy loam.

817. What kinds of timber grow on it? Pine and box. At Yarry Lake, 13 miles from Wee Waa, the carriers were feeding their horses for weeks in the box forests during the dry seasons. Mr. Campbell, of Cubbo, has had a great deal of stock on Terradelbi, about 12 miles from Yarry Lake.

818. Would the Terradelbi country be influenced by the construction of the proposed railway? No; I only referred to it to show that the country back from the river is good country. The stock I speak of is still there.

MONDAY, 21 MAY, 1900.

[The Committee met at the Court-house, Wee Waa, at 3:30 p.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Laurence Brennan, pastoralist, Wee Waa, sworn, and examined:—

819. *Vice-Chairman.*] How far is your holding from Wee Waa? Two miles.

820. I understand that you have a statement to make to the Committee with regard to the railway proposal into which they are inquiring? Yes. There are 25,000 acres of land between Narrabri and Wee Waa, on the south side of the Namoi, which, in my opinion, are quite equal to the best land to be found upon the Lower Namoi. The land I speak of commences at Wee Waa and extends up the river as far as the Molly crossing. A railway from Narrabri West *via* Wee Waa, to Burren, would serve that land, and would provide a shorter route than any other line that could be made to Burren. Such a railway would be of use to the people of Pilliga district, and to the people between Wee Waa and Pilliga. It would also give assistance to the timber trade. On the northern side of the river there is no timber which can be used for building purposes, and on a great deal of the land there is no timber at all. People out Collarendabri way would be glad to get timber from the district behind Wee Waa for building purposes and for fencing, and a railway on the south side of the river would get a great deal of timber traffic. I should like to point out that it would cost more per mile to make a railway station at Tulladunna accessible to the people at Wee Waa, and to the people in the district generally, than to construct a railway from Narrabri West to Wee Waa. If the railway were taken on the north side of the river from Narrabri East, in wet seasons the traffic from Wee Waa and the south side of the river would have to go to Narrabri West, because the flooded state of the country between Wee Waa and Tulladunna would prevent people from getting to Tulladunna either with fat stock or with produce. The population between Wee Waa and Narrabri, on the north side of the river, is not so great as that between Wee Waa and Narrabri West, on the south side of the river. The following return gives the names of the various land-holders within 6 miles of Wee Waa on the south side of the Namoi, and the areas of their holdings. Altogether, there are 38 land-holders, and they occupy 22,364 acres:—

L. Brennan.
21 May, 1900.

| Name. | Area. | Name. | Area. |
|---|--------|---|--------|
| | acres. | | acres. |
| J. M. Robertson, "Womera" | 1,700 | W. Murphy, settlement lease | 1,600 |
| Mrs. Lynch, homestead selection | 843 | Allan MacKenzie, conditional purchase | 660 |
| W. Ryan, homestead selection | 868 | Archie MacKenzie | 450 |
| Hamilton & Sons, Moleyn, conditional purchase | 2,000 | J. Graham | 320 |
| George McFarlane, " " | 1,600 | W. O'Brien | 70 |
| W. M. Maxwell, "The Willows" " " | 3,120 | L. Brennan | 800 |
| W. Graham " " | 800 | M. Smith | 10 |
| J. Wallace, homestead selection | 500 | J. Collins | 38 |

| J. Luckey | 389 | J. Smith | 37 |
| A. Boggs | 500 | | |
| C. Hall, freehold | 340 | Total | 22,364 |

821. You have not included town allotments in that list? No; all the holdings mentioned in that list are outside the town boundary. On the south side of the river, and within 4 miles of it, but 15 miles from Wee Waa in the direction of Narrabri, there are 304 horses, 316 cattle, and 10,360 sheep depastured. From Narrabri to Pilliga and below Pilliga, as far as Bungle Gully, on the south side of the river, there are depastured 506 horses, 4,677 cattle, and 206,992 sheep.

822. How far back from the river does the country upon which they are depastured extend? At Bungle Gully you are 10 or 15 miles back from the river.

823. How far is Bungle Gully from Pilliga? About 30 miles. The land on the north side of the river, between Narrabri and Wee Waa, is first-class pastoral land; but I think that, under present conditions, wheat-growing would not be profitable there, because there are districts with a better climate and nearer to market, with which this district could not compete. The town of Wee Waa comprises property valued at from £70,000 to £80,000, including public and private improvements. A very small number of persons would be inconvenienced by taking the railway on the north side of the river from Narrabri East to Tulladunna, and that smaller number of persons would have a full railway service if the line were brought on the south side of the river from Narrabri West to Wee Waa.

824. What distance would the people on the north side of the river be from either Narrabri or Wee Waa? At the furthest point they would be about 14 miles from either place. I take it, however, that the people mainly to be served by the construction of the proposed railway are the people out towards Burren and Collarendabri, and a line on the south side of the river would give them a shorter and better route than a line on the north side of the river. It was first proposed to take the railway from Narrabri through Wee Waa

L. Brennan. Waa to Pilliga, and it was afterwards thought that a line on the north side of the river would be cheaper, because it would save the construction of a bridge over the Namoi. Further investigation, however, shows that a line on the south side of the river would be the cheaper. I was on a deputation that went to Sydney to urge the extension of the railway from Narrabri to Wee Waa. The Sectional Committee of the Public Works Committee who investigated the Pilliga proposal reported that the line could not be kept on the south side of the river further down than Wee Waa, but that they would recommend the construction of a line as far as Wee Waa, if it could be taken across the river there, and carried on through Burren to Collarendabri without too heavy an expenditure. If it were shown that the expenditure would be too heavy, they would recommend the construction of the line on the northern side of the river. Some persons who gave evidence in favour of the construction of the railway on the northern side of the river opposed the construction of a railway crossing at Gully Point when we wanted a deviation of the line from Narrabri to Moree, towards Wee Waa. The Narrabri evidence at that time was directed to show that the safe route from Narrabri to Moree was the direct route. I have no property in either Wee Waa or Narrabri West. My only personal interest in the railway is the share which I would have in the general prosperity of the district which would be brought about by maintaining the strength of this town. We have good public buildings here—a good post and telegraph office, a new police station, and a public school. I hold 3,000 acres on the north side of the river which would be within half a mile of the railway station, if the railway were kept on that side of the river, whereas I have only 800 acres on the south side of the river, and that land would be 2 miles from the nearest point on the railway, if it were brought on the south side of the river. I do not think that the public buildings in Wee Waa would be kept up so well if the railway did not come nearer than 2 or 3 miles to the town, because it would take away from Wee Waa the traffic which properly belongs to the town. There is a big watercourse between Wee Waa and Tulladunna, and at Tulladunna you have half as much water as you get in the Namoi, so that a railway station there would be useless to us in wet seasons, unless the Government went to a considerable expense in providing access.

21 May, 1900.

825. Several witnesses have stated that there is a larger area of flooded land to be crossed on the southern side of the river than would have to be crossed on the northern side of the river? In my opinion that statement is not correct. I believe that a line on the south side of the river would have less flooded land to cross than a line on the north side of the river. Such a line would cross the flood-waters of the Namoi at the narrowest place, going in the direction of Burren. Unfortunately, my own ground is within the flooded area, and there are 3 miles of water there during an ordinary flood. It is all flooded country from the river at Tulladunna for some miles back.

826. It has also been stated that there is a larger area of ground suitable for agriculture on the north side of the river than there is on the south side? I think that the land on the north side of the river is about the worst in the district for agriculture. The flooded land is of no use at all for agriculture.

827. How would you describe the country within 20 miles of the northern bank of the Namoi, between Narrabri and Wee Waa? It is first-class pastoral land, but there is a large extent of it which is of no use at all for agriculture, though there may be some pretty considerable patches which could be cultivated.

828. What sort of soil is there? The greater part of it is sticky black soil—soil that dries up and opens out.

829. Have you had any experience of agriculture on the black soil? I consider that the black soil on the Namoi is not of much use for agriculture, though the red, chocolate, and lighter soils may be cultivated. I have put in five crops on the black soil, and I have had three failures. Those crops were put in within the last six years. The two crops that I got were only half crops.

830. What is your opinion of the country on the south side of the river, as far as its agricultural possibilities are concerned? If wheat will grow in this climate there are patches of red soil and timbered country there which would suit wheat.

831. What proportion of the land 20 miles from the river on the south side would be fit for agriculture if it were cleared? One-fourth or one-fifth of it. There are 25,000 acres there of first-class pastoral land, and one-fifth of the timbered country appears to me good wheat-growing land, supposing the climate to be one which would suit wheat.

832. *Mr. Watson.*] Is the one-fifth that you speak of suitable for agriculture, apart from the good pastoral land? Yes. The pastoral land is as good as any on the northern side of the river.

833. *Vice-Chairman.*] What traffic passes through Wee Waa now? Pretty well all the traffic from Collarendabri, and the traffic from Pilliga, Burren, and all the country down to Walgett. The line from Narrabri to Moree passes through land between Killarney and Moree which would be better suited for wheat growing than any of the land on the northern side of the river, and until that land is used for wheat growing it is very unlikely that wheat will be grown on the land on the north side of the river.

834. If the line were constructed on the north side of the river what course would the Pilliga traffic take in wet seasons? It would go to West Narrabri, because I do not think it could get to the railway at any other point. If the line were brought on the south side of the river to Wee Waa, the Pilliga traffic could come to Wee Waa, because the road from here to Pilliga is practically above flood-level.

835. Do you think that the construction of the proposed railway would be likely to develop settlement? Yes.

836. What kind of settlement? The timbered country on the south side of the river would probably be readily taken up if a railway were brought close to it, and I think that that country is only suitable for agriculture.

837. Would the country on the south side of the river be absolutely cut off in bad weather from a railway on the north side? Yes, practically, unless macadamised roads and traffic bridges were made between Wee Waa and Tulladunna. The traffic 10 miles east from Wee Waa would go to Narrabri West.

838. So that you think a line on the north side of the river would not draw traffic from country on the south side of the river, between Narrabri West and Wee Waa? It would only draw traffic from that country to a very slight extent, if at all. In dry seasons some of the traffic from that country might go across to Tulladunna; but in wet seasons it would have to go to Narrabri West, because it could not get to a line on the northern side of the river at such times.

839. *Mr. Shepherd.*] Would settlers on the north side of the river have any difficulty in getting to a line on the south side of the river? A traffic bridge 2 miles up from Wee Waa would enable most of the settlers

settlers on the northern side to come to Wee Waa, and in dry seasons there are many places where they can cross the river without a bridge. To give them access to Wee Waa in all seasons it would be necessary to build another traffic-bridge above Wee Waa; but such a bridge would not give the Wee Waa people ready access to Tuiladunna, because it would require them to go 2 miles up the river on one side and then come down 2 miles on the other. Mr. Cohen, Mr. Lehaine, Mr. Wyatt, and other people out there would require a traffic-bridge to enable them to go to Wee Waa in wet seasons.

L. Brennan.
21 May, 1900.

840. Has any of the country on the south side of the river been cultivated? There are small patches of cultivation in different parts.

841. What has been the result of the cultivation there? Heavy crops of wheaten hay have been obtained, and some fruit has been grown.

842. Whereabouts is the timber that you have spoken of? It is some miles out to the south; part of it lies in the direction of Pilliga, and part of it is south from Wee Waa.

843. *Mr. Watson.*] Why has not the land on the south side of the river been more freely taken up in the past? Everyone preferred the plain country on the north side of the river for pastoral purposes.

844. But since the railway has been brought to Narrabri it seems curious that that land should not have been taken up? For 10 miles out from Narrabri West the country is very barren, and forms part of an abandoned run. The Bohina Creek country is barren; where the timber grows in raw sand the soil is no good.

845. Do you know Malone's place on Bohina Creek? Yes. He has the best place on Bohina Creek, a sandy loam which is very easily worked, and pretty good in dry seasons. It gives a few crops. I have had experience with similar country elsewhere.

846. Does the country improve as you go towards Wee Waa? Yes. Mr. Malone's land is just a little bit on the banks of the creek.

847. I understand that a number of the landholders whose names appear in the list that you have read are only recent selectors? Yes; they have come to the district within the last few months.

848. Was the land open to selection long before they took it up? I think it was land in the leasehold area of a run. It was not open to any form of purchase before they took it up.

849. Were there many applicants for it? Yes, and I think that nine out of ten of the small blocks that were offered close to Wee Waa were taken.

850. Do people intend to grow wheat on these small areas? Yes.

851. Could they afford to cart their grain into Narrabri West? I think they believe that the railway will come very close to them. Wheat-growing has not been a success in this part of the country. When an attempt was made to start a co-operative flour-mill in Narrabri, the people of Narrabri did not invest in it, and there is no flour-mill in Gunnedah. In my opinion, not much confidence is to be placed in the Narrabri district as a wheat-growing district.

852. What is your rainfall? About 25 inches a year; but we do not get it at the right time. Then, too, the evaporation in this district is greater than that in a district like Young.

Stephen Dempsey, selector, Pilliga, sworn, and examined:—

853. *Mr. McFarlane.*] Have you resided long in this district? Yes; I have been here about twenty years. S. Dempsey.

854. What is your opinion of the railway proposal? I should like to see a railway brought from Narrabri West through Wee Waa. Such a line would give us a shorter route to market by 10 miles than we should get if the railway were kept on the northern side of the Namoi, and it would thus make our rates of carriage lower. 21 May, 1900.

855. How does the country on the north side of the Namoi compare with that on the south side? The country on the north side of the river is very subject to flooding.

856. Is it good pastoral country? Yes.

857. Is it suitable for agriculture? I do not consider it suitable for agriculture, though parts of it may be so.

858. It is mostly plain country? Yes; heavy, sticky, black soil.

859. Which is the best soil for agriculture in this climate, the black soil, the red soil, or the chocolate soil? I consider that the red and the chocolate soils are the best. I do not think the black soil is any good at all for agriculture.

860. Does it not stand the drought as well as the red soil? No.

861. How would you describe the country on the south side of the river? It is not so good for pastoral purposes as the land on the north side of the river, but it is much better for agriculture.

862. Is it heavily timbered? Yes, it is very heavily timbered.

863. What is your opinion of the pine and box country on the south side of the river? There is a lot of heavy sandy country close to Narrabri West; but as you get towards Wee Waa you come into a chocolate soil.

864. Would that country be expensive to clear? It would be pretty expensive to clear.

865. Why is there not more settlement on the south side of the river? I think that is because people find it too expensive to take up that land. In former times if you wanted to select it you had to pay the same price for it as for the plain country, and for pastoral purposes no one would take it up when he could get plain country. Agriculture was not thought of then.

866. How many acres of land do you occupy? 7,000 acres where I am living.

867. What kind of country is it? Principally open, black plains.

868. What has been the result of your operations? I have grown wheat there; but I find that it will grow better on the sandy box ridges than on the black soil. I have a cultivation paddock on a ridge which was very heavily timbered with box. I cleared it, because I thought the black soil was no good for agriculture. Some time afterwards I tried the black soil, and I found that in a very good season I could grow a crop in it; but that in a season when there was only a small rainfall it would not produce anything.

869. Do you cultivate much of the red soil? About 5 acres. The place that I am speaking of is 33 miles from Wee Waa.

8. Dempsey. 870. Is it similar to the red-soil country on the south side of the river, between Wee Waa and Narrabri West? It is somewhat similar to it, but I should think the soil would be stronger.
- 21 May, 1900. 871. Do you consider the red soil on the south side of the river, between Wee Waa and Narrabri West, suitable for wheat? A great deal of it is; but there are places where I think the soil is too sandy for wheat.
872. How much of the country there, within 10 miles of the river, would be suitable for agriculture? About one-fourth of it.
873. If a railway were constructed, would people be induced to take up that land for wheat-growing? I feel nearly sure that they would.
874. Have you a good knowledge of the country between Pilliga and Burren? Yes.
875. What sort of country is it? It is mixed country. There are a good many red and chocolate box ridges, and there is also a large area of black-soil plains all the way from the river up. From the river to Pilliga it is very heavy black-soil country.
876. Given railway communication, is it country that could be settled upon? I do not think that it wants railway communication to induce settlement. All that is wanted is to have the land thrown open. If 610 acres were to be thrown open for selection to-morrow there would be forty applicants for the block.
877. How many acres of the land on the route of the proposed railway would maintain a family under agriculture? I do not think people would make a living on the country that I am speaking of by agriculture, though they could grow hay in places. Some years I get a crop, and some years I do not.
878. Is that because of the scantiness of the rainfall? I think that has a good deal to do with it.
879. How many acres of the pastoral country between Pilliga and Burren would it take to maintain a family? I do not think less than 5,000 acres would maintain a family.
880. *Mr. Watson.*] Yet people take up 610-acre blocks in this district? They do so in the expectation of being able to get more later on.
881. *Mr. McFarlane.*] Do you know the country on towards Collarenebri? Yes; the country is somewhat similar all the way out.
882. If the proposed railway were constructed, would the traffic of the district be largely increased? I do not see that there would be much additional traffic between here and Collarenebri, because all the traffic there is has to come this way now; but there might be a little more traffic if the country were made available for closer settlement.
883. What is the carrying capacity of the pastoral country? Taking one year with another, I think you want about 3 acres to a sheep.
884. Does much stock travel from different places in the district in the direction of Narrabri, along the route of the proposed line? Yes. There are three roads from Wee Waa—one to Collarenebri, another on the north side of the river, and another on the south.
885. Does most of the traffic come through Wee Waa now? I think it all comes through Wee Waa.
886. How would the construction of the railway on the north side of the river affect Wee Waa? I think it would injure Wee Waa, because it would leave Wee Waa 6 or 7 miles away from a railway station.
887. Which would be the most convenient site for a railway station to people living 15 or 20 miles from Wee Waa—a place on the north side of the river, or Wee Waa itself? I think that Wee Waa would be the most convenient site for a station. I do not think the Pilliga people would have anything to do with a railway on the north side of the river. If the line were made on the north side of the river, I think the Pilliga traffic would all go to Narrabri West.
888. How far is the good timber in this district from the proposed railway? I think the best ironbark is about 15 miles from Wee Waa.
889. And how far from Narrabri? It must be 20 miles from Narrabri.
890. If the railway were taken to Wee Waa, would the timber be put on the train here? Yes; because most of the ironbark grows in country on the Walgett side of Wee Waa.
891. What is the quality of that ironbark? I have never had much experience in working ironbark; but I have heard it well spoken of, and it is used for railway sleepers at Narrabri West. The further you get from Narrabri the better the timber becomes.
892. *Vice-Chairman.*] Does a small grazier find it as expensive to send small consignments of fat stock to a railway as to send large consignments? Yes.
893. Would it be possible for a man who had 640 acres near to a railway to periodically fatten and send away small consignments of stock? Yes.
894. In that way would the railway create a traffic that could not exist without it? Yes.
895. Is the country between Pilliga and Burren tolerably good fattening country in fair seasons? Yes.
896. Would a sheep to 3 acres be the carrying capacity of the greater part of the country to be served by the proposed railway? I should say so.
897. How many sheep do you run on your 7,000 acres? I consider that my place will not carry more than 4,000 sheep; but I have my land fenced into small paddocks, and it is a little better than the general run of land in the district. It was appraised at 30s. an acre.
898. *Mr. Watson.*] Would not the Pilliga people be likely to use the proposed railway somewhere near Burren? I do not think so. The people whom I came here to represent say that they would not.
899. Their traffic would continue to go through Wee Waa, even if the railway were brought to Burren? Yes.
900. Would it pay them to drive stock to Narrabri West if there were a railway station at Tulladunna? I think so.
901. Why? I could get a man to drive my stock from Narrabri West, and truck them there, for almost as little as I would have to pay to have them driven to Tulladunna, and by doing so I should prevent the sheep from being knocked about in the trucks, and I should save something in railway carriage. By trucking stock from Wee Waa a great deal of knocking about in the trucks, by reason of shunting operations, as well as 10 miles of railway carriage, could be saved.
902. Do the Pilliga storekeepers now get their goods *via* Narrabri West? Yes; the leading storekeeper at Pilliga told me that if the railway were taken on the north side of the river he would still bring his goods from Narrabri West by team.
903. Would he rather bring his goods 60 miles by team than pay 34 miles of railway carriage and bring them only 40 miles by team? Yes; he said so. He considers that in bad seasons he could not bring goods from Tulladunna at all, because of the flooded state of the country between Wee Waa and Tulladunna.
- 904.

904. Can the Pilliga traffic get through to Narrabri West more easily on the south side of the river than on the north side? Yes; in 1890 I had to travel on the south side of the river to go from my place on the north side of the river into Pilliga. I live within 12 or 15 miles of the proposed line to Burren. S. Dompsey.
21 May, 1900.
905. *Mr. Shepherd.*] What is the average weight of your fleeces? Five pounds or 6 lb. is the average weight.
906. How many sheep will give a farmer a fair living? I think a man ought to run between 4,000 and 5,000 sheep, and then he does not want too large a family.
907. Out of 4,000 sheep how many could a man sell to the butcher each year? If he bred a couple of thousand every year he would have that number to sell, supposing the drought did not kill them.
908. How many paddocks have you? Ten.
909. I suppose you feed and spell alternately? Yes.
910. Is it usual in this district to divide up runs into paddocks? Yes.
911. And do most of the station-owners feed and spell alternately? Yes; most of them try to spell their land occasionally.
912. I suppose you have very little scrub with which to feed your sheep? Very little. I came here as a representative of the Pilliga people, who told me that they would much rather see the railway come into Wee Waa than see it constructed on the north side of the Namoi, because they are of opinion that a line on the north side of the river would be of very little use to them.
913. *Mr. McFarlane.*] Are they anxious for the construction of this line? They would like to see a railway made to Wee Waa.

Walter William Richard Holcombe, grazier, Weetawaa, sworn, and examined:—

914. *Mr. Shepherd.*] What extent of country have you? About 30,000 acres. W. W. R.
Holcombe.
21 May, 1900.
915. Do you use the land exclusively for grazing, or do you carry on farming as well? We do a little gardening, and I have done a little farming for our own use.
916. Have you got a satisfactory yield from your crops? I have generally got a good crop of hay when I have grown wheat, but it is some years since I grew any wheat. I let some wheat stand for grain, but it seemed to take the rust.
917. Do you consider the country suitable for agriculture? Some of it would be, but it would require irrigation. With irrigation, I think all but the very low country would be suitable for agriculture.
918. What proportion of your 30,000 acres would be suitable for agriculture if you could irrigate the land? About half of it; but it would be very expensive to irrigate it.
919. Is it timbered country? Yes.
920. What kind of timber grows on it? Coolabah, chiefly.
921. Have you had much of it ringbarked? 5,000 or 6,000 acres.
922. What number of sheep are you running on it? About 22,000; but at the present time some of them are away.
923. I suppose that if the land were all rung it would carry more? Yes; but the ringbarking does not make so much difference in the flat country as it does on the ridges.
924. How long have you been here? I have been living on my present holding for twenty-two years.
925. Whereabouts is your land? It is on the north side of the Namoi, but it lies south of both the proposed northern routes, and about the same distance from each.
926. Is much of your land freehold? A lot of it has been held over twenty years, and is nearly freehold.
927. It is all secured? I have about 27,000 acres of secured land. The rest of my land is held under annual lease.
928. What is the country in the neighbourhood of your holding like? A good deal of the high country along the line would be fit for agriculture. After the line leaves Wee Waa it gets on to high country, and runs down Pian Creek, and a lot of that land would be fit for agriculture, though the lower swampy ground would not. The high ground on the banks of creeks and watercourses would be fit for agriculture; but while it pays better to graze sheep people will not go in for agriculture.
929. Is the country out as far as Burren of the same description? Yes; it is all about the same.
930. Would the construction of the proposed railway induce settlers out there to go in for agriculture? I think it would. I think that the halves system would be largely adopted.
931. Would you be disposed to adopt it? Yes. I shall put in 100 acres this winter as a trial. Latterly I have cut clover and grass for hay.
932. I suppose you are rather too far from a railway station to go in for agriculture? I shall grow hay for my own use.
933. How far are you from Narrabri? About 32 miles.
934. Is the road there fairly good? Our sheep are reared and fattened on black-soil country, and when they are travelled away from the run they do not eat the first day out, and on the next three days they have to go through a sandy scrub in which there is nothing for them to eat, going on the south side of the river. If we take them to Narrabri, on the north side of the river, the journey is a day longer, and they have to travel through mere lanes the whole way.
935. If the proposed railway were made, would you use it for sending your sheep away? Certainly. Whether the line is made on the north side or on the south side of the river, I shall use it; but if it comes on the north side of the river, it will add 6 miles to the distance which the sheep will have to be driven to get to it.
936. Would the proposed railway be of great advantage to small holders? I think it would be of great advantage to them. We could often pick out 100 or more fat sheep, and send them away if there were a railway close at hand; but it does not pay to drive so small a flock a long distance to a railway.
937. Which line would suit you the better—the one on the south side, or the one on the north? The line on the south side of the river would suit me better than the one on the north, because it would give a railway station at Wee Waa, and would make the journey to market shorter for the stock. If the line were taken on the north side of the river we should have to pay more freight for our sheep, and probably 4s. or 5s. a ton more for our goods. Before the bridge at Wee Waa was built we had to go to Narrabri along the north side of the river, and the track was sometimes impossible.
938. Which line would open up the more country, and bring in the larger revenue? I think a line through Wee Waa. There is a lot of country on the south side of the river which would not be convenienced

W. W. R.
Holcombe.
21 May, 1900.

convenienced by the construction of a line on the north side of the river. I believe that there are 25,000 acres of good land on the south side of the river which could be used for farming, or for anything else—land lying between Molly and Wee Waa. I know some of the land which has been farmed there, and I do not think there is much better country in the district. There is also a large extent of scrubby country there which would grow wheat and fruit, and I have seen corn growing there too. About two years ago I saw some corn and pumpkins growing on Mr. Schwager's farm, and, although the weather was very dry, they were doing well. The country on the north side of the river, however, would be very well served by a line on the south side, because, if there were a bridge over the river, the people on the north side could very easily come to the line on the south side.

939. It has been estimated that there will be a deficiency of something over £13,000 a year; on the working of the proposed line;—do you think that that deficiency would be wiped out within a reasonable time by the additional traffic which the line would create? I think that it would. There would be a holding to nearly every 2 square miles of country, within five years, if the railway were constructed, and there would be a vast amount of traffic then. A great deal of wire would be brought into the district, and timber and many other things would be sent away from the district.

940. Would you be willing to make a contribution towards reducing any deficiency? Yes.

941. Would there be a general willingness to make such a contribution? I think so; but, of course, if people can get out of contributing they will do so. I think that it would be a fair and reasonable arrangement.

942. Have you had any experience of fruit-growing? Yes; I have grown oranges, grapes, peaches, and most of the ordinary fruits, and they all do well.

943. Is your orchard an extensive one? No; I have only about 6 acres. Small holders can hardly live in this district without a railway to enable them to send away small consignments of sheep.

George McFarlane, grazier and farmer, Sandy Hook, sworn, and examined:—

G.
McFarlane.
21 May, 1900.

944. *Vice-Chairman.*] What is the area of your holding? 1,600 acres.

945. How long have you resided in the district? Since 1841.

946. What cultivation have you carried on here? I have grown hay.

947. What yields have you got? I have only been on my present place a short time, and we have had very bad seasons. I do not know what the crop was.

948. Have you had experience in agriculture in any other part of the district? Yes; a little out beyond Pian Creek, about 30 miles from Wee Waa.

949. What was the result of your operations? I only cultivated 5 or 6 acres; but I grew some splendid crops of hay out there, though I never weighed them.

950. What kind of country are you holding? Brigalow and oak country.

951. Is it country that is valuable for agriculture if it is cleared? Yes.

952. What is the nature of the soil? It is chocolate soil.

953. Do you expect good results from this country when it is cleared? Yes.

954. Is there much similar country on the south side of the river between your holding and Narrabri? Yes; a great deal of it. The country has been measured out in 5,000, 7,000, and 17,000-acre blocks; but a man with a small capital could not do anything with it, and a man with means would not look at it. If a man of small means could take what he wanted of that country and work it, a great deal more of it would be selected.

955. How many acres of that kind of land would be sufficient to give a farmer and his family a decent living? 500 or 600 acres.

956. What is the average cost of clearing the scrub land which you occupy? It costs about 1s. 6d. an acre to get it ringbarked, and you could not get any of my land burnt off and cleared for less than 4s. 6d. an acre.

957. How long did you leave your timber, after ringbarking, before you commenced to burn it? It was ringbarked when I bought the property, about two years ago. Some of the timber has been ringbarked eight or nine years, and some of it only two years.

958. Do the trees throw up suckers after being ringbarked? The oak will not do that, but the box will. The brigalow country grows splendid grass when it is ringbarked. It is better land than that on the other side of the river.

959. Do you propose to devote any large part of your holding to agriculture? Yes; I have about 150 acres cleared ready for the plough.

960. What do you intend to sow in it? I intend to grow wheat.

961. Do you think that a man could make a living by agriculture on 640 acres of such land? I think so.

962. Would you recommend mixed farming in the district if the proposed railway were constructed? Yes; it is 12 miles to Brigalow Creek from Wee Waa, and then you are in the ironbark country. There is some splendid ironbark there for sleepers.

963. How much of the country between Wee Waa and Narrabri, 20 miles back from the river, would be fit for agriculture? More than half of it.

964. How much of the land on the north side of the river would be fit for agriculture? Not very much, except the box country. The coolabah country and the black-soil country are neither of them good for farming. It is cracky, sticky ground that we cannot do anything with by farming. I do not think one-third of it would be fit for farming.

965. Is the country on the south side of the river more likely to be closely settled than the country on the north side? Yes; it would be taken up if it were measured out in smaller areas.

966. *Mr. Watson.*] If a man took up that country to-day, and fenced it in and ringbarked it, how long would it be before he got a return for his expenditure? I ringbarked 120 acres at the back of my paddock, and in twelve months there was as good grass there as on any other part of my run.

967. *Vice-Chairman.*] Do you think that scrubby country quite suitable for agriculture? Fully half of it is.

968. You at one time held property on the north side of the river, but you sold that, and took up land on the south side of the river? Yes. There was a drought, and I was forced to sell, because I could do no good with the land. Then I bought a place on the south side of the river.

969.

969. Do you think that red soil or chocolate soil resists drought better than black soil? Yes. There is a red soil, however—a red soil on the plains—which is no good at all, but the chocolate soil on which the scrub grows is good for anything.

G.
McFarlane.

21 May, 1900.

970. Does it resist drought better than the black soil? Yes, a great deal better.

971. Will it stand repeated cropping? I think so, from what I have seen of it. I have never had a great deal of experience in farming. The land I now hold is better drought-resisting country than that which I previously held on the north side of the river. It does not crack so much.

William Hockan, grazier, Rossmore, sworn, and examined:—

972. *Mr. Watson.*] What is the area of your holding? 9,350 acres.

W. Hockan.

973. Is it secured land? Yes; and I have 2,000 acres of leased land.

21 May, 1900.

974. What is the average carrying capacity of your run? After the drought we have gone through, in which our natural grasses have been almost exterminated, it is almost impossible to say; but we are taxed on the basis of a sheep to an acre and a half.

975. Taking good seasons with bad seasons, is that a fair estimate of its carrying capacity? I think it is rather an over-estimate, but we stock up to that.

976. Is there any land on your holding which, with the rainfall you usually have, is suitable for agriculture? About one-third of the land between Wee Waa and my place, and within 10 miles of the travelling stock reserve, is suitable for agriculture.

977. What proportion of the land on towards Collarendabri would be suitable for agriculture? From the 26 to the 38-mile peg it is coolabah country—that is, pastoral country; but from the 38-mile peg to about the 60-mile peg the land would all be available for agriculture.

978. Do you mean 60 miles from Wee Waa? Yes.

979. Is the rainfall out there sufficiently good for agriculture? Judging from my personal knowledge of the country, I should say that they would get about two crops in three. From Merrywinbone to within 5 miles of the Barwon, it is high, sound country.

980. Would you go in for agriculture to any extent if the railway came close to your holding? Yes; I should cultivate 500 acres to-morrow if I could get a market for the produce. I have 63 acres under crop now.

981. Have you obtained satisfactory results from your cultivation? Since 1881 I have lost about one crop in three.

982. Under such conditions, would a man be justified in going in for agriculture on a large scale if the railway were built close to his land? If a man started when the season was bad, so that he lost his first crop, he would want enough capital to be able to hang on until he could grow another.

983. May we anticipate an increase in fat stock traffic if the proposed railway is made? Yes, because with a railway more fat stock would be sent away by small holders. It does not pay a man to drive a small flock of sheep 70 or 80 miles to a railway station; but if he were close to a line he would often send away small consignments.

984. Even if agriculture were not entered upon, you think there would be an increase in the production of the district, and a consequent increase in railway traffic? Yes. The country requires development, and a greater conservation of water. You cannot expect to increase the agricultural traffic for some years, for the simple reason that the people who are in the district now have not the means, after the terrible straits which they have gone through, to purchase agricultural machinery.

985. What would they do if there were a railway? Undoubtedly, if a railway were constructed there would be a big increase in the traffic from the district.

986. Would the railway be of any advantage to people situated like yourself, in enabling them to get fodder from more favoured districts, in times of drought? Yes; and it would be of immense advantage in assisting us to get stock away.

987. Where would you look for grass? As a rule, the only places where we can look for grass are the scrub lands on the south side of the river, and the New England country.

988. Do you send your stock to New England? I have not done so, but my neighbours have. I wish to state that it would be almost utterly impossible for people living out west to get their stock to a railway on the north side of the river.

989. Would there not be a station out near Rossmore? Yes; but it would be of no use to put sheep on the trucks there if the train could not travel in towards Narrabri, because of the flooded state of the country.

990. At Tulladunna? In wet seasons there is no such place as Tulladunna. The flood-water breaks over the land at the 277-mile peg on the proposed route, on the northern side of the river, and one stream goes to the east of Boolcarrol, and the other to the south of it. On the north side of the river the line would have to cross about 20 miles of flooded country. I have known this country since 1865.

991. You think it would be better to take the line on the south side of the river? Yes; it would be accessible there, whereas at times it would be impossible to get to a line on the northern side of the river.

Joseph Wall, grazier, Apple-tree Clump, sworn, and examined:—

992. *Vice-Chairman.*] Are you in favour of the construction of the proposed railway? Yes, if it start from Narrabri East, and keep on the north side of the river.

J. Wall.

21 May, 1900.

993. Why? Because such a line would go almost entirely through Crown lands. Personally, I do not care much where the line goes; but the Crown land on the south side of the river is of very little value.

994. How does the land on the north side of the river compare with that on the south side? In my opinion the land on the north side of the river is better than that on the south side.

995. What experience of agriculture have you had in the district? I have grown crops on my land, but I kept no record of the yield. If the season is at all favourable grain will grow in that part of the country. I have known the district for thirty-three years.

996. Did you only put in one crop? That is all for grain; several for hay. The land had been harrowed the year before, and the crop was put in practically under the harrow. If the railway were kept on the north side of the river there would be an important station at the crossing on the Boolcarrol Road. Mr. Maxwell has a large shed there, and as many as 50,000 sheep have been shorn there.

997. Could not the wool be brought to Wee Waa? No; it would be less costly to take it to Narrabri.

Albert

Albert Coppleson, storekeeper, Wee Waa, sworn, and examined:—

- A. Coppleson. 998. *Mr. McFarlane.*] How long have you been in the district? About thirteen years. I have been living in Wee Waa about ten years.
- 21 May, 1900. 999. How do you get your supplies? I get them by road through Narrabri West. Ten years ago the importation of the town of Wee Waa amounted to 240 tons in the twelve months; but last year it amounted to about 1,600 tons, and the trade is increasing every year.
1000. What is the increase due to? To the closer settlement in and about Wee Waa.
1001. Is the population of the district increasing? Yes, and the population of the town too. When I first came here the population of Wee Waa was about 150; but now there are nearly 1,000 people within about 2 miles of the town. People used to be in the habit of sending to Narrabri or to other places for their supplies, but of late years they have been buying their supplies in Wee Waa. Apart from that, however, the traffic to and from the district has increased.
1002. Do you think that the increase will continue? Yes, if we get a railway. There are a good many industries which might be started in and about Wee Waa.
1003. What rate is charged by teams to bring goods from Narrabri West to Wee Waa? All classes of goods are charged for at the same rate. Our cheapest rate is 1s. a cwt., while, in very dry weather, when the carriers have had to feed their animals, or in wet weather, when it has taken longer to make the journey, we have had to pay 2s. a cwt. About 1s. 4d. a cwt. would be the average rate.
1004. Is there much traffic from Wee Waa to Narrabri? Yes, a good deal. A large quantity of wool goes through Wee Waa, and a great deal of timber. Only last week I noticed loads of timber being carted through Wee Waa to Narrabri. A great many people are employed in the district in getting timber both for sleepers and for the saw-mills.
1005. Are there any saw-mills at Wee Waa? Yes, one; and there are two or three out at Pilliga.
1006. Do you favour the extension of the railway from Narrabri West or from Narrabri East? From Narrabri West. If the railway is kept on the north side of the river, and a station is made at Tulladunna, it will not pay the Wee Waa people to use the line, because the station will be about 6 miles from here, and it would suit us better to bring our goods right through from Narrabri West, and thus save the railway freight. I know the whole of this district pretty well, and I have travelled from Wee Waa to Narrabri, to Moree, and to Collarenebri.
1007. Have the droughts had a serious effect upon the district, from a business point of view? No; our business is constantly increasing, though it has not increased with a rush lately.
1008. Notwithstanding the drought of the last four or five years, the district has gone ahead? Yes.
1009. If good seasons return, do you anticipate a greater increase in business? Yes. If we had a railway I think that agriculture would be entered upon in the district to a greater extent.
1010. Do you think that the land is sufficiently good for agriculture? Yes. A good many people have come from long distances and have taken up land here only lately. I believe that about twenty-three blocks were thrown open only a few months ago, and people who are competent to judge thought it good enough to take up in blocks of something like 500 acres.
1011. What do the small farmers in this district do with their produce? Some of it is sold locally. I have bought locally-grown hay and chaff. The people who have settled here lately have taken up the land with a view to farming it.
1012. Is the produce which you have purchased consumed locally? Yes; and I have also to get produce from the New England district to send out north.
1013. Is there not a sufficient quantity grown here to supply the district? No.
1014. Is it only in times of drought that there is not a sufficient quantity grown to supply the district? Yes.
1015. Do you think that, with railway facilities, people would go in more for cultivation? Yes.
1016. What market would they use when they were over-supplying the local demand? There is a good market in the district between Wee Waa and Collarenebri.
1017. Would Walgett be a market for produce too? Yes.
1018. Is not that country similar to this? As far as Pilliga the country is similar; but I have not been as far as Walgett, though I have been up in the direction of Collarenebri and Mungindi.
1019. Do you think a railway here would pay within a reasonable time? If a line were constructed to Wee Waa it would pay for that distance.
1020. Are most of the people of Wee Waa in favour of the extension of the railway from Narrabri West? Yes, pretty well all of them.
1021. *Vice-Chairman.*] Would it be a positive disadvantage to Wee Waa, if the railway were kept on the north side of the river? Yes, it would wipe the town out, though, of course, a number would try to hang on.
1022. If a railway were constructed through Wee Waa, would this become a fairly large distributing centre? Yes; Wee Waa would supply all the settlers down towards Pilliga, and out towards Burren, Bugilbone, and Merah.
1023. *Mr. Watson.*] The rate on third-class goods from Sydney to Narrabri, a distance of 352 miles, would be £8 10s. 3d. per ton, and to Tulladunna £9 1s. 7d.;—would it not therefore be cheaper for you to get your goods sent to Tulladunna, and to cart them from there, than to get them sent to Narrabri West and cart them from there? Carriers charge not only for distance but also for the time spent in loading and unloading; and therefore we should have to pay nearly as much to bring goods from Tulladunna as to bring them from Narrabri West.
1024. If you paid anything less than 9s. a ton from Tulladunna you would save money;—do you not think that you could get your carting done for that? I do not think so; I should have to put on teams myself.
1025. There would be no back loading? No.
1026. What back loading is there now? Most of the teamsters take back timber and wool.
1027. When there is back loading you get lower rates? Yes. We must try and land goods here as cheaply as storekeepers doing business, say, in Narrabri, could deliver them at Pian Creek. As regards the merit of the two proposals, I should like to say that although there are some settlers living on the north side of the line, most of the land there is within the Edgeroi holding. Settlers who are living on the eastern side of that holding send their produce to the Moree line, and the holders of Edgeroi are having a woolshed built on

on that line, and their homestead is there. Other settlers on the north side of the river are not more than 14 or 15 miles from the existing railway, while those who are not served by the existing railway would be only 12 or 14 miles from the proposed railway on the south side of the river. If, on the other hand, the line were kept on the north side of the river it would wipe out Wee Waa altogether. I should like to draw the attention of the Committee to the evidence of Messrs. E. H. Wall and Murat, given in 1893, against the proposal that the line should be taken *via* Gurly Point to Moree.

A. Coppleson.
21 May, 1900.

1028. *Mr. Shepherd.*] Why would a line on the north side of the river wipe out Wee Waa? Wee Waa is an established town and a fairly good trading centre? If the railway come here it will become a still bigger centre; but if the railway keep on the north side of the river we shall be unable to compete with the Narrabri storekeepers for the Pian Creek traffic, because it would cost us more to land our goods there than it would cost them. We should have to bring our goods from Tulladunna to Wee Waa, and then bring them back to Tulladunna, and that would kill our trade, so that it would not pay business people to remain here.

1029. What would it cost per ton to do that? At a low rate it would cost, on the average, about 15s. a ton. If flour were £8 10s. a ton landed at Tulladunna, it would cost 15s. more to bring it to Wee Waa, and, if we wanted to supply a man at Burron, another 15s. to take it back to Tulladunna, in addition to the railway rates from Tulladunna to Burron. It would, therefore, cost a man at Burron £1 10s. a ton more to buy flour at Wee Waa than to buy it at Narrabri. I have paid the Government as much as £350 for an acre of land in this town; but I have been afraid to enlarge my premises, because I do not know what will be done about the railway, and we have all been in a state of uncertainty about the matter for a number of years. If it were not for that uncertainty, Wee Waa would be a bigger town than it is, although it has made great strides of late years.

1030. *Mr. Watson.*] Have you noticed any increase of late years in the number of farming implements required in the district? Yes. Up to five years ago there was no inquiry for such implements, but now the inquiries increase every year.

1031. Is there an apparent disposition on the part of the farmers to adopt newer kinds of implements? They are only just commencing to go in for the newer kinds of implements, but there is a great demand for them now.

Ernest Albert Anniversary Holcombe, settlement lessee, Wee Waa, sworn, and examined:—

1032. *Mr. Shepherd.*] Where is your property? On the Merah holding, on the north side of the river, 20 miles below Wee Waa.

E. A. A.
Holcombe.

1033. How much land do you hold? 3,000 acres.

21 May, 1900.

1034. Are you carrying on grazing there? Yes.

1035. How long have you been there? For four years. Before that time I was in the Walgett district. I have been at it ten years altogether.

1036. How many sheep do you run? I have 1,700 at the present time.

1037. Is your land ringbarked? Yes, all of it.

1038. What kind of timber was growing on it? Belar and coolabah.

1039. Have you been engaged in the timber business at all? No; but I have had a fair amount of experience in getting timber for my own use in other ways. You will find very good ironbark about 12 miles from Wee Waa, south-west and west.

1040. Is the forest an extensive one? Yes; it extends for a great distance. There is more ironbark there than I know of in most districts.

1041. Would the timber in the district contribute extensively to the traffic of a railway? I think timber would be brought to the railway from that part of the district. They could get it to Wee Waa more easily than to Narrabri or to Boggabri.

1042. How far is it from Narrabri? About 30 miles.

1043. How long do you think the timber there is likely to last? It all depends upon how it is used. I have worked amongst it getting posts and building material, and I know that it is timber which is suitable for railway requirements.

1044. Is the silver-leaved ironbark between Narrabri and Wee Waa as good as the ordinary ironbark? No; it is not considered good timber at all. It is the narrow-leaved ironbark that is useful. The silver-leaved ironbark is generally pipey, and not so big as the narrow-leaved ironbark.

1045. *Mr. McFurlane.*] Is it the red or the grey ironbark that you use? You will get both out there; but it is chiefly red ironbark.

1046. *Mr. Shepherd.*] Are there many selectors out your way? Yes.

1047. What is the average size of their holdings? From 2,000 to 3,000 acres.

1048. What kind of land do they hold? Red-chocolate soil, which is good farming.

1049. How much of your land would be suitable for cultivation? I can safely say that half of it would be.

1050. Is there a disposition on the part of the settlers in your district to go in for agriculture? I think that people on small holdings will have to go in for agriculture, because they have not sufficient land to make grazing pay. It is only by cultivating your land that you can save your stock when you are away from the railway line.

1051. Would you feel disposed to go in for agriculture? Yes.

1052. At the present time it would not pay you to grow produce to send away? No.

1053. What number of sheep are you able to fatten and dispose of in a year? We never have many to fatten. I go in more for breeding, myself, and I do not send many away. I usually run from 1,800 to 2,000 sheep, and I can sell my stock better locally as stores.

1054. *Mr. Watson.*] Is your country good for fattening? Yes, splendid.

1055. *Mr. Shepherd.*] Is it expensive to drive stock from your land to the railway station? Yes; it is too expensive to make it profitable to send small lots away; but if we had a railway we could often send away a small lot.

1056. Is much stock moved from this district in dry seasons? Yes.

1057. In what direction? This year stock has been going to Moree and to New England, and also on to the scrubby country. I have a lot there myself.

- E. A. A. Holcombe.
21 May, 1900.
1058. Would the starving stock traffic be a source of revenue to a railway? Yes. A railway would provide the only means of saving stock.
1059. Is there any good pine in the forests that you have spoken of? About 16 miles out you will find pine. The good timber has been cut out just around the town by the local sawmills, so that they have to go from 16 to 20 miles for good timber now.
1060. I suppose at that distance from Wee Waa the pine has not been cut much? It has hardly been cut. You find pine more down about Pilliga.
1061. What would be a fair-sized holding for the support of a family in your neighbourhood? I have 3,000 acres, and I can support a family well on that area. You can do very well on from 2,000 to 2,500 acres.
1062. But a railway would assist you considerably? Yes.
1063. If there were a railway you could put part of your land under crop? Yes; and I should be able to send away some fat stock occasionally.
1064. Are you acquainted with the country as far out as Collarendabri? No, but I know it as far as Walgett.
1065. What is the country like between your place and Walgett? It is principally black-soil, coolabah country, with belts of loamy soil. It is the loamy soil that we generally use for agriculture, and our houses and gardens are generally situated on that soil.
1066. Are the red and the chocolate soil superior for agriculture to the black soil? Yes; we all use the red or the chocolate soil for agriculture, because they do not crack.
1067. If we have been informed that the black soil gives better returns, and lasts twice as long as the red soil, would you say that the information is incorrect? I think that it is. The black soil grows the best pasture; but it is not the best agricultural soil. With regard to the feeding of stock, I have found that the cost of fodder, and the various charges for carriage, and so on, make it too expensive. The only thing that would help us is a railway.
1068. Which route would you favour for a railway from Narrabri—that on the north or that on the south side of the river? That on the south side of the river. That is the way all the traffic goes now, to and from Walgett: I cannot see that the construction of a railway on the northern side of the river would benefit very many people, whereas if the line were taken on the southern side of the river it would be of advantage to some hundreds.

Arthur George Lane, homestead selector, Wee Waa, sworn, and examined:—

- A. G. Lane.
21 May, 1900.
1069. *Mr. Watson.*] Where is your holding? A mile and a half from Wee Waa.
1070. What is the area of it? 500 acres.
1071. How long is it since you took it up? I took it up in September last.
1072. Was the timber on it green then? Yes. I think it originally formed part of the Wee Waa holding.
1073. Were there many applicants for the land? Yes, two or three.
1074. What sort of land is it? Part of it is red chocolate ground, and part of it is black soil. About 200 acres of it are chocolate ground.
1075. Is the chocolate ground heavily timbered? Yes.
1076. What sort of timber is there on it? Ironbark, pine, box, and brigalow. I have a lot of it cleared ready for the plough, and it would have been ploughed but for the wet weather.
1077. Have you had previous experience of farming? I have not had much previous experience in farming.
1078. How do you expect to make a living on your land—mainly by agriculture? Yes.
1079. Where do you expect to get a market? I expect to send some of my stuff to Walgett if the railway is made there, and what I cannot get rid of in that way I shall send towards the coast.
1080. When you took the land up did you think you would find a local market for what you grew, or did you expect to have to send your produce to Narrabri? I intended to send some produce to Narrabri West.
1081. What did you expect to have to pay for cartage there? £1 a ton when the roads were good, and more at other times.
1082. Did you expect to find a fair demand locally for hay? I did not expect to be able to get rid of very much locally.
1083. I understand that quite a number of selections have been taken up recently? I think that the day I selected my piece about ten blocks were taken up.
1084. If all of these selectors go in for agriculture they will soon exhaust the local market? Yes; in anything like a decent season.
1085. Do you think that the proposed railway would assist you in getting rid of your produce? Yes, if it came from Narrabri West; but if it came from Narrabri East it would be of no assistance to us at all, because it would cost us as much to cart produce to Tulladunna as to cart it to Narrabri.
1086. Is there much land between Wee Waa and Narrabri West as well suited for agriculture as your land is? Yes; for from 10 to 12 miles on this side of Narrabri the land is all good for agriculture.
1087. It improves as it gets to Wee Waa? Yes.
1088. What would you contract to clear land similar to your own for? From 15s. to £1 an acre.
1089. Did you grub out your timber? I burnt it off and grubbed it out. There was a good deal of dead timber amongst it.
1090. Is there much timber similar to yours still to be thrown open? Yes. Out towards Yarry Lake the country is all the same.
1091. How far is Yarry Lake? Ten or 12 miles from the proposed railway.

Charles Peter O'Rourke, hotelkeeper, Wee Waa, sworn, and examined:—

- C. P. O'Rourke.
21 May, 1900.
1092. *Vice-Chairman.*] How long did you carry on operations as a saw-miller in this district? Between four and five years.
1093. What kind of timber did you deal with mostly? Mostly with pine.
1094. Did you saw ironbark? Yes.

1095.

1095. Where did you get your supplies from? The pine came mostly from Cuttabri, down towards Drilool, about 16 miles away; and from Brigalow Creek, about 14 miles away. There is more ironbark than pine on Brigalow Creek.

1096. Is the pine practically cut out now within 15 miles of Wee Waa? There is none within 15 miles of Wee Waa; but from Cuttabri Creek to Baradine, and right on to Coonabarabran, it is all pine-bearing.

1097. What is the nearest point, on the route of the proposed railway from Narrabri West to Wee Waa, to the pine forests? I think that Wee Waa would be the nearest point, or somewhere near Round Swamp, which would be about 15 miles by Yarry Lake.

1098. Would one have to go 14 or 15 miles from the proposed line in order to get suitable pine? Yes. You might get odd loads at a shorter distance, but you would have to go out some distance to get a good supply.

1099. Where is the good ironbark now grown? On Brigalow Creek, and from a point 14 miles south of Wee Waa, right on to Coonabarabran.

1100. We have been informed that the ironbark of the district which would be served by the proposed railway is inferior, being as a rule hollow, with 30 per cent. of waste in each log;—is that your experience? No; there is ironbark within 3 or 4 miles of Wee Waa which is hollow, but they call it bastard ironbark; it is a short-leaved ironbark; but the ironbark on the Brigalow Creek has a long leaf, and is very sound.

1101. *Mr. McFarlane.*] What variety of ironbark is it? I only know the two varieties—the short-leaved ironbark and the narrow-leaved ironbark.

1102. If a railway were brought to Wee Waa would that timber be sent out west? I think that Wee Waa would advance if the railway were brought here, and the people out west must get their pine either from this district or from the Pilliga district.

1103. Have you consigned any timber, either sawn or in logs, to Narrabri? Yes; to Gately's mill and to Stafford's mill, and I have sent sawn timber. I have sent a lot of timber to Collarendabri.

1104. Do you endorse the evidence which has been given to-day with respect to the advisability of constructing the proposed railway on the south side of the line? Yes.

Archibald MacKenzie, grazier, Wee Waa, sworn, and examined:—

1105. *Mr. McFarlane.*] Have you a good general knowledge of this district? Yes; in pretty well all directions.

1106. Will you describe the country between Wee Waa and Narrabri? Along the cleared line it is sandy, scrubby country.

1107. What would that country be like if it were cleared? Some of it would be very good.

1108. For agriculture, or for pastoral purposes? It would be good country if you could keep the native dogs off it.

1109. Is it country that would be settled upon to any extent if railway communication were given to it? A lot of it is; but parts of it are no good at all.

1110. Is the country between Wee Waa and Walgett similar to that between Wee Waa and Narrabri? On the south side of the river it is somewhat the same.

1111. Is there much scrubby country? Yes, down towards Pilliga.

1112. What is the best soil for grazing land? The black soil.

1113. Does the clearing of scrub country greatly improve the land? Yes; the scrub land is no good unless it is cleared.

1114. How does the cleared land compare with the plain country? Some of it is nearly as good as the plain country.

1115. *Mr. Watson.*] Do you know the country around Yarry Lake? Yes.

1116. And do you know the country between Wee Waa and Schwager's? Yes.

1117. How does the country out towards Yarry Lake compare with that between Wee Waa and Schwager's? It is about the same; but there is more belar and pine.

1118. Is it good country? Very good country.

1119. How far south of the cleared line is Yarry Lake? About 7 or 8 miles from Round Swamp.

1120. Then the Yarry Lake country would be within the influence of the proposed railway? Yes.

1121. How far south of the cleared line is ironbark to be got in any quantity? For railway purposes.]

1122. Yes? About 14 or 15 miles from Round Swamp.

1123. Would it be closer to the line at any other point? No.

1124. Is there good pine within about the same distance of the railway route? Most of the pine from that part of the district has been drawn towards Narrabri; but you could get pine within about the same distance of the railway route.

1125. How far do they draw timber now? From 20 to 25 miles.

1126. Fourteen or 15 miles is not too far to draw timber? No.

1127. So that there is a good deal of timber still standing which would be within the influence of the proposed railway? Yes. Coming towards Wee Waa you get ironbark within 12 miles.

1128. Do you think that Wee Waa is the nearest point to which any quantity of timber would be drawn? Yes.

Sydney Powell, grazier, Pilliga, sworn, and examined:—

1129. *Vice-Chairman.*] What is the extent of your holding? About 13,500 acres, including what is held by one of my sons.

1130. What is the carrying capacity of the land? There is such a difference in the seasons that it is difficult to say; but on the average it will carry a sheep to 2½ acres.

1131. What advantages would you and the people of Pilliga derive from the construction of the proposed railway;—what effect would the construction of the line have upon settlement in that district? The construction of a railway from Narrabri West to Wee Waa would be greatly to the advantage of the people living in my neighbourhood. I have been in consultation with them over the matter for several months, and no later than Saturday they asked me to advocate the construction of such a line, as it was hopeless to expect that a line would be constructed to Pilliga.

1132.

C. P.
O'Rourke.
21 May, 1900.

A.
MacKenzie.
21 May, 1900.

S. Powell
21 May, 1900.

- S. Powell. 1132. Do you regard the construction of a line on the north side of the river as unlikely to serve the interests of Pilliga? Yes.
- 21 May, 1900. 1133. Would the people of Pilliga use a railway station at Burren? No; they say that they would sooner come to Wee Waa.
1134. Why would Wee Waa be more serviceable to them than Burren? I should make Wee Waa my terminus, except in cases of emergency.
1135. Is the country easier between your place and Wee Waa than between your place and Burren? I do not know that it is any easier. The people going from Pilliga to Burren would have to cross the Bugilbone Creek bridge, about 8 miles from Pilliga, and from the crossing to Burren would be another 14 or 15 miles, or 22 or 23 miles altogether, whereas from Pilliga direct to Wee Waa the distance is only 37 miles.
1136. Do you corroborate the evidence which you have heard here to-day? I do. I was in Narrabri in 1890, and I travelled from Narrabri after the water had begun to recede, but it took me three days to get home. I passed through water at Tulladunna and Boolcarrol for a distance of 3 or 4 miles, so that it looked like a perfect sea.
1137. What depth was the water there? The depth varied, so that sometimes the water came up to the horse's fetlocks, and at other times to the saddle flaps. I could see by the marks on the trees that the water had fallen 9 or 10 inches before I got there; and I should have been afraid to venture through, only for a guide.
1138. Tulladunna is the place at which it is proposed to construct a railway station? I believe so. I have no doubt that in bad weather such as that of last week, the road from my place to Burren would be very heavy.
1139. In bad weather, could you get to Wee Waa as quickly as to Burren? If I came along the south side of the river, but I should have to go 20 miles around to get across. I live on the north side of the river.
1140. Could people living on the south side of the river get to Wee Waa as quickly as to Burren? Yes; even the people on the north side prefer to travel along the road on the south side of the river in wet weather. That road is more sandy and easier to travel in wet weather, because it is free from flood, but it is very heavy in dry weather.
1141. Is the country between Pilliga and Burren more liable to floods than the country between Pilliga and Wee Waa? There is not much of it flooded, unless the flood is very high, but there are swamps and low places where I have had my horses bogged to the bellies.
1142. Then the travelling generally is heavier towards Burren than towards Wee Waa? In some places, though the road, where possible, follows the high ground.

Cornelius Kelaher, grazier, Pian Creek, sworn, and examined:—

- C. Kelaher. 1143. *Mr. Shepherd.*] How much land have you? With the members of my family, I hold between 5,000 and 6,000 acres.
- 21 May, 1900. 1144. What number of sheep have you? About 3,000.
1145. How long have you been on your present holding? Eighteen years.
1146. What is your annual production of wool and stock? I have sent away from sixty to seventy bales of wool a year, and in favourable seasons I sell from 1,000 to 1,500 fat sheep.
1147. Do you carry on cultivation at all? Yes, a little.
1148. What is the extent of your cultivated land? About 5 acres.
1149. Do you cultivate wheat chiefly? I tried wheat one year, oats another year, and corn another year.
1150. How did the various crops succeed? I got the best crops I ever saw in my life there. The wheat was almost as high as myself, and I never saw better ears of grain. I was reared on a farm at Singleton, and I never saw a better crop on the Hunter than I saw on Pian Creek. The same remarks apply to my oat crop and to my corn crop.
1151. Have you gone in for fruit-growing at all? A little; I never saw better grapes grown than grow there.
1152. What proportion of your land is similar to that which you have been cultivating? Very nearly every acre of it is as good.
1153. Would you go in extensively for agriculture if the proposed railway were made? I intend to go in largely for agriculture.
1154. Would many of your neighbours do the same? They seem all inclined to go in for agriculture, more or less, but my experience is that sheep pay better than farming. I have done better since I took to grazing.
1155. Are many sheep moved about this district in bad seasons? Yes, a great many; I have had to move some of my own. Many sheep are trucked at Narrabri and sent to Guyra.
1156. Have you had many losses in moving sheep? Yes; we have lost heavily in driving them.
1157. At what rate will poor sheep travel? Sometimes you are very lucky if you can get them 3 miles a day. They are dropping every mile.
1158. Would you avail yourself of the railway, if one were near at hand, to move your sheep in times of drought? Yes. If we had had a railway years ago it would have saved me a lot of money. Then, too, in good seasons there would be many more stock sent away. I should often send away two or three trucks of sheep to Maitland or to Sydney if there were a railway here; but it does not pay to drive small lots, and the sheep afterwards get poor, and perhaps die.
1159. Do you carry any large stock? About five head of cattle, and five or six horses.
1160. Do the cattle on your run do well? Splendidly; it is very fattening country.
1161. Has the whole of your land been ringbarked? It is nearly all plain country; but there is some coolabah country, which would be better if it were thinned.
1162. Is your soil chiefly black soil? We have black soil and chocolate soil.
1163. What kind of soil are you cultivating? I have tried both. My grapes are growing on black soil, and they are doing wonderfully well.
1164. There seems to be a prejudice against black soil for cultivation? Yes; it is said that it cracks too much; but I have tried both it and the chocolate soil. I find that oranges do much better on the black soil.
- 1165.

1165. Are not some kinds of black soil more clayey than others? Yes. Some black soil does not crack so much as other black soil does; it is a sort of loamy soil.
1166. Have you drained your ground at all? No; I have never even trenched it.
1167. Do vegetables do well with you? Yes; I have grown cabbages that you would have to get an axe to cut—that is the black preserving cabbage. I am in favour of bringing the line from Narrabri West. If the line is brought from Narrabri East, people living to the west of Wee Waa will have 10 miles additional haulage to pay for all time, which means so much less profit on our wool and produce, and so much more money for our stores. I have laid out some hundreds of pounds in Wee Waa, and for that reason I should like to see the town go ahead. I think it would be very wrong to saddle the people living between Wee Waa and Collarendabri with 10 miles of unnecessary haulage. I am sure, too, that a line on the south side of the river could be constructed more cheaply than a line on the north side. What Mr. Powell said about the flooded state of the country on the north side is quite correct. I have had to swim my horses there occasionally.

C. Kelaher.

21 May, 1900.

WEDNESDAY, 23 MAY, 1900.

[The Committee met at the "Burren Hotel," Burren, at 3 p.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD, | JOHN CHRISTIAN WATSON, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Robert Darvall Barton, grazier, Burren, sworn, and examined:—

1168. *Vice-Chairman.*] How is your property situated with respect to the proposed railway? The proposed railway would pass through my leasehold. R. D. Barton.
23 May, 1900.
1169. What is the area of your holding? I have got about 60,000 acres, leasehold and freehold. There are 14,000 or 15,000 acres of secured land.
1170. What is the average carrying capacity of your land? Before answering that question I would ask what do you mean by carrying capacity;—do you mean simply capacity to carry sheep and keep them alive, or capacity to keep them in such a condition that they will grow wool and increase.
1171. How many sheep will your country carry, one year with another, taking your latter definition of carrying capacity? During the last few years it has been able to carry fewer sheep than formerly. Fifteen years ago when I came here I gave evidence before the Local Land Board that the country would carry a sheep to 3 acres; but, during the last year or two, I have been rather inclined to think that it takes more than 3 acres to carry a sheep. I still hold to the opinion, however, that, on the average, taking the seasons as they come, right through, a sheep to 3 acres is fair stocking.
1172. Where do you consign your wool and other products? To Sydney, *via* Narrabri West.
1173. Do you ever experience any difficulty in getting your produce away? Yes, on many occasions; either because of droughts, or because of floods. When there is a drought, there are no teams, and in wet seasons the roads become practically impassable. If I sent for supplies to Narrabri to-morrow it might be six weeks or two months before I got them.
1174. Do these difficulties happen every year? Not every year; but we have rain, on the average, more than once a year, and if you wanted to get supplies up, or to send wool away at that time, you could not do it.
1175. Do you consider the country which you hold, and the adjacent country, good fattening country? Yes; it is the best in the Colony.
1176. What difficulty have you in getting fat stock to market at the present time? At the present time there is never a blade of grass on the travelling stock routes between here and Narrabri, and I estimate that sheep lose 10 lb. in weight in going from Burren to Sydney.
1177. Does this risk of loss prevent the sending of consignments to market? It does.
1178. Is the country so good that you could fatten more than one consignment of sheep per annum if you had speedy communication with Sydney? Yes. We can fatten all the year round, winter and summer; but we require a railway to send the stock away.
1179. Would your remarks about your own land apply to your neighbours' land? Yes; to the whole district through which the proposed line would pass.
1180. Have any small holdings been taken up recently in this district? Yes.
1181. With railway communication, would small holders be able to send away small consignments of fat stock at intervals during the year? The same thing applies to large holders as to small holders in that matter. I have a small consignment of fat wethers on hand at the present time, but I could not pay a drover to take them to Narrabri, because it would cost too much. A drover would take 2,000 sheep for the same money as 500.
1182. Which way would you like to see the railway brought from Narrabri, on the north side of the river or on the south side? In my opinion the line should come on the south side of the river, *via* Wee Waa; but it does not matter to us on what side it comes, so long as we get it.
1183. Do you think there is likely to be any agricultural development in the country between Wee Waa and Burren? No, not the least.
1184. Is it because the land is not suitable for agriculture? Yes; and because there is no market in which to get rid of your stuff when you have grown it.
1185. With a railway to Walgett and Collarendabri, would there not be a market out west for locally-grown hay? Yes; but it would hardly be worth considering, from a commercial point of view. When there is rain, and grass follows, there is never any demand for fodder out west, and it would be ridiculous for us to grow produce in competition with the Hunter River farmers and the farmers round about Gunnedah. As for supplying the country out west, we should be having a drought when they were having one.

- R. D. Barton. 1186. Do you think that the distance from the seaboard is too great to enable you to successfully compete with your grain in the markets of the world? I think so; and I think that the crop which we should get once in five years would not pay us for putting it in. This is essentially a grazing country, and I hold that, as graziers, we require, and can support, a railway far better than as farmers.
- 23 May, 1900. 1187. What sized holding would be sufficient to maintain a man and his family in decent comfort in this district? That depends very much upon what the man will be satisfied with. No doubt a man could make a living on 5,000 acres; but if he gets on well in that area he will, before very long, try to increase his holding to a very much larger one.
1188. Is land always available for that? Not always; but if I wanted to buy your shirt, and I offered to you more than you could get another one for, you would probably sell it.
1189. Have any experiments for conserving the natural grasses as hay been successful in this district? Last year I conserved the natural grasses, and also cultivated 25 acres of wheat for hay. I have cultivated one paddock for the last ten or twelve years, and I have had three crops during that time, but not one of them would have yielded grain, because they were all pinched.
1190. I suppose you selected the best agricultural land on your holding to cultivate? Yes. The piece I speak of is 12 or 13 miles from my house, and it was selected because it was the best I could get. My object in growing hay and conserving the natural grasses is to have a reserve of fodder in the event of another drought, such as that we have recently passed through, occurring.
1191. How often during a period of years would you be able to cut a large quantity of grass for hay? During the last two years we could have done it, and I should think it could be done two years out of three. We generally get a spring.
1192. How does the natural grass keep as hay, and what is the quality of the hay? I cannot tell you how it will keep, but, as for its quality, I would sooner have it than any other hay I have grown.
1193. What grasses have you conserved? Trefoil, "parsnip," "carrot," a little crowsfoot, and other native herbage. You can get twenty or thirty different species of herbage in one handful. The trouble with crowsfoot is that it is rather too succulent to dry into hay.
1194. Have any of your neighbours carried on similar experiments? Mr. Brodie, the manager of Boolcarrol, is the only person I know who has gone into it to any extent.
1195. Where do you consign your wool? Sometimes to Sydney, and sometimes to Newcastle for direct exportation to England. I think that the district deserves a railway, because it is one of the best pastoral districts in the Colony. We have been very much neglected in the past. All we have got from the Government is a by-weekly mail and a telephone line, erected after a combined movement on the part of a few of us around here, and the giving of a guarantee.
1196. *Mr. Watson.*] Do you think it is necessary to take the railway both to Walgett and to Collarendabri;—the Railway Commissioners estimate that there would be a yearly loss of £13,000 on the working of the two lines? I cannot contradict the figures of the Railway Commissioners; but I cannot see how there can be that loss. Probably the estimate of traffic has been made in a time like the present, when the country is not a quarter stocked. We have nothing like a sheep to 3 acres in the district now. There are times when we can carry more than a sheep to the acre; but there are also times when we cannot carry any sheep at all, because we do not get enough rain to make the grass grow. If we had a few good seasons, however, the probability is that the figures of the Railway Commissioners would be found to under-estimate the traffic. If I had plenty of capital, I think I should not mind guaranteeing a railway as I have guaranteed the telephone line. Walgett wants a railway, and Collarendabri wants a railway, and if the proposed line is constructed, we shall have a trunk line for both towns for more than half the distance, and only 50 miles of branch line will be required. That arrangement makes the construction much less than would be necessary if two separate lines were made—one to Walgett and the other to Collarendabri. Had the railway originally come down from Narrabri through Wee Waa, and then on to Moree, we should have had a railway before this, and at a much smaller expense.
1197. Is there enough traffic from the country beyond Collarendabri and Walgett to make two railways pay? Judging from the traffic that passes Burren from Walgett, and that which passes Boolcarrol from Collarendabri, I should think that there is ample to justify the construction of two railways.
1198. The Railway Commissioners suggest that a line might be taken to Collarendabri from Narrabri, and another line to Walgett from Coonamble? I lived in the Coonamble district for ten years, and I have been in this district some fifteen years, and thirty-five years ago I was in this district managing Gurly station, so that I am thoroughly acquainted with every inch of the country between Burren and Coonamble, as well as with the district round about Walgett and along the Barwon, and out to the Queensland border. The country down the Castlereagh from Coonamble is certainly excellent pastoral country, and requires a railway as much as we do; but the question is, should the country between the Castlereagh River and the surveyed line to Walgett be left without a railway. This country is practically comprised by the frontage on each side of the Namoi, and it is all good country.
1199. A line from Coonamble to Walgett, and another from Narrabri to Collarendabri, would apparently divide the pastoral country well? I think so. There would be a distance of about 80 miles between the two lines.
1200. What is the country like in that 80-mile stretch;—south of the Namoi, below Pilliga, is not some of the country unproductive? Until you come to Come-by-chance the country on the south side of the river is not very good.
1201. Should you consider a man too far from a railway if he were within 20 or 25 miles of one? I think that a man should be satisfied to be within 30 miles of a railway; but, of course, others might not be of the same opinion. As to whether the railway should be taken to Walgett from Coonamble, or from Narrabri, that is a question for the Committee to answer.
1202. Would a line to Walgett catch the more northerly traffic that now comes to Collarendabri? No doubt the traffic would go to the railway, either at Walgett or at Collarendabri.
1203. A railway to either place would catch all the more northerly traffic? Yes. People will go to the nearest railway, wherever it is.
1204. If the railway were taken from Coonamble to Walgett, and another line were made from Narrabri through Wee Waa to Collarendabri, could the Collarendabri line be given a more direct route than that at present surveyed? From my long experience of the district, I say that the line that is now surveyed is the cheapest that could be constructed. Any other line would pass through a great deal of flooded country, and, if you tried to bring a railway more to the north, you would lose the traffic of Pilliga and places lying on the north side of the Namoi, but on the south side of the proposed line; although such a
line

line would come nearer my woolshed. Any deviation would not save more than a few miles, and the more northerly route would not serve as many people as would be served if the route already surveyed were adopted, while the cost of construction would be more if the surveyed route were altered.

R. D. Barton.
23 May, 1900.

1205. Do you think that if Collarendabri were the only objective the present surveyed route would be the one to follow? Yes. I think that a line following that route would serve more people than any other. I have heard no one object to the proposed route. The people on the north side of the Namoi, who, I thought, would have opposed it in order to get the railway brought closer to them, are in favour of it; but if you took the line further to the north the people to the south would complain that they were being left too far away.

1206. Is the whole of your 60,000 acres black-plain country? Yes. It is similar to the country the Committee have seen.

1207. *Mr. McFarlane.*] Is the country between Burren and Collarendabri, and Burren and Walgett, similar to what we have already seen? Yes.

1208. Is the timbered country, when cleared, equal to the plain country? It depends on the timber. The belar country, when cleared, or when the timber has been ringbarked and killed, is better than any other. I have small patches of belar, and there are small patches of it all through the plain country. The belar is very easily killed, and if you ringbark it the country on which it grows will carry more stock than the natural plains. When the timber is killed the country is like virgin soil, and the saltbush and natural herbage come up most prolifically.

1209. Would the same remarks apply to box and pine country? No; if you ringbark that country you will probably get a very strong growth of grass-seed.

1210. Which would obtain the more traffic, a line to Walgett or a line to Collarendabri? I think it would be six of one and half a dozen of the other. To Narran, from either Walgett or Collarendabri, is about 60 miles. The bulk of the wool comes from that country, and from the Birrie, the Balloon, and other rivers, right up to the Queensland border. That wool passes Burren and Boolcarrol, and could come through either Walgett or Collarendabri. The carriers follow whatever route has the better feed on it, and the traffic would go to whatever place the railway went to.

1211. Would there be much cultivation between Wee Waa and the Barwon? There are patches of country similar to that of Mr. Hocken, at "Rossmore," Long Point—sandy loam with a few box trees on it. It would probably grow very good crops, but the climate is against agriculture. Our rainfall here is insufficient, and the rain does not come at the right time. You must have rain to come at a time when it will fill the ears, or otherwise the crop will all pinch up. In my opinion, agriculture in this district is more precarious than wool-growing.

1212. Would the traffic of the district increase if a railway were made? Certainly. One has only to look at the railway returns for any district to know that. If you make a railway to any place the traffic increases.

1213. Would the increase in traffic be caused by additional settlement? There would be a good deal of additional settlement, and people would travel about more if there were a railway. The probabilities are that with a railway we should utilise our land more than we are doing now.

1214. Is there much land here available for settlement? Yes, a great deal. Nearly all the leased land will be thrown open for settlement next July.

1215. *Mr. Shepherd.*] Do you think that the renting of the travelling stock routes is desirable? It is most undesirable. I took a great deal of trouble some years ago to bring the matter before the Government, so as to have the stock routes kept open to the public; but they are in the same condition now as they were before. It is due to the state of the stock routes that there is such a loss in stock travelling between Burren and Narrabri. The burrs which are growing up everywhere should be cut down. We keep our own land in good condition; but in many instances I am afraid to buy sheep, because, by doing so I should have my land overrun with burrs.

1216. Are there any other instances in the district, besides your own, where people go in for cultivation? Most of us have a few acres on which we try to grow something.

1217. What success have the others had? About the same success as I have had.

1218. Have you tried the cultivation of fruit to any extent? Yes. The district is as good a district for fruit as you can have, if you irrigate the land. The soil suits grapes especially well.

1219. Do you think that if a railway were constructed people would be induced to go in for fruit-growing? They would certainly grow grapes.

1220. Has any attempt at wine-making been made in the district? I fancy that Mr. Walter Holcombe makes some wine. You cannot surpass the grapes grown in the district, and I suppose good wine could be made from them.

1221. Do you think that the partial success that you have had in agriculture would deter others from cultivating on a large scale, even if they had a railway? I do not know. I should attempt agriculture on a large scale to-morrow if I knew that I could sell my produce.

1222. You think that growing wheat for grain is not likely to be a success in this district? Yes.

1223. It would never pay to grow it for hay for export? No.

1224. Would a railway be largely used for the removal of stock? If we had had a railway here within the last two or three years we could have saved millions of sheep which have since died. I sent 5,000 sheep to Narrabri by train; but at Breeza I took out of the trucks only 2,200 live sheep, and I had to pay for the burning of the rest. If I could have put those sheep into the train, within 20 miles of the paddock, while they were fresh, they would have gone down all right; but during the fortnight's travel from Burren to Narrabri they had nothing to eat. Other sheep that I have trucked I have fed on hay before putting them into the train. If I had the railway here I could put sheep into the train in as good or better condition than they are in when they are fed on hay.

1225. You attribute your losses, I suppose, almost entirely to the want of feed on the travelling-stock routes? Yes.

1226. Is there much large stock in this district? Not at the present time. A few years ago all this country was cattle-country; but we found that cattle would not pay on land that the Government wanted 30s. an acre for.

1227. In what seasons of the year do you suffer most from want of feed? From December until the winter time—if we get no rains in February.

- R. D. Barton. 1228. Where do you send your stock for grass? It all depends upon where the rain has been.
 1229. What do you pay per ton to get goods brought from Narrabri? At the present time, £3 a ton.
 23 May, 1900. I have paid £2 and £3 a ton for the carriage of my wool, but about £2 a ton is the usual rate for back-loading. In the drought of 1898 and 1899 I imported £400 worth of produce, which cost me £7 or £8 a ton delivered here; but it would not have cost half as much if there had been a railway.

James Cousins Duncan, hotelkeeper and grazier, Burren, sworn, and examined:—

- J. C. Duncan. 1230. *Mr. McFarlane.*] Have you resided long in this district? Thirty-seven years.
 1231. Is it a good pastoral district? From fair to good; some parts of it are better than others.
 23 May, 1900. 1232. Do you endorse in the main what Mr. Barton has said about the district? Yes.
 1233. He stated that, in his opinion, it is not suitable for agriculture;—is that your opinion? Yes.
 1234. Is it that the land here is not sufficiently good, or is it that the rainfall is insufficient? Some of the and is good enough; but the rainfall is insufficient. If you get one crop in three you are very lucky.
 1235. Do you hold any considerable area of land here? 6,500 acres, on the north and south sides of Burren Creek.
 1236. Have you occupied it long? I have held part of my land for twenty-one years, and the rest of it for nearly eighteen years.
 1237. Do you run many sheep? Not a great number. Until four years ago my partner, Mr. Hocken, held the reins. We have carried, on the average, a sheep to 2 or 3 acres.
 1238. Is that the full carrying capacity of your land? Yes; during the last four years. I have seen this country when you could not overstock it, and I have seen it when you could not carry a sheep on 100 acres. At the present time I am carrying 4,000 sheep on about 9,000 acres, under starvation conditions.
 1239. Is the country generally similar to that which you occupy? Yes; it is all about the same.
 1240. Is your land all plain country? No; I have some belar and some coolabah country.
 1241. Is that country equal to the plain country when it is cleared? I think that the belar country is better when it is cleared. It is only of late years that we have started ringing the belar; but belar country, when the timber has been rung, is the best carrying country I have seen; though ten years hence it may be the worst.
 1242. Is there much belar country? A good deal in this district. You can hardly find a run that has not a little of it.
 1243. Have you ever tried agriculture? Yes.
 1244. With what success? My first experiment was to throw the seed into the ground, and it stopped there. I got no crop. Last year I got a very light crop. I ploughed 11 acres.
 1245. Do you know the country between Burren and Collarendabri, and between Burren and Walgett? Yes.
 1246. Is it good grazing country? Yes; it is all good grazing country.
 1247. Is it mostly plain country? It is what you might call mixed country—plain, and open box country. On the Collarendabri route there is open coolabah country.
 1248. If the Crown land in this district is thrown open for settlement, and a railway constructed, will it be taken up? Wherever you throw open a piece of land there are hundreds after it. Mr. Barton spoke about the stock routes being withdrawn from lease. I lease a stock route here, and so do many others, and I think it is no use withdrawing the land from lease until someone is appointed to look after the stock routes, and to keep the burrs down. In some places now a carrier cannot walk alongside his team, because of the burrs. I think that the reserves should be withdrawn from lease, and a caretaker appointed to see that they are not eaten out by loafing sheep. If the Government cannot afford to pay caretakers, let them charge us so much for the sheep that we travel.

James Joseph Burrell, settlement lessee, Merrywinbone, sworn, and examined:—

- J. J. Burrell. 1249. *Mr. Watson.*] What is the extent of your holding? 2,560 acres.
 23 May, 1900. 1250. How would the proposed railway, if constructed, affect this district generally? I think it would materially assist us. It would give us a chance to get our sheep away in time of drought, and to bring up provisions.
 1251. What capital value was placed on your settlement lease? Thirty shillings an acre.
 1252. On that you pay 1½ per cent.? Yes; my annual rent is 4½d. an acre, or £48 a year. I think that without a railway, £1 an acre is enough for the land. We are paying too much now.
 1253. Would it be worth 30s. an acre, if you had a railway? I should be satisfied to pay that for it then.
 1254. Do you think that the Crown land in the district would make a similar increase in value, if a railway were made? Yes.
 1255. How far back from a railway would graziers and settlers be assisted by it? Twenty or thirty miles; and extending to the Barwon River.
 1256. Are there many settlers in this district just now? On the Merrywinbone holding alone there are twenty-five settlement lessees.
 1257. Do they all hold the same area as you hold? Some of them hold a little more, and some a little less. Then there are eleven in the Moree district, on the other side of the Thalaba Creek, and nine or ten in the Walgett district.
 1258. All within what distance of the route of the proposed railway? Ten or 12 miles.
 1259. Do you regard the land here as fit for agriculture? It is all good agricultural land, but the climate is against agriculture here.
 1260. Is it your intention to confine your operations solely to sheep? Yes; it would be impossible for me to do otherwise. I might put in a few acres on the off-chance of getting some hay.
 1261. You would not be likely to grow for grain? No; I have had experience in farming in some of the best agricultural districts in the Colony, notably at Wellington and at Mudgee.
 1262. You do not think the rainfall here seasonable for grain crops? No.
 1263. To within what distance would a railway benefit settlers? I should think it would benefit people from 20 to 30 miles back.
 1264. Are there any large areas within a reasonable distance of the proposed railway, which might be made available for settlement leases, if it were constructed? I think that the Mercadool leasehold is to be thrown open shortly. I do not know if the whole of the Oreel and Merrywinbone land is to be thrown open,

open, but I understand that there are 80,000 acres to be thrown open shortly on the Burren, Gorian, Mercadool, and a portion of the Avon Downs holding. J. J. Burrell.

1265. How far would some of that land be from the proposed railway;—20 miles? Not quite so far as that. 23 May, 1900.

1266. Do you agree generally with the statement made by Mr. Barton as to the possibilities of the country to be served by the proposed line? Yes; I thoroughly agree with what Mr. Barton said. I should like to refer to the disadvantages that we are under at the present time. I want seed-wheat, but it will be six or seven weeks before I shall be able to get it out from town, because of the heavy state of the roads after the rain which has just fallen. This rain comes on top of a drought. Week in and week out we are always at a disadvantage.

1267. Can a man make a living on 2,560 acres in this district at so great a distance from market? It is a struggle.

1268. How many sheep should you be able to carry in an average season? Very nearly a sheep to the acre to make a living; but I cannot carry as many as that at the present time. It is of no use for a man with 2,560 acres of land to try to make a living in this district, if he cannot carry a sheep to the acre.

1269. Is your land superior to the average land? It is about the same. The man with a small area of land tries to carry as many sheep as he can.

1270. Are the settlement lessees here generally desirous of having the railway? Yes.

1271. Do you think that people will be able to make a living on 2,560 acres without a railway? No.

1272. *Vice-Chairman.*] Do you consider your country fattening country? Yes.

1273. If there were a railway should you be able to send many small consignments of fat stock away by it? Yes.

Gerard Loder Herring, grazier, "Rose Lea," sworn, and examined:—

1274. *Mr. Shepherd.*] What is the area of your holding? 10,150 acres.

1275. How many sheep do you carry? I have only had my present holding eighteen months. Last year I had 1,600 sheep, and I employed three men to cut scrub for them. Now I have 3,600 sheep, and I employ two men to cut scrub. G. L. Herring. 23 May, 1900.

1276. Have these men been cutting scrub all along? No; I only started them at scrub-cutting two months ago.

1277. Is your holding thickly timbered? There are about 600 acres of belar on it, and I have some coolabah country; the rest is plain country.

1278. When all the timber is ringbarked, will the carrying capacity of your country be increased? I do not care about ringing the belar, because I feed my sheep on it. It keeps them alive, though it is not good for them.

1279. Is your run well watered? Yes, I have three wells on it.

1280. What depth are they? A little over 100 feet.

1281. Do they give you as much water as you require? Yes.

1282. Have you been sufficiently long in the district to be able to say what your prospects are? I have been dealing in sheep since 1890. I had a place close to Wee Waa in 1890, which I sold.

1283. What is your opinion of this part of the country for agriculture? It is no good at all for agriculture. A man might grow a bit of hay; but bush hay would be just as good as any wheaten or other hay that he could grow. Horses eat bush hay before they eat any other, as long as it is not grass hay. Herbage hay is better than any hay you can buy. We never have grass in the early spring here, only herbage.

1284. And do you reap the herbage? Yes; we cut it at the end of the spring. We have grass if we get rain after Christmas.

1285. For how many months in the year are you able to run sheep without cutting the scrub? It all depends on the seasons. Sometimes you can run sheep all the year round without cutting anything for them.

1286. Would there be sufficient water in your wells to allow you to try irrigation on a small scale? No; it takes me all my time now to water vegetables, and a few fruit-trees.

1287. What vegetables do you grow? Cabbages, cauliflowers, lettuces, and turnips. They all do well with plenty of water.

1288. Do you use manure with them? Yes, I have given them manure—ashes principally.

1289. Have you tried fruit-trees? There are a few which I have kept alive.

1290. Does a railway afford great facilities for travelling stock? If I had had a railway at the commencement of the drought I could have sent away 300 or 400 sheep as fat stock. As it was, when I sent them in they were so poor that they did not pay for the driving.

1291. If you were within 15 or 20 miles of a railway I suppose you could send away half a truck-load or a truck-load of sheep at a time? Yes; I could send away fat lambs then. We cannot send away fat lambs now, because they fall away so much on the road.

1292. I suppose even fat sheep suffer a good deal on the road? Yes. I had to send some fat sheep nearly 60 miles, and my instructions to the drover were to drive them as fast as he could, and to truck them straight off, because at that time there was not a bite for them between my place and Narrabri. He took them in in five days.

1293. Is there any good timber between Burren and Collarendabri? No.

1294. Is there any good agricultural country there? No; there might be an occasional patch where a man could grow an odd crop or two of hay, but I should not call it agricultural land. Before the rain fell I offered carriers 3s. 6d. a cwt. to bring horse feed out from Narrabri. I only had a little over 2 tons to bring out; but, after the first fall of rain, the roads got so bad that no carrier would bring it, and I am left with only a few bags of chaff for all my horses. If there had been a railway I could have got my produce out. I agree with the evidence which Mr. Barton has given in regard to the district generally.

1295. *Mr. McFarlane.*] Do the people in this district favour the construction of a line on the north side of the river or a line through Wee Waa? I think that a line through Wee Waa would be the better; but I do not think the people here care what route the line takes so long as it comes here.

Alexander Donaldson, settlement lessee, Merrywinbone, sworn, and examined:—

1296. *Vice-Chairman.*] How far is your holding from the nearest point on the route of the proposed railway? From 1½ to 2 miles; my land lies to the west of the railway route. A. Donaldson.

1297. What is the extent of your holding? 2,560 acres.

1298. How long have you held that land? Three years.

23 May, 1900. 1299.

- A. Donaldson. 1299. Did you anticipate that a railway would come near your holding when you took it up? Yes.
- 23 May, 1900. 1300. Did that belief influence you in the determination to take it up? Yes.
1301. Without a railway could a man make a fair living off 2,560 acres in this district? I think that the land is good enough, but the rainfall is too little. There has been practically a drought all the time I have been here. Under present conditions the holdings are hardly large enough to support a family.
1302. Did many people apply for land when you took up your lease? There were twenty-five blocks balloted for, and there were 109 applicants for the land.
1303. We understand there are still some 80,000 acres to be thrown open for settlement;—do you anticipate that that land will be equally sought after? Yes.
1304. What direct advantages should you reap from the construction of the proposed railway? I believe that the construction of the line would increase my net income, because I should live more cheaply if there were a railway. It would cost me less to get up my supplies and to get away my produce and my stock, and it would give me more opportunities for sending away fat stock. At the present time a man cannot send away a small lot of fat stock, because it costs too much; and in any case there is no feed on the stock routes.
1305. As a rule, a man lives pretty well up to his spending power, so that if you could get up your supplies more cheaply you would probably get up an additional quantity? Yes.
1306. If there were a railway, and the season were good, how many consignments of fat stock could you send away in a year? If a man had 2,000 wethers he might make them into small lots if there were a railway.
1307. Have you to fatten all your stock at one time, or do you spread the fattening over five or six months of the year? The grass only lasts a certain number of months, so that we are compelled to fatten all at one time. I have old feed on my run now nearly a foot high, and still the sheep are starving. They will not eat it.
1308. Do you corroborate the evidence which has been given by the other witnesses? I cannot speak from personal experience; but I believe that the land here is good enough for agriculture if it is irrigated. I think that if the Government went in for water conservation, and enabled this land to be irrigated, it could not be beaten for agriculture; but I have not heard of any practical farmer who has come into the district and given it a proper trial.
1309. Have you had any experience in irrigation yourself? No.
1310. What areas are there in this district available for irrigation? Artesian water would have to be used. With regard to what has been said about the condition of the stock routes, I think that if any landowner or drover were given power to impound loafing stock it would do away with the necessity for appointing caretakers.

William Cussen Cormie, grazier, Mercadool and Merrywinbone, sworn, and examined:—

- W. C. Cormie.
23 May, 1900.
1311. *Mr. Watson.*] What area of land do you hold? 2,560 acres conditional purchase and conditional lease.
1312. How long have you been on the land? A little over five years.
1313. Where do you send your produce? To Sydney, *via* Narrabri.
1314. What freight do you pay on goods coming from Narrabri? From 4s. to 4s. 6d. a cwt.
1315. And what do you pay to send your wool away? About the same.
1316. How far are you from the route of the proposed railway? I am 6 or 7 miles from the route of the Collarendabri branch.
1317. So that the line would assist you in getting stock and wool away and in bringing goods back? Yes; and it would assist a great number of selectors near me.
1318. Is much of your land suitable for agriculture? It would be if the rainfall were sufficient.
1319. Would it be wise to risk a grain crop? It would not.
1320. Would it be wise to risk a hay crop? In some seasons; but you would not get a crop every year.
1321. Do you agree with the evidence which has been given to the Committee to-day? Yes.
1322. Have you anything to add? I should like to add that about 90,000 acres on the Mercadool holding will shortly be thrown open for settlement lease, and that about 40,000 acres on Gorian holding will also be throw open.
1323. Would the Government be likely to get a higher rental for that land if the proposed railway were made, than it would get without it? I hope not. It takes us all our time to pay our rent now. The railway would certainly be an advantage to us; but I do not think we should have to pay more rent for it. I consider that we should pay less than we are paying now.*
1324. Do you think that there would be a greater demand for the land if the proposed railway were made? I believe that there would.

William Green, selector, Burren, sworn, and examined:—

- W. Green.
23 May, 1900.
1325. *Vice-Chairman.*] What is the size of your holding? 2,560 acres.
1326. How long have you occupied it? About thirteen years.
1327. How many sheep have you carried, on the average, during that time? Taking one year with another, I can carry 1,600 sheep, keeping them in good condition. I might keep 2,000 sheep on the land, but they would be starving at times.
1328. Do you corroborate the statements you have heard as to the agricultural and pastoral possibilities of the district? Yes; my opinion is that you cannot beat this district for grazing, and that for agriculture it is as good as you could find under the sun, if there were some certainty about the seasons.
1329. How often could you get a crop in this district? About three times out of five.
1330. Hay or grain? Hay.
1331. You do not think that the district would carry a large agricultural population;—what will be grown will be for home consumption? Yes, to help us through droughty seasons. I think the line should be brought from Narrabri West through Wee Waa, because I do not think it would benefit so many people if it were taken on the northern side of the river. The people on the northern side are within a reasonable distance of the Moree line. A line on the south side of the river would serve the Boolcarrol country as well as the country on the south side of the river. If we had a railway we could shift our stock in droughty times, and save them, but when sheep have to be driven a hundred miles without food the greater number of them die on the road.

FRIDAY,

* NOTE (on revision):—I did not quite understand Question 1323; if the railway were constructed it would make the land more valuable and the Government would get higher rents, but I think the areas should be increased from 2,560 acres to 4,000 or 5,000 acres.

FRIDAY, 25 MAY, 1900.

[The Committee met at "Tattersall's Hotel," Collarendabri, at 3:30 p.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Edmund Brennan Loughnan, J.P., Honorary Secretary, Railway League, Collarendabri, sworn, and examined:—

1332. *Vice-Chairman.*] You have a statement to make with regard to the proposal into which the Committee is inquiring? I think I could not do better than repeat the evidence and statistics which I gave when a Sectional Committee visited Collarendabri to inquire into the proposal to construct a railway from Woolabra to Collarendabri. That evidence is as follows:—

E. B.
Loughnan,
J.P.

25 May, 1900.

ANY information I have to give is from statistics gathered by me as Secretary to the Railway League, which will be substantiated by witnesses. We wish to bring under your favourable notice our claim for railway extension to Collarendabri, with a view to a further extension later on to the Queensland border *via* Angledool. In support of our claim we wish to point out the following facts:—That the part that would be served by the railway we advocate to Collarendabri would embrace an area of about 200 miles in length, by about 80 miles in breadth, catching the whole of the New South Wales trade to the Queensland border north of Angledool, none of which is served by the Narrabri-Moree line, and which, without railway communication to Collarendabri, will still continue to go to West Narrabri. Starting from Millie, skirting the northern boundary westward of Malaraway, Minna Minane, Mungyer to the Gwydir River, down the course of that river westward to the Collymongle boundary; thence northwards along the eastern boundary of Collymongle, Caidmurra, and Wirrah runs, to Mungindi; thence westward following the Queensland-border-line to the western boundary of Brenda station; then southward along the eastern boundaries of Brenda, Denman, Dumble, Bangate, Grawin South, Llanillo, and Dunglear, to the Barwon River; thence following that river to the north-east to a point opposite to the western boundary of the Eurie Eurie leasehold area; thence crossing the Barwon and following the southern or south-western boundary of Eurie Eurie leasehold area to and along the southern boundaries of Mercadool, Cryon, and Gorian; thence from the south-eastern corner of Gorian in a straight line to Millie, the point of commencement. [Except in certain seasons these boundaries would fairly include the area from which revenue could be obtained on wool or general goods, inwards and outwards; but a considerably larger area might safely be included (including the town of Walgett) in the matter of passenger traffic or stock for trucking.] That the area named contains, at a low estimate, 2,701,394 sheep, giving, also, at a low estimate, 40,515 bales of wool, and an approximate tonnage of 6,752 tons, with a return loading equal to 2,195 tons. [Boatman station (Queensland), 190 miles from Collarendabri, sent wool through Collarendabri. This is not included in above estimate. It is largely worked with Wirrah, and has 125,000 sheep, 5,000 cattle, and 300 horses—1,500 bales, 250 tons.] That this line would be the shortest, driest, cheapest, and most practical route to the Queensland border. That the whole of the country passed through is rich country, for either agriculture or grazing, especially the latter, and is already thickly populated with thriving selectors, who being well-to-do, and having built comfortable homes, show thereby their *bona fides* and intention to remain. That the route, as surveyed, is readily drained into the Thalaba Creek, from which creek abundance of water is obtainable along the line. That at Collarendabri, the Barwon being dammed by a bar of rocks, gives a magnificent sheet of permanent, good water for all purposes, while abundance of good gravel is obtainable, suitable for ballasting purposes, a short distance from the town. That, should the Government extend the line, in the future, to Angledool and the Queensland border, there is nearly equally good country from Collarendabri to Angledool, with two Government bores equally dividing the distance. That a through line this way, as proposed, is certain to divert much of the Southern Queensland traffic to New South Wales, as this is its natural outlet. With reference to this matter, I would draw your attention to a notice which appeared in the *Queensland Government Gazette* in December last [1897], which I will read:—

"It is hereby notified for general information, that, under the provisions of section 8 of 'The Railway Border Tax Act of 1893,' permission has been given to the owners of woolsheds situated within the area between the southern border line of the Colony and a line parallel thereto, and 30 miles north thereof, to convey the wool shorn at such sheds across the border without the payment of the tax provided by the said Act."

That, again, favours our getting the wool from a great many stations in Queensland. The statistics which I am about to hand in have been gathered by myself in reply to letters and forms sent to each landholder in the district, the majority of whom are within New South Wales, asking them to give certain information.

INFORMATION showing justice of claim for railway extension to Collarendabri. This information is subject to the alterations in tenure incidental to the occupation of the land.

| Name of Owner. | Nature of Holding. | Number of Sheep (approximate). | Number of Bales. | Approximate Tonnage. | Route. | Back Loading. |

Mr. B. Benson, of Brinda station, in writing to me, says that about 70,000 sheep on the Queensland run, shorn in New South Wales, will come this way. I have also letters from managers inside the Queensland country, whose statistics are not given in the returns which I have put in. The managers of Llanillo and Dunglear state that they will send their wool this way, provided that the line is carried through. I may mention that the Sectional Committee inquiring into the Moree line made the following observations:—

"The Sectional Committee came to the conclusion, that if the whole area of country in this railway question is to be properly served it can only be done by two lines—a northern line following the route submitted to the Committee, and a western line following the driest belt or country, which is apparently south of Thalaba Creek, and eventually reaching Collarendabri. Any attempt to deviate from the direct route, they say, 'will entail a permanent disability on the northern trade without conferring a fully compensating advantage on the western trade.' They were of opinion, that in view of the importance of the western trade, it would be well if a full exploration and survey should be made of the country towards Collarendabri, apparently the best place to start a survey from, being a point between Narrabri and Edgeroi, thus utilising the bridge which will be constructed over the Namoi on the direct route."

With reference to the statistics I have put in, I may mention that the Merrywinbone return of wool is 2,240 bales. That was the return in the year in which the statistics were obtained. Since that year a great deal of the land has been thrown open, and taken up by selectors. Consequently, there may be a discrepancy between Mr. Langhorne's figures and the statistics.

Since that evidence was given, the Queensland Government have taken off the export duty of £2 10s. upon wool, and, consequently, at least 30 miles of the country on the other side of the Queensland border would, we contend, send traffic to the proposed railway. The Woolabra line, however, has not been sanctioned, and it is now suggested that a line should be brought from Narrabri to Burren, with a branch to Collarendabri and another to Walgett. If the Walgett line is made, it will, of course, take some of traffic which we claim for the Woolabra line; but, if it be not constructed, the Collarendabri to Narrabri line will get almost all the traffic that would have gone to the line from Woolabra to Collarendabri. A great deal of settlement which has recently taken place on Oreel holding was not mentioned by me in my former evidence; but the settlers there are well-to-do and comfortable if the seasons permit of it, and they would furnish a considerable amount of traffic to a railway. In dealing with the statistics which I have given, it must be remembered that the terrible drought, which I hope is now over, in which 60 per cent. of our sheep were lost through want of railway communication, has, for a time, considerably reduced our production.

1333. Do you, as the Secretary to the Railway League here, care to express any preference for either the proposed line or the Woolabra to Collarendabri line? My instructions from the league are to express no opinion at all as to where the line should come from, but to express a strong desire for railway communication, and to leave it to the Committee and to Parliament to decide upon the route. I have received several letters from gentlemen who would have liked to be present to give evidence at this meeting, but who are unable to attend because of the difficulty of travelling, in the present state of the country. Mr. Sinclair, of Moongulla, writes to say that his "horses are unfit for the trip—no grass, and no horse feed. The latter has been costing me £10 per ton, for carriage; but at present I am unable to get it at any price, and I am only one out of many who are in the same fix, and that not for this year only, but for several years past." Then Mr. Sherwin, of Nullawa, who is Chairman of the Angledool branch of the Collarendabri Railway League, writes, "Owing to the fearful drought, and not having horses fit to travel, it will be utterly impossible for me or other residents to attend at Collarendabri to meet the Committee or give evidence." He goes on to say that the evidence given before the Sectional Committee two years ago, "is much accentuated by this fearful drought. We have now to pay carriage at the rate of £10 per ton from Narrabri to Angledool, which rate is ruinous, especially when you have to feed horses to do absolutely necessary work. This winter will pretty well decimate the sheep that survived previous years' droughts." Other letters in the same tenor have reached me.

Stanley James Greenaway, settlement lessee, Oreel (Merrywinbone) holding, and representative of the Thalaba Farmers and Settlers' Association, sworn, and examined:—

1334. *Mr. Watson.*] What is the area of your holding? 2,560 acres.

1335. How far are you from Collarendabri? Twenty-six miles. Oreel was the furthest of three stations, Oreel, Merrywinbone, and Poekateroo, owned by one firm. When they took over the three stations they shifted the principal homestead to Merrywinbone, and the three holdings are now locally known as Oreel.

1336. Have you been long in the district? I have spent my life in the district between Narrabri, Walgett, and Collarendabri.

1337. What is your land like? It is first-class grazing land; but the rainfall is limited.

1338. Is any of it suitable for agriculture? I have heard numbers of Victorian farmers say that they consider it first-class agricultural land, and several of them are beginning to cultivate areas of 50 or 60 acres.

1339. For grain or for hay? For hay. We have no railway to make grain-growing profitable.

1340. Are the seasons such as would give you decent results if you grow grain? I believe so, though I cannot speak from experience. I have lately seen such magnificent returns of hay, and such good cars on the wheat, that I am inclined to believe that this will ultimately become a wheat-producing district. During the last three years, although we have had most awful droughts, ram has always come at a time when it would do wheat good, and it has seemed to me that the seasons of late, although so bad for stock-raising, would have been good for agriculture.

1341. What is the carrying capacity of your district in average seasons? I have prepared the following statement, which I think might be of interest to you in connection with your inquiry:—

There are now in residence on Oreel holding 110 settlers.

The approximate distance of their holdings from the proposed railway line would be from 1 to 10 miles on the south side and from 1 to 15 on the north side. The sheep depastured on their holdings would total 250,000 to 300,000 in fair seasons. The tonnage of wool would be about 700 tons. The number of fat stock trucked to Sydney would be about 40,000 a year.

The total acreage of their holdings would be about 350,000 acres, exclusive of roads. Railway communication with the seaboard would, no doubt, have the effect of placing a large amount of this land under crop.

During the present year the pastoral leases of Boulureol, Bunna Bunna, Collymungle, and one or two other small places, expire. The total area is about 250,000 acres in all. The greatest distance of any of this land from the proposed railway line would be 30 miles on the north side—two-thirds would be within from 1 to 15 miles from the line. Practically, the whole of this 250,000 is suitable for occupation in small holdings. During the past three years settlers on Oreel have lost at least 180,000 sheep. With railway communication the greater number of these sheep would have been trucked to where pasture was obtainable.

S. J.
Greenaway.
25 May, 1900.

There is similar settlement to that on Oreel, Mungyer, Collymongle, and Mercadool holdings, and a large number of the settlers on those holdings will be served by the proposed Collarendabri line.

1342. When you speak of 110 settlers, do you mean 110 holdings? I mean that 110 men have taken up land on Oreel, and are now in residence on their holdings.

1343. Do you think that, if there were a railway, small landholders would send away fat stock more frequently than they do now? I am certain of it. Even during the recent drought there have been times when 200 or 300 wethers out of a flock of 700 or 800 could have been trucked away if there had been a railway. The owners would have been glad to get rid of them, but they could not stand the expense of sending them to Narrabri.

1344. Does it occur during a drought that patches of country will get showers, giving them a little grass on which the stock will fatten, while the country generally is bare? Yes; that is the effect of local thunderstorms. I have seen high grass at some places, and no grass at all only a chain or two away.

1345. Then it might happen that there would be fair grass in parts of the district but none upon the stock route? There is never any grass on the stock route.

1346. Would a railway be of more assistance to small holders than to large holders? I believe so, because small holders would very often like to realise on a few sheep. It is generally considered good business to be able to sell your fat stock on the ground, and station-owners can frequently do that, because a buyer will come from Sydney to inspect 7,000 or 8,000 sheep when he would not come to inspect 200 or 300. Some two years ago we had 1,200 or 1,300 wethers to sell; but the Aberdeen Company's buyer did not think it worth his while to come up specially to look at them. Mr. Langhorne, however, had several thousand sheep to sell, a little later on, and when the buyer came up to inspect them he also inspected ours; but we had to deliver our sheep at Narrabri, whereas, if we had had a larger flock, we should have secured the same price for them on the run.

1347. What rate do you pay on wool from your place to Narrabri? We have paid 2s. 6d. and 3s. a cwt. I am speaking also for my brothers, J. and H. Greenaway.

1348. Do you get stores up at the same rate? Sometimes; but as a rule back loading is dearer. During the last three years the rates of carriage have varied from 2s. 6d. to 5s. 6d. a cwt.

1349. Have the people who have taken up settlement leases here done so with the intention of depending upon grazing for a living? Yes; but the dry seasons have caused them to change their minds, and I believe that as they start with agriculture others will follow them.

1350. Do you think that with a railway a man could make a decent living on 2,560 acres in this district? Not by grazing.

1351. Could a man put his land to a variety of uses whereby he could make a living on such an area? A railway would add greatly to his opportunities; but I consider that the man who intends to make a living by grazing should be able to run about 3,000 sheep.

1352. Then he should want about 5,000 acres? Yes.

1353. *Mr. McFarlane.*] How far is your holding from the route of the proposed line? About 7 miles.

1354. What class of country is it? It is open country.

1355. How does it compare with the country generally between Collarendabri and Burren? It is a little above the average of that country, I think, but it is all similar country.

1356. Would the same remarks apply to the other settlement leases? Yes; though some of the blocks would have a little more timber on them than others.

1357. Have droughts been of frequent occurrence during your thirty-three years' residence in this district? Yes; I believe that, on the average, we have as many droughty seasons as good seasons, and perhaps a few more.

1358. Has the last drought been excessive as compared with others that you have known? I believe that it has been the worst that I have known.

1359. Would it have affected agriculture as much as grazing? I think that the light rain which has fallen from time to time would have suited agricultural operations better than grazing. It made wheat grow for hay where it would not make grass grow.

1360. Is it your opinion that, with a railway, a large area of land in this district would be placed under agriculture? Yes; that is what I have heard from Victorian farmers who have come to the district.

1361. Do you think that there would be a sufficient market for agricultural produce grown in this district? I think there would be a market for hay, but there would be no market for wheat, unless we had railway communication with the seaboard. At the present time there is always a shortage of produce. The people round the artesian bores have never grown enough produce to satisfy local wants.

1362. So that produce has to be imported into the district? Yes; and the importation will have to continue, unless we increase our cultivation. Thousands of tons of produce have been brought into the district during the last two or three years.

1363. Where does most of the wool now sent from the district go? To Narrabri West.

1364. Would there be much traffic from the north and north-west to feed a railway? There are a great many stations out there which would give very material assistance to a railway. Wool comes this way from as far as Brenda. In 1895, 640 loaded teams of wool went over the bridge at Collarendabri.

Joseph William Cook Langhorne, grazier, Oreel (Merrywinbone) holding, sworn, and examined:—

J. W. C.
Langhorne.
25 May, 1900.

1365. *Mr. McFarlane.*] What is the area of your holding? There are 70,000 acres of secured land, conditional purchase, and freehold, and about 35,000 acres of leasehold.

1366. How far is your holding from Collarendabri? The run comes right down to the Barwon, near Collarendabri.

1367. What is the carrying capacity of your land? About a sheep to an acre and a half.

1368. Is it open country? Fairly open country; more of it is plain country than timbered country.

1369. Have you resided long in the district? I have been in the district since 1875, and I have been fifteen years at Collarendabri.

1370. Is your holding similar in character to the land between Collarendabri and Burren? Yes.

1371. Do you experience much difficulty in getting your wool to the railway? Yes, very great difficulty.

1372. To what railway station do you send it? To Narrabri West.

1373. What is the average cost of cartage there? I have never paid more than £2 10s. a ton for the cartage of my wool; but I have paid as much as £4 10s. a ton to have goods brought from Narrabri. The average rate would be from £2 10s. to £3 per ton, in good seasons.

1374.

1374. Do you send your fat stock to Narrabri? Most of them go to Narrabri; but I sometimes send stock to Wallerawang.

J. W. C.
Langhorne.

1375. Do you send away large numbers of stock? Of late years I have not sent away many; but formerly I used to send away a great many.

25 May, 1900.

1376. It has been stated that small settlers experience considerable hardship in not being able to send small consignments of fat stock to the Sydney market, owing to the expense of driving;—do you suffer in the same way? To some extent; but the hardship is more accentuated in their case. They have a few sheep which are fat, and fit to go to market, and by sending them away they would relieve their holdings and leave more feed for those that are kept; but the expense of driving them to the railway station is often too great, and so they keep them until they become poor, and can only be sold as store stock. If there were a railway they would send away small consignments of fat stock and small parcels of hides, skins, and tallow. With a railway they would get full prices for their produce; but when they have to sell small parcels to the dealers they only get half the money they would otherwise get.

1377. If there were a railway here should you use it to send away stock to Sydney? Yes, always. I should not attempt to drive stock past a railway station.

1378. Would others do the same? I think so.

1379. Is there much traffic in store stock between Collarendabri and Narrabri? Yes; and from places lying west and north of Collarendabri. The stock goes from Collarendabri, through Oreel, Burren, and Wee Waa, to Narrabri, and thence to the Muswellbrook market. When the main stock routes are practicable, upwards of 200,000 sheep travel through the district per annum, and cattle as well.

1380. If the country were in good condition, would store stock leave the railway, or would they travel along the stock route? If the country were in good condition store stock would travel along the stock routes, but fat stock would be sent by train.

1381. And in times of drought? All the store stock would be trucked then. If there had been a railway, 75 per cent. of the losses which have occurred in this district during the last eighteen months would have been saved, because the sheep would have been sent to the hilly country, where there was food.

1382. That traffic would only occur in times of drought? Yes; that is the only time when any but surplus stock would be sent out of the district.

1383. Is this district fairly well watered? Yes.

1384. Do you think it will produce crops? I am fairly convinced that it will. I think that a great deal of it is good wheat-growing country. There is a patch of land on the right-hand side of the road, about three miles from the "Avondale Hotel," than which I have not seen any better for wheat-growing.

1385. Have you done any cultivation yourself? I have grown a little hay for home requirements.

1386. Would the construction of the proposed railway induce closer agricultural and grazing settlement? I do not think smaller areas will be taken up than those which have already been subdivided, but I think that selectors will combine agriculture with grazing. I do not think that agriculture by itself would pay here.

1387. What area would maintain a family in this district in comfortable circumstances? I think a man wants 5,000 acres at the very least to maintain and bring up a family.

1388. Using the land for pastoral purposes? Yes; but it would pay him better to go in for mixed farming, and it would be better for the country.

1389. How do you account for the scalded country? It is higher ground than the rest, and the surface-soil has been blown off it by the continuous action of the wind.

1390. Do the scalded areas increase? I do not think so.

1391. Are the people in this district unanimously in favour of the construction of the proposed line? I believe that they are.

1392. *Mr. Watson.*] Do you think that the route of the proposed line is as good as might be obtained if a line from Narrabri to Collarendabri were all that was aimed at? I think so. If the line were taken further north, it would shorten the distance; but it would get into a large area of low-lying country.

1393. Do you think that the district is sufficiently productive to be able to support two lines of railway? I think that it could support one line better than two. My opinion is that Walgett should be connected with Coonamble. If the Walgett line is constructed, with a branch to Collarendabri, the traffic will be divided between the two lines; whereas, if the Walgett line is not made, the whole of the traffic will come on to the Collarendabri line.

1394. What is a fair distance to leave between railway lines in pastoral districts such as this? Sixty or 70 miles. That would bring every property within 35 miles of the line.

1395. *Vice-Chairman.*] Where do you consign your wool? As a rule, to London from Newcastle.

1396. In times of drought, where would stock be sent from this district? To the New England district.

1397. Do you think that the New England district could accommodate all your stock;—it has been pointed out to us that the limit of their accommodation was reached last year? Possibly it was; but the worst seasons we have here are the best seasons in New England. For three or four months in the year you could run three or four sheep on an acre of land in New England, and that is generally the state of the country at the time when we are wanting relief here.

1398. If the proposed railway were constructed, should you fatten and send away any larger number of sheep than you send away now? Yes. Instead of sending away sheep as stores it would be more profitable to send them away fat, if there were a railway.

1399. Have you consigned any fat sheep to the Aberdeen meat-works since you have been in the district? Yes.

1400. What loss of condition takes place in the sheep in travelling to the nearest railway station? I consider that the loss in condition between my holding and Aberdeen would average from 4 lb. to 5 lb.

1401. In seasons of drought would fodder be brought into the district by the proposed railway? Yes; in large quantities. All the holdings round here have to feed a certain number of their animals with artificially grown fodder. I have been feeding my horses for the last two months, and the carriage costs me more than the produce itself.

1402. If the river were full, should you send your wool away by steamer rather than by the train? No; I should use the train.

1403. Is the river likely to be a serious competitor to the railway? No; because it would require a very great

J. W. C.
Langhorne.
25 May, 1900.

great deal of locking and damming to make it navigable. When it is in flood, the steamers have to rush up here and back again to avoid being stranded, and unless you have your wool waiting on the banks they cannot take it. I do not think that the river will ever be navigable without a series of locks and weirs.

1404. How is the country affected by flood between the river bank and a point on the surveyed line about 11 miles from Collarendabri? In an exceptionally high flood, such as that of 1890, all the country would be under water from the Grawin to the nine-mile peg.

1405. To what depth? The depth would vary from a few inches up to 3 feet.

1406. How long would the water remain on the land? A very short time. It would run off in a few days.

1407. Would it be necessary to provide fairly extensive earthworks or a viaduct to carry the line over that piece of country? I think it would be necessary to provide a viaduct, and to make arrangements for the water getting away.

1408. What would be the maximum length of the viaduct that would be necessary? I should say that a mile and a half would be sufficient, apart from a bridge over the Grawin.

Charles Edward Brown, homestead lessee, Bundaborina holding, sworn, and examined:—

C. E. Brown.
25 May, 1900.

1409. *Vice-Chairman.*] Where is your land? It lies 12 miles west from Collarendabri, on Bundaborina holding.

1410. Will you give us the benefit of your knowledge of this district? I know all the homestead leases down the river, west and south-west from Collarendabri, and I know the holdings, such as Dunumbral.

1411. How does that country compare with the country between Collarendabri and Merrywinbone? It is nothing like as good; it is very inferior country, and it would take 3 or 4 acres of it to carry a sheep.

1412. Are 10,000 acres sufficient to enable a man to make a living in this district? Yes, if he improve his land. The country on the other side of the river is heavily timbered.

1413. What benefits do the homestead lessees there hope to reap from the construction of the proposed railway? We pay from 3s. to 4s. a cwt. to send our wool to Narrabri now, and from 4s. 6d. to 5s. 6d. a cwt. to bring back stores.

1414. Have the difficulties of travelling prevented you from taking advantage of a favourable market? Of course, our wool is sometimes delayed, and last year, if there had been a railway, I could have trucked my sheep to New England and prevented great loss.

1415. Do you corroborate what has been said by previous witnesses as to the gain which they would make by sending their stock away by train? Yes; I have often had to sell fat sheep as stores because I would not take the risk of travelling them to Narrabri. I inspect a great many sheep for other people. I come from near Moree, and I inspect for Mr. Moses, Mr. Black, Mr. Glennie, and other stationholders there. I see some thousands of sheep during the year, all of which go away from here as stores.

1416. Do you corroborate what Mr. Langhorne said about the possibility of opening up a larger market for fat stock if a railway is constructed? Yes. The Aberdeen people send out men to buy stock from us; but they have paddocks in which to spell their stock after the journey. I think that the fat stock from the western district would be a tremendous item in the railway traffic. It is a great wheat-growing country out west, with red and chocolate soil.

1417. Is there much of it? There is a great deal of it along the edge of the "Bully"—a name given to a box and budda scrub in the district.

1418. Is the rainfall out there sufficient for wheat? No; the average rainfall at Dunumbral station is about 21 inches.

1419. How much of the land there would be available for wheat-growing if the proposed railway were constructed? The Bully, which is considered the worst grazing country in the district, is said to be good wheat-growing country.

1420. Do you know anyone who has experimented with it? Mr. Seymour has experimented with similar country at the Moongulla bore.

1421. *Mr. Watson.*] It has been suggested that, in view of the great expense of railway construction on the last 11 miles of the route from Collarendabri, the district would be sufficiently served if the line stopped about 11 miles short of the town;—would such an arrangement serve the district reasonably well? I think it would serve the district better to bring the line on to Collarendabri. Eventually it would have to be brought to the town. A line stopping at the point to which you refer would serve the stock traffic; but it would leave us a long way to bring our fodder.

1422. Would it seriously handicap the people of the district if the line were left there? I think that the town would move to the terminus of the railway if there were water there; but I believe that there is no water there. I think that 1890 was the first year for thirty years in which the flood-waters stretched out as far as that point.

1423. But the warrumbools are frequently filled in times of ordinary floods? Still, I do not think it would be practicable to stop right outside the town. To do such a thing would be to kill Collarendabri altogether. We depend entirely upon the river for our water supply, and I do not think a sufficient supply for a town would be obtained at the point at which you suggest the line should stop. In my opinion, the vested interests of Collarendabri should be considered. Then, too, if the Government spent any money on terminal station arrangements out there, it would be wasted when the railway was brought on to Angledool.

1424. Would there be any difficulty in getting stock to the railway line at that point? In wet seasons we could not get stock there. Thousands of sheep would be sent from this district as fat stock if the proposed railway were made; but they now have to go away as store stock.

1425. *Mr. McFarlane.*] If Collarendabri were connected with Narrabri, and Walgett with Coonamble, which line would be the more convenient for people living further out west? As far as Dunglear, 47 miles from here, I think traffic would come to Collarendabri. Everything from the northern and western country must come here. All the wool from that part of the Colony comes through Collarendabri now, though during the last twelve months I think some of it has gone to the Moree line, because there has been no feed on our stock routes.

1426. What is the country like between Narrabri and Moree? It is very rich, flat, black-soil country—similar to this, except for two or three stony ridges.

1427. The Moree line has exceeded the expectations of the Railway Commissioners;—do you think similar results would follow the construction of the proposed line? Certainly. C. E. Brown.
25 May, 1900.
1428. Do you think that it would drain as much country west and north of its terminal area? I believe that at Collarendabri the railway will tap a larger area of country than it does at Moree, and the number of small holdings—homestead selections, conditional purchases, and settlement leases—is increasing every year in this district.
1429. Would the construction of the proposed line cause closer settlement? Yes. Every block that is thrown open for selection between Collarendabri and Narrabri is eagerly ballotted for.
1430. Will the land be taken up whether a railway is constructed or not? I think so, because there is no land of a better character available elsewhere.

Alfred Blomfield, homestead lessee and selector, near Collarendabri, sworn, and examined:—

1431. *Mr. Watson.*] What area of country do you hold? 15,000 acres. A. Blomfield.
25 May, 1900.
1432. How far is your holding from Collarendabri? It is 8 miles north-west of Collarendabri.
1433. How long have you been in the district? I have resided here constantly for twenty-six years.
1434. What would be the effect of the construction of the proposed railway on the district generally? It would confer great comfort upon the residents, and it would save many hundreds of us from ruin. If we had had a railway in the past, people could have saved their stock from starvation more cheaply by sending them away by train than by supplying fodder with which to feed them.
1435. How does the country north and north-west from Collarendabri, towards the Queensland border, compare with the country through which the proposed line would come? Part of it is equal to it, but other parts are not so good. Taking one run with another, I think that the carrying capacity of that country is equal to the carrying capacity of the country on the south side of the Barwon. The wash from the red conglomerate soil in the Bully scrub is good country, but the Bully itself is not good. The Bully country stretches from below Walgett to somewhere above Mogil Mogil.
1436. Where does the Narran traffic come now? Through Collarendabri and Narrabri.
1437. If the railway came to Collarendabri, and also to Walgett, where would that traffic go? To Collarendabri. The cross road to Walgett is almost impracticable in wet weather. It comes from Angledool to within 4 miles of Collarendabri, over hard soil; but, going on to Walgett, there is low country to be crossed.
1438. Then, if the line were taken to Walgett and not to Collarendabri, that country would not be served? No; the traffic would still go through Collarendabri to the nearest railway station.
1439. In what direction will the traffic from Southern Queensland go after Federation is established? I think it will come through Collarendabri. The country towards Dolbey and St. George is fearful black-soil country, and very difficult to travel over, while, coming this way, you have red-soil country, upon which it is easier to travel; so that the greater part of the traffic from that district will come here in any case. One of Mr. P. G. King's managers in Queensland told me they could afford to send their wool this way, notwithstanding the export tax which had then to be paid, because of the less knocking about it got. Then, too, a lot of the traffic that now goes to Moree would come to Collarendabri if the railway were brought here. What people have to consider in this country is, not so much where is the nearest point on the railway, as which are the best roads. The district would be served by a railway, even if it stopped 11 miles out of Collarendabri. I saw the floods of 1864, 1876, and 1890, and I think that $1\frac{1}{2}$ mile of viaduct would not be sufficient. It would be useless to put in earthworks. There are two places where you could put in earthworks, for a total distance of about a mile; but the remainder of the distance would have to be covered with viaducts. Plenty of settlers in the district would be glad to send away 200 or 300 sheep at a time if there were a railway. I have some sheep now which I would send away at once if there were a railway, but which I cannot send away under present circumstances. Then, in dry times, we are always importing fodder, and we shall never grow as much as our stock will require, so that the fodder traffic on the railway will always be considerable. Wheat would grow better here than oats, barley, corn, rye, or anything else. I have tried all of these crops during the last twenty years, and I have known wheat to give a yield of 60 bushels to the acre in certain seasons.
1440. *Vice-Chairman.*] Can you generally get a fair crop of hay? Yes. I put a crop in every year, no matter what happens, and I have got fair crops occasionally, but only one heavy crop in five years. I have been sowing crops for the last twelve years.
1441. How many total failures of crops have you had? Three. I think the proposed line would pay, and the people want it. If we do not get a railway, the district will always be a miserable, mean place, in which men can only make a hard living. I wish to add that ballast would be obtainable for the line at no great distance.

SATURDAY, 26 MAY, 1900.

[The Committee met at "Tattersall's Hotel," Collarendabri, at 10:30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq., VICE-CHAIRMAN.

The Hon. PATRICK LINDSAY CRAWFORD SHEPHERD. | JOHN CHRISTIAN WATSON, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Francis Kirby, grazier, near Collarendabri, sworn, and examined:—

1442. *Mr Watson.*] What is the area of your holding? 7,680 acres. F. Kirby.
26 May, 1900.
1443. How many sheep do you carry on it? In usual seasons, about 5,000.
1444. What would be the effect of the construction of the proposed railway upon the district? It would be of great advantage to the district in giving us facilities for getting our stock and wool away, and in other directions. 1445.

- F. Kirby. 1445. Would it be of value to you in assisting you to save your stock in times of drought? Yes; it would enable us to send the stock to places where the animals could get food.
- 26 May, 1900. 1446. Have you lost many sheep yourself? No; we got most of our sheep away in time. We travelled them for agistment to Gunnedah, and then, as the dry weather continued, I drove them on to New England, and sold them there.
1447. If the proposed railway were constructed, New England would be the district to which starving stock would be sent? Yes; you can usually get food there in dry seasons.
1448. How do you regard this district from an agricultural standpoint? I think that with a railway it would be a very good district, judging from what I have seen in Riverina. I think that the land on the north side of the river would be better for agriculture than that on the south side of the river; but crops could be grown on the south side of the river.
1449. In what months of the year do you usually get rain? Our heavy rains generally fall in the period of the year between January and March, or April.
1450. Do you usually get enough rain later on in the year to keep a wheat crop growing? Yes. During the nine years that I have been here I have known good rains to fall in June, and as late as August and September—splendid rains for the crops. Almost every year we have had some rain in those months.
1451. We have been informed that there is a very large area of country on the north side of the river, extending into Queensland, which would be served by a line having its terminus at Collarendabri? That is so.
1452. Would the proposed railway drain traffic from as far as Mungindi? Yes.
1453. Would it also attract traffic from Queensland, from the direction of St. George? Yes.
1454. If the Queensland railway were brought to St. George, where would the traffic go? I think even then a great deal of the Queensland traffic would come this way, because the railway mileage to Brisbane would be about the same as to Newcastle, and the steamer freight to Sydney would be less from Newcastle than from Brisbane. All that wool is usually sent to Sydney to be sold.
1455. Sydney is the great wool market of Australia, and her shipping facilities are greater than those of Brisbane? Yes; in many instances owners have found it cheaper to pay the Queensland export duty on wool than to send their wool to the Queensland railways.
1456. Do you find it difficult to dispose of your fat stock under present conditions? Yes.
1457. What is your usual outlet for fat stock? They are driven to Narrabri and trucked from there to Sydney or Aberdeen.
1458. If the proposed railway were made, could you in a good season deal with more stock than you deal with now? Yes; at the present time we cannot afford to send away small lots, and even in the best of times stock lose in condition by being driven to Narrabri.
1459. If the railway were brought to Walgett and also to Collarendabri, to what line would the more traffic go? I think that the greater part of the traffic from the country to the north would come to Collarendabri.

John Francis Kirby, grazier, near Collarendabri, sworn, and examined:—

- J. F. Kirby. 1460. *Mr. McFarlane.*] How much country do you occupy? I hold, in partnership with my brother, 14,000 acres—three conditional purchases and two settlement leases.
- 26 May, 1900. 1461. Is it good sheep country? Yes; since 1894 we have carried, on the average, 6,600 sheep; but up till 1896 we had only 7,500 acres.
1462. I suppose that in good seasons the land would carry more? Yes; for the last five years the seasons have not been too good. Our country is open or lightly timbered, with coolabah and belar.
1463. Do you send fat stock and wool to market? Yes; *via* Narrabri West, to Sydney.
1464. Do you send away a large number of fat sheep? We have not done so of late years; but previously we have sent away a good many.
1465. Have you been inconvenienced by not being able to send away small lots of fat sheep? Yes; and there is also a loss in sending away stock at all, because of the bad state of the stock routes. As soon as there is any grass on the stock routes the lessees turn their sheep on them, and eat it all off; so that the stock routes are like a desert for travelling sheep. If they were kept solely for travelling stock they would be much more use to us.
1466. During the past drought have you suffered much from want of grass? Yes; a good deal at different times.
1467. Have you had occasion to send your sheep elsewhere for food? No; but we should have sent them away if there had been a railway.
1468. Is it within your knowledge that a large number of sheep have gone to other districts for feed? Yes; at the present time I have 5,000 sheep in New England. I got them away five months ago, when they were in good condition. If I had left them a little later I should not have been able to send them away at all.
1469. Do stock usually go from this district to England in times of drought? Yes; to the country beyond Moree—to Warialda, Inverell, and Tenterfeld. We can generally get feed there when we have a drought here.
1470. Would the proposed railway be used for transporting starving stock to other districts? Yes; very greatly, when there was no feed in this district.
1471. And it would be used for the transport of fat stock? Yes.
1472. Have you ever tried agriculture? Last year I put about 5 acres under wheat and the crop gave about $\frac{3}{4}$ ton of hay to the acre.
1473. Last year was very dry? We had good winter rains, but the weather, previous to putting in the crop, had been dry.
1474. Do you consider this good wheat land? Parts of it are in ordinary seasons. On the average, you would get three fair crops in five years.
1475. I suppose it is the insufficiency of the rainfall that makes the country unsuitable for agriculture? Yes.
1476. How does your land compare with that between Collarendabri and Burren? It is all similar country.
1477. Is much of the land along the railway route suitable for cultivation? There is more land in the direction

direction of Burren suitable for cultivation than there is in the immediate neighbourhood of Collarendabri. The land on the north side of the river is more suitable for cultivation than that on the south side, because it retains moisture longer. J. F. Kirby.
26 May, 1900.

1478. What is the country like north-west from Collarendabri? It is fair grazing country, as far as I know, but there is more scrub there than on the south side of the river. The scrubby country, if improved, would be good grazing country, but at the present time it is comparatively useless. The soil is good enough for anything.

1479. Is it suitable for agriculture? Yes; the timbered country is more suitable than the open plain country.

1480. Would stockowners generally use the railway for the conveyance of stock to Sydney and elsewhere? Yes, I think so, because stock lose so much in condition by being driven, even in a good season.

1481. Would the construction of the proposed railway bring more population to the district? Yes, if more land were thrown open for settlement.

1482. Has all the available land been occupied? Yes; it is over-occupied.

1483. Is there much Crown land within a reasonable distance of the proposed railway which could be made available for settlement? I believe that there is a good deal still to be thrown open.

1484. When it is thrown open, will it be taken up and settled upon? I think that it will be taken up immediately.

Wyndham Dallas Bruce, homestead lessee, Gundablue holding, sworn, and examined:—

1485. *Mr. Watson.* Would a railway to Collarendabri be of any value to the people in your district? Undoubtedly. W. D. Bruce.
26 May, 1900.

1486. Where do you send your wool and produce at the present time? Until the last two years I have sent it to Narrabri; but recently I have sent it to Moree, because there has been more feed on the Moree route.

1487. How far are you from Moree? Ninety-eight miles, by road.

1488. If the proposed railway were constructed, it would pay you better to send your wool to Collarendabri? Yes; we are only 42 miles in a northerly direction from Collarendabri, and the road here is a comparatively good one, whereas it is utterly impossible for us to get to Moree in wet weather.

1489. For how many miles, east and west, along the Queensland border, would traffic be brought to Collarendabri? From places all along the Queensland border, between Angledool and Mungindi.

1490. Would the Angledool traffic come to Collarendabri rather than to Walgett? Yes; because the track into Collarendabri is better than that to Walgett.

1491. What is the distance from Angledool to Walgett? Between 80 and 90 miles.

1492. And to Collarendabri? About 60 miles. I should say the traffic would come to Collarendabri from country lying 30 or 40 miles beyond the Queensland border in the direction of St. George.

1493. If the Queensland railway were brought to St. George, would the traffic that you speak of still come to Collarendabri? Yes; at present some of it goes to Yuilbar, and thence through Brisbane to Sydney. Most of the holders there sell their wool in Sydney.

1494. Could they afford to pay a little more to send their wool more quickly to Sydney? Yes; a lot of them are within 100 miles of Collarendabri.

1495. Are they further than that from Yuilbar? Yes; they have to go about 160 miles to get to a railway station now.

1496. How is the land near your place held—mostly under pastoral lease? Under homestead lease and pastoral lease.

1497. Have the resumed areas been pretty generally taken up by homestead lessees? Yes, every inch of them as they have been thrown open. It is fair country, but it wants improving.

1498. Is it mostly timbered? Two-thirds of it is timbered, and the rest of it is open plains. It is patchy country. In between Moonie and the Barwon the country is inferior; but out towards the Narran there is beautiful country.

1499. Would the Narran traffic come to Collarendabri? Yes, it comes here now.

1500. Are you able to get rid of fat stock? No, because we are too far from a railway, and there is never any feed on the stock routes.

1501. So you confine yourselves to breeding? Yes; but I suffer great losses through the native dogs, which eat a great many lambs; and the high rates of carriage make it impossible for me to get up wire-netting. I have been paying 5s. a cwt. for carriage lately, and I have paid as much as 8s. 6d. a cwt., which just about doubles the price.

1502. If you were able to wire-net your run you would probably increase its carrying capacity? Yes. I have lost about 6,000 grown sheep during the last five years because of the dogs. The Gundablue people are netting their holding.

1503. What area of land do you hold? I hold 10,000 acres, and my brother holds 10,000 acres adjoining; we work the holdings jointly.

1504. If you had the two holdings netted could you deal with the dogs? I am sure of it. They come in on the Queensland side, and no sooner do I get rid of one batch than another appears.

1505. If the line stopped about 11 miles short of Collarendabri, would it serve the people living out towards the north? In ordinary dry times it would do well enough; but in times of flood we could not send stock there; and if we were caught by a big flood there would be no place near the railway where we could keep our sheep.

1506. Would access be impossible in other than big floods? The water would not be very deep. I have been over that country in a boat during flood-time, but we had to keep to the channel all the way. In 1890 there was an unusually big flood.

1507. What depth of water is there over that piece of country in flood-time? You can ride over the country in ordinary floods, except that for about a quarter of a mile, where the Warrambool is, there is a dip.

1508. If the railway were brought to Collarendabri a viaduct would be required there? Yes, though there is not much current there. A great number of fat sheep would be sent from our part of the country if we had a railway. Last year I had some sheep which were as fat as whales, and which would have fetched splendid prices in Sydney, but I could not get them away.

1509.

- W. D. Bruce. 1509. Is there any likelihood of agriculture out your way? Yes.
 26 May, 1900. 1510. Is the rainfall sufficient? Yes, in ordinary winters, for hay crops, and even for grain. I have grown several small crops of hay, and I am going to put in a big patch this winter. Any of the red soil will grow wheat.
 1511. What is your usual rainfall? About 16 inches; but in a good season we get over 20 inches. During the last year or two the rain has fallen at a very bad time for grass; but if we had had crops in they would have grown.

William Henry Wordsworth, J.P., storekeeper, Collarendabri, sworn, and examined:—

- W. H. Wordsworth, J.P.
 26 May, 1900.
1512. *Mr. McFarlane.*] Have you resided long in Collarendabri? Between eight and nine years.
 1513. Where do you get your supplies from? From Sydney and Newcastle, through Narrabri West.
 1514. What do you pay for cartage from Narrabri West? In a good season, 2s. 6d. a cwt., and we have paid as much as 5s. a cwt. The rates rise in dry seasons.
 1515. What quantity of goods do you get up every year? I have brought up as much as 350 tons in a year, but a good deal of that was produce.
 1516. Do the other storekeepers in the town get up goods in the same way? Yes.
 1517. How much would they get up in a year? I think that the others would get up about as much as I get. In ordinary years, about 300 tons would be the total tonnage for the town.
 1518. Do you send much from Collarendabri to Narrabri? Wool, skins, and tallow go from Collarendabri to Narrabri West.
 1519. How would it affect the town if the proposed railway stopped 10 miles short of the river? People could not continue in business at Collarendabri with a railway 10 miles off, though they might, if the railway were only 2 or 3 miles off. When carriers have a load on, they will carry it 50 miles for the same price as they would carry it 10 miles: the probability is that we could bring goods from Bulyeroi for the same price as from a terminus 10 miles back from the river. At Moree they charge 1s., and 1s. 6d. per cwt. for only 2 miles of cartage. In my opinion, Collarendabri would fade away if the railway were kept 10 miles back from the river. Such an arrangement would be ruinous to the vested interests here.
 1520. Do you think that the flood country within 10 miles of the river could be traversed by a railway without great expense? I think that only about two or three long culverts would be necessary, as there is no current, except in a very high flood.
 1521. How long have you resided in the district? Over eleven years.
 1522. I believe that the flood of 1890 was exceptionally high? Yes; the highest we have had for thirty years.
 1523. How was the country 10 miles back from the river affected by that flood? I do not think that the water would have gone over an ordinary railway embankment, except in the two places that I have mentioned. The next highest flood was that which occurred in 1893 or 1894, and on the highest day of the flood I sent my cart out over the country that we are speaking of with only one horse. The cart got back safely, although there two men in it, and it had to go through the water.
 1524. Then you do not think that there is any serious difficulty in the way of carrying the line right into the town? No.
 1525. Do you do much business in the country west and north-west from Collarendabri? We do a good deal in the country within 30 miles north and north-west, and we very often do trade with Angledool.
 1526. Do the other storekeepers do a similar amount of trade, or does their trade extend further towards the Queensland border? No; they do not go any further.
 1527. Where does the country just south of the Queensland border trade? The trade of that country is done with Angledool. The Angledool trade district borders our trade district.
 1528. Would the Angledool traffic go through Collarendabri if the proposed railway were constructed? Yes; there is no possibility of that trade going to Walgett.
 1529. Is the trade of the district increasing year by year? Since I came to Collarendabri eight or nine years ago the district has improved tenfold. The small holdings were just beginning to be occupied when I came here.
 1530. Has there been any marked improvement in the town since you came here? Yes, nearly all the new business premises have been improved. The hotels have been enlarged, and there has been great development. If it had not been for the last four or five years' drought this would have been a very important centre.
 1531. Have the settlement and trade of the surrounding district increased? Yes.
 1532. Have you reason to believe that this progress will continue? Yes; people on the land are to a great extent people with money.
 1533. If Collarendabri were connected by railway with Narrabri, and Walgett with Coonamble, where would the traffic from the north and north-west come? To Collarendabri. That is the natural route for that traffic, and there is no reason why it should be diverted. Angledool is further from Walgett than it is from Collarendabri, and the country between Angledool and Walgett lies low; whereas that between Angledool and Collarendabri is, with the exception of one or two narrow swamps, good country for travelling over.
 1534. If both Collarendabri and Walgett were connected by railway with Narrabri, from what districts would the Collarendabri branch attract traffic? I think that if the railway were brought to Walgett, and no railway were made to Collarendabri, Angledool goods would still come to Collarendabri, because the rate would be about the same.
 1535. For what distance towards Walgett would people use the Collarendabri line? Traffic would come to the Collarendabri line from close about Eurie Eurie. The Mercadool trade is Collarendabri trade at the present time, although the Walgett people claim it for their railway.
 1536. Would the construction of the proposed railway settle more people on the land? Yes, and a good number of people are now waiting for land to be thrown open.
 1537. How far to the west and north-west of Collarendabri would there be settlement which would give traffic to the proposed railway? Traffic would come to Collarendabri from within a few miles of Mungindi, and from places 40 or 50 miles beyond Angledool.
 1538. *Mr. Watson.*] Would the construction of the proposed railway draw traffic from the southern part of Queensland towards Newcastle and Sydney? Yes. When I first came to Collarendabri a great deal of

of the St. George loading used to pass through here and through Mogil Mogil; but when the line of railway was taken to Eulabah much of that traffic was cut off. A line to Collarendabri, however, would draw a great part of it back in this direction again. If the Walgett branch were not constructed, a great deal of traffic which had not been credited to Collarendabri would come here, and the saving of expense in construction would probably make the line pay from the beginning. The Mercadool traffic, the Cryon traffic, and the Eurie Eurie traffic, must come to the Collarendabri line, even if a railway is constructed from Coonamble to Walgett. Mr. Harper, when he was here, admitted that a good deal of traffic had been credited to Walgett which naturally belongs to Collarendabri, and we considered that if the Walgett branch is not made the Collarendabri branch will pay from the start.

W. H.
Wordsworth,
J.P.
26 May, 1900.

1539. If you were a speculator, which line would you make? The line to Collarendabri, because the construction would be less, and Collarendabri is a more central point than Walgett at which to catch traffic. A line from Narrabri to Walgett would not catch any of the Collarendabri traffic.

1540. Would it not catch it at Burren? No; a team loaded with wool would not stop at Burren, but it would go straight into Narrabri West.

1541. Does the road traffic from Collarendabri go *via* Burren or *via* Bulyeroi? *Via* Bulyeroi. Carriers would take traffic from Collarendabri to Narrabri West at the same price as to Burren. They have taken goods for less money to Angledool than to Collarendabri, and they have repeatedly accepted the same rate for Angledool as for Collarendabri. The number of sheep which we take as a basis upon which to estimate the traffic of the proposed line was fixed upon before there was any small settlement in the district; so that I think Dr. Loughnan's figures should be increased by 30 per cent.

1542. Do you think that in good seasons small holdings will carry more sheep than large holdings? Undoubtedly.

1543. Is the river likely to prove a serious competitor with the railway? No; it could never compete with a railway to Collarendabri. The steamer has been to Collarendabri only four times since I have been here; it came up in 1890 as a speculation, and twice it was specially chartered by my partner, and once by our own firm. Had it not been specially chartered it would not have come up.

1544. What price did you pay for carriage on the steamer? Wool was taken from Mogil Mogil to Bourke for £3 a ton.

1545. I suppose the steamer also brought goods up? Yes, from Bourke. It would be impossible to send wool from Collarendabri to Adelaide by river, because the water falls too rapidly.

1546. What did you pay to bring goods up from Bourke by steamer? £2 10s. a ton. There are three rocky bars below Collarendabri that make the river impassable above Walgett in most seasons. When the steamer did come here it was at a time when the roads were impracticable; but if the railway had been here there would have been no necessity for the steamer to come.

Charles Seymour, hotelkeeper, Moongulla bore, Angledool Road, sworn, and examined:—

1547. *Mr. Watson.*] Can you offer any opinion as to the direction which the Angledool traffic will take if the railway be brought to Walgett and also to Collarendabri? I think it would come to Collarendabri; it comes here now.

C. Seymour.
26 May, 1900.

1548. Is the traffic from that part of the country in any way large? Yes; it is heavy traffic. A line to Collarendabri would tap the Australian Pastoral Company's land. The company carry nearly 1,000,000 sheep on their land, the greater part of which is in Queensland.

1549. Where does their wool go now? Nearly all of it comes this way.

1550. You do not think it likely that any of that traffic will go towards Walgett? I do not think so; a little of it goes through Mungindi to Moree, but it would come to Collarendabri if there were a railway here.

1551. Can it at the present time reach the railway at Moree more quickly than at Narrabri? Part of the land is nearer to Moree, but all the traffic would come to Collarendabri if the railway came here. If the line were made to Collarendabri, traffic would come here from close on to Goodooga. Everyone wants to send his wool in the direction of Newcastle.

TUESDAY, 29 MAY, 1900.

[The Committee met at the Court-house, Walgett, at 10.30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDSAY CRAWFORD SHEPHERD, | JOHN CHRISTIAN WATSON, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Thomas Clarke, J.P., Secretary, Railway League, Walgett, sworn, and examined:—

1552. *Vice-Chairman.*] I understand that you have a statement to read to the Committee? Yes; it is as follows:—It has been resolved by the residents of Walgett and district that the question of route of a railway from the main system to Walgett shall not be interfered with by them, the question of route being left entirely in the hands of the Government; hence I am not considering the cost of construction or maintenance, but will only furnish you with an estimate of traffic which must accrue to a line constructed to Walgett, no matter what direction it may take. From returns furnished me in 1898, which was an ordinary year, I find that in the district served by a station at Walgett there were 1,504,341 sheep, 7,610 cattle, 4,072 horses; that 22,069 bales of wool were produced, which weighed about 4,518 tons.

T. Clarke,
J.P.
29 May, 1900.

| | | |
|--------------------|-------|---|
| T. Clarke,
J.P. | tons. | There were sent away about 258,600 fat sheep, and the tonnage received from south was 2,305 |
| 29 May, 1900. | tons. | My estimate of earnings would be as follows:— |
| | | 2,305 tons of goods from Sydney, at £1 16s. per ton... .. £4,140 |
| | | 4,518 tons of wool, at £1 3s. 9d. per ton 5,365 |
| | | 2,873 trucks sheep, at £2 5s. per truck 6,464 |
| | | 100 trucks large stock, at £2 5s. per truck 225 |
| | | *Mails—104 miles, at £20 per mile 2,080 |
| | | Coaching—1,500, at 17s. 8d. per head 1,325 |

Total £19,608

No Queensland wool or stock is included in above. Mr. District Superintendent Jones estimates 950 tons of wool from Queensland, which, at £1 3s. 9d. per ton, is ... 1,128

Making a total amount of £20,786

I will now explain how I arrive at these figures. Some time ago I sent out circulars to every resident in the district, and the majority of them replied. Where the answers were missing, I obtained the information from the Pastures and Stock Board. The estimate of wool, fat sheep, and large stock I have made up in this way: The tonnage received in Sydney is made up from the circulars, and from returns furnished to the League last November by the storekeepers of Walgett. My estimate shows the wool got from 1,504,341 sheep. The total number of sheep in this district in an ordinary season is about 2,000,000; 4,518 tons of wool from this number of sheep is not an over estimate. I say there would be 258,600 fat sheep trucked from Walgett in 2,873 trucks. This estimate must be largely increased in the event of a railway, as the greater facility for landing stock on a poor market would be an incentive for small holders to fatten. I am only estimating 100 trucks of large stock, which must be considered very small in a district like Walgett. I am of the opinion, which is shared in by all the principal experienced men of the district, that, in a very short while after the opening of the line, Walgett will be one of the largest trucking stations in the Colony. I would here invite your attention to the sworn evidence, before the Sectional Committee, Narrabri-Pilliga proposal, of the late Mr. B. S. Martyn, a man of very large experience in stock. He stated:—"I may add that Walgett is a great stock centre. The travelling stock generally follow the water, and if there were a railway station here it would be largely availed of for trucking stock. I was an agent in Wee Waa for several years, and I know that several mobs of sheep which came there from the Walgett and the Narran districts started as fatts, and were sold as stores." When the Railway Commissioners were in Walgett Mr. Martyn stated most emphatically that in his opinion Walgett would be one of the largest trucking stations in the Colony. Now, as regards the mails, we are receiving about 20 cwt. of mails here every week, and for this the Post Office would be charged £20 per mile. My estimate of the passenger traffic is based upon returns made by the police for the year 1899, which are as follow:—

| | |
|--------------------------------|-------|
| Walgett Police District | 1,672 |
| Angledool | 380 |
| Goodooga | 481 |
| Comborah | 301 |
| Carinda | 397 |
| Total | 3,231 |

Leaving out Goodooga and Angledool, we should be justified in estimating the population that would use a railway station in Walgett as 2,370, and could credit ourselves with one single fare for each unit. I have put it down at 1,500, which you will, I think, admit is a very low estimate. The district served by a railway station at Walgett would be: Commencing at Walgett, running due south to Combogolong; thence south-west to Carinda; thence north to the Narran; thence along that river to Angledool; thence south-east, through Dunumbral and Dungalear, to Mercadool; thence south to the boundary of Eurie Eurie and Kercargo; thence west to the line from the point of commencement. This embraces the area covered by the following large holdings:—Ulumbie, Euroka, Combogolong, Wangrowaly, Warren Downs, Brewan, Mourabie, Boorooma, Gingie, Llanillo, Dungalear, Mercadool, Eurie Eurie, and Bangate. Now, in regard to the river, the most sanguine supporter of the river Barwon, as an antagonist to a railway, states that the river has been navigable seven times in fourteen years. If that is a fact, can any person look upon such an irregular mode of transit as an actual competitor with a railway. A line built *via* Narrabri would be in length, to Newcastle (which I look upon as the natural outlet for the produce of this district) 353 miles, and to Sydney, 455 miles. Produce sent *via* the river, thence per rail from Bourke, would have over 300 miles of river carriage, and then 503 miles of trainage, against a total carriage of 455 miles to Sydney, or 353 miles to Newcastle. The river Darling was not navigable for four years continuously in the early eighties, and this may occur at any time in the future. I would invite your attention to the evidence of Mr. Webster, Conditional Purchase Inspector, given before the Sectional Committee when they were inquiring into the Narrabri-Pilliga proposal: "I desire to say something with regard to the river traffic. I have known the river since 1882. In that year I went to a station below Bourke and was handed bills of lading for shearing supplies, which were received four years afterwards. I may state that on the boat carrying the supplies there was timber, which was intended for the building of an hotel in Bourke for a Mr. Huggins. The timber was so long coming up that he bought the "Royal Hotel," and spent most of his money before the timber arrived. From 1882 to 1886 there was really no river which you could depend upon." I can corroborate the statement of Mr. Webster. At the time he mentioned I was bookkeeper to Mr. Huggins at the "Royal Hotel," Bourke. I also desire to direct your attention to the following extract from the report of the Public Works Committee, on the proposed construction of locks and weirs on the river Darling:—"For the past fourteen years the Darling River has been navigable on an average for half the year; the boats passing up and down stream free from toll and without serious delay. Various rates of freight are quoted, but a reasonable estimate, with easy navigation, may be stated at 20s. per ton. The quantity of freight is, approximately, 10,000 to 12,000 tons between Brewarrina and Bourke, with very little intermediate traffic. Most of the traffic of the district reaches the railways at Bourke or Byrock,

* *Vide* evidence of Mr. Jos. Clarke, of G.P.O., on Narrabri to Mores line.

Byrock, and any increase in the revenue returns of the Great Western line, would be the result of leakage from the Northern systems. The inhabitants of those districts most interested in obtaining the readiest way to market object to the proposal on the following grounds:—(1) Because it will only provide for a portion of the produce of the district. (2) Because stock (one of the greatest products of this pastoral country) cannot use it. (3) Because the time occupied in transit will be greater, and the cost heavier, than by direct railway communication between Brewarrina and Byrock." Also this extract from Mr. H. G. McKinney's report: "The great drawback to river traffic on the Darling, and to settlement on the river, is the uncertainty of transit.

The river is frequently not navigable for long periods, and this naturally adds materially to the cost of river traffic, and renders it more or less untrustworthy. What applies to Brewarrina also applies to Walgett." In the event of the river being seriously looked upon as a competitor with a railway, I would invite your attention to the fact that there still would be no get-away for stock, which must be a source of considerable revenue to a railway, also to the great risk attached to the water carriage of wool, and the increased insurance. The anticipation of this proposed line being a payable one is proved by a perusal of the profits earned by the Werris Creek to Narrabri line, and the Narrabri to Moree. The former, in 1891, showed a profit of £907, in 1892 of £9,432, in 1893 of £14,000, and in 1896 of £10,488; the Moree line paid from the start. In speaking of pioneer lines the Railway Commissioners state:—The two latter lines indicate a good prospect, more particularly the Narrabri-Moree line." To prove the prosperity of our district I would point to the financial healthiness of our local institutions. The Pastoral and Agricultural Association takes rank with such towns as Dubbo, Forbes, Glen Innes, Hay, Junee, Moree, Orange, Temora, and Warren. The School of Arts is also in a flourishing condition. The Hospital ranks with the like institutions in Armidale, Corowa, Scone, Wallsend, Wyallda, Windsor, and Young. The amateur and professional race clubs are both in a healthy condition. In considering the claim of this town to railway communication, I would respectfully point out to the Committee that there are public buildings in Walgett worth at least £30,000, and a short while ago about £3,000 was laid out in putting them in thorough repair. If a railway were constructed to any other town in this direction, and Walgett left in the cold, it would not only destroy the private vested interests, but would render the public buildings useless. Referring to the anticipation of trucking: In my opinion the whole of the Queensland traffic in stock, when crossing near Brenda or Heeble, would come to Walgett in preference to any other town. At the inquiry into the Narrabri-Pilliga proposal, I put in, as evidence of this, the sworn declarations of seven drovers, worded as follows:—"I am a drover; I have frequently taken stock from Queensland, from the districts on the border, to the railway for carriage to market in Sydney; I know the various stock routes from the border to Narrabri; I am of opinion, the result of my experience, that the routes from Goodooga and Angledool, to Walgett, *via* Wilby Wilby and Weetalibah respectively, are the best for stock to travel, owing to the greater facilities for obtaining grass and water on the road; I am further of opinion that a trucking station at Walgett, connecting with the line at Narrabri, would be available of to a greater extent than one in any other locality in the district. And I make, &c." The following is a statement prepared by the C.P.S., Walgett, for the information of the Railway Commissioners when they were here last November:—"In the Central Division, Walgett has about 3,000,000 acres of land, a great portion of which, about 1,000,000 acres, will become available for some class of settlement under the Act of 1895. In the Western Division of Walgett there are about 5,000,000 acres under pastoral and homestead lease, representing about 211 holdings under homestead lease, an average of 10,000 acres per lot, whilst 340 persons hold 4,774,342 acres under pastoral lease. Nearly every form of settlement has been availed of in this district since the initiation of the new Land Act in 1895. The following are some of the results: Settlement leases since 1895, 114, of an average of 2,500 acres, in all 285,000 acres, with permanent residence; homestead selections, 20, of an average of 1,200, in all about 24,000, with permanent residence; conditional purchase and alienation carrying residence since 1875, 400, representing about 500,000 acres, excluding the amount taken up by squatters in exchange, &c. In 1898, 171,607 acres were made available for conditional purchase. Little, if any, is now remaining to be taken up under that tenure. The following is the return of revenue received at the Crown Lands Office, Walgett, for the year 1899:—

| | £ | s. | d. |
|-------------------------------|---------|----|----|
| Annual lease | 257 | 15 | 2 |
| Auction sales | 106 | 16 | 8 |
| After auction sales | 59 | 11 | 0 |
| Conditional leases | 3,823 | 14 | 5 |
| Conditional purchase | 5,890 | 5 | 8 |
| Homestead lease | 74 | 16 | 8 |
| Homestead selection | 111 | 4 | 11 |
| Settlement lease | 2,022 | 6 | 3 |
| Lease fee stamp duty | 17 | 0 | 0 |
| Miscellaneous | 181 | 15 | 0 |
| Total amount collected | 12,545 | 5 | 9 |
| C.P.S. collection | 714 | 15 | 0 |
| Grand total | £13,260 | 0 | 9 |

The total amount of revenue from this office would exceed £20,000 if the money sent direct to the Treasury were included for payments payable to this office. If the total land revenue for this district were taken, including pastoral, homestead, and other forms of large leases, for which payments are only made to the Treasury, it would exceed £50,000 per annum. The Walgett district is the central office for electoral work of no less than seven divisions, running to the Queensland border on the north, Curribric and Missington on the west, Gundabluie on the east, and Willie on the south.

1553. Where is most of the wool that goes from this district consigned to? Most of it to Sydney.

1554. Where do you draw your town supplies from? Most of our supplies come from Sydney, but we get a great deal from Newcastle.

1555. The Railway League does not commit itself to any opinion as to the merits of the respective routes by which Walgett may be reached? That is the attitude taken, not only by members of the League, but also by the people of the district. Several public meetings have been held, at which that determination was arrived at.

1556,

T. Clarke,
J.P.
29 May, 1900.

T. Clarke,
J.P.
29 May, 1900.

1556. What is your private opinion as to the best way of reaching Walgett? My opinion is that the railway should be brought here, from Narrabri West, on the south side of the Namoi River, and that the next best route would be from Narrabri East, on the north side of the Namoi, straight into the town. If the line is brought from Narrabri West, the terminus, according to the present scheme, will be a mile and a half from the town; but in my opinion the railway could be brought straight into the town for an extra expenditure of £5,000, and unless the Government bring the railway right into Walgett there will be a great deal of agitation to have it extended, so that ultimately it will have to be brought here. Narrabri for years agitated for a railway into the town, and eventually got it; and Yass, which was left off the line, at last succeeded in getting a tramway.

1557. A connection with the Northern line gives Walgett a port 100 miles nearer than it would get one by being connected with the Western line, and the advantage of being able to send its produce to both Newcastle and Sydney? Yes.

1558. You spoke of small holders being able to send consignments of fat stock away more frequently if there were a railway;—why cannot they send them away now? In a season like this, if a man started to drive 100 fat sheep to Narrabri, they would be store sheep when they got there. Besides, it costs almost as much to send away a small flock of sheep as to send away a large one. Most of our travelling stock routes are eaten down, even in good seasons, because they are generally leased to the holders of the adjoining runs.

1559. Do you regard this as a good fattening district? Experts state that this is one of the finest fattening districts in New South Wales, and, therefore, in the world.

1560. Do you think that with the construction of the railway to Walgett there would be an increase in the number of stock fattened for export? Undoubtedly. Mr. Benn, of the Aberdeen meat-works, could give you valuable evidence on that point. He buys almost all of his stock in this district, and trucks them from Narrabri.

1561. Which would be the most convenient and accessible district to send starving stock to from this district? New England.

1562. The Railway Commissioners anticipate a loss of £13,000 per annum on the line to Walgett, with a branch to Collarendabri;—if both lines were made, which place would get the larger amount of stock traffic—Walgett or Collarendabri? Walgett. The sworn affidavits of the seven drovers of whom I have spoken, all of whom have had from seven to twenty-five years' experience, state that those drovers, if they had to bring stock from Queensland, would rather bring them *via* Wilby Wilby and Comborah to Walgett than by any other route.

1563. We were informed at Collarendabri that nearly all the traffic from the Queensland side, between Angledool and Mungindi, now comes through Collarendabri? I think that most of the travelling stock from the district north of Angledool come this way.

1564. We were told that on the road to Collarendabri the country is comparatively high and dry, and that between Angledool and Walgett the land is more subject to floods? I doubt it very much. Since 1893, scarcely any water has lain on the ground at all, and only in 1890 were the roads impassable because of floods. In almost any kind of season there is plenty of grass and water on the Wilby Wilby track.

1565. Would a line from Narrabri to Collarendabri, and another from Coonamble to Walgett, attract a larger quantity of traffic than the proposed line? I do not think so.

1566. Would a line from Coonamble to Walgett attract more traffic from the western country than the Walgett line? I do not think so. I think the traffic that would not come to Walgett would go in any case to Coonamble, or to the Brewarrina-Byrock line. The manager of Brewarrina assured me that his wool would come from Walgett, but I doubt if it would go to any intermediate station.

1567. Do you anticipate any development of agriculture in this district? Yes; by the use of artesian water.

1568. But you would not expect much agricultural traffic on the railway? No; but I would point out that the most profitable lines in the Colony are those that run through purely pastoral country.

1569. How close together is it justifiable to construct railways in purely pastoral country? The Railway Commissioners will never allow for traffic from a district more than 25 miles from a proposed railway.

1570. Would there be enough purely pastoral traffic to keep going both the proposed line to Walgett, and the proposed line to Collarendabri? I think so; but Walgett has far greater claims to a railway, by reason of the wealth of the town, its great private and public vested interests, and for other reasons, than Collarendabri. Walgett has always been looked upon as one of the largest centres in the Western district. If Collarendabri is to be taken into account at all, it is because of the Queensland traffic which she grasps, and, with Federation, that traffic may cease to come here.

1571. The Railway Commissioners suggest that Walgett should be reached from Coonamble;—would that be a disadvantage to this district? It would be a disadvantage to us, in that we should have to wait at least another decade for our railway. Before the line can be extended from Coonamble, the Public Works Committee must report to Parliament upon the proposal that they are now considering, and before any fresh proposal can be referred to the Committee the House will have expired by effluxion of time; then, before another proposal can be submitted, we shall have to overcome a great amount of opposition from people in the northern districts, who look upon Walgett as their private property. I am quite satisfied to have a railway from Coonamble, or from any other place from which you choose to bring it, if you give it to us within a short period. At the last inquiry I stated that if the Committee chose to send a person here to analyse the traffic of the district, uncontrolled by the Government, he would find that a line to Walgett would pay from the jump, even with a railway to Collarendabri, and another to Coonamble. As far as Mr. Harper's figures are concerned, it should be remembered that Mr. Usher, who compiled them, came here, and all he did was to have a little talk with us; but exact information cannot be obtained merely from speechmaking.

1572. But Mr. Harper says that he knows where every bale of wool in the district goes to? I am very sorry to contradict him, but I can show that his statement is hardly reliable. For instance, one man in this district uses a Sydney name, and brands his wool "G.M. over Forest Lodge," and he sends it to the railway one year, and down the river another.

1573. *Mr. McFarlane.*] How long have you resided in Walgett? Seven years.

1574. During your residence here have you noticed any marked improvement in the town or district? Yes; especially in the amount of settlement which has taken place under settlement lease.

1575. Would the land that you speak of as about to be thrown open for settlement be influenced by the construction of the proposed railway? Some of it would, I know.
1576. Would the greater part of the 1,000,000 acres, to which you have referred, be better served by a line from Narrabri than by a line from Coonamble? I could not tell you from memory. I am informed that the whole of the land on each side of the Namoi is to be thrown open for selection, shortly, under settlement lease. I know that there are 97,000 acres on Mercadool holding which are shortly to be thrown open. Nearly all the leases fall in this year.
1577. Has much Crown land been thrown open for settlement during your residence here? Yes.
1578. Has it been eagerly taken up? Yes.
1579. You stated that you did not think agriculture would be extensively carried on in this district except by the use of artesian water;—in times of drought is there any difficulty in obtaining produce from other places? Yes.
1580. What rates of carriage are paid between Narrabri and Walgett? The rates fluctuate, but lately as much as £6 and £6 10s. a ton has been paid. They went down to £2 a ton once, but that was only for one or two loads. £3 a ton is a fair average.
1581. Are the rates highest at times when you want produce most? Yes; because those are times of drought.
1582. Is there any considerable trade between Newcastle and Walgett? I have no personal knowledge of that trade.
1583. *Mr. Shepherd.*] What are the smallest areas taken up in this district? There are some homestead selections of 640 acres close to the town.
1584. How is that land used? Some of the holders grow hay, and I think that ultimately they intend to go in for agriculture properly, but since they took up the land the seasons have been so droughty that some of them have not been able to reside on their selections at all.
1585. What is the average carrying capacity of the country about here? About a sheep to 3 acres.
1586. Is it possible for a man to make a living on 640 acres here, taking everything into consideration? I do not think so, and I do not think that any more of these small blocks will be thrown open. About twenty of them have been taken up, altogether.
1587. What is the smallest area that would be likely to support a family here? 2,560 acres; but a proper-sized block would be at least 5,000 acres in extent. I think that every acre in this district is suitable for agriculture.
1588. Do you consider the land around Walgett that is subject to floods suitable for agriculture? Yes. Residents of the Hawkesbury have told me that a flood there does them a power of good.
1589. How frequently is the land submerged? Close to the river the land was submerged in 1893, but not since.
1590. At what time of the year do you generally get rain? Our heaviest rains fall in January or February.
1591. What is your average rainfall? About 20½ inches.
1592. Do you generally get enough to manure your crops? Yes, if we get our average rainfall; but in some years we have only had 10 and 11 inches.
1593. At the present time there is no inducement to go in for agriculture here, because there is only the local market to supply? Yes.
1594. *Vice-Chairman.*] Walgett has not yet been incorporated? Not yet. If the railway were brought here it would be an inducement to incorporation, because it would enable us to bring material here cheaply for the improvement of our streets.
1595. *Mr. Shepherd.*] Has the Railway League considered the advisableness of guaranteeing the Government against any loss on the proposed line? No.
1596. Do you think that those who would benefit by the construction of the line would be willing to pay an amount equal to what they pay in land tax towards the reduction of any deficiency? I think so. I think they would be glad to promise to do so, because they believe that the line would pay from the jump. The Byrock to Brewarrina line is only 60 miles from the Byrock to Bourke line, and if both those lines will pay a line to Walgett would pay. I do not believe a man in the district would be called upon to pay one penny towards making good a deficiency on the working of a line to Walgett.

T. Clarke,
J.P.
29 May, 1900.

Isaac Collins, sheep farmer, near Walgett, sworn, and examined:—

1597. *Mr. McFarlane.*] What area of land do you occupy? With my three sons, I occupy 21,000 acres, about 11 acres of which are conditional purchase land and conditional lease land, while the rest is held under annual lease.
1598. How far is your place from Walgett? It is about 10½ miles down the river, in the direction of Brewarrina.
1599. How many sheep will your land carry in average seasons? I have had 10,000 on it, but at the present time I have only about 3,500 or 3,600. In a very good season an acre and a half will carry a sheep, but in some seasons it takes 6 or 7 acres to keep a sheep. It is very hard to say what the average carrying capacity of the land is, because the last five years have been so dry; but I dare say it might be put down as a sheep to 3 acres.
1600. How long have you resided in the district? Nearly eleven years.
1601. Have you a good general knowledge of the district? Yes.
1602. Do you know the district between Walgett and Narrabri? Yes.
1603. Will you describe that country? In places it is fairly good. It is good sheep-carrying country in good seasons.
1604. How would you compare it with your own land? It is as good as my land, and some of it is better. If we could get rain at the right seasons country like that which I occupy would carry a larger number of sheep.
1605. Do you send many sheep to market? I sent 2,300 fat sheep away last. By the time they got to Narrabri, a distance of 140 miles, sheep that had left as fat stock were only stores. If we had a railway here, a man in a small way could send away small consignments and he would get quick returns, and in that way he would keep out of the storekeepers' books. If we do not get a railway here many of the small

I. Collins.
29 May, 1900.

- I. Collins.
29 May, 1900.
- small men will have to go, because everything is so dear here. The storekeepers have to pay high rates to the carriers, and, consequently, the farmers have to pay high prices to the storekeepers, so that a poor man has to work hard all the year round to make ends meet.
1606. Where do you send your fat stock? To Sydney, through Narrabri. If settlement-lease men could send away two or three truck-loads of sheep at a time, it would be of great advantage to them to do so.
1607. If the proposed railway were constructed would everyone who was sending fat sheep to market use the railway? Yes. It would have to be a very good season to make it worth anyone's while to use the stock routes. People would be very foolish not to use the railway.
1608. Do you send away much wool? Yes, to Sydney. I have sent away as many as 130 bales in a good season. What I want are quick sales and ready money.
1609. Did you suffer very much from the late drought? I lost half of what I had. I lost about 4,000 sheep, and I was about 100 bales of wool short.
1610. Did you make any effort to send your sheep away to other districts during the drought? It was of no use to try to do so. A man keeps his sheep back thinking rain will come, until at last it is too late to move them.
1611. Did many other people lose as heavily as you lost? Yes, all my neighbours lost in the same way.
1612. If the proposed railway were constructed, would it be used in times of drought for sending starving stock to more favoured districts? If the railway had been here last season I should have sent my sheep away instead of letting them die in the paddocks. Every man who has stock would use the railway to send them away in times of drought.
1613. Which route would you prefer, that from Narrabri or that from Coonamble? It does not matter to me where the railway comes from; a line to Walgett is all that I want.
1614. But would not one route be better for you than another? It is immaterial to me which route is adopted.
1615. Have you done anything in the way of agriculture? Not yet; but my neighbours have. A man close to me has grown a very nice crop.
1616. Do you think that the land is suitable for cultivation? There is plenty of land here which is suitable for cultivation.
1617. If the railway were constructed, would people here be induced to go in for agriculture? Very likely. Several settlement lessees in my neighbourhood could have sent away two or three truck-loads of fat sheep at the beginning of the season if there had been a railway; but, as it was, they had to keep the sheep back until they lost them.
1618. It has been stated that a considerable area of Crown land is shortly to be thrown open for settlement;—if that land is similar to the land you occupy will people take it up? Certainly; but Walgett is so far from Sydney that 2,560 acres make too small a holding for farming. Blocks of 5,000 acres are required.
1619. Would a 5,000-acre block maintain a family? Yes.
1620. Where were you living before you came to this district? In Riverina.
1621. How does that country compare with this country for sheep farming? I think that this country is as good as the Riverina country. If we have rain here, no matter at what time of the year, grass or herbage of some sort will follow; but in Riverina, if rain comes between the seasons, not a blade of grass follows.
1622. Will this land carry as many sheep to the acre as the Riverina land will carry? Yes, if not more. Taking one season with another, I think it will carry more. I used to do a little wheat-growing; but more for chaff than anything else.
1623. Which line would suit this district the better, one from Narrabri or one from Coonamble? A line from Narrabri will enable us to send our starving stock to the New England district.
1624. Where do starving stock go now? Mostly through Narrabri to the New England district; but some of them have travelled to the Moree district, because there has been rain there.
1625. *Mr. Shepherd.*] What is the average weight of a fleece with you? From 6 to 8 lb.
1626. Are the sheep in this district liable to any disease? No.
1627. Have you much scrub on your holding, upon which you can feed sheep? No. I had a little; but it has all been used. I have had very hard times during the last few years.
1628. Have you a garden? I had a beautiful lot of fruit-trees; but they nearly all died in the drought.

Horatio William Smith, selector, near Walgett, sworn, and examined:—

- H. W. Smith.
29 May, 1900.
1629. *Mr. Shepherd.*] What is the extent of your holding? 2,560 acres.
1630. How long have you been in the district? Nearly eight years.
1631. How many sheep have you? At the present time a little over 700.
1632. Is that the full capacity of your holding? No. I had never shorn fewer than 2,000 sheep until last year, when I sheared about 1,800.
1633. Have you lost others through the drought? Yes.
1634. Will your run carry 2,000 sheep? Until last year it carried 2,000. I do not buy and sell.
1635. What number of fat sheep do you send away? None.
1636. What kind of pasture have you? Mine is principally plain country, slightly timbered with coolabah and white wood. Mitchell grass, blue grass, and saltbush grow on it, and herbage in the winter.
1637. Do you feed and spell alternate paddocks? Yes; three-fourths of my country is spelling now.
1638. Where do you send your wool? To Sydney, via Narrabri.
1639. What is your opinion of the country between Narrabri and Walgett? From Walgett to Wee Waa the country cannot be excelled as grazing country; but beyond that a great deal of it is flooded country.
1640. Is any of the land between Walgett and Wee Waa fit for agriculture? I think it is all fit for agriculture, judging by the crops that I have seen growing in the district; but, unfortunately, just when the crops need rain, at the end of September and in October, we generally get a dry spell. Of course, artesian water could be used to get over that difficulty to a great extent.
1641. If the line came from Narrabri, would you sooner see it brought on the south side, or on the north side

side of the river? I think that a line coming from Narrabri East would come through better country ^{H. W. Smith.} than any other; but it would not pass through Wee Waa.

1642. How would you describe the Collarendabri country? As far as I have been in the direction of ^{29 May, 1900.} Burren it is similar to the country round here.

1643. Have you tried cultivation at all? Not yet; but I am making a start this year.

1644. Have you every hope of being able to make a fair living on 2,560 acres? I have done so up to the present, and I hope my condition will improve if a railway comes here.

Charles Speight Haigh, storekeeper, Walgett, sworn, and examined:—

1645. *Mr. Watson.*] Have you resided long in the district? Over five years.

1646. Then you have had an opportunity of observing and experiencing the difficulties which the residents labour under by reason of the want of railway communication? Yes; in the first place, our climate is of such a trying character that we cannot keep large stocks of perishable articles, because they go bad in the stores. Now that the district is becoming so thickly populated by small holders, if we had 50 or 100 points of rain now and again, during a few weeks, the teams find it impossible to travel, and that brings about almost a state of famine. A little while ago people here were offering 25s. a bag for chaff to feed their horses, and animals were starving. I had three teams stuck up 37 miles from the town at the time; but I could make no use of the produce. I had there about 12 tons of grain, and if I had been able to bring it into Walgett I could have sold it for 10s. a bushel, and people would have been very glad to buy it; but when it came here it was practically unsaleable, because grass had grown, and people did not want it. In good seasons chaff and produce are nearly useless here. People will not buy produce, and horses will not eat it then; and it is consequently a dead loss to the storekeepers. With regard to the river, it has been stated that we do not want a railway here, because we have water communication; but the river is simply a snare and a trap to us. When the water has risen sufficiently to enable a steamer to come up here, it is too late to send to Sydney to order goods to be sent to Bourke, to be put on board the steamer. When the water is high enough here for us to think about sending for goods, there is no water at Bourke; and when the water gets down to Bourke there is none here. Last time I risked it, I had to send waggons to Boorooma to bring the goods from there. The steamer people will not guarantee to deliver at any particular time.

1647. What freight do you pay from Narrabri, on the average? From 2s. to 6s. a cwt.

1648. What is the steamer freight? About £2 10s. a ton from Bourke, I think. I have three teams always employed, and very often I employ two other teams as well.

1649. How far does your trade area extend from Walgett? Speaking for our own business, it goes back as far as the Narran, 58 or 60 miles from here. Our trade also goes a long way down the Barwon, and down the Castlereagh towards Combogolong and Coonamble. Then we go north-easterly as far as Cryon, and as far as Mercadool.

1650. Does any of the Angledool traffic come this way? I have frequently supplied people in Angledool.

1651. If the Federal Government locked and weired the river, could goods be brought here more cheaply by river than by train? Not unless the Federal Government also abolished the differential rates to Bourke. I hope that whatever route is adopted the railway will be brought right into the town. It will be a very serious injury to Walgett if the terminus is left a mile and a half away.

1652. Is there any way in which the engineers could avoid the extreme expense of construction which is necessary to bring the railway into the town? I do not know; but we want a railway into the town.

1653. *Mr. Shepherd.*] Have you noticed a general advance in the town and district since you have been here? Our customers have increased in number; but, unfortunately, one year has been worse than its predecessor, and that has militated very considerably against business. If we got one or two good seasons I think the capability of the district would astonish people. I have been told that this district is particularly suitable for the breeding of sheep and the production of wool.

1654. And you think that a railway would greatly improve your conditions? Yes; especially if it is brought into the town. That would suit both business people and the people of the district.

1655. *Mr. McFarlane.*] Where do you get most of your supplies from? We get nearly everything from Sydney.

1656. Do you do much trade with Newcastle? We only get butter and biscuits from Newcastle, and we sometimes get flour from Tamworth.

1657. Would it not be of advantage to Walgett to have the Newcastle as well as the Sydney market? Yes; we should then have two ports instead of one; but Sydney is the only port I use.

John Young Bell, grazier, near Walgett, sworn, and examined:—

1658. *Vice-Chairman.*] What is the area of your holding? 10,240 acres.

1659. What is its average carrying capacity, taking good and bad seasons together? A sheep to an acre and a half, taking the average for ten years.

1660. Is the land that would be served by the proposed railway good pastoral country? Yes.

1661. What is your opinion of it from an agricultural point of view? Nearly the whole district is really first-class agricultural land. I have been farming in the district on a small scale for the last nine years, and I have got as much as 3 tons of hay to the acre.

1662. How many failures have you had? Only one total failure; but two of the crops were not very good, owing to dry seasons.

1663. Would you expect, on the average, worse or better results than you have obtained during the last nine years? The last five years have been worse than the average season, and, therefore, I think my average crop, taken over a long period, would be better than I have been getting.

1664. Do you irrigate your land? I have started to irrigate it. I irrigated a small piece last year; but I consider the land first-class agricultural land, even without irrigation.

1665. Is it possible to irrigate any large area in this district? Yes; by the use of artesian water. The country is extremely level here.

1666. If there were a railway, what crops could be profitably grown here? Wheat, and I think almost any other crop that is grown in the Colony. I believe that this would be a splendid tobacco-growing district.

C. S. Haigh.
29 May, 1900.

J. Y. Bell.
29 May, 1900.

- J. Y. Bell. district. I have had a good deal of experience in tobacco-growing, and I am sending for seed now to give this country a trial.
- 29 May, 1900. 1667. What is the largest area that you have had under crop, and what has been the best yield from it? Sixty-five acres is my largest area, and I got about 60 tons of hay from it; but that was one of the worst crops that I have had.
1668. Are your results such as to lead you to increase your area? Yes; and I am now cultivating 200 acres.
1669. What market do you expect to find for your produce? Only the Walgett market at present.
1670. If there were a railway to Walgett, could you grow grain for export? I think we could. I produce a sample of the wheat which I grew last year. I have always been growing for hay; but last year some of the crop was a little on the ripe side before I gathered it in. I intend putting in 1,000 acres next year, and I am about to order £850 worth of machinery.
1671. How would you describe your soil? Most of the land that we are farming now is black soil, but we have farmed the red soil too.
1672. Which is the better? I think that the red soil is safer than the black. It stands a drought better; but in a good season, or with irrigation, the black soil is the better.
1673. What crop do you propose sowing next year? Wheat, oats, and maize or Indian corn. I have seen Indian corn grown on the Castlereagh, and a very good crop came.
1674. What are the possibilities of the district for fruit? I have seen some very fine grapes grown close to my place on about an acre of ground. I have had a good deal of experience in grape growing, though not in this district. My father used to make a good deal of wine in the Albury district, and I think that this would be a good wine district. There is a Chinese garden close to my place where really first-class fruit is grown.
1675. Is the district suitable for small holdings with mixed farming? Yes.
1676. What would be a fair-sized holding for the maintenance of a family here, supposing there were a railway? About 2,560 acres. A man could do on less; but I consider that the area I have named would enable anyone to make a really first-class home. I know men in the district who have done well on 2,560 acres simply by grazing. They started with very little money, but, notwithstanding the severe droughts which we have had, they are in a good position now.
1677. But mixed farming would be safer? Yes; I am satisfied of that.
1678. *Mr. Watson.*] Would you say that the rain falls here at seasons that would suit wheat? Yes, generally; but in some years it is patchy. During my nine years' experience, enough rain has fallen at the right time, except in two or three seasons.
1679. Would the rainfall generally be sufficient for a grain crop? I think so, if the land were properly farmed; but there are not many first-class farmers in the district at present. When I first came here people told me that I should not be able to get a crop at all; but I tried 8 acres, and I got a splendid crop.
1680. I understand that hay and chaff have occasionally been at very high prices here? Yes; the lowest price at which I have sold chaff is £6 a ton.
1681. Then how is it that more produce has not been grown here? I am one of the oldest selectors in the district, and up to the time of my coming here the land was held by squatters, who told us, because they did not want selectors to come here, that the soil would not grow wheat. I know that some of those squatters had been most successful with small areas, but they would not continue growing for fear that other people should find it out. Since I have discovered that wheat can be successfully grown here, a great many other selectors are going in for it. I know about a dozen within 15 or 20 miles of my place who are cultivating from 40 to 50 and 60 acres.
1682. If the railway were made, could you grow hay in competition with a more favoured district, such as the Hunter? If I could get £2 10s. a ton for all the hay I grew, I should give up sheep-farming and go in solely for agriculture. I have 5 acres under lucerne, and the crop which I have irrigated has been a very good one, so that I am extending the area to 20 acres this year.
1683. How do you irrigate? From the Telloora bore, on the Coonamble-road. It is a Government bore; and I think it has the biggest flow in the Colony.
1684. What is the depth of the bore? 1,540 feet.
1685. What do you pay for the water that you get from that bore? 6s. 8d. a week. The flow was estimated at 6,000,000 gallons. I could have the whole of it; but I have never been able to use more than one-third of it. I should have to pay about £2 10s. a week if I used the whole of it. An arrangement was made with Mr. Boulton that seventeen selectors could take the whole flow by paying £2 10s. a week for it.
1686. If there were a railway, would it pay you to grow crops by irrigation? I am sure that it would. This is a very hot climate, so that you can grow crops here nearly all the year round, and the extra crops which you obtain from irrigation would more than pay for the expense. We irrigated 15 acres twice, occupying two days in the work on each occasion, and we only had one-third of the flow. It did not take as much time to irrigate on the second occasion as on the first. If land is worked regularly, and is not allowed to get too dry, it will not require so much water.
1687. Have you been irrigating sufficiently long to know whether the artesian water will have a bad effect upon the soil? I cannot say what effect it will have upon the soil.
1688. *Mr. Shepherd.*] How do oats succeed here? We have only tried oats twice. On one occasion the crop was not very good, and on the other occasion Algerian oats proved a success.
1689. Do you irrigate by flooding, or with drains? With drains.
1690. How often do you find it necessary to irrigate in dry weather? Last year was a very dry season, but we only found it necessary to irrigate twice, and in many years it would not be necessary to irrigate at all.
1691. How long have you been growing lucerne? We only put in the lucerne last year.
1692. How many cuttings have you had from it? We cut it once, and then let the sheep run on it for about three months. Now it is fit to cut again.
1693. Where have you had experience in tobacco-cutting? About Albury.
1694. Is it not generally considered that alluvial lands are the best for tobacco? Yes; but this soil is very rich and strong, and I think that with water it will grow tobacco. The only thing that might go against

a tobacco crop is the climate ; but I think that the climate will suit, because we are not very subject to frosts here. J. Y. Bell.

1695. What kinds of fruit grow here? Grapes, peaches, figs, apricots, oranges, and other fruits. I do not think that apples are a success. 29 May, 1900.

1696. Is fruit grown chiefly by irrigation? Yes.

1697. Are you quite satisfied with the results of your experiments so far? Yes ; I think that with railway communication the raising of pigs would be a very profitable industry in this district. I am quite satisfied that there would be no difficulty in raising pigs here, because of the trouble that we have in keeping down wild pigs. If we had a railway to Walgett we could make a lot of money by fencing off the warrambools and keeping them for pig-breeding ; but, without a railway, pig-raising is out of the question, because we should have too far to drive the animals to market. Then, if we had a railway, grazing could be carried on more successfully. In a good season we have more grass than we want. I have seen grass as high as a sheep's back ; but, owing to the uncertainty of our seasons, I have been afraid to put more stock on to the land. If there were a railway, however, I could put on two-thirds more stock and fatten them ; and if the season turned out a dry one I could truck away the fattest sheep, 100 or 200 at a time. This is the finest country that I have seen for the raising of fat lambs. We have lost very heavily on several occasions ; but we should not have lost if we had had a railway. In 1897 I had about 300 fat lambs, and they were inspected by a first-class man, who valued them at 10s. a head on the ground ; but, as it did not pay to drive away so small a lot, I had to keep them until they died. I have also had fat bullocks and cows, which I should have liked to send away, but which I have had to keep until they died from want of food. We have had great losses, which would not have occurred had there been a railway, because in dry seasons we could send our animals elsewhere for grass. The stock routes become bare before any other part of the country, so that it is impossible to use them for sending sheep away. The value of the sheep which have died in this district during the last three or four years would be equal to the cost of building a railway to Walgett. I am quite sure that if all the pastoral leases in the district were thrown open for selection, and we had a railway to Walgett, every block would be taken up. That would give the railway a better chance of paying. Up to the present time several large areas of land have been thrown open here, and in most cases the blocks have been balloted for, and there is not now a block in the district open for selection. The land is sought after by farmers, some of whom have come from Riverina and Victoria ; and I know of at least seventy or eighty farmers who are in Victoria at the present time waiting for an opportunity to take up land in this district. A man named Butler is going into farming on the share system with myself and my brothers. He comes from Victoria, and has done a lot of farming there, and he is quite satisfied that he can do better in this district than in Victoria. The uncertainty of the river has been a curse to the district. During my nine years' residence here the river has been of no use to me. During the first one or two years that I was here I brought up goods by steamer ; but they cost me 7s. 6d. or 10s. a ton more than they would have cost if I had had them brought here by team, because they would have to be unloaded at Brewarrina. Since that time I have never used the steamers. I do not think that the river will ever compete with the railway. If there were a railway to Walgett I should not use the river, even if the steamer people undertook to carry my wool to Bourke for nothing, because at Bourke my wool would be further from Sydney than it is at Walgett.

Robert Moyses, Inspector of Stock, Walgett, sworn, and examined:—

1698. *Mr. McFarlane.*] How long have you held your present position? I have been in the Walgett district about twenty months. R. Moyses.

1699. Have you a statement to make to the Committee? I have a few returns here. At the end of 1897, the number of sheep in the district was 1,901,243, and at the end of 1898, 1,538,030, showing that the loss for the year was 363,213. In 1899, there were 1,038,186 sheep, showing a further loss of 479,844 in that year, or a total loss for the two years of 843,057 sheep. Those sheep died during the drought, and at present prices they would be worth £421,528. The loss of horses and cattle in the same period was about 50 per cent. 29 May, 1900.

1700. Do you think that those losses could have been averted if there had been a railway? I am of opinion that if there had been a railway, we should have saved 70 per cent. The stock routes have been in such a terrible state that it has been utterly impossible to travel sheep. People started felling scrub for their stock, and when the scrub was cut out, they had simply to let the sheep die.

1701. Did any of the stock-owners travel their sheep to other districts during the drought? Yes.

1702. In which direction? Principally the New England, though a few flocks have gone to Mendooran, and in that direction.

1703. I suppose the number of horned stock in the district is not very large? No ; we consider the district capable of carrying 2,000,000 sheep, but at the present time we have only 1,038,000.

1704. So that you are considerably understocked? Yes ; none of the holdings are fully stocked at the present time.

1705. What is the grazing capacity of this district? On the average, 3 acres will carry a sheep.

1706. Have you had experience of other districts? Yes ; I know the Macquarie district, the Dubbo district, the Walgett district, the Wilcannia district, and other parts of the Colony.

1707. How does this district compare with those that you have named? I think that it is one of the best in the Colony ; it is by far the soundest district that I have been in.

1708. Is it a good fattening district? Yes ; a splendid district.

1709. In ordinary seasons, are a large number of fat sheep sent from this district to Sydney? Yes ; about 250,000 a year.

1710. In what direction, do they mostly go? In good seasons they generally travel to Rylstone, to Mudgee, and to Wallerawang, but a large number of fat stock are bought in this district by the Aberdeen Company, and they are trucked from Narrabri.

1711. In what direction do most of the fat stock for the city market go? If they can travel, they go *via* Conamble, Mendooran, and Conabarabran ; but in a bad season, they are glad to take the train at Narrabri.

1712. If the railway were brought to Walgett, would it be used by the owners of fat stock to send sheep to market? Yes.

- R. Moyse.
29 May, 1900.
1713. It has been stated that holders of fat stock have experienced considerable difficulty in getting rid of small consignments? Yes; I have often heard that complaint. I have seen sheep in good condition, which it would not pay an owner to send away, unless he could put them directly on to the trucks. Fat stock belonging to small holders are generally bought by people who are making up a large flock to send away. In good years most of the Queensland stock comes through the district on their way to the southern markets, and to the Hunter. The estimated traffic through Walgett last year was about 2,100 horses, 10,800 head of cattle, and 510,000 sheep. Those figures are taken from the permits granted.
1714. Which way were those animals passing? Backwards and forwards through Walgett.
1715. Is there much traffic in store stock? Yes, a good deal.
1716. With what other districts has this district stock transactions? The Walgett district is expected to supply most of the New England country, and people living up the Macquarie come this way for store stock. Buyers come here every year.
1717. Do most of the transactions with store stock take place between people in this district and people in the New England district? Yes.
1718. *Mr. Watson.*] Would store stock use the proposed railway in any but times of drought? They would not use it if they could get grass.
1719. But fat stock would be put into the train? Yes.
1720. *Mr. McFarlane.*] And starving stock? Yes.
1721. *Mr. Watson.*] Does your district include Collarendabri? Yes.
1722. With a terminus at Walgett and another at Collarendabri, which line would attract most of the stock traffic from Queensland and the northern part of this Colony? The Walgett line. There are two stock routes from Brenda—the Lightening Ridge route and the Wilby Wilby route—and they both come here; whereas there is only the 60-mile track to Collarendabri.
1723. It has been stated that between Angledool and Walgett the track traverses a good deal of flooded country? Both tracks are alike. On the Collarendabri side of Angledool there are about 30 miles of low country, and both tracks are pretty wet in a good season.

Abraham Falstein, storekeeper, Walgett, sworn, and examined:—

- A. Falstein.
29 May, 1900.
1724. *Mr. Shepherd.*] How long have you been here? I have been in the district since 1889, but I have not always been storekeeping; some of the time I have been hawking.
1725. Then you have a pretty good knowledge of the district, I suppose? Yes.
1726. What is the country like between Walgett and Collarendabri? In wet weather the river track is a terribly bad one. The country is low, and it is bound to be flooded whenever the river rises. Sometimes the flood-waters of the Barwon spread out to within 4 miles of Mercadool holding. They did so in 1893.
1727. Is the district a good one for pastoral or agricultural pursuits? Yes; one of the finest districts I have been in. I have a knowledge of South Australia and Victoria; but this district will compare favourably with any part of Victoria that I have been in. Of course, there are areas of country near the river which are not suitable for agriculture; but 6 or 7 miles from the river the country is splendid, and along the route of the proposed branch line to Collarendabri there are some very large areas suitable for closer settlement. The land there is so good that after 3 or 4 inches of rain the grass grows very high.
1728. Were you ever engaged in agricultural pursuits in Victoria? No; but I have seen a great deal of agriculture. I have travelled throughout Europe, and I know pretty well the ideas and the customs of the farmers there.
1729. Are the people in this district satisfied with their lot? Yes. I have not known anyone to become insolvent in this district for the last six or seven years; but in other districts, if there is a drought, it is ten to one that people become bankrupt. There have been no such failures in this district.
1730. What extent of country do you supply with stores? I go south as far as Castlereagh, towards Coonamble, and north-east as far as Cryon.
1731. And you find people well able to meet their engagements? Yes; except in dry weather. I think that the proposed railway will pay from the start, just as the Moree line paid. They did not think at first that that line would pay.
1732. Do you find any great difficulty in getting stores here? Yes.
1733. Do you buy in Sydney chiefly? Yes.
1734. How long does it take you to get goods from Sydney? In this dry weather it has taken one of our teams six weeks to come from Narrabri, and last year on many occasions it took nearly two months. It is very hard upon storekeepers to have goods so long on the road.
1735. What freight do you pay? We have paid from £2 to £6 a ton, but on the average we pay about £4 a ton from Narrabri. It is simply folly for us to rely upon the river here. Even if locks and weirs were made it would be of no use to us, because it would cost us more to bring goods up the river *via* Bourke than to bring them direct *via* Coonamble or Narrabri, and we want to get them delivered here as cheaply as possible. It has been said that our cattle and sheep go New England way, but they only go there in the summer time, and very often, after they have been away six months, they come back with footrot and fluke. There are plenty of other places besides New England to which we could send our sheep—places such as the Wellington and Dubbo districts. In the winter New England would be of no use to us at all.

Robert Henderson Duncan, homestead lessee, Narran Point, near Walgett, sworn, and examined:—

- R. H.
Duncan.
29 May, 1900.
1736. *Mr. Watson.*] What area have you? 10,240 acres.
1737. How many sheep do you run? I have about 2,900 now.
1738. Is that your usual number? I have rather more now than I should have, considering the seasons. I am trying to keep them in hope of more rain.
1739. In an average season what will your holding carry? About a sheep to 3 acres.
1740. Is it open country? No; it is pretty scrubby country.
1741. Have you improved it? I have ringbarked it all, with the exception of some coolabah scrub, which I do not know how to kill.
1742. What effect will the construction of the proposed railway have on the district in which you are living?

living? It will benefit it in many ways. At the present time we are considerably taxed in getting our wool away; there is no certainty about the river. Last year I sent some of my wool down by steamer, and six weeks after it left I sheared some more sheep, and their wool, which went to Narrabri, reached Sydney before the wool that left by the steamer. The steamer got stuck up at Brewarrina, and had to unload there.

R. H.
Duncan.
29 May, 1900.

1743. I suppose that if the railway were brought to Walgett you would send all your wool by it? Yes.

1744. Is any fattening done in your district in good seasons? I do not think there is better fattening country in New South Wales, and sheep grow very large there. I have killed merino wethers which weighed 100 lb., and it is an ordinary thing in good seasons to kill a sheep weighing 80 or 90 lb. I produce a sample of some chaff which I grew at my place and cut for my horses.

1745. Do you regard your land as suitable for agriculture? It would require to be cleared, because it is nearly all timbered land; but in any ordinary season I believe that a man could grow a good crop on it.

1746. Have you tried it for wheat? I have grown wheat, chiefly for hay, for the last seven years.

1747. What results have you obtained during that period? Three years ago I got 7 tons of oaten hay, without irrigation, off a little more than an acre and a half. A good many of the people in the district who saw the crop told me that it would have yielded over 60 bushels of oats to the acre.

1748. What results have you had with wheat? Unfortunately, we have generally had hot winds just when we wanted cool weather for the wheat to mature in. I have tried different sorts of wheat, and the wheat which I find best suited for this part of the country is the White Lamona.

1749. Do you regard the district generally as suitable for agriculture? In two years out of three you can get a crop.

1750. Then why have people not grown more hay here? There has not been much population. When I came to Walgett, eighteen or nineteen years ago, they told me that all the land on the Barwon was secured. It was all surveyed in small blocks for the stations, as a blind to keep settlers out.

1751. But since 1884 there has been a lot of settlement here? Yes. They told me when I came here that I would never be able to grow anything; but I got a small engine to water the garden, and I found that I could grow almost anything by using water. I have grown cabbages up to 23 lb. in weight, and I have grown oranges, citrons, peaches, nectarines, plums, bananas, cherries, apples, and pears with irrigation. The pears were as fine as have ever been grown out of Sydney. If a man looked after his land he could grow nearly anything with a little care. In a good season he could grow an abundance of hay.

1752. If there were a railway would there be a market elsewhere for hay? Yes. There are different places to which a man could send produce. There might be a bad season in Brewarrina, or at Narrabri, or at Coonamble.

1753. Is it not more likely that any markets for produce would be out towards the west rather than towards the coast, where farmers are already established? I dare say there would be a good market out west; but in good seasons it is not difficult to get a good crop here, though in bad times it takes a man all he knows to get a crop to grow.

Charles Neam-Vaughan, storekeeper, Walgett, sworn, and examined:—

1754. *Vice-Chairman.*] How long have you been in the district? Twenty years.

1755. What is the financial condition of the district at the present time? It is about as sound as that of any part of New South Wales.

1756. Can you give us some idea of the rate of progress here during your time? The district has progressed very considerably since I have been here. A large amount of settlement has taken place since land has been made available for it, and I have no doubt that when more land is made available settlement here will increase very rapidly. Each time that land has been thrown upon it has been rushed.

1757. Would the district be attractive to small settlers if there were a railway? Yes.

1758. Would it be so without a railway? Not to the same extent. Without a railway the settlement will be a settlement of graziers rather than of agriculturists; but with a railway there will be a good opening for agriculturists.

1759. What area would a man require here for the maintenance of himself and family? For grazing, he would require larger areas than are now allotted for small holders. I dare say 640 acres would enable a man to make a living if there were a railway, and he cultivated his land, and had also a grazing lease.

1760. What are the main lines of traffic to and from Walgett? Hitherto the traffic has gone to the nearest point on the railway line, and it will always do so. Narrabri, being the nearest railway station, the traffic has always gone there.

1761. Will the construction of the Byrock to Brewarrina line have any effect upon the Walgett traffic? I do not know that it will, unless it affect the traffic from the north; but a railway to Walgett should attract the greater part of the traffic from the country towards Goodooga, Angledool, the Rirrie, and the Bokhara. My trade connection has been out in that direction, and I have a branch at Angledool; but the difficulties of getting goods there leaves the place almost in a state of famine at times. I had a letter to-day stating that they are quite out of sugar, and a few weeks ago they had not a bag of flour, nor any sugar there. The rate of carriage to Angledool from Narrabri is now about £10 a ton, the freight on flour being £1 a bag, which is more than the flour cost to buy. A great many of the goods that I send to Angledool come through Walgett, and would come to Walgett if there were a railway.

1762. You do not think that Angledool would be supplied from Collarendabri? My store would not, because there would be very little difference in cartage, and the road from Narrabri *via* Walgett, would be better than that from Collarendabri.

1763. Where do you get your stores? From Sydney; but we get biscuits from Newcastle, and sometimes we get flour from Dubbo and Orange. I have had goods three months on the road between Narrabri and Walgett, and I have goods now at Narrabri which have been there since 11th April waiting for despatch, so that it is hard to say when they will reach me. Recently, I endeavoured to get up about 40 tons of stuff by way of Bourke; but I found that it was impossible. Trade is considerably hampered by the want of facilities for transport. As to the nature of the soil in the district, I am satisfied that it will produce almost anything, whether fruit or grain. I have a little garden at the back of my private residence, and almost every kind of fruit grows there—quinces, figs, English mulberries, lemons, and oranges. The soil will produce anything if it has moisture; but without a market there is no inducement to

grow

C. N.
Vaughan.

29 May, 1900.

C. N.
Vaughan.
29 May, 1900.

grow anything. The Chinese pay £3 or £4 an acre for land which they rent on the banks of the river, and still make a good living. The land that they rent is part of the park, and the money that they give us is spent in improving the park; but they are liable to be removed at twenty-four hours' notice. The Government has decided, I understand, to put down a bore within half a mile of the town, and I consider that the production from the surrounding land will amply cover the interest on the outlay.

Andrew Essex Scott, pastoralist, Gingie, sworn, and examined:—

A. E. Scott.
29 May, 1900.

1764. *Mr. McFarlane.*] What area of land do you occupy? I hold something over 100,000 acres of leasehold and 18,000 acres of purchased land. I also hold land under annual lease; so that my property comprises about 150,000 acres.

1765. How many acres does it take to maintain a sheep? About four.

1766. Is the country between Walgett and Narrabri similar to that which you occupy? Yes, parts of it are; but my land is not so good as the land down Narrabri way.

1767. Do you send away much wool and fat stock? More wool.

1768. Where do you send your wool? We sell some of it in Sydney, and we send some of it to England, from Newcastle or from Sydney.

1769. Do you send much to Newcastle? In some years we send nearly all of it to Newcastle, and in other years we send it to Sydney. Sometimes we send it to Sydney for sale, and then, if prices do not suit, we ship it home.

1770. What you have sent to Newcastle has been for direct shipment? Yes.

1771. Do many of the station-owners deal with their wool in that way? Several of those around here do. If I send through Bourke I ship from Sydney, and if I send through Narrabri I generally ship from Newcastle.

1772. Do you send many fat stock to the Sydney markets? I generally sell off the shears. I seldom send fat stock to Sydney.

1773. If the railway were brought to Walgett, should you send fat stock to Sydney? Yes, in a season like this, when I wanted to get rid of them, though, generally, I have no difficulty in disposing of my sheep, because they are a good breed, and people buy them.

1774. Where do you get your station supplies? From Sydney, *via* Narrabri, or else *via* Bourke.

1775. Do you send away much wool by river? Sometimes, when the steamer is running.

1776. Would you continue to do so if the railway were brought to Walgett? I should choose the cheapest route.

1777. What do you pay to send wool to Bourke? If they do not trans-ship at Brewarrina, about £2 10s. a ton. I pay about £6 10s. a ton through to Sydney.

1778. Which line would suit you the better—the Coonamble-Walgett line or the Narrabri-Walgett line? Personally, the Coonamble line, because we have a station in the Coonamble district, near Warren; but in times of drought I dare say the Narrabri line would give us the better get-away for our stock.

1779. Which line would suit your Walgett property the better? The Narrabri line; but I do not mind where the railway comes from.

1780. How long have you lived in this district? Twelve years.

1781. Do you frequently have droughts such as that which you have experienced recently? Yes.

1782. Have you tried agriculture? Yes, in a small way.

1783. Have your results been encouraging? They were not.

1784. Is that because of the poorness of the soil? Because of the insufficiency of the rainfall.

1785. Would the land be good enough if the rainfall were greater? Yes. At a time like this, when the rates of carriage are so high, we have great difficulty in getting goods up from Narrabri, and you cannot possibly send sheep away, because there is neither grass nor water on the stock-routes. If there were a railway, we could send our sheep to places where there is better feed.

1786. Have you, in the past, sent stock to other districts for feed? Yes. When my father had the station, it happened to be a better season round Bourke way, and at Nyngan, than here, and we had stock at both places; but, generally, the season is good in New England when it is bad here, and New England is the usual place to send stock to in times of drought.

1787. Is the Crown land which is shortly to be thrown open for settlement good grazing land? Some of it is; but I should not say that all of it is, of course I am referring to the Central Division.

1788. Is it land of such a character as would induce people to take it up for pastoral purposes or for cultivation? I think that some of it is, but I do not consider the rainfall sufficient for cultivating.

George Matthews, grazier, near Walgett, sworn, and examined:—

G. Matthews.
29 May, 1900.

1789. *Mr. Shepherd.*] How long have you been in the district? Over forty years.

1790. What is the extent of your holding? Nearly 13,000 acres.

1791. How many sheep have you on your land? It is doubtful whether I could muster 3,000 now.

1792. How many do you carry, on the average? Not more than a sheep to 4 acres, on the average; but in a good season I could carry more.

1793. Is your country up to the general average? Portions of it are very good; but some of it is not good.

1794. We have been told that some of the properties here will carry a sheep to 2 acres? Yes; in a good season.

1795. Is yours fair average country? Yes; except for the timber.

1796. Have you cultivated any of your land? No.

1797. What market do you find for your wool and your sheep? Sydney.

1798. Do you send *via* Narrabri? Yes.

1799. Do you ever find any difficulty in sending away small consignments? Yes; and just now it is impossible for me to get my stock away at all.

1800. If you had a railway you could often send away small lots? Yes, and that would pay me well; but sheep which I could have sent away, if there had been a railway, have died during the drought.

1801. I suppose that is the case with many others? Yes; and I am afraid that some unfortunate people will never recover from their losses

1802. The travelling stock routes in this district are generally pretty bare? Yes; because those who rent them keep them eaten down. G. Matthews.
1803. You do not approve of the leasing of the stock-routes? I do not. The reserves should be placed in the hands of the stock inspector. If they are thought to be too big, they might be reduced; but all except travelling stock should be kept off them. Then, tanks should be made at suitable places. God knows, we have unemployed enough. If there were a railway we could send our stock away without using the stock-routes. 29 May, 1900.
1804. How would a railway assist the people in this district? It would give us greater facilities for transport. In 1869 I had my wool lying in the shed from October until the following May before I could get it away, and then I paid £1 a cwt. to send it to Morpeth, and £1 a cwt. to get my rations brought up. Many a time, if there had been a railway, we could have sent our stock out of this district to districts where they could have got something to eat. It is seldom that we are troubled so much as we are at the present time; but now no man can save his stock.
1805. Which line would you prefer—one from Narrabri or one from Coonamble? Undoubtedly the line to come from Narrabri. That has been the route the traffic has taken for the last forty years.
1806. How should you describe the country on each side of the proposed route? On the Pian Creek side it is black-soil country, but on the other side the soil is of a sandy nature.
1807. Is it all good for pastoral purposes? No.
1808. What proportion of it would be good? The land on the Pian Creek side is the best; but after you pass Pilliga there is some country which is as good as one could wish for. From Narrabri to Pilliga there are belts of really first-class country.
1809. What way should the line be brought out from Narrabri? From West Narrabri direct to Wee Waa. If any other route is adopted the Government will be throwing money away. No one can imagine the terrible losses that we have had to undergo during the recent drought. I have had men cutting scrub for the last eleven months; but if I could send my stock away to some place where they would get food, it would be to my interest to do so.
1810. Should you use the railway to send stock away? Undoubtedly. The Walgett Progress Committee wish the Public Works Committee to take into consideration the claims of Walgett to have the railway continued right into the town, as they consider that it would be extremely disastrous to both private and public interests if it were left some distance away. On the last occasion, when the Members of the Committee discussed the railway proposal, they unanimously agreed to leave it to the Government to decide by what route the railway should be extended to Walgett.

Charles Edward Colwell, settlement lessee, near Walgett, sworn, and examined:—

1811. *Mr. Watson.*] What is the area of your holding? 2,560 acres. C. E. Colwell.
1812. How long have you been in occupation of it? Since 1896. 29 May, 1900.
1813. Were many other settlement areas thrown open when you took up your land? About seventeen—seven or eight on Euric Eurie, and some on Youenbah.
1814. What is the carrying capacity of your land? My experience is that it will not carry more than a sheep to 3 acres.
1815. Have you been able to carry as many as that during the drought? No. I was forced, through the want of water, to start 500 or 600 on the road. They were nice young sheep and most of them fat; but the stock route was so bad that when I got 20 miles out I found it impossible to go any further. I was then offered 8s. 6d. a head for them, and I accepted that price rather than run the risk of losing the sheep altogether.
1816. How long ago was that? A little over twelve months ago. Last shearing I brought up another little lot, so that at the present time I have about 800.
1817. Is any of your land suitable for agriculture? Yes; but the crops are not reliable. You may put a small crop in this year, and it may be very successful; but next year if you put in a larger crop it may be a total failure. I believe, however, that with irrigation agriculture could be carried on with great advantage.
1818. Did you and others who have taken up settlement leases take them up with the intention of using them for grazing? Yes.
1819. Do you think that a man can make a living on 2,560 acres? Not without a railway.
1820. If there were a railway you could use your land to better advantage? Yes, and we could risk carrying more stock, because if we got pinched we could send away some to more favoured parts of the Colony. It has been almost impossible to get stock from Walgett to Narrabri during a great part of the year in recent seasons. Then, if there were a railway, we could in good seasons send away small consignments of fat stock; but it does not pay us to put small consignments on the road; so that our stock are often kept in the paddocks until they become poor again, and we lose heavily.
1821. How does the country between Coonamble and Walgett compare with that between Narrabri and Walgett? It is much the same, I think.
1822. Where should you like the line to come from? From Narrabri, because it would then come nearer to my place, and it would also serve a lot of Crown land on the Mercadool side, the lease of which will expire shortly.
1823. Would it be of advantage to this district, in dry times, to be connected with the New England district? Yes. Everybody makes for New England in dry times.
1824. We have been informed that a large number of stock have gone to Munderoran for agistment? That may be so; but, of course, all the stock cannot go there.
1825. Would the country between Munderoran and Coonabarabran afford you relief in the summer time? Yes; there is permanent water there, and it is very suitable country for the purpose. I lived in Coonamble before I came here, and I am of opinion that we are more entitled to a railway than are the Coonamble people, because our difficulties are greater than theirs. The nature of our soil is such that if a few points of rain fall it becomes almost impossible for us to get along, and prices become intolerably high. The supply of edible scrub here is becoming very short, and it is only a matter of a few years when, if the railway is not made, a great many of us must leave the district. I have lost very heavily myself, and I am heartily sorry that I came here.

William

William Vanstone, hotelkeeper, Walgett, sworn, and examined :—

W. Vanstone. 1826. *Vice-Chairman.*] How long have you been living in this district? Since 1880; but during part of that time I lived at Goodooga. I have been contracting and sheep-farming in the district, as well as hotel-keeping.

29 May, 1900.

1827. Do you corroborate generally the evidence which you have heard concerning the desirableness of making the proposed railway? Yes from Coonamble; when I was living in the Goodooga district we used to try to send our fat stock to Dubbo, *via* Coonamble, because the stock route going in that direction was the best that we could use, and Dubbo was nearer to Sydney than any other trucking station; and I think that if the proposed railway is made the stock from that district will come to Walgett to be trucked. Goodooga and Angledool are both within about 90 miles of Walgett. We want a line that will bring us as close to Sydney as possible. All the stock on the other side of the Culgoa would come to Walgett to be trucked, in preference to Brewarrina, because Brewarrina is 513 miles from Sydney by rail, and Walgett, *via* Coonamble, will be only about 434 miles. A line from Walgett to Coonamble would be shorter than a line through Narrabri to Sydney. In dry times a lot of stock go to Mulooran, Coonabarabran, and out in that direction for feed. I sent some wethers that way myself, and sold them at Mulooran. I should like to mention that Walgett is very badly off for timber. There is no timber nearer than Come-by-chance, and there are no sawmills along the Narrabri route.

1828. *Mr. Watson.*] How do the grazing capabilities of the Mulooran and Coonabarabran district compare with those in the New England district? They are about the same.

1829. Would it be of as much use to you to be connected with the Mulooran district as to be connected with the New England district? There is not so large an area of country out Mulooran way as there is in New England; but, otherwise, the conditions in the two districts are similar. Both places are very cold in the winter-time.

Terence Francis Fagan, coachbuilder, Walgett, sworn, and examined :—

T. F. Fagan. 1830. *Mr. McFarlane.*] Have you resided long in the Walgett district? Over nine years. I think that this district has great claims to consideration in the matter of railway connection. There are no macadamised roads in the district, and it would cost more to construct a road than to make a railway. Without good roads, transit is so uncertain that it is very difficult to send produce from the district, or to bring supplies here.

29 May, 1900.

1831. Do you experience much difficulty in your own business? Yes; I have often to pay for material before it comes to hand.

1832. Where do you get your material? From Sydney, from Maitland, and sometimes from Newcastle. We can get timber at Pilliga; but it is not very suitable.

1833. I understand that there are some forests of ironbark lying about 20 miles away from either Narrabri or Wee Waa? Yes; but that ironbark is not suitable for wheelwright's work or for coachbuilding. It can be used; but it is not like the coast timber. If you are driving with wheel-spokes made of it it will sometimes split off.

1834. Which is the cheapest timber for you to get? I get my timber from Sydney dressed, and therefore I have less to pay in carriage. Rough, undressed timber costs me nearly as much as dressed timber coming from Sydney.

1835. Do you use the pine that grows about here? No. It is good timber for house building, but it is not suitable for coachbuilding.

1836. Is the Richmond River pine superior to it? Yes. I use Richmond River pine, kauri, and American timber, all of which come from Sydney.

1837. Which route do you prefer—the Narrabri or the Coonamble route? Either will suit me, so long as we get railway communication quickly. With a railway, I think this will become a very flourishing district. If the land were thrown open for permanent occupation we should have a mixed agricultural and grazing population which would be of great benefit to the country.

1838. Have you done anything besides coachbuilding in this district? Yes. During the last three years I have been assisting my brother on a settlement lease, and I know that, notwithstanding the bad seasons, he has made a good profit off his land—more than I can make at my trade.

1839. During your residence here, have you noticed any substantial improvement in the town and district? Before the drought a considerable improvement had commenced. Business has always been sound here.

1840. Is it increasing? Not lately, in our business. Stock have been so poor that vehicles are little used now.

1841. Would the construction of a railway materially improve the condition of affairs? Yes; by enabling small settlers to send to market small lots of sheep. I have heard people complain that they have had fat stock, which would have brought £1 a head in the Melbourne market if they could have been sent away, die in their paddocks. Stock cannot be sent from here, because of the bad state of the stock routes. The people of this district are entitled to a railway, and a railway is the cheapest road that could be made here.

Archibald Edward Park Skinner, stock and station agent, Walgett, sworn, and examined :—

A. E. P. Skinner. 1842. *Mr. Shepherd.*] How long have you been in Walgett? Eleven years.

29 May, 1900.

1843. What are your views in respect to the railway proposal? It has been the unanimous decision of the Walgett people to leave the question of route entirely in the hands of the Government; but it is my private opinion that a line from Coonamble to Walgett would serve the district and the Colony better than a line from Narrabri to Walgett.

1844. What advantages do you expect from the construction of the proposed railway? Walgett would be a very large trucking centre if the railway came here. Most of the stock from central Queensland come through Goodooga, or Brenda, to Walgett, and then go towards Nevertire, Mudgee, or Rylstone. Last year fully 30,000 head of cattle passed through Walgett.*

1845. Do stock deteriorate much in travelling to Narrabri or to Coonamble? Yes, very much, even when the roads are good.

1846. I suppose most stock go from Walgett to Narrabri? In a good season most fat stock go to Rylstone or to Mudgee to be trucked to Homebush; but in a bad season the shortest route is adopted.

1847.

* Note (on revision).—My reply to this question was intended to apply to the extension from Coonamble.

1847. Are small settlers here unable now to send away small consignments of stock? Yes; a man occupying 2,560 acres would run about 1,000 sheep, most of which would be ewes and lambs. He might have 100 or 200 fat wethers, but it would be too expensive to send such a small lot by road to market.

1848. Is it usual for small holders to club together in sending away stock? No; because there is always a difference in the quality of the various flocks, and it would mean drafting at Homebush, and perhaps entail dissension.

1849. Is it usual for people to buy up small lots to make up a large flock to send away? Yes; we have been depending to a great extent upon the buyers for the Aberdeen meat-works, and Mr. Richards, of Sydney; but owners have to take lower prices for stock sold on the ground than they would get if they sent to Sydney.

1850. To what districts are starving sheep sent from this district? Chiefly to New England; but owners hold their stock in the hope of rain coming, until it is often impossible to get them to the railway.

1851. Would a railway to Walgett be largely used for the conveyance of fat stock and the removal of starving stock? Yes.

1852. Do you think that the railway should be brought from Narrabri or from Narrabri West? I think it should start from Narrabri West and come through Wee Waa. By doing so, a number of river crossings would be avoided, and the route would be shortened.

1853. Where does Walgett get its timber from? I think that most of it comes from Come-by-chance and Pilliga. If there were a railway to Walgett, produce grown in this district would be sent out to country lying to the north-west and west, where there is a smaller rainfall than we have, and where there are fewer opportunities for growing it. The railway would make Walgett the centre of the team traffic, and waggons bringing in wool and other station produce would take out fodder. I have seen four crops taken off a paddock in one year at Boorooma. Those crops were irrigated with water from the river.

1854. How long have they been growing lucerne there? For several years. They have about 10 acres.

1855. *Mr. Watson.*] With the removal of the stock tax, Queensland stockowners may again endeavour to find a market in Melbourne;—do you think that it would be of advantage to them in that case to have railway connection from this district to the Southern line? Yes.

1856. Do you think that such a connection would induce more traffic than a connection with the Northern line? Yes; because it would be of advantage to cattle from southern and central, and even from northern Queensland. Our districts cannot supply the demand for cattle.

FRIDAY, 1 JUNE, 1900.

[The Committee met at the Municipal Council Chambers, Coonamble, at 10:30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (VICE-CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD, | JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

George Charles Arthur Cobb, forwarding and coaching agent, Coonamble, sworn, and examined:—

1857. *Mr. Watson.*] Have you been long in this district? Thirty-two years.

1858. In connection with our inquiry into a proposal to construct a railway from Narrabri to Walgett, it has been suggested that a better route for reaching Walgett would be obtained by continuing the railway from Coonamble to Walgett;—can you give us particulars as to the traffic which now goes from Coonamble in the direction of Walgett? Yes; but the question arises, would not the Narrabri connection serve the Walgett people better than the Coonamble connection. The principal station between Coonamble and Walgett, which would send wool to Coonamble, would be Wingadee. The wool and back loading from that station amount to about 500 tons per annum. Bullarora is the head station of Wingadee holding, and is about 30 miles from Coonamble, and about 18 from Come-by-Chance. Then, there is Warrigan, or Combogolong. Last year was a bad year, but in an average year the traffic to and from that station would amount to about 120 tons. The woolshed is about 4.5 miles from Coonamble and about 30 from Walgett. Then there is Bundy, the traffic to and from which station would amount to 25 or 30 tons per annum. That station is about 18 miles from Coonamble.

1859. Does any station beyond Combogolong send its wool this way? No.

1860. What about Euroka? The traffic from that station goes to Warren or to Walgett. If the Barwon is up, the Brewon wool is generally carted to the river, and sent by steamer to Bourke, and thence to Sydney. On the direct line to Walgett there are practically only two stations, Bullarora, or Wingadee, and Warrigan. Eastward of the suggested line there are a few stations, but their traffic would be very little, and from the west of the proposed line very little traffic would come. Stations lying east of Coonamble send their produce to Quirindi. Quirindi is not the nearest point on the railway line for them, but it is the cheapest place at which to truck, because the rates on the Northern line are lower than those on the Western line.

1861. Where does the wool from Terrembone go now? To Dubbo.

1862. That station would be 12 or 15 miles east of the suggested line? Yes; and about the same distance from Coonamble.

1863. Are no goods sent through Coonamble to other stations than those which you have mentioned? No.

1864. Narrabri is nearer to Walgett than any station on the Western line? Yes; Bullarora is 130 miles from Narrabri, and about the same distance from Dubbo.

1865. Will the railway from Dubbo to Coonamble compete for the Walgett trade at all? Not against the Northern line, because the rates on that line are lower than those on the Western line. I can send wool to Newcastle from Bullarora, through Come-by-Chance, and along the Northern line, more cheaply than by using the Western line. The Railway Department allows a big rebate on wool consigned to Newcastle.

A. E. P.
Skinner.

29 May, 1900.

G. C. A. Cobb.
1 June, 1900.

G. C. A. Cobb. Newcastle for shipment outside the colonies—something like 17s. a ton. They seem to want to divert some of the trade to Newcastle. The rate for road carriage is the same from Walgett to Narrabri as from Bullarora to Dubbo.

1 June, 1900.

1866. Do you know anything of the passenger traffic? There is very little traffic between Coonamble and Walgett; it would not average one passenger a week.

1867. Can people reach Walgett more quickly from Narrabri? The Narrabri road is that which is used by the travelling public at the present time, because the distance from Narrabri to Walgett is less than that from Dubbo to Walgett, although the road is not so good. If the line were brought through Come-by-chance or Pilliga the stations which I have mentioned would be better served by it under present railway arrangements as to freights than by a line from Coonamble to Walgett.

1868. From Come-by-chance, Burren would be the nearest point on the proposed railway? Under those circumstances I do not think there would be much difference between the two routes for the wool that we have been speaking about.

1869. *Mr. McFarlane.*] If a line were made from Narrabri to Collarendabri, and another line from Coonamble to Walgett, would the line to Walgett draw all the trade from that district? It would draw all the Walgett traffic, and all the traffic from the country on this side of the Namoi.

Donald Fletcher, President, Coonamble section, Dubbo-Coonamble Railway League (Coonamble), sworn, and examined:—

D. Fletcher. 1870. *Vice-Chairman.*] What is your opinion of the suggested extension from Coonamble to Walgett? I think that a line from Narrabri to Walgett would serve a much greater number of people.

1 June, 1900.

1871. Is the general drift of trade between Narrabri and Walgett or between Coonamble and Walgett? Between Narrabri and Walgett. Walgett has been connected with the Northern line ever since the district was occupied.

1872. From how far in the direction of Walgett would a line to Coonamble draw traffic? From about Combogolong, 40 miles away. The Coonamble line would not draw much traffic from the country to the north, because that traffic would go to the Northern line. A railway to Coonamble would serve the country lying 25 or 30 miles beyond Coonamble as well as a line from Coonamble to Walgett would serve it; but the traffic from the country further out would go to the Northern line in any case, because that would be the shorter route to the seaboard.

1873. How should you describe the country between Coonamble and Walgett? It is tip-top grazing country. For the first 30 miles is really good dry country, but, further on, towards Walgett, the country is very liable to floods.

1874. Does the flooded area extend to any distance east and west of the suggested railway route? For 15 miles on the west side of the route the country is flooded by the Castlereagh, and half the country for 30 miles at the Walgett end is subject to flood. All the polygonum country is flooded country.

1875. *Mr. Shepherd.*] Do the sheep eat the polygonum? It would keep them alive.

1876. Does the water lie on that country for any length of time? Sometimes. If it were flooded now, it would not be dry until the spring.

1877. Are you in favour of the extension of the railway from Coonamble to Walgett? The Coonamble Railway league has not considered the matter. All we want is a connection between Coonamble and the Western line.

1878. Do you think that the connection is a desirable one from a national point of view? I think that Walgett is entitled to a railway; but, in my opinion, the line should be extended to Narrabri. When the line is made from Dubbo to Coonamble, if another is made from Narrabri to Walgett, and Coonamble is connected with that line, and Inverell with Glen Innes, the Northern, Southern, and Western lines will all be joined up by a fairly straight connection, and stock from the drought-stricken districts will be able to resort to either the New England or the southern table-land. From Inverell to Glen Innes is only about 40 miles, and the connection is one that would pay.

1879. *Mr. Watson.*] The Railway Commissioners suggest that the railway should be extended from Coonamble to Walgett, and that another line should be taken from Narrabri to Collarendabri, as they think that that arrangement would split up the country better;—do you think that the country between Walgett and Collarendabri would give enough traffic to make two lines from Narrabri pay? I should not think so, at the present time.

1880. Would you make the line from Narrabri to Walgett, or from Narrabri to Collarendabri? I think I should adopt a middle route.

1881. Do you think that it is necessary to go a little north of Walgett in order to catch the Queensland traffic? I think that you would catch the Queensland traffic as well at one place as at the other. Whichever line you build I think it would get all that traffic.

1882. Do you think that there would be enough traffic for a line from Narrabri to Collarendabri, and another from Coonamble to Walgett? I do not think so, at the present time.

1883. Is it not a fact that whatever way you approach Walgett you have to go through a considerable area of flooded country? I do not think that there is so much flooded country between Burren and Walgett as between Coonamble and Walgett; but you must go through some flooded country, in any case.

1884. Do you think that the Walgett district is suitable for wheat-growing? I think so. I think you can grow wheat anywhere on this side of the Barwon.

1885. Would it be of advantage to prospective agriculturists in the Coonamble district to have a railway in the direction of Walgett? Yes.

1886. In dry seasons would Coonamble be more likely to have a sufficient fall of rain for wheat than Walgett? I think so. The rainfall in the country south and east of Coonamble is generally better than that at Walgett.

1887. So that it might happen that there would be no feed out Walgett way when there was plenty round Coonamble? Yes; but it would not happen often. During the last two years there has been feed pretty well all the time in the country 10 miles south and east of Coonamble; but, on the other hand, in 1877, when we had no grass at all, they had fairly good feed round Walgett. According to statistics, we have a couple of inches of rain more per annum than they get at Walgett.

Thomas William Medley, Inspector of Stock, Coonamble, sworn, and examined:—

1888. *Mr. McFarlane.*] Have you been stationed in this district long? Fifteen years last March.
 1889. Can you give us any information as to the movements of stock between Coonamble and Walgett? During last year not much stock came this way because of the drought, but stock from Queensland generally come this way through Walgett.
 1890. Fat stock, or stores? Stores, generally; but fat stock come this way from Walgett.
 1891. Where do they go to? To Dubbo.
 1892. On their way to Sydney? Yes. Store stock from Queensland come through Walgett to Coonamble, and either branch off here to go to Muswellbrook, or else they go to Dubbo, or through Warren, towards Victoria.
 1893. Where do the starving stock generally go? Most of the starving stock in this district have gone in the direction of Cobar and Dubbo.
 1894. It has been stated that a great many of them have gone to Munderoran? Yes; that is in the same district.
 1895. Is the movement of starving stock very large, taking one year with another? I suppose 150,000 sheep have gone to that district each year during the last two years.
 1896. Do large numbers of fat stock come this way from Walgett? Not very large numbers. Some go from Narrabri to Muswellbrook.
 1897. Where do the greater number go? Through Coonamble, I think; but I have no way of ascertaining what number of stock goes to Narrabri, except by what I hear from the drovers.
 1898. Is there much movement of stock from this district in the direction of Walgett? No.
 1899. How should you class the country lying in the direction of Walgett? I only know it as far as Combogolong. Some of it is very good country, but most of it is flooded country.
 1900. Is it good grazing country? Yes; most of it is very good.
 1901. If a railway were constructed from Coonamble to Walgett, would it be used on all occasions for the conveyance of stock? I think it would be used in times of drought, but not when there was good feed on the road.
 1902. Would people travel fat stock rather than send them by rail? Many people do, when there is good feed on the road, unless the lots are very small, say, from 500 to 1,000. Of course, when stock get to Dubbo they must take the train, because there is no feed along the roads there.

T. W. Medley.
 1 June, 1900.

* William Pedley, cordial manufacturer, Coonamble, sworn, and examined:—

1903. *Mr. Shepherd.*] Have you ever been engaged in agricultural and pastoral pursuits? Yes, within 10 miles of Coonamble.
 1904. How should you describe the country between Coonamble and Walgett? It is good country, and is suitable for mixed occupation. From Coonamble, as far as Bullarora, there is a lot of good agricultural country—red-soil country.
 1905. Is the rainfall in this district sufficient for agriculture? I know a man out that way who has been able to grow something during the last two years, although the seasons have been so bad. He has 10 or 12 acres of wheat which he cuts for hay, and he occupies some land about 30 miles from here.
 1906. What is your opinion about the suggestion to extend a line from Coonamble to Walgett? I think that the steamers on the Barwon would compete with the railway in good seasons.

W. Pedley.
 1 June, 1900.

Henry Lyons, representative of Wright, Heaton, & Co., Coonamble, sworn, and examined:—

1907. *Mr. Watson.*] Can you give us any information as to the trend of traffic between Coonamble and Walgett? The only traffic from Coonamble in the direction of Walgett is that which goes to Bullarora and to Combogolong.
 1908. Whence do the stations north of Combogolong get their supplies? From Narrabri, I believe. It is about 125 miles from Narrabri to Walgett, and about 175 miles from Dubbo to Walgett.
 1909. From how far towards Walgett do you collect wool? Only from as far as Combogolong.
 1910. East and west, how many miles does the wool come to Coonamble? From about Terambone, on the eastern side. The wool from the country out west goes either to Dubbo or to Warren.
 1911. Will the construction of the line to Coonamble make any considerable alteration in the wool and goods traffic? I do not think so, except that much of the traffic which now goes to Warren would come this way.
 1912. If the line were continued from Coonamble to Walgett, would it attract much traffic from the country out west? Not much; the stations are all small on the western side.
 1913. Would it be nearer for them to go northwards to Walgett than to come to Coonamble? It would be nearer to come to Coonamble.
 1914. Is the country on the western side of the Coonamble-Walgett route barren country? No; it is pretty good country, though much of it is flooded country.
 1915. Do the only practicable roads run in the direction of Warren and of Coonamble? I believe so.

H. Lyons.
 1 June, 1900.

Charles McDonnell Stuart, Supervising Engineer, Railway Construction Branch, Department of Public Works, sworn, and examined:—

1916. *Vice-Chairman.*] In their official report on the proposal to construct a line from Narrabri to Walgett the Railway Commissioners suggest the extension of the line from Coonamble to Walgett; will you kindly give the Committee a short description of the route which such an extension would follow? Such an extension would be a continuation of the surveyed and authorised line from Dubbo to Coonamble, which keeps on the western side of the Castlereagh River. It would pass Coonamble, and cross the river a few miles beyond. Then it would turn northerly and take the high country between the Castlereagh River and Bullarora Creek, going through Bullarora holding until it crossed Bullarora Creek, and thence direct

C. McD.
 Stuart.
 1 June, 1900.

C. McD.
Stuart.

1 June, 1900.

direct into Walgett, finishing on the high ground which lies between the cemetery and the town proper. The following is a detailed description of the route:—

DESCRIPTION OF COONAMBLE TO WALGETT LINE.

Extracts from Mr. C. O. Burge's Reports.

This is a continuation of the line from Dubbo to Coonamble, and begins at 371 miles 14·418 chains from Sydney, crosses Curramie Creek at 371 miles 46 chains; thence down the centre of driftway from 372 miles to 372 miles 76 chains. At this point the line becomes parallel to the Castlereagh River, which is about 24 chains to the north-east, and, turning sharp, crosses the river on the square. At 375 miles 32 chains reverses, and takes a N.N.E. direction, the surveyed line from Mudgee *via* Coonamble to Walgett junctioning with it at 378 miles 11·588 chains. The road from Coonamble to Terambone is crossed at 381 miles 16 chains. Bullarora, or Merrimbah, Creek, is now followed on its western bank for many miles; Sandy Creek crossed at 391 miles 28 chains, and the main creek at 393 miles 69 chains, the eastern bank being now followed, crossing Gunyillah Creek at 397 miles 20 chains, down to the intersection of the Terambone Creek at 406 miles 77½ chains, the line being partly on a 3-chain road.

At 409 miles 23 chains the line enters on T.S.R. No. 1,748, and, with the exception of about 2 miles, where a bend is cut off at 424-425 miles, this is occupied up to 435 miles 21 chains. In this length, Bungle Gully, Shepherd's Creek, and Cambadoon Creek are crossed at 411 miles 33 chains, 423 miles 47½ chains, and 434 miles 61 chains respectively. The line enters the township of Walgett at 439 miles 16½ chains, crossing corner of Police Paddock, and running parallel to, and between, Dewhurst and Arthur streets, at 2 chains from the former; ends at Myall-street at 440 miles 15·20 chains.

The estimated cost of such a line is £222,000, or £3,212 per mile, the length of the route being about 69 miles. The cost is somewhat high, owing to the extent of the flooded area which would have to be crossed, and the expensive character of some of the bridges.

1917. How much of the line would pass through flooded country? I could not tell you exactly, without seeing the section; but I think there is as much flooded country on that route as on the route of the proposed line from Narrabri, *via* Wee Waa and Burren, to Walgett; but I do not think it would be as troublesome as the country between Eurie Eurie and a point within a mile and a half of Walgett on that line.

1918. *Mr. Watson.*] If the Narrabri to Walgett line were taken right into Walgett instead of stopping a mile and a half out of the town, how much extra would it cost? Approximately, I should think it would cost at least £25,000, because nearly the whole distance would have to be bridged.

1919. *Vice-Chairman.*] Has a detailed survey been made of the Coonamble to Walgett route? A revised trial survey has been made of that route.

1920. *Mr. Watson.*] Which route passes through the larger area of flood country—that from Narrabri West to Wee Waa or that from Narrabri East to Tulladunna? I think that there is about the same length of flood country to be crossed on each route. The Wee Waa route would require the construction of a bridge over the Namoi; but that expense is more than compensated for by the saving in distance.

1921. The Railway Commissioners suggest that in the event of Walgett being connected with Coonamble, the route of the proposed line to Collarendabri might be straightened? I think that if it were it would have to go through country which is more heavily flooded than that which it now passes through.

1922. So that, if you were surveying a line to serve Collarendabri only, you would still keep the westerly curve which is shown on the map? Yes.

1923. Can you offer any opinion as to the extent of the floods which occur in the country between Collarendabri and the place marked "Point A" on our map, about 11 miles from Collarendabri, and on the east side of the Barwon? From memory I should say that about 6 miles of that country is flooded to such an extent as to require the construction of a lot of bridge-work for the carrying of any railway across it.

1924. Does the estimate of the cost of continuing the line from "Point A" to Collarendabri cover the cost of bridges over the Barwon and the Grawan? Yes.

1925. Is it proposed that the terminus of that line shall be on the western side of the Barwon? Yes; but the cost of the terminal station is included in the estimate of the section ending at "Point A."

FRIDAY, 22 JUNE, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.

JOHN CHRISTIAN WATSON, Esq.

The Hon. ANDREW GARRAN, LL.D.

ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Thomas Henry Hall Goodwin, Esq., M.P., sworn, and examined:—

1926. *Chairman.*] You are a surveyor by profession? Yes.

1927. Will you give your experience of the country proposed to be served by the proposed railway? During my career as a surveyor I worked for ten years in the counties immediately to the south of the Namoi River—the counties of Pottinger and White. During that period I was constantly travelling through those counties, and I acquired a great amount of information in regard to them. The county of White is generally considered poor country, but, in my opinion, there are very large areas within that county admirably suited for the production of cereals.

1928. Could you indicate to the Committee what relation the county of White bears to the proposed route—how near it is to it? The proposed line passes through it. The line dividing the counties of White and Pottinger starts 12 or 15 miles south of Narrabri from the Namoi River, and, running in a westerly direction, it strikes the dividing watershed, and follows that in a southerly direction.

1929. You were saying what you thought of the land? This land until recently was looked upon as having rather a low value, but within the last three or four years a considerable amount of agriculture has been successfully carried on about the south-east corner, and on the eastern boundary, of the county of White. There are certain large areas within the boundaries that can be set aside as valueless.

1930. What part of the county are they situated in? They are scattered through it, and composed principally of sand, but I feel convinced that by the expenditure of labour and capital very considerable areas will, within a few years, be brought under cultivation, and, in my opinion, nothing would stimulate agriculture more than keeping the proposed railway line to Walgett on the south side of the river. I might point

T. H. H.
Goodwin,
Esq., M.P.

22 June, 1900.

point out that wheat is a product the growers of which cannot afford to carry any great distance to a railway, but wool has a much greater value, and can be carried longer distances.

1931. Do I understand you to say that you advocate the construction of this railway along the south side of the river for the whole distance? My knowledge of the district does not extend as far down as Walgett, but I should propose that the railway should cross the river about half-way from, or a little nearer to, Narrabri.

1932. You would go as far as Pilliga before crossing the river? No; I would cross before getting to Pilliga. I would take the proposed line straight from Narrabri to Wee Waa, then across the river as shown on the map.

1933. Do you know the country north of the river? Yes.

1934. How should you describe that? The land on the north side of the river, from a grazing point of view, is probably the richest land in the Colony, or it is equal to any, for grazing purposes, but not for agricultural purposes.

1935. Would you agree with the statement that, from Narrabri to Wee Waa, the land on the south side of the river is better than that on the north, for agricultural purposes, though inferior from a grazing point of view? Yes.

1936. Do you know the point to which the settlers will focus? I have never lived in that district; but I know from living in adjoining districts that more settlement would take place if the railway is made on the south side of the river than if it is made on the north side.

1937. Do you think that, under Federation, we could expect to get a good deal of Queensland trade? Yes, a good deal of the southern Queensland trade.

1938. The previous Committee had two proposals referred to them—one for a railway from Woolabra, through from Narrabri to Walgett. They thought the wants of the district would be best served by a line which would be common to both these places—Walgett and Collarendabri, over a point near Burren Creek, then out from there in a fork to Walgett and Collarendabri;—from your knowledge of all that country west of the Narrabri to Moree line, do you think that is a suitable method of dealing with the trade likely to arise from that district? I do.

1939. It has been suggested that Walgett might be connected with Coonamble;—could you offer any opinion as to the respective merits of the two connections—Walgett and Narrabri, as against Walgett and Coonamble? I could only say that the Walgett connection, from the time the district has been inhabited, has been with the Hunter River, and, as far as I can judge, the residents of that district still prefer their old connection to being connected with Coonamble. I recollect when the Walgett supplies went out by teams from the Hunter River, and the people of that district have never severed the old connection. The tie seems to have strengthened with time, and the people now have a very decided objection to having a connection from Walgett to Coonamble.

1940. Leaving out personal predilections, which do you think would open up the larger amount of good country—a railway from Coonamble to Walgett, or from Narrabri to Walgett? I am not in a position to speak with any force in regard to the country between Coonamble and Walgett.

1941. But you regard the country between Narrabri and Walgett as some of the best grazing country in the Colony? Yes; on the north side of the river.

1942. We have had some rather conflicting evidence about the timber, which I believe is mainly in the county of White;—would you give your own idea of the character of the hardwood to be obtained in that country? It is the best patch of ironbark I have seen over the range, in New South Wales. I, perhaps, may have seen a smaller patch of longer timber at Trinkey; but in the county of White there is an immense forest extending for miles, and timber in it equal to anything growing on the coast, but not so long. Some of the railway people tell me that it is better than the coast timber, because it is of slow growth, and is harder and more durable.

1943. Suitable for all railway purposes? Yes.

1944. Could you state whether it would be necessary to go a long distance from the line to get it? No; as a matter of fact they are cutting timber there now.

1945. How far would they have to draw it? I do not know the exact locality that they are working in. The timber could be got within a very few miles on this side of Narrabri. Thousands of sleepers have been got there.

1946. Is there any large area of pines which would be available for building purposes, within easy distance of the line? There is scattered pine in many places. The southern part of the county of White is principally covered with pine, but that is getting a good distance back from the proposed line.

1947. *Dr. Garran.*] Would there be justification for making one line from Narrabri to Collarendabri and another from Coonamble to Walgett, so as to open both routes? I think probably there would be; but I prefer the Narrabri-Walgett connection.

1948. I suppose the Walgett people themselves are the best judges as to the best connection with their township? Yes.

1949. Although their natural connection was with Newcastle, circumstances may have changed since the railways have been constructed? I should certainly say that the people there are the best judges of the connection that would suit them.

1950. In the dry seasons there is a large trade in forage and produce from the country further south, up into the dry squatting country, and it may be a question whether Walgett and the country beyond could get its supplies best from Dubbo and Orange, or from Werris Creek and the Hunter River? We are producing forage in immense quantities north of Werris Creek.

1951. Between that and Narrabri? Yes.

1952. How near to Narrabri? Within 10 or 12 miles, and all the way above Werris Creek.

1953. Is Narrabri about the furthest limit of the area for the growth of forage? No; I think that in any of the timber countries wheaten hay can be produced, except where it is too sandy.

1954. When the timber is cleared off? Yes.

1955. Will all that forest country be good forage country? It will.

1956. Have you seen any of that land put under forage? Yes, and it grows very well indeed.

1957. In dry seasons as well as in wet? Yes.

1958. In several inquiries which the Committee have had on their hands lately, the great question has arisen as to whether it would pay better to send sheep to the food or to send food to the sheep, in dry seasons; what is your opinion? It depends entirely on the kind of food you refer to. If you refer to the natural grasses, it is the practice to send the sheep to the grass. If you refer to forage, chaff, and bruised oats, you take the food to the sheep.

1959.

Goodwin,
Esq., M.P.
22 June, 1900.

T. H. H.
Goodwin,
Esq., M.P.
22 June, 1900.

1959. All these railways to the west have been more or less recommended to us on the ground that in dry seasons starving stock can be sent to the east? Yes.

1960. Have you looked into that question? I have.

1961. Do you think there is room in the ranges and in New England for the starving stock? During the past two years nearly all the stock for a little distance below Narrabri for 30 or 40 miles to the west of Moree have been on the table-land of New England.

1962. How came there to be room;—did not the New England people use their land? Yes; but what would be a favourable season to us in the low country would be unfavourable to the people of New England. They suffer from excessive moisture, which causes foot-rot and other things. They have so much moisture that the grass makes very little headway. In a dry season, when we are starved out owing to the scarcity of rain, in New England, as a rule, they have enough to produce their forage supply.

1963. So that in dry seasons they have in New England an increase in the natural forage, therefore they can receive stock from the west? Yes.

1964. That has been done to a large extent? Yes.

1965. Will that apply to the country on the Darling River; could they send their stock across? No, there is a limit to it.

1966. Could you draw the line where the limit is? I should say that the limit would probably be this side of the Barwon.

1967. Then if we make a railway to Collareendabri or Walgett, that would be about as far as it will be useful for starving stock? In my opinion it would be. There is one point in connection with that, that although the stock at Collareendabri may be starving, the country may be good along the Namoi.

1968. Suppose you had a run a little to the westward of Collareendabri, and you wanted to send your starving stock away in dry seasons, it would be more to your purpose to have Collareendabri connected with Narrabri, from where you could get to the New England range, than to be connected with Coonamble? It would be.

1969. Because there is no country down there to send to? They have sent stock down to Mundooran and Coonabarabran, but not in nearly such numbers as went to New England.

1970. The New England Range is really their stand-by? Yes.

1971. For that particular purpose it would be most useful for the squatter to be connected with the northern line? Yes.

1972. In any case, I suppose, you would like to see the railway pass through Wee Waa? Yes.

1973. We are told that it is a very thriving township? I do not know that it is a very thriving place.

1974. But it ought not to be left out? I think the line should cross the river just below Wee Waa.

1975. Do you think the scheme of having a bifurcation there is better than having two separate railways—one from Narrabri and one from Woolabra? I do. I think it will meet the requirements of the district, and cost considerably less money.

1976. You see the line marked on the map, from Moree towards Inverell, now being constructed, we have been given to understand that the market for the Inverell people really lies to the west, not to the east; is that so? It is, in my opinion.

1977. Would it be out of the way for the produce of that district to come south to Narrabri, then to go up again to Collareendabri? There is a very large area north of Moree which appears not to be noticed at all. There is something like 50 miles of magnificent grazing country there; but it is unfit for agricultural purposes.

1978. Would it be better for the Inverell people to have the line to Moree extended to Collareendabri? It is very low country there; but, I think, the day is fast approaching when we shall have an extension from Moree in a north-westerly direction.

1979. But not to Collareendabri? No, it is all flat country out there.

1980. Suppose we make this line to Collareendabri from Narrabri, will it pay the Inverell people to send their stuff to Moree, and down to Narrabri, then up to Collareendabri? I think they will be shut out by the farmers living nearer.

1981. Then Inverell will not find a market at Collareendabri? No.

1982. There is no doubt that the squatters beyond Collareendabri and Walgett will gain very largely as regards facilities for getting provender, if the line be made? Undoubtedly, it will also be a great relief to them in getting their stock away in times of drought.

1983. Have they a good market for produce? Yes.

1984. Is that district north-west of Collareendabri a good squatting district? Yes, it is very rich grazing land right up to the Queensland border, and right round to Yetman (on the McIntyre).

1985. And it is all fully stocked? The large paddocks are being subdivided annually, and their carrying capacity is increasing.

1986. That is, supposing there is grass? Yes.

1987. If there is no grass, what then? Then they have to send the stock away to New England, or into Queensland.

1988. How far do you think it would pay to take food to the stock? That is a thing of which I have had no practical experience. I have heard of some taking it hundreds of miles by train.

1989. How much would it cost in a year? I have not fed stock artificially.

1990. The question has been raised whether the cost would not amount to the value of the sheep? I have never fed artificially, and I should be very sorry to try it. I think the sheep would eat their heads off.

1991. Does that district grow a kind of grass that you can cut in a very dry season and make hay of? Yes.

1992. Does it make nutritious hay? I never saw it used extensively. It seems very good hay.

1993. If we are going to keep that country always fully occupied, we shall have to contrive some method of keeping the stock alive;—the question is, would a railway to the west facilitate the process of keeping the sheep alive? Yes. I have seen various parts of the country so dry that nothing could travel along the road. When I was surveying the Mount Browne-road, the mail-coaches had to be taken off and the mails carried by camels, it being impossible for horses and cattle to travel over the roads.

1994. If a man keep stock too long on a run in a dry season, he cannot get them away at all? No, he cannot get them away by road; but if there were a railway he could.

1995. *Mr. Levien.*] You have been a resident up north for a number of years? Yes.

1996. The trade from that district has always been from Walgett to Maitland? Yes. I have spent all my life, with the exception of four years, between Newcastle and Walgett, and the trade has always been as you say.

1997. We have been told by Mr. Morgan, of the *Dubbo Dispatch*, that, originally, this trade always started from Maitland, and went right up to Walgett;—is not that correct? Yes; that bears out my experience.

1998. Being a surveyor for many years, as you have been, and having a thorough knowledge of the whole district, which way should you say the railway ought to go? I say unhesitatingly that, in my opinion, it ought to go from Narrabri to Walgett.

1999. Can you give an opinion as to which side of the river it should go on? It should keep on the south side of the river, at least as far as Wee Waa.

2000. It would go in the direct line of the old route of trade from first to last? Yes.

2001. And those old towns ought not to be deserted? I think it would be a pity to see them cut off.

T. H. H.
Goodwin,
Esq., M.P.

22 June, 1900.

Bishop Lyne, Conditional Purchase Inspector and Forester, Narrabri, sworn, and examined:—

2002. *Mr. Watson.*] You are engaged in the Lands Department as a conditional purchase inspector? Yes.

2003. And also as forester? Yes; forester and inspector of prickly-pears.

2004. You have been living at Narrabri for a considerable time? For five or six years.

2005. In the course of your work you would have plenty of opportunity of making yourself acquainted with the general character of the land in the district? Yes.

2006. The proposal before the Committee involves the construction of a line of railway from Narrabri West through Wee Waa to Walgett, and from Burren to Collarendabri; in regard to the first portion of the route to Wee Waa, there is considerable difference of opinion locally, some saying that the line should start from Narrabri East, and keep to the north of the Namoi, and some distance north, also, of Wee Waa; they suggest that as an alternative route to the one to the south of the Namoi;—can you express any opinion as to the advisability of either route, having in view the character of the land? Knowing the circumstances of the case, I have often thought the matter over, and I have invariably come to the conclusion that to serve the best interests of the country the extension should be from West Narrabri.

2007. Keeping on the south of the river to Wee Waa? Yes. The area immediately to the south of the Namoi, and also to Coonabarabran, and from there extending west towards Coonamble, has been very much under my observation, on account of the very large timber trade that is going on there, employing, at present, as it perhaps will for two or three years to come, up to 200 men. I have, on several occasions, made reports in reference to timber in that forest, and I have always held that the timber there is of great extent and of great value, particularly the ironbark, for railway construction purposes. There is also an extensive area of cypress pine, which is distributed along the whole of the distance down to Pilliga. This is valuable timber, used for building purposes, chiefly, on account of its being proof against white ants.

2008. Could you say how much nearer you would get to the main part of that forest by the construction of the proposed line, than the nearest point it is accessible from now? Yes. At the present time the principal roads extend south and west from Narrabri West, and the timber is brought in a distance of from 25 to 30 miles. There is a very large timber reserve running parallel with the river, comprising 225 square miles. At present the timber that is accessible is only on the eastern end of that reserve, and to touch the reserve you have to go 20 miles out from Narrabri West. The extension of the railway to Wee Waa would really open up the whole of that reserve, and make it accessible for timber supply. I may mention that, independently of that reserve, I have reported at times upon the quantity of timber there is outside the reserve, on Crown lands; and I have expressed the idea that the reserve probably ought to have been extended considerably in the first instance, because there is really better timber off the reserve, in places, than on it.

2009. You stated that the cutting of timber extends 24 to 30 miles south of Narrabri West;—how far from Wee Waa to the south-west would the present drawing of timber extend? For railway purposes it would not approach that at all at present.

2010. How far south-west would it be cut at present from Wee Waa? None can be obtained in that direction at present. If the railway were extended to Wee Waa, I can safely say the timber would be cut out south-west for a distance of not less than 40 miles, on account of the very best part of the timber being in that neighbourhood; that is on the reserve extending toward Baradine, and out below Wee Waa in the south-west.

2011. How much closer to that do you think you would get with the railway? Sixty miles from Wee Waa closer than at present, if the line is constructed to Wee Waa.

2012. You think it would give access, then, to another 30 miles of timber? I think it would give access to an area 30 miles broad by from 45 to 50 miles long.

2013. Then, with respect to the timber which is on that country, it has been alleged that the ironbark is of a poor description—pipey, and unfit for milling purposes, though fit for sleepers? I cannot understand such evidence being given. I have had a lot of experience in the Dubbo forest-country as well as that, and, whilst I admit that in all forests of the kind there is pipey timber, there is in that forest a great proportion of sound timber equal to that of any back forest that I know of. It is the best back-country forest that I have ever known for timber. Of course, young timber is not as good as old timber. If anybody use young timber that is exposed to the weather, the sap in it must naturally cause it to give way at an early date, as compared with old timber.

2014. It would seem, then, that the demand is overtaking the supply of pine, at any rate, because on the North-western line, at present, they seem to be cutting very small trees? Yes; all the available area has been cut out to a considerable extent, and they have now to take logs which formerly they would not have touched.

2015. Then there is a great demand for pine for building purposes, in the back country, generally? Yes. I know that in one yard in Narrabri there are 5,000 logs, and they were cutting them as fast as possible.

2016. Should you like to venture an opinion as to whether the land within a reasonable distance of Narrabri West has been fairly cut out of pine? Only to the south and west, extending, perhaps, about 20 miles to the south, and about 15 miles to the west. There are some excellent pine trees along the cleared road going to Wee Waa.

2017. Would it be fair to say that the available timber, within the distance that it would pay to cart it to Narrabri West, has been largely cut out? Yes; there will have to be some arrangement made so that a higher rate will be paid for the carriage than is paid at present, because they have to go further back for it.

2018. According to that, if you do not by some means get a better price for the timber, to allow higher rates to be given for the carriage, or afford some means by rail of getting towards the forest, the supply will

B. Lyne.

22 June, 1900.

B. Lyons. will fail, as far as freight on the existing railway is concerned? Yes; no doubt. Something will have to be done. The Railway Department is endeavouring to make up for the difference by altering the kind of timber which they will accept. During the last few years the whole of that area has been made valuable again through the alteration in their specifications, which permits round-backed sleepers to be used where previously they would use only squared timber. Pipey timber also, which, under the old system, was passed over, is now available.

22 June, 1900.

2019. So that timber that was previously passed over as useless will now be made available? Yes. Perhaps 50,000 or 100,000 sleepers have already been supplied from that area. Last week a contract to supply 65,000 sleepers of that kind of timber was entered into at Narrabri.

2020. Is there such a decided preference shown for pine, as against imported timber, for building purposes, that there is always likely to be a demand for it? I am satisfied that nothing will take its place out in the west, in the way of timber for building purposes. The demand for it is constantly increasing.

2021. Would that timber find an outlet westward as well as eastward of the proposed line, supposing a line were constructed from Collarendabri to Walgett? I could hardly estimate the quantity, but there would be a demand when there is a possibility of getting the timber away to the west. There are two or three mills working at Pilliga, and the whole of their timber goes out west. They cannot get it away in bad seasons, and they have orders now which they cannot complete.

2022. In regard to the forest reserves you spoke of south-west from Wee Waa, of course a royalty would be paid on that timber? Yes; and after the 1st July there is to be a royalty on all timber that is cut on Crown lands or forest reserves. I made an estimate with reference to this last contract of 65,000 sleepers at Narrabri West. The royalty on that timber would come to £1,340.

2023. They charge no royalty, but only a license-fee to each of the sleeper-getters? That is a mistake. There are different classes of reserves. Those to which you are referring are known as class C. The contractor there pays 10s. a month for a license, and under that license he can issue to his men 100 or 200 certificates to cut timber.

2024. Does that apply to all reserves? No; only those under class C.

2025. With regard to the land south of the cleared road from Narrabri West towards Wee Waa, do you think that if that were improved generally it would be of any value for settlement purposes? Yes, for small holders. There are patches where, perhaps, the largest area of land available for wheat-growing would not exceed, in one block, 3,000 acres. The portions that are valuable for small settlement are areas along the creek. There are numberless creeks along there, and there are flats all along for 30 miles towards the river Namoi. Those are valuable, under certain conditions, for farming on a small scale. For instance, a timber-getter will establish himself with a small family, and in his spare time will carry on farming operations, and form a home for his family, where he has water available. All that area is known to have subterranean water. It is wonderful what has occurred there within the last twelve months. People were under the impression that you could not obtain water by sinking for it; but the settlers in that part all sink wells, and they invariably get good water at a depth of 35 or 40 feet.

2026. You spoke of new settlers coming there;—has there been any marked increase in the number of settlers? The amending Land Bill, introduced by Mr. Carruthers, gave opportunities for homestead selection, and I think that in the last patch there were something like twenty taken up about Wee Waa. The other settlement in that part has only been scattered; but I think that every one of the settlers has a well.

2027. Do you consider that the country between Narrabri West and Buena Creek is suitable for settlement of any description,—it seems to be rather lower in average quality than that between Buena Creek and Wee Waa? Yes, that is quite right. Within a radius of a few miles from the cleared line there is a growth called the brigalow which will make that country difficult to handle. There are barren sand ridges, and it is very hard to say whether they will be available for settlement. Further up Buena Creek you get into far better country, and a great portion of it has been reserved. Settlement has never had an opportunity there,—the land has been a forest reserve; but, as it is now being cut up, I am certain that when it is made available for settlement thousands of acres will be taken up. People might say, "Why has there not been a greater desire to get it, up to the present?" But people up there have common sense, and when they have good land on the north side of the river, it is very few who will not exhaust their chances before trying the south side.

2028. The good grazing land on the northern side has no timber on it to speak of? No, it is very open country.

2029. Consequently, it requires no great capital to work it? It has apparently been used at all times for grazing.

2030. Whilst on the southern side a man would have to improve the land, and spend something considerable in that way before it would be of much value? Yes. I think that explains what I have said as to the chance of settlement, because the land is in an altogether unimproved state at the present time. I am confident that it is good land, and will be made use of for settlement when the opportunity is given.

2031. Do you know the country called Yarra Lake? Yes.

2032. Is that west from Buena Creek? It is.

2033. Is it good country there? I could show you very bad country there, and a considerable area of very good country. It is wheat-growing country.

2034. How far will that be from the supposed route to Wee Waa, on the cleared line? From 7 to 10 miles. There is good wheat land between Yarra Lake and the line, within 3 or 4 miles; and nearer than that there is good land.

2035. Taking the land between Wee Waa and Buena Creek from Narrabri West, what would your opinion of that be from an agricultural point of view? It is about 4 miles from Narrabri West to Buena Creek. That is a very mixed piece of country. On the frontage you get the Scaldy Plain, and then pine and box, and then you get into a few ridges of nasty heath and sand, and then into the belar country. There is a considerable area directly south from that, which is known as Dungeon Belar, it is so thick.

2036. From there on how do you describe it from an agricultural point of view? In many places there is very good wheat land, but that is where the pine and the box are, and the chocolate soil. Ten miles out of Wee Waa, south of that, it is not such a good class of soil; but it is very fair wheat land. I consider that some of the land I have just referred to is really good; you might call it first-class farming land. There are some large flats about 15 miles from Narrabri, towards Wee Waa, and out south some hundreds of acres of box flats. South of Wee Waa there is some good country.

2037.

2037. Why would it be more expensive to the people of Baradine to go to Narrabri West than to go to Wee Waa; the distance would seem to be much the same? From Narrabri West towards Baradine, along the Buena Creek, and to the south-west, the traffic is impeded from the fact that there is much sand on that road, and that is a great consideration as to the loading.

B. Lyne.
22 June, 1900.

2038. The roads you speak of towards Wee Waa would go over a better traffic route? Yes; it is a harder class of country. What I have attempted to show in my evidence is that the fact of that railway being extended from Narrabri West to Wee Waa would increase the available area for the purposes of timber-getting, by a breadth of from 25 to 30 miles, and a length of from 55 to 60 miles.

2039. Coming back to the quality of the land, it was stated by some witnesses, who gave evidence in the district, that the land between Narrabri West and Wee Waa was absolutely useless—you do not agree with that? No. I say that there is good land for small settlement. At the Buena Creek crossing, on a farm which has been cleared there since I went to Narrabri, as good results have been obtained as from any other farm in the district.

2040. Taking everything into consideration—the timber and the quality of the soil—you think that the best route for the railway would be from Narrabri West towards Wee Waa? I have no feeling in the matter at all: but I say that the extension of the line from Narrabri West to Wee Waa will be of vast benefit in opening up an extensive area of country which at present is not available for settlement. It will not only do that, but it will largely increase the work for workmen in connection with the forests, and it will give them a great opportunity of establishing themselves permanently there.

2041. When this forest is cleared, will the land be worth much for grazing or for agriculture? Yes; it will be ordinary country for those purposes.

2042. It is not first-class land? No; but I would venture to say that the chocolate soil is first class for wheat-growing. There seem to be properties in that soil favourable to the production of first-class wheat.

2043. *Dr. Garran.*] Will it be best fitted for grazing or for tillage? I think some portions will be best for tillage and some for grazing.

2044. During your inspections of conditional purchases, you saw a great many different selectors;—on what sort of soil in that district do they seem to thrive most? A soil that has not been referred to at all so far in my evidence—that is, the soil on the Deep Creek, to the east of Narrabri, where there are rich deposits.

2045. Alluvial soil? Yes.

2046. That seems to answer best? Yes; I do not think it can be surpassed in any part of the Colony.

2047. What is the next best? The next best is the chocolate soil with a slight mixture of sand, the reason being that it has not a tendency to bind round the vegetation in hot seasons, after a thunderstorm.

2048. The sand keeps it open? Yes.

2049. What is the third best soil? The third is the same soil without the sand.

2050. *Chairman.*] Will you favour the Committee with your opinion as to the character of the soil on the north side of the river? My opinion of the country to the north of the Namoi is that, as grazing soil for fattening purposes, it is not surpassed in New South Wales.

2051. What is your opinion of its agricultural capabilities? I believe we shall live to see crops growing there, but it will not be by the present holders of the land. When I say that, I should like to explain in this way—that the changes are remarkably rapid at present in connection with the means of cultivation; and not only that, they are bringing out a new kind of cereal. Take wheat: It is quite possible that the old varieties of wheat will not be a success in that country; but the new variety, which is known as the Stienwieden, &c., which come to maturity with great rapidity, might make an enormous area valuable for wheat-growing which is not valuable for that purpose now. That country may be brought before the public in the same way as other country has been, owing to the easy means of putting large areas very quickly and cheaply under crop. In the ordinary way, there would be a risk in connection with the crop, but in the future it may be that the risk would become very small, because of the light cost of getting the crop in. I think the soil is so rich that in a moderate season it would produce wheat, and, with an ordinary rainfall, it would always produce hay.

2052. Do you think it necessary to obtain a special kind of wheat to bring that part of the country under cultivation? Yes. I do not think the settlers there now have in view any idea of cultivating for export.

2053. *Mr. Watson.*] That is because they are doing too well at grazing now? It surprises me, considering the seasons, that they are not all bankrupt on the best land, but they produce their fat stock when those in other parts of the country cannot. At this season of the year the grass and the herbage grow rapidly, and on all that big area there is water for a certainty at a certain depth. When they have a good fattening season it enables them to make such a lot of money that they can stand unfavourable seasons afterwards. I might mention that I think the country to the south of the Namoi is well suited for fruit-growing. I have seen excellent fruit grown in the gardens there.

WEDNESDAY, 27 JUNE, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD,
The Hon. ANDREW GARRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.

JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Wallace Webster, Conditional Purchase Inspector and Forester, Walgett, sworn, and examined:—

2054. *Chairman.*] Will you indicate the limits of the district you had under your charge as conditional purchase inspector? From Carinda, on the south, to the Queensland border, north; the Narran River on the west, and Come-by-chance on the east.

W. Webster.
27 June, 1900.

2055. That district practically includes the whole of the country which the proposed railway is likely to drain? Yes.

2056.

- W. Webster. 2056. I believe you are at present engaged in superintending the erection of a rabbit-proof fence;—will you give some details in regard to it? Yes. I am engaged on an extension of the rabbit-proof fence from Mungindi, running south to Yarraldool—to a point a little north-westerly of Pilliga; and from there following the main road south of the river, south of Wee Waa, to the railway station at Narrabri West. I am now preparing specifications for that, and before I did so, I picked the route, and traversed the country some miles south of the Namoi. The fence was, in the first instance, erected at the request of the Queensland Government and the residents of the Moree district, to protect them from the spread of rabbits from the west. The rabbits were working from the Bourke district, and eastward from the Western district. We stopped at the Namoi River, but the Moree residents considered that they would like to have the scrub country, which is south of the Namoi, fenced off. That is generally considered to be vermin-infested country, and a shelter for rabbits and wild dogs. The residents have subscribed a considerable amount towards the erection of that fence. Our fence really follows the northern boundary of the scrub country. In picking the line for the fence, I tried to avoid as much scrub country as possible. At the same time, I have recommended a line about 5 miles south of Wee Waa, which takes in a considerable area of that reported valueless country. I recommended it for the reason that I considered it was good agricultural country, and that I took in as much as possible without deviating the line too much, believing that the small settlement which is going on there would keep down the vermin.
2057. How long did you live in Narrabri? I was stationed there for two years.
2058. Do you know the country from Narrabri, on each side of the river, east to Wee Waa? Yes.
2059. Will you describe the character of the country on the south and north of the river? The country on the south side from Narrabri to Wee Waa, between the road and the river, is of heavy soil. It is very rich, pastoral land and good agricultural land, and it is fairly clear of timber. South of the road it is very heavily timbered with pine, box, and ironbark. Although there are some spots in it of very poor soil—box swamps and raw sand—the country will grow cereals, grain, root-crops, and fruit. For instance, near Bohena Creek, cultivation has been carried on with success. I have spoken to several old Victorian farmers who have taken up homestead selections south of Wee Waa, of 400-acre blocks, and they seem to be very hopeful of making a good thing out of crops. The ground for grazing, south, is what is generally termed a little sour, and is not fit for fattening like the north side of the river; but it would carry, when cleared, as much store stock as would the northern side, but it would not be suitable for fattening. Again, the south side of the river is open for settlement, and I think suitable for farms of 400 to 500 acres. The northern part—north of the river—is very rich grazing country, but not so reliable for a cereal crop as is the southern side, with the same rainfall. Why I say that is because in the north of Victoria, and in the extreme west of New South Wales, farmers seem to thrive better, and produce better crops for cereals, on the light rather than on the heavy land, with a light rainfall. In the west we always grow a good hay crop on sandy soil. For instance, near Wilcannia, and north of Wilcannia, very good crops have been grown on the light land, but you would not think of putting the same crop in on heavy land.
2060. On which side is the greater quantity of alienated land? I think the northern side is mostly alienated.
2061. Then there is more room for closer settlement on the south side of the river? Yes; it is nearly all open for closer settlement south of the road.
2062. Do you think the construction of a railway is likely to stimulate the taking up of land along the route? I think that is the reason most of the land has been taken up—in anticipation of the railway being constructed.
2063. We have had some conflicting evidence as to the amount and quality of the timber south of that part of the line as far as Wee Waa;—have you had any experience of the timber in that part of the country? Only in travelling through the country, looking for a line for the rabbit-proof fence.
2064. What is the amount and quality of the timber obtainable south of line? From what I know, and from what I have seen of it, I should say that there is a great future for timber-carters. There is also good pine up to the road, and there is a lot of pine there which, in the future, will be of great use for building purposes. It is also found towards Pilliga, for more than 6 miles south of the road. In the Walgett district, however, I have had to report many people for only partially residing on their ground, because they could not bring their families there on account of the want of building timber.
2065. Does Walgett itself suffer from the difficulty of obtaining timber? From a scarcity of timber, and from a difficulty in obtaining it, on account of the cost of cartage.
2066. Do you think that, with the construction of a line from Narrabri to Walgett, there would, for some time, be a considerable traffic in timber? I think there would be a fair amount of timber traffic there.
2067. Mainly for local requirements? Yes, for local requirements in the Walgett district.
2068. Starting from Wee Waa, could you give a general description of the country, first along the route to Walgett, and then along the proposed branch to Collarenebri, say, for 20 miles on each side of the proposed line from Wee Waa to Walgett? From Wee Waa to Walgett, on the south side of the proposed line—between the Namoi and the proposed line—the country consists of black soil. It is rich grazing land.
2069. Could you compare it with grazing land in any other part of the country with which you are acquainted? Taken as a whole, I should say that it would always carry a sheep to 2 acres.
2070. Would you call that very good pastoral land? Yes. I might say that I consider that the whole of the Walgett district, unimproved, will carry a sheep to 3 acres. That is double the carriage of the unimproved land in the Bourke district. North of the proposed line, the average would be similar to that on the south side.
2071. Do you know the country within a radius of about 40 miles of Collarenebri? North and north-west, and west and south of Collarenebri, it would carry a sheep to 3 acres without ringbarking.
2072. Do you think that is country which is likely to be closely settled, from a pastoral point of view? I think it should be closely settled.
2073. Will you describe the country towards Narran Lakes? North-west from Walgett the country is a little richer than the other portion to which I have referred. Possibly it would carry a sheep to 2½ acres without ringbarking.
2074. Then you look upon the great bulk of the country, which the proposed line will serve and drain, as being good pastoral country? Yes. I might add that the country north of Collarenebri has been improved by ringbarking, which will add considerably to the estimated carrying capacity.

2075. *Dr. Garran.*] Is the district which you look after suited to mixed farming? I think it is more suited to grazing than to agriculture. W. Webster.
27 June, 1900.
2076. And the close settlement we are to look forward to is a number of moderately-sized grazing farms? Yes; in the Walgett district.
2077. What population could be carried on grazing farms? There is a great diversity of opinion on that matter. I think that in this part of the country settlement leases of 2,000 acres are too small for grazing. The people, however, say that I have an exaggerated idea of the extent of country a person could live upon.
2078. Your idea of a small grazing farm is 2,000 acres? 2,000 to 2,500.
2079. Should there be an average family of five people on 2,000 acres? Yes.
2080. And the produce would be pastoral produce? Yes.
2081. It would not be a mixed produce for a railway? I think it would be mostly wool and stock that would have to be depended upon.
2082. Is it equally fitted for cattle and sheep? Yes.
2083. So that whichever pays the better can be grazed there? Yes.
2084. Has the custom shifted from time to time from cattle to sheep, and sheep to cattle? The reason why the cattle are not kept in that district is that you cannot very well keep cattle and sheep together, on account of the necessity of making provision for water.
2085. Has it ever been a cattle district? It was, when it was first taken up.
2086. Has it ever shifted back from sheep to cattle? No.
2087. For the reason you have given? Yes.
2088. Is the grass as suitable for cattle as for sheep? Yes.
2089. During the late dry weather has that district suffered very much from the drought? Very much.
2090. Has it suffered as much as the Bourke district? I think quite as much, for large stock.
2091. Has the drought lasted year after year as it has done on the Darling? I have been in the district for two years, and have had to carry every bit of horse-feed I have used.
2092. I suppose the country is looking very well at present? Not west of the Barwon, where they only had a small rainfall.
2093. Is the country looking well around Walgett? It was not when I left it, but I believe it is now.
2094. Has the quantity of sheep very much fallen off during the last two years, in consequence of the drought? I could not say, but I should think one-half the sheep have been lost.
2095. That would make a great deal of difference to the railway in the quantity of wool carried? It would.
2096. So that there is always a risk in making a railway through a pastoral district like this, especially when you may get a couple of years' drought, which will reduce your returns by one-half? Yes.
2097. As far as the present season has gone, have the squatters in that district imported feed to any extent? They have for their horses, but not for their sheep.
2098. Have they sent their sheep anywhere in search of grass? Yes; mostly to New England.
2099. Did they send them to Narrabri to the railway? I think they mostly went to Narrabri; but I could not say with certainty.
2100. Do you know what it costs per sheep to get grass in New England? No. The pastoralists make their own arrangements.
2101. What proportion of sheep in the district were sent eastward? I think the pastoralists would have sent them all if they could have got them away.
2102. What proportion was sent? I could not say.
2103. Did as many go as died for want of food? I could not say.
2104. In dealing with this proposal, one important matter to be considered is what will be the utility of a line going west, either in fetching sheep to the grass, or in taking fodder to the sheep;—I want to know what has been the experience in connection with the last drought in the district? My experience of what I have seen, and of what I know as an old station man—I went through a drought in 1885 on the Barwon, and lost 30,000 sheep—is that when you want to get the sheep away you cannot.
2105. That is because you stay back too long? But you never know when you are going to have the rain, consequently you hang on.
2106. Supposing a line were made to Walgett or Collarendabri, would it pay the squatter west of Collarendabri to bring food to his sheep? I think it would.
2107. Do you know what it would cost per sheep to feed them on imported fodder? No.
2108. I presume you have not heard the settlers discuss the question? No.
2109. Supposing the Committee were to agree to only one of these lines—to Collarendabri or to Walgett—which of the two is the more important? I think they are both equally important. My experience of Walgett is that it is just as much a back-block town, for cost of living, horse-feed, and so on, as is Milparinka, and more so than is Wilcannia.
2110. It is a much larger town than Collarendabri? Yes.
2111. Is it more of a commercial centre? Yes, at present.
2112. If both lines are made, which will bring the more wool from the north-west? I should say that the Collarendabri line would bring most of the Queensland wool. With regard to the New South Wales wool, I think the two would be about equal.
2113. Either place would suit the north-west people equally well? It would not suit the Walgett people.
2114. But would a line to Walgett suit the north-west people as would one to Collarendabri? Yes.
2115. So that, as long as the north-west people get one or other of the lines it would not be very material to them which they got? I do not think so.
2116. Would the Queensland traffic be tempted to Walgett? Of course a lot which would now come to Collarendabri would probably go to Moree then.
2117. So that we should not lose it? I should think not.
2118. *Mr. McFarlane.*] You have spoken of the different classes of soil on the south and north side of the Namoi, near Narrabri;—what is the character of the soil on the northern side of the river? It is generally heavy, red and black soil.
2119. What is it like on the south side of the river? It is black first, and then inclines to sandy loam.
2120. Which class of soil in that part of the country do you consider best for grazing purposes? The heavy soil on the north of the river.

- W. Webster. 2121. And for agricultural purposes? For agricultural purposes I should prefer the loamy soil.
 2122. That is what is known as the chocolate soil? Yes, and anything loamy.
 27 June, 1900. 2123. Taken together—agriculture and grazing—which stands the drought the better, black or chocolate soil? For grazing I should say the heaviest soil will stand the longer.
 2124. Would it stand a drought better than the lighter soil? The lighter soil would stand the drought better for store grazing. It would retain the moisture better; but for an average season I would prefer the heavy soil.
 2125. What about a drought such as these districts have experienced during the last few years? Then, the light soil would beat the heavy soil.
 2126. The light soil is more reliable for a country suffering from drought than is black and heavy soil? Yes.
 2127. What is the water supply like in the country from Narrabri to Collarendabri or Walgett? From Narrabri, and about the country south, to somewhere near Pilliga, there seems to be plenty of water to be had in wells at a shallow depth; but from there to Walgett the country is badly watered, and will have to depend on bores.
 2128. Have many bores been put down recently, or are many in existence? There is one 10 miles south of Walgett. That is the only bore south of the Namoi. There is one about 20 miles north-east from Walgett—at Eurie—which has been put down lately.
 2129. In times of drought, do stock suffer to any large extent for want of water? That has been the great drawback to that part of the country this year.
 2130. Is that a more important consideration than want of grass? No; I think the want of grass is the most important. If you have grass you can generally provide water by sinking for it.
 2131. How would you class the country between Narrabri and Walgett as a fattening country? From Narrabri to Pilliga, south of the road, there is only store country.
 2132. What about Collarendabri? It is all fattening country there. I think it is rather better country there than immediately south of the Namoi to Walgett.
 2133. Is the whole of that country alienated? No; there is a lot of country coming from Come-by-chance to Walgett, and, south of the road, of that scrub country, which is not alienated. There is a good deal of unalienated land south of the Namoi.
 2134. I suppose it is occupied? Yes, by pastoral tenants; and it is being subdivided for settlement lea.
 2135. Will the settlement leases soon be thrown open? Yes; many of them are being kept back until we get the rabbit-proof fence up, so that we can recover the value of the boundary.
 2136. When these blocks are thrown open, do you think they will be readily taken up for settlement? Most decidedly.
 2137. Will that mean a larger population settling on the country? Yes. It means a family, probably, on every 2,500 acres. At present, under the occupation licenses, there are only four or five men working on a station of a large area.
 2138. What is the usual area held by the stations? They vary very much about there. They may be 40,000 or 50,000 acres, but I could not say positively.
 2139. You consider that a fair average? Yes.
 2140. When the stock-owners about Walgett and Collarendabri fatten their stock, by which route do they send them to market? They generally pick the route for feed. Generally they send them to Narrabri; but sometimes, if the roads are good, they send them south. It depends on the condition of the stock route.
 2141. Is any difficulty experienced in travelling fat stock to Narrabri? Of course there has been a great falling off during the last two years.
 2141½. If the line of railway, as proposed, were constructed, do you think it would be used for the purpose of sending fat stock by rail? Decidedly.
 2142. Do you think the whole of the fat stock would be carried by rail? I do not say the whole of it; but from all the small holdings a great deal of stock would go. That would relieve the holdings of the stock upon them, and would, of course, increase the carrying capacity of the country a good deal.
 2143. If the railway were constructed to Walgett, would the stock-owners put their stock on the train at Walgett, or travel them to Narrabri? They would put them on the train.
 2144. Do you think the line, if constructed, would be used to a large extent in times of drought, such as those we have experienced lately, in sending starving stock to other localities? Most decidedly.
 2145. Do you think that would be of material benefit to the stock-owners in the north-west? I think it would.
 2146. Have you any knowledge of the country between Walgett and Coonamble? Only about half way.
 2147. In that half way, how would you compare the country? The country from Walgett to about half way is generally heavy, and, as you get nearer to Coonamble, it opens into a red, lighter country.
 2148. Would that country be similar to the country between Wee Waa and Walgett to Collarendabri? I think that the country, as you approach Coonamble from Walgett, is of better quality than south of Wee Waa.
 2149. Which do you think would serve the Walgett people and those in the immediate neighbourhood—a connection with Narrabri or with Coonamble—that is when the railway is extended as far as Coonamble? I think that as long as the Walgett people get a railway from one place or the other it will suit them.
 2150. Is there much trade between the north-west and Newcastle? I think most of the trade comes that way. The goods for the whole of the Walgett district come through Walgett from Narrabri—I suppose that means from Newcastle.
 2151. Is much wool carried from Walgett and the surrounding district to Newcastle, to be shipped there? I could not say.
 2152. What classes of marketable timber are to be found in the district? There is no marketable timber. From Baradine to Walgett there is no pine. On the Castlecreagh there is some, but very little.
 2153. We have had evidence with regard to the existence of ironbark and pine scrub near Narrabri? There is a fair forest reserve of pine near Wee Waa. There are also good pine further south, and good pine forests south of Pilliga.
 2154. Is there much marketable timber? The greater part of that pine is marketable for building purposes.
 2155. Is the locality of the timber of which you are speaking such that if a line of railway were constructed it would be used for bringing the timber to market? Of course the timber from the Baradine district would probably go to Wee Waa.
 2156.

2156. Do you think that would be a large item in the way of freight? I think it would be a fair item.
2157. Where do the supplies of fodder come from in times of drought? For Walgett it mostly comes from Narrabri. The freight is £6 a ton from Narrabri to Walgett at present.
2158. Is there any reason why the country suitable for cultivation is not put under cultivation to meet a contingency such as a drought? Of course in the Walgett district there is an uncertain crop on heavy ground, and there is really no market for a crop of wheat in Walgett, except in a drought year.
2159. Farmers do not consider it worth while to cultivate, seeing that the only time they will have a profitable sale for their produce is during a drought? That is really how the matter stands at present; but of course everyone is now considering the advisableness of putting in crops for their own use in a drought season.
2160. Looking at the district as a purely pastoral one, how much country would the proposed line serve on either side of it? A distance of about 30 or 40 miles.
2161. Do you think, if a line were constructed to Collarendabri, it would catch any considerable portion of the Queensland traffic? I think it would catch a great deal of it. Of course, it all depends on the Queensland freights.
2162. And to the west and north-west, do you think there would be a large amount of traffic any distance from the line? It would take in the traffic as far as the Narran, pretty well.
2163. If it were decided to construct only one of the proposed lines—to Collarendabri or to Walgett—which do you think would do the larger amount of good, or serve the larger amount of area, having in view also the traffic from Queensland? Taking Queensland into consideration, I think the Collarendabri line—that is if there were a railway to Coonamble to serve the south of Pilliga.
2164. Has there ever been a serious attempt to make roads across the plain? No; you could not make roads across. There is no metal, or anything with which to make them, in that part of the country.
2165. I suppose the people engaged in carrying have experienced great difficulty in crossing the plains in wet weather? It simply means that you are apt to stick. That is my experience even in a light buggy.
2166. *Mr. Watson.*] You have stated that the country some distance west of Weo Wan, and along the proposed line, is looked upon only as a pastoral country yet;—do you think it is likely that pastoral products would ever give a sufficient return to make two lines pay when they are so closely together as these would be? I think they would.
2167. The Railway Commissioners' estimate shows a loss of £13,000 per annum, assuming that both lines are constructed:—do you think there would be a sufficient expansion, because of the construction of the lines, to give any probability of the interest and working expenses being paid on both? Without a knowledge of railway matters, I think they should pay interest on the cost of construction.
2168. We generally assume, in regard to railway construction, that, in agricultural country, 20 to 25 miles is about the limit of distance at which it pays a man to carry wheat to a railway; a man, however, can carry wool a greater distance without making it unprofitable;—assuming that you were safe in building lines for agricultural country within 40 miles of each other, you think you are equally safe in attempting to do it in pastoral country? Of course there would not be so much revenue.
2169. In this instance it is proposed to run a branch at an acute angle, and the furthest distance between the two lines would only be something under 50 miles? That is so.
2170. That is not a great area from which to draw pastoral produce? If you were certain of crops you could draw wheat further than that. In Victoria I have carted it 60 miles.
2171. I suppose the prices were better than the average? You could do it on 2s. 6d. a bushel.
2172. But, in this instance, as far as we can ascertain, there does not seem to be much probability of any great wheat production in that district? Of course, with a railway there will be a certain amount, but I do not think it is a thing to rely upon.
2173. So that, for railway traffic, you would have to rely practically on pastoral production? I think so. Walgett, of course, is more agricultural than Collarendabri.
2174. I think you stated that Coonamble is more so than either of them? Yes. As you go south, there is a greater probability of agriculture.
2175. If you had your choice as a speculator of running a line to either Walgett or Collarendabri, with a view to catching traffic to make that line pay, which place would you sooner have as a terminus? Have I to take into consideration a line from Coonamble.
2176. No? Outside of the Queensland trade, I should take it to Walgett.
2177. Do you think there is a greater probability of catching the Queensland trade at Collarendabri than at Walgett? I think so.
2178. Can you say what is the present direction of the Angledool traffic;—does it go through Walgett or Collarendabri? Through Collarendabri, I should say.
2179. We were informed at Collarendabri that there is a harder road from Angledool towards Collarendabri than there is towards Walgett? That is quite right. That 60-mile track is a harder road than the track more southerly towards Walgett. The southerly traffic goes through richer black country, but it is not so good for road purposes.
2180. If distances and charges are equal, people will be more likely to use the hard track in that country? Yes.
2181. So that it would appear that Collarendabri would be a better point for reaching the Angledool traffic than Walgett? You might say that all the Bundabareena traffic would go to Collarendabri, and all the Dungalear traffic would go to Walgett.
2182. Does the Dungalear wool now go to Walgett? Yes; and it makes from there to Narrabri along the Pine Creek Road.
2183. The Railway Commissioners suggest that, if both places are tapped, they would prefer to reach Walgett from Coonamble. In their opinion the result would be a better opening up of the country;—what is your opinion of that? My opinion in regard to reaching Walgett from Coonamble rests on the freight to Newcastle or Sydney.
2184. How far do you think the country, which might reasonably be placed under agriculture, would extend off from Coonamble? About half way to Walgett.
2185. That will leave a little over 30 miles of purely pastoral country towards Walgett? Yes.
2186. *Mr. Levien.*] The distance between the two lines should not debar the construction of both, so far as the country to the west and north-west is concerned? No.

W. Webster.
27 June, 1900.

- W. Webster. 2187. Do you think a line to either Collarendabri or Walgett would serve the whole of the traffic to the west? If you had a line to Collarendabri and none to Walgett, a lot of traffic would probably go to Brewarrina.
- 27 June, 1900. 2188. Supposing the proposed lines are constructed, the producers will have a port at Newcastle as well as at Sydney? Yes.
2189. For both wool and sheep? That is so.
2190. Is there not a big trade done in wool, from Walgett downwards, at Newcastle? I should say that there is.
2191. Supposing the stock had to be shipped, which should be the better port at which to ship it—Newcastle or Sydney? I could not say.
2192. Would it be an important consideration to have two ports—Sydney and Newcastle? I should say so.
2193. You state that the country is mostly used for sheep-farming? Yes; there are very few cattle.
2194. *Mr. McFarlane.*] Having in view the character of the country to be passed through, and also having some consideration for the town of Wee Waa—which one line would touch, and the other would not—which do you think would be the more desirable connection—from Narrabri East, or West? I think, taking everything into consideration, the line should go through Wee Waa or Narrabri West.
2195. *Chairman.*] You will notice on the map the branch from the Walgett-road to Collarendabri? Yes.
2196. Would the greater amount of traffic come from the country on each side of the route from the Walgett line to Collarendabri, or from the country lying beyond Collarendabri? From beyond Collarendabri, I think. Of course, there would be a considerable traffic all the way along.
2197. But would there be more from the country beyond Collarendabri than there would be along the branch? I think there would be more from the country beyond Collarendabri.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and further examined:—

- J. Harper. 2198. *Mr. Watson.*] Since you last gave evidence in regard to this proposal, the Committee have been on a visit of inspection to the district, and it was thought advisable to obtain from you separate estimates of revenue and expenditure in regard to each of the two proposed lines—a line to Walgett, and a branch to Collarendabri? I think you have it. It is only a matter of deducting one from the other.
- 27 June, 1900. 2199. The cost of a line from Narrabri West to Walgett direct is £316,386;—the cost of a line from Narrabri West to Collarendabri I should ascertain by taking the first two sections of the main line which run to the junction, and the branch line to Collarendabri,—that amounts to £335,797;—I understand, you would credit a line to Collarendabri, if there were no extension to Walgett, with £7,681 per annum? Yes.
2200. Supposing we did not construct a branch to Collarendabri, but constructed a line to Walgett, what revenue would you anticipate from it? I have not worked that out; that would require a revision of the whole position. Assuming a line were built to Walgett, the question would arise as to whether a lot of traffic, which is credited to Collarendabri, would come into Walgett. I do not think it would. A lot of the northern Queensland traffic certainly would not.
2201. The question also arises as to whether it would go to Moree, or come in at Collarendabri, and catch the Walgett line at Burren? I think it would go to Moree; some of it might go to Burren.
2202. Then there is the traffic from Angledool and in that direction;—we were informed locally that that at present goes towards Collarendabri? Yes, it passes over the Collarendabri bridge.
2203. Can you offer an opinion whether a line at Walgett would attract that traffic, or whether it would continue to go to Collarendabri, to Moree, or a junction at Burren? I think it would be more likely to go into Burren.
2204. So that it would only travel over one-half the line to Walgett? Yes.
2205. It was stated at Collarendabri that the road from Angledool to Collarendabri, in addition to being shorter than that to Walgett, is a better road because of the country being higher? That is what I have always understood.
2206. Suppose it were decided for the present only to build one line—which do you think would be the more likely to attract traffic from all round—that is including southern Queensland and the surrounding country? A line to Collarendabri. I explained before that the construction of a line to Brewarrina will tap the district to the south of Walgett. The construction of a line to Coonamble will tap the south-eastern portion of that district, whereas Collarendabri is practically a virgin district.
2207. From a traffic point of view, if you had your choice as to which of the two lines should be constructed, you would prefer the Collarendabri route? Yes. I regard it as best serving the interests of that part of the country.
2208. Assuming that the suggestions of the Railway Commissioners were adopted, and a line taken from Narrabri to Collarendabri, and another from Coonamble to Walgett were constructed, do you think the class of country which would be generally served by those two lines would be sufficient to keep both within a reasonable distance of paying point? Viewing lines as we do now, not with any immediate prospect of their paying, I think they would both be good lines. There is one matter I wish to make absolutely clear: We have heard a great deal about the interests of Newcastle in connection with this district. I have had some figures taken out which indicate where the business really is done, as far as the general merchandise is concerned. During the year, ending March, 1899, 36,775 tons of general merchandise went to the northern districts from Sydney. During the same period Newcastle supplied the same districts with 2,400 tons. So much has been said about the interests of Newcastle that I am having worked out for the Committee the wool and the stock traffic, and you will find the same or a greater disparity exists in that connection.
2209. It would seem, then, that although the people in the northern district get their supplies through Newcastle, the original point of departure is from Sydney? Yes. During the period I have mentioned, 32,449 tons of general goods—groceries, drapers' goods, &c.—were carried from Sydney by rail, and 4,336 tons were carried by sea from Sydney to Morpeth. From Newcastle, during the same period, there were 2,427 tons carried.
2210. *Chairman.*] Do you credit to Sydney all the goods landed at Morpeth for transmission to the north? Yes.
2211. Although they go by steamer? Of course they go from Sydney by steamer.

*2212. *Mr. Watson.*] Is it on some classes of goods only that there is a saving by sending them *via* Morpeth? There is a slight margin on the general class of goods, but during the last few years people have become more disposed to send direct by rail from Sydney. We have altered our rates during the last twelve months, and that has made it more favourable for people to send goods direct from Sydney, instead of from Morpeth. For instance, in 1898 the quantity of general goods sent from Sydney was 19,238 tons, and that has been increased to 32,000 tons. J. Harper.
27 June, 1900.

*2213. Was there a corresponding decrease in the amount sent by sea? During that period Morpeth sent 2,113 tons. This does not represent all the goods, but it represents the bulk of the goods carried in full truck-loads. The rest would not add 5 per cent. to the tonnage I have quoted.

2214. In view of the big reduction made in the freight of truck-loads, of course the disposition is to put everything in truck-loads? Yes; of course, that applies equally to Newcastle as to Sydney.

2215. Have the reductions which have been recently made for through traffic—as between Newcastle and Sydney—been distinct and out of proportion to reductions made in similar long-distance traffic on other lines? No; they have been made general. We have altered the method of charging by enabling people to amalgamate truck-loads of all classes of goods. At one time we had a truck-rate which practically represented the highest class. Now, it is competent to get a truck-load of mixed consignments.

2216. *Chairman.*] Do you, in the figures you have quoted, include items such as rock-salt? No.

*2217. In one year alone, 5,000 tons of rock-salt were sent into that district? That is so. My return represents general articles of consumption.

2218. Could you include in your return all the articles sent on the line? I could.

*2219. Do the figures you have quoted include cement? No.

*2220. Do they include fencing wire? Yes.

2221. *Mr. Shepherd.*] Has there been any increase in the quantity of rock-salt sent to the country since the saltbush has been almost exterminated? I could not say. It is one of the lowest classes of goods we have in our list. It does not produce much revenue.

2222. *Chairman.*] Does your return include agricultural implements? Yes.

2223. Will the return you propose to hand in be a general return of the whole of the traffic, and will it include all the items I have mentioned? Yes.

2224. Will it include beer and spirits? Yes; those articles are included in the figures I have quoted.

2225. *Mr. Watson.*] A number of the people in the district around Collarendabri seem to think that if they are given access to the northern lines, their chances of trade will be increased, from the fact that if they like they can ship at Newcastle, or take goods from Newcastle direct, whilst they will have, in addition, the alternative of going on to Sydney? So they would, under any circumstances. Of course, the Collarendabri extension would come into Newcastle. The Walgett extension, being further south and closer to the Western line, the advantage in reaching Sydney would be 15 miles in favour of a line *via* Coonamble.

2226. Could you say whether the trend of business each year is to concentrate a greater quantity of wool at a depôt like Sydney, for sale? Undoubtedly. Our records show it. I will produce evidence to show that the quantity which has been exported from Newcastle has been a constantly decreasing quantity every year.

2227. Is the same effect noticeable in regard to the principal ports of other colonies? Yes. For instance, more wool is being offered at Melbourne than formerly. Geelong has practically disappeared as a wool-selling centre. In South Australia, of course, there is only the one market—Adelaide.

2228. Is not a greater quantity of wool being sold locally each year? That is so in each Colony. We are beginning to feel it now with some of the Riverina wools, which we used to get this way, because they were shipped. It was immaterial whether they were shipped here or at Melbourne. It was only a matter of rates; but now, although our rate may be a more favourable one than the Victorian rate, the agents of the producers are in Melbourne, and the wool is now being shipped there.

2229. One aspect of the matter, in connection with the proposed line, is as to the respective advantages of the Sydney and the Brisbane markets. The people about Collarendabri seem to think, with Federation, there would be a chance of a railway to Collarendabri getting a very large proportion of the South Queensland wool traffic;—looking at the general aspect of the question, do you think the attraction of the Sydney market would be greater, other things being equal, than that of the Brisbane market? I think so. Our position now, as far as the wool from southern Queensland is concerned, is very much better than it was. We have made an arrangement with Queensland whereby they have withdrawn the £2 10s. a ton duty on wool; and we remain with unfettered hands, provided we do not quote below a certain rate, which will be about the rate we have at Bourke.

2230. If a line were constructed to Collarendabri, to what point, across the Queensland border, do you think its influence would extend, as far as the wool traffic is concerned? It is hard to say. I should imagine it would extend, perhaps, 50 or 60 miles.

2231. Assuming the Federal authorities established a mileage rate pure and simple, and did not allow any preferential rate for the purpose of attracting the traffic, do you think there would be a likelihood of the south Queensland wool within that distance coming towards Sydney? Our position is this: we have no preferential rate. The interior of the country would never be developed if an equal mileage rate were insisted upon. No country in the world has an equal mileage rate—it always tapers. To-day, practically, the boot is on the other leg, as far as Queensland is concerned. They are charging the same rate for 100 miles further than we are. I think Queensland would suffer rather than we, in the event of an interstate commission. Cunnamurra is 100 miles further than Bourke, and they are charging the same rate as we are charging from Bourke.

2232. You think that whatever new conditions might arise you are likely to hold that south Queensland traffic? Yes.

2233. In making up your general estimate of the traffic likely to be derived from the suggested lines, do you allow for any increase on the present wool production, or do you assume that it would be about the same? The most favourable year they have had in that district was taken as a basis—the year 1894–5—before the drought set in. That was what may be regarded as a normal year. Since then, of course, the whole of the seasons have been bad.

2234. It was stated in evidence in the district that there had been, because of the closer pastoral settlement,—the extension, for instance, of the settlement-lease provisions of the Land Act, an increase in the quantity

* See answer to Question 2912 (Mr. Harper's further examination).

- J. Harper.
27 June, 1900.
- quantity of sheep carried, as compared with any previous time when similar conditions existed;—it was stated that, with the same drought conditions previously, under the system of large holdings, there were not so many sheep carried as there are now on the smaller holdings? When the return was taken in 1894-5, there was a large number of small holdings in that district, and even if they had increased, they have not carried anything like the same quantity of stock, because the quantity of wool has been a diminishing one every year since then.
2235. It was stated that if they had had the same large holdings in the late drought that they had in the previous heavy drought, they would have lost more sheep? Yes; because all the small holdings report improvements in the shape of water, and so on.
2236. There seems to be a good deal of land available for settlement in the district generally;—do you anticipate that, with the throwing open of those areas to closer pastoral settlement, that there will be any increase in your wool production? There would be, some years hence; but I think it will be a long time before that country will recover to such an extent as to carry the stock that it carried in 1894-5.
2237. Your estimate, you think, goes as far as you are likely to realise for some time? That is my opinion.
2238. Supposing the suggestion of the Railway Commissioners is carried out, and a line is taken from Coonamble to Walgett, as well as from Narrabri to Collarendabri, the loss which you show would be slightly increased? I do not think the net loss would. My estimate of the traffic on a line between Coonamble and Walgett, assuming that the goods were carried to Sydney, is £4,190.
2239. Is that in competition with a line to Collarendabri? No; that is assuming a line were built from Coonamble to Walgett, and another to Collarendabri.
2240. That is not so great a loss as you credit to the two lines to Walgett and Collarendabri? No; but there are only 69 miles of working between Coonamble and Walgett, as against 104 between Narrabri and Walgett. Assuming that a line were not built from Narrabri to Walgett, we must deduct £648 from the estimate for the mails over the 54 miles between Burren and Walgett. Then we have to add to that the additional £1,000 on wool alone, which to-day is lost. The estimate on that line is through to Sydney, but we do not get it. As a matter of fact, it is carried by the boat from Morpeth. That wool finds its way to Sydney, but it does so by steamer. If that were carried direct to Sydney from Walgett, *via* Coonamble, there would be £1,000 additional to be added to the estimate.
2241. Would there not be a likelihood of that wool, assuming that a line to Collarendabri were constructed, going to that line at Burren rather than coming *via* Coonamble to Sydney? The estimate does not include any wool which would come on the Collarendabri line. It only deals with wool which would come into Walgett, or between Coonamble and Walgett.
2242. Could you say what they save by shipping at Morpeth now, rather than bringing it right through to Sydney? They keep as close to us as they possibly can. The Commissioners are in this position: Some years ago they made a promise to the Newcastle people that they would maintain a certain difference in the rate as between Sydney and Newcastle. That was done in the interests of the port of Newcastle for export purposes. The Commissioners have religiously adhered to that. It is a rate which is very much higher than the normal rate, but I am sorry to say that the return which I will furnish to the Committee will indicate that the Commissioners, whilst making this promise for the purpose of encouraging export from Newcastle, have practically placed the steamboat proprietors in a position to compete with them at Morpeth; so that, instead of Newcastle profiting by this consideration, it has practically gone into the pockets of the shareholders of the steamboat company. I may say that it was never intended that the steamboats between Morpeth and Sydney should get it, but it was intended to develop the export business of Newcastle. As the Committee will see, when I place the figures before them, it has failed in having that effect.

FRIDAY, 29 JUNE, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDSAY CRAWFORD SHEPHERD, |
The Hon. ANDREW GARRAN, LL.D. |

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Henry Chamberlaine Russell, C.M.G., Government Astronomer, sworn, and examined:—

- H. C. Russell,
C.M.G.
29 June, 1900.
2243. *Mr. McFarlane.*] Can you give us particulars of the rainfall of the country between Narrabri, Walgett and Collarendabri? The rainfall at Narrabri itself is 26.64 inches.
2244. For how many years does your average extend back? Twenty-eight years. The Pilliga rainfall is 24.57 inches; Edgeroi, 24.77; Avondale, 25.50; Millie, 26.28; Boolcarrol, 21.31; Drilldool, 25.12; Deenderrah, 25.26; Mercadool, 22.18; Goangra, 19.42; Collarendabri, 19.28; Gerongra, 18.14; Walgett, 19.57; Colma, 16.64; Brewan, 17.60; Bung Hill Tank, 21.04; Dungalear, 19.03.
2245. Is the country through which the proposed railway will pass subject to drought? Yes; but less so than stations to the west of it. That is, it is not so severe in the Darling country. I look upon all the tributaries of the Darling as if they belonged to the river. That country is less subject to the severity of drought than the country west of Walgett.
2246. It was stated in evidence, when the Committee were in Walgett, that that district had just passed through a drought extending over four or five years? That is true; but it is common to all parts of the Colony, west of the mountains.
2247. During a period of drought such as that, what would be the minimum rainfall? In some cases it would be 50 per cent. less than the average.
2248. Are there seasons also which have an over supply of rain? Yes; in the years 1889, 1890, 1891, 1892, and 1893, they had a great many floods, affecting the Macintyre, and some of the country lower down, between Walgett and the Queensland border.
249. Is there a large area subject to floods? I believe there is.

2250.

2250. Does drought affect this plain country more severely than coastal country? I think not. We, in Sydney, with an average rainfall of 49·50 inches, have everything ruined if we get a rainfall of 25 inches. Vegetation is destroyed; but that is not so in the districts to which I have referred. A fall of 50 per cent. below the average is not so disastrous to them as it is to people on the coast. It is a curious fact that 25 inches on the coast, which would be an abundance of rain on the Macintyre, and in this district, is ruinous. In other words, it is an abundance of rain on the Barwon, and it is ruinously small on the coast. I think the chief reason for it is that the wind in the country is so much less. It is the wind which carries away the moisture and dries up the rain. Where a country is not subject to very strong winds, it does not seem to suffer to the same extent as windy places suffer.
2251. The greater area of the land of which we are speaking has been stated to be sufficiently rich for the production of wheat;—do you think the rainfall they get would be sufficient for growing that cereal? Yes; it is more than enough, according to experience.
2252. Compared with other districts, how does it stand with regard to rainfall? This district is very much better than Bourke, Brewarrina, or Cobar. For instance, in 1898 the rainfall of Cobar was under 10 inches.
2253. Was that an exceptional year? Yes; it was a very dry year. Of course, it is far too low for wheat-growing. In the neighbourhood of Pilliga they had from 15 to 18 inches. It was worse about Moree, where they had as low as 14 or 15 inches. Their average rainfall is at least double that.
2254. How do you think the locality would suit the production of other crops? It is very hot climate; it is not quite so hot as Bourke; but there is very little difference between Walgett and Bourke. Going east from Walgett, however, the land rises, and the temperature falls as the land rises, so that it is cooler on the mountains than it is at Walgett.
2255. Is the country subject to frost in the winter time? Very little.

Charles Edward Rennie, Chief Draftsman, Department of Lands, sworn, and examined:—

2256. *Chairman.*] You produce a map showing the area of influence of the proposed railway to a distance of 20 miles on each side? Yes. Within those limits the areas of land are as follows:—

Areas in connection with Line, Narrabri to Walgett—altered position.

| | | | | | | |
|---------------------------------|-----|----------------------------|------------|-----------|--------|---|
| Alienated Land | ... | ... | ... | 1,165,000 | acres. | |
| Reserves | ... | ... | ... | 463,700 | " | |
| Settlement and Homestead Leases | ... | ... | ... | 491,000 | " | { Includes 192,300 acres, Homestead Leases, Western Division. |
| Crown Lands | ... | ... | ... | 774,800 | " | |
| Tenure of Crown Lands. | | | | | | |
| Leasehold Areas | { | Western Division, expiring | 1918 | ... | 79,000 | acres |
| | | Central do | July, 1900 | ... | 81,600 | " |
| | | Do do | Dec., 1902 | ... | 19,000 | " |
| | | | | | | } 179,600 acres. |
| Held under Occupation License | ... | ... | ... | ... | ... | 353,900 " |
| Untenanted | ... | ... | ... | ... | ... | 241,300 " |

Areas in connection with Branch Line to Collarendabri—altered position—outside limits of Line, Narrabri to Walgett.

| | | | | | | |
|---------------------------------|-----|----------------------------|------------|---------|---------|---|
| Alienated Land | ... | ... | ... | 412,700 | acres. | |
| Reserves | ... | ... | ... | 103,500 | " | |
| Settlement and Homestead Leases | ... | ... | ... | 270,200 | " | { Includes 167,160 acres, Homestead Leases, Western Division. |
| Crown Lands | ... | ... | ... | 203,000 | " | |
| Tenure of Crown Lands. | | | | | | |
| Leasehold Areas | { | Western Division, expiring | 1918 | ... | 128,000 | acres |
| | | Central do | July, 1900 | ... | 22,000 | " |
| | | | | | | |
| Held under Occupation License | ... | ... | ... | ... | ... | 53,000 " |
| Untenanted | ... | ... | ... | ... | ... | Nil. |

Areas in connection with land common to lines from Narrabri to Walgett, and Narrabri to Collarendabri—altered position.

| | | | | | | |
|---------------------------------|-----|----------------------------|------------|---------|--------|--|
| Alienated Land | ... | ... | ... | 769,500 | acres. | |
| Reserves | ... | ... | ... | 299,500 | " | |
| Settlement and Homestead Leases | ... | ... | ... | 209,000 | " | { Includes 13,200 acres, Homestead Leases, Western Division. |
| Crown Lands | ... | ... | ... | 501,100 | " | |
| Tenure of Crown Lands. | | | | | | |
| Leasehold Areas | { | Western Division, expiring | 1918 | ... | 12,300 | acres |
| | | Central do | July, 1900 | ... | 80,100 | " |
| | | | | | | |
| Held under Occupation License | ... | ... | ... | ... | ... | 181,500 " |
| Untenanted | ... | ... | ... | ... | ... | 227,200 " |

Areas quoted as under Lease and Occupation License do not include Reserves within the Holdings.

Narrabri to Collarendabri (through).

| | | | | | | |
|---------------------------------|-----|----------------------------|------------|-----------|---------|---|
| Alienated Land | ... | ... | ... | 1,182,200 | acres. | |
| Reserves | ... | ... | ... | 403,100 | " | |
| Settlement and Homestead Leases | ... | ... | ... | 479,200 | " | { Includes 180,360 acres, Homestead Leases, Western Division. |
| Crown Lands | ... | ... | ... | 704,100 | " | |
| Tenure of Crown Lands. | | | | | | |
| Leasehold Areas | { | Western Division, expiring | 1918 | ... | 140,300 | acres |
| | | Central do | July, 1900 | ... | 102,100 | " |
| | | | | | | |
| Held under Occupation License | ... | ... | ... | ... | ... | 234,500 " |
| Untenanted | ... | ... | ... | ... | ... | 227,200 " |

2256.

- C. E. Rennie,
29 June, 1900.
2257. Have you any details as to the nature of the reserves? There is one large forest reserve south of Narrabri, and on the border of the area influenced, comprising 98,000 acres. There are travelling stock reserves, water reserves, and commonage reserves adjoining the township.
2258. Are there any large areas not occupied at all? The following parishes near Narrabri are unoccupied:—Quin, Robertson, Papp, Anson, Dampier, and Bohena.
2259. Can you state the proportion of alienated to the unalienated land within the whole area comprised by the two lines? It is almost the same—half and half.
2260. What is the total area that would be available for settlement if the two lines were constructed? Taking the two lines together, the area falling in between the present date and 1918 will be 329,600 acres.

MONDAY, 2 JULY, 1900.

The Committee met at the Court-house, Newcastle, at 10.30 a.m.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Honorable George Frederick Earp, M.L.C., President of the Chamber of Commerce, Newcastle, sworn, and examined:—

- The Hon. G. F. Earp, M.L.C.
2 July, 1900.
2261. *Chairman.*] How long have you carried on business in Newcastle? Since 1863.
2262. Have you any statement to make on the proposal before the Committee? As you are aware, an agitation has been going on for a good many years with the object of connecting the isolated district of Walgett with the North-western line. A great many deputations have waited upon the various Secretaries for Public Works to ask for such connection to be made. I am not aware that there ever was any question as to the advisability of connecting the district with the seaboard by any other route than the Northern one. That is an important factor to bear in mind, because the people of the district naturally know what connection would suit them best. They know the way their trade has gone from the beginning. I produce a map, upon which I have sketched what I presume would be the area served by the proposed line. That area would extend on the south to half-way between Walgett and Coonamble; on the west, to half-way between Walgett and Brewarrina; on the north, to about 60 miles beyond the Queensland border; and on the east, to within 20 miles of the Northern line. You will observe, from the map, that from the Western line there have been several extensions in the direction of that trade. In the first place, there was the line from Wallerawang to Mudjee; then the line from Nevertire to Warren; and now a line from Dubbo to Coonamble has been recommended, and, I think, passed by Parliament. If we study the map, we can only come to one conclusion with regard to the system with which that district should be connected—that is, the North-western system. I will state my reasons why that district should be connected with the North-western and not with the Western. In the first place we must compare the routes, and see what the mileage is. The mileage from Sydney to Walgett is 476 miles. The mileage *via* Coonamble and Dubbo, is 439 miles. That makes a difference in favour of the port of Newcastle of 37 miles. There is not only the question of the additional length and cost of line to be considered, but there is the question of haulage for all time. If the producers of the Walgett district are compelled to send their stuff to Sydney *via* Dubbo and Coonamble, they will have to pay unnecessary charges. If that is not the case, in order to put those people in a fair position—in the position in which they would be by the construction of the Narrabri-Walgett line, and by the port of Newcastle being placed at their disposal—the Commissioners must charge less than ordinary tariffs. I have with me some of the rates worked out on the figures which I quoted on a former occasion. Of course, they are slightly modified, not because the route to be taken by the proposed line makes the difference slightly less in favour of Newcastle. Taking the whole of the proposal, however, the ordinary rate on cattle from Walgett to Sydney would be £8 19s. 3d. per truck. The rate to Newcastle, *via* Narrabri, would be £7 5s. 5d. per truck. The difference in favour of Newcastle, therefore, would be £1 13s. 10d. per truck. That would be slightly modified by the alteration in the difference in distance under the newly proposed route. When you remember that Newcastle is the chief cattle shipping port for all Australasia, you will see the importance of that fact to the people in the Walgett district. Newcastle ships as many cattle in a month as Sydney does in a year. I will mention one or two other lines. Of course, goods come under different rates: A. B. first-class, second-class, and third-class rates. A rate: From Newcastle to Walgett the rate would be £1 7s. 8d. That would be for flour and stuff of that kind. Sydney to Walgett £1 13s. 10d., making a difference in favour of Newcastle of 6s. 2d. Under the B rate the difference in favour of Newcastle would be 11s. 4d. Under the first-class rate the difference in favour of Newcastle would be £1 9s. 8d. Under the third-class rate the difference in favour of Newcastle would be £2 1s. 6d. For all time, so far as the residents are concerned, the trade of this district has come to Newcastle and Maitland, towns on the Northern line. Trade, of course, is like a stream—it follows the line of least resistance. In other words, it follows in the most natural channel. That trade has never found its way to Sydney. It has found its way to Newcastle and Maitland—the only places to which it should find its way. Although I am aware that the Railway Commissioners have prepared reports showing that somewhere between one-half and two-thirds of the trade from that district ultimately gets to Sydney, and that between one-half and one-third of it only remains at Newcastle, still the fact remains that it finds its way through Newcastle. The portion of the trade done with Sydney comes through Newcastle, and there is a large portion, even on the Railway Commissioners' own showing, which remains in Newcastle and Maitland.
2263. Are you referring to the figures lately put before the Committee by Mr. Harper? No; I am referring to the figures put before you by myself in connection with the former inquiry.
2264. Mr. Harper has ascertained that he made a serious error in the figures which he put before us last week? Of course, I do not agree with his figures. I believe the proportion is more in favour of Newcastle than he made it out to be. It would be a very serious thing to construct a railway by which places like

like Newcastle, Maitland, and Morpeth were deprived of trade which they have held for the last half century, especially when you consider that, by constructing such a line, no good is done to the producers or the district, or to the country; and also when you consider that, if you make the line which will retain to Newcastle the trade which belongs to it, you will enable those who wish to trade with Sydney still to do so, because the line will connect them, not only with Newcastle, but with Sydney. Another point in favour of the construction of the line with the North-western system is this: In time of drought a connection with Coonamble would be absolutely useless for people in the Walgett district. If connected with the North-western system they could transfer their cattle to the table-lands of New England, and save a large portion of them. I am given to understand that, had the proposed line been constructed some years ago, the number of sheep which might have been saved by removal would have more than paid the cost of its construction. Again, in times of drought supplies are more easily obtainable from the Hunter valley than from Coonamble. The Hunter valley is more reliable in drougthy seasons than are Coonamble, or Dubbo, and the western area. It is a most important matter that the people of the district should have the chance, in time of drought, of removing their stock to places where they can be saved. That would be effected by connecting the North-western system. The great point in connection with the proposed railway is this: that, in connection with the North-western system, you put the people of the district affected in communication, not only with Sydney, or Newcastle, or Maitland, but with all three. Maitland is the second cattle district in the Colony, Newcastle is the first cattle shipping port, and Morpeth has become a large wool-shipping port. Last year 80,000 bales of wool were shipped from Morpeth. I wish to impress upon the Committee the fact that Newcastle is the first shipping port of all Australasia. At the present time we have at Newcastle 264 vessels, with a tonnage of 91,900 tons. The tonnage at Sydney of 43 vessels is 68,217. In addition to the latter figures there are the mail steamers, with a tonnage of 26,871 tons. Newcastle has now recovered from the effects produced by labour disturbances, and is at the present day the first shipping port of the southern hemisphere. Deep-sea vessels, drawing over 23 feet of water, can come up. We have lines of vessels trading from Newcastle to London, the Cape, and other South African ports, also to India and New Caledonia. As a shipping port, Newcastle is not excelled even by Sydney. With regard to Collarendabri, it was shown in a recent inquiry that by constructing the two lines—Narrabri to Walgett and Woolabra to Collarendabri—a saving of distance of 45 miles would be effected, and of something like £100,000 in cost. I take it that it is admitted by all that a line to Collarendabri must be built for strategic reasons. When we see Queensland advancing in the direction of Cunnamulla and St. George, it is evident that unless Collarendabri is brought into connection with our railway system we must lose our border trade. Under the proposal which is before us the two lines to which I have referred will, for 60 miles, be served by the one line. I understand that the proposal is to make a deviation at what is called the 350-mile peg from Newcastle to Collarendabri, and thus the two lines would be served for 60 miles of their journey by the one line. I do not know whether any later reports as to the cost of the line have been submitted; but when the last Committee inquired into the matter the engineers presented a statement showing that the line would cost, for 56 miles, about £2,297 per mile.

2265. The total cost of the proposed line varies from £2,729 to £5,375 per mile? I merely wished to refer to that because it shows that practically there are no engineering difficulties in the way.

2266. *Mr. Watson.*] Neither of the proposed lines can be carried out at the price you mention. The line you refer to was abandoned, and the proposed line will cost a little more? Still it is sufficient to show that there are no engineering difficulties in the way of construction. Timber is known to exist close at hand south of the Namoi, and the engineering difficulties are such that they can be easily got over.

2267. They have to get over flood-water? The engineer reports that that can be done by means of earth-works. The cost of a little over £3,000 per mile is a very moderate one indeed. I am aware that reports have been made to the effect that the working of the line would result in a loss; but when we regard such reports in their proper light we must come to the conclusion that they ought to have very little weight indeed in deciding upon such an important matter as the opening up of the country. The extension from Werris Creek to Gunnedah, and from north Werris Creek to Narrabri, were also reported against. It was evidently believed that those lines would result in a loss, and yet we find that in 1896 the profit on the Werris Creek to Narrabri line was £10,498. The country around Walgett is second to none as a pastoral country; it carries a sheep to an acre and a half, whereas the country around Dubbo and Coonamble carries about one sheep to 3 acres. The country is very similar to that around Narrabri and Moree, and if there were any justification at all in extending the line to Narrabri, there is a justification in extending it to Walgett; not only is it a pastoral country, but we have the evidence of Mr. Russell to show that there is a sufficient rainfall in the district for the cultivation of cereals. We have the evidence of a large number of inhabitants to show that not only is the soil good enough for cereals, but they have grown cereals, and the only reason they have not grown them in sufficient quantities to send to market is that there has been no means of getting them to market. Although more than 30 bushels to the acre can be grown, it does not pay to grow it, and that is the only reason no serious attempt has been made to cultivate cereals in the district. Another point—and it is a point which shows the uselessness of figures of actual traffic being taken to decide whether a line should be considered, rather than taking the capabilities of the district into consideration—is this: Lambs could be produced in the district to be sent to Maitland and other places, and they would increase the railway freight to a very large extent. The reason fat stock cannot at present be produced and sent to market is that you cannot travel lambs for hundreds of miles over bad roads. Therefore, the cultivation of cereals and the production of fat stock are precluded to people in the district, because they have not the means of getting to market. The population of the district is about 5,000, but it is increasing yearly as lands are thrown open for closer settlement. In speaking of the two routes, I omitted to refer to the fact—and it is a very important fact—that on the western route there are mountains to be got over, and the haulage cost is simply double what it is on the Northern line. There is only one point on the Northern line, near Murrurundi, where it is necessary to use two engines for a load. Coming over the mountains it is necessary to have two engines for a very long distance.

2268. Will you specify the points where they have the two engines on the Western line, apart from the Zigzag? I refer to the Blue Mountains.

2269. Apart from that point, there have been several reductions of grade? I am aware of that, otherwise it would have been impossible to have dealt with this traffic at all. The fact remains that on the

Hon.
G. F. Earp,
M.L.C.
2 July, 1900.

Blue Mountains, for a great distance, it is necessary to use two engines. If the Commissioners are not going to charge for that, in making the freights, it is unfair to the country generally. If they do charge, it will put a great handicap on the people sending produce to market, or importing their supplies.

2270. *Chairman.*] Could you give any information as to the frozen meat trade? There are lines of vessels carrying frozen meat from Newcastle to the markets of the world. At Aberdeen there is one of the largest frozen-meat-works in the Colony. These works rely very largely on the northern and north-western districts for their stock.

2271. The whole of the district to be served by the proposed railway is noted as a fattening district? It is.

2272. Do you think the construction of the line will practically add to the carrying capacity of the land by giving the producers a market for their fat stock, which they could use as soon as the stock were in condition? I think it would do so to a considerable extent. At any rate, a large number of the residents of the district have stated, on oath, that they could send large quantities of fat stock to market if they had the means of getting them there.

2273. There are regular lines of steamers coming to Newcastle for that class of trade? Yes; the Gulf line, the White Star line, and others; in fact, the loading of frozen meat at Newcastle is almost a regular business.

2274. With a port like Newcastle at hand, the smaller producer would, with railway communication, be able to do better on a small area than he does now? Yes; that is an important point. I have particulars showing the trade of Newcastle for the last six months. Those returns show that in 1899 we exported, during the half-year, ending 30th June, 1899, 2,152 cattle. During the same period in 1900 we exported 4,487 cattle; of sheep, in six months of 1899 we exported 4,654; during the same period of 1900 the export was 23,617. During six months of April, 1899, we exported 17 horses; during the same period of 1900 we have exported 2,415.

2275. *Mr. Shepherd.*] That must be on account of the South African war? Yes; the trade, we believe, is only just beginning.

2276. *Mr. Levien.*] There are more smaller holders north and north-west than there are on the west? There are, and they are likely to increase. Crown lands are falling in, and as these become available for closer settlement, the produce of the district must double. I think, so far as the justice of the case is concerned, there cannot be two questions about the construction of the proposed railway. Why should the traffic of this great district be centred at Sydney? At Sydney you are already about to build a new railway station because you cannot deal with the present traffic. Why should traffic, under those circumstances, be dragged away from Newcastle, which has had £1,000,000 spent upon it to make it the port it is, in order to still further increase the congestion of traffic in Sydney. Why should that be done, especially when it has to be hauled over the Blue Mountains, a distance of 86 miles further.

2277. *Chairman.*] Can you give us any information as to the extent of the direct importations into Newcastle, and as to the character of the distributing trade? We have lines of vessels from every port in the world. We have lines bringing lumber from Puget Sound and Humboldt Bay, and lines bringing American goods—kerosene, and other articles. We have lines from London, Liverpool, Glasgow, and Hamburg. The merchants of Newcastle are in as good a position to supply goods from those places, and to distribute them to the people of the district, as are the merchants of Sydney. I am aware that reports have been made to the effect that more than one-half of the supplies go from Sydney; but even if one-half the supplies go from Sydney, the other half can be obtained from Newcastle as cheaply, and with 86 miles less of traction to pay for. That is a very important consideration with the settlers of the district. Their power to compete in the markets of the world is decided by the cheapness with which they can produce, and the cheaper they can get supplies the cheaper they can produce. At the end of 1899 there were in the Walgett district 1,000,000 sheep, but in normal seasons the number of sheep is nearer 2,000,000. So many have been lost by drought that the number has been reduced to about 1,000,000. When we remember that fact it is evident that such a place as Walgett should have had a railway to it years ago.

2278. *Mr. Watson.*] You stated, just now, that the merchants of Newcastle are as able to supply goods which may be required for this district as cheaply as those of Sydney;—can you state why that is not done now? They do supply a large number of lines. I believe about one-half the goods go from Sydney. You must bear in mind that a large centre like Sydney shares in the Queensland trade. You might just as well ask why Brisbane does not do the trade of Maryborough. They do a share of it. We are all competing, and you cannot prevent any port doing a share of the trade. We do not begrudge Sydney her share of the trade, and we are not jealous of Sydney doing one-half of it. Nevertheless, we say that the people of Walgett should be in a position, when this railway is carried out, to pay for 86 miles less of traction than they would have to pay if a line were constructed *via* Coonamble and Dubbo.

2279. The evidence of the storekeepers of Walgett was to the effect that all they got from Newcastle—that is, originally from Newcastle—was butter and biscuits, and that all the other goods came through Newcastle from Sydney? There is the evidence of Mr. N. Cohen.

2280. I am referring to the evidence of Messrs. Haigh, Vaughn, and Scott—the latter a pastoralist near Walgett? There are seven storekeepers in Walgett.

2281. The two referred to spoke for the others, and they stated that the whole of the goods, with the exception of butter and biscuits, came from Sydney? As against that I should like to say that the people of Walgett have had their minds upset lately; they have been given to understand that they had better say very little about this matter. They used to go baldheaded for the line on the north.

2282. It is of no use suggesting motives, because these people were all in favour of the connection with Narrabri? There is the evidence of Mr. Clarke, who represents the Walgett Railway League, and of Mr. Levy, and of Cohen & Co. There is also the evidence of the Railway Commissioners themselves. The Railway Commissioners, in their report, stated that a very large quantity of the supplies came from Newcastle.

2283. *Chairman.*] Are there not a number of lines sent out west from Newcastle—rock-salt, cement, and so on? Lines like that go principally from Newcastle. Of course, in taking evidence of that kind, one wants to know what the articles are, because £100,000 worth of drapery goods might not mean so much freight to the Railway Commissioners as £10,000 worth of rock-salt.

2284. *Mr. Watson.*] It is the other way about;—the rock-salt is carried more cheaply, with the object of assisting pastoralists? Yes; but there would be very little tonnage in drapery and silk goods.

2285. Mr. Haigh, storekeeper, was asked as to where they got supplies from, and he said that nearly everything was obtained from Sydney;—he stated that they only got butter and biscuits from Newcastle, and sometimes flour from Tamworth;—Mr. Vaughn also gave similar evidence? Even if that were the case, stuff can be sent from Sydney to that district cheaper *via* the north than *via* the west. If this line is built to the north-west, stuff will be sent more cheaply to Newcastle, and it will be shipped by the local steamers to Sydney, and the other way about, much more cheaply than it could be sent by way of Coonamble and Dubbo. Even the Sydney stuff comes *via* Newcastle, because that is the natural way for it to come. Mr. Cohen was asked:—

Your main contention is, that the trade from the north-western district has for many years come to Newcastle and the towns on the Northern line, and that any attempt to interfere with that traffic would seriously prejudice those towns, while the district would not be better served by an alternative route? Exactly.

2286. *Mr. Watson.*] With regard to the cattle which are shipped here, do you know where they are sent to? To New Caledonia and to the Cape. Horses are sent to India and West Australia.

2287. The greater part of the fat cattle disposed of in New South Wales would, of course, find Sydney their market? Maitland is a large market—the second in the Colony. Regular sales are held there, and large quantities are sold. Of course, this railway would give people the option of sending to either market—Maitland or Sydney. Mr. Cohen says:—

My firm, and several other firms in the Newcastle, West Maitland, and Singleton districts, are a good deal interested in this extension, because the trade from the district which would be affected by it has hitherto always come to Newcastle, and we think that if it were diverted to some other place it would do a great injury to the large towns in the northern district. Irrespective of any personal interest which I may have, I consider that any railway to Walgett should be taken from Narrabri, so that the trade would not be diverted from Newcastle. The trade of Newcastle is at present very large, and it is a growing trade; but if an extension were made to Walgett from Mudgee a good deal of this trade would be taken from Newcastle and brought to Sydney.

2288. With regard to the question of the line to Walgett, and a branch to Collarendabri, paying, I think you stated that it was usual to find production doubling with railway construction;—do you think that remark would apply to a purely pastoral district? I do. This district hitherto has been held in large holdings of 40,000 or 50,000 acres, and as it falls in it will be taken up for close settlement, in lots of 2,000 and 3,000 acres. By that means the production will be nearly doubled.

2289. It is generally assumed that you are safe in good country, fit for agriculture, in constructing lines within 40 miles of each other, so that one will not unnecessarily drag traffic from another; in this case, with pastoral country, it is proposed to have two lines running at an acute angle until, at the widest part, they are over 50 miles apart;—do you think it is likely, under those circumstances, that both lines will pay? The Collarendabri line is as much a strategic line, as anything, to get the traffic of the Queensland border. The line to Walgett is to serve the immense Walgett district. Of course, the Collarendabri line could not serve that district.

2290. The furthest points are only some 50 miles apart, and in pastoral country? I take it that the Collarendabri line would be ultimately carried on to the Queensland border. Although they are only 50 miles apart they serve two different trades—the one will take the trade far away to the north, and the other will take it south and all round.

2291. *Chairman.*] I suppose you regard both Walgett and Collarendabri as centres which will attract trade from some distance west and north? Yes; I consider the large area west and north as being the area which will gain the traffic to make these lines pay.

2292. *Mr. Watson.*] The Railway Commissioners anticipate a loss of £13,000 per annum on the duplicate proposal, and suggest that the country would be better cut up if one line were taken from Narrabri to Collarendabri, and Walgett were reached from Coonamble;—how do you view that proposal? I differ from the Railway Commissioners for all the reasons I have given.

2293. *Mr. McFarlane.*] In view of statements made by several storekeepers in Walgett as to the small quantities of goods obtained direct from Newcastle, could you give an idea of the class of goods sent from Newcastle to Walgett? All storekeepers' requirements. David Cohen & Co. supply drapery, ironmongery, and groceries. Mr. Cohen says, in his evidence, that he sends large quantities of stuff to this district, and the Railway Commissioners have shown, by their returns, that a large quantity of trade is done with Newcastle.

2294. Would that be merchandise imported to Newcastle—not from Sydney? No.

2295. I understand a considerable quantity of goods comes by steamer from Sydney? That is always reckoned in the Newcastle portion.

2296. Could you name anything approaching the quantity which is sent annually from Newcastle? I am afraid there are no returns to enable me to obtain that information, because the stuff which goes north goes to twenty or thirty places.

2297. I mean goods sent through Narrabri to the north-west? I am afraid there are no returns published. Of course, Newcastle sends a quantity of stuff, which is put in the Sydney return. Sugar, for instance, is all sent from Sydney, and the Newcastle merchant would simply pass his order on to the Colonial Sugar Company, and it would be shipped to Newcastle or Morpeth, and then sent by rail on account of the Newcastle merchants.

2298. *Mr. Leven.*] The trade is direct with Newcastle, after all, although the stuff is sent from Sydney? Yes; as I pointed out, the portion of the trade which now belongs to Sydney, will still belong to Sydney, because the line will be as much to Sydney as to Newcastle. No injustice can possibly be done to Sydney, but a great injustice would be done to Newcastle by having the line the other way, because it would kill the trade of the Newcastle people. When you have railway communication all the way to Walgett, no stuff will come by team to Narrabri.

2299. *Mr. Watson.*] What saving is effected by consignees in sending stuff to Morpeth by steamer, rather than sending it the whole way by train, assuming it to be going to Narrabri? It depends on the class of goods. When truck-loads can be made up, there is a saving on various classes of goods, but on every line of goods there would be a difference, because there are so many different rates.

2300. Is it a material difference? I think the steamers carry the stuff from Sydney to Morpeth at a much less rate than the corresponding rate would be from Sydney, the same distance, by rail. I have particulars of the stock which passed through the Maitland sale-yards during the year, ending 31st December, 1899:—Horned cattle and calves, 39,172; sheep, 130,692; pigs, 16,497; horses, 1,492; total, 187,853. By taking the railway the other way, the people would be taken right away from this market.

- Hon. G. F. Earp. M.L.C.
2 July, 1900.
2301. *Mr. McFarlane.*] You have referred to cattle being shipped from Newcastle to other ports;—can you state where the fat stock came from? From the Narrabri district and places north.
2302. Is it within your knowledge that large quantities of stock come from the North-western district, through Narrabri, to the Maitland sale-yards, or Newcastle markets? I know the cattle come from the north, but I do not know from what district. I think they come from the north-west and the north, because the pastures are there. In giving the figures *re* the export for the half year, I omitted frozen beef and mutton, as follows:—Of frozen beef in the six months, ending 30th June, 1899, we exported 9,892 cwt. as against 32,466 cwt. during the corresponding period of this year. Of frozen mutton during the six months, ending 30th June, 1899, we exported 37,976 cwt., as against 39,807 cwt. during the corresponding period of this year. That is in spite of the four or five years' drought through which these districts have passed. Had we had a normal time, I think these figures would have been doubled.
2303. Can you give any particulars of the quantity of wool coming from the north-west? The quantity shipped from Newcastle to Morpeth for the year, ending 31st December, 1899, was 121,487 bales.
2304. Was that for shipment to India, or some other market? Some of it would be shipped direct to Great Britain and the Continent by the steamers which regularly load here, and a portion of it would be taken by local steamers to Sydney to be shipped into vessels loading there.
2305. Can you give any idea of the quantity shipped to Sydney and also of the quantity shipped to the London market? I am afraid not. The Commissioners in their report put down from one-half to two-thirds as being Sydney destined, and one-third to one-half as being Newcastle destined.
2306. Can you say whether the direct shipment from Newcastle is increasing? Not during the last year or two, owing principally to the drought.
2307. Taking the proportion of the total quantity of wool coming to Newcastle, would the proportion be increased—that is, making allowance for the smaller return on account of the drought? If it had not been for the drought I think there would have been a progressive increase.
2308. Do you think there would be a tendency to increase in the event of the railway being constructed? I think so; because they would save 86 miles of haulage by shipping at Newcastle, as compared with Sydney.
2309. *Chairman.*] The Sydney sales have shown the same decrease as have those of Newcastle? Yes; the export from Sydney has shown a proportionate decrease during the same period. The Secretary of the Chamber of Commerce has given me the exact particulars of shipments from Newcastle for the last ten to fifteen years, and the average is between 50,000 and 60,000 bales. This amount went direct to London.
2310. The Railway Commissioners have stated that there has been an increase in the local sales? That is quite correct.
2311. Do you think that would be likely to influence the quantity of wool coming from the north-west, through Narrabri, to Newcastle? I think the tendency is to test both markets. For instance, when the wool market is particularly good in Sydney, no doubt more wool will go there for sale. When the market is better at home more wool will be shipped direct. It depends on the markets whether the sale diminishes or increases in Sydney.
2312. Has the merchandise traffic towards the north-west, through Narrabri, increased year by year;—how does last year compare with five years previously? I have not the returns to show that, but my experience is that trade is increasing in that direction.
2313. One of your main reasons for supporting the Narrabri to Walgett connection is that it would give the people in the north-west the advantage of two markets? Three markets—Maitland, Newcastle, and Sydney. Maitland for fat stock, horses, cattle, sheep, and so on; Newcastle as a port of shipment, and as a port for obtaining supplies; and Sydney as well.
2314. In times of drought is there much produce going into the district? Very large quantities, but unfortunately for the people of Walgett they cannot afford to pay the team-rate from Narrabri to Walgett: It goes up to £20 and £30 a ton. They can then neither get their stock away, nor can they get produce to their district.
2315. Is the produce imported? A large quantity is grown in the Hunter valley. The tendency is to grow it locally. I remember a time when two-thirds of the general produce was imported from New Zealand; but the tendency now is to grow it locally in the Hunter valley. Large quantities of lucerne, oaten hay, and maize, are grown there. Even Dubbo and Coonamble would have to get their stuff from places like the Hunter valley, in times of drought; those people will be close to a market for their supplies if the line is connected with the North-west.
2316. What classes of produce would they be likely to get? Hay, maize, and oats.
2317. You refer, of course, to times of extreme drought? And those times are very frequent, unfortunately. On and off, I think there is as much drought as there is fair weather. During the last ten years they have had as many bad as good seasons; they are dependent on the Hunter valley for their produce, but unfortunately there is no railway from Narrabri to get it.
2318. Could they get it at a cheaper rate by a connection with Narrabri than with any other place? Yes; because they are right in the direction of the market, whereas Sydney has to get portion of its produce from the Hunter valley.
2319. *Mr. Watson.*] Whilst we were conducting the inquiry at Wellington and Dubbo, we found that the people had been sending produce right round to Sydney, Newcastle, and up to the Moree line? That might arise at a particular time owing to accidental circumstances, but it would never be a regular trade. For instance, we have been sending three trains a day from here to Riverina. In times like that, accidental trade arises, but it does not last.
2320. I think the explanation was that you were sending lucerne hay away, and they were sending wheaten chaff? Yes.

Samuel Clift, pastoralist, East Maitland, sworn, and examined:—

- S. Clift.
2 July, 1900.
2321. *Mr. Watson.*] Are you interested in property on the North-western line? Yes; I am the manager of the Bishop of Newcastle's stations at Goodooga, beyond Walgett.
2322. Do you know the country through which the proposed line would pass? I know the country to Walgett, but not to Collarendabri.

S. Clift.
2 July, 1900.

2323. The line to Walgett would leave the Namoi, for a great part of its route, about 20 miles to the south;—do you know that country? Not exactly where the line runs; but I know it nearer the Namoi.
2324. What is your general impression of the country? It is very good grazing land, and it would be suitable for the cultivation of crops which would grow before the summer came upon them. It would be suitable for hay. Early wheat would grow well there.
2325. Do you know the country from Walgett to Goodooga? Yes.
2326. Do you think the Goodooga trade would come to Walgett if the proposed line were constructed? Yes. At present I am sending my stuff from Sydney to Bourke, and from Bourke back to Goodooga, because it is the most convenient. If there were a railway to Walgett I should send it from Newcastle to Walgett, and then 93 miles out to Goodooga. At present we have to send it 501 miles from Sydney to Bourke, and 140 miles back to the station. If it went the other way it would only traverse about 300 miles to Walgett, and 90 miles to the station.
2327. Would there be a better chance of getting the Goodooga trade with a railway at Walgett than with one at Brewarrina? Yes. It would be nearer to come to Walgett than Brewarrina.
2328. Is the track as good one way as the other? There is a cattle track from Walgett to Goodooga.
2329. Is it liable to flood? It is fairly high. It would take an excessive flood to make it impassable.
2330. How do you regard the country between Walgett and Goodooga;—is it as good as that on the northern side of the Namoi, between Narrabri and Walgett? It is similar country. It is hardly so thickly grassed; but it is quite as rich for fattening qualities. It is mostly plain country.
2331. Taking the land through which the proposed line would pass, and that beyond the Barwon within its influence, should you say that its construction would result in largely increased settlement or production? It must do so. When the Werris Creek to Narrabri line was made, there was not any agriculture in the district. The whole of the agricultural district which we now have about Currabubula and around the Tamworth district has all come about since the railway was constructed.
2332. Do you think the country further west is as suitable for agriculture as is that between Werris Creek and Narrabri? Yes; there is a good deal of similar country, and it would grow crops just as well. I have not the slightest doubt that it would grow excellent wheat crops for hay, and probably good crops for grain.
2333. What is your opinion of the suggestion of the Railway Commissioners to connect Collarendabri with Narrabri, and Walgett with Coonamble, and thence to Dubbo? Personally, that would drive me to Sydney.
2334. How should it affect you if we had two termini, as suggested—one at Collarendabri and the other at Walgett? It would not suit me at all, because Goodooga would be 90 miles from Walgett and 130 to 140 miles from Collarendabri, and I would be about 140 miles from Bourke.
2335. It would not suit you to go to Walgett if Walgett were connected with Sydney by rail? No. That would take me a long way round the Blue Mountains, and I ship from Newcastle.
2336. Does the wool from your stations go direct to England? It has been going to England until last year, when I sold in Sydney.
2337. Is there an increasing tendency to try the local market before sending to England? It has been gaining ground for several years. We can send our wool much more cheaply to Walgett, and thence to Sydney, than we can send it by rail to Sydney direct.
2338. Even if the western route were a little shorter to Sydney, it would be cheaper to send it by the Northern line and then to Morpeth? Yes. As Chairman of the Hunter River Steamship Company I may say that we send 100,000 bales of wool per annum from Morpeth, and an enormous quantity of hay.
2339. The main trouble about this war of routes seems to be the difficulty of having enough country to serve two lines, if you start both from the same point at Narrabri; the Railway Commissioners have suggested that there would be a better chance of getting enough revenue to keep both lines going if one were constructed from Coonamble and the other from Narrabri;—I take it that, in your opinion, the disadvantages would be greater than the advantages? The same remarks would apply to the Werris Creek-Tamworth line. Gunnedah is only 30 miles from Tamworth; the line widens out as it goes further, and I presume that in the event of either of the proposed lines being continued to the Queensland border they also would widen out.
2340. Where would a market be found for the fat stock which might come over the proposed line? Great numbers would be sold in Maitland. Any that would be shipped would come to Newcastle; the balance would go to Sydney.
2341. Is there a large market at Maitland compared with the Sydney market? The Sydney market is about twice as large as the Maitland market. If you take the Sydney Meat Preserving Company's stuff into consideration, we are within 50 per cent. of the Sydney market.
2342. You think the Maitland market is sufficiently large to be an item in the matter of the construction of the railway? Yes; it is the second market in the Colony.
2343. Where do you fatten stock? At Breeza.
2344. Where do you send it? Maitland is our principal market; but we also send to Mr. Richards, of Riverstone. I sold 59,600 fat wethers in 1898. 47,500 of these went by rail from Breeza to Riverstone.
2345. Is there any other evidence you wish to offer? I should like to point out that I do not think the railway estimates are worth a farthing. It was stated that the Werris Creek-Narrabri line would not pay for the grease used for the wheels. That, however, is a good paying line at the present moment.
2346. *Chairman.*] You think the country to be served by the proposed line is as good as the Narrabri-Moree country? It is quite as good fattening country.
2347. In the case of the Narrabri-Moree line, the estimate of receipts was greatly exceeded? The receipts during less than one-third of the year were greater than the Railway Commissioners estimate for the whole year.
2348. Do you think we might anticipate a similar experience in this instance? Not quite so much perhaps, but we are likely to have a big increase.
2349. *Mr. Watson.*] If you look at the map you will see that Moree would, with a railway terminus, be the depot for an extremely large area of back country, more so than would be the case with one or other of the proposed lines? Yes; Moree is in a good position.
2350. From your knowledge of the north-west country, could you say whether any suggestion could be made

S. Cliff.
2 July, 1900.

made by which one line alone, with a consequent saving in expenditure, could be made to serve the requirements of the district? I see no better plan than to run from Narrabri to Walgett, and then, if you wished to reach the border, to go straight out to Goodooga. It is good country about there, on both sides of the route.

2351. Do you think if you had a line at Walgett, and perhaps on towards Goodooga, that that line, in conjunction with the Moree line, would have a fair chance of catching all the south Queensland traffic likely to come in? Yes, it would catch a large part of the Queensland traffic, and if the Moree line went to Mungindi we should get a great deal of traffic there.

2352. Would you prefer to approach Mungindi from Moree than from the suggested line to Collarendabri? I think so. It is only about 65 miles from Moree to Mungindi.

2353. Is there any other point to which you wish to draw attention? There has been a large falling off in the production of wool, through loss of sheep, which will be recovered when the seasons change. On the stations with which I am connected, we had, seven or eight years ago, 112,000 sheep; to-day we have only 25,000. All that would be recovered.

2354. *Mr. Levien.*] Do you not think that the smaller landholders would come with their produce to the nearest point? Yes. The proposed railway would be a great advantage in carrying starving stock to New England, where feed is better.

2355. *Chairman.*] With reference to your suggestion to connect Moree with Mungindi, it has been stated that the track in that direction would have to cross a great many river courses and flooded country; whereas from Collarendabri to Mungindi it would avoid them? What is to prevent us going from Mungindi to Benava, and over to Moree. The country on the Moonee, or western side of the river, is almost valueless, and it is all good country from Walgett to Goodooga.

2356. *Mr. McFarlane.*] Which, in your opinion, would suit the major of the Walgett people the better—a connection with Narrabri, or with Coonamble? With Narrabri.

2357. Can you give any particular reason for that? I think the business will very soon tend from the Coonamble line to the other. Take myself, for instance, I should shift my business immediately a line to Walgett were built.

2358. Can you purchase supplies as cheaply in Newcastle as in Sydney? I think so.

2359. *Mr. Levien.*] Do you remember when there were larger holdings, and when all the trade of the north and north-west was done directly with Maitland? I can remember it for the last fifty years; it was always done with Maitland until a few years ago.

2360. The graziers then dealt directly with the Maitland banks, and never thought of coming to Sydney? That was so, in those days.

2361. Of course, it would be an advantage to the smaller holders to be able to convey their wool to a market not far distant? Yes; naturally they would go to the nearest port by the cheapest route.

2362. *Mr. Shepherd.*] You have stated that, with railway communication, Walgett will become an agricultural district? It could become a district for crops which will grow before the extreme heat arrives. You cannot grow anything in our country when the heat of summer comes.

2363. Are you aware whether they grow enough in Walgett now for their own consumption? I am not aware; but they could grow wheat or hay if they chose. The soil is good enough.

2364. Do you think the rainfall is sufficient for it? Yes; for the winter crop. The land will grow anything which can be grown in the cooler weather. Of course, it is not worth while growing grain in Walgett, at present, because they cannot get it away. Everything dealt with on the land requires rain. Six or eight months ago you might have seen three train-loads a day leaving West Maitland, East Maitland, and Morpeth, for Riverina, which is a fine agricultural district.

Henry John Adams, pastoralist, West Maitland, sworn, and examined:—

H. J. Adams. 2365. *Mr. McFarlane.*] How long have you resided in the district? I have carried on pastoral pursuits since 1859.

2366. Do you wish to make a statement concerning the knowledge you possess of the north-west country, as the proposed railway will affect it? I have travelled over the whole of the roads between Narrabri and Goodooga, from here to the Queensland border, in times of drought and flood.

2367. Have you a knowledge of the pastoral pursuits in the Walgett and Collarendabri portion of the Colony? Yes; I have owned about 1,000 square miles in that district at different times. I know every road in the district.

2368. Do you think the railway from Narrabri to Collarendabri will be a paying one? Yes; in lieu of one to Walgett.

2369. Would there be a large extent of country to the west and north-west of Collarendabri, which the railway would benefit? The area of country that the railway would serve is circumscribed as the country between the Barwon and Moonee Rivers is scrubby, the same as on the east side above Mungindi. People east of Mungindi would send their produce to Moree, or when the railway is extended towards Goondiwindi (which I feel certain will follow), to some place on the line.

2370. Which connection would be the more beneficial for the Walgett people, one with Narrabri, or one with Coonamble? One with Narrabri. Sheep would have a better chance of getting to good grazing country in times of drought by making towards New England by way of Narrabri, than by going to Dubbo via Coonamble.

2371. As a pastoralist, did you, in time of drought, send stock to the New England district? Yes.

2372. Would a railway, connecting Walgett with Narrabri, enable pastoralists to send starving stock to New England? Yes.

2373. Would that mean considerable traffic in times of drought? Yes, and it would save large numbers of sheep.

2374. Would New England be the best place to which to send starving stock? Yes.

2375. Where did you send your wool when you were following pastoral pursuits in these districts? To Morpeth.

2376. Was it sent for shipment direct to the English market? It first went to Sydney and then to England.

2377. Was there a line of railway to Narrabri at that time? No. There was none beyond Murrurundi.

2378.

2378. Do you think if the proposed line were constructed from Narrabri to Walgett a considerable quantity of wool would come through Newcastle for direct shipment? I think so; although the tendency seems to be to increase the number of sales in Sydney. H. J. Adams.
2 July, 1900.

2379. Has a considerable quantity been coming to Newcastle, for some time past, for direct shipment? Yes.

2380. Do you think the people would be likely to send fat stock, to any great extent, to the Maitland sale-yards? Yes. When we get back again to the ordinary condition of things in regard to stock we shall find that Aberdeen will consume a very large quantity for the export trade. As our runs are divided, and smaller holdings are brought into existence, stock will be sent to Aberdeen.

2381. Is that one of the reasons why you are in favour of the Narrabri-Walgett line? Yes; it will enable the smaller holders to get to a certain market.

2382. Could they not get to the Meat-preserving Company on the other line, supposing they were connected with the Western line? It would be more expensive for them to do so. Apart from that, the meat-works in Sydney do not do as well as the meat-works at Aberdeen. It would pay a small holder with 2,000 sheep far better to send to Aberdeen than to the meat-works in Sydney.

2383. Is the cost of conveying them to Aberdeen less? Yes; it would be very much less than going *via* Coonamble to Sydney, and having them frozen there.

2384. How do the prices at Aberdeen compare with those at the meat-works near Sydney? I think the Aberdeen prices are equal to those of Sydney. I consider that when we have a few good seasons the price of fat stock will be based on their export value, and holders will get a better net return from Aberdeen than from Sydney.

2385. Is one of your reasons for favouring the Narrabri-Walgett connection the fact that it will give the people two markets instead of one? Yes; and it will enable them in bad times to send their sheep to New England.

2386. Do you consider that a strong argument in favour of the line? A very strong one. Within the last four months I have paid £590 in sending sheep from Beaconsfield to one of my stations.

2387. Where did you get your station supplies from? Maitland.

2388. Did you purchase direct from there? Yes. Mr. Christopher Newton, years ago, said that they ought to sell cheaper in Maitland than in Sydney, because the rents are lower.

2389. Have you ever purchased supplies in Newcastle? No.

2390. Can you give any indication of the places from where the fat stock sold at Maitland come? From all parts.

2391. Do they come to any large extent from the north-western parts of the Colony? Yes.

2392. From parts which will be affected by the proposed railway? Yes; from Angledool, Narran, and other places.

2393. You are aware that the proposed railway passes through plain country, and that in good seasons there is an abundance of grass? Yes.

2394. Would those people who have fat stock in the Walgett and Collarendabri districts use the railway when there was an abundance of grass on the plains, or would they travel them? The tendency now is to put them on the trucks at once, even though there may be plenty of grass, because of the saving of time and condition.

2395. Have you a good knowledge of the country to the west and north-west of Collarendabri? Yes.

2396. In the event of a line being constructed from Narrabri to Collarendabri, what extent of country to the north-west would be served by it? Taking a radius from Collarendabri west and north-west, I should say about 30 miles.

2397. Then, besides the country in and around Collarendabri, together with the intervening country between Walgett and Collarendabri, there would be served a large area to the north and north-west, including a considerable portion of Queensland? Yes. If there were only one railway line it would pay better to construct it from Narrabri to Walgett than from Narrabri to Collarendabri, because when you get north from Collarendabri you get into a country which is not adapted for carrying stock.

2398. Do you think such a line would serve the Collarendabri people? Of course, not so well as one going to them direct.

2399. Is the country on the western side of the Barwon flooded? Yes.

2400. How would it serve Collarendabri to extend the line from Moree to Mungindi? It would do no good to Collarendabri at all. They would have to come the nearest way to the Moree line, or to Walgett. I think if you get within 50 or 60 miles of a railway you serve stock fairly well.

2401. Do you think the proposed connection of Narrabri with Walgett, with a branch to Collarendabri, would pay? I do not think it would, at once. There is fine country between Walgett and Collarendabri. The soil is adapted for growing grain.

2402. Do you think it would be used for the growth of grain if the line were constructed? I think it would, in time to come.

2403. Have you anything further to state? Only that I think stock is the main consideration in making a line of this character pay.

2404. The Railway Commissioners would have to depend on revenue from the stock and wool carriage? Yes; bones, horns, and hides, which are not saved now, would be sent away, and they would create a traffic.

2405. *Chairman.*] Do I understand you to say that you prefer an extension of the Moree line in the direction of Mungindi as against the branch from Walgett to Collarendabri? If you only want the least amount of railway to develop the largest amount of country, the best plan would be to run a line from Narrabri to Walgett and one from Moree to Mungindi, leaving Collarendabri out.

2406. Would not a branch to Collarendabri attract the whole of the Mungindi trade? Yes; it would, certainly.

2407. Mr. Stuart, railway engineer, was sent to report on a proposed extension from Moree to Collarendabri, and he winds up his report as follows:—

Owing to the flooded nature of the country necessitating higher embankments, as well as the number of bridges which would have to be constructed, I do not consider any line in this direction advisable at the present time, nor do I think it would bring in as much traffic to the railways as a line further south.

? That is quite right.

2408.

- H. J. Adams. 2408. Is not that an objection against going from Moree at all? If you go from Moree to Mungindi you do not go in that way, but in a different direction altogether.
 2 July, 1900. 2409. The flooded country begins 17 miles from Moree? Yes.
 2410. Would you not strike that flooded country whether you went from Moree to Mungindi, or from Moree to Collareendabri? Going from Mungindi you would miss it. What we call the Big River is from 15 to 20 miles wide. It is about 400 yards wide at the back of Moree, and it is 20 miles wide when you get 50 miles away.
 2411. Do you think the proposal now under consideration is a cheaper way of reaching both centres than the one you have suggested? Yes; the only thing I wanted to point out was that the best way of getting to Mungindi was from Moree. You would, however, get better traffic by going to Walgett, and then to Collareendabri, and afterwards as far as Moonee.
 2412. *Mr. Watson.*] With a line to Collareendabri, would you have as good a chance of getting the south Queensland traffic as you would with a line to Mungindi? I think so.
 2413. You would have 50 to 60 miles of road-carriage in New South Wales, with a line to Collareendabri;—when you cross Collareendabri, you have high dry country? All the area of land 25 miles below Mungindi, and on the western side, is of no good until you come to the south bank of the Moonee.
 2414. If you had a railway to Collareendabri, and wanted to extend it northwards, would you continue it towards Angledool to catch the traffic? I would prefer to go to Angledool than to make to Mungindi.

E. P. Capper.

Edward Peter Capper, merchant, West Maitland, sworn, and examined:—

- 2 July, 1900. 2415. *Mr. Shepherd.*] How long have you been in West Maitland? About fifty years.
 2416. Are you in favour of the construction of a line from Narrabri to Walgett, with a branch to Collareendabri? Yes; such a line would be of great advantage to Newcastle and Maitland; and with Federation coming there is every probability of large manufactories being established in Newcastle and Maitland, and the people of the north and north-west can be brought in touch with these by the Narrabri-Walgett extension.
 2417. What are the principal places in the Narrabri and Walgett districts, which you supply with goods? We supply Pilliga, Wee Waa, and other places as far as Collareendabri.
 2418. Do you send many goods to Walgett? We send a good deal of ironmongery. We also supply many of the stations. I think the construction of the proposed line would be an advantage, not only to merchants, but to squatters, who would be able to get their cattle away in dry weather.
 2419. Are you aware whether the people of the district would prefer a junction with Narrabri or with Coonamble? I think they would sooner have a connection from Narrabri.
 2420. Do they now chiefly do business with Maitland and Newcastle, in preference to Sydney? I think they would do it.
 2421. Do you sell much fencing-wire and netting in the districts to which you have referred? Yes; we supply a lot to the smaller holders. We also supply them with a great many agricultural implements.
 2422. Have you noticed, of late, an increased demand in those districts for agricultural implements? Yes. I may state that, with the construction of the proposed railway, the small holders would go in for a small amount of cultivation, where none exists now, on the larger holdings. That should bring about an increased demand for agricultural implements.

S W.
Chadwick.

Sheldon Western Chadwick, journalist, Newcastle, sworn, and examined:—

- 2 July, 1900. 2423. *Chairman.*] Have you had an opportunity of personally inspecting the country to be traversed by the proposed railway? Yes, twelve months ago.
 2424. Have you any statement to make concerning it? Yes. Representing the *Newcastle Morning Herald* and the Newcastle Chamber of Commerce, I went to Werris Creek, and thence to Walgett, and returned the other way. The principal thing I had to deal with was the Narrabri extension to Walgett. From the information I gathered, and from what I could see, I came to the conclusion that the railway, if built from Narrabri to Walgett, would undoubtedly be of very great assistance to that district. It appears to me to have been the only extension which is practicable in order to give the best possible results. There are three things which might be urged in favour of the line. In the first place, it would promote closer settlement. In the second place, it may be regarded in every sense as a salvage line, because of the great amount of saving which will be effected by it in time of drought and flood. In the third place, it would give a connection with the seaboard by a shorter route, and at the same time would enable producers in the district to test one excellent market, whilst, if necessary, proceeding to a second market, thus offering a choice of markets. Speaking of it as a salvage line, I found that at the time of my visit—July of last year—the country was suffering very seriously from the effects of a long drought. At that time a careful estimate had been made by several people—one in particular by Mr. Gordon, a prominent pastoralist in the north-west district, who is managing two to three large estates, and is regarded as a representative man, as a member of the Stock Board—that during that drought 1,000,000 sheep were lost in the Walgett district. Putting these down at the low estimate of 5s. per head, that would give a direct loss of £250,000. In addition to that, there was an almost entire absence of lambing that season, and that is estimated at £100,000. Therefore, the total loss in that year alone is set down at £350,000. Of course, there are other losses which might be counted in. There was the cost to pastoralists of engaging scrub-cutters, buying feed, getting it up to the north-western districts at high freight rates, and the dislocation of business. Here, however, is a direct loss of £350,000, which would have more than covered the cost of the railway. I think we may reasonably say that there is no possibility of ensuring ourselves against a repetition of that disaster. In the north and north-western districts a drought may be encountered at any time, so that the successive losses by drought and flood are not only losses to those districts, but for the whole of the Colony. By building the proposed line from Narrabri to Walgett, the people would be enabled to effect very large savings in drought or flood time by getting their stock away to the New England table-land. If, however, a railway is built from Coonamble to Walgett, we shall have no outlet, inasmuch as when we are in trouble through drought or flood, a similar set of conditions will prevail in the western districts. It is urged by some people that we shall have a choice of markets. In the case of sheep, whilst there is a considerable saving by reaching the seaboard at a shorter distance, the cost of shipping wool here is about

S. W.
Chadwick.
2 July, 1900.

on a par with Sydney. There is less handling, and freight rates and brokerage charges amount to about the same. At the same time there is a saving in distance, as against taking it round the other way. One thing I was interested in was the possibility of closer settlement, and that seems to me to be the great question. Owing to the operations of the new Land Act, a large number of holdings were taken up, and are still being taken up, and the evidence goes to show that a greater degree of security will follow, in the course of time, those men who are now taking up the smaller holdings. The people are all hopeful. Some have already succeeded in making a financial success of their holdings. In the course of time a greater degree of security will arise out of those conditions. The general opinion was that, if the railway were built from Narrabri to Walgett, they would be able to enjoy the advantages I have already noted in regard to drought and floods. At the same time they will send their fat stock into markets more easily and readily. The explanation given to me was this: "We have small holdings, and consequently a small proportion of fat stock ready for market at any given time. We may have a couple of loads. That is not sufficient for us to employ a drover to send them away, and even if we did employ one in dry seasons, the roads are so bare that it is impossible to travel them to the railway, whereas with a line passing close it is possible to ship a truck or two at short intervals, thus providing us with ready money with which we can fight our way to make a success of things." The same thing, in a larger degree, applies to the men with larger holdings. I took notice of the possibilities of successful grain-growing, and all the evidence goes to show that grain can be grown successfully. In and around Wee Waa, and connecting to the northward, there seems to be a good deal of agriculture, or country which it is possible to use for agricultural purposes, and at the same time to secure timber useful to the construction of a railway. That timber will be found in the scrub lying round to the south-east of the proposed line.

2425. How would a railway affect the saving of sheep in times of flood? A few years back there were disastrous floods in that district, and in many instances station-holders lost all their stock. In one or two instances a saving was effected by the foresight and really extraordinary experience of those engaged. The suggestion is that with the warnings which are given of the rising of the rivers, and the possibilities of low-lying country being inundated, it is possible for pastoralists to get their sheep away before the water rises to such an extent that they are drowned. The country is flat, and the water rises rapidly.

2426. *Mr. Shepherd.*] With a railway they could only get a small proportion away? Even that proportion is a saving; but the saving in time of drought would be undeniable.

2427. *Chairman.*] Had you an opportunity of inspecting the country about Collarendabri? No.

2428. Did you inspect the country on each side of the proposed route, as far as Wee Waa? Yes, crossing backwards and forwards over the river. My opinion, so far as I was able to judge of the country, is that the railway should go to Wee Waa, and whatever deviation is made it should be made after passing that town.

2429. Can you offer any opinion as to which is the better land—to the south or to the north side of the river? The north side seems to be a purely pastoral country.

2430. Did you see any indications that the south side would be likely to prove profitable from an agricultural point of view? Undoubtedly. There is a very large area of country to the south which some people speak of as being useless. When you press them for an opinion you find that their idea of useless country is in many instances that it is useless for pastoral purposes. It is a question of whether a man is a pastoralist or an agriculturist. If he is a pastoralist he regards agricultural country as useless. If an agriculturist, the reverse.

2431. Did you make any estimate of the extent of the circle which Walgett, as a centre, would drain—for instance, how far north-west would Walgett drain? It would take in the townships up to the Queensland border.

2432. *Mr. McFarlane.*] Do floods frequently occur in the Walgett district? Not very frequently. Still, the effect is bad when once they do occur.

2433. Could you give any indication of the area of land which is flooded? A considerable area is flooded; but I could not give you any idea of the extent.

2434. Would the whole of the plain country be covered? No; but a large portion of it would.

2435. Do you think that when the country is severely flooded the line of railway, if constructed, will be used for the purpose of conveying stock to the high lands of New England? Yes. In these days of weather forecasting we can get a good idea of what we are likely to experience; but I should hardly think the line of route would be submerged.

2436. Would there not be abundance of grass on the land which was not flooded? That depends on when the flood came? You might get a flood following the drought, when there was no grass available.

2437. The country might be flooded when there was no local rainfall? To a certain extent. At the close of a long drought, when everything is bare, it is possible for a sudden heavy and continued rainfall to produce a flood.

William Bethel Sharp, shipping agent, Newcastle, sworn, and examined:—

2438. *Mr. Watson.*] How long have you resided in Newcastle? Twenty years.

2439. How will the construction of the proposed line affect the interests of Newcastle? It will give a large area of wool-growing country which will ship its wool from Newcastle. That area will represent from 25,000 to 30,000 bales of wool a year. It would also give the return carriage of all the produce going to the stations and towns within that area. Another point of advantage to the Walgett district would be the fact that the haulage of wool from that district to Newcastle—the natural port of shipment—would be less by 80 or 90 miles than the haulage to Sydney. Consequently, the additional traction would be saved to the wool-grower. There would also be an additional traction saved in getting stores from this port, which could supply them on equal terms with Sydney. It has always been advocated in Newcastle that the Walgett district should be attached to Newcastle—the nearest port of shipment for the foreign markets. The rates of freight from Newcastle to London and the Continent are as cheap as they are from Sydney. Since the inauguration of the wool shipments at Newcastle, in 1881, there has been an average of from 50,000 to 60,000 bales of wool shipped yearly from Newcastle direct. In my opinion, if the railway were extended to Walgett, we could get 25,000 or 30,000 more bales of wool for handling at Newcastle.

2440. Where does that go now? A great deal of it goes down the river to Bourke, and from there by train to Sydney. Of course, this would be not only a direct advantage to the town, by the employ-

W. B. Sharp.
2 July, 1900.

- W. B. Sharp. ment of labour on the wharfs, by dumping and pressing the wool, but it would be an advantage to the railway, as far as haulage is concerned, and a direct advantage to the growers by giving them additional markets.
- 2 July, 1900. 2441. How would it be an advantage to the railway if they now get their wool carried from Bourke, which is 500 miles, to have it carried only from Walgett to Newcastle, which is 352 miles? They make a heavy discount on Bourke wool, and by carrying it the shorter distance it would be an advantage to the Railway Department.
2442. Is much wool going through Newcastle to Sydney by rail? The great proportion of it is trucked at Morpeth and then transhipped. That is a serious competition with Newcastle direct shipments, and probably the Railway Commissioners will some day see the advisableness of charging an extra rate from Morpeth, and a lesser freight to Newcastle to counteract it.
2443. It seems that there is some understanding at the present time, by which some difference is preserved in favour of Newcastle, to allow goods to be shipped at Morpeth? I believe there was a sort of arrangement between the late Commissioner, Mr. Eddy, and the steamship companies. Mr. Oliver has tried to alter it once or twice still further in favour of Sydney as against Newcastle, but he has not carried it out yet. He is naturally anxious that the wool should be carried by the railway. They could, however, do it without curtailing the direct shipments from Newcastle. There is a way of overcoming the difficulty.
2444. Do you think direct shipments are likely to increase, proportionately, or decrease, as compared with selling in the local markets and reshipping afterwards to foreign ports? That is a difficult question to answer. The present idea amongst a large number of wool-growers is to try the Sydney market, and if they do not get their prices to ship from here.
2445. That, even, would involve their taking it to Sydney in the first instance? Yes; but it is quite on the cards that before long wool sales will be established at Newcastle, which will give the same advantage to Newcastle that is given to Sydney at the present time. As far back as twelve years ago I started wool sales in Newcastle. Our first catalogue represented 2,800 bales, and the second catalogue over 3,000 bales. Competition was brisk, but, owing to a combination of the wool-buyers in Sydney and the wool-sellers, they boycotted Newcastle with a penalty of £500 against any buyer who came to Newcastle to buy wool. Thus, our life here was a short one. Such a thing could not take place now, because the trade would not allow it. It is quite possible that before long—in fact, a scheme is on hand now—to arrange for wool sales in Newcastle. If that takes place, the shipments will considerably increase at Newcastle, compared with what they have been during the last year or two, owing to the high price ruling in the Colony for wool.
2446. Would that involve duplication in the representation of firms buying for the foreign wool supply? No. When we started the wool sales in Newcastle we only had steam communication, and a man had to give up the whole of his day, and sometimes two days, to attend them. Now, when we have railway communication, we can get from Sydney in three hours and back in the same time.
2447. Should you require to dovetail your sales in with Sydney, so as to avoid the necessity of having a duplication of agents? Yes.
2448. Can buyers sample and attend an auction on the same day? I have done it on several occasions, myself. You get there at 6 o'clock in the morning, sample every bale in the catalogue, attach your prices to the catalogue, and compete accordingly at the auction.
2449. If local sales were successful, would it mean a considerable difference in the destination and method of export? Yes; a large quantity would go to the Continent direct from here, instead of being principally confined to direct shipments to London.
2450. Do the exporters usually rely upon steam communication for sending their wool home? The growing tendency now is to ship nearly the whole of the wool by steamers.
2451. In that case, would the vessels which come here for coal, and then go on to London—the regular liners usually go back to Sydney before proceeding to England? They generally come here and take their bunkers in, and cargo of frozen meat, or wool, copper, or pig-lead. Then they go to Sydney and take in so much more. Then they go to Melbourne, and finish up at Adelaide. There is no difference from here to London as compared with Sydney; in fact the charges are cheaper here than they are in Sydney. We have more pig-lead here than we can ship; we have to scud some of it to Brisbane and Sydney.
2452. Do you think it will make much difference in the steamer communication when the Port Kembla harbour is completed? I do not think it will make the slightest difference, except that it may rob us of some coal which ought to be shipped from Newcastle.
2453. It seems to me possible that, with the provision of greater facilities on the South Coast, and their coal being held to be more suitable for steam purposes, the steamers might make for there for bunker coal? The delay in going to Kembla and taking in the bunker coal will be greater than the additional expense of loading in Sydney. When they bunker in Sydney with southern or northern coal the bunkering is going on when they are loading and discharging the steamer, and there is no delay. Mount Kembla, as far as the export of wool is concerned, will not interfere with Newcastle. You can get coal here almost as cheaply as you can get it at Mount Kembla, and of much better quality.
2454. Have you attempted to find out, in regard to the larger lines of goods, what the saving is in bringing goods from Sydney to Morpeth, and then on to the Great Northern Railway line, as compared with bringing them right through by rail? I know it is much cheaper to bring the goods by steamer to Morpeth and to Newcastle than to send them right through, except the goods are in truck-loads, for which a concession is made.

Henry Deane Walsh, M.I.C.E., District Engineer, Harbours and Rivers Branch, Department of Public Works, Newcastle, sworn, and examined:—

- H. D. Walsh, M.I.C.E. 2455. *Chairman.*] Will you make a general statement as to the improvements which are being carried out in the harbour at Newcastle for the purpose of rendering it more fit to accommodate large vessels? At present we are carrying out a large new northern breakwater, an extension of the southern breakwater, a guide wall, and extensive reclamations in the north harbour. The breakwaters are being constructed with the view of deepening the present channel out to sea, and the reclamation works with a view of improving the accommodation in the north harbour.
- 2 July, 1900. 2456. What maximum depth is the harbour now capable of accommodating in the way of vessels? It is hard to say from day to day, on account of the deposit from the floods; but, as a rule, ships can go out loaded to 24 feet 3 inches, and on the completion of the works now in progress it is anticipated that we shall have 26 feet, at low water, on the bar.

2457. That is sufficiently deep to accommodate the larger class of vessels likely to trade with the Colonies? Yes; we have had vessels like the "Medic" and "Afric" in, already. We berth them on the wool-berth wharf without difficulty. H. D. Walsh,
M.I.C.E.

2458. Is the tendency, in connection with modern ships, to build with greater draft or greater beam? The tendency is chiefly towards greater beam—towards making them flatter in the floor. 2 July, 1900.

2459. What was the available depth at Newcastle twenty years ago? Our plans show that where we are berthing vessels now fully loaded—near the Horse-shoe—some few years ago they used to pull up boats to clean their bottoms, at half-tide. Now we have 15 and 18 feet of water at that place. Certain new appliances have been ordered for the port. At present we are getting out six of the newest class of hydraulic cranes, and we are putting in 1,300 feet of special wharfs to carry them. We have two dredges cleaning out the inner basin, which will give, when finished, an accommodation of 90 acres of deep water for mooring vessels. The cranes are in addition to those at present up, and their design is to load a vessel of the class of the "Langton Grange" at high water. That is about the largest vessel which would ever be required to load. At present we are making provision for deepening all along the dyke-walk. Under the old system we had 18 feet of water there, and we are now making 24 feet.

2460. *Mr. Shepherd.*] Is there any noticeable silting up with the ordinary flow of the river? The ordinary flow does not silt up, but a fresh does.

2461. To what extent does it silt up in the event of a heavy flood? During the heavy flood of 1893 we had a considerable silting in the north channel. We removed 1,750,000 tons of silt after that flood from this channel.

2462. Does it require dredging after every flood? Yes. Any harbour at the entrance to a river going through alluvial flats will require constant dredging.

2463. The broadening of the bows of a vessel would, I suppose, really make it draw less water? Yes. The tendency now is to make them flat on the bottom. They draw as much water on the bilge-chocks as they do on the keel.

2464. So that vessels of a larger tonnage can come here than came here formerly? Yes. The larger tonnage does not mean deeper draft.

Michael March, wool manager, Dalgety & Co., Ltd., Newcastle, sworn, and examined:—

2465. *Mr. Shepherd.*] How long have you been manager of the wool department for Dalgety & Co.? M. March.
Seven or eight years.

2466. What quantity of wool has passed through your hands during the last twelve months? About 20,000 bales. 2 July, 1900.

2467. Has there been a general increase? There has been a falling off, principally on account of the drought. We have had a drought now for five years. The greatest falling off has been in the Walgett district.

2468. What distance do you receive wool from? From the whole of that district, including Pilliga, Collarendabri, and Angledool.

2469. Do you get any from over the border? Yes; several clips. The Australian Pastoral Company do not send it through us, but to other agents; and they have several stations. They have about 5,000 bales from Queensland. We get wool from the Angledool district and as far north-west as Goodooga, and several clips from the southern portion of Queensland.

2470. What effect do you think the construction of the proposed line would have upon those districts? It would considerably increase settlement.

2471. Do you find the country is more productive when there is closer settlement? Undoubtedly.

2472. What do you suppose the increase of production on an area of 500,000 acres would be if it were divided into runs of from 5,000 acres to 10,000 acres? Probably one-third. Of course, you cannot get 100,000 acres of good land in one piece, but there would be a very large increase.

2473. How would small holders, as opposed to larger holders, obtain an advantage by the construction of the railway? It is always an advantage to have a railway as near as possible.

2474. As a rule, small holders cannot get a sufficient number of stock to send away? No; if a man had to travel them 100 miles to get to Narrabri, it would not pay him; but with a railway handy he could send a truckload at a time.

2475. There would, I suppose, in sending them on a journey of that distance, be a falling off in the sheep? Yes; between Wee Waa and Narrabri there is not a blade of grass to be got, and I have been told on several occasions that the sheep lost in value 3d. per head on that journey.

2476. Would there be any advantage in shifting starving stock in a bad season? Yes; if they could have got to the New England district last season, thousands would have been saved. The tendency was to hang on as long as possible, thinking that the rain would come, because when it does come, the herbage springs up quickly.

2477. What is your opinion of the country which will be served by the proposed railway? I have always thought that the Namoi was one of the richest districts in the Colony; it is one of the best grazing districts we have.

2478. At what do you estimate its carrying capacity? A sheep to the acre. Many selectors have carried that for years.

2479. Have you seen any attempt at cultivation? Yes; and it has succeeded fairly well. They have lately started a flour-mill at Narrabri, and the black soil has turned out well for growing wheat.

2480. Have you heard of any failures there in producing wheat? No.

2481. Have you any further information to give? I have noticed that the settlers of the district are well-to-do, and that is a good indication of the nature of the country. Whenever any land is thrown open, there is a great rush for it, people coming from all parts of New South Wales, and even Victoria.

2482. The holdings there now are of considerable extent? Yes; I may state that the whole of the wool comes to Narrabri West from the Walgett district, and it seems to me that is strong evidence in favour of the railway going there rather than from Coonamble.

2483. Are you aware whether there is any wool going from Walgett to Dubbo? No. I think it all comes to Narrabri. During the last twelve months the railway received at Narrabri 22,310 bales of wool from Walgett and north western districts. That is however not a fair criterion of what the district can carry, because that is the result of five years of drought, last year being the worst of all. Several stations lost as much as 70 per cent., some 50 per cent., and many of them 30 per cent. and 40 per cent. The Moree line

- M. March.
2 July, 1900.
- line is of no use to those people. They do not send to Moree now. Some of the wool may go to Millie, but very little.
2484. In the event of a further extension towards Queensland, do you think that the line ought to go from Moree, or from Walgett? I think it should go towards Collareendabri.
2485. Do you send your wool to Sydney, or ship it direct? Direct; we have every facility here which they possess in Sydney, and the steamers come all the year round. With regard to the river-loading we find that the people about Walgett do not care for it, because it is too uncertain.
2486. *Mr. McFurlane.*] It has been stated that there is a strong tendency now on the part of the wool-growers to sell locally? It all depends on the prices. If the prices in Sydney are going to be good they will probably sell in Sydney as they did last year. The prices about October, November, and December were extraordinarily high—1s. 6d. a lb. During this last season shipping at Newcastle has been worse than we have experienced, for that reason.
2487. During the past five years has the quantity of wool passing through the hands of your firm shown a tendency to increase? About the same. Some years it has been up and sometimes down.
2488. Is there any probability of an increase in direct shipments? I think there is this year. The market is pretty low, and some of the buyers have got into difficulties.
2489. It has also been stated that there is some likelihood of establishing wool sales in Newcastle? I think they would be successful. It is quite on the cards that they will be established.
2490. Do you think the wool-buyers in Sydney would attend the Newcastle sales regularly? They go to Brisbane now, and I do not see why they should not come here.
2491. Would the catalogues at Newcastle be sufficiently large to induce them to come? I think they would. The squatters have often asked why we do not have them here. Mr. Sharp has explained the reason, namely, that it is on account of the jealousy of some of the Sydney brokers.
2492. In the event of these sales being established, and proving successful, what effect would they have on the wool trade;—would they induce more direct shipment to London, from Newcastle, and less to Sydney? They would, because all the wool bought here would have to be shipped direct to England or continental ports.
2493. Are the freights the same between Newcastle and London, and Sydney and London? Exactly the same. Freights to continental ports also are the same as from Sydney.
2494. How about loading the ships? There are better facilities for loading here, and there is the same expedition for getting them away.
- 2494½. Have you anything else to add? I would like to point out that if the railway be taken from Narrabri to Walgett it will give the Walgett people a choice of markets—Maitland for stock, Newcastle for shipping (and sale of wool when sales established), both considerably nearer than Sydney by any other route; and even if they desire to send to Sydney they can do so, the distance being about the same as *via* Coonamble and Dubbo. On the other hand, if the railway be taken *via* Coonamble, the Walgett people will be in a measure penalized by being forced to send their produce by the longer route to the seaboard, and an injustice be done to Newcastle and the Hunter District—the natural outlet for the north-west.

TUESDAY, 3 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GALRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collareendabri.

James William Boulton, Superintendent of Public Watering Places and Artesian Boring, Department of Public Works, sworn, and examined:—

- J. W. Boulton.
3 July, 1900.
2495. *Mr. Watson.*] Are you acquainted with the country generally from Narrabri towards Walgett and Collareendabri? Yes.
2496. How much, if any, of the area that would be affected by either of these lines would you consider to be in the artesian area? The whole of it.
2497. Can you say what you have done in the way of boring, so far, in that locality, generally? On the Woolabra-Collareendabri survey we have the Woolabra bore and the Bulyeroi bore. Besides those, there are contracts advertised now for several bores, under the Artesian Wells Act.
2498. These, I understand, are where the local owners, or holders, guarantee the expense? Yes. There are two between Collareendabri and Bulyeroi—they are, Oreel bore No. 1, and No. 2.
2499. What is the flow of the two bores you have? Woolabra, about 700,000 gallons, and Bulyeroi, 1,700,000 gallons. Woolabra is not a very deep bore—about 1,700 feet; Bulyeroi is 2,424.
2500. From Narrabri towards Walgett, have you any bores north of the river? Not directly on the road, but one has been asked for at Wee Waa—we have not settled about that; and there is one being put down by the Public Works Department for a town supply at Narrabri; and there is one at a place called Come-by-Chance, which is south of the Namoi. That is being done under the Artesian Wells Act; and then the Walgett bore will be done; the interest is being guaranteed. You may take a line from Warialda to the eastward of Bingara and of Barraba down to Gunnedah, and then across to the north of Coonabarabran, down to Terrable, and all that country is within the artesian belt.
2501. Do you find large flows at Come-by-Chance and Walgett? The contract tenders are only just invited for those; but as you go that way to the westward you get deeper ground and better flows; and on the road from Walgett to Coonamble, at Tuloorra, we have the biggest flow in the Colony—over 2,000,000 gallons a day.
2502. At or near the Tuloorra bore some experiments are being made, I understand, with cultivation? They are being done in a very slipshod, perfunctory way—nothing systematic. It is only the caretaker doing what he can.

2503.

J. W. Boulton.

3 July, 1900.

2503. I mean by an adjoining owner, Mr. Bell? Yes, the flow is being utilised by a selector named Bell, to a certain extent.

2504. Mr. Bell, when speaking to the Committee on the subject, seemed to have the opinion that he would be able to utilise that water, if he were given an opportunity to supplement the rainfall, with regard to a large area of land, for the purpose of putting it under crop? Yes, there is no doubt he would. The trouble is that he does not care to pay sufficient for it.

2505. Speaking of that district generally, do you think that there would be any possibility of getting a supply from artesian bores to enable large areas to be irrigated? There is no doubt that is a development that will come within the next twenty years; but it is a good way ahead of us at the present time.

We are just in the same position as they were in America twenty-seven years ago. When they started their settlements at Fresno, Riverside, and Lake View, they had the same disabilities as we have—want of knowledge on the part of the people as regards the suitability of the water, and distance from market, and perhaps disabilities which we have not as to the alkalinity of the soil, and the difference of climate. They had to contend against all those things, and yet they have made a most wonderful development there.

2506. At the Pera bore, I understand, there has been a falling off in the amount of water got from the original bore? Yes.

2507. Has that experience been repeated in regard to the bores in this district? No. There has been no experience of that description, so far as I have heard of, in connection with any of the bores that have been put down in the trias formation, which underlies the cretaceous.

2508. Does it underlie the strata you have at Pera? I cannot say it does, continuously; but at one bore right out towards Milparinka we get the same coal measures as we get in the trias here, and which they get in the Lea Creek coal-beds in South Australia. It may be that there has been an intrusion of the basalt rocks through the trias which has caused a disturbance in that particular part between Bourke and Wanaaring. That is very probable.

2509. Have you formed any idea as to the area that it would be possible to irrigate with one of these bores;—it would, of course, depend on the rainfall for a portion of the year? Yes, and it depends on the nature of the crop you are going to irrigate, and also on the nature of the soil you are experimenting with. In every country there is a different duty assigned to water. We have taken an average one as a basis to go upon; that is, a cubic foot per second as sufficient to irrigate 250 acres of land. That is the American standard. When I was giving evidence at an inquiry some time ago, I gave a table showing what the duty of water was in different countries. That inquiry was in connection with the locking of the Darling, and the information I then gave was as follows:—

| | Duty of 1 c.f. per second. |
|---------------------------|----------------------------|
| <i>India.</i> | |
| Eastern Jumna Canal | 306 acres. |
| Western Jumna Canal | 240 " |
| Ganges Canal | 232 " |
| Swat River Canal | 216 " |
| Bari Doab Canal | 227 " |
| <i>Spain.</i> | |
| Henares Canal | 157 " |
| Valencia Canal | 242 " |

2510. As to the sources of supply, do you think they are sufficient to permit of a large area of country, or of any proportion of the area within the artesian basin, being irrigated? I think so. For instance, in America, at the Riverside settlement, they have twenty-seven wells grouped on an area of 700 acres. The water from those twenty-seven wells is all gathered together, and carried in a flume down to the land to be irrigated.

2511. That would seem to imply that the yield from one of the wells was not very great? They got about 11,000,000 gallons a day out of the twenty-seven wells, and from experiments they made as to the interference of one well with another, they found that with one well shut down, and the rest all open, that one well was affected only to the extent of about 30,000 gallons a day. According to that, the interference was not very much. How far that experiment would apply to our own country we have no possible means of telling until we put the bores down.

2512. But, as far as investigation has gone, does it seem that we have as large an intake area, proportionately, in Australia as they have in America? Well, it is entirely different. In America they have a series of self-contained basins. Here we seem to have one huge undersheet. For instance, in America the basin at the St. Louis valley covers an area of about 9,000 square miles, and within that they have 3,700 flowing wells. Then there is the Denver basin, also a self-contained basin, and Kern Valley, and a large extent of Southern California, too. But here we have an area of 62,000 square miles, and have just 200 wells on it.

2513. Then we are not near the limit yet? No: I do not think we are.

2514. The estimate of 1 cubic foot per second for 250 acres would mean that the flow would be—what? 548,000 gallons in twenty-four hours. That is not taking into consideration the natural rainfall at all.

2515. You are presuming that they are relying absolutely on the artesian waters? Yes.

2516. But that does not mean that the flow is over the whole of the 250 acres on one day, but that you do sections of the area in rotation? Yes. That would give you about equal to something like 35 inches of rain in the year, roughly speaking.

2517. You irrigate the total area of 250 acres, but you do it in sections, day or week about, as the case may be? That, of course, depends absolutely on what you are doing.

2518. You do not spread it over the whole area at one time? No, you could not do it.

2519. A flow of 500,000 gallons, roughly, per day, is sufficient to irrigate 250 acres all the year round without any rainfall? Yes.

2520. So presuming the supply is there, it is only a question of having that area to each bore? Yes.

2521. Leaving out of count the Tuloor bore, have there been any experiments elsewhere to your knowledge, in this district, in regard to irrigation? We have done a little at Woolabra—the bore on the Railway line—and, on the other side of Collarendabri, we have done a good deal at Moongulla.

2522. At Moongulla the country is somewhat different from what it would be between Woolabra and Collarendabri? Yes.

J. W.
Boulton.
3 July, 1900.

2523. Do you think it is more suitable for irrigation? I would not say that. A good many people prefer the red soil; but I must confess that I have a weakness for the black soil for irrigation. Some patches of the black soil are exceedingly stiff, and want a large amount of cultivation; but there is no comparison between the two soils, as to richness. Red soil is more easily worked than black soil.
2524. On some of the black soil between Walgett and Coonamble the people seem to run just a couple of harrows over it without using any ploughs at all? Yes.
2525. Having in view your previous experience on the land in the western country before you joined the Department, and your knowledge of the artesian probabilities, would you say that there is a fair prospect of extensive agriculture through irrigation in these districts, within a reasonable time? I think so.
2526. *Dr. Garran.*] Have we any successful agricultural irrigation in the Colony at the present time? So far as actual production has been concerned, yes; but I cannot say so from a financial point of view—at least so far as the Government or co-operative undertaking is concerned. I think you can see it on private places.
2527. So far as Pera bore is concerned, the latest evidence is that the number of cultivators has diminished? Yes.
2528. And they would like to get away if the Government would buy them out? I doubt if they would—all of them.
2529. That was the statement recently? One of the men who was so anxious to sell out made an offer to the Minister to lease the Government farm subsequently to the time when he made the offer to sell out.
2530. Well, that is a very small settlement to have a superintendent there to look after them? I do not think so, and I will tell you why. Here we have an experiment that may or may not have a very important bearing on a very large class of country in our artesian belt, and to carry out an experiment of that sort we have to take the class of men that is available. We are limited by the conditions under which that land was leased, and we are obliged to take whoever chooses to offer himself as a tenant for the land. The suitability of the man, or his experience, is not taken into consideration at all. The success or otherwise of the experiment, to my mind, absolutely depends on the class of men you get. If you get men who have been used to a pastoral life, or men who have been used to office life—bank clerks or lawyers' clerks—and put them suddenly on the land there, to develop an irrigation settlement, then, as far as I can see, you are very heavily handicapped. It was more with the idea of educating and trying to inculcate into these people the right methods that we had the experimental farm there; and if that thing is once shown to be a success, and if the class of settler that we have there can make a success of it, and make a living out of the 20 acres, in my opinion it will have a great bearing on a lot of that western country.
2531. Then you look upon it rather as a school, at present, rather than anything else? Certainly; it is purely an experiment.
2532. Has either the Wentworth or the Hay establishment been successful? That I cannot say. I never was there, nor have I seen them. I do not think they are carried on under the Agricultural Department, either.
2533. Then your idea is that before we can make a success of irrigation we have to train the men? We have either to train the men, or get a population that are used to that particular class of life, and the growing of those particular products.
2534. But we have not the men in the Colony? No, I think not.
2535. We have either to import them or train them? Yes. I think that when once a few of them show what can be done, and that a living can be made in that way, a lot of people will go into it. To refer again to America, I may say that when the Fresno settlement was started, I think 500 people joined together and formed a colony there. They got 5,000 acres of land, and they had just the same difficulties, just the same trouble. They were of different temperaments, and were different classes of workers, and it was only after years of struggling that they managed to bring the thing properly to the front. We shall just have the same here.

WEDNESDAY, 4 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

| | |
|---|-----------------------------|
| The Hon. PATRICK LINDSAY CRAWFORD SHEPHERD. | JOHN CHRISTIAN WATSON, Esq. |
| The Hon. ANDREW GARRAN, LL.D. | ROBERT HENRY LEVIEN, Esq. |
| | JOHN McFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarenebri.

John Kenneth Mackay, grazier, Gunnedah, sworn, and examined:—

J. K.
Mackay.
4 July, 1900.

2536. *Mr. McFarlane.*] Have you a good general knowledge of the district between Narrabri and Walgett and Collarenebri? I have lived in the district, served by the proposed routes, for the past twenty years, until three years ago, when I went to reside at Gunnedah.
2537. What, in your opinion, is the best route for connecting the western parts with either Narrabri West or Narrabri East? I think the connection should be from Narrabri West.
2538. Would a line from that point pass through country equally as good, if it started from Narrabri East? Not from a pastoral point of view. The north side of the Namoi is the best pastoral land.
2539. What is the character of the land on the south side of the Namoi? It is more arable. It is country more capable of improvement than the northern part. There is a lot of good pastoral land on the south side; but I think the proposed route would go through the scrub land, which, with improvements, will carry a good population.
2540. For pastoral or agricultural purposes? Both, I should think.
2541. Is the land heavily timbered? Yes; the land is not so sweet as is to be found on the other side, for stock, and, I think, it never will be.

2542. For the purposes of settlement, which side of the river would carry the larger population, with improvements? I think the north side would carry the bigger population, there is such a large scope of good country. It is a wool-growing more than an agricultural country.
2543. You say that the south side would be suitable for agriculture? More so than the north.
2544. Will not an agricultural area carry a larger population than a pastoral area? That is a question which I could not very well answer. I remember well when the land about Narrabri West was scrubbed and fit for nothing. Now you see herbage and wheat crops equal to any in the country.
2545. Is that land of a similar character to the land on the south side of the Namoi, between Narrabri and Wee Waa? A great portion of it is, judging from what I remember of Narrabri West before the railway was taken there.
2546. Would you class that as fairly good agricultural country? Very good—nothing better for certain crops.
2547. What would it be capable of producing? It would grow wheat; but I do not think it would grow lucerne. You want more alluvial soil for lucerne; but it would grow wheat, oats, and barley. I have seen crops of maize in that timbered country; but, as a rule, there is not the amount of moisture which is required.
2548. If the line were constructed on the south side of the river, do you think that land would be taken up for agricultural purposes? I think so. Even now, without railways, there is a lot of settlement going on amongst the scrub.
2549. Is that free selection? Yes; on the cleared line to Pilliga. I see improvements every time I travel there.
2550. Is there much land there under cultivation now? No. I do not say that there is much of it under cultivation; but I have seen crops growing there, and there are no means of making use of them.
2551. Is that due to the want of sufficient facilities for conveying the produce to market? I should say so.
2552. Do you know the town of Wee Waa? Yes.
2553. Where the two different routes junction near Burren, the line from Narrabri East on the north side of the river would not touch Wee Waa, whilst to the south of Narrabri West it would go through Wee Waa;—do you think the town of Wee Waa is of sufficient importance to justify its being connected by rail? It is just a matter whether vested interests are to be considered. Wee Waa is a flourishing town, with a lot of arable land about it. I think myself that the railway should run the nearest possible way from the outlying districts to the coast.
2554. Would not some consideration have to be given to the nature of the country, or to the towns it passes through? Of course. I do not say anything about the town. I think the people out west should be considered more than the local towns. I should say that what the back country wants is the most direct route to the seaboard. At present the stock is shunted and kept in the trucks longer than is necessary.
2555. Would it make much difference—I mean, with regard to length of time—in conveying stock from Walgett by the route through Wee Waa, as compared with the route on the northern side of the river? I think it would make a difference.
2556. Any material difference? I go upon the principle that any difference should be avoided, if it is possible to avoid it.
2557. What is your opinion of the character of the country from Wee Waa towards Walgett and Collarendabri? It is a wool-producing country, pure and simple. Of course, it will grow wheat. I have grown wheat out there myself.
2558. What has your experience been? Not good. I have sown for three years in succession, and have had no return, and then I would get a good crop.
2559. Are the failures due to lack of richness in the soil, or to drought? More to the drought. A certain amount may be due to want of proper cultivation.
2560. Do you think it would have any material bearing in carrying out agriculture by the extension of artesian bores, which have been found to be successful in several parts of the district? I have not much faith in irrigation by means of artesian bores—I mean for agriculture.
2561. Why is that so? It is too expensive.
2562. Can you give any information as to what the country is best suited for, or whether there is much available land to be taken up for settlement, and whether such available land would be taken up for settlement, if railway facilities were afforded? Undoubtedly it would be taken up; I do not say for cultivation. The only cultivation we should do out there would be for our own protection—feed during dry times.
2563. Do you think the land is of sufficiently good quality to produce hay, wheat, and other fodder for stock? It will produce hay and wheat in certain seasons.
2564. It has been stated by those engaged in pastoral pursuits that very great loss has been sustained during periods of droughts by their not being able to convey stock to districts where there is feed? We have a property 40 miles below Walgett, and another 30 miles on this side of Walgett, from which we have had to shift every sheep we could travel last year. We have 40,000 sheep away from the station below Walgett at the present time.
2565. In what direction have you sent them? I have 16,000 at New England, and the balance are on the Namoi.
2566. Have you and others, who have suffered during drought, experienced much difficulty in conveying starving stock to New England? Yes; the roads, of course, as the drought increases, get bare, and you can do nothing but cut scrub. Last year, whilst shifting the balance of my sheep, I had to cut scrub and lay hay at Burren and other places. I had some (20 tons) tons of it.
2567. Does that mean a large expense? Yes; but it is the only means of shifting the stock.
2568. If the proposed railway were constructed, would it be used to a large extent during times of drought, such as those we have experienced during the last few years, for sending stock to New England and other districts? I should say so.
2569. Do you think it would be a great saving to stockowners if they had such a railway in times of drought? Yes; and it would be a saving to the country generally. The loss of stock is a national loss.
2570. Do you think the line would also be used for obtaining produce for feeding stock? To a certain extent.

- J. K. Mackay. 2571. Different phases of the question as to whether it would pay the stockowners to get produce from other districts with which to feed starving stock have been placed before us;—what is your experience? It would only pay up to a certain limit. It would depend on how long the drought lasted. Some holders last year carried as much as 1,500 tons of feed to their stock in the Moree district.
- 4 July, 1900. 2572. Carriage at the present time is, I understand, so costly that it means a considerable outlay to obtain produce to bring to Walgett? Yes; it could not be done for any large amount of stock.
2573. In the event of the railway being constructed, do you think much stock will be driven away by road? There always will be droving whilst the routes are practicable.
2574. But there would be no necessity for removing stock if there were grass? No. But when the routes are impassable the only thing to do is to truck them.
2575. Do you think that would be a considerable item in railway revenue if the proposed line were constructed? Yes.
2576. Is the Walgett district a good fattening country for sheep? There is nothing better.
2577. Where are the fat sheep usually sent to? Since the freezing works have been in operation they have been sent to Aberdeen. They are also sent to the Sydney market and Maitland. Aberdeen, however, has been our salvation during the past few years.
2578. Where do you principally send your fat sheep? To Aberdeen and Sydney and Maitland.
2579. Where does the larger portion go to? To Sydney. There are some stations which would sell almost wholly to Aberdeen; for instance, Collymungle station nearly always sells to Aberdeen. Other owners freeze on their own account, and ship at Newcastle, but people who make their sheep absolutely prime would rather sell in the Sydney market.
2580. Would the wool be sent to the Sydney or to the Newcastle market? To the Newcastle market, for shipment to London.
2581. What proportion would that amount bear to the quantity of wool produced in the district? I could not say definitely, but I should think more than one-half. It depends on the local market here. If the Sydney market rules high, people sell there.
2582. Is not the Sydney market to a large extent ruled by the prices realised in the London market? To a certain extent, but there are times when the Sydney market has a boom.
2583. If the proposed railway were constructed, would the stockowners put their stock upon it at the nearest railway stations, or would they drive them through the country to Narrabri, as they do at present? When the railway first came to Narrabri stockowners travelled their stock on the routes, but as time has gone on, we have found that it pays us better to truck them and pay the rate. I am referring to fat stock, and not to store stock. It undoubtedly pays to truck them.
2584. Is it your opinion that fat stock would be put on the railway at the nearest railway station rather than that they would be driven even through good country? Yes, it pays. People may not do it until they find it out by experience. Where I live I can travel stock well towards the markets for 60 or 100 miles, but I find it pays me best to truck them.
2585. Is that because the stock lose in quality whilst droving? They lose in quality slightly; but you would order your trucks to meet a market, and, of course, you would like to get into that market. If I start stock on the road, I do not know what market they will hit.
2586. There has been a little diversity of opinion as to whether the proposed line will be the best, or whether it will be better to connect Walgett with Coonamble, with a view to joining the Western line at Dubbo? I think, in the best interests of the district of Walgett, and of the country generally, a connection with Narrabri would be preferable to a connection with Coonamble.
2587. Does that mean that it would be cheaper to send stock in that direction, or does it mean that they will have better accommodation and better markets? No. I think the fact of their being connected with New England would be an insurance to all the stock-owners in the district.
2588. Is that your principal reason for suggesting that Walgett should be connected with Narrabri rather than with Coonamble, viz., that it will afford facilities in times of drought for sending stock to the New England district for feed? Yes. It would also give them a shorter rail-carriage to the sea-board.
2589. When you speak of the sea-board, do you mean Sydney or Newcastle? I understand that with a Narrabri to Walgett connection there would be less haulage than by any other route to the sea-board, unless we except the Mudgee route.
2590. Would an extension from Mudgee prove of any material advantage in the event of Walgett and Coonamble being connected? It would probably be the most direct route. My own idea is that there should be a railway, on the south side of the Namoi, to Walgett, with a junction from Coonamble to Pilliga, or Come-by-Chance, or Baradine Creek.
2591. Do you think a branch to Collarendabri would be the means of affording additional facilities to those residing in that part of the country, and to the north-west? Yes.
2592. Do you think there would be a probability of that branch paying? It will drain a very large area of country. I know of no larger area of country that will be drained.
2593. What area of country will it drain? From Mogil Mogil to Goodooga.
2594. Do you think it would draw any traffic from the Queensland border? I should say so.
2595. What distance west from Walgett do you think the country would be served by an extension from Narrabri? I think 35 miles south-west and west.
2596. Which extension would serve the greater extent of country—one between Narrabri and Walgett, or one between Coonamble and Walgett? One between Narrabri and Walgett. Between Coonamble and Walgett there is a lot of flooded country.
2597. Is there much flooded country in the other district? Of course, there are floods and floods.
2598. Is the plain country between Burren and Walgett flooded to any extent? There is a certain amount of flood from Pian Creek. During the flood of 1890, Brianbri, towards the Barwon, was all under water, with the exception of Eurie Eurie plain.
2599. Was that flooded to any depth? Yes; in places a horse could swim through it.
2600. Does it remain in that condition for any length of time? During the 1890 flood it remained there for about eight days. In 1864, however I understand that the water remained there for almost six weeks.
2601. Where do the graziers who would be affected by the proposed extension obtain their supplies from? Principally, from Newcastle. Of course there are people who have old friends in Sydney with whom they deal. When, however, they come down to commercial lines, they must deal with Newcastle. Personally, I deal with Newcastle, wholly.
- 2602.

2602. It has been stated by a number of stockowners that considerable loss is involved through their not having railway facilities for sending small lots of fat stock to market. They state that it does not pay to grow them;—have you any experience in that direction? There certainly is a loss to them. Dealers go round, and buy up little lots, put them together, and make up a mob, which they can drive and then truck. Perhaps they make a profit out of them. J. K. Mackay.
4 July, 1900
2603. Does it pay to travel small lots? No.
2604. Do you think the country is of such a character that, with railway communication, closer settlement, followed by increased traffic, will prevail? I think so.
2605. Do you think that the country would maintain a large population? I do not say it would maintain a large population. All that wool growing country is practically stocked for a certain number of years. It may carry a few more people on small holdings; but the wool and stock produce will not be increased. Of course, small paddocks do give a bigger return. We can carry more stock when the country is cut into smaller paddocks; but the open country is now practically being used up to its fullest extent.
2606. I suppose the plain country is not capable of much improvement? No; it is naturally good country.
2607. From which have you obtained the better results—the wool shipped direct, or the wool sold in the local market? That is a question which I could not answer. We have not settled it ourselves. London, however, is the market of the world, and, over a series of years, it is undoubtedly the ruling market.
2608. It has been stated that there are prospects of holding wool sales at Newcastle;—how do you think they would suit the graziers in the district to which you have been referring? They would suit the graziers very well if we could induce the wool-buyers to attend them.
2609. Do you think they would attend the sales if sufficiently large catalogues were offered? I think so. They were starting once before, but owing, perhaps, to want of organisation and proper management, they were given up. However, we hope to have wool sales there.
2610. Do you think the graziers and the north-west and western districts would appreciate a market if it were established at Newcastle? I think so.
2611. Do you think sufficiently large catalogues of wool would be offered to induce purchasers to go there? I think so; the purchasers go to large centres now. Of course, if they say they will not buy, except in Sydney, we shall have to send to Sydney, as we used to send to London. They have had to go to Sydney to buy, and the probability is that, in the near future, they will have to go to Newcastle.
2612. Would the result be a saving to wool-growers in the north and north-west if the sales were held at Newcastle instead of at Sydney? I think it would.
2613. Do you think they would prefer to send to the Newcastle market, provided the results of the sales were equal? I think so.
2614. *Dr. Garran.*] Have you had considerable experience in shifting stock in dry weather? Yes.
2615. What proportion of your stock have you sent away? Out of 60,000 sheep on one holding at Brewan—below Walgett—we sent away 40,000.
2616. Supposing you had wished to send the whole away, do you think you could have found grass for them? Yes; in New England at that time.
2617. Could the stockowners in the whole of the district have found grass? I think not.
2618. There is a difference of opinion amongst witnesses as to whether the New England district could find room for all the starving stock of the west, even if we built railways out there? I do not think the New England district could find room for the whole of the starving stock. The west is a very big country. New England last year took a great number of sheep; I could not say how many, but it was our salvation.
2619. Could you give a rough guess as to the number of stock sent to New England last year? I could not.
2620. Do you think it took 1,000,000? I do not suppose it did.
2621. Could it have taken 2,000,000? I do not think so.
2622. Supposing a railway had been constructed, not only to Collarendabri, but right on to Angledool, and it had been in a position to pour into New England double the number of stock which were sent there, could the grass have been found for them? No. I had a difficulty in finding grass for the last lot of sheep I sent there. New England at that time was on its last legs, so far as the supply of grass was concerned.
2623. You do not think it could have carried many more? No.
2624. Can you tell us how it is that the New England runs are not sufficiently stocked by their owners as to have all this grass to spare? New England is a poor country, and the people have to keep their paddocks under-stocked, so that the stock may get the choicest grasses, or the choicest parts of the grasses.
2625. They live on inferior grass? Yes.
2626. Is that what the sheep from the west get? Yes.
2627. I suppose they are obliged to take that or nothing? They are glad to get it. It is the only thing which has saved, not only myself, but most of the other holders.
2628. Then the western sheep are thankful for the grass which the New England sheep will not eat? Yes. I may mention that, on the Cryon run, out of 14,000 sheep, less than 1,000 were left. We could not get them away, and I had to feed them on hay and scrub the whole of the way to Narrabri. I did that without very much loss. On the adjoining run—Gorian—out of 56,000 sheep only 15,000 remained at the end of the drought; the rest were lost.
2629. If there had been grass to which to send them, would it have paid to send them if they could have been got away? Undoubtedly.
2630. How much does it cost for sheep to send them to New England and get them back, including the hay and all transit expenses? Last year I had 11,800 sheep, which travelled for over twelve months. I shorn them, and when they returned to the station the accounts were made up, and I found they had cost 2s. 3d. per head.
2631. The shearing expenses would have had to be incurred under any circumstances? Yes; the shearing expenses amounted to about 5d. per head.
2632. Is the amount you have mentioned a net amount, after allowing for the wool they had grown in the twelve months? No. They cost me 2s. 3d. per head, but I was considerably in pocket from the wool which I cut. Then I had my sheep to the good.
2633. Had you a better clip than you would have had had you kept them at home? Yes; it was a good investment.

- J. K. Mackay. 2634. You saved your sheep at a cost of 2s. 3d. per head? Yes; allowing for all losses.
- 4 July, 1900. 2635. Supposing we had railways out to the west which were connected with fodder-growing districts, would it be cheaper to send the sheep to the fodder, or the fodder to the sheep? I think it would be cheaper to send the sheep to the fodder.
2636. That is, to the live fodder? Yes.
2637. I suppose you would save all the expense of reaping, harvesting, chaff-cutting, and so on? Yes. It is expensive to feed the stock when you get the fodder out.
2638. Should you have to bring your sheep to the hay on the run? We should have to cart it about, and to scatter it about is expensive.
2639. Do you think it would cost too much to do that? Yes.
2640. A great deal has been done in that way during the last few years;—can you say how much per annum it has taken to keep a sheep alive by the process of taking the fodder to the sheep? No; I have not gone into the matter.
2641. Have you heard your neighbours say anything about it? No. I have heard people say that it requires 3 lb. of hay per day to keep one sheep.
2642. I suppose that the squatters at Collarendabri are much better off than the squatters on the Darling? Yes.
2643. Do you think that squatters on the Darling could send their sheep to New England? No. The country south of the Marra Creek is practically closed to stock getting off. I could scarcely get them away from our station at the junction of the Marra Creek.
2644. You are, I presume, always hoping for rain, and you wait too long, and cannot get them away? Yes.
2645. If they could be got away in time by rail, would it pay to send them to the east? Yes.
2646. Then, if they cannot be got away, will it pay to send the fodder to them? I think so.
2647. If you had a run west of Bourke you would, I presume, make an effort to get the fodder to the sheep rather than see them die? Yes. Those who have done that this year have been well paid for their trouble. Many people did not do it, and they lost their sheep. Those who saved their sheep have them now, and can sell them at high prices.
2648. The question is, has it cost more than the sheep are worth? Not in our case. We are very well satisfied.
2649. You will remember that in that district they have now had five very dry years? We have had five dry years about Walgett as well.
2650. I suppose you have seen green grass during that time? Yes; but we have had no lambs.
2651. Not for five years? We have had none for the last two years, and of the lambs which were dropped three years ago, only a small percentage pulled through. We have had three bad years.
2652. Would it pay to feed the sheep for three bad years running? I have practically been feeding them. I have had 40,000 sheep away for two years. I have moved them about to places where I could rent feed.
2653. Your policy is to keep your sheep alive if possible? Yes.
2654. And if you could do it in no other way, you would go to the expense of almost the value of the sheep by bringing feed to them to keep them alive? Certainly; in fact, it is the only salvation we have.
2655. *Chairman.*] Can you give any idea of the value of the railway to that district from the point of view of the frozen meat trade;—would the presence of a railway in that district, and in connection with that trade, have the effect of adding to the carrying capacity of your run? Do you mean by your question, would it help us if we had a frozen depôt at Walgett?
2656. You can look at the matter in that light if you wish? Undoubtedly it would help us. The carriage on the dead carcasses would be cheaper, and there would be a better return all round.
2657. Would it give you a chance of carrying more stock in a good year than you would care to risk carrying now? Yes, it would do that. That is why the Aberdeen works have been so beneficial to us on the plains. We know that they can deal with so many sheep, and they are not put on the Sydney market. It is really a sort of insurance to us.
2658. Would the construction of a railway to Walgett enable you, taking one year with another, to carry more sheep than you do at present? Yes. If there were a frozen depôt at Walgett, we could get the sheep away to it. Now, by the time we get sheep to railway communication, they lose so much in condition that they are not fit for freezing.
2659. Have you any further statement to make? I should like to see the railway on the south side of the Namoi for more reasons than one. The Stock Boards, through the Government, are spending £9,000 on a rabbit-proof fence. I have always considered that if a railway went through that scrub, we should, to a large extent, get rid of the marsupials, and deal with the prickly pear pest effectually. That scrub, with its dogs and rabbits, is a menace to us. The £9,000 would be thrown away if only an ordinary fence is put up. If a railway line were constructed, the caretakers on the railway could look after the rabbit-proof fence, and the result would be beneficial to the whole of the northern side of the Namoi River. The dogs which come in there kill enough sheep to almost pay, in the course of a few years, for the construction of a railway.
2660. *Mr. Shepherd.*] Have you used the scrub, to any large extent, for feeding sheep? Yes; we have been felling scrub now for two years.
2661. What description of scrub have you generally used? Belar, myall, buncee, and urah. There are several different kinds; some are better than others; but it is not a very satisfactory way of feeding. It is better to shift your sheep if there is any possible means of getting them away.
2662. Do you find the myall very good? Yes; if you can get it with plenty of water.
2663. What plan have you adopted in cutting the scrub? We have lopped it. It is necessary to leave a branch or two so as to leave the vitality in the tree. If a myall tree gets past a certain age and is lopped, it is almost sure to die.
2664. After lopping a myall tree, have you found that the branches shoot out again in the following season? Yes; if you leave a green branch or two. You can lop all the branches off some kinds of trees, and they will shoot out again, but the myall is a tree the whole of the branches of which you must not cut.
2665. Are not many of the trees cut down to within 2 feet 6 inches of the ground? Yes. In that case they can never get ahead again. It should be prevented. The only way in which the stock were got along the stock routes last year was by lopping the timber. If the people cut the trees down, they are done for. If we do not get a railway constructed in that district, and another drought is experienced, all the sheep must die, because they cannot be got away. We have just about cut out everything.
2666. I suppose the whole of the scrub on many of the runs has been destroyed? Yes.

2667. And the myall is dying out rapidly? Yes. The myall is a tree which only lives for about forty years. On every station there should be tracts of myall fenced in, to enable the young trees to grow. They could be used as horse-paddocks for the time. J. K. Mackay.
4 July, 1900.
2668. Do you think some plan could be adopted for the purpose of nursing the myall? I am personally adopting a plan of nursing it.
2669. Would it not be a good plan, on different runs, to surround 8 or 10 acres of myall by means of a good wire-netting? Yes; I have been doing it even on the Breeza Plain. I have several plantations there fenced in with barbed wire.
2670. And healthy young myall trees will stand lopping? Yes; and they will give an annual crop.
2671. I have noticed on some of the runs that lopping has been carried out; but the squatters, as a rule, say it is too expensive? It is not, if they will only look further ahead. I should have lost a lot of valuable sheep this year if I had not lopped the myall in years gone by.
2672. Is it usual for the squatters to meet and discuss these matters? They do meet privately at times, but of late they have not been able to keep any ground idle—the ground has to be worked up to the hilt. It is a pity we have no legislation dealing with the saving of fodder plants.
2673. Are you aware whether any attempt has been made to plant the kurrajong? It does not suit in our part of the country. The kurrajong requires gravelly ridges.
2674. I suppose that in places where the myall scrub is pretty plentiful the sheep can be kept in good condition during a bad season? Yes.
2675. *Mr. Watson.*] When you made an estimate of the amount it would take to feed sheep, had you in mind what the cost of the hay would be at the place you were thinking of? When I was feeding my sheep I was paying £7 per ton for hay delivered from Narrabri.

John Bissett Brodie, station manager, Boolcarrol, sworn, and further examined:—

2676. *Mr. Watson.*] I understand you desire to supplement your previous evidence, more particularly in connection with the removal of stock? Yes; I am living on Boolcarrol station, about 30 miles from Narrabri. When the 1898 drought commenced we shifted sheep in November. We trained about 32,000 or 35,000 of them to New England. After we had got the larger portion of them away we sent a number along the Moree Road to Glen Innes, where rain had fallen. We had about 60,000 sheep away altogether during that drought. The sheep left in November of 1898, and the last of them arrived back in September of 1899. We have also trucked about 30,000 sheep to New England this year. We started sending them in February, and about 8,000 were roaded to Glen Innes. Most of these sheep are there now. We have started during the last three weeks to bring them back. J. B. Brodie.
4 July, 1900.
2677. I suppose that since the late rains set in you have got some herbage? Yes; sufficient to enable us to start the sheep home. Of course, we were feeding some of the stud sheep at home.
2678. Do you think you saved money by trucking those which you sent away? Yes. We had 60,000 sheep on the run, and if we had not got them away we should not have had 10,000 left. Some of the runs west of ours had a similar number. They did not, however, send them away, and they lost from 80 to 90 per cent. of them.
2679. Did you experience any difficulty in getting them to the railway from Boolcarrol? We used to send a waggon of hay with every lot. Of course, a number of the weaker animals died on the road. We gave them about a pound of hay each in the trucking yards before they were trucked. We did not lose many in the trucks.
2680. Where did you detain them? We detained most of them last year at Walcha-road. This year we put them out at Walcha-road, Llangothlan, and Ben Lomond—wherever we could get paddocks.
2681. Did you experience any difficulty in getting grass? We had to knock about a good deal to get it. Of course, we had to stock very heavily—about two sheep to the acre. The feed was rough, but it kept the sheep alive.
2682. It has been suggested that the amount of grass available, even in New England, for sheep from the western district is a limited quality, and that even if railways were constructed into the western country people would not be able to obtain grass in New England? Of course, the grass in New England is limited, but a number of stock could be got away to the Manning, the Macleay, and the coast country generally, as well. The grass there would be sufficient to keep sheep alive. During the 1897 drought we had to send a lot of bullocks to Casino, and I believe that sheep would do well there when the west was in a drought-stricken state.
2683. A long dry period out west is usually accompanied by a dry period at New England? There is no doubt that when we are catching a drought there is usually one at New England. At the same time, the period during which we are suffering is the best period in New England.
2684. Assuming that the people west trained their sheep to Glen Innes, do you think they could then travel by road towards the coastal districts, which might be held as a further reserve for sheep during a dry period? Yes. Of course, if there were tremendous lots of stock on the road the grass would give out; but there is a great growth of rough grass—not very good—which would enable them to get down. The Queensland people are now training their sheep as fast as they can to their coast country. Their coast country is not so good as ours, because they have a frightful grass-seed—the spear grass—which we do not find in New South Wales.
2685. I understand that your firm has another station some distance beyond Collarendabri? Yes; 30 miles beyond.
2686. What is your experience there? We lost one-half of our sheep there. We were cutting scrub for a long time, but still the losses were great. There were no lambs, and we lost 50 per cent. of the sheep.
2687. Were they too far out to attempt to bring them to New England? Yes; we could not have got them in.
2688. How near would a railway, in the western country, require to be to pastoralists to enable them to get stock away? I would not be afraid of travelling even pretty weak sheep a distance of 100 miles, so long as I could get feed for them. If we had fodder stacked on the route, so that every 10 or 12 miles we could give them a pound or two, we could easily travel them 100 miles.
2689. The ordinary traffic in produce of that far western country is comparatively limited;—you would require a large area to give traffic to a line; therefore, we cannot construct railways very close together;—I should like to know what you consider a fair distance from which a line might attract traffic or assist people, under those circumstances? If people are within a distance of 40 or 50 miles from a railway there is not much to complain of. 2690.

- J. B. Brodie. 2690. If we had railways in that country 100 miles apart it would be a fair thing? I think so.
- 4 July, 1900. 2691. Have you any further information to offer? I only wish to state that the produce of the stations in the district to which I have been referring goes from Newcastle to England. Newcastle is the most convenient port, and we have always looked upon London as the best market.
2692. Have you noticed any inclination recently on the part of pastoralists to take advantage of Sydney as a market? I think they are all sorry they did not sell here last year. I think railways out west will develop a tremendous lot of trade. People know more about the relief country in the present day than they knew formerly.
2693. Do you think the disposition to take advantage of the relief country will be greater each year? I do not think pastoralists will hesitate about it at all. We travelled portion of our sheep in 1898 and 1899, and also during the drought of this year, to Narrabri, and then trucked them from there. The railway authorities allowed a discount of 50 per cent. on the starving stock sent away, and of 75 per cent. when brought home. It would have cost us £30,000 to have replaced our sheep if we had not taken them away.
2694. Can you give us an estimate as to what they did cost you? Of course, everything depends on the time they are away. The railway charges come to about 7d. or 8d. per head—that is, for trucking them from Narrabri to Walcha-road and back. You can keep them on New England for about 3d. per month per sheep, including the looking after of them, or about £10 per month for every 1,000. People are lucky when they can get grass country during times of drought. If the sheep are away for a whole year, I should imagine that they will cost from 3s. to 4s. each.
2695. As against that you have the wool which they grow? Yes, and the lambs. We feed a lot of sheep at home; but there is not much in feeding sheep on hay. A ton of hay will keep about seven sheep alive for a year. They require about 1 lb. of hay per day. It hardly pays to feed flock sheep on hay if there is likely to be a long drought. During the big drought our hay, which we bought early, cost us about £4 per ton delivered at Boolcarrol. If Walgett were connected with New England, you would find that there are plenty of sheep in the western country which, in drought time, would absorb all the spare grass of that district.
2696. *Dr. Garran.*] If there were a line of railway from Narrabri to Collarendabri, the fat sheep would, I suppose, be put in the trucks at Collarendabri? Yes.
2697. For how many months in a year would that trade last? In a good season it would last all through the year. That country would be in the same position as Warrah and Breeza, where they keep their stock almost to the end of the winter.
2698. Do you think the trade would be a pretty continuous one? I think so. There is nothing to prevent the trade being as good as that on the Moree line. The country is similar.
2699. If a line were constructed to Collarendabri, would there be any immediate urgency for its extension beyond that point? I think the people would expect it to go further—to Angledool.
2700. I suppose it would be a great help to all the squatters in the north-west if such an extension were carried out? Yes. It would be a great help to get it to the Barwon. All beyond that point they have to sell their stock as stores.
2701. In good seasons they could send fat stock away all the year round? Yes, with a railway.
2702. *Mr. Shepherd.*] If the travelling stock routes were properly managed, would the result not be of advantage to squatters in moving their stock? In times of drought the stock routes get like the runs. At the present time the stock are returning home, and there is any quantity of feed for them; but in times of drought the routes get bare.
2703. Are not the stock routes, as a rule, unfairly treated by squatters? Some are. As long as the stock routes are not fenced off separately much damage cannot be done. It must be remembered that the sheep have to travel 6 miles a day. I question whether you can improve on the present system.
2704. Is it not a fact that, in some instances, the squatters rent the stock routes from the Government? They are all rented.
2705. Do you not think that they ought to be entirely used for travelling stock? The main stock routes of the Colony start from the Queensland border, and go down the frontages of the large rivers to the southern border, and I do not see how the Government could resume them.
2706. There is no doubt the original intention was that the travelling stock routes were to afford feed for travelling stock? There is not much trouble in removing stock in good seasons. As soon, however, as drought sets in people put their sheep on reserves or anywhere else, in order to save them.

THURSDAY, 5 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.

JOHN CHRISTIAN WATSON, Esq.

The Hon. SOLOMON HERBERT HYAM.

ROBERT HENRY LEVICK, Esq.

JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Robert Edward Jones, M.I.C.E., District Engineer, Roads Branch, Department of Public Works, sworn, and examined:—

R. E. Jones, M.I.C.E. 2707. *Chairman.*] Have you had an opportunity of exploring the country between Narrabri and Walgett? Yes.

5 July, 1900. 2708. Does the report which you published in 1891 include a description of the proposed railway? Virtually so. I made the following reports:—

Narrabri West, via north side of Namoi, to near Walgett; length, 112 miles; estimated cost, £422,700.

The main difference in this scheme from that last dealt with is that this runs on the opposite or northern side of the Namoi. Crossing the river at Gurleigh Point, 16 miles from Narrabri, it is proposed to make use of the firm sandy ridges which exist much of the way to the Barwon. The terminus suggested is at Euric Euric, 10 miles north of Walgett.

This line passes over ground less liable to inundation than on the south side of river. It also serves a larger area of good grazing country, and would be within easy access from Pilliga and Wec Waa, the latter more especially. It also passes through the centre of extensive settlement on Pian Creek and Jews' Lagoon.

A

A line to Moree, if made *via* the travelling stock reserve, would utilise the river bridge and 20 miles of construction of this scheme. A considerable amount of competition would, however, exist between both lines.

Having fully discussed the direct project to Walgett, the question arises: Will this line, which is further north, obtain such increased traffic as to warrant the exclusion of the Coonamble and Baradine districts from railway communication? No more Queensland wool is obtained by this scheme than any of the others to Walgett, and there is a probability of an injurious competition with a line to Moree if made.

One advantage, however, by this project, is, that it terminates at a better crossing off the Barwon than Walgett should an extension to Queensland be ever desired, but I think any connection with the sister Colony will be made rather at Goondiwindi or Mungindi.

No survey has been made of the Enrie Eurie scheme.

Narrabri West, *via* Collarendabri, to Angledool: length, 176 miles; estimated cost, £677,500.

No survey has been made of this scheme, which appears to be put forward to attract traffic from Queensland rather than New South Wales.

It leaves the proposed Moree line at Boggy Creek, 34 miles from Narrabri, proceeds, *via* Bunna Bunna and Orel holdings, to Collarendabri, on the Barwon, at 108 miles; then by way of Gambalale, and the abandoned Government bore, to the great Warrambool, which might be crossed at about 29 miles from Angledool, the point of terminus, distant 176 miles from Narrabri. The great difficulty upon this line is the amount of country passed through liable to inundation. At the time of my visit I had ample evidence of the 1890 flood to warrant me in asserting that this line will be enormously costly to construct, especially near Collarendabri, where, from the position of the crossing of the Thalaba Creek, Grawin, an ana-branch of the Barwon, and the last-named river, one continuous bridge will be needed, some miles in length. In this case there can be no following the surface. The above-mentioned channels must be bridged at a safe height, with easy graded approaches, necessitating a great length of flood openings.

Between Collarendabri and Angledool the great Warrambool, which carries a tremendous body of water in flood-time, must be crossed. And when it is found that a length of quite 40 miles of what is known as the 60-mile track was flooded last year, it will give some idea of the country to be passed through. I believe about 250,000 sheep, with a considerable number of horses and cattle, were lost between the Queensland Border and Walgett during the 1890 flood.

Overlooking for the moment the question of costly construction, how will this line serve the districts of this Colony asking for railway communication?

It needs only a glance at the map to show that this scheme is the least useful of all those put forward to give access to the north-west. Coonamble and Coonabarabran would be entirely shut out; Walgett would make very little use of such a line, as it is scarcely likely traffic would be hauled north by road to go south by rail.

No doubt a few stations west of Goodooga—not within the trafficable sphere of a line to Walgett—would use the Angledool railway, but their wool is already obtained either at Byrook or Bourke, and therefore little extra revenue would be received by the State. Possibly Queensland might furnish some additional traffic in the shape of stock and wool—very much of the good country extending from Angledool to St. George and Mungindi is, however, in the hands of the Australian Pastoral Co., whose wool, is not sent to Brisbane, will be obtained in New South Wales stations, the increased freight for extra mileage to Angledool being no great sum. Should it be determined to construct a line to Moree it would branch off from this railway at Boggy Creek. Both lines, however, would be in competition for a large amount of traffic from the watercourse country—Mungindi, &c.

I have not thought it necessary to give any statistics—as such a line so little fulfils the purpose of opening up the north-western district in the best manner. It also passes over purely grazing country, where permanent water is obtained at little expense. One bore on the Dumunbral run I may mention is 2,400 feet deep. Several others have been attempted with great success. In this case to get to the Queensland Border appears to be of paramount importance, although so far as I can discover little extra traffic will be obtained thereby, and it is quite certain if the northern colony considers the country in this neighbourhood of St. George, Goodooga, and Angledool of sufficient importance to warrant railway communications such will be furnished.

Respecting any through line to Queensland, I do not think Angledool—where there is a network of watercourses—is the most suitable junction point.

2709. Can you tell us whether a direct line from Moree to Mungindi would have to cross much flooded country? Yes, it would cross the watercourse country.

2710. What would be the best way to reach Mungindi from the north-western country so as to avoid the watercourse country? It is rather difficult to tell. You would have to cross a lot of flooded country from which ever point you started. Of course, a shorter distance would be from Moree; and although there is a lot of flood country, there are not many streams to cross, with defined channels.

2711. I understand you favour the Moree-Mungindi connection to a line going out *via* Collarendabri? Yes.

2712. Do you think that that country would be well served by a line from Narrabri to Walgett and another from Moree to Mungindi;—would they each be sufficiently apart to draw traffic? I do not think so. I do not think both lines would be warranted. The one now before the Committee would serve a greater scope of country, because the Queensland Border is so close on the northern side of the line from Moree to Mungindi that it would have little traffic on that side to gain.

2713. The survey which you made on the northern side of the river crosses the Namoi closer to Narrabri than the present one? Yes.

2714. Do you think the importance of Wee Waa is such as to justify the crossing of the river further on? I do. I was there in February last, and it has gone ahead very much.

2715. *Mr. Watson.*] The present proposal involves, not only a railway to Walgett, but a branch to Collarendabri, which has the effect of leaving a rather small piece of country between the two prongs of the fork, if I may so term it;—do you think that that country is such, even allowing for the area from which the termini would draw traffic, that it would justify two lines of railway being constructed? I hardly think so, especially with the existence of a line to Coonamble south of Walgett.

2716. That will take a certain amount of traffic away from the Walgett end? Yes.

2717. If you had the opportunity of constructing one only of the two suggested lines, which would you prefer to construct? A line near to Collarendabri—not into Collarendabri. There is increasing settlement in that part of the country, and Collarendabri itself is a growing place. It would get traffic from Gundabluie, Mogil, and Angledool, which is 60 miles from Collarendabri, whereas it is 76 miles from Walgett.

2718. With regard to any of the South Queensland traffic which might come to Collarendabri, do you think it would also go to Walgett if only one line were constructed? Yes; of course, it would have a greater road haulage. I may add that two bores have been successfully put down, since I made my report, on the 60-mile tract towards Collarendabri, one at Moongulla, and one at Dungle Ridge.

2719. Supposing a line were taken to Collarendabri, and none to Walgett, would that not leave a rather large tract of country without access to it, or a way of getting from it? Yes; but we must not ignore the existence of the Brewarrina railway on the one side. It is all pastoral country.

2720. What, in your opinion, is the distance within which it would be safe to construct railways in pastoral country;—how nearly parallel might they go? In the case of such large holdings as there are in the Western Division, I should say 40 miles.

2721. That would mean 80 miles between two lines? Yes; I may mention that the holdings are very large. Even the homestead leases there are over 10,000 acres. It is not close settlement. 2722.

2722. *Mr. Shepherd.*] Do you think there is any other point along the proposed line from which it would be desirable to reach Collareendabri? No; a line from Woolabra would be shorter; but it would not serve a lot of settlement on Pian Creek, and would leave out Wee Waa.
2723. Would the country be equally suitable for making a railway? I think so.
2724. From Woolabra the line would be considerably shortened? Yes; but it would encroach somewhat on the sphere of traffic on the Moree line, and therefore would not bring much additional revenue to the country.

FRIDAY, 6 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collareendabri.

Robert Darvall Barton, grazier, Burren, sworn, and further examined:—

R. D. Barton.
6 July, 1900.

2725. *Chairman.*] Can you give us an idea of the character of the country bounded on the south by a line between Brewarrina and Walgett, and stretching north of that line to the Queensland Border;—can you also state the way traffic from it would be diverted by the construction of a railway from Walgett, if there were a railway to Brewarrina? The country you are referring to is from Brewarrina to Collareendabri on the north side. Only one watercourse—the Narren—is marked on the map; but if you look at other maps, you will see that there are others. There is the Condamine, which starts in Queensland. Its first mouth is the Culgoa, then the Birie, then the Bokhara, and then the Barwon. The Narren runs into the lake, and the country is a swamp from that lake into Brewarrina. The Bokhara runs in somewhere about Brewarrina—it joins Cato Creek—and the Culgoa goes further down Wilcannia way. The country west of Collareendabri is very good for grazing purposes; but the present road which is used is one from the direction of Angledool towards Collareendabri. The head of the Narren is shown on the map. It comes down first, in flood-time, at the Condamine. The Condamine, when it passes the St. George, is called the Culgoa. It is called the Culgoa right down to the most northern branch of the four mouths to St. George. The Narren breaks out first, then the Bokhara, then the Birie, and then the Culgoa. The whole of the country north of Brewarrina—north of the Culgoa towards St. George, and round by Mungindi—is first-class grazing country for stock. In olden times it was considered only fit for cattle, but now we have sheep all over it. The road at present used from Collareendabri to Angledool has no watercourses or anything to make it impassable. It is a very good road. After that you get upon the real black soil, and the country, no matter where you go, is more or less difficult to travel over in wet times. My contention is that the traffic from the country north and west of the Narren will be more likely to go to Collareendabri than to Brewarrina, for the simple reason that, from that country to Brewarrina, the rivers and the low-lying country between the Narren, the Bokhara, the Birie, and the Culgoa are all more or less subject to flood.

2726. *Dr. Garran.*] Will not that "three-river" country make a barrier between Collareendabri and Barrington? Yes.

2727. Then everything east of those rivers might go to Collareendabri? Yes.

2728. And everything west might find an easier road to Bourke? Yes.

2729. So that the three rivers practically make a boundary for the drainage of the railway? Yes. What I contend is that the traffic from all these rivers, right up to the the Condamine in Queensland, will go to Collareendabri. All the wool from Mungindi, and Mr. Fisher's large stations south of St. George, and north of Collareendabri, come in now, *via* Collareendabri, to the Narrabri railway station.

2730. *Mr. Watson.*] Does the Mungindi traffic come that way in preference to going to Moree? Of course, it was only last year that we got the traffic to Moree. I have no doubt that the Mungindi portion would come to Moree; but there is a good deal of difficult country between Mungindi and Moree to traverse. There is a good deal of good country, for railway purposes, between Moree and Collareendabri, and Moree and Mungindi. The natural course for the traffic would be from the Queensland Border into Collareendabri.

2731. *Dr. Garran.*] Angledool is the natural terminus of the line to Collareendabri? Yes.

2732. And that would sweep a fair share of the South Queensland traffic? Yes, under federation.

2733. Supposing a railway were made to Collareendabri, would the Angledool traffic go to it? Yes; it would be impossible to go from Angledool to Brewarrina. It is 60 miles from Angledool to Collareendabri, and about double that to Brewarrina.

2734. *Mr. Watson.*] Supposing a terminus were at Walgett, and another at Collareendabri, would the Angledool traffic be more likely to make for Collareendabri than for Walgett? I should think so.

2735. Would a line at Walgett, and none at Collareendabri, fairly serve the Angledool people? It would give them a little longer distance, but it is not as good a road as the Collareendabri road, which is drier, and a good deal of which is hard.

2736. Could you feed sheep upon it as you went along? Yes. The country is nearly all occupied, and there are stock upon it.

2737. *Chairman.*] From your knowledge of the country crossed by the three or four rivers you have named, would the traffic which now comes from Bredah go to Walgett or to Brewarrina, in case both railways were constructed? It would be more likely to go to Walgett. I have no doubt it would be further; but I think it would be better travelling to Walgett.

2738. *Dr. Garran.*] Are there any high ridges between the three rivers? No, it is all low country.

2739. *Chairman.*] Can we regard the Narren River, which flows into the Narren Lake, as being the boundary between the spheres of influence of the Brewarrina railway on the one hand, and the Collareendabri railway on the other? I should think so. Any one who was on the west of the Narren would take the Brewarrina railway.

2740. *Dr. Garran.*] Is there a road between the Narren and the Bokhara? In flood-time it is 30 miles wide.

2741. Where is the Goodooga trade likely to go to? By way of Angledool to Collareendabri. 2742.

2742. To go from Goodooga to Brewarrina you would have to cross many watercourses and much flooded country? You would have to cross the Narren.
2743. Could you get from Goodooga to Brewarrina between the Bokhara and the Narren? Yes.
2744. But you think the trade is likely to go, on account of the better road, from Goodooga to Collarendabri or Walgett? Yes. If a railway were at Collarendabri, and another at Brewarrina, the traffic would go to Collarendabri.
2745. Supposing a railway were at Brewarrina and not at Collarendabri? Then it would probably go into Walgett.
2746. *Chairman.*] What is your opinion of a northern or north-western extension from Moree? I think that would be a very expensive line to construct. Moree is on the Meehi itself, and the Big River branches a little to the east of Moree, and comes round on the north. Then it breaks out into what is called the Big River watercourse. It splits into several watercourses; in fact, it is a big swamp, with ridges all through it.
2747. Taking the sphere of influence of the railway station at Brewarrina, and another at Collarendabri, which would include the better quality of pastoral land? The larger area, including Queensland, would be around Collarendabri. I take it that the traffic near Barringun would be more likely to go to Collarendabri than to Brewarrina.
2748. Is the country traversed by those three rivers often impassable? During the last six or seven years it has been very dry. Of course, in wet weather it would be almost impassable.
2749. Is that country now covered with sheep or with cattle? With sheep. There is always sufficient dry ground upon which to keep sheep during the wet weather.
2750. Then they do not get foot-rot? No; there is a lot of lime in the water. Sometimes they feed with water half-way up their backs. Even if the country is perfectly bare when the flood comes down, the grass grows quickly.
2751. Is it a kind of rush, or real grass? It is a kind of rush.
2752. *Chairman.*] We should have much safer and easier country for the construction of a railway by going north-west from Collarendabri than by going north from Brewarrina? Much easier.
2753. Supposing we went north-east from Brewarrina, would the country be easier? No; that is bad country as well. The Narran Lake is very shallow, and when it overflows it covers a great deal of country.
2754. *Dr. Garran.*] So far as you see, there are only two extensions to the Queensland border possible—one from Collarendabri to Angledool, and one from Bourke to Barringun? Yes. I do not know anything about the country to Barringun as I have not been there.
2755. Would there be enough traffic at Angledool to pay for an extension from Collarendabri? I think so. The line would be a cheap one. There would be no cutting and no bridges. When you get to Angledool, on the Narran, you are in the centre of the best country.
2756. Supposing we only made the line from Narrabri to the junction of the Burren;—do you think it would be sufficiently long to pay;—would it fetch the trade from Collarendabri? Yes. Of course the present traffic from Collarendabri does not come along the route through which the proposed railway would run; it comes more to the east.
2757. Do you think the traffic would leave the road to come to Burren? I am sure it would.
2758. Looking at the importance of keeping down all unnecessary outlay, would it answer all practical purposes for Collarendabri and the country beyond it, to stop 10 miles short at the point marked A. on the map? If I were one of a syndicate running the railway I would stop there.
2759. Such a railway would practically answer all purposes for the Collarendabri and Angledool people? Yes.
2760. Do you know the country between Woolabra and Collarendabri? Yes.
2761. Is not that drier country than that between Narrabri and Collarendabri? No; the route from Narrabri to Collarendabri is drier than the route from Woolabra to Collarendabri.
2762. Is there not some bad country between Wee Waa and Burren? Very little. At Wee Waa, of course, we have the river, and there is a little flooded country on either side of it, but from there to beyond Burren the country is good.
2763. Then you would not call it a bad line for any part? No.
2764. Do you favour the Northern line from Narrabri, missing Wee Waa, or the Southern line going through it? The shorter line would be to Wee Waa, and if there were no engineering difficulties, I think it would be best to go *via* Wee Waa. I have heard that it would cost as much to take the line along the north side as to cross at Wee Waa.
2765. Supposing, instead of making the fork line, which is marked on the map, we only go to Collarendabri, and do not take a branch to Walgett, would the Walgett trade then go into Burren? It would go to Collarendabri. It is only 40 miles from Collarendabri to Walgett, and 60 miles to Burren. It is a better road from Walgett to Collarendabri than from Walgett to Burren.
2766. Supposing we connect Narrabri with Collarendabri, and Coonamble with Walgett, would not such connection give the district every opportunity of being connected, if it required it, with the western country? It would. I lived twelve years near to Coonamble, and I know the country between Walgett and Coonamble. It is all good country on both sides of the river. Within 10 or 16 miles of Walgett the country is flooded.
2767. And if the railway went to within that 16 miles it would be quite sufficient for Walgett? Yes.
2768. I suppose there is no need to connect with the river? No.
2769. *Mr. Watson.*] From whichever side you approach Walgett you will have flooded country? Yes.
2770. Supposing a line is taken from Narrabri to Walgett, as proposed, how far would you go before you got into the centre of the flooded country, as compared with approaching Walgett from the south? It would be about the same distance.
2771. *Dr. Garran.*] Do you know anything of the country between Woolabra and Bingara? Yes.
2772. Would a line from Woolabra towards Inverell have been practicable? It would have to go through very rough country.
2773. When the line was made from Moree to Inverell it was partly with the idea that the Inverell farmers would have an outlet for produce to the west;—if we take a line from Collarendabri to Narrabri they will have to go all the way to Moree, then down to Narrabri again, and then on to Collarendabri, making a considerable detour;—do you think that will stand in the way of the produce traffic to the west? No; it will always follow the railway. Of course, there would be a good deal of haulage.

- R. D. Barton. 2774. Would the producers be able to compete with those lower down—about Werris Creek? I do not think they could compete with farmers anywhere on the Lower Hunter.
- 6 July, 1900. 2775. If we had had a railway to Collarendabri for the last four years, would the squatters there have largely imported produce for their stock? Yes. Numbers of teams loaded with fodder have gone out there during the last few weeks. They are loaded principally with chaff. It is, of course, more difficult to carry hay than chaff. That is the reason we always get chaff. We can load 6 or 7 tons of chaff in bags, whereas 6 or 7 tons of hay is very cumbersome to carry.
2776. Would a railway in dry seasons be of great service to the squatters? Yes, it would save thousands of sheep.
2777. Do you know anything about sending away starving stock to the east? Yes.
2778. Has it paid you? Yes.
2779. Do you think the eastern country was fully stocked with starving stock this year? I should say not.
2780. Some of the witnesses have said that a larger number could have been taken;—others have said that it has taken nearly all it will hold? I sent 12,000 sheep to one particular place.
2781. Would the place have carried another 12,000? No. The 12,000 I took away lived, and of 14,000 which I left on the station I lost 7,000.
2782. If you had only left 7,000 behind, you could have kept them in good condition? I could have kept them alive.
2783. Without imported fodder? Yes; I cut down brush.
2784. Have you spoilt the brush for the future? Yes, it is all gone. My experience of the brush is that it is not nourishing food. I may say that I have brought a great deal of forage from Narrabri to Burren, a distance of 65 miles.
2785. What would it cost to carry it by road from Narrabri to your run? Over £2 a ton. If we had had a railway the cost would have been under 10s. a ton. I bought the forage at Tamworth, Maitland, and other places. It cost me about £2 a ton, delivered in Narrabri, and about £5 a ton delivered at Burren.
2786. Then it is cheaper to take the sheep to the east, and get the grass, if you can do it? Yes. If I could have taken my sheep straight to Muswellbrook or anywhere on the Hunter, and had even hired a yard for them, and had bought hay for them at £1 10s. a ton, I could have kept them alive for far less money.
2787. If you cannot feed them on live fodder, it is cheaper to take them to the Hunter and feed them on dead fodder than it is to bring the fodder to them? Yes.
2788. Have you ever tried making hay on your run? Yes.
2789. How does it answer? Very well.
2790. What sort of grass did you cut? The herbage grass—natural trefoil. It makes a good hay. We keep it in stacks. This year I intend to have stacks all over the run, and to collect fodder for hay.
2791. For how many years will a stack of hay keep good? I cannot say, as I have not tried it. I made it last year, and two years previously, and on both occasions it turned out very well indeed.
2792. Did it keep sweet for two years? Yes; of course the outside of the stacks get dusty.
2793. How long would you have to keep your land closed off from stock, to enable the hay to grow? You would not require to keep them off at all.
2794. Would the hay grow whilst the sheep were running? Yes; it grows as thick as possible. If you put 10,000 sheep into a 20,000-acre paddock, they will not go over a quarter of it.
2795. How long would the hay be growing? It would start about July, and you must have it all cut before the end of October, or it will be dead.
2796. On the whole, you think a line from Narrabri to Collarendabri would pay in a few years' time? I think so; I have heard it said that the Commissioners expect a loss of £13,000 per annum on the two lines. Personally, however, I would not mind having a share in the loss, if there were one line.
2797. *Mr. Watson.*] Supposing you were a private speculator, which of the two lines would you prefer to make first? The line to Collarendabri, because there would be a greater area of country to drain to that place than there would be to Walgett.
2798. *Dr. Garran.*] Is it bad country from Moree to Boggabilla? It is good country as far as the soil is concerned, but it is flooded.
2799. *Mr. Watson.*] It was stated in evidence at Newcastle that a route could be got from Moree to Mungindi, which would not have a good deal of flooded country along it, by keeping to the north of the watercourse shown on the map;—do you think that could be done? Yes; but I think there would be a good deal of difficulty in getting out of Moree itself.
2800. *Chairman.*] Where do you usually send your wool? To Sydney.
2801. *Mr. Shepherd.*] I suppose there is very little timber in that direction? Very little indeed.
2802. *Mr. McFarlane.*] If your property were in the Walgett district, which do you think would be the most suitable railway connection for you? I do not think it would matter much to the residents, so long as they got a railway near. I should always go for the shortest haulage.
2803. Is there much in the contention that the Narrabri connection will give the producers two markets—Sydney and Newcastle? The connection with the Northern line would be much better for getting fodder, because the Hunter River supplies such a large quantity. At the same time the fodder can be supplied from the Western line probably as cheaply as it can from the Hunter.
2804. Is there much direct shipment of wool from the north-west, *via* Newcastle? I am not sure. I do not think anything near one-half of the wool which comes down is shipped.
2805. To which market is the fat stock principally sent? To Homebush.
2806. Witnesses have stated that the Maitland sales absorb a good portion of stock from the north and north-west? They do take a portion, but I cannot say what business is done.
2807. Would it be an additional argument in favour of the Narrabri connection that it would give access to the Maitland market? I suppose it would.
2808. In the event of wool sales being re-established at Newcastle, do you think they would prove of material convenience to the wool growers of the north and north-west? I suppose they would if their financial agents have branch stores there.
2809. I suppose a good deal would depend on whether the prices obtained at Newcastle equalled those obtained at Sydney? Yes. If the buyers came there no doubt the sales would be carried on.

2810. *Mr. Shepherd.*] Do you think it would be possible to cultivate black plain soil if there were an abundance of water? If you have abundance of water you can do anything. R. D. Barton.

2811. I understand that the Euroka bore gives as much water as any in the country. If other bores were sunk in the neighbourhood, do you think it would be possible for the producers to grow enough fodder for themselves without relying on Newcastle? Yes. I think if they store the natural grasses they will be able to do without the Hunter Valley. 6 July, 1900.

2812. I suppose natural grasses, with irrigation, could be kept all through the summer? Yes. I may mention that there is an irrigation farm between Eurio Eurie and Walgett which I think does very well.

Charles Binnie, grazier, Spring Ridge, near Quirindi, sworn, and examined:—

2813. *Mr. McFarlane.*] I understand you have a knowledge of the Walgett district? Yes; I own property there.

2814. Would you like to make a statement as to your knowledge of the district in connection with the proposed lines? My experience of the Walgett district extends over a period of eight years, being about 12 miles up the river towards Collarendabri from Walgett. The capacity of the country with which I am acquainted, with the frontage to the river, I take to be between 12,000 and 14,000 sheep to 30,000 acres—that is, about 2½ acres to the sheep. That is on the Barwon; at Wurrawadin, on the western bank of the river. A deal of the country is subject to floods. The whole of the property on the river is highly fattening, and is capable of great improvement by the axe being used upon the timber. One of the drawbacks to a small holder, like myself, and smaller holders who hold only one homestead—a block of 10,000 acres—is that, although small numbers of our stock will become fat, we are too far away at present to send 200 or 500 sheep to the Sydney market. The cost of droving 130 miles to Narrabri, and a longer distance to Mudgee, to which place I have sent fat stock, is too much for the small holders. As I have stated, it is highly fattening country, and at times I have turned off mobs of 2,000 sheep, which have realised top values at Flemington. C. Binnie. 6 July, 1900.

2815. The small holders suffer more from the want of a railway than do the larger holders? Yes; they are at a disadvantage.

2816. Are there many small holders in the district? There are a number.

2817. How would the rest of the country compare with the property you have described? The country to the east of the Barwon River would be of a higher carrying capacity than mine, which is on the west of the river. It improves as you go towards the east.

2818. It is the same class of country? My country has more timber upon it than would be found to the east of the river. As regards Walgett, I myself would prefer the connection *via* Narrabri, because, upon mileage rates, stock and produce of any kind would be no worse off as regards the cost of getting it to Sydney. I understand that the distance from Walgett, *via* Coonamble to Sydney, and the distance from Walgett, *via* Newcastle to Sydney, is about the same; whereas, for heavy produce, such as wool, it would save 100 miles of rail carriage by shipping at Newcastle. For this reason I would favour a connection with Narrabri, and that connection I would prefer *via* Pilliga.

2819. Not the proposed route *via* Wee Waa? No.

2820. Do you know the route as proposed from Narrabri to Walgett through Wee Waa? Yes; I know both routes—north and south.

2821. Would a line through Pilliga possess any advantages as compared with the other? I think it would be safer country in time of flood.

2822. Is not the land on the south side of the Namoi from Narrabri West, high country? I should say so—certainly between Wee Waa and Narrabri, and, I believe, also between Pilliga and Wee Waa.

2823. Would not the Walgett to Pilliga route be a longer one? Slightly.

2824. Where do you ship your wool? Sometimes I have shipped it to London from Newcastle, and sometimes I have sold it in Sydney.

2825. Where would your fat sheep be sent to? They would have the alternative market of Maitland, which is a very good one, without being at more serious expense. They would also have the Sydney market, which, I understand, would be 13 miles longer than going *via* Newcastle. They would have two markets by the junction at Narrabri.

2826. Is much fat stock from the north and north-west sent to the Maitland market? Fair quantities.

2827. Would the proposed line enable station holders to send their sheep to more favoured county? I am confident it would. There are large areas in the higher table-lands, which, under ordinary circumstances, would not be suitable to turn sheep upon; but in times of drought they would carry the stock well. To my knowledge, country which was looked upon as thoroughly unhealthy, has, during the last two years, been turning off fat sheep and cattle.

2828. Is it mostly to the New England district to which stock are sent in times of drought? New England would take the bulk of them. It is a very extensive district, and overlapping New England would be the eastern fall, which, in dry seasons, would take a large number of sheep. During the last five years the eastern fall has practically been unexploited. They did not exhaust the higher country on the table-land, and in the vicinity of Kentucky, Walcha, Glen Innes, and other places.

2829. Have you had experience in removing starving stock in time of drought from the Walgett district? Yes. I have had to do it during the last two years.

2830. Did you remove to New England? No; to properties I have near Boggabri, Quirindi, and Spring Ridge.

2831. Has there been any difficulty in getting country for starving stock? I should say that the New England country has not been availed of to its fullest extent.

2832. With the probability, in the event of the proposed railways being constructed, of a largely increased number of sheep in the district of which we are speaking, do you think there would be sufficient country to carry, in times of drought, the extra starving stock which would be removed? New England would carry such a proportion that the balance left would have a much better chance. Although it might not pay the stock-owners to shift their stock about, still, if they had the accommodation offered them in the shape of a railway line, they would do it in the hope that they would be able to get their stock back again before long. Although they might be losers by the transaction, it would be a gain to the country, because the productiveness of the sheep would still belong to the Colony, although lost to the individual. From a State point of view, I should say it would be a great inducement to construct these lines, to save the country's main asset.

- C. Binnie.
6 July, 1900.
2833. Do you know the country on the eastern slopes of New England? Yes; a quantity of it. I have had stock there in times of drought.
2834. Do you think that country would be suitable for carrying sheep removed from the drought-stricken district? In exceptionally dry times it would.
2835. So that, in the event of the New England district being over-taxed, additional areas would be available there? Yes.
2836. It has been stated that if the routes were good people would travel fat stock a considerable distance rather than take the train at Walgett? As a sheep-breeder, and one who has highly fattening properties, I would not travel my sheep a yard further than the nearest railway, for one reason alone—the burrs upon the reserves would so deteriorate the fleeces that the extra gain would very soon be lost.
2237. It has been stated in evidence that a large area of good country to the west would largely contribute to the proposed railway? That is good country. In that basin of country surrounding Walgett we have one of the heaviest wool-growing countries that I know of. My stock upon Walgett, even when there is very little feed in sight, get into wonderful condition, and give heavier fleeces than the stock on the Liverpool Plains, which are up to their bellies in feed.
2838. Do you think the traffic which would be opened up, in the event of the two lines being constructed, together with the existing traffic, and the probability of considerable contributions coming from the north-west and north, would enable both lines to pay? I am rather of opinion that one line would rob the other.
2839. In view of that, which would you suggest should be constructed? I should say—taking the country as a basin—that the line to Walgett would serve the bigger portion of the basin, and would serve country more populated.
2840. Do you think that the Crown lands available and within easy reach of the proposed line would be taken up if thrown open for settlement? Every acre.
2841. Are the Crown lands in the locality of similar character to the country you have described? For many miles surrounding Walgett they are. At Pilliga and Wee Waa you get into a heavy forest country, which at the present time is, for stock purposes, unavailable; but there is country which would be suitable for agriculture.
2842. Where? The country between Pilliga and Wee Waa, towards Baradine.
2843. *Dr. Garran.*] Is the country between Narrabri and Walgett as fattening as the country beyond Pilliga? Yes; to the north of the river. It is similar soil and similar herbage.
2844. Is it more flooded or subject to flood? All that country is very similar in that respect.
2845. After the country has been flooded, is the grass all the richer for it, or is it poorer? Richer, as a rule. That would follow if the floods came without the frosts. A flood would do no good in the early winter time if it were followed by heavy frosts. A flood in the spring-time or during the summer benefits us greatly. The growth is then very rapid.
2846. Do you know whether the grass which grows slowly is more nutritious than that which grows quickly? From my experience, I should say that it is the reverse.
2847. Quick-growing grass is the most succulent herbage? When the sun sweetens it.
2848. Is the country to the north of the red line—Narrabri to Walgett—as good as the country to the south of it? Better; there is a space south of the suggested line which would be of the same character, with little variation.
2849. The line from Narrabri to Walgett would go through the centre of a rich belt of pastoral country? Yes.
2850. Why do you prefer the Pilliga line going through a forest country? I think it would be the safer in wet seasons.
2851. But we want a railway to produce? Yes; but there is a large area south of the line which is at present unproductive. The country to the north of the Namoi would, for the most part, be productive of wool and fat stock only; but the other country is excellent agricultural country. The country to the south of the Namoi, between Pilliga and Narrabri, is at present heavy forest country, and carries little stock; but there are very large areas of that which would be excellent for wheat-growing if it were cleared.
2852. It often happens that the timber country, when cleared, makes good wheat country? As a rule the best—particularly pine country.
2853. A line from Narrabri to Collarendabri would also go through the heart of good country? All good country from a pastoral point of view.
2854. Do you think, if that railway were constructed, and the properties were subdivided, they would produce more fat stock than are produced on large runs? I do not think it would alter the numbers of the stock. There are, however, a number of small holders along the suggested route, and in the vicinity of it, as well as west and east of the Barwon, whom it would help; and there would be a larger number of fat stock coming to the Sydney market if a line were available for them.
2855. Will subdividing result in more fat stock being raised? I should think so. Subdivision alone will increase the carrying capacity.
2856. Has it not often happened that when a considerable portion of a run has been taken away the squatter has kept as many sheep upon it as he did before? Yes, by improving his holding.
2857. What is the limit of subdivision for pastoral purposes in that district? 1,500 acres.
2858. *Mr. Hyam.*] Is that without agriculture? Yes.
2859. *Dr. Garran.*] I understand that most of the flooded country was, years ago, cattle country? Yes.
2860. It would still fatten cattle, I suppose, but it is more profitable to fatten sheep? Yes; the number of cattle at present are very few.
2861. If a line be made, and the country be well subdivided, will there be a larger population than there is now? Yes.
2862. And naturally there would be more railway traffic? Yes.
2863. And you think the actual productiveness of the country will be increased? Yes.
2864. Do you think there is a reasonable probability of a line to Walgett or Collarendabri paying within the next five or ten years? I cannot express an opinion, because I know nothing about the railway freights; but the railway would undoubtedly increase the productiveness of the district.
2865. At any rate, a railway would facilitate the keeping alive of sheep in dry weather? Yes.
2866. And it would facilitate the sending of fat stock away in good weather? Yes.
2867. And it would be an immense gain to the squatters beyond Collarendabri, and make it safer for them to occupy their runs? Yes.
- 2868.

2868. *Chairman.*] Do you think there is sufficient country to the north-west to give lines both to Collarendabri and Walgett a fair amount of traffic? I do not think there is sufficient settlement at the present time out there to justify both places having a railway line.

C. Binnie.
6 July, 1900.

2869. *Mr. Levien.*] Which route do you favour—from Narrabri West or from Narrabri East? The route along the south side of the river.

2870. *Mr. Shepherd.*] Do you think that a line to Collarendabri would be more likely to draw the Queensland traffic than a line to Walgett? I think not.

2871. Collarendabri would be nearer to the Border? Yes, nearer by 50 miles to the direct Border; but the traffic Walgett would lose, and which would come to Collarendabri, would either go to Moree, on the one hand, or Brewarrina, on the other.

TUESDAY, 10 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

| | |
|--|-----------------------------|
| The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | JOHN CHRISTIAN WATSON, Esq. |
| The Hon. ANDREW GARRAN, LL.D. | ROBERT HENRY LEVIEN, Esq. |
| The Hon. SOLOMON HERBERT HYAM. | JOHN McFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

William Henry Hall, Sub-editor, "Statistical Year Books," Government Statistician's Department, sworn, and examined:—

2872. *Chairman.*] Have you prepared the usual statistical returns in regard to the proposed line from Narrabri to Walgett? Yes.

W. H. Hall.
10 July, 1900.

2873. Will you kindly indicate the limits within which you have taken these statistics? I have taken them at a distance of 20 miles on each side of the proposed line, but extending out to Angledool, and southerly including Wee Waa and Pilliga.

2874. Do you include any part of Narrabri? No.

2875. Will you give the estimates of population? The estimate of population on the proposed railway from Narrabri to Walgett is 6,240.

2876. What is the estimated population on the proposed branch from Burren to Collarendabri? There would be 2,060 persons affected; but part of these would be included in the estimate for the railway from Narrabri to Walgett. Angledool, Collarendabri, and Mogil Mogil would be included, and the only one not affected would be Mungindi. It seemed to me that Mungindi would be outside the influence of the line, and would be more directly connected with Moree.

2877. The country between Mungindi and Moree is not easily passable? There is a lot of water-course country between the two places.

2878. What other population return have you brought? I was asked to prepare a statement in regard to a probable line from Coonamble to Walgett. The population on that route would be 3,030.

2879. Does that estimate include Coonamble? No.

2880. Perhaps you will be good enough to read the details of the estimates of population? The returns I have prepared read as follows:—

ESTIMATES OF POPULATION.

Proposed Railway from Narrabri to Walgett.

| Locality. | Estimated Population. |
|-----------------------|-----------------------|
| Angledool | 330 |
| Burren | 460 |
| Collarendabri | 900 |
| Come-by-Chance | 210 |
| Goodooga | 490 |
| Mogil Mogil | 210 |
| Pilliga | 930 |
| Walgett | 1,950 |
| Wee Waa | 710 |
| Total | 6,240 |

PROPOSED Railway from Burren to Collarendabri.

| Locality. | Estimated Population. |
|----------------------|-----------------------|
| Angledool | 330 |
| Collarendabri | 900 |
| Mogil Mogil | 210 |
| Mungindi | 620 |
| Total | 2,060 |

PROPOSED Railway from Coonamble to Walgett.

| Locality. | Estimated Population. |
|-----------------------|-----------------------|
| Corinda | 380 |
| Come-by-Chance | 210 |
| Goodooga | 490 |
| Walgett | 1,950 |
| Total | 3,030 |

2881.

2883. Will you read the agricultural and pastoral statistics you have prepared in regard to the proposed railway from Coonamble to Walgett? The return reads as follows:—

W. H. Hall.
10 July, 1900.

AGRICULTURAL AND PASTORAL STATISTICS.
Proposed Railway from Coonamble to Walgett.

| District. | Year. | Maize. | | Other Grains—Area. | Hay. | | Green Food. | Area under— | | | | | Horses. | Cattle. | | Sheep (including Lambs). | Swine. | | |
|----------------|-------|--------|--------|--------------------|-----------|-------------------------|-------------|-------------|-----------|--------------|----------|-----------------------|---------|------------------|-------------|--------------------------|---------|------------------------------|-----|
| | | Area. | Yield. | | Area cut. | Wheat, Oats and Barley. | Lucerne. | Area cut. | Potatoes. | Grape Vines. | Oranges. | Other Fruit Orcharis. | | All other Crops. | Milch Cows. | | | Ordinary (including calves). | |
| | | acres. | acres. | bushels. | acres. | acres. | acres. | acres. | acres. | acres. | acres. | acres. | acres. | No. | No. | No. | No. | No. | |
| Carinda | 1896 | 16 | .. | .. | .. | 16 | .. | .. | .. | .. | .. | .. | .. | 1,222 | 243 | 4,582 | 234,157 | 13 | |

WEDNESDAY, 11 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The HON. PATRICK LINDESEY CRAWFORD SHEPHERD.
The HON. ANDREW GARRAN, LL.D.
The HON. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with a branch to Collarendabri.

George Charles Yeo, Draftsman, Stock Branch, Department of Mines and Agriculture, sworn, and examined.—

2884. *Chairman.*] Have you any particulars to furnish respecting the stock in the district that would be affected by the proposed railway from Narrabri to Walgett? Yes, and I have a map here showing what area, I think, will be included in this Narrabri to Walgett part.

G. C. Yeo.

11 July, 1900.

2885. That is the area which the proposed line would be supposed to influence? Yes, so far as stock are concerned. The brown tint on the map shows the Narrabri-Walgett part, and the blue tint shows the Narrabri-Collarendabri part.

2886. Will you give the statistics in regard to cattle and sheep? The return I prepared reads as follows:—

PROPOSED RAILWAY, NARRABRI TO WALGETT.

Number of cattle and sheep within the area shown approximately by brown edging on Map "A."

| Year. | Cattle. | Sheep. |
|----------------|---------|-----------|
| December, 1896 | 23,200 | 1,978,086 |
| " 1897 | 21,230 | 1,901,000 |
| " 1898 | 17,133 | 1,538,000 |

I did not make out the return for 1899, because the fall in sheep was so great that I thought it would not be a fair year to take.

2887. Do you think that it would be lower than in the previous year? Yes. The number of sheep in the Colony in 1898 was 41,000,000, and in 1899, the number fell to 36,000,000.

2888. Was the fall due to the drought? Yes.

2889. Will you give the statistics as to wool? The number of bales of wool affected in the same area was 29,670 in 1896; 28,513 in 1897; and 23,070 in 1898. There is also a big stock traffic coming in towards Walgett which I have taken out for the same years. In 1896, 32,200 cattle came in through Walgett from Queensland, and from the country between Walgett, Goodooga and Angledool, on their way to the southern and eastern markets.

2890. Can you give the figures in regard to both cattle and sheep? Yes; the return reads as follows:—

Stock traffic through Walgett.

| Year. | Cattle. | Sheep. |
|-------|---------|---------|
| 1896 | 32,200 | 560,000 |
| 1897 | 20,000 | 530,000 |
| 1898 | 35,000 | 480,000 |

Of course most of these cattle would come from Queensland. That is all the information I have in connection with the railway from Narrabri to Walgett.

2891. Would the return you are about to read re the proposed branch railway from Burren to Collarendabri include any of the district from which you have just given the statistics? Yes; the northern part of it.

2892.

- G. C. Yeo. 2892. Could you give a separate return also, say, if both lines were constructed? I did not work it out that way. I took them individually. By the map you will see how much they overlap.
 11 July, 1900. 2893. Will you now read the statistics relating to the proposed railway from Narrabri, *via* Burren, to Collarendabri? The return I have prepared reads as follows:—

PROPOSED RAILWAY, NARRABRI, *via* BURREN, TO COLLARENDABRI.

Number of cattle and sheep within the area shown approximately by blue edging on Map "A."

| Year. | Cattle. | Sheep. |
|-----------------------|---------|-----------|
| December, 1896 | 19,388 | 1,212,896 |
| " 1897 | 17,000 | 1,106,000 |
| " 1898 | 14,000 | 980,000 |

Number of Bales of Wool.

| Year. | Bales. |
|-------------|--------|
| 1896 | 18,180 |
| 1897 | 16,599 |
| 1898 | 14,700 |

Stock traffic through Collarendabri.

| Year. | Cattle. | Sheep. |
|-------------|---------|---------|
| 1896 | 31,200 | 254,000 |
| 1897 | 14,500 | 250,000 |
| 1898 | 6,500 | 240,000 |

2894. Has the decrease in sheep in both districts—in Walgett and Collarendabri—been equal to the decrease in other parts of the Colony or greater in proportion during the last three years? I did not work it out; but as the drought fell pretty well all over the Colony I should say it would be.
 2895. Have you any personal knowledge of the district? None whatever.
 2896. You could not give any information respecting the districts? No; nothing further than supplying the statistics which we take from the returns that we get every year from our inspectors in the districts.
 2897. Could you give any information as to the destination of the cattle and sheep passing through Walgett and Collarendabri? They are all working over for the Hunter River market or for Homebush. They may be coming in on to fattening country with a view to ultimately arriving at those markets. They may be coming in as stores from Queensland.
 2898. Are there many stores which come in from Queensland? They would be practically all stores, for there would not be any fats coming in from out there.
 2899. What is the destination of the stores? To all the fattening country on New England or the Hunter.
 2900. Would the bulk of the store stock be going in that direction? Yes.
 2901. You could not give any approximate idea as to the number of fat stock coming to the Newcastle and Maitland markets as compared with the number going to Homebush? No.
 2902. *Dr. Garran.*] Do stock entrain at Narrabri at present? I could not say. I did not make any inquiry in that respect, but I can ascertain if the information is desired.
 2903. You see a good deal of stock comes down from Queensland country passing through Walgett and Collarendabri;—are they making for Narrabri? Mostly. Being stores, they would be making for the fattening country throughout New England and the Upper Hunter.
 2904. We are told that this district between Narrabri and Collarendabri and Walgett is a remarkably good fattening district—one of the finest in the Colony? It is.
 2905. If that is so, would fat stock be entrained if this railway were made? They are more likely to be trucked than stores are, on account of the freight.
 2906. We find very few stores taking the railway at all? The freights are too high.
 2907. There would have to be a good reduction in rates before we could get any traffic in stores? Exactly.
 2908. Would that pay the railway? That would be a question for the Commissioners to consider.
 2909. You do not know much about that? No.

THURSDAY, 19 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

| | | |
|--|--|-----------------------------|
| The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | | JOHN CHRISTIAN WATSON, Esq. |
| The Hon. SOLOMON HERBERT HYAM. | | ROBERT HENRY LEVIEH, Esq. |
| | | JOHN MCFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and further examined:—

- J. Harper. 2910. *Chairman.*] You have some new figures to put before the Committee? I have to supplement the explanation which I gave you in writing on the 27th June, and in which an error was made in taking out the figures. I now tender the correct figures to the Committee.
 19 July, 1900.

2911. Will you read the return? It is as follows :—

RETURN of Goods Traffic for year ended 31st May, 1900.

J. Harper.
19 July, 1900.

| Station from | Total weight. | Narrabri East and West | Remarks. |
|----------------------|---------------|------------------------|---|
| | tons. | | |
| Morpeth..... | 16,900 | 2,004 | About two-thirds of the traffic came from Sydney, and about one-third from Newcastle. |
| Darling Harbour..... | 12,490 | 891 | |
| Redfern..... | 4,246 | 524 | |
| Total..... | 33,636 | 3,419 | |
| Newcastle..... | 19,749 | 1,762 | |
| Grand Total..... | 53,385 | 5,181 | |

2912. You desire to amend the answers which you gave to several questions? Yes; I desire to amend the answer to Question No. 2212 by leaving out these words, "for instance, in 1898 the quantity of general goods sent from Sydney was 19,238 tons, and that has been increased to 32,000 tons." I also want to excise the answers given to Questions No. 2213, 2217, 2219, and 2220, because they are all really contingent on the answer given to Question No. 2212.

2913. Do the corrected figures which you have put before the Committee include all articles sent up? Yes.

2914. I suppose you have not a detailed compilation with you? No.

2915. We wanted to get, if possible, a few items, such as kerosene, beer, and spirits? It would have been a very big work to have taken them out separately for the twelve months.

2916. You promised to prepare an estimate of the traffic on a line from Narrabri West to Walgett alone? Yes; it reads as follows :—

ESTIMATE of Traffic for proposed Railway—Narrabri West to Walgett—and assuming Collarendabri Traffic will truck at Burren.

| | Trucks. | Tons. | Revenue. |
|-------------------------------------|---------|--------|----------|
| Goods traffic..... | | 3,922 | £2,500 |
| Wool | | 9,008 | 3,467 |
| Stock | 2,600 | | 2,135 |
| Total..... | 2,600 | 12,930 | 8,102 |
| Coaching and mails..... | | | 3,093 |
| | | | £11,195 |
| Less diversion from Moree line..... | 450 | 1,132 | 941 |
| Grand Total..... | 2,150 | 11,798 | £10,254 |

This includes traffic from Collarendabri, Angledool, and Queensland districts, which amounts to £3,064, and which would come in on the Collarendabri line.

2917. *Mr. Watson.*] But in the event of there being no line to Collarendabri and a line to Walgett, do you think it would come in by the Walgett line? A portion of it would not.

2918. What is the use of putting in this estimate then? As I explained to the Committee before, I cannot tell where that wool would come in.

2919. If you put in this estimate, and say it is not your estimate, what does it mean? I put it in, saying, "This includes traffic from Collarendabri, Angledool, and Queensland districts, which amounts to £3,064."

2920. The question is whether it will come in at Burren or at Moree;—is it your opinion that it will? I think probably a portion of it will come into Burren. On the other hand, I think a good deal of it will come into Moree.

2921. Taking the Australian Pastoral Company as an illustration, is it not a fact that the road from Collarendabri towards Moree is an extremely difficult one, owing to flooding? Yes; but that traffic would not come that way.

2922. Which way would it come? Further north, for their property is further north.

2923. I always understood that the present drift of traffic from Angledool was through Collarendabri and Burren to Narrabri;—if people now send their wool from Angledool to Narrabri, and not to Moree, is it not likely that they will keep to that track when they can get a railway 50 or 60 miles nearer? As a matter of fact, this wool I speak of has gone into Moree; it has not come by Collarendabri.

2924. The evidence we had at Collarendabri was that practically all the Angledool traffic came on that track? But that is not Angledool traffic; it is traffic in Queensland which is further north-east.

2925. Is there nothing you can go upon in forming an estimate as to which would be the more attractive to that company—Burren or Moree? No; it would be difficult to state. The fact remains that I have given the estimate in full. I have just passed that remark, from which I must leave the Committee to draw their own deduction.

2926. *Chairman.*] In answer to Question No. 2226, you state, "I will produce evidence to show that the quantity which has been exported from Newcastle has been a constantly decreasing quantity every year"? Yes. I was going to produce the evidence. In 1895 there were 55,890 bales shipped at Newcastle; in 1896, 53,409 bales; in 1897, 56,316 bales; and in 1898, 46,126 bales.

2927. That does not agree with the information in the *Statistical Register*, which says that in 1894-5 there were 58,436 bales shipped from Newcastle? The figures I have given are for the years 1895-6, 1896-7, 1897-8, and 1898-9. We take our seasons differently.

2928. Taking that same period, do you know what the figures are for Sydney? I have the number of bales offered, and the number of bales actually received.

2929. *Mr. Watson.*] Does that include the wool that came by Morpeth to Sydney? Yes.

2930. *Chairman.*] For the 1894-5 season I have 58,436 bales? I have not got that quantity. The total number of bales received at Newcastle in 1895 was 68,142, and of that quantity some was shipped to Melbourne, no doubt. That explains the discrepancy in the total. In this return I first of all give the direct shipments, and then I give the totals in each case.

2931.

J. Harper. 2931. The point I am leading up to is that in the same period the total reduction in the number of bales shipped from Sydney was 100,000, the figures being in 1894-5, 697,333 bales: and in 1898-9, 598,000 bales; while, from Newcastle, 58,436 bales were shipped in 1894-5, and 47,529 bales in 1898-9;—I wished to draw your attention to these figures when I put Question No. 2226? The following are the percentages of Northern wool coming to Sydney:—In 1895, 59 per cent.; 1896, 62 per cent.; in 1897, 64 per cent.; and in 1898, 64 per cent., showing that whilst it had been increasing or stationary during the season in Sydney, it was not the case in Newcastle. The total falling off during the 1898 season in the number of bales of wool which came through to Sydney was about 2,400—that is, on a total 170,000 bales—and you must naturally look for an equal percentage of falling off in what went to Newcastle, because that indicates really the falling off in that particular district.

2932. Will you read the return from which you have been quoting? It is as follows:—

WOOL Traffic from Northern Line.

| Season, January to December. | Total Number of bales received at Newcastle. | Shipped direct. | Total Number of bales received at Darling Harbour and Morpeth. | Total from Northern Line. | Percentage received at Sydney by rail and boat combined. |
|------------------------------|--|-----------------|--|---------------------------|--|
| 1895 | 68,142 | 55,890 | 98,772 | 166,914 | 59 |
| 1896 | 64,164 | 53,409 | 106,007 | 170,171 | 62 |
| 1897 | 62,646 | 56,316 | 110,402 | 173,048 | 64 |
| 1898 | 62,099 | 46,126 | 108,485 | 170,587 | 64 |
| Four years | 257,051 | 211,741 | 423,669 | 680,720 | 62 |

2933. You promised to produce further information in connection with live stock? I promised to produce a return of the live stock which came through to Flemington and Riverstone in the one case, and to Farley and Aberdeen in the other. The return gives the comparison and the disposition of the stock.

2934. Will you be good enough to read the return? I find that it is not amongst my papers. I will produce it to-morrow.

2935. Mr. McFarlane.] Respecting the tonnage which has been given in this return at 33,633 tons;—is that from Sydney direct to Narrabri? No; that is generally on the Northern line.

2936. Could you not give us the figures respecting the total tonnage from Sydney direct to Narrabri? To Narrabri East and West from Darling Harbour, 891 tons; from Redfern, 524 tons; and from Morneth, 2,004 tons. That makes a total of 3,419 tons, as against 1,762 tons sent from Newcastle to Narrabri West.

2937. Have you also similar figures relating to the traffic from Narrabri direct to Sydney, and from Narrabri direct to Newcastle? I have not, so far as the stock is concerned, but I will furnish the information to the Committee to-morrow.

FRIDAY, 20 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.

The Hon. ANDREW GARRAN, LL.D.

The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarenebri.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and further examined:—

J. Harper. 2938. Chairman.] Have you brought a return of the live stock which come to Flemington and Riverstone in the one case, and to Farley and Aberdeen in the other? Yes. It reads as follows:—

NEW SOUTH WALES RAILWAYS.

RETURN of Live Stock received at Flemington, Riverstone, Farley, and Aberdeen, from Narrabri, Moree, Collarenebri, and Walgett District, during the year ended 30th June, 1897:—

| | Cattle. | Sheep. |
|-------------------|---------|---------|
| Flemington | 7,935 | 248,542 |
| Riverstone | 4,008 | 68,885 |
| Total | 11,943 | 317,427 |
| Farley | 704 | 26,136 |
| Aberdeen | | 85,451 |
| Total | 704 | 111,587 |
| Grand Total | 12,647 | 429,014 |

2939. Have you also prepared a return of the wool traffic from that district? Yes. It reads as follows:—

J. Harper.
20 July, 1900.

RETURN showing Number of Bales and Weight of Wool forwarded from Narrabri West during the Seasons 1897-98 and 1898-99:—

| Stations to. | 1897-98. | | 1898-99. | |
|---|------------------|--------------|------------------|--------------|
| | Number of bales. | Weight—Tons. | Number of bales. | Weight—Tons. |
| Darling Harbour, Liverpool, and Morpeth | 24,071 | 3,800 | 21,801 | 3,399 |
| Newcastle and West Maitland | 15,124 | 2,612 | 16,520 | 2,732 |
| Total | 39,195 | 6,412 | 38,321 | 6,131 |

2940. Have you brought any other returns? Yes. In my first examination I was asked, by Dr. Garran I think, a question as to the disposition to offer wool in the Sydney market as against shipping it direct. For the information of the Committee I have prepared the following return:—

STATEMENT showing Number of Bales of Wool offered for sale in Sydney compared with the arrivals.

| Season. | Number of Bales offered. | Number of Bales actually received. | Percentage offered for Sale. |
|-----------------|--------------------------|------------------------------------|------------------------------|
| | | | Per cent. |
| 1895-6 | 441,437 | 623,000 | 71 |
| 1896-7 | 437,284 | 610,000 | 72 |
| 1897-8 | 445,000 | 564,000 | 79 |
| 1898-9 | 447,517 | 552,000 | 81 |
| 1899-1900 | 419,000 | 501,000 | 84 |

NOTE.—Brisbane sales are subsidised by the Government.

TUESDAY, 24 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarendabri.

Charles McDonnell Stuart, Supervising Engineer, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

2941. *Dr. Garran.*] Is the proposed line from Woolabra to Collarendabri the driest of all possible routes? There is not very much difference between it and the line from Narrabri, on the north side of the Namoi.

C. McD.
Stuart.

2942. I am leaving out the eleven miles at the end of the line; I am supposing that we stop at point A on the map;—is the other part of the line drier between that and Woolabra? It is slightly drier; but only slightly drier.

24 July, 1900.

2943. Taking the line from Narrabri to Wee Waa, do we get much flooded country there going south of the river? No.

2944. When we get to Wee Waa, have we to cross the water? Yes; that is troublesome. It is very flooded from there until you join the survey on the north side of the Namoi.

2945. What distance is that? About 7 miles of flooded country.

2946. Would most of that be on piles? No; bridges just here and there at the deepest points, with shallow banks. It is not a very deep or strong flood.

2947. Is there any danger of the bridge, or banks being washed away? No.

2948. Would this alternate bank and bridge work extend over 6 or 7 miles? Yes; that is the worst part.

2949. Would you be pretty well on sound ground until you get to point A? No; only until you get to Burren; thence you have 3 miles of flooded country before you get to point A.

2950. As between Woolabra to point A and Narrabri West to point A, the difference in favour of the northern route for dryness is not very great? No; but on the whole I should say the Woolabra line is the drier.

2951. For commercial and general traffic purposes, which line do you think is the better one? I think the line from Narrabri.

2952. That is a better connection for the railway? Yes.

2953. Even if it is a little more flooded, that is more than compensated for by its going through better country? Yes.

2954. Is there very much flooded country between Burren and Walgett? After you cross Pian Creek into Walgett, where we propose stopping a mile and a half from the town, there are some miles of flooded country, and it is very deep.

2955. How many miles? I think it is 7 or 8 miles from Eurie Eurie.

2956. How close can you approach Walgett, coming from the south, without getting into wet country? You cannot get very near Walgett. It is not the last piece of flooded land that causes the trouble; there are three or four pieces of flooded ground.

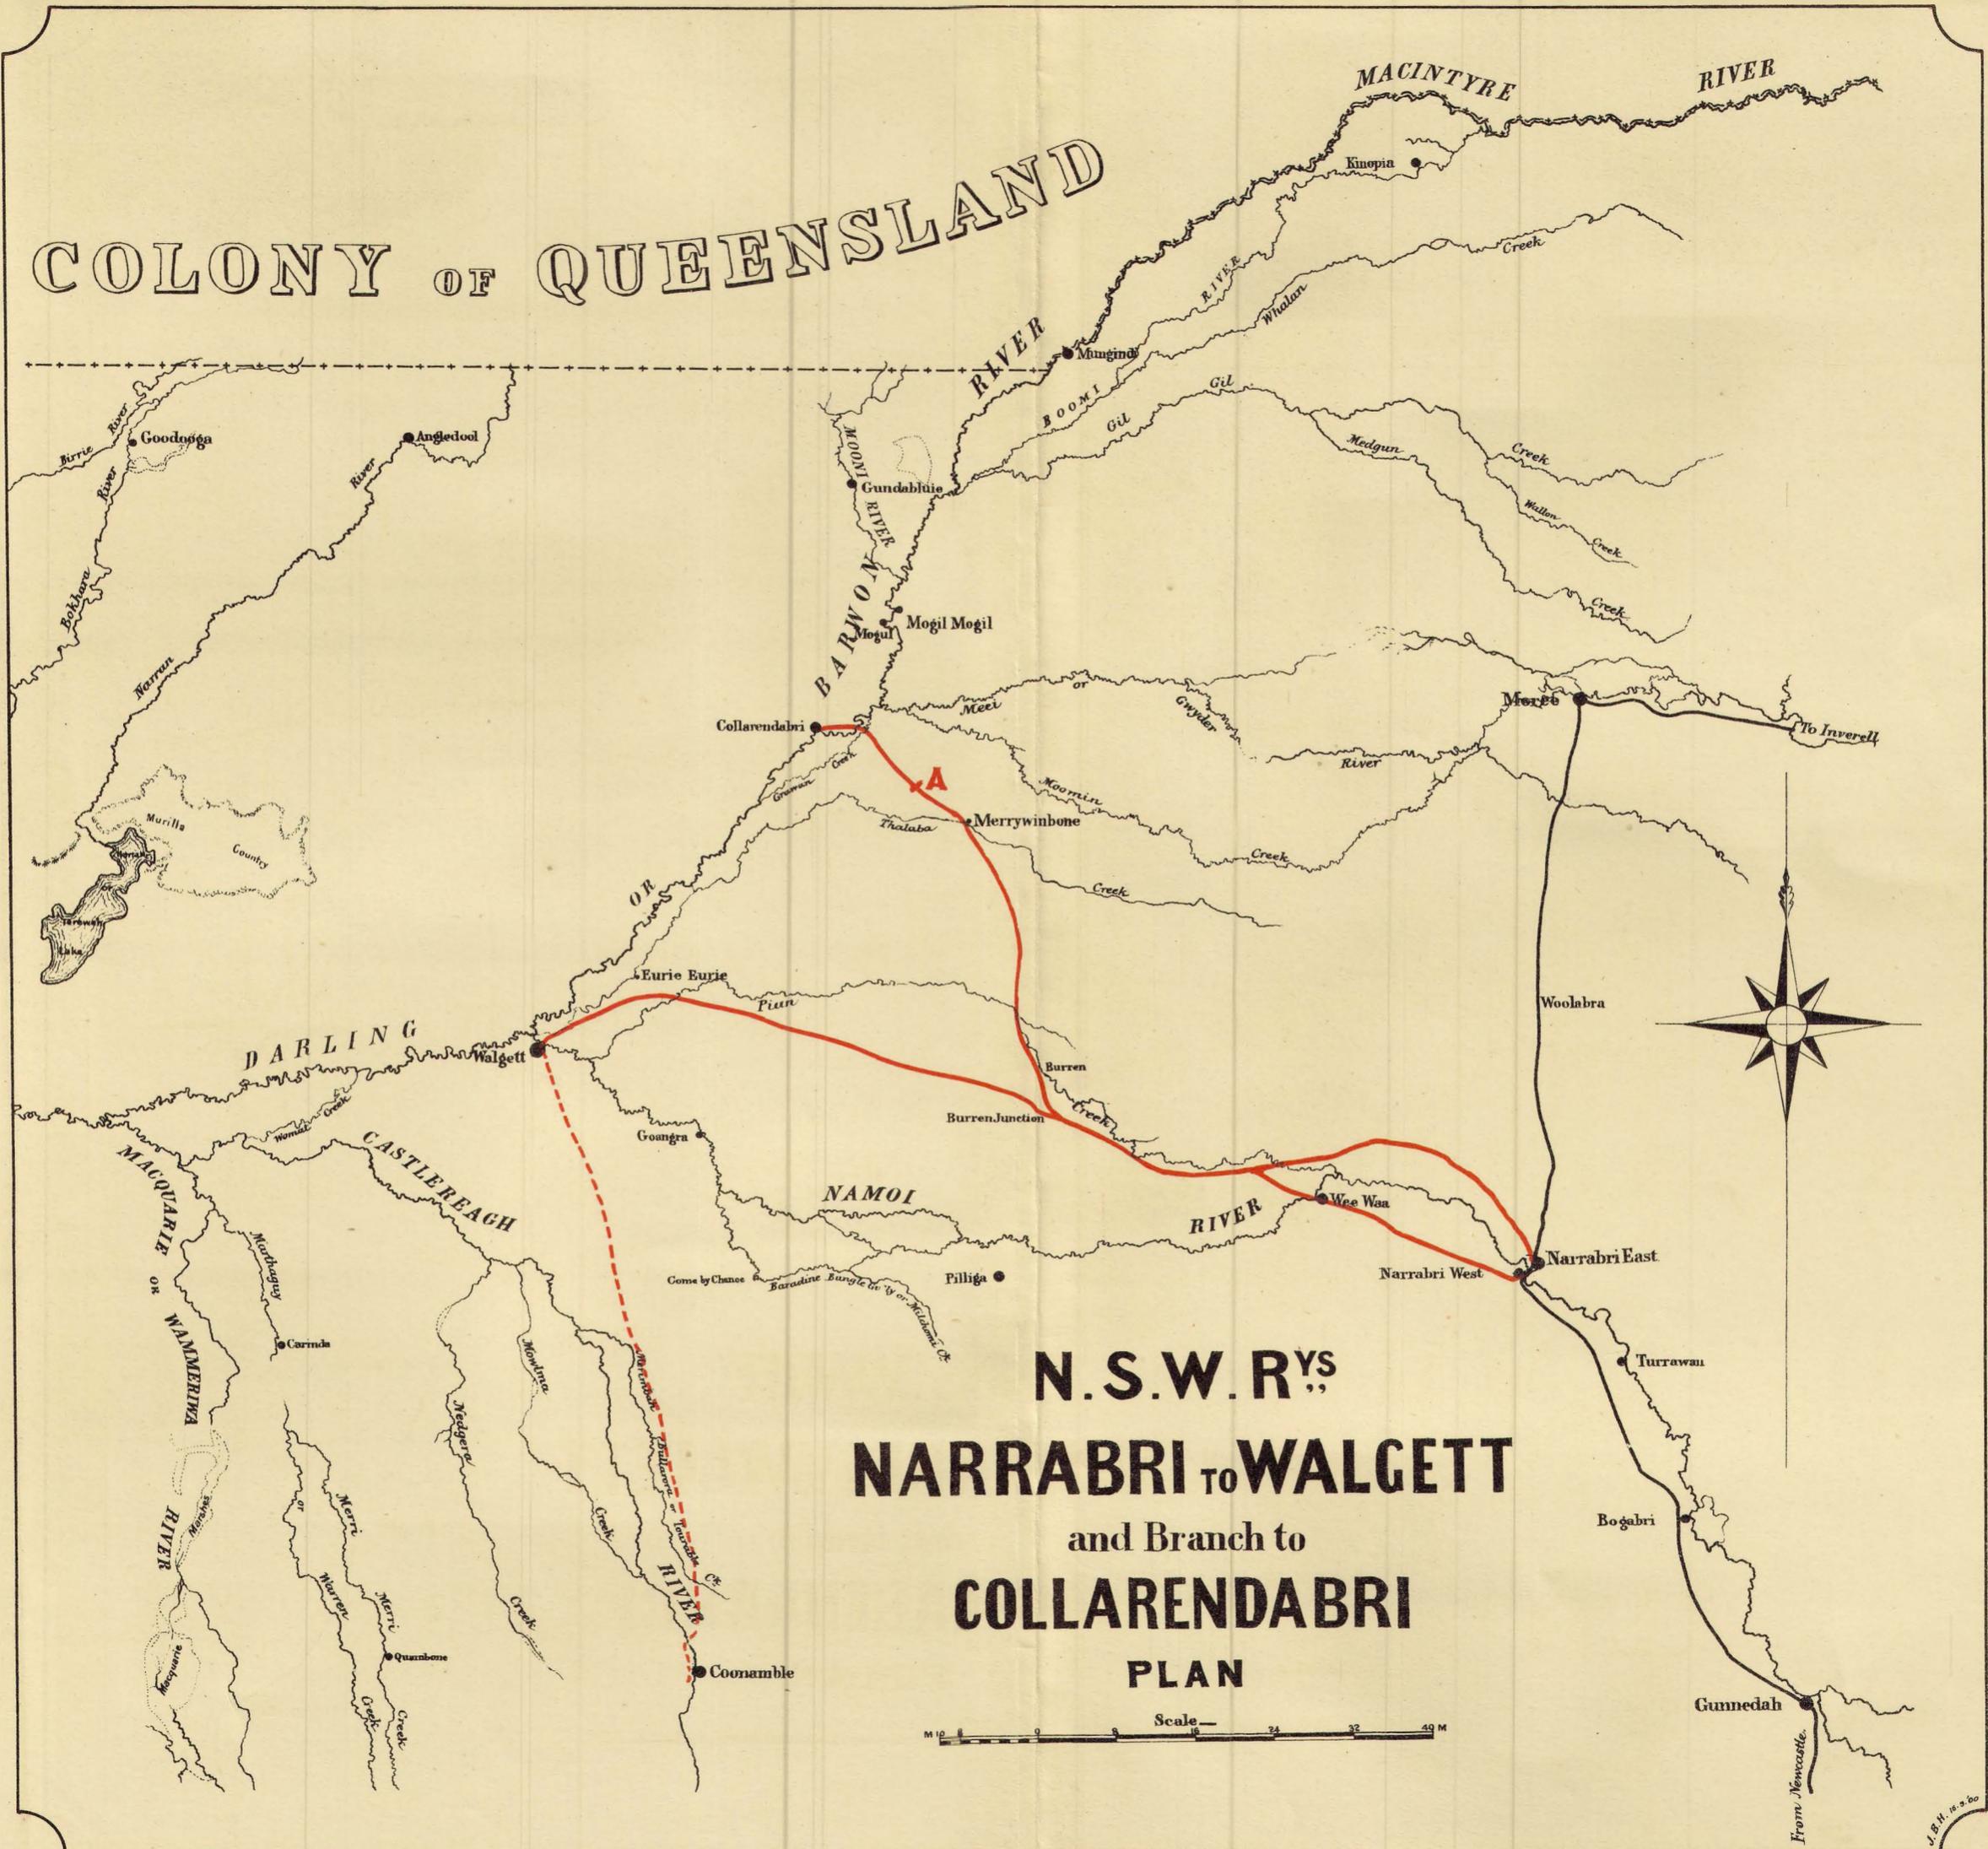

2957. I mean that to avoid all difficulties in approaching Walgett from the south, how far south would you stop? I would go right into Walgett.

C. McD.
Stuart.
24 July, 1900.

2958. I want to know how far you would have to stop to get clear of the difficult country? I do not know exactly. It is a troublesome bit of country, but it is not flooded to anything like the same depth as the country between Eurie Eurie and Walgett.
2959. Is Walgett subject to flood? Yes; in a very high flood the main street is under water.
2960. Could you put your railway station anywhere above flood-level? No.
2961. If you take a line of railway into Walgett, it must be submerged? We would keep it out of the flood by raising it 4 feet.
2962. But would not all the approaches be under water? Yes; in a high flood.
2963. So that practically traffic would be at a standstill? Yes.
2964. Will Collarendabri be so bad as that? No; Collarendabri is practically dry ground. It is in getting from point A to Collarendabri that you have the greatest difficulty.
2965. Suppose we stop at point A, with a view of ultimately going on to Angledool, would it be better to leave that difficulty and face it afterwards, or would it be better to face it at once? That is more a political question than an engineering question.
2966. If you stop at point A, what will be the result? You will have a new town established there.
2967. And if you go on to Angledool, will the centre of population be shifted to Angledool? Not necessarily.
2968. You would not increase the expense by stopping at point A, rather than by going on to Collarendabri? No.
2969. And at point A you will get all the traffic which you would get by going to Collarendabri? Yes; and you would save that expensive 11 miles.
2970. As between Moree and Collarendabri;—is it hopeless to think of a railway line there? Yes; I think it is quite hopeless.
2971. So that the idea of extending the Inverell-Moree railway due west is out of the question? Yes.
2972. The idea was that Inverell would find its market in the west; now it will have to come down south, and then go north-west to Collarendabri;—would not that be a great handicap? Yes.
2973. So that the idea once entertained is, you think, now out of the question? Yes, unless the Inverell people can compete with produce from the Tamworth district.
2974. If we make a railway from Narrabri to Collarendabri, as marked on the plan, and one to Walgett, do you think we shall serve all requirements of that part of the country? Yes.
2975. And the space between the two is not far from either line? It is not.
2976. If we make a line from Narrabri to Collarendabri, and a line from Coonamble to Walgett, we will do justice to the district? I think so.
2977. Would that be a good division? Yes, a very good division.
2978. Would all the parts between the two railways be fairly well served? Yes.
2979. Would any part be more than 40 miles from a station? No.
2980. And it would open up the best of the district? Yes.
2981. Do you think that the line which is being made to Brewarrina will take a good deal of the traffic that might have come to Walgett? It will certainly take some of it.
2982. Do you think that the line to Brewarrina diminishes the necessity, from the Railway Commissioners' point of view, of going to Walgett? I would scarcely say so, because the distance from Brewarrina to Walgett is so great that I think both parties are fairly entitled to railway communication.
2983. Do you think there is room for both? Yes.
2984. From Coonamble to Walgett, to the point where you meet with the difficulties, is an easy line? Yes; it is only on the last 10 miles that there is a difficulty.
2985. At the end of the line you will be under water unless you build up? Yes.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM GRENFELL TO WYALONG.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom the consideration of the proposed Railway from Grenfell to Wyalong was referred back for further consideration and report, have, after due inquiry, resolved that it is not expedient the proposed railway should be carried out, as in their opinion a line from Temora is preferable; and, in accordance with the provisions of sub-section (iv), of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

PREVIOUS INQUIRIES.

1. Including the present inquiry, the question of railway extension to Wyalong has been four times before the Public Works Committee. In 1894 it was under consideration as a proposal for the construction of a line from Temora, and the Committee reported, that, owing to the uncertainty of the permanence of the Wyalong goldfield, the decision upon the proposed railway should, in their opinion, be deferred for six months. The following year the proposal to connect with Temora was again dealt with by a fresh Committee, and on that occasion the decision was against the proposed line, the Committee being of opinion that at that time there was no justification for its construction, and that the prospects of Wyalong's future were not such as to lead them to conclude that the railway should be built in anticipation of what might be the condition of the goldfield and the district some years hence. Last year the present Committee inquired into a proposal for the construction of a railway from Grenfell to Wyalong, the line connecting with that now being constructed from Koorawatha, and a report was adopted recommending the Grenfell route, the resolution on the subject being passed on a division of four votes to three.

THE REFERENCE BACK TO THE COMMITTEE.

2. On 19th December, 1899, the proposed Railway from Grenfell to Wyalong was referred back to the Committee by the Legislative Assembly, the resolution of the Assembly being—

“That the consideration of the Railway from Grenfell to Wyalong be referred back to the Parliamentary Standing Committee on Public Works for further consideration and report, because the matter has not received sufficient consideration.”

The reason stated in the resolution for sending back the proposal the Committee did not consider to be justified, and they, therefore, through their chairman, in reply to the letter of the Clerk of the Legislative Assembly, informing them of the passing of the resolution, addressed to the Honorable the Speaker, a letter stating that, while recognising the authority of the Assembly to refer the matter

matter back, and agreeing to reconsider the matter, they respectfully took exception to the reason assigned for such reference, and drew attention to their report and the evidence and plans attached thereto, which afforded ample proof that the proposed railway received very full consideration in all its bearings.

FURTHER CONSIDERATION OF THE PROPOSED RAILWAY.

3. In the further consideration given to the matter by the Committee, it was thought to be unnecessary to take further evidence, unless on some points not already put forward, but advisable that those members of the Committee who had not been over the route of the proposed line, and that from Temora to Wyalong, should have the opportunity to do so. It was considered that the evidence taken in the last inquiry was very complete, that the further examination of witnesses would prolong the investigation without resulting in anything useful, and that the only procedure likely to assist the Committee was the further inspection of the route by those of the Committee not personally acquainted with it. The whole of the evidence given in the inquiry of 1899, it was agreed, should be regarded as evidence in the present inquiry, and Mr. Shepherd, Mr. Levien, and Mr. McFarlane were appointed a Sectional Committee to make a further inspection with reference to the proposed railway. The inspection by the Sectional Committee was delayed by the state of the roads consequent upon the wet weather, and, as at this time a vacancy occurred in the representation of the Legislative Council on the Committee, it was thought advisable to postpone the inspection until the vacancy was filled, so that the newly elected member might be added to the Sectional Committee.

SECTIONAL COMMITTEE'S VISIT.

4. On 20th July the Sectional Committee, to which Mr. Hyam had been added, left Sydney for Temora, it having been decided that their further inspection should commence, at that town, by proceeding along the alternative route from Temora to Wyalong, and from there travelling over the proposed route from Grenfell to Wyalong; and their report is published with this one. They were able, not only to inspect both the routes, but to see much of the country through which they run, and, though they did not examine any witnesses, they gave the residents of the districts interested in the railway full opportunity to put before them any information likely to assist them in acquiring a thorough knowledge of the results that would follow the construction of the proposed railway, whether from Grenfell or from Temora. As the resolution under which they were appointed did not direct them to do more than further inspect the proposed and the alternative route for the railway, they did not, in their report, make any recommendation. They were of opinion that they should inform the full Committee of the nature of their proceedings from the time of their leaving Sydney to that of their return, and postpone an expression of their views as to the better of the two routes until the matter should come before the full Committee for consideration.

EXPLANATION OF THE VOTING.

5. The report of the Sectional Committee was submitted on the 27th ultimo, and on the 1st instant the Committee came to a decision in regard to the proposed work, by passing a resolution that it is not expedient the line to Wyalong should be constructed from Grenfell, as, in their opinion, a line from Temora is preferable. As in the preceding inquiry, the division is four to three, but the position is reversed, the majority now being in favour of the extension from Temora. Five of the members of the Committee voting in the division took part in the inquiry of last year, and voted in the present further inquiry as they did previously, two favouring the Grenfell route and three that from Temora; but of the two new members appointed since the date of the last inquiry, one voted for the Grenfell connection while the other supported that from Temora. This increased the number of votes in favour of the Temora route, as shown in the division of last year, from three to four, and decreased that in favour of the route from Grenfell from four to three.

REASONS

REASONS FOR SUPPORTING THE ROUTE FROM TEMORA TO WYALONG.

6. The four members of the Committee who supported the Temora connection urged in favour of their view the following reasons :—

- (1) It is considerably shorter than the route from Grenfell to Wyalong.
- (2) It will cost £45,000 less.
- (3) It will serve a larger population.
- (4) It will open up a larger area of land suitable for close agricultural settlement.
- (5) It will serve the mineral area around Reefton and Barmedman.
- (6) It will preserve existing trade relations.
- (7) It will allow the residents of the districts affected an opportunity of trading indifferently with either Sydney or Melbourne.
- (8) It will facilitate the transfer of stock in times of drought from the west to the high country about Gundagai and Tumut.

RESOLUTION PASSED.

7. The following extract from the Committee's Minutes of Proceedings shows the resolution passed, and gives the details of the voting :—

" Mr. Shepherd moved,—'That in the opinion of the Committee, it is expedient the proposed Railway from Grenfell to Wyalong, as referred back to the Committee by the Legislative Assembly, for further consideration and report, be carried out.'

" Mr. McFarlane seconded the motion.

" Mr. Levien moved,—'That the motion be amended by inserting the word 'not' before the word 'expedient.'

" The amendment was passed on the following division, upon the question 'that the word proposed to be inserted be so inserted' :—

| Ayes, 4. | Noes, 3. |
|--|--|
| Mr. Dick,
Mr. Hyam,
Mr. Watson,
Mr. Levien. | Mr. Shepherd,
Dr. Garran,
Mr. McFarlane. |

" Mr. Levien moved,—'That the motion be further amended by the addition of the following words :—' as, in the opinion of the Committee, a line from Temora to Wyalong is preferable.'

" The amendment was passed on the following division, upon the question 'That the words proposed to be added be so added' :—

| Ayes, 4. | Noes, 3. |
|--|--|
| Mr. Dick,
Mr. Hyam,
Mr. Watson,
Mr. Levien. | Mr. Shepherd,
Dr. Garran,
Mr. McFarlane. |

" The motion, as amended, was passed on the following division :—

| Ayes, 6. | Noes, 1. |
|---|--------------|
| Mr. Dick,
Mr. Shepherd,
Mr. Hyam,
Mr. Watson,
Mr. Levien,
Mr. McFarlane. | Dr. Garran." |

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

RAILWAY FROM GRENFELL TO WYALONG.

REPORT.

THE Sectional Committee appointed to make a further inspection with reference to the proposed Railway from Grenfell to Wyalong, left Sydney by mail train at 9.20 p.m. on Friday, 20th July, for Temora, it having been decided that the inspection should commence at that town, by proceeding along the alternative route from Temora to Wyalong, and from there travelling over the proposed route from Grenfell to Wyalong.

On the motion of Mr. Levien, seconded by Mr. McFarlane, the Hon. P. L. C. Shepherd, M.L.C., was appointed Chairman.

Temora was reached at 9.15 a.m. on Saturday, and, in the interests of the Temora-Wyalong route, the Sectional Committee were met by the Mayor, the Secretary, and a number of the members of the Temora Railway League, and others of the townspeople.

At 10.30 a.m., accompanied by the Secretary and some of the members of the Railway League, the Sectional Committee left Temora for Wyalong, *via* Reefton and Barmedman. Travelling by way of the Duck Creek and Trungley-road, as far as the Trungley Hall, they saw a fair proportion of the land under cultivation up to that point; and then branching off to Reefton, they arrived at that mining township at 12.30 p.m., and were met by a number of the townspeople and members of the local Railway League. Barmedman was reached at a quarter-past 2 p.m., and after a stay of an hour, during which the mining resources and progress of the town and district were explained, the journey was continued to Wyalong, where the Sectional Committee arrived at 7.25 p.m.

Their inspection of the Temora route for a railway to Wyalong showed them that for about 4 miles from Temora the country was scrubby. Thence to Reefton, 8 miles further on, the land was found to be fairly good, and this continued, with occasional patches of inferior country, to Barmedman, 9 miles from Reefton. Thence to the Half-way House Hotel, 10 miles from Barmedman, the land varied considerably from fair to sandy loam with scrub, and between the hotel and the vicinity of Wyalong, 8 or 9 miles further, almost all the country passed along the main road was inferior, gilgai holes of considerable size being for some distance very numerous, and thence sandy scrub and gravel ridges were noticeable until about a mile from Wyalong when the land became very good. On leaving Barmedman, two of the Committee followed the main road, while the other two travelled from 3 to 5 miles south of the road, where the country was of much better quality.

At East Wyalong, the Government township, the residents were practically unanimous in supporting the Grenfell route. They do so to a certain extent because that by adopting that route less delay in giving them railway communication will take place than may be the case if another inquiry respecting the Temora route should have to be made, but also because they are satisfied with the facilities which the line to Grenfell will afford the town and surrounding

district. They point out that the objections to this route come almost wholly from Temora. That town has business associations with West Wyalong which strongly influence the residents of that part of Wyalong in favour of the Temora route. It does not appear that the trade and traffic with Temora is of any special benefit to that town—most of both simply passes through; but in any case Temora wishes to retain its present relations with Wyalong, either by means of a railway connection or by leaving things as they are. Another factor in the matter is that the people of Temora are afraid that, if the Wyalong trade and traffic are diverted to Grenfell, the railway train service between Cootamundra and Temora, instead of being continued as now—daily—will be altered to one by which the trains will run only twice or three times a week.

At 8:30 p.m. the Sectional Committee met a deputation representing the Wyalong Railway League, and including the Mayor of Wyalong, in the jury-room of the court-house.

The importance of Wyalong as a permanent and flourishing gold-field, and the serious hindrance to the progress of the town and district caused by the want of railway communication, were strongly represented. All of the speakers, including the Mayor, with one exception, favoured the Grenfell route, but were willing to leave the choice of routes to the Public Works Committee, provided the construction of the line was not thereby delayed. On Monday, 23rd instant, a deputation, representing the West Wyalong Railway League, waited upon the Sectional Committee, in the interests of the Temora route for the proposed railway, and advocated that route as the nearest and most direct to Wyalong, and as the national route. It would, they said, afford the farmers of the district a means for getting their produce away to the nearest market, and mine-owners for obtaining machinery for their mines; and it would develop a large timber trade between Wyalong and the district beyond it and Temora. One of the deputation stated that, if the Grenfell route should be the one adopted, goods would still be obtained by Wyalong business people from Temora by team, in competition with the railway.

At 10:30 a.m., the Sectional Committee left Wyalong to inspect the Grenfell-Wyalong route, and reached Back Creek at 12 o'clock noon. For about $3\frac{1}{2}$ miles from Wyalong good agricultural country, and very suitable for fruit-growing, was passed through; and for 4 miles further the land was of excellent quality—a good sandy loam. Thence for $4\frac{1}{2}$ miles, to Back Creek station, the land was fairly good, with box, myall, oak, and belar growing upon it. At Back Creek station a deputation of settlers pressed upon the attention of the Sectional Committee the disabilities they laboured under through not having railway communication, and expressed themselves favourable to any route, so long as they got a railway.

From Back Creek station to the Bland Creek, a distance of 5 miles, the Sectional Committee continued along the surveyed railway route, and inspected that portion which is most liable to flood. The land consists of red, and what is known in the district as black, soil, all since the recent rains, more or less covered with grass and herbage excellent for grazing purposes, and portions of the land suitable for agriculture. Several parts of it have been flooded within the last fortnight; most of the water had run off, but it still remained in the gilgais. The portion of the route most subject to flood extends back from the Bland Creek towards Wyalong for a considerable distance, and this, during the recent heavy rainfall, which, it is said, produced one of the heaviest floods experienced since 1890, was found to have been covered to a height of about 12 inches; and now, a fortnight afterwards, the water has disappeared, except that it has left the ground boggy. At the Bland Creek, where the railway route crosses it, a selector who has been ten years there, on a selection comprising 960 acres, met the Sectional Committee and informed them that he had successfully cultivated the black soil.

From the Bland Creek the Sectional Committee travelled 11 miles to Marsden, where the residents of the township brought under their notice the advantage that would accrue to the township, and to Bena, a largely-settled district to the north-west of it, if the Grenfell route could be altered so as to bring the railway through Marsden. The country from the Bland Creek to Marsden was well grassed and of good quality.

Leaving

Leaving Marsden, the Sectional Committee travelled to Lake Cowal station, $6\frac{1}{2}$ miles further, over exceedingly well-grassed land, which must be grazing country of the first quality, with a large proportion well suited for agriculture.

Lake Cowal was left at 10:30 the next morning, and the Sectional Committee travelled to Grenfell, *via* Marsden and Carragabal. The grass and herbage on the plain country in the vicinity of Lake Cowal and around Marsden showed remarkable growth, as the result of the recent rainfall, for it was from 6 to 8 inches to considerably over 1 foot high, suggesting unusual possibilities in the fattening of stock. For some distance from Marsden towards Carragabal splendidly grassed land was passed through; and, though nearer Carragabal station, the grass and herbage were not so thick or plentiful, the land, some of which consisted of bare plains, but most of it lightly timbered, was generally of good quality. All of the country in this locality might be fairly described as very good pasture land, with much of it fit for cultivation. Debris on the wire fence along one of the banks of Carragabal Creek showed that in some places, when the creek was recently in flood, the water must have covered portions of the adjoining land; but, as except in a few rather boggy places no water was remaining, it must have disappeared from the land very quickly. Myall, box, pine, and oak were the chief timbers seen.

At Carragabal station the Sectional Committee were met by a deputation of settlers from Piney Range and its vicinity, who urged the construction of the railway by the Grenfell route in the interests of further settlement and production. The land in the district, they stated, was taken up by settlers to a large extent, and they were cultivating a considerable proportion of it; but the want of easy communication with a railway prevented them putting as much under crop as they would like to do.

From Carragabal the Sectional Committee travelled towards Piney Range, crossing the surveyed railway route several times, and passing a considerable quantity of land under wheat. Approaching Grenfell the country changed from flat to undulating, timbered, chiefly, with oak and box, nearly all suitable for cultivation, and the balance fit for pastoral purposes. Some miles of poor-box country with some hills and undulations which might be described as second-class grazing land for sheep were also met with.

Grenfell was reached at 6:30 p.m., and at 8:30 a deputation, consisting of the Mayor of Grenfell and members of the Grenfell Railway League, waited upon the Sectional Committee, and advocated the construction of the railway from Grenfell to Wyalong. They urged that there could be no question of the superiority of the land along this route, as compared with that along the route from Temora, and stated that more land would be taken up along the route, or within convenient reach of it, and cultivated, if it were certain that a railway would be provided to afford means for sending the produce away. It was impossible, they said, to make farming pay under present conditions, the farmers having to cart their produce such a distance. The Grenfell-Wyalong line, they wished to press upon the attention of the Committee, was one that would afford the people of the Grenfell district a western market as well as one at Sydney, thus giving them some chance of competing with producers in a better position in regard to railway communication. The railway should, moreover, they considered, be regarded as a portion of a trunk line extending to the Hillston district, the trade of which district would thereby be attracted to Sydney, the direction in which it ought to come. The route from Temora, they pointed out, would divert the Hillston trade to Melbourne.

The following morning the Committee left Grenfell for Sydney, by way of Landra and Young, that route affording them an opportunity for seeing some of the rich agricultural lands that will be served by the railway to Grenfell from Koorawatha.

The foregoing statement of proceedings will show that the Sectional Committee inspected both routes and much of the country through which they run, and that though they did not examine any witnesses they gave the residents of the districts interested in the railway full opportunity to put before them any information likely to assist them in acquiring a thorough knowledge of the results that would follow the construction of the proposed railway, whether from Grenfell or from Temora.

Last

Last year, when the Full Committee traversed the Grenfell route, the Bland Plains and most of the country generally were almost bare of grass or herbage; now both grass and herbage may be said to be in profusion everywhere. The country has, therefore, been seen in both a bad and a good season, and its capabilities can thereby be better understood.

As the resolution under which the Sectional Committee were appointed did not direct them to do more than to further inspect the proposed and the alternative route for the railway, they do not consider that they are called upon in this Report to make any recommendation. They are of opinion that they should inform the Full Committee of the nature of their proceedings from the time of their leaving Sydney to that of their return, and postpone an expression of their views as to the better of the two routes until the matter comes before the Full Committee for consideration.

PLAN.

Railway from Culcairn to Germanton.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM CULCAIRN TO GERMANTON.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of Railway from Culcairn to Germanton," have, after due inquiry, resolved that it is expedient the proposed railway should be carried out, conditionally on the required land being given free or equitably exchanged for Crown lands, and that the lands served contribute a sum sufficient, together with revenue received, to make up an amount equal to the working expenses and 2 per cent. on the cost of construction,—and not otherwise; and, in accordance with the provisions of sub-section (iv), of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

DESCRIPTION OF THE PROPOSED RAILWAY.

1. The proposed railway, 16 miles 38 chains in length, would leave the Main Southern line about 30 chains south of the Culcairn station, and, taking a generally easterly direction, pass Morven township about 1 mile to the south, and thence, following the general direction of the main road, continue to Germanton, where it would end at Albury-street in that town, beyond the cricket ground, which it would adjoin on the south side. The general construction of the line is described as light, but includes provision for the triplication of rails at the Culcairn station; the junction and terminus arrangements necessarily raise the mileage cost in such a short line. Five fair-sized creeks have to be bridged; the grades and curves are easy.

THE GERMANTON DISTRICT.

2. The proposal for a railway to Germanton has been before the public, the Committee are informed, for many years, the first survey having been made in 1883, from which date to the present time the matter has frequently been brought under the notice of the Department of Public Works by deputations from residents of the districts concerned, and by other means. In 1896–1899 a very considerable development took place in the Germanton district, in the direction of wheat-growing, a large area of land being devoted to that industry on the half-shares principle, with the result, that during the grain season of 1898–1899, out of 115,000 bags of wheat received at the Culcairn railway station, 90,000 came from the Germanton district. As the whole of the present season's wheat has not yet been marketed it is difficult to forecast the actual yield. Up to the middle of March, which is less than four months of the wheat season, 50,000 bags were received at Culcairn, of which quantity 37,000 bags were the produce of the district to be served by the proposed line. The continued development of the district is regarded as highly probable, inasmuch as it is favoured as a rule with a rainfall sufficient to ensure the success of all agricultural operations.

AN

AN ALTERNATIVE PROPOSAL.

3. At the request of the Progress Committee of Cookardinia, an exploration was made in 1897 of a line from Henty to Germanton, as an alternative to that from Culcairn. It was found that a railway from Henty presented no engineering difficulties, and was not likely to cost more per mile than the other; but it would be expensive in the aggregate, on account of its extra length—some 10 miles—and it did not present any special advantages over the original proposal, as the population to be served by it was no larger than that along the route from Culcairn. The Railway Commissioners went over the route, and, as a result of their inspection, were not prepared to recommend it in preference to the line from Culcairn, which has the great advantage, from a traffic point of view, of leaving the main line at a point which is already a junction station.

ESTIMATED COST.

4. The estimated total cost of the line is £53,957, or £3,275 per mile. This estimate is based on the price of rails being £7 10s. per ton; but the Engineer-in-Chief, according to his evidence, anticipates a higher price than this by the time the line is under construction. There may, he says, be a drop; but, on the other hand, the price may rise to the extent of another 10s. per ton, which would amount to about £50 or £60 more per mile.

RAILWAY COMMISSIONERS' REPORT.

5. The report by the Railway Commissioners estimates the annual cost, comprising interest at 3 per cent. and working expenses based on a tri-weekly service, at £3,469, and the revenue from traffic at £2,175, which exceeds the working expenses by £325, but is £1,294 less than the total annual cost. In referring to the circumstance that the estimated revenue which can be calculated upon to-day will more than pay working expenses, they say it is fair to assume that the traffic will be considerably increased, and, as a large proportion of it would pass over the main line, it is reasonable to look to that line to bear any deficiency that might arise on account of interest on the capital cost of the branch line. The locality is one of a highly competitive character as regards Victoria; but, while it is impossible to look for more than the carriage from Albury to Germanton of general goods, the grain and kindred traffic would, under existing rates, come in the direction of Sydney. In view of the possibilities of the district, and its probable development, if aided by railway communication, they feel justified in recommending the construction of the line, subject, however, to the imperative condition that all the land required should be conveyed to the Government free of cost.

INSPECTION BY A SECTIONAL COMMITTEE.

6. The Committee having examined the necessary official witnesses in Sydney, a Sectional Committee visited the Culcairn-Germanton district, where they inspected the route of the line and a considerable portion of the country to be served by the railway, and took local evidence. They found the country through which the line would pass to be generally level, with small broken hills on the northern side, whilst on the southern side the flat lands extend for a considerable distance, bounded by a range of hills some miles away. From the township of Morven, 5 miles distant from Culcairn, the expanse of level land widens out considerably, forming extensive areas of verdant flats. The greater portion of the land along the route on the lower levels is suitable for agriculture, whilst the slopes in the hilly parts are excellent for grazing purposes.

It was noticeable that but little attempt at agriculture had been made within 8 or 9 miles of Culcairn, the land for that distance being occupied almost exclusively with stock. A considerable amount of cultivation, however, was apparent on approaching Germanton, and though agriculture has only been carried on there to any large extent during the last three or four years, there is every promise,—the Sectional Committee say,—of a considerable development of this industry

industry in the near future; in fact, larger areas are being put under crop every year. In addition to the paddocks which have already been brought under the plough, further areas are being prepared for sowing, whilst ringbarking and other improvements are being rapidly carried out on most of the holdings.

The evidence given before the Sectional Committee, generally, went to show that the country through which the railway would pass, as well as considerable areas beyond the terminus which will be served by it, is of a superior description, suitable for growing wheat and other agricultural products. Its suitability for sheep, the rearing of cattle, and the production of wool is generally conceded, whilst it is anticipated, according to the evidence of several landowners, that in some of the country beyond Germanton, an extensive dairying business will be developed within a very short period, more particularly if the means of transit, which the proposed railway would afford, is obtained. The higher lands in the direction referred to are, though for the most part consisting of good soil, deemed more suitable for grazing than for agriculture, on account of their broken character.

It was ascertained that the country through which the railway would pass is held in large areas by private owners. These, the Sectional Committee found, are not inclined to give, free of cost, the land that would be required for the line, but express themselves generally as willing to accept Government land in exchange for that which may be taken by the Railway Department.

During their visit the Sectional Committee drove in the direction of Yarra Yarra, a distance of about 13 miles east of Germanton, and from there northward to Little Billabong, a further distance of 15 miles. From Little Billabong they proceeded to Kinross, a distance of about 15 miles, and thence back to Germanton, another 5 miles. The land towards Yarra Yarra consists of undulating country, interspersed with rather precipitous hills. It is all first-class grazing land, about three-fourths of it being suitable for cultivation. Some of the land is exceptionally good. It is mainly forest land—box and red-gum country. From Yarra Yarra to Little Billabong the country is more level than in the part already referred to, and the whole of it may be classed as land suitable for cultivation. Already considerable areas of it are under wheat, and the crops so far look very promising. The land from Little Billabong to Kinross is of an excellent character, and is tolerably level and well watered. A considerable portion of that land also is being used for growing wheat, and the farmers met with expressed their intention of largely increasing the area under cultivation if the proposed railway were constructed.

On the route of the line, and for a considerable distance beyond Germanton, there are large areas of land suitable for cultivation, that between Little Billabong and Germanton being noticeable for its superior quality.

TRAFFIC PROSPECTS.

7. The traffic expected on the proposed line will consist chiefly of the carriage of wheat. The district is a pastoral as well as an agricultural one; but the bulk of the stock and wool, according to a report read to the Committee by the Chief Railway Traffic Manager, is forwarded by road to Albury, 38 miles from Germanton, and thence by rail to Melbourne. Fully 75 per cent. of return supplies, he also says, are obtained from Melbourne, *via* Albury or Culcairn, the Melbourne rates, arising from shorter carriage, operating distinctly in favour of that source of supply, and an analysis of the rates, apart altogether from the business relations of the district being chiefly centered in Melbourne, does not hold out any hope of a diversion of this trade to Sydney. The Sectional Committee were informed by some of the storekeepers that, under the existing condition of things, they find it cheaper to have supplies purchased in Sydney sent round to Melbourne by sea, and carried by way of the Victorian Railways to Germanton.

The wheat traffic, however, is assured. The traffic area of the line is considered by the Chief Railway Traffic Manager to be the country within about 20 miles due east from the terminus at Germanton, and 12 miles north and south of that town, and within this area there are under cultivation 26,000 acres, of which from 12,000 to 14,000 acres are east of Germanton. Throughout the 20 miles he states, if not for

for a further distance, all the land is very suitable for agriculture, from which fact it may be seen that, although the people of Germanton may be said to be near enough to railway communication, the line will bring within the influence of the railway other areas which under present circumstances are not served. Evidence given before the Sectional Committee represents the area of land in the district suitable for growing wheat to be 150,000 acres, of which 27,000 acres are already under cultivation and producing 115,000 bags a year, the yield per acre being from 12 to 20 bushels; and the Committee say in their report that the halves system of wheat-growing appears to be tolerably satisfactory to both the owners of the land and the lessees, and that applications are reported to be both numerous and incessant from persons in various parts of the Colony desirous of obtaining land for cultivation under this class of tenure.

At present the wheat produced in the district is carted to Culcairn, and carried by rail to various milling centres in New South Wales. With the railway, and the existing rates for the conveyance of grain, the inducement to keep this traffic in the Colony will be all the greater. The wheat traffic, together with the carriage of a certain proportion of fat stock and wool, would, in the opinion of the Chief Traffic Manager, represent the great bulk of the traffic carried over the line in the direction of Sydney. The line might, however, he states, be utilised for the carriage of goods from Albury to Germanton, and from Germanton to Albury, and he has allowed for this in his traffic estimate, which is as follows:—

| <i>Summary of Traffic.</i> | | | | | | | |
|--------------------------------|-----|-----|-----|-----|-------------|-----|----------|
| | | | | | Tons. | | Revenue. |
| Goods traffic | ... | ... | ... | ... | 1,353 | ... | £241 |
| Wool | .. | ... | ... | ... | 1,000 | ... | 214 |
| Wheat | .. | ... | ... | ... | 10,576 | ... | 1,088 |
| Stock | .. | ... | ... | ... | 300 trucks | ... | 70 |
| | | | | | <hr/> | | |
| Total | ... | ... | ... | ... | 12,929 tons | ... | £1,613 |
| | | | | | 300 trucks | | |
| | | | | | <hr/> | | |
| Passengers—2,000, at 2/10 each | ... | ... | ... | ... | ... | ... | £283 |
| H.C.D. and parcels | ... | ... | ... | ... | ... | ... | 75 |
| Mails—17 miles, at £12 | ... | ... | ... | ... | ... | ... | 204 |
| | | | | | | | <hr/> |
| Total, coaching | ... | ... | ... | ... | ... | ... | £562 |
| | | | | | | | <hr/> |
| Grand total traffic | ... | ... | ... | ... | ... | ... | £2,175 |

With regard to wool, the Sectional Committee mention 8,000 bales as the locally estimated quantity which would be carried from the district by the railway, 5,000 bales being the produce of the area which the line would traverse. Some of the witnesses, however, estimated that another 3,000 bales, including some that now goes towards Wagga, would be intercepted by the railway from places beyond Germanton, such as Tarcutta, Tumberumba, and Adelong. The bulk of the wool from the Wagga district at present finds its way to Melbourne *via* Albury; but the opinion was expressed by some witnesses that after the accomplishment of Federation, the wool must inevitably come to Sydney, if the proposed railway be constructed, and some of the traffic which now goes to Melbourne, though continuing to go in that direction, would probably be carried by way of the proposed line to Albury.

To judge from the evidence of several landowners in the district, examined by the Sectional Committee, traffic is also possible from dairying, which it is anticipated will be carried on extensively in some of the country beyond Germanton. Timber, also, might furnish some traffic to the line, as there are said to be valuable timbers in the district, which cannot be turned to profitable use though very much in demand, owing to the want of railway communication.

STOCK IN THE DISTRICT.

8. Evidence given by the Chief Inspector of Stock shows that in the area that would be influenced by the railway, there were, in 1899, 298,785 sheep, and 3,850 cattle. The average carrying capacity of the country, he states, is from a sheep and a half to a sheep per acre. The drift of stock has hitherto been to Melbourne, the market there being better than that in Sydney, and stockowners

in

in the district being largely interested in the southern capital; but bad seasons in New South Wales improve the Sydney market. Considerable stock movements take place between Culcairn and Germanton, and also between Little Billabong and Germanton.

LAND STATISTICS.

9. According to the Chief Draftsman of the Department of Lands, there are, within an area of 12 miles north and south of the proposed line, and extending 20 miles to the eastward, 361,000 acres of alienated land, 34,400 acres of reserves, and 56,000 acres of Crown lands. Of the Crown lands, 24,000 acres are held under occupation license, and 320 are untenanted, unless it be by annual lease.

THE COMMITTEE'S DECISION.

10. The Committee consider that it is expedient the proposed railway should be constructed, but, in view of the very exceptional circumstances surrounding the proposal, their approval is subject to the conditions that the required land should be given free or equitably exchanged for Crown lands, and that the land to be served should contribute a sum sufficient, together with the revenue earned by the line, to make up an amount equal to the working expenses and 2 per cent. on the cost of construction,—and not otherwise.

Two facts that stand out very prominently in this inquiry, are that the land to be served by the line is practically all privately owned, and that very little of it is at the present time beyond a reasonable distance from the Great Southern Railway. The length of the line— $16\frac{1}{2}$ miles—is less than the distance ordinarily considered as reasonable for farmers to travel with their wheat to a railway, and, while there is at present strong indications that the growth of wheat in the district will increase, the method by which a considerable portion of it is cultivated—the halves system—has not been as successful in some other parts of the Colony as was expected.

The first condition attached to the Committee's approval of the line being constructed—that the land should be given free or equitably exchanged for Crown lands—is a modification of what the Railway Commissioners regard as an imperative necessity in connection with the railway. The second is justified by the fact that the lands that would be benefited by the line are almost all private lands, and by the advisableness of ensuring the permanency of the wheat industry in the district. The payment of a tax, regulated in amount by the distance from the line of the lands benefited, may have the result of inducing the landholders to continue their land under cultivation instead of letting it go back to a condition which will provide little or no traffic to the railway.

RESOLUTION PASSED.

11. The following is the Resolution passed by the Committee, as shown in their Minutes of Proceedings:—

Mr. Watson moved,—“That, in the opinion of the Committee, it is expedient the proposed Railway from Culcairn to Germanton, as referred to the Committee by the Legislative Assembly, be carried out, conditionally on the required land being given free, and that the lands served contribute a sum sufficient, together with revenue received, to make up an amount equal to the working expenses and 2 per cent. on the cost of construction.”

Mr. McFarlane seconded the motion *pro forma*.

Dr. Garran moved,—“That the motion be amended by the omission of the words ‘conditionally on the required land being given free, and’”

The amendment was negatived on the following division upon the question “that the words proposed to be omitted stand part of the motion.”

Ayes, 5.
Mr. Dick,
Mr. Shepherd,
Mr. Hyam,
Mr. Watson,
Mr. McFarlane.

Noes, 2.
Dr. Garran,
Mr. Levien.

Mr.

Mr. McFarlane moved,—“That the motion be amended by the insertion after the word ‘free’ of the words ‘or equitably exchanged for Crown lands.’”

The amendment was passed on the following division:—

| | |
|----------------|---------------|
| Ayes, 6. | Noes, 1. |
| Mr. Dick, | Mr. Shepherd. |
| Dr. Garran, | |
| Mr. Hyam, | |
| Mr. Watson, | |
| Mr. Levien, | |
| Mr. McFarlane. | |

Mr. Hyam moved,—“That the motion be further amended by the omission of all the words after the word ‘and’ to the end of the motion.”

The amendment was negatived on the following division upon the question “that the words proposed to be omitted stand part of the motion”:—

| | |
|----------------|-------------|
| Ayes, 5. | Noes, 2. |
| Mr. Dick, | Mr. Hyam, |
| Mr. Shepherd, | Mr. Levien. |
| Dr. Garran, | |
| Mr. Watson, | |
| Mr. McFarlane. | |

Dr. Garran moved,—“That the motion be further amended by the addition of the words ‘and not otherwise.’”

The amendment was passed on the following division:—

| | |
|----------------|-------------|
| Ayes, 5. | Noes, 2. |
| Mr. Dick, | Mr. Hyam, |
| Mr. Shepherd, | Mr. Levien. |
| Dr. Garran, | |
| Mr. Watson, | |
| Mr. McFarlane. | |

The motion as amended was passed on the following division:—

| | |
|----------------|---------------|
| Ayes, 4. | Noes, 3. |
| Mr. Dick, | Mr. Shepherd, |
| Dr. Garran, | Mr. Hyam, |
| Mr. Watson, | Mr. Levien |
| Mr. McFarlane. | |

W. T. DICK,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 29 September, 1900.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM CULCAIRN TO GERMANTON.

TUESDAY, 24 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.

The Committee proceeded to consider the expediency of constructing a line of Railway from Culcairn to Germanton.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

1. *Chairman.*] Have you a statement with reference to the Culcairn to Germanton railway? Yes; I propose to read a statement prepared for the Under-Secretary. It is as follows:—

H. Deane.
24 July, 1900.

CULCAIRN TO GERMANTON RAILWAY.

THE proposal before the Committee was referred by the Legislative Assembly for the Committee's consideration on 22nd November, 1899, in the following terms:—"That it be referred to the Parliamentary Standing Committee on Public Works to consider and report on the expediency of constructing a line of railway from Culcairn to Germanton."

This is a proposal which has been before the public for many years.

The first survey for such a line of railway was made in 1883, and from that day up to the present time the proposal has been frequently brought under the notice of the Department by deputations from the residents of the districts concerned, and by other means.

In 1891, at the instance of Mr. Secretary Bruce Smith, the proposal was subjected to a thorough investigation by Mr. Stanley Alexander, one of the Examiners of Public Works proposals. Mr. Alexander reported that, in his opinion, the construction of the line would not, within a long time, produce an appreciable effect upon the pastoral or farming industries of the districts served by it, and that the traffic to be obtained from the carriage of stores and general goods would be extremely limited.

Representations continued to be made, however, to the Department urging the construction of the line, and in 1898 a further examination of the route was made by Mr. C. McD. Stuart, of the Construction Branch, as forming the first section of a proposed line from Culcairn to the Upper Murray. Mr. Stuart's report favoured the construction of a railway from Culcairn to Germanton; but was against any extension of the line beyond the last-named town. A revised survey of the line from Culcairn to Germanton was carried out by Mr. Surveyor Wilkins and completed early in this year.

In the meantime, but more particularly during the years 1896-1899, a very considerable development had taken place in the Germanton district. Although the country which the proposed line traverses is almost wholly alienated and consists of purely pastoral properties, a large area has of late been devoted to wheat-growing on the half-shares principle. The result has been that, out of the 115,000 bags of wheat received at Culcairn Railway Station during the grain season of 1898-1899, 90,000 of them came from the Germanton district. The grain traffic for the current season has not been so large, only some 50,000 bags having been received at Culcairn up to the middle of March, 1900; but of that quantity 37,000 bags were the produce of the district to be served by the proposed line.

The continued development of the district may be regarded as highly probable, inasmuch as it is favoured with the great advantage of receiving, as a rule, sufficient rainfall to ensure the success of all agricultural operations. Nevertheless; it has to be pointed out that the cultivation of land on the half-shares principle may not be the method most conducive to permanent settlement.

At the request of the Cookardinia Progress Committee, an exploration was made by Mr. Stuart in 1897 of a line from Henty to Germanton as an alternative route to that from Culcairn. The survey report showed that this alternative proposal, while it presented no engineering difficulties and was not likely to cost more per mile than the line from Culcairn, would be much more expensive in the aggregate, on account of its extra length—some 10 miles; that it did not present any special advantages over the original proposal; and that the population to be served by it was no larger than that along the route from Culcairn.

These conclusions in favour of Culcairn as the junctioning point have been generally endorsed by the Railway Commissioners, who reported last November that they had personally inspected and considered the merits of the two routes in question, but they were not prepared to recommend that *via* Henty in preference to the line from Culcairn.

Culcairn to Germanton is practically a straight line and has the decided advantages, from a traffic point of view, of leaving the main line at Culcairn, which is already a junction station.

The following is the report of the Railway Commissioners on the proposed line:—

"Proposed Line of Railway from Culcairn to Germanton—16 miles 38 chains.

"In accordance with section 13 of the Public Works Act of 1888, we beg to report as under:—

Cost of Construction—

The Engineer-in-Chief for Construction estimates the cost of construction of a light line of railway (exclusive of land and compensation) at £53,957

Annual Cost—

Interest on capital expenditure at 3 per cent. £1,619

Working expenses, allowing for a tri-weekly service 1,850

Total annual cost £3,469

Traffic Estimate—

Merchandise and live stock £1,613

Passengers and parcels 358

Mails 204

Total estimated revenue £2,175

H. Deane.
24 July, 1900.

"The country that would be served by this line is practically all privately owned. It is of good quality and well suited for agriculture, but chiefly devoted to pastoral pursuits. At the present time there are about 26,000 acres under crop, and it is stated that this area would be at least doubled if the district had the benefit of railway communication with Culcairn."

"It will be observed from the estimated revenue that the traffic which can be calculated upon to-day will more than pay working expenses, and it is fair to assume that this traffic will be considerably increased, a large proportion of which would pass over the main line; and, therefore, it would be reasonable to look to the main line to bear any deficiency that might arise on account of interest on capital cost of the branch line."

"The locality is one of a highly competitive character, so far as Victoria is concerned; but, while it is impossible to look for more than the carriage from Albury to Germanton of general goods, the grain and kindred traffic would, under existing rates, come in the direction of Sydney."

"In view of the possibilities of the district and probable development, if aided by railway communication, the Commissioners feel justified in recommending the construction of the line, subject, however, to the imperative condition that all the land required should be conveyed free of cost to the Government."

With reference to the stringent condition governing the Railway Commissioners' recommendation of the proposed line, namely, that all the land required should be conveyed free of cost to the Crown, it may be stated that when a deputation waited on Mr. Secretary Lee, then Minister for Public Works, on 7th July, 1899, to advocate the construction of the line, Mr. John Ross, of Germanton, who was chief spokesman on the occasion, said, *inter alia* :—

"With regard to the matter of the land, he did not think there would be any difficulty in that respect; Mr. Roach, who owned a tract of some 8 miles through which the line would pass, would not stand in the way of its being made. There would doubtless be some land near Culcairn which would require to be purchased, but so soon as the line got beyond that the land would be no trouble. He (Mr. Ross) would give any land of his it might pass through."

In view of such authoritative representations as the foregoing, it may reasonably be expected that the conditions imposed by the Railway Commissioners as to the free gift of the lands required will be satisfactorily complied with by all the parties concerned.

The official description of the line is as follows :—

"Culcairn to Germanton Railway."

"(Length, 16 miles 38 chains. Estimated cost, £53,957 7s. 9d., or £3,275 2s. 2d. per mile, exclusive of land and compensation.)"

"This line begins by a junction with the Great Southern Railway at 356 miles 18 chains 65 links from Sydney, about 32 chains south of Culcairn Station, and takes a generally easterly direction, passing about 1 mile south of Morven township at 361 miles; thence following the general direction of the main road to Germanton, it ends beyond the Cricket Ground, which it adjoins on its south side, at Albury-street, at 372 miles 56 chains 65 links."

"The forming is light, but includes provision for the triplication of rails into Culcairn Station. Five fair-sized creeks have to be bridged, and the junction and terminus arrangements necessarily raise the mileage cost in such a short line."

"The grades and curves are easy."

"The land traversed is chiefly alienated, but that at the terminus is unsold."

2. *Dr. Garran.*] Is the cost of this proposed line higher than the cost of other cheap lines, such as that at Berrigan and elsewhere? Yes.

3. Do you explain that on the ground of the shortness of the line and terminal accommodation being required? Yes.

4. Will the cost of construction itself be higher than on the other cheap lines? No. The first six items of the estimate amount to £1,897 per mile. That is fairly comparable with some of the later lines. Part of the extra cost is due to the increased price of rails.

5. Will you read the details of that estimate to the Committee? Yes; they are as follows :—

CULCAIRN TO GERMANTON.

Amended Trial Survey.

ESTIMATED cost of a single line of railway 16 miles 38 chains in length with 60-lb. rails; ruling grade 1 in 100; sharpest curve, 24 chains radius—New fastenings; $\frac{1}{2}$ ballast; sleepers, 2,464 per mile; new 4 feet 6 inch T.O.s.

| Description. | Estimated cost. | | | Average per mile. | | | | |
|---|-----------------|----|----|-------------------|-----|----|---|----|
| | £ | s. | d. | | | | | |
| Earthworks | 3,335 | 4 | 2 | 202 | | | | |
| Timber bridges | 3,368 | 0 | 0 | 204 | | | | |
| Level crossings, cattle stops, fencing, and road diversions | 1,781 | 10 | 0 | 108 | | | | |
| Permanent way materials (rails taken at £5 5s. per ton)..... | 10,259 | 14 | 0 | 623 | | | | |
| Freight | 2,782 | 8 | 0 | 169 | | | | |
| Platelaying at 1s. 2d. = £1,691 8s. 8d. | 9,737 | 19 | 2 | 591 | | | | |
| $\frac{1}{2}$ ballasting at 4s. = £1,450 | | | | | | | | |
| Sleepers at 3s. 3d. = £6,596 10s. 6d. | 6,637 | 14 | 8 | 403 | | | | |
| Station works, including junction and sidings | 4,479 | 0 | 0 | 272 | | | | |
| Station buildings.—Passenger station, £287; waiting sheds, £115; platforms, £276; loading banks, £300; goods shed and platform, £345; cottage, £282; 20-ton weighbridge, £242; 5-ton crane, £207; engine shed, £805; carriage shed, £230; coal stage, £195; trucking-yards, £620; turntable, £575 | | | | | | | | |
| Gradient and mileage posts | | | | | 271 | 16 | 9 | 17 |
| Telegraph | | | | | 271 | 16 | 9 | 17 |
| Miscellaneous | 500 | 0 | 0 | 30 | | | | |
| Cost of works | £43,425 | 3 | 6 | 395 | | | | |
| Engineering and contingencies, 15 per cent. (nearly) | 6,513 | 16 | 6 | | | | | |
| | £49,939 | 0 | 0 | 3,031 | | | | |
| Add for extra cost of rails at £7 10s. per ton | 4,018 | 7 | 9 | | | | | |
| Total cost | £53,957 | 7 | 9 | 3,275 | | | | |

I am afraid the cost of rails has been going still higher since that estimate was prepared. By the time the line is under construction there may be a drop in the price; but to keep it up to date this estimate would have to be altered from week to week while prices are rising, as they have been.

6. Still, would it make very much difference per mile in cost; it is now £3,275 per mile; is it likely to go above £3,400 per mile? No. You cannot tell, unless fresh tenders are called for; but I think it is very likely we should have to pay 10s. a ton more now for rails, and that would mean about £50 or £60 extra.

7. I see that 15 per cent. is put down in the estimate for engineering and contingencies;—is that the usual charge? Yes.
8. Allowing for all things, is this estimate fairly on a level with the cost of other cheap lines? Yes.
9. Is it considerably cheaper than the line from Culcairn to Corowa? Yes.
10. In what respect is there a difference between the Culcairn—Corowa line, and the one now proposed;—is the Culcairn to Corowa a stronger or better line? It is a ballasted line.
11. Is it fenced? Yes. That would make a difference of a few hundred pounds per mile.
12. All your cheap lines are unfenced;—have you found any great danger or difficulty arising out of that fact? No; I have not heard of any great difficulty.
13. Have you heard of the Government having to pay any damages on that account? No.
14. So that we have not had to pay for that saving? Certainly not, in any proportion. There may be a little damage occasionally through running over an animal; but, taking it altogether, it has been so slight that the Railway Commissioners have not found it necessary to offer the slightest objection to making lines of this character.
15. You are aware that when we first proposed to do without fencing, a good deal of alarm was expressed;—has experience justified that alarm? No.
16. Is it quite safe to go on in the same way? Yes.
17. Have you been over the route of this proposed railway? Yes.
18. Do you approve of the survey as laid out? Yes.
19. Has the bulk of the wheat grown in the district come from that portion between Culcairn and Germanton, or from beyond that point? I think it has mostly been grown between Culcairn and Germanton. When I went out to that district I intended to go further than Germanton, so as to form an idea of the character of the country; but the weather broke up the evening before I arrived there, and I found 5 or 6 inches of water lying over the roads in places, so that it was practically impossible to do any exploration.
20. Did you see any reason to believe that your railway formation would be under water? No; it would be quite safe.
21. If the bulk of the wheat-growing is between Culcairn and Germanton, would we get the whole of it for the full length of the proposed railway? No.
22. Do you know anything of the country beyond Germanton? I have brought with me a report, made by Mr. Stuart in September, 1898, on a proposed extension of this railway to the Upper Murray. I will read extracts from that report, which will give all the information which the Committee may desire:—

Memo. to the Engineer-in-Chief, Railway Construction.

Sydney, 27 September, 1898.

Culcairn to the Upper Murray, via Germanton.

I HAVE the honor to report that I have examined the country between Culcairn and Welaregang, on the Upper Murray, with a view of a railway extension to the latter place, and I have laid down a route shown by red line on the accompanying tracing. Leaving the Main Southern line at Culcairn, at 356 miles from Sydney, and adopting the route from Culcairn to Germanton, with the proposed alterations suggested by Mr. Burge, the line would thence bear in a north-easterly direction, taking advantage of the easy country to the east of the main Sydney-Germanton Road, until a low spur of the Cascook Range is crossed at 377 miles; thence bearing more northerly, the same road would be crossed about a mile further on, after which the line, bearing round to the east, would be carried approximately parallel to this road on its northern side, until the surveyed township of Garryowen is reached. . . . The easy country continues close up to Jingellic, where a saddle will have to be crossed before reaching the main road up to Murray River; thence the line, after crossing this road, bears in an easterly direction, approximately following up its right-hand side, and keeping between it and the river. A few nasty sidings have to be negotiated, where the road will require deviating. The intermediate country up the river being more or less broken and undulating will require a considerable amount of work. A slightly easier line might be got by keeping as close as possible to the flood-level of the river, but the curvature in places would be very sharp, particularly where the steep sidings junction with the easier country—in a few cases so sharp as to necessitate crossing low ground, or running with considerable cutting. The latter line would also be longer, but there would be an improvement in the grades. When the surveyed town of Welaregang is reached, the line might terminate at 426 miles from Sydney, or 70 from Culcairn, and close to where the main road to Tumberumba branches off. The grade from Culcairn to the foot of the main range at Yarra Yarra will be very easy, and a surface line can be obtained up to this point. In crossing the range at Yarra Gap there is a very quick rise on its eastern side—700 feet in about 3½ miles; and to get a grade of 1 in 40 with the load would entail a long tunnel with heavy approaches. After getting through on the eastern descent down Lankey's and Coppabella Creeks, a grade of 1 in 60 against the load will be the best obtainable, but with a considerable amount of work up to where the line crosses the latter creek; thence to the end, a limiting grade of 1 in 100 can be got, but the works will, in places, be fairly heavy, commencing with the cutting through the spur at Jingellic. There would be a good deal of curvature from the foot of the range on the Yarra Yarra side to the end. In view of the difficulties met with in ascending the river, I examined the Victorian side from beyond Tintaldra down to the bridge across the river at Jingellic, and would certainly give that side the preference, as, in nearly every case, where the mountains abut on the river, the sidings are easier, giving more width to work in, with the view of easy curvature, and a more uniform gradient. Again, the main road on this side is only a bush track, and could be very easily deviated at any point where it may be found necessary. There is already a railway survey located on this side by the Victorian Government. The question arises, if the connection with the Upper Murray should be made *via* Germanton, would the advantages gained by carrying the line on the Victorian side compensate for the extra cost entailed by having to put a bridge across the river at Jingellic, close to the present road bridge? This can only be determined by an actual survey of both routes. . . . Description of country: From Culcairn to Yarra Yarra the country on the flats and low ridges is of a good friable nature, suitable for either grazing or agricultural purposes. A very large portion of it is now cultivated, and there would, no doubt, be a further development in this direction if better facilities for transit were afforded. . . . After crossing the range down Lankey's, Coppabella, and Jingellic Creeks, and up the Murray as far as the country is inhabited, the area of land suitable for either pastoral or agricultural pursuits, taking both sides of the river into consideration, probably does not exceed 150 square miles, one-half of which might be suitable for agriculture, the rest being river flats liable to flood, but splendid fattening country for stock, and ridges too steep to be economically worked. The population is principally on the Victorian side, where there are the only townships worthy of the name. . . . All the cattle and sheep fattened in this district go to the Melbourne market, and the wool to Wodonga to avoid trans-shipment. Taking everything into consideration with reference to the Upper Murray, although the quality of the available country is very good, and the scenery, from a tourist's point of view, exceptional, still the area of good country is limited, the population on the New South Wales side small, the difficulty in reaching the district by the proposed route entailing considerable cost, and the fact is that the traffic to and from the district is almost exclusively with Victoria, Melbourne in geographical situation and distance being its natural outlet. A favourable consideration might be given to the question of running a branch line from Culcairn to Germanton, or on to Garryowen or Yarra Yarra (there is no township at Garryowen, but it is at the junction of Billabong and Yarra Creeks), provided all wheat, wool, and stock raised in the district be trucked at the nearest station, which, if Melbourne is the market, could scarcely be expected, owing to the cost of trans-shipment at Wodonga. A line to one of these points might, possibly, tap some of the traffic from Tumberumba and the Upper Murray, the former place being about 45 miles from Garryowen, as against 73 from Wagga, and the latter, taking Welaregang as the centre, about the same distance from Garryowen, as against 70 miles from Wodonga. It is a pity so much of the country in the neighbourhood of Germanton is alienated, and in the hands of large holders, a good deal of the land now under cultivation being worked on the halves principle, which is not conducive to permanent settlement.

H. Deane.

24 July, 1900.

- H. Deane.
24 July, 1900.
23. *Mr. Watson.*] Does Mr. Stuart suggest that there will be any possibility of getting to Tumberumba from Garryowen? No; I do not take it that he suggests that. I fancy that would not be possible, as the country is high in between.
24. Do you know whether there is any present intention of putting forward a proposed railway from Wagga Wagga to Tumberumba? No, I believe not.
25. Is the report very encouraging? No.
26. Supposing that a line were constructed from Wagga Wagga to Tumberumba, do you think that a line from Germanton would be a competitive one? No; I think it is far enough away, and the lines are sufficiently divided by high ground to render them incapable of competing. I have been over the line from Wagga Wagga to Tumberumba. I should think that some day a line from Wagga Wagga to Tumberumba will come forward, but not at present.
27. Is it very easy country from Wagga Wagga to Tumberumba? No; the country is hilly, and consequently the line is very crooked in parts.
28. How far is Yarra Yarra Creek from Germanton, *via* Garryowen? It is 25 miles from Culcairn, that would be 9 miles from Germanton.
29. Would that be well within the influence of a terminus at Germanton? Yes.
30. Does there seem to be any country beyond Yarra Yarra Creek which is of value—that is, any large area? No. I gather from Mr. Stuart's report that the country which would come under the influence of the Germanton line would be the lower part of the valleys of the collecting streams in the neighbourhood of Germanton and Garryowen.
31. I gather that, in Mr. Stuart's opinion, the cost of making the line beyond Germanton would be materially increased per mile? Yes; there is a tunnel there, and some stiff grades.
32. To what land does Mr. Stuart refer when he states that at the terminus it is not alienated;—does he refer to village lots, or large areas of land at the terminus? There are allotments in the town of Germanton, and a recreation reserve at the end. I put in the plans and section of the line and the book of reference.
33. *Dr. Garran.*] What grades and curves are there on the proposed line? The steepest grade is 1 in 100, and the sharpest curve 24 chains.

WEDNESDAY, 25 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.

The Committee further considered the expediency of constructing a line of Railway from Culcairn to Germanton.

Hugh McLachlan, Secretary to the Railway Commissioners, sworn, and examined:—

- H.
McLachlan.
25 July, 1900.
34. *Chairman.*] Do you regard the district to be served by the proposed railway, from Culcairn to Germanton, as likely to become a permanent agricultural district? The Railway Commissioners think it will. At present it is largely devoted to agricultural and pastoral pursuits. The land is of good quality, there is a very good rainfall, and there seems to be every prospect of considerable development in connection with agriculture.
35. It is stated in the Commissioners' report that agriculture in the district is carried on only on the halves system;—have you any knowledge as to the recent development of that system in the Grenfell district? No.
36. Some time ago, strong hopes were held out there to farmers that the institution would be permanent, but on one very large holding, at least, the system has fallen with a crash? I have no personal knowledge on the subject.
37. Do you anticipate that that system is likely to settle a permanent agricultural population in the district to be served by this railway? Personally, I would sooner see the land owned by the farmers themselves; but if it pays the squatter and the person working with him, it will certainly provide traffic for the railway. No doubt permanent settlement would be better developed if the persons themselves went in for selection, and cultivated their own land.
38. Is the greater number of the holdings to be served by this railway composed of fairly large areas? Yes; there are four stations between Culcairn and Germanton.
39. Is the land nearly all alienated? Yes.
40. From what part of the district is the main portion of the agricultural produce now drawn? Of course, the estimate is that we get a larger crop from Germanton itself. It is estimated that 2,000 tons of wheat would be carried from Morven station, 2,000 tons from Carabobala, an intermediate station, and nearly 7,000 tons from Germanton. It is estimated the greater quantity would come in from Germanton.
41. Do you regard Germanton as the centre of a fairly large area, from which the traffic will be drawn? Yes; not only from Germanton itself, but from a considerable distance to the east of it.
42. Are these figures based on existing tillage, or does it take into account probable increased tillage? They are largely based on the existing tillage. There are 26,000 acres under cultivation in the district, and a fairly large increase is shown during the last few years. There has been an increase of 5,500 acres during the last year, which is an increase of about 25 per cent.
43. Do you think that that increase is likely to be maintained in the coming year? The Commissioners think so. They were given to understand by the local people that, if the railway were taken to Germanton, they would considerably increase the area under cultivation.
44. In the areas between Culcairn and Germanton, which extend from nothing up to 16 miles, or a general average of 8 miles, do the Commissioners anticipate getting the whole of the agricultural traffic from there? Yes, practically. We carry wheat at such a low rate that we are bound to get the traffic.
45. Suppose a man is 7 miles to the north of the line, half-way along its distance, would it pay him to go direct to the line for a distance of 7 miles, or would it pay him better to go 9 or 10 miles to Culcairn? It would pay him, because Culcairn would not be the objective point. The wheat would be put into trucks principally to go to Sydney.

H.
McLachlan.
25 July, 1900.

46. How far east of Germanton do you expect to attract such traffic? Our officers estimate that they will get traffic for a distance of 20 miles east.
47. And down to the Murray on the south? I do not know that we would get much traffic from the Murray. The Tumberumba coach traffic now goes to Wagga.
48. Would not the area south of the line have a competing means of conveyance? I think it would. A great deal of the business will, no doubt, be done at Albury, and they would have a more direct route to Albury than by railway, and anything near the river towards Albury would have a more direct route.
49. A portion of the agricultural produce will be destined for export;—when Federation comes about, where do you think that will find its outlet—at Melbourne or Sydney? You have to recollect that Melbourne is very much the nearer port. A good deal would depend upon the rates charged. But, as far as the earnings of this line are concerned, it would not affect them, because the proposal is to charge a local rate, and we would get main-line carriage whichever way the traffic would go. If it went to Sydney, we would get a long carriage rate; if it went to Melbourne we would get a higher proportionate rate to Albury. We are bound to get the business to a smaller or larger extent for the main line. There would be a local rate from Culcairn to Albury as well.
50. *Dr. Garran.*] How do you make that out? It is a local rate.
51. Is it not a main line rate from Culcairn to Albury? As a matter of fact, our cheap rates are always imposed in the direction of the up journey; the other is a down rate.
52. But between Culcairn and Albury you would charge your usual main line rates? Yes; but it is practically a local rate.
53. *Chairman.*] Do you regard this as a pioneer line? Yes; it is a cheap line. It is somewhat dearer than other lines, because the terminal expenses would be charged over a short length, and there are a number of waterways to cross.
54. We have evidence that the tendency recently has been rather to increase the accommodation on these so-called pioneer lines beyond what was anticipated when they were first mooted;—does that pay in the long run? I should think so. The Commissioners consider every case very carefully, and, consistently with the requirements to be met, they cut down the terminal or station accommodation as low as possible, but necessarily the terminal accommodation on a short line is greater proportionately than on a long one.
55. *Dr. Garran.*] Do you find in your experience of these local rates that they tend to discourage the farmers from using the railway? We have had very little experience of that. Our experience is hardly wide enough to enable me to give a definite reply. We have few local rates. The Berrigen-Finley line would be of a somewhat similar character to this line, but very soon after the local rate was introduced we altered it so as to make it a through rate. On the Culcairn-Corowa line, which is the complement of this line, we have no local rate.
56. If we make a railway on the strength of local rates, and two years afterwards they are changed to through rates, we are making that railway on false pretences; take the case of Germanton;—if the weather is dry, and there are good natural roads, if you put on a local rate, might not a farmer say, "I have a dray and horses idle, I can take my produce as cheaply by the road as by the railway"? I do not think that would pay with regard to wheat. The local rate from Germanton to Culcairn would be from 2s. to 2s. 6d. per ton. We know they cannot possibly compete with that. Of course, in the other cases I have referred to, we had competing lines at the opposite terminal, therefore we were almost forced to adopt our ordinary scale.
57. Do not drays on the main trunk line between Sydney and Orange sometimes compete with your through rates on the railway? Not with special class goods.
58. What sort of goods are sent in that way? General goods, down journey—grocery, drapery, machinery; they are all high-class rates.
59. Are these the only rates which can be competed against? Yes.
60. Are you quite sure that they could not compete for produce? Personally, I cannot see how they can compete.
61. Does produce ever come down the main road? No.
62. Do the drays come down empty? They bring hides or wool.
63. Is not that pastoral produce? I am speaking of agricultural produce.
64. The charge for pastoral produce is higher than for agricultural produce? Yes.
65. People can compete with you for pastoral produce as back loading? Yes. I do not think that in this case we would get the whole of the wool. The wool from that district has hitherto gone to Melbourne, and is likely to do so. They have a direct road from many of the stations to Albury, and no doubt most of the wool will still go that way. The estimate does not include a large quantity of wool.
66. Do you expect that Germanton will be the centre of a radius of 10 miles from which the line will obtain agricultural produce? Yes; and even beyond that. Our traffic officer estimates that produce will be sent for a distance of 20 miles from that point.
67. Is not the country about there hilly? Yes; but there are patches of good soil.
68. It is not a flat country all about, like it is at Berrigan? No; that is not the case when you get a considerable distance east of Germanton.
69. The Commissioners, looking at the question altogether, although they do not think it will be a brilliantly-paying line, are willing to take a favourable view of it? Yes; they think there is likely to be a development of the district which warrants them in recommending the line for favourable consideration.
70. They think that at no distant time the line may pay expenses? From the estimate it appears that the expenses are nearly covered now. The line must also increase the earnings of the main line to some extent.
71. Would you be able to dovetail the workings of this line with the Corowa line? Yes, for, say, six months in the year. When we find that the grain traffic is heavy we may have to work them independently.
72. Is the Culcairn-Corowa railway an encouraging or a discouraging line? It has improved considerably during the last year.
73. How long has it been open? About eight years.
74. What has been the result during the first seven years? There has been a loss on it each year; but last year the prospects were brighter. We have a competing railway at the terminus, which is so much nearer to Melbourne.

H.
McLachlan.
25 July, 1900.

75. Was not that all taken into account when the line was made? I do not know that the Commissioners reported on that line; they might have done so in 1889.
76. Is it paying yet? No.
77. What is the loss on it now? For the year ending December, 1899, £5,700; it is a more expensively constructed line than the one now proposed.
78. Have we any other branch line as short as this one which would be a guide to us? No. We have, of course, the Blacktown to Richmond line, and the Nevertire to Warren line; but they are hardly similar lines.
79. This would be an experimental line to some extent? Yes.
80. Not only as to its length as a cockspur line, but as being almost purely an agricultural line? There is some pastoral production in the district.
81. Still you do not think you will get the pastoral business? No, the larger part will be agricultural.
82. Then it will be an experimental line? Yes, to that extent.
83. Looking at the fact that the length is not very great, and the loss not unendurable, the Commissioners think we may chance it? That is the Commissioner's feeling.
84. Is there any idea of continuing this line in the future? The Commissioners see no immediate prospect of extending it.
85. If there is any idea of extending it, would it not be better to do so at once? Germanton is a gathering centre at present.
86. Would it be expensive to go further? Yes, and there is nothing particularly to be gained by it. The traffic now drains into Germanton. The Commissioners would stop there at present, whatever might be decided upon in years to come.
87. Mr. Deane tells us that his maximum cheapness in making these lines is a thing of the past—that he has to make the lines with better equipments, so that we can hardly take £2,000 or £2,200 per mile as the standard cost of a new line? The cost of this line seems to be a little bit high; but no doubt extra bridges account for that, and also the terminal accommodation on a short length.
88. Are you charging through or special rates on the Corowa line? Through rates.
89. You could not get special rates? Not very well.
90. Where does most of the traffic on the Culcairn-Corowa line come from? From a number of stopping-places. Settlement is fairly good right through. The land is practically all taken up, and is largely held in farms.
91. Except one large run, is it all settled? Yes.
92. Does the trade go to Culcairn or Corowa? The grain business practically comes right through to Sydney.
93. What is the reason for that? The duty in Victoria, and also the cheap rates we charge.
94. But cannot they take the wheat in bond from Corowa right through to Melbourne? It can be sent there in bond.
95. Then the duty ought not to deter it? There has always been a good local market.
96. Do you think that grain grown so near the border comes to Sydney? Yes, by preference.
97. You cannot tell what will happen when the duty is abolished? No; but if the grain were diverted the other way it would not affect the earnings as given by the Commissioners for this line.
98. Does the wheat come on to Sydney or stop *en route*? It may stop at intermediate places; but finally most of it comes to Sydney as flour or wheat.
99. Is it an increasing trade? I have not seen the returns for some time.
100. What has made the Culcairn to Corowa line better this year? I think there was some better stock traffic, and also more grain.
101. The returns from the Culcairn-Corowa line are nearly £2,000 a year better this year? £1,300.
102. Can you say at present whether that is a permanent improvement? No.
103. From what you know, do you think that Mr. Harper has over-estimated this traffic? No; the Commissioners went into the matter with him, and, basing it on local rates, they think he has made a fair estimate.
104. Do they think the experiment is worth making? The Commissioners are prepared to recommend it.
105. Mr. Watson.] Can you say whether this railway is likely to draw traffic from any great distance beyond Germanton? Yes; the traffic officers estimate it will drain the country for a distance of 15 or 16 miles east of Germanton, and to the north-east.
106. Is the country to the eastward similar in character to that through which the line goes? It is not quite so good; but it is fairly good, and so is the rainfall, which is about 27 inches a year. That is equal, if not better than, the rainfall at Grenfell.
107. I suppose it will be admitted that, as far as Germanton is concerned, it is well within the influence of the existing railway? It is within 18 miles of it; but that is a fairly long way to haul grain.
108. Do you consider that it will be necessary to construct a railway to every place 18 or 20 miles away from the existing railway? I should not like to say that. At the same time, where you have a good district, and there is some prospect of the railway paying, it is worth considering whether you ought not to make a railway to it.
109. Is there any short railway without traffic beyond the terminus being directed to it that is paying? No; as a rule, a local line by itself would not pay. It is the country which it drains that enables it to pay.
110. In this case, do you think there is sufficient area of land beyond the proposed terminus to help the local traffic? The Commissioners think there will be. From their own observation, and from what they were told locally, they are favourable to the proposal. There is a considerable increase in the grain cultivated in the district. People are generally very sanguine when asking for a railway; but a number of people in the district assured the Commissioners that in a few years the area under cultivation within the district would be doubled.
111. I understand that some of the owners are prepared to give the land through which the railway will go free of charge? The Commissioners think that ought to be imperative. The land is practically all privately owned, although I think the terminus will be on a reserve. The Commissioners think that it ought to be an imperative condition that all the land required, except, perhaps, in the case of a very small holding, should be given free.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and examined:—

112. *Mr. Watson.*] Do you know the route of the proposed line from Culcairn to Germanton? Yes.
 113. Do you produce a map showing the trafficable area and the manner in which the land is held? Yes.
 114. Will you favour the Committee with your opinions on the proposal? Perhaps I had better read my report to the Railway Commissioners, which is as follows:—

J. Harper.
 25 July, 1900.

PROPOSED RAILWAY, CULCAIRN TO GERMANTON—17 MILES.

As directed by the Commissioners, I have had very thorough inquiry made as to the probable traffic on the proposed line from Culcairn to Germanton. Its total length is 17 miles, the ruling grade being 1 in 100. Up to the present no estimate has been received of the cost of construction.

The district is a pastoral and agricultural one. The bulk of the stock and wool traffic is forwarded by road to Albury, the distance from Germanton being 38 miles, and thence by rail to Melbourne; the wheat traffic is carted to Culcairn, and carried by rail to various milling centres in New South Wales. Fully 75 per cent. of the return supplies are obtained from Melbourne, *via* Albury or Culcairn, the Melbourne rates, arising from shorter carriage, operating distinctly in favour of that source of supply; and an analysis of the rates—apart altogether from the business relations of the district being chiefly centred in Melbourne—does not hold out any hope of the diversion of this trade to Sydney.

At the present time there are some 26,000 acres of wheat under cultivation within the sphere of influence of the line, and so long as the rates for this commodity remain as they are, the traffic will come to New South Wales. This, together with a certain proportion of fat stock, would represent the great bulk of the traffic which we might anticipate would be carried over the line in the direction of Sydney. There is, of course, another phase of the question, and that is, that the line might be utilised for the carriage of goods from Albury to Germanton, and *vice versa*, as far as the district is concerned, and this view has been taken into consideration in forming the estimate of the probable traffic. For this purpose ordinary mileage rates have been taken between Culcairn and Albury, added to the arbitrary rates which it is proposed shall be charged on the section between Culcairn and Germanton.

The following return indicates the current road rates, and what the rate from Germanton to Albury would be were the method I have suggested adopted:—

Rates of Road Carriage.

| From— | To— | Miles. | Description. | Average rate. | | Lowest rate. | |
|-----------------|-----------------|--------|--------------|---------------|-------------------|--------------|-------------------|
| | | | | Per ton. | Per ton per mile. | Per ton. | Per ton per mile. |
| Culcairn | Germanton | 18 | Goods | 12/6 | 8/33d. | 10/0 | 6/66d. |
| Albury | " | 38 | " | 20/0 | 6/32d. | 15/0 | 4/74d. |
| Germanton | Culcairn | 18 | Wool | 10/0 | 6/66d. | 10/0 | 6/66d. |
| " | Albury | 38 | " | 17/6 | 5/53d. | 15/0 | 4/74d. |
| " | Culcairn | 18 | Wheat | 7/6 | 5/00d. | 6/9 | 4/50d. |

I also attach a return showing the estimated total traffic to be £2,175 per annum, and a further return showing the rates which would prevail, assuming mileage rates were charged from Culcairn in the direction of Albury to Sydney and Melbourne respectively on the probable commodities of the district, *viz.*, wool, wheat, stock, and general supplies.

It will be observed that the estimated revenue is small, and can only be obtained by the imposition of arbitrary rates, and that the only justification which appears to exist, from a commercial point of view, to the construction of the line, is that it would induce larger cultivation of cereals in the district, and probably will have the effect of fostering such cultivation as already exists, and thereby provide traffic for the line.

PROPOSED RAILWAY, CULCAIRN TO GERMANTON—17 MILES.

Summary of traffic.

| | Tons. | Revenue |
|--------------------------------------|--------------------|---------------|
| Goods traffic | 1,353 | £241 |
| Wool | 1,000 | 214 |
| Wheat | 10,576 | 1,088 |
| Stock | 300 trucks | 70 |
| Total | 12,929 tons | £1,613 |
| | 300 trucks | |
| Passengers—2,000, at 2/10 each | | £283 |
| H. C. D. and parcels | | 75 |
| Mails—17 miles, at £12 | | 204 |
| Total, coaching | | £562 |
| Grand total traffic | | £2,175 |

Goods and Live Stock Rates—Germanton—Culcairn extension.

| Total | 237½ " | 63/6 | 50/6 | 23/5 | 134/- | 85/1 | 88/6 | ... |

115. From the map which you produce it appears that nearly the whole of the land within the influence of this proposed line is alienated? Yes.

- J. Harper.
25 July, 1900.
116. Can you state, roughly, what you consider to be the traffic area on the line? About 20 miles due east from the terminus at Germanton, and 12 miles north and south of Germanton. I may point out that a very large percentage of the land which is under cultivation is due east of Germanton.
117. It is not between Culcairn and Germanton? Out of 26,000 acres I should think 12,000 to 14,000 acres are east of Germanton.
118. Under those circumstances, you would get freight over the whole line? Yes.
119. Is there much land beyond Germanton fit for cultivation and not now cultivated? Throughout the whole 20 miles, if not further, it is all fit for cultivation; it is all very good agricultural land, and not too hilly. On Yarra Yarra run they had 7,000 acres under cultivation—that is due east of Germanton.
120. Although the people of Germanton may be said to be near enough to railway communication, yet this line will bring other areas within the influence of the railway which at present are not served? Yes. Of course, if there was only intermediate traffic between Culcairn and Germanton which could be obtained, the Commissioners would not have viewed the line with favour. I would not.
121. As you have seen the country to the east and south-east of Germanton, can you offer an opinion as to the wisdom, at a later date, of taking the line beyond Germanton? I do not think there would be any difficulty about taking it 20 miles further; thence the country is hilly and rough. Due east of that you get into the Tumberumba country.
122. Do you think it would be worth while taking it further, or will the line to Germanton sufficiently serve the country worth opening up? It will serve for the present; that is to say, the people east of Germanton will be no worse off than the Germanton people are to-day, as far as railway communication is concerned.
123. Would a point 20 miles east of Germanton be the limit of the agricultural land? It was represented to me that there is very good land some distance beyond that; but I did not go further than Yarra Yarra.
124. It has been asserted that there is a considerable area of good basaltic country on the Upper Murray;—would that be best reached from our railway system, or would it be better to allow the Victorians to carry a railway there? Naturally, I think the traffic must gravitate to Victoria.
125. It is hardly worth our striving for it? No; the bulk of the traffic will continue to find its way to Victoria, except with regard to wheat.
126. How will the cost of railway carriage from Germanton to Culcairn, and thence to Albury, with the local rates suggested, compare with the present road carriage from Germanton to Albury? It will be in favour of the route from Germanton to Albury.
127. It will pay to take the railway, although it will be running on two sides of a triangle, rather than to take the road? Yes; it is only a difference of 38 miles and 48 miles.
128. Is the difference in cost pronounced? It is sufficiently pronounced to bring the traffic to the line. For wool, it is 15s. against 20s.; the wheat under no circumstances would go there, because the through charge to Melbourne is only 7s. 3d. by railway—it would be nearly £1 by road. Merchandise would be about 16s. 9d., as against 23s. 8d. per ton from Albury to Germanton.
129. In comparing merchandise, would it be necessary to allow for the cost of transshipment at Albury from Melbourne? No; we do not charge anything for transshipment, it is a through rate, including a junction charge for the mileage between Albury and Wodonga.
130. So that goods coming from Melbourne towards Germanton would be conveyed by the proposed line rather than by team from Wodonga to Culcairn by road? Yes.
131. There is no doubt that in any case the branch line would get the full amount of traffic which you estimate? There is no doubt it will. Whether the traffic goes to Melbourne or comes to Sydney, the estimate will be realised. The wheat will continue to come in this direction for some time at all events.
132. As soon as the border duties are abolished under Federation, it is not probable that Melbourne will take a great deal of that wheat for shipment? There is not a very great margin between their rate and ours. There is very little difference between our rate at Corowa and the Victorian rate at Wahgunyah.
133. Is it not possible that the Inter-state Commission may insist upon an absolute mileage rate? I do not see how they can. This is practically a tapering mileage rate; it applies not only to this line in a competitive district, but to all lines in the Colony. It is in no sense a competitive rate, it is a normal rate.
134. Then you taper proportionately to distance quite as much coming from the Queensland border as coming from the Victorian border and from Bourke? Yes; it applies all over the Colony. It is a general rate, and not a special rate, for that district as far as wheat is concerned.
135. Have you a special rate for wool and merchandise? Yes.
136. Then there is little probability of the wheat traffic going away? No. There is no doubt that where our lines are close to the Victorian border, as at Corowa, we shall lose all that traffic. Under any circumstances, wheat going to Victoria would have to pay either road carriage to Wodonga or our rates to Albury, and those rates, added to Victorian rates, would be in excess of our rates.
137. Assuming that the Victorian railways are as well managed as ours, they should be able to draw wheat for the shorter distance cheaper than you can bring it to Sydney? Yes; but they are in a peculiar position in Victoria. They look very largely to the wheat traffic for their revenue. As a matter of fact, because some reductions have been recently made in the rates for the carriage of wheat, the railways are being subsidised by the Government. What the railways are losing is being refunded to them by Parliament. I take it that the Inter-state Commission would rule that that is irregular. The state of things is rather peculiar under their Act. It is competent for the Minister of the day to ask the Commissioner to reduce the rates, but that is contingent upon the Minister refunding half the amount of the loss out of the Consolidated Revenue.
138. Do you know whether that system has been long enough in existence to show what the results will be? I do not think so. Naturally enough, the railway people do not approve of it very much. One can see at once the incidence of it. A Minister representing a country constituency only wants to be moved strongly enough to use the powers given to him under the Act, and it is absolutely in the hands of the Minister to do it.
139. Do you know whether there has been any loss to make good under that system? There has been in connection with coal. Of course, the carriage of coal is subsidised; but it is only during the last season that it has been brought into operation in connection with wheat.
140. What is the explanation of their not being able to easily compete with you;—is it because you have

a larger area of pastoral country on your trunk lines which yields a class of traffic which pays better than agricultural produce? Yes; and it has been the desire of the administration to develop the lands of the interior. It was only possible to do it by charging low freights. In Victoria they have been depending for the bulk of their revenue on wheat. J. Harper. 25 July, 1900.

141. Seeing that you make the railways come within a reasonable distance of paying, you must have something else which makes good what you lose on agricultural produce? Decidedly; wool pays.

142. What is it that you have which the Victorians have not? We have general merchandise hauled over long distances; we have the wool, which they have not. We carry four times as much wool, and it stands a higher freight.

143. That enables you to give greater concessions on some products? Yes; mining and agriculture.

144. On the whole, do you think that this proposed line will retain sufficient local traffic to justify its construction? Yes; I think so, looking at it in the light of the development of the territory. I would not like to say that the line would pay. In connection with that, of course it is for this Committee to determine whether it would be judicious or otherwise to recommend that the people in the neighbourhood of the line should be called upon to contribute in any way. Of course, that is not a matter for us to consider.

145. If you have any largely increased cultivation resulting from the construction of the line, would it mean some contribution to the profits of the main line which would not be credited to the branch? Yes; it would have an influence on the main line earnings. As far as the land is concerned, practically the whole of it is fitted for agriculture.

146. As to the probability of the land being kept under cultivation, it is, I understand, mostly held in large areas by private owners? Yes.

147. Do you think that the halves system is likely to be permanent? I am inclined to think that it will be in that district, because it is to the interest of the large owners to have a considerable amount of agriculture. They have something to fall back upon for their stock in the event of drought.

148. You know that on open forest land, when it is cleared and cultivated for a year or two, it will carry more sheep than it did before? Yes; that is my reason for saying that I think the large owners will encourage cultivation on the halves principle.

149. Is there not a possibility that, after the land has been cleared and cropped for three or four years, some of the owners will be disposed to use it again for sheep? That will depend largely upon the value of wool.

150. Are you aware that, on one large estate in the Grampian district, the men working on the halves system have been cleared out, with the exception of two or three, and they were only retained to break up new land? No doubt that will be the method adopted. New land will be given to men prepared to take it up to clear and cultivate it.

151. But that does not make for permanence? It is more than likely that the district about Germanton will develop into a large dairying district. It is within comparatively easy distance of Melbourne.

152. Would dairying be a greater traffic producer than wool-growing? It would mean more population and the consumption of more goods. I think that that country is carrying one sheep to the acre at present; under cultivation I fancy that it would carry a cow to a couple of acres. There is infinitely more traffic to be obtained if you have a cow to 2 acres than if you have a sheep for 1 acre. It is only 230 miles from Melbourne by the railway. To-day we are bringing butter a greater distance than that.

153. That is mostly for export? Yes.

154. You bring that at a very low rate? Yes; but it is the population which would increase the traffic. For instance, there is one station on this line where they have 93,000 acres of freehold land. I fancy that, except at shearing time, that would be worked by about eight or ten men.

155. *Dr. Garran.*] Did not this method of working on halves originate at a time when the wool was very cheap? I imagine it did. My first experience of it was in the Berrigan district; but it might have been in operation in Victoria prior to that.

156. If the rise in the value of wool should be permanent, would not that have a tendency to induce people to go back to the pastoral use of the land? I think what we may look forward to in future is a system of mixed farming. I do not think anyone is now prepared to have all his eggs in one basket, the disposition will be to grow both wheat and wool.

157. What I am looking to is this: Is this system of farming on the halves principle so certain that we can feel we have a guarantee that wheat production will continue? My own impression is that it will continue. If it does not continue on the halves system, those who are farming will acquire land, and go in for mixed farming. That is happening in the Berrigan district.

158. In the absence of cheap manures, is there not a tendency for the wheat-grower to work out his land? Yes; but when you carry sheep on the same land where you grow wheat, not only does it keep the land clean, but it manures it.

159. Under the halves system does the squatter run his sheep on the farming land? Yes; that is a condition of the agreement.

160. Then you do not think it is a mere temporary phenomenon? No.

161. As a traffic man, do you think it is safe to rely on the wheat grown in this district? Yes; with mixed farming. If you asked me the same question with regard to purely timber land, I would hesitate. Once the timber is gone the traffic is gone unless you replant the forests, which we do not.

162. Ten years is long enough to trust to timber traffic? Yes; that would be a very good term.

163. Are the roads good to the east of Germanton? Yes.

164. So that you might expect that 20 miles is not too far to bring traffic in to the railway? The roads are fairly good; they are not so good as between Germanton and Culcairn, but it is reasonably sound country. As a matter of fact, they now come into Culcairn.

165. Do you think there is any likelihood of much of this land now rented on the halves system becoming freehold owned by the agriculturists? If the halves men get good seasons, they all show a desire to acquire a freehold in the Berrigan district.

166. But then you have to get the consent of the present holders? I think any of them will sell if they get enough for their land.

167. If the price of wheat falls very low, do you think we should still be able to grow wheat here and ship it. As a matter of fact, I do not see what else they are to do. Every day the cost of cropping wheat is becoming less. This is a district where the crops are generally very heavy in a good season.

- J. Harper.
25 July, 1900.
168. Shall we be able to open agricultural land if it does not pay? No; but those who are able to combine sheep-farming with wheat-growing have a better opportunity of making it pay.
169. The evidence in other inquiries goes to show that the cheapest part in the world in which to grow wheat is Argentina, where they have many miles of river frontage? It is not very long since we heard that Argentina was going to spoil our market for wool, meat, and horses; but that has not happened.
170. If it does not pay to grow wheat here, shall we not have to fall back on wool? Yes; but wool can be far more successfully grown with wheat.
171. In that event will not population fall off and also the traffic? Our own population is increasing. Western Australia and Queensland are not producing wheat to any extent, and I daresay markets will be found for wheat. People who keep sheep and grow wheat do not know what failure is, even in drought time. Young sheep will fatten very quickly on wheat-stubble.
172. Did the farmers do pretty well this year with wheat? Those who sold in the first instance did fairly well; those who are holding are in rather a bad position.
173. Has the wheat traffic at Berrigan justified the expectations which were held out? We do not regret making that railway.
174. You do not think you will regret to adding this line to the other railways? No. I cannot see any prospect of this line paying in the immediate future, or probably for some time; but for the development of this country it is not unreasonable to add it to our railway system.
175. That is looking to the fact that we have to settle people on the land? Yes. The view I take is this: The country is capable of production. Any country of that nature which is likely to yield a legitimate percentage and working expenses is entitled to consideration.
176. Still, on general traffic principles, a short cocks spur line, looking principally to agricultural traffic, is placed at perhaps the maximum disadvantage? The line is peculiar in this respect. It has a common junction with the line from Corowa to Culcairn, so that we will be practically able to do a great deal of the work on this line with the staff and appliances which we have on the other line.
177. Has that Culcairn to Corowa line been very profitable? No, for this reason we have always carried the wheat from intermediate points, and we have carried only a certain amount of wheat from Corowa itself; but the position will be different on the proposed line. Only a mile separates the two railway stations at Wahgunyah and Corowa. Germanton and the adjacent district is not near any railway. As a matter of fact, as far as Corowa is concerned, there is far more justification to make a line to Germanton than to Corowa, because the wants of Corowa are already served. If the line from Culcairn had been made to Germanton instead of to Corowa it would be much more likely to be a paying line, it would have been away from existing communication.
178. I have asked Mr. McLachlan if we must look upon this as a purely experimental line, risking a little risk to test the system, because we have no parallel to it? The private line from Moama to Deniliquin is very successful; but they deal more largely with wool. They also carry a great deal of wheat.
179. Besides, that is an extension of the Victorian line? This is an extension of ours. We have also the Temora line, which is a line very much on all fours with this, and it is doing very well.
180. But that is not a paying line? No; but it is improving. The loss on the Temora line in 1897 was £3,519; in 1898, it was £3,856; in 1899, I think the loss was still smaller.
181. Have we indirectly made gains on the Temora line? I think the country has indirectly gained. It has certainly opened up a great deal of country.
182. You do not think the apparent loss is all real loss? No, because it has provided traffic for the main line.
183. From a national point of view it has been a gain? Yes, a distinct gain.
184. Do you think that there is any likelihood of the proposed line being extended at any future time? It would be possible to extend it if considered desirable to the point I have already indicated, and probably, a little further east.
185. Would there be any engineering difficulty? No; not as far as I went east in the direction of Yarra Yarra.
186. *Chairman.*] Does the Tumberumba trade now go mainly to Wagga Wagga? Yes.
187. Is there a chance that some of that trade will be diverted? Some of the trade of the western portion of the Tumberumba district may probably come in to this line.
188. When we were on the Gundagai-Tumut line, we heard a good deal of evidence to the effect that the Tumberumba ranges and foothills were covered with fairly valuable timber, and that the long carriage to Wagga Wagga prevented a good deal of it from being developed? I should expect that some of the timber on the western slope would find its way to Germanton, although I have not included that in the estimate of traffic.
189. We were told that people in the direction of Wagga Wagga, and right down to Albury, were anxious to get that timber, and two contractors told us that they had orders as far as Albury, but they could not fulfil them. We were told that if they had some means of getting to the main line, they would be able to develop some timber areas? I do not know what the roads into Germanton would be like, but I think there would be a fair amount of traffic from the western ranges.
- 190-1. There seems to be only one spur to cross? That is not important. There is one shown at Germanton, but it is a very small affair.
192. Is all the country from Germanton to Tumberumba good agricultural land? Yes; as far as I went. It is about 15 or 16 miles to the east.
193. Do you think that the fact that the land in this district is mainly held in large holdings would prevent the development of the dairying industry? No. The Ross family own 93,000 acres of the best land, and they announced their intention, if the line is built, of going in largely for clearing and cultivation. I think dairying would probably come after that. There is a fairly heavy duty on butter entering Victoria; but after Federation there would be more inducement to go in for dairying in that district.

THURSDAY, 26 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD,
The Hon. ANDREW GARRAN, LL.D.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Culcairn to Germanton.

Alexander Bruce, Chief Inspector of Stock, Department of Mines and Agriculture, sworn, and examined:—

194. *Chairman.*] Have you a return showing the stock statistics for the trafficable area of the proposed Culcairn-Germanton line? Yes.

A. Bruce.

26 July, 1900.

195. Will you first state the limits of that area? I produce a map showing the boundaries of the area. It takes in the river Murray from Dora Dora to Jingellie. From there it passes in a north-easterly line between Yarara and Tumberumba, thence to Kyamba, and from there to a point on the Billabong Creek, 10 or 12 miles east of Culcairn, and from Culcairn south-east to Dora Dora, where it commenced.

196. Can you give us the returns of stock in that area? In 1898, in that area there were 326,822 sheep and 4,162 cattle; in 1899, there were 298,785 sheep, and 3,850 cattle.

197. Have these numbers been seriously diminished by the drought of the last five years? Not in that district. They have had comparatively good seasons.

198. What is about the average carrying capacity of that country? It would range from a sheep and a half to a sheep to the acre; it is very good country. Of course, there might be something to reduce that average in small portions of the district.

199. Is that a fair general average? Yes.

200. Will it carry that many sheep all the year round? Yes. It is some of the heaviest carrying country in the Colony.

201. *Dr. Garran.*] Has it a cold winter? Not very cold.

202. Does the grass die down in winter? It is a country in which horses and cattle, and particularly horses, do not lose any condition to speak of in the winter time.

203. *Chairman.*] Have you any other figures? I have the drift of stock on several of the roads. I may point out that there would be a large portion of that drift for Melbourne. The market for the owners in that district is largely Melbourne, and the portion which would come to Sydney would be comparatively small in ordinary seasons.

204. *Dr. Garran.*] Is it equally good country for cattle and sheep? It is too good for cattle, as sheep pay better than cattle. That is how the owners find it. It is very good for wheat.

205. Did the stock tax diminish the drift of sheep to the Melbourne market? To some small extent it did; but the Melbourne market, as a rule, in by-gone years, was better than the Sydney market. The last year or so our bad seasons have equalised matters. We have had about as good prices as Melbourne.

206. Have some of the sheep from this district come to Sydney this year? Yes; and even further away. Sheep have come to Sydney from lower down the Murray.

207. I want to know whether, in a dry season, we draw some of these sheep to our market? Yes.

208. And, in an ordinary season, do the sheep go to Melbourne in spite of the stock tax? Yes; to a considerable extent.

209. Is the country which is being taken up for agriculture good sheep country as well as agricultural country? Yes; and it is sound country, except in some of the upland spots.

210. What about the river flats? There are not many sheep on those flats. Cattle are mostly there.

211. Do the sheep take the high lands and the cattle the low lands? The sheep take the falls to the Billabong Creek, and not towards the Murray River.

212. Has this district under occupation shown any sign of falling off in the quality of its herbage owing to its being over-stocked? Very little in that way.

213. Is it as good as ever it was? Yes.

214. Beyond Germanton, out to the east, beyond where the railway is proposed to go, is that good productive country? Yes; it is good right up and down to Billabong Creek.

215. Have you been over that part of the country? Yes.

216. Is it going into agriculture? Yes; into wheat-growing.

217. Are there many conditional purchasers, or are the agriculturists all halves men? There are still some conditional purchasers left. A good many have sold out, and their selections have been added to other selections. I believe that about the largest selectors in the Colony are in that district. There are also some men working on the halves system.

218. Do you mean the graziers? They are letting the land out again for wheat-growing.

219. What pays best in that district at present—growing wheat or grazing? I expect it will pay best with stock now; but that was not the case two or three years ago.

220. When wheat was at its best, wheat-growing paid better? I made that remark principally because stock are such a high price at present.

221. At present prices, which do you think pays better—growing wheat or fattening stock? Stock, I should say. Wool was very high, and fat stock is high.

222. If that is the case, there is not a strong tendency at present for the land to be used for agriculture? It would largely depend upon the price of wheat. If wheat were at 3s. a bushel, it would still pay better to grow wheat.

223. Is there a certain amount of grain grown in that district now? Yes.

224. Do you think that wheat-growing will decrease? No; I think it will increase.

225. That is if the price keeps up to 3s. a bushel? Yes; a system is now becoming common of growing wheat for a few years and then laying out the land in lucerne. The two combined make wheat-growing more profitable.

226. Have you seen any of this land under crop for two or three years, and then brought back to pasturage? No.

227. Have you only heard about it? Yes.

228.

- A. Bruce. 228. And have you heard that the land was improved by this process? It was generally understood that lucerne would only grow profitably on alluvial land; but in some portions of Riverina, further down the Billabong, and on the Murray, they have been growing lucerne on what they call the box country. They can fatten from three to four sheep to the acre by that means. They do not get the same crop of lucerne that can be obtained on alluvial ground, but it pays very well.
229. Lucerne will grow on land after tillage on which it would not grow before tillage? Yes.
230. Do you think there will be any falling off in the amount of tillage in the district? No; I think it will increase.
231. Do you think that all those squatters who lease their land on the halves system will ultimately restore that land to pasturage? Yes, for a time; I have heard that it is made a condition that the land shall be left in lucerne. That system gives rotation. They will leave the land for three or four years in lucerne, and then they will break it up again. In that way they will keep the heart in the land and not run it out.
232. So that agriculture would not go out altogether? No; instead of turnip-growing, as in New Zealand, this system enables a rotation—the great want in the farming of the Colony—to be kept up, so that the fertility of the land is preserved.
233. The idea is to have three or four years of tillage, and then to keep the land under lucerne for three or four years? That is to begin with; but after that it would be only one crop of grain and then, say, four in lucerne.
234. How deep does the ploughing go when you have this tillage? A 6-inch furrow would be a good furrow.
235. So that the surface soil is not loosened more than 6 inches? The question as to the growth of lucerne depends largely on the sub-soil, so that it can get its roots down deep. It could not get through stiff clay, but gritty clay or sandy soil would suit lucerne.
236. So far as lucerne has been tried, does it answer? Yes; it has been much more largely tried on the Murray, and on the country a little north of the Murray, from Corowa down to Deniliquin, than in the country we are speaking of now.
237. Have the graziers generally in that district tried this alternating system of tillage? Not very many on this area, but a few have done so.
238. If their example brings out good results, do you think that others will follow their lead? Yes; especially the small men.
239. *Chairman.*] Do you think that agriculture will be an intermittent thing in that district, or will they always have some of their land under crop while the remainder is resting under lucerne or lying fallow? It is a necessity that it should be intermittent, if they are not to run the fertility out of the land. We have not, as at Home, the means of growing green crops and cleaning the land with turnips and some other crops, but we can do it to a certain extent in the way I have described. In the old land they take crop after crop of a different description for four years. Here we have only discovered one thing yet which would enable us to carry out a rotation.
240. Will the land, say, for three years, be all devoted to one sort of cultivation, or will part of it be resting while the other part is under wheat? It will be partly resting.
241. So that every year we may expect some railway revenue from agriculture? Yes; and a good deal ought to be used for fattening the stock. They might grow rape, or some other green crop, so as to be able to fatten the sheep. The climate and soil in that district are very suitable for that sort of thing.
242. Do you think that this railway is likely to draw traffic from Dora Dora up to Horse Creek? It would be traffic to Melbourne, to a large extent.
243. Is there not a range of mountains a little north of the Murray, which practically shuts off that part of the country from this proposed railway? Dora Dora is only 8 or 10 miles from the top of the Range to the Murray. It would be only a small strip of land on the Murray which would be affected in that way.
244. How far east of Germanton does the good country extend? Right up to the top of Billabong Creek.
245. How far is that? About 30 miles from Germanton, on the east side. On the north it is all good country.
246. Is it country which could be profitably devoted to dairying for the Melbourne market? It might, but the carriage would be over a long distance—about 250 miles.
247. Mr. Harper has assured us that the carriage would not be a serious handicap if the land was good? It would do for dairying, but I think it would be better for cross-bred sheep, and that could only be profitably carried out by tillage. The country is well suited for mixed farming.
248. *Mr. Shepherd.*] Have you been on the route of the proposed line? Yes; I was Inspector of Stock in that district, and I know it very well.
249. Is it a thoroughly well-watered district? Yes; it is fairly well watered. The Billabong Creek sometimes gets into water-holes, but for a good many seasons it is running. Then there are other creeks—the Little Billabong, Yarra Yarra, Forest, Back, and Mountain Creeks, besides the frontage to the Murray.
250. Is there always sufficient water to carry stock safely? There have been no losses from want of water during the late drought.
251. What sort of country is it? It is principally box country, mixed here and there with what is called the yellow-jacket, which indicates better country than where the timber is all box; and there are a good many patches and strips of gum country.
252. Is it loamy soil? Not much of it; it is principally a yellow soil, such as you get in good box country.
253. Is the timber really good? Not much of it. Where there is red-gum it is fairly good. There is some timber on the tops of the ridges—stringy-bark—but there is not much of it. There is messmate in the extreme eastern portion.
254. Do you think there will be sufficient timber there to provide railway sleepers and fencing in connection with the railway? I do not know if the red-gum is large enough to provide sleepers. It is not like the red-gum on the Lower Murray flats; it is not nearly so large, but it is sufficiently large for posts for fencing purposes.
255. Where do the settlers generally find a market for their stock now? It used to be all for Melbourne, but of late years, especially on account of the tax, they do not send it there. Our market in bygone years has always been cheaper than Melbourne.
256. Do you say that this is good agricultural land? Yes.
257. What outlet do they get for their wheat? Sydney; on account of the tax.
258. They do not think of sending their wheat to Melbourne? No.
259. Have they grown any other crops there besides wheat? No. I left the district a long time ago, but I know a good deal of what is going on there. I do not know of any other crop being grown except lucerne.

260. Has your attention been chiefly occupied in connection with stock? Yes.

261. *Mr. Hyam.*] Do you remember that in one of the very dry seasons, about three years ago, a great deal of the wheat in Riverina was purchased for Melbourne? Yes.

A. Bruce.
26 July, 1900.

262. Do you think, now that there is a possibility of the border duties being removed, that a great deal of wheat from that district will be diverted to Melbourne for shipment or consumption? That would not affect the question of the Culcairn-Germanton railway, because the wheat would be put on at Germanton to go to Melbourne if it were sold for Melbourne. I have with me a return showing the drift of stock in that district. In 1897, the stock traffic by road from Culcairn to Germanton was 51,732 sheep; from Germanton to Culcairn, 66,974 sheep. These numbers depend largely on the sheep going to the mountains on account of drought. A very large proportion of sheep which go to the mountains in starvation times pass through the Germanton district.

263. *Mr. Levien.*] It is merely travelling stock? Yes; but I hope before long there will be a railway, which will be a continuation of the Germanton-Culcairn line, down the Billabong to Jerilderie. The land on both sides is high-class land, and would then get the starving stock upon that line, and they would be taken to the mountains more safely and more economically, and they would not perish by the way for want of grass. These sheep now pass through the Germanton district. In 1898, from Culcairn to Germanton there was a traffic of 107,962 sheep, and from Germanton to Culcairn 45,771 sheep. The number of sheep passing each way usually balances, but in this case the season was so bad that the sheep were left in the mountains; they did not come back in that year, which accounts for the difference in the numbers. In 1899, from Culcairn to Germanton, there were 138,397 sheep, and from Germanton to Culcairn there were 153,238 sheep. In that year more went back than went the other way. Some of these had been left for the whole year in the mountains. Then, in 1897, there was a traffic from Little Billabong to Germanton of 66,406 sheep, and from Germanton to Little Billabong 62,886 sheep. In 1898, from Little Billabong to Germanton, there were 44,612 sheep, and from Germanton to Little Billabong 94,468 sheep. In 1899, from Little Billabong to Germanton, 226,719 sheep, and from Germanton to Little Billabong 146,633 sheep.

264. *Chairman.*] What places does this district chiefly relieve in drought time? From below Deniliquin in the last drought. They are taken to the top of the Murray, and between that and Monaro.

265. You said you would like to see this railway extended;—how far, and in what direction, would you like to see it extended? Right down the Billabong to Deniliquin, or to the railway from Hay to Deniliquin, if that be made; that would be passing through Jerilderie.

266. What we understood you to say was that the Germanton line should be extended at the Germanton end further east? I propose that it should not stop at Culcairn, but that it should be taken west right down the Billabong. It is all good country, and there is no mountain or hill all the way.

267. How far is it that the land in this district can be used in drought time for starving stock purposes;—is it not the custom to stock up to the full capacity? The land in this area is fully stocked, and is not used by starving stock. My suggestion had reference to the railway from Culcairn to Germanton carrying starving stock towards the mountainous country, which is only occupied in drought time, because it is not sound country. Rather than see the sheep perish the owners run the risk of their getting fluke and footrot amongst the mountains. I have figures showing the wool produced in the district to be served by the railway. In 1898 there were 4,905 bales; in 1899, 4,485 bales.

Charles Edward Rennie, Chief Draftsman, Department of Lands, sworn, and examined:—

268. *Chairman.*] Do you produce a map showing the trafficable area of the proposed line? Yes; it shows the area within 12 miles north and south of the proposed line from Culcairn to Germanton, and extending 20 miles to the eastward. Those were the limits about which the Railway Commissioners asked us to provide them with information. The holdings within that area are as follows:—Alienated land, 361,000 acres; reserves, 34,400 acres; Crown lands, 56,000 acres. The alienated land is shown on the map by a blue tint, the reserves by a green tint, and the Crown lands by a brown tint.

C. E. Rennie.
26 July, 1900.

269. By far the largest portion of the area is wholly alienated? Yes; almost the whole of it. There is one small area under an improvement lease. Of the Crown lands, 24,000 acres are held under occupation license, and 32,000* acres are untenanted, unless it may be by annual lease.*

270. Is the unoccupied land in the high country? I do not know the nature of the land, but a range of hills is shown right through the untenanted area.

MONDAY, 27 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.

The Hon. SOLOMON HERBERT HYAM.
ROBERT HENRY LEVIEN, Esq.

JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Culcairn to Germanton.

Charles McDonnell Stuart, Supervising Engineer, Railway Construction Branch, Department of Public Works, sworn, and examined:—

271. *Mr. McFarlane.*] Have you a good knowledge of the proposed route of railway from Culcairn to Germanton, and of the proposed site of the Germanton station? Yes; but I have not been over the ground in detail.

C. McD.
Stuart.

272. Do you think it a sufficiently convenient site for Germanton? I think so; it lies parallel to the main street, and also parallel with the Government reserve. 27 Aug., 1900.

273. Is it on the Government reserve? On part of it.

274. How far would it be from the town to the station? Not more than a quarter of a mile.

275. Some of the residents, in giving evidence, suggested another site for the station, to the south of the proposed site, on a reserve; they thought it would be more convenient to the town, and, further, they say there is a good water supply adjacent;—do you know? I do not know the position exactly to which you refer; I suppose it would be on the Ten-mile Creek, about half a mile from the proposed station.

276.

* Note (on revision):—It has been since ascertained that 27,250 acres of this area is held under annual lease.

- C. McD. Stuart.
27 Aug., 1900.
276. Would that be more convenient to the centre of the town? Yes; but it would not be so well suited to the railway if it were to be extended.
277. If the railway were to be extended, you would have to make a curve? You would have to put in an S curve to cut the street at right angles, and it might take up more valuable property.
278. Do you think that was in contemplation when the proposed site was selected? Yes; with a view of further extension, if found necessary.
279. Do you think a sufficient water supply could be obtained in close proximity to the proposed station? I think it more than probable; there is no permanency in regard to these creeks.
280. Do you think it desirable to alter the proposed site to the one required by several local residents? I could not say without further examination of the ground.
281. Do you think there is a reasonable prospect of further extension? That I could not say.
282. Do you know the country between Germanton and Culcairn? Pretty well.
283. Do you know the Carabobala Station? Yes; it is quite close to the main road.
284. Does the Ten-mile Creek run through it? I think it does. It runs very close by, at any rate; if it does not, the main creek does.
285. That is the Billabong? Yes; the Ten-mile Creek goes into the Billabong.
286. Do you understand that the proposed railway would run through the Carabobala Estate? Yes.
287. Do you think there is anything in the contention that to construct a railway, as proposed, through the Carabobala Station, would seriously damage it? I do not think it would.
288. Are you aware that there is a road passing almost parallel with the proposed railway line through Carabobala Station? Yes; a surveyed road.
289. If that road were opened, would it not have the same effect as a railway, in cutting off the remainder of the station from the water supply spoken of? I do not think so.
290. Could you say whether the proposed line follows the main road, or does it go approximately close to it? Approximately to it.
291. Is the country fairly level? Yes.
292. Would it be possible to vary the deviation of the line, so as to follow the road now in existence? No.
293. Then there would not be much in the contention of the owners of Carabobala Station in regard to compensation? Of course, their argument is that they are cut off from Billabong Creek.
294. The road keeps pretty well to the one side of Billabong Creek? Yes, until it gets within a few miles of Germanton, then it crosses it. We keep the railway to the opposite side of the creek to that on which the road runs, until the road crosses the creek.
295. Mr. Hyam.] The road of which Mr. McFarlane spoke just now is an unformed road? I presume so.
296. You do not know whether there is a made road there? I do not know of my own knowledge.
297. Or whether one has been reserved? I do not know.
298. And you do not know whether the railway will follow that line of road? It does not follow it exactly, but takes the high ground on the southern side of the Billabong.
299. The road I refer to is an unused road? Yes.
300. But there is a surveyed road there? Yes.
301. Dr. Garran.] Do you know the Corowa line? I do not.
302. You do not know whether this is an easier line? This is, if anything, an easier line.
303. Then we can make it a cheap line? Yes, fairly so.
304. It need not cost more than £3,000 per mile? You have the Engineer-in-Chief's estimate.
305. But, so far as you know? It is the stations that run away with so much money.
306. But to put in such stations as the Department proposes? Yes.

William Henry Hall, Sub-editor, Statistical Year Books, Government Statistician's Department, sworn, and examined:—

- W. H. Hall.
27 Aug., 1900.
307. Chairman.] Have you any statistics with regard to the population and production of the area which it is proposed to serve by a railway from Culcairn to Germanton? Yes, I have.
308. Will you state from what area you have obtained those particulars? The country embraced in the return covers about 20 miles from the terminus of the railway. It bisects about one-half the country on the north and the south between the proposed railway line and the main Southern line. It also goes out as far as the Carabost Range on the north-east, and as far as Jingellic on the south-east. The estimated population of that part of the Culcairn district which would be affected by the railway is 200; the population of Germanton is 1,660; the total population of the two places being 1,860. The agricultural, pastoral, and dairying statistics for 1897-1900 are shown in the following returns:—

PROPOSED RAILWAY FROM CULCAIRN TO GERMANTON.
Agricultural, Pastoral, and Dairying Statistics, 1897-1900.

| District. | Cultivation. | | | | | | | | | | | | | | Live stock. | | | | Dairy produce. | | | |

| | Area. | Yield. | Area. | Yield. | | | | Wheat, oats, and barley. | Lucerne. | | Potatoes. | Fruit orchards. | All other crops. | | Match cows. | Ordinary, including calves. | | | | | | |
| Total area cultivated. | acres. | bushels. | acres. | bushels. | acres. | acres. | acres. | acres. | acres. | acres. | acres. | acres. | acres. | No. | No. | No. | No. | No. | lb. | lb. | | |
| Culcairn, 1900 .. | 10,880 | 9,916 | 143,084 | .. | .. | .. | 100 | .. | 873 | .. | .. | .. | .. | 545 | 155 | 632 | 71,008 | 13 | 2,600 | 1,71 | | |
| Germanton. | 1897 | 3,414 | 2,511 | 26,175 | 2 | .. | .. | 162 | 687 | .. | 2 | 14 | 29 | 7 | 1,279 | 648 | 5,012 | 272,837 | 271 | 9,078 | 190 | |
| | 1898 | 8,023 | 6,580 | 52,931 | 3 | 90 | .. | 128 | 1,263 | .. | 1 | 10 | 29 | 5 | 1,230 | 589 | 4,020 | 277,289 | 217 | 7,170 | 8,910 | |
| | 1899 | 13,411 | 11,481 | 198,131 | .. | .. | 1 | 82 | 2 | 1,732 | .. | 11 | 6 | 33 | 13 | 1,260 | 393 | 4,721 | 241,237 | 254 | 13,006 | 100 |
| | 1900 | 18,328 | 15,556 | 217,701 | 1 | .. | 3 | 144 | 2 | 2,536 | .. | .. | 10 | 31 | 7 | 1,132 | 422 | 2,836 | 285,611 | 252 | 11,820 | 7,420 |

309. Taking a general view of the statistics you have just read, would you say the district is a progressive one? Unquestionably; it shows that the area under cultivation has increased considerably during the last four years. W. H. Hall,
27 Aug., 1900.
310. And from what you know of the district, you think there is room for still greater expansion? Unquestionably; the best proof of that is that so many of the holdings there were originally taken up in small areas, extending out from the north of Germanton. Out Back Creek way, to the Billabong and Cookardina, they were all taken up in small areas of from 40 to 160 acres.
311. Whereabouts would that be? To the north and north-east.
312. *Mr. Levien.*] I suppose you would recommend a railway there? I would.
313. You think there would be an absolute good return from the country to be served by this railway? There would.

Henry Chamberlaine Russell, C.M.G., Government Astronomer, sworn, and examined:—

314. *Chairman.*] Could you give us the details of the rainfall over the district proposed to be served by the line of railway from Culcairn to Germanton? Yes; I can give you the average rainfall at the stations where records are kept. At Culcairn the rainfall averages 20.13 inches; at Pulletop it is 27.40 inches; at Howlong, on the other side, it is 23.29 inches; at Thurguna it is 31.16 inches; at Germanton, 21.91 inches; at Strathdownie, to the east of Germanton, it is 26.46 inches; at Aunadale, north-east of Germanton, it is 21.66 inches. That takes the stations all round the line. It is only a short area. H. C. Russell,
C.M.G.
27 Aug., 1900.
315. Can you say whether the rain falls in such a way as to be eminently suitable for wheat growing? Yes; that is the character of the distribution of the rain about the river Murray, comparing it with places further north—that the distribution of the rain is more even during the year, and more abundant between the winter and the early summer.
316. Is the yearly rainfall subject to any very great variation? Yes, a very considerable variation, but not at all to the same extent as in the Northern parts of the Colony.
317. *Mr. McFarlane.*] Do you consider the climate suitable for products other than wheat? I cannot answer that question.
318. But with regard to the rainfall? The rainfall is good and favourably distributed. The greater part of it falls between, say, July and November, and so far as wheat is concerned that is a very favourable condition, indeed.
319. Can you say whether, during the past five years, the district has suffered as severely from drought as compared with the west and extreme north-west? There is no comparison at all between the extreme north-west of the Colony and this part of the Colony, which will be served by the proposed railway. In the extreme north-west they go frequently for months without rain; but that is not the case about the Murray. Albury, Germanton, and other places have always a considerable amount of rain.
320. Taking Germanton, what is the minimum rainfall for the past five years? 21.19 inches.
321. Would that be the average for five years? No; it is less than the average. That is the lowest reading of the rainfall for the particular year.
322. This part of the country does not suffer from floods or excessive rainfall? Not very severely, speaking of the district generally. There are no great records there. It is on the Murrumbidgee that the floods are so mischievous, coming down from the high lands.
323. The fact that the rainfall is fairly distributed every year makes the country very suitable for growing wheat? Certainly.
324. Wheat does not want a very wet climate? No; the chief feature in its favour is the abundance of rain at a particular season of the year. It is very seldom, indeed, that the wheat-growing period without rain.
325. *Dr. Garran.*] There is no failure of crops by drought in that district? I do not think so.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

RAILWAY FROM CULCAIRN TO GERMANTON.

REPORT.

THE Sectional Committee, consisting of Mr. J. C. Watson, the Hon. S. H. Hyam, and Mr. John McFarlane, appointed to inspect the route of, and to take evidence and report upon the proposed Railway from Culcairn to Germanton, left Sydney on the evening of Thursday, the 2nd instant, by the southern express, arriving at Culcairn at 6 o'clock on the following morning.

The Sectional Committee held its first meeting at the "Culcairn Hotel" at 10 a.m. on the 3rd, when Mr. J. C. Watson was elected Chairman. The evidence of a number of witnesses was taken in regard to the character of the country between Culcairn and Germanton. All the local residents appeared to be favourable to the proposed extension, so far as could be gleaned from the evidence adduced.

At about 1 o'clock the Sectional Committee left for Germanton, proceeding along the route of the proposed railway, and reaching the terminus a little before 4 o'clock in the afternoon.

The country through which the line would pass was found to be generally level, with small broken hills on the northern side, whilst on the southern side the flat lands extend for a considerable distance, bounded by a range of hills some miles away. From the township of Morven, 5 miles distant from Culcairn, the expanse of level land widens out considerably, forming extensive areas of verdant flats, which presented a luxuriant appearance, no doubt owing to the copious rains which have recently fallen in the district. The greater portion of the land along the route on the lower levels is suitable for agriculture, whilst the slopes in the hilly parts are excellent for grazing purposes.

It was noticeable that but little attempt at agriculture had been made within 8 or 9 miles of Culcairn, the land for that distance being occupied almost exclusively with stock. A considerable amount of cultivation, however, was apparent on approaching Germanton, and though agriculture has only been carried on there to any large extent during the last three or four years, there is every promise of a considerable development of this industry in the near future. In fact, larger areas are being put under crop every year. In addition to the paddocks which have already been brought under the plough, further areas are being prepared for sowing, whilst ringbarking and other improvements are being rapidly carried out on most of the holdings.

The Sectional Committee held a meeting in the Court-house, Germanton, at half-past 4 o'clock, on the afternoon of the 3rd instant, when a number of land-owners and other local residents gave evidence. A further sitting was held on the following day, which was attended by residents of all parts of the district likely to be affected by the proposed line, all of whom, with one exception, were favourable to its construction. Though the evidence, generally, was favourable to the route which the railway is to take, dissatisfaction was expressed by some residents of Germanton with the proposed site of the terminal station, on the ground of its being at an inconvenient distance from the centre of the township and in a locality where there might be some difficulty in obtaining a supply of water. It was suggested that the station should be located on a Government

reserve near the cricket ground, which is in closer proximity to the main street and to the Government buildings. The Sectional Committee, however, after a careful inspection of the two sites, came to the conclusion that the objections raised to the one already selected had but little force, while it would be the most convenient for future extension.

The evidence, generally, went to show that the country through which the railway is to pass, as well as considerable areas beyond the terminus which will be served by it, is of a superior description, suitable for growing wheat and other agricultural products. Its suitability for sheep, the rearing of cattle, and the production of wool is generally conceded, whilst it is anticipated, according to the evidence of several landowners, that in some of the country beyond Germanton, an extensive dairying business will be developed within a very short period, more particularly if the means of transit, which the proposed railway would afford, is obtained. The higher lands in the direction referred to are, though for the most part consisting of good soil, deemed more suitable for dairy farming than for agriculture, on account of their broken character.

The wheat-growing industry, which is carried on on what is known as the "halves" system, appears to be tolerably satisfactory to both the owners of the land and the lessees, and the Committee were informed that applications are both numerous and incessant from persons in various parts of the Colony who are desirous of obtaining land for cultivation under this class of tenure.

It was stated in evidence that there are 150,000 acres of land in the district suitable for growing wheat, of which area 27,000 acres are already under cultivation, producing 115,000 bags a year, the yield per acre being from 12 to 20 bushels.

The production of oats has been only recently entered upon by one or two land-holders who, however, have been remarkably successful. The yield for 1898 was 1,000 bags, the average production being from 20 to 40 bushels per acre. It is probable, therefore, that the production of this kind of cereal will be entered upon much more extensively in the immediate future.

It is computed that the quantity of wool to be carried by the railway from this district is 8,000 bales, of which 5,000 bales would be the produce of the area which the line will traverse. Some of the witnesses estimate, however, that another 3,000 bales would be intercepted by the railway on its way from districts beyond Germanton. This produce comes from Tarcutta, Tumberumba, and Adelong, and includes some wool which now goes towards Wagga Wagga. The bulk of the wool from that district at present finds its way to Melbourne, *via* Albury; but the opinion was expressed by some witnesses that after the accomplishment of federation it must inevitably come to Sydney, if the proposed railway be constructed. It may be pointed out that some of the traffic which goes to Melbourne, though continuing to go in that direction, would probably be carried *via* this line to Albury.

A point which was much emphasised by the local residents is the fact that the Germanton district is practically free from droughts, the losses from that cause according to the evidence, not at any time exceeding 2 per cent.

Attention was also drawn to the valuable timbers in the district which, it is stated, cannot at present be turned to profitable use, owing to the want of railway communication, though they are much in demand. Orders which have been received from various parts of the Colony not being supplied, because of the impossibility of getting the timber away.

It was ascertained that the country through which the railway would pass is held in large areas by private owners. These, the Committee find, are not inclined to give, free of cost, the land that would be required for the line, but express themselves generally as willing to accept Government land in exchange for that which may be taken by the Railway Department.

The Government Inspector of Stock for the district mentioned that the stock, in the area of which Germanton is the centre, had increased considerably during the last three years. The carrying capacity of the land is 1½ sheep to the acre.

It was stated by some of the storekeepers that, under the existing condition of things, they find it cheapest for them whilst buying supplies in Sydney to have them sent round to Melbourne and carried over the Victorian railways to Germanton.

On the 5th instant, the Sectional Committee drove in the direction of Yarra Yarra, a distance of about 13 miles east of Germanton, and from there northward to Little Billabong, a further distance of 15 miles. From Little Billabong they proceeded to Kinross, a distance of about 15 miles, and thence back to Germanton, another 5 miles. The land towards Yarra Yarra consists of undulating country, interspersed with rather precipitous hills. It is all first class grazing land, about three-fourths of it being suitable for cultivation. Some of the land is exceptionally good. It is mainly forest land—box and red gum country. From Yarra Yarra to Little Billabong the country is more level than in the part already referred to, and the whole of it may be classed as land suitable for cultivation. Already considerable areas of it are under wheat, and the crops so far look very promising. The land from Little Billabong to Kinross is of an excellent character, and is tolerably level and well watered. A considerable portion of that land also is being used for growing wheat, and the farmers met with by the Committee expressed their intention of largely increasing the area under cultivation if the proposed railway were constructed.

On the route of the line, and for a considerable distance beyond Germanton, there are large areas of land suitable for cultivation, that between Little Billabong and Germanton being noticeable for its superior quality.

As there is still a considerable amount of evidence to be taken on the proposed line of railway, the Sectional Committee think it desirable not to make any recommendation.

The Sectional Committee left Germanton at 10 o'clock on Monday morning for Culcairn, catching the 3.42 p.m. train for Sydney.

8 August, 1900.

J. CHRIS. WATSON,
Chairman.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

[SECTIONAL COMMITTEE.]

RAILWAY FROM CULCAIRN TO GERMANTON.

FRIDAY, 3 AUGUST, 1900.

[The Sectional Committee met at the "Culcairn Hotel," Culcairn, at 9 a.m.]

Present:—

JOHN CHRISTIAN WATSON, Esq. (CHAIRMAN).

The Hon. SOLOMON HERBERT HYAM.

JOHN MCFARLANE, Esq.

The Sectional Committee proceeded to consider the expediency of constructing a line of Railway from Culcairn to Germanton.

Richard John Matchett, manager of the Morven Estate, sworn, and examined:—

1. *Chairman.*] Does the proposed line go anywhere near the Morven Estate? It goes through it.
2. What do you think will be the effect of the railway if it be carried out? I think it will be beneficial to our district.
3. Is the Morven Estate a large one? It comprises 7,200 acres of secured land, and about 600 acres of annual leases, besides which we rent about 1,100 acres from private owners.
4. Do you go in for cultivation there? Not much; we have 93 acres under cultivation this year. Formerly we had no cultivation, except for the production of hay for our own use.
5. Has that area to which you have referred been put under crop with the view of producing wheat, or merely for hay? Some of it for hay, and probably 70 acres under wheat.
6. Is the land round Morven suitable for agricultural purposes? It is.
7. Why is it that there is only such a small area cultivated out there? We thought wool-growing more profitable.
8. Do you think it likely that there will be a greater proportion of land put under agriculture in that locality in the future than there has been in the past? Yes, if the price of wheat does not get too low.
9. On the other holdings surrounding Morven has there been much cultivation going on? Yes; a great deal.
10. Can you give us an approximate idea of the area under cultivation there? There is a property adjoining ours belonging to Mr. McLennan, 1,100 acres, most of which is under cultivation. At Benambra there is a great deal under cultivation. On the Carabolla estate, which adjoins our property, they are putting 700 acres under crop this year for the first time.
11. Does the traffic from that direction come towards Culcairn? Yes, chiefly. I think that some of the Benambra wheat went to Gerogery this year for the first time, but all the rest round there has come to Culcairn.
12. What was the reason that induced them to go to Gerogery;—was it that the wheat was likely to find a market towards Melbourne? No; I think the distance was a little shorter than to Culcairn, or the road is better, I am not quite sure.
13. Do you know whether the trade in wheat usually makes for Sydney or for Melbourne from here? I think mostly for Sydney.
14. Where does your wool go to? To Melbourne.
15. How do you send it? By rail from Culcairn.
16. Then by rail from Wodonga to Melbourne? We send it by rail right through.
17. If this railway were constructed would you put your wool that is intended for Melbourne on to the railway if there is a siding at Morven, or would you carry your produce to Culcairn? We should put it on at Morven if possible.
18. Where do you get your supplies from? We get them from Culcairn. They come from Albury to Culcairn by rail.
19. Do you know anything of the land beyond Morven? Yes; I know it pretty well.
20. How does it compare with that between Culcairn and Morven;—is it better or worse? It is very similar country, for some miles anyhow.
21. Towards Germanton is agriculture gone in for extensively? Yes; a great deal of land is cultivated in that neighbourhood.
22. Is that mostly on the halves system, or are the owners cropping their own land? I think it is chiefly on the halves system.
23. Do you know whether the people have found it profitable? I believe they have. I think the yields have been very good during the last few years.
24. Have you estimated the yield of hay and wheat that you get? I think the average would be about 1 to 1½ tons of hay to the acre. We have grown no wheat for grain.
25. What is the carrying capacity of the land at Morven as regards sheep? About one sheep to the acre.

R. J.
Matchett.

Aug., 1900.

- R. J. Matchett.
3 Aug., 1900.
26. Is it forest land or plain? It is forest land.
27. I suppose you have killed the timber? Yes, the land is well improved.
28. Do you think a railway would be of any advantage to your property out there? In one respect it would be an advantage; but going through the property it might injure it to some extent.
29. By cutting it up? Yes; I think it goes across for a distance of about 2 miles.
30. Does it cut through at an awkward angle? It will cut one paddock off at a rather awkward angle. It will go through our cultivation paddock.
31. You were going to say that the railway would be of some advantage? It would be an advantage to have a railway station and less freight to pay.
32. Do you engage carters or use your own teams for carrying your produce? We engage carters.
33. What does it cost per ton? Five shillings and sixpence.
34. Do you know whether your people would be prepared to give free the land which the railway would take from the estate? I could not say that the land would be given without compensation.
35. I suppose the railway would take about 32 acres in 2 miles? Yes.
36. Would the construction of the railway be worth 32 acres to the estate? I do not think so.
37. Are there many settlers along your way towards Germanton, or is the land mainly held in large blocks? They are fairly large holdings; there are a very few small holdings as far as I know.
38. Do you send any fat stock away? Yes; we sent a good number last year.
39. Where do you make for with fat stock? For Homebush.
40. Do you drive them to Culcairn, and have them trucked there? Yes.
41. Of course, it does no great injury to stock driving them that distance? No.
42. Supposing there were a station near at hand, would you truck them at the nearest point? Yes, we should.
43. Is the stock traffic likely to be a large item? I think so.
44. *Mr. McFarlane.*] You say that you know the country between here and Germanton? Yes, pretty well.
45. Is most of the land alienated along the proposed line? It is.
46. Do you think that the proposed line, if constructed, would have the effect of increasing settlement:— would those who have large holdings subdivide their properties and turn them into farms? I do not know whether they would do that, or whether they would go more into share-farming.
47. Do you think the railway would cause a large increase in agriculture in the district? I think it would.
48. What is the feeling of the people, as far as your knowledge goes? I think the feeling is very generally in favour of the line, except on the part of those through whose property it will go.
49. Do you think there will be a considerable traffic between Germanton and Culcairn, in the event of the line being constructed? Yes, I think there will be a lot of traffic.
50. Is Germanton an important settlement? Yes; I should consider it important.
51. Do you know the country around Germanton? I have a fair knowledge of it.
52. Within a radius of 10 or 15 miles beyond the terminus of the proposed railway, would that country be likely to contribute much traffic to the line? I think it would.
53. Has wheat-growing been carried on with the market as it is now in your district? Yes; I think it has been very profitable.
54. Could you give any idea as to the average result per acre, taking ordinary seasons? I am not quite certain, but the results have been very good; I think the average is three or four bags to the acre.
55. Twelve to 16 bushels? Yes; but I am not quite certain.
56. Would you consider that a fair average crop? Yes; I think about four bags to the acre is the average.
57. Is the country heavily timbered? It has been.
58. I suppose most of the land has been improved? It is highly improved.
59. *Mr. Hyam*] How long have you resided in the district? About thirty years.
60. I suppose the rainfall is pretty regular in the district? Yes; I think that about 26 inches is the average.
61. Are the seasons fairly regular? They are.
62. They do not vary very much? No.
63. It is pretty certain that you will get a crop? Yes; the crops very seldom fail in the district.
64. Have the failures that have occurred been partial or absolute? There have been partial failures, but no absolute failures.
65. If this railway were made, do you think there would be a great increase in agricultural products, live stock, and wool in the district? Yes; and especially in wheat.
66. Do you know the country through to Jingellic? Not very well; I have not been there. I think Jingellic is a rather lilly country.
67. Can you tap the Upper Murray from here by going through Garry Owen? I cannot give any information about the Upper Murray.
68. Do you think that if a line of railway were constructed to Germanton it would take the traffic from the places which I have mentioned? I think it would.
69. That traffic would be almost certain to come on to the line? Yes.
70. Is there a very large population at Germanton? Not in the town.
71. I suppose the town has not progressed owing to the want of railway facilities? That has been the drawback.
72. You think it would not only improve the agricultural area, but the town also, if a railway were made to Germanton? I think it would.
73. There is no doubt, then, that the whole of the trade of the district would be diverted to this line, and possibly a great deal of the wheat grown in the district might be diverted to Melbourne? I do not think that wheat has been sent to Melbourne to any extent.
74. Two or three years ago, when the price of wheat was very high in Victoria, I think a great deal of wheat was sent from this district to the Melbourne market? I never heard of it.
75. With freetrade between the colonies, is it likely that a considerable portion of this trade would be diverted from Melbourne? I cannot say.

76. Do you not think that the people would avail themselves of the nearest port? I daresay that if prices in Melbourne are as good as they could get anywhere else they would.

R. J.
Matchett.

77. Of course, you are alive to the fact that they would like to have two markets instead of one? It would certainly be an advantage. I might mention, with regard to giving the land for the railways, that we should be prepared to grant the land required provided that we got other land in exchange in the shape of unnecessary reserves on the property. I understand that the Department are willing to grant that.

3 Aug., 1900.

78. *Chairman.*] The Engineer informs me that in running a railway through purchased property they take 12 acres to the mile;—that would be 24 acres in this instance? Yes.

John O'Donoghue, hotel-keeper and postmaster, Morven, sworn, and examined:—

79. *Mr. McFarlane.*] Have you resided long at Morven? Three years and a half.

80. Have you a general knowledge of the country through which the proposed railway is to pass? I have, from Morven into Germanton and around this district.

J.
O'Donoghue.

81. Is there much traffic between Morven and Culcairn? Yes; a good deal. All the Benambra wheat comes through Morven.

3 Aug., 1900.

82. Where is Benambra station? About 7 miles from the "Morven Hotel," to the south-east.

83. What is the nature of the traffic between Morven and Culcairn? Wheat, wool, and stores.

84. The stores come from Culcairn? Yes.

85. Do you think, if the railway passed through Morven, as proposed, it would be universally used by the people for carrying produce and supplies? Yes.

86. Of course, road carriage has to be used at present? Yes.

87. Does much traffic from Germanton pass through Morven? Yes; nearly the whole of it.

88. Would you consider the present traffic a large traffic? There is a traffic from Albury. A great deal of traffic comes from Albury by road, but if there was a railway from Germanton that traffic would go by the railway.

89. How far is Albury from Germanton by the road? About 36 miles.

90. About double the distance between here and Germanton? Yes. The brewers have to cart their beer from Albury, but they would not do that if there was a railway.

91. What is the occupation of the settlers? They are farmers.

92. Are they agricultural farmers? Yes. They cultivate the soil and rear sheep.

93. Is there much mixed farming? Yes, a good deal.

94. Is the district progressing? Yes. There has been a great deal of clearing done. Thousands of acres have been cleared within the last few years.

95. Has there been much increase in settlement? Yes, a great deal. Some of the settlers at Benambra have purchased farms.

96. I suppose there is a very small extent of Crown land available? Very little.

97. How do the settlers get land now? They purchase it from private owners.

98. If this line were constructed, do you think it would have a great effect in increasing settlement? I do.

99. Do you think those who are living such a short distance from Culcairn as Morven is would not drive their stock to Culcairn? No; I do not think they would if there was a station at Morven.

100. Do you think there would be much passenger traffic? Yes; the railway would catch all the people from Benambra, Mountain Creek, and Roachdate.

101. Are the landowners favourable to agricultural farming being extended in the event of the line being constructed? They are; and they are already preparing to let out the land largely on the halves system next year.

102. Do you think that a satisfactory system of farming with regard to wheat-growing? It is.

103. Is it satisfactory to the persons who take the land from the owners? Yes; they are making homes. Some of them are leasing the land for five years.

104. Do you think the land is suitable for wheat-growing? Yes; it is as good as any in New South Wales.

105. Have you been in any other district of the Colony? I have; and I have been in New Zealand, where I grew wheat myself.

106. Do you think there would be a satisfactory average yield of wheat in the district? I do.

107. Do you know the Germanton district? Yes; but I have not been further than there. The land as far as Germanton is all level.

108. Is it similar country to that between here and Morven? No; it is more level here.

109. Is there much waste land between here and Germanton? There is very little waste land, except some hills.

110. Is Germanton growing in importance and population? I do not know that it has grown much. It is nearly at a standstill, but slightly improving.

111. Is it the centre of a considerable district? Yes, it is. There are some very big stations in that district, and I believe that a railway would improve the place vastly.

112. Do you think there would be a large amount of traffic opened up if the line were constructed? I do. It might not pay just at first; but there is a great district beyond Germanton, the traffic of which must come to the railway.

James Hugh Balfour, manager of the Round Hill Estate, sworn, and examined:—

113. *Mr. Hyam.*] How long have you been in the district? About twenty years.

114. Where do you reside? On the Round Hill Estate.

115. Will the proposed railway go through your estate? Yes; for about 4 miles.

116. Of course you heard the question raised as to giving up the land necessary for the construction of the railway;—would you be willing to give the land free to the Government for this purpose? We certainly could not give it free.

117. What conditions would you impose if you gave the land? We should be willing to make an exchange of land, if we could get some that would be suitable.

J. H. Balfour.

3 Aug., 1900.

- J. H. Balfour. 118. Is there any land near your place that you could take in exchange for that which would be required for the railway? Yes; I think there is. Of course, we should not expect to take unimproved land for our improved land.
- 3 Aug., 1900.
119. You would take land of the same value as that which you give up? Yes; except for two blocks, for which we would expect compensation, being completely cut off from our water. One block would be isolated from the property altogether.
120. Can you tell me the area of your holding—on this side of the line? The whole of our property is on the eastern side of the Main Southern line.
121. How much freehold have you? Between 30,000 and 40,000 acres.
122. All freehold? Yes.
123. Does that land lie between here and Morven? A portion of it.
124. Does it extend a great distance along the Southern line? About 7 miles.
125. Does it abut on the line? Yes.
126. Is your land suitable for agriculture? Yes.
127. The whole of it? Almost the whole of it, except the tops of some of the rises.
128. I suppose the whole of the hills are fit for grazing? Yes, they are.
129. Do you pay much attention to agriculture? Yes; we have about 6,000 acres under cultivation.
130. Do you cultivate it yourselves? No; it is nearly all let on the halves system.
131. If this line were constructed, would you increase the area under cultivation? No, not necessarily. The line would not affect us in that way.
132. Your property being so near to Culcairn, you would come to Culcairn under any circumstances? Yes.
133. Then the line would be of no benefit to you? Of no benefit at all.
134. Do you carry many sheep on your land? Yes; about one and a half sheep to the acre.
135. Your land is highly improved? Yes; it is one of the oldest stations in the district.
136. Can you give us any idea of the average yield per acre of wheat, taking one season with another? From 15 to 20 bushels would be a fair average.
137. What is the yield of hay? About 1½ tons to the acre.
138. Can you grow potatoes? Not well.
139. Do you grow maize? No.
140. Do you grow lucerne? Yes; good grazing lucerne. It is not such lucerne as that of the Hunter River district.
141. Do you find that by cultivating lucerne you increase the carrying capacity of your land to a considerable extent? Yes.
142. How is the country watered between here and Germanton, and especially on your own place? The main Billabong Creek runs right through our property.
143. And it never fails? It is never absolutely dry. During the late drought it stopped running, but there were holes holding considerable quantities of water, and we could get water anywhere on the creek by sinking.
144. Then you think that the chief traffic on this line would be wool and wheat? Yes.
145. Do you know the country beyond Germanton? Not for any distance beyond Yarra Yarra.
146. How far is that from here? It is about 32 miles.
147. What is the nature of the country between Yarra Yarra and Germanton? It is more hilly than the country on this side of Germanton.
148. Is it good agricultural country? Some parts of it.
149. What proportion of it? I hardly know.
150. Would one-third of it be fit for agriculture? I should think so.
151. And I suppose the rest is good grazing land? Most of it is.
152. Will it carry one sheep to the acre? I should not say that it would.
153. What would it carry? It is difficult to say, so much of it is rough country.
154. Is that country very rough? Yes.
155. Still it would carry sheep? Yes, when improved; a lot of it is not improved.
156. You think that the trade of that outlying country would increase the revenue from the railway between Culcairn and Germanton? Yes; the traffic from that part would come to the railway.
157. Taking the country running at right angles to the railway between here and Germanton, is that good country, say for 5 or 10 miles back on each side? Yes; on the whole it is good country on both sides of the line for a distance back of about 5 miles.
158. Do you think that the traffic would be diverted on to this railway? I think the trade would undoubtedly come to the line beyond a certain distance from Culcairn. All the traffic within that distance would come to Culcairn.
159. Would the traffic of the district between Morven and Germanton come to the railway? I should think so.
160. Do you know anything of the road traffic between Albury and Germanton? Yes; all the wool from the Germanton district goes that way. The large stations send their wool direct to Albury, along the Old Sydney Road.
161. As a rule, do they get their supplies from Albury? Yes.
162. Is Albury the centre at which they deal? It is.
163. Do they send their wheat from that district to Albury? No; the wheat comes to Culcairn.
164. And does the wool go to Albury? Yes.
165. Do you think that if this railway were made it would get that traffic? It is hard to say. I suppose the main thing would be the freight. It may be that a man may be able to send his wool cheaper by the road than round by the branch line and the main line.
166. Is it a good road to Albury? Yes; it is a good macadamised road.
167. Then it will be good in all seasons, wet or dry? Yes.
168. You cannot say whether the traffic would be diverted to this railway instead of going to Albury? No; I think that the wheat traffic will naturally come to Culcairn.
169. Where is the wheat from here generally sent to? To Sydney.
- 169½. And the wool? The wool goes to Melbourne. One reason for that is that the freight of wheat to Sydney

Sydney is less than to Melbourne, and the freight on wool to Sydney is a good deal more than the freight to Melbourne. J. H. Balfour.

170. Assuming that the wool will continue to go to Melbourne, do you think it will be sent to the Border by road or by rail? I think a good deal will depend upon the freight. 3 Aug., 1900.

171. Assuming that there will be very little difference between the two? Then I think that it would be sent by rail.

172. *Chairman.*] Mr. Harper, the Chief Traffic Manager, in giving evidence, said that the wool freight from Germanton to Albury at the present was about 20s. per ton by road;—do you know whether that is so or not? I think it is between 15s. and 20s. per ton. I believe it has been reduced below 20s.

173. He said that the freight on wool from Germanton to Albury, at existing rates, by rail, would be 15s.;—do you think that at that rate the railway would have a chance of competing with the road traffic? I think it would in the case of some stations; but in other cases I do not think it would, because when they get it put on their waggons they can have it carried for £1 into Wodonga. They would have to pay another freightage from their stations to Germanton Railway Station, and for the short distance to Culcairn the charge would not be less than 5s., and when you put the wool on the trucks here they would have to pay the truckage rate from Albury to Wodonga, which they would escape by taking their wool direct to Wodonga.

174. It would appear from that that those pastoralists whose land is a little distance from the line on the Albury side of Germanton would find it pay them better to go direct to Wodonga? I think they would, at the present rates of freight. Those near Germanton would naturally be inclined to send their produce by the railway.

175. You are not interested in the line;—as a taxpayer, what is your opinion of this proposal—do you think it would be a fair thing to construct this railway in view of the country that it would open up beyond Germanton, and the traffic that it would get generally? I think that the main thing on this line would be the wheat traffic. I certainly do not think the railway would pay with only the present production of wheat; but, as a rule, a railway causes an increase in agriculture. In my opinion the main point is, whether in view of the wet seasons wheat-growing would be continued to a great extent in the outlying Germanton districts. Wheat is known to grow very well in dryer times. The question is, whether, if wet seasons come, it would be profitable enough to continue growing wheat to any great extent.

176. What is the difficulty in wet seasons? Too much moisture. Germanton is nearer the hills than this part, and gets more rain than we get here. Our average rainfall here since 1879 has been 20 inches per annum. At Germanton I should say that the average is something over 30 inches.

177. Do they not grow wheat with a much heavier rainfall than that in New Zealand? Yes.

178. Have they been growing wheat at Germanton during wet seasons? I suppose they have grown wheat there, but not in any great quantity until the last four or five years. They have grown wheat for hay, and they may have had small crops for grain too.

179. Assuming that wheat can be grown in average seasons as well as in the past few years, do you think that the encouragement of agriculture would be sufficient to justify the construction of the line? I think it would.

180. The Railway Commissioners anticipate a loss on the working of the line? I suppose there are few which will not show a loss at the commencement.

181. Do you think, looking at it generally, that the construction of the line will be justified? Yes, in the future. I might mention one of our great difficulties about the line: Our property is enclosed in wire-netting, and this railway would cut both the east and west fences, and so open it to the rabbit pest. That would have to be provided for before the line was started, otherwise the rabbits could get in when the line is being made. Great damage would be done.

182. Lately these light lines have been left unfenced; how would that state of things affect you? It would not suit us.

183. Would it not be possible to make some pits, or cattle stops, which would have the effect of blocking the rabbits? That is done in some cases, and is a great help, but it is not an absolute protection. The difficulty would be in the making of the line. Whilst the line is being made you cannot keep the fences closed.

184. I should think that the Department would be willing to meet you in reference to that? It would be ruination for us, having gone to the expense of 50 or 60 miles of fencing to have it broken open. If it is thrown open for only three months the rabbits, which are all along the outside, would get in. If it was left open for a couple of nights we might get twenty or thirty of them in each night.

185. Have you got the rabbits down on your property? Yes; we have never had many of them.

186. Are they bad outside your boundaries? Yes, they have increased greatly since we put the netting up.

187. I suppose the hills harbour them? Yes.

Sydney Hinde, railway station-master, Culcairn, sworn, and examined:—

188. *Chairman.*] Can you give the Committee any information as to the class and volume of the traffic that usually comes from Germanton towards Culcairn? Yes; wheat and wool, a little tallow, sheep-skins, and hides. S. Hinde. 3 Aug., 1900.

189. Is there any fat stock? Yes; principally sheep, occasionally a few trucks of cattle.

190. In which direction does the wool from that district usually go—towards Melbourne or Sydney? It all goes to Melbourne.

191. And where does the fat stock go to? About one third to Sydney and the remainder to Albury.

192. Where does the wheat go to? To Goulburn and Sydney. During the last few years we have had a little chaff going towards Sydney.

193. Can you give the Committee any idea of the volume that either of these items would amount to from the direction of Germanton? Last year there were between 50,000 and 60,000 bags of wheat from Morven and beyond, and the year before that the quantity was a little heavier, from 70,000 to 80,000 bags.

194. Is there any large passenger traffic to and from Germanton and that direction? Most of our passenger traffic comes from the Germanton direction, from Morven, and beyond there. I believe a great many

- S. Hinde. many travel down the back road, from Germanton to Albury, by coach. If the railway were constructed I should think they would come by rail.
- 3 Aug., 1900. 195. Have you been long at Culcairn? I have been here thirteen years next September.
196. Have you noticed, during that period, any great increase in the traffic at the Culcairn station, irrespective of the branch to Corowa? There has been a large development in the wheat traffic. When I came here there were only a few farmers in the district.
197. Has there been any corresponding falling off in the production of wool,—or has it kept up its average? The quantity of wool going by rail has increased. When I first came here we used to get about 1,000 bales. I think the highest number of bales we ever had in one year was 6,000. It is down now to between 3,000 and 4,000 bales.
198. So the increase in agriculture does not necessarily result in a falling off in the production of wool? No.
199. Does any great quantity of goods go out towards Germanton from here by rail? Yes, a fair quantity; but owing to the difference in the rates I believe that most of the goods go up the main Sydney Road from Albury. They can be brought from Sydney to Albury at about the same price as they can be landed at Culcairn, and they can get teams to cart them up almost as cheaply there as here. I am told that goods are sent round by boat from Sydney to Melbourne, then brought to Wodonga, then carried by road from Wodonga to Germanton, because they can get from there to Germanton almost as cheaply as from here.
200. What is the cost of carriage by road? Flour, sugar, potatoes, and so on, about 18s. a ton. For groceries and drapery, about £1 a ton.
201. What is the cost from here to Germanton for similar goods? From 10s. to 15s. per ton, according to the class of goods. It is 18 miles from here to Germanton, and 37 from Germanton to Albury. The freight from Albury to Culcairn is from 3s. 11d. up to £1 5s. 7d. a ton, according to the class of the goods.

[The Sectional Committee met at the Court-house, Germanton, at 4 p.m.]

Present:—

JOHN CHRISTIAN WATSON, Esq. (CHAIRMAN).
The Hon. SOLOMON HERBERT HYAM. | JOHN MCFARLANE, Esq.

The Sectional Committee further considered the expediency of constructing a line of Railway from Culcairn to Germanton.

Gordon Ronald McLaurin, grazier, Stonebroke, sworn, and examined:—

- G. R. McLaurin. 202. *Chairman.*] What are you? A grazier, residing at Stonebroke.
- 3 Aug., 1900. 203. How far from here? About 12 miles.
204. What is the extent of your holding? It is held conjointly (five in family). We have from 75,000 to 80,000 acres.
205. Is it fit for agriculture? A great deal of it is. Roughly speaking, about 30,000 acres of it.
206. Do you class the remainder as good pastoral land? It is, and in time, when it has been properly improved, it will be available for cultivation. In some places, though the land is good enough, you could not work the ploughs on it, because it is too steep.
207. Is a great deal of what you class as agricultural land improved? The greater part of it is.
208. To what purpose do you mainly put the land now? We use it for grazing, and we have a number of acres under crop.
209. How many acres have you under crop? I suppose about 6,000 or 7,000 acres.
210. What is the carrying capacity of the holding? The cultivation of the land has not made a great deal of difference to the carrying capacity of the place, because whilst the crops are growing we can make use of the wheat, and it relieves the paddocks and does a great deal of good. We have between 800 and 1,000 bales of wool.*
211. How is your land being farmed? On the "halves" system.
212. How do the farmers seem to be doing? They seem very happy.
213. What yields do they usually get? The last returns were between three and four bags of wheat to the acre.
214. Was that an average year? That was in 1898. There were 11,618 bags from 2,700 acres. In the following year there were 19,884 bags from 7,000 acres. At present there are 8,000 acres under cultivation.
215. Is last year to be regarded as an average season? It was not such a good year as the previous one. We have only been a very few years at cultivation. I think that the average yield here is between three and four bags an acre.
216. Where do you send your wool to now? To Melbourne.
217. By which route? We send it *via* Albury.
218. Where do you send your wheat to? To Sydney.
219. Do you send fat stock away during the year? As a rule, we sell them on the place or at Albury.
220. Do they find their way to Melbourne or to Sydney? I could not tell you. We sell them to dealers.
221. Where do you get your supplies from? We deal with Mate & Co., at Albury.
222. What do you think would be the effect of the construction of the proposed railway? It would open up a vast amount of country which has never been touched, I think.
223. Immediately round Germanton, or away from the town? It would tend to open up country here as far as cultivation is concerned, and it would bring in trade from the Upper Murray.
224. How far do you think the line would influence trade beyond Germanton? Taking into consideration the geographical position of the place, it ought to influence it for 70 or 80 miles up the Murray.
225. In that part of the Upper Murray 70 or 80 miles from here do they not make for the other side of the river? They have a long way to go to get to Tallangatta.
226. Do you think that if a line were constructed to Germanton it would influence trade to that distance? I think so. We are only 20 miles from the Murray.
- 227.

* NOTE (on revision):—This quantity includes 300 bales of scoured wool, which, if sent away in the grease, would increase the total number of bales by 300,—calculating that two bales of greasy are equal to one of scoured wool.

227. What class of trade do you think would come from there towards the line? In the first place there would be a good passenger traffic, because when they can get a train within 16 miles they would not ride 40 or 50 miles.

228. Would you expect that goods traffic would come from that part of the Upper Murray towards this line? Yes.

229. What class of goods traffic? General goods. People would, perhaps, deal with Sydney instead of getting through goods from Albury, as they do now. They would get them *via* Germanton if it were the terminus of a railway.

230. Are the roads good between Germanton and Welaregang? They are average roads.

231. There is a road shown on the map as going from Welaregang down the river towards Albury;—is it not a more direct road than that from Welaregang to Germanton? The distance is shorter from Walleragang to Germanton than from Welaregang to Albury, by 30 or 40 miles.

232. Do you think the people would be more likely to come from Walleragang to Germanton with goods than to go down the Murray towards Albury? I am certain of it.

233. Is there any road from Germanton in a direct line towards Tumberumba? Yes.

234. Which is the most direct road to Tumberumba? The road by Coppabella.

235. Do you think there is any likelihood of traffic coming from the direction of Tumberumba towards the railway at Germanton? I think there would be.

236. At present the traffic goes to Wagga Wagga, does it not? A good deal of it does, although there is a considerable trade between Albury and Tumberumba.

237. How far out from Germanton, in the direction of Carabost or Jingellic, is the land suitable for cultivation? In a straight line from here, in the Carabost direction, there is land fit for cultivation for a great many miles.

238. How far is it to the Yarrara Gap? Eighteen miles and a half.

239. How far in that direction do you say the land would be suitable for agriculture? Sixteen miles.

240. Then towards Jingellic, is the land as good for a similar distance? There is a belt of good country there; but not so good as the other—it is more broken.

241. Is it fair pastoral land? It is good for that. It is really good soil—in fact, better than we get lower down.

242. Do you think that if the line were constructed the people would be induced to go in for cultivation in the direction I have named? I do; I think it will forward the industry.

243. What do you pay now for the carriage of your wool to Albury? That is rather an inquisitorial question. We pay about 30s. a ton.

244. What do you estimate it would cost you to bring that wool into Germanton if the railway were here? The distance is about 12 miles. I do not think it would cost 10s. a ton.

245. Do you think it would pay you to put the wool on the trucks at Germanton instead of sending it to Albury? Certainly; if they did not charge an exorbitant rate.

246. It is estimated that the charge from here to Albury will be 15s. a ton by the railway? That will pay us.

247. It will pay you to use the railway after carting the wool from your station to Germanton? Certainly it will.

248. There is no doubt that you will use the railway for the carriage of wheat? Not the slightest doubt about that.

249. With regard to the fat stock, I think you said you sold to dealers? As a rule, we do; but the time may come when we shall not.

250. You cannot say what you will do with fat stock? No; if the price is good in Sydney we shall send them there.

251. If you were sending fat stock to Melbourne you would not truck them here, in view of the fact that they would have to be transhipped at Albury on account of the break of gauge? We go in more for fat sheep than anything, and we generally sell them in Albury.

252. Do you think you will continue to send them that way, even if this line be constructed? No; I do not say that.

253. But you will have the break of gauge at Albury? That will only be for a time.

254. What do you pay per ton for stores that you get from Albury? That carting is generally let by contract for the whole year.

255. For wool one way and for supplies the other? Yes; and, of course, letting it that way it is a private agreement.

256. Could you say whether it would pay you to get your supplies, supposing you got them from Albury, by rail to Culcairn, and from there to Germanton instead of having them sent as they are sent now from Albury by road? If it would pay us better to get our supplies from Sydney *via* Culcairn, we should get them that way.

257. What I wish to get at is whether it would pay you, knowing what the railway rates usually are for that distance, supposing you continue to get your goods from Albury, to have them brought *via* Culcairn and Germanton? In all probability we shall get them that way.

258. Would you use the line instead of the road? That is what we intend to do.

259. Is there anything else you would care to mention? We have had to refuse dozens of orders for timber, because we cannot get the timber away from the district.

260. Have you a saw-mill? Yes.

261. Where is the timber got for supplying the saw-mill? In the ordinary bush.

262. What class of timber do you get? Red-gum and stringy-bark.

263. Where do you find a market for the timber? We have had orders from Coolaman, Narrandera, and Rutherglen; but we cannot supply the timber, because we cannot get teams to take it to Culcairn.

264. Which class of timber do they require? I do not know anything about it.

265. But you know there have been orders sent? I know that those orders have been refused.

266. Do you think the carriage of timber would form a considerable item if the line were constructed? I am certain of it.

267. Is the forest that could be tapped extensive? The supply is very good, and seems likely to last for some years. I suppose we get now about 100,000 feet a quarter for local requirements alone.

G. R.
McLaurin:
3 Aug., 1900.

- G. R. McLaurin.
3 Aug., 1900.
268. Is there any difficulty in getting timber at other points on the railway line which would put a premium on timber here? Not that I am aware of.
269. How many farmers have you on the share system on your estate? I think, about twenty-six.
270. *Mr. Hyam.*] How much of your land is freehold or conditional purchase, or Crown land? Most of it.
271. All the 80,000 acres is secured land? Yes.
272. Have you any leasehold area? Yes; in addition to the 80,000 acres.
273. Is any of that leasehold land fit for settlement? No; it is only grazing land.
274. How many sheep do you carry on the 80,000 acres? From 75,000 up to 95,000.
275. And you get 1,000 bales of wool? Yes; between 800 and 1,000 bales.
276. Is not that a low average;—does not a sheep cut 6 or 7 lb. of wool? Not in this district.
277. They are light sheep? Yes.
278. Have you any horned cattle? I suppose we have 400 or 500.
279. Is it good cattle country? Some of it is; but you can class it mostly as sheep country. Some of it is wet country, and that is suitable for cattle.
280. Is it swampy? No, not big swamp.
281. What is the nature of the soil that you are cultivating? Some is black and some is chocolate.
282. Have you any volcanic country? Yes.
283. Which do you find best for wheat-growing? We have only been two years wheat-growing. I have given the returns.
284. *Chairman.*] Have you anything more to say? I wish to say, with regard to the carriage from our place to Culcairn, that if it had not been for the bad seasons which have prevailed throughout the country, we could not have got teams to cart the wheat away for the last two years.
285. *Mr. Hyam.*] Why? The effect of the bad seasons in the far west was to drive the teams up here. If it had not been for that, the teams would not have come, and our wheat would have been left in the paddocks.
286. *Chairman.*] It would have cost more for carriage than you could afford to pay? It would. If we cannot get teams to cart our wheat away, we cannot grow it, and if they have good seasons in other parts there is no certainty that we shall be able to get teams here. We had, I think, forty-seven teams going for about six weeks. That was for our own share.

Charles Edward Burrowes, farmer, Yarrara, sworn, and examined:—

- C. E. Burrowes.
3 Aug., 1900.
287. *Mr. McFarlane.*] Where do you reside? At Yarrara, 22½ miles from Germanton.
288. In which direction is that? To the east of Germanton.
289. How many acres do you occupy? About 400 acres.
290. Have you been long residing in the district? About twenty years.
291. Do you carry on agricultural farming? I combine sheep-grazing with agriculture.
292. How long have you carried on agriculture? Ever since I started. I carried it on mostly to produce stuff for my own use.
293. You have not sent any wheat to market? No.
294. Can you tell us what result you have had from wheat-growing? I live in that particular stretch of country between where the arable land finishes and starts again. So my block does not represent the quality of the land generally in the district.
295. Is your land inferior to the general run of the country? It is very good land, but rather too broken for agriculture.
296. Have you got a knowledge of the country within a radius of 15 miles of Germanton? Yes.
297. How do you class that country,—is it good for wheat-growing? The bulk of it is.
298. How would the balance of it be classed for sheep farming? The balance of it could be classed as second-class grazing land as a rule.
299. How many sheep to the acre is the country capable of carrying? In its improved condition it will carry about a sheep to the acre.
300. Is that the general average? Yes.
301. During the time you have resided in this district has it made much progress with regard to settlement and increase in population, and increase in agriculture and sheep farming? Not until the last two years. There has lately been a rush for land on the share system for wheat-growing. That stimulated it wonderfully.
302. Is there likely to be any further increase? Yes; a very great deal of increase in that respect.
303. Is there much room for additional settlement? On the system they are adopting now there is. Unfortunately, most of the land is in the hands of large holders.
304. There is not much available Crown land? No, not fit for agriculture.
305. Is Germanton your market where you send your produce for sale? Yes.
306. In what direction would the produce go from there? Mostly to Albury. That is the predominating market in this district.
307. You have heard *Mr. McLaurin's* evidence about the rates of carriage,—do you agree with his statement? Exactly.
308. Is Germanton a recognised centre for all the sheep and agricultural farmers in the surrounding district? Yes; it is the recognised centre for a very large district.
309. Is there much communication between the outlying districts and Germanton? Yes, a good deal.
310. Is it looked upon by the people of those districts as their place of business? Yes, as their natural trade centre.
311. If the proposed railway were constructed to Germanton, do you think it would have the effect of increasing settlement? Yes; it would increase settlement very much.
312. In what direction would the increased settlement be? I am speaking from an agricultural standpoint.
313. You think that if railway facilities were given there would be a great inducement to the farmers to grow wheat? I am certain there would be a very large increase in settlement, as this is a very safe district from droughts. During the last couple of years the crops here have been exceedingly good, though in other districts they were a failure.

314. Do you think it would pay to grow wheat at the present price, carry it to the railway station, and send it to either the Albury or the Sydney market? It certainly would.
315. Is the country thickly timbered and difficult to clear? No; it is not difficult to clear. The land which they use for agriculture is cleared at very little expense.
316. Is there a large area suited to wheat-growing in your locality? Not in my locality.
317. Is there any other product which could be successfully grown in the district? Yes; potatoes, onions, and other vegetables.
318. Would it pay to grow them? Yes; I would go into it very largely myself if we had railway facilities here.
319. Do you think the settlers would use the railway instead of doing as they do now in many instances—paying carriage to Albury? I am certain that they would.
320. Even if Albury is the point to be reached? Yes; I am certain they would use the train in preference to ordinary road carriage.
321. Is there anything else that you would like to say? I should like to add that, as regards the condition of the Upper Murray, it was not quite clear from Mr. McLaurin's evidence that this is the natural depôt for the trade of the district. There is a natural avenue between the hills here till we come to the valley of the Upper Murray, and the trade will come here from that part if the proposed railway is made, and it will be a very large trade. Nearly all that Upper Murray trade which is now going to Albury will come here. In view of the consummation of Federation, the trade from the Victorian side which is in the occupation of smaller holders will come this way, this being their nearest market.
322. *Chairman.*] Will it cross the river at Jingellic? Yes; there is a bridge there.
323. Would there be a passenger traffic? Yes; a very large one.
324. In which direction will it go after taking the train at Germanton? If a person at Jingellic wished to go to Melbourne it would be better to come this way than to go down the Murray.
325. Would it not be more costly? No, it would be less costly; but the distance would be almost exactly the same. People from Jingellic would come down here to go either to Albury or Sydney.
326. How far would it be to Albury from Welaregang? It is 72 miles going within a few miles of Germanton; consequently if a person at Jingellic wished to go to Albury, and we had the railway to Germanton, he would use the railway.
327. How far is it from Jingellic to Germanton? Thirty-five miles.
328. It would be a considerable distance further by train, would it not? Yes; and it is a very rough road down the Murray to go to the train.
329. *Chairman.*] If a man were at Jingellic, and he wanted to go to Melbourne market with either fat stock or goods, would he make for here or for Wodonga? With goods, I think he would make for here; but as regards stock, transhipping would make a difference. The people up my way are handicapped. This extra distance to Culcairn makes it easier to go to Albury or Tullangatta.
330. You think there is no doubt that they would use the railway? I am certain they would, to a very large extent.

C. E.
Burrowes.
3 Aug., 1900.

Edward Byrne, farmer and grazier, Cookardina, sworn, and examined:—

331. *Mr. Hyam.*] Where do you reside? I reside 5 miles east of Cookardina—15 miles from here.
332. What is the extent of your holding? I am part owner of three different places. I live at one of them, another is 6 miles from Germanton, and the other is 22 miles east of Germanton, on the road to Jingellic.
333. How many acres have you altogether? About 12,000 acres.
334. Is it secured land? Yes.
335. Is there much of it under cultivation? Yes; between 2,000 and 3,000 acres.
336. How are you farming them? Most of it is let to farmers at so much per acre, and we ourselves farm sometimes 300 acres, sometimes 400 acres.
337. Do you find that the farmers who are renting the land are fairly prosperous? Yes; they are doing very well.
338. Would you mind telling the Committee how much a year you get for the land per acre? It is not let altogether on money considerations, but partly for improvements. We are, perhaps, the only people who do it. We let the land partly on improvement leases.
339. For how many years on improvement leases? For five years.
340. Is there any money consideration? Yes.
341. Would you mind telling us how much the money consideration is? The money consideration is 4s. per acre, and they have to make certain improvements.
342. Was that ringbarked country, or was it in a state of nature when the tenants went on it? It was partly improved, and some very much. It was all fairly improved grazing land, but not all what you would call fairly improved for cultivation. It was ordinary grazing country.
343. How many tenants have you under that system? Nine or ten.
344. I suppose that if you had a railway from Germanton, and better facilities for getting produce to market, you would be likely to increase the number of your tenants? Not very much in our case; our holding is limited in area.
345. How many acres of your land are fit for agriculture? Altogether I suppose that between 3,000 and 4,000 acres would be fit for agriculture, in excess of what is already occupied for agriculture.
346. Half of your holding is fit for agriculture? More than that.
347. Can you grow anything but wheat? We can grow anything that would grow in a humid climate.
348. Can you grow maize? Yes.
349. Can you grow potatoes? Yes.
350. And oats? We have had some remarkably heavy crops of oats.
351. What is the carrying capacity of your pastoral lands? One sheep to the acre.
352. Do you call that first-class or second-class pastoral land? I consider that land which would carry a sheep to the acre is first-class pastoral land.
353. What is the character of the sheep? They are average sheep.
354. Not so large as the sheep you get in the Riverina? No.

E. Byrne.
3 Aug., 1900.

- E. Byrne.** 355. Was the late drought felt very much here? It was felt, but not nearly so severely as it was in some places.
- 3 Aug., 1900. 356. Were there any serious losses of stock? No; there were losses, but not such disasters as occurred in other places.
357. Then the country, for agricultural and pastoral purposes, will stand the drought fairly well? It is a splendid district for standing a drought.
358. I suppose you have a good knowledge of the country within a radius of 15 miles east of Germanton? Yes.
359. And further out, I presume? Yes, up to 40 miles.
360. Do you think the traffic from Jingellic would be brought to Germanton? Yes; this is its natural run. It must come here.
361. How far is Jingellic from the nearest railway on the Victorian side? There is a sort of driver's track to Tallangatta, and the distance I should take to be about 36 miles.
362. Then, if the Victorian Government were to extend that line to the Murray—and I think it could easily be done—would it not attract the trade of Jingellic and the Upper Murray into Victoria? No; it would not interfere with Jingellic at all. The Victorian Government could not tap the Murray so low down as Jingellic; they would have to tap it much higher up—about Toolong.
363. It is only about 32 miles from Tallangatta to Jingellic? It is 32 or 36 miles, but there is no road.
364. You think there would be no possibility of this Victorian railway attracting traffic from our railway here? No; none whatever.
365. Do you think there would be any chance of our losing the trade of Welaregang? No; I think a line to Germanton would suit the people better. There is already a line to Tallangatta, but still they come down here, and they go to Albury.
366. There are fiscal barriers at present, but it will not be so much longer;—there is a stock tax and a grain tax? Yes, I know; but they come down to Albury with stock, knowing that they must pay the tax.
367. Do you think that any agricultural industry will grow up in the Jingellic and the Welaregang districts? They will grow oats and potatoes; but it will be principally a dairying district. That is a model dairying country to the east of Germanton, in the direction of Tumberumba and the Upper Murray. They can grow tobacco and hops in that country, and it is all very well suited for dairying.
368. Do you think that the traffic from that particular industry will be attracted to Germanton? Yes.
369. Is there any dairying going on in that district now? Only for local requirements.
370. I suppose that if a railway were constructed to Germanton, you would use it? Yes.
371. Do you think that if a railway were constructed to Germanton, it would promote further settlement on lands already alienated in the district? Yes; there would be vastly more production on that land.
372. Is there much unalienated land around Germanton? No; I do not think there is much.
373. What, in your opinion, is the greatest distance that a man can cart wheat to a railway station and make it pay at the present price? That depends on the quality of the land he is farming. If a man is farming good land, he can cart wheat in average seasons and at average prices from 20 to 25 miles, and make it pay; but it has to be good land. You can cart wheat from good land, where you would not attempt to cart wheat from bad land.
374. Take the average of the land about here—within a distance of 25 miles from Germanton;—is the bulk of it fit for wheat-growing? Yes; it is suited for wheat-growing.
375. Is there any other statement that you would like to make? In a place that I am interested in now, and in other places, we have a good deal of timber. We left it unskilled, thinking that it would be of value, but it is too far to cart it to Culcairn. If there is a railway to Germanton, it would relieve us of 18 miles of road carriage, and we should be able to dispose of that timber.
376. How far is that timber from here? Twenty-three or 24 miles.
377. What is the nature of the timber? It is mostly blue-gum and stringy-bark.
378. Is that stringy-bark country good grazing land? Yes.
379. As a rule it is not good? That is not the case in this district. There are thousands of acres of it here which is good land.
380. Is it true stringy-bark? Yes.
381. You think that a good timber trade would spring up between Culcairn and other districts, if you had a railway to Germanton? Yes; timber is very scarce, and there is an unlimited demand for it. I can speak from my own experience. In the place that I am interested in myself, you could put down a mill, pump water out of a creek, and work that mill for twelve months, without having to drag a log a single mile—there is so much timber. The land will never be developed until that timber is killed. With regard to dairying, the people say that it is too far to carry their produce 40 or 50 miles, but they say it is their intention to start dairying if they can get the road carriage to Culcairn reduced by 18 or 20 miles by means of this railway.
382. If they were within 20 miles of a railway or a port, they could do well? Dairying will stand 20 miles of carriage. The country to the east of Germanton is better suited for dairying than the land in many districts where they are carrying on dairying successfully.

SATURDAY, 4 AUGUST, 1900.

[The Sectional Committee met at the Court-house, Germanton, at 10 a.m.]

Present:—

JOHN CHRISTIAN WATSON, Esq., CHAIRMAN.

The Hon. SOLOMON HERBERT HYAM.

JOHN MCFARLANE, Esq.

The Sectional Committee further considered the expediency of constructing a line of Railway from Culcairn to Germanton.

John Holmes (Holmes, Wickham, & Co.), Germanton, sworn, and examined:—

383. *Chairman.*] Can you give the Committee any information as to the traffic which at present comes to Germanton, and the direction of that traffic? I can tell you what comes to our place; then there would be about twice as much as that comes into the township. Looking over the way-bills last night, I found that the quantity of traffic that comes for our firm from the Victorian and New South Wales railways, including what comes from Albury by team, is about 290 tons. J. Holmes.
4 Aug., 1900.
384. For what period? That is for twelve months, from June last year to June this year. That does not include anything that comes in from this district. It does not include produce that we buy here; it is simply merchandise. We get flour from Albury, and that comes by teams. The amount of stuff that we get, independent of the flour, is about 270 tons. I am well within the limits when I say that it is nearly 300 tons of traffic altogether. Two-thirds of that comes over the Victorian lines, and one-third, since the new rates were imposed, comes over the New South Wales lines.
385. Before the new rates were imposed where did you get your goods from? Prior to the imposition of the new rates we got the bulk of it *via* Melbourne. If we bought stuff in Sydney we took it to Melbourne, and had it carried over the Victorian lines. Since they have reduced the truck rates in New South Wales we have been getting three times as much over the New South Wales railways as we did previously. We have only been three years in the district, and we have built up the trade since we came here, and it is still increasing.
386. Then you think that the town, generally, will probably get as much again as you get? There is another store in the town that gets more bulk stuff than we do. We do, perhaps, more shop trade, but they do more of the heavy trade. They get more tonnage than we do.
387. What would you take the total inward tonnage of the town to be? Do you mean of the town alone, independent of what the stations would get?
388. Taking what the town imports, without what the stations would import directly for themselves? I should say that there comes into this township at least 800 tons of merchandise.
389. Without the flour? It would include the flour; but the outside public buy a good deal of flour from the mills.
390. What do you pay the teamsters for bringing merchandise from Albury? Just now we are paying 15s. a ton for heavy and 17s. 6d. for case goods. We keep a man constantly on the road, and we have been paying 15s. all round. Recently they have been charging 17s. 6d. from Albury; but the average would come to 15s. all round. The carriage from Culcairn is 10s. a ton. I may mention that the returns from Albury station last year would not give the exact amount of tonnage that was coming over the Victorian railways, because Wright, Heaton, & Co. were carrying stuff from Wodonga station into Albury for a little less than what the railways were charging. There is 2s. 6d. a ton charged from Wodonga into Albury. Last year they put teams on, and carried the stuff over at a lump sum, and we got most of the stuff consigned to Wodonga.
391. Mr. Harper, the Chief Traffic Manager, in his evidence, said that the merchandise rates (on third-class goods, I presume) would be 16s. 9d. per ton from Albury to Germanton? I suppose that is on the railway right into Germanton.
392. Do you think it would pay you to use the railway for merchandise if you continued to get goods *via* Albury and Wodonga? Now we are paying 15s. a ton from Albury, and the railway proposes to charge 16s. 9d. The road makes no differential rate as regards parcels of goods.
393. For some classes of goods—for instance, flour, sugar, salt, and the heavier classes of goods—the railway might charge much less? We pay the same all round for carriage by team—the same for flour, salt, wire-netting, &c.
394. But, considering that wire, sugar, salt, flour, and other heavy goods would be carried at a lower rate than 16s. 9d., would it pay you to pay 16s. 9d. for drapery, and things like that? It would not if we could get the stuff carried for 15s.
395. Do you think the carriers would continue in competition with the railway if the railway was charging such a low rate for heavy goods that it would get the bulk of them, so that they would be confined to the carriage of drapery? No; it is the heavy goods that keep them on the road. If we took the carriage of the heavy stuff from them there would not be enough to keep them going.
396. *Mr. McFarlane.*] How long does it take the teams to travel between here and Albury? Four or five days.
397. *Chairman.*] To what extent does your trade go from here in each direction? We send stuff all round the district for a distance of 15 to 18 miles.
398. Can you indicate the places? We send stuff to Yarra Yarra.
399. Do you send to Jingellic? No, we do not go there; we do not go further out than 15 miles in that direction. If good roads were made up that way the whole of that trade would come to Germanton.
400. Why would it come here instead of going to Tallangatta? Most of it has to go to Albury now; this is the direct road. They have to send in here for all their light goods.
401. Is that because of the greater number of coaches coming this way from Albury? Yes. If people want anything in a hurry they ride in here for it. This is the natural channel. That district is not opened up properly. The Tumberumba stuff has to come through Germanton, and it would be quite natural to suppose that if the railway brought goods for a little less to Germanton they would cart from here, as they would get the stuff quicker that way.
402. Does not most of the Tumberumba trade go to Wagga Wagga? I should think not. There are about

- J. Holmes. about three teams on the road here, and one of the carriers told me that they are making arrangements for further teams to Tumberumba from Albury. All their heavy stuff must come over the Victorian railway. The New South Wales lines are not able to compete with the present tariff. We get a rebate of 10 per cent. on all third-class goods carried over the Victorian railway. Kerosene, sugar, salt, wire, and other lines we must even now buy in Victoria. We should buy more stuff in New South Wales, and have it carried over the railway to Culcairn, but for the fact that they charge 40 or 50 per cent. more than the Victorian railways. We could cart flour cheaper by sending it to Culcairn than by the present road. We could get it for 3s. 1d. from Albury to Culcairn, and 10s. from Culcairn to Germanton by road, making 13s. 1d. as against 15s. from Albury. Of course, at other times of the year, when wool is being carried, we should get that class of goods much cheaper by back loading from Culcairn, but as we have carriers on the road we have to keep them going, and to put on our stuff irrespective of that.
- 4 Aug., 1900. 403. What class of goods do you get from Sydney now? Second and third class goods. We buy all our drapery in Sydney, and all our fancy goods. We buy all our shelf ironmongery in Sydney. In fact, we can afford to buy in Sydney all small lines, ship them to Melbourne, and ship them over the Victorian lines better than buying them in Melbourne. The houses in Sydney, for the sake of the trade with Riverina, will land our stuff at Melbourne wharf free of charge when we buy a parcel. That is to compete with the Victorian houses.
404. Is there anything else you can tell us? You will get evidence in regard to the stuff coming in from the station-owners. They bring in a lot of very heavy stuff, such as cornsacks, woolpacks, and salt. They buy in large quantities.
405. Their heavy supplies they get direct? Yes.
406. And probably the carriers get back loading when their wool goes down? I do not know how that is. There is another matter which I should mention. I think it might be pointed out to you that a saving of £100 a year could be made by the railway authorities if the station were put in the proper place in the town. Where the proposed station is now there is no water. I do not think they will be able to get water there. The people about there cannot get a permanent supply.
407. The terminus is to be on a Government reserve? Yes.
408. Is there any other Crown land that would be more convenient to the terminus? There is a block of ground, which I think is dedicated for a hospital, on the Culcairn-road. It is Crown land, and it is alongside a never-failing supply of water—the Ten-mile Creek. With an artesian bore they would have an unlimited supply of water. You can sink to a depth of 5 or 6 feet and get a permanent supply.
409. How far is that from the proposed terminus? It is not very far away. It would save the making of half or three-quarters of a mile of railway, and it would save an expense of £100 a year; it would be more central, and it would be on the main road. It would be about half a mile from the town. Where they propose to put the terminus is right back in a reserve nearly a mile from this place. The public offices being at this end, the people would all have to come up here. I do not say that it would affect our business; but looking at it from a general standpoint, I think they might as well save that £100 a year, have a good water supply, and save the making of about a half to three-quarters of a mile of railway.
410. What is the extent of the site you speak of? About 12 acres.
411. Would that site lend itself as well to a future extension as the one now proposed? That I cannot say; it is a matter for the engineers. I should think it would make very little difference. It would be more central, and it would be more convenient.
412. You consider that the nearer the station is to the town the better? Yes; especially when you can make it central, and have it near to the public offices, the post office, and the banks.

James Gifford, farmer, Lankey's Creek, sworn, and examined:—

- J. Gifford. 413. *Mr. McFarlane.*] Where do you reside? At Lankey's Creek, beyond Yarrara.
- 4 Aug., 1900. 414. In what direction is that? It is eastward from here, on the main Germanton and Jingellic Road.
415. How far is it from Germanton? Twenty-five miles.
416. Have you been long residing there? I have been in that district for the last thirty years.
417. Are you a freeholder? Yes; I am a freeholder, and I farm on the share system on the Yarra Yarra Estate.
418. How many acres do you occupy? Sixty acres of freehold, and 400 acres of leased land.
419. Do you cultivate land? Yes; I cultivate the 400 on the share system.
420. Could you give us the result of your experience as a farmer, with regard to production;—what do you grow? I grow wheat on the Yarra Yarra lands. At the other place, at Lankey's Creek, I do a little dairying, and grow potatoes, and other crops.
421. How far is your residence from the land which you rent? Twenty miles.
422. Is that land good for wheat-growing? Yes, very good.
423. Could you give the average yield per acre in fair seasons? I can give you the average of what I have had since I went there. I have only been there for two seasons. The first year we got four and a half bags to the acre; last year the average would be about three bags per acre.
424. Is there much wheat grown in that locality? Yes; on the Yarra Yarra station I suppose there must be between 7,000 and 8,000 acres under cultivation this year.
425. Would the results on the holdings be similar to what you have had? Just about the same; but some of the land is better than mine.
426. What do you do with the grain? Send it to Sydney.
427. By which route? We send to Culcairn, and from there by train.
428. How far are you from Culcairn station? Twenty-eight miles—10 miles from Germanton.
429. Could you give the cost of carriage? It is 1s. 2d. per bag. That was during the last two seasons; but if we have a general rainfall, and there is a good crop in the other wheat-growing districts, we shall not get our wheat carried for that.
430. Would not that amount represent the average crop? One shilling and 2d. per bag would not represent the cost when they have good crops in other parts of the country, because then we should not be able to get the teams. There have been scarcely any crops during the last two years in the lower part of the country, and that has caused the teams to be brought here. I had teams from Bourke carting for me. If they have a good season this year in other wheat-growing districts, we shall not be able to get our wheat carried at 1s. 2d. per bag.
- 431.

431. What is your experience with regard to the share system;—is it satisfactory? It is to me, most decidedly. J. Gifford.
432. Do you grow any other products for the market besides wheat? Yes, potatoes; but I grow them on my other land. I only grow wheat on the leasehold land. 4 Aug., 1900.
433. Have you an agreement that you are only to produce wheat? No.
434. Is there a large area of land in the district which the proposed railway would be likely to affect, suitable for growing wheat? Yes.
435. A very large area? Yes; there is a good deal of land that would be suitable, if only the owners will lease it out on the share system, as they have been doing. I think it has paid them very well to let the land on the share system.
436. Do you think it pays better than grazing sheep? Yes, I am sure of it; but the number of sheep has not been reduced as a result of the cultivation.
437. Taking the distance of about 15 miles further in than Germanton, is there any considerable area that would be likely to be put under wheat if the proposed railway were made from Culcairn to Germanton? There is; but, as I say, it depends upon the owners whether it shall be put under cultivation.
438. You think that people would take up the land, provided they had an opportunity of doing so, and cultivate it for wheat-growing? Yes; for wheat-growing and dairying.
439. Has there been any dairying carried on there? There has not; but the land is suitable for it—as suitable as it is on the South Coast.
440. Do you know the South Coast district? Only by reading about it. The stations about Jingellico have some of the most beautiful land to be found in Australia.
441. *Mr. Hyam.*] But only in patches? It is; but you cannot beat it for dairying purposes.
442. *Mr. McFarlane.*] Are there many small land-holders in the district? There are a great number.
443. What would be the extent of their holdings? Some hold 300 and some 400 acres; some 2,000 acres; some, perhaps, 3,000 acres. It is not easy to get land in the district; you cannot get a foot of Crown land. On the Victorian side of the river, when I first came up the river thirty years ago, there was not a settler on the land; there was not a bit of land taken up by selectors. Now, Walwa is thickly populated, and there the land is of the same kind as that on the Kibacabin station, the Bringanbrong, the Welaregang, the Gregg Gregg, and the Ournie stations.
444. How far is there a railway from Walwa? I suppose Walwa is between 30 and 40 miles from the railway. It is a matter of impossibility to bring the railway from Tallangatta to Walwa; the country is too rough.
445. Over the area which you have just described, in the event of the railway being extended to Germanton, do you think the farmers generally would use it to carry their wheat to market? Most decidedly. I could get my wheat brought in from the farm out there for 4d. per bag, and I should use the railway in preference to paying 1s. 2d., even if I had to pay a little for the use of the railway.
446. How far from Germanton would the railway be likely to be used by the wheat-growers—how far would it pay them to carry the wheat? I should think 25 miles.
447. Do you think the whole of the farmers within 25 miles would bring their produce to the railway at Germanton? I could not say that, because it would be more than half the distance towards Albury, and the people in that direction would take their produce to Albury.
448. How many acres of wheat-growing country do you consider it would take to maintain a family? It depends upon what, and how, you cultivate.
449. I am referring to wheat-growing country which gives a fair average yield? I maintain a family on 200 acres. There is not a fortune to be made out of it, but it is better than letting the boys go to manual labour.
450. *Mr. Hyam.*] I suppose you could make a good living off 150 acres if it were your own? Yes.
451. *Mr. McFarlane.*] Do you think 400 acres a sufficient area? 640 acres is about what a good-sized family would require in this district. Then they could have a few sheep, and keep the land in good heart and keep it clean. A farmer always wants a few sheep.
452. You believe in mixed farming? I do. It is a bad thing to have all your eggs in one basket.
453. With regard to the land which is not suited for wheat-growing, is it good country? It is good dairying land. A lot of the country about here, in my opinion, has the wrong kind of stuff upon it; it should have dairy cattle on it instead of sheep.
454. You think the dairy cattle would be more profitable? I am sure that the land is better adapted for dairying than anything else. The land is hardly good enough for cultivation, being rather too rough for that, but it is suitable for dairy purposes.
455. Have there been any good results from dairying? Yes; at Walwa there is a cheese factory—that is on the Victorian side; any quantity of cheese is made there.
456. Is Germanton the business centre for the farmers and settlers living in your district? Yes; nearly all the inhabitants between here and Jingellic get their goods from Germanton. It is only 35 miles from here to Jingellic.
457. *Mr. Hyam.*] Is there a good deal of settlement at Walwa? Yes; that district is thickly settled.
458. What do they produce there? The principal thing is dairying and raising stock.
459. Where do they take their produce to? Some of it goes to Albury. The settlers supply the cheese factory with milk.
460. Is the produce that goes to Albury sent on to Melbourne? More of it comes into New South Wales than goes to Melbourne.
461. Does it go by Albury or Germanton? A quantity of it comes into Germanton; they sell it here.
462. They would not be able to sell much cheese here, would they? An old man goes selling cheese all round the country.
463. That would not be a large quantity? He supplies some of the stores with cheese too, and some goes to Albury. They could not make enough cheese last year to meet the demand.
464. Does any of the trade from Walwa go to Tallangatta? It cannot.
465. It must come to either Albury or Germanton? It must go right up the river and round by a good road. It must go to Wodonga instead of Tallangatta.
466. Is there a good road from Wodonga to Walwa? No. The roads are not so good, generally speaking, as they are on the New South Wales side.

- J. Gifford. 467. *Chairman.* Would you state on what terms you rent the land? On the halves system.
 468. Does the owner supply the seed? Yes: he supplies the seed and the bags.
 4 Aug., 1900. 469. Does he clear the land? Yes.
 470. And he takes half the produce? Yes; and we do the labour.
 471. You find the plant, machinery, and labour? Yes.
 472. For how many years have you the use of the land? Some have it for three and some for five years.
 473. How long do you think you would require to have the use of the land to justify a man in buying a plant;—how long would it take to pay the plant off? It would take a man two years, but he would have to be very saving to do it in that time.
 474. So a man wants the land for three or four years to make it pay? A man ought to pay off the plant in three years, and then be ready to take a place for himself if he sees an opportunity.
 475. Is there anything else that you would care to mention? I was going to mention that the land at Lankey's Creek is not so good as some of the other land in the district for cultivation; it is not fit for dairying. There are small patches like gullies on which you could grow anything. I have grown potatoes up to 4 lb. in weight.

Samuel Hall Phillips, postmaster, Germanton, sworn, and examined:—

- S. H. Phillips. 476. *Mr. Hyam.*] Would you like to make a statement in connection with the proposed railway? Yes, with reference to the rainfall in this district. I have been keeping the rainfall returns for the last eight years.
 4 Aug., 1900. The average rainfall is 27 inches. I may say that in connection with the Postal Department a petition is going in asking for a coach service three times a week between Germanton and Jingellic. The revenue that we derive between Germanton and Lankey's Creek, from postage stamps, is £164 a year. The adult population between Germanton and Lankey's Creek numbers 201. Lankey's Creek is about 12 miles this side of Jingellic.
 477. How far is it from Germanton to Lankey's Creek? About 25 miles.
 478. How far is it from Lankey's Creek to Jingellic? Twelve miles, making 37 miles in all.
 479. Your coach does not go further than Lankey's Creek at present? No.
 480. Do you know what is the population about Coppabella and Yarra Yarra? At Coppabella there are thirty adults, and at Yarra Yarra ninety-six adults.
 481. Do you know the country? I have been as far as Yarrara.
 482. I suppose the inhabitants are chiefly farmers? Yes; Yarrara was once a mining place, now it is a grazing district.
 483. I suppose you have been some time in the district? Eight years.
 484. Have you formed a good idea as to the quality of the land about Coppabella? Yes.
 485. Is it fairly good land? It is.
 486. Is there any extensive area that could be brought under cultivation? I have noticed that considerable areas have been put under wheat lately in that locality.
 487. Have you been to Jingellic? No.
 488. Is it good country for agricultural purposes between Germanton and Lankey's Creek? Yes; it is fairly good country for wheat-growing.
 489. Do you think that one-third of it could be brought under cultivation? Yes, more than that.
 490. Is the rest good pasture land? It is. The population has been steadily increasing since I have been here.
 491. Has it doubled in eight years? It has trebled in that time.
 492. Do you think that with a railway from Germanton to Culcairn, that increase would be continued? Yes, I am sure it would; it would cause increased population and more settlement.
 493. Do you know anything about the trade coming from Jingellic to Germanton? No. I know that people from Jingellic make Germanton their depôt for supplies.
 494. Is there anything else you would like to state? Within 3 miles of this town there is a tin-mine, and the only difficulty in developing the tin is the want of water.
 495. Is it lode or stream tin? It is stream tin. One man is working there and making very good wages; he works in the wet weather.
 496. Is there any other mining in the district? There is some mining out east, at Four-mile Creek, and they have a six-head battery working continually.
 497. Is it a quartz reef? Yes; it averages about $\frac{1}{2}$ oz. to the ton. It is poor stone. I have seen a crushing for three months which yielded 26 oz.
 498. Is it good mineral country generally? There is a good deal of it, but it is poor. The shafts have not been put down to any great depth. With regard to the site for the railway station, referred to by Mr. Holmes, that is a matter that deserves the consideration of the Committee. In the creek where the station could be put there is a permanent water supply, and it is in the centre of the town.
 499. The Chairman asked a previous witness whether, if the railway were put on the site you suggest, it would interfere with any future extension of the line;—do you think it would? Not in the slightest.
 500. There would be no serious deviation to get out of the town again? Not the slightest.
 501. Would it have to go through private property? No; there is a travelling stock route in a direct line from the site proposed by Mr. Holmes; there would be no difficulty in getting out of the town.

Arthur Hulme, farmer and grazier, Germanton, sworn, and examined:—

- A. Hulme. 502. *Chairman.*] Where do you reside? About 6 miles from Germanton, to the north-west.
 4 Aug., 1900. 503. What is the nature of your holding? It is partly freehold, the remainder conditional purchases.
 504. What is the area? 3,800 acres.
 505. Is any considerable area of that fit for agriculture? It is all agricultural land.
 506. How much do you cultivate at the present time? During the last three years we have been cultivating between 1,100 and 1,200 acres.
 507. With what results? Very good results. The last four seasons have been dry, but we have had an average of a little over four bags; that is including some new land. We crop new land every year.
 508. Does your land carry sheep as well? Yes; we combine grazing with cultivation.
 509. What number of sheep do you usually carry? We have shorn from 4,000 to 5,000; one year we had over 5,000.

510. Were those sheep which you had on the property all the year, or had some of them been bought just before the shearing? They were on the land all through the winter.
511. Has the land carried those sheep whilst you have been cultivating? Yes.
512. Have you any leasehold land? No.
513. I understand that your land has been carrying from 4,000 to 5,000 sheep, in addition to your cultivating 1,100 or 1,200 acres out of the 3,800 acres? Yes. Last year we had no leased land, but we shored over 4,000 sheep, and we had over 1,100 acres under cultivation.
514. Do you find that the cultivation of the land is a help to you with the sheep? Yes; we consider that the land all wants cultivating because the sheep do not thrive if it is not cultivated. We have had nothing wrong with the sheep since we started cultivation.
515. Is yours low-lying land—liable to be wet in winter? No; the water does not lie on it. Of course we feed our sheep sometimes, but we grow the stuff on the farm. We have never bought food for our sheep.
516. Have you some portions specially suitable for lucerne? Yes; most of our land will grow lucerne.
517. Will it grow sufficiently well to enable you to cut hay off it? Yes; but we have never done that. We could have done it, but we thought it better to use it for feeding. We fed the sheep during two bad seasons with chaff.
518. Which you got from your own land? Yes.
519. Do you use the binder? Yes, and also the stripper.
520. Where have you been in the habit of sending your produce to? It all goes to Sydney, except the oats; the oats generally go Narrandera way.
521. Are you cultivating oats for grain? Yes.
522. What yield of oats have you had? From 5 to 9 bags per acre. That was on old land. We generally put it on land that we have been growing wheat on.
523. Is it a good sample? Yes, a very good sample. Last year we had 7 bags to the acre; we have had 9 bags to the acre.
524. *Mr. McFarlane.*] How many acres of oats have you in? We generally put in between 100 and 150 acres a year.
525. *Chairman.*] Does the wool go to Sydney? No; we never send our wool to Sydney. We deliver the wool at Culcairn, and it goes on to Melbourne. Sometimes we have taken it to Albury, when we wanted back loading.
526. Do you think the railway would be of any material assistance to yourselves? No doubt it would. That is what we want. The road is not a good one. It is 18 miles from here to Culcairn, and at this time of the year we could not attempt to cart our stuff.
527. What do you think would be the effect of the railway generally in the district? I should think that the result would be increased cultivation, because cultivation has increased without a railway, and with the advantage of railway communication it would increase still more. We have only been here about nine years, but when we came here there was very little cultivation at all.
528. You have heard most of the evidence that was given this morning;—is there anything that you could say in addition to that? Comparing this with other parts where we have lived—and we came from one of the best districts in Victoria, the Ovens district—I think this district is as good as any. It is very prosperous now. The combining of cultivation with grazing is a great success.
529. With regard to dairying,—do you think there would be any chance of this district competing with the coast districts in the export trade? Yes; I think so. They are doing it on the Upper Murray.
530. Are they competing for the outside trade, or only supplying the people locally? They send the produce right away.
531. Where to? They send butter to England. An uncle of mine living up there is one of the principal suppliers, and he tells us that his butter brings as good a price as any that is sold. He gets the top price.
532. Can they utilise the rougher lands for dairying? The rougher land gives the richest cream. When they started dairying in Victoria the people living on the rich country—the flats—were dissatisfied, because they thought they were not getting as high a percentage as the people were getting on the higher lands; and when they came to test it, they found that the people on the higher lands had the far better quality of cream. Country which was considered useless is now being taken up there—even the tops of the hills.
533. *Mr. Hyam.*] You say you go in largely for the cultivation of oats? Not very largely.
534. I suppose there are large areas that would produce crops similar to those which you produce? Yes.
535. What price do your oats bring on the average? 2s. 6d. is the highest we have obtained.
536. That is locally? Yes.
537. You would not expect to get that in Sydney? No; we sent some to Sydney, and we got about 1s. 10d.
538. That is better than wheat? Yes.
539. Which particular variety of oats do you grow? Mostly the Algerian and White Tartarian. We have grown peas, and they do well here. We tried mangolds and sugar-beet, and they grow without irrigation.

William Brodribb, farmer and grazier, Little Billabong, sworn and examined:—

540. *Mr. McFarlane.*] Where do you reside? At Little Billabong.
541. How far is that from Germanton? Thirteen miles north-east; right along the main Sydney road.
542. Are you an old resident of the district? Yes; I have been here for over thirty years.
543. Do you farm to any considerable extent? I cultivate 680 acres.
544. What is the area of your holding altogether? 3,180 acres.
545. Have you any leasehold area in addition? No; only conditional lease.
546. Have you been cultivating for a number of years? Ever since I have been on the place, but not to any great extent until recently.
547. What products do you cultivate? Wheat and oats.
548. Have you met with much success? Yes, very considerable.
549. What yield of wheat do you get per acre? The last three seasons, from 5 to 6 bags to the acre. Last season I had some new land under crop, but we were rather late in getting the crop in, and it only gave about 4½ bags.

W. Brodribb.
4 Aug., 1900.

- W. Brodribb. 550. What quantity of oats did you get? About 7 bags to the acre. The year before last I got 11 bags of oats to the acre.
- 4 Aug., 1900. 551. Do you think the cultivation of oats will be extended? I do not know whether it will or not. It all depends on what will pay the best.
552. In view of the much higher yield per acre, do you not think it would pay better to grow oats? There is more expense attached to growing oats.
553. How would you class the land in your locality? Half of my land is suitable for wheat-growing.
554. Is the land in your district, that you have got a knowledge of, land that you would class as good for wheat-growing? Yes.
555. And how would you class the land which is not suited for cultivation? It is first-class grazing land.
556. Where is the market for the wheat? Culcairn is the place where we generally take it to. It goes to Sydney, Goulburn, Cootamundra, and Wagga Wagga.
557. Do you send to Culcairn all the wheat that has to go away by rail? Yes.
558. How far would that be from your place? About 30 miles.
559. In going to Culcairn, would you pass Germanton on the road from your place? Yes.
560. How far away? We come through Germanton. It is the only road that we have from our place.
561. So that in the event of the railway being constructed, it would be 18 miles shorter carriage for you? Yes.
562. Do you think that if the railway were constructed it would have the effect of causing a large additional area of agricultural land to be placed under wheat, or some other crop? I think so.
563. Is it a handicap having to carry produce that long distance? Yes. I have paid as much as 3s. 6d. a bag for the carting of wheat from my place to Wagga Wagga years ago.
564. How much do you pay now? 1s. 3d. a bag to Culcairn.
565. Would you place more land under cultivation if you had a railway to Germanton? I have about 1,200 acres cleared now.
566. Is that in addition to what you have under cultivation? No; I have 1,200 acres altogether.
567. What class of holdings are there in your district;—are there many small holders? Not many small ones.
568. Do you think the land that is suitable for agriculture would be cultivated if you had railway communication? It would be very hard to say.
569. Do you not think that having the land under cultivation would be more profitable than grazing? I think so.
570. What has your experience been? I could make the most money out of cultivation myself.
571. Do you not think that the large holders would come to that way of thinking? Yes, I think so.
572. You have heard the evidence given to-day; is there anything else that you would like to say in addition? I could not give any more evidence than you have already heard. I keep sheep as well as cultivating.
573. How many sheep have you on the property? 3,500, or thereabouts.
574. Do you keep them all on your own land? Yes.
575. It must be land of good carrying capacity? Yes. We get the benefit of the cultivation land for half the year.
576. Do you send the wool and other produce the same way as the wheat? We send the wool to Melbourne, *via* Albury. It would not pay to cart to Culcairn and truck it there.
577. If the railway came to Germanton, would you still cart your wool to Albury? I do not think so.
578. What distance is your place to Albury? Forty-nine miles from Albury, and 13 miles from Germanton.
579. Would it not pay you better to cart your wool to Germanton and have it carried by rail from there to Albury, instead of sending it nearly 50 miles by road to Albury? Yes, it would pay better.
580. But you must calculate that the additional railway carriage between here and Albury? Yes; it would take but a short time to bring the wool to Germanton from my place.
581. What does it cost to cart your wool from your place to Albury? £1 5s. per ton. The teamsters have been carting it lately at an unusually low rate.*

Lucien Grimwood, storekeeper, Germanton, sworn, and examined:—

- L. Grimwood. 582. *Mr. Hyam.*] Have you been here long? I have been here three and a half years.
- 4 Aug., 1900. 583. How many storekeepers are there in Germanton besides yourself? There are two others, and there are small shops as well.
584. Where do you get your store goods from? About three-parts from Melbourne.
585. Where does the balance come from? From Sydney. Some of the goods come from Sydney, *via* Melbourne.
586. Do you get any goods direct from Sydney? Yes; about half of the goods are brought from Sydney and half *via* Melbourne. Some of the goods from Sydney come *via* Melbourne because freight is cheaper that way.
587. Can you give any idea of the amount of freight which you pay annually on goods? I suppose between £300 and £400.
588. That includes everything? That is the freight from the station to here.
589. I suppose you will still continue to get your goods in the same way that you have been doing, from Melbourne and Sydney, and from Sydney *via* Melbourne? I shall buy wherever I can get them the cheapest.
590. Perhaps you will see no reason to make any alteration as to where you are getting your goods from? Unless Federation should make some difference. I see no other reason.
591. Suppose you have a railway to Germanton—will you have your goods sent by railway from Albury to Germanton, or will you get them by road from Albury? Not unless they alter the freight from Sydney to Culcairn.
592. Will you continue to get them from Albury by road? That will depend on the railway charges.
593. What will you do if the charges are equal? I will get the goods by rail. 594.

* NOTE (on revision):—In the event of the railway coming to Germanton, I could send fat stock and also chaff to market.

L. Grimwood.

4 Aug., 1900.

594. What is the freight by road from Albury to Germanton? It is different in different seasons.
 595. What is the average? The average would be about 17s. 6d. a ton.
 596. What is the lowest rate you have paid? It has been as low as 10s. a ton, and as high as 22s. 6d.
 597. Do you cart goods from Culcairn to Germanton? Yes.
 598. What is the freight from Culcairn? 10s. for flour, 12s. 6d. for case goods.
 599. There is no alteration in that? That is the standard charge.
 600. It is not like what it is on the Albury-road? No; there are more teams on the Albury-road, and the charges do not fluctuate so much there.
 601. Have you been out any distance from Germanton? I have been out about 20 miles each way.
 602. Were you ever engaged in farming pursuits? No.
 603. I suppose you have some knowledge of farming? Yes.
 604. Do you call this a fairly prosperous district? It is the soundest district which I have been in in my life.
 605. Do you expect any increase in trade here? A great deal depends on the squatters. It all rests with them. There is room for any number of people here if the squatters are willing to throw open their lands.
 606. Do you think there would be larger settlement if more land become available? Decidedly; very much more.
 607. Where were you in business before you came here? I was sixteen years in Granville, and eleven years on the Turon. I have been all over the country.
 608. I asked you that to see if you could make any comparison between this and other agricultural districts? I was at Bathurst.
 609. Do you think this district will bear comparison with Bathurst? It is a better district.
 610. What is about the limit of your distributing area? We send out about 2½ miles from here.
 611. In what direction would that be? Generally east, south-east, and north-east.

Heber Herbert Walsh, farmer, Old Carabobala, sworn, and examined:—

612. *Chairman.*] Where do you reside? At Old Carabobala.
 613. That is on the proposed line between Culcairn and Germanton, is it not? Yes.
 614. Is it good land between Culcairn and Germanton? I should say that it is good.
 615. Does that good land extend a considerable distance on each side of the line? I should say that it does, speaking from places that I know.
 616. You are managing Carabobala station? Yes.
 617. What is the area of that holding? Over 5,000 acres. I manage two different estates—Carrabobala proper and Old Carabobala.
 618. What is the area? The area of the two combined is between 9,000 and 10,000 acres.
 619. How far is Carabobala from Culcairn? Nine miles.
 620. So, of course, all your wool and other produce goes in there now? Sometimes it goes towards Wodonga. We can get it taken cheaper by teams than by the railway to Wodonga.
 621. What have you lately paid for carriage by team to Wodonga? 17s. 6d. a ton.
 622. Would it cost more than that *via* Culcairn? Yes; it would be £1.
 623. How much of that £1 would be for team carriage to Culcairn? 7s. 6d.
 624. If a railway came through your holdings, and there was a platform there, do you think it would pay you to truck there for Wodonga, or to continue to send your produce by the road? It all depends.
 625. Mr. Harper stated that from Germanton to Albury the charge would be 15s. per ton, and the presumption is that it would be a little less than that from your place;—in that case would it pay you better to use the railway? Certainly, for 15s. There are disadvantages connected with it. We have our shed on one side of the creek, whilst the railway is to be on the other side, and we could not possibly cross the creek with wool. It would pay us much better to send to Culcairn than to cross the creek.
 626. Is any of the land on the property under your management suitable for agriculture? Yes.
 627. What proportion do you think would be suitable for agriculture? The whole of it.
 628. Have you engaged in agriculture so far? Only to a very small extent.
 629. Assuming that you went in for wheat-growing, the railway would then be of material advantage to you, would it not? No; I do not think so.
 630. Assuming that you wish to send wheat to Sydney, and that the rate from Culcairn to Sydney and from your place to Sydney would be exactly the same, would you rather cart the wheat to Culcairn, to truck it, than truck it from your own place? I do not know anything about wheat.
 631. Do you think it pays to go in for growing wheat? I do not know; it might. I have never tried it.
 632. You prefer sheep-grazing? Yes; and always will.
 633. For how many miles does the railway go through your land? I have never followed it.
 634. Can you say approximately? It goes 4 or 5 miles through each property. It will spoil our runs completely.
 635. How many miles would it go through Old Carabobala? For a distance of about 5 miles.
 636. That would be about 60 acres that the railway would require of that holding;—can you say whether you and those associated with you are willing that that area should be given to the Government? Decidedly not. It cuts us off from our main water frontage.
 637. Could you not have a means of getting to the water? No. My principal decidedly objects to the way the railway is going. It cuts us off from the whole of our summer water.
 638. Could any deviation be made which would obviate that? Certainly. You can bring the line up the main road.
 639. Would not that be more expensive? Very little. It would do away with the expensive bridges that you must put up on the proposed route. You would have two very expensive bridges to build as the line is proposed at present. That would not be necessary if the line went along the main road.
 640. Would there not be some heavy cuttings where the spurs of the hills run down to the creek? Only two.

H. H. Walsh.

4 Aug., 1900.

- H. H. Walsh. 641. Would you still have to bridge the Billabong? Yes. You will have a bridge over one creek that would be a far more serious matter than the Billabong—the Mountain Creek. The line as at present proposed cuts us off from the water on both holdings.
- 4 Aug., 1900. 642. Could any other arrangement than giving the land free be arrived at;—could you take other Government land in exchange? Speaking of Old Carabobala, I would not take any Government land in exchange for the land along the line as it is surveyed at present, unless I was compelled. It cuts us off from the summer water, which we always want. It runs within a few chains of the main road, and might just as well be on the main road.
643. Do you think that your land would get any advantage from having the railway brought so close to it, having all things in view? Not the slightest. I think that one of our executors on the lower property did make a proposal to Mr. Ross about the matter; but I would not say anything about it till I see whether he is coming to give evidence.
644. You do not think the railway would benefit your property at all? No. My principals are entirely antagonistic to the railway as proposed, because it spoils three of our best paddocks.
645. Most people on land suitable for agriculture are very glad to welcome a railway, because it gives them a big advantage in getting their wheat away; but your position is different from that which most people take up under similar circumstances? It spoils our properties for pastoral purposes, and we regard that as most important.
646. Mr. Hyam.] What is the carrying capacity of your land? About two sheep to the acre.
647. What is the average? I have had one and three-quarter sheep to the acre on it for the past two years.
648. Is the land highly improved? It is fairly well improved. It is a property with permanent water on it. It is rung and fenced.
649. The permanent water is the creek that you spoke of? Yes.
650. Is that the only permanent water? Yes. We have not a drop of water except on the frontage. That is what we depend on.
651. If they had a level crossing, and sheep and cattle stops, it would not prevent your sheep and cattle from going to and from the creek, would it? The line would cut through our paddocks in a dozen different places, and we have different classes of sheep in different paddocks. How are we to keep them separate with a railway line going through the paddocks? Must we keep a man to look after the gates when the train comes.
652. What do you consider the value of your land per acre? I should not like to put a price on it. It is for my principal to do that.
653. Would you mind telling the Committee what return per acre you get from your land? I could not give you an average; when I took the place we had two very bad years, and we have had one very good year.
654. Did you lose any stock during the last drought? We lost, comparatively speaking, nothing.
655. What would the percentage of loss be? About 2 per cent.
656. You could not form any opinion as to the return from your land per acre? I should not like to.
657. How many sheep have you altogether on the two holdings? 12,000 or 13,000, including lambs.
658. That would not be one and three-quarter sheep to the acre? No; we have sold some.
659. Do you consider the runs are fully stocked now? No.
660. Chairman.] Is there anything else that you would like to mention? Only that both my principals were up here a short time ago, and they decidedly objected to the line going as it is proposed. They said it would simply spoil the holdings altogether.
661. If the line were fenced, and had only a train a day passing over it, would that be a great disadvantage to you? Certainly it would be a great disadvantage.
662. Which would be preferable to you—a fenced or an unfenced line? If the line must go through there, a fenced line most decidedly, because I do not see how we are to manage about the stock; the sheep would be always running over the line, the paddocks being narrow.

John Ross, farmer and grazier, Kinross, near Germanton, sworn, and examined:—

- J. Ross. 663. Chairman.] How long have you been residing in the district? Thirty-two years.
- 4 Aug., 1900. 664. You are Secretary of the local Railway League? Yes.
665. Have you any statement to make concerning this district for the information of the Committee? I may state that the agitation for a railway to Germanton has been going on for some time, the desire being to get better access to the markets for the produce of the district. There are in this district 150,000 acres of land fit for cultivation, which would be served by the proposed railway. Of that area, about 27,000 acres is at present under cultivation. The yield from that 27,000 acres in 1898 was 115,000 bags of wheat and 1,000 bags of oats. The number of bales of wool that it is computed would be carried on the railway is about 8,000. About 5,000 bales of wool would be produced within the area traversed by the proposed railway. But we estimate that we shall be able to arrest about 3,000 bales which come from a distance beyond 20 miles from Germanton, and which go through Germanton, from Tarcutta, Tumberumba, and Adelong, and even wool that comes from near Wagga Wagga. The bulk of the wool at present goes to Melbourne, but after Federation has been accomplished I do not think it will go to Melbourne, because the cutting rates that are adopted on the Victorian railways will have to cease. The present rate for wool is the same from both Albury and Wodonga to Melbourne. I should like to draw special notice to this fact that the Railway Department in Victoria charge the same price for wool from Albury as from Wodonga, namely, 28s. a ton. That is what we have paid for the last two years. Previous to that, on one occasion, we had it carried for 25s. a ton from Wodonga; then they ceased taking it from Wodonga to Melbourne, unless at the same rate as from Albury. I understand that the general rate for Victorian-grown wool is about £2 10s. from Wodonga, so I think we are quite justified in calculating on the whole of the wool being taken by this railway if the proposed line is constructed. As regards the area under cultivation for wheat in this district, I do not think it will increase much beyond what it is at present, unless the railway is made. The firm of which I am a member—consisting of five of us—owns about 25,000 acres of land that is fit for cultivation, of which about 1,000 acres is under cultivation now. If the railway is constructed we shall feel justified in putting the greater part of that land

land under cultivation. Our difficulty at present is to get the wheat taken away. During the last two years there have been over 100 different teams employed in the district carting wheat, and more than three-fourths of them have come long distances from drought-stricken districts. They were forced to come here for want of employment in their own districts, and want of feed for their bullocks and horses. Besides filling up the gap which existed here, and having this produce to cart, these men were competing with each other, so that the rates for carriage were below what they would have been had there not been so many teams available. If the yield next harvest is as good as it has been the last two seasons I think it will be some months before we shall be able to get the wheat away. They are having a splendid season down the Murrumbidgee where the teams come from, and they will not come here at all if they have plenty of grass there.

J. Rosa
4 Aug., 1900.

666. *Mr. McParlane.*] Do the farmers cart any of the wheat? The share-farmers generally cart their own wheat—the greater number of them, but not all. I might mention that one of the chief reasons why we rely upon inducing the Government to construct the railway is that, from Culcairn junction, three trains a week run to Corowa, and the same rolling stock and the same men that are employed on that branch line could be employed in working the line to Germanton. This district is practically exempt from drought. During the last two or three years there have been the worst droughts that have occurred for thirty years on the Murrumbidgee and in the Riverina generally, but they have been the best seasons that we have ever had here for grain crops, and for wool, too.

667. Have you had experience of wheat-growing during the wet seasons? I have had experience in wheat-growing for the last thirty-two years.

668. How did wheat thrive during the wet seasons? The average yield about here has always been about four bags to the acre. Some of our share-farmers have had over five bags to the acre. I came to this country to grow wheat, having been brought up to it in South Australia. The district is admirably suited for what they call "closer settlement." Fruit can be grown in the district to any extent.

669. What would bring about closer settlement? This share-farming. The farmers would rather go into share-farming than rent the land, because it requires less capital to commence operations.

670. Do you think the large landowners would let the land out under the share system? That appears to be the system that is gaining favour.

671. Have you any practical knowledge of the share system? Yes; we have about 1,000 acres of land let in that way. There are four or five farmers on it.

672. Are the results satisfactory to you and to the farmers? Financially, the result is satisfactory; but I always look with dread at the carting away of the grain.

673. Would that system pay you better under existing circumstances than grazing sheep? Yes; because you do not lose the ground altogether for the whole year, and the reduction in the number of sheep that you can keep is not very great.

674. You have heard stated in evidence the conditions on which the farms are let out;—is your land let on the same conditions? Just about the same.

675. Is that system generally practised? That is the system that is generally favoured by the farmers. Some of the farmers clear the ground, but, generally, they prefer to have the ground cleared.

676. You have stated that there are 150,000 acres of land suited to the cultivation of wheat? Yes.

677. That is, including the area under cultivation at present? Yes.

678. In the event of the railway being extended to Germanton, and the landholders being willing to let their land for cultivation on the share system, do you think there will be a sufficient number of farmers who will be willing to take up the land? The demand for land on the share system is very great.

679. Is it great at present? It is very great at present.

680. And the making of a railway would, no doubt, increase that demand? Yes; I have applications every week from farmers, asking if I have any land to let on the share system.

681. What is about the average quantity of land that a farmer working on the share system would require? It depends on whether he is a man with a family or not. One man by himself can put in 250 acres—some of them more.

682. What area of wheat-growing land would be required to maintain a family on the share system? I should say from 200 acres upwards.

683. Do you think 200 acres would be sufficient? It would be all the better if a man had more. I know several farmers who have not so much as that, and they seem to get along.

684. Are there many members of the Railway League which you represent? Yes; about twenty.

685. Are they residents of Germanton or of the surrounding district? Most of the members reside away from Germanton. There are only two or three who are residents of Germanton.

686. As far as you know, are the residents of Germanton unanimous in their desire to have the railway extended to Germanton? They are practically unanimous. A few object on some personal grounds.

687. Is there any prospect of the railway being extended in future years further than Germanton? Yes. It would be an advantage if it were to go as far as Garry Owen now.

688. How far is that? About 7 miles further. The country opens out. There is a large range of hills to the east which ceases there. There is a large basin on the Yarra Yarra estate; then, continuing on the Sydney-road, there is the valley of the Little Billabong.

689. Is Germanton the recognised business place for those districts? Yes.

690. Would that be the most suitable place to have the railway extended to? Yes. I may state that in 1898 I paid £568 17s. 9d. for trainage, sheep-trucking, and for the year 1899, £400 12s. 8d. This was at Culcairn. I have a monthly account there. In December, 1898, I paid £221 for that month.

691. Was that in the wool season? There was not much wool in it; it was for sheep-trucking.

692. Which port do you do the most business with—Melbourne or Sydney? Sydney. We do little business with Melbourne. The only item of goods that we get from Melbourne is lake salt. We use about 80 tons a year. I do not know how the storekeepers get on, but I find that I can get goods from Sydney by rail far more conveniently than from Melbourne. I can get them in half the time, too, that it takes to get goods from Melbourne. I could send a letter away on a Monday morning, and have the goods from Sydney on Wednesday night at Culcairn—a truck load if I wanted them. It would take about ten days to get the goods from Melbourne to Culcairn.

693. If the railway were extended to Germanton, would Sydney be the point to which you would send your goods? We should send to Sydney for supplies, except, perhaps, for salt.

- J. Ross. 694. If the railway were extended to Germanton, would you use that railway, or would you continue to send by road to Culcairn? I should certainly use the Germanton station.
- 4 Aug., 1900. 695. Do you consider the statements which have been made here in evidence fairly represent the state of agricultural and pastoral pursuits in this district? Yes.
696. They have been borne out by your own experience? Yes; I believe that if the line were constructed, the area under crop would be doubled the first year.
697. And the products from that area;—would they go by the proposed railway? I feel quite sure that all the produce would go by the railway.
698. There has been some evidence given as to the likelihood of a portion of the produce raised in this district still going to Albury, if the railway is made;—could you give an opinion as to that? That is wool. I think that that will cease when the cutting rates have to be determined. The differential rates will have to cease, then there will not be the same inducement to send the wool to Melbourne.
699. There were some questions asked of Mr. Holmes as to getting certain classes of merchandise from Albury; it was stated the third-class goods could be got as cheaply from Albury by team, as they could by train to Germanton;—do you think there would be any desire on the part of business men to still get their goods carried by team if they had this railway? I do not think so.
700. If the cost were about the same? All things being equal, people would prefer the railway, because the articles would be promptly delivered.
701. Something has been said about the possibility of this becoming a dairying district;—could you give an opinion on that? Yes; I believe the district is suitable for dairying. Dairying was carried on here thirty-five years ago, before the selectors came.
702. There has been a great change made in the butter-making business since then? When I first came here for the first few years, we made cheese and butter, and sent cheese to Wagga Wagga.
703. Have you any personal knowledge of any of the dairying districts in the Colony? No.
704. So you could not compare these districts with those well known dairying districts? No.
705. How many acres are required for a beast in this district? When the land is improved, it will generally carry about one head of stock to 5 acres. Perhaps 4 acres might be sufficient.
706. Most of the land is held by large owners in this district, is it not? Yes; there are a few large owners and a considerable number of medium-sized holders. They are only two or three very large holdings, and they are held by firms consisting of four or five persons. When you divide the holdings amongst the several members of the firm, they are small-sized holdings.
707. Are the small holders successful? Yes; they are all moderately successful. This is considered a financially sound district.
708. Has it made any marked progress during the last few years? During the last few years the seasons have been very favourable, although there have been droughts in other places. Many landowners have profited from being able to take stock to graze on their land.
709. That is from the drought-stricken districts? Yes.
710. So you did not participate in the damage which was done by droughts elsewhere? No.
711. During your long term of residence in the district, has there been any drought that has done serious damage to the district? Since the country has been improved by ringbarking there has been no drought that has done any injury to the settlers, provided that they have only their own stock to maintain.
712. Have you had much experience of wheat-growing for a lengthy period? I have been brought up to it ever since I was able to work.
713. It has been stated here that the country here would be rather too wet for wheat production? There are some parts of this district that have been brought into cultivation during the last few years which I thought too wet for wheat-growing.
714. You mean that it would hold the water? Yes.
715. The witnesses to whom I refer meant that the rain would affect the wheat, and in what would be looked upon as a favourable season for stock the rainfall would be too heavy for wheat-growing? Generally it has not proved so, although a medium rainfall is better than a heavy rainfall. I think a rainfall of 22 inches in the year is better than 30 inches for wheat-growing.
716. *Chairman.*] As secretary to the Railway League, you have been endeavouring to ascertain how far the owners through whose land the line would go are willing to give land for the line? Yes.
717. What has been the result of your inquiries? Some of the owners have met us very fairly, and are willing to give the land if they can get their roads closed, or get in return some reserves which are worth the same amount acre for acre.
718. Is that at the Culcairn end or this end? At the Culcairn end. Mr. Balfour stated his willingness to meet the Railway Department, and to offer no objection to the line, provided that he gets some other land for that which he is to give up. He is not extravagant in his demand, and met us very fairly. Mr. Matchett, the next owner, stated that he will give the land required for the line provided that he gets lands in exchange from the Government acre for acre. Those two owners are so near to Culcairn that the proposed line would be of very little advantage to them. In connection with the estate of the late Mr. Herriott, I have had one or two interviews with one of the executors, and he says that he is willing to give the land required for some other Government land, in reserves—rather more than acre for acre.
719. Is that the Carabobala estate? Yes, Carabobala proper. I have had several interviews with the manager of old Carabobala, and he stated, on one occasion, that there were some reserves there, and if he could obtain the reserves he would consent to the line. He did not point out very definitely the area, but he required more than acre for acre. I am not sure whether it was not 2 acres, or even more than that. Coming further this way, the next owner is Mr. Kendall, who is willing to give the land if he gets acre for acre in return. The next owner is Mr. Roach. He has about 1½ mile in two different places. He has a piece of estate between old Carabobala and Carabobala proper—about 50 chains, and he has about ¼ of a mile near this side of Mr. Kendall's property. He was at the first meeting of the Railway League, and he stated that if the line were made, as shown on the map, there would be no trouble about the land for the line. He has not mentioned it to me since. But I have heard, indirectly, that he will withdraw that offer.
720. How far is his place from Culcairn? About 14 miles.
721. Between his place and Germanton are there any other owners? Yes; one or two small owners. There

There is an owner close to Germanton who recently bought his estate. I mentioned it to him, and he said, "If you can find me a piece of Government land that will suit me we shall have no bother about it." 4
 722. The Railway Commissioners, in their recommendation, consider it imperative that the lands should be given free, and seeing that there is likely to be a considerable loss on the line for some time, it looks as if some of the people through whose land it will go might be fairly expected to give the lands free;—will it not make a considerable difference in the value of land which is 15 or 18 miles away from the existing railway? No doubt.

J. Ross.
 4 Aug., 1900.

723. Assuming that there was considerable trouble with regard to one or two owners, and it were necessary to resume their land and send them to arbitration, would the other people interested at Germanton and beyond, through whose land the line does not go, be willing to do what has been done on other lines—give a guarantee that they will reimburse the Government for the expense they are put to? The matter has never been mooted. Personally, I should be willing to do it.

724. If any resumption is made by the Government of a piece of land for railway purposes, and the matter goes to arbitration, the arbitrators have to take into consideration the increased value given to the rest of the owner's land, because of the construction of the railway, and that would be deducted from the value of the resumed land;—what do you reckon the land on the Carabobala estate would be worth? I suppose they could obtain £3 an acre for it.

725. In that case, about 100 acres would be required for railway purposes;—assuming that to be worth £4 an acre, instead of £3, it does not follow that the owner would get £400, because the increased value given to the rest of that property will be taken into consideration, and it might wipe out the whole cost of the resumption? Then we are to understand that if a line goes through a landowner's property and the land taken is valued at £100, and it was computed that the balance had been increased in value by £300, he would only receive £100?

726. Yes, that is so? Then, if the land were increased in value by £400, he would get nothing.

727. Mr. Hyam.] Mr. McLachlan, the Secretary to the Railway Commissioners, in giving evidence, was asked this question:

I understand that some of the owners of property will give the land through which the railway will run free of charge?

His answer was:

The Commissioners think that ought to be imperative. The land is practically all privately owned, although I think the terminus will be on a reserve. The Commissioners think it ought to be an imperative condition that all the land required, except, perhaps, in the case of a very small holding, should be given free.

? There is a danger in carrying that out, of one or two persons being able to prevent a line being made.

728. Chairman.] Is there any other point which you wish to speak upon? Yes; I may say that the Tumberumba trade would come through Germanton. I might mention that an immense quantity of hay and chaff would be grown in the district if we had a railway, and would be sent to Sydney.

John Thomas Hely, Senior-constable of Police, Germanton, sworn, and examined:—

729. Chairman.] Where are you stationed? I am in charge of the Germanton Police Station. I was recently transferred from Tumberumba.

J. T. Hely.
 4 Aug., 1900.

730. Can you give the Committee any information as to the direction which the trade of Tumberumba usually goes? It goes to Albury via Germanton. I do not think that during the six years that I spent in Tumberumba ten loads of store goods were sent from Wagga Wagga. The road is not suitable.

731. How do the distances compare? From Tumberumba to Wagga it is about 67 miles, and from Tumberumba to Albury is 90 miles.

732. Tumberumba would be nearer the railway at Germanton than at Wagga Wagga? Yes.

733. Would the Tumberumba trade be likely to make for Melbourne or for Sydney? I think that most of the Tumberumba trade is done with Melbourne via Albury, but with a railway station at Germanton the goods could be sent this way. The Wagga Wagga Road is not suitable for haulage on account of the big hills. They branch off at Emerson's, about 27 miles from here, to avoid two big hills. But coming back they have to haul up big hills.

734. Irrespective of distance, there are other disadvantages? Yes. I have been over all the Upper Murray country, from Mount Kosciusko to Toolong.

735. Have you a fair knowledge of what the land is like? Yes.

736. How do you regard the land north-east, east, and south-east from here—beyond Jingellic and Yarra Yarra? I consider it first-class agricultural land between here and Yarra Yarra Gap.

737. What is it like beyond? Between Yarra Yarra Gap and Jingellic it is good second-class grazing land, and there is some good agricultural land, and land that is well suited for dairying.

738. Do you think there would be any considerable traffic from that more broken country? I think the whole of the traffic from Jingellic would come down this way if we had a railway here. You could carry a far heavier load coming this way from Jingellic than you could in going from Jingellic to Albury, provided the road was properly maintained.

William Alexander Mackie, Inspector of Stock, Germanton, sworn, and examined:—

739. Chairman.] Have you some information bearing on the movements of stock from and to this district? Yes; the stock passing through Germanton during the last three years have averaged 365,231 sheep per annum; the cattle, those that have come under my notice—some pass that I never hear of—7,125 per annum; horses, 370 per annum.

W. A. Mackie.
 4 Aug., 1900.

740. Could you say what proportion of the sheep would be fats, and what proportion would be stores? No; they are principally stores.

741. From whence would they be coming, and where were they going to? The bulk of them were travelling from the plains to the mountain country for grazing.

742. Was that the regular traffic, or was it consequent on the extremely dry seasons we have had? It is not so heavy in good seasons.

743. Were those stock taken to the railway at any point? Out of that there was slightly over 52,000 store stock from the beginning of this year which were trucked either from Culcairn, Wagga Wagga, or intermediate

W. A.
Mackie.
4 Aug., 1900.

intermediate stations, to be sent to Jerilderie, Hay, Narrandera, and intermediate stations along the South-western line.

744. Do you think it is likely that those store stock would have been trucked at Germanton had there been a railway here? I think there is little doubt that they would have been trucked here.

745. Have you any means of ascertaining the number of fat stock that have been sent out of the district? 15,438 fat sheep were sent from this district, from 1st January to 31st July, 1900, principally to Albury and Victorian markets.

746. Might others have gone from this neighbourhood towards the railway for the Sydney market without your having had any record of them? Yes; small lots. What I have given is not the total by any means. Of course, most of the stock go towards Victoria.

747. And they would be trucked at Wodonga? Yes; there or at Tallangatta.

748. Assuming that the railway were constructed, and the owners of fat stock wished to send their stock to Melbourne after the accomplishment of Federation, do you think they would truck at Germanton and send them to Albury to be transhipped, or that they would send them from here by road to Wodonga? They would send them from here by road to Wodonga, but if there was no break of gauge they would truck here and send them right through.

749. Is there any other information you can give the Committee? Of course, this railway would be the means of getting stock up here in dry times. The stock I have referred to would have trucked at Culcairn this year, but there was no grass between here and Culcairn; the road was bare, and they had to go off on to other roads.

750. *Mr. McFarlane.*] Has there been any increase in the stock in the Hume district during the past three years? Yes.

751. Could you give the approximate increase for the time you have been here? I should say it was not less than 20,000 per annum. There are 60,000 more sheep in the district now than there were three years ago.

752. *Mr. Hyam.*] Not counting the stock that come here, there is an increase? Yes; in addition to that there has been an increase.

753. Has this district during the time which you have been here suffered from the drought that has been experienced in the north and north-western districts of the Colony? No.

754. Have there been any serious losses? Not in local stock, but in sheep travelling.

755. Not in the stock properly belonging to the district? No.

756. How has the feed been during the dry season? It has been fairly good. The dry seasons are really beneficial to us.

757. How is the district situated with regard to water supply for stock purposes? It is very well off.

Bogan Gate to Bulbodney Railway.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM BOGAN GATE TO BULBODNEY.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of Railway from Bogan Gate to Bulbodney," have, after due inquiry, resolved that it is expedient the proposed railway be carried out, conditionally upon the landholders in the district benefited by the line contributing annually towards the deficiency between the revenue and the annual charge for interest and working expenses an amount not exceeding $1\frac{1}{2}$ d. in the £ on the unimproved value of land within 5 miles of the line, 1d. in the £ on the unimproved value of land beyond 5 miles and within 10 miles of the line, and $\frac{1}{2}$ d. in the £ on the unimproved value of land beyond 10 miles and within 20 miles of the line, such tax to be a charge upon the land until the line becomes self-supporting;" and, in accordance with the provisions of subsection (iv), of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

PROCEEDINGS LEADING TO THE PROPOSAL.

1. The proposed railway is described, in the official statement put before the Committee at the opening of their inquiry, as an agricultural line, the route traversing good wheat country, on which there is, at the present time, a fair amount of settlement. The farmers, the Committee are informed, have come, mainly within the last ten or twelve years, from the Southern Riverina and Victorian districts, and are of a class who have had the experience necessary to develop the latent capabilities of the land. They claim that, as compared with the Goulburn Valley and Southern Riverina districts, the country is better suited for agriculture, and yields greater results in an average season.

The question of providing Bulbodney with a railway arose in 1898, when the Bulbodney settlers represented, by petition, that they were prepared to make up any deficiency between working expenses and revenue, in connection with the line, to the amount of £1,275 per annum, for a period of five years from the date of the opening of the railway from Bullock Creek to the Bulbodney settlement, a distance of 34 miles. A line from Bogan Gate to Bullock Creek was advocated earlier; the movement commencing with an agitation to connect Bogan Gate with Trundle, an agricultural centre 25 miles from Bullock Creek.

Railway connection with Trundle was first definitely brought under review in the year 1895, when the then Public Works Committee was conducting an inquiry into the expediency of constructing a line of railway from Parkes to Condobolin. In
the

the course of that inquiry the residents of Trundle strongly urged that the Parkes to Condobolin line should deviate from the route via Bogan Gate, and be made to pass through their settlement. But as this deviation would have added about 7 miles to the length of the line, prevented its consideration as a surface railway, and largely increased its cost, the Committee, after hearing exhaustive evidence, decided that the deviation could not be recommended.

The claims of Trundle to a railway were not, however, ignored by the Committee, and as a Sectional Committee reported that a branch line from the locality of Bogan Gate towards Trundle might be worthy of consideration, the residents pressed the matter upon the attention of the Minister for Works, who, after inquiry, came to the conclusion that Trundle itself was already fairly well served by the railway at Bogan Gate. The settlers of Bullock Creek then joined with those of Trundle, and urged the construction of a line from Bogan Gate through Trundle to Bullock Creek, a distance of 40 or 41 miles. Respecting that proposal the Railway Commissioners reported unfavourably, but on the Bulbodney settlers joining the movement, and a willingness being expressed to enter into a guarantee to make up any deficiency between the revenue and the working expenses of the line, a survey between Bogan Gate and Bulbodney was made, and a decision arrived at to submit the line to Parliament.

DESCRIPTION OF THE RAILWAY.

2. The proposed railway, 75 miles 5 chains in length, would commence at the east end of Bogan Gate railway station, and proceed in a generally north-westerly direction, more or less identical with the travelling stock reserve 6,645, to the village of Trundle. Ten miles further on it would go in a more northerly direction until crossing Bullock Creek, 41 miles from Bogan Gate; and thence it would proceed north-westerly, crossing the road from Dandaloo to Melrose at 59 miles, and ending near Bulbodney Creek, in the vicinity of Lansdale. The works would be generally light, but a good many moderate sized creeks would have to be bridged. The ruling grade would be 1 in 100 against the load, and 1 in 80 with it. Except for about 10 miles south of Bullock Creek the land required for the railway is unalienated, but most of the country north of that is held under lease, which runs to 1928.

ESTIMATED COST.

3. The estimated total cost of the railway is £229,370, or £3,055 14s. 5d. per mile. The first 40 miles 40 chains of the line is less expensive than the remainder. For that distance the estimated cost per mile is £2,955; for the remaining distance, 34 miles 45 chains, it is £3,175.

RAILWAY COMMISSIONERS' REPORT.

4. The Railway Commissioners report favourably on the proposed railway. They estimate the annual cost, based upon a tri-weekly train service, at £12,946, made up of interest on capital cost at 3 per cent., £6,881, and maintenance of line and traffic and locomotive expenses, £6,065; and the annual revenue, calculated upon the charging of local rates and fares, at £4,400, which comprises merchandise and live stock, £2,600, and passengers, parcels, mails, &c., £1,800.

The country that would be served by the line, they say, is specially suitable for wheat-growing. At the present time there are something like 23,000 acres under cultivation, exclusive of the country within 7 miles of Bogan Gate, the present terminus; and there can be but little doubt that this acreage would be very largely increased if the district had the benefit of railway communication.

Although the estimated annual revenue, based upon existing traffic, falls short of the working expenses, apart from the interest upon the capital cost, the character of the country, and the evidence of industry on the part of the settlers—as shown by the extent of wheat-growing that has been carried on, despite the long distance from the railway, and the consequent high and uncertain means of team-carriage—induce them to believe that, with certain means of conveyance and moderate rates, traffic would develop, and they think the line is one well worthy of favourable consideration.

They

They are, however, of opinion that all land required for the line should be conveyed free of cost to the Government, and they suggest that the estimate of cost of construction be reconsidered, as, having regard to the character of the country through which the line would pass, and in comparison with other lines of a similar character, it appears to them to be excessive.

REDUCING THE COST OF THE RAILWAY.

5. With regard to the suggestion of the Railway Commissioners in their report, that the cost of constructing the railway should be reconsidered, the Engineer-in-Chief explains that the higher estimate is, to a certain extent, due to the increased cost of permanent-way material, and to the higher wages now paid; but it is due also, he states, to requests from the Railway Commissioners for station accommodation beyond what was considered by the late Chief Commissioner for Railways to be necessary in connection with pioneer railways. Goods platforms and goods sheds are wider than originally proposed; the width of station verandahs is increased to make them more comfortable; low platforms, which the late Mr. Eddy called landings, have been abolished, and the usual high platforms substituted; in connection with the smaller stations, instead of dead-ends the Commissioners now ask for loops, and at the larger stations it has been decided, as a proper provision, to construct what is called a back road for special loading. Station yards, generally, are now made longer to allow of more freedom of action and greater facilities in shunting, and to give more room for standing trucks, a comparison of some of the first stations designed for pioneer lines with those more recently approved of by the Commissioners showing that the present stations are, on an average, 5 chains longer than those previously deemed sufficient. All this adds to the cost of constructing a railway to an amount estimated at from £200 to £300 per mile, and, as the Engineer-in-Chief points out, unless the Railway Commissioners can lessen their requirements in regard to station accommodation, lines that should be constructed on the pioneer principle must necessarily be more expensive than they otherwise would be. In the opinion of the Committee, the accommodation provided in connection with these railways should be, at first, no more than is absolutely necessary for the traffic expected, additions being made as the increase in traffic justifies them. If this course were adopted in the present instance, the cost of constructing the line would be reduced by about £20,000.

THE COMMITTEE'S INQUIRY.

6. The Committee's inquiry with reference to the proposed railway was carried out in both Sydney and the country. Having examined the Engineer-in-Chief for Railway Construction, the Secretary to the Railway Commissioners, the Chief Railway Traffic Manager, and some other official witnesses, the Committee left Sydney, and travelling through the district to be served by the railway, visited, and took evidence at Bogan Gate, Trundle, Bullock Creek, Jumble Plains, Bulbodney, Dandaloo, and Wallanbillan. From Wallanbillan, the Committee returned to Sydney by way of Tomingley, Peak Hill, and Parkes, in order to make inquiry respecting a suggested alternative line to Bulbodney, by way of Peak Hill and Bullock Creek, from Parkes.

TRAFFIC PROSPECTS.

7. The details of the Railway Commissioners' traffic estimate are given in the evidence of the Chief Traffic Manager, as follows:—

| | |
|---|--------|
| Goods, 800 tons | £304 |
| Wool, 2,067 tons... .. | 679 |
| Stock, 475 trucks | 285 |
| Agricultural produce, 9,700 tons | 1,650 |
| | <hr/> |
| | £2,918 |
| From this, however, it will be necessary to deduct the loss due by diversion of traffic from the existing main line, viz. ... | £318 |
| | <hr/> |
| Total, goods, wool, and stock traffic | £2,600 |
| Coaching traffic, including parcels, H.C.D., &c. | 900 |
| Mails, 75 miles, at £12 per mile | 900 |
| | <hr/> |
| Total traffic | £4,400 |

The

The traffic of the district, it is stated, would come to the railway at the following points :—

| | |
|----------------------|---------------------------|
| Trundle | 15 miles from Bogan Gate. |
| Bullock Creek | 40 " " |
| Bulbodney | 75 " " |

The Chief Traffic Manager is of opinion that under anything like favourable circumstances considerable development in the district may be expected in the near future, and he looks for a steady reduction in the estimated annual loss upon the line. Mineral development in the west, he says, is possible at any time, and would in that event add to the traffic of the railway. The trade of the district is at present dealt with to a large extent at Condobolin, Narramine, and Trangie, and to a small extent at Nevertire, Nyngan, and Parkes, which means that by the construction of the railway there would be a certain amount of traffic diverted from the main line ; but allowance for this has been made in the estimate.

The area of the majority of the holdings is 2,560 acres, and the settlers graze sheep as well as grow wheat ; carting the latter to market, in some instances, a distance of 60 or 70 miles. They labour under great difficulty in getting their produce away, and in periods of drought they are further hampered by the impossibility of removing their sheep to other districts, or, in consequence of the cost of carriage, of purchasing fodder for them.

According to evidence given at Trundle, the area under cultivation in the district has been increased since 1895 to the extent of 18,596 acres, and, in addition to the new land prepared this year for agriculture, there are thirty-three new settlers whose holdings are not yet producing, owing to the prolonged drought. Next year a further increase to the area cultivated of from 5,000 to 7,000 acres is expected. The larger holders, as well as the smaller, it is believed would cultivate more than now if the railway were constructed. Some of the land is farmed on the share system, which is said, so far, to have proved satisfactory.

A considerable area of land in the district is held under scrub lease, and this contains a provision by which the whole or any portion of the area may, in the event of a railway being constructed within 10 miles of the land, be resumed by the Government, and thrown open for settlement.

The following local statistics give some further indication of the traffic prospects :—

LOCAL STATISTICS.

Supplied at Trundle, and representing an area within 20 miles east and west of the line, and extending north to 8 or 9 miles beyond Bullock Creek.

Number of producers—115.
 Area under wheat—23,096 acres.
 New land put in for 1900—5,456 acres.
 Value of farming equipment—£20,281.

Supplied at Bulbodney (Lansdale), and representing an area within a radius of about 20 miles from Lansdale :—

Population—405.
 Occupied area affected by the railway—647,507 acres.
 Carrying capacity in sheep—400,800 (which would produce about 5,968 bales of wool).
 Fat stock that would be sent by railway—308 trucks.
 Tallow and skins—20 tons.
 Acres under cultivation—6,069. (Average yield, in fair seasons, about 16 bushels to the acre, or a total of 80,944 bushels.)
 Increase in cultivation, if railway constructed—14,000 acres.
 Value of farming plant—£10,464.
 Value of machinery—£5,709.
 Value of draught stock—£4,755.

NATURE OF THE COUNTRY TO BE SERVED.

8. According to information supplied by the Department of Lands, there are within 20 miles, on either side of the route of the proposed railway, 813,700 acres of alienated land (which includes land conditionally purchased and conditionally leased) ; 112,000 acres of reserves ; 84,580 acres settlement leases ; 177,800 acres improvement

improvement leases ; 410,320 acres scrub leases ; and 369,900 acres of Crown lands—3,100 acres of which are described as inferior. The tenure of the Crown lands is as follows :—Under leasehold, which expired on the 4th August, 1900, 143,170 acres ; under leasehold, expiring in August, 1901, 1,100 acres ; area of leasehold, expiring in 1903, 2,130 acres ; area which, when this evidence was given, on 26th July, the Committee were informed would be held under occupation license in a few days, 113,000 acres ; untenanted, 107,400 acres.

Within the traffic area of the proposed line there were, in 1897, 2,700 cattle, and 359,850 sheep ; and, in 1898, 2,670 cattle, and 366,091 sheep.

The land generally is of good quality, timbered chiefly with box and pine ; the soil a red loam, well suited for agriculture ; and the rainfall—as the Government Astronomer informed the Committee—though not quite so favourable as that in the eastern part of the Colony, is suitable for wheat-growing. Those parts of the country which have been taken up by settlers, almost wholly Victorians, are in the hands of what are described as a very thorough and practical set of farmers, who have given evidence of a determined intention to make the most of the land, notwithstanding the drawbacks to which they have been compelled to submit, owing to the distance of their holdings from railway communication. The Committee were much impressed, during their visit to the district, with both the nature of the land and the character of the people. With the exception of a few stony ridges, which form the divide between watersheds, and upon which the timber is chiefly ironbark and some mallee, the country passed through, for the whole length of the route, appeared to be exceptionally well suited for agricultural purposes ; and where wheat was seen, the crops were in excellent condition, and promised a satisfactory yield. One witness informed the Committee that he had been continuously cropping a paddock for nineteen years, with a spell of two years under lucerne, and that the crop of wheat there now was just as good as those grown on land which has been in use for only two or three years.

In its unimproved state the land in the district is covered with scrub, which harbours noxious animals in large numbers. Railway facilities, it is urged, would, by promoting increased settlement, lead to the clearing away of this scrub, and make the land more productive. Unless scrubbed and ringbarked, the country is of little use, even for pastoral purposes, and cultivation is regarded as the surest method of getting the land into good condition.

ALTERNATIVE LINE FROM PARKES TO BULBODNEY.

9. In the course of their inquiry, it became apparent to the Committee that a line of railway to Bulbodney from Parkes, *via* Peak Hill and Bullock Creek, might be more generally advantageous than a railway from Bogan Gate, and after traversing that part of the route which such a line would take between Parkes and Peak Hill, and examining witnesses respecting a railway in that direction, they had, through the Department of Public Works, an exploration of the country between Peak Hill and Bullock Creek made by an officer of the Railway Construction Branch, and obtained a report from the Railway Commissioners on the subject.

At first sight, a railway from Parkes to Bulbodney, by the route mentioned, would appear preferable to one from Bogan Gate, as besides serving an extensive area of good agricultural land, including that which would be within the sphere of influence of the Bogan Gate line, around Bullock Creek and on to Bulbodney, it would run through a well-populated district, where mining, as well as agriculture, is a permanent industry. The country between Parkes and Peak Hill is very well suited for agriculture, and is extensively cultivated. Harvey's Range limits the area of good land to the east of the road from Parkes to Peak Hill, to a valley only a few miles wide, but on the west the area is practically unlimited. At Alectown, Peak Hill, McPhail, and Tomingley, mining is carried on, and in the opinion of the Chief Inspector of Mines, the field is a permanent one, and likely to be further developed. The population of Alectown and district is given in evidence as 600 ; that of Peak Hill and district as 2,250 ; that of McPhail as 500 ; and that of Tomingley and district as 400.

The

The result of the exploration from Peak Hill to Bullock Creek, and the report of the Railway Commissioners, however, do not, in the opinion of the Committee, place the line from Parkes to Bulbodney in a light which would justify it being carried out in preference to the railway from Bogan Gate.

By the route explored, this line would leave the northern end of the proposed Peak Hill station about 306 miles from Sydney, *via* Parkes, and taking an almost due westerly direction, which is maintained throughout, it would cross the Bogan River, at 309 miles, Back or Genaren Creek at 322 miles; the Gap, a low point in a small range of hills, at 327 miles; and Sandy Creek at 331 miles; and thence join the Bogan Gate to Bulbodney survey, close to where that survey crosses Bullock Creek, at a point 338 miles from Sydney, by this proposal, and 332½ miles by Bogan Gate.

The line would be a comparatively easy one to construct, and there should, in the engineer's opinion, be no difficulty in maintaining the same grades and curves as on the Bogan Gate to Bulbodney line, the only cutting of any importance being at the Gap, and this would probably not be more than 10 or 15 feet deep. The most expensive part of the line would be the crossing of the Bogan River, where a bridge, possibly 200 yards long, would be required, but ordinary timber openings with one 60-foot span would be sufficient. The country passed through is reported by the engineer to be good, varying from light sandy loam to rich myall flats. All the available land in the immediate vicinity of the route has been taken up, but it is sparsely populated, and the areas under crop have not increased in the same proportion as in the few years prior to 1898.

Except with regard to what is said of the lack of increase in areas under crops, there is nothing in this report of the railway engineer unfavourable to a railway by this route; but in respect of length and cost, the line does not compare well with that from Bogan Gate, as the following figures, supplied by the Engineer-in-Chief, show:—

COMPARISON between Bogan Gate, Bullock Creek, and Bulbodney; and Parkes, Peak Hill, Bullock Creek, and Bulbodney.

| Description. | Length. | Estimated cost. | Average per mile. |
|---|-----------|-----------------|-------------------|
| | Mls. chs. | £ | £ |
| Bogan Gate to Bullock Creek..... | 40 40 | 119,658 | 2,955 |
| Bullock Creek to Bulbodney | 34 45 | 109,712 | 3,175 |
| Distance, Bulbodney from Sydney, 367 miles. | 75 5 | 229,370 | 3,056 |
| Parkes to Peak Hill..... | 31 52 | 112,808 | 3,564 |
| Peak Hill to Bullock Creek..... | 36 00* | 122,400* | 3,400* |
| Bullock Creek to Bulbodney..... | 34 45 | 109,712 | 3,175 |
| Distance, Bulbodney from Sydney, 371 miles. | 102 17* | 344,920* | 3,375* |

* These figures are only approximate.

The Railway Commissioners' report estimates the annual expenditure at £18,748, and the annual revenue at £8,035, the difference being £10,713. They are not favourable to the proposal, and suggest that, if instead of a line from Bogan Gate, one from Parkes should be determined upon, it should take a route more north-westerly, diverging towards Bulbodney at a point some distance to the west of Peak Hill.

LOCAL GUARANTEE AGAINST LOSS.

10. The report of the Chief Railway Traffic Manager states that the local residents are willing, should it be practicable and deemed necessary, to contribute at the rate of 2d. per acre within 5 miles of the railway, 1d. over 5 and under 10 miles, and ½d. over 10 and under 15 miles, in order to meet any loss which may be incurred through the construction and working of the line.

Questioning

Questioning the witnesses regarding this, the Committee found that there was a willingness on the part of the residents generally to contribute towards what may be necessary to meet the estimated loss in connection with the line; and most of those through whose land the railway would go are understood to be willing to give the land required for the line free of cost. A few of the farmers regard the special tax on their land as a hardship, but the majority are agreeable to pay as high as the rates mentioned by the Chief Traffic Manager rather than not have the railway. When it is considered that for the full distance between Bulbodney and Bogan Gate, in transit to Sydney, wheat would be carried on the railway at a cost to the farmer of only $\frac{1}{4}$ d. a bushel—the cost by team now being 3d. to $4\frac{1}{2}$ d. per bushel for a distance of from 20 to 40 miles to Bogan Gate; 4d. and $4\frac{1}{2}$ d. per bushel for 30 miles to Narramine; and 6d. per bushel for 55 miles to Nyngan and 62 miles to Trangie—it is clear that the saving to the settler from the railway would far more than cover the land tax he would pay.

CONCLUSION ARRIVED AT.

11. From the evidence before them and their inspection of the country through which the proposed railway would go, the Committee are of opinion that, while there is no immediate prospect of the line from Bogan Gate to Bulbodney paying, there are sufficient reasons to justify its construction, provided the residents of the district contribute in a special manner towards the reduction of the annual loss. This, they have expressed themselves willing to do, and the Committee recommend the construction of the line, conditionally upon the landholders of the district benefited contributing annually, until the line becomes self-supporting, a tax upon the unimproved value of their land. According to the report of the Railway Commissioners, there will be an annual loss upon the railway of £8,546, that being the difference between the estimated expenditure and the estimated revenue. The revenue estimate is within £1,665 of the working expenses, and there is a practical certainty of the traffic on the line increasing; but it will probably be some considerable time before the earnings meet the expenditure, and in view of the benefit to the district which the railway will be, and the fact that the land tax proposed is considerably less than the farmers are now paying for the carriage of their produce by team, the Committee consider that the residents should be required to contribute in the manner stated.

RESOLUTION PASSED.

12. The resolution passed by the Committee is shown in the following extract from their Minutes of Proceedings:—

Mr. Hyam moved,—"That, in the opinion of the Committee, it is expedient the proposed Railway from Bogan Gate to Bulbodney, as referred to the Committee by the Legislative Assembly, be carried out, conditionally upon the landholders in the district benefited by the line contributing annually towards the deficiency between the revenue and the annual charge for interest and working expenses an amount not exceeding $1\frac{1}{2}$ d. in the £ on the unimproved value of land within 5 miles of the line, 1d. in the £ on the unimproved value of land beyond 5 miles and within 10 miles of the line, and $\frac{1}{2}$ d. in the £ on the unimproved value of land beyond 10 miles and within 20 miles of the line, such tax to be a charge upon the land until the line becomes self-supporting."

The motion was seconded by Mr. Watson, and passed.

W. T. DICK,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 31 October, 1900.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM BOGAN GATE TO BULBODNEY.

TUESDAY, 24 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.

The Committee proceeded to consider the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

1. *Chairman.*] Are you prepared with a statement of the proposal for constructing a railway from Bogan Gate to Bulbodney? Yes; I have a statement prepared for the Under-Secretary, which is as follows:—

H. Deane.

24 July, 1900.

RAILWAY FROM BOGAN GATE TO BULBODNEY.

THE proposal before the Committee was referred by the Legislative Assembly on 13 December, 1899, for the Committee's consideration, in the following terms:—"That it be referred to the Parliamentary Standing Committee on Public Works, to consider and report on the expediency of constructing a line of railway from Bogan Gate to Bulbodney."

This is a proposal to construct a branch "pioneer" line of railway from Bogan Gate, on the Parkes-Condobolin line, via Trundle to Bullock Creek, and thence to the Bulbodney settlement.

The question of providing Trundle with a railway was first definitely brought under review in the year 1895, when the then Public Works Committee was conducting an inquiry into the expediency of constructing a line of railway from Parkes to Condobolin.

In the course of the inquiry the residents of Trundle strongly urged that the line should deviate from the proposed route via Bogan Gate, and be made to pass through their settlement. But as this deviation would have added about 7 miles to the length of the line, prevented its consideration as a surface railway, and largely increased its cost, the Committee, after hearing exhaustive evidence, decided that the deviation could not be recommended.

The claims of Trundle to railway accommodation were not, however, ignored by the Committee, as will be seen from the following extract from the Committee's report of 21 May, 1895:—

"Trundle is a well-settled district, where numbers of settlers are producing large quantities of cereals, fruit, &c., as well as to some extent, following the occupation of pastoralists; and many of the landholders along the route which would be of service to Trundle stated their willingness to give the land required for railway purposes free of cost, as well as pay special rates of carriage for the conveyance of their produce over the line. The Sectional Committee, much impressed with the importance of this part of the district, remark in their Report that it may be worthy of consideration whether a branch line could not with advantage be made from the locality of Bogan Gate towards Trundle."

Encouraged, no doubt, by this commendatory reference of the Public Works Committee, the residents of Trundle approached Mr. Secretary Young, through their Parliamentary representative, Mr. Thomas Brown, with the request that a branch line should be constructed from Bogan Gate to their township. A survey of the route was made in July, 1896, its length being 15½ miles, and the opinion of the Railway Commissioners asked upon the proposal. Their opinion was unfavourable to the construction of the line, and the Minister therefore decided that the proposal could not be entertained, on the grounds, chiefly, that Trundle was connected by an excellent road with the railway at Bogan Gate, that the distance between the two places was only 13½ miles, and therefore, so far as Trundle itself was concerned, it was considered to be already fairly well served.

Shortly afterwards, that is in October, 1896, a petition, bearing the signatures of 205 residents of the Trundle and Bullock Creek districts, was presented to the Minister, again asking for the construction of the line to Trundle, with its extension to Bullock Creek settlement, being a distance of some 30 miles further on, in a north-westerly direction. The petitioners represented that such a line would open up a large area of Crown lands suitable for agriculture; that the major portion of the present settlers were mainly engaged in farming pursuits, there being 5,000 acres under wheat; that the district was quite equal to the southern districts for wheat production, and superior as regarded fruit and cereals; and that the area under cultivation would, in the event of railway facilities being provided, be at once increased by 19,900 acres.

The Minister stated, in reply to the deputation who presented the petition, that he would have further inquiries made as to the advisability of carrying the line beyond Trundle to Bullock Creek; and, if it could be shown that there was any reasonable justification for doing so, and that the line would pay in the course of a year or two, he would have much pleasure in pushing the matter forward.

The Minister accordingly instructed that a survey should be made of the proposed extension to Bullock Creek, and, on receiving the surveyor's report, submitted it to the Railway Commissioners for their opinion upon the proposal. The Commissioners gave their opinion, under date 10 August, 1897, as follows:—

"The Hon. the Minister for Public Works, having asked for the opinion of the Railway Commissioners on the proposal to construct a branch line of railway from Bogan Gate, on the Parkes-Condobolin railway to Bullock Creek, a distance of about 40 miles, we beg to state that the proposed railway is an extension of a line from Bogan Gate to Trundle, upon which we reported on the 15th September last.

H. Deane.
24 July, 1900.

"The country is sparsely populated by a recent settlement, and is of an agricultural character. There is no doubt the settlers suffer much inconvenience, and are subjected to considerable expense, in consequence of the distance from the existing railways, and it is also reasonable to conclude that near railway communication would induce further settlement and greater production; but while taking this favourable view, there is small prospect of the line returning even working expenses.

"The only way in which railway communication could be provided for this district without involving an undue burden on the railway capital would appear to be to adopt a special arrangement in regard to it, and make the cost a charge upon the land served and improved by it.

"As, however, there are large tracts of agricultural country available and suitable for settlement within reasonable distance of existing railway communication, it is a question for consideration whether any exceptional course should be pursued in this instance to meet the requirements of a limited settlement."

In the interval between the date of the survey report on the extension to Bullock Creek and of the foregoing opinion of the Railway Commissioners, a petition had been presented from sixty-seven (67) residents of the Bulbodney settlement, which lies some 40 miles further to the north, praying that in the event of the railway being carried to Bullock Creek, it might be further extended on to Bulbodney. The petitioners stated that the then population of the settlement was 376; the area of holdings, 450,271 acres; the area under cultivation, 2,437 acres; and the additional area promised by holders to be immediately put under cultivation in the event of railway facilities being provided, was 14,140 acres.

On 11 November, 1897, a second deputation, representing the Bullock Creek districts, waited upon Mr. Secretary Young, to urge that the proposed line should be at once submitted to the Public Works Committee. The deputation were emphatic in their assertion that the area to be served thereby was the greatest wheat-growing belt of country in the Western district, and quite equal, if not superior, to any other agricultural district in the Colony; the only drawback to its development was the absence of railway communication.

At the conclusion of the representations of the deputation, Mr. Howard, who had come down on behalf of the North and South Bullock Creek Progress Committees, said he was instructed by the people of the district to state that they were prepared to guarantee any shortage on the interest in the event of the railway being constructed.

Mr. Young, in reply, informed the deputation that he would have a thorough survey and estimate of cost made, and the proposal sent on to the Public Works Committee as soon as possible. With respect to their offer to make good any deficiency in the interest, Mr. Young considered that there should be an absolute guarantee, with some security at the back of it.

A third deputation, which included representatives from the Trundle, Bullock Creek North and South, and Bulbodney Selectors' Associations, waited upon the Minister at Bogan Gate on 16th March, 1898, with the object of laying before him some additional information regarding the development of the districts from an agricultural standpoint, and also for the purpose of giving him some idea of the guarantee being prepared in connection with meeting any deficiency that might occur so far as the working expenses, &c., of the line were concerned. The proposed guarantee was to be an individual guarantee up to the amount of each guarantor's present cost of carriage, so that in the event of his being called upon to make it up to the full, he would not be any worse off.

These representations were supplemented by a petition received on 5th May, 1898, from a Committee appointed by the Bulbodney settlers, which set forth that they were prepared to make up any deficiency between working expenses and revenue, to the amount of £1,275 per annum, for a period of five years from date of opening of the line from the proposed Bullock Creek terminal point to Bulbodney settlement, being a length of about 34 miles.

The corresponding amount to be guaranteed by the Bullock Creek settlers has not yet been stated, but they have expressed their readiness to complete the guarantee whenever required so to do.

The survey and report thereon of the total length of the proposed railway from Bogan Gate to Bulbodney was finally completed in 1899.

The proposed railway is what may be termed an "Agricultural line." The route traverses splendid wheat country, on which there is at present a fair amount of settlement. The settlers have been drawn mainly within the last ten or twelve years from the Southern Riverina and Victorian districts, and are of the class, and have the experience, best calculated to develop the latent capabilities of the country. They claim that, as compared with the Goulburn Valley and Southern Riverina districts, the country in question is better suited for agriculture, and yields greater returns in an average season. It is also claimed that only by resort to agriculture can the country be profitably cleared of its superabundance of scrub growth, and freed from its rabbit and noxious animals pest. The settlers are confident that the proposed line will return a large revenue, and speedily become self-supporting.

The official description of the line is as follows:—

Bogan Gate to Bulbodney.

(Length, 75 miles 5 chains; estimated cost, £229,370, or £3,056 per mile.)

This branch line begins by a junction with the Parkes to Condobolin railway, recently opened at the east end of Bogan Gate station at 291 miles 43·83 chains from Sydney, and proceeds in a generally north-westerly direction, more or less identical with the T.S.R. 6,645, to the village of Trundle at 308 miles. Ten miles further on direction traverses more northerly, until Bullock Creek is crossed at 332 miles. The north-westerly direction is then resumed, the road from Dandaloo to Melrose being crossed at 350 miles, and the line ends near Bulbodney Creek, at 366 miles 53·83 chains.

The works are generally light, but a good many moderate-sized creeks have to be bridged.

The ruling grade is 1 in 100 against the load and 1 in 80 with it.

Except for about 10 miles south of Bullock Creek the land required is unalienated, but the most of the country north of that is held under lease, which runs to 1928.

The following is the Statutory Report of the Railway Commissioners upon this proposal:—

Sydney, 9th Dec., 1899

"Proposed Extension of Railway from Bogan Gate to Bulbodney, 75 miles 5 chains.

"In accordance with Section 13 of the Public Works Act of 1888, we beg to report as follows:—

Cost of Construction—

Engineer-in-Chief's estimate of construction, exclusive of land and compensation.....£229,370 0 0

Estimated Annual Cost—

Interest on capital cost, at 3 per cent.£6,881

Maintenance of line and traffic and locomotive expenses 6,065

Total annual cost 12,946 0 0

Estimated Traffic Revenue—

Merchandise and live stock£2,600

Passengers, parcels, mails, &c. 1,800

Total estimated revenue 4,400 0 0

"The annual cost is based upon a tri-weekly train service, and the revenue upon the charging of local rates and fares.

"The country that would be served by this line is specially suitable for wheat-growing. At the present time there are something like 23,000 acres under cultivation, exclusive of the country within 7 miles of Bogan Gate, the present terminus; and there can be but little doubt that this acreage would be very largely increased if the district had the benefit of railway communication.

"Although the estimated annual revenue, based upon existing traffic, falls short of the working expenses, apart from the interest upon the capital cost, the character of the country, and the evidence of industry of the settlers,—as shown by the extent of wheat-growing that has been carried on, despite the long distance from the railway, and the consequent high and uncertain means of team-carriage,—induce us to believe that, with certain means of conveyance and moderate rates, traffic would develop, and we think the line is one well worthy of favourable consideration.

"As in other cases, however, we are of opinion that all land should be conveyed free of cost to the Government, and we would also respectfully suggest that the cost of construction be re-considered. £229,370, is at the rate of £3,056 per mile, which, having regard to the character of the country through which the line will pass, and in comparison with other lines of a similar character, appears to be excessive." With

MINUTES OF EVIDENCE—RAILWAY FROM BOGAN GATE TO BULBODNEY.

With regard to the Commissioners' remarks respecting the apparently excessive cost of this line, Mr. Deane, will, no doubt, be able to furnish satisfactory explanations on this point. But I may perhaps mention that one chief cause of its higher cost, as compared with other pioneer lines of the same class already constructed, is the sharp rise that has recently taken place in the price of steel-rails, which have advanced from £5 5s. up to £7 10s. per ton, the price now quoted, being an increase of 43 per cent. H. Deane.
24 July, 1900

The following is a detailed statement of the cost:—

BOGAN GATE TO BULBODNEY.—Part 1.

REVISED estimated cost of a single line of railway 40 miles 40 chains in length, with 60-lb. rails. Ruling grade 1 in 80 with, and 1 in 100 against the load. Sharpest curve 12 chains radius.—New fastenings: new 4 feet 6 inch T.Os.; $\frac{1}{2}$ ballast; Sleepers, 2,464 per mile.

| Description. | Estimated Cost. | | | Average per mile. |
|--|-----------------|----------|----------|-------------------|
| | £ | s. | d. | £ |
| Earthworks..... | 9,961 | 13 | 4 | 246 |

H. Deane.
24 July, 1900.

2. Do you regard the class of country through which the line goes as easy country? Yes; it is fairly easy, but it is not quite so easy as the country between Parkes and Condobolin. You cannot get quite on to the surface in the same way as on the Parkes to Condobolin line, and we have to traverse the water-courses, to a great extent, at right angles. Then, if we compare the cost with the cost of the Parkes-Condobolin line, it will be found that the Parkes-Condobolin railway was constructed very cheaply. There were several reasons for that. The item for contingencies was not drawn upon at all. The timber bridges which were erected cost very much less than the total originally estimated, the reason being that it was impossible to locate some of the waterways, and determine their size. I have reckoned that a certain amount of money should be reserved, so that, when really heavy rain comes on, it can be used to make good any damage. I believe that water will go over the Condobolin line in some places, and that additional waterways will have to be provided there eventually. But it is difficult in flat country to say how the water will come. One great reason for an increase in the cost of the Bulbodney line, as compared with the Parkes-Condobolin line, will be the increased cost of permanent way material.

3. How do the earthworks compare? Taking the earthworks and culverts together, they come to about the same amount. On the Parkes-Condobolin line, £420 is allowed for those two items. In this line we have £433 for the first part, and about £505 for the second. That would be £465 as compared with £420, so that they are a little more expensive on this line.

4. Do you think that that country can be as easily traversed by a railway as the country between Narrabri and Pilliga, or between Narrabri and Walgett? It will prove better than that, because we shall not have the same amount of water to contend with. The creeks are easily crossed. With regard to the cost of permanent way materials, it will be seen that, taking rails at £5 5s. per ton landed in Sydney, and freight to Bogan Gate, the cost will amount to £764 per mile; that is, in the first part from Bogan Gate to Bullock Creek. On the Parkes to Condobolin line the permanent way material was put down at £630 per mile; that is including freight. The reason for the difference is that rails were exceptionally cheap at that time. If I remember aright, we got rails delivered then in Sydney at about £4 per ton. The price of rails is now nearly double that.

5. *Mr. Watson.*] Then there is a difference in the cost of permanent way at that rate of about £400 per mile on present prices? Yes. Then look at the station works and sidings. The station works and sidings on the Parkes-Condobolin line were put down at £213 per mile. On this particular line, taking the first part from Bogan Gate to Bullock Creek, that amount is £385 per mile. The Parkes-Condobolin line is essentially a pastoral line. This railway will be an agricultural line, and there will be more stations required. Independently of that, there are some additional expenses connected with stations which should be noted. In consequence of the slightly rougher country we have to go through, the earthworks will be heavier. Then the station buildings, although cheap, will be somewhat more expensive than we put on the Parkes-Condobolin line. I have been asked by the Railway Commissioners to add one thing and another. I have added to the width of the goods-platforms and goods-sheds. I have increased the width of verandahs, and so on, to make them more comfortable, and perhaps more suitable. But that is going back, to a certain extent, upon Mr. Eddy's idea of the pioneer principle. Not that it is not quite right; but still it adds to the expense. Then, again, the low platforms, which Mr. Eddy called landings, and not platforms, have been abolished, so that there we have the extra cost of building the usual high platforms. Then, again, in the small stations, instead of having dead-ends, I have been asked by the Railway Commissioners in every case to place loops, thus connecting each end of the main line. That also means extra expense. Then, again, in the larger stations, it has been decided as a proper provision that we should construct what is called a back-road for special loading. We always put these in now. Again, Moree station, which was one of the first of the terminal stations made in connection with pioneer railways, was made a certain length, and there was a certain compactness given to it. It was scarcely opened, however, when it was found that it was too constricted. Station-yards, generally, are now made longer, so as to allow more freedom of action and greater facilities in shunting, and so on, and giving more room for standing trucks. I find, in comparing some of the first stations, that we designed for the pioneer lines, with those stations which have been more recently approved of by the Commissioners, that on an average our present stations are 5 chains longer. The length of an important station was originally 25 chains; it is now 30 chains. I am quite certain that the Railway Commissioners would not ask for a provision which is not necessary; but, at the same time, it must be borne in mind that they are asking a great deal more than they asked in the case of the Parkes-Condobolin and the Moree line. That accounts for much of the difference in cost.

6. *Dr. Garran.*] When they make such provision, do they charge it to working expenses, or to the capital account? When they make it on a new line, they come to me for the money.

7. *Chairman.*] How does this more expensive station accommodation compare with the accommodation on similar lines in other countries? I have no doubt that the work is of such a class that it would compare with the best work in other countries.

8. For the same class of lines? Yes. Possibly the Commissioners are anxious to look a little further ahead than they did in the first place with the pioneer lines. Then there is another point I should like to mention to the Committee—and I have mentioned it with regard to one or two other lines—that is the rate of wages. The minimum rate of wages, as the Committee are probably aware, has been fixed at 7s. per day, where previously it was only 6s. per day. That, of course, means that the rates for all classes of labour have gone up, and we have to pay more.

9. Can you give us any idea in figures as to what the difference in wages means per mile? It is very difficult to do so. The estimate depends very much upon the cost of material, and that is indirectly connected with the question of wages.

10. *Dr. Garran.*] Would it make a difference of £50 per mile? Yes, fully.

11. Would it make a difference of £100 per mile? I daresay it would.

12. Would it make any difference in your contracts for sleepers? It is not very apparent in the cost of sleepers. I think the consideration given to labour in the rate of wages has had its effect on the price of sleepers, and we certainly are paying very much more than we otherwise would have to pay.

13. *Mr. Watson.*] But there is no day labour in connection with sleepers? No; it affects us indirectly, but I think the effect is very marked.

14. *Chairman.*] How far is Bulbodney in a direct line from the Western railway? I think it is about 40 miles.

15. Would not the last 20 miles of the proposed railway be practically little more than 40 miles from the Western line? Yes. H. Deane.
16. Do you regard that as being country which can stand two lines of railway so close to one another? Yes, for agricultural purposes, but not for pastoral purposes. 24 July, 1900.
17. Do you look upon that part of the country as purely agricultural? Yes; this line is brought forward as an agricultural line.
18. *Dr. Garran.*] I gather from your remarks that in the very cheap lines we have made hitherto we have been rather more fortunate than we are going to be in the future? I think so as regards cost.
19. You do not see your way to keep the lines of the same quality quite down to the same price? No. More freight has to be added as the lines are made further out. Then we are getting a diminution in the iron-bark and timber reserves, we are paying more for wages, and unless the Railway Commissioners can forego the advantages of increased accommodation at stations these lines must, necessarily, be more expensive.
20. Three or four causes are operating to raise the cost of the lines, yet their quality and capacity for traffic are not increased? Yes. Of course, with regard to the stations, if they are made more expensive now, they will not want enlarging in the near future.
21. If you spend the money in the first instance you will not want to spend it afterwards, and it is only putting off the evil day a little further, when you are very economical at first? Yes.
22. Then we will have to put on £200 or £300 per mile to the price of the cheapest line you have made hitherto? Yes.
23. We must make the minimum a little higher than we have before? Yes. After all the cost of the running-road still remains pretty low. Take the first six items of the first part of this Bogan Gate line, and you will find that they only amount to £1,841 per mile.
24. *Chairman.*] Is not the allowance of 15 per cent. for engineering and contingencies, somewhat larger than usual? I think that is the amount I have been allowing lately. I think it was in some cases to be 12½ per cent., but I found that that was not enough.
25. Do you find that, as a rule, the expenditure on that account comes up to the maximum of 15 per cent.? Yes, we very often do. Fifteen per cent. for engineering and contingencies is very moderate, indeed. I know that, in other countries, engineers not infrequently put down 10 per cent. for contingencies alone, and engineering and supervision comes to 5 or 8 per cent., according to the nature of the work.
26. Would you have any difficulty in getting sleepers for this line? I think that will be all right. I now put in the usual plans and book of reference in connection with this line.

WEDNESDAY, 25 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

Hugh McLachlan, Secretary to the Railway Commissioners, sworn, and examined.—

27. *Dr. Garran.*] Is this a district in which the selectors have taken the initiative, and are showing where the good land is? Yes. H. McLachlan.
28. Many of them are practical men from Victoria, who know what they are about, who have settled there, and who are already cultivating to advantage? Yes; I may say that the Commissioners in going through the district were very much impressed by the character of the men who had taken up land along this line. 25 July, 1900.
29. We are asked now simply to follow them and give them the means of transit? Yes.
30. Is it a strip of good land, or is there a large area of good country for miles on either side? The Commissioners think there is a large area of good land, which is easily cleared. In many ways it is far better to have it under cultivation, because it develops into scrub country, and becomes almost a nuisance.
31. Is much of the country liable to be covered with scrub? Yes.
32. Has a good deal of it been scrub which has been cleared by these farmers? Yes; I do not know whether that scrub is so obnoxious as it is in other places; but good land soon grows scrub.
33. Of course, this land is parallel to the main Western line, and is not at a very great distance from it? It is almost too great a distance for profitable cultivation. From Narramine, where a large quantity of grain comes in, it is 36 miles.
34. We are told that, for pastoral purposes, if two parallel lines are 80 miles apart, and a squatter is only at a maximum distance of 40 miles from a railway, that is a reasonable distance? Yes.
35. But in the case of agricultural land, a maximum distance of 20 miles is reasonable? Yes.
36. How far would this line be from a main line? Nearly 40 miles. Some of the farms would lie between the two lines.
37. Looking to the future, you are aware that one of the lines which have been much advocated is that from Narramine to Forbes, so as to make a connection with the Werris Creek line if it be made? Yes.
38. Suppose we open the Narramine line, we shall then have an intermediate line between the present Western line and this new line;—would there be room for three? I should hardly think so under present conditions.
39. That raises the question: Which would be the more important line—one from Narramine to Forbes or this line, because we are told that the Narramine-Forbes line will go through first-class agricultural country? To a large extent that line would bisect the country which this line would serve.
40. What I mean is, if we make this line, shall we rather check the making of a line from Narramine to Forbes? Personally, I should think this line would serve the country better, because I do not see that you

H.
McLachlan.
25 July, 1900.

you want a cross-country line from Narramine to Forbes, unless it be to develop country. The point is, which is the best line to develop the country? The Commissioners have never reported on a line from Narramine to Forbes to my knowledge, but, personally, I think this line would better develop the country than the other.

41. That line has been advocated as a cross-country through line, whereas this is a local line? I do not see what fresh business you are going to get on the Narramine-Forbes line.

42. Do you think we need not distress ourselves at all about a line from Narramine to Forbes? I think it is a question for the distant future.

43. Can we consider this on its own merits? Yes.

44. If we make this line, will it fairly serve the whole district between the Great Western line and this line? Yes.

45. Would the farmers between the two lines have fairly good access to some station or another? Yes. It seems to me to fairly bisect that tract of country, and, from the Commissioners' observation, the country is good and the people there deserve encouragement.

46. Is this a cockspur line for almost purely agricultural business? For agricultural and pastoral produce.

47. Will not most of the pastoral produce go direct to the main Western line? The pastoralists who are close to this line will take advantage of it.

48. It will be a cockspur line, depending mainly on agricultural business and the miscellaneous business which that gives rise to? Yes. The estimate of the traffic officers is that 2,000 tons of wool will come over the line. That is a fair quantity.

49. Except as to the rest of it, the wool is well accommodated? It is no hardship to travel 40 miles with wool in that country.

50. Is there any idea in the Commissioners' minds of a further extension of this line? Not at present.

51. Does the good land cease at Bulbodney? The Commissioners did not go beyond that.

52. Do you think it is better to start from there than to go further west and work north; or will there be room hereafter for another line from Condobolin? The Commissioners did not consider that question.

53. If this line is a good one, and answers expectations, do you hope to make another cheap line northwards from Condobolin? Yes.

54. We need not look about for a better site to start from? No, and it runs through the better country. The further west you get the poorer the country is.

55. We know the land is good, and that the men are there to stay? Yes.

56. As we have no agricultural cockspur line in the Colony, will this line be experimental? Yes.

57. But the loss is one which the Commissioners think we may fairly face? That is their recommendation. As a rule they do not recommend a line unless there is a prospect of its paying working expenses. In this case they make an exceptional recommendation, saying it is worthy of consideration. That is after they had gone through the district, and had seen the character of the country and the people.

58. They will be content to work at a loss for six or ten years if they see that it will eventually pay? Yes.

59. There are all the elements of permanence? Yes.

60. This line is getting into the dry country? Yes; but we know that, in the parallel country, production is increasing.

61. A few dry years must be expected occasionally? Yes.

62. But that does not deter the Commissioners for recommending the line? No.

63. You will have no competition in this district? Yes. That is one feature about this proposal which makes it different from the Culcairn-Germanton railway. We open up our own country.

64. Will not this line require a service all to itself;—you cannot work it with the trucks on the main line? There may be a separate engine, but the trucks loaded there will go right through to Sydney. It will be a tri-weekly service.

65. Have you some tri-weekly lines at present? Yes.

66. Do they answer well? The people would like a daily service. The Temora and Cobar lines were tri-weekly at one time.

67. Do you find any difficulty in working such lines;—are they alternately starved and over-loaded? No. In such a case the Commissioners would start a daily service.

68. Do you have to leave goods behind? No; if we found that happening frequently we would run a daily service.

69. *Chairman.*] Do you expect to draw much traffic from Tomingley and Peak Hill? Nothing is provided for the Peak Hill business in connection with this line.

70. Do you know whether the mineral belt north and south of Parkes extends over this line? No; as far as we know there is not much mineral development about Bulbodney, and the traffic officers allow nothing in their estimate for mineral traffic. Nearer Bogan Gate the mineral prospects are better.

71. Is the branch line, Parkes to Forbes, worked as a separate branch line? We have a through carriage from Sydney, and we would have through trucks. We have what you might call a local service to some extent, with regard to local men and engines from Orange, but it might be considered to be a through business, because the same trucks and carriages can run through.

72. You could not run in the locomotives with this line? No; we would probably have a locomotive to run this line, but all the produce would come through. There would be no junction transfer.

73. *Mr. Watson.*] How do the Commissioners deal with rolling stock on new lines;—is the equipment of new lines with rolling stock part of the vote for the construction of the line? Not as a rule. We throw the rolling stock in, unless it is a very long line, such as Nyngan to Cobar, where you would have to keep a lot of rolling stock, or at Casino, where it would require to be separate; but we do not add anything to these short lines for rolling stock as a rule.

74. Has any attempt been made to see whether a line could be as advantageously located from Parkes as from Bogan Gate? Not to the knowledge of the Commissioners. They make it a rule to report on the line referred to them.

75. Would it not be more advantageous from the Commissioners' point of view, if you had a branch north and south from Parkes, rather than a branch at Parkes, and another at Bogan Gate? There might be a slight advantage.

76. At Bogan Gate you will have to erect duplicates of the junction arrangements, which you have now at Parkes? Still the arrangements of a small junction do not cost much. On the Nevertre-Warren line we have not spent much. That is only a detail.

77. Would it not be easier to work, if you had the junction there, so as to dovetail the trains and arrangements generally? Naturally it would be a little easier to have the junction at Parkes, but it is really not a point that would weigh in determining the route of the railway.

H.
McLachlan.

25 July, 1900.

78. Would it be worth while considering, if all other things were equal? Yes.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and examined—

79. *Chairman.*] Do you produce a map showing the trafficable area between Bogan Gate and Bulbodney? Yes; it is defined by the green mark, commencing at a point 7 miles from Bogan Gate, and embracing an area of about 20 miles on the other side of the line, about 25 miles to the north, about 15 miles to the south, and about 15 miles to the west, and about 15 miles to the east. The following is an estimate of the traffic:—

J. Harper.

25 July, 1900.

PROPOSED RAILWAY, BOGAN GATE TO BULBODNEY; DISTANCE, 75 MILES.

Estimated cost of construction, £229,370, exclusive of land and compensation.

As directed by the Commissioners, I have had very careful inquiries made as to the prospective traffic on this proposed line. The soil is of an excellent character, and at the present time about 23,000 acres are being farmed in the district which would be served by the proposed line. The trade of the district is now dealt with to a large extent at Condobolin, Narramine, and Trangie, and to a small extent at Nevertire, Nyngan, and Parkes. As a consequence, therefore, the construction of this line would mean a certain amount of diversion of traffic from the main line, and I have dealt with this phase of the question in submitting the estimate of the traffic.

As already stated, the land is of an excellent character, and has been taken up by a very thorough and practical set of farmers, who have given evidence of a thorough intention to make the most of the land, notwithstanding the drawbacks to which they have been compelled to submit, owing to the distance of their holdings from railway communication. I may also incidentally remark that the local residents have undertaken, should it be practicable and deemed necessary, to contribute at the rate of 2d. per acre within 5 miles of the railway, 1d. over 5 and under 10 miles, and ½d. over 10 and under 15 miles, in order to meet any loss which may be incurred.

Up to the present time produce has been carted a distance of from 20 to 40 miles to Bogan Gate at 3d. and 4½d. per bushel, 30 miles to Narramine at 4d. and 4½d. per bushel, and 55 miles to Nyngan and 62 miles to Trangie at 6d. per bushel.

The roads to any station on the Main Western line are generally very bad in wet weather, the formation being black soil. The country is chiefly box and pine, and a very large area has been improved by ringbarking and scrubbing. There are large areas of Crown land in the neighbourhood, most of which consist of very excellent agricultural soil.

In the area to be served by the proposed extension there are about 130 selectors. The bulk of these are located between Trundle and Bullock Creek, and the remainder between Bullock Creek and Bulbodney.

My opinion is that, under anything like favourable circumstances, we may look forward to considerable development in this district in the near future; and I am further of opinion that it possesses fairly good claims for consideration in the direction of the construction of a railway; but would suggest that, if possible, some provision should be made whereby the Crown lands should in some direction be required to bear the burden involved in the inevitable loss which will for some time occur in the construction and working of the line.

The traffic of the district would fall in at the following points—

| | |
|---------------------|---------------------------|
| Trundle..... | 15 miles from Bogan Gate. |
| Bullock Creek | 40 " " |
| Bulbodney | 75 " " |

The following is the estimate of the traffic:—

| | |
|---|--------|
| Goods, 800 tons..... | £304 |
| Wool, 2,067 tons..... | 679 |
| Stock, 475 trucks..... | 285 |
| Agricultural produce, 9,700 tons..... | 1,650 |
| | £2,918 |
| From this, however, it will be necessary to deduct the loss due by diversion of traffic from the existing main line, viz..... | £318 |
| Total, goods, wool, and stock traffic..... | £2,600 |
| Coaching traffic, including parcels, H.C.D., &c..... | 900 |
| Mails, 75 miles, at £12 per mile..... | 900 |
| Total traffic..... | £4,400 |

80. The total revenue is practically a little over one-third of the total annual expenditure? Yes.

81. Various suggestions have been made in connection with lines of this character, which are practically developmental lines for bridging the gap between revenue and expenditure;—in this particular case, can you suggest the best means of doing so? In view of the fact that there is such a large area of Crown lands which will be affected by the line, I think, if practicable, the revenue to be derived from the Crown lands should be called upon to meet the deficiency. The line will very largely increase the value of a large quantity of Crown lands in that district. When the Crown lands are dealt with, the fact of a railway being in existence will be taken into consideration either in the assessment or in the valuation.

82. Presuming that most of the people there have taken up land on the old terms of £1 or 25s. per acre, on twenty-eight years' purchase, do you think that another £1 per acre added to the capital value would discourage the taking up of land in view of the construction of a railway? I would not like to say that the land is worth £2 per acre.

83. What is the general character of the holdings there? There are 31,000 acres taken up in settlement leases, 100,000 acres in improvement leases, and 3,000 acres of scrub land; inferior Crown lands, 6,500 acres.

84. Have you details of the conditionally-purchased land? No.

85. These are practically very cheap forms of taking up land? Yes.

86. Would not any attempt to materially increase the capital cost discourage the taking up of that class of land? Yes; but still we have the fact that the people there are willing to contribute to the cost of the railway.

87. I notice that the people have promised to guarantee a considerable portion of the loss? Yes; they are prepared to guarantee up to 2d. per acre for land adjoining the line. If they are prepared to guarantee that much it would not be unreasonable to ask the Crown to set apart either the same amount or a little more. It is country which, unless it is closely settled, will certainly never be of much value to the State or to any one else. It requires cultivation to rid it of scrub. It is very rich, but much infested with scrub.

- J. Harper. 88. Do you anticipate much traffic from the mineral belt to the east of this line? No; that would go into the main line. The mineral developments at Melrose would be affected by it—that is, to the west of the line. There is another question which I did not look into very much, but I think it is worth considering. This line represents about the shortest route which you can get to Nymagee. I do not know what engineering difficulties might be in the way, but it seems to be 30 or 40 miles shorter than any other route. It would bring Nymagee 40 miles closer to Sydney and Eskbank than it would be by any other line. If Nymagee develops like Cobar there will be some justification for extending this line to that point.

THURSDAY, 26 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

| | |
|--|-----------------------------|
| The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | JOHN CHRISTIAN WATSON, Esq. |
| The Hon. ANDREW GARRAN, LL.D. | ROBERT HENRY LEVIEN, Esq. |
| The Hon. SOLOMON HERBERT HYAM. | JOHN MCFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and further examined:—

- J. Harper. 89. *Dr. Garran.*] Does all the pastoral traffic to the west of the Western railway come to some station or another on that line at present? Yes.
90. Would this new line intercept some of that traffic? Yes; I have allowed for that in my estimate.
91. How far to the east would the effect of the new line be felt in drawing pastoral traffic? About 20 miles.
92. And everything to the west? Yes—of course, within a radius of about 22 miles.
93. Would the Bulbodney station draw the Nymagee traffic? I hardly think so. It is only 38 miles from Hermidale, on the Cobar line, with a good road, and plenty of water. That is where they go at present.
94. Is there a small mine at Overflow? Yes; there are several small mines there.
95. Will you get all the traffic from there? Yes.
96. Will there be a little terminal trade? Yes.
97. And it may grow? Yes.
98. Is the mining development at present only in its infancy? Yes.
99. It may prove to be something or nothing? Yes; the probability is that their distance from a railway at present keeps them back.
100. How far does agricultural development go on the line at present? The whole distance.
101. Is it equally good land all the way to Bulbodney? It varies; but the great bulk of it is very good land.
102. Is any of the land which is not taken up tied up in leaseholds for a term of years? I think some of it is; but I do not know the nature of the tenure.
103. Has the selection been on the resumed area mostly? Yes.
104. From the figures you read yesterday it would appear that a large quantity of land there has been taken up under settlement leases, improvement leases, and scrub leases? Yes.
105. In all these cases does the title remain in the Crown? Yes.
106. So that at the end of a term of years the improved land will come back to the Crown? Yes.
107. The quantity of conditionally purchased land does not seem to be large? No.
108. Are the areas comprised in improvement and scrub leases rather larger areas as compared with conditionally-purchased land? Yes.
109. So that the population would not be so large as if the land had been taken up on conditional purchase? No.
110. Have you formed any estimate as to what the population is likely to be when the line is made? No; it is impossible to form such an estimate.
111. Is the industry at present mixed agricultural and pastoral occupation? Some of the selectors there are keeping sheep as well as growing wheat; but a great many are only growing wheat at present. Of course, they have had adverse seasons ever since they have been there.
112. Is there a great deal of scrub to clear away? Yes; the ordinary Bogan scrub, growing on good soil.
113. Is it much the same kind as is to be seen at Nyngan? Yes; the same as you see between Nyngan, Cobar, and the Bogan.
114. Where the Government has been clearing the scrub? Yes.
115. Where the land is cleared is its quality very good? Yes.
116. Do the settlers seem to be going ahead? Yes; two brothers have 2,300 acres under wheat on one farm. That gives an indication of the class of farmers who have settled there. They are a very good class of farmer—Victorians almost to a man. They have had very bad seasons during the last three or four years.
117. After the line is made, during the first three years the area under grain will not be anything like what it will be afterwards? No.
118. So that the amount of traffic during the first few years, will not be a fair test as to what may be expected later on? No; the country will constantly go on improving when there is railway communication.
119. Is your estimate based on the traffic which you expect to get at first? Yes.
120. So that the annual loss ought to diminish after the first few years? Yes.
121. We have one junction already at Parkes to go to Forbes, and now it is proposed to have another at Bogan Gate;—would there be any advantage in making this branch start from Parkes? No. In the first place, by that means you would not serve so large an area; because, in leaving Parkes, the line would run at an acute angle, and it would not go through such good country as the line now proposed.
122. Could not we go at right-angles due north? You would then miss some of the best settlement in the district. The best settlement is on the main road to Trundle and Bulbodney. 123.

123. But at every junction do you not want extra appliances? Not at a junction of this kind. It would require one additional man, probably. It would probably be worked from Parkes in conjunction with the Forbes service.

J. Harper.
26 July, 1900.

124. If so, would it not be more convenient to have only one junction? The same train-staff would be employed as we have for Forbes.

125. You do not think that there would be any more people employed under this proposal than if we junctioned at Parkes? No.

126. How far are the Peak Hill people from their nearest station? From Parkes it is 33 miles; it is 32 miles from Narramine.

127. I suppose Parkes is their station? Yes.

128. Is there considerable traffic there? There has been a good deal of machinery going there at one time and another, but I cannot say for certain what traffic is going there just now; but, of course, if you keep in that direction you will miss a great deal of the country to the west.

129. Has this line the advantage of being in no way a competitive line? Certainly; but it will divert some of the traffic from the main line.

130. But we are only in competition with ourselves? Yes.

131. We are improving the very heart of our own country? Yes.

132. Is it too far west for agriculture? No; the rainfall is about 21 inches.

133. And the gradients on the line are easy? Yes; they are 1 in 100.

134. Is there any danger of being flooded at any part of the line? No.

135. Although the initial loss may be £8,000 a year, do you reasonably look for a steady reduction of that loss? Yes.

136. *Mr. Hyam.*] Have you been over this line to Bulbodney? Yes.

137. I have been twice over the whole length of this line, and from what I was told by the residents, I was under the impression that they had offered to guarantee any loss on the working of the line? Yes; they are prepared to pay 2d. per acre for land within 5 miles of the railway, 1d. per acre on land from that point up to 10 miles distant, and so on.

138. Is it your impression that it would be a very easy line to work? Yes.

139. Would it be similar to the line from Bogan Gate to Condobolin? Yes; it would be practically the same. It is a cheap line. There is only one range to get over, and it is a very low one.

140. Do you think that, besides wheat and wool, there would be any other traffic on the railway? The country to the west is full of minerals, and I do not know what mineral development may take place there.

141. Did the people there inform you that there would be a large trade in poultry and eggs during the winter months? That is a very small item.

142. They seemed to think that the quantity would be enormous; the laying season is in winter, and in the wheat fields they could keep an enormous number of poultry, and, if they had a market, they would send them by the railway;—is that a paying trade? No; there is nothing in it in the net or gross value. The same thing as far as poultry raising is concerned applies wherever they grow wheat. There is a lot of very good pine timber in that district, but they have been ringbarking so extensively that a good deal of it has been destroyed.

143. You stated that a good deal of this country was under settlement lease, improvement lease, and scrub lease;—are the areas there very large? No.

144. Are the areas too large to prevent close settlement? No.

145. Hence there would be a fairly numerous population? Yes. There is nothing to prevent the farmers from carrying a good number of sheep, and at the same time there might be a comparatively dense population.

146. Is there a great deal of wheat-growing carried out in the district? Yes; there are 23,000 acres under wheat.

147. Have some of the farmers large areas under wheat? Yes; as I have mentioned already, two brothers have 2,300 acres under wheat, and there are other farmers who have large areas under cultivation.

148. Did they inform you that they would grow considerably more wheat if they had railway communication? Yes.

149. Do you think that a line running to Bulbodney would serve a considerable amount of side country? Yes; I have indicated that on the map by means of a green strip.

150. *Mr. Watson.*] Have you seen the country to the west of the proposed line? No.

151. It seems probable that, some day or another, a line will be taken from Parkes to Narramine, in which case it would be advisable to have this proposed line of railway further west than is now projected? That is a matter for inquiry. I do not know much about the land in the west. As you go west you get closer into the range which is marked on the map. I think it is called the Black Range.

152. That range does not seem to be very extensive, judging from the feature map? I am not personally acquainted with the country in that neighbourhood.

153. Can you say anything as to the country between Bulbodney and Nymagee? It is good red-soil country practically the whole way.

154. Do you think that the rainfall to the west of Bulbodney is sufficient to justify cultivation? It diminishes there.

155. Towards Nymagee, would it be outside the wheat-growing zone? I scarcely think so. As far as Nyngan they grow wheat, and also along the Bogan. I have seen some very good crops in the neighbourhood of Nyngan.

156. *Chairman.*] Do you think that the line would practically serve all the good country in that neighbourhood? Yes; it is a very good location, judging by the settlement which has already taken place there.

157. *Mr. Shepherd.*] The report states that the ruling grade is 1 in 100 against the load, and 1 in 80 with it;—what is the meaning of that passage? That means that the loading is never equal—that is to say, that in hauling traffic in the direction of Bulbodney the loads would never be so heavy as they are coming towards Sydney. The grade coming towards Sydney would only be 1 in 100, while in going towards Bulbodney it would be 1 in 80.

Charles Edward Rennie, Chief Draftsman, Department of Lands, sworn, and examined:—

- C. E. Rennie. 158. *Chairman.*] Do you produce a map showing the character of the holdings in the district to be served by this railway? Yes.
- 26 July, 1900. 159. Will you describe the limits of it? The areas are taken out within 20 miles of the proposed line—Bogan Gate—Bulbodney Creek. Allowance is made for the influence of the line, Parkes to Condobolin, on the south. The areas within these limits are as follows:—Alienated land, 813,700 acres; reserves, 112,000 acres; settlement leases, 84,580 acres; improvement leases, 177,800 acres; scrub leases, 410,320 acres; inferior Crown lands, 3,100 acres; Crown lands, 366,800 acres. The tenure of the Crown lands is as follows:—Under leasehold, expiring on the 4th August, 1900, 143,170 acres; under leasehold, expiring in August, 1901, 1,100 acres; area of leasehold, expiring in 1903, 2,130 acres. The area which will be held under occupation license in a few days will be 113,000 acres; untenanted, 107,400 acres. These areas are shown on the map as follows:—Alienated land, blue tint; land held under various kinds of leases, blue hatching; Crown lands, brown tint; reserves, green tint.
160. Does the brown tint represent unoccupied lands? No; it represents all the Crown lands outside reserves.
161. *Mr. Hyam.*] Where is the unoccupied land? It is scattered in different pieces throughout the whole area.
162. *Chairman.*] Can you give us the details with regard to the settlement, improvement, and scrub leases? I have not got that, but the usual tenure of settlement leases is twenty-eight years; improvement leases, vary up to twenty-eight years; and scrub leases up to twenty-eight years; inferior Crown land leases, twenty years.
163. Taking a general view of the map, does the leased land follow pretty closely the course of the proposed line? Yes; the greater part of it abuts on to the proposed line.
164. So that the construction of the line would practically improve the Crown estate all the way? Yes, for a great part of the way.

THURSDAY, 2 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.

The Hon. ANDREW GARRAN, LL.D.

The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

George Charles Yeo, draftsman, Stock Branch, Department of Mines and Agriculture, sworn, and examined:—

- G. C. Yeo. 165. *Mr. Watson.*] Have you any statistics showing the number of stock in the district which will be served by the proposed Bogan Gate to Bulbodney railway? Yes; the number of stock which was depastured in that area was as follows:—In 1897, 2,700 cattle, and 359,850 sheep; in 1898, 2,670 cattle, and 366,091 sheep. The wool clip was as follows:—In 1897, 5,400 bales; in 1898, 5,490 bales. In the area which will be affected by the railway, there are nineteen large owners of sheep, and eighty-seven small ones. The stock traffic has been as follows:—In 1897, from Trundle and north to Bogan Gate, 4,200 sheep; in 1898, between the same places, 7,430 sheep. In 1897, the stock traffic from Bogan Gate to Trundle and north was 3,000 sheep; and in 1898, between the same places, it was 11,861 sheep.
166. What are the boundaries of the district which you have taken as being likely to be served by the proposed railway? I have taken the boundaries shown in green on the map produced by Mr. Harper, the Chief Traffic Manager of the Railway Department, with the exception of the Burdonda holding; I have included the whole of that in my returns. The boundaries run in a north-easterly direction to the Bogan River at Wallanbillau. From there they follow the Bogan River downwards to Burdonda; thence westerly to about the centre of the Melrose holding, and generally south through Melrose across to the starting point.
167. Does the district which you have described extend roughly on the eastern side about 20 miles from the proposed line, and then does it go about 15 miles north of Bulbodney, and on the western side about 22 miles? Yes.
168. Do you know where the stock from that district makes for now;—does it go towards Parkes or the Western line chiefly? The stock mostly make up the Bogan. That is the biggest drift of stock at the present time.
169. From the Bogan does fat stock come towards Sydney? I have not taken particular notice as to which way it works after that.
170. Has there been any great variation in the number of stock in the district which you have described;—have many sheep been lost owing to the drought? Yes; during last year it made a difference of about 100,000 sheep. In 1896, which was a good year, there would be about 100,000 more sheep in the district than the numbers I have given for the two succeeding years.
171. *Mr. Hyam.*] Do you know the particular stations on which those sheep were lost? No; I am giving only the general loss throughout.
172. *Mr. Watson.*] Have you anything in your returns which would show whether the loss was larger on the large holdings, as compared with the small holdings? I could ascertain that, because we have the returns of each individual holder. By comparing the figures for one year with the previous year, I could show what decrease has taken place.
173. It is contended by some people that there is a better chance of saving stock on small holdings, on account of the improvements which are generally made. I would like to know how your returns bear on that? The returns will show the actual losses of each individual, whether the losses occurred on large or small holdings. I will prepare such a statement for the years 1897, 1898, and 1899. [*Vide Appendix.*]
174. *Mr. Hyam.*] Do you say that the loss of stock within the green boundaries marked on this map numbered 100,000? Yes; close to that.

175. What is the area of country within the green boundaries? 3,696 square miles. My returns only show the owners of sheep. G. C. Yeo.
2 Aug., 1900.
176. *Mr. McFarlane.*] Taking into consideration the area of country which is likely to be affected by the proposed railway, how will that compare with other pastoral districts as to the number of stock which is kept? It compares very favourably with any other pastoral district.
177. Do you think that the construction of the proposed railway will increase the number of stock in the district? I do not think so, unless it tends to promote the cutting up of the large holdings. There are, however, only nineteen large holdings.
178. Is it not generally the result that when large holdings are cut up into small ones, it tends to increase the number of stock kept in that area? I have never worked out the figures, in order to ascertain the exact results in that way.
179. In your returns you furnish two years' statistics of stock;—can you say what was the number of stock running in those boundaries previous to 1897? Yes. I have already stated that, in 1896, there was practically an increase of 100,000 above what I have stated for the two following years.
180. What was the reason for that large decrease? The drought.
181. How did the year 1899 compare with the year 1896? It showed a decrease of nearly 200,000 on the returns for 1896, which was a good year.
182. Have you worked out the figures for 1896 and 1899 in such a way as to show how they compare with the figures in other pastoral districts? No.
183. Have you reason to think that the number of sheep and cattle in that district suffered a greater decrease than in other districts of the Colony? No.
184. Has the number of holdings increased? There was a slight increase in 1898 as compared with 1897, but it was only very slight. My figures, however, only refer to the owners of sheep. There might have been an increase of agriculturists, but that would not be shown in our statistics.
185. I see from the figures that the stock traffic has increased;—what is the reason for that? It is impossible to tell why a slight increase of traffic has taken place. The traffic to the Bogan varied a few thousands backwards and forwards.
186. What I was thinking about was that if there had been a decrease in the actual number of stock in the district, what reason could there be for an increase in the actual traffic? It would be hard to say where the increase came from; it might come northwards from that district; it might consist of stock coming down from Nymagee and Cobar. The figures do not prove that the increase arose from local stock.
187. Have you any return as to fat stock sent to Sydney? We get the cast of fats in the returns for one annual report. I can give the annual cast of fats, but I shall first have to look up the figures.

FRIDAY, 10 AUGUST, 1900.

[The Committee met at the "Bogan Gate Hotel," Bogan Gate, at 3:45 p.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

William Todd, forwarding agent, Bogan Gate, sworn and examined:—

188. *Chairman.*] Do you represent the firm of Hollibone and Todd? Yes. W. Todd.
10 Aug., 1900.
189. Are you also a landholder in the district? Yes, I have been here fourteen years.
190. Have you some knowledge of the development which has been brought about in this district by the construction of the Parkes-Condobolin railway? Yes.
191. What has followed in the way of settlement, increased production, &c., through the opening of that line? Settlement has increased greatly along the route from Parkes to Condobolin. There has been a great demand for land, and when land has been thrown open we have had to go to a ballot, and there has been from eight to fourteen applicants for each block.
192. Coming along in the train to-day, we noticed a great deal of land adjacent to the railway which is not under cultivation, and there does not seem to be much improvement;—what is the reason for that? I think most of the land which you saw along the railway is held by Nelungaloo station. Apart from that there is a reserve along that line, and there is settlement on both sides of the line, which you could not very well see from the train. The land on the station is secured land.
193. What is the area of that land? About 18,000 acres.
194. Is there much land still in the district adjacent to the Parkes-Condobolin railway which is fit for agricultural settlement; but which has not yet been taken up? Yes; there are large areas of land, which I expect will soon fall in, and which is good wheat-growing land. It is now held under lease.
195. Do you think that the construction of the Parkes-Condobolin line has had a distinctly beneficial effect upon the district? I am quite certain that it has. When I came here, fourteen years ago, this country was all scrub.
196. Taking the district proposed to be served by a line from Bogan Gate to Bulbodney, how would you compare the character of that country 20 miles on each side with the country along the Parkes-Condobolin line? It is similar country for wheat-growing purposes all the way along that route.
197. What area along the route of the proposed line would be sufficient to enable a farmer to make a decent living for his family? 2,560 acres.
198. Would it be necessary to carry out a system of mixed farming? Yes.
199. What is the general tenure of the land;—is it mostly held in large sheep runs at present? Yes.
200. When will the leases fall in? I understand some of them will fall in within three years.

- W. Todd.
10 Aug., 1900.
201. Do you think the falling in of the leases and the construction of the line will offer attractions to farmers who have had experience in wheat growing? Yes. I know several Victorians have come here, and have gone 40 miles away from here in search of land for wheat-growing purposes. They consider that it is equal to the country they have come from.
202. Is there any wheat cultivation to a large extent in the direction of Bulbodney? Yes; out at Bullock Creek there are large areas under wheat cultivation.
203. Do you think the district towards Bulbodney is at present kept back, as far as its agricultural capabilities are concerned, for want of railway communication? Yes.
204. The official estimate of the total annual cost of this railway is £12,916 per annum, and the anticipated revenue is only £4,400;—do you think that we may reasonably expect within a few years the great gap between revenue and expenditure will be bridged over? I think a certain amount of it would, because the people would go in more for cultivation if they had a railway.
205. It has been proposed that a special financial arrangement should be made, and I find that the people of Bulbodney are prepared to guarantee an annual amount of £1,257, and it is anticipated that the people at Bullock Creek will be prepared to guarantee a proportionate amount;—do you think it would be a paying concern to the settlers who would take up land in the district to give such a guarantee? I certainly think so. If I were 50 or 60 miles out from here, I would be willing to guarantee a certain amount, because the railway would enhance the value of the land.
206. What difficulties are the people subjected to with regard to road facilities? It is impossible to get in wheat. We have wheat 40 miles from here, and we have been trying for three months to get teams to bring in that wheat.
207. Is that the normal condition of things? It is according to the rainfall. The roads are easily made difficult by a very small rainfall.
208. It is generally urged as one reason in support of lines to districts suitable for mixed farming that a largely-increased fat stock traffic might be reasonably anticipated;—are the stockowners in this district handicapped at present with regard to fat stock? Yes; owing to the great distance they have to travel before they begin the long train journey.
209. Can we reasonably expect that each small owner on the proposed railway would be able to send in small consignments of fat stock where they are now absolutely prevented from doing so? Yes. It costs a great deal at present to drive fat stock 30, 40, or 50 miles. By the time the sheep get to Sydney they look much worse than they would if they could be put on the railway at once without long driving.
210. Could we expect much traffic in that way from each holder? That all depends upon the season, with regard to the fattening. A lot of stock have gone from here this season, owing to its being good.
211. Can you get three fattening seasons out of five? We are subject to droughts, and we cannot foretell. The rule is to have a few bad seasons, and a few good ones.
212. *Mr. McFarlane.*] Has any attempt been made to cultivate the land along the proposed railway? Yes; there are large areas under cultivation now.
213. For how long? The last three years.
214. Can you give any of the results and the average per acre? The average in this district during the last three years has been about 8 bushels to the acre. Further out the yield is much better.
215. Would the three years you refer to be considered unfavourable seasons? Yes.
216. Would that represent a fair average, taking the good years with the bad years? No; that is the average of three bad seasons. I think you could put the average, taking good and bad seasons, at 16 bushels an acre. The last three years have been exceptionally bad.
217. Which are the principal centres of population? Trundle, Bullock Creek, and Bulbodney.
218. Do they do business with Bogan Gate? Yes; the traffic comes here principally.
219. Do the farmers draw wheat to the railway station here? Yes.
220. What is the greatest distance from which they draw wheat here? Seventy-five miles—that is from Woodlands.
221. Would that pay? No; but they grow the wheat and they must get rid of it.
222. Have you done much in the way of forwarding goods along the proposed route? Yes.
223. Do you think the construction of the railway would increase the goods traffic? Yes; there would be an increase in settlement, and an increase in goods traffic must follow.
224. What class of country is it, speaking from a pastoral standpoint? It is good sound sheep country.
225. What is its carrying capacity per acre? If the land is well improved it will carry one sheep to the acre, taking one season with another. I am speaking of country which is fenced, subdivided, scrubbed, and ringbarked.
226. Is the country fairly well watered? There is not much permanent water; it has to be conserved.
227. In times of drought have there been severe losses? Yes.
228. Do they travel stock during times of drought to other districts which are more favoured? With railway facilities they would do so. Sheep have been sent away from here.
229. In what direction would they be likely to go? East; towards the mountains.
230. Do you think sheep-farmers would avail themselves of the railway in times of drought? Certainly; I would do so myself.
231. Is this good fattening country? Yes; after it is improved.
232. Do any fat stock go through here to the market? Not during the last three or four years, owing to the unfavourable seasons. Several lots have gone through this year.
233. In good seasons do you think that a large business would be done? Yes; they go to the Sydney market principally, and also to Orange and Goulburn.
234. Is there much traffic in store stock? Yes; at present a lot of sheep are changing hands.
235. Is the country heavily timbered? Yes; parts are heavily timbered with box, pine, and oak.
236. Is it expensive to clear? Not after it is dead.
237. What is the average cost of ringbarking? About 8s. an acre.
238. Is there much of it scrub country? Yes; a portion of it. It consists of pine scrub.
239. If a railway were constructed, do you think that people would go in for cultivation? I am certain that they would.
240. Is there much available Crown land within easy reach of the line? Yes; all along it.
241. Are there many large holdings privately held? Yes, they are fairly large—from 2,560 acres up to 7,000 or 10,000 acres.

242. Do you think that the holders of 10,000 acres, who have land suitable for cultivation, would be likely, in the event of the railway being constructed, to lease the land for agriculture, or cultivate the land themselves, in preference to sheep-farming? There is quite sufficient land to be thrown open on the proposed route for people to settle on without leasing from the large holders. W. Todd.
10 Aug., 1900.
243. Has there been any leasing in the district? There is a little of the halves system worked in the district.
244. Has that been satisfactory to the tenants and the owners of land? Not during the last three years.
245. In favourable seasons, do you think the system is fairly satisfactory? I think it is more satisfactory to the landholder.
246. Are there agricultural areas suitable for growing other products than wheat? Wheat is the principal product. A little barley growing has been tried successfully.
247. *Mr. Shepherd.*] You say that 2,560 acres would be a fair area for a man to make a living by mixed farming? Yes.
248. How would you divide the industries? My idea would be to farm 640 acres—320 one year, and the balance the second year. In that way you would get better results than if you farmed the whole 640 acres at once. I would use the balance of the land for running sheep.
249. What is the average yield of wool per sheep? About 5 lb., lambs included.
250. Do you think that any less area would be insufficient to keep a family? Certainly a smaller area would keep a family well if they had good seasons for wheat production, but not otherwise.
251. What is the rainfall in the district? About 20 inches.
252. At what time of the year does it usually fall? We have heavy rains in summer, and, as a rule, we have fairly good winter rains.
253. Does the rain fall about the right time for crops? We want early rains to put in the crops, and late rains to fill them. The trouble last year was that there were no late rains.
254. Which would be your market? Sydney, principally.
255. Would it pay to send hay to Sydney? There has not been much hay cut in this district; it has principally been wheat.
256. Have you suffered much loss in stock from the drought? We have had our share, like other places, especially during the last two years.
257. Would there be any land available here to receive starving stock in a dry time? No.
258. We are generally told that a railway will induce wheat-growing, but we saw thousands and thousands of acres along the railway to-day apparently fit for wheat-growing, but which did not appear to be touched—that was on both sides of the Parkes-Condobolin line; how do you account for that? On the right-hand side of the line most of the land has been taken up in small areas during the last two or three years. There is very little Crown land on the right-hand side of the line which is not occupied. On the opposite side you come through a large station on which a considerable area is held as freehold.
259. What would be the average size of the holdings? About 1,000 acres. The land there has been thrown open under homestead selection.
260. Is not that rather less than you say would be sufficient for a good living? Yes.
261. Is much of the land out here secured, or is it generally held under lease? A large portion of Burrawang station is secured. There are about 100,000 acres of freehold.
262. Do you know the country between here and Bulbodney? Yes.
263. Do you say that it is quite equal to the country about here? Yes; it is quite equal to the country between here and Parkes. It might be a little more expensive with regard to timber.
264. What does it cost to clear land here? With the timber on it, it costs about 10s. an acre to clear the land for the stump-jump plough.
265. How long is it ringbarked before it is fit to clear? Four or five years. It costs 8d. or 9d. an acre to ring it, and the scrubbing depends upon the thickness of the scrub.
266. Would there be sufficient timber on the proposed railway to furnish sleepers? Yes; taking a distance of about 16 miles on each side of the line, you would get sufficient ringbarked timber for sleepers for the line.
267. *Mr. McFarlane.*] How long has the country been ringbarked between here and Parkes? A lot of it for fourteen or fifteen years. Some of it has only been ringbarked lately. A lot of that country which you came through might be said to be green; that was owned by the Honorable John Lackey, and no improvements were made, except where there was selection. The line has been opened about three years.
268. What class of soil is there between here and Bulbodney? Rich loamy chocolate soil; further out it is inclined to be a little clayey.
269. Which is the most suitable for agriculture in this district? Red chocolate soil.
270. How far on each side of the line would the railway serve? About 20 miles.
271. *Chairman.*] Is a good deal of the country very scrubby? Yes, in places.
272. Is it a fact that, in its present condition, without a railway, it is hardly profitable to remove the scrub if you devote the land to sheep farming entirely? That all depends upon the leases. I am certain that if they had a long tenure on some of these stations, they would be quite willing to remove the scrub.
273. In the official report it is stated that only by resorting to agriculture can the country be profitably cleared of its superabundance of scrub growth, and freed from rabbits and other animal pests;—you agree with that statement generally, with a modification as to the length of the leases? I know very well that if they had long enough leases they would clear away the scrub.
274. Which would be the most profitable to the country as a whole—an extension of the leases or opening the land for agricultural settlement? Throwing open the land.
275. Is there anything else you would like to add? I have made out a statement of the agricultural machinery which we have brought into the district. We represent the machinery firms, Massey-Harris Machinery Company and T. Robinson and Company, of Melbourne. Since 1898 we have unloaded here 130 machines, consisting of ploughs, 17; strippers, 18; winnowers, 9; threshing machine, 1; harrows, 7; tread powers, 8; binders, 26; cultivators, 30; thatching machines, 6; chaff-cutters, 8. We have ordered ten machines for the coming season. Most of that machinery was sold in 1898 and 1899. There were several other orders given besides these; but they were cancelled. There are other machinery agents in the district; but no records have been kept.

John Christie, farmer, Bogan Gate, sworn, and examined:—

- J. Christie. 276. *Mr. Shepherd.*] Where do you live? I live about 3 miles from Bogan Gate.
277. What is the area of your farm? At present it is 1,137 acres.
- 10 Aug., 1900. 278. How much of it is under cultivation? About 100 acres this year. I have only had the land, on which I am now living for three years. I leased the remainder of my land for grass.
279. What number of sheep are running on the balance of your land? There have been 2,000 or 3,000 at a time; but not permanently all the year round.
280. About what do you suppose it would average per year? It would carry about one sheep to the acre all the year round.
281. Has it been ringbarked? Yes; by the station. The dead timber is standing on a great portion of it.
282. Is it on the proposed new line? No.
283. What effect do you think the construction of the line would have on the district? I think it would very considerably develop the district for agriculture chiefly. It would also improve it for stock carrying, because the country would be more improved.
284. What has been your average return of wheat to the acre? During the last two years it has been very bad. The rabbits were very bad, and the seasons also bad. In good seasons the average would be about 16 to 20 bushels per acre, and more in good seasons.
285. Has fruit-growing been tried to any extent? No, except at Burrawang station, and on the other side of Trundle and Mr. Foy's place. Grapes have been very successfully grown there.
286. Is there any timber in the district which it would pay to cut for sale? Yes, there is a considerable amount of pine, which would be very saleable.
287. Are you acquainted with the country along the proposed line? Yes, I lived close to Trundle for seven years, and I have been in this district for fifteen years.
288. What is the principal timber that would be available? Pine and ironbark.
289. I have noticed that most of the pine scrub timber is very small; has the timber which you have referred to been much used? There are forests of pine which are too far away to be used up to the present; they could be utilised if the railway were constructed. There is also ironbark.
290. Do you find that the country upon which ironbark grows is good for agriculture? No; it is generally found on the ranges in this part of the country.
291. What area of land is required to fairly support a family by mixed farming? 1,280 acres is sufficient of good agricultural land.
292. What proportion do you consider should be taken for farming and for grazing? I believe in cultivating as much of the land as possible. You can carry very nearly as many sheep if you farm a great quantity of it. You are able to feed your stock on stubble and straw after you get your crop off.
293. Have you kept stock? Yes.
294. Which pays best, growing crops or running stock? Without a railway, of course, cultivation is a loss; with a railway I would favour cultivation.
295. Have you cultivated land sufficiently long in the district to know what time the land would stand cropping without manure? A great deal depends upon the mode in which the land is worked. If it is well cultivated it will last twenty years—that is, by giving it a spell occasionally, say once in three years. I have known land in this district which has been cultivated for fifteen years in succession.
296. Is that the red land? I am speaking of the black soil.
297. Do you think the black soil would be more durable? Yes.
298. Does it throw equally good crops? Yes, where not liable to be under water in winter; a great deal of the black-soil country on the Bogan and Lachlan Rivers is under water in fair seasons.
299. Have you tried anything except wheat? No.
300. How does it answer for vegetables? I have grown splendid vegetables during the last few years. I have also grown very good melons and cabbages, and also splendid Swede turnips.
301. Have you grown all these crops without manure? Yes; I have given suitable manure to the cabbages.
302. Is there any other information which you can give to the Committee? I know the Trundle district very well. The people there are of a very good class, and with a railway they will develop the country thoroughly. Without a railway, they can only develop the country at a loss to themselves. They cannot possibly grow wheat and send it a great distance at the price now given.
303. What do you consider is a fair distance from a railway to enable a man to successfully carry out farming? Not more than about 15 miles.
304. To some extent would not that depend upon the roads? Taking good roads into consideration, I would not like to go further than 15 miles from a railway.
305. *Chairman.*] Are you acquainted with the country right out to Bulbodney? Yes; right out to Dandaloo.
306. Is it all fairly good for agriculture 20 miles on each side of the line? Yes; the scrubbiest part of the land often turns out to be the best for agriculture when cleared.
307. Does it cost much to keep down the scrub where the land is devoted to pastoral purposes? Yes; it is very bad country to seed, and it is only by cultivation that it can be brought into good condition.
308. Has the district, in spite of rabbits and bad seasons during the last four or five years, been progressing steadily? Yes.
309. Could we anticipate any immediate increase of settlement with a railway? Yes.
310. Have you had experience in any other part of the Colony? Yes, in Riverina.
311. How would this district, from a wheat-producing point of view, compare with Riverina? It is superior. There is a greater quantity of good land here than in Riverina suitable for farming.
312. Is the yield and quality of wheat as good as in Riverina? Yes.
313. What position does the wheat grown here take in the milling world? It takes a very good position. A railway will enable mixed farming to be carried out with great success. Large quantities of poultry, pigs, and fruit will also be raised in the district.

Alexander John Evans, commission agent, Bogan Gate, sworn, and examined:—

314. *Mr. McFarlane.*] How long have you resided here? About three years; but I have been fourteen years in the district. A. J. Evans.
10 Aug., 1900.
315. Have you a good knowledge of the country through which the proposed line will pass? Yes.
316. What is your opinion concerning it? I think it is a very favourable country for a railway; it would also be very beneficial for agriculture and pasture—principally agriculture.
317. How would you class this country from an agricultural point of view? The best portion of it I should call good agricultural country.
318. Taking about 15 miles on each side of the proposed line, what proportion of agricultural country do you think there would be? With the exception of about 12 or 15 miles of it, nearly the whole of it is agricultural country.
319. Would the country, which is not suitable for agriculture, be suitable for pastoral purposes? Yes; and it is rather good for mining.
320. Where is that country? At Burra Burra, about 45 or 50 miles from here.
321. Since you have been in the district, has it become more settled, and has there been a marked increase in population? Yes; we had no population three years ago at Bogan Gate.
322. In your business have you done much in the direction of the proposed railway? I have been dealing with wheat a good deal. 7,000 bags of wheat went through my hands, and about 5,000 bags came from that direction.
323. If the proposed railway were constructed, would it induce the cultivation of wheat? I think it must do so.
324. Would people utilise the land for that purpose rather than for pasturage? They would use the best portion of it.
325. How would the line affect Bogan Gate? It would affect the carting of wheat, but we have a great extent of country. We have 30,000 acres suitable for cultivation.
326. Is this a business centre for the people on the proposed line? The business passes through here.
327. Do you think that wheat growing at the present low prices is payable? It would pay if there were anything like crops.
328. Even at the present low price, with fair seasons and railway facilities, would it pay? Yes.
329. Are there many inquiries here for settlement? Yes.
330. Do you think the available Crown lands would be taken up? Yes; we have a great number of applications for nearly every block thrown open.
331. Do you think that that would particularly be the case if there were railway communication? Yes.
332. How would the cultivation land in this district compare with other districts? It is equally as good as the land at Riverina, and it is equal to the land in the Corowa district.
333. How far would it pay a farmer to carry his wheat to the nearest railway station? We are carting it in here for a distance of 68 or 70 miles.
334. Would that pay? No.
335. What would be a reasonable distance? Fifteen or 20 miles.
336. *Chairman.*] Do you know the country to the west of the proposed line? Yes.
337. How far west does the good agricultural land extend from here? You have good agricultural land all the way west; it is on the east that there is a bit of inferior land.
338. You stated that there are indications of minerals on the inferior land; can you give any evidence on that point? We had an Inspector of Mines here lately, and he gave a very good report. There is gold in quartz and tin ore at one place.
339. Do you know the country towards the Western line? Yes.
340. It has been proposed to make the line from Parkes through Peak Hill to Narramine as an alternative to this route. It is supported mainly because it will serve a larger population, and open up a rich mineral field;—would the Bogan Gate line, or the Parkes extension, be the most justifiable in the public interest? The Bogan Gate line would be.
341. Do you think there are greater probabilities of prosperous settlement along the Bogan Gate line? Yes, I am sure of it.
342. Do you know any holders of land close to the Condobolin-Parkes line who have not yet made any attempt to put the agricultural land which they hold to the most profitable use? No; every one of them is going in for agriculture, and doing all he can in that direction.
343. Is it plain that the construction of the Condobolin line has stimulated agriculture? Yes; I was there when there was not a sod turned over. I have been here since the 5th August, three years ago, and the increase in agriculture is from 600 acres to 4,400 acres, within a radius of 8 miles from Bogan Gate. That is in spite of bad seasons. We had only a population of men, women, and children of 86 two years ago, now we have a population of about 280. They come to school from a distance of 2 miles.
344. What is the average capacity of the wheat-growing land? I am sure we can get 16 bushels to the acre in any season. People are asking us to sell our homestead selections already, and they are offering good prices.
345. What is a fair average value of land in an unimproved state? Anywhere near the railway you could get 10s. to 12s. per acre for land in its unimproved state.
346. Has there been a steady and consistent demand for land in this district since the construction of the railway from Parkes? Yes; I have inquiries for 2,560 acres conditional purchase and conditional lease anywhere from here to Bulbodney.
347. Do you think the settlers, in the district to be served by the railway, are prepared to pay special rates, or special taxes, on land in order to liquidate the deficiency between the revenue and expenditure? I think they would be willing to do almost anything to have railway communication. It is quite impossible to get teams to carry anything at present.
348. Do you know the rates charged for carriage on the road? About 1s. 4d. a bag for a distance of 32 or 34 miles.
349. What is the reason for the present dearth of carriers? I cannot say; they seem to have gone away; some of them have selected land. I cannot get any carriers at present.
350. How many teams are on the road between here and Bulbodney? We do not get the Bulbodney carriage—it goes to Dandaloo and the west. We get wool from Woodlands, which is about 74 miles away.
- 351.

A. J. Evans. 351. How many teams are on that stretch of road, on an average? It would be very difficult to say. I have seen as many as eleven teams unloading in the railway yard; on other days there may be none at all, or only one or two. We have seven teams in to-day with wheat, and they are taking back loading.

10 Aug., 1900.

William Thomas Jones, Officer-in-charge, railway station, Bogan Gate, sworn, and examined:—

W. T. Jones. 352. *Chairman.*] Have you a statement prepared giving details of the goods received at your station from the district proposed to be served by the Bogan Gate-Bulbodney railway? Yes.

10 Aug., 1900.

353. Will the whole of that traffic, in any case, come to the proposed line? I cannot say; but what I am about to give comes from the Trundle district.

354. Where is it usually trucked? At Bogan Gate. The figures I am about to give are the actual truckings at Bogan Gate from those places.

355. Have you a return of the stock trucked here? We truck very little stock here.

356. What are the returns which you have prepared? They are as follows:—Thirty-nine settlers have trucked 10,429 bags of wheat, weighing 1,158 tons 10 cwt. Some of the agents have bought wheat, and the weighings have been done in their name. What I have given are simply the weighings by those thirty-nine settlers.

357. How long have you been on this station? About five months.

358. Have you had an opportunity of looking at the books in order to see whether the weight is an increasing amount year by year? These figures show an increase on previous years.

359. *Mr. Hyam.*] Do you know anything about the district? I prepared a return a few months ago, and my inquiries went to prove that there is a considerably greater area under cultivation this year than in the previous season.

360. *Mr. McFarlane.*] Is there much passenger traffic between Bogan Gate and any other part of the railway system? We average between £40 and £50 a month.

361. Do many of these passengers come from settlements along the proposed line? I should say about one-half. The inwards tonnage at Bogan Gate station for twelve months ending 31st July, 1900, was 1,514 tons 12 cwt., and the freight amounted to £2,452 6s. 4d. The wool trucked at Bogan Gate from Trundle and district around and beyond, from 1st July, 1899, to 30th June, 1900, amounted to 1,599 bales, and the weight 245 tons 12 cwt.

Charles Tait, manager, Wright, Heaton, & Co., Bogan Gate, sworn, and examined:—

C. Tait.
10 Aug., 1900.

362. *Mr. Watson.*] Can you give the Committee any information as to the traffic from the direction of Trundle, Bullock Creek, and Lansdale? I have only been a short time here. A great lot of wheat and wool comes from that direction. I was here during last wool season, and a great quantity came in. We do not go in for wheat much.

363. What does your business consist in chiefly? Forwarding supplies outwards, and forage and merchandise. There are only three people out there who do a decent business that I know of, and I have taken down these figures for May, June, and July:—Mr. Maloney, Trundle, 25 tons; Mr. Metcalfe, store-keeper, Fifield, for the same three months got up 5 tons.

364. Is that merchandise alone? Yes. Mr. Metcalfe, 7 miles this side of Fifield, got a little over 14 tons for the same three months. At present there are shearing supplies going up.

365. Do they amount to a considerable quantity? The average man gets about 2 tons. I sent some out to-day to Mr. Hawley, of Troff's station. I do not think he has a great number of sheep.

366. Does most of the wool go through your firm? We do our share of it, and Messrs. Hollibone and Todd do a fair share.

367. Is there anything else in the district except wheat and wool? I do not think there is anything else.

William Todd, forwarding agent, Bogan Gate, sworn, and further examined:—

W. Todd.
10 Aug., 1900.

368. *Mr. McFarlane.*] Are you prepared to give further evidence with regard to timber? Yes; the principal timbers are pine and a certain amount of ironbark on the proposed line. There is not a great quantity of ironbark.

369. Where are the principal forests? All along the proposed railway, on both sides. They are large forests.

370. Has there been much timber cut in that direction? No, only locally. We have supplied it from here principally. I have been in the timber trade myself.

371. Is there a large timber trade done at Bogan Gate? Yes; there have been two saw-mills here, which have cut large quantities. They have cut from 8,000 to 10,000 feet a week on an average, purely for building purposes. The plant is capable of cutting 25,000 feet a week; but the demand has not been large lately.

372. Has there been a local demand? Yes; for Orange and Cowra.

373. How far are the forests from Bogan Gate? You are in pine country when you leave Bogan Gate right out to Burra Burra and Woodlands.

374. What is the class of pine? It is a good class. The logs are up to 2 feet 6 inches in diameter. They have been getting small in diameter here, because the supply is getting smaller.

375. If a railway were made, do you think it would be extensively used for timber? There is no doubt of that, because the pine timber here is pretty well cut out.

376. Are there places along the existing railway line which would take pine timber? Yes.

377. Is it because the timber is nearly cut out that the mills are not now fully employed? No; there are two mills in Parkes, and two in Forbes, which are being supplied with logs from here.

378. Are there many orders coming from stations along the line for timber from here? Yes; and a large order has gone to Burrawang.

379. What does it cost to carry pine from the forest to Bogan Gate? Three shillings for 100 superficial feet for a distance of about 8 to 10 miles.

380. If a railway were constructed, would timber be supplied by the railway? Yes. At present they are carting timber 7 or 8 miles to the line at Yarrabundi, sending it to Forbes.

381. Is there much ironbark in the district? There are ironbark ridges within 15 or 20 miles of the railway.
382. What is the class of ironbark? It is nothing like the coast ironbark.
383. Is it faulty timber? Some of it is sound.
384. Is it pipey? Some is sound, and some is pipey, like all other timber.
385. Would it be sufficiently good for railway sleepers and girders? Yes.
386. Has it been used for that purpose? It has been used all about here, from 10 to 15 miles, on the line.
387. Are these forests close to the proposed railway? Yes.
388. If there were railway communication, do you think large quantities would be trucked to be sent to other parts? There is not a large quantity to send away. When the railway went through it would pretty well exhaust the supply of ironbark.
389. Do you send supplies to the different townships along the proposed railway? Yes.
390. Can you give an idea of the quantity sent yearly? On an average, about 100 tons—that is, machinery, produce, and everything else. Last year, during the dry season, we sent a lot of chaff and produce as far as Woodlands.
391. Have you noticed any increase during the past few years in the quantity of goods sent? Yes; it is increasing daily, and so is settlement.
392. *Mr. Watson.*] Have the mills been kept going hard at their full capacity? No.
393. What has that been due to? Lack of demand.
394. If the mills are not now kept going, where do you expect to get a market for the extra pine that will come along the proposed line, seeing that the carriage will be greater the further you go away? That is not the case, because you would then be much nearer to the pine. The difficulty arises through having to cart the timber from the forest to the mill, which is 7 or 8 miles away.
395. Then, the mills are not working at their full capacity because there is no demand for the pine at a reasonable price, but the road carriage makes it impossible for them to compete? Yes.
396. Where do the principal supplies of pine for the easterly towns come from now? Narromine, Trangie, and other places. There is not much sent from here at present, but a great deal of timber has gone from here.
397. What is the price given for pine at Orange now? Ten shillings a hundred for sawn timber—that is, rough undressed timber, delivered in Orange. They cannot do it now.
398. Would that be cheaper than Oregon pine delivered at the same place? Yes.
399. What is the freight from here to there? About 1s. 6d. per 100 feet; that is on a 6-ton truck.
400. You have no doubt that, if a railway goes in this direction and opens up large quantities of pine, there will be a market for it? Yes; there will be more demand. The pine forests are getting worked out right back from the railway.
401. *Mr. Hyam.*] Is ironbark country good for agriculture? Yes; where it grows on the flats with other timber the land is good.
402. Is it good grazing country? Yes.
403. Would you call it first-class grazing country? No; it is better for wheat-growing than for grazing.
404. You do not get much ironbark off the ridges? Yes; it grows at the foot of the hills and extends out on the flats.
405. What is the size of the pine you get here? It averages 15 inches.
406. What length? Up to 35 feet.
407. Is it the chief timber of the district? It is the only timber in the district for building purposes.
408. Does it stand the weather for outside purposes? Yes; if it is painted and well cared for.
409. If the timber were sent down to Bathurst and other places, could it be sold in competition with American lumber? Yes; they use it down there in preference to American lumber, especially for flooring on account of its not being attacked by the white ant, and it is very durable.
410. Is it good for mining purposes? No; it is too brittle.
411. Is it good for fencing? Yes; for wire-fencing.
412. How long does it last in the ground? I knew a case in Riverina where it was in the ground for thirty years, and it was quite sound.
413. I have known some pine timber to go very quickly—do you know the reason? It may have been sap-wood. If you use the hard wood it will last a long time—a good deal depends upon the size of the tree.
414. Have you noticed whether there is any considerable addition to the area of land under wheat this season as compared with last year? I do not think there is a great increase in the area in this district.
415. Is there any increase in sheep? There is a decrease.
416. Have the losses been heavy in the smaller holdings? They have all lost a certain percentage, I think.
417. Has the lambing been good? It is turning out very satisfactory. Up to 90 per cent. have been marked amongst the small holders.
418. What is the average? About 75.
419. That will give a considerable increase? Yes; the season has been very favourable for lambing.
420. Will the land here grow anything else besides wheat? It is too dry for maize. Potatoes might grow in seasons like this one, but I do not think it is a success.
421. Would the district be good for dairying? I do not see what there is to prevent it.
422. Do you think it could be made a success? It would all depend upon the seasons.
423. Do you think the district is progressing? Yes.
424. With any great rapidity? No, owing to the seasons; but the settlement is increasing every year.
425. Have you been here fourteen years? Yes; in the district. I have a place here.
426. *Mr. Watson.*] Can you give an estimate of the area under wheat within a radius of 10 miles of Bogan Gate? About 4,000 acres.
427. *Mr. Hyam.*] Who are the principal wheat-producers within a radius of 10 miles? McEwan Brothers, Herbert Brothers, Jeffrey, Christie, Dwyer, Francis Brothers, McCawley, and myself.
428. Would not those holdings make considerably more than 4,000 acres under wheat? No.
429. Have not Francis Brothers over 1,000 acres under wheat? Yes; but theirs is the largest.
430. *Mr. Shepherd.*] Is the timber almost exclusively cut on Crown lands? Yes.

W. Todd.
10 Aug., 1900.

- W. Todd.
10 Aug., 1900.
431. Do they put the Act into operation with regard to the size of the timber? Yes.
432. You say that it is about 15 inches in diameter;—is that the small or the butt end? The butt end.
433. What is the Government restriction? Eight inches, 3 feet from the ground.
434. Do you say that it costs 3s. per 100 feet to cart 8 miles? Yes.
435. So that in the event of this line being constructed, you think that the timber business would be confined to about 8 miles on each side of the line? The mills will probably be established in the forest, and sawn timber will be carted in to the line. You can get the sawn timber carted for about half the cost of round timber.
436. Do you think it is likely that saw-mills would be started along the line? Yes, the saw-mills will have to work out there; the timber is getting exhausted here.
437. You say that they pay 3s. per 100 feet? Three shillings per 100 in the log is different from 3s. in sawn timber. You only get about two-thirds of the measurement drawing it to the mill.
438. So that really it would amount to more than 3s. per 100 feet on ordinary timber? Yes; you lose about one-third.
439. In the event of their carting the timber 15 or 16 miles, do you think that they would expect to get double the price that they charge for carting 8 miles? No; they would do it for less in proportion to the distance.
440. Are they bringing any sleepers from a distance? No; this line would exhaust the timber supply within 10 miles, so that there is not much left on any section of this line. Further away from this there are ironbark ridges.
441. *Mr. McFarlane.*] With regard to the timber you spoke of as being delivered at Orange at 10s. per 100 feet, would that be 12 x 1 boards? Yes; that is superficial measurement. In weather-boards it is five-eighths of an inch. Only six of them go to a foot, the same as 6 x 1, and three battens, and 9 inches to the foot.

SATURDAY, 11 AUGUST, 1900.

[The Committee met at the School of Arts, Trundle, at 2:30 p.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN.)

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

Thomas Looney, Honorary Secretary, Railway League, Bullock Creek, sworn, and examined:—

- T. Looney.
11 Aug., 1900.
442. *Chairman.*] How long have you been in the district? Twelve years.
443. Have you a statistical statement prepared with respect to the railway? Yes.
444. For what limits have you drawn up your statistics? Approximately not more than 20 miles east, west, and north of the line.
445. How far out do your statistics go? About 8 or 9 miles from Bullock Creek, along the line towards Bulbodney.
446. What distance will that make from Bogan Gate to the boundary of the district from which you have drawn the statistics? About 59 miles.
447. Will you give us the totals of the statement? Number of sheep, 308,533; cattle and horses, 3,016; pigs, 227; acres under wheat, 23,096; new land put in for 1900, 5,456 acres; value of farming equipment, cost price landed on the ground, £20,281 18s.
448. How many producers does that return refer to? One hundred and fifteen.
449. Can you state from your own personal observation whether the agricultural development of this district has continuously progressed during the last few years? Yes. When the inquiry was held regarding the detour of the line, *via* Trundle, instead of Bogan Gate, in 1895, we had 4,500 acres under cultivation. In 1896 I had an interview with the Secretary for Public Works, and I promised that if he made the railway we would be prepared to put in about 20,000 acres. The area has grown from 4,500 acres to a total of 23,096 acres without a railway. We have broken up new land this year amounting to 5,456 acres. We have also thirty-three new settlers in the district who have not yet got under weigh, the drought has put them back. We expect another increase next year of 5,000 or 7,000 acres.
450. Would the construction of a railway cause a rapid increase in the area of land under cultivation? Yes; there is a lot of timber ringbarked, and the land is ready for cultivation.
451. Can you give any details as to the yield last year from the 20,000 acres under cultivation? I did not take the average yields, but about Bullock Creek it was slightly over 3 bags to the acre. Further north I believe it was more. I do not regard last year as a good one. There was a late frost, and it tipped a lot of wheat, and the rains did not strike us properly.
452. Under what disadvantages do producers in this district now labour? They labour under a great many difficulties. One great difficulty is in getting the stuff away, and in droughty years, of course, it would be a great assistance to be able to get fodder into the district or to get stock away.
453. Have you a list of the landholders in the district to be served by the railway who are prepared to give the land required free of cost? Yes; but it is not quite completed.
454. How many are there? Ten have signed the list, and two have refused. One is near Bogan Gate, and the other is near Trundle.
455. Is it country land? Yes.
456. What is the size of the holdings of those who refused to give the land? One has 1,200 acres, and the other has 80 acres of purchased land—the latter is near Trundle.
457. *Mr. Shepherd.*] Did they give any reason for refusing? They simply say they will not give the land; but the owner of the land at Bogan Gate said he is prepared to let the Government settle what the land is worth.
458. *Mr. Hyam.*] Is he far from Bogan Gate? About 3½ miles.

459. *Chairman.*] Some time ago representations were made to the Secretary for Public Works by a committee of Bulbodney settlers, which set forth that they were prepared to make up any deficiency between working expenses and revenue on that portion of the line, to the amount of £1,275 per annum. Do you know whether any similar agreement has been obtained for the portion of the line for which you provide statistics, and whether the people along that portion of the line would be prepared, in the event of the line not paying, to contribute a proportionate amount to the revenue? Yes. First of all, we sent papers to the Minister offering to give him an individual guarantee. We had it drawn up by a solicitor, and sent it down for his inspection, and we asked if it would suit before we got the signatures; but it was never decided. Then the Public Works Committee passed a resolution in connection with the Byrock to Brewarrina railway, proposing a tax on the land on a sliding scale. We offered to meet the deficiency in that way. In a later interview with Mr. O'Sullivan, he told us that he thought it could be met by a special railway rate. When the Railway Commissioners were here they asked me if I could give them an idea as to what amount could be collected from those willing to pay.
460. It was stated by Mr. Harper, the traffic expert of the Railway Department, that the inhabitants, if deemed necessary, are prepared to pay 2d. per acre on land within 5 miles of the railway; 1d. per acre on land within 5 to 10 miles of the railway, and a proportionate amount further out;—do you think there is a general agreement among the landowners that they are prepared to pay that sum if they get the advantage of a railway? There were some who would not agree to it; but the majority did agree.
461. Do you think that that would be a fair charge while the line is not paying? We would give that rather than not have a line.
462. *Mr. Watson.*] Do you think that £2,600 is a fair estimate of the revenue which will be derived from the railway? I think it is pretty nearly a fair estimate. I notice that Mr. Yeo, in giving his evidence, said he expected that there would be 4,500 bales of wool along the line. In an average season we would send a little over 10,000 bales.
463. From how far along the line would the 10,000 bales come? Between 6,000 and 7,000 bales would come from Trundle and Bullock Creek, and the balance from the Bulbodney end.
464. The 10,000 bales would go over half the line on an average? Yes.
465. The amount of revenue which would be derived from wheat carriage over a branch line of this description would be comparatively small. For the full distance between Bulbodney and Bogan Gate the Commissioners would only get ½d. a bushel on wheat—that is, if it were sent to Sydney. That is the extra amount which they would get. Taking the amount you are likely to have this year off 28,000 acres, yielding about 300,000 bushels, an average of 12 bushels to the acre, the amount they would get from that would pay only £300;—do you think the majority are willing to give a guarantee to make up any loss on the working of the line? Yes; it is certain that the majority would assist in that way.
466. Do you think that the gain would be sufficient to make it worth your while—that is, getting wheat carried at ½d. a bushel instead of what is now paid? Yes; we consider that we would then be better off.
467. What area of land would be put under cultivation if the line were constructed? It is impossible to say exactly, but, judging by results up to the present, it is likely that a great quantity would be put in.
468. Is there land available for those who are likely to be attracted to the district owing to the railway? It can be made available. It is under scrub lease, with the right to throw land open when the line runs through.
469. With regard to those who have the larger holdings along the railway, is it likely that they will go in for cultivation, or allow others to do so? Yes; a great number would let their land on the halves system.

Thomas Quade, farmer, and Honorary Secretary, Farmers' and Selectors' Association, Trundle, sworn, and examined:—

470. *Mr. Shepherd.*] What is the size of your holding? 1,265 acres. I live 8 miles from Trundle, in a north-westerly direction.
471. Is that on the proposed line of railway? About 4 miles away from it.
472. How long have you been residing there? Two years. I have 170 acres under cultivation.
473. What would you consider a fair average farm for the support of a family in this district at present? 2,000 acres, for mixed farming.
474. How do you think that would be best divided for working? 500 acres for agriculture, the rest for sheep and other stock.
475. What is the carrying capacity of the country for sheep? About a sheep to the acre, with mixed farming.
476. Have any of the settlers about here tried artificial grasses? I have tried lucerne, but we find, in good seasons, the natural grasses are all right. Sorghum grows splendidly.
477. Do natural grasses produce as much fodder as lucerne? No.
478. Are you subject to loss of stock from drought? Yes.
479. What would be the average loss? Some people did not lose anything, because they were able to feed their stock. I am trustee for the Stock Board, and during the last seven years 300 native dogs have been killed, and some have been paid for at the rate of £4 or £5 a head. Last season 15 were killed.
480. Is large stock run to any extent? No, they are nearly all sheep.
481. Do you find the distance from the railway station a great drawback to you? Yes.
482. What are you paying for the carriage of wheat? I had to pay 1s. a bag last year—that is, 3d. a bushel. If that 1s. was in our pocket we could cultivate more.
483. Do you think it is any drawback to the sheep-farmers to be so far away? Yes.
484. Particularly to small holders? Yes.
485. Would they be able to send away twenty or fifty sheep at a time? Yes; or they could club together and send a truck away.
486. Is there much difficulty in driving sheep here? It has been almost impossible lately.
487. Is the district fairly well watered? Yes, chiefly by dams.
488. What is your opinion as to the advantages the district would reap from the construction of this railway? I consider it would clear the country of scrub. We would not then have trouble from rabbits, wallabies, and wild dogs. We would be able to send pigs and fat bullocks to market. We cannot compete with other places at present, because we have to pay too much to the carriers.

- T. Quade. 489. Do you think the railway would be likely to be self-supporting within a reasonable time? Yes.
 490. Do you think the agreement to guarantee the Government against loss in the working of the railway would be generally participated in? Speaking for myself, I would do it willingly.
 491. Do you think that would be fair and reasonable? Yes; I am willing to pay 2d. per acre.

Francis William Gibson, farmer, Trundle, sworn, and examined:—

- F. W. Gibson. 492. *Mr. Hyam.*] Do you reside in the district? Yes; about 8 miles from Trundle. I have been here about twelve years.
 493. What is the size of your holding? 4,500 acres; that includes the settlement lease.
 494. On the conditional purchase and conditional lease land have you much land cleared? 900 acres fit for cultivation.
 495. Is the rest ringbarked and improved? Yes.
 496. Have you much under cultivation for wheat this year? 700 acres.
 497. How many sheep have you? 3,750.
 498. Have you much improvement on the settlement lease? Yes; it has been scrubbed during the last nine months.
 499. Do you expect to get much from that at present? No.
 500. How long has your land been under cultivation? Eight years.
 501. Has it fallen off in its producing qualities? It is hardly noticeable.
 502. What has been your average for the last five years? About 14 bushels to the acre.
 503. Taking five years of fairly good seasons, what do you think the land would produce? About 16 bushels.
 504. What does it cost you to carry wheat to Bogan Gate? We have been paying 1s. a bag—that is the highest; but I think if we had a good season, with an increase in cultivation, we would not get it done at that price.
 505. Is some of your land under grass? It is all under cultivation at present, barring 100 acres.
 506. Have you any experience as to the carrying capacity of the land after it has been under cultivation? I think it improves the land.
 507. Is nearly the whole of your grass natural grass? Yes.
 508. Do you find that it is fattening, strengthening grass? Yes; during the last few years it has improved very much. We have fat stock now fit for Sydney. Fat stock from this district has topped the market this year.
 509. Is the natural grass here specially good? Yes.
 510. Have you a variety of grasses? Yes.
 511. You have heard that some farmers in the district are willing to make up a portion of the deficiency in the working of the railway? Yes.
 512. Have you joined with the others? Yes.
 513. Did you come from Victoria? No, from Riverina.
 514. Will the land here bear comparison with Riverina? Yes; I came from the Berrigan district, and the land here is quite as good.
 515. What is the rainfall here as compared with Riverina? It is better by about 4 or 5 inches. The average at my place is 20 or 21 inches.
 516. If this line were constructed, would you increase your wheat area? Yes.
 517. Would you cultivate much more land? Yes, up to 1,000 acres.
 518. Do you carry other stock besides sheep? Only a few head of cattle for our own use. The district is very suitable for cattle, they become fat.
 519. Have you fat sheep now? Yes.
 520. Have you found a difficulty in getting to market? Yes. I have to drive them to Bogan Gate.
 521. If you could truck them a few miles from your place, would you avail yourself of the opportunity? Yes.
 522. Is your place well watered? Yes, by tanks; there is no natural water.
 523. Is your place fully supplied? Yes, we never run short.

Charles James Metcalfe, storekeeper, Fifield, sworn, and examined:—

- C. J. Metcalfe. 524. *Mr. Watson.*] How far is your place from here? Twenty miles by road, it is 8 miles from the proposed line.
 525. How long have you been in the district? About fifteen years.
 526. Have you had any experience of agriculture? Yes, about eight years. I have been more or less connected with it during the whole time.
 527. Do you know the country through which the line would pass from Bogan Gate out to Bulbodney? Yes; as far as Bullock Creek, and up to Jumble Plains. From Trundle that would be about 45 miles.
 528. Do you know the country east and west of the line? Yes.
 529. How would you describe the country through which the line passes? Good agricultural country as far as it would cross Bullock Creek. Between that and Jumble Plains it would be about half agricultural country, and the other half rather rough, being more fitted for running stock.
 530. Taking the country that you know to the west of the line, how far west would the good country extend? Personally, I can only speak of about 20 miles.
 531. Do you think that for that 20 miles it is as good as the land through which the line goes? On an average it is about the same; where I live it is better. There is no rough country at all for 5 or 6 miles.
 532. Do you think that any great development would follow the construction of the line by the present route? As far as I know the settlers in that part of the country, they would all go in for a great deal more wheat growing. That would apply to my district, and 10 miles further on.
 533. Eighteen miles west of Fifield it would lead to extra cultivation? Yes. There are about twenty selectors who have taken up land north of Fifield during the last twelve months—that is, about 5 miles from the line.

534. Is there any cultivation going on at present in the vicinity of Fifield? There are only two or three, except the new hands. Some of them have small areas under cultivation. For C. J. Metcalfe.
11 Aug., 1900.
535. Do they grow for hay at present? Yes; one or two have grown a certain amount of wheat this year. At one place between here and there we have 1,000 acres under cultivation for wheat. That is sent to Bogan Gate, about 28 miles away. My district has been more of a mining district than an agricultural one, until the last twelve months.
536. What has been the class of mining? Principally alluvial.
537. Has that been worked out? The main lead is almost worked out, but there is a considerable area of surface work. It is very poor, but with the quantity of water available, they can put a lot of dirt through, and it pays them. There are about 1,000 or 1,500 acres, and the whole of the surface carries gold. With water, that will give employment to a number of men for years.
538. Is there any indication of reef outcrops in the district? Yes; about 5 to 7 miles out to the north-east there are several copper shows being prospected. Twelve to 15 miles to the north there are a number of reefs being prospected in what they call Lightning Paddock. It has several quartz reefs carrying gold. They have got some large reefs.
539. Has anything been done with regard to tin-mining in the district? Nothing payable. To the north-west there is the Burra Burra tin-field—that is, stream tin. It was worked six or seven years ago, but it was deserted. At present there are eight men on the ground. They are making a living, and getting about 15s. a week. With machinery they could make good wages, and there seems to be no limit to the deposit. The flat is 3 miles long, with several gulleys. The assay shows that it is of the best quality, yielding 74 and 75 per cent.
540. Is anything being done with the copper shows of which you have spoken? No; only prospecting. Some stone was sent a little time ago to Dapto, but I have not heard of the result.
541. *Mr. Hyam.*] Is it granite country where they got the tin? There is granite about the head of it, 4 miles away. There is a main dividing range between the Bogan and the Lachlan, and there is granite there.
542. Is not the granite poor country? There is not a great deal of it; Gobondry Range is only 5 or 7 miles long. Only the hills are poor, and that grows good crops.

Walter Berry, farmer and grazier, Woodview, near Trundle, sworn, and examined:—

543. *Mr. McFarlane.*] Where is Woodview? Six miles south-west of Trundle. W. Berry.
11 Aug., 1900.
544. How many acres do you hold? 7,680 acres.
545. Do you use it for agriculture? Yes.
546. To what extent? I have 1,700 acres cleared—1,200 in wheat, 150 in rape, and 350 are being cleared now. I have 1,750 acres under cultivation altogether.
547. Have you been cultivating for a number of years? Since 1887; but only a small piece until the railway was made.
548. What were the results of farming during that period? We had very good crops; we never had a total failure, but we have had five dry years lately.
549. Did you commence in a small way? I started with 10 acres, and I increased it to 200 acres when the railway came to Parkes.
550. What is the yield in an average season? Fifteen to 20 bushels per acre.
551. Is there much agriculture in your immediate locality? Yes; wheat and hay.
552. Has that been successful? Fairly, I think.
553. Where do you send your wheat? To Sydney. My wheat has all gone through Trundle to Bogan Gate.
554. What distance is that? About 22 miles.
555. Do you find it costly? I am nearer the railway than that; but for the convenience of a better road the carriers prefer to come that way.
556. What is the cost of sending it that way? About 1s. per bag. During some parts of the year you cannot carry it at any price.
557. Do you know the country further on than Trundle along the proposed railway? For some distance, but not right through. I know it for about 10 or 15 miles.
558. What is the class of country? Very good. It is, perhaps, better than my country.
559. Is it similar to the country on both sides of the line between here and Bogan Gate? I fancy it is better; but it is very similar country.
560. Has there been any marked increase in the area put under wheat during past years? Yes; since the railway came to Bogan Gate, and it is increasing. If this railway were made it would increase ten times.
561. Do you also carry on sheep-farming? Yes; I think they work better together.
562. Which do you think is the most profitable—using the land for agriculture or for sheep? I think that farming is more profitable when you carry as much stock as you can. In dry times one helps the other. The haystacks help to keep the sheep alive in the dry times, and there is a good market for hay in the dry times.
563. Do you think that if railway facilities were given those who have large holdings, but who have not yet commenced agriculture, would put a large portion under wheat? Perhaps some of them would not bother about it themselves; but they might lease it on halves or rent it.
564. Has the halves system been adopted in any part of this district? Yes.
565. Does it work satisfactorily to the tenant as well as to the owner? No; I would prefer farming myself. There is a lot of slummed work under the halves system.
566. Out of the area of land which you hold, how much would be suitable for wheat-growing? All of it, except 200 acres.
567. Has there been much inquiry for land for agriculture? Yes.
568. Have you a knowledge of the Crown lands in the district which would be influenced by the proposed railway? No; but the small areas are taken up in homestead selections. I think there ought to be combined agriculture and grazing.
569. The only chance, then, for new settlers would be to lease land or purchase it from the large land-owners? There may be Crown lands in the district which I do not know of. I believe there is one Troff's station. 570.

- W. Berry. 570. If the proposed line were carried out, would you increase your area under wheat? I propose to clear up to 2,000 acres, and then, if it pays well, I will increase the area; but I have just about as much land as I care to farm single-handed.
- 11 Aug., 1900. 571. Is the land difficult to clear? When the timber is dead it is very easy; but if not, it is very difficult. The land when cleared at first, cost me £3 or £4 an acre; now it costs 7s. an acre.
572. Do the landholders speedily clear the holdings which are taken up in the district? As soon as they can, as rule; but not always for cultivation. They kill the timber, and make it suitable. It depends a good deal upon the finances.
573. *Mr. Hyam.*] Were you the first in the district to make a new departure with forage crops? Yes.
574. How do you find the rape to succeed? Very well. I have kept ten sheep to the acre for the last month on rape, also a lot of pigs and some cattle.
575. How much did you put in? 150 acres.
576. How long did it last? I commenced with a few cattle; then I turned in ten sheep to the acre, and kept them in for a month. I spelled it for a month or six weeks.
577. Will it last three months altogether? Yes.
578. You find that that improves the land? Yes; it cleans the land and enriches it.
579. Have you some lucerne planted? Yes.
580. How does it do? Very well.
581. Do you think that rape is a very profitable crop? Yes, it will pay in two or three ways. I think that the bacon has paid for putting it in, and the feed for sheep is all profit.

John O'Brien, pastoralist, Yarrabundi station, near Trundle, sworn, and examined:—

- J. O'Brien. 582. *Chairman.*] How far is your property from Trundle? Ten miles, in a south-westerly direction, from here.
- 11 Aug., 1900. 583. Have you had opportunities of personally investigating the capacity of land in Victoria and Riverina? I have had experience of Riverina and the Jerilderie and Berrigan district.
584. Would you establish a comparison between the character of the land around Berrigan and Jerilderie and the land in this district? I think the land in this district is equally good, if not better, than the land in Riverina. We find we can grow a greater variety here than in Berrigan, and the wheat yield is greater.
585. Is it a district fit for close agricultural settlement? Yes.
586. Has it been handicapped up to the present by the absence of a railway? Yes; it has been very much handicapped, considering that this was ten years ago a virgin forest for 50 or 100 miles, with no land ring-barked. During those ten years we have overcome the difficulty of ringing the timber. It takes a number of years before you can burn it off. Now that the timber is dead we can put in 100 acres easier than we could put in 10 acres before.
587. Is it a district that absolutely requires railway communication in order to lead to its full development? Yes.
588. Do you regard wheat as a crop that cannot stand long or expensive road carriage? Yes; it is impossible to make it pay over 10 miles.
589. It has been stated that this proposed line is somewhat too near to the Western line, and that a line running parallel to it, but further west, would more equally split up the good country than the one now referred to the Committee;—have you some knowledge of the country to the west of the proposed line? Yes.
590. What is your opinion of that statement? It would be foolish for the Government to build such a railway. The rainfall decreases as you go west. There are 7 or 8 inches per annum less in 50 miles—that is, between Bulbodney and Melrose. It varies very much between Trundle and our place—to the extent of 2 inches during the last seven years.
591. Is there any other consideration in the character of the country? The character of the country further on is infinitely rougher. Fifteen miles from the Condobolin railway the ground is stony and ridgy, and covered with mallee. It is principally held by large stations. The settlement is very sparse and rendered very difficult on account of dingoes, wallabies, and scrub. Wheat-growing at that distance will not pay, and they could not keep their sheep alive.
592. Do you think that this proposed line is the best that could be adopted for serving the good agricultural land north of the Parkes-Condobolin line? Yes; there is good land all through, and it is thickly settled. I do not think it goes through a single leasehold area, and there is available Crown land adjacent.
593. What is the area of your holding? 22,000 acres. We cultivated 1,200 acres last year. We have 800 acres under wheat this year, and 200 acres under fodder crop.
594. Would you be induced to cultivate more by the construction of a railway? Yes; we would go in for the halves system. We have had a slight experience of it, and it works very well.
595. Do you think the halves system lends itself to permanent settlement? I am sure of it in this district. It is only recently that it has had a trial, but so far it is very satisfactory. Mr. Kerr has 3,000 acres under the halves system in our direction, and we have 400 acres. We had not the slightest trouble with the men; they came and put in their crop, then they went away, and they will come back to take it off.
596. What is a fair average yield for the district? Fifteen bushels, year in and year out.
597. Is there anything else you would like to state to the Committee? We have an unlimited supply of pine logs in our district, which would find a ready market to the railway. It is the finest timber to be obtained anywhere. At present it is useless, owing to the distance from a railway line, and a demand does not seem to exist.
598. Is there much suitable timber close to the line of the proposed railway? Yes; in Bulbodney district there is a good deal of ironbark. A great deal of the timber about here has been taken away. As to the general carrying capacity of the country, it carries sheep well. We can fatten stock here. Lucerne and rape grow well. We have had lucerne for eight years. Unfortunately we struck dry years. At first it flourished splendidly. There is still a good deal of it left, and it was the means of saving a lot of stock during the drought. We have 100 acres of rape, which was put in rather late; it is giving good results. We are fattening sheep, and intend to put more land under the same crop.

599. What percentage of your holding would be fit for cultivation? There are about 21,000 acres of splendid agricultural land. J. O'Brien.
11 Aug., 1900.
600. Is your holding characteristic of the district? Yes; the character of the country seems to be similar in every direction about here, with the exception of slight ridges and hills; but the land is good right to the foot of them.
601. *Mr. Hyam.*] Does your holding adjoin Mr. Berry's property? Yes; we take in a little of the mountain—about 50 acres—but the richest land we have runs right up to the foot of the mountains.
602. *Mr. Shepherd.*] How long have you been cultivating lucerne? About six years.
603. Has the result been satisfactory? Yes; considering we have had five years' drought. It has not yet given out. We never took hay off it, except in small quantities. We fed the stud stock, horses, and cattle in the middle of the drought with but a slight shower, and the lucerne lasted very well. It was the means of saving stock which otherwise would have died.
604. How long have you cultivated rape? Since April this year. It was put in a little too late. Mr. Berry's rape was planted a week before, and got a shower of rain, so that it is ahead of ours. All the old cultivation paddocks are under rape. We have no means of irrigating, as the water supply is not strong enough. We have had no trouble with the halves system. It is likely that next year we will clear more land, and let it on the halves system.
605. What are the terms? Merely the halves system. We find land cleared, and the seed. The men put in the crop and take it off. We take all the responsibility of stacking. If we take our share in wheat, they strip it, and let it remain in the paddock, and we cart the bags away—that is, for one season. The men who do the work are small holders in the district. We do not care about the system under which the men come and live on the land.
606. *Mr. Hyam.*] How many sheep are on your country? 18,000 sheep for the last ten years, but the drought reduced them to 13,000. At present we have 13,000 grown sheep, and 7,000 lambs. We lost about 1,500 last year. We would have lost many more, but for the hay and wheat grown on the place.

George Frederick Giles, station manager, Troffs, near Trundle, sworn, and examined:—

607. *Chairman.*] Are you the manager of the station? I am supervising the management of the station for the Australasian Mortgage and Agency Company, Limited. G. F. Giles.
11 Aug., 1900.
608. Where is the station? Seven miles from here, on the proposed railway.
609. Does the surveyed route practically go through the station? Yes.
610. What is the tenure of the holding? It is under different tenures. There is a scrub lease, divided into three blocks, having a ten years, fourteen years, and a twenty-one years' term.
611. Will the construction of the railway be an advantage to the owners of the station? No; it will not, owing to a condition in the scrub lease by which it is provided that—
- In the event of its being decided to construct a railway within 10 miles of any part of the subject land, the right is reserved to the Governor to resume the whole or a portion of the scrub lease by giving not less than four months' notice to that effect in the *Government Gazette*; and no compensation will be paid for the exercise of the right of resumption. Provided that upon the resumption of any land as aforesaid a reduction of the annual rent will be made proportionate to the area taken.
612. Are you of opinion that it is more than likely, if the railway were constructed, that a portion of the lease would be withdrawn, and the land thrown open to settlement? I am of opinion that that would be the case.
613. Do you regard the land in Troffs station, or in any portion of it, as suitable for closer settlement? A portion of it could probably be improved.
614. What is the total area in the three leases? 31,000 acres.
615. How much is suitable for agriculture? Probably one-fourth or one-fifth. It is not really good land—it is fairly good.
616. Would it be a serious matter to the owners of the station if that one-fourth or one-fifth were withdrawn? If the whole of the lease, or a large portion of it, is resumed, it will mean the ruination of the station. There is only a small portion of the land secured beyond this area.
617. When were these leases first taken up? In July, 1898.
618. Was it not then accepted that it was more than likely the railway would go through that property? I cannot say, because at that time I had nothing to do with the station.
619. How long have you been on the station? About eight or nine months.
620. I find, by a reference to the official statement concerning this line, that as early as 1896 a proposal to send a railway up to Bulbodney was before the public;—do you think those who took up the station under the present lease took it up knowing that it was likely that clause 9 would be brought into operation? When I took the supervision of the property, I saw this clause in the lease, and I drew the Company's attention to it. They did not seem to clearly understand it up to that time. I cannot speak with reference to the previous owners.
621. Did the Company only take over the property in 1898? It was held by other persons, subject to mortgage, up to that date.
622. Prior to that, did the people to whom your Company advanced money on mortgage, hold the property under ordinary pastoral lease? Yes.
623. Which expired? Yes, I think so. It was then made into a scrub lease.
624. What is the rental now paid under the present scrub lease? £96 19s. 8d. annual rent—that is, for 31,034 acres.
625. Can you give the Committee any idea what the annual financial responsibility of your Company is, according to the terms of the scrub lease? It means a considerable outlay. The annual expenditure will amount to at least £400 per annum for the full term.
626. As manager of the station, have you any further statement which you would like to make with respect to the proposed railway? I simply appear to-day to give evidence, pointing out this clause in the scrub-lease conditions. With that exception, I would not be against the proposed line. The Company has made an application to have a modification of that condition, by way of a guaranteed term of the lease. Unless that is done the run is practically at the mercy of this condition as to the land being resumed. If it is resumed, it simply means the ruination of the run.
627. *Mr. Hyam.*] On this station was there a resumed area? Yes. 628.

- G. F. Giles. 628. Was not the whole of that land taken up? Yes; on homestead selections.
 11 Aug., 1900. 629. Is it not a fact that the land taken up is not superior to the land you hold at present under scrub lease? I think it was much of the same quality. The scrub lease is not fully improved.
 630. If the Government claim forfeiture under these circumstances, do you not think that the 31,000 acres would be readily taken up on the same conditions? I do not think it is equal to the resumed area.
 631. Would it not be taken up by people looking for land? I think that is possible.
 632. Do you not think that your estimate of the land fit for agriculture is very low? No; I mean fair agricultural land.
 633. Is there not a considerable quantity of good agricultural land on it? That is my estimate—about one-fourth or one fifth; the rest is only fair grazing land.
 634. What would it carry if highly improved? It would require 2 acres to a sheep all the year round—that is, in a fair season.
 635. That is what you call second-class agricultural land? I call it fair.
 636. *Mr. Watson.*] Have you been in this district for some time? In the Parkes district.
 637. Do you remember when the 1884 Act was passed? Yes.
 638. Have you been connected with pastoral pursuits during all that time? Yes.
 639. Did not pastoralists have an opportunity to choose which half of the run they liked? Yes.
 640. Do you think that in this instance the lessee chose the worse half, when he had the opportunity of taking the best? It appears to me to be the worse half.
 641. Of the resumed area, declared in 1884, how much has since been secured by the owners of the station? I am not aware that any of it has been secured. Altogether, there are only 960 acres of secured land on the property. That is what makes this clause have such a bad effect.
 642. *Chairman.*] Do you fear that the result of your operations would be lost to you if the land were resumed for settlement? Yes.
 643. Which are the improvements that you are forced to place on the land that are most important, financially? The tanks, fencing, and ringbarking.
 644. Look at clause 13, and see if the tanks and fencing are included in it? What I complain of is the loss of the land before the expiration of the term.
 645. You have only the land on lease at a very low rental; the question is, whether it would be very unjust to take the land and throw it open for selection, when clause 13 gives you tenant rights in the fencing and the tanks? Ringing and scrubbing means a great outlay from which we may get no benefit. When the bulk of the work is done the land may be resumed.
 646. Would your Company be prepared to hand over, without any trouble, the amount of land necessary for the construction of the railway through the run? I cannot say. If only the minimum amount was taken, I do not think there would be any objection—that is, 2 chains in width.

John Stewart, saw-miller, Parkes, sworn, and examined:—

- J. Stewart. 647. *Mr. McFarlane.*] Have you a good knowledge of the district through which the railway is proposed to run? Yes.
 11 Aug., 1900. 648. Where do you get your principal supplies of timber? At present I have a saw-mill at Bogan Gate. I had another mill here, fifteen months ago, at Bullock Creek. I supplied a lot of settlers there.
 649. From what part did you get your timber? At Mr. Looby's, about 30 miles from Trundle, in a westerly direction.
 650. How far from the proposed line? Eight or 10 miles.
 651. What class of timber is there? As good a sample as I have seen in the Colony; it is the Cyprus pine—all good timber. I got over 250,000 feet in eight or nine months. Out of the whole lot I only throw away three or four logs.
 652. Where was your market? Among the neighbouring settlers.
 653. Had you orders from other places along the railway line? I had letters on the subject; but I could not compete with other mills on the Western line, owing to the long carting distance. If there were a railway I could compete with other mills.
 654. How far from the forest were you at Bullock Creek? I was right in the forest.
 655. What cost per 100 feet would be incurred in sending the timber from the mill to the railway station? One shilling per 100 feet, or less, in dry weather.
 656. Are the forests extensive? Yes; very extensive. At the last place I got 100,000 feet, and I got that inside of 300 acres. You would not have noticed that the timber had come out of the paddocks.
 657. As a rule, the pine timber grows small;—is that the case in the forest you refer to? No; I had no difficulty in getting timber large enough.
 658. What is the girth of the trees? About 5 to 6 feet, 3 feet from the ground.
 659. We have it in evidence that timber is delivered at Orange at 10s. per 100 feet, 12 inch by 1 inch sawn stuff;—would it pay to supply timber at that low rate? Yes.
 660. That is, if you had not too much haulage? Yes; if the railway were made, it could be done.
 661. Will it cause much increase in timber-getting if there are railway facilities near the forest? Yes.
 662. So as to enable the proprietor to execute orders at a considerable distance along the line? Yes. I often had letters inquiring what I could put timber on the trucks for. I had a business in Parkes.
 663. What is the price of Oregon pine—that is, Sydney price, freight added for boards? I think it would cost from 18s. to £1 per 100 feet in bulk, with the carriage added. From Bogan Gate to Parkes it would add about 9d. per 100 feet.
 664. Would local pine be preferred to Oregon pine at the same price? Yes; even on Government jobs it is preferred, because it is free from white ant, and it is durable wood.
 665. Are there any other classes of timber? Yes; but not in the same quantities as pine. There is ironbark, I have been told, a little further out. It would do for railway sleepers.
 666. It has been said that the ironbark here is not of such good quality as the ironbark in the coast districts? I have had a large experience. I was engaged on the railway from Molong to Forbes, and the ironbark used there was very good timber. I am sure the ironbark in this district is the same as in the Bunbury and Parkes districts.
 667. Would it be suitable for railway purposes? Yes; it would be sufficient for the local requirements of the railway.

668. If the railway were constructed, do you think, from your experience, that the timber industry would be entered upon largely? Yes; in pine timber. J. Stewart.
669. Would the railway be used largely for that purpose? Yes; I am using the existing railway at present, and at a disadvantage, because I have to cart logs 8 miles. 11 Aug., 1900.
670. Supposing mills exist at Bogan Gate at present, would the mills be shifted to the forest if the railway were made? Yes; and the timber would be sent by train. There would be a large trade with Orange, Cowra, and Blayney.
671. What is the extent of forest fit for milling purposes? Almost every settler has a large quantity of pine on his land. In one paddock alone, which I saw, it would go into millions of feet.
672. Would that be sent upon the proposed railway? Yes.
673. Would the haulage be far to any railway station? No.
674. Have you any further information with respect to the timber industry? If the railway were made there would be a large market for timber. I have had a large amount of correspondence on the subject. I am sure there would be a large trade in this district.
675. Have you had experience in other districts where Cypress pine is available? Yes; in the Dubbo district.
676. How does that compare with the forests here? The forest at Bullock Creek is the best I have seen.
677. Is it largely timbered? Yes; there is a great quantity, and it is of good quality.

John Carey, farmer and grazier, near Trundle, sworn, and examined:—

678. *Mr. Shepherd.*] Where do you reside? Fifteen miles north from here. J. Carey.
679. What is the area of your holding? In partnership with my brother, I hold 7,000 acres. 11 Aug., 1900.
680. Can you add anything to what we have already heard? With regard to the timber trade on which Mr. Stewart gave evidence, I can bear out what he stated as to the quantity of timber he cut at our place. I can bear out all the other evidence given in connection with wheat-growing and grazing, and also the quality of the land. On our place we have about 6,200 acres available for grazing. On that we have run from 5,000 to 6,000 sheep. In 1898 we had 6,000 sheep on the place, and the same number in 1899. Those were two very bad seasons. In 1899, by feeding them, we got through with very little loss, only from 1 to 1½ per cent. With regard to lucerne-growing, last year we put in a small patch of 5 acres, and so far it has done very well. Last March we put in 35 acres additional. So far we are perfectly satisfied, and I believe it will be a success.
681. Have you attempted fruit-growing? Yes; in a small orchard less than a quarter of an acre. It has done very well so far. I may point out that the early settlers have had great difficulties to contend with, and we had the same difficulties until within the last year or two. We had to contend with dingoes and wallabies as well as the scrub. There was an association formed in 1893 to put down the wild dog pest. I believe that since then there have been from 250 to 300 dogs paid for. The rate was £4 to £5 a head, and 30s. a head for pups. Now they are almost exterminated.
682. Have the dogs destroyed many sheep? In past years we used to lose, on an average, about 10 per cent. We lost more through the sheep being knocked about. Latterly our losses have been trifling. The wallaby pest has been even a greater drawback. In the first six months of 1897 we killed 4,000. They eat out the best grasses.
683. Have you a good knowledge of the country along the proposed line? I have from Bogan Gate to 15 or 20 miles on the other side of Bullock Creek.
684. Is that all fairly good country? Yes. From here to Bogan Gate is a fair average of it. If anything, land on the northern end may be better; it does not require so much rain as the land on the southern side; fully 90 per cent. of it would be fit for cultivation. There are some rough hills; but 10 per cent. would more than cover that.
685. *Mr. Hyam.*] Do you think closer settlement would do away with noxious animals? Yes. The scrub is a harbour for them.
686. Where the country is ringbarked, improved, and scrubbed, have you few wallabies? Very few.
687. Have you the rabbit? Yes; but up to the present they have not done much damage; they are easily kept in check by ordinary precautions.

Henry Hollibone, commission agent and station manager, Mordialloc, near Trundle, sworn, and examined:—

688. *Mr. McFarlane.*] Where do you carry on business? My firm carries on business at Bogan Gate, and I am also managing a property in this neighbourhood for Mr. Foy. H. Hollibone.
689. What is the area of the run? 10,000 acres, and it is 5 miles north of Trundle. 11 Aug., 1900.
690. Have you a good knowledge of the country through which the proposed line passes? Yes; I have been all over the country from here to Bulbodney.
691. How would you class the country generally? It is all good agricultural country.
692. Does that apply for a considerable distance on each side of the line? Yes, right through.
693. Do you know the country well between here and Bogan Gate on both sides of the line? Yes.
694. How would the land further on compare with that? The land further on is much better country. Trundle hardly touches the best part of the agricultural country.
695. Can you give any particulars of your station? We go in for wheat-growing and sheep. We have about 2,000 acres under wheat this year.
696. What are the results? Our average is about 15 bushels to the acre. We have had as high a yield as 40 bushels of wheat and 60 bushels of oats to the acre; that was in 1894, which was a very good season.
697. Do you carry the wheat by road to the railway station? Yes; it is a distance of about 20 miles from the cultivation to Bogan Gate.
698. Have you any particulars to give with regard to the operations of the station? We run from 7,000 to 10,000 sheep. We have 10,000 sheep this year. We leased a little country for a few months to keep them in case of drought. I bought 10,000 wethers off the shears to put on the land. We intend to carry them on 10,000 acres.

- H. Hollibone. 699. What advantage would the railway be to you? It would be a great advantage in agricultural Pursuits. We would go in for wheat-growing on the halves system. We have 10 acres of vines—they do very well. We would also have pigs—we have only a few at present; 200 is the most we have had; the dry year was against them; in good seasons they do very well.
- 11 Aug., 1900. 700. Do you think that the construction of a line would greatly increase settlement? I am certain of that.
701. You have heard all the evidence given to-day? Yes.
702. From your personal knowledge of it, do you endorse it? Yes; it is all correct.
703. *Mr. Hyam.*] Did you hear Mr. Giles give his evidence? Yes.
704. Do you know the country which he was talking about, and do you think his evidence respecting the amount of land available for agriculture is correct? No; I think his land is equally as good as the selectors' land. The only difference is that it is unimproved; the country is all good.
705. Would a large proportion of that land be fit for cultivation? Yes.
706. How much? All of it, except a few stony ridges. Ten per cent. ought to cut out all the hills; 90 per cent. of the land would be fit for agriculture.

William Herbert Cannon, grazier, Bullock Creek, sworn, and examined:—

- W.H. Cannon. 707. *Mr. Watson.*] How long have you lived in the Bullock Creek district? Twelve years.
- 11 Aug., 1900. 708. Do you wish to make a statement with regard to the proposed railway? Yes; I am thoroughly acquainted with the resources of this district. The construction of the railway would open up one of the finest wheat centres in the Colony. My experience during the last twenty-five years enables me to say that the yields obtained in this district are greater than those obtained in the Goulburn Valley, Victoria, and in Riverina. In 1897 I had a yield of 26 bushels of wheat to the acre. The highest yield I obtained when living in the Goulburn Valley was 16 bushels to the acre. The rainfall there is 16 inches; here the rainfall is 20 and 21 inches. The lasting capabilities of this land are much better than in the other districts I have mentioned. The reason is that it has richer soil, stronger land, and a better rainfall, therefore the yields must be greater. Another great industry which would be promoted by the construction of a railway is the growth of Chevalier and Battledore barley. The colonies are about to federate, and that will mean the imposition of a duty on imported malt. We shall probably have malting houses erected, and grow our own barley. Where we get a yield of 18 or 20 bushels of wheat to the acre, we would be able to get 48 to 50 bushels of barley per acre. The land is very well adapted to the growth of that crop. Another large line of traffic would be secured to the railway, owing to the fact that we possess an unlimited quantity of pine timber suitable for building. All the good pine has been cut out for a considerable distance along existing lines of railway. Men with large sawmill plants are only waiting for this line to be built, in order to move those plants into this district. That means a large traffic for a long time. There is no better agricultural land in this Colony or in Victoria than is to be found in this district, which we ask the Government to open up by means of a railway. It does not mean opening up 35,000 acres of good country; it amounts to 1,400,000 or 1,500,000 acres. It is beyond doubt that this railway will be a good paying line, because the land is here in quality and quantity to supply it with traffic. If the railway be built, there is a great future in store for the settlers; if it be not built, it will be a great pity to leave such a magnificent agricultural district undeveloped. Another great advantage of this line is that it equally divides the country between the Condobolin and the Bourke railway lines. I think that the estimated cost for the construction of the line is too high, as compared with the cost of the Condobolin line, and other light railways—that is, with the exception of the extra price for steel rails.
709. That amounts to £250 per mile alone? Yes; but that does not account for the extra high estimate.
710. The engineers say that the reason for the increased cost, irrespective of the extra cost for rails, is more particularly the number of bridges to be constructed, and the slightly heavier earthworks necessary, and we can fairly leave the estimate of cost to them? Yes.
711. Do you think we are likely to get as good results from this line as from the Condobolin line? Better, in my opinion; it runs through a better district with a better rainfall.

David Jones, selector, Bullock Creek, sworn, and examined:—

- 2.D. Jones. 712. *Mr. Hyam.*] Do you reside near the proposed station at Bullock Creek? Yes; the railway will run half a mile from my land.
- 11 Aug., 1900. 713. What area do you hold? 5,760 acres.
714. How much under crop? 430 acres under wheat.
715. How many sheep have you? 3,000.
716. Are you fully stocked? No.
717. Do you experience any difficulty in getting wheat to market? Yes; I have nearly 800 bags on hand now. I am offering 2s. a bag for cartage, but I cannot get any teams.
718. What is the reason? The roads are bad, and the teams seem to be scarce. It does not pay a farmer to cart his own wheat.
719. If you had a railway would you be able to send your wheat to market at once? Yes.
720. Supposing the proposed railway were constructed to Bullock Creek, would you increase the area under wheat? Yes; I would double it.
721. Do you know the nature of the country further on towards Bulbodney? Yes.
722. Is it equal to the country you occupy? Yes.
723. Do you consider that your country is equal to the land in the Trundle district? Yes, fully equal to it, if not better.
724. Is the country out towards Bulbodney equally as good as yours? Yes.
725. What is the proportion of inferior land? Not more than 100 acres in every 1,000.
726. If this line were constructed, do you think a very large area of land would be put under crop at once? Yes; in the course of a year or two.
727. Do you think that the railway would induce a great deal of settlement? Yes; and the share system would be largely adopted.
728. Would your land grow lucerne? Yes.
- 729.

729. Did you hear Mr. Berry give his evidence as to rape? Yes; Mr. Watts put in some last year, and it grew very well. It was a dry season, but the result was very satisfactory.
730. What rate of carriage were you in the habit of paying until the roads got into their present bad state? Generally 1s. 6d., and never less than that.

D. Jones.
11 Aug., 1900.

Frederick Charles Herzog, farmer, Trundle, sworn, and examined:—

731. *Mr. Shepherd.*] What area do you hold? 640 acres; and I have over 300 acres under cultivation.
732. Do you grow wheat? Yes; but if I got a railway I would go in for pig-breeding.
733. Have you tried fruit-growing? Yes; I am an experienced fruit-grower from the Albury district.
734. Have you tried fruit-growing here? Yes; peaches, pears, apples, plums, and grapes. In good seasons I can grow them better than in the Albury district.
735. Would it be too far to cart fruit to Bogan Gate? It would not pay me.
736. Would you be likely to go in for fruit cultivation largely if the railway were made? I would go in for wine-making and fruit.
737. What has been your success with farming generally? There has been no success at all for five years; the weather has been too dry.
738. Do you agree generally with the evidence you have heard? Yes.

F. C. Herzog.
11 Aug., 1900.

George Charles Little, farmer and grazier, near Trundle, sworn, and examined:—

739. *Chairman.*] Where do you reside? Ten miles from Trundle, on the proposed line. I was present when the Troff's scrub lease was recommended by the Land Board. This line of railway was previously advocated, and the applicants were asked if they were willing to accept the lease with the present conditions, which the Committee have read. These conditions were recommended by the inspector. It was with their eyes open that they agreed to take the lease. With reference to the statement as to one-fourth or one-fifth only of the holdings being fit for agriculture, I am certain that there is not more than 5,000 acres out of the 31,000 acres unfit for cultivation. I know all the country well, and also all the country on the proposed line to Bulbodney. I can form a very fair estimate as to what land is unfit for cultivation on each selection. I confirm what has already been stated in evidence, and I am of opinion that we have the largest area of wheat-growing land which it is possible to open up by railway in New South Wales. It will all be required to supply Sydney after Federation, because we know that then all the wheat grown in the southern portion of the Colony will go southwards. It takes from seven to ten years to get the country fit for burning; but after that time it goes ahead by leaps and bounds, because the land is then very easily cleared.
740. From your conversation with various landholders and settlers on the route of the proposed railway, are you prepared to state that the majority are willing to pay either special rates or some special tax to make up the anticipated deficiency on the working of the line, so long as there is a deficiency? Yes; they are quite satisfied in their own minds, judging by the development which has taken place during the few years we have been here, notwithstanding the droughts, that the line will pay its way almost from its inception. The greatest part of the cultivation has been put in with the expectation that the line will be made. At Bullock Creek and other places they are only preparing their holdings for this line. When the line is made what has been done will be no guide as to what will be done in the future. That is one reason why the people in this district are fully prepared to guarantee any loss.
741. *Mr. Hyam.*] How many acres have you? Little Brothers have 4,000 acres.
742. Is the whole of your land improved? Yes; the whole of it is ringbarked.
743. How much have you under crop? 450 acres.
744. Could some of the ringbarked land now be cleared at a very small cost? Yes; from 5s. to 7s. per acre.
745. Is 5s. per acre about the cost of clearing improved land? No one would care to give over 7s. an acre.
746. Should this railway be constructed to Bullock Creek, will you increase the area considerably? Yes; it will be increased as much as possible, with a view of laying down lucerne. It improves the country very much. The barley, grass, and trefoil which follow will increase the carrying capacity three times. We have now the eighth crop which has been grown successively on one paddock. The yields have been as follows:—In 1893, 3 bags; in 1894, 6 bags; in 1895, 3 bags; in 1896, 4 bags; in 1897, 6 bags; in 1898, 4 bags; in 1899, 2 bags; and the eighth crop is now the best. That does not represent the average yield on the holding. Large areas had been sown late, and we got nothing. This particular paddock we clear first.
747. Have you planted some fruit-trees? Yes.
748. How are they doing? They bear splendidly.
749. Can you carry one sheep to the acre? Yes; fully. Our country was spoiled in the past owing to the great plague of wallabies. One scalp receiver alone received 32,000 for one quarter.
750. Is the district absolutely free from rust or any other disease in wheat? It is not absolutely free from rust, but I never knew it to affect the grain but once, and that was a small area last year. It grew very quickly and very rank, and the grain shrivelled; it then went three or four bags to the acre.
751. Was your yield last year affected by the frosts? Yes.

G. C. Little.
11 Aug., 1900.

MONDAY, 13 AUGUST, 1900.

[The Committee met at the "Trundle Hotel," Trundle, at 9 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

| | | |
|--|--|-----------------------------|
| The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | | JOHN CHRISTIAN WATSON, Esq. |
| The Hon. SOLOMON HERBERT HYAM. | | JOHN MCFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

John McFadden, post and telegraph master, Trundle, sworn, and examined:—

- J. McFadden. 752. *Chairman.*] How long have you occupied your present position? Eight years.
 13 Aug., 1900. 753. Has the revenue increased since you have been here? Yes, very considerably. That is also the case since I gave evidence last before the Committee in 1895. There has been a very large increase in mail work.
 754. Have you any statistics? Yes. About 1,500 letters pass through the post per week; about 70 mail bags per week are made up here. That is a considerable increase. About 330 telegrams pass monthly. There have been three telephones connected with the office since I gave my last evidence. The commission on money orders and postal notes has increased by about 100 per cent.

[The Committee met at "Lara," at 2 p.m.]

George Charles Little, farmer and grazier, near Trundle, sworn, and further examined:—

- G. C. Little. 755. *Chairman.*] Do you wish to give further evidence? Yes; I wish to correct an item in my evidence, which I gave on Saturday, by stating that there are 7,000 acres of land on the Troff's Station unfit for agriculture. I think I stated that there were 5,000 acres unfit for agriculture. I also wish to say that I have had some experience in poultry raising, and we get a full supply of eggs all through the winter. We sent a large quantity to Sydney in a preserved state, but with better communication we would be able to send a regular supply of fresh eggs. At present we lose 3d. per dozen, or more. We have also grown amber cane in the district. The first year it attained a height of 7 feet; the second year it shot from the roots, and attained a measured height of 12 feet 6 inches. I am of opinion that this is a first-class dairying country, when we have this means at our hand for supplying fodder during the few dry months.
 13 Aug., 1900. 756. There is a suggested proposal to connect Parkes with Peak Hill and Tomingley;—if that line were built, would it accommodate the traffic between Bogan Gate and Bulbodney—say, 15 miles out from Bogan Gate? No.
 757. Why not? We are over 20 miles from Trundle now. It would not accommodate even this place too well, as the line would traverse several creeks, which are ana branches of the Bogan; it is heavy black-clay country.
 758. Are there any stony ridges to get over? There would be one piece of rough country near Gennaren. From Parkes to Tomingley it is undulating country, bounded by the Harvey's Range, close in on the right side, which is a tract of the most worthless country I have seen. The Harvey's Range extends the full length, and they come right to Tomingley. Then such a line would have good country only on one side.
 759. Is it a reasonable conclusion that the line now before us would almost equally split the good land? Yes; this line splits fairly the real agricultural country. Ten miles from here you get on to the clay-pans of the Bogan.
 760. What direction is that from this Bogan Gate to Bulbodney line? Ten to 12 miles north-east.
 761. What would be the general average of good country on the west side of the Bogan Gate to Bulbodney line for a distance of 20 miles alongside the line? The agricultural country would extend about 20 miles, but it is all good country. The clay country, to which I have referred in another answer, is good fattening country.

Thomas Carey, farmer and grazier, near Trundle, sworn, and examined:—

- T. Carey. 762. *Mr. McFarlane.*] Do you own land in this district? Yes.
 13 Aug., 1900. 763. What area? My brother and myself own 7,000 acres.
 764. What class of land is it? It is all fit for agriculture, except 200 acres.
 765. How many acres do you cultivate? Altogether there is cleared 550 or 560 acres. A few hundred acres are let on shares.
 766. On what terms do you let the land? We clear the land, and the share-farmer finds the plant. We find the seed for the first year.
 767. Do you let the land on a term of years? Yes; for three years in this case. We get a bag to the acre for the use of the land out of his crop.
 768. Then it is not on the halves system? No; on shares.
 769. Has that system been generally adopted in this district? It has not been so liberal as our terms. There are farmers working on the shares system. Although our terms are liberal, they pay us—that is to say, it would be the case if we were nearer railway communication.
 770. Has the halves system been satisfactory in this district? We have found it very satisfactory, so far.
 771. Do the tenants appear satisfied? So far as I know, they are satisfied, and they seem inclined to go on with it.
 772. Is the land good for wheat-growing? Yes.
 773. What is the average yield per acre? Last year it averaged 14 bushels to the acre of first-class wheat.
 774. Was that a good average season? No; it was one of our driest seasons.
 775. Taking five years of ordinary seasons, what would be the average? From three to six bags per acre, with an average of 18 bushels—that is, wheat put in early at the proper time.

776. Where do you send your wheat to market? To Bogan Gate, for Sydney. We sent some of it home to England through the Farmers and Settlers' Association. That wheat was graded by the Board of Exports, and our wheat was marked A quality—that is, the first quality. I believe that some wheat from this district was marked B quality. That proves that we have grown first-class wheat in dry seasons. T. Carey.
13 Aug., 1900.
777. Did sending it to London prove remunerative? We have not yet got the returns, but I think they will leave a fair profit.
778. Will the business of sending wheat to London increase? I think so. The Farmers and Settlers' Association will handle the wheat only once, and we will ship direct through them. No doubt, a lot of wheat will be sent direct from the farm to the ship, in that way cutting down expenses. We find the cartage from here to Bogan Gate almost as expensive as it is from Bogan Gate to Sydney. Bogan Gate is 30 miles from here.
779. What does cartage cost? In summer, 1s. 3d. per bag. We had great difficulty, a few months ago, in getting teams to take the wheat away at 1s. 6d. per bag. We held some over in case of a drought, as we might want to use it for sheep feed. We fed our sheep on wheat, and pulled them through the drought. We hold some wheat every season in case of drought.
780. How far is your property from the proposed railway? About 10 miles.
781. Would it pay you to grow wheat in larger quantities if you had only 10 miles cartage instead of 30? Yes, on the shares system. There is not only the cost of haulage at present, but also the uncertainty of getting teams. As the country becomes fenced, the carriers' horses will have to be fed, and the work will be more expensive. At present the carriers only make a living.
782. If the proposed railway were made, would you be inclined to extend your agricultural operations? Yes; we could go in for a couple of thousand acres.
783. Would that be the case with others? Yes, even with the low prices now paid. We find that it pays even at one bag to the acre. It left us a return, after all expenses, of close on 7s. 6d. an acre.
784. Have you long been engaged in farming? Yes, all my life. I was in the northern districts of Victoria since 1873.
785. Which would pay best—to put the agricultural land under wheat, or to have it under sheep? Agriculture would pay best at a distance of 15 miles from a railway station.
786. How would you class the country likely to be influenced by the proposed railway? First-class wheat land.
787. What proportion of it is suitable for wheat? Only 10 per cent. would not be fit for wheat growing; perhaps not even so much.
788. Would the land, which is not suitable for wheat-growing, be suitable for pastoral purposes? Yes; a few stony ridges would not be suitable.
789. *Mr. Hyam.*] When you let your land on the shares system, at what time of the year did the men come on to it to get ready for the crop? In March.
790. When would they go off? They camp there the most of the year.
791. Do you run your stock on it? Yes; we have the run of the stubble for four months.
792. You do not alienate the land for three years? No; we have the use of it as far as grazing on the stubble is concerned. That is a very great consideration in dry times.
793. Do you get 7s. 6d. rental and the use of the land for four months in the year? Yes; and when that is all done it is highly improved for grazing. Another thing is, you would get the scrub killed. We intend to lay down some of this country with lucerne.
794. *Chairman.*] Have you tried a small area with lucerne? Yes.
795. With what results? Quite satisfactory, and we intend to go on with it. We sowed last year in October; this season we sowed some in March. I think the spring sowing is the best.
796. Do you think it is very likely that you will be able to permanently establish lucerne here as a fodder crop? Yes; it would more than double the carrying capacity of the land.
797. If lucerne growing becomes a success, would it lead to a discontinuance of agricultural operations, and a heavier stocking of the runs? Possibly; but I do not think so.
798. Does lucerne growing enable you to carry on mixed farming? Yes, far better. There would not be a less acreage under wheat; there would be a decided increase for many years. If the land was put under lucerne for a few years, it would be giving it a rest. Lucerne growing is likely to double the carrying capacity of the land.

Robert McArthur, share-farmer, near Trundle, sworn, and examined:—

799. *Mr. Hyam.*] Do you reside in this district? Yes; I have been here for seven years. R. McArthur.
13 Aug., 1900.
800. Have you been working on the share system all the time? No; for one year.
801. How many acres do you cultivate? 200.
802. How many bags to the acre do you get? A little over three and a half; it averages 15 bushels.
803. What terms do you get? I gave the landowner 250 bags. I have thirty-eight bags sown for seed, and I sold 408; then I have so much for horse-feed.
804. How much do you give to the landlord? One bag to the acre.
805. Where do you market your wheat? Sydney.
806. When you gave the landlord a bag to the acre, did he have to deliver the wheat himself? Yes; I only carted my own.
807. Where did you take your wheat to? To Bogan Gate, about 31 miles away. I engaged teams at 1s. 3d. per bag. That was the highest price. I sent it in the summer, and I had great trouble in getting the teams.
808. Do you consider that a low rate? Yes. I shall have to pay more this year. The crops are looking favourable, and no teams are about. Carriers have been going in for farming, and taking off their teams.
809. Have you been farming long? I have lived on farms all my life.
810. Do you think this is a good district for wheat and lucerne growing? Yes; and for amber cane.
811. Is the system under which you are working a profitable one to you? Yes; it would pay me if I had no difficulty in getting the wheat away.
812. At what distance could you make a decent living? Within 12 or 15 miles of a railway.
813. Would you be afraid to go in for share farming at a distance of 15 miles from a railway? No; if I got the same terms, 814,

- R. McArthur. 814. Are there many others working on the same conditions? No; there are some on different terms.
 13 Aug., 1900. 815. You look upon your terms as exceptionally favourable? They were the best I could get. To show the quality of the wheat we grow, I may say that the share I gave to the landowner was graded A by the Board of Exports.

Annie Tomkins, Lara, sworn, and examined:—

- Annie Tomkins.
 13 Aug., 1900. 816. *Chairman.*] How long have you resided here? Seven years.
 817. What is your opinion of this district, from a poultry-raising and dairying point of view? It is a splendid country for poultry. Very few go in for dairying, because we have no means of getting away the produce; but from our experience in supplying ourselves it is a very good country for dairying. We have only two or three cows milking, and they keep, not only a large household, but we are able to sell to the men on the place. We would go in for dairying if we could get the produce away.
 818. Have you had experience of dairying in any other part of the country? Yes; my relatives kept cream separators. We did a little of it ourselves in Riverina, but we were near a market there.
 819. Do you think that, with a railway, large consignments of poultry would be sent from here? Yes; I know two or three who have made up their minds to keep poultry. I intend to do so myself. We can only get 1s. 6d. or 2s. for a turkey at Parkes. We rear 100 to 150 for our own use. I would double that number if I could sell them.
 820. Would eggs be a fairly large article of production? Yes; Messrs. Gibson sent 75 dozen to Parkes and Orange.
 821. Do you think that both poultry and egg-raising is stopped by want of communication? Yes. If we had the railway, we could get to Parkes in one day. Two of my daughters intend to engage in the industry.
 822. Can you give us any information as to fruit-growing in the district? Yes, it grows splendidly. We grow plums, peaches, apricots, apples, figs, and grapes. We do not know what to do with our fruit. We have made our own raisins.
 823. Can you dry the raisins by ordinary exposure to the air? Yes; I have made cases of them. We can dry plums and peaches. We preserve the peaches ourselves. A great many would go in for bacon and ham curing if we could get it away, because there is a lot of cracked wheat to feed pigs.
 824. *Mr. Hyam.*] Do the fowls in this district lay nearly all the year round? Yes; we are very seldom without eggs. They lay in winter, and we are getting 3 or 4 dozen a day now, and also turkeys' eggs.
 825. Could you take advantage of the high prices in Sydney during the winter months? Yes, certainly.
 826. Could you send large quantities of poultry? If we had the means of sending them away we would improve our poultry. It does not pay at present. When eggs are 1s. 6d. a dozen in Sydney they are 9d. in Parkes.
 827. Are turkeys very easily raised here? Yes.
 828. *Mr. McFarlane.*] Have you lived in the Doniliquin district? Yes.
 829. Have you some knowledge of dairying? Yes.
 830. How does this district compare with the Riverina district? It is better, because it is a cooler climate, and there is a better way of making it.
 831. Do you use a separator here? No; we churn it ourselves.
 832. *Mr. Hyam.*] Would you use a separator if you had a great number of cows? Yes. Our vegetables go to waste for want of a market; they grow splendidly.

[The Committee met at "Tullamore," Bullock Creek, at 5.45 p.m.]

Thomas Loobey, farmer and grazier, Bullock Creek, sworn, and examined:—

- T. Loobey.
 13 Aug., 1900. 833. *Chairman.*] Can you tell us how far along the course of the proposed line from Bogan Gate your property is situated? Over 40 miles.
 834. How far in a direct line are you from the surveyed route? Seven or 8 miles.
 835. What is the size of your holding? 2,560 acres.
 836. How much have you cultivated? 300 acres under crop this year.
 837. How do you describe the country immediately around your holding? It is a rich red loam, the same as the country between Trundle and here.
 838. What proportion of the country within 20 miles of the railway line and about your property would be suitable for agriculture? Forty miles from my place to Narramine, which is our railway market, the land is all good.
 839. How far to the east and west of the proposed line does the good country extend? About 42 or 43 miles from my place, right up to Peak Hill, is fairly good land.
 840. In an ordinary season, what would you say was an average yield in your vicinity? Five to six bags per acre—that is, 20 to 24 bushels.
 841. What is your market at present? Narramine.
 842. Are your agricultural operations considerably handicapped by reason of your distance from Narramine? Yes.
 843. What is the usual rate of carriage from your place to Narramine? £2 per ton. I pay £2 10s. per ton in weather like this.
 844. How much do you pay for wheat when you send it in? I have not sent any away. I have 300 bags now, and I cannot send them away. I will probably have to pay 2s. a bag for it.
 845. Do you think that the construction of the railway would greatly stimulate agricultural pursuits? Yes.
 846. What particular benefit would the railway be in a time of severe drought? It would be a great benefit. For instance, last year I had to get a 6-ton truck of corn to feed my sheep. The rain came in the meantime, and I could not get it out, and I lost 1,000 sheep that could have been fed if I had the railway.
 847. Would the railway lead to the consumption of a good deal of fodder in times of drought, or would the farms in the district be able to keep enough of their own produce to feed their stock? Yes.
 848. Then we could not anticipate much traffic of that sort if the railway were built? No; we could grow enough to keep the sheep alive ourselves. 849.

849. What is the character and value of the timber? The value is very good. I have preserved a lot of pine myself, which I think is very valuable.
850. Are there extensive areas of pine forest? Yes; there is a good deal further out.
851. *Mr. Shepherd.*] Have you engaged in any other industry besides wheat-growing? Only grazing. I would clear it all if we had the railway, because I consider it would return me more.
852. How many sheep can you carry? I have had over 4,000 sheep; but, unfortunately, the drought killed many of them. My son-in-law and I had 5,000 acres, and we had 300 acres under cultivation this year.
853. Are you quite satisfied as to the result? Yes.
854. How do you find the country for large stock? Very good.
855. Do you think that the dairying industry would be advanced by the construction of a railway? Yes; we could grow lucerne.
856. *Chairman.*] Would a railway from Parkes to Peak Hill serve your district beneficially? No.
857. For what reason? Because it is too far away. It is over 42 miles from my place to Peak Hill.
858. Would the road carriage be difficult? Yes; it would have to go through creeks and broken country.

T. Loobey.
13 Aug., 1900.

Charles McLaughlin, farmer, Bullock Creek, sworn, and examined:—

859. *Mr. McFarlane.*] Where do you reside? Thirteen miles from here, and I have resided in the district twelve years.
860. How much land do you hold? About 900 acres, and I cultivate 130 acres. I have only got it under wheat this year.
861. Do you think the land here is favourable for wheat-growing? It is first-class.
862. What results have you obtained? I had over 12 bushels off some of the land last year, which did not get hurt with the frost.
863. Would that be considered a fair average for the district? No; I think it would go from 25 to 30 bushels on an average.
864. Would last year be considered a bad season? Yes.
865. Have you any knowledge of the country along the proposed railway? Yes; for about 25 or 30 miles.
866. In which direction? That is from Bogan Gate to this place, and a little further on, (say) 12 or 14 miles.
867. How would you class the character of the land which you know? I think it is the best land I have ever seen for cultivation and wheat-growing.
868. Have you been farming in other districts? Yes; in Victoria.
869. How would that land compare with this? I do not think you could make any comparison between the lands. It is much better land here.
870. In what part of Victoria were you? I have been at Kyneton, Goulburn Valley, Shepparton, and up the Northern line, Sandhurst and Echuca.
871. Is wheat-growing carried on extensively there? Yes.
872. How far is your land from the proposed railway? About 12 miles.
873. What distance are you at present from the railway station? Forty-five miles. I cannot get my wheat away.
874. Would it pay you to cart wheat that distance? No, not just now.
875. In your locality, is there much land under wheat? No; they do not like to put the wheat in, because there is no market for it.
876. Would the construction of the line have the effect of enabling these people to place their land under wheat? Yes; they would only be too happy to have the chance.
877. Taking the land 15 or 20 miles on each side of the railway line, what proportion of it, do you think, would be suitable to wheat? Very nearly all, except a little bit of swamp.
878. Would not some of the hilly ground be unsuitable? There are very few hills.
879. Do you keep sheep? Yes.
880. Your land is conditional purchase? Yes.
881. Which would be the most profitable for farmers—wheat-growing or sheep, if railway facilities were given? Wheat-growing.
882. Would they to a large extent abandon sheep farms for wheat-growing? Yes; at least, they say so.
883. *Mr. Hyam.*] Would you go in extensively for wheat-growing if the railway were constructed? Yes.
884. What is the carrying capacity of your land for sheep? One sheep to the acre.
885. Is your place highly improved? Yes; it is ringbarked and cleared. If the railway were made we would saw all the pine.
886. *Chairman.*] Is there a considerable amount of pine, which, on the construction of the railway, would be utilised in this district? Yes.
887. Is there an extensive area of pine in your district? Yes; there is good pine in every paddock.

C.
McLaughlin.
13 Aug., 1900.

TUESDAY, 14 AUGUST, 1900.

[The Committee met at "Tullamore," Bullock Creek, at 9.30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

| | | |
|--|--|-----------------------------|
| The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | | JOHN CHRISTIAN WATSON, Esq. |
| The Hon. SOLOMON HERBERT HYAM. | | JOHN MCFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

William Berwick, gold-miner, Bullock Creek, sworn, and examined:—

- W. Berwick. 888. *Chairman.*] Where do you live? Just where the proposed railway crosses Bullock Creek.
- 14 Aug., 1900. 889. Have you been mining for some time? Yes.
890. Where are you carrying on operations? At Lightning Paddock, where the surveyed line spans the creek, 5 miles due west.
891. Are you mining for gold? Yes.
892. Is there a large area of auriferous country there? Yes; it runs for miles, with large flats at intervals.
893. Does this auriferous country extend as far as the old Melrose holding? I cannot say; but gold has been found right through the Little Melrose.
894. Does the belt extend north and north-east for any distance? I believe it goes on to Nymagee; it makes a sweep towards Dandaloo.
895. What is the nature of your operations? Quartz-mining. There is a lease taken up of 25 acres by Messrs. Oxley and Evans and their partners. Then there is a claim owned by Mr. William Rix and Mr. Menzies.
896. What have been the results? They have not sent anything away to be tested; they are dollying. They have got, by Government assay, 17 dwt. to the ton. That is Mr. Rix's claim; I do not know what the others got.
897. Have you had much experience? Yes; from the first days of old Bendigo.
898. Would the construction of a railway lead to great mining development here? Yes. Men come here with rations, and when they run out of supplies they have to go over 20 miles. With a railway there would be stores near at hand.
899. What is the largest number of men who have been working at Lightning Paddock at one time? About five years ago there must have been 100 or 200 when the alluvial was first discovered. I sent 4½ tons away five weeks ago, and it realised 11 dwt. to the ton. I sent it to Tomingley; but owing to the machinery breaking down, the special treatment was not carried out. They then used the ordinary battery process, and the yield was 2 oz. from the 4½ tons, and 10 dwt. was obtained from the tailings. The same stuff was assayed, and it yielded at the rate of 2 oz. 16 dwt. 10 grs. to the ton, and 6 oz. of silver.
900. Do you regard 11 dwt. to the ton as a payable yield? Yes, if we had to pay a lower rate than 30s. a ton for taking it to Tomingley.
901. Have you resided a considerable time at the place where it is proposed to take the railway across the creek? Yes.
902. Can you give us an idea as to the nature of the floods at that point, and if they are likely to prove a source of danger to the railway? I was there when the heaviest flood known occurred—9 inches of rain fell in two days, and it came down very heavily. One-third of a mile from my place there is an embankment on the stream which causes it to back up a little; but a culvert would relieve that. The banks are all dry in very heavy floods.
903. *Mr. Shepherd.*] Have you a well-defined reef? We have two walls going down; we are down about 40 feet; the reef cut out at one end; we drove and took out the stone. The reef is dipping heavily to the north-east. All reefs here seem to go to the east. We sunk another shaft. When we got down 30 feet the reef dipped again; but we still had walls. We sunk another shaft, and got two splendid defined walls, and the inspector told us to continue operations. We carry gold all the way. At 46 feet the reef is coming in, and making 6 inches wide at 51 feet. We had payable stone on the top, and we have it now. The adjoining claim had stone at 50 feet which assayed 3 oz. 16 dwt. to the ton. Our assay was 6 dwt. on the surface, and at about 8 feet it was 17 dwt., and 6 oz. of silver. Eight feet below that the assay was 2 oz. 16 dwt. of gold, and 8 oz. of silver. We then sent 4½ tons to be crushed, and we all expected to get a better result than we did. When we reached 20 feet we applied for aid to the Government. An inspector was sent out, and he thought a good deal of it. He described the reef just as we have since found it. He told us to continue, and that there was no fear of losing the walls. He said we would strike something.
904. What is the width of the reef? In the old shaft it is 18 inches. In the new shaft it pinched out at about 20 feet. It carried gold on the hanging wall, and it is now making again. It is not a reef—it is a lode.
905. Has there been any alluvial obtained here? Yes. I obtained 3 oz. 17 dwt. alluvial in five weeks. I got £3 19s. 7½d. an ounce.
906. Does the country seem settled? No; it is broken.
907. Have you gone deep enough to reach the settled country? No.
908. Are there no funds in hand to put down a vertical shaft? The inspector said there were none, and that the Government could only afford to give 7s. 6d. per foot, which only pays for the powder.
909. What was the width of the reef where you got the 4½ tons for crushing? Eighteen inches to 2 feet. It then cut out.
910. Are there no regularly organised parties at work? No; and a man has to go 20 or 30 miles to Trundle to obtain supplies.
911. Is it all dollying work? No.
912. Have you to cart away any of the stone? Yes; the mining would give employment to a large amount of surplus labour, if we had better facilities for communication.

913. Do you think that the mining here would prove permanent? Yes; I have been down at Jumble Plains, and I found a prospect there that would give a man good wages. W. Berwick.
914. Is the country where these reefs are found Government land? Yes; I believe they are scrub leases. 14 Aug., 1900.

[The Committee met at Jumble Plains, at 2.30 p.m.]

Edwin John Witts, licensed surveyor and settlement lessee, Jumble Plains, sworn, and examined:—

915. *Chairman.*] How far is your property from the proposed railway? About 4 miles. This place is 55 miles along the route of the proposed railway. E. J. Witts.
916. How long have you resided in the district? Nine years. 14 Aug., 1900.
917. Does your professional duty take you practically throughout the whole district traversed by the proposed railway? Yes.
918. What are the limits of your district as a surveyor? It includes the whole area served by the line, and easterly for a distance of 15 miles, and westerly a distance of from 30 to 40 miles.
919. Is the country from Bogan Gate to Bulbodney suitable for close agricultural settlement? Yes; the greater portion is suitable for agriculture, combined with grazing.
920. What is the nature of the country from Bullock Creek to Bulbodney, taking 20 miles on each side of the proposed line? It is slightly undulating country, consisting of box, pine, and yarran forest; it is chiefly scrub; it should be classed as agricultural land right through, except about 10 miles of it along a spur—that is, where Lightning Creek crosses the line. There is a stretch there of a gravelly class of country.
921. Would the country between Bullock Creek and Bulbodney compare favourably with the country from Bullock Creek to Bogan Gate? Yes; it is the same country and quite as good. The rainfall is slightly less, but nothing appreciable.
922. With the construction of this railway, do you think that there would be a reasonable prospect of a considerable area within 20 miles of the proposed line on each side being devoted to agriculture? I am satisfied there would.
923. You, having a settlement lease, it would follow, according to the conditions, that any land required for railway purposes would be resumed by the State without compensation? Yes.
924. Two other routes have been proposed to open up the country north of the Parkes-Condobolin line—one going from Parkes to Peak Hill and from Peak Hill to Bulbodney, the other to start from a point on the Parkes-Condobolin line further west than Bogan Gate and going about parallel to the proposed Bogan Gate-Bulbodney line, with a view of opening up an area further west;—in your opinion, what would be the value of these two connections? Taking the proposed line from Peak Hill to Bulbodney first, you would have several rather bad creeks to cross; you would also be coming through a large area of secured land on the Mungary holding; you must also cross the Bogan River, approximately at right angles.
925. Would that open up a large area of good country? It is scarcely so suitable for agriculture as the proposed line from Bogan Gate.
926. In proportion to its length, would it open up as much country as the Bogan Gate to Bulbodney line? Not in proportion to its length; but taking the through length it would open up a great deal.
927. Would it be considerably more expensive than the Bogan Gate to Bulbodney line? Yes.
928. Take the other line further west than the proposed Bogan Gate-Bulbodney line, how would you describe the country to be served by that line? You would pass through an area of good country, but you would also have to cross a lot of broken hilly country. It would not be an easy line to construct.
929. Going further west, what would be the rainfall? It is much lighter, although I do not know the exact data. From Piffeld west you would have a considerable area of hilly country to get through.
930. If the Bogan Gate-Bulbodney line were constructed, would you devote part of your holding to agriculture? That is my intention.
931. What is the area of your lease? 7,500 acres.
932. What proportion is fit for agriculture? One-half.
933. Have you made any experiment in wheat-growing? I have had crops growing for the last five years. The results ranged from six bags to one and a half.
934. What would be the average in a fair season? About three to four bags to the acre.
935. Would that average be payable? Yes, with railway communication. Last year I stripped three bags.
936. In a previous inquiry in connection with the Parkes-Condobolin line, a number of holders in this district guaranteed to pay a certain amount of any loss which might accrue; they have now stated their willingness to give the same guarantee for the Bogan Gate-Bulbodney line;—would you join in any such guarantee, such as 2d. an acre on all land within 5 miles of the railway, 1d. per acre for land between 5 and 10 miles of the railway, and a proportionate amount for land further away, until the line became self-supporting? I think the rate is too high, except for agricultural country. It is rather high for land held on settlement lease; but I would be quite willing to contribute up to 1d. per acre.
937. *Mr. Shepherd.*] With regard to the guarantee, the way to look at it is what you would be likely to save; the guarantee would be reduced year by year as the line becomes self-supporting; the question with you is whether the guarantee would amount to less than what you would actually save by the construction of the railway;—if you have confidence in the railway, would it not be a tax for only one or two years? That is so. I was one of the original persons who offered to give a guarantee. I think the principle is good, and I quite agree that it is a necessary and desirable thing. For a small area of 2,560 acres it would not be so heavy, because a great proportion of that would be devoted to agriculture. In my own area the greater proportion is devoted to grazing, and it is not of a very heavy carrying capacity. Generally you must allow 2 acres to the sheep.
938. What does it cost you to cart your wool? I deliver wool at Bogan Gate or Trangie. I could get it carted for 30s. per ton.
939. Have you sent in any wheat? Only by my own team. That cost me about 1s. 6d. per bag. I could not get it carried for that; it would cost me 2s. per bag.
940. Is there much agriculture carried on at this distance from a railway? Nothing of any consequence.
941. The average for a great deal of the country we have been through is one sheep to the acre? One

- E. J. Witts.
14 Aug., 1900.
- and a half acres to the sheep is the usual estimate; but I conclude, to make it safe, it should be 2 acres to the sheep.
942. Is there any other industry besides wool and wheat-growing which you would be likely to enter upon? There would be a considerable quantity of pine logs sent from here. It is a pine country, with some very fine timber within 10 miles of the line on either side.
943. Is there anything else besides timber which would be likely to be delivered by the railway—for instance, fruit? The district, as far as I know, is favourable to fruit-growing. Vines appear to do well here.
944. Have you any difficulty with regard to water? It can be conserved readily. So far we have not been able to get artesian water.
945. What does it cost to clear land for cultivation? That depends upon whether the timber is well killed. I have done 200 acres at a cost of 7s. an acre. It is grubbed 4 inches deep, and the timber was well killed. Green country would be very expensive.
946. Do you think the railway would be self-supporting within a reasonable time? Yes.
947. *Mr. McFarlane.*] What is your opinion of the district for wheat-growing? I think that a general average of three bags to the acre can be got, taking one year with another.
948. You consider that as a fair average? Yes.
949. Have you a good knowledge of the country through which the proposed line will pass in the direction of Bulbodney? Yes.
950. How does that country compare with what we have passed through from Bogan Gate? It compares favourably—there is less broken country.
951. What is your opinion of the country where there is gravel on the surface? The part I referred to is ridgy and very poor country—mallee and ironbark grow on it, which is an indication of poor country.
952. Has not some of the flat country a gravel formation? That is suitable for agriculture.
953. Is there much mallee country? No; a belt of mallee country continues along the ridge. There are no large areas of mallee country until you get west of Bulbodney, and there is not much there.
954. If the railway were constructed, do you think the landowners would go in largely for wheat-growing? Yes.
955. What is a reasonable distance from which to send wheat to a railway? I have always thought that 20 miles was a fair limit.
956. Taking the whole of the country you know which would be served by the railway, what proportion of it would be fit for cultivation? About one-fourth.
957. Would the balance of the country be good for sheep? Yes; chiefly for sheep.
958. Would the ridgy country cover a large area? No; it is a small proportion of the whole.
959. Excepting that small portion, would the rest of the country be suitable for wheat-growing or sheep? Yes.
960. *Chairman.*] Would the construction of a railway be of great benefit to settlers in times of drought? Yes; the great drawback in sending stock away in time of drought is that there is a difficulty in getting them away and in getting grass. It is much better to feed them on the place than to send stock away at present. The railway would be an advantage in enabling settlers to get fodder more cheaply than at present.
961. If a larger amount of the district were devoted to agriculture, could enough fodder be obtained in the district? Yes.
962. Does the devoting of part of the holdings to agriculture practically increase the carrying capacity of the whole? Yes.
963. So that the construction of the railway would lead to increased production over what now takes place in two ways,—first, from the agricultural products, and second, from the increased amount of wool due to the increased carrying capacity? Yes.
964. *Mr. McFarlane.*] On the large holdings there is a great quantity of agricultural land;—would the owners of the large holdings place the whole of the land suitable for agriculture under cultivation, or would they let it out on the share system? I should say they would adopt both principles. They would work a considerable area themselves, and also some on the share system; principally, I think, it would be worked by the holders.
965. Do you think that by adopting both systems the whole of the land suitable for agriculture would be put under cultivation? Yes.
966. *Chairman.*] Of the 147,000 acres of leasehold land which have fallen in this year in this district, is there any considerable amount fit for agricultural settlement? Yes, a good proportion of it.

WEDNESDAY, 15 AUGUST, 1900.

[The Committee met at Bulbodney (Lansdale), at 11 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

Thomas Ankers House, farmer, and Secretary, Bulbodney Selectors' Association, sworn, and examined:—

- T. A. House.
15 Aug., 1900.
967. *Chairman.*] How long have you resided in this district? About eleven years.
968. What area do you hold? With my brother, 5,120 acres.
969. How do you use it? For agriculture and grazing.
970. Have you certain statistical and general information to lay before the Committee? Yes. The acreage within a radius of about 20 miles from Lansdale, which will be affected by the railway, is 647,507½. Its carrying capacity is 400,800 sheep, which would cut about 5,968 bales of wool. The number of fat stock

T. A. House.
15 Aug., 1900.

stock which would be likely to be sent away would amount to 308 trucks. Tallow and skins, 20 tons; acres under cultivation, 6,069; average yield in a fair season, about 16 bushels to the acre; or a total of 80,944 bushels. The population within a radius of 20 miles is about 405. The increase in cultivation, in the event of a railway being constructed, would be about 14,000 acres. That, however, is a very low estimate, and I believe that, with a railway, the increase in cultivation will be practically unlimited. Every acre that we possess would be put under cultivation if we had a railway.

971. Can you give a general idea of the proportion of land within that radius which is suitable for cultivation? I think the whole of it is. There is not an acre which is not fit for agriculture. The farming plant in the district is valued at £10,464 10s. The machinery is valued at £5,709 10s., and draught stock £4,755. At present there are 6,000 acres under agriculture, and that leaves a balance used for pastoral purposes of 640,000 acres.

972. In that 640,000 acres do you exclude Government reserves not occupied? Yes. I have only included occupied land in the statistics.

973. With the development of agriculture, would the general carrying capacity of the country be increased? Yes.

974. So that, with the construction of the railway, there would be two new sources of revenue—that is, one from agriculture, and one from the increased number of sheep which could be depastured? Yes.

975. Two methods, so far, have been suggested for bringing the revenue from the railway nearer to the expenditure—one being a specific monetary guarantee, and the other a general tax imposed upon all land indifferently within a certain distance from the railway, the amount of the tax varying with the distance from the railway;—if either were deemed necessary, which of these two methods do you think would be the better? I should say a land tax in preference to the specific guarantee. I think an increased rate for freight would be the most satisfactory, because then those who used the railway most would pay the most.

976. Would you care to offer an opinion as to the amount of the tax suggested by the railway experts, namely, 2d. per acre on land within 5 miles of the railway, 1d. per acre on land over 5 miles and under 10 miles from the railway, and a proportionate amount for the land further away? I think 2d. per acre is rather excessive, and I would suggest 1d. per acre within 5 miles, and ½d. per acre within 10 miles and over 5 miles.

977. If, after carefully investigating the proposal, it is deemed necessary by those in authority that 2d. per acre should be imposed, do you think the people in the district would be willing to agree to the construction of the railway with such a condition attached to it? I think so. As far as I am concerned, if I were within 5 miles of a railway, I would gladly pay it.

978. Would the imposition of such a rate impose a special hardship on any of the selectors or farmers? It would be a hardship.

979. In what cases? Of course, it would be a handicap as against those who are nearer the other railways. We would be handicapped in having to pay an extra amount besides the long carriage charges to Sydney.

980. I suppose you know that the rates for agricultural produce are very low? Yes; we are very well satisfied with them.

981. Do you think that 2d. per acre on top of that would be a serious handicap? Yes.

982. Is there any special class of settler whom it would prejudicially affect? I do not think so.

983. Do you care to give an opinion as to what would be the development of agriculture in the district? Of course, I have taken it roughly at 20,000 acres; but that is a very low estimate. I have put down 500 acres extra for myself and brother; but we would put in the whole 5,000 acres in our holdings if we had a railway, and others are in the same position.

984. Do you send any wheat to market now? Yes; we send it by way of Nyngan—45 miles. I do not think we could get teams to start now to carry the wheat. When we sent it it was a very bad season, and there were a lot of carriers offering; it was carried at 1s. 7d. per bag.

985. Do you anticipate that you will get it carried cheaper in future? I do not think we could get any quantity carried at any price at present.

986. Two other proposals have been mooted—one to take a line from Parkes to Peak Hill, another from a point on the Condobolin line, west of Bogan Gate, running parallel to the Bogan Gate line;—would either of these proposals serve the good agricultural country as well as the one now before the Committee? I do not think so.

987. *Mr. McFarlane.*] What class of timber grows here? Pine and box; there are patches of myall and belar.

988. What timber grows on the best class of country? It is a matter of opinion. Some people are in favour of pine country for agriculture, and others belar. Every man thinks his own land the best.

989. Which do you think is the best? Pine and belar are very similar.

990. Is much of the country about here ridgy? No.

991. What proportion of the land is suitable for agriculture? Ninety per cent.

992. Have you any gravelly country about here? Not within 20 miles. You might find a gravel ridge here and there.

993. Is any of the level land gravelly? No.

994. Have you had any experience of gravel country from an agricultural point of view? Yes. There is a gravel ridge about 20 miles from here, and it has grown as good a crop as anything in the district.

995. Is it country that would last as long as the other class? It seems to do so up to the present.

996. Is the country fairly well watered? Not naturally. It is artificially watered with tanks.

997. Is there any difficulty in getting the water supply by means of tanks? No; you can get the water by making the tanks large enough.

998. Has much work of that kind been done? Yes.

999. Has stock suffered much from the drought? Yes.

1000. Which season was the worst? The last three seasons were very bad. The last season was the worst, but that might be because it followed the others. Some people lost nearly all their stock.

1001. Did they make any efforts to travel them? They could not, because there was no grass on the stock routes.

1002. Would the railway be used in time of drought? Yes.

1003. Where would you send them to? It would depend upon the state of the other districts. At one time we could get grass at Girilambone, at other times we have had to move them to Tumut.

- T. A. House. 1004. Do you think produce would be brought here from other districts to feed stock if there was a railway? Yes, if we had not enough of our own; but if we had a railway there would be enough produced to feed our own stock.
- 15 Aug., 1900. 1005. Then there would be no necessity to send them away, or to bring produce here? Yes.
1006. How is agriculture affected by the drought? It was not affected like grazing. If the rainfall comes at the right time, the drought does not affect the wheat crops very much.
1007. Have you been farming during the whole of the eleven years you have been here? Yes; with the exception of the first year. We have been eight years cultivating wheat.
1008. You stated that 16 bushels an acre would be the yield of wheat? Yes; but that is a fair average yield.
1009. During the ten years that you have farming, would your yield average 16 bushels per acre? No, not taking one year with another. The last four years were not very good, and the last two years have been very low, and has brought down the average. For an ordinary season we consider 16 bushels a fair crop. Some people have had as high as five and six bags to the acre in a good season; that is an average of 24 bushels to the acre.
1010. Is there very much variation in what is called agricultural land? I do not think so.
1011. Do you think that in a fairly good season the wheat-growing portion of the land would produce 16 bushels to the acre? Yes.
1012. Is there a large area of Crown land that would be affected by the proposed railway, and which would be made available for selection? Yes.
1013. Is most of the land held privately? Most of it is included in conditional purchase and conditional lease.
1014. What would be the size of an average holding? 2,560 acres.
1015. Are there very many under that size? Very few.
1016. Are there not some large areas held in the district? I do not think there is anything in the district under 2,560 acres; but I do not know how much freehold the squatters hold.
1017. Speaking of the conditional purchase land, what would be the average holding? 2,560 acres—I do not know of any smaller.
1018. If railway facilities were given, and the land were properly improved, do you think that the land suitable for agriculture would be used for agricultural purposes? Yes.
1019. That is, within reach of the railway? Yes; within 15 or 20 miles. I believe that more than that, outside of such a distance, would be used; but I speak positively as to land within 20 miles of the railway.
1020. In view of that, how many acres would it take to maintain a family by agriculture? 640 acres of agricultural land, adjacent to the railway, and in an improved condition, would be sufficient.
1021. Do you think that the holdings would be divided as small as that, or would there be a tendency to go in for mixed farming? They would sooner have mixed farming, because then you have not to cultivate the same land over and over again.
1022. Have you had much experience of sheep-farming? Yes, since I have been in this district.
1023. With a railway, which would pay best—agriculture or sheep-farming? Agriculture, decidedly.
1024. Do you think that those who hold large areas of private land would use it for agriculture if they had a railway? Yes, if they could get anyone to use it on the halves system.
1025. Has there been any of that system adopted here? Yes; there is a little at present.
1026. Is it satisfactory to the tenant and the owner? This is the first year that it has been tried.
1027. Are you aware that the system has been carried on in many parts of the Colony? Yes.
1028. From your knowledge of the system, do you think it would work satisfactorily here? Yes.
1029. If land were thrown open on the halves system, do you think people would be ready to take up the land? Yes.
1030. *Mr. Watson.*] You say that you pay at present 1s. 7d. per bag for carting wheat to Nyngan? That is what we would have to pay. We have carted our own.
1031. With a yield 16 bushels to the acre, that amounts to a tax of 5s. 8d. an acre upon the land-owner; if you had a railway here it would go from Bulbodney, and the charge would be 3d. a ton less than it is at present from Nyngan to Sydney, so that you would save 5s. 8d. if the railway were constructed? Yes.
1032. How, then, can you say that 2d. an acre would be a serious tax upon a land-owner if he could save 5s. 8d. an acre in carriage? Taking it in that way, I agree with you. What I meant to say was that 2d. an acre would be a tax.
1033. 'Is it a great tax, in view of what I have stated? I can put it in this way: At present we cannot carry on agriculture successfully and pay that charge of 5s. 8d. an acre for carriage. You will understand that the charge is a tax in that way.
1034. Assuming that a man has only a small portion of his land under agriculture, would it not still pay him, on that basis, to give a certain guarantee to the Commissioners until the railway paid its way? Yes; as far as I am concerned I would willingly pay it.
1035. *Mr. Shepherd.*] I understood you to say that the construction of the railway here would largely increase the carrying capacity of the country for sheep? Yes.
1036. How would it do so? You could turn the stock into the stubble country, and you could grow hay as a stand-by, so that you could afford to carry more stock, and be safe from a drought.
1037. That would be where mixed farming is carried on? Yes.
1038. *Chairman.*] Have you consulted the settlers in the district as to whether those through whose land the railway will pass are prepared to hand over the land free? I think the whole distance from Bullock Creek to Bulbodney is Crown land, so that there is no necessity, so far as that part of the line is concerned. I may be allowed to make a short statement to the Committee, putting forward a few reasons for the construction of this line. The policy of this country has been to settle the people on the land. I would ask what benefit is it to the country to settle the people on the land unless you give them the necessary conveniences to make it productive. This railway is what might be termed an agricultural line, running as it does nearly the whole distance through agricultural land, and it would serve about 2,000,000 acres. Of that area, 1,800,000 acres are first-class agricultural land. The settlers are thorough agriculturists, coming, as they do, from Victoria and Riverina. We all have a special knowledge of farming. The value of the farming plant in the district is £10,464; the area under cultivation is 6,069 acres, which would yield, in a fair season, 81,000 bushels, or 2,058 tons. If the line is constructed, I believe that that amount will be increased to an unlimited extent. If our present statistics do not show that we produce sufficient to warrant the construction of the line, it is simply because, under present conditions, the margin of profit

profit is not sufficient to warrant us in producing more, as the cost of carriage to the railway, and the inability to get teams, prevent us from cultivating to any great extent. As to the future development of the district, we are quite satisfied that, with the construction of the line, we can produce sufficient to provide enough traffic to pay interest on construction and working expenses. We know of no country where the growth of wheat and barley can be carried on with better results. As to the lasting qualities of the soil, some men have grown eight crops in succession on the same land, and the present crop has the appearance of being quite as good as any of the previous crops. We consider that the land in this district, as a whole, is superior to the land in the Goulburn Valley, which is considered to be one of the greatest wheat-growing districts in Victoria. If this line were constructed, whereas at present there is only one family on every 2,560 acres, four families could make a living on the same area. The railway would be the means of encouraging closer settlement. Then, there is the noxious animal pest. The wallabies and wild dogs are a continuous menace. Unless we get rid of the growth of under-scrub it is impossible to get rid of those pests. The only effectual way is to cultivate the land. It is impossible, without a railway, to cultivate any more than we do at present. At present it takes us, with a six-horse team, six weeks to deliver 210 bags of wheat at the nearest railway station. If this railway were constructed within 10 miles of our land, we could deliver 1,000 bags in the same period with a four-horse team. It could hardly be expected that this railway would be a paying concern from the start; but we consider that the railway could be used as a means of developing the country, and, if worked in harmony with the Lands Department, it could be made the means of profitably using a very large tract of country which, up to the present, has been a source of great trouble to the Government generally, and the Lands Department—that is what is known as the West Bogan Scrub. This land is as good as anything in the Colony for agriculture. It depends upon the construction of this railway whether we shall make this part of the Colony the granary of New South Wales, or whether it shall be abandoned to scrub and the noxious animals pest.

T. A. House.
15 Aug., 1900.

Isidore Henry Moss, grazier, Woodlands station, sworn, and examined:—

1039. *Mr. Shepherd.*] What distance is your holding from Bogan Gate along the route of the proposed railway? About 70 miles. I. H. Moss.
15 Aug., 1900.
1040. What is the size of your holding? 42,915 acres of Crown land, held under West Bogan scrub improvement lease. Under the terms of the lease, a portion of the area becomes available in a certain time for settlement if the Crown desires it. They have the right to resume one-third in about nine years; another third will be available for resumption in seventeen years; and the balance in twenty-five years from the present time.
1041. What does the remainder of your holding consist of? 10,240 acres of conditional purchase and conditional lease land, and about 1,400 or 1,500 acres of freehold.
1042. What do you consider are the capabilities of this country for pastoral purposes? Partly improved, its carrying capacity would be one and a half acres to a sheep; unimproved, without water, it would carry nothing; by putting tanks down, the country would carry one sheep to 5 or 7 acres.
1043. Does any one attempt to carry on pastoral pursuits without improving the country? It would be impossible to do so.
1044. In the event of a railway being constructed, do you think there would be sufficient timber to supply sleepers? Yes; I believe there would be sufficient ironbark and box, so long as the Department did not confine itself strictly to ironbark to supply sleepers for a double line.
1045. What is your opinion of box timber? A great deal of it is quite sound.
1046. How would you compare it with ironbark for durability? Ironbark must be put first, but we find that box lasts very well.
1047. What is your opinion of the country for agricultural pursuits? I think a great deal of it. I have been continuously cropping one paddock for nineteen years. It has been cropped continuously year after year with a spell of two years under lucerne. The crop of wheat on it now is just as good as crops grown on land which has been in use for only two or three years.
1048. Are you fairly well acquainted with the whole of the country from Bogan Gate to Bulbodney? I know the country between Bogan Gate and Trundle by the road, and I have been at Bullock Creek. I know the country better from Bullock Creek to Bulbodney, and I know the country generally.
1049. Taking a fair distance on each side of the proposed line, what would you say is the average proportion of land suitable for agriculture? From what I have seen, I should say about two-thirds.
1050. Would the balance of it be all fit for pastoral purposes? Yes, when improved.
1051. There are some rather stony ridges between Bogan Gate and this place;—do you think that they are fairly good for agriculture, or are they useless? The stony ridges are not good for agriculture, but I have seen a crop growing right up to a large upheaval of granite, to the foot of the ridge, and among the granite hills there are crops growing in basins. The ridges are of very small extent.
1052. Are you acquainted with the mineral resources of this district? I can only speak of what I have heard. The shows are very good.
1053. What minerals are found here? Copper, silver, and gold; at one place they have found tin.
1054. Has anything been sufficiently tested? No; there has been no deep sinking. They have never been able to crush. A man informed me that he obtained a very good prospect at Burra Burra, and the shaft was down 44 feet; the reef was 4 feet wide. He was never able to get a crushing away on account of great distance, but the assay showed a very good yield.
1055. Have you any idea as to what quantity was assayed? No; I think there was only a small quantity. He said the teams were too expensive to send it away to the train, and there were no crushing mills near at hand.
1056. What is the rainfall in your neighbourhood? I have the rainfall record, which has been kept accurately from 1882 to 1899, a period of eighteen years. It shows an average of 19 inches 70 points for that period, and that includes the last four or five years of drought. The record is as follows:—

| | | | | | | | | |
|------|-----|-------|------|-----|-------|------|-----|-------|
| 1882 | ... | 19·27 | 1888 | ... | 10·47 | 1894 | ... | 29·57 |
| 1883 | ... | 13·73 | 1889 | ... | 21·17 | 1895 | ... | 13·63 |
| 1884 | ... | 14·74 | 1890 | ... | 28·24 | 1896 | ... | 20·41 |
| 1885 | ... | 19·23 | 1891 | ... | 26·29 | 1897 | ... | 17·22 |
| 1886 | ... | 22·77 | 1892 | ... | 17·54 | 1898 | ... | 14·55 |
| 1887 | ... | 30·59 | 1893 | ... | 22·01 | 1899 | ... | 13·18 |

1057.

- I. H. Moss.
15 Aug., 1900.
1057. Do you wish to make a statement to the Committee? Yes; my opinion of this country, from an experience of nineteen years, is that very little can be done with it unless grubbing and clearing are carried on to a very large extent. That is very expensive work. There are certain classes of scrubs which grow here which would be ineradicable unless grubbed out. Once the land is ploughed we get good fattening grasses. It would be impossible for us to grub and clear this land unless we had a railway to take away the wheat. The great drawback is the want of teams. When a farmer has finished taking off his crop at the end of the year or early in January, he wants to start ploughing in January, and he has no time to spend in carting his wheat away. I had only 200 bags to send away this year, but I had to wait until April before I could get a team to carry it away, and the last two teams did not get away until June or July. If I left that in the paddock I would have sustained a great loss; if I built sheds to protect it it would be too expensive. I had to pay 1s. 9d. a bag to get it carried to Bogan Gate, and I thought that was cheap. That did not pay the carrier, and it did not pay me either. I have more land cleared than I am cultivating, because I find it is impossible to do so at a profit. I am only growing for my own requirements. The yield has been very good. I have taken off 8 bags an acre, and I have known 10 bags to be taken off an acre. I consider that the average crop of wheat would be 16 bushels to the acre. With regard to pine logs, we have reserves to the extent of about 40,000 acres in close proximity to the line. These reserves were made by the Crown to preserve the pine timber, and they contain some of the most valuable pine in the colony. That timber would be taken to the different centres of population in a raw state or sawn. Another phase of the question is that there is such a large quantity of unimproved Crown lands which would be taken up if there were railway communication. At present they are very much infested with noxious animals of all sorts.
1058. What is the area of unimproved Crown lands? On one station alone there are 250,000 acres of Crown land within twelve miles of the proposed line. It is now available for settlement of any description the Government like. There is also some land on Orange Plains station. The men who are improving their properties are harassed by these noxious animals. They come on the land and eat out the settlers, who are surrounded by scrub country which is just as good as that which has now been cleared. The only thing to benefit this country is the construction of a railway. It would convert a great deal of abandoned and unimproved Crown lands into highly valuable property. It only needs improvement. It cannot be improved without grubbing, and grubbing will not pay without a railway. I think the extent of agriculture and cultivation in this district would be quite unlimited if a railway were made, because most men would put all their holdings under wheat for the sake of improving them. Another consideration is the present loss of stock by drought. We had a very dry season last year and the year before. For my own part I could have saved a great deal of my stock if there had been a railway. We had favoured districts within a very short distance, and with a railway we could have got our stock away very easily. Even if we could not have sent them away we could have brought forage into the district. Last year I spent £1,000 in feeding stock, and the greatest trouble I had was to get teams to cart the forage. I would have paid anything for cartage but the teams were not available. At certain times there are not a sufficient number of teams to meet the requirements of the district. Men will not go into the carrying business when they know that they will only have wheat to carry during certain portions of the year, and then they will have to be idle for six or seven months.
1059. Is there any description of timber here which it is necessary to grub? Yes; several of the scrubs have to be grubbed out. Box seedlings, silver wattle, and one or two others have to be grubbed out. If you cut them you are only cultivating them.
1060. Have you ever tried the scrub exterminator? Yes; I tried Lowe's Scrub Exterminator in several ways. We thought it was a great success for about a week; but afterwards we found we were cultivating the scrubs; they grew better than ever.
1061. How did you use it? We tried it in several ways. We bored holes in the tree and poured it in; we ringed them and painted them with it, and found it a failure. I have tried other specifics, but they were nearly the same. I have driven copper nails into the trees, which kills the oak at home, but it is not a success here.
1062. At what time in the year do you get a rainfall? In droughty times it comes anyhow and at any time. We used to look forward to heavy February rains, but they failed us during the last four or five years.
1063. Does the rain fall at a favourable time for wheat growing? Yes; during my experience of nineteen years in cropping I have only had one failure in the hay crop, and that was two years ago.
1064. Do you find any difficulty when harvesting in obtaining extra hands? There is a little difficulty; but the machinery now in use gets over that.
1065. Are you always able to get the harvest in before it has gone too far? Yes.
1066. Is it likely that fruit culture will be developed in the district? Yes, we have had very good fruit; the trees have grown well.
1067. Do you think it likely that poultry would be raised largely? Yes; a man having lucerne paddocks could rear a lot of turkeys.
1068. Have you cultivated lucerne? Yes; I have a very good lucerne paddock.
1069. Was it a thorough success? Yes; but during the dry years the wallabies came down and ate it out. We were infested from the outside runs.
1070. Did you cut the lucerne? We cut it for six or seven months, and then we kept the stud sheep on it. I put it in again last year, but as it was such a bad season it failed.
1071. How far from a railway station could a man carry on farming operations successfully? From 10 to 12 miles. That would enable him to take a load to the station and get back the same day, or to take two loads in three days. It would depend upon the state of the roads.
1072. *Chairman.*] Can you give the Committee any details of the wheat crop which you obtained during the nineteen years you have been cultivating? Until the last three or four years our crops have been about two tons of wheat and hay to the acre. One year we had four tons of wheat and hay to the acre.
1073. With regard to the Crown leases, do they carry a condition that any land required for public purposes should be handed over without compensation? Yes.
1074. With respect to the general class of West Bogan scrub leases, do you think that, with the construction of the railway, the lessees would be induced to farm any of that land on the share system? Yes; I believe that would be the case with a great deal of it.

1075. So that it would not be necessary to wait for the falling in of the leases for the railway to induce agricultural operations? No.
1076. *Mr. Watson.*] Have the West Bogan leases been chiefly granted to get rid of the scrub? Yes. I. H. Moss.
15 Aug., 1900.
1077. Have you been successful so far as you have gone? Yes, very successful.
1078. Have you treated the greater part of your leasehold area? Yes; there are only 3,000 or 4,000 acres not finished now. The rest is completed.
1079. Is that out of the total? Yes.
1080. Do you think the scrub is likely to come again unless some greater expenditure is entered upon? We do not anticipate large expenditures; perhaps two or three more.
1081. With regard to your secured lands; you have heard the suggestion that some guarantee or subsidy should be given by the landowners to make good a portion of the anticipated loss upon the railway;—would you be willing to pay on the secured lands which you hold? Yes.

Andrew Lindsay, farmer and grazier, Myra Vale, sworn, and examined:—

1082. *Mr. McFarlane.*] How far do you live from here? Twenty miles, and about 15 miles from the surveyed line of railway. A. Lindsay.
15 Aug., 1900.
1083. Does your holding adjoin Melrose leasehold? Yes.
1084. Is there land on that holding which will be shortly available for settlement? Yes.
1085. What is the area of that land? 250,000 acres.
1086. What is the character of that land? It is similar to what you see here. It is good agricultural land, interspersed with ridges of mallee.
1087. Is that considered to be good country? Not for agriculture, but a great deal of it is fair land.
1088. Is the land in your neighbourhood similar to the land between here and Trundle? I think it is better than the land at Trundle; it is like the country you pass through from Woodlands to this place.
1089. Taking the 250,000 acres of land which will be available for settlement, how much of it would be suitable for agriculture? I think there are at least 200,000 acres; there are not 50,000 acres of mallee in it.
1090. How far from the railway would that land be? Twenty miles.
1091. On which side of the line is Melrose leasehold? On the west side.
1092. Would the whole of that area be served by the railway? Not if you take a radius of 20 miles,—some of it is beyond that distance.
1093. How much would the 20 miles radius include? I think it would go about midway through the leasehold.
1094. Would 25 miles include the whole of it? No.
1095. Which half would contain the best agricultural land? The half close to the railway line.
1096. Can you give us any information as to the rainfall in your district? The average is about 20 inches.
1097. Have you had any experience in farming? Yes, for thirty years.
1098. How many acres do you hold? 2,560, and my three sons each hold an equal area.
1099. How many acres do you cultivate? 175, at present.
1100. Is your land of the same character as the land on the Melrose leasehold? Exactly the same.
1101. What are the results of your experience on your present holding? I have not cultivated a great deal. I started with a little, because it was too far to cart the grain. I consider that the soil is capable of growing good crops. You can depend upon an average crop, in a fair season, of four bags to the acre. I have grown as much as six bags to the acre in a good year.
1102. How long have you been cultivating? About nine years on my present holding.
1103. Have you been in any other part of the Colony? I have been in Goulburn Valley, Victoria; I was engaged in wheat-growing.
1104. How would the land in this district compare with the Goulburn Valley? It is just the same country, growing box, yarran, and pine; but there is not so much undergrowth in Goulburn Valley.
1105. How is your land timbered? Box, pine, yarran—it is heavily timbered.
1106. Do you consider that the distance you are away from a railway is too great to allow you to carry on farming operations? Yes.
1107. How far are you from the nearest railway station? Condobolin is about 56 miles away.
1108. If you had a railway within 20 miles of you, would you be able to farm extensively? Yes, we would go in for it largely.
1109. In your area of 2,560 acres, how much do you consider would be fit for wheat growing? The whole of it?
1110. In the event of a railway being constructed, would you be inclined to put a larger area under wheat? Yes. The land is all ringbarked and scrubbed.
1111. So that you would soon be in a position to place the land under cultivation if you had a railway? Yes, we would do so at once.
1112. Would people having holdings in the same locality do the same as you would? Yes, their land is of a similar character.
1113. Have you any experience in sheep farming? Yes.
1114. Would it pay you better to place your holding under cultivation and to do away with sheep? No, we will never do away with the sheep. I agree with what has been said about mixed farming, and I have fully proved it, here as well as in Victoria. I consider that sheep improves the farm just as much as manuring it.
1115. What proportion would you cultivate, and how much would you utilise for sheep farming? In all probability one-third would be ploughed; the rest would be kept for sheep. The whole of my block, as it is now, could be put under the plough.
1116. What would you do with your own holding? I would put two-thirds of it under crop.
1117. Have you a good knowledge of the district? Yes, a fair knowledge.
1118. Does the country which would be influenced by the railway consist of hilly country to any large extent? No; the hilly country is outside the influence of the railway. There might be a few miles of gravelly land.
1119. When that sort of land is cleared, is it good for pastoral purposes? Yes.

- A. Lindsay. 1120. So that even the ridges would not be waste land? No; there is good country between the ridges.
 1121. I noticed a considerable quantity of flat country containing gravel on the surface;—have you had any experience of that land? I have never farmed any gravel land, but I have seen it ploughed up.
 1122. Is it as good as the other land? I think that it had better be left alone; I would never think of cultivating it.
 1123. Has it been cultivated in any places? Yes, but not where they can get better land.
 1124. Have you suffered during the last two or three years from drought? Yes, in common with others.
 1125. Was there any loss of sheep? Yes, generally.
 1126. How is the country watered? By tanks.
 1127. Is there any difficulty in obtaining a sufficient water supply? No, it is good country for holding water.

Alexander Menzies, grazier, Walker's Hill, sworn, and examined:—

- A. Menzies. 1128. *Mr. Watson.*] Where do you reside? Near Walker's Hill, at Bobadah, about 30 miles from here, in a north-westerly direction.
 1129. What is the area of your holding? It is a family holding of a little over 12,000 acres.
 1130. Have you carried on agriculture? On a small scale, and mostly for hay.
 1131. What success have you had? It averages about 1 ton to the acre. I have also grown wheat, and I got a good average yield of about 20 bushels to the acre.
 1132. What area did you have in? About 12 acres. I also got about 60 bushels of oats to the acre.
 1133. Were they specially good years? Yes.
 1134. Do you reckon that from an agricultural standpoint the land out there is as good as the land about Bulbodney? Yes, it is similar land.
 1135. Is there as great a proportion of it suitable for agriculture? Yes. There are some rough hills coming into the district.
 1136. What is the rainfall? At Melrose, that is about 20 miles south from me, it is about 19 inches. The rainfall at my place is about the same.
 1137. Does the rain usually fall at seasons suitable for hay and wheat? Yes. Sometimes we get thunderstorms during the summer months, which are not suitable for wheat, but on the whole we get good falls during the winter.
 1138. Do you know the land generally between here and Nymagee? I am not well acquainted with a wide area of it, but I have been about Nymagee; it is similar to this country, but slightly more ridgy.
 1139. What stock have you been carrying on your holding? We never had it fully improved until the last few years, and then the drought threw us back. I think there have been a little over 7,000 sheep on the 12,000 acres.
 1140. Which is your nearest railway station? Condobolin; but I am midway between there and Nyngan. I do business sometimes with one, and sometimes with the other.
 1141. How far west do you reckon you would be out of the practicable area for wheat-growing, owing to the rainfall? Wheat has been grown 30 or 40 miles further west from me.
 1142. Assuming that this line were built to Bulbodney, would you use it in preference to going to Nyngan? Yes; it would save me 30 miles.
 1143. Would there be any agricultural development in your direction if this line were constructed, leaving you, say, 30 miles away? It is a little too far to grow wheat at a profit, although there are some people now growing wheat near me and carting it to Condobolin.
 1144. What would be the effect of the railway upon your district? I do not know that it would have very much effect. It would suit Bobadah, which is a mining town likely to develop—that is, 35 miles away from here. They would probably get their supplies by the railway, and also coke for smelting.
 1145. Are there any large developments there? Not at present. It is quite in its infancy.
 1146. Is there any great amount of Crown land in that direction which might be made available for settlement? I think it can all be made available. I do not think it is under lease, and it is nearly all Crown land.
 1147. Is there any prospect of increased settlement for pastoral purposes in your direction if the railway were made? There would be a great increase in pastoral pursuits.
 1148. What advantage would it be to a man to take up the land not now taken up if the railway were made? It would be more convenient for him to get his supplies and his wool taken away. It is now impossible to take away stock.
 1149. Would it be possible for a man with a small capital to take up land within 30 miles of the railway when he cannot take it up within 60 miles of a railway? Yes, and there is a vast amount of pine timber through that country. I do not know of any ironbark forests.

John Lancaster Tindall, miner and prospector, Bobadah, sworn and examined:—

- J. L. Tindall. 1150. *Chairman.*] Were you the discoverer of the Lightning Creek and Bobadah mining fields? Yes.
 1151. Can you give us a general idea of the mineral characteristics of the country to be served by this railway, and what effects would follow in the mining industry from its construction? At Lightning Creek chiefly gold is found. There will be reefs worked there soon. There is a good deal of reef country in the direction of Jumble Plains, Lightning Creek and Bobadah. There is copper at Jumble Plains. I found a little alluvial there tracing up the reefs. There was no capital to develop the reefs, so I left, and came on towards Bobadah.
 1152. Was capital frightened away owing to the long distance from railway communication, or was it owing to the uncertainty of the prospect? That had a great deal to do with the copper. The gold is generally low grade, and it takes a great deal of heavy machinery to work those ores.
 1153. What was the value of the gold which you got at Lightning Creek? The alluvial gold was poor, but there was a great quantity of it; it went from 2 dwt. up to 7 dwt. to the load. You can get gold all through that country, more or less—that is, from Fifield to Platina and Lightning Creek.
 1154. Do your observations lead you to the conclusion that with railway communication there is a likelihood of mineral development in the neighbourhood of Lightning Creek? Yes.

1155. What is your experience of Bobadah? It is a low grade formation with a good deal of smelting ores—silver, copper, lead, and gold. There is a little gold mixed with them.
1156. Is the mineral area there extensive? Yes.
1157. Are Lightning Paddock and Bobadah connected with each other? Yes; there is a continuous belt of country there.
1158. What is your experience of Bobadah? There is a very large low grade gold formation, besides copper and silver.
1159. Are they of such a character that with easy communication they could be profitably worked? Yes; the cheap carriage of coke for smelting would make a lot of difference in the working of the mines.
1160. Have you so thoroughly prospected the Bobadah district as to be able to state definitely that there is a large area of mineral country there which could be profitably developed? Yes; I know of two or three very fine shows there which will eventually be worked.
1161. If a railway were constructed as far as Bulbodney, would that materially help towards the development of the Bobadah field? Yes; it would be within thirty miles of a railway.
1162. In low grade country would machinery and coke be brought to the ore? Yes, it would have to be treated on the spot. The matte would have to be sent down the line for treatment.
1163. Do you find any difficulty in obtaining water for mining purposes? No; excavations will have to be carried out for water, but I would sooner excavate for water than have to contend with it.
1164. So far, in sinking, have you had to contend with any water difficulty? No.
1165. Have you had any experience of mining elsewhere? Yes, in Victoria. I was at Temora at the first of the mining there.
1166. Is the Bobadah country similar to the Cobar country? Yes, the mines are large, and we employ a number of men, but they are handicapped through being such a long distance from a railway.
1167. *Mr. Watson.*] Was there not a large company formed to work at Bobadah some time ago? Yes.
1168. Did they put machinery on the ground? They did not put on much.
1169. What was the cause of their failure? The gross misdirectionship—the managers had to do what they were told.
1170. Did they go so far as to make any bulk test to find out how things were? The smelting ores which they sent to Sydney gave £5 per ton after paying expenses, but they have done nothing. It yields lead, copper and gold.

J. L. Tindall.
15 Aug., 1900.

George Lind, miner, Albert Water Holes, sworn, and examined:—

1171. *Mr. Shepherd.*] How long have you been engaged at those mines? I have been there a little over eighteen months.
1172. What is your opinion of the field? There is a mineral belt of country running for miles along there—from Fifield on to Bobadah. It is nearly 100 miles in length. I think it is auriferous country. We know that there are minerals of several kinds there; but the only payable mineral we have got so far is copper. We have traces of gold, and gold has been got 15 or 16 miles to the south, towards Fifield and Lightning Paddock. At Lightning Paddock the mines are only in their infancy, and so are ours. I cannot actually say how the country is going to turn out until it is more developed. It takes a good time to develop a field like this. As we have no banks behind us, we are handicapped to a great extent by having to take our ores 40 miles to the nearest railway-station, and with a very bad road. Carriage is very high. If we had better facilities by getting close to a railway-station, people would be able to come on to the fields, and the country would be properly opened out.
1173. Have you a true lode where you are working? Yes; we are about 80 feet down; there is another shaft 125 feet. There are three mines working. Two have been getting ore for twelve months. Two men are working in one, and about three or four in the other.
1174. Have you had any quantity treated anywhere? Yes; we have been sending ore down to be treated.
1175. What quantity? As far as I can find out, about 90 or 100 tons of picked ore have been sent away. There is a lot of second-class ore on the top, which it would not pay to send down.
1176. Has it paid you to send away the ore? Yes.
1177. What has been the return? On an average 22 per cent. right through. The ore has gone as high as 30 per cent. and over, and as low as 15 per cent.
1178. At what depth did you have the best results? We have had ore all the way down to a depth of 125 feet.
1179. Is it running all the same? It is running in patches and blocks all the way down.
1180. Did you have as good a result near the surface as you had at 80 feet? Yes, and in some instances better.
1181. Where did you have the ore treated? We had ours treated at Cockle Creek at first, but at present we have it treated at Lithgow.
1182. What is the size of your lode? It averages from about 1 foot to 2 feet 6 inches, or 3 feet at the most.
1183. Does the lode vary as you go down? Yes.
1184. Is it not rather small for a copper lode? It is too small for a company to tackle it; they would do so, however, even with poorer stuff, if there was a larger quantity.
1185. Have you been along the auriferous belt of country? Yes, for a part of the way.
1186. Is the part where you are the most promising? Yes; 10 or 12 miles further north there is what we call Orange Plains—there are some mines there. I understand they look pretty well at the surface.
1187. Has only one lode been discovered? There are three distinct lodes. We have got three.
1188. Has trenching been carried out to discover new lodes? There has been no one prospecting there, except three or four of ourselves. The country has not been tried.
1189. How far are you away from the railway? The railway will come within 5 or 6 miles of our mine.
1190. Will that railway assist you? Yes; it will help to develop this belt of country, as it will bring more prospectors out here, and the carriage will be cheaper.
1191. Have you water in the 80 feet of shaft? No; we have never got to any water-level.
1192. Could you get sufficient water to carry on operations on a large scale? Yes; we have made preparations to catch surface water. Our party have a good-sized dam now.

G. Lind.
15 Aug., 1900.

- G. Lind.
15 Aug., 1900.
1193. *Chairman.*] Is there any indication of these lodes opening out wider at a depth? Yes.
1194. What are they? The country, in one mine especially, is very much disturbed, but in the other mine, in which I am, the lode carries two splendid walls right down. We have the lode at the bottom level as large as 3 feet 6 inches and 4 feet. We had no size like that on the surface. It runs in blocks, pinching and widening out. The blocks of quartz seem to be widening.

Charles Henry Siemsen, farmer and grazier, Buddabudah, near Lansdale, sworn and examined:—

- C. H. Siemsen.
15 Aug., 1900.
1195. *Mr. McFarlane.*] Where do you reside? Thirteen miles north from here, on Bulbodney Creek.
1196. Have you any statement to make to the Committee? Yes. In the first place, if railway facilities are given to this district, self-interest will induce landholders to go in largely for agriculture, because the majority of the holdings are 2,560 acres in area, which is not sufficient for grazing purposes alone. In the second place, cultivation is the only sure method of economically preventing the dense growth of noxious scrub which continually makes its appearance on this West Bogan country. In the third place, because the rents and instalments are altogether too large in proportion to the net return which can be made off these holdings by grazing. The very great disadvantage under which landowners of 2560 acres are labouring should be borne in mind, owing to the want of railway facilities up to the present time, which has prevented them in the past from taking full advantage of agricultural operations, which otherwise they undoubtedly would have done. Fourthly, because it has been proven beyond doubt that this land is most admirably adapted for the growth of cereals. I would also point out, in addition to these considerations, that a great advantage would be gained from the fact that there is a large quantity of marketable pine timber in this district. The landholders here have not been treated as they ought to have been. The majority of the selectors were given to understand, when they came here under the 1890 Act, that in five years from that date there would be a great deal of land resumed, and in that case we would have had a dense population here, because land would be taken up. Every available acre here has been taken up by selection.
1197. Are you of opinion that the small holders, that is men with 2,560 acres, have suffered more from the want of a railway than the larger holders? Yes; because the small holder has gone in more for cultivation.
1198. Do you think that 2,560 acres are not sufficient for grazing purposes? Yes; in this district.
1199. What is a fair area on which to maintain a family by grazing? A great deal depends upon the amount of improvements put upon the land. If the area is improved, I should say that 5,000 acres would maintain a family, if it were not too large a family.
1200. Where do you live? Near Orange Plains.
1201. How many acres do you hold? 2,560.
1202. Do you use any of that for cultivation? Yes, between 450 and 500 acres. I have been cultivating since 1894.
1203. What distance are you from the railway? I am between 47 and 50 miles from Nyngan station.
1204. Is that too far to make farming pay? Yes, it is impossible to make it pay. It has cost me in the past from 1s. 7d. to 2s. a bag for cartage. The great drawback is the impossibility of getting teams at certain times. The spring may be good, but the summer exceptionally dry, and carriers cannot afford to pay for feed at 2s. a bag.
1205. How much of your land is suitable for cultivation? Every acre.
1206. Is all the land in your locality equally good? Yes.
1207. Do you know Orange Plains very well? Yes.
1208. What class of land is it? Although I differ from most of the people here to-day, I consider that the whole of Orange Plains is well adapted for agriculture. There is a good deal of gravel land on Orange Plains; but it has proven itself in this district able to grow a better average year in and year out than the other land.
1209. Do you know any of this gravel land which has been under cultivation? Yes; and taking the general run of it, I have known gravelly ground to produce just as good crops as the other land.
1210. Are there any Crown lands on Orange Plains? Yes; I believe most of it is Crown land.
1211. Has any of it been recently thrown open? No.
1212. If the land were thrown open, would it be taken up? I am sure you would not have an acre left in two years.
1213. Do you think it would pay you to cultivate if you only had to cart for 13 miles, as against your present distance? Certainly.
1214. If the railway were constructed, would you increase the area you have under cultivation? Yes, to the extent of about one-half of my holding. I believe that example would be generally followed. By cultivating about half the holding, I could carry as much stock as at present. I reckon that I would go in for 1,200 acres of cultivation.
1215. Would there be good marketable pine in this district? Yes.
1216. Has it been cut for milling purposes? Yes; there has been a saw-mill here, and there was a good demand for the timber. They are drawing pine 17 miles to the railway station at Nyngan.
1217. What would be the average yield of wheat per acre? I do not think I am in a position to give an average. The selectors, and people who have gone in for wheat-growing, have done so principally within the last six years. During that time there have been three bad seasons, and that has been the case only during the last eleven years, so that those bad years robbed the average of five good years. From my experience of ten years, an average of 16 bushels to the acre would be within the mark; but for three years past it has been lower than that.
1218. Are there many large landholders in your locality possessing 5,000 acres, 10,000 acres, and upwards? No; they are mostly conditional purchase and conditional lease men.
1219. Is the land well watered? There is no natural water; you have to conserve the water by sinking tanks.
1220. Is it level or hilly country? On the west side of Bulbodney it is very level country for about 16 miles, then it gets a little more ridgy; on the east side the country is hilly. The country is fairly heavily timbered.
1221. What is the average of cultivation land in your locality? The whole area is fit for cultivation with the exception of some narrow ranges.

1222. Is there much mallee country? There is no mallee country within 25 miles of this place.
1223. *Chairman.*] Is there any area on Orange Plains which has been available for settlement lease for some time which has not been taken up? Yes.
1224. Do you think that persons have been prevented from taking up that land on account of its distance from railway communication? Yes; if there had been a railway station on this creek that land would not remain there as it is a fortnight. I think that a good many people are of opinion that that land is not suitable for grazing or agriculture. I say it is suitable, and that has been proved on a selection a few miles from us; they have grown the best average crop there for the last six years.
1225. Do you know any other place where the same conditions prevail? Yes; I believe that is the case on Bulbodney Creek. I believe there are a few blocks there available for selection, and they have not been taken up there for a few years. It is all of good quality.

O. H.
Siemeen.
15 Aug., 1900.

Thomas Lacey, share-farmer, Balgay, sworn and examined:—

1226. *Mr. Watson.*] Where do you reside? Twenty miles from Lansdale, to the west.
1227. Have you a holding of your own? No; we are working on the half-share system.
1228. What area have you? About 570 acres from Mr. Ryrie.
1229. How long have you been there? About ten years in the district; but we only started this year on the half-share system. My father has been farming for ten years.
1230. Where does he send his crop to? To Nyngan, 57 miles away.
1231. What has been your father's experience with cropping? We have got 16 to 20 bushels per acre since we have been there. It costs 1s. 7d. to 2s. a bag to get it to Nyngan.
1232. Would it pay you to work on the halves system? Yes, if we get a railway.
1233. But when you took up this land, you did not know there would be a railway? There was some talk about it.
1234. That induced you to take it up? Yes.
1235. Would it pay you, if you got 10 bushels of your half-share, to cart it 57 miles? No; not at a low price.
1236. What price would you require? Four shillings a bushel.
1237. What are the terms on which you have got the land? Mr. Ryrie finds the land, and we find the labour. He clears it and finds us in seed, and we have to take it off. He has to find his own cartage.
1238. Are there any others besides yourself who have taken up land on that system? No.
1239. Is there other land as suitable as that which you have taken up? Yes, all the land about there.
1240. Is it similar to the land about here? Yes.
1241. Is the rainfall there as good as it is here? Yes.
1242. Do you think that if a railway were constructed, many other people would follow your example? Yes, a great many; it pays both parties.
1243. If this line were ultimately extended towards Nymagee, would it then be far from your land? In a straight line to Nymagee it would go within 2 or 3 miles of our land.
1244. Do you know the character of the land towards Nymagee? I have been to Overflow; it is all good agricultural and grazing land.
1245. Does it become more ridgy? Yes.
1246. What proportion of the land at Overflow would be suitable for agriculture? One half.

T. Lacey.
15 Aug., 1900.

Robert James Hutchinson, selector, Lansdale, sworn and examined:—

1247. *Chairman.*] What area do you hold? 2527 acres.
1248. Had you any experience in the timber trade? Yes, a little.
1249. Can you give the Committee any idea of the amount of timber within easy reach of the proposed railway which could be worked for milling purposes? There is a great quantity of timber within an easy distance; it consists mainly of pine suitable for sawing.
1250. Do you think there is a sufficient area of pine to give a large amount of traffic to the railway for some time? Yes, for a couple of years.
1251. What is the quality of pine timber in this district? What is large enough is mostly good; it is mainly sound timber; it is suitable for building purposes of all kinds.
1252. If the line were constructed, is there a chance of finding a market down the existing railways for some distance? Yes; from what I hear there is a great demand for the timber.
1253. We understand that districts like Orange would be large consumers of this timber. Have you the timber in such quantities here, that after paying for sawing and getting it on to the railway line, and another 1s. 6d. per 100 feet, you would be able to find a market in such districts? There are several people doing so now, and I think they ought to be able to do it here. At Trangie they have to cart the timber 15 and 20 miles to the station.
1254. What is the destination of the timber trucked at Trangie? I think I have seen some of it going to Bourke.
1255. Do you think that the timber is in such quantities here that it will stand that amount of carriage? Yes.
1256. Can you offer the Committee any evidence as to the rates for the carriage of store goods? It costs £10 10s. a ton to deliver goods here from Sydney; the cost of carriage on the railway is very high, and I pay £3 a ton from Trangie.
1257. Does that impose any difficulty on the people living here? Yes; it is a great handicap.
1258. Do you go in for farming? Yes; I have 300 acres under cultivation.
1259. What has been your experience as an agriculturist? I have obtained 14 or 15 bushels to the acre; in some years I have got 7 or 8 bags to the acre.
1260. Would the greater part of the district, say within 20 miles of the railway, around Bulbodney be fit for agriculture? Yes; it could not be better.
1261. What would be the percentage of arable land there? Almost the whole of it.
1262. Would the construction of this railway enable the selectors in this district to frequently send small consignments of fat stock for sale? Yes.

R. J.
Hutchinson.
15 Aug., 1900.

- R. J. Hutcheson.
15 Aug., 1900.
1263. Are they prohibited from doing so now? Yes, on account of the distance they have to travel the sheep.
1264. Would that materially increase the chance of profitably running sheep on their holdings? Yes; the sheep get fat, but we have to leave them here.
1265. By a system of mixed farming, under which the sheep are fed off the stubble during the period in which the grass is seeding, would you, to a large extent, avoid the risk of deteriorating the wool? Yes. I have 100 acres of land cleared beyond what I cultivate.
1266. How much of your holding would you farm if you had a railway? Between 600 and 700 acres.
1267. Do you agree with the statement that, with the construction of the railway and a consequent increase of cultivation, the total carrying capacity of the district with respect to sheep would be considerably increased? Undoubtedly.
1268. *Mr. McFarlane.*] Are there any other classes of marketable timber in this district? Not between here and Burra Burra that I know of. There is a little ironbark in patches, but there is not a great deal of it.
1269. Would there be sufficient ironbark for railway construction? Yes, for the time being.
1270. Is it of fairly good quality? Yes.

THURSDAY, 16 AUGUST, 1900.

[The Committee met at the "Post Office Hotel," Dandaloo, at 8 p.m.]

Present:—

WILLIAM THOMAS DICK, Esq., (CHAIRMAN).

| | | |
|--|--|------------------------------|
| THE HON. PATRICK LINDESAY CRAWFORD SHEPHERD, | | JOHN CHRISTIAN WATSON, Esq., |
| THE HON. SOLOMON HERBERT HYAM, | | JOHN MCFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

George Edgar Richardson, Secretary, Dandaloo and Trangie Railway League, Dandaloo, sworn and examined:—

- G. E. Richardson.
16 Aug., 1900.
1271. *Chairman.*] What is your occupation? Grazier, residing on Trangie, Dandaloo Road.
1272. The Committee have at present under their consideration a proposal to connect Bogan Gate with Bulbodney;—would you give your opinion as Secretary of the league of the Dandaloo-Trangie connection as to whether the Bogan Gate line would or would not serve this district? It will not serve this district.
1273. How far is Dandaloo from Lansdale? Thirty-two miles.
1274. How far is Dandaloo from Trangie? Twenty-seven miles.
1275. Do you know the stock route from Dandaloo going about south-west through Dandaloo down through Kerriwah holding? Yes.
1276. That stock route is practically in a direct line from Dandaloo to the nearest point on the proposed Bogan Gate to Bulbodney line;—what distance is it from Dandaloo along that stock route to Bulbodney Creek? Twenty-five miles to the creek.
1277. So that practically you would be an equal distance from the Bogan Gate-Bulbodney line and the western line? Yes.
1278. From the nearest point of the proposed railway line, Dandaloo would be practically about 20 miles in a direct line. You are now 27 miles distant from Trangie. The mileage to the nearest point on the Bogan Gate-Bulbodney line from Sydney is 350 miles, the mileage from Trangie is 321 miles;—taking both these facts into consideration, which of the two lines would serve Dandaloo best? The western line.
1279. Do you state that the extension of the line from Bogan Gate to Bulbodney would be of absolutely no benefit to the people of Dandaloo? It would be of no benefit.
1280. In what way could the people of Dandaloo be served? They could be best served by a line from the western railway at Trangie coming to Dandaloo; that would be a distance of 27 miles.
1281. What is the character of the country between Trangie and Dandaloo? It is all flat country.
1282. Are there any watercourses to cross? Only Boggy Cowal. An extension could be made from Trangie to the Bogan Gate-Bulbodney line, or on to Nymagee.
1283. Would it not be a distinct advantage to the people of Dandaloo to get on to a main line where there would be main line charges as compared with sending their produce over a branch line? Yes.
1284. *Mr. Watson.*] It has been suggested that the line towards Bulbodney might be taken first to Peak Hill, and from there westerly to Bullock Creek, and thence to Bulbodney;—would that line serve Dandaloo to any greater extent than the Bogan Gate to Bulbodney line? It would be just the same.
1285. Was there any idea on the part of your league that a railway to Dandaloo might be extended further? They did not ask for anything else; they sent in a petition for a line to Dandaloo from Trangie.
1286. Are you aware that short cockspur lines are not favoured by the Railway Commissioners, because they do not pay so well proportionately as a longer line;—is there any suggestion as to where the line might be taken from Dandaloo after coming here from Trangie? It might be made to junction with the Bogan Gate-Bulbodney line.
1287. *Mr. Hyam.*] What is the nature of the country between here and Trangie? Plains and belts of timber alternately.
1288. Is it agricultural land? Yes; it is black and red soil.
1289. Is it heavy country? Yes, in wet weather.
1290. Would the railway which you propose run at right angles to the rest of the line? Yes.
1291. Then would the line from here to Nymagee be taken at another angle? Looking at the map, I see that it would be at an angle of 65 degrees.
1292. *Chairman.*] Have you anything else to add? Our committee has not instructed me to prepare any evidence, as we thought the Public Works Committee were not taking evidence on the Trangie-Dandaloo Railway. We understand that to be the case now. My evidence is simply to show that the Bogan Gate-Bulbodney line would not meet the requirements of Dandaloo.
1293. I may sum up your evidence by saying that you do not think the proposal now before the Committee would benefit Dandaloo, or the country between Dandaloo and Trangie? Yes.

FRIDAY,

FRIDAY, 17 AUGUST, 1900.

[The Committee met at Wallanbillan Homestead, at 4.15 p.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

THE HON. PATRICK LINDESAY CRAWFORD SHEPHERD,
THE HON. SOLOMON HERBERT HYAM,JOHN CHRISTIAN WATSON, Esq.,
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

Peter Andrew Cannon, grazier and farmer, Wallanbillan, sworn and examined:—

1294. *Mr. Watson.*] Are you part owner of Wallanbillan? Yes.
1295. Are you interested in property towards Bullock Creek? Yes.
1296. How will the Bogan Gate-Bulbodney railway affect your position? It will do so very advantageously.
1297. Will that apply more particularly to your land near Bullock Creek? Yes.
1298. Is your land here 22 miles easterly from Bullock Creek? Yes, but rather north-east.
1299. How many miles are you from Narramine? Thirty-two.
1300. If a line were constructed from Bogan Gate to Bullock Creek, would you continue to use Narramine for your produce, or would you come into Bullock Creek? To Bullock Creek, because it is nearer.
1301. How do the roads compare in the two directions? The roads are better to Bullock Creek than to Narramine. In a wet season the roads to Narramine are almost impassable, and we also have to pass the Bogan River without a bridge.
1302. How far east do you think the Bulbodney line would attract traffic at Bullock Creek? When it is possible to cross the Bogan, I should think it would go 4 miles on the north-eastern bank of the Bogan. I have great difficulty in getting my wheat away from here. I have nearly 3,000 bags of last season's crops here, and I am compelled at present to buy teams to carry it. I cannot get ordinary carriers, except at ruinous prices.
1303. What have you been paying in the past for carriage to Narramine? From 1s. to 1s. 4d. per bag.
1304. At the present price of wheat would it stand that cost? No.
1305. If the railway were at Bullock Creek, would you be able to get cartage much cheaper then? Yes; I would get it carted from here for 1s. a bag, as against 1s. 4d. the other way. As the production of wheat increases teams become scarcer, because the competition for teams is greater. The supply does not keep pace with the demand.
1306. Would the majority of the farming population have to employ teams rather than cart themselves? Yes; it does not pay farmers who grow wheat to keep teams, because they would have to keep such a large plant. By the time they have the wheat taken off they want to start ploughing again.
1307. What is the area of your holding at Wallanbillan? 14,900 acres.
1308. What proportion of that is suitable for agriculture? The whole of it with the exception of a few acres under water.
1309. Taking the land between Wallanbillan and Bullock Creek, is it all of the same character? Yes.
1310. Is it all suitable for agriculture? Yes.
1311. It has been suggested that the line towards Bulbodney might, instead of starting from Bogan Gate, be taken from Parkes to Peak Hill and from there to Bullock Creek;—what is the country like between Peak Hill and Bullock Creek? There is a great deal of broken country, creeks, and cowals. It would have to cross some high ridges.
1312. Would the country on the whole between Peak Hill and Bullock Creek compare favourably or unfavourably with that between Trundle and Bullock Creek? From Bogan Gate to Bullock Creek it would be much cheaper to run a railway.
1313. Which would be the best from an agricultural stand-point? I do not think there would be any difference. There is a good deal of hilly country on the Peak Hill line which does not appear on the Committee's map, and there are also some deep creeks which would necessitate bridges.
1314. Do you think it is probable that the cost of construction would be a great deal higher if you attempted to reach Bullock Creek from Peak Hill? Yes.
1315. What area do you cultivate at present at Wallanbillan? 2300 acres.
1316. Would the Bulbodney railway be an incentive to you to increase cultivation? Yes; my intention is to increase it more than double.
1317. Do you farm your land yourself, or do you let it on the halves system? I do it all myself.
1318. Would any extension of farming operations be dealt with by you in the same way? Yes.
1319. What is the general capacity for stock of the land around Wallanbillan? One sheep to the acre.
1320. What has been your wheat yield? Our average yield for about seven years has been 17 bushels to the acre.
1321. Does that include the recent drought years? Yes, dry years and good years. We had as low a yield as 9 bushels to the acre one year.
1322. What was your largest crop over the whole area during that period? In one season, 24 bushels over the whole area.
1323. It has been put forward that the Bogan Gate-Bulbodney line and the western line will serve the country between the two railways;—do you think that is so, or do you think it will be necessary to make an additional line to effectually serve that area? I do not think the proposed line would serve the whole area. I do not consider that it would serve me on this part of the run. If no line were constructed to Bullock Creek I could not continue growing wheat here; but, in the event of the railway being constructed to Bullock Creek, I intend to grow wheat in that direction. The portion I have under wheat, close to this homestead, will go back to grass.
1324. Do you think 22 miles is too far to cart wheat? Yes, at the present price.
1325. What suggestion is there to serve the country in addition to the proposed railway towards Bulbodney? In order to open up this country it would be necessary to run a cross line from Bullock Creek

P. A. Cannon.

17 Aug., 1900.

- P. A. Cannon. Creek to Narramine. It would run the whole way through first-class agricultural and grazing land. From the river to Narramine, in what we call a reasonably wet season, it is impossible to cart even wool.
 17 Aug., 1900. We have to pay very high prices for wool.
1326. Supposing you had fair roads, do you think it would pay a man to grow wheat on good land 22 miles from a railway? Not with the price at 2s. a bushel.
1327. What, in your opinion, is the limit of attraction for an agricultural line? Twenty miles at the outside. I have to pay 2d. a bag extra for an additional 2 miles cartage. I am paying 14d. a bag from here to Narramine, and 16d. a bag for 2 miles further out, and the carriers take the 14d. a bag wheat in preference. That is because the road is very heavy.
1328. Do you think that if the suggested line from Bogan Gate to Bulbodney, and a line from Narramine to Bullock Creek, forming a loop, were constructed, they would come within a reasonable distance of paying? Yes; I believe that the produce from the district would increase 400 per cent. at the very least, and the carriage of other merchandise accordingly.
1329. Is there a great amount of settlement between Wallanbillan and Bullock Creek, or is the land mainly in the hands of a few holders? There is a good deal of settlement. There has also been some land surveyed recently for selection.
1330. Is that land suitable for agriculture? Yes; it is good agricultural land.
1331. Do you think that landholders generally would be of the same opinion as yourself, as far as extending the agricultural operations are concerned, between Bullock Creek and Wallanbillan if the railway were made? I am sure they would. I have heard a great many of them say so, and I know a great many of them are clearing land in anticipation of that line being constructed.
1332. I presume you have seen the estimate of the Railway Commissioners as to the probable financial results of the railway, which go to show rather a large deficiency;—are you willing, as far as your land within a reasonable distance of the line is concerned, to contribute towards reducing that loss? I am quite prepared, provided the suggestion is reasonable.
1333. Do you think it is reasonable to impose a charge of 2d. per acre within 5 miles of the line, and 1d. per acre between 5 and 10 miles, and so on? Yes.
1334. Do you send your wool at present to Narramine? Yes. I cart my own wool. I would have to pay £1 or £1 5s. per ton.
1335. Would you send your wool *via* the Bullock Creek line? Yes. I believe the proposed railway is necessary to open up this country. It is not producing one-tenth of its capacity.
1336. *Mr. Hyam.*] What time is occupied on the journey between here and Narramine by a waggon with an average load, and with the road in its ordinary state? It takes my waggon six days to go there and back.
1337. What time would it take you from the extreme end of your land to Bullock Creek? Three days. The road is much better; the country is hard and livelier.
1338. Is there any metal on the road between here and Bullock Creek? There is a little stone at one point; I think it could be utilised for road making.
1339. Is the country sounder than on the Narramine-road? Yes.
1340. Is there any possibility of improving the road between here and Narramine? No; there is no material for doing so, until you get within a few miles from Narramine.

George Currie, grazier, Strathallan, sworn, and examined:—

- G. Currie. 1341. *Chairman.*] What is your position with regard to the Bogan Gate-Bulbodney line? I live 23 miles north-easterly from Bullock Creek.
 17 Aug., 1900.
1342. Have you had any experience as a farmer? No.
1343. Have you had any opportunity of judging the capacity of the land, from an agricultural point of view? Yes.
1344. What experience have you had? I lived about fifteen years in the Goulburn Valley district. I was brought into contact with farming to a great extent there, although I took no personal part in it.
1345. From what you have seen of the country in your own district, how would you compare it with the Goulburn Valley wheat land? I consider that this country compares very favourably with the best of the Goulburn Valley. I have also lived in a district close to Berrigan. My relatives have properties there now. This district compares very favourably with Berrigan.
1346. What is the size of your holding on the Bogan? Close on 8,000 acres of secured land.
1347. Do you do any farming? No, only growing hay.
1348. What do you consider is the carrying capacity of your country? I have kept about a sheep to the acre during the last five years of drought.
1349. In good seasons, what increase would there be? I would put it down as a sheep to the acre country. In a good year it would carry more.
1350. Would the construction of the Bogan Gate-Bulbodney line induce you to go in for agriculture on your land? Yes—probably a good deal.
1351. What proportion of your holding is suitable for agriculture? There are some parts more suitable than others; but, with the exception of a swamp, it is all suitable.
1352. What yield of hay do you usually get? I have only begun to grow it quite recently. I have seen over 2 tons per acre grown on my land.
1353. Do you agree in the main with what Mr. Cannon has stated? Yes; the roads are the principal objection. I was on the point of beginning to farm about two or three years ago, but the road from here to Narramine is impassable in wet weather, and the cartage is too high.
1354. With railway communication, and with the development of agriculture on your holding, would you be able to carry more sheep than you can carry now? Yes, far more—probably double in the course of a very short time.
1355. Do you agree with other witnesses who have told us that, with the construction of a railway, the produce in the district would be increased in a two-fold manner—first by the agricultural produce, and second by the increase in the sheep-carrying capacity of the run? Yes. Of course, my idea would be, if there were a railway within a reasonable distance, to farm portions of my land and then lay it down in lucerne. It has been proved to be lucerne-growing country, and the rainfall is large enough for lucerne.
1356. Are we to gather from that that you would not go in permanently for agriculture? Yes; because I would keep on putting in fresh paddocks year by year.
- 1357.

1357. Would you put in lucerne in the older paddocks? Yes; that would increase the carrying capacity.
1358. What would be the increase in the carrying capacity? Five or six times. The country that would carry one sheep to the acre now, would carry five or six to the acre under lucerne.
1359. Do you think it has been satisfactorily established that this country is suitable for lucerne-growing? Yes; I have seen it live here during the last four years of drought.
1360. *Mr. Hyam.*] How long will lucerne stand after it has been planted? Provided it has been properly farmed, it has stood here for the last five or six years.
1361. Is that the limit? I do not know; it is impossible to say what is the limit.
1362. You know that lucerne does not stand so long after feeding as by cutting? Yes; but it has stood here for five or six years.
1363. Then you would have to replant? I do not know that it would be necessary to replant at the end of that time, because the country has not been tried.
1364. Your evidence might be open to the construction that you would gradually clear your land, and put it under wheat for a certain number of years, then sow it with lucerne until you had the whole of it under that crop, and then discontinue growing wheat? Not necessarily; because it will always be a country suitable for wheat. If I began growing wheat I would continue to do so. We are at a great disadvantage here on account of the difficulty of road carriage to Narramine. The roads during this winter have been practically impassable for teams. I have been paying as high as 3s. 6d. a cwt. on loading from the railway to this place.
1365. *Chairman.*] Is there the same difficulty in getting from here to the railway? Yes.
1366. What do you usually pay for goods from the railway? When the roads are hard, about 1s. per cwt. and upwards.

G. Currie.
17 Aug., 1900.

Arthur Seaton Machin, farmer and grazier, near Wallanbillan, sworn, and examined:—

1367. *Mr. Hyam.*] Where do you live? Four miles west from here, running parallel to the railway.
1368. How far would you be from the proposed railway at the nearest point from your boundary? From where I am at present living, I would be 20 miles from Tullamore.
1369. What is the size of your holding? At present, 970 acres. The balance of my block is surveyed, but I have not yet got it.
1370. Is it to be made up when the land is available? Yes.
1371. Will that give you 2,560 acres? Yes; and I have an annual lease of the stock route.
1372. How do you use your land? For sheep at present, except a piece for hay. I am clearing the land.
1373. If the railway is constructed from Bogan Gate to Bulbodney as proposed, will you go in for wheat growing? Yes; I have 70 or 80 acres cleared now.
1374. Is the land in your locality suitable for anything else besides sheep-farming and wheat-growing? It is suitable for dairying and wheat-growing.
1375. Do you think that in dry seasons you could carry on dairying successfully? Not without farming; we would have to grow feed.
1376. With care and attention, and with the growth of crops suitable for dairying, would you be able to carry out that industry successfully? Yes; but I do not think it has been tried.
1377. Would it be an experiment? Yes.
1378. With a railway, would you combine dairying and sheep-farming? Yes; the additional area which I would get will only be 15 miles from the proposed railway.
1379. You have heard Mr. Cannon and Mr. Currie give their evidence;—do you agree with them? Yes; in the main.
1380. Is there anything you would like to add to it? I consider that the proposed railway would not suit the majority of the people in this district; they would not be able to use the railway on account of the river.
1381. Do you think that the people on the Bogan Gate-Bulbodney side of the river would be brought into communication with the proposed railway? Yes.
1382. Would they use it in preference to the railway at Narramine? Yes; on account of the river and the road.
1383. Would the road to the proposed railway be better? Yes; undoubtedly.
1384. You have heard of the proposal to put a tax on land within 5 miles of the railway at the rate of 2d. per acre, and proportionately at a greater distance? Yes.
1385. Would you be willing to contribute with the others on that basis? Yes; of course that would mean a halfpenny per acre on my full holding.
1386. Have you been farming in the New England district? Yes.
1387. Were you engaged in extensive operations? Yes, in that district. There are immense areas of land here eminently suited for agriculture.
1388. How would the land here compare with the land in the New England district? On the whole, the land here is superior. Of course there are patches of land in New England far superior to the land here—that is to say, there are immense areas of basaltic soil there. I was living east of Glen Innes, 13 miles towards the coast.
1389. Do you think that the land in that locality is superior to the land here? Yes; for wheat-growing.
1390. What was your average in that locality? If I remember rightly, I obtained 45 bushels to the acre, but that was an exceptional season. I have taken off the land here 32 bushels, and I have only been here five years, and it could not have been a good year. I got it three years ago. Of course it was only on a small area, and I think it was in the year 1896.
1391. Do you think this country would compare favourably with the New England district? Yes; I consider it is superior, taking into account the immense area. I do not know anything about its lasting qualities.
1392. What is the carrying capacity of the country for sheep? I differ from other gentlemen on that point; I would put it at 1½ acres to the sheep, in order to be safe.
1393. What would it carry, combined with agriculture? Two sheep to the acre.
1394. As you clear your land and improve it, would you be perfectly safe in carrying more sheep than you do at present? Yes.
1395. Have you had experience in feeding sheep in drought times? I have had to feed my sheep here for

A. S. Machin.
17 Aug., 1900.

- A. S. Machin. for four years. Those who have had experience here in feeding sheep on hay find it has been a great success.
- 17 Aug., 1900. 1396. Would the proposed railway be a benefit to the district in times of severe drought by giving facilities to remove stock to better places? Yes.
1397. Have any large quantities of stock been removed from this locality for better pasture? Yes.
1398. Do you think the railway would be made use of by small holders? Yes; it would be easy to get the sheep quickly on to the grass and at a less expense.
1399. Have you a small number of sheep? Yes.
1400. Occasionally you have to feed your sheep? Yes.
1401. If a railway came within a reasonable distance, would you be induced sometimes to send half a truck or a truck load of sheep to Sydney, perhaps joining with your neighbours? Yes; we are debarred from doing that at present.
1402. The reason being, that it would not pay you to drive them to Bogan Gate? Yes.
1403. If you had a railway within a reasonable distance, would you be able to avail yourself of the Sydney market? Yes. I consider that if the proposed railway were constructed, it would be a great benefit to the majority of the people here to extend it to Narramine.
1404. Do you think that this railway would attract the whole of the trade that goes to Narramine at present? Yes, on this side of the river.
1405. Do you know the Narramine Road? Yes, I had a team on it. The roads are very good compared with what they have been during the past winter. I came out of town the other day with six horses carrying 32 cwt., and it took me four days to do the trip. I do not think there is a worse road in New South Wales over level country.

SATURDAY, 18 AUGUST, 1900.

[The Committee met at "the Hall," Peak Hill, at 7.30 p.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

Jacob Matthews, Mayor, Peak Hill, sworn, and examined:—

- J. Matthews. 1406. *Mr. Watson.*] Where do you reside? Two miles out of Peak Hill.
- 18 Aug., 1900. 1407. Do you know the proposal to take a line of railway from Bogan Gate to Bulbodney? Yes.
1408. You know that there has also been suggested a line from Parkes to Narramine through Peak Hill? Yes.
1409. It has been further suggested that, instead of starting from Bogan Gate to reach Bulbodney, that Parkes should be made the starting-point, and that the line, after going to Peak Hill, should be taken from there to Bulbodney, then forming a portion of the suggested line between Parkes and Narramine;—will you give the Committee your ideas on that subject? I think if it started from Parkes to come to Peak Hill, then turning to the west at right-angles, going to Bulbodney, it would suit Peak Hill equally as well, and I think it would suit the Bulbodney-Bullock Creek people generally as well as a line going from Bogan Gate to Bulbodney. If the line came here, going to Bulbodney, I do not think the distance from Parkes to Bulbodney around this way would be any greater than from Parkes to Bulbodney *via* Bogan Gate. From Parkes to this place there is splendid country. There is a grade of 1 in 100 to be obtained on the present surveyed line. There are no cuttings of any consequence. The railway would serve Mingelo and Bulderudgera; likewise it would serve McPhail and Tomingley, north of Peak Hill. McPhail is 9 miles and Tomingley 11 miles from here. If it went westerly from here it would cross the Bogan, which is a small river at that point; likewise it would cross Back Creek, which is not very large, and the only other creek between there and Bulbodney would be Bullock Creek, which is not a large one. It has to cross that creek anyhow. The only streams which it would have to cross on this line that it would not have to cross on the Bogan Gate line would be the Bogan River and the Back Creek. I know the country fairly well from here to Bulbodney; it is all splendid country. It is composed of myall, pine, and oak flats; also box and belar. Between here and Bullock Creek I do not think there would be one mallee hill to cross; after leaving Bullock Creek there are a few. I think it is 40 miles from here to Bullock Creek. There is a population at Peak Hill of about 1,000 or more. In evidence which I gave before, I stated that the population of McPhail was 400; I find that it is really 600 or 700. Tomingley has a population of about 250. This line would serve about 150 settlers outside the town limits.
1410. Would that number of 150 be on the line to or beyond Tomingley? From Tomingley to within 10 miles of Parkes, and within 10 miles of this place, and 10 miles towards Bullock Creek westerly from Peak Hill.
1411. In that number, you do not count those within 10 miles of Bullock Creek? No; but when you get there, there are a lot more settlers.
1412. You speak of the number that would be served by an extension *via* Peak Hill? Yes; the population of that area would be about 4,000 altogether—that is, including Peak Hill, Tomingley, and McPhail.
1413. I understand you have some figures relating to the tenure of land and the areas on the suggested Peak Hill line;—can you give the figures? I start 10 miles from Parkes, and continue to Tomingley. The total is 530,702 acres; area under cultivation, 22,092 acres; number of sheep, 263,742; number of landholders, 170. These figures refer to the area within 10 miles of Narramine.
1414. What should be deducted from each of these totals for the distance between Tomingley and the point at which you ceased to collect the figures? The number of landholders would be reduced by about twenty; the area of land would be reduced by about 40,000 acres. I do not think the area of cultivation would

would be reduced by more than 3,000 acres, and the sheep, approximately, by 20,000; so that the figures, after making those reductions, would refer to the land which would be served by an extension to Peak Hill. J. Matthews.
18 Aug., 1900.

1415. From here to Bullock Creek, is the land all good? Yes; it is splendid land.

1416. On the feature map of the Lands Department there is a range shown nearly directly west from Peak Hill;—would the line from here to Bullock Creek avoid that by keeping northerly? Yes; that range would be to the left of it—that is, south. They used to be called the Cadungule Mountains. It is timbered with kurrawong, mallee, ironbark, and oak.

1417. By how much would you avoid those hills? Eight or 10 miles to the north.

1418. So that they would not affect the traffic-producing part of the railway? No; the line would be fully 10 miles away.

1419. Taking the land between Parkes and Peak Hill, how far on each side of the line do you get agricultural country, taking the eastern and western sides? You get agricultural country to the Harvey Ranges, which are 8 or 12 miles easterly. On the western side you get it as far as the line from Bogan Gate to Bullock Creek.

1420. From Peak Hill towards Narramine, through Tomingley, do the ranges come near the line? No; they are 8 or 10 miles away, except at Mingelo, where they come within 7 miles of the line.

1421. Are the greater number of the town population on this route engaged in mining? Yes; at Peak Hill, McPhail, and Tomingley.

1422. Speaking generally of mining affairs, are they healthy? Yes.

1423. Can you reasonably expect that the present population will either continue or be augmented? It will increase.

1424. The people who are to be served by the suggested Bogan Gate-Bulbodney line have nearly all offered to bear their share of making good any loss which may accrue in the working of the line;—do you think that if it is proposed to bring a line in this direction, the landholders here would be willing to come to a similar understanding? I have no doubt of it. I think if a line were constructed here it would not require anything of that kind. I believe that a line *via* Peak Hill would pay from the start.

1425. Are you prepared to back your opinion by entering into a guarantee for your share? Yes.

1426. Do you know the line the railway would take to Bullock Creek? Yes.

1427. Are there any engineering difficulties that would necessitate heavy construction? There is not a hill between here and Bullock Creek.

1428. Taking the gilgai country, would that require expensive viaducts or bridges? No, only the water-courses would require timber construction. There is not much gilgai country. The line would follow the high country, which is dry forest country.

1429. Taking the land first between Parkes and Peak Hill, what would you say, in view of its average rainfall, as to its capacity for wheat-growing? Last year was exceptionally dry, and the average was about 12 bushels to the acre. A fair average yield would be 16 bushels, and all of it would carry one sheep to 2 acres—that is, when improved.

1430. Take the land between here and Bullock Creek in the same way? It is equally good.

1431. Is there anything else which would be of interest to the Committee? When I was giving evidence at Dubbo, I said that the output of gold was 20,000 oz. I find that I was very much at sea in that respect. I find that since the inception of Peak Hill the output of gold has been 90,000 oz., amounting to £360,000. That is for ten years. One year the output was about 13,000 oz. That does not include McPhail and Tomingley.

1432. Is there any gold being got at the present time, independent of the shutting down of the Peak Hill Proprietary mine? Yes, that mine is working now on tribute; it is not shut down. There are two or three other mines on the Hill which are working in addition to that.

1433. *Mr. Hyam.*] The people living on the route of the proposed Bogan Gate to Bulbodney line have agreed to give the land required for the railway free of cost;—do you think the people on this alternative line would do the same? Yes; I think they would be only too glad to do so.

1434. Are you certain of it? I have never asked about it.

1435. What proportion of good land is there on this route? From Parkes to Peak Hill, and from here to Bullock Creek, 95 per cent. of the land could be ploughed—that is, within 10 miles of each side of the line.

1436. What proportion of the 4,000 population are engaged in mining? About 1,000 at Peak Hill, about 700 at McPhail, and 150 in Tomingley. These are people who are engaged in pursuits other than agriculture.

1437. You said that there would be no engineering difficulties, but is there not a great deal of hilly country about Parkes? The proposed line comes *via* the Condobolin line, and then round the hills. I know the country generally, and there are no big hills. I do not think there would be a cutting of 10 or 12 feet in the lot.

1438. *Mr. McFarlane.*] Can you give the increase of population in this district during the last four or five years? No; but it has been considerable, because a great deal of land has been taken up.

1439. Has it substantially increased? Yes.

1440. Does that apply to Peak Hill also? Yes; the cultivation has increased by nearly 8,000 acres during the last two years. There are large holdings between here and Alectown, which is 15 miles from Parkes. Goobang station had about 3,000 acres cultivated. I do not know what is being cultivated now.

1441. Has the agricultural area increased during the last five years? Yes; an increase of 8,000 acres in about two years.

1442. Between here and Bullock Creek, is there much land under cultivation along the suggested line? Yes; between here and Curra, 20 miles away, there are large farms.

1443. What would be the total length of the line to connect Parkes with Bulbodney, *via* Peak Hill and Bullock Creek? I think it is 67 miles from Parkes to Bullock Creek; that would be nearly 100 miles altogether.

1444. Is there much settlement between here and Bullock Creek? It is all selected.

1445. Where do the settlers between here and Bullock Creek do business? Between here and Curra, 20 miles away, they do most of their business at Peak Hill and Parkes. Further on, they do business with Narramine.

- J. Matthews. 1446. Is there a considerable trade between here and Bullock Creek? No; they go to Parkes with their wheat. They come here to get supplies.
- 18 Aug., 1900. 1447. Have you a knowledge of the country between Bogan Gate and Bullock Creek? Yes.
1448. How would that country compare with the country between Parkes and Bullock Creek for agricultural purposes? This is the best country. The country is a little better, and the rainfall is decidedly better. We have a rainfall of about 22½ inches.
1449. Do you think that if a line between Parkes and Bulbodney were constructed, it would greatly increase the area under cultivation? I am sure it would.
1450. More than if a line were constructed between Bogan Gate and Bulbodney? Yes.
1451. Would it open up more agricultural country? Yes.
1452. Is there much Crown land along the route between Parkes and Bullock Creek? No; the most of it is in private hands.
1453. Are there any large holdings? It is conditionally purchased and conditionally leased land. It is in the Central Division, and most of them have the full area of 2,560 acres.
1454. Have the large holders secured land other than conditionally purchased? I do not think so.
1455. Are there any within your knowledge who own 40,000 or 50,000 acres? No; there are some Crown lands between Alectown and here. It has been let on improvement lease lately; but it is not alienated.
1456. *Chairman.*] What is the character of the road from Peak Hill to Parkes? The road from Alectown to Parkes is very good. From here to Alectown it is good, except in exceptionally wet seasons.
1457. Do the settlers from Peak Hill or from Tomingley down to Alectown suffer any great inconvenience at present by reason of the indifferent roads? They suffered a lot this winter.
1458. What are the rates of carriage charged from Tomingley to Parkes? Thirty shillings a ton to Tomingley; 25s. to Peak Hill.
1459. What are you charged for the carriage of your wheat? One shilling a bag anywhere between here and Alectown. From Curra they give 1s. 6d. a bag—that is, on the proposed line.
1460. How far is Curra from the Bogan Gate to Bulbodney line? I think Curra would be 25 miles from Trundle.
1461. When the Committee took evidence in Sydney, Mr. Harper, the Traffic Expert, was asked:—"We have one junction already at Parkes to go to Forbes, and now it is proposed to have another to go from Bogan Gate;—would there be any advantage in having this line started from Parkes? No; in the first place, that line would not serve so large an area, because at Parkes it would run at an acute angle, and not go through such good country as the line now proposed." Then he was asked:—"Could we not go at right angles due north? You would then lose some of the best settlement between Bogan Gate and Bulbodney";—have you anything to say with reference to that? My opinion is that, with regard to the land between Peak Hill and Bullock Creek, there is nothing better in the Central Division. Certainly, from Bogan Gate to Bullock Creek the country is not as good as it is between here and Bullock Creek.
1462. *Mr. Watson.*] Would it be as good as the country between Parkes and Peak Hill? Yes; it is splendid land; but it is a different kind of land. It is good for grazing, agriculture, and everything. The country between Peak Hill and Bullock Creek is better than that between here and Parkes, taking grazing and agriculture combined. I do not think it is any better for agriculture between Peak Hill and Bullock Creek than between here and Parkes; but taking both together it is better, and in addition we have mines.
1463. How far from the railway line do you think mixed farming can be profitably carried on? I think if you get within 15 or 20 miles of a railway you are pretty well served.
1464. Taking that into consideration, and also your previous statement that the Harvey's Range comes in on the eastern side of the Peak Hill-Parkes line at a distance of 8 or 12 miles, and leaving out of consideration for the moment the population on the land, would it not be better to go a little to the west, and get an area of 17 miles on each side of the line? There is another thing to be considered. At Mingelo the mountains are very narrow. On the other side of them is a great basin, and a fine agricultural area of land. A railway to Peak Hill would serve that country out to Obley—that is, about 32 to 35 miles from Peak Hill, about 30 miles from Mingelo, then 40 miles to Molong, and 30 odd miles to Wellington.

John Dight Mackay, grazier, Bulgandramine, sworn, and examined:—

- J. D. Mackay. 1465. *Mr. McFarlane.*] Where do you reside? Ten and a half miles north-west of Peak Hill.
- 18 Aug., 1900. 1466. What area of land do you hold? I have a large pastoral holding of about 40,000 acres—that is, a pastoral lease which is falling in shortly.
1467. How much secured land have you there? 14,000 acres of conditional purchase and conditional lease.
1468. Do you cultivate any land? Yes; a little wheat and hay chiefly.
1469. Which is your nearest railway station? Narramine, from which my homestead is 33 miles distant.
1470. Have you a knowledge of the land along the suggested line from Peak Hill to Bullock Creek? Yes.
1471. How would you class that land? It is nearly all first-class agricultural land. It is also very good grazing land, especially from Peak Hill westward.
1472. How far would your property be from the suggested line? From 5 to 8 miles.
1473. Is there much land under cultivation between Parkes and Peak Hill? Yes.
1474. Further along towards Bullock Creek, is there any considerable area under cultivation? Not a great deal. On each side of the proposed line the quality of the land is fairly uniform. On the western slope it varies from red-pine forest to myall plain.
1475. Have you been cultivating for any length of time? For twenty years; but only for home consumption.
1476. What is the average production of wheat per acre in a fair season? Narramine is very similar to this country, and there the crops vary from 12 to 30 bushels to the acre.
1477. Have you been residing here long? Twenty-one years.

1478. During the past few years have you noticed any marked improvement in the district with regard to increased population and improvement of the land? There has been an enormous increase since I came here. During the last ten years the chief part of the settlement has taken place—that is, since the passing of the Land Act of 1884. J. D. Mackay.
18 Aug., 1900.
1479. Since the land has been settled upon, has there been any tendency to improve the land? Yes: from a grazing point of view, as well as in agriculture.
1480. How does it class as a pastoral district? On improved land it carries a sheep to $1\frac{1}{2}$ or 2 acres; in some cases it carries a sheep to 1 acre.
1481. Does the district suffer severely from drought? Sometimes; but we have a good average rainfall. My average for seventeen years is 23 inches.
1482. Has there been a severe drought during the last two or three years? They have been years of comparatively low rainfall.
1483. Has there been any serious loss of stock during those years? Not in this district.
1484. Is the water supply sufficiently good? It is chiefly artificial water, and it may be made good on every holding.
1485. Do you think that, if the suggested line from Parkes through to Bullock Creek and Peak Hill were constructed, it would be the means of opening any large area of land for agriculture? I have little doubt about it.
1486. Taking agricultural land, which you referred to as suitable for wheat-growing, say, 15 miles on each side of the railway, which would be the most profitable to the owners—to use it for wheat-growing or for sheep farms? On small holdings, agriculture; with the holdings as they are now they must be agriculturists. On the run immediately adjoining Peak Hill the areas were, I think, from 400 to 1,200 acres, and on Coradgery Run the areas are 1,000 acres.
1487. Would that be sufficiently large to maintain a family by sheep-farming? No; there must be agriculture.
1488. Would they be sufficiently large for wheat-growing? They are certainly large enough for one man to work. It depends upon a man's capital what area he can work.
1489. Are there many large holdings in the district similar to your own? There is only one, as far as I know, which would be affected by this line. There is only one really large holding in this district, and that is Mungary. I think they have about 50,000 acres of secured land; it is very rich land.
1490. How far is it from this line? Some of it is, perhaps, within 5 miles of the line.
1491. In a case such as that, given a railway, do you think the whole of that large area would be subdivided for agricultural holdings, or would the owner place that large area under cultivation himself? I cannot say. Speaking for myself, I have a large area of land ready for agricultural purposes if a railway comes near me. I have been looking for a railway from Parkes to Narramine. I now have upwards of 1,000 acres ready for the plough if a railway comes near to me.
1492. If the railway comes to Peak Hill, would it be sufficiently near to suit you, and also the other holding to which you have referred? A portion of it would come within a reasonable distance.
1493. Do you think that it would be more profitable with a railway close to large properties to place areas suitable for agriculture under cultivation, either by the owner or by subdividing it or letting it? Yes; provided the price of wheat did not fall below a profitable point.
1494. Has Peak Hill increased in population materially during the last two years? I do not think that is the case with the town, but it is with the district.
1495. Does that hold good with regard to the other townships further on? Yes; every year the land, as it becomes available, is immediately taken up. There is no land available here now which has not been selected.
1496. Is there any likelihood of other Crown lands being thrown open for settlement within easy reach of the suggested line? Yes; there are Crown lands on my own holding. I fancy the line will pass through it, or very close to it. To the west there are Crown lands falling in.
1497. When that land is thrown open, do you think it will be speedily taken up for settlement? I have no doubt of that.
1498. During the inquiry of the Committee into the Bogan Gate and Bulbodney railway, a number of owners of land who would be benefited by the railway expressed their willingness to contribute, by way of a tax on land, to make good any loss incurred in working the railway, the amount named being 2d. an acre within 5 miles on each side of the line, 1d. per acre on land between 5 and 10 miles, and so on;—would you be prepared to agree to such a proposal? Personally, I should be quite satisfied to pay such a tax.
1499. Do you think the landowners along the railway would be willing to do that between Peak Hill and Bullock Creek? I should think they would. I would be very glad to do it.
1500. *Mr. Hyam.*] Is your pastoral land likely to be resumed? My lease runs out in 1903; I absolutely lose the whole of that, and it will be available for settlement.
1501. How much land is there on Mungary station in the same position? Rather a larger area. That land falls in next year. I think there are 50,000 acres.
1502. Is there much leasehold on Gerranagie station? About 30,000 acres.
1503. When would that land fall in? In about three years.
1504. What about Coradgery station? It has been all cut up.
1505. Can you only speak for yourself with regard to what you would do in the event of the suggested railway being carried out as to future agricultural operations? Yes.
1506. Do you think other people would follow your example? The Mungary holding is large enough to work as a pastoral holding, and I do not think they will go in for agriculture.
1507. Would not the increased revenue from wheat growing induce them to let their land? I do not think so. Coradgery is a large cultivator already. There they cultivate about 1,000 acres at present.
1508. *Chairman.*] Is there anything you desire to add? Yes. I wish to say something with reference to the question you asked Mr. Matthews with regard to Mr. Harper's evidence. At the time Mr. Harper gave his evidence the settlement had probably not taken place at Coradgery. He probably did not know that Coradgery had then been taken up in small farms. From my knowledge of the Coradgery and Bogan Gate country, I know that the former is infinitely superior to the Bogan Gate country, and that immediately north of Bogan Gate. When you get to Trundle it is a larger settlement, but they are within reach

J. D. Mackay. reach of Bogan Gate already. The country down Bullock Creek has a good deal of kurrawong ridges, which are not good for agriculture. With reference to this extension west to Peak Hill, it seems to me, looking at the map of existing railways, that it would divide the country here, and it is capable of further extension as far as agricultural land is available, and it is more suitable than a line at right angles to the existing line.

18 Aug., 1900.

1509. *Mr. Hyam.*] What is your opinion of the line from Peak Hill to Narramine direct? That is the line which I personally desire most to see.

1510. Would that be a good line? Yes; as it opens a market to the west.

1511. Would it open good country between here and Narramine? There is no better in this district.

1512. Would it serve a great area of country? It is only 23 miles from Tomingley to Narramine. The country is all settled with the exception of one small leasehold area, which will be available for settlement.

Frederick Beasley, farmer and grazier, near Peak Hill, sworn, and examined:—

F. Beasley.

18 Aug., 1900.

1513. *Mr. Hyam.*] Where do you reside? About 6 miles from Peak Hill in a south-easterly direction.

1514. Have you a large area? I have a big family, and we have five blocks amongst us. We have 2,560 acres each. We have about 1,000 acres under wheat this year.

1515. Do you carry on grazing as well? Yes; we have about 14,000 sheep.

1516. What is the average production of wheat per acre? About four bags to the acre.

1517. You carry over one sheep to the acre? Yes; there is abundance of feed at present.

1518. Have you had many losses? No losses during the drought.

1519. How far are you from Parkes? The homestead is about 25 miles.

1520. Do you take your produce to Parkes? Yes.

1521. What price per bag do you pay for wheat? Generally 1s.; but I have paid 2s. 6d. in the winter.

1522. Did you find any difficulty in obtaining cartage for your wheat this year? No.

1523. Can you give us general information on the subject before the Committee? The prosperity of the Colony at large depends greatly on those who occupy the land. I have been farming for forty years, and the greatest drawback is the want of railway communication to centres of population. In the cases of thousands of people who have left their holdings, that has been the principal cause; they have been too far from a market, and men with small capital have been obliged to dispose of their holdings. If they had been supplied with railway communication, they would still be on their holdings. I came from Riverina, and nearly the whole of that district was settled by small holders. They were agitating for railways for twenty-five years. About that time the principal number sold out, and many came into this part of the country. A great many of my former neighbours are now in this district; they were too far from a market in Riverina; they were on the Victorian border, and had to pay duty if they sent any of their produce into the neighbouring Colony. This district is well adapted for wheat-growing, and if there were railways provided for those producing wheat, the Government would find a difficulty in providing a sufficient number of trucks. In Victoria, when they made a line up the Goulburn Valley, they could not get sufficient trucks to carry away the wheat. This country is equally as good as that. The men here are capable and willing to cultivate the land, and the only drawback is the want of communication.

1524. If a railway were constructed from Parkes to Peak Hill, would it cause you to increase the area under cultivation? Yes; and every man along the line would increase his area of cultivation. From the very start the line would pay. I reckon that if every acre contributed 3d. in the way of freight for 5 miles on each side of the line, it would pay interest at the rate of 4 per cent. on the cost of construction.

1525. On the proposed line from Bogan Gate to Bulbodney, the people within 5 miles of the railway are willing to allow themselves to be taxed at the rate of 2d. an acre, and within 5 and 10 miles, at the rate of 1d. per acre, and so on;—do you think the people on this line would agree to that condition? I can say distinctly that they would have no objection to pay that amount.

1526. Would most of the people on the proposed line give the land required for the railway free of charge? I think any reasonable man would do so.

1527. Do you think they would do so, from your own personal knowledge, between Parkes and Peak Hill? It is nearly all Government land there; it is a railway reserve.

1528. Do you know the country between here and Bullock Creek? As far as I have seen it, the land is adapted for agriculture.

1529. What is the percentage of land fit for agriculture? I should say 90 per cent.

1530. Have you had considerable experience in fruit-growing? Yes; it is a good district for grapes and apples.

1531. Does it grow raisin grapes? Yes.

1532. Do you think this country would be suitable for evaporating or drying fruit? I have dried them myself in the sun, and I have had an evaporator. It could be done successfully from a commercial point of view.

William Michael Nash, farmer and grazier, Reedy, sworn, and examined:—

W. M. Nash.

18 Aug., 1900.

1533. *Chairman.*] Where do you reside? At Reedy, 18 miles south-west from Peak Hill.

1534. Have you heard most of the evidence to-night? Yes.

1535. Do you corroborate generally what you have heard with regard to the desirability of constructing the Parkes-Peak Hill railway as against the Bogan Gate to Bulbodney railway? Yes; I agree with what has been stated. I think the Curra leasehold of 18,000 acres falls in this month. With regard to the probable applicants for it, we have had an instance at Coradgery, where there were 140 applicants for one block of 1,000 acres. There were a number of other blocks opened.

Evan Lewis Jones, farmer and grazier, near Peak Hill, sworn, and examined:—

E. L. Jones.

18 Aug., 1900.

1536. *Chairman.*] Where do you reside? About 15 miles south of west from Peak Hill.

1537. Have you heard the evidence as to the quality of the land in this district? Yes. I have travelled from here to Bullock Creek many times.

1538. Can you substantiate what has been said as to the good quality of that land? Yes, it is suitable generally for agriculture.

1539. What area do you hold? Three blocks of 2,560 acres each.
1540. Have you carried out agriculture? Yes. When we started to agitate for a railway here, I put in some cultivation, and I have increased the area every year; I have now 650 acres under cultivation.
1541. Which is your nearest railway station? Parkes, 33 miles away.
1542. Would there be any large development in that district if a railway were made *via* Peak Hill? Yes.
1543. If a line went from Peak Hill to Bullock Creek, would it go near your land? Yes.
1544. Would all the people there go in for cultivation? I think so.
1545. Is there anything you would like to add? The small settlers about Peak Hill, and between here and Parkes hold only about 400 acres each. My experience is that a man wants a fair sized area to live upon. For these small men, the only hope is dairying. As for a man trying to make a living on 1,000 acres with sheep, it is impossible.
1546. *Mr. Hyam.*] Could he not do so with mixed farming? He could make more out of dairying.
1547. *Mr. Watson.*] If a man had a railway within 15 miles of him, do you think he could make a living on 1,000 acres? Yes.
1548. Is this your argument, that because there is so much small settlement there is all the more necessity for a railway? Yes. If a line were made here, there is a great deal of pine timber which could be made use of, at present it is going to waste. A good market could be found for it; before wheat was grown the pine used to be carted 30 miles to Parkes. I pay £16 a year to the Government for 1,920 acres, and have proved it impossible to make that amount off the scrubby land. But after the land is improved it gets better, and can be made to carry a sheep to the acre in good seasons.

E. L. Jones.
18 Aug., 1900.

Thomas Bridle, farmer and grazier, near Peak Hill, sworn, and examined:—

1549. *Mr. McFarlane.*] What area of land do you occupy? 5,320 acres of conditional purchase and conditional lease, belonging to myself; and my son holds 1,050 acres conditional purchase and conditional lease. It is situated 12 miles due west from Peak Hill.
1550. Do you cultivate any considerable portion of it? Yes; 700 acres this year.
1551. Have you heard the statements made with regard to the character of the country between Peak Hill and Parkes and Peak Hill and Bullock Creek and Bulbodney, and do you confirm in the main the statements of the different witnesses? Yes.
1552. Do you know the country between Bogan Gate and Bulbodney? Yes; I have travelled over it once or twice.
1553. How would that land compare with the land on this suggested line? The land on the Peak Hill line is better. There is more broken country on the other line than there is here.
1554. Is there much cultivation in the district near your land? Yes.
1555. Is it principally wheat? Yes.
1556. Where do you find a market? At Parkes for the Sydney market. I send mine to England.
1557. Is that more profitable than selling it locally? Yes.
1558. Do you think it will be profitable in future? Yes.
1559. How far have you to cart your wheat to the nearest railway station? Forty miles.
1560. Is not that too great a distance? Yes; if it was a wet summer I could not get it carried. I have tried to get it carted this summer; but I have not succeeded. It cost 2s. a bag to send the last of it. 1s. 6d. a bag is what I paid this year.
1561. Is there anything you can add to the evidence given this evening as to the desirability of carrying out this proposed line? The chief thing I have to say is that the line from Parkes to Peak Hill and thence to Bulbodney will split up the country better than any other line. It would break up the great distance between existing lines better than any other line.
1562. It has been stated that the average production of wheat in this district is 16 bushels per acre;—do you bear out that statement? Yes.
1563. Is there anything additional you wish to say? I quite agree with all I have heard stated. I have stopped cultivating at present. I have 1,000 acres more land ready for cultivation, but I have refused to go further until I have a railway. The roads are so bad that I could never get the wheat carried away at a proper price.
1564. What proportion of your holding is fit for cultivation? The whole of it. It would grow from 16 to 30 bushels an acre in a good season.
1565. Is that a fair description of all the country? Yes. There is a ridge at Coradgery; but that is the only bit of bad country between here and Bullock Creek.
1566. *Mr. Hyam.*] How far is your homestead from Trundle? Thirty-five or 40 miles.
1567. Would you be so far as that from the proposed railway between Bogan Gate and Bulbodney? As far as I know, it would not be of any benefit to me.
1568. How far are you west of the Bogan? About 8 miles. There are several thousand tons of wheat still in the district, which will not stand road carriage. It would be sold at a profit if there were a railway.

T. Bridle.
18 Aug., 1900.

Thomas Daniel Oxley, storekeeper, Peak Hill, sworn, and examined:—

1569. *Chairman.*] Would a proposal to carry a railway through Peak Hill from Parkes, and thence on to Bulbodney, more equally divide the country at present without railway facilities than the Bogan Gate-Bulbodney line? Yes; and the area is so large that it would be isolated from communication by the Bogan Gate-Bulbodney line.
1570. Taking that portion of the suggested Peak Hill line to Bulbodney, what distance would it leave first, on the south side from the Condobolin line, and, second, on the north side from the Western line? Forty miles on each side. The Peak Hill section from Parkes to Peak Hill would work in as a connecting link of the other systems of railway—that is, the Parkes-Narramine line—that would be one link already made; while the extension from Peak Hill to Bulbodney would serve the whole of the country west of the Western line and north of the Condobolin line, which is purely agricultural. Then between Parkes and Peak Hill there is the Goobang holding. On that an area of 30,000 acres will fall in next year.

T. D. Oxley
18 Aug., 1900.

1571.

- T. D. Oxley. 1571. How far is that from Parkes? About 4 miles north of Parkes, and it comes this way.
 1572. Is not that all practically within the influence of the Parkes line? Yes; but this line will run alongside of it, and the land all round there is much superior to the land along the Bogan Gate line. I have been all over that land. Both as to climate and quality of soil, the land here is superior. Another thing which has been missed is the natural grade of the land through which the Peak Hill line would run; there are no engineering difficulties at all. The range which has been spoken of, where this line would cross it, is not 10 feet high between here and Bullock Creek; it falls away to nothing.

18 Aug., 1900.

MONDAY, 20 AUGUST, 1900.

[The Committee met at the Municipal Council Chambers, Parkes, at 10:30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD,
 The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
 JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

John Medlyn, Mayor, Parkes, sworn, and examined:—

J. Medlyn.

20 Aug., 1900.

1573. *Chairman.*] How long have you resided here? Twenty-six years.
 1574. Have you a general knowledge of the country to be served by the Bogan Gate-Bulbodney railway and also by the Parkes-Peak Hill extension? I have not much knowledge of the first proposed line—I know the country between here and Peak Hill.
 1575. Can you give a general idea of the character of the country between Parkes and Peak Hill, and its possibilities? As far as agriculture is concerned, it is reckoned to be all good. There is a great deal of mining on that line, and there is a great deal of carriage by teams from here to Peak Hill. It has always been reckoned that the railway from here to Peak Hill would be part of a national line—that is, what is known as the cross line. Whether it would suit the people at Bulbodney I am not in a position to say. The cross line from here to Peak Hill and in that direction, has been advocated by almost every one as a national line which would go through the best agricultural land in the country. A great deal of wheat comes in here.
 1576. What do you mean by a national line? It has always been called a national line; that is, a cross line from Dubbo or Narramine on to Peak Hill, through here and then on to Forbes, Grenfell, and Young.
 1577. What peculiarity has it that you should call it a national line? It would open up traffic right through the Colony in the agricultural and mining country. At present a lot of coke is taken to Peak Hill for smelting.
 1578. What has been the character of the mining from here to Peak Hill during recent years? It has been steadily progressing. There are reefs between here and Aleetown, there is reefing country right through, and Peak Hill is a large mining centre.
 1579. Has there been much new development in mining lately? No; but there is a plant being put up 4 miles on this side of Aleetown.
 1580. Can you give the Committee a general idea of the trade relations between Parkes and the district towards Peak Hill? Parkes is the business centre for Peak Hill. Wheat comes in from Peak Hill. For some distance further, I think it would go to Dubbo or Narramine. There is a passenger traffic and goods traffic between here and Peak Hill.
 1581. What is the immediate course of the line from Parkes? I believe it goes straight on to Peak Hill; it would all go through agricultural country.
 1582. Where would the suggested line leave the Parkes-Condobolin line? It goes directly north from Parkes.
 1583. How far out from Parkes would it come on to the main road? About 4 miles.
 1584. *Mr. Shepherd.*] Do you regard the country the whole way to Peak Hill as first-class agricultural country? Yes; there is an enormous amount of wheat grown there now. It is generally an agricultural country.
 1585. How is it timbered? Box, chiefly.
 1586. Would it be sufficiently good to supply sleepers? Ironbark is better, and that might be got in the hills between here and Peak Hill. A large number of sleepers were brought from Aleetown for the Parkes-Condobolin line.
 1587. What is the prospect for mining? It is very fair.
 1588. How many mines are in work now? Between Peak Hill and here there are four small mines working. I believe that they will develop into large mines.
 1589. Have not a good many of them been abandoned? Yes; but the Koh-i-noor and the Phoenix were also abandoned for some time, and now they are among the best in New South Wales.
 1590. What has been the greatest depth obtained? 600 feet at the Koh-i-noor. It is now better than ever, and it is still working.
 1591. What are the average output and the returns? They have been dividend-paying mines during the last twelve months.
 1592. What influence would a railway have on the mining industry? At Parkes it would not have any influence; but it would have an influence in Peak Hill and between here and there. I have heard complaints about the cost of carriage of coke and machinery to Peak Hill.
 1593. The mining industry can hardly be considered to be flourishing in the district just now? Some of the mines have been idle for want of money to go deeper. That was the case with the Phoenix and the Koh-i-noor; but they have since turned out very well. That will be the case with others.
 1594. Do you know if any prospecting is going on? There is a little towards Aleetown.

Sydney

Sydney Ephraim John Close, auctioneer, Parkes, sworn, and examined:—

1595. *Mr. McFarlane.*] Have you a knowledge of the country through which the proposed Bogan Gate-Bulbodney railway will pass? Yes; I know it well. S. E. J. Close.
20 Aug., 1900.
1596. How would you describe the country generally, taking a belt of 15 or 25 miles on either side of the line? It is fairly level country. There are a few ridges; but most of it is fit for agriculture.
1597. What proportion? There is very little of it that is not fit for agriculture. Three-fourths of it are fit for cultivation.
1598. What would the other fourth be fit for? Grazing.
1599. Is it heavily-timbered country? Yes.
1600. Which would be the best part of it? It is good right on to Bullock Creek. As you go over to Bulbodney there is a bit of a range, which is the worst of it. On the other side there is good country as well.
1601. Would the country carry close settlement with railway facilities? Yes; and they could do on much smaller areas than at present.
1602. What would be a sufficient area for a farmer? 1,000 acres, with a railway.
1603. Have you had any experience of the people engaged in agricultural pursuits there? Yes; I have bought wheat from them.
1604. Is it of good quality? Yes.
1605. Do you think that 16 bushels to the acre would be a fair estimate of the yield? Yes; I have known a yield of seven and eight bags to the acre.
1606. Would that be in an exceptionally good season? We have not had a good season for seven years, and the yield I have referred to was during that period.
1607. Have the wheat crops been a failure during the drought? No; there has been a fair crop even during the worst seasons. They have obtained three or four bags to the acre in most places.
1608. If a railway were made, would all the land suitable for agriculture be used for that purpose? I think most of the present holders would utilise two-thirds more than they do at present. It is only the cost of carriage which keeps them back.
1609. For what distance on each side of a railway would it serve agriculturists? Fifteen miles is not too far to come to a railway.
1610. Are there some farmers carting their wheat a greater distance than 15 miles now? Yes, considerably more.
1611. Would it pay to carry wheat at the present ruling rates for the distance which some wheat-growers are now carting it? No; it gives them very little return.
1612. Would wheat-growing be better than sheep-farming with a railway? Yes.
1613. What distance are some farmers now carting their wheat? A man carted some in for me the other day, 36 miles—that was to Bogan Gate.
1614. What is the nature of the country between Parkes, Peak Hill, Bullock Creek, and thence to Bulbodney? I occupied most of the country in that neighbourhood. I owned Curra and Currawinnia. The first section of the proposed line, between Parkes and Peak Hill, consists of good agricultural land. Between Peak Hill and Bullock Creek you get into a different class of country; it is myall land, and it is not thoroughly reliable for agriculture; it does not grow good crops in wet seasons. The remainder of the land on that line would be common to both railways.
1615. How would you compare the land between here and Bullock Creek with the land between Bogan Gate and Bullock Creek? The land on the first portion of the line to Peak Hill would be similar to the land on the other line from Bogan Gate. Then from Peak Hill to Bullock Creek you have the myall and gilgai land. Curra is midway. Then you get on to sandy soil; after that, thickly timbered country of a sandy nature. It would be good for agriculture when cleared.
1616. Taking the country between Bogan Gate and Bullock Creek, and the country between Parkes and Bullock Creek, which would contain the greater amount of agricultural land? I think the Bogan Gate country.
1617. Which line would open up most land for settlement? I think the Bogan Gate line would.
1618. Which contains the greater area of Crown lands? I think the Bogan Gate line.
1619. Is the rainfall similar in the two districts? Yes; in a drought they would suffer about equally.
1620. What about the water supply on this line? Of course, on the Bogan Gate line they would have to conserve all the water; there are no creeks. Bullock Creek is small, but it could be dammed so as to hold a good supply. The line from Parkes would cross the Bogan River.
1621. As a purchaser, can you say which district produces the most wheat? On the Parkes-Peak Hill line there is a good deal of wheat growing, but that is also the case on the Bogan Gate line. I do not know exactly which would give the best yield for the same area of country. The principal part of the country between Parkes and Peak Hill is under cultivation. Some have 800 or 900 acres under wheat. That is also the case on the other line.
1622. From a pastoral point of view, how would the country on the two lines compare? The country, *via* Peak Hill, would be better fattening country. They would be about the same with regard to carrying capacity.
1623. Were you engaged in pastoral pursuits on the property you have referred to? Yes; for a number of years.
1624. Is it good fattening country? Yes.
1625. Did you experiment in cultivation? Yes; I tried it for several seasons and got no return. I persevered and put in 50 acres to grow hay, and I got as much hay off that as kept me during the rest of the time I was there. The season happened to be suitable; it was not too wet or too dry.
1626. Was the soil unsuitable? It was myall land, and if it got too much wet I had no return; if a dry season came I got nothing. A medium season having occurred I got a wonderful crop.
1627. Is there a large area of that kind of country? About 14 or 15 miles of it; it was flat, alluvial, myall ground; it was black soil.
1628. Is there much black-soil country in that locality? Only 12 or 14 miles where the railway would go through.
1629. Would there be more red-soil country between Bogan Gate and Bullock Creek than between Parkes and Bullock Creek? Yes.
1630. Which was the most suitable for agriculture? The red soil. 1631.

- S. E. J. Close. 1631. For pastoral purposes would that also hold good? It is good carrying ground, but not good fattening ground.
- 20 Aug., 1900. 1632. Does it stand drought better than the black soil? Yes; as soon as the black soil dries, the ground cracks.
1633. *Mr. Watson.*] Do you know the land at Wallanbillan? Yes.
1634. That is some distance north of the suggested line between Peak Hill and Bullock Creek;—would you hold that to be similar land to that through which the line would go further south? No; that is a little more solid; there is not so much gilgai ground.
1635. It seems that this suggestion of running a line from Parkes to Peak Hill, thence to Bullock Creek and Bulbodney, was put forward with the idea of endeavouring to serve the same number of people with one line instead of constructing two lines—that is to say, it has been advocated that there should be a line from Narramine to Parkes; it is thought by some people that if the railway from Bogan Gate to Bulbodney is constructed, it will be too great a competitor with a line from Narramine to Parkes;—do you think that the country between Parkes and Peak Hill surveyed line and the Bogan Gate and Bulbodney line is sufficiently productive and extensive to provide traffic for both lines—that is, assuming that the line does not go further than from Parkes to Peak Hill, and the other line from Bogan Gate to Bulbodney? I do not hold with the railway stopping at Peak Hill; I believe it should go further.
1636. Would the area between those two lines justify their construction? I can hardly answer that question. I think the Bogan Gate—Bulbodney railway should pay its way; I do not know about the other.
1637. What is the average distance between the two lines from here to Tullamore? About 35 miles.
1638. Does it start at 20 miles and widen out to 35 miles at Bullock Creek and Peak Hill? Yes.
1639. Would you say, from a national point of view, that that country would be thoroughly divided by the two lines? I think the Peak Hill line should be run as a national line, and that it should not stop at Peak Hill.
1640. It may be many years before the national view is brought into operation; in the meantime we have to consider the question from a paying point of view;—from that point of view, do you think we would be justified in constructing the two railways at present? I hardly know how to answer that question. I think one line should be carried out from a national point of view, and the other line should be carried out for the benefit of those who have settled on the land.
1641. Is it a fact that there will be a good-sized area of Crown lands on Curra to be thrown open for selection at an early date? A portion of it will.
1642. Is a reasonable portion of the leasehold area on Curra likely to be fit for agriculture? A good portion of it would be. There is a good deal of rough country on the holding. There are some ridges which run from the south to the north. None of the ridges would be fit for cultivation.
1643. On the Mungary station we were informed that a large portion on the western side of the Bogan would be made available for settlement next year;—does it consist of gilgai country? A good deal of it is gilgai country. There is a very large swamp on it, three-quarters of a mile across. There is a lot of it which would be suitable for agriculture.
1644. We have been informed that on Genanagie there are 30,000 acres falling in in three years time;—what is the character of the leasehold there? That will be on the east side of the Bogan, close to Peak Hill. That is good agricultural land.
1645. Would any line to Peak Hill serve that country? Yes.
1646. *Mr. Hyam.*] Who is the present owner of Curra station? Mrs. Arthur.
1647. Was some portion of Curra resumed some time ago? Yes.
1648. Was that land selected? Yes.
1649. Did you know any of those selectors? Yes.
1650. Do you know Mr. Williamson? Yes.
1651. Has he bought out a good many of those selectors lately? Not on Curra run.
1652. Well, some of the selectors on other stations? Yes.
1653. For what reason did they sell out? I do not know. My own idea is that they only came here for speculative purposes—that they came to take up the land with the view of selling out at the expiration of their term.
1654. You did not look upon them as *bonâ fide* settlers? Yes. I do not think they sold out because the land was not suitable.
1655. Do the people here go in for mixed farming? Yes.
1656. Do you think that an ordinary block of 2,560 acres is sufficient for a man in this district to carry on? Yes. I think a man could do on that. A man on one of the selections referred to who who sold out came here with £150, and took up 2,560 acres. You can imagine his financial state at the end of five years.
1657. Did those selectors make a profit in selling out? Yes; a fairly good profit.
1658. Was it because they enhanced the value of the land, or was it because Mr. Williamson wished to add to his holding? They enhanced the value of the land; they ringbarked it, put a tank on and improved it about half as much as it should have been.
1659. Is Mr. Williamson a large landholder there? Yes.
1660. Is this land, which has been sold, on the proposed Parkes—Bulbodney railway, or is it anywhere near it? Yes; some of it is.
1661. *Mr. Shepherd.*] Do you mean that you would recommend the construction of a line from Parkes to Peak Hill, but not on to Bulbodney? I think it could be run to Peak Hill, and right on to Narramine; but I cannot recommend the other proposal.
1662. But you recommend the line from Bogan Gate to Bulbodney? Yes; I think that would be a paying line.
1663. Is that because you consider the country between Bogan Gate and Bulbodney is better than the country between Peak Hill and Bulbodney? I think the Bogan Gate line would supply a greater number of settlers, and I think the settlers on that line could do with smaller areas.
1664. Are the ridges on the Peak Hill—Bulbodney line extensive? They run right through the block from north to south.
1665. What width are they? About a mile and a half, or a mile and three-quarters.
1666. Would they provide pasture, or would they be useless? There is but little to be got out of them; the soil is very gravelly. It is all small white quartz, where it does not consist of big granite rocks.

Robert Mitchell (Wright, Heaton, & Co.), Parkes, sworn, and examined:—

1667. *Chairman.*] Have you some figures indicating the amount of outward traffic from Parkes to Peak Hill? I have not had time to take them out; I have only been here three months. During June and July there were about 200 tons of goods outwards from Parkes to Peak Hill. R. Mitchell.
20 Aug., 1900.
1668. Were they mainly consigned to Peak Hill? Yes; the largest part of the traffic was coke. Fully half of it was for the Peak Hill Proprietary Mine. That is rather extraordinary traffic; but I understand that they intend to go in more heavily for that traffic.
1669. Do you send goods any further north than Peak Hill? We did for a time send goods to Tomingley and McPhail.
1670. Do you send station supplies to any holdings between Peak Hill and Bullock Creek? We send supplies to Genanagie, Curra, Brue Plains, and Coradgery. On the west, our trading area is practically bounded by the Dividing Range, and on the north by the boundary of Curra, and then on towards Bulgandramine. From what I have heard from selectors and others, I think that with a fairly good season, they will have considerable difficulty in getting their wheat to market owing to the want of teams.
1671. When you have teams available, do you experience much difficulty with respect to the roads? Between here and Peak Hill the road is a very fair one.

Henry Harry Cooke, farmer, and member of the Local Land Board, Parkes, sworn, and examined:—

1672. *Mr. Shepherd.*] How long have you resided in Parkes? Since 1862, ten years before Parkes was founded. H. H. Cooke.
20 Aug., 1900.
1673. Have you been chiefly engaged in farming? In farming and mining.
1674. How far from here is your farm? Two miles.
1675. Are you acquainted with the country between here and Bulbodney? I have been over it several times.
1676. How would you describe the country, taking 10 to 15 miles on each side of the proposed railway? It might be fairly described as undulating country, consisting of open box and pine forests, suitable for wheat, wool, and wine growing. This district is the home of the grape vine.
1677. What is the proportion of agricultural land? About 75 per cent. of the people seem to me to be a little in the dark about this matter. This country, in order to be occupied profitably, must be occupied by those who grow both wheat and wool. If a man goes on to 2,560 acres and grows wheat, the grazing capabilities of the land are not lessened; they are very often increased. Three-fourths of the whole area mentioned would be fit for agriculture—that is, between here and Peak Hill.
1678. What proportion would be fit for vine culture? The whole three-quarters. The remainder would consist of ridges, but every place will grow grass when the rubbish is cleared away. Where there are rocks above the surface of soil you will see signs of mineral deposits, either gold or copper.
1679. How would you describe the country between Peak Hill and Bulbodney? It is similar, with the exception that there is some myall country intervening between the Bogan and the red country on the other side of Curra.
1680. Do you consider that land equally good for agriculture? It is heavier for ploughing, but once it is broken it is good land, and in favourable seasons it yields heavy crops.
1681. Are you also acquainted with the country from Bogan Gate to Bulbodney? It is similar undulating country, covered with open pine and box forests; there are, occasionally, ridges, with mineralised rocks and thin soil. When the rubbish is cleared away it will grow grass.
1682. What proportion of that country do you consider is suitable for agriculture? About three-fourths.
1683. What has been the average yield of wheat on the country through which the two proposed lines will pass? Since the farmers have taken to growing wheat in that neighbourhood, we have had very inferior seasons. Notwithstanding that, the average yield has been from 15 to 20 bushels. The crops have never absolutely failed. When showers come at the right time there is an abundant harvest. Some have got 30 bushels, and others 15 bushels.
1684. Do you think the average is about the same on the two lines? Yes.
1685. What is the rainfall here? Twenty-four inches at Parkes, but not lately. Further west the rainfall diminishes.
1686. Have you had any experience in growing fruit? Yes.
1687. Has fruit been grown to any extent here? No, but people are beginning to do so. I have 14 acres of vines and 2 acres of mixed fruits.
1688. Are any other crops grown here? Barley grows very well, oats sometimes, and maize on the lower ground. Sorghum will grow well here.
1689. Is there a satisfactory return from those crops? Yes, but there is not much demand for them.
1690. On the line from here to Peak Hill and on to Bulbodney, what do you think would be a fair area on which to support a family by mixed farming? To start with, not less than 2,560 acres. It will take a long time to bring that into a state of production; but the man's family will be increasing, and he will have to subdivide it because all the rest of the land is taken up.
1691. What is the method of clearing the land for agriculture? Grubbing. If you clear the land properly it will cost 30s. an acre after the timber is killed.
1692. Do you think that mixed farming is the best method? Yes; it is the only paying method.
1693. Is there a possibility of mining in this district being permanent? Yes. I came here as a miner in 1862. There were then one or two reefs, and when they got to a depth of 200 or 300 feet, it was said they had run out. Superior enterprise and capital came in, the lodes were followed deeper, and it was found that they were as good as they were on the surface.
1694. What is the deepest of them at present? 600 feet at the Koh-i-noor; 700 feet at the Bushman's; and Dayspring 500 feet.
1695. *Mr. Shepherd.*] Have the reefs continued? Yes; they have had good crushings lately.
1696. What is the width of the reef? From 2 to 4 feet.
1697. Do the persons who are engaged in mining seem hopeful? Yes; the alluvial has been worked out in the vicinity of Parkes; but in many cases reefs are found under alluvium.
1698. Are you in favour of a line of railway the whole way from here to Peak Hill and on to Bulbodney? It seems to me incredible that it could be proposed in that way. Suppose you make a line to Peak Hill—
which

H. H. Cooke. which will be made ultimately—that would be part of a line from here to Werris Creek. If you make a line from Peak Hill on to Bulbodney, it seems to me that a more necessary connection will be wanted—that is, between Bogan Gate and Bulbodney.

20 Aug., 1900.

1699. Are you in favour of a line to Bulbodney by way of Peak Hill? No; it is not the best way from what I know of the country.

1700. Is there anything else that you would like to state to the Committee? Something has been said about the state of the roads. All bush roads and tracks are bad when there is heavy traffic. The Government are urged from time to time to spend money on roads, and I daresay if the cost were reckoned up it would be found that to make a good macadamised road, and to keep it in repair, the cost would be quite equal to that of making a light line of railway over the same length of country. If farmers are to exist by wheat-growing and other agricultural pursuits, they must have roads. A light railway is cheaper than a macadamised road; you can travel on the railway in all weathers, and you can get revenue from it. Light traffic does not hurt the bush roads. I saw seven teams going to Peak Hill, and it took thirty-six horses at a time to pull one waggon out of the mud. It is certainly better to provide light railways instead of roads.

1701. Do you think that owners of land along the proposed railway line would be willing to give their land free for railway purposes? I do not know; but I should think so.

1702. *Chairman.*] You stated that you thought the Parkes-Narramine line through Peak Hill should be constructed on national grounds;—what national benefit would follow from the construction of the line? We are now entering upon a Federal system of government. We do not know where the federal city will be, but I fancy it should be near Orange. In view of Federal government in the future, we do not think it is absolutely necessary that all the traffic from the north to the south, from Queensland to South Australia or to Western Australia, should go down the Northern line to Sydney, and by the Southern line to Melbourne. We look upon a railway from Werris Creek to the south as being of importance, not only in opening up the country through which it passes, but also as a line by which traffic can be taken from one Colony to another. Then also it should be considered as a military line. We do not know what may occur in the future. It must be apparent how easy it would be to break the connection between Queensland and Sydney by a chance shot at the Hawkesbury Bridge. For these reasons and others, we are of opinion that a line from here to Werris Creek should be made, and that it should be continued south, perhaps to Grenfell.

1703. *Mr. Watson.*] You said that you could not understand the suggestion to take a railway from Parkes to Peak Hill, and thence to Bullock Creek and Bulbodney, because, if it were constructed, it would leave a large area which would still require railway communication? Yes.

1704. A line from Parkes to Bulbodney by Peak Hill would leave only about 40 miles between that line and the Condobolin line;—do you say that that would be too great an area to leave without railway communication? A line taken from Parkes to Peak Hill and on to Dubbo or somewhere else, must be made. To Bulbodney from here by Peak Hill, seems to me to be like a dog's hind leg, and it would leave the country about Trundle and further on without a railway.

1705. What area of country would be unserved if a line were taken from here to Peak Hill and on to Bullock Creek? All the Trundle country would be unserved. I do not see any sense in the alternative proposal to take a line from Peak Hill to Bullock Creek.

1706. Do you think that the country between Bogan Gate and Bullock Creek, and that between the suggested line from Parkes to Peak Hill and Narramine, could stand two railways so close together? You must have roads of some kind, and a macadamised road would cost as much as a railway.

1707. Do you think we can afford to make railways so close all over the country? I do not think so at present. We should make the most urgent ones first.

John George Dane, stock and station agent, Parkes, sworn, and examined:—

J. G. Dane. 1708. *Mr. Watson.*] How long have you been here? About four years.

1709. Have you any information which you can give with regard to the proposed railway from here to Peak Hill, and on to Bullock Creek, and from Bogan Gate to Bulbodney? I suggest that a line should be run between the two—from here to Peak Hill, and going on to Bullock Creek.

20 Aug., 1900.

1710. Would you go between Parkes and Peak Hill? Yes, keeping a little to the west.

1711. Would it be necessary to go to Peak Hill, or to keep some distance west of it? That would depend upon the cost of construction and other things.

1712. What reasons are there in favour of that project? Because there are two lines advocated—one direct from here to Peak Hill, forming part of a national line, and the other from Bogan Gate to Bulbodney. There is no doubt that both tracts of land require railway facilities; but I do not think we can make two lines. If one railway could be made between both, it would be better, and it would open up a good tract of country.

1713. Do you know the country between Peak Hill and Bullock Creek? I know it well.

1714. Is that pastoral land, or is it fit for agriculture? Two-thirds would be fit for agriculture, and, of course, that would also grow wool.

1715. Would there be any difficulties in railway construction? I do not think so; there seems to be plenty of timber and level country. The line could be constructed cheaply.

1716. It has been suggested that such a line would have to cross the waterways at right angles, and that there would be costly bridges? I do not know where they would come in.

1717. What are the main watercourses? There are four, including the Bogan, between Peak Hill and Bullock Creek.

1718. Does most of the wheat from that area go to Bogan Gate or Parkes? The bulk goes to Bogan Gate. I handle a good deal of the wheat in the district, and have an opportunity of knowing.

1719. Do you know those who are cultivating land between Peak Hill and Bullock Creek? Yes; there are a number, and they are increasing every year.

1720. How far are they from Parkes or Bogan Gate? Thirty-eight or 40 miles.

1721. Do they bring their wheat to the railways that distance? Most comes by team to Parkes. Beyond that it goes to Narramine.

1722. What have they to pay for bringing it in? From 1s. 6d. to 2s. a bag, according to the state of the roads.

1723. What is the ordinary price when the roads are in good condition? 1s. 6d. per bag.
1724. Assuming that only one line can be constructed, which do you think would be most payable, and develop the country best? I should say a line from Parkes to Peak Hill, and thence on to Bulbodney.
1725. If a speculator had authority to construct a line to Bullock Creek, and he wished to make as much money as possible, which line would he construct? He would construct the Peak Hill line. I can endorse the evidence of the last witness as to the roads. I also think that lines of railway could be made as cheaply as roads.

J. G. Dans.
20 Aug., 1900.

Henry Alfred Croft, farmer and grazier, Trundle, sworn, and examined:—

1726. *Chairman.*] Have you had long experience in this part of the Colony? Yes, for thirty-eight years.
1727. Do you know practically the whole of the country which will be served by the Bogan Gate-Bulbodney line, and also that which will be served by the suggested line from Parkes to Peak Hill? Yes.
1728. Would you establish a comparison between the character of the country opened out by the Bogan Gate line and that opened out by the Parkes-Peak Hill line? The country from Bogan Gate to Bulbodney, *via* Bullock Creek and Lansdale, is all undulating country well-fitted for agriculture; it is well drained. The country from Peak Hill to Bullock Creek is more or less wet country. It is gilgai country; there are patches of myall country which are dry, and fit for agriculture, but, as a rule, it is not so well-suited for agriculture as the land on the Bogan Gate line, because it is not so sure. If you have a wet-season the country is all wet; if it is a dry season, the crop will be almost a failure; if you have a moderate season, you will have a heavy crop.
1729. Do you think that, year in and year out, the country on the Bogan Gate railway would give more uniform and profitable returns than the country between Peak Hill and Bulbodney? Yes.
1730. Will you compare their relative grazing capacities? I think the country between Peak Hill and Bullock Creek would fatten better, but it has not any greater carrying capacity. On the western side of the Bogan Gate line it is equally as good fattening country as it is on the Peak Hill line.
1731. It is generally assumed that an agricultural railway will draw traffic from 20 miles on each side;—which of these two proposed lines, Bogan Gate or Peak Hill, would have, on the first part, the largest amount of good land on each side? The Bogan Gate line.
1732. How far from the Parkes-Peak Hill line, on the eastern side, does the agricultural land extend? Not very far, on account of Harvey's Range.
1733. What is the average distance of that range from the line? Not more than 6 or 7 miles.
1734. Is there any country over Harvey's Range which could be served by the Parkes-Peak Hill line? I do not think so.
1735. Do you know the Gingham Gap? I do not know it very well.
1736. Does it lead to any extensive area of agricultural land on the other side? There is a basin there, but it is not very large, and is inferior agricultural land.
1737. Take the Bogan Gate-Bulbodney line;—what is the general average yield of wheat along that line, year in and year out? Fifteen to 16 bushels is a fair average, although I have averaged six and a half bags per acre three years ago. I never had less than three and a half bags, even last year, which was the worst we have had.
1738. Is the Trundle country superior, or is the land on that line on the whole the same? I think Trundle is a fair average. It is not at all a picked spot.
1739. What is the grazing capacity of the land right through? One and a half acres to a sheep. When you allow that much land there is never any occasion to be frightened about a bad season. That is what I am carrying, and I have never lost a sheep through drought.
1740. It has been the experience in some parts of the Colony that, although before the construction of a railway great prospects were held out of agricultural development, the construction of the line has not been immediately followed by any large increase in agriculture;—do you think that, in the case of the Bogan Gate-Bulbodney line, we can reasonably expect a considerable increase in the area under cultivation? Yes; 50 per cent. on the holdings.
1741. *Mr. Watson.*] Do you know the country between Bullock Creek and Peak Hill? Yes.
1742. Would the watercourses be any great item in the construction of a railway there? Yes.
1743. Do they all run at right angles to the suggested line? Yes.
1744. How many are of importance? Two besides the Bogan—those are the Back Creek and Sandy Creek. There may be others, but not of any great extent.
1745. Going over the gilgai country, would the construction be expensive? Yes.
1746. Would you get heavier watercourses than on the Bogan Gate line? Yes; the country is liable to flood in wet seasons.
1747. In your opinion, would the construction of the Peak Hill line cost a great deal more than the Bogan Gate line? Yes.
1748. *Chairman.*] One witness to-day pointed out that a number of selectors had taken up agricultural holdings merely for speculative purposes;—has that class of occupation characterised the Bogan Gate-Bulbodney country? No; I do not think you could buy one of them out.
1749. Where were those holdings which were sold? Somewhere near Curra.
1750. Were they sold to consolidate them into larger agricultural holdings? No; they were sold to a very large proprietor of land—Mr. Williamson.
1751. Is he an agriculturist? No.
1752. Do you think that the settlers along the Bogan Gate-Bulbodney line have taken up land permanently to develop it? Yes.
1753. *Mr. Shepherd.*] Have you been engaged in pastoral and farming pursuits all your life? Yes.
1754. Do you think it is desirable to construct two lines—one to Parkes, *via* Peak Hill to Bulbodney, or one from Bogan Gate to Bulbodney—and do you think that two lines would be likely to be supported? A line from Parkes to Peak Hill would be well supported, but not if a line were made from Bogan Gate to Bulbodney. I do not think the line from Peak Hill to Bullock Creek would be well supported.
1755. Do you think it is desirable to construct a railway from Bogan Gate to Bulbodney, and one from here to Peak Hill? Yes.
1756. *Mr. McFarlane.*] Which line would pass through the greatest quantity of good country? The Bogan Gate line.

H. A. Croft.
20 Aug., 1900.

H. A. Croft. 1757. What proportion of good agricultural land would there be in the country which would be served by the Bogan Gate line? From 60 to 70 per cent.—that is, agricultural land; the remainder would be first-class pastoral country.

20 Aug., 1900.

1758. How would you class the country from Peak Hill to Bulbodney? It would go through good grazing land; but I cannot say that it is agricultural land at all. I do not believe in it. You only get belts of good land there fit for agriculture.

1759. Would as large a proportion of it be fitted for agriculture as there would be on the Bogan Gate line? No.

1760. *Chairman.*] Is there anything else you would like to add? There are a lot of discrepancies with respect to the distance from Peak Hill to Bullock Creek—some say it is 35 miles, and others say it is 30 miles. If the Peak Hill line is constructed as suggested, it would actually cut off the main settlement in the Trundle district, which is a very large one. At present it is said that a distance of 15 to 20 miles from a railway is sufficient to suit all persons. I cannot agree with that, simply because if a man has 2,000 bags of wheat, it takes him five months to cart that, provided that he carries 5 tons a load. He cannot make more than two trips a week; that would occupy twenty weeks. Even if he takes fifty bags, that would make 5½ tons. Therefore, we have very great difficulty in getting cartage even in a dry season. In the Trundle district we have great difficulty in obtaining cartage. There is a lot of wheat there now, but we cannot get carriers.

1761. *Mr. Watson.*] Does that condition apply to the land about Trundle, or to further west of Trundle—that is, Fifield, and so on? No; it applies to Trundle alone. At Fifield it is still more difficult.

1762. Do you think that Trundle is too far from the railway now? A farmer cannot carry his own wheat.

1763. The question arises, do you think it necessary, in agricultural country, to construct railways within less than 30 miles of each other, in order to serve the country? No; most of the settlement in Trundle is 25 or 30 miles away from a railway.

1764. How far are the Fifield people away from a railway? Thirty miles.

1765. Would the Parkes-Peak Hill-Bullock Creek line benefit them? No; they would be as far away as they are now.

William Metcalfe, miner, Parkes, sworn, and examined —

W. Metcalfe. 1766. *Mr. McFarlane.*] Have you a knowledge of the country through which the Bogan Gate-Bulbodney line passes? Yes; I used to live at Bulbodney.

20 Aug., 1900.

1767. Do you know the country between Parkes, Bullock Creek, and Bulbodney? Yes; I have been over the different roads for the last twenty-five years.

1768. How would you describe the country on each line? I consider that the country from Parkes to Peak Hill is better than that from Bogan Gate to Bulbodney for agriculture and for grazing. There is some very good agricultural land between Peak Hill and Bullock Creek, and there is a portion of it which is first-class grazing land, it consists of myall plains and that sort of country.

1769. Has your experience been principally in mining? I have been farming, mining, publichouse-keeping, and contracting.

1770. Where were you farming? In New Zealand.

1771. Were you mining in this district? Yes.

1772. What is your opinion of mining in this district and Peak Hill? The mining industry is not very satisfactory at present. For the last twenty years it has fluctuated.

1773. What percentage of land would be fit for agriculture between Parkes, Peak Hill, Bullock Creek, and on to Bulbodney? I consider that there is three-fourths of the land on each of the routes fitted for agriculture. There is a belt of ironbark and hilly country to go through on the Bogan Gate line at Gobondry.

1774. Do you agree generally with the evidence you have heard to-day respecting the country on both lines? Yes; but not the whole of it.

1775. What portion do you disagree with? That stating that a great many favour the Bogan Gate line. I would prefer a line from here to Peak Hill on these grounds, that it would form a branch of the national line to be constructed which has been referred to to-day. It would serve quite as large a population as the other line between Bogan Gate and Bulbodney.

1776. Do you mean that the line should cease at Peak Hill? No; it should be constructed from here to Peak Hill, and then on to Bulbodney; it would serve two purposes.

1777. Would the whole country be served by a line from Parkes by way of Peak Hill? The only drawback is that it would leave the district of Trundle a little to the south-west of the line; it would go within 20 miles of it.

1778. Would it pay farmers to carry their produce 20 miles to a railway? I would not like to have to do it myself; I do not think it would pay.

1779. How would a line from Parkes to Peak Hill form part of a national line? It has been laid down that the Government intend to construct a national line, and this would be a portion of it—that is to say, from Parkes to Peak Hill, thence to Dubbo or Narramine, and thence to Werris Creek—that would be a national line.

1780. Speaking from a local point of view, would you still be in favour of the Parkes-Peak Hill-Bullock Creek-Bulbodney line? Yes; because there is a very large wheat-growing district on the other side of Aleetown, that is the Kadina district.

1781. Do you think there would be a greater area put under wheat if the Parkes-Peak Hill line were constructed instead of the Bogan Gate to Bulbodney line? I think it would be about equal. I consider there is better wheat-growing land on the Peak Hill line, there is a better rainfall, because it is closer to Harvey's Range.

1782. But one part of the line is identical, that is beyond Bullock Creek? Yes, that would be the same.

1783. Do you want to say anything additional? There is one point I wish to mention touching Harvey's Range. The line would go within 6 or 7 miles of that range at Peak Hill. Once the line left Peak Hill it would go away from Harvey's Range, and there would be splendid land on both sides.

Harry Bowditch, journalist, Parkes, sworn, and examined :—

1784. *Chairman.*] Are you well informed as to the rates of cartage throughout the district? Yes, with H. Bowditch. regard to produce.
1785. What are the rates charged from the various points for wheat delivered at the railway station? 20 Aug., 1900. When the roads are dry for 25 miles it costs about 1s. a bag. When the roads are boggy it costs more. Then from Alectown or Kadina the rates might increase 100 per cent.
1786. What is the greatest distance over which grain is carried to the railway? I suppose 35 miles. If you have a railway within 3 or 4 miles of your farm it would not be worth more than 3d. a bag to put the wheat on the railway trucks. With a 16-bushel crop that would be equal to 1s. an acre. If your farm is 25 miles away from the railway it would be worth at least 4s. an acre on the same basis.
1787. What is the maximum charge for long distances? I cannot say, except with respect to Kadina. I visited the farms there to get the production, and I ascertained that for a distance of 25 miles it would cost 1s. per bag.
1788. What has been the average yield in this district? Last year it was about 12 bushels to the acre. I collected information on that subject for the *Daily Telegraph*. That was the yield on the country which would be served by the Parkes to Peak Hill railway. Last season the crop was a comparative failure.
1789. Are you thoroughly acquainted with the country between here and Peak Hill? Yes.
1790. What would be the prospect for a railway between those places? It would mean a return of 3s. per acre more profit in an average season—that is, for wheat-growing alone.
1791. Do you consider that the whole of the country between here and Peak Hill is suitable for agriculture? Yes. I have a good knowledge of the Young and Cootamundra districts in which I lived for many years, and the district between here and Peak Hill is superior for wheat-growing. It will grow as good a crop, it is more easily cleared and worked.
1792. What is a fair distance from a railway station in carrying on agriculture? I think railways through wheat-growing centres should not be more than 40 miles apart.
1793. Yet you can get wheat delivered at a distance of 25 miles for a 1s. a bag? That is in a good season. If the roads were bad, the charge would be increased 100 per cent. There is another great advantage in having the railway near a farm; you can get the wheat into the hands of the millers and the wheat dealers quicker than if you have to depend upon teams.
1794. How would you describe the country within a radius of 20 miles from Peak Hill? The country to the west of Peak Hill is excellent wheat-growing country. That is the best wheat-growing land in the district. I refer to a strip of land from Parkes running in a north and north-westerly direction. It is stiffer soil than the soil to the south. The land about Kadina and some newly taken up land on Goobang, on the left of Peak Hill Road, has returned excellent crops even in dry seasons.
1795. Would you describe the country from here to 20 miles beyond Peak Hill as good agricultural land? I think 60 per cent. of it is good.
1796. Would the whole of the balance be suitable for pastoral purposes? Yes, except where Harvey's Range comes in. That is very poor, but the rest of the country is fit to run sheep on.
1797. How far along the railway line does Harvey's Range run? The range comes in at one point within 6 miles of the road; it then goes away from the road, and runs at an average distance of from 12 to 14 miles.
1798. Is there anything else you wish to add? There is one point with reference to a national railway. I feel strongly on that point, having carefully considered the question for years. I think that the Melbourne market should be connected with Queensland by a line to junction at about Young, extending from Forbes. It should junction at Dubbo or Narramine, and go on to Werris Creek. That would run on about the borders of the agricultural land of the Colony. I thoroughly endorse Mr. Cook's evidence with reference to the military aspect of that railway. I believe that it will ultimately be absolutely necessary to construct that railway, and I advocated it before I came to the Parkes district.

MONDAY, 27 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LANDESAY CRAWFORD SHEPHERD, |
The Hon. ANDREW GARRAN, LL.D. |

The Hon. SOLOMON HERBERT HYAM, |
ROBERT HENRY LEVINE, Esq. |

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

William Henry Hall, Sub-editor, Statistical Year Books, Government Statistician's Department, sworn, and examined :—

1799. *Chairman.*] You have, I understand, some statistical information to lay before the Committee respecting the proposed railway from Bogan Gate to Bulbodney;—could you tell the Committee what area of country your statistics will cover? After allowing for the influence of the line from Condobolin, I have taken a distance of 20 miles on each side of the line extending as far as Dandaloo, but not going east of the Bogan. W. H. Hall. 27 Aug., 1900.

1800.

W. H. Hall. 1800. Is that more than 20 miles? Just over 20 miles. I have taken the western side. I have not touched the Dandaloo country on the other side of the Bogan to the proposed railway. I have kept on this side of the Bogan. The estimated population is as follows:—Trundle, 660; Fifield, 480; Dandaloo (part), 750; making a total population of 1,890. The cultivation statistics, &c., are shown in the following table:—

PROPOSED RAILWAY FROM BOGAN GATE TO BULBODNEY.
Agricultural, Pastoral, and Dairying Statistics.

| District. | Cultivation. | | | | | | | | | | | | | Live stock. | | | | | Dairy produce. | | |
|-----------|------------------------|--------|--------|--------|--------|---------|-------|---------------|--------------------------|----------|-------------|-------------|--------------|-----------------------|------------------|---------|-------------|-----------------------------|-------------------------|--------------|----------------------|
| | Total area cultivated. | Wheat. | | Maize. | | Barley. | Oats. | Other grains. | Hay. | | Green food. | Area under— | | | Cattle. | | | | | Butter made. | Bacon and ham cured. |
| | | Area. | Yield. | Area. | Yield. | | | | Wheat, oats, and barley. | Lucerne. | | Area cut. | Grape-vines. | Other fruit orchards. | All other crops. | Horses. | Milch cows. | Ordinary, including calves. | Sheep, including lambs. | | |
| Trundle | 1897 | 4,766 | 2,930 | 22,892 | .. | .. | .. | .. | 1,276 | .. | 539 | 14 | 10 | .. | 765 | 192 | 963 | 166,157 | 289 | .. | .. |
| | 1898 | 6,535 | 4,633 | 70,211 | .. | .. | .. | .. | 1,183 | .. | 567 | 12 | 7 | .. | 668 | 114 | 551 | 114,445 | 239 | .. | .. |
| | 1899 | 13,591 | 11,348 | 72,369 | .. | .. | .. | .. | 2,243 | .. | .. | .. | .. | .. | 803 | 233 | 502 | 142,694 | 218 | 7,150 | .. |
| | 1900 | 12,519 | 9,372 | 80,596 | .. | .. | .. | .. | 3,137 | .. | .. | .. | .. | .. | 374 | 152 | 374 | 84,962 | 174 | .. | .. |
| Fifield | 1897 | 543 | 195 | 400 | .. | .. | .. | .. | 333 | .. | 7 | .. | 8 | .. | 295 | 97 | 437 | 105,504 | 31 | 500 | .. |

1801. Those figures show that there would be about 9 bushels to the acre of wheat? Yes; it would be about that.

Henry Chamberlaine Russell, C.M.G., Government Astronomer, sworn, and examined:—

H. C. Russell, C.M.G. 1802. *Chairman.* The Committee is inquiring as to the expediency of constructing a railway from Bogan Gate to Bulbodney. Can you furnish the Committee with any particulars as to the rainfall in the district that will be served by the railway? Yes. At Bogan Gate the average rainfall is 17.08 inches. Immediately to the east of that, at Timaldra Station, it is 23.24 inches. I should state that the Bogan Gate rainfall rests upon the records for the last six years, and which, taken as a whole, are very unfavourable. The figures I have given for Timaldra rest upon nine years' records, and are therefore relieved of some of the evil effects of the drought.

1803. Can you say how far Timaldra is from Bogan Gate? It is a station about 17 or 18 miles east-north-east of Bogan Gate. There is another station close to called Brue Plains. The rainfall there averages 22.76 inches. Timaldra is a little south-east of that. The Condobolin rainfall average for the past eighteen years is 18.89 inches. That is considerably more than Bogan Gate appears, but that is because of the longer period over which the records have been made, which has given us good years with the bad ones. Almost immediately north of Condobolin is a station called Mowablaa. It is a tank, the average rainfall there being 18.19 inches. Immediately north of that again is Burra-Burra, where the rainfall averages 22 inches. East-north-east of that, about 20 miles away, is Warge Rock, where the average rainfall is 22.63 inches; immediately north of that is Tabratong, where the average rainfall is 21.70 inches. Then comes Dandaloo, with 23.23 inches. Then we get Bulbodney, with 21.46 inches. Then for 20 miles further there is rather a gap among the observers till we get over towards Eremeran, which is about 20 miles south-west from Bulbodney. The records of the rainfall there are valuable, because they have extended over twenty years, and show the average fall to be 16.56 inches. Then immediately north of that is Moothumbil, with a rainfall of 16.55 inches. The next station immediately north is Babinda, where the rainfall averages 22.39 inches, and about 12 miles to the east of that, and 12 or 13 miles west of Bulbodney, is Panjee, where the rainfall averages 21.50 inches.

1804. Have you the return for Trundle, about 15 miles north of Bogan Gate? I have Trundle Lagoon; the mean annual rainfall there is 21.35 inches.

1805. *Mr. Hyam.* Have you the return for Bullock Creek—the place is better known as Tullamore? No; I have not the return for that.

1806. *Chairman.* Could you institute a comparison between the places you have named and other places—Parkes, for instance? Parkes has an average rainfall of 24.12 inches.

1807. Have you the returns for Alectown, Peak Hill, and Tomingley? Not of Alectown; the average rainfall of Peak Hill is only 23.48 inches; that for Tomingley is 19.64 inches.

1808. Can you tell us how much greater the rainfall is about Parkes than it is towards Bogan Gate or Bulbodney? It would be from 2 to 3 inches towards Parkes. The country falls very rapidly as you go further west; you not only go further from the sea, but you are going down hill.

1809. To the east of Peak Hillie what are known as Harvey's Range, having an average distance of 6½ miles from the proposed line;—would they have an appreciable effect upon the rainfall? I should think it would not be very appreciable.

1810. *Dr. Garran.* Have you any rainfall record of places 12 miles from Peak Hill—Yeoval, for instance? No; but if there is an elevation there of 300 feet or so the increase in the rainfall would be about an inch.

1811. Harvey's Range has an elevation of about 600 feet? An elevation of about 300 feet makes the increase in the rainfall about 1 inch.

1812. *Chairman.* With respect to the rainfall between Bogan Gate and Bulbodney, which you say is about 21 inches, is that sufficient for wheat-growing? Yes.

1813. Do you know whether it falls in a favourable season of the year? Yes; it is not quite so favourable as in the eastern part of the country, but still it is favourably situated for wheat-growing.

1814. More likely to be subject to intermittency in the rainfall? I could not say.

1815. As you go north-west the rainfall becomes more irregular? Yes.

THURSDAY, 30 AUGUST, 1900.

Present:—

|--|-----------------------------|
| WILLIAM THOMAS DICK, Esq. (CHAIRMAN). | |
| The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | JOHN CHRISTIAN WATSON, Esq. |
| The Hon. ANDREW GARRAN, LL.D. | ROBERT HENRY LEVIEN, Esq. |
| The Hon. SOLOMON HERBERT HYAM. | JOHN MCFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

William Henry John Slee, Chief Inspector of Mines, Department of Mines and Agriculture, sworn, and examined:—

1816. *Mr. Watson.*] The proposal before us is to construct a line of railway from Bogan Gate to Bulbodney, through Trundle;—do you know of any mineral development along the route of that railway? There are some developments, so far as gold is concerned. I have been through that district. When Fifield and Platina were opened I had charge of the district as Warden, and that caused me to go about the district a good deal on horseback. W. H. J. Slee.
30 Aug., 1900.

1817. Were they alluvial diggings? Yes.

1818. What is the position there to-day? There are not so many people as there were at the time of the rush, but the townships have always kept up ever since. Going from Bogan Gate, I do not think there will be any mining until you get past Trundle; but there is a good agricultural, wheat-growing district there. Going from Trundle, through Carlisle and Fifield, I have no doubt that there will be a population of gold-miners. Of course, near Melrose Plains, there are silver and copper, but the traffic of that part generally goes to the Condobolin line.

1819. How far is Melrose Plains from the Condobolin line? From 35 to 40 miles.

1820. How far would it be from the proposed line, say at Bullock Creek, or anywhere between there and Bulbodney? I do not know, but I think that if a line were constructed from Bogan Gate, it would be handier for them to go from that part to the Bogan Gate railway than to the Condobolin line.

1821. Has anything been done in a large way with the copper shows at Melrose Plains? Near Dandaloo, or on the Lightning Paddocks side of Dandaloo, men are prospecting for copper lodes, aided by the Government.

1822. That is between Dandaloo and the proposed line? Yes; in the same locality.

1823. The Lightning Paddocks is where Lind is working, is it not? Yes.

1824. Is the show there extensive? The real miner has hardly ever been at the Lightning Paddocks. It is very rough country near there, and the country is fit for mining only just at the Lightning Paddocks and past there. It is not fit for agriculture. I have no doubt that, with a proper population, they might find quartz reefs, and they might also find silver, but I do not think that they will ever find copper. There is copper further on, and nearer Condobolin; but I am talking only of the locality of Lightning Paddocks, which belongs to the Burra Burra pastoral lease.

1825. What is the real name of the place where Lind is? I do not think that there is any township name. I know that the Government thought sufficiently well of the place to aid parties in prospecting there out of the Prospecting Vote, but they are not at present getting anything payable or really good, at which they could start on their own account. However, the prospects are very promising.

1826. Are there any claims on gold reefs in that district? Yes; there are a large number of reefs there, but not tested. As I have said, the real mining population has hardly ever got that way. There are more of the men who are usually employed about stations. There is tin at Burra Burra; in fact, there is alluvial tin on the very line of this proposed railway.

1827. You would consider it, then, a promising district, from a mining point of view? I think so.

1828. In connection with this proposal to reach Bulbodney by rail, a suggestion has been made to run a line from Parkes to Peak Hill, and thence to go westerly towards Tullamore and Bulbodney, taking the section to Peak Hill and further on;—can you give the Committee any particulars as to the present condition of the mining industry north and south? The line would go through Alectown if it went from Parkes. Peak Hill and Alectown were opened in 1889. In 1890 and 1891 I was there for sixteen months as a Warden of the Colony, going backwards and forwards to Sydney. As far as Alectown is concerned, there are a large number of quartz reefs and very good agricultural land. I believe that the pastoral leases are either to be thrown open soon, or have just been thrown open. In my opinion, Peak Hill is a permanent gold-field. There is a great deal of refractory ore there.

1829. They are not working the big mine at Peak Hill at the present time, are they? Yes, they are. There is also the Proprietary Mine at Peak Hill, although I believe it has paid little in dividends to the present company, compared with what it paid previously. The ore there is very refractory, but the Government Mineralogist, when he was in our Department at a salary of £1,200, thought sufficient of that ore to resign his position and take it in hand, in order to try and make it pay.

1830. Do you think that sufficient time has elapsed for you to be able to say whether he is likely to be successful in that? About a week ago he came to see me at my office, and he said he was quite confident that he had taken the right step. I had thought that he had taken the wrong step in throwing up his appointment; but he told me the other day that he was quite satisfied that he had taken the right step, and that the gold-field was better than he had anticipated.

1831. Are any other mines being worked at Peak Hill? Yes, there is Mooney and Wise's. There are half-a-dozen fairly large mines, and there are numerous small mines—the latter being worked just by individual miners.

1832. But nearly all on reefs? Mostly reefs. Of course they have had some very rich gold there in alluvial—the richest I have seen during the time I have been in Australia.

1833. You mean they had rich alluvial? Yes. They bottomed a small shaft in 1890 when I was Warden, a shaft about 4 feet x 2 feet, and they had over 10 oz. of gold picked out in pieces. That caused a big rush, and 8,000 or 10,000 people were there in about a fortnight.

1834. That has probably been worked out pretty well by now? Well, it has been tried a good deal, but there is a very large valley. The late Mr. Wilkinson, who was our Government Geologist, and I went
over

- W. H. J. Slee, over it some years ago; and when the rush was on at Peak Hill, I induced the Government to give prospecting aid to test this valley. This valley must extend from Alectown right down to the Bogan—15 or 20 miles in length. A little gold has been got, but no shaft has ever been bottomed on it. They have gone down to a depth of over 300 feet, but were always thrown out by water, through not having the proper appliances. I feel confident that, sooner or later, we shall have one of the deepest leads, if not the best—a payable deep lead—about 4 miles west of Peak Hill township. We had a little gold on a sidling in a shaft 80 feet in depth—from 2 to 3 grains of gold—and it dipped away, as far as we have gone, about 300 feet. There was a little gold on the sidling, but nothing has been done there since then. The late Mr. Wilkinson and I were staunch friends, and we both always took great interest in that field. I have been to Peak Hill three or four times to try to induce people to go in for prospecting it. Of course they would have to have a small steam plant, and I would ask the Government, if possible, to give them a subsidy. I feel confident that, sooner or later, Peak Hill will be a very thriving gold-field and farming district combined.
1835. What is the characteristic of the ore bodies at Peak Hill—are they large deposits? In the Proprietary Mine the deposit is sometimes very large—never less than 3 or 4 feet.
1836. Going further north, between Peak Hill and Tomingley, there is a place called McPhail? Between Peak Hill and Tomingley there is a place now called McPhail, but formerly called Myall. McPhail was the name of the prospector, but Myall was the original name of the place. That was opened about sixteen or eighteen years ago. I was there in the first week. It has been worked by English companies, and there is now a large number of persons employed there. Myall is 8 miles from Peak Hill, and Tomingley 2 miles further, and in between there is no doubt that it is all auriferous country.
1837. Have you inspected the mine at McPhail? Yes: I have been through the whole of it.
1838. They have a large ore body there? Yes. It is now being worked by an English company.
1839. What is the characteristic of the ore? It is quartz reef.
1840. Do you think they have a good permanent mine there? I think so. Myall, or McPhail, is not a new affair; it was started long before either Peak Hill or Alectown was founded. Peak Hill and Alectown were discovered in 1889.
1841. Is there mining also going on at Tomingley? Yes: there is mining at Tomingley, but not further on, going towards Narramine or Dubbo. Tomingley is about 30 or 32 miles from Dubbo, and Narramine something similar.
1842. Can you, from memory, state roughly the mining population in each of those centres along that route? I doubt whether, at the present time, you would find more than about from 500 to 600 miners there; but there is the usual population of business people and farmers as well. At Peak Hill there is a large number of families settled on 20-acre and 4-acre suburban blocks, which were sold by the Government on certain conditions. They have made their homes there, and I believe that if the pastoral leases have not already fallen in they are to be thrown open in a very short time right from Parkes to Alectown. Of course, that is an agricultural country as well. If mining goes down there—and mining always has its ups and downs—then agriculture will fill up the gap.
1843. Can you say whether railway communication would be of much value, from a mining point of view, as far as Peak Hill? In my opinion, the Peak Hill route is far more valuable, from a mining point of view, than is the Bogan Gate route.
1844. What I want to get at is whether, because of the peculiar character of the ore which is met with along that route, there is any great necessity for railway communication—for instance, either for the carrying away of ores, or for the carrying of fuel to the mining centres? The refractory ores of Peak Hill, of course, require to be treated by means of furnaces, and to use furnaces for metalliferous purposes properly you require coke or coal. For that reason, if for no other, refractory ores are more valuable to a railway than would be ore consisting merely of clean quartz.
1845. Of course, in the case of a place where there are only quartz reefs, the railway would only have to carry supplies to the miners and take the gold away; whereas, in the other case, the railway would have to carry stuff for smelting as well? Yes. There are three cyanide plants now working at Peak Hill. Two of them are working on ore now being produced, and one of them is working on tailings produced some years ago. The line proposed to go to Peak Hill is what was always called the "White" line. That was measured in 1878 or 1879. Surveyors were sent from Parkes long before Peak Hill was thought of, and that line was, at that time, supposed to form a portion of a line to Werris Creek, *via* Dubbo, to connect the Northern districts with the Southern, through Young, Grenfell, Forbes and so on.
1846. If a line were constructed to Peak Hill, do you think that the mine-owners there would arrange for the local treatment of their ores, or would they send them away for treatment? I think they would rather arrange for the local treatment of the ores.
1847. Then you think that traffic for the railway would consist, among other things, of the taking of coke to the mines? Yes.
1848. Would they also require fluxes to be taken to them by the railway? They have limestone not far away, and they could get the necessary fluxes without difficulty.
1849. They would not need to have these brought to them by rail? No. Independently of this being one of our best mining districts, it is also a very good agricultural district. You can go to a depth of 8 or 10 feet through rich loam. The country is very good for wheat growing; in fact, anything would grow there.
1850. Has anything in addition to gold been found on the line from Parkes to Tomingley? There is a little copper, but that has not been sufficiently developed. There is a hill close to the main road going from Alectown to Peak Hill, and a little prospecting for copper has been done between Peak Hill and Parkes, but that is all.
1851. Would you class that district generally as an important one in comparison with other mining centres in New South Wales? Yes; I always have done so since I first saw it. My first report on it was not an extraordinarily glowing one. I said it would require capital, economy, &c., to make it a payable field, and that report has been borne out since. At that time, to use a common phrase, they were merely pig-rooting—they were not doing any real mining.
1852. *Mr. Shepherd.*] What is your opinion of the mineral resources generally between these two points? My opinion is that they will employ a large number of persons—both wages men and individual miners.
1853. Do you think that any of them have been sufficiently tested yet to justify you in saying that they are likely to be permanent? Yes. They have been working ever since 1889. The Proprietary Mine has never

never stopped a day from working, and then there is the Crown of the Hill, and Moonie and Wise's; ^{W. H. J. Sloc.} they have always been working.

1854. Do you think the prospecting has been carried out intelligently—in a systematic way? Latterly it has, but in the beginning it was not. With practice and science combined, they will no doubt succeed. ^{30 Aug., 1900.}

1855. Nothing of any great consequence has been done yet, I think? No, there has not.

1856. So that you would hardly be justified in expressing an opinion as to the probability of its permanence, I suppose? Yes, as far as I can see, I am of the opinion that the Peak Hill district will be one of the most flourishing districts in New South Wales.

1857. What is the greatest depth attained there yet? A little over 400 feet.

1858. What are the best results obtained? At first, when they started roughly, before the ore went into the refractory state, as much as 6 or 8 oz. to the ton were obtained. The ground was very rich on the top levels.

1859. What is the width of the lode they have got those returns from? What I am speaking about was never less than 3 feet; but when the late Mr. Kelly, who was a Member of Parliament for Dubbo, had charge of it, he had a cutting over 40 feet in width, and he crushed the whole lot.

1860. Did that give anything like a fair return? Yes, it paid him very well; but the ore became very refractory, and the gold fine, going away with the slimes. And there was the slimes difficulty, which is a difficulty even at Lucknow now. They have thousands of tons, but their scientific men cannot recover the gold out of the slimes. However, Mr. Taylor, the late Government Metallurgist, thinks he has now got on the right track. He told me so last week.

1861. Do you think it is likely that the mining development will be such as to materially assist a railway in the event of its being constructed? Yes, combined with farming. Of course if you have only a mining district, and no farming, you must expect it to go down and drop very low, like Hill End, which had a population of 25,000, but now has a population of not so many as 1,500.

1862. *Mr. McParlane.*] You stated that mining has been carried on at Peak Hill since 1859? Yes.

1863. Does that apply also to the other towns where the proposed railway would go? To Alectown, McPhail, and Tomingley. McPhail and Tomingley were called after men of those names, and these two gold-fields were opened long before Peak Hill, which shows that although Peak Hill has been opened, there may be other good places in between. They have not been sufficiently prospected yet.

1864. Do you know Bullock Creek—Lightning Paddocks? Yes; I have been through there.

1865. Is that a recent discovery? There are only a few parties working there. Lightning Paddocks is about 8 miles from the Burra Burra home station, and it is very rough country.

1866. Do you think that mining is in a prosperous condition there, or is likely to be? I think so. Of course in mining there are always ups and downs.

1867. Comparing its present condition with what it was five years ago, what is it now? To-day it is not much better than it was then, past Myall or Tomingley.

1868. Take Peak Hill;—are there as many miners working there now as there were five years ago? Yes; one or two places more. Peak Hill is a municipality. The people think sufficiently well of the mining there to have formed a municipality and to tax themselves.

1869. With regard to the other mining centres which the proposed railway would be likely to influence, are there as many men working there now as there were, say, five years ago? Yes.

1870. Any increase? A little. There was an increase throughout the Colony last year, compared with 1898, of about 3,000.

1871. But I am speaking more particularly of this district? Yes; there is a little increase there.

1872. Is there any increase in the gold production? Yes; the gold production is increasing everywhere.

1873. But I am speaking of Peak Hill? Yes. Peak Hill produced more gold in 1899 than it did in 1898.

1874. So that it did increase? Yes; and no doubt it is still increasing.

1875. Does that apply also to the other mining towns? Yes; there is Alectown in between.

1876. Does the gold-bearing country cover a very large area? Yes. The whole of the country, from Parkes, 32 or 33 miles, to Peak Hill, is auriferous country for 10 miles on either side of the proposed line.

1877. Has it been thoroughly prospected? No.

1878. Do you think that the railway would assist in the development of mining throughout the district generally? I think so. A railway always does. A mining population always uses a railway more than a farming population does. A miner is far freer in spending his earnings than a farmer is.

1879. He gets more, I suppose? Yes; a farmer has to work harder, and gets less for it; whereas the miner has regular hours, and can afford to spend more.

1880. *Dr. Garran.*] Do you consider that the mining industry at Peak Hill is now being kept back by want of railway communication? I will not say that. I will not go that far; but I believe that if a railway were constructed to Peak Hill, the whole district would be assisted; and even if it would not pay at first, it would be likely to pay within a very short time afterwards.

1881. You think that a railway would lead to a much greater development of the mining industry? Yes, no doubt.

1882. You spoke of some rich farming land in the neighbourhood of Peak Hill—does that go all the way from Peak Hill to Parkes? Yes, right from Parkes to Peak Hill; in fact, right to the Bogan—it takes in all the Bogan flats.

1883. Is it as good as the land between Bogan Gate and Bulbodney? Every bit as good as that.

1884. Is it as much taken up? No, it is not taken up, because the pastoral leases were in force; but the pastoral leases are either to be thrown open this year, or have already been—I am not sure which. I have not been there this year.

1885. Your opinion is, that when the ground is available for selection in any form, it will be taken up? Yes, selected at once, or taken up under certain conditions—under the most liberal conditions of the law.

1886. Then, you think that, both as an agricultural line, and as a mining line, this railway has some recommendations? Yes.

1887. There is only a very slight indication of mining on the line between Bogan Gate and Bulbodney? I feel confident that there will be no mining between Bogan Gate and Bulbodney until after you pass Trundle, and get into the quartz ridges at Carlisle, or Fifield as it is now called, Burra Burra having been the original name.

- W. H. J. Slee. 1888. At present it is more alluvial indication than reef? No, it is mostly reef indication.
 1889. You have had no proved reef with gold in it? Yes, we have. They are working. We have several crushing machines there.
 30 Aug., 1900. 1890. Do you think that the alluvial there is coming out of those reefs? Yes.
 1891. And that there is more gold in the reefs yet? Yes.
 1892. A workable amount? Yes.
 1893. *Mr. Hyam.*] Do you know the country between Tomingley and Bullock Creek towards Dandaloo? Yes; that would be an agricultural and pastoral country.
 1894. You would not expect to find any considerable quantity of gold in that country? Yes; but at present there are no big deposits being worked past Tomingley.
 1895. Whatever gold is there would be alluvial? Alluvial and quartz reefs mostly.
 1896. You expect to get quartz reefs in that country? Yes; quartz reefs are to be seen on the hills. I have been through that country on horseback for weeks.
 1897. Do you know Woodlands station, on the road from Dandaloo to Bulbodney? That name is not familiar to me.
 1898. Well, do you know the name Lansdale? Yes. I believe there will be gold got there—right through that country.
 1899. You think that is gold country? Yes.
 1900. And further on than Lansdale, do you expect there will be a continuation of that gold-bearing country. Yes. As far as mining is concerned, I feel confident that a line from Parkes to Peak Hill and through there, would do more good to the country, from a mining point of view, than would a line from Bogan Gate.
 1901. You think it would be a better line for developing new mines and improving those already in existence? Yes. Of course it would not serve the people between Bogan Gate and Trundle.
 1902. You think the whole district, taken generally, is a good one? Yes, I think so.

WEDNESDAY, 5 SEPTEMBER, 1900.

Present:

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The HON. PATRICK LINDESAY CRAWFORD SHEPHERD.
 The HON. ANDREW GARRAN, J.L.D.
 The HON. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
 ROBERT HENRY LEVIEN, Esq.
 JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

William Duncan, Pastoral Inspector, Union Bank of Australia, sworn, and examined:—

- W. Duncan. 1903. *Mr. Watson.*] Do you know the country through which the proposed railway from Bogan Gate to Bulbodney would pass? Yes, I know the country very well, as far as Tullamore, on each side of the route of the proposed line. I have travelled through that district several times.
 5 Sept., 1900. 1904. How would you describe that country? It is good, strong, red, loamy soil—good wheat-growing land. There are small patches of ironbark ridges, but the area of the poor country is comparatively small.
 1905. To what distance on each side of the route of the proposed line would that description apply? It applies to the country within 12 or 15 miles on each side of the route of the proposed line.
 1906. Do you visit the farms of the clients of the Union Bank in that district? Yes, and I also have an opportunity of seeing the country in travelling about to inspect sheep.
 1907. The people in that district appear to have gone in very largely for agriculture? Yes, very largely, considering their distance from a railway.
 1908. What is the greatest distance over which people in the district draw wheat to the railway? Wheat is drawn to the railway from places about 40 miles beyond Bogan Gate.
 1909. How far west of the route of the proposed line does the good country extend? It is all good country for at least 15 miles west of the route of the proposed line.
 1910. Taking the rainfall into consideration, would you say that the country on the western side of the route is as well suited for agriculture as that on the eastern side? Yes, within a distance of 12 or 15 miles.
 1911. Do you know if there is any appreciable diminution of the rainfall within 15 miles of the route on the western side? I do not; but the diminution would be very slight if any.
 1912. You have not been further north than Tullamore? No.
 1913. It has been suggested that a line might be taken from Parkes through Peak Hill to Tullamore; how would the construction of such a line affect the people living between Tullamore and Bogan Gate? It would be of no advantage to them.
 1914. From how far towards Trundle would such a line draw traffic? The traffic would naturally go to the nearest railway station.
 1915. Do you think the present railway to Bogan Gate would have a greater attraction for the traffic between Bogan Gate and Tullamore than a line going from Parkes through Peak Hill to Tullamore? I fancy that it would, but I cannot speak definitely upon the point. What is the distance from Bullock Creek to Peak Hill.
 1916. It would appear to be about 30 miles. The distance from Tullamore to Parkes by rail would be about the same by either route? I think that some of the land to the east of the suggested line to Peak Hill is poor country.
 1917. The land on Harvey's Range? Yes; a lot of that is rough, useless country.
 1918. It has been suggested in favour of the Peak Hill line that it would serve a greater number of people than the Bogan Gate line, and would not leave the settlers between Tullamore and Bogan Gate at a greater distance than 20 miles from a railway; would that be too great a distance? Twenty miles from a railway is rather too long a distance at which to carry on farming profitably, with the prices which have ruled during the last two years.
 1919.

1919. But you say that at the present time some of the people in the district are carting their wheat 40 miles. Would not a saving of 20 miles be of material assistance to them? Yes, it would be of great assistance to them. W. Duncan.
5 Sept., 1900.

1920. Twenty miles would be the greatest distance which any of the people between Bogan Gate and Tullamore would be from a railway, so that most of them would be less than 20 miles from a railway? No doubt there is a bigger population on the Peak Hill route, taking the township of Peak Hill into consideration, than there is on the proposed Bogan Gate route, but I think that the proposed route runs through better country, and country more suited for settlement, than the Peak Hill route does.

1921. It has been suggested that a line might be taken from Parkes to Narramine, in order to serve a series of townships lying along that route, and a considerable area of agricultural land. If the proposed line from Bogan Gate to Bulbodney were constructed could the country afford to construct a line from Parkes to Narramine? I do not know the country lying to the north of Peak Hill, but I think that a lot of it is very rough.

1922. But, seeing that the two lines would be only 20 miles apart at the beginning, and would run nearly parallel, would it pay to construct it, assuming that they both ran through good country? I hardly think so.

1923. If we construct the Bogan Gate to Bulbodney line we must abandon all hope of reaching Peak Hill by railway? Yes.

1924. The Peak Hill-Tullamore-Bulbodney route has been suggested with a view to serving the Peak Hill portion of the district as well as the Bulbodney portion, without leaving any part of the district too far away from a railway; is there any other suggestion which occurs to you as likely to meet the position better? I can see no other.

1925. From what you know of the district, do you think that railway construction there is justifiable? Undoubtedly it is. There is a large extent of country there which will shortly be opened for settlement, and it is all good land, and land which it is not difficult to clear. I look upon the district as one of the best I know, though it wants men with a little capital to develop it properly.

1926. It seems to have attracted a very energetic class of settlers? Yes, the settlers there are a splendid class of men.

1927. *Mr. Shepherd.*] Have you visited the district frequently? I visit it sometimes two or three times a year, and never less than twice a year.

1928. Do you think that the country through which the proposed line would run is capable of closer settlement? Undoubtedly it is.

1929. And suited for mixed farming? Yes.

1930. Is it well watered? It is not watered naturally at all; but there is every facility for conserving water by means of tanks and dams. It is good holding ground.

1931. How is it timbered? Principally with the bright-leaved box, pine, and bull-oak, and there is yellow box and belar in places.

1932. Is there sufficient timber there to provide the necessary railway sleepers? No, there is not very much timber there suitable for railway sleepers.

1933. From what distance would sleepers have to be brought? I could not say. There is very little ironbark in that country, and what there is, is not much good; it is stunted, decayed stuff mostly.

1934. Is the land pretty well all taken up? All that has been available has been taken up.

1935. For a considerable distance on each side of the proposed line? Yes.

1936. Is that land now held under lease? It is chiefly conditionally purchased and conditionally leased land.

1937. Has any considerable area of it been brought under cultivation? Yes, a good portion on each selection.

1938. Chiefly for wheat, I suppose? Almost entirely for wheat.

1939. Are you aware of fruit having been grown there to any extent? Yes; I have seen excellent fruit grown there. Fruit seems to do wonderfully well in any part of that district. I know of a splendid orchard in the district.

1940. Do the people who have grown fruit there seem satisfied with the results? Yes, perfectly.

1941. Do you think that the fruit industry will expand if the proposed railway is constructed? I could not speak about that.

1942. Is it your opinion that if a railway is constructed, it will be a success? Yes, after a time, but not for a year or two. The land is capable of carrying such a large population that I think a line would undoubtedly pay.

1943. Are the holdings there generally of any large extent? Some of them are large. About 12,000 acres is the largest that I know of.

1944. Are there any holdings of a moderate extent? They are all fair-sized holdings, ranging from 3,000 acres to 12,000 acres.

1945. What would be a fair sized holding to support a family by mixed farming? From 1,000 acres to 1,280 acres, if the farm was well managed. Small holdings, when properly worked, are more remunerative than large holdings which lie partly idle.

1946. What is your opinion of the Peak Hill route as compared with the Bogan Gate route? I think that the Bogan Gate route runs through better country than the Peak Hill route; but I am not so well acquainted with the Peak Hill country. I know that not far from Peak Hill there is some very indifferent country, which is not suitable for settlement of any kind.

1947. It is your opinion that the district is sufficiently good to support a railway? I think that it undoubtedly is.

1948. *Mr. McFarlane.*] How long have you known the district? For three years.

1949. Have you known the country between Parkes and Peak Hill for that length of time? Yes.

1950. In comparing the Bogan Gate route with the Peak Hill route, which do you think would open up the larger area of agricultural land? I think the Bogan Gate route.

1951. Do you think that if there were railway facilities the people in the district would show a disposition to go in more largely for agriculture? I think so.

1952. Do you think that the district is prospering? From appearances the people there are prospering, but it is very difficult for a farmer to prosper if he has to cart his wheat 30 or 40 miles to get it to the railway.

- W. Duncan. 1953. Is settlement on the increase in the district? So far as I know all the available land has been taken up.
- 6 Sept., 1900. 1954. Is agriculture increasing there? Yes, undoubtedly.
1955. Do you think there would be a material increase if the proposed railway were made? I am certain that there would be a big increase.
1956. *Dr. Garran.*] We have been told that part of the land is held under conditional purchases and conditional leases, and part under scrub leases and settlement leases;—is that so? I do not know of any settlement leases out there, though there may be some.
1957. Have you noticed any difference between the farming of those who have contingent freeholds and that of those who have not? No; I do not know of any settlement leases in the district.
1958. So far as you know, all the banks' clients have the right to purchase their land? Yes.
1959. The land they hold will ultimately become theirs? Yes, if the payments are completed. In the southern district, where there are settlement leases, I have not noticed any difference.
1960. So far as you know, the people of this district are making steady progress? Yes, and are increasing the area under cultivation.
1961. Notwithstanding the long distances that they have to carry their produce? Yes.
1962. Do you know any other district where people can afford to carry agricultural produce 20, 30, and 40 miles? I know other districts where produce is carried similar distances.
1963. Are the people in this district as prosperous as those in any other agricultural district that has come under your notice? Yes, quite as prosperous as people similarly circumstanced elsewhere. People who have railway communication have a better chance to prosper than people who live away from the railway.
1964. What additional value will the construction of the proposed railway give to the holdings you are speaking of by diminishing the cost of transit to and from them;—would it increase their value by one-tenth? I think so.
1965. By more than that? I think so.
1966. By one-fifth? Possibly not so much as that.
1967. But it would make a very sensible difference? Undoubtedly.
1968. Would it make a very great difference to a farmer to reduce his road carriage from 30 or 40 miles to 20 miles. Yes.
1969. We have been told that a farmer does very well if he is near enough to a railway to be able to take his wheat in and get back again in the one day? Yes, that suits the farmer very well.
1970. If a farmer has to spend the night in town it makes a difference to him? Yes, it causes him to lose two days.
1971. And it makes it necessary for him to incur expense? Yes, for the accommodation of himself and his horses.
1972. Your verdict is that, notwithstanding the past five years, which have been very trying years—more trying perhaps than we may expect to have again for some time—the people in this district are actually forging ahead? Yes.
1973. *Mr. Hyam.*] Does this district compare favourably with any other of our wheat-growing districts? In my opinion it is one of the best wheat-growing districts that I have been in.
1974. Could a man who lived 20 miles from a railway take his produce to the line and get back home in one day? No, not even with good roads.
1975. What is the greatest distance from a railway in which a man could do that? Twelve or 15 miles.
1976. I suppose you have seen a great deal of the district in its unimproved state? I have seen it in all states. A great deal of it is still unimproved.
1977. Is it of any value in its unimproved state? Of very little value.
1978. Do you consider it good sheep country when it has been ringbarked and scrubbed? Yes, capital sheep country; it is sound and good.
1979. What is its capacity? Taking it all through, it will carry nearly a sheep to the acre.
1980. Are the grasses there good and sweet? Yes.
1981. There is no fluke in the district? There is no disease of any kind there. It is absolutely sound country for stock.
1982. Do you think that the cultivation of the land improves it for grass? Yes. The grass is finer and more nutritious where the land has been cultivated.
1983. And the cultivation produces a better growth of grass? Yes.

THURSDAY, 6 SEPTEMBER, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDSAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.

The Hon. SOLOMON HERBERT HYAM.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

John James Miller, Manager, Farmers' and Settlers' Co-operative Association, sworn, and examined:—

- J. J. Miller. 1984. *Chairman.*] You are acquainted with the country through which the proposed railway from Bogan Gate to Bulbodney would pass? Yes.
- 6 Sept., 1900. 1985. Since that railway proposal was referred to the Committee, it has been suggested that a line might be taken from Parkes through Peak Hill to Bullock Creek, and then on to Bulbodney:—can you compare the country on the two routes? I have not been along the alternate route that you speak of; but I know the country from Bogan Gate through Trundle to Bullock Creek.
1986. How would you describe that country? It is all splendid agricultural land.

1987.

1987. What portion of the land within 20 miles on each side of the proposed route is agricultural land? J. J. Miller. I should say three-quarters of it.
1988. Given railway facilities, what area of land in that district would maintain a family in decent comfort under mixed farming? The Australian families are generally pretty large. I suppose about 2,500 acres would maintain a family properly in that district. 6 Sept., 1900.
1989. If a man used 2,500 acres for mixed farming, how much land would he have under cultivation, year in and year out? Some farmers would cultivate more than others; but if a farmer was cultivating 1,500 acres, he would have 600 or 700 acres under crop one year, and about the same area under crop the next. That would maintain the strength of the soil.
1990. Would not a man be able to carry more sheep on 2,500 acres if he farmed a portion of it than if he used the whole of it for pastoral purposes? Yes; the more land a man farms, the more sheep he can carry. The old cultivation paddocks always carry a great many sheep.
1991. To cultivate the land is, to some extent, to provide an insurance against drought? Yes; especially if a store of fodder is kept on hand.
1992. What is the average carrying capacity of the district? It is all a sheep-to-the-acre country.
1993. What would be its average yield of wheat, year in and year out? It is splendid wheat country. It is part of the same belt as the Narramine country, and has the same rainfall. Some of our farmers have been there for 12 years, and have had twelve crops. They have never had less than 10 bushels to the acre, and they have had as many as 25 and 28 bushels to the acre. The average yield would be 15 or 16 bushels to the acre.
1994. Had there been many inquiries for land in the district from *bona-fide* farmers? Yes; there has been a good demand for land there. A good many farms have changed hands lately, and farmers have come from Victoria to look for land in the locality.
1995. Do you think that the settlers between Bullock Creek and Bulbodney are seriously handicapped by the want of railway communication at the present time? At the present time it is impossible to make farming pay there.
1996. Are they an enterprising class of settlers? I think they are the most enterprising class of men in the country. They are men who have come from Victoria and South Australia, and they are steady and thrifty. I do not know any district where there are men of a better class than those between Bogan Gate and Bulbodney.
1997. Do you think that, if the proposed line were made, it would, in a short time, prove a profitable one? I think that it would be a very profitable line. It will in time be self-supporting, and it will be a big feeder to the main line. The district will be one of our biggest wheat-growing districts, because so much of the land there is suitable for wheat.
1998. I suppose the two main items of produce will be wheat and wool? Yes; and a great deal of poultry and a great many pigs, stock, and other produce will also be sent from there.
1999. Are the settlers there handicapped by the want of a railway in the matter of the consignment of small lots of fat stock to market? Yes; a man cannot send a small consignment of fat stock to market unless he is close to the railway, because of the expense of driving them to the line. It costs as much to drive 100 sheep 30 or 40 miles as to drive 1,000 sheep that distance.
2000. Is the district a good fattening district? Yes.
2001. What leads you to the conclusion that a great deal of poultry will be sent from there? A great deal of poultry is sent from there now. Turkeys are sent from there, and a great many eggs are sent from the country round Trundle, and the district generally. I have seen dressed turkeys on the table weighing 19 lbs. That shows that the country is capable of producing good poultry.
2002. *Dr. Garran.*] What is the greatest distance any farmer you know of sends produce to a railway? About 50 or 60 miles.
2003. That is an extreme distance? I think that some of them send even further.
2004. What would you consider a paying distance? A farmer ought to be able to get to a railway station with a load and to return home in the one day.
2005. A man could not do that if he had to travel 50 miles? No; 15 miles would be rather far. When a man has to stay a night in town with his team it becomes rather an expensive matter for him.
2006. The settlers at Tullamore could not go to the railway and back in a day? No.
2007. Yet they are thriving? Most of them went there with a little capital. They are men who have done well in Victoria, and who have gone there to obtain larger areas. They have improved their land in the hope of getting railway communication; but they are carrying on their farming under great difficulties.
2008. A railway through Peak Hill to Tullamore would suit the Tullamore people, and it would also suit the people within 15 miles north or south of Tullamore. The question is would this line be better than a line from Bogan Gate? Whichever route is followed one part of the district must be left out to some extent. I know that there are some prosperous farmers out towards Peak Hill, and they would gain by a railway going through Peak Hill, whereas the Trundle farmers would gain by the proposed railway. A lot of stuff comes from Trundle.
2009. *Mr. Hyam.*] The people in this district have shipped wheat to England through the agency of your Association? Yes. We have shipped wheat to England on behalf of nine farmers living between Bogan Gate and Bullock Creek. The first lots shipped have been sold in England at the top price obtained in the market—30s. 3d. a quarter. This wheat was all examined before being sent away, and the secretary's certificate showed it to be above fair average quality. It was graded A and B, and most of it was of A quality. The country is splendidly adapted for the production of good quality wheat. It is a full-grained wheat, of a splendid colour, very flinty, and full of gluten.
2010. Were many bags of it sent away? 6,000 bags were in the first shipment, and one-fourth of that wheat came from Trundle. There have been five shipments, and they have had wheat in every shipment.
2011. Do you look upon these shipments as an experiment? The "Vortigern" took the first shipment of wheat sent from New South Wales and resulted satisfactorily.
2012. It looks as if there would be a big surplus this year? Yes; and we are making arrangements for full shipments. The farmers are growing for export.
2013. Do you think there will be a big export trade? Yes; there is a big trade already.
2014. Is there room for a considerable increase in the wheat production of the Colony? Yes. This district could grow enough wheat to supply the whole of New South Wales. The land in the Bullock Creek valley is as good as any in the country. 2015.

- J. J. Miller. 2015. Did you see the wheat growing at Wallanbillan? Yes; and also at Bulbodney. At Bulbodney it was a little early, and the frost had touched it.
- 6 Sept., 1900. 2016. Is all that country suitable for wheat? Yes, except where there is ironbark and gravelly ridges. For miles at a stretch, the whole of the country is suitable for wheat.
2017. You do not wish to express an opinion as to which is the better route for a railway? No; I am not competent to do so.
2018. Do you like the country round about Wallanbillan for wheat-growing? Yes. We shipped wheat from there for Messrs. Cannon Brothers; that wheat went to Narramine. There were 2,000 bags to go in another shipment; but it could not be got into the railway station, because of the bad state of the roads.
2019. If the proposed railway were constructed, Messrs. Cannon Brothers would send their wheat to it? Yes; most of their holding lies in towards the proposed line, whereas it is 25 or 30 miles to Narramine. They have to go nearly 40 miles round to cross the Bogan by the bridge. None of the wheat sent from Trundle was as low as C grade.
2020. Is there a great difference between the A and the B grade? The A grade is superior to the B grade.
2021. Is there as much difference between the A grade and the B grade as between the B grade and the C grade? Yes; but, according to the Board of Exports, even the C grade is a fair average quality milling wheat.
2022. Have you resided in the district of which we are speaking? No; but I have visited it, and I have transacted business for the people there.
2023. Is much fruit grown in the district? No; but I have learned that fruit does very well there.
2024. Do you think that fruit-growing would enter largely into the operations of a person engaged in mixed farming? Yes; fruit-growing, dairying, and poultry and pig-raising would go very well with the growing of wheat, and the rearing of sheep. A farmer can generally keep his house upon these subsidiary aids.
2025. Is the country on each side of the proposed route at a considerable distance from it as good as that immediately upon the route? Yes; as far as I can see there is very little difference. It is much the same sort of country right through, the good country being divided here and there by an ironbark gravelly ridge.
2026. There is very little waste land? Very little. Very large paddocks of wheat could be cultivated, and wheat-growing pays best where you can carry on your farming operations on a large scale.
2027. Is it probable that the mineral resources of the district will be largely developed? I do not know much about the mineral resources of the district, but I believe that it is gold-bearing country, and that tin and other minerals will be found there. The country of which we are speaking is not far from Peak Hill on the one side, or from Cobar on the other.
2028. Do you think that the large estimated loss upon the proposed railway is likely to be made up within a reasonable time? I feel sure of it. The fertility of the soil, and the results of the recent shipments, show that the district is splendidly adapted for wheat-growing. Not only will the holders of land grow wheat there themselves, but they will also let their land out to tenant farmers, who will also grow wheat, and in this way a very large area of land will be brought under the plough—a larger area than the settlers themselves think. The Commissioners have not taken into consideration the great advantage which the traffic of this district will bring to them in earning revenue for the main line, because everything that goes over the branch line will also be taken over the main line. I would like to impress upon the Committee the splendid character of the men in this district. If any men can subdue the country and make it profitable, it is the men already out there; and they are worthy of every assistance from the Government. They must make things succeed. There seems to be plenty of timber and ballast in the district. There is ironbark and box along the route, and there will not be much expense in getting ballast. In addition to the earnings from the mineral, agricultural, and stock traffic, there will be the earnings from the timber traffic, because there will always be a certain quantity of timber traffic on the proposed railway.
2029. *Mr. McFarlane.*] How long have you known the country through which the proposed line will pass? I have not known that immediate locality very long.
2030. Then you cannot speak of its condition a few years ago? Not from personal experience.
2031. Did the people who were settled there go there with a view to using the land for farming, or did they intend to use it for pastoral purposes? For farming; they are all practical farmers.
2032. Have you noticed any material progress in the opening-up of the district since you have known it? Yes; the farms there are in a splendid condition. Very large areas have been cleared, and very well cleared, too. The improvements which have been made are of a substantial character, and some of the farms are more creditable to their holders than many of the farms on the railway line.
2033. When you said that three-fourths of the land is suitable for agriculture, did you mean for wheat-growing? Yes; it is all wheat-growing land.
2034. What is the country like before it is improved;—is it scrubby? It is heavy country; but the timber can easily be burnt off after it has been killed.
2035. Has much land been cleared other than that which is actually under cultivation? I think that whatever land has been cleared has been cultivated, or is about to be cultivated.
2036. Are the holdings sufficiently large to enable those who have them to make a living upon them? Yes. Those who have taken up the land seem to have sufficiently large holdings.
2037. Have the people taken up the land in very large areas? Most of the blocks are of about 2,000 acres.
2038. Are there many large holdings in the district? There are not very many large holdings of freehold or secured land, though there is a lot of leased land about to fall in.
2039. Do you think that the proposed line will go through the middle of the good agricultural land? Yes.
2040. Have you a good knowledge of the country between Peak Hill and Bullock Creek? No; I do not know much about that part of the country, but I have been up past Wallanbillan where the country is similar, though perhaps a little more open in places than that between Trundle and Bulbodney.
2041. Do you know of any land under cultivation along the route of the proposed line? Yes. Some of the farmers have as much as 2,000 acres under wheat, and he is a small man who has not 400 or 500 acres under wheat. There is a prospect of a big crop this year.
- 2042.

2042. Are these large areas at a considerable distance from the railway? The large areas are round about Trundle and Wallanbillan. Messrs. Cannon Brothers have about 2,500 acres there.

2043. Is there much cultivation between Trundle and Bullock Creek? Yes; a great deal.

2044. Do you think that the present cost of transit is too great for the farmers to pay? Yes; it is a great handicap to them at the present price of wheat. When they went to the district, wheat was worth 4s. a bushel, and at that price I suppose that they could manage to make it pay. Some of them are able to run 3,000 or 4,000 sheep, so that they can make a living apart from agriculture; but no doubt they took up the land in the hope that the railway would come sooner or later. They are men who came from Victoria. In Victoria, no matter where men selected, the railways followed them; and no doubt they hoped that the same thing would happen here.

2045. Do you think that the bulk of the land which is suitable for wheat-growing will be placed under cultivation? Yes.

2046. Have you had any experience of the halves system? Not personally; but I know a large number of people who are working in that way.

2047. It is held by some that the halves system has been adopted by landholders for the purpose of getting their land cleared and improved? That is so, to a large extent. Agriculture on the halves system is not so permanent a thing as when a man is cultivating his own land. Very often a squatter, upon the expiration of a lease on the halves system, will lay down his land with lucerne and artificial grasses. Land thus treated will carry more stock than other land, and the transaction pays the landholder and pays the farmer too. As a rule, when tenant farmers have saved up a few pounds they go away and select land for themselves.

2048. Do you think that the land which will be placed under cultivation in this district will be only temporarily under cultivation? No; I think it will always pay the men in that district to go in for mixed farming. Wherever a man is cultivating his own land, there is a certain degree of permanency about his operations.

2049. These farmers are not likely to abandon agriculture for pastoral purposes? No; because even light crops, with small prices, will pay them.

2050. Which would pay best—the use of 2,500 acres for agriculture only, for sheep raising only, or for mixed farming? The use of the land for mixed farming. There is nothing like mixed farming, where a man has a family to keep. It is the man who goes in for mixed farming who gets along.

2051. How has the district fared during the last few years of drought? It has done very well as compared with other districts.

2052. Has the rainfall been fairly good? Yes; it is sufficient for wheat-growing.

2053. Is the district one in which dairying operations would be profitable? I do not say that dairying will be carried on there upon as large a scale as along the coast; but in the country districts they always require a certain amount of dairy produce for local wants, and the surplus will be sent to Sydney for export. I know districts in which dairying has paid very well, even at a distance from a railway station.

FRIDAY, 7 SEPTEMBER, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.

The Hon. SOLOMON HERBERT HYAM.
ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

James Taylor, B.Sc., Wh.S., F.C.S., A.R.S.M., metallurgist, Peak Hill, sworn, and examined:—

2054. *Chairman.*] You have had some opportunity to become acquainted with the mineral resources of the district between Parkes and Peak Hill;—do you consider Peak Hill likely to prove a permanent mining field? I think it is very likely to be a permanent mining field. Work has been going on at Peak Hill for the last twelve years or more, while at Tomingley the mines were working even before that. The mine with which I am connected has been continuously at work for the last twelve years, and has not had to apply for the suspension of labour conditions on any occasion. Our shaft is down 700 feet, and the main lode goes below that, but we do not know how far.

2055. As you go down, do you find the same body of ore and of the same quality as in the upper part of the mine? In the upper levels the ore is usually such as can be treated by the ordinary battery processes—crushing and amalgamation. When you get down to the water level sulphides come in, and the ore becomes of a nature that cannot be treated successfully by the batteries. That is the common experience in mines generally, and it has been our experience. We have a battery running to treat the ore obtained in the higher levels, and we have introduced a smelting process to treat the ore in the lower levels.

2056. Can you give the Committee any details of your operations with the new process? We put up as small a plant as we could, so that if the process proved a failure the loss would be a minimum loss, and we ran the furnace continuously for over ten weeks. So far as the process is concerned, we might have gone on for ten years without stopping. It was well known that the ore was difficult to treat, and people who were supposed to know about these things said that it would be impossible to treat it by a smelting process; but during those ten weeks we treated over 700 tons of ore, and we sent away 39·7 tons of matte. The value of the matte produced was something over £30 per ton after paying transport and treatment charges. We were sending the matte away regularly. The ore is difficult to treat, but, if we could get suitable ores to mix with it in place of using fluxes which contain neither gold, silver, nor copper, to any extent, our charges would be much less, and the process would be correspondingly more successful. At Orange Plains there is exactly the material we want, and we are trying to get supplies of ore from there; but 60 miles of road carriage is a very serious matter, especially with the weather that we sometimes get there.

2057.

J. J. Miller.

6 Sept., 1900.

J. Taylor,
B.Sc., Wh.S.,
F.C.S.,
A.R.S.M.

7 Sept., 1900.

J. Taylor, 2057. If a railway were made from Parkes *via* Peak Hill to Bullock Creek, would it enable you to take
B.Sc., Wh.S., advantage of the Orange Plains ores? Yes; because that line would pass within 10 miles of the mines
F.C.S., at Orange Plains.
A.R.S.M.

2058. What quantity of ore could you use if the railway were made, and your plant were in full working
7 Sept., 1900. order? There are two groups of mines, and one mining field which is just beginning to be developed,
directly on the route of the proposed railway. There is one group of mines at Orange Plains, another
group at the Albert Water Holes, and another group at Lightning Paddock. All those places are within
a few miles of the route of the line that you speak of. Lightning Paddock is about 40 miles from Peak
Hill, and is near Bullock Creek, and the mines there would be within 3 or 4 miles of that line. Further
on, you come to the Albert Water Holes, and the mines there would be within 6 or 7 miles of the line, while
at Orange Plains the mines would be within 8 or 10 miles of the line. From these mines we could take
from five to fifteen tons daily at present.

2059. If your process of smelting proves a success, will the other mines in the district be able to take
advantage of it? The gold-mines would not. The concentrates they produce would probably come to
us, but the bulk of their ore will be treated by the ordinary battery processes. This week they are
bringing from 5 to 10 tons of gold ore to us from Lightning Paddock as an experimental crushing, and,
if the stuff proves to be worth anything, they will put up a battery on the ground. They have, however,
copper deposits as well, and we expect shortly to get a supply of copper ore. The copper ore in those
mines must come either to us or to some other smelting place. If it comes to us, and the line that you
speak of is made, it must use that line, whereas, if it went elsewhere, it would probably use the line
from Bogan Gate. The erection of smelters to treat ore in the district would mean a considerable
amount of traffic in coal and coke, and a copper-mine provides more traffic for a railway than a gold-
mine does.

2060. What is your opinion of the Albert Water Holes as a copper-mining field? The show there is very
good so far. There are three shafts down on three different claims, and the deepest is down about 90
feet. Mr. Lynn, who gave evidence at Lansdale, is part proprietor of one of the mines, and about three
weeks ago one of the other mines found as good a deposit as anything which has been seen in Mr. Lynn's
shaft. Mr. Lynn has been sending consignments of ore to Cockle Creek and to Dapto. Of course, no
one can tell what will happen in the future, but, so far, things appear satisfactory there, and the ore that
is being raised is good.

2061. What do you think of the gold prospects at Lightning Paddock? I have not been there.

2062. What fuel do you use for your smelters? Coke.

2063. Where do you get it from? The bulk of it comes from Unanderra; but we have got some of it
from Rix's Creek, and some from the Purified Coke Company, Newcastle.

2064. What is the charge for conveying fuel from Parkes to Peak Hill? 17s. 6d. a ton.

2065. Is that a considerable handicap? It is a serious matter. The railway charge for the same distance
would be something like 2s. 6d. a ton.

2066. If there were a railway from Parkes to Peak Hill, what amount of coke would you be likely to
use? Hitherto we have been using 2 tons of coke a day; but we are enlarging our operations, and it is
quite possible that when they begin again we shall use from 3 to 4 tons a day. The directors have had
under consideration the advisability of putting in larger furnaces, and there would be all the more reason
for doing so if we could conveniently get ores from other places. A larger furnace would consume at
least 8 to 10 tons of coke a day.

2067. In what way would the mines at Tomingley and McPhail be benefited by the construction of the
line we are speaking about? They are gold-mines, and would not provide so much traffic for a railway as
if they were copper-mines, because they do not require fuel for the treatment of their ores. At McPhail,
however, there are from 100 to 150 men employed, and, of course, a large quantity of supplies are
required for a population like that, while, in addition, there are the ordinary mining supplies required.

2068. Is the copper-mining likely to be developed in the district by the construction of the suggested
Peak Hill line? I think so. We are getting about 1 per cent. of copper from our ore; but, from time
to time, prospectors bring in samples from the country roundabout, and we may come across something
which is worth working. The country being flat, it is not so easy to make discoveries in it as if it were
undulating.

2069. Is the country similar to that between Nymagee and Cobar? I have not been to Nymagee,
although I have been to Cobar. It is generally supposed that there is a belt of metalliferous country
extending south-east from Cobar. There are small shows of copper all the way down past Peak Hill.
Lightning Paddock, Albert Water Holes, and Orange Plains are all in that belt. There is a considerable
show of copper deposits round about Albert Water Holes, which has not yet been touched. There are
outcrops here and there which give promise of something.

2070. *Dr. Garran.*] Do I understand that there are mineral indications all the way from Parkes to Cobar?
Not quite to Parkes, but pretty nearly as far as that.

2071. Are there any indications of mineral wealth in Harvey's Range? Yes; here and there.
Manganese, carrying a little gold, has been found nearly opposite Peak Hill.

2072. Do you know what the rock is of which those ranges are composed? I think it is silurian rock.
The rock about Peak Hill is silurian. We have silurian shales and schists there.

2073. Then it is quite possible that there may be minerals in that range? Yes.

2074. Have the mines at Peak Hill any connection geologically with the Parkes gold-field? I do not
know as to that. The formation about Peak Hill is very much contorted. There is a good deal of
irregularity in it.

2075. It is not the same rock as at Parkes? I have not examined the country at Parkes.

2076. Are there any indications of minerals between Parkes and Peak Hill? At Alectown a good deal
of gold has been taken from alluvial workings, and a reef is being worked at Monte Carlo, about 9 miles
from Peak Hill. There are some other indications, but I do not know much about them.

2077. So far as you know, Tomingley is the northern end of this field? I think so.

2078. There is nothing between Tomingley and Narramine? I do not know of anything being worked there.

2079. A railway to Peak Hill would practically be enough for Tomingley? Yes; Tomingley is only 11
miles from Peak Hill. McPhail, where there is one of the largest gold-mines in the district, is only 9
miles away.

2080. Then a line to Peak Hill would practically serve the whole of the mineral area of which Peak Hill
is the centre? Yes.

J. Taylor,
B.Sc., Wh.S.,
F.C.S.
A.R.M.S.

7 Sept., 1900.

2081. Are there indications of minerals going west or north-west from Peak Hill towards Bullock Creek? That is flat country, and difficult to prospect.
2082. There is nothing on the surface to show? No.
2083. Have the mines been discovered by surface indications? I think there is a slight rise at Lightning Paddock, and I think that there are some outcrops there, but I have not been on the ground.
2084. Is there any mineral outcrop beyond Bulbodney, on towards Nymagee? I cannot say; I have not been through that district.
2085. There are minerals at Overflow? Yes; both copper and gold, and some work has been done at Honeybugle station; but I have not been in that district.
2086. A line from Peak Hill to Nymagee would run through mineral country? Yes. At Overflow they have put in a furnace, and have attempted to smelt.
2087. What is the quality of the land between Parkes and Peak Hill? Where there are crops growing there they seem to be doing well.
2088. Would a line from Parkes to Peak Hill develop agriculture there? So far as I know it would; but I do not profess to know much about agriculture. My impression is that from Peak Hill out the land is very satisfactory from an agricultural point of view.
2089. Do you know whether there are minerals between Bogan Gate and Bulbodney? There are minerals at Fifield, to the left of the proposed line from Bogan Gate to Bulbodney.
2090. How far to the left? About 20 miles from Trundle.
2091. *Mr. Hyam.*] Is the ore which is obtained above the water-level easily treated? Yes; we treat it by the ordinary battery processes.
2092. Is there much of it in sight? The whole hill can be treated. It varies from rich to poor in places. We have from 15 to 20 head of stampers going on that kind of material.
2093. At McPhail they are using the cyanide process? Yes; they crush first, and then use the cyanide process, except for the slimes, which they are not treating.
2094. Yours is not a quartz mine? Yes, it is; but the quartz is impregnated with pyrites, and a little copper.
2095. Arsenical pyrites? No, iron pyrites.
2096. Do you think that this mineral field is likely to be permanent? I think so. We have a strong lode at 700 feet down, and as soon as we get fairly to work we shall sink another 100 feet.
2097. What is the width of the lode that you are working on now? The width varies; but it averages about 5 feet.
2098. Is it a well-defined lode? Yes.
2099. With proper hanging walls? With proper walls. When the furnace is running there are about twenty men working in connection with it, and about as many more in the mine, while to work the battery would require about forty men, so that altogether we employ about eighty men.
2100. *Chairman.*] Can we take that number as any criterion as the number you would employ if the railway came to Peak Hill, and you could obtain your fuel more cheaply? No; that is the number of men that we are employing now. I do not say that we could employ very many more men if we confined our operations to our own ores, though if we double our furnace, as we probably shall, that will mean an increase in the number of men employed. The smelting process would be much more profitable if we could get a variety of ores to treat. At Swansea, in Wales, they get ores from all parts of the world, and therefore the cost of smelting is very low, but our process costs a good deal, because we have to use fluxes which contain very little mineral. If we could get ores of different qualities from other localities, we could smelt at a much lower cost, and so build up an industry there. I might point out that if you plot out on the map the country within 20 miles of the route of the line from Parkes through Peak Hill to Bullock Creek, you will find that it will serve almost every acre of the land that would be served by the Bogan Gate line which is not already served by the Condobolin line.
2101. If the line were taken *via* Peak Hill, where could you draw ores from? We should get ore at once from Orange Plains. The ore at the Albert Water Holes is like our own, highly silicious, but at Orange Plains the ore carries a good deal of iron with copper. At the present time we are using an iron-ore which we get on our own ground. If it contained 1 or 2 per cent. of copper, it would make all the difference in the world to us. Now it is only valuable as a slag forming material. What we should also like to do is to find a limestone carrying copper.
2102. If you were successful in establishing a fairly large smelting works at Peak Hill, from what district would you draw ore? From as far as Orange Plains in one direction; eastwards anything that was found in the Harvey's Range; and, southwards, anything that would not go to the Condobolin or the Parkes line. There are one or two mines near Parkes which contain rich copper, but we could scarcely expect to get that ore, because those mines are near to the main line, and the ore could be sent as easily to Lithgow or to Dapto. We could not expect to get anything from the country more than 10 or 15 miles south, unless we had control of a mine of our own.
2103. *Dr. Garran.*] Is there any other complication in your ore besides that created by the fact of it being sulphide? Unfortunately there is not as much sulphide as we should like. The difficulty is with the quartz. It is highly silicious—there being 50 to 70 per cent. of silica in it. It is necessary to convert that into fusible slag, and, therefore, we must have limestone and ironstone. If we could get either carrying copper or a little gold, it would pay for the treatment.
2104. Would it pay to reduce your ore, and then send it to Cockle Creek or Dapto? No; that has been tried.
2105. Is the cost of carriage too heavy? Yes.
2106. Your difficulty is to find good blending ores within reach? Yes; though we may find them any day. In an auriferous district like Peak Hill, one would expect any ironstone found there to carry a little gold. The ironstone does carry some gold, but, unfortunately, it is less than a pennyweight to the ton.
2107. Does not the Lithgow coke suit you? We have not tried it.
2108. Has not the Lithgow Contributing Company built furnaces at Lithgow? Not for coke. Those furnaces were built to treat matte after it had been through the coke furnaces. They use coal for that process.
2109. They get their own coke from Rix's Creek? I think so. The Rix's Creek coke is of very good quality.
2110. You have not tried to find out whether you could get coke from Lithgow? We have not tried to use that coke.

- J. Taylor, B.Sc., Wh.S., F.C.S., A.R.S.M.
7 Sept., 1900.
2111. Would their coal suit you? We do not use coal, because we can get wood.
2112. Is there much timber in your neighbourhood? A considerable quantity. We pay about 8s. a cord for it.
2113. In course of time a large smelting establishment denudes the neighbourhood of timber? Yes; that is what happened at Cobar; but if we doubled our output we should consume only a comparatively small quantity of timber, because we only use wood to raise steam. We purpose in the future to use wood to treat the matte, but coal could be used for that.
2114. You see your way to success if you can get the necessary materials? Yes. Metallurgically the problem is solved; the question is, how to turn the corner financially, and the railway would help us to do that.
2115. If your work proves a success, will it assist in the development of other mines in the district? Yes; because there would then be a market on the spot for the ores which they produced.

Robert Golding, manager, cyanide works, Peak Hill, sworn, and examined:—

- R. Golding.
7 Sept., 1900.
2116. *Dr. Garvan.*] Have you resided long at Peak Hill? I have resided about thirteen years between Peak Hill and Tomingley.
2117. Were you attracted to the district by its mineral developments? Yes.
2118. Have you followed mining as an occupation all through? Yes.
2119. You are thoroughly familiar with the character of the country there? Yes.
2120. You have heard Mr. Taylor's evidence;—do you corroborate it generally? Yes.
2121. *Mr. Shepherd.*] Have you been connected with a mining company, or have you been mining on your own account? Sometimes I have been connected with companies; but at other times I have been mining on my own account. Recently I was working on tribute in the mine adjoining the Peak Hill Proprietary Mine.
2122. Have you been generally successful? Yes; more so than the general run of miners. With three partners I took about £3,500 worth of mineral out of the mine adjoining the Proprietary in something under three years.
2123. Is the district sufficiently proved to enable you to speak of the likelihood of its permanency? Beyond a doubt it is. I have resided in the district for something like eighteen years. I came there first to the opening of the Tomingley field, about eighteen years ago. Since then the Peak Hill field has developed, and the mine there has been working continuously from the first. At no time since its opening has that mining-field carried a larger population than it is carrying at the present time, nor at any time has it turned out a larger yield of gold than it turned out last year. The same remarks apply also to McPhail. Beyond a doubt, any mine which has worked continuously for eighteen years must be considered permanent. The mines in that district look better now than they have looked at any time since they started.
2124. What depth have they gone down? At McPhail and Tomingley the greatest depth is 400 feet. At McPhail they crush about 2,500 tons a month, and the tailings and everything else are afterwards treated by the cyanide process. The plant there is so complete that something like 5 dwt. to the ton will give a fair dividend.
2125. What is the thickness of your lode? At McPhail it varies from 3 feet to 30 feet. It is all quartz.
2126. Is it about the same all the way down from the surface? No. At the shallower levels it seemed much richer than it is lower down; but that is accounted for by the fact that the shallower levels were worked by individual miners, who only took out the richest stone. There is equally rich stone at the bottom now; but the good stone and the poor stone are bulked together.
2127. Do you think that the lode is widening as you go down? Yes; it has widened at McPhail.
2128. Is it richer or poorer than higher up? There is a pretty uniform average throughout.
2129. Are there distinct walls? Yes. At McPhail there are four different reefs in the big mine, and at Tomingley there are two distinct reefs. In some places the walls are broken a bit; but, taking it all through, there is a distinct hanging and foot wall.
2130. How far are the four reefs apart? I should think that they are all within about 130 feet.
2131. Do they seem likely to unite? It is generally considered that they will, because some of them underlay a little more steeply than the others. It is the impression at McPhail that the reefs will come together.
2132. How many mines are there working at McPhail and at Tomingley? There are five mines working at Tomingley, and there is one big mine at McPhail. To the south, three leases were recently applied for, and work will start there when the leases have been granted.
2133. Has the country been tested for any great distance? No; it has not been tested as much as one would expect.
2134. Has any alluvial ground been worked there? There is no alluvial ground at Tomingley.
2135. What effect would the construction of a railway to Peak Hill have upon the mines that you speak of? It would have no direct effect upon the Tomingley mines; but it would enable the people there to get their supplies more cheaply. At the present time it takes three waggons constantly going from Dubbo and Narramine to supply Tomingley and McPhail.
2136. Is Dubbo your nearest railway station? No, Narramine is; but most of the goods come from Dubbo.
2137. *Mr. Hyam.*] There is a better road to Dubbo? Yes.
2138. *Mr. Shepherd.*] What is the cost of carriage? Thirty shillings a ton from Dubbo to McPhail.
2139. Is your ore all treated on the spot? At the big mine at McPhail it is all treated on the spot. As they get down they find that there is more mineral in the stone, and I have very little doubt that eventually the stone will be found to be highly mineralised, and more difficult to treat.
2140. Is there a battery at McPhail? Yes, a 40-head battery; and about 250 men are employed there.
2141. Is that battery kept constantly at work? Yes.
2142. What fuel is used? Wood, chiefly. Even if the process that is now being tried at the Proprietary Mine at Peak Hill fails, it will not mean the extinction of the mining industry there, because, in my opinion, the ores might be crushed and concentrated as much as possible, and the concentrates might then be trucked to Dapto or Cockle Creek. That has already been tried by the "Crown of Peak Hill" Mine with very satisfactory results. There are two large mines at Peak Hill beside the Proprietary Mine,

Mine, and they are waiting to see what developments take place in the Proprietary Mine. If the Proprietary process fails, they will go on crushing, and will send their concentrates to Cockle Creek or to Dapto.

R. Golding.
7 Sept., 1900.

2143. Which would be the better line to make, one from Bogan Gate to Bulbodney, or one from Parkes *via* Peak Hill to Bulbodney? I think one from Parkes *via* Peak Hill to Bulbodney. Going from Parkes to Peak Hill, the first town of any importance is Alectown, 15 miles from Parkes. Alectown, Peak Hill, Tomingloy, and McPhail contain about half of the population of the Condobolin electorate. Then from Peak Hill to Tullamore the land is of the very best quality, and there are between 130,000 and 140,000 acres of leased land on Mungary, Bulgandramine, Genanagie, and other holdings, over 90 per cent. of which is good agricultural land, which will fall in shortly. Immediately that land becomes available for selection it will be secured.

2144. *Dr. Garran.*] Is there much alienated land in the district? Yes, a very large quantity. During the last five years land values in the district have increased very considerably, and within 12 miles of Peak Hill the increase has been something like 90 per cent., as the following list of sales will show:—

| Name of Holder. | Area. | Value, 1895. | Value, 1900. |
|----------------------------|-----------------|-------------------|----------------|
| J. B. Wilson | acres.
2,560 | £2,100 | £3,000 |
| —, Paynes | 1,891 | Ss. 6d. per acre. | 18s. per acre. |
| R. J. and F. Edwards | 4,500 | 8s. " | 20s. " |
| J. J. McCudden | about 1,900 | 10s. " | 24s. " |
| —, Rice | " 8,000 | 17s. " | 25s. " |

No sale has taken place in the district which has not shown an increase in value of at least 25 per cent.

2145. Was the land sold freehold land? Conditional purchase and conditional lease land.

2146. *Mr. McFarlane.*] Was it improved much in the period between the first and second sales? To some extent. When Paynes' land was sold, in 1891, it was well fenced, about 50 acres were under cultivation, and there was a comfortable house on it. Edwards' land was in something like the same position. On Rice's land no improvements were made between the time of the first sale and the time of the second sale.

2147. *Mr. Shepherd.*] What are the people using their land for? Wilson, Paynes, Edwards, and McCudden use their land for agricultural and pastoral pursuits, while Rice's land is used chiefly for sheep. All the places I have named lie north of Peak Hill, and in towards Harvey's Range. Edwards' selection runs right up to Harvey's Range.

2148. What area would support a family in that district under mixed farming? It would depend greatly upon the position of the holding. Within 4 or 5 miles of Peak Hill from 750 to 800 acres would maintain a family, but, getting out 8 or 9 miles, from 1,000 to 1,250 acres would be required; and, as you got back towards Bulbodney, the area will have to be still more increased.

2149. Do the farmers round Peak Hill grow fruit and vegetables to supply the miners? Yes. It is very good land for fruit and vegetables, and particularly for grapes. Grapes are the principal fruit grown.

2150. What is the population of Peak Hill? From 1,100 to 1,200 people. The population of McPhail is between 350 and 400, and the population of Tomingloy between 280 and 300. For the last eight years the average rainfall of Peak Hill has been 23.48 inches; of Tomingloy, 23.4 inches; of Wargo Rock, 23.57 inches; and of Wargo Rock No. 2, 23.74 inches. Those four stations are practically on the direct route of the line from Parkes, *via* Peak Hill, to Tullamore. The average rainfall at Bogan Gate, however, for a period of four or five years, was 18.33 inches; of Trundle, 21.35 inches; and of Fifield, 16.28 inches. The average of the four stations near Peak Hill was 23.45 inches, and of the Bogan Gate stations 18.50 inches, showing an advantage of something like 5 inches for the country on the Peak Hill side. The produce from Cannon Brothers' holding would be as likely to go to a line passing through Peak Hill as to a direct line from Bogan Gate. I should like to read a letter received by Mr. T. Brown, M.P., from the Public Works Department, in reference to the probable cost of constructing a line from Parkes, through Peak Hill, to Tomingloy. That letter is as follows:—

Sir,

Department of Public Works, Sydney, 17th August, 1900.

With reference to your letter of the 16th ultimo, regarding additional surveys, &c., in connection with the proposed railway from Parkes, *via* Peak Hill, to Narramine, I have the honor, by direction of Mr. Secretary O'Sullivan, to inform you that the present survey from Parkes to Dubbo, which is a revised one, stands good for this proposal from Parkes as far as Tomingloy, a distance of 43 miles, and an estimate made in April last set the cost down at £139,406, or £3,242 per mile. The remaining portion—*i.e.*, from Tomingloy to Narramine, 24½ miles—has only been explored, and an approximate estimate made of this length, at the same time as that of the first mentioned section, amounted to £73,500, or £3,000 per mile. The total estimate for the line, therefore, amounts to £212,906.

I have, &c.,

R. HICKSON,

Under Secretary and Commissioner for Roads.

A line from Parkes through Peak Hill to Tullamore divides the country pretty equally between the Western line and the Condobolin line. If such a line were constructed, any country to the north of it that was more than 20 miles from the Western line would be less than 20 miles from it, while any country to the south of it that was more than 20 miles from the Condobolin line would be less than 20 miles from it.

2151. *Mr. Nyam.*] Do not Harvey's Range come in very close to Peak Hill? Yes; but there is a good deal of cultivation on the other side of the range, and the produce from that part of the district would come into the line of which I am speaking, because that country is 50 miles from Molong, which is its nearest railway on the other side.

2152. *Chairman.*] What other pass is there over Harvey's Range besides the Gingham Gap? There is also the Gundongs.

2153. *Mr. Shepherd.*] How far would that country be from the proposed line from Bogan Gate to Bulbodney? Over 40 miles. Bogan Gate would probably be its nearest point.

2154. *Dr. Garran.*] Do you think that as large a farming population would settle along the line you speak of as is settled along the proposed line? Certainly. There is as good a farming population there

now.

- R. Golding.
7 Sept., 1900.
- now, and if the Bulderudgera-Warroo land exchange takes place it will make room for some more settlers.
2155. Do you advocate the Peak Hill route upon the ground that it would serve a mining district? Not entirely.
2156. Would it be as good an agricultural line as the proposed line? Yes; the average yield of the Peak Hill district is between 15 and 17 bushels of wheat to the acre. Within 12 miles of Peak Hill there are about 111 landholders, and something like 10,400 acres already under cultivation.
2157. How did the farmers there weather the recent bad seasons? At Peak Hill we have been extremely lucky. In our worst year we have had as much as 1.6 inches of rain.
2158. Then there has been no actual failure of crops? No; we have had very bad times, but not so bad as other people have had.
2159. Has the rainfall been as good as that over the whole country between Peak Hill and Parkes? That is a belt of country where there is always a good rainfall.
2160. Does more rain fall on Harvey's Range than on the land to the east and west of them? I think that, if anything, more rain falls on the west of Harvey's Range than on the east. The rains we get generally travel from the north towards the south, bearing a little to the east, or from south or south-west, coming the other way.
2161. *Mr. Hyam.*] You do not get so much rain from the south? No. The rains from the south rarely travel further than Parkes, but sometimes they come our way.
2162. *Dr. Garran.*] If the line that you favour were made, would the people between Bogan Gate and Bulbodney be sufficiently accommodated? I think so. From Trundle through to Fifield and Tullamore the population is very scarce. Most of the population in that part of the district is on land which is within 15 miles of Bogan Gate. That is the centre of agriculture in that part of the district. Most of the agriculture along the Condobolin line lies in and around Trundle.
2163. Does it lie to the east or to the west of the proposed line? On both sides of it.
2164. Would the making of the line that you favour do justice to the settlers between Bogan Gate and Bulbodney? Certainly; because it would not leave any of them at a very great distance from a railway. We shall serve more people by constructing a line to Peak Hill than by constructing the proposed line.
2165. What is the distance to Tullamore? Tullamore is about 35 miles from Peak Hill, and between 35 and 40 miles from Bogan Gate.
2166. *Mr. Hyam.*] You say that half the population in the Condobolin electorate lives in the Peak Hill district;—is not that a mining population? Not entirely. Although the district is a mining district, it also contains a large pastoral and agricultural population.
2167. But are there not a great many people living in and around the mining townships who depend for their living upon the operations of the mines? I have seen Peak Hill when there was not one wages man there. No doubt some of the population in the district is due to the mining.
2168. Do you not look upon a mining population as a floating population? No, not altogether.
2169. Do you regard a mining population as a permanent population? Places like Parkes, Forbes, Grenfell, and Young were all opened up by mining operations; but when the mining began to fail agriculture started, and those towns are now all of them flourishing. The towns in the Peak Hill district, it seems to me, will follow that example.

Andrew Stewart, storekeeper, Liverpool-street, Sydney, sworn, and examined :—

- A. Stewart.
7 Sept., 1900.
2170. *Mr. McFarlane.*] Have you any knowledge of the Peak Hill district? Yes; I resided there from the latter part of 1889 until 1898. I was Mining Registrar and Warden's Clerk at Peak Hill.
2171. During the ten years that you resided there, was there any marked increase in the population? Yes.
2172. What was Peak Hill ten years ago? It formed part of the leasehold area of Genanagic.
2173. Were there any settlers there? A few; but there was practically no agriculture.
2174. Had much of the available land been taken up by selectors at that time? Yes; all the available land on Genanagic had been selected under the Act of 1884, five years before the gold-mines started.
2175. There was a large influx of population into Peak Hill after the mining started? Yes. In September, 1890, there were 7,000 people there.
2176. That is a larger population than there is there now? Yes; much larger.
2177. What is your opinion of the mining capabilities of the Peak Hill district? The ores at a depth from the surface are refractory; the oxidised ores which they are working on now are low-grade ores. Mining will continue to be carried on there under any circumstances, and will sustain a small permanent population, but if a satisfactory way of treating the refractory ore is discovered, the district will sustain a larger population than there is there now.
2178. Do you think there is any prospect of the difficulty being overcome? Yes; and I think that reefs of low grade ore, which have hitherto remained undeveloped, will be worked.
2179. Have any of the mines there been abandoned? None of the principal mines.
2180. I understand that a large number of mines were taken up there in the early days? A great many places were prospected, but no machinery of any value was erected. A good many miners have the idea that unless a reef is a payable one on the surface or near the surface, it is useless to go to any expense in developing it. A reef called Gorman's Reef has been taken up again.
2181. During the last few years has there been any increase in the number of men employed in the mines? Not at Peak Hill; but there has been at McPhail.
2182. How far does the mining district extend? Peak Hill is part of the Mudgee mining district, the border of which extends only to the Ten-mile Creek, a mile and a half from Peak Hill proper.
2183. Do you know the other mining towns near Peak Hill? Yes; I have a good knowledge of the whole district.
2184. What are the prospects of McPhail and Tomingley? Those are places where mining will always be carried on. The prospects of McPhail are very encouraging. They have a very large body of comparatively free ore there, and they have not tested their sulphides at any depth. They are only down 400 feet, so that they have not had to deal with the sulphide problem yet. The refractory ores are generally met with at the water level.
2185. Did mining commence at the other townships about the same time as it commenced at Peak Hill? It commenced at Tomingley and McPhail about ten years before it commenced at Peak Hill.

2186. Is there any likelihood of McPhail and Tomingley becoming permanent mining fields? Yes; the reefs there are decidedly payable. When they have exhausted the free ore at McPhail they will find that they have a large body of sulphide ore available.

A. Stewart.
7 Sept., 1900.

2187. Is the mining industry there suffering to any great extent from the want of a railway? I do not think so, though a railway would cheapen the cost of machinery and supplies. When they come to require coke, coal, and fluxes they will feel the want of a railway.

2188. Has that time yet arrived? It has arrived at Peak Hill.

2189. Do you think that if a railway were constructed from Parkes, *via* Peak Hill, to Bullock Creek, and so on to Bulbodney, there would be a large amount of mining traffic on it? I think there would be a fair amount of mining traffic on such a line—consisting chiefly of fluxes, coke, mining machinery, and supplies.

2190. Was there any difficulty in getting supplies when you resided at Peak Hill? There was great difficulty in getting machinery out to Myall, because there was a spell of dry weather at the time. Carriage is dearer than usual in times of drought.

2191. Have they not got most of the necessary machinery there now? As a field develops it requires new machinery. The machinery suitable for the treatment of free ore is useless for refractory ores.

2192. What is your opinion of the country from an agricultural point of view? It is so good that I made several unsuccessful attempts to secure land there myself. It is a very good district for mixed farming.

2193. Are you speaking of the land between Peak Hill and Parkes? Those remarks would apply to any part of the district between Peak Hill and Narramine; but I should not like to go far away from the ranges, because there the rainfall diminishes.

2194. Have you had any experience as an agriculturist? A little.

2195. Have you had any experience of pastoral pursuits? Yes; several years I was engaged in agricultural and pastoral pursuits.

2196. What is your opinion of the country between Parkes and Peak Hill? It is very good country for wheat growing, and for fruit, such as apricots, nectarines, grapes; and other fruits requiring a warm climate.

2197. Is it as good country for wheat growing as the country to the north of Peak Hill? Yes. I think it would yield better wheat than that country, because it is a heavy clayey loam, while the country to the north and to the west of Peak Hill is a lighter loam.

2198. Is it not flatter country? Yes; but the undulating character of the country near Peak Hill is rather an advantage from an agricultural point of view.

2199. Do you know the country between Bogan Gate and Bullock Creek? Yes, fairly well; I have been through it on several occasions.

2200. What is your opinion of it in comparison with the country between Parkes, Peak Hill, and Bullock Creek? I think that the country round Trundle is about equal to the country between Parkes and Peak Hill; but, as you get further west, the rainfall decreases, and consequently the land becomes of less value for agriculture.

2201. There are considerable areas of land being put under wheat there at the present time? Yes.

2202. In the event of a railway being constructed through Peak Hill, would all the available land within its influence that was suitable for agriculture be cultivated? I think so; I think that the people would find that agriculture was the most profitable enterprise that they could enter upon. I believe that in time all the available land there will be cultivated.

2203. You are aware that there are large areas of land suitable for wheat growing between Parkes and Peak Hill which are not now cultivated? Yes; but most of that land is gradually being brought under cultivation. It takes some years to properly clear land for agriculture. To clear it cheaply, the farmers have to wait until the timber dies after ringbarking. It is not plain land like the land which Messrs. Cannon Brothers are cultivating.

2204. Have any attempts been made to cultivate the land between Peak Hill and Bullock Creek? Yes; but that land was scarcely available for occupation in 1884. Myall, Tomingley and Peak Hill are all situated upon the leasehold areas of Genanagic and Bulgandramine, and consequently the people who went there were unable to get sufficient land to cultivate. It was not until 1895 that the remaining part of the leasehold area of Genanagic was made available for selection.

2205. Independently of mining; do you think that the agricultural settlement along the line to Peak Hill would give sufficient traffic to a railway? I have always thought so.

2206. Do you think that the mining of Peak Hill and the other towns there is likely to be of a permanent character? Yes.

2207. Do you regard the settlers there as prosperous? At first the district was settled by people of nomadic habits—by a mining population entirely; but some of these people took up land, and a number of small holdings were occupied round Peak Hill and Alectown by them.

2208. How have the settlers who took up land under the Act of 1884 got on? They have done very well. Very few of those selections have been sold; most of them remain in the hands of the original selectors.

2209. What is the usual size of the holdings? The average size of a selection there is 2,560 acres; but in many cases blocks of 6,000 or 10,000 acres are worked by several holders conjointly.

2210. Are there many large landholders in the district? Not a great number. Mr. McPhillamy holds the largest area of alienated land. He has between 23,000 and 24,000 acres.

2211. How far is his land from Peak Hill? Twelve miles, and about 5 miles from Alectown.

2212. What percentage of agricultural land is there in the district which would be served by the construction of a line from Parkes through Peak Hill? At least 90 per cent.

2213. What percentage of the land between Bogan Gate and Bulbodney is suitable for cultivation? There is one very large ridge there where the land is not good; but possibly 60 per cent. of that country would be suitable for cultivation.

2214. Where is the worst land there? After you pass Burra Burra.

2215. Between Bullock Creek and Bulbodney? Yes.

2216. What percentage of the land between Bogan Gate and Bullock Creek is suitable for cultivation? That land is almost equal to the land between Parkes and Peak Hill.

2217. *Mr. Hyam.*] Do you know Mr. Beazley's holding? Yes.

2218.

- A. Stewart. 2218. What is the size of that holding? There are four blocks there occupied by several members of a family, who work their land together. There are about 10,000 acres altogether.
- Sept., 1900. 2219. A lot of the land selected in that neighbourhood at one time formed part of the Bulderudgera holding? Yes.
2220. That land has been selected for some time? Yes; since 1885.
2221. Would you say that 90 per cent. of the land in the immediate neighbourhood of Beazley's selections is fit for agriculture? Yes.
2222. Where have you been engaged in agricultural pursuits? On the Namoi, near Gunnedah.
2223. Do you think that the land in the Parkes, Peak Hill, and Trundle districts is similar to the land about Gunnedah? Yes; but there is a better rainfall about Gunnedah, and the land is heavier there; it is a deeper alluvial soil.
2224. Do you think that it is as safe as the Gunnedah country for agriculture? No; not for agriculture alone, but it is for mixed farming.
2225. Would you be surprised to learn that the rainfall of Trundle is considerably higher than the rainfall at Bogan Gate? I am aware that it is.
2226. There is not a great deal of difference between the rainfall at Trundle and the rainfall at Peak Hill? No. The rainfall at Parkes is less than the rainfall at Peak Hill, though it is only 32 miles away. Peak Hill, Trundle, and Dandaloo get about the same rainfall.
2227. There is a good rainfall at Bullock Creek? Yes; it is just on the edge of the good rainfall.
2228. Would it be fair to take the average rainfall of the last three years as the average rainfall for the district? No; I think that to strike the mean average rainfall it is necessary to take about twelve seasons into account.
2229. Would 16 inches be your estimate of the rainfall at Bogan Gate? From 17 to 18 inches.
2230. What is the width of the range that you spoke of between Bogan Gate and Bulbodney? About 15 miles.
2231. How much poor country is there in a straight line there? Five or 6 miles, I dare say. There is a long stretch of inferior country there.
2232. Do you look upon that country as absolutely valueless? No; it may be capable of a considerable mineral development.
2233. If it were improved it would be fairly good pastoral country? Yes.
2234. Second-class grazing country? Yes.
2235. You would take it to be in the belt of mineral country that runs through the district? Yes.
2236. It has not been proved? No; prospecting there has been very trifling.
2237. Do you think that the Orange Plains will, in the course of eight or ten years, become a mining centre? I think there is a possibility of it.
2238. What sort of ore do they get there? Copper ore chiefly.
2239. Is it payable copper ore? I should think so.
2240. Then if the railway went through the district there would be a chance of mineral traffic as well as agricultural and pastoral traffic? Yes. Although that ore may not be payable to work by itself it may be useful to blend with other ores.
2241. Do you think it would be better to make a line from Parkes through Peak Hill to Bullock Creek, and then on to Bulbodney, than to make a line from Bogan Gate to Bulbodney? I think so.
2242. Considering only the character of the country on each route? Yes. I think the character of the country on each route is much about the same.
2243. Going from Peak Hill in the direction of Bulgandramine, would you not get into myall and belar country? Yes; but I think that would be good country for cultivation.
2244. Would it stand a drought as well as the lighter soils? The experience of Messrs. Cannon Brothers has been that it stands a drought better if it is well worked. They stated that they had a better yield the year before last from the myall country than from the other country, though the wheat did not grow so high.

TUESDAY, 18 SEPTEMBER, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDSAY CRAWFORD SHEPHERD.

The Hon. SOLOMON HERBERT HYAM.

The Hon. ANDREW GARRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.

JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

- H. Deane. 2245. *Mr. Watson.*] Since you were first examined, the suggestion has been put forward that, in order to serve the people between Parkes and Tomingley, as well as those in the Bullock Creek and Bulbodney district, a line might be run, in lieu of that from Bogan Gate to Bullock Creek, from Parkes to Peak Hill, and then westerly to Bullock Creek;—have you had an opportunity to make investigations with regard to that matter? Yes. I sent Mr. Stuart over the line, and he has submitted a report, which I will read:—
- 18 Sept., 1900.

MEMORANDUM to the Engineer-in-Chief, Railway Construction.

Parkes to Bulbodney, *via* Peak Hill and Bullock Creek.

Department of Public Works, Railway Construction Branch,

Engineer-in-Chief's Office, Sydney, 6th September, 1900.

Sir,
I beg to report that I have examined the country between Peak Hill and Bullock Creek, with the view of a connection between the present surveyed line, from Parkes to Dubbo at Peak Hill, and the Bogan Gate to Bulbodney survey at Bullock Creek; thus forming a through line from Parkes to Bulbodney, *via* Peak Hill and Bullock Creek, to be substituted for the present proposed extension from Bogan Gate to Bulbodney.

This

MINUTES OF EVIDENCE—RAILWAY FROM BOGAN GATE TO BULBODNEY.

H. Deane.
18 Sept., 1900.

This connection, which I have shown by a green line on the accompanying diagram tracing, would leave the northern end of the proposed Peak Hill station about 306 miles from Sydney, *via* Parkes, and taking an almost due westerly direction, which is maintained throughout, it would cross the Bogan River at 300 miles, Back or Genaren Creek at 322 miles, the Gap, a low point in a small range of hills, at 327 miles, and Sandy Creek at 331 miles, and thence join the Bogan Gate to Bulbodney survey close to where that survey crosses Bullock Creek, at a point 338 miles from Sydney, by this proposal, and 332½ miles by Bogan Gate.

This connecting line would be a comparatively easy one to construct, and there should be no difficulty in maintaining the same grades and curves as on the Bogan Gate to Bulbodney line, the only cutting of any importance being at the Gap, and this would probably not be more than 16 or 15 feet deep. The most expensive part of the line would be the crossing of the Bogan River, where a bridge, possibly 200 yards long, would be required; ordinary timber openings with one 60-ft. span would be sufficient.

The country passed through is good, varying from light sandy loam to rich myall flats, the latter possibly not quite as well adapted for wheat-growing as some of the freer and more easily worked ground.

In the immediate vicinity of the route all the available country has been taken up. It is, however, sparsely populated, and the areas under crop have not increased in the same proportion as in the few years prior to 1898.

The prevailing timbers are box and pine, with belah and myall on the flats. Stone suitable for ballast can be got at Peak Hill, and in the low range of hills in the vicinity of the Gap.

For a description of the country between Parkes and Peak Hill, I would refer you to my report R.S. 356, of 24th October, 1898.

The following distances may be useful for comparison:—

| | |
|---|-------------------------------------|
| Bogan Gate to Bulbodney | 75 miles |
| Peak Hill to Bulbodney | 70 „ |
| Parkes to Bulbodney (<i>via</i> Peak Hill and Bullock Creek) ... | 104 „ (about 102 miles of new line) |
| „ „ (<i>via</i> Bogan Gate) | 99 „ |

CHAS. McD. STUART.

I have had a comparison made between the estimates, which I thought would be useful for the Committee, so that they could see how the matter stands on a money basis. The comparison is as follows:—

COMPARISON between Bogan Gate, Bullock Creek, and Bulbodney; and Parkes, Peak Hill, Bullock Creek, and Bulbodney.

| Description. | Length. | | Estimated cost. | Average per mile. |
|---|---------|------|-----------------|-------------------|
| | Mls. | chs. | £ | £ |
| Bogan Gate to Bullock Creek | 40 | 40 | 119,658 | 2,955 |
| Bullock Creek to Bulbodney | 34 | 45 | 109,712 | 3,175 |
| | 75 | 5 | 229,370 | 3,056 |
| Distance, Bulbodney from Sydney, 367 miles. | | | | |
| Parkes to Dubbo | 78 | 0* | 256,000* | 3,282* |
| Total of system | 153 | 5* | 485,370* | 3,172* |
| Parkes to Peak Hill | 31 | 52 | 112,808 | 3,564 |
| Peak Hill to Bullock Creek | 36 | 00* | 122,400* | 3,400* |
| Bullock Creek to Bulbodney | 34 | 45 | 109,712 | 3,175 |
| | 102 | 17* | 344,920* | 3,375* |
| Distance, Bulbodney from Sydney, 371 miles. | | | | |
| Peak Hill to Dubbo | 47 | 00* | 143,000* | 3,043* |
| Total of system | 149 | 17* | 487,920* | 3,270* |

* These figures are only approximate.

If you take Narramine as the ultimate connection with the Western line, instead of Dubbo, the comparative cost will be exactly the same. The reason why I have taken the whole of the system is, I think, apparent. At some future time a connection will probably be made between the Condobolin line at Parkes, and the Western line at Dubbo or Narramine. If you take the line to Bulbodney by way of Peak Hill, you will have a portion of that line already constructed. Acting upon the assumption that we want to connect the Western line with the Condobolin line at some future time, and give Bulbodney the advantage of railway communication, it is only right to take the whole expenditure into consideration. I only wish to add that the total length of the two systems does not differ much; but calculating the distance of the Bulbodney connection by way of Bogan Gate, together with the Parkes to Dubbo connection, as 153 miles 5 chains, and calculating the length of the Parkes-Dubbo line with the Peak Hill-Bulbodney line as 149 miles, the cost is only £2,550 in favour of the Bogan Gate connection with Bulbodney.

TUESDAY, 2 OCTOBER, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.The Hon. SOLOMON HERBERT HYAM.
JOHN CHRISTIAN WATSON, Esq.

JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bogan Gate to Bulbodney.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and further examined:—

J. Harper. 2246. *Chairman.*] Have you prepared a statement as to the probability of the traffic of a line from Parkes to Bulbodney, *via* Peak Hill? Yes. In the first place, I will read the following report from the Railway Commissioners:—

Office of the Railway Commissioners of New South Wales, Sydney, 2nd October, 1900.

Proposed Railway from Parkes to Bulbodney, *via* Peak Hill,—102 miles.

In compliance with the request of the Honorable the Minister for Public Works, and in accordance with section 13 of the Public Works Act of 1888, we beg to report as follows:—

Cost of Construction—

Engineer-in-Chief's approximate estimate, exclusive of land and compensation ... £344,920

Estimated Annual Expenditure—

Interest on capital cost, at 3 per cent. £10,348
Maintenance of line, and traffic and locomotive expenses 8,400

18,748

Estimated Annual Revenue—

Merchandise and live stock £4,961
Passengers, parcels, and mails 3,074

8,035

The annual expenditure is based upon a tri-weekly service, and the revenue upon the charging of arbitrary local rates and fares.

The country is similar to that between Bogan Gate and Bulbodney, *via* Trundle, upon which we reported on the 9th December last. It is admirably suitable for wheat-growing, and the average rainfall is somewhat better than on the Trundle route.

It is stated, by those who should be qualified to judge, that the gold-fields at Peak Hill, Tomingley, and McPhail will be permanent; but while that may be so, they are not, and it is very questionable whether they ever will be, of sufficient importance to justify such an extensive detour as would be necessary to directly connect Peak Hill with a railway from Parkes to Bulbodney.

There is only an average of about 8 miles of agricultural country between the proposed line and the Harvey's Range on the east, while 20 miles are not regarded as an excessive distance to cart wheat in such country.

If, therefore, it should be determined to construct the line from Parkes, instead of from Bogan Gate, we would respectfully suggest for consideration whether, after leaving Parkes, it would not be advisable that it should take a more north-westerly route, diverging towards Bulbodney at a point some distance to the west of Peak Hill.

Having regard to the present and prospective traffic, directly or indirectly connected with the mines, this diversion would not be of material importance, and it would have the effect of bringing a considerably larger area of agricultural land within the influence of the railway. Unless this is done, the area of wheat-growing land within carting distance of the line will not be so great as on the route from Bogan Gate to Bulbodney.

The Common Seal of the Railway Commissioners of
New South Wales was hereunto affixed this
2nd day of October, one thousand nine hundred,
in the presence of,—

(Signed) W. M. LEHON,
Deputy Chief Commissioner.
DAVID KIRKCALDIE,
Commissioner.

H. McLACHLAN.

This is a report which I furnished to the Railway Commissioners:—

PROPOSED RAILWAY, PARKES TO BULBODNEY, VIA PEAK HILL.

As directed by the Commissioners, I have had careful inquiry made as to the probable traffic on the suggested line from Parkes, *via* Peak Hill and Bullock Creek, to Bulbodney.

The total length of the line is 102 miles, as against 75 miles of construction in the case of the line from Bogan Gate to Bulbodney. The line, as surveyed, traverses generally very excellent agricultural country, but is limited on the eastern side by the Harvey's Range, which is of an average distance of 8 miles from the proposed line, and to that extent limits the area of production in that direction.

At the present time the business of Peak Hill is transacted with Parkes, a distance of 31 miles. The population of Peak Hill and municipality is about 900; and the villages of McPhail and Tomingley have a united population of about 950. These are at a distance of 9 and 11 miles respectively by road from Peak Hill, and would also be served by the proposed line. In the aggregate, there is a population of about 4,000 who may be regarded as immediately interested in it.

The agricultural development amounts to equal to about 32,000 acres of cultivation, of which about 15,000 acres are common to both lines.

The map, which I furnish herewith, indicates the trafficable area of the two lines. On reference to this, it will be observed that a population of about 400, and 11,500 acres of cultivation, between Bogan Gate and Trundle will remain unserved should the line to Peak Hill be constructed. The settlers concerned will then be compelled to cart a distance of from 7 to 30 miles to reach a railway station. The map referred to also indicates the Crown lands available in the district, and it will be observed that the larger areas of land of this character are on the route *via* Peak Hill.

As far as cultivation generally is concerned, there is no doubt that those who are settled on the Bogan Gate-Bulbodney line have shown most enterprise, their areas being considerably larger than in the case of those situated along the route to Peak Hill.

Briefly stated, the settlement of the district may be described as follows:—

| Name. | Population Number. | Distance to Parkes by proposed railway. | Distance to Peak Hill by road. | Occupation of Residents. |
|-----------------------------|--------------------|---|--------------------------------|---|
| Alectown and district | 600 | 15 | | Farming and grazing; a little mining. |
| Peak Hill and district | 2,250 | 31 | | Farming, grazing, and mining; 70 miners employed. |
| McPhail | 500 | 31 | 9 | Mining; 200 men employed. |
| Tomingley and district | 400 | 31 | 11 | Mining and grazing, and a little farming. |
| Bullock Creek and Bulbodney | 250 | | | Farming and grazing. |

With reference to the mining industry of the district, very little work is being carried on in the "Proprietary" Mine at Peak Hill, although it is considered that ultimately important developments will take place. The "Myall" Mine at McPhail is in full operation, with, I believe, successful results, some 200 men being employed there. As this, of course, is purely a gold-mine, there does not appear to be any immediate prospect of the carriage of ores or of coke. Firewood is plentiful and cheap in the neighbourhood of both mines. J. Harper.
2 Oct., 1900.

With regard to the existing rates of carriage, I find that from about 17s. 6d. to 20s. per ton is the rate prevailing between Peak Hill and Parkes for general merchandise, 3d. per bushel for wheat up to 20 miles, and 4d. per bushel up to distances of 40 miles. The business of the district is done chiefly at Parkes, Dubbo, and Narramine.

My estimate of the traffic, based upon arbitrary local rates, and in a favourable season, is as shown hereunder:—

| | Tonnage. | Revenue. |
|--|----------|----------|
| Goods | 2,214 | £902 |
| Wool..... | 2,109 | 943 |
| Stock—575 trucks..... | | 470 |

2247. In making a financial comparison of the two lines, the loss on the line via Peak Hill would be greater than on the other line? Yes.

2248. Which of the two districts is likely the sooner to bring the revenue up to the annual expenses? That is a very difficult thing to say.

2249. Which district is the more capable of development? That is also a difficult thing to say. Personally, I am impressed with both districts, and it is a difficult thing to distinguish between either.

2250. Would a line from Bogan Gate to Bulbodney be one from which you would anticipate considerable development in the near future? Yes; at the same time I should anticipate it on the other line.

2251. But a line from Bogan Gate to Bulbodney would have a bigger sweep of country from which to draw traffic? Yes; on either side.

2252. Whereas a Parkes-Peak Hill-Bulbodney line would be limited on the eastern side by the Harvey's Range? Yes; and on the southern side by the existing line to Condobolin.

2253. Do you think, if it were desirable to construct the line from Parkes, a deviation, leaving Peak Hill out of the question, should be seriously considered? One phase of that matter, which has been emphasised by the Railway Commissioners, is that more agricultural land would be served. The members of the Committee would observe that the general direction of one line is due north, and the other due north and west—practically, two sides of a triangle. You will also see, from the estimates I have given, that the mines—I refer to the townships of Peak Hill, McPhail, and Tomingley—will only contribute a small quota of the revenue of the line. The bulk of the revenue will be made up of stock, wool, and agricultural produce.

2254. All other things being considered, the suggestion to go to Peak Hill is due, no doubt, to the settlement there in connection with the mining which is going on? No doubt.

2255. If that is not likely to be a large item in the annual revenue of the line, it would seem desirable to go from the point originally suggested, namely, Bogan Gate, inasmuch as it would have a much larger area to draw from? It would open up more country to draw from.

2256. And it would not involve so much initial loss as the Peak Hill line? No.

2257. Mr. Watson.] Do you think, if the Bogan Gate to Bulbodney line is constructed, another line from Parkes

- J. Harper.
2 Oct., 1900.
- Parkes towards Peak Hill will be justified in the near future? I do not think so. I do not think there would be sufficient warrant for the construction of a line between Parkes and Peak Hill. If you refer to my statement you will see that a great deal of the revenue is made up of agricultural produce, wool, and stock which come from beyond Peak Hill.
2258. Of the estimate of nearly £5,000 for goods, wool and stock, &c., about one-half has, apparently, to be credited to the Peak Hill and surrounding districts, and another half to the Bullock Creek to Bulbodney section? Not that much; at Peak Hill there are only 450 tons of wool out of 2,109 tons. Peak Hill and Alectown would give 600 tons of wool altogether. Of all goods, Peak Hill and Alectown together represent £1,654.
2259. You give the intermediate traffic as £934. Does "intermediate" mean between Peak Hill and Bullock Creek, part of which might be drawn from the Bogan Gate-Bulbodney line if constructed? Yes.
2260. How do you make up the difference between £8,035, the estimate of traffic for a railway from Parkes to Bulbodney, via Peak Hill, and the estimate in the other instance of only £4,400? That is made up out of increased population. There would be increased passenger traffic; there is also an increase of 27 miles of mileage.
2261. The difference from Bullock Creek would be only one of about 7 miles? Twenty-seven miles of construction. The difference in distance through to Sydney is 4 miles. The local mileage would be much longer, although the difference in mileage through is only 4 miles.
2262. Do you think that the population around Peak Hill and district is not sufficient to make any wide detour to serve it? Personally, I do not think so, and the Commissioners are also of that opinion.
2263. It has been suggested that the Parkes-Peak Hill section might be used afterwards to connect with the Western line at Narranine? But what advantage will be gained by that.
2264. There has been talk of a cross-country line from Grenfell to Forbes, and then on to Narranine? Our experience of cross-country lines has not been a happy one so far.
2265. But leaving out the immediate future, would it not be well to keep in view the possibility of a cross-country line at a later day? I cannot see what advantage would be derived by a cross-country line in that direction, because the country is so similar. If one district is suffering from drought, the other is almost invariably suffering from drought.
2266. Do you think that the agricultural development around Peak Hill is not going to amount to much? It would be impossible to say. There is plenty of good land in that neighbourhood, and, given a railway, it would develop very materially. The same thing might be said in regard to the Bogan Gate to Bulbodney line. No doubt material development would take place there.
2267. The rough estimate placed before us by the Engineer-in-Chief goes to show that the two lines—one from Bogan Gate to Bulbodney, and the other from Parkes to Peak Hill—could be constructed rather cheaper than could a line from Parkes to Peak Hill, and thence across to Bullock Creek and Bulbodney. That would seem to infer that the difficulty of construction would be between Peak Hill and Bullock Creek? That is not contained in the report. I have had before me an estimate of the cost of the line, and the higher rate of construction per mile was between Parkes and Peak Hill. I think there must be some mistake in regard to the matter, because any one who has been over the country knows that difficulties are greater between Parkes and Peak Hill than they are between Peak Hill and Bullock Creek.
2268. I asked Mr. Deane a question with reference to the country between Parkes and Peak Hill, and he said that, although undulating, it was not such difficult country after all? I think he is mistaken there, because I have a clear recollection that he told the Commissioners and myself that that would be the more expensive portion of the line. The mileage is practically the same. On one route it is 35 miles and 75 miles, total 110; and on the other it is 106 miles.
2269. The portion between Bogan Gate and Bullock Creek is estimated at £229,370. The portion between Parkes and Peak Hill is £112,108. The two together make about £342,000. The estimate from Parkes to Peak Hill and on to Bullock Creek is £358,000? The estimate which I have submitted to-day from the Railway Commissioners is the very latest. I only got it ten minutes before coming here, and it makes the cost from Parkes via Peak Hill to be £344,920.
2270. *Mr. Hyam.*] Supposing you constructed the line over the Peak Hill route, and, in order to straighten the line, made a deviation so as to leave Peak Hill out, how far would you be from Peak Hill? That is simply a suggestion. The Commissioners have not sufficient knowledge of the country to state authoritatively how far to the north of Peak Hill might be left.
2271. Can you say approximately? Perhaps 6 or 7 miles. The feeling is that if Peak Hill were brought within that distance of the line it would not be badly served, and the fact of a line being built in that direction would, of course, open up much more agricultural land on either side.
2272. The people from Bogan Gate to Bulbodney have agreed to be taxed at so much per acre? I think that is so.
2273. Would that tax pay the whole or a portion of the annual loss upon the line? I should not think so, but no calculation has been made. It is rather a matter for the Committee or for Parliament to determine as to whether they could do it or not. The matter has been mentioned to the Commissioners, and they have referred to it in their report.
2274. *Chairman.*] Can you say what percentage of the land within 20 miles on each side and 20 miles beyond the terminus of a line from Bogan Gate to Bulbodney would be suitable for agriculture? That is too big a question for me to answer.
2275. Do you think we would be within the limit if we estimated it at 60 per cent? I could not say.
2276. *Mr. Hyam.*] I think it would be 60 per cent., except in regard to the patch about Harvey's Range? Of course the Harvey Range does not affect that line at all.
2277. *Dr. Garran.*] When you say that you expect the greatest sweep of trade from the Bogan Gate line, you refer to the available land on either side? Yes.
2278. The Bogan Gate to Bulbodney country is only feebly developed at present? Very.
2279. I suppose your expectations in regard to traffic are from a more thorough development of the land already taken up than from land 20 miles back? Decidedly; I refer to land which would have a frontage to the line, and within that mileage limit.
2280. How far back from the route is the land taken up already? I should say for about 20 miles at certain points.
2281. Is the land taken up for 20 miles on either side of the route? Yes, as already stated, at certain points.
2282. May it extend for another 20 miles if the railway is constructed? Yes.

2283. So that you really have two strings to your bow: a greater development of the land already taken up, and an increase of the extent of land which would be taken up? That is so.
2284. And you would not have that on the other route? No, because on the other route we are limited.
2285. As far as the available traffic is concerned, by the Condobolin line on the south, the area is limited to the south-east of the line, which would be fairly called the traffic of that line? I wish to emphasise the fact that the Commissioners and myself were strongly impressed with the character of the soil on the route of that line. I do not wish to say anything in depreciation of the character of the soil.
2286. *Mr. Hyam.*] Is not the country, after you leave Tomingley, rather flat? It is. It is not so good to the north.
2287. *Dr. Garran.*] On the first 10 or 15 miles of the line from Bogan Gate *via* Peak Hill, you would not get much, because it already goes to the main line? Yes; the map indicates the point at which we expect to pick up traffic—about 8 or 10 miles from Parkes. Harvey's Range limits the traffic, although, in order to put the case fairly before the Committee, it is represented locally that the traffic to the east of the Harvey's Range, which at present goes into Molong, would, if a road were constructed, find its way to that line.
2288. We have been told of one or two gaps where roads could easily be made, and which concentrate the traffic;—of course, it is doubtful whether they would come back? I do not think they would.
2289. In comparing the two routes a good deal depends on the importance of the district as a mining district? Yes.
2290. If that were a great mining district, its claims would be very strong? Yes.
2291. If it is only a feeble mining district it will not weigh very much against the great agricultural prospects of the other route? I do not think so; I do not think that as things are at present it would warrant the agricultural and pastoral interests being sacrificed.
2292. That confirms my statement that the importance of Peak Hill goes a long way towards settling the question? Yes. As I have stated in my report, we found that matters at M'Phail were going on very prosperously. At Peak Hill those who were engaged in operating the Proprietary Mine were full of hope as to its future, but up to the present very little has been done.
2293. Still, mining business is business for the railway all the year round? Mining business of this character would simply resolve itself into passenger traffic and the consumption of commodities by those who were engaged in it. We would not expect to carry any of the products of the mines.
2294. Still it is a uniformly spread traffic all over the year? Yes.
2295. Whilst the agricultural traffic comes in during two or three months? Yes.
2296. Is it not to the interests of the railways to have a traffic which is spread uniformly? Certainly, it is more economical to work; but still we have to submit to the circumstances and do the best we can to meet the demand.
2297. You do not look upon mining traffic as very important traffic to your revenue? We do if it is of such a character as that which we have at Cobar, where, as I pointed out recently to the Committee, we practically have the traffic balancing by carrying the coal in one direction and the matte in the other. If this line were ultimately extended to Nymagee I should expect important developments in that direction.
2298. I suppose you get a good deal of traffic in the carriage of ore from one mine to another for the purpose of mixing and blending? We do not on the Cobar line; but from other districts we carry ore to the smelting works on the Coast; the Cobar people are not getting any fluxes at present, but it is possible that they may have to do so some day.
2299. You get some of their trade to Lithgow? Yes.

J. Harper.

PLAN.

Railway from Bowral to Robertson--Diagram Plan.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM BOWRAL TO ROBERTSON.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of railway from Bowral to Robertson," have, after due inquiry, resolved that it is not expedient the proposed railway be carried out; and, in accordance with the provisions of sub-section (IV), of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

REASONS FOR THE PROPOSAL BEING REFERRED TO THE COMMITTEE.

1. The Committee are informed, in the official statement put before them, that the agitation for the construction of a line to connect the Robertson district with the Main Southern railway has been in progress for the last twenty years. In the early part of the year 1890 a proposed line between Moss Vale and Robertson was referred by Parliament to the Public Works Committee, who reported against the construction of that line, as they were of opinion that Bowral was the better point of junction with the Main Southern railway.

Beyond completing the survey of the route from Bowral to Robertson, no action has been taken on the Committee's report; but the residents of the Robertson district have continued to urge their claims to being provided with railway accommodation, on the grounds that the district is a populous one and a great food-producing centre, the land being very fertile and eminently adapted to the production of potatoes and other root crops, development, however, being retarded by the high cost of carriage to the nearest railway station. The climate, also, is described as equal to that of the Blue Mountains, and the district offers many attractions for visitors and tourists.

Recently a new phase has been imported into the agitation for the construction of the line, it being now asserted that the erection of large smelting works at Dapto, on the South Coast line, has given an impetus to mining in the southern districts, as well as in other parts of the Colony; and it is contended that in the near future it will be necessary to connect the Main Southern line with the South Coast line to give facilities to the mines in the southern districts to get their ores to the smelting works at Dapto.

DESCRIPTION

DESCRIPTION OF THE PROPOSED RAILWAY.

2. The proposed line, 17 miles 44 chains in length, is described as a branch of the Great Southern railway, leaving the south end of Bowral station at 80 miles 21·61 chains from Sydney. Proceeding in a generally east-by-south direction, it crosses the Great Southern Road at about 2 miles from Bowral, and runs between the Robertson Road and the Wingecarribee River, till the latter is crossed near 86 miles. Here it takes a more southerly direction to 91 miles, where the road from Moss Vale to Robertson is joined, and the village of Wild's Meadows, or Myra Vale, reached at 93 miles. The line is then north-easterly, following the Meadows Creek to its origin, and terminating at Robertson parallel to and south of Congewoy-street, at 97 miles 65·77 chains. The line cannot be classed as a light one; but the ruling grade of 1 in 60 and numerous curves of 10 chains radius contribute to moderate its cost. The land required is practically all alienated.

ESTIMATED COST.

3. The estimated total cost of the proposed railway, exclusive of land and compensation, is £94,578, or £5,388 per mile. For the first 13 miles 12·837 chains—Bowral to Wild's Meadows—the cost is given as £60,405, or £4,590 per mile; for the remainder of the distance, 4 miles 31·32 chains—Wild's Meadows to Robertson—the estimate is £34,173, or £7,767 per mile.

RAILWAY COMMISSIONERS' REPORT.

4. The Railway Commissioners, from the information before them, do not recommend the construction of the railway. In their report, they state the annual cost at £5,415—interest on capital expenditure at 3 per cent., £2,837, and maintenance of permanent way and for traffic and locomotive expenses, £2,578; and they estimate the traffic revenue at £2,131—merchandise and live stock £882, and passengers, parcels, and mails £1,249. The estimated traffic falls short of the annual working expenses to the extent of £447, which, added to the interest on capital, represents a total annual loss of £3,284.

The proposed line, the Commissioners say, will serve a larger area than the Moss Vale-Robertson line, which was under consideration some eleven years ago; but in the interval little, if any, progress has been made in the district. Those who advocate the construction of the line, the Commissioners further state, allege that the absence of progress is consequent on the difficulties experienced in getting the products to market. No doubt, they say, a railway would afford a better means of transit; but it must be remembered that Robertson is only 14 miles from Moss Vale and 15 miles from Bowral; and further, the district is fortunate in having good roads, though in some places of steep gradients. These roads are being steadily improved, both as regards formation and gradient, and the opening of the road over Macquarie Pass has facilitated traffic to such an extent that goods have been carried from Sydney to Shellharbour by steamer, and thence to the Robertson district by team. Some of the business people state that they would guarantee to use only the railway if an extension to Robertson were made. Experience, however, has shown that small reliance can be placed upon such guarantees. The district, in the opinion of the Railway Commissioners, is one capable of development, but the absence of railway communication cannot, they consider, be said to have created the stagnation which has prevailed for the past eleven years.

THE COMMITTEE'S INQUIRY.

5. The Committee, having taken evidence from the official witnesses, visited Bowral, Moss Vale, and Robertson, for the purpose of examining local witnesses and inspecting the country along the route of the proposed railway, and the route which would connect Robertson with Moss Vale. Accompanied by an engineer from the Railway Construction Branch, Department of Public Works, the Committee, leaving Bowral, followed the Moss Vale Road for about a mile and a half, and then, taking the direct road to Robertson *via* the Sheepwash, travelled close to the railway route

route from Bowral as far as the Sheepwash, and thence parallel with it at a distance of about a mile. Returning from Robertson, they travelled by way of the Belmore Falls and Wild's Meadows to Moss Vale, and thence to Bowral. In the course of the inquiry, they had a further investigation made by the railway engineer respecting a suggested connection between the proposed railway at Robertson and the Illawarra line for the conveyance of ores from mines in the southern districts to the Dapto Smelting Works, and they visited Dapto and took evidence there on that subject.

TRAFFIC PROSPECTS.

6. The details of the Railway Commissioners traffic estimate are as follow:—

| | |
|--|--------|
| General goods—2,000 tons, at 3s.; 250 tons at 7s. 7d. | £394 |
| Agricultural and dairy produce—3,000 tons, at 2s. 6d. | 375 |
| Live stock—150 trucks, at 15s. | 113 |
| | <hr/> |
| | 882 |
| Passengers—3,000 1st class, at 3s. 8d.; 4,000 2nd class, at 2s. 5d. | 1,033 |
| Mails—18 miles, at £12 per mile | 216 |
| | <hr/> |
| Total | £2,131 |

The local witnesses examined urged that the construction of the railway would lead to a much increased production of potatoes, cabbages, and fruit for supplying the Sydney market, and enable the farmers to send milk to Sydney. It would also lead to the district being largely patronised by tourists.

The Chief Traffic Manager in his report regards the official traffic estimate as in every direction a liberal one, but especially so in relation to produce, the tonnage of which is based on an estimated area under cultivation during 1899, the best season known in the district for four years. The figures referring to produce are:—

| | Acres. | Tons. |
|---------------------|--------|-------|
| Cabbages | 75 | 1,300 |
| Potatoes | 300 | 1,200 |
| Dairy produce | | 500 |
| | <hr/> | <hr/> |
| Total | | 3,000 |

The experience of the Department in connection with the South Coast railway does not, the Committee are informed, show that reliance can be placed to any extent on milk as an article of traffic. With regard to the estimate for passengers, the population to be served is taken approximately at 3,500, including 1,000 in the Kangaroo Valley district, and two trips per year are allowed for each person. At present the bulk of the traffic expected on the proposed line finds its way through Moss Vale, the remainder being received at Bowral and Mittagong.

COMPETITION WITH THE RAILWAY BY STEAMERS.

7. A road was opened by the Government between Albion Park and the Macquarie Pass about two years ago, and this, the Chief Railway Traffic Manager states in his report, has enabled the storekeepers at Robertson and Burrawang, on the proposed line (and indeed at Bowral and Moss Vale), to obtain goods of the 1st, 2nd, and 3rd classes cheaper than by rail to Bowral or Moss Vale. Heavy loading, such as sugar, iron, wire, &c., can be landed at Robertson, *via* Shellharbour, for 30s. per ton (10s. steamer's freight, and 20s. road rate), the distance by road being 20 miles. The same class of loading from Sydney to Bowral would cost 29s. 7d. per ton in truck-loads, and in smaller quantities, 36s. 5d. per ton, but in addition to this, there would be a cartage rate of 10s. per ton from Bowral or Moss Vale to Robertson or Burrawang. In the case of 2nd and 3rd class goods, the saving in adopting the coastal route reaches as high as 20s. per ton, or 33 per cent. In competition with a railway at Robertson, there is no doubt, the Chief Traffic Manager considers, that the road charge between Shellharbour and Robertson, which is now 1s. per ton per mile for 20 miles to Robertson, and the same to Moss Vale, 34 miles, would be considerably reduced, and it would be found hopeless to compete with the boats and teams for the high class traffic, especially as return loading would be secured by the teams in the shape of potatoes for disposal on the South Coast line.

CONNECTION

CONNECTION WITH THE ILLAWARRA RAILWAY.

8. The connection with the Illawarra railway is suggested under the impression that the line would be used for the conveyance of ores from mines in the southern districts of the Colony for treatment at the Smelting Works, Dapto, and of fluxes with which to treat the ores. The country between the Illawarra railway and Robertson was examined in June of the present year by a supervising engineer of the Railway Construction Branch, Department of Public Works, and he reported that, speaking generally, any connection between the Southern and Illawarra railways would be a very expensive and difficult undertaking; and, considering the difference in height between the two places—about 2,400 feet—and the nature of the country traversed, it would be very difficult to determine if the line were within the range of practical consideration. The slopes on the eastern side of the Illawarra Range, he pointed out, are to a great extent very similar to those on the railway in the neighbourhood of Clifton, and would be liable to slips, which would probably make the cost of construction practically prohibitive. A more simple scheme, the engineer stated, might possibly be a rack railway; but this would be very costly, and the grade on the rack very steep. From an engineering point of view, owing to the very great difficulties to be encountered, he did not recommend a survey of the route. The further investigation, at the instance of the Committee, was made in August, the engineer giving his attention to routes *via* Mount Johnstone and Mount Terry, respectively, which he found impracticable, and to a route discovered by Mr. Carl Weber, which crosses the main Illawarra range at the lowest point between Mount Kembla and the head of the Macquarie Pass. This route was found to be more favourable than any one of the others; but, the engineer states in his report, “viewed in the most favourable light, it would entail very heavy expenditure, possibly running into £500,000, and the length required in order to obtain a grade is excessive, being some 45 miles from the junction on the Illawarra line to Moss Vale, as against 24 miles in a direct line. This difference is specially noticeable between the same point on the Illawarra line and the Devil’s Gap, where the distance is under 5 miles, as against 21½ by the proposed route.”

THE INQUIRY BY A PREVIOUS COMMITTEE.

9. When the question of constructing a railway to Robertson from Moss Vale was under consideration by a former Public Works Committee in 1890, the Committee were of opinion that a line from Bowral to Wild’s Meadows *via* The Sheepwash would meet the case. The report of the Railway Commissioners did not support the construction of the railway as proposed, but it pointed out that the district around Robertson itself was very rich, and if it were devoted more to the growth of fruit and vegetables a much greater traffic would be developed, which, later on, might perhaps justify the making of a branch line. Since that time the district does not appear to have shown any noticeable sign of progress.

CONCLUSION ARRIVED AT.

10. An extension of the proposed railway to the South Coast being, under the circumstances stated in clause 8, quite out of the question, the Committee have to consider only the line referred to them. Robertson is but 15 miles from Bowral by road, and 14 miles from Moss Vale, and the roads in the district, though steep in places, are very good. Most of the farmers are much nearer the Southern railway than this, and, generally speaking, can without difficulty make a trip to and from the railway in one day. The extent to which production would be increased if a railway were made to Robertson may be understood from the area of land available for cultivation. Much of the country between Bowral and Robertson is of a pastoral nature, and is used in connection with dairy-farming. The land that can be cultivated is confined to a few flats and hillsides, and in comparison with what is to be found in other districts is extremely limited in area. Very little opportunity exists for taking up and cultivating additional land, and new settlement is therefore impracticable. Some years ago the district was regarded as important to the milk supply of Sydney, but that trade has been diverted to Illawarra, and the railway authorities do not regard milk as an article which would add in any considerable degree to the traffic

traffic earnings of the proposed line. The milk produced in the district at the present time is used in the manufacture of butter, principally by the Berrima District Company. The traffic prospects of the line cannot be regarded as favourable. In view of the road carriage by way of Macquarie Pass, probably very little traffic would come to the railway at Robertson, and it does not appear that there would be much on the line between the terminus and Bowral. As for the district being attractive to tourists, there are two waterfalls and an extensive view of the Kangaroo Valley to be seen, but the better of the two waterfalls, the Fitzroy Falls, is within easy reach from Moss Vale by a very good road, and the other sights are within a reasonable distance of that town. Considering all these circumstances, in conjunction with the high cost of the line, and the anticipated annual loss in connection with it, the Committee have come to the conclusion that it is not expedient the proposed railway should be constructed.

RESOLUTION PASSED.

11. The following is the resolution passed by the Committee, as contained in the Minutes of Proceedings :—

Mr. Shepherd moved,—“ That, in the opinion of the Committee, it is not expedient the proposed railway from Bowral to Robertson, as referred to the Committee by the Legislative Assembly, be carried out.”

The motion was seconded by Mr. Levien, and passed.

W. T. DICK,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 26th November, 1900.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM BOWRAL TO ROBERTSON.

TUESDAY, 31 JULY, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.

JOHN CHRISTIAN WATSON, Esq.

The Hon. SOLOMON HERBERT HYAM.

ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee proceeded to consider the expediency of constructing a line of Railway from Bowral to Robertson.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

1. *Chairman.*] Are you prepared to make a statement with respect to the proposed railway from Bowral to Robertson? Yes. The following is a statement which has been prepared for the Under Secretary:—

H. Deane.
31 July, 1900.

RAILWAY FROM BOWRAL TO ROBERTSON.

THE proposal before the Committee was referred by the Legislative Assembly on 22nd December, 1899, for the Committee's consideration, in the following terms:—"That it be referred to the Parliamentary Standing Committee on Public Works to consider and report on the expediency of constructing a line of Railway from Bowral to Robertson."

The agitation for the construction of a line to connect the Robertson district with the Main Southern railway has been in progress for the last twenty years, and in the early part of the year 1890 a proposed line between Moss Vale and Robertson was referred by Parliament to the Public Works Committee.

The Committee, after taking a considerable amount of evidence and visiting the locality, reported against the construction of that line, as they were of opinion that Bowral should be the point of junction with the Main Southern line. The resolution, which was arrived at by the Committee in April, 1890, was passed unanimously in the following terms:—"That, in the opinion of the Committee, it is not expedient the proposed railway from Moss Vale to Robertson, as referred to the Committee by the Legislative Assembly, be carried out, because the evidence shows that a line from Bowral to Wild's Meadows, *via* Sheepwash, would give more general accommodation to the district, and would be sufficient for the present."

Beyond completing survey of route from Bowral to Robertson, no action has been taken on the Committee's report.

The residents of the Robertson district have, however, continued to urge their claims to being provided with railway accommodation, basing such, chiefly, on the grounds that had been placed before the Committee in 1890, namely, that the land was very fertile, the soil being eminently adapted to the production of potatoes and other root crops, the district a populous one, a good class of people settled there, that it was a great food-producing centre; but development was retarded by the high cost of carriage to the nearest railway station. The climate, also, was equal to that of the Blue Mountains, and the district offered many attractions for visitors and tourists.

Recently a new phase has been imported into the agitation for the construction of this line. It is now asserted that the erection of large smelting works at Dapto, on the South Coast line, has given an impetus to mining in the southern districts as well as in other parts of the Colony, and it is contended that in the near future it will be necessary to connect the Main Southern line with the South Coast line to give facilities to the mines in the southern districts to get their ores to the smelting works at Dapto. The line now proposed from Bowral to Robertson, with its ultimate extension to Dapto, would, it is held, meet the requirements of the southern mining districts. This aspect of the proposal was prominently brought before the Legislative Assembly by the Minister (Mr. O'Sullivan) when moving his resolution of reference to the Committee. An examination of the route from Robertson to the South Coast line has been made by Mr. C. McD. Stuart, Supervising Engineer, whose report is hereto appended.

The official description of the proposed line is as follows:—

Bowral to Robertson Railway.

(Length, 17 miles 44 chains; estimated cost, £94,578, or £5,388 per mile, exclusive of land and compensation.)

This line is a branch of the Great Southern railway, leaving the south end of Bowral station at 80 miles 21·61 chains from Sydney, and proceeding in a generally east-by-south direction, crosses the Great Southern Road at about two (2) miles from Bowral, and runs between the Robertson-road and the Wingecarribee River, till the latter is crossed near 8½ miles. Here the line takes a more southerly direction to 9½ miles, where the road from Moss Vale to Robertson is joined, and the village of Wild's Meadows, or Myra Vale, reached at 93 miles. The line is then north-easterly, following the Meadows Creek to its origin, and terminates at Robertson parallel to and south of Congewoy-street, at 97 miles 65·77 chains.

The line cannot be classed as a light one; but the ruling grade of 1 in 60 and numerous curves of 10 chains radius contribute to moderate its cost.

The land required is practically all alienated.

H. Doane. The following is the statutory report of the Railway Commissioners upon the proposal :—
(99/4,152-74.)

31 July, 1900.

Office of the Railway Commissioners of New South Wales, Sydney, 19 December, 1899.
Proposed Line of Railway, Bowral to Robertson—17½ miles.

IN accordance with the provisions of the Public Works Act of 1888, section 13, we beg to report as follows :—

Cost of Construction—

The Engineer-in-Chief for Construction estimates the cost of construction (exclusive of land and compensation) at £94,578

Annual Cost—

Interest on capital expenditure at 3 per cent. £2,837
Maintenance of permanent way and for traffic and locomotive expenses 2,578

Total annual cost 5,415

Estimated Traffic Revenue—

Merchandise and live stock £882
Passenger, parcels, and mails 1,249

Total annual revenue £2,131

From the foregoing figures it will be gathered that the value of the estimated traffic falls short by £447 of meeting the annual working expenses; this, with the interest on capital, would involve an annual loss of £3,284.

The proposed line will serve a larger area than the Moss Vale-Robertson line, which was under consideration some eleven years ago; but in the interval little, if any, progress has been made in the district.

Those who advocate the construction of the line allege that the absence of progress is consequent on the difficulties experienced in getting the products to market. No doubt a railway would afford a better means of transit; but it must be remembered that Robertson is only 14 miles from Moss Vale and 15 miles from Bowral; and further, the district is fortunate in having good roads, though in some places of steep gradients.

These roads are being steadily improved, both as regards formation and gradient, and the opening of the road over Macquarie Pass has facilitated traffic to such an extent that goods have been carried from Sydney to Shellharbour by steamer, and thence to the Robertson district by team.

Some of the business people state that they would guarantee to use only the railway if an extension to Robertson were made. Experience, however, has shown that small reliance can be placed upon such guarantees.

The district is one capable of development, but the absence of railway communication cannot be said to have created the stagnation which has prevailed for the past eleven years.

From the information before us we are not justified in recommending the construction of the proposed line.

The Common Seal of the Railway Commissioners of New South Wales was hereunto affixed, this nineteenth day of December, one thousand eight hundred and ninety-nine, in the presence of,—
H. McLACHLAN.

CHARLES OLIVER,
Chief Commissioner.
W. M. FEHON,
Commissioner.
DAVID KIRKCALDIE,
Commissioner.

In connection with the question of the present condition of the roads between Moss Vale, Bowral, and Robertson, referred to by the Railway Commissioners, I append copy of reports (2) thereon by the Acting Road Superintendent of the district.

REPORT of Mr. Supervising Engineer C. McD. Stuart on the Illawarra to Robertson Railway.

Sir,

I beg to state that I have examined the country between the Illawarra railway and Robertson, with a view of a railway connection between these places, being portion of a direct communication with the Great Southern railway.

The first route I examined, shown by a red line on the accompanying diagram tracing, left the Illawarra line between Wollongong and Unanderra stations, and bearing in a north-westerly direction, crossed the main South Coast Road on the northern side of Byarong Creek; thence skirting for about 2 miles up a main spur off the Illawarra Range on the southern side of the road to the Mount Keira Colliery, the line would bend round to the south across Byarong Creek and the valley called "Hell Hole"; thence skirting round Mount Nebo it again takes a north-westerly direction till close up to the Main Range; thence in a south-westerly direction still on an ascending grade along the face of the range, and keeping at the back of the Mount Kembla Colliery, it would cross the range with a tunnel at the point A, and thence debouching into the valley of the Cordeaux, turn in a southerly direction and work up to the high country at the back of Robertson.

This route I abandoned, as there would be considerable difficulty in working up from the Illawarra line to where the tunnel would enter the Main Range, and it is doubtful if you could get sufficient length in working across the Byarong Valley and round Mount Nebo for a limiting grade of 1 in 40; as it is, the spurs off Mount Nebo are so sharp, curves of 5 chains radius would be essential. Again after crossing the range the country at the back of it is so very broken, nothing short of an actual survey would determine if a line was possible.

I then tried another route, also shown by a red line; this leaves the Illawarra railway between Unanderra and Kembla Grange stations, and bears in south-westerly direction on an ascending grade of 1 in 40 along the slopes of the Bong Bong Mountain spur; thence in a southerly direction along the face of the Main Range crossing the Avondale and Marshall Mount spurs, and thence turning round the head of the spurs which divides the waters of Marshall Mount Creek from those of the Macquarie Rivulet, it crosses the range at a narrow point with a tunnel at B, and taking advantage of a deep gully, one of the heads of the Avon River, it would work across some very broken country till the high ground round Stockyard Swamp was reached; thence it would work up in a south-westerly direction, and skirting along the northern side of Wingecarribee Swamp, would join the surveyed line from Bowral to Robertson about 5½ miles from Bowral. To work up to Robertson itself in anything like a direct line would be impossible.

This unfortunately would leave the present surveyed line to Robertson as a short branch off the Bowral-Illawarra connection, the working of which branch would entail a good deal of extra cost.

Speaking generally, any connection between the Southern and Illawarra railways would be a very expensive and difficult undertaking; and considering the difference in height between the two places, about 2,400 feet, and the nature of the country traversed, it would be very difficult to determine if the line was within the range of practical consideration: the slopes on the eastern side of the Illawarra Range are to a great extent very similar to those on the railway in the neighbourhood of Clifton, and would be liable to slips which would probably make the cost of construction practically prohibitory.

A simpler scheme might possibly be by a rack railway, as shown by a red dotted line, the rack starting from the end of the tunnel on the summit of the mountain at B, and running down the Marshall Mount spur; this latter scheme would also be very costly, and the grade on the rack very steep.

From an engineer point of view, owing to the very great difficulties to be encountered, I would not recommend a survey of the proposed routes.

The Engineer-in-Chief, Railway Construction.

CHAS. McD. STUART.

Department of Public Works, 16 June, 1900.

BOWRAL TO ROBERTSON.

State of Road.

This road is metalled to 6 miles 50 chains from Bowral Post Office, and has a very good surface.

From the above point some mile or more runs along a sound ridge which has not yet been formed; from the end of this to West Kangaloon there are a few chains without metal that get sloppy in wet weather, but, as a deviation is proposed, only necessary repairs have been done.

From West Kangaloon through East Kangaloon to Hindmarsh Hill, near Robertson, there are only a few short strips of metalling, as another deviation is proposed here.

In both these cases, I believe, head office stated that no extensive repairs were to be done.

Gradients.

MINUTES OF EVIDENCE—RAILWAY FROM BOWRAL TO ROBERTSON.

Gradients.

H. Deane.

The worst grade on the metalled portion between Bowral and the 6 miles 50 chains is one of 9 chains 1 in 12, then 15 chains of 1 in 17·23; after that all are very easy gradients until the first proposed deviation is met with. I cannot supply these gradients, but believe some of them to be as bad as 1 in 7 or 8. Comparative sections will be found with the papers referred to above.

31 July, 1900.

Traffic.

This cannot average more than 10 tons per week, comprising, as the other road does, butter, cabbages, and potatoes. The light traffic on this road is considerably less than the Moss Vale-Robertson road. The steepness of the gradients may account for a portion of this; but there is not the population, and the Moss Vale-Robertson road is nearly 1½ mile the shorter route for the Robertson traffic.

THOMAS OATLEY,
Acting Road Superintendent.

Department of Public Works, 16 June, 1900.

MOSS VALE TO ROBERTSON, TOWARDS MACQUARIE PASS.

State of Road.

It is metalled throughout; the surface is in good condition, and I consider it one of the best roads in the district to travel on.

Gradients.

Between the municipal boundary of Moss Vale and 9 miles 38 chains there is nothing steeper than 1 in 18·26, and that only for a few chains, the remainder being 1 in 24, 30, 32, and as flat as 1 in 1,110.

Between the 9 miles 38 chains and the 10 miles 37 chains a deviation was proposed, but as there was great opposition (no doubt in view of the Robertson railway) no further action was taken. The present grades between the above points are 8 chains, 1 in 17·50; 31 chains, 1 in 15; but by rather heavy cuttings and fillings these gradients can be improved to a 1 in 19 or 20.

From 10 miles 36 chains to 10 miles 45 chains the worst grade is met with, viz., 1 in 11·60; for 9 chains after this the gradients are all very easy to the 13 miles 60 chains, which is opposite the post office in Robertson.

Traffic.

At 5 miles 43 chains the road from Wild's Meadows (now Myra Vale) junctions with the Robertson-road, and at 8 miles 12 chains the Burrawang-road. The population are principally dairy farmers, and only grow cabbages and potatoes for the outside market.

After careful calculations I find that the through traffic from Robertson does not exceed 18 tons per week, and 3 tons from each Myra Vale and Burrawang. The return traffic in good seasons is considerably less than half this, but in dry years, when produce has to be bought, it will equal the outward quantity.

There are two teams of six horses each on the road regularly, and make about four trips a week.

The cabbages and potatoes are carted in by the farmers themselves.

In addition to this, there is a very considerable amount of light traffic between the three places mentioned and Moss Vale.

THOMAS OATLEY,
Acting Road Superintendent.

2. *Mr. Hyam.*] What is the altitude of Robertson? At the terminus of the line it is 2,421 feet.
3. Was there a flying survey made some years ago of a line between Robertson and Kiama? There was an examination made, but it turned out to be impossible. The exploration with the best result is that made by Mr. Stuart.
4. *Chairman.*] Do you hand in the book of reference and plans and section of the line? Yes; I have also here a detailed estimate of the cost of the works. It is as follows:—

BOWRAL TO ROBERTSON. Summary.

Rails at £7 10s. per ton.

| Part. | Description. | Length. | | Estimated cost. | | | Average per mile. | | |

| Total cost..... | £ 34,173 0 0 | 7,767 |

5. How far, in a direct line, is Bowral from Robertson? To the centre of the town it is a little over 13 miles in a straight line.

6. How far is it from Moss Vale to Robertson in a direct line? Just about a quarter of a mile further.

7. Then, in order to get from Bowral to Robertson, even with a 1 in 60 grade, you have practically to go one-third more than the actual distance? Yes; it will be such a very crooked line. There is a great bend necessary in order to get round the Wingecarribee Swamp, and in order to negotiate the hilly country.

8. So that the very difficult character of the line involves a larger amount of railway construction per square mile of country to be served than is ordinarily the case with our lines? Yes.

9. I gather from the report of Mr. Stuart that the latter reason which has been urged in support of the line, namely a connection with the Illawarra line at Dapto, cannot be urged in favour of a line from Bowral to Robertson? No.

10. The only feasible way of carrying out that project would be to leave Robertson out of the question? Yes: it would junction a few miles out of Bowral. In fact, Robertson is not in the direct line at all.

11. Does this line lend itself to such a connection? No. If you wanted to connect the district with the Illawarra line you would not go through Robertson at all; it would be practically impossible to do so.

12. From the general nature of the report on the roads, would you say that the roads from Bowral and Moss Vale to Robertson are fairly good? From Moss Vale to Robertson the road is very good; but the road from Bowral to Robertson is not in such good condition.

13. Is the country of such a nature that, after connecting with Robertson, there is not much likelihood of any further extension, presuming the line were built? I believe so.

14. *Mr. Watson*] Is there a sudden drop on the coast side? Yes.

15. Going from Robertson towards the coast, does a sudden drop occur there? Yes.

16. If the line were taken to Robertson would it draw any traffic from any distance beyond there, or would the traffic be likely to go towards the Illawarra line? I should think it would make for the coast.

17. *Chairman*.] Are the last 4 miles of the proposed line much heavier as far as the nature of the country is concerned than the first 13 miles? Yes, very much heavier. There would be very great difficulty in getting a good line there. The section shows a succession of cuttings and banks.

18. *Mr. Shepherd*.] Was a trial survey of the line ever made to Moss Vale? Yes; that was the line which was first submitted to the Public Works Committee; but the last section would be common to the two, so that that proposal would not get out of any of the rough part of the country.

19. *Mr. McFarlane*.] If the proposed line were carried only as far as Wild's Meadows would there be any considerable amount of traffic, and how would the traffic compare with what there would be if the terminal point were at Robertson? All the traffic that comes from Robertson would go through Wild's Meadows, but really the traffic is very small on both roads from Moss Vale and Bowral.

20. Do you think that such a line would serve the country at Robertson? I doubt very much whether it would. When the farmers once put their produce on their carts I think they would go right on to the existing railway.

21. Supposing the line were continued from Robertson so as to join the Illawarra railway, would that be any material benefit to the district? I am very doubtful about it myself.

22. Which way would the traffic go from Robertson if the line were so extended? I think it would be very likely to go to the nearest port.

23. *Mr. Hyam*.] Would such an extension go by way of Kangaroo Valley? No, it would not go through there. The line that Mr. Stuart has explored keeps well north of the Illawarra Lake.

24. *Mr. McFarlane*.] Can you say whether the Railway Commissioners would approve of the terminus being placed at Wild's Meadows? They do not approve of the line at all. I do not think that they have been asked to consider the question of terminating the line at Wild's Meadows. They say that the construction of the line is unnecessary, on account of its short length.

25. Do you think there would be about as much traffic if the line stopped at Wild's Meadows as if it were extended to Robertson? I have not studied the circumstances of the district sufficiently to be able to say. H. Deane.
31 July, 1900.

26. Would not that bring about a considerable reduction in the cost of the railway? Yes, there would be less mileage.

27. Would not the cost of construction be £34,000 less? Yes.

28. In view of that saving of £34,000 in cost of construction, and the probability that the same amount of traffic would be carried, do you think that the Railway Commissioners would favour the proposal? I have no doubt that a line to Wild's Meadows only would show better proportionate returns than a line right through to Robertson; but I should say, that judging from the Railway Commissioners' report, that they would not favour such a line on account of its being so short, it is certainly unnecessary.

29. Do you think the Southern line is sufficiently near to the people in that district to answer all purposes? Yes. The original report of the Public Works Committee shows the kind of line that was projected between Moss Vale and Robertson. The ruling grade in that line was 1 in 40. An endeavour has been made, with regard to the line now submitted to the Public Works Committee, to obtain a ruling grade of 1 in 60. If a ruling grade of 1 in 40 were adopted, of course the line would be somewhat cheaper.

30. *Mr. Shepherd.*] Has any attempt ever been made to get a practicable line from the Southern railway to the Illawarra railway? Not other than Mr. Stuart's exploration. Similar difficulties occur all the way along the coast right throughout the Colony. There is a difficulty even when we get down to Bombala, although there are leading spurs there which you could follow. The great difficulty here no doubt is due to the very sudden drop in a short distance and the absence of leading spurs.

31. *Mr. Hyam.*] Speaking of the Bombala country, is it not a little better there, because the coast range is further back, and there is a long spur running almost to the coast? Yes; but it is very difficult even there. The line running down to Wolumla is the best line of any, but it will be a very expensive line.

John Harper, Chief Traffic Manager, Department of Railways, sworn, and examined:—

32. *Chairman.*] Have you a statement prepared with regard to the proposed line from Bowral to Robertson? Yes; it is as follows:— J. Harper.
31 July, 1900.

PROPOSED RAILWAY, BOWRAL TO ROBERTSON, 17½ MILES.

As directed by the Commissioners, I have had an estimate prepared of the probable traffic for this proposed railway.

The estimated cost of construction is £94,578, or £5,338 per mile. Interest at 3 per cent. on this sum would amount to £2,837, and the working expenses would be £2,578, or a total of £5,415.

The estimated traffic is as follows:—

| | |
|---|--------|
| General goods—2,000 tons, at 3s. ; 250 tons, at 7s. 7d. | £394 |
| Agricultural and dairy produce—3,000 tons, at 2s. 6d. | 375 |
| Live stock—150 trucks, at 15s. | 113 |
| | 882 |
| Passengers—3,000 1st class, at 3s. 8d. ; 4,000 2nd class, at 2s. 5d. | 1,033 |
| Mails—18 miles, at £12 per mile | 216 |
| | 1,249 |
| Total | £2,131 |

Although the line is 17½ miles in length, the bulk of the traffic (goods, produce, and stock) would not be carried more than an average distance of 15 miles, and the estimate has been based accordingly.

For mails and passenger traffic, however, the full distance (18 miles) has been credited. Local rates have been applied to general goods, and 2s. 6d. per ton for agricultural produce.

Approximately, the population to be served is 3,500 (including 1,000 in the Kangaroo Valley district), and two trips per year have been allowed for each member of the population.

It is considered that the estimate of the traffic is in every direction a liberal one for the line, especially as regards the produce, the tonnage of which has been based on an estimated area under cultivation during 1899, which is regarded as the best season known for four years. The figures are:—

| | Acres. | Tons |
|-------------------------|-----------------|-------|
| Cabbages | 75 | 1,300 |
| Potatoes | 300 | 1,200 |
| Dairy produce | | 500 |
| | Total | 3,000 |

The bulk of the traffic to be carried over this proposed line now finds its way through Moss Vale. A small quantity is received at Bowral and Mittagong. By diverting it *via* Bowral from Moss Vale, there would be a loss of 6 miles to the Main Southern line as against the earnings of a branch line of 18 miles. The loss by diversion of traffic has not been debited.

The distance by road to Robertson from Moss Vale is 14 miles, and from Bowral, 15, whilst the proposed line is 17½ miles. At least 90 per cent. of the Robertson traffic is carried to and from Moss Vale at 10s. per ton, and empty butter kegs are returned free. The road is an excellent one, and the return trip is made in the same day, yet with all these advantages it is admitted that the district is not as prosperous now as it was fifteen years ago, and it is stated that a number of old settlers have left it to take up land on the South Coast and the Richmond River.

The country for the first 9 miles of the line may be regarded as suitable for pastoral purposes only, whilst a large extent of that in the Kangaloon, Burrawang, and Robertson districts is no doubt of a rich volcanic character, but requires manuring to produce good crops of potatoes.

An idea of the progress made can be formed on perusal of the enclosed documents prepared by the Secretary of the Railway League at Robertson at the close of 1896. This gentleman points out that at the end of 1896 there were 321 farmers, holding 50,101 acres of the best land, out of which he admits there were only 220 acres of potatoes and 40 acres of cabbages. This would represent 1,580 tons. The estimate now submitted, based on information as to area under cultivation during 1899, provides for 2,500 tons of the same produce. Hay, &c., which is grown purely for local use, has not been included in the estimate.

Dairy produce.

It is represented that during the year 1896, 1,235,306 lb. of butter were made from 2,841,205 gallons of milk produced in the district to be served by the proposed line, the Berrima District Company making the butter, finding the salt, colouring it, &c., and delivering it at Moss Vale station (14 miles from Robertson) at ½d. per lb. It is claimed that with a railway a large quantity of milk would be sent to Sydney instead of being made into butter locally, and as a consequence a large traffic would result. The experience of the Department in connection with the South Coast line shows that reliance can only be placed upon butter and cream traffic, and not to any extent upon carrying milk.

Competition

Competition with Railway.

J. Harper.
31 July, 1900.

A road was opened by the Government between Albion Park and the Macquarie Pass about two years ago, which has enabled the storekeepers at Robertson and Burrawang, on the proposed line (and indeed at Bowral and Moss Vale), to obtain goods of the 1st, 2nd, and 3rd classes cheaper than by rail to Bowral or Moss Vale. Heavy loading, such as sugar, iron, wire, &c., can be landed at Robertson, *via* Shellharbour, for 30s. per ton (10s. steamer's freight, and 20s. road rate), the distance by road being 20 miles. The same class of loading from Sydney to Bowral would cost 29s. 7d. per ton in truck-loads, and in smaller quantities, 36s. 5d. per ton, but in addition to this, there would be a cartage rate of 10s. per ton from Bowral or Moss Vale to Robertson or Burrawang. In the case of 2nd and 3rd class goods, the saving in adopting the coastal route reaches as high as 20s. per ton, or 33 per cent. A great deal of loading has already arrived for Robertson and Burrawang, and one large storekeeper in Bowral and Moss Vale has also obtained some sugar and kerosene *via* Shellharbour. In competition with a railway at Robertson, there is no doubt that the road charge between Shellharbour and Robertson would be considerably reduced (it is now 1s. per ton per mile for 20 miles to Robertson), and the same charge was only made to Moss Vale, 34 miles, and there is no doubt it would be found hopeless to compete with the boats and teams for the high-class traffic, especially as return loading would be secured by the teams in the shape of potatoes for disposal on the South Coast line. On the other hand, if the line is constructed to Robertson, an endeavour might be made to use it for carrying goods traffic from Shellharbour for Moss Vale, Bowral, &c., although such a contingency could be controlled by arbitrary rates from Robertson.

In preparing the estimate for this proposed line, the competition by teams has been kept in mind, and only a small percentage (250 tons) of high-class traffic has been allowed for. In any case the estimate would not be much increased if the whole of the high-class goods were credited at local rates.

I also produce a map showing the area of country which will be served by the proposed line.

33. How would you describe the limits of the trafficable area? The furthest southern point is about 12 miles, embracing a portion of the Kangaroo Valley. The traffic of the lower portion of that valley would continue to go to the coast under any circumstances. To the east the maximum distance would be about 8 miles; north-east, about 10 miles, and running from there to the existing line. The blue line on the map indicates the traffic which at present finds its way to the existing railway at Moss Vale, Bowral, or Mittagong. The portion of the map, shown in red, on the south-east side shows the additional traffic which it is anticipated would go towards the projected line.

34. *Mr. Shepherd.*] How long is it since the first survey was made on this line? I do not know. I think I first reported on the line in 1886, and again in 1888. At that time it was proposed to take the line from Moss Vale to Robertson.

35. According to the report before us, there seems to have been a falling-off in the district during the last fifteen years? Yes; but it will be noticed that the estimated traffic shows really an increase of a couple of hundred pounds on the traffic estimated to be obtained in 1888.

36. Is there any cause assigned for that falling-off? A large number of the South Coast farmers have gone to the Richmond and other northern rivers in order to acquire larger areas, or for other reasons best known to themselves. That, no doubt, has militated against the progress of the district. My estimate, however, is based on what was produced in the season of 1899, and, from an agricultural point of view, that is regarded as the most prosperous season they have had in that district.

37. Are the principal products in that district dairy products? Yes.

38. Did they try to grow maize some years ago in that district? As far back as my recollection of this district goes, and that is about fourteen years, no maize has been grown to any extent.

39. Are the Railway Commissioners favourable to the construction of this line? I do not think so.

40. I suppose you are personally acquainted with the country? Yes; I have been over it a number of times.

41. What is your opinion as to the prospect of the railway paying? I must confess I cannot see any immediate prospect of its doing so. It will be a very expensive line, costing over £5,000 per mile to construct, and, like all short lines, it will relatively be an expensive line to work.

42. And the country has been so long occupied that there is not likely to be any new industry established there? No, and as I have stated in my report, we have very good reason to fear competition from the South Coast; in fact, that competition exists to-day. The rates for carrying goods by road are more favourable in certain directions than we can offer for the conveyance of goods by the existing railway.

43. Would goods be likely to find their way to the coast? No; but goods would be likely to find their way from the coast up to the Robertson district. Potatoes would probably find their way to the coast from the Robertson district, and they would furnish back loading for the drays carrying on the road traffic.

44. According to the plan, it would appear that Moss Vale is nearer to Robertson than Bowral is;—do you know why Bowral was selected instead of Moss Vale as the point of junction with the Southern railway? I think a line to Robertson from Bowral will serve a better district, and it will serve more of the district. Then, again, it has the advantage of being 6 miles nearer to Sydney.

45. Was there not a great deal of controversy on that point some years ago? Yes; and at one time Mittagong was mentioned as a good place for a junction; but that now appears to have dropped out of consideration.

46. I see in your report that you say there is competition already for that traffic of the Robertson district by way of Albion Park, on the Illawarra railway line and the Macquarie Pass? Yes; a road has been recently constructed over Macquarie Pass to Robertson.

47. Surely they would never attempt to bring anything up from the low country about there? Yes; they are now bringing goods from that point as far as Moss Vale and Bowral, and their rates are more favourable than our railway rates.

48. What route do they adopt? They come up from Albion Park through the Macquarie Pass. They are getting a good rate. They charge the same to Moss Vale as they do to Robertson. The distance is 34 miles. For general merchandise we cannot compete on the Illawarra railway with the steamers for Kiama and Wollongong. To those places steamers carry the bulk of the general merchandise.

49. *Chairman.*] It is urged, in support of this line, that there will afterwards be a further extension of it to the South Coast line, with the view of getting ore more easily and cheaply to Dapto and other smelting works on the South Coast line;—from a railway point of view, what would be the effect of a connection between the Southern line and the North Coast line for that purpose? From a railway point of view, it would not be very beneficial; it would mean the construction of a new line and the withdrawal of traffic from the existing railway, and the new line would be one with very heavy grades.

50. Is the carriage of ore over such a long distance to Sydney, and then down to Dapto, a fairly profitable branch of the railway traffic? No. We only charge $\frac{1}{2}$ d. per ton per mile, and it would take a lot of that kind of traffic to pay the cost of a line to the South Coast.

51. Would it make a saving by reducing the working expenses and the distance over which the ore has to be carried, if we were to charge a slightly higher rate for the conveyance of ore to Bowral and Moss Vale, and thence across to the South Coast line? No. As far as the carriage of ores is concerned, we make the charge uniform, and, simply because a new line was opened, you could scarcely put a differential rate upon it. J. Harper.
31 July, 1900.
52. Presuming, for the sake of illustration, that it cost 10s. per ton to take the ore round from Bowral to Sydney, and then down the South Coast line to Dapto, and if we constructed a line direct from Bowral to Dapto, would you be able to save a large amount of working expenses which is included in that charge of 10s. per ton? It would all depend upon the character of the new line which would be constructed. It might cost more to take the ore across that new line, owing to the heavy grades, than it would to take it by way of Sydney as at present. Then the chances are that a very large proportion of the trucks employed to carry the ore would have to be sent on to Sydney from Dapto in order to get return loading to the country.
53. Then you do not view such a proposal with great favour? No; I do not think that at present it is within the sphere of practical consideration.
54. How much of the country to be served by this proposed line from Bowral can be considered to be already fairly served by the Southern railway? If a man can make a trip to the railway and back in one day, he may be considered as being within a fair distance of the railway which exists to-day. The people in this district who are proposed to be served by this railway, are now able to do the round trip in one day.
55. How do those people manage with regard to obtaining supplies who live to the eastward of Robertson? They have the advantage of being able to make use of the Illawarra railway and the coastal steamers. The coastal steamers' rates are so low that the people to the east of Robertson are more favourably placed than the people living at Bowral and Moss Vale.
56. Have you considered the question of only taking the line as far as was indicated by the last Public Works Committee which considered this proposal—that is, that the terminus should be at Wild's Meadows? No. I have dealt with the line as a whole. The first 9 miles from Bowral goes through pastoral country. I have made out my estimate on the basis of taking the line as a whole. I imagine that if the railway were only constructed for a distance of 13 miles, a good deal of the traffic to the east of that terminus would probably not come in to it at all. That traffic would find its way down to the Illawarra railway, and the South Coast. If the railway is to be of any value at all it would be necessary to make the whole of it.
57. *Mr. Watson.*] Would not the working expenses amount to as much for a line 13 miles long as for a line 17 miles long? Yes; there would practically be only the extra cost of maintenance.
58. Do you think that the people living about Robertson would patronise the railway if it terminated at Wild's Meadows, rather than go right into Moss Vale, once they have their carts loaded? If the line terminated at Wild's Meadows, I think the people at Robertson would be likely to get their goods from the coast—that is to say, they would have to pay for 5 miles of cartage from the terminus at Wild's Meadows to Robertson as against 20 miles from the South Coast line, and very much lower freight by the steamers along the coast than they would have to pay if they got their goods along the Southern railway.
59. Taking the other suggestion, with regard to the connection to suit the consignors of ore from the south to Dapto, the construction of a loop line would save about 100 miles in the freight of southern ores which are now taken round to Sydney and back to Dapto;—allowing for the extra cost of haulage over the heavy grades between the Southern and the South Coast lines, what difference do you think you could afford to make in the freight charged on, say, a 400-mile run? It would be absolutely $\frac{1}{2}$ d. per ton difference as between the mileage; but you would require to put against that the loss which would be sustained on the existing main line. As the distance is greater to-day, the profit would probably be nil. More would be lost as a matter of revenue than would be gained.
60. Supposing that you could get a reasonable connection between the two lines, is it not possible that a reduction in the cost of carriage would mean the difference between a gain and a loss in the working of many mines? I have not gone into that question.
61. Do you do a considerable amount of business now in the carriage of ores? Yes; from all parts of the country.
62. Is it profitable enough to enable you to make up train-loads of ores? No; the business is done only in ordinary trucks—one or two at a time; there is no large volume of the traffic.
63. Do you anticipate that it is likely to be a large traffic at any time, or is it only spasmodic? I would scarcely like to call it spasmodic. I hope it will be regular; but I am not prepared to say that it will all come from the Southern line. My information indicates the contrary, and that it will be more extensively drawn from the west and the north.
64. Do you take any ores from the north to Dapto? Cockle Creek works deal with most of that, although some does come to Dapto.
65. Do any of the southern ores go up to Cockle Creek? I cannot say just now; but I know I am correct with regard to the other direction.
66. Unless there is some strong local reason in favour of a connection between the Main Southern line and the South Coast line, do you think that the ore question would be sufficient to justify such a work? I certainly do not.
67. Do you know of any other trade or class of produce that would be influenced by the construction of such a line? No.

Archibald Campbell, Esq., M.P., sworn, and examined:—

68. *Mr. McFarlane.*] Have you a good knowledge of the country which will be served by the proposed railway from Bowral to Robertson? I have not a great deal of knowledge of the route between Bowral and Robertson; but I have a good knowledge of the country between Illawarra and Robertson, and of the proposed extension between those two places. Archibald
Campbell,
Esq., M.P.
31 July, 1900.
69. Are you prepared to make a statement with regard to that locality, and the probabilities of a further extension? I did not come into the room with the view of giving evidence, but I am so familiar with all the particulars connected with the proposal that I am quite prepared to make a statement of the main facts

Archibald
Campbell,
Esq., M.P.
31 July, 1900.

facts at a moment's notice, as I am about to do in this instance. I look upon the proposed extension of this branch line to Robertson—I care not from what point it comes on the Southern line—as merely the first step towards what must be carried out in the near future—that is, a connecting line between the Main Southern railway and the Illawarra railway, mainly for the purpose, which I have heard referred to here, of the haulage of ores from the southern districts to be smelted in Illawarra. This Colony has two great coal-fields—the Newcastle in the north, and the Illawarra in the south. The Newcastle coal-field will be the smelting-ground for the northern ores, and in the same way Illawarra will be the natural smelting-ground for the mines in the southern part of the Colony. As sure as water finds its level, so surely will the smelting-ores in the two portions of the Colony find their way to these two great smelting-furnaces which have been provided by Nature. I have just heard Mr. Harper give evidence with regard to the haulage of ore from the southern districts. I have obtained particulars from the Railway Department showing that the charge of $\frac{1}{2}$ d. per ton per mile means a difference of about 4s. 6d. per ton on ores coming from the southern districts to the Dapto Smelting Works by way of Sydney, as compared with taking the ores by a direct route by way of Robertson or thereabouts into the Illawarra district. Mr. Watson asked Mr. Harper some pointed questions upon that subject. I have statistics supplied by the Railway Department showing that on every ton of ore taken from the southern districts, including the south-western parts of the Colony in the direction of Wyalong and Young, coming down to the Dapto Smelting Works, round the “Horn” *via* Sydney, and then down the Illawarra line, means a difference of 4s. 6d. per ton for haulage compared with what would be charged if it were conveyed over a direct line, which would not be more than 40 miles in length as against 140 miles at present. Some months ago I mentioned this matter to Mr. A. Chapman, M.P. for Braidwood, who is well posted up in all mining matters. He made the statement to me that a saving of 4s. 6d. per ton would mean in the case of many mines all the difference between profitable working and working at a loss. Without using the words in an offensive sense, I think the matter has been looked at from a narrow railway point of view. In the present circumstances, assuming from a railway point of view that the Department would lose 4s. 6d. per ton if the ores were carried over a direct line by way of Robertson, any person of common-sense can see at once that if such a reduction were made, the tonnage carried would increase to an enormous extent. What the railway service would lose on the present carriage by way of Sydney would be nothing compared with what they would gain by the haulage of the extra quantity of ore which would be brought to Illawarra, by the shorter route, for smelting. According to the particulars I have obtained from the Railway Department, the difference, in a year and nine months, on the ore that was carried to the Dapto Smelting Works amounted to between £2,000 and £3,000. I look upon the haulage of ore from the gold-mines, copper-mines, and other such works in the southern parts of the country, in districts such as Braidwood, Queanbeyan, Tumut, Young, and Wyalong, as being infinitely the greatest matter to be considered in discussing the construction of this branch line. The extension of the line to Robertson, important agricultural district though it is, is not to be compared for a moment with the national advantages connected with the construction of a direct line to the Illawarra coal-fields in order to convey ore to the smelting works. So important is the question of conveying ores to the smelting works from the southern half of the Colony, that I think the Public Works Committee should take evidence on the point in the Illawarra district. What I am proposing is the extension of the proposed line from Robertson into the Illawarra district, which would only be a distance of about 20 miles. In my opinion, it would be an inestimable national benefit to the Colony. If such a line were made, many additional mines would be opened in consequence in different parts of the Colony, which would be of immense advantage to the mining industry.

70. To what point of the Illawarra railway line would you suggest this proposed line should be extended? Personally, I do not care where it touches the Illawarra line.

71. Which would be the most convenient place for a junction? It would be where the best grade could be obtained for getting up and down the mountain.

72. Can you suggest where that would be? No; that can only be shown by a thorough survey.

73. Do you know, generally, the nature of the country between Robertson and the place on the Illawarra railway where the lines are likely to be connected? Yes.

74. What class of country would it be? It would be difficult country over the mountain, wherever the range was crossed. There is a fall of over 2,000 feet; but I have no more doubt than I have of my own existence that a good route with fair grades could be obtained. In order to find that, it would be necessary to have a thorough survey made—one lasting for several months—in order to ascertain the best natural features of the country, so as to obtain easy grades. I wish to say a few words with regard to the cursory observations which were made by Mr. McDonnell Stuart, who has furnished a report which the Chairman of this Committee has been good enough to enable me to look over. That exploration was made during the holidays between last Christmas and New Year's Day, and that gentleman was only there for three or four days. No matter what professional ability a man may have, he cannot pronounce a correct opinion after so casual an inspection of mountainous country, extending over only a few days; it would require months to do the work thoroughly.

75. What is the distance from Robertson to the coast? I believe that a much better grade than 1 in 40 could be obtained; and assuming that there was a good deal of winding round about the spurs, in my opinion the distance would not be more than 20 miles—it might not be so much. I wish to impress upon the Committee, if Mr. Stuart's report comes before them, that his inspection of the country was of a most casual character. That was all he was intended to do. He only made a flying inspection, lasting three or four days, and that was wholly inadequate for the purpose.

76. Respecting the proposal before the Committee—that is, connecting Bowral with Robertson—what is your opinion concerning that:—do you think there will be sufficient traffic to make that railway a paying line? I do not consider myself a sufficient authority on that subject, and I would not venture to express an opinion on the point. I am not familiar with the country; but I know that the Robertson district is a very good one.

77. You would not care to express an opinion? I do not hesitate to express the opinion that it is a district which ought to have a branch railway. It is a rich district. It is one of the first parts of the Colony that was taken up under Sir John Robertson's Free Selection Act, and there was never any dummyism there. It is a genuine settlement, and there is no better yeomanry in the whole country than reside in that district. There has been no picking out of the eyes of the country. People went there and cleared the great bush which existed. The farms are still used for agricultural purposes, and families are living upon them. They are a most industrious class of people. Even if the line did not pay at the outset, I believe it would pay eventually.

Archibald
Campbell,
Esq., M.P.
31 July, 1900.

78. Is there any room for increased settlement, and would the construction of a railway bring about any increased traffic? It is a favoured and favourite district. In summer time it is almost as cool as it is in the neighbourhood of Kiandra; it is over 2,000 feet high. In summer it is much cooler there than in the lower districts, and if a railway were made, I believe a considerable number of people would go to live there on that account. Probably the larger farms would be subdivided, and would be taken up by a wealthy class of people who would settle there on account of the salubrity of the climate. There are also many waterfalls in the district, which would be an attraction to tourists.
79. Are there any available Crown lands there which would be taken up if better means of communication were afforded? I am not sufficiently familiar with that part of the country to answer that question. A great portion of the Crown lands immediately to the north of the district are reserved for the Sydney water supply; so that I suppose there could be little extension of settlement in that direction.
80. Your principal contention is that the proposal to connect Bowral with Robertson by railway should only form part of a scheme for connecting the Southern line with the Illawarra railway for the purpose of taking ore to the Illawarra district to be smelted there? My contention is that the question of extending the line from Bowral to Robertson is infinitesimal in importance compared with the extension of the line to the Illawarra district for smelting purposes.
81. Do you think that the traffic caused by conveying ore to the Illawarra district would be sufficient to pay interest and working expenses on such a line? Yes; that traffic and the traffic incidental thereto. There would, of course, be some general traffic as well. I have no doubt that such a railway would pay, and that in the near future it would more than pay.
82. Do you think there will be any other traffic besides the conveyance of ore? Yes; there is always incidental traffic where there is a railway.
83. Would it be an important feature? In my opinion the haulage of ore would be the great feature of the line. The mere fact that mine-owners in southern and south-western parts of the country now send ores all the way to Sydney, and back to Illawarra, shows that it would be a great advantage to have such a direct line. A difference of 4s. 6d. per ton in the carriage of the ore would cause other mines to be opened, and incomparably more ore would be sent than is now forwarded by the longer route.
84. But would not that mean a loss of 4s. 6d. per ton to the Railway Commissioners? I have already pointed out that, in my opinion, the increase in mining, and the increase in the quantity of ore that would be sent, owing to the reduction of 4s. 6d. per ton in the cost of carriage, would far outweigh the loss on the present traffic. I understand that at present the haulage by way of Sydney prevents the sending of a great deal of ore from the parts of the Colony referred to. It is not a question whether it should be sent to Illawarra or to Newcastle, because when the ore reaches Sydney it is then only a question of sending it 56 miles to Dapto as against about 100 miles to Newcastle.
85. Do you think that the reduced freight would mean an enormous addition to the present traffic, which would reimburse the Railway Commissioners for the loss they would sustain on the present route? Yes; that is only common sense.
86. *Mr. Watson.*] Do you know that, as far as the investigation by Mr. McDonnell Stuart went, he is of opinion that the most practicable route to connect the South Coast line with the main Southern line would leave Robertson some distance to the south of the railway? Yes; but that is only his opinion after making a flying survey lasting only three or four days, and he was nearly roasted to death when he was there, owing to intensely hot weather. I am not reflecting upon him, but it was impossible for a human being to do the work properly in such a short time.
87. The only point that seems to bear out his contention is that Robertson is 2,400 feet above the level of the South Coast line, and, at the same time, is 200 feet higher than Moss Vale or Bowral? The highest point on the Blue Mountains is 3,600 feet—that is, nearly twice as high above Penrith as Robertson is above Illawarra.
88. *Mr. Hyam.*] But there is a distance of 50 miles in reaching that height on the Western line, whereas on the Southern line there is only a distance of 20 miles? Yes; but in that distance of 20 miles the grade could be flattened out a great deal. The Macquarie Pass road was for many years thought to be impossible on an easy grade. Now, that road, which was constructed only two or three years ago, is so graded that there is not a part of it which a horse attached to a buggy cannot trot up if required. That is over a distance of only 4 miles.
89. Did not that road cost a great deal of money? Only about £5,000.
90. Did you say that you know the country pretty well between Robertson and Dapto, where the two lines would junction? I did not fix any junction.
91. I do not see where they could junction in any other place except at Kiama? I understand that my brother and a few other gentlemen have been exploring another route within the last few days—that is, between the Macquarie Valley and Jamberoo.
92. Do you not think that any railway taken from Robertson to the South Coast line, anywhere about Dapto, would cost an enormous sum of money? A portion of it would be very expensive; but that would only be for a few miles.
93. How much do you think it would cost? As I am not an engineer, I cannot answer the question.
94. Do you think that the increase of traffic would justify the construction of a railway from Bowral to the South Coast? I have no doubt at all about it, and in the national interest it should be constructed.
95. Do you advocate a line of that description? Yes. I have no personal interest or concern in the matter; I am simply speaking in the general interest. It is essential, in the general public interest, that the ores from the southern and south-western portions of the Colony should be afforded the best facilities for reaching the Illawarra coal-fields for smelting purposes.
96. When the Sydney collieries are at work, is it not likely that the ores, instead of going to Illawarra, will be treated in Sydney? That would shorten the distance; but still it would not be so short as going to Illawarra.
97. The distance of the connection with the Southern line and Illawarra would be about 45 miles? I believe it would be under 40 miles. I do not believe it would be much more than 30 miles. There is this feature to be considered in connection with the conveyance of ore—that the heavy load would always be downwards.
98. Would not this have to be considered—that there would be no loading back again, unless it might be coke? Such a thing is never known as a great volume of trade in one direction without some going in the other direction.

FRIDAY, 3 AUGUST, 1900.

[The Committee met at the Municipal Council Chambers, Bowral, at 10 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. |

ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bowral to Robertson.

William Frederick Brenning, farmer, West Kangaloon, sworn, and examined:—

W. F.
Brenning.
3 Aug., 1900.

99. *Chairman.*] How far is West Kangaloon from Bowral? A little over $9\frac{1}{2}$ miles.
100. How far is it in a direct line from the proposed railway? About $4\frac{1}{2}$ miles.
101. What is the character of the country of which West Kangaloon is the centre? The district is very fertile. We grow potatoes, and we follow the dairying industry.
102. Where is your principal market? Sydney.
103. Are many producers in the district you have named more than $9\frac{1}{2}$ miles from the Southern line? Yes.
104. What is the character of the road? Very bad in some places, and very hilly.
105. Can farmers go to and from the railway with their produce in one day? Yes; to and from Bowral.
106. What is the population of West Kangaloon? I cannot say exactly; but I think the area of the district is between 10,000 and 12,000 acres, most of which is fairly good land.
107. Are the producers handicapped by reason of the bad road to Bowral? I am certain that if a railway were constructed *via* the Sheepwash, people would grow more potatoes than they do now. Some of them would also go in for market-gardening and fruit-growing. I have a small orchard, and I have had as many as thirty cases of apples from one tree. Last year the man who has the place now obtained twenty-five cases from one tree. The land is well adapted to the growth of fruit and cabbages.
108. Is there room for extension in the way of taking up land? There is plenty of room if those who have large holdings will cut them up and let them. There is plenty of room for agriculture.
109. Would the proposed line pass through much Crown land between Bowral and Robertson? I do not think it would pass through any.
110. Do you think that the owners of the land through which the proposed line would pass would hand their land over to the Government free of cost? Some might do it; others would not.
111. What is the average value per acre of the arable land in the Kangaloon district? There has been a great reduction in its value during the last five years. If a man were forced to sell he would not get more than half of what he would have got ten years ago. I myself have paid as much as £29 an acre for land at Kangaloon.
112. Was that a special value? It was a good value, although I have had good interest from the outlay ever since.
113. Do you anticipate any serious difficulty in the way of handing over the land for railway purposes free of cost? Unfortunately, the railway does not touch any of the land at Kangaloon.
114. I am referring to the land actually required for railway purposes? The land is not so valuable along the route of the proposed line.
115. From your knowledge of the district, do you think it is likely that the estimated annual deficiency of £3,100 upon the working of the proposed railway would be wiped off within a reasonable time? If we got good seasons I think the line would eventually pay, and that it will turn out better than what is represented by the report of the Railway Commissioners.
116. The report of the Railway Commissioners stated:—

Those who advocate the construction of the line allege that the absence of progress is consequent on the difficulties experienced in getting the produce to market. No doubt the railway would afford a better means of transit, but it must be remembered that Robertson is only 14 miles from Moss Vale and 15 miles from Bowral; and, further, the district is fortunate in having good roads, though in some places of steep gradients. These roads are being steadily improved, both as regards formation and gradient, and the opening of the road over the Macquarie Pass has facilitated traffic to such an extent that goods have been carried from Sydney to Shellharbour by steamer, and thence to Robertson district by team.

Do you consider that that estimate of the character of the roads is a fair one? I think it is very fair, but it is a mistake to say the roads are good. They are very hilly, and are not so good as represented in the report. The roads from the Sheepwash to Kangaloon are very steep, and at present they are not very good. I have been a resident of Kangaloon since 1863, and I know the country very well.

117. The report admits that the district is capable of development, and goes on to say:—

The absence of railway communication cannot be said to have created the stagnation which has prevailed for the past eleven years.

? There is no doubt the drought has affected us. We have been seriously handicapped by it, but with the return of good seasons and with railway facilities the district will develop.

118. It has been pointed out that if a connection be made towards the coast from Bowral or Moss Vale, it should be made in contemplation of a further extension to the South Coast line, in order that the ore may be expeditiously and cheaply carried to the coal at the coast; an engineer was asked to make a flying exploration of the country, and he pointed out that if the line went as far as Robertson it could go no further, and an alternative route was suggested by him a little further north;—have you considered that aspect of the question? I have. In my opinion it would be a very difficult line to construct. I am not aware what ores are available. No doubt it would be nearer to get them to the coast.

119. Presuming Robertson were left, as it would be by that survey, about 4 miles from the line, would the district of Robertson and surroundings, under such circumstances, be sufficiently provided with railway communication? I hardly think so, because the country about Robertson is naturally broken and hard to get at. A mile or two out of Robertson it is very steep. I do not think such a line would improve the position of Robertson at all.

120. Such a line would go through Stockyard Swamp? I know the place well, and it would be a very difficult route. It is very rocky country—somewhat similar to Waterfall, on the Illawarra line. 121.

121. Presuming the line is constructed, as proposed, the Chief Traffic Manager has mentioned in his report that, with the prevailing rates, and local rates as far as Robertson, it would still be possible to bring goods by steamer to Shellharbour, and then to send them by road to Robertson in competition with the railway;—do you think there is any danger to be anticipated in that respect? I think not. Certainly there is communication at present by way of the Macquarie Pass Road; but it is not so good as people imagine. Parts of the mountain road are very good, but in wet weather the lower part of it is very sticky, and a team could not bring much loading up. The storekeeper at Kangaloon has tried the experiment. He got some sugar and kerosene through from there, and the wet weather coming on, the goods were lying at the wharf at Shellharbour for some time. The result is that he will get no more that way.

W. F.
Brenning.
3 Aug., 1900.

122. The report goes on to say:—

In the case of 2nd and 3rd-class goods, the saving by adopting the coastal route reaches as high as 20s. per ton.

Do you not think that that would be so serious a handicap that in regard to these classes of goods the railway would not be able to compete with the coast traffic? The mountain is too steep. I think that men who contract to draw from there would soon give it up. I think that the railway could compete at the best of times. The road is not what might be called a good one; it requires metalling right through.

123. Do you know how many teams there are on the road between Robertson and the coast? I think there is only one. The Shellharbour Steam Shipping Co. has advertised for teams to draw goods from Shellharbour to Robertson. In wet weather teams could not cross the Macquarie Rivulet. That has to be crossed three times, and there are no bridges.

124. *Mr. Shepherd.*] Has the Macquarie Pass Road been much altered during the last twelve or fourteen years? Yes; a lot of money has been spent upon it.

125. Is it zig-zagged? Yes.

126. What railway station do you use? Bowral.

127. Do you know of any Crown land in the direction to which you have been referring? No; the whole of it is alienated, and what little good land is left is water reserves.

128. Do you think it is likely that the people benefited by the proposed line would be willing to guarantee the Government against loss? That I could not say. Personally I think the estimate of the cost of construction is rather high. There are 8 miles of the line which I am certain could be constructed for less than the average which has been put down, the country being level. Those who are acquainted with the district as far as Myra Vale, know that the country is very level.

129. The estimate takes in the whole length of the proposed line, and an average is formed? Of course, that part of the line from Myra Vale to Robertson would be difficult of construction.

130. Is agriculture carried out to any extent in the district? Not to the extent to which it was carried out twenty years ago. The dairying industry is carried on now; but I have no doubt that if the district became overrun, the people, with proper facilities for getting to market, would go in for farming.

131. Is the country laid down with artificial grasses? Yes; most of it is roughed over with rye-grass and cocksbur.

132. What is the carrying capacity of the land which has not been sown, and of the land which has been sown with grasses? The Kangaloon district, in its natural state, was mostly brush land and brush forest. It had to be brushed thirty years ago and fired, and then rye-grass was sown.

133. What is its carrying capacity? Twenty years ago it carried a beast to the acre. I daresay it would carry that now if it were properly laid down with rye-grass and clover. Unfortunately, we have had to contend, of late, with an insect in the grass. Once the insect is got rid of I believe the land will carry a beast to the acre.

134. Have you had any report upon that? I think Mr. Thompson, of the Agricultural Department, reported upon it. His idea was, to put lime on the ground when the grass was sown. Personally, I think the last few dry years have caused the appearance of the insect.

135. Do you spell the land? We generally do that. We used to shut the paddocks up for two or three months. Of course spelling is of great benefit to the paddocks.

136. What proportion of the land, say, for 10 miles on each side of the line, would you class as good pastoral land? Most of it is fair pastoral land.

137. The whole of it would be fit for agriculture or pasturage? Yes.

138. *Mr. Levien.*] Has much agricultural produce been sent in to Bowral? No, only potatoes.

139. In what quantity? The last two or three years have been so very dry that not many have been sent in. I have no doubt the Railway Department could give you the full details.

140. What is the character of the rainfall? It is very good at Robertson and Kangaloon. Of course, during the last three or four years we have suffered.

141. How far would the proposed railway be from your holding? Four miles.

142. And at present you are $9\frac{1}{2}$ miles from the main line? Yes.

143. I suppose you know that in most parts of the country people are satisfied if the railway is within 15 miles of them? Yes.

144. Would you be willing to contribute towards the annual loss upon the proposed line? I would do it if the general public would do it.

145. Do you think that much of the estimated annual loss will eventually be made up? I could not say; but no doubt it would if the seasons were favourable, and the people did more cropping and grew more potatoes.

146. Do you rely principally upon potato-growing? Yes.

147. How does oaten-bay grow? It grows well; but potatoes grow better in a good season. We get about 8 tons to the acre.

148. Will the country grow maize? Good maize has been grown; but we could not compete with the Northern rivers.

149. How are you off for timber? A lot of it has been killed, and there is not much left, although there is plenty for firewood.

150. Is there no timber in the district suitable for railway sleepers? There is timber on the water reserve which would be suitable for railway construction.

151. How far is that timber from the proposed railway line? Seven or 8 miles. It is very good timber.

152. Is there any quantity of it? I would not say that there is any quantity; but there is some good box and stringy-bark.

Arthur Knox, auctioneer and farmer, Kangaloon, sworn, and examined:—

- A. Knox. 153. *Chairman.*] How long have you been at Kangaloon? Twenty years.
- 3 Aug., 1900. 154. What is the extent of your property? Two hundred acres.
155. What are you chiefly cultivating? I go in for dairying and potato growing.
156. How much land have you under potatoes? Last year I had about 10 acres.
157. What is your average crop per acre? From 5 to 8 tons in a good season.
158. What number of cattle do you run? About seventy cows.
159. Do you grow any feed for them? Yes; for the winter.
160. What kind of feed? Broadcast corn, oats, barley, and rye.
161. Do you find that these crops answer fairly well? Yes.
162. What is your average yield per cow? I have not made a calculation, but I should imagine that a cow would return about £7 to £8 per year.
163. Is there much cultivation in your neighbourhood? There has been a lot of cultivation, but, owing to the cost of transit—from 10s. to 15s. per ton—and the low prices ruling in the Sydney market, we cannot make it pay.
164. What distance do you live from Bowral? Ten miles.
165. Do you use the Bowral station? Yes.
166. What distance would you be from the proposed line? About 4½ miles.
167. So that you would still have half the distance to carry your produce, even if the proposed line were constructed? Yes.
168. What effect do you think the construction of the line would have upon the farmers generally? A good effect. At present the farmers cannot grow stuff to make it pay. I think the railway would bring people into the district. There is a lot of land which at present is almost valueless which would become of benefit. For instance, grazing flats would be turned into cabbage flats. I may state that those who grow cabbages grow from 22 to 30 tons per acre. An acre of grazing ground would, if it were utilised for cabbages, be worth a good deal in that way.
169. What is the average size of farms? The smallest is 40 acres, and they run up to 400 and 500 acres.
170. Do you think a farmer can get a fairly good living off 40 acres? Yes; from some of the rich land, through cultivation.
171. Do you carry out mixed farming in the district? Yes; but we principally go in for dairying.
172. Do the farmers, as a rule, appear to be prosperous? Yes.
173. I suppose that on nearly the whole of the farms the timber has been killed? Yes; on the farms which are using timber. There is plenty of timber on the Crown lands, about 4 miles from the proposed line, which could be used for railway purposes.
174. Have you any further evidence to offer? We consider we have a just claim to a railway, principally on account of the inconvenience of the present transit. The main roads are fairly good, but it is impossible for a farmer who lives a little way off them to load a team and get to Bowral and back in one day. At present it takes him two days, and that, and the cheap prices, prevents his farm paying. We claim that the proposed line will be a feeder of the main line. I believe that most of the farmers of the district are willing to pay local rates. I have to pay 12s. a ton in order to get my produce to Bowral, and I would willingly pay 5s. a ton to the Railway Commissioners. With reference to the question of competition by boats along the coast, I may state that I consider the amount of risk, and the transit from the coastal steamers to Robertson or Kangaloon, would be such that no storekeeper would think of sending goods that way.
175. Do you think it would be a fair thing for those who are benefited by the construction of the proposed line to contribute a certain amount towards paying off the deficiency;—supposing you are paying 12s. a ton for the carriage of goods, would you be willing to guarantee to pay to the railway to the extent of 6s. per ton? Yes; and I think most of the farmers would do so.
176. Have you mentioned that matter to any of the farmers? I have heard some of the leading men in Robertson say that they would be willing to do it.
177. Have you heard anyone object to it? No.
178. What do you do with your dairy produce? We have local creameries and central creameries in the district. We have two central creameries—one in Mittagong, and one in Robertson. We send our cream to them, and it is made into butter and sent on to Sydney.
179. Would the construction of the proposed line make any difference in the methods you adopt? Yes; I think we could send milk to Sydney. We have a cooler climate than that of the coast, and if we can get our milk away by train we can compete with any part of the Colony.
180. Do you think it will stand 80 or 90 miles railway carriage? Yes; especially as the climate is much cooler than that of the coast from which it is now sent.
181. The Railway Commissioners, referring to that point, say—
- It is claimed that with a railway a large quantity of milk would be sent to Sydney, instead of being made into butter locally, and as a consequence a large traffic would result. The experience of the Department in connection with the South Coast line shows that reliance can only be placed upon butter and cream traffic, and not to any extent upon carrying milk.
- You think the difference in the climatic conditions would place you in a position which would enable you to furnish the railway with that class of traffic? I think so.
182. The Commissioners also state that there is no doubt that the districts of Kangaloon, Burrawang, and Robertson contain a large extent of land of a rich volcanic character; but it requires manuring to produce good crops of potatoes? It does not require manure in Kangaloon.
183. Is that the general experience? Yes; very few go in for manuring on the rich land referred to.
184. Is it strong enough to do without it? Of course there are exceptions. If a man puts in half an acre of potatoes he may use a little manure; but as a general rule no manure is used.
185. *Mr. Levison.*] You state that the cost of carriage for produce is from 10s. to 15s. per ton? Yes. I may state that we are not asking for the railway to come right into Kangaloon; we are willing that it should come 4 or 5 miles from us.
186. Supposing it got within 4½ miles of you, what would be the railway freight? No more than half what it is at present by road.
187. Have you a good main road? Fairly good, although it is steep.
188. How many miles of good road have you coming into Bowral? Six or 7.
189. So that there are 3 or 4 miles of bad road? Yes.

190. Have you had any conversation with any of the landowners with a view to ascertaining whether they would give their land for railway purposes? No; I think, however, that some of the farmers would require compensation, and probably some would give it free.

A. Knox.
3 Aug., 1900.

191. Do you think the majority would require compensation? I could not say.

192. Do you think the estimated annual loss on the proposed line—£3,280—is likely to be reduced? I think it will be reduced every year. The cabbage-growing industry is quite a new industry in this district. At present they are not grown any distance away, because of the cost of carriage.

193. What do the growers realise for their cabbages per ton? £4 to £5, and they can produce 30 tons to the acre.

194. Then, how is it there are not more under crop? The industry has only been introduced lately. Very little has been done until the last three or four years. I have heard that between Bowral and Kangaloon people have realised as much as £100 per acre for cabbages.

195. What do you estimate as the profit per ton after deducting all expenses? I should say about £2.

196. And you think an enormous quantity would be grown if the proposed railway were constructed? I think so.

197. What do you estimate as the profit upon potatoes per ton, after deducting the cost of carriage and working expenses? About £2.

John Joseph Campbell, builder and contractor, Bowral, sworn, and examined:—

198. *Chairman.*] How long have you resided in this district? Thirty-four or thirty-five years.

199. Do you know the district to be served by the proposed line? Yes.

200. What reasons can you urge in support of the construction of the line? It would be a great convenience to Kangaloon and Robertson. A large quantity of material which comes into the Bowral Station has to be conveyed to Kangaloon by dray.

J. J. Campbell.
3 Aug., 1900.

201. Do you agree with the statement that the roads are fairly good? Yes.

202. So the inhabitants of the district are not much handicapped in that way? I do not think they are handicapped as regards the roads. At the same time portions of the road about Robertson are very difficult.

203. What development is likely to take place as the result of the construction of the proposed line? It will enable the people to get their goods to Bowral at less expense, and I think it will be profitable to the Railway Department.

204. In what way will the construction of the proposed line stimulate the production of the district? There will be more farming, and more produce will be raised.

205. Do you consider that on account of the absence of a railway the arable land of the district is not put to its best use? That is my opinion. The people go in for the class of produce which is the easiest to get away, namely, dairy produce. If they could get farm produce away they would go in for it.

206. Do you think the production of the district would be doubled within a few years if the line were constructed? No.

207. What is your opinion of the district, from a tourist's point of view? Bowral would naturally benefit by the construction of a railway from that point of view.

208. *Mr. Levien.*] Is much stock bred in the district? There is not much about Bowral; but there are numbers of sheep on the other side of Sutton Forest.

209. Do you think much stock would be carried on the proposed line? I could not say.

Henry Milward Smith, dairy-farmer, West Kangaloon, sworn, and examined:—

210. *Mr. Shepherd.*] How far do you live from Bowral? A little over 9 miles.

211. What is the size of your holding? 370 acres.

212. Is that considered a moderately-sized holding for that district? Yes. It includes rung lands. There are about 120 acres of inferior land included in it. We used to grow potatoes, but the seasons lately have been bad and the prices low, and there has also been difficulty in getting to market. The result has been that they have not paid.

H. M. Smith.
3 Aug., 1900.

213. What crops do you grow for cattle feed? Broadcast corn, imphi, barley, and oats.

214. Is the whole of your ground laid down with artificial grasses? All the good land is.

215. What stock have you on the property? About eighty head of dairy cattle.

216. Are you fully stocked? No; the seasons have been so bad.

217. What do you consider you could run in a good season? About a beast to the acre on the good land.

218. Have you left the timber growing on what you consider to be the inferior land? Yes, on some of it.

219. What kind of timber is it? Gum, messmate, and mountain ash.

220. Are you handicapped by your distance from a railway? Very much.

221. Do you use the Bowral railway station? Yes. Milk would be sent away very largely if we had a railway. It would be the chief product of the district.

222. Are you able to take a load in and come back the same day? Yes; by putting it on the dray the day before.

223. Do you generally take one or two loads at a time on the good road? We are on the good road. There are about 5 miles of good road, but the remainder is very indifferent. It is not metalled, and it is very hilly.

224. What is the value of the land in the neighbourhood in which you live? Originally the very best land was £30 per acre, but it has come down very much. Of course, railway communication would make a vast difference in its value.

225. But what is it valued at now? About £20 per acre.

226. Are you aware whether many people visit the Fitzroy Falls now? There are a great number during the summer months. During the five months of the year they are patronised almost every day.

227. Do you think the number of visitors would be largely increased if the railway were constructed? I am quite certain of it.

228. How far would the proposed line pass from the Fitzroy Falls? Three or 4 miles; but I am not certain.

229. Are the main roads macadamised? The road from Robertson to Moss Vale is metalled, but from Kangaloon to Bowral only one-half of it is metalled.

- H. M. Smith. 230. What do you think of the evidence which has been given regarding the guarantee of loss to the Government? I think the majority of people would be willing to contribute towards the deficiency.
- 3 Aug., 1900. 231. What does it cost you to land your produce at Bowral? As high as 15s. The average would be 10s. or 12s. per ton.
232. Then, if the railway were constructed, you would be in pocket to the extent of 7s. or 8s. per ton? I think so.
233. Do you think it would be reasonable to guarantee the Government to the extent of half your saving? Yes. It would pay us to do so, and to have the convenience.
234. Have you any idea of any other crops besides potatoes which could be grown? Any crop suitable for a cold district will grow, because the land is the best in New South Wales as far as volcanic soil is concerned. Turnips, cabbages, potatoes, peas, and beans will grow well.
235. Are swedes grown for fat stock? They are grown for household use, but not for stock at present. I imagine beetroot would also grow well, because the soil and climate are suitable for it.
236. Has wheat been grown to any extent? No; the soil is too good. It would run to stalk.
237. Do you think it would be possible to send milk away if you had a railway nearer to your holding? Yes. Formerly the milk was sent to Sydney, until the Illawarra line was opened. They sent such large quantities from there that we were knocked off. If we had a railway I should think one-half of the milk we produce would be sent away.
238. Does the milk pay better than the butter? It did in those days, and I think it would do so now.
239. Do not some of the Kangaloon farmers now send their milk to the Mittagong creamery? They send the cream there.
240. Is milk sent to Sydney from Mittagong? I think so.
241. What effect generally would the construction of the railway have upon the district served by it? It would have a wonderful effect. It would advance the district, and in a couple of years it would be a different district in every way. Large quantities of produce would be grown. I should like to refer to the question of the carriage of calves. At present the farmers kill the majority of the calves, but if we had a railway every one of them would be sent to Sydney. I may state, with regard to timber, that the small towns along the existing line consume a great amount of firewood. They have great difficulty in getting it at present. I think there would be a great amount of freight from firewood alone.
242. Do you think sufficient could be obtained from railway sleepers? There is ample in the district.

Henry Havelock Shepherd, General Secretary, Bowral to Robertson Railway Leagues, sworn, and examined:

- H. H. Shepherd. 243. *Chairman.*] Do you produce a statement from the Secretary of the Robertson Park sub-committee to the Robertson Railway League? Yes; as follows:—
- 3 Aug., 1900. The statistics have been collected under ten separate headings, and the results show that we have a population of 300, and a district area of about 14,000 acres, divided into 50 farm and dairy holdings. As a result of the farming industry, this season 250 acres have been planted with potatoes, the yield from which it is, of course, as yet, impossible to ascertain; but the soil here being well adapted to their growth, and having the expense and inconvenience of haulage to Bowral removed, potatoes would certainly be grown on an extensive scale here. Cabbage-growing is also an important industry in the district, 700 tons having been sent from here to Sydney during the three months ending 31st March, and the area occupied for the growth of this item is fast increasing.
- Our milk supply in any average good season is estimated at 3,000 gallons per day. This would not only be increased, with the facilities of rail here; but in conjunction with the other sources which the line would tap, and due consideration being given to climate and purity of water supply, &c., there is every reason to believe that this district would contribute a very important part of the best milk supply of the metropolis.
- Hay.—Though only grown for local use, 300 tons were harvested here this season.
- Fruit.—The district is particularly adapted, both in soil and climate, for the growth of all kinds of English fruits.
- Timber abounds in the outlying portions of the district, of superior quality and in great variety, including box, red and blue gum, white stringy, and iron-bark.
- Iron ore is also to be found here in abundance, and in close proximity to the proposed railway station, is easily obtainable, and likely to be of great importance.
- Stock.—As near as can be ascertained there are about 3,000 head of milking stock in the district, besides a large number of horses of all classes; and as a result of the dairying industry a very considerable number of pigs are annually fattened here.

John McPherson, dairy-farmer, Robertson Park, sworn, and examined:—

- J. McPherson. 244. *Chairman.*] How far is Robertson Park from Bowral? Six or 7 miles.
- 3 Aug., 1900. 245. Is it in the direction of the proposed railway? Yes; the railway passes partly through it.
246. Do you agree with the report of the Railway Commissioners, that the country for the first 9 miles along the route of the proposed line may be regarded as suitable for pastoral purposes? Yes; there is a lot of first-class agricultural land all round Robertson Park.
247. You say that the line goes partly through Robertson Park? Yes.
248. Can you give an idea of the cultivation which is carried on there at present? It is principally cabbages, potatoes, and the dairying industry.
249. What is the average size of the holdings at Robertson Park? From 100 to 400 acres.
250. Do you experience any disadvantage on account of the absence of a railway towards the Robertson district? To a certain extent.
251. Although you are only 6 miles away from a railway, you are at a disadvantage? Yes.
252. In what way? At present it takes us a whole day to come to Bowral with one load, whereas if we had a station at Robertson Park we could bring about four loads.
253. Does the fact that you can only carry one load a day prevent you going in for more cultivation? Not in regard to myself, but it does in regard to the majority of the people in the district.
254. What is the cost of carrying cabbages into Bowral? About 8s. per ton.
255. How many head of cattle have you? About thirty-five.
256. Do you agree with the evidence of the previous witness, to the effect that it would pay you better to send your milk to Sydney if you had the opportunity, than it does now to send your cream? Yes; the profits would be nearly double.
257. Which of the timbers in your district are suitable for railway sleepers? The red-gum, often called blue-gum.
258. Is there much of it available? Yes, on the Crown lands. Some of it is used at present for sleepers.

259. *Mr. Shepherd.*] A great many people think 20 miles from a railway is a fair distance for the cultivation of grain crops;—you are already within 6 miles of a railway, and yet you think you ought to have better facilities? We are pretty close; but our idea is that the easier we can put milk on a railway the better. We are too far from Bowral now to send milk to Sydney; it would not keep sweet.

J. McPherson.
3 Aug., 1900

260. What fruit do you grow? Principally apples.

261. What are your average potato crops? Five to 7 tons per acre.

262. *Mr. Levien.*] How many acres have you? I am a leaseholder, and have 208 acres.

263. *Chairman.*] Have you anything further to state? I think 700 tons of cabbages were sent to the railway station during three months of last season, and the growers are now putting twice as much land under cultivation as they did formerly, and with railway facilities that will be greatly extended. One of the cabbage-growers told me yesterday that he sold £200 worth of cabbages off 2 acres.

John Griffiths, farmer, Glen Quarry, sworn, and examined:—

264. *Mr. Shepherd.*] Where is Glen Quarry? Two miles from Robertson Park, or 8 miles from Bowral.

J. Griffiths.
3 Aug., 1900.

265. What is the size of your holding? 600 acres.

266. Are you cultivating any of it? About 200 acres. The rest is ringbarked.

267. How many head of cattle have you? About 100, including 70 milking cows.

268. Will not your holding carry more than that? Yes; but we have to look out for bad seasons, although we have plenty of water.

269. Do you send milk to the factories? Yes; to the Robertson Park factory.

270. What do your cows produce per annum? From £8 to £10 per cow in a good season.

271. Do you grow fodder for them? Yes. We used to grow wheat until a few years ago, when the rust came.

272. What advantage would you reap from the construction of the railway? Unless there was a station at Robertson Park I would not reap any advantage. It would be a great convenience in the matter of sending milk to Sydney.

273. Would you, under those circumstances, send milk instead of cream? Yes.

274. What is the land in the neighbourhood in which you live valued at? It was very high some years ago; but from £10 to £12 per acre would be a fair average at present.

275. Do you think that those who would be benefited by the construction of the proposed line would guarantee the Government, to a certain extent, against loss, until the line became self-supporting? I cannot say. The construction of the line would greatly improve the district, and in the course of time the traffic upon it would greatly increase.

276. What does it cost you, per ton, to deliver your produce at Bowral? We carry with our own team, and I think it would cost 7s. or 8s. per ton. I consider that a team and a man are worth 16s. a day, and you cannot do the journey in and out in less than a day, and 2 tons is a good load.

277. Of course you know that if it were carried by rail it would not cost half that, and therefore you would effect a considerable saving;—would it not pay you to guarantee to pay, say, 1s. 6d. or 2s. per ton, for carriage, until the railway became self-supporting? Yes.

278. Would you be willing to do it? Yes.

279. Do you think fruit-growing would be likely to be encouraged by the construction of the line? Yes.

280. Is 6 or 8 miles a great distance to cart fruit? No; of course there is not a great deal of it.

281. Do you think the construction of the line would induce much passenger traffic to the Fitzroy Falls and other places. A large number travel there now by coach.

282. Do you think they would use a railway in preference to buggies and coaches? Yes.

283. Have you anything further to state? A great number of cabbages have been grown in the Robertson Park district, and it pays well. 10,000 plants will grow upon one acre.

Francis Boughton Kyngdon, Bowral, sworn, and examined:—

284. *Chairman.*] Have you any statement to make? Yes; especially in regard to the cabbage crop and other crops suitable to the district:—

F. B. Kyngdon.
3 Aug., 1900.

Cabbage Culture in the Berrima District.—About five years ago Messrs. Elliott Brothers commenced to cultivate cabbage for the Sydney market, on a small area of low-lying land adjoining the Maryvale Creek, which flows into the Bong Bong River, distant 4 miles from Bowral station. The ground is subject to high floods, but these are rare, and by open-cut draining the water-table is lowered sufficiently, so that the roots of the cabbage-plant can easily reach down to it. The family had experience in cabbage culture at Burrawang, some 8 miles away. The industry is now established at Maryvale and Robertson Park, the growers there being Messrs. Elliott Brothers, T. Madden, J. Madden, M. Madden, Seahull, Symon, Menzies and Norman, J. McPherson, T. M. Smith, A. M. Smith, J. J. Wood, E. Mullett, B. Jones. The above will have under cabbage this coming season about 81 acres. The crop is marketed from Christmas to April, coming into the Sydney market when the suburban supplies are off. The climate is, moreover, an additional factor, in that the quality and flavour of the district cabbages, is superior to those quick-grown and stimulated by manures in the hot clime of Sydney.

The profits are large, for the yield is heavy—some 20 tons per acre—and the cost of cultivation is not excessive, as will be seen from the subjoined figures:—

Cost of growing, harvesting, and marketing 1 acre of cabbage—

| | £ | s. | d. |
|---|-----|----|----|
| The tilth—two ploughings, at 8s., 16s.; two harrowings, at 1s., 2s. | 0 | 18 | 0 |
| Plant seed-bed raising, preparing 2 rods of bed, 4s.; 4 oz. of seed, at 1s. 6d., 6s. | 0 | 10 | 0 |
| Planting out—four men per acre, at 4s. | 0 | 16 | 0 |
| Manure—2 cwt. fertiliser, at 6s. | 0 | 12 | 0 |
| Hand-hoing, &c. | 1 | 0 | 0 |
| Marketing (cutting and loading, per ton, 2s.; carting and putting in truck at Bowral, 8s.); yield—20 tons, at 10s. | 10 | 0 | 0 |
| Freight to Sydney—20 tons, at 7s. 1d. | 7 | 1 | 8 |
| Rent of land | 1 | 0 | 0 |
| | £21 | 17 | 8 |

| | | | |
|---|----|---|---|
| Money return per acre—20 tons, e.g. 9,000 plants, weighing 5 lb. each (450 plants to the ton), sold in Sydney at 2½d. each | 93 | 0 | 0 |
| Less cost as above | 22 | 0 | 0 |

Net profit per acre £71 0 0

The

F. B.
Kynndon.
3 Aug., 1900.

The variety most grown in the Berrima district is an introduction from America—the "Succession"—characterised by the uniformity of size and weight of each plant in a crop, a feature of considerable importance. The seed is sold at 1s. 6d. per oz., and 4 oz. suffice for an acre. The seed-bed is prepared in July. The area for the crop is prepared in August. The planting out is done in successive breadths, so as to yield a crop to be cut in succession over a series of weeks. Planting commences in October. The crop is cut from Christmas up to and through March. The land lies fallow till August. Farmers who add cabbage-growing to dairying find that the stalks and leaves left after cutting form good feed for stock, and that a catch crop can be taken off the land from April to August. The extra labour entailed by cartage to market during the season of three months is met by hiring vehicles. The charge from Robertson to Bowral is 8s. per ton, the man helping pack and load the covered railway trucks at Bowral. In marketing in Sydney the middleman is avoided. One grower has a member of the family attending a stall in Belmore Market, and others consign to a stallholder, one man finding three consignors sufficient for a stall. The losses to which the cabbage plant is liable in this district are chiefly caused by locusts. Aphis is not feared, and caterpillars are not taken into account. The favourite manure is the Sugar Company's special fertiliser, costing landed on the farm £6 per ton, and being used at the rate of 2 cwt. per acre.

There are large areas of land suitable for cabbage-culture in the neighbourhood of Robertson Park, which the contemplated railway would serve. When it is considered that 100 acres yield 2,000 tons of freight, in value about £700, and that the farmers would save 4s. per ton cartage—*e.g.*, £400 per 100 acres—it is evident that the cabbage crop is one that promises to benefit the railways to a large extent. There are other varieties of garden produce that can be sown with profit in this district. For instance, Messrs. Scahill and Wood have found pea-culture for marketing in the pod in Sydney quite as profitable as cabbage-culture, with the price 2s. 6d. per bushel. Then Brussels sprouts and cauliflower are suitable for culture in large breadth. The berry fruits are well adapted for this cold-climate district, since they need the rest in winter, such as raspberries, strawberries, gooseberries. Furthermore, celery and asparagus do well. Last year at the Consumptive Fair the Berrima district produce stall did a large business in produce, and the reputation for the butter, bacon, poultry, eggs, and minor products of the farm was astonishing. I mention this to indicate how much may be done in building up a trade from the district that the railway would serve, especially the Kangaroo Valley.

F. B. KYNGDON.

285. Do you know the acreage available for that class of cultivation? No; but it is a large one. Hundreds of acres of low lying land can be rendered sufficiently dry by open cuts.

286. Do you consider that this district offers special facilities for successful dairying, and that with the construction of the proposed line a considerable traffic will ensue to the railway in the carriage of milk? My opinion is that this cool climate makes a sweet, nutritious, and rich herbage—quite a contrast from the succulent watery herbage of the coast, which benefits the milk to this extent: that it is a richer milk, and therefore of better quality when landed in Sydney. Once upon a time the whole of the city supply of milk was derived from this district. The Illawarra line opened up very large quantities of milk from that district, and the farmers here at once went in for butter-making, so that if that trade could be regained the district would supply large quantities. My experience, when assisting the ladies to take charge of the Berrima stall at the Hospital for Consumptives' Fair, was that Berrima district butter had the highest reputation in Sydney. It was the best flavoured butter to be obtained in Sydney, and the way in which the stall was rushed by consumers was something marvellous.

287. Are you of opinion that the district would largely exceed its present output of dairy produce? The rich land is hilly land, and not very suitable for the plough; but if the farmers were to clear it more thoroughly, and rested their paddocks, so that the grasses, and particularly the native grasses, might have a chance to thrive, the dairy production of this district might be double. When they want to rest a paddock, they turn in the store cows which eat up all the roots. There is one good paddock of native grass in this district, and that is in the Bowral Cemetery, into which the cows cannot go.

288. The Railway Commissioners in their report indicate that no progress has characterised this district for the last ten or twelve years? That is correct.

289. They also state that in their opinion that is not due to the want of railway communication? The district, so far as culture goes, has not progressed. When we consider that 4 or 5 miles out the main roads are, with the exception of one or two steep pinches, excellently graded and well kept, the present railway should certainly have stimulated more dairy production. I think the district is capable of producing a great deal more butter and milk. The farmers hesitate a good deal about launching out.

290. Do you think the fact of the South Coast railway going through a rich district, and enabling the producer there to get his products speedily to market, has given this district a temporary set back? I consider that the shifting of the milk supply from this district to the Illawarra district took away the stimulus to the farmers. They have been gaining their experience in butter production in this district. Since they installed refrigerators in the two centres—Robertson and Mittagong—the quality of the butter has become extremely even all the year through, and very high. Prior to that, when summer came, the absence of cool storage rendered the butter more or less varied in flavour. That, I think, did something to prevent the expansion of this district, but now they are up-to-date in dairy appliances. I consider the district will go ahead.

291. Has any effort ever been made to combine for the purpose of catering for the export trade? No; nothing has been done in this district in the export trade in butter, because the Berrima Butter Company can sell the whole of its butter as high-class market butter in Sydney. It cannot supply all the customers; consequently there is no surplus for export. That is what Mr. Throsby told me last year.

292. When you refer to the Berrima district, do you mean all the district practically to be catered for by the railway? No; the Berrima district is that large district—Hilltop to about Exeter, and from Bullio to Robertson. The most important section is undoubtedly Robertson, although Exeter is very good. I would like to lay particular emphasis on the fact that if the railway tapped the Kangaroo Valley it would do good. The Kangaroo Valley farmers are interested in the production of butter, bacon, eggs, and poultry, and they could produce more.

293. Would the proposed railway be of advantage to the producers of the Kangaroo Valley? At present they have an outlet by team across the Cambewarra Mountains to Berry, but the Robertson railway will, the teams having to come up the mountain, bring the valley into close touch with the railway. It is a more direct railway line from Berry to Sydney, than from Robertson to Bowral, and Bowral to Sydney.

294. Have you considered the possibilities of the line, when still further extended to the South Coast line, for taking ore across the shorter distance? The question is where does the ore come from, and will not the Harden line supply the portion of the Colony which has Lithgow as a smelting centre. I do not lay much stress on the ore business, because as soon as enterprise starts smelting works at Lithgow, I have no doubt the great central ore-producing area of New South Wales will be better served there.

295. *Mr. Shepherd.*] You state that the cabbage grown is what is known as the "Succession" cabbage. Is that the only one which is being tried? It is the principal one. Other kinds have been tried, but not to much advantage.

296. Do you think it is possible that some other variety may be introduced, inasmuch as the "Succession" cabbage takes a good time to come in? We might have to compete against Botany. Of course our cabbages come in when the Botany cabbages are out, and that keeps up the market price.
297. Is it found that the "Succession" cabbage suits the climate and the soil of the district better than any other? Yes. I might point out the rapid increase of acreage from Madden's—15 acres of five years ago, to 81 acres, and that without the stimulus of a railway.
298. Have the people confined themselves entirely to the use of one description of manure? At first I understand they were using a good deal of crushed bone, but they find the fertiliser answers best. I may state that the grasshoppers have bred very largely on the swamps during the last two or three years, and they have injured the plants very much. The moral of that is to keep poultry, which will hunt the grasshoppers, and turn them into meat.
299. Has the crop been troubled with aphid? That only comes when the crops are grown too freely in succession.
300. Have the farmers gone in for growing cauliflowers? They grow well, but they have not been grown in quantity.
301. *Mr. Levien.*] Will the district grow onions? Yes; in the more friable soil, but not in the wet soil. I may mention that we were told by customers at the Consumptive Fair that they had great difficulty in getting Brussels' sprouts, and all we had were snapped up at once. Brussels' sprouts will always sell well as a high-class vegetable, for which people are willing to pay, and they grow well in this district. We have strawberry culture in this district in the few spots where water is available. If the low-lying ground was tried with strawberries, they might do well, so that if strawberry culture could be introduced on a large scale, we should think nothing of growing from 500 to 700 acres of them. In that case a railway is essential, because the strawberries have to be packed the night before, and despatched by the night train, so that they may get to Sydney the first thing in the morning. On many railways in England special trains are put on for strawberries. Cabbages go to Mittagong from one or two other growers, and they would come to Bowral if the proposed line were constructed. When we find cabbages coming past us all the way from Victoria it is evident that there is plenty of room for their cultivation here. With regard to raspberries: this is a climate which rests the raspberry cane in winter. They would be grown to a much larger extent than they are now if water were available during dry weather. With regard to the free grants of land for the purposes of a railway construction, I may state that the areas here are very small, and the fairest way—when the areas are small—is undoubtedly to pay for the land. With regard to the local train rates, there is no doubt they should be high enough to cover a deficit, and as the deficits decreased the local rates would decrease.

F. B.
Kyngdon.
3 Aug., 1900.

SATURDAY, 4 AUGUST, 1900.

[The Committee met at the Court-house, Moss Vale, at 11:45 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDBAY CRAWFORD SHEPHERD. | ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bowral to Robertson.

Charles Lindsay Nicholson, J.P., grazier, Sutton Forest, sworn, and examined:—

302. *Chairman.*] Have you any statement to make with respect to the proposal before the Committee? I think the better connection with Robertson would be from Moss Vale.
303. For what reason? The line would be less expensive to construct, and there would be a better trade.
304. On the last occasion on which the Public Works Committee investigated the proposal it seemed that, in order to secure the maximum amount of traffic available, it was necessary not to connect with Moss Vale, but with Bowral, and that a connection with Moss Vale would leave out a lot of farmers at Kangaloon? I do not think it would affect those people to any extent. The country about Kangaloon is very inaccessible.
305. Could the producers in the Kangaloon district go directly south towards a line from Bowral to Robertson? I do not think they could.
306. They would have to tap the proposed line somewhere near the Sheepwash? Yes, at Robertson Park.
307. If a line were constructed from Moss Vale to Robertson, would it be any advantage to the people of Robertson Park? They would not come to a line from Moss Vale with their produce, but would go to Bowral by road.
308. Then, so far as the people of Kangaloon and Robertson Park are concerned, they would not use the line from Moss Vale to Robertson? I think not.
309. The two lines are common up to a certain point, from Robertson to Wild's Meadows;—taking the first part of each of the lines—that is, from Moss Vale to Wild's Meadows, and Bowral to Wild's Meadows—which of the two would open up the greater amount of good land? A line from Moss Vale. There is a larger population along that route, and the holdings are more numerous.
310. What is the character of the land upon the two routes as far as Wild's Meadows? I think the land from Moss Vale to Wild's Meadows is fair, good, and very good.
311. Which of the districts would have the most good land—Kangaloon and Robertson Park together, or the district between Moss Vale and Wild's Meadows? I think the largest extent would be between Moss Vale and Wild's Meadows.
312. Has there been any development in the amount of production between Moss Vale and Wild's Meadows? Yes.
313. We have had evidence that 700 tons of cabbages came from the Robertson Park district in three months;—has any similar development taken place here? I know that hundreds of tons of cabbages go from Moss Vale Station.

C. L.
Nicholson,
J.P.
4 Aug., 1900.

C. L.
Nicholson,
J.P.
4 Aug., 1900.

314. Is there any other reason you can urge in support of the Moss Vale connection as against the Bowral connection? The chief advantage of the Moss Vale to Robertson connection, is that it would be a feeder for the south country—Goulburn, Crookwell, Tumut, and other outlying places. There is a large consumption of flour, bran, corn, and lucerne hay, which comes south, and is taken off here and forwarded to the Robertson district.

315. In which direction is the maximum amount of traffic sent to the Robertson district—from Sydney or from the districts you have mentioned? I think the bulk would come from Goulburn.

316. You think that the extra haulage of the Bowral connection would be a disadvantage to that connection? Yes.

317. With respect to traffic which must necessarily come from Sydney, which of the two connections offers the best prospects from a railway point of view? It would only mean a difference of 3 miles in favour of the Bowral connection. The passenger traffic between Moss Vale and Robertson is a large item. The District Court is held at Moss Vale, and there is a considerable amount of traffic from Robertson to Moss Vale. The jurymen and others must come in three or four times a year.

318. *Mr. Shepherd.*] Where are the vegetable gardens situated about Moss Vale? In various spots. Some of them are right in the town.

319. We had evidence at Bowral to show that there were 50 acres of cabbages between Bowral and Robertson? There may be more than half that between Moss Vale and Robertson.

320. Do not the farmers grow forage for their stock? Only green forage.

321. Have most of the farmers cultivation areas between Moss Vale and Robertson? Yes.

322. What do they chiefly produce? I do not think the production is very large on either route, so far as hay is concerned. Potatoes are grown largely on both routes. Turnips and other vegetables are also grown.

323. Are swedes for cattle grown to any extent? A great number are grown, and I think they are sent to Sydney.

324. Does the district appear to be in a flourishing financial condition? I think its financial condition has very much improved during the last five or six years, and it is still improving.

325. Has there been any increase in the laying down of pastoral grass or in the cultivation of potatoes? There has been a large and gradual increase. Dairying has gone up by leaps and bounds, and the growth of hay and potatoes is coming largely to the front again, which it has not done for thirty years.

326. Do you think that the annual deficiency on the working of a railway from Moss Vale to Robertson would be likely to be soon wiped out if the line were constructed? I have no doubt about it. Everything is on the upward grade now, and people have got their properties more securely fixed than they were before. I also think that families are now more permanently settled on the land, whereas, when the estimate showing the annual deficiency on a line from Moss Vale to Robertson was made eleven years ago, they were in an uncertain condition. The settlers, for instance, had not become settled.

327. Do you think the majority of the free-selectors have paid off? I do not think so; but they have become established, and I think they are more satisfied and will stay. The soil is good and the surroundings are good.

328. *Chairman.*] The length of a line from Moss Vale to Robertson would be 14 miles;—do you think the people who would be served by it suffer any great disadvantage at present, by reason of being 14 miles from a railway? Yes; the roads are bad, and it is almost impossible to keep them in order.

329. In a report, which we have received from the Public Works Department, it is stated—

With respect to the road from Moss Vale to Robertson, towards Macquarie Pass, it is metalled throughout, the surface is in good condition, and I consider it one of the best roads in the district to travel on.

Do you agree with that statement? It is a road which frequently and easily gets out of repair. Perhaps, when that report was written, the road was in good condition.

330. A calculation which has been made in regard to the traffic is as follows:—

The through traffic from Robertson does not exceed 18 tons per week, and 3 tons from Myra Vale and Burrawang each. The return traffic, in good seasons, is considerably less than one half this; but in dry years, when produce has to be bought, it will equal the outward quantity.

Do you think an amount of traffic of that kind would justify the construction of a railway? That is a question which I do not care to answer.

331. Do you think the prospects of a railway from Moss Vale to Robertson depend upon a considerably increased development of the district, or does the present state of the district justify railway construction? I can scarcely answer the question, because I do not know what justification there is for railways in many places; but I think the district ought to have as fair a show as many other districts in which railways are being constructed.

332. Do you think the efforts of the producers of the district towards greater development have been kept back owing to the want of a railway? I think a great deal more produce would be grown if the line were constructed.

333. What is your opinion of the prospects of the line from a tourists' point of view? I think it would lead to a larger passenger traffic.

334. *Mr. Levien.*] Do you think the owners of land through which a line from Moss Vale to Robertson would pass would give the land required for railway purposes free of charge? I think so.

335. Do you think they would contribute towards the annual loss on the line? No; I for one would not.

336. Do you agree with this statement:—

The proposed line will serve a larger area than the Moss Vale-Robertson line, which was under consideration some eleven years ago; but in the interval little or no progress has been made in the district.

? No; I think there has been a large amount of progress in the district.

337. Supposing you are paying 15s. a ton for delivering produce at the railway station, and the construction of the line reduces that freight to about one-half for the sake of getting a railway, would it not pay you to guarantee one-half of what you would gain? No.

338. Would it not be a saving to the farmers, even if they did it? Yes; if they could secure their customers. Personally, I do not like the idea at all.

Thomas William Lackey, J.P., grazier, Moss Vale, sworn, and examined:—

339. *Mr. Shepherd.*] Where is your property situated? I have a property between Moss Vale and Robertson, about 4½ miles from Moss Vale. I know every yard of both routes. T.W. Lackey, J.P.
340. What is the size of your holding between Moss Vale and Robertson? 500 acres. I am farming upon it. 4 Aug., 1900.
341. What extent have you under crop? About 50 acres. I do a little dairying, and grow potatoes and fruit.
342. Are you satisfied with the results? Thoroughly.
343. Would a railway assist you to any great extent? Very great.
344. What would be a fair distance from a railway station to successfully carry on dairying and farming operations? I could do it where I am situated—4½ miles away. I am fairly well served already.
345. How far would a line from Moss Vale go through your property? It would go right through.
346. Will you state your reasons for preferring the Moss Vale connection to the Bowral connection? The population is greater between Moss Vale and Myra Vale than it is between Bowral and Myra Vale. The holdings are smaller and more productive. Forty tons of cabbages per week are delivered at the Moss Vale railway station from the parish of Yarrunga.
347. Is that an average all the year round? Yes. The Moss Vale route would get the Kangaroo Valley traffic, and that is pretty good. The land between Moss Vale and Myra is much better than it is between Bowral and Myra Vale.
348. How far is Myra Vale out? Nine miles from Moss Vale. The land between Moss Vale and Robertson is better, and it is occupied by small holdings, which, I think, are more productive than the larger holdings. Upon the small holdings they go in for cabbage-growing, which they do not do upon the larger holdings. The population is greater on the Moss Vale route than it is on the Bowral route.
349. Are there many large holdings between Moss Vale and Robertson? No; the largest is Mr. Gilchrist's property, which is close to Moss Vale; the area of that is about 4,000 acres. I produce statements which have been made by various farmers who have consented to give their land for the purposes of railway construction:—
- I, *T. W. Lackey*, of Moss Vale, hereby agree that if the proposed railway from Moss Vale to Robertson is made by the Bell route that I will give the Government the necessary land for the said railway to pass through my land.
Dated this 15th day of May, 1900. T. W. LACKEY.
Witness—HERBERT W. BLEASE.
- I, *James Jefferis*, of Adelaide, hereby agree that if the proposed railway from Moss Vale to Robertson is made by the Bell route that I will give the Government the necessary land for the said railway to pass through my land.
Dated this 22nd day of May, 1900. JAS. JEFFERIS.
Witness—MARIAN JEFFERIS.
- I, *Alfred Baxter*, of Myra Vale, hereby agree that if the proposed railway from Moss Vale to Robertson is made by the Bell route, that I will give the Government the necessary land for the said railway to pass through my land, providing the majority of landowners agree.
Dated this 22nd day of May, 1900. ALF. BAXTER.
Witness—HERBERT W. BLEASE, Law Clerk, Moss Vale.
- I, *Henry Moore*, of Myra Vale, hereby agree that if the proposed railway from Moss Vale to Robertson is made by the Bell route, that I will give the Government the necessary land for the said railway to pass through my land.
Dated this 10th day of May, 1900. H. MOORE.
Witness—HERBERT W. BLEASE, Moss Vale.
- I, *M. Moore*, of Myra Vale, hereby agree that if the proposed railway from Moss Vale to Robertson is made by the Bell route, that I will give the Government the necessary land for the said railway to pass through my land. Buildings not included.
Dated this 10th day of May, 1900. M. MOORE, Myra Vale.
Witness—T. W. LACKEY.
- I think I shall be within bounds if I say that none of these holdings are over 500 acres in extent.
350. What effect generally would a railway have upon the district between Moss Vale and Robertson? There is a good road from Moss Vale to Robertson, but the back roads, along which the people are producing, are in a bad state, and in the winter time they cannot get out. Farmers out there whom I know of are growing cabbages, and are making £120 a year per acre out of them. That remark applies to places away from the main road. They have good soil, but bad roads before they can get upon the main road. In some instances they have to travel 4 miles before getting to the main road.
351. Has nothing been spent upon the by-roads? Yes; but it is not sufficient to keep them in repair—they are only metalled in patches. I think the construction of a line from Moss Vale to Robertson will assist the main trunk line considerably. The greater part of the produce which goes to Robertson comes from the south. Bran is greatly consumed in the Robertson district, and that is procured at Murrumburrah and Goulburn.
352. Is much milk brought into Moss Vale now? No; but a good deal of cream is brought in. People are now going in for their own separators.
353. Do you think the construction of a railway would induce people to send milk to Sydney instead of cream? Yes.
354. Do you think a connection between the South Coast line and Robertson would be feasible? Yes.
355. At what point? Albion Park.
356. Could a good grade be obtained from Albion Park? It would have to be tunnelled, but the distance is not great.
357. Do you think that would be of any assistance to the proposed line? Yes; because the minerals which will go to the smelting works would be taken off at Moss Vale, and that would save considerable carriage.
358. Do you think the producers in the Kangaroo Valley would be accommodated by a line from Bowral to Robertson? No.

Andrew Delfosse Badgery, J.P., auctioneer, Sutton Forest, sworn, and examined:—

359. *Chairman.*] Have you any statement to make concerning the proposed railway? I do not think you would be justified in constructing a line unless you considered the Kangaroo Valley, which is one of the best producing districts we have. The line which would catch that traffic would be the better of the two. I know each farm from Bowral to Kangaloon, and on the left of Kangaloon we soon run into poor country. A. D. Badgery, J.P. 4 Aug., 1900. 360.

A. D. Badgery, J.P.
4 Aug., 1900.

360. Which of the two routes intersects the more good land? I think the better land is on the Bowral route for a few miles; but I do not know where it is proposed to cross the Shipley Swamp. If it is done at the Sheepwash you will be a long distance from the Kangaroo Valley traffic. I think that traffic should come to the water-falls, and from there down to the head of Kelly's Creek.

361. You think the Kangaroo Valley traffic is sufficiently important to be a determining factor as to which line should be constructed? In my opinion it is. I may state with regard to fodder that we usually grow sufficient for our requirements. Of course, during the drought, we had to import it. My opinion is that the Wingecarribee Swamp will be a great bugbear to the route from Bowral. I understand that a number of the settlers in the Kangaroo Valley send a portion of their produce to Berry.

Thomas Oatley, Acting Road Superintendent, Moss Vale, sworn, and examined:—

T. Oatley.
4 Aug., 1900.

362. *Chairman*] Can you give a general idea of the character of the road from Moss Vale to Robertson? It is a good metalled road throughout.

363. Is it much affected by heavy weather? No. It has been metalled for some years now. The gradients are easy. Up to the 9 miles 38 chains point there is nothing steeper than 1 in 26; that is excluding the municipality.

364. How far does the municipality run out? Not quite 4 miles. Some of the gradients are as flat as 1 in 1,100. Between the 9 miles 38 chains and the 10 miles 36 chains the present grade is 1 in 17, and 1 in 15. A deviation was proposed, but it was opposed by the residents. Heavy cuttings and fillings would give a gradient of 1 in 20. The worst grade on the whole length is between the 10 miles 36 chains and the 10 miles 45 chains.

365. Can you give an idea of the annual cost of the up-keep of the road? It is 13 miles and 60 chains from one post office to the other, and we spend £520 per year upon it.

366. What is the general trend of the Kangaroo Valley traffic at present? It does not touch the Moss Vale to Robertson road until it junctions within the municipality.

367. Would the construction of a line from Moss Vale enable the producers to reach the railway more easily than they do at present? Yes.

368. At what point would they strike the old survey from Moss Vale to Robertson? At Myra Vale. There has been a trial survey from Myra Vale into Kangaroo Valley.

369. How far is Myra Vale from Moss Vale? Between 10 and 11 miles.

370. How much nearer would the construction of a Moss Vale-Robertson line put the Kangaroo Valley people to a railway;—could they get direct from the Kangaroo Valley to the nearest point of a Moss Vale-Robertson line? Yes. It would be a saving of 7 or 8 miles.

371. Would the road require much formation to enable them to get to the nearest point? No. There is a road formed right through from the Kangaroo Valley to the Moss Vale-Myra Vale road.

372. Then the construction of the line would be of considerable advantage to those people? Yes.

373. How do the roads between Moss Vale and Robertson compare with those between Bowral and Robertson? After you get 7 miles out from Bowral the gradients are bad. In fact, deviations are proposed all along through Kangaloon to Robertson.

374. *Mr. Levien*.] Can you say how much is spent on the Bowral to Robertson road per annum? £600.

Herbert Williamson Blease, Secretary, Moss Vale Committee, Bowral to Robertson Railway, Moss Vale, sworn, and examined:—

H. W. Blease.
4 Aug., 1900.

375. *Mr. Shepherd*.] How long have you been in Moss Vale? Three years.

376. Can you describe the country from Moss Vale to Robertson? The line would go through a valley winding round the foot of most of the hills, until it gets up to Myra Vale, where the other line from Bowral to Robertson is supposed to join. I know the portion of the line—from Bowral and Moss Vale to Myra Vale—that is where the junction is.

377. What is the character of the country? The land from Moss Vale to Myra Vale is first-class for market gardening. It is well sheltered. Along the Moss Vale route there are valleys in which there are large tracts of land, which are well sheltered, and on which vegetables can be grown both in winter and summer. The farmers, however, have not been growing winter vegetables, because there have been no means of getting them to the railway. The only road which they could follow is what is called the Falls Road, and in the winter it is impassable in places.

378. What sort of country is there between Bowral and Myra Vale? It is not so much sheltered as the other; it is more open and more fit for pasturage than for agriculture. There is only one part of it in which they seem to succeed in getting vegetables to grow, whereas there is land all the way through from Moss Vale which could be used for that purpose.

379. What extent of land is there in the spot you speak of on the Bowral route? I know of 70 or 80 acres in one lot which seem to be growing well. Several farmers on the Moss Vale route tell me they grow the vegetables, but it kills them to bring them in. It takes them a whole day to bring in half a ton. One gentleman, who stated that he would give his land free, told me that a short time ago.

380. What distance does he live from Moss Vale? Between 9 and 10 miles.

381. Taking the roads and the character of the country into consideration, what would be a fair distance from a railway station to successfully carry on vegetable gardening? Three to 4 miles. The supply of the Sydney market at this time of the year is principally from Victoria; but we can grow all the vegetables required for the Sydney market here. I know of one man who had 160 bushels of peas from an acre of land, and they are worth 5s. a bushel. All the small farmers would grow vegetables if they could get them to market. The same remark applies to cattle. We have large sales of cattle in Moss Vale, and the principal purchasers are the dealers, who give a low price. We cannot drive two or three cattle to a railway station.

382. Do you mean to say that you cannot drive cattle a distance of 10 or 12 miles? During some parts of the year it would take a whole day to do it.

383. We have had evidence to show that there are 80 acres of vegetables being successfully grown at Mary Vale, 4½ miles from Bowral;—have you anything to compare with that between Moss Vale and Myra Vale? I do not think there is a single place where they are growing such a quantity in one lot; but there is fully that, and more, along the route of the line. In a good season something like 60 tons a week go from Moss Vale.

384. Are there consignments every week throughout the year? I do not think so.
385. During what months are there consignments of vegetables to Sydney? They come in from December to about the end of May. Of course, they can grow them, and would bring them in, in the winter if they had the railway to help them.
386. Is fruit being grown to any extent between Moss Vale and Robertson? Yes; a great number of apples and cherries are grown, and they are beginning to cultivate strawberries, raspberries, and gooseberries.
387. Do you think the construction of a line to Robertson would largely increase the cultivation of land for industries of that kind? I am sure it would double it.
388. Is a large portion of the country laid down with artificial grasses? A portion is, at Robertson itself.
389. Would there be sufficient timber on the route for railway sleepers? Yes.
390. Do you think the estimated deficiency on a line from Moss Vale to Robertson would be wiped out within a reasonable time? Yes; I do not think the estimate you have, of eleven years ago, represents anything like what the traffic would be at present, and it would get better every year. Farms which I know of, which have been vacant for several years, have all been let during the last year. There is a general improvement all along.
391. What is your opinion about the Bowral to Robertson district? The proposed line goes through land where there is very little, if any, population until it comes to the junction of Myra Vale. I have not been here sufficiently long to tell what progress has been made there; but about Bowral itself there are more empty houses than in any place in which I have ever been. It has been over built. As far as Kangaloon is concerned, I do not think you would find one farmer out of twenty who would venture to bring his goods to the Sheepwash Station. It is the worst road in the neighbourhood. The natural outlook for the Kangaloon people is to Robertson.
392. If a line were constructed from Moss Vale to Robertson, would the Kangaloon and Robertson Park people use it? Not the Robertson Park people, but the Kangaloon people would use it at Robertson.
393. Have you any idea of the number of tourists leaving Bowral and Moss Vale for the various sights in the district? I am often at the Fitzroy Falls, and for one conveyance from Bowral you will see three from Moss Vale.
394. Do you think the number of visitors to these places would be largely increased if a railway were constructed? I am sure it would. It is very expensive to go to them by coach.
395. Then you think the passenger traffic may be looked upon as a fair asset for a railway? A very large one. You have to pay 15s. to £1 for a conveyance to Fitzroy Falls, and it is a heavy tax on a great number of people.
396. What is your opinion about connection with the South Coast line from Robertson? I think it would eventually be one of the best paying lines in the country. It would save the carriage of all the fluxing stone which will go right through to Dapto.
397. Where do you think the connection ought to be made? Somewhere near Albion Park.
398. Have you consulted with many people with regard to the line? Yes.
399. What do you think the feeling is in regard to contributing land gratuitously for the proposed construction of a line? There would be few, if any, opposed to it.
400. Do you think it would be fair to ask those who are benefited by a line to guarantee, not the whole lot, but a portion of the loss—say one-half? I do not think it would be fair to put it in that way; but I think it would be fair to say to the people that they must pay 10 to 20 per cent. on the amount of the freight they pay, in case there is a deficiency at the end of twelve months. I do not see why there should be any objection to that as long as they save money by it.
401. *Chairman.*] Do you think the ore-carrying aspect of the question is of sufficient importance to warrant the district of Robertson being left some 3 or 4 miles to the south of any proposed connection with the South Coast line, or do you think the main element to be considered is the development of the district? I think the main element to be considered is the development of the district.

Henry Bailey, railway station-master, Moss Vale, sworn, and examined:—

402. *Chairman.*] How long have you resided at Moss Vale? Nine years. Assuming that it is desirable to build a railway, the evidence I desire to give is simply as to the rival claims of Moss Vale as against Bowral, from a junction point of view.
403. Do you favour a connection with Moss Vale? Yes. One of the reasons is, that time is money now-a-days, and every passenger travelling from Robertson to the southward, or from the south to Robertson, would save thirty-five to forty minutes' journey by travelling *via* Moss Vale as against Bowral. That is because the journey from Moss Vale to Bowral occupies fifteen minutes, and all the trains stay at Moss Vale from twenty to twenty-five minutes for refreshments, making thirty-five to forty minutes difference between Moss Vale and Bowral.
404. How would that apply to the people coming up from Sydney when the Bowral route would be 3 miles shorter? They would not have the additional journey of from twelve to fifteen minutes from Bowral to Moss Vale, and they would not be handicapped with the twenty to twenty-five minutes' wait for refreshments which the up-passengers experience.
405. What amount of cabbages come to Moss Vale station to be sent away? The season lasts from three to four months, and during that time we are loading from 40 to 50 tons per week. We do not receive many peas. The two principal items of traffic in connection with the Robertson-Burrawang-Myra Vale district are cabbages, cauliflowers, butter, and cream.
406. It has been stated that if a line be constructed through this dairying district, people will be able to send milk to Sydney? I think it is purely a matter of choice with the producer as to whether he prefers to send his produce in as milk or butter. Everything depends on the state of the market.
407. Can you state where the greater number of cabbages and cauliflowers come from? The neighbourhood of Burrawang and Myra Vale contribute the larger portion. There are several reasons why the junction should be at Moss Vale. The Railway Commissioners have ample land here for the purpose, and that I do not think they have at Bowral. We have about 17 acres of land available for junction purposes, for making the necessary connections, and sheds. In establishing a junction it means the building

H. W. Blease.
4 Aug., 1900.

H. Bailey.
4 Aug., 1900.

H. Bailey. building of conveniences for watering engines, turning engines, and stabling stock and engines, and all that we have at Moss Vale. We have an abundant water supply, with the necessary connections for watering ten or a dozen engines, if necessary. In addition, we also have a turn-table, which is absolutely necessary. It is contrary to all railway law to run engines tender first. If you make a connection at Bowral you must incur a large expenditure for turn-tables and water, or you must have a fixed annual expenditure by running the engines to Moss Vale for turning purposes, which means a waste run of 10 or 12 miles.

4 Aug., 1900.

408. *Mr. Shepherd.*] It has been stated that there is an average of 40 tons of cabbage per week for the whole year round sent to Sydney from Moss Vale? That is incorrect. It is correct, so far as the season is concerned, which lasts three or four months. The season might extend over that period; but it would not maintain that average.

409. What amount of produce comes from the Moss Vale station from Kangaroo Valley? There is a large traffic. Teams travel to and fro twice a week, and carry flour and other produce. I do not think this traffic would work to Bowral station if the junction were there instead of at Moss Vale.

John Cullen, farmer, Moss Vale, sworn, and examined:—

J. Cullen. 410. *Mr. Shepherd.*] How far is your farm from Moss Vale? Four miles; close to the route between Moss Vale and Robertson.

4 Aug., 1900. 411. What is the extent of your farm? About 1,100 acres. I carry it on as a dairy farm. I also cultivate a little. On one occasion I cultivated 80 acres, and if I had facilities for taking my produce to market I would cultivate more.

412. How long have you had your farm? Some of it for seven years, and other portions for three years.

413. Is the whole of it improved? Yes; to a certain extent. About 50 acres of it have been laid down with artificial grasses, and it carries at present about 150 head of cattle. I have about 300 acres fit for cultivation.

414. What advantage would you derive from the construction of a railway from Moss Vale to Robertson? It is impossible for me to say, because I would cultivate about three times as much as I have been doing.

415. What is a fair distance for a farmer to carry produce to a railway station? Two or 3 miles; so long as he can go there and back in one day. I consider that a line from Moss Vale would pay better than a line from Bowral to Robertson, and would be cheaper to construct.

416. Is the land better from Moss Vale to the Sheepwash than it is from Bowral to the Sheepwash? I think so.

417. Upon which route is most cultivation being carried on? Between Moss Vale and Robertson.

John Alexander Badgery, grazier, near Moss Vale, sworn, and examined:—

J. A. Badgery. 418. *Chairman.*] Where is your land situated? About 7 miles south of Moss Vale.

4 Aug., 1900. 419. Can you say that the district towards Robertson has been retarded in its development by want of railway communication? I think so. If people had a railway to their doors it would enable them to produce more.

420. What is your opinion of the capabilities of the district? A great deal of it is excellent land. I look upon it as a potato-growing and dairying country. It is not a wheat-growing country.

421. Can you offer any opinion as to the respective merits of the rival routes? I do not think there is any doubt that the route from Moss Vale is the more desirable. It passes through better country, and it would tap the Kangaroo Valley.

422. Do you think the Kangaroo Valley is of sufficient importance to justify the construction of a railway, taking into consideration other facts? It would greatly assist in making the line pay.

423. Do you think there is a reasonable prospect of the large annual deficiency which would be incurred by constructing a line from Moss Vale to Robertson being overcome in a few years? I think there is.

424. The proposed line from Bowral to Robertson would, according to the Railway Commissioners, serve a larger area of country and more people than would the Moss Vale connection? I do not think it would.

425. Would the people of East and West Kangaloon be able to avail themselves of a railway from Moss Vale to Robertson? I hardly think so. They could tap the railway nearer than by coming to Bowral, but it would hardly serve them—no more than going out from Bowral would serve the Kangaroo Valley people.

Henry William Taylor, Mayor, Moss Vale, sworn, and examined:—

H. W. Taylor. 426. *Chairman.*] How long have you resided in the Moss Vale district? Sixty-two years.

4 Aug., 1900. 427. Have you any statement to make as to the comparative merits of the two lines under consideration? I may mention that the Bowral to Robertson line will run for 2 miles in touch with the main line into Burradoo. The southern end of this district—out to Yarrunga and the Kangaroo Valley River—is a large and important district, trade of which would come upon the Moss Vale line. A great portion of the produce is sold for what it will fetch. I have bought potatoes at 30s. a ton, because the people cannot afford to bring them in and send them to Sydney.

428. How far south would that district extend from the line? It goes through Yarrunga to the junction of the Kangaroo River, and what I might call the Bundanoon Creek. There is an enormous junk of land there—some hundreds of thousands of acres—the greater portion of which is Government land. It is heavily timbered, and is full of iron deposits and kerosene shale.

429. Would the whole of the country be within 20 miles of the proposed Moss Vale connection? It would be within less. I do not think it is more than 12 to 14 miles across.

430. Can you say why it has not been taken up and developed? The reason the coal has not been taken up is because there have been no means of transit. I should like to know the ultimate intention of the Railway Commissioners as to carrying the line through to the South Coast. A lot of produce is brought to the Goulburn district, which comes here and goes out to the Wingecarribee district.

431. Do you think there is as much land suitable for cabbage cultivation along the Moss Vale-Robertson route, as along the Bowral-Robertson route? Yes. There is also an amount of timber suitable for sleepers.

sleepers. If the line goes from Moss Vale there will be a fair traffic to the Waterfalls. At the southern end of this district there are a number of small selectors who are trying to improve their holdings, and it is only reasonable and fair that they should be encouraged. I believe that if the line be constructed it will eventually pay. There are large deposits of coal about the Waterfalls, and there is any amount of timber.

H. W. Taylor.
4 Aug., 1900.

432. Do you think there are more selectors upon the land now than there have been during recent years? The land is always being taken up.

433. With regard to the connection with the South Coast line, if, as we are informed, it is impossible to get past Robertson to the South Coast line, would you prefer to see a line starting from Moss Vale or Bowral, leaving Robertson entirely out? No; I think Robertson has a prior claim.

434. *Mr. Shepherd.*] Do you think the farmers on a line from Moss Vale to Robertson would give up a portion of their land free for the purpose of railway construction? I believe the greater number between Moss Vale and Myra Vale would give it free, but I do not think they will do so between Myra Vale and Robertson. Most of the selectors in the Wingecarribee district have taken up their land under the old Robertson Act, and they have only paid 5s. an acre on it; therefore, the cost of resumption is not likely to be large. If the Government resume the land they will only have to pay the 5s. per acre, and the value of the improvements.

435. Do you think it is likely that those who will be benefited by the line will guarantee a portion of the loss? The difficulty can be got over by the enforcement of differential rates.

MONDAY, 6 AUGUST, 1900.

[The Committee met at the Court-house, Robertson, at 10 30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESEY CRAWFORD SHEPHERD. | ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bowral to Robertson.

William Rutter Hindmarsh, junr., farmer, Robertson, sworn, and examined:—

436. *Chairman.*] How long have you been in the district? Eighteen years.

437. Can you give any idea of the extent of territory in the Robertson district, and the amount of products to be derived from it in case the railway is extended to Robertson? We have 50,000 acres of rich chocolate soil, besides second and third class lands. That includes from the edge of the mountain to the other side of Burrawang.

W. R.
Hindmarsh,
junr.
6 Aug., 1900.

438. What is the average carrying capacity of the best land in the district which the railway would serve? There are over 9,000 milk cows, and between 2,000 and 3,000 ordinary cattle.

439. How many factories are there in the district from which you draw these statistics? Eight.

440. Can you give a general idea of the amount of dairy produce sent from that district? In 1896, 1,250,000 lb. of butter were made.

441. It has been stated that the construction of the railway would alter the character of the dairying trade in this way: that where it does not pay to send milk to Sydney it would pay if you had a railway? I agree with that statement. The factories and private dairymen would send milk. They produce 3,000,000 gallons a year, and if a quarter of that went to Sydney it would amount to an annual income of £2,425 to the railway. This is a cool climate, and the milk would keep well. The cattle in this district are healthier than those on the coast, from which Sydney at present gets its supply.

442. What is the amount of cultivation carried on in the area to which you refer? There are over 3,000 acres under crop. The usual crops at present are grown for the maintenance of the cattle—such as broadcast corn, oats, and potatoes. I do not think any district in the Colony can grow better potatoes than this. The freights, however, are so heavy that it does not pay to send them to Sydney; in fact, they are often given to the cows and pigs.

443. What is the freight by road from Robertson to Bowral for such produce? From Robertson to Moss Vale the charge is 10s. to 15s. a ton.

444. Does that amount of freight debar cultivators from going in for that class of crop? Yes. If a man had a crop of 5 to 6 tons of potatoes to the acre, and he only had to pay 5s. a ton for freight, it would mean a profit—about 25s. to the acre.

445. Are there any disadvantages under which you labour on account of the absence of a railway? Yes. I think the passenger traffic labours under disadvantages. There are no regular conveyances on the road from Moss Vale or Bowral. Another industry of the district is the cabbage-growing industry, which has suffered very much from the want of facilities to get to market. At present we have in the district over 100 acres under cabbages, and if we had facilities for getting to market that would be doubled. There is any amount of land which is not used for growing potatoes which would grow cabbages successfully.

446. How far do you think a man should be from a railway in order to successfully carry out that kind of cultivation? If he is 3 or 4 miles away he can do it successfully.

447. Is it not a crop which yields very heavily? Yes. Thirty tons is considered a fair crop. If we had 200 acres under cabbages they would yield 6,000 tons a year, which is a low estimate. Some people consider we would have 300 acres under cultivation within twelve months of the railway being constructed.

448. Would freight as high as 10s. a ton be a serious handicap as far as the successful growing of cabbages is concerned? I think it would. If we had to pay 5s. instead of 10s. it would mean a difference of £7 10s. per acre.

449. What is the average price per ton for cabbages? They generally run from 3s. to 7s. 6d. a dozen. One man, a few miles from Robertson, has made over £300 off 1 acre; but that year he got as much

W. R.
Hindmarsh,
junr.
6 Aug., 1900.

as 7s. 6d. a dozen for his cabbages. At 1s. a dozen an acre will bring £45 7s. 6d. I reckon that if we were allowed credit for what we should put upon the main line, the cabbage industry would contribute to the railway revenue £2,000 per annum.

450. Is the road from Bowral to Robertson a good one? Yes.

451. We have been informed that the construction of a railway will stimulate the calf industry,—what are the conditions which prevent you getting calves to market now? If calves have to travel 14 miles on a hard metalled road, they will become footsore before coming to the train, and they will scarcely be able to stand when trucked. If they could be put into trucks here they would go down fresh. As it is, a great number of calves are killed.

452. What number of calves would you get away per annum if the railway were extended? About 50 per cent., or 4,000 calves;—that is, allowing 50 per cent. to be destroyed or to die.

453. Do you think that if a railway were constructed to Robertson the whole of the trade which now goes to Moss Vale or Shellharbour would come over that railway? I think it would. A great deal has been made of the Shellharbour route by the Railway Commissioners; but during the last few months it has been almost impossible to get up there at all with a load.

454. What is your opinion of this statement by Mr. Harper, the Chief Traffic Manager:—

Heavy loading, such as sugar, iron, wire, &c., can be landed at Robertson, *via* Shellharbour, for 30s. per ton, that being 10s. the steamer freight and 20s. the road freight. The same class of loading from Sydney to Bowral would cost 29s. 7d. per ton in truck loads, and in smaller quantities 36s. 5d. per ton. In the case of second and third-class goods, the saving in adopting the coastal route reaching as high as 20s. per ton, or 35 per cent.

From that he infers that even if you had a railway to Robertson, in second and third-class goods the coastal route would successfully compete with it? I do not think it. We get regular rains, and the roads become so bad that it is impossible for the stuff to come up. I know that on one occasion there was some stuff there, which came from Sydney, and it had to be sold there, because it could not be brought here.

455. Then you think that it is only in dry seasons that the coastal route would successfully compete with the proposed railway? That is all.

456. *Mr. Shepherd.*] What is the distance to the edge of the mountain? Two and a half miles.

457. Is it all good land to the edge of the mountain? Yes.

458. What extent of land have you on the other side of the proposed line which you think the line would serve? It extends to Kangaloon on the north side, and to the parish of Yarrawa on the southern side.

459. What weight could you put on a dray, if you were sending goods to Moss Vale? From 1 ton to 1½ ton on a two-horse dray.

460. Would it not pay you better to get a good waggon which would carry 5 to 6 tons? The carriers here have waggons.

461. How long does it take to carry a load from here and get back again? Eight or nine hours. We do it in a day.

462. If you had a waggon with four horses, and could carry about 4 tons, would it cost you 12s. or 14s. for freight? Every farmer cannot keep the waggons and the horses. They must employ someone to do the work for them.

463. Twelve shillings to 15s. a ton on a splendid road of 14 miles, such as you have, seems to be a high rate, because in some of the country districts the carriage is only 12s. to 15s. per ton for a distance of 40 to 50 miles? I can only say that I heard a carrier state the other day that if anyone could do it for less, they could have his carrying from Robertson to Moss Vale.

464. How do you pack the cabbages? They are packed on a dray with a frame.

465. What kind of winter food do you grow? Oats and hay, and we go in for ensilage.

466. Have you a good deal of country laid down under artificial grasses? Yes; the last few years, however, have made the country look very bad, on account of the drought and the plague of grasshoppers we have had.

467. Is there much pasture in the winter? Yes; the farmers generally use the broadcast corn in the autumn, and save the paddocks for the winter.

468. Is cabbage the principal crop here? It is, as far as the market gardeners are concerned. They also send to market, cauliflowers, turnips, and green peas.

469. You say that 30 tons to the acre is a fair crop? Yes; and land at the present time is bringing £2 an acre for cabbage-growing purposes.

470. Have you discussed the question of the construction of the railway with the farmers of the district? Yes.

471. What is their opinion as to giving the land through which the line will pass? I think some would give it free, and there is an inclination amongst the people of the district to subscribe and help to pay those who would not give it free.

472. Do you think it is likely that within a reasonable time the estimated loss on the line will be made up? Yes; from three industries alone—milk, cabbages, and potatoes. I am sure they would make it a paying line within two years.

473. In the face of that, do you think that persons who would be served by the railway would be willing to guarantee the Government, not against the total loss, but against a portion of the deficiency, until the line became self-supporting? I am not in a position to say that, but the people are willing to pay differential rates.

474. That would amount to something like the same thing:—you say that you pay now from 10s. to 15s. a ton for carriage;—supposing the railway carried your goods at the rate of 5s. a ton, there would be a saving at once of, say, 6s. a ton;—would it not be to the advantage of the persons interested to guarantee to the extent of 3s. a ton? Yes; I think they would be willing to do that.

475. Do you think it would be a fair and reasonable thing to ask? Yes.

476. *Chairman.*] Have you any further information? Yes. I believe that if a quarter of the milk produced were sent to Sydney, it would give an annual revenue to the railway of £1,212 10s. on the line from Bowral to Robertson, and apart from that, there would be the addition of traffic which would go over the main line.

477. *Mr. Levien.*] Which would be the best connection for you—Moss Vale or Bowral? That is a matter which we would leave in the hands of the Government. We have no particular feeling one way or the other.

other. I may mention that the tourist traffic would be very great. During the holidays we always have a fair number of tourists in the district. Someone has stated that 3,000 pigs would be carried by the railway. In reality, there would be over 20,000 store pigs brought here by train, and the fat pigs would go out of the district by rail. They are generally brought in from the southern districts by train.

W. R.
Hindmarsh,
junr.
6 Aug., 1900.

478. *Chairman.*] How do you arrive at the number of 20,000 pigs? From personal experience; we usually fatten that number. Another matter which has been overlooked is the manure which will be required for the growing of cabbages. No matter how good the ground is, they require manure to force them. For that purpose 12 cwt. manure is required to the acre, which would be a large item, so far as railway freight is concerned. It would bring in a revenue of £240 to £250 a year. I may state that the average rainfall from 1890 to 1895 was 76 inches, so that we do not send a large amount of produce one year and nothing the next year. It is only the drought we have had during the last three or four years which has stopped produce to any extent for the last thirty years.

479. Leaving out of consideration the recent drought, do you consider the district as being uniformly progressive for some years? Yes.

480. Do you think it has a capacity for still further progress? Yes. Another matter to which I wish to refer has reference to chrome ore. There is a large deposit here which could be worked.

481. Where is it? Near the head of the Kangaroo River. It was stated in Sydney by the Railway Commissioners that the land is no good for growing potatoes or crops unless it is manured; but that is a mistake altogether.

482. Will the land stand potato-growing for successive seasons without becoming exhausted? Yes. After growing potatoes for a year or two it could be laid down under grass, and then brought under cultivation again for two or three years.

James Lackey, market gardener, Burrawang, sworn, and examined:—

483. *Mr. Shepherd.*] How far is your property from Robertson? Four miles.

484. In what direction? In the direction of Burrawang.

485. What is the extent of your property? Fifty-one acres.

486. How long have you resided there? Thirteen years.

487. Have you been cultivating vegetables all the time? Yes; with the exception of eighteen months, when I was out of the district.

488. What is your average production per acre? In a good season, about 30 tons of cabbages to the acre. Upon 4 acres, during one particular season, I grew 120 tons; but that was an exceptionally good crop. I also grow peas and fruit.

489. Do you find yourself handicapped by the distance you have to send your produce to the railway? I have to pay 10s. per ton for all I send from Burrawang to Moss Vale, and when I started first I paid 15s. per ton. During the last eleven years I have never paid more nor less than 10s. for freight from Burrawang to Moss Vale—a distance of about 10 miles.

490. Do you use your own conveyance? No; but I draw some of my produce.

491. Do you find that the vegetables get injured in transit? Not a great deal.

492. Do you send them to an agent in Sydney? No; I sell them myself, principally.

493. Do you grow any other produce? Yes; potatoes, peas, and cauliflowers.

494. What average of potatoes do you get to the acre? About 5 tons is a good average.

495. What description of fruit do you grow? Strawberries, gooseberries, nectarines, and apples.

496. Do you find that the gooseberries and strawberries pay you well? Yes. With regard to the use of crates for cabbages, I may state that the cabbages which come from Melbourne by rail do not come in crates. They only come in crates by steamer. You cannot get the crates into the trucks.

497. Do you not think that crates would save the vegetables from being knocked about? No; I think they go better as they are.

498. Do you wish to add anything to the evidence of Mr. Hindmarsh? I was the first to start the cabbage-growing industry in this district. I started in a very small way, sending from 20 to 30 tons away during the first year. This year I should think that between Moss Vale and Bowral nearly 2,000 tons have been sent away. In view of the heavy cartage we have to pay for the stuff which is sent to Moss Vale and Bowral, I should think that, with the construction of the railway, the production would increase to double that.

499. Do you find that in a bad season you get a better price than you do in a good season? Yes.

500. And, in a great measure, that will make up for the deficiency in crop? It depends. If you have high and dry ground, which you cannot water, of course you lose your crop. If you are on flat ground you can get a good crop even in a bad season.

501. What variety of cabbage do you chiefly grow? We call it the "Succession" cabbage. We do not grow any of the "Savoy," and very little of the "St. John's Day." I am of opinion that if the railway were constructed, in a short time, instead of there being a deficiency, it would pay good interest on the money expended. We could get our stuff to market fresher, and it would not be knocked about so much. I do not think there are any of the growers who would not be satisfied to pay 6s. per ton carriage for a short line from Robertson, to tap the trunk line at any place the Government think fit.

502. What is a fair distance from the railway station to carry on your industry successfully? Three to 4 miles. We could go twice a day then.

503. Could you not carry on your industry successfully at a greater distance than 3 or 4 miles from the railway? I have been fairly successful up to the present, but with a railway I would be able to make a little more.

504. *Chairman.*] What is the cost of production of cabbages on good flats;—what would it cost you to prepare the land, put in a crop, and take it off? £10 per acre; that would include every charge until you started to cut the crop off. Then there is the cutting, which would be about £5 per acre.

505. Then, £15 per acre would include every charge but the road carriage? Yes.

506. What is a fair price to get for your cabbages? £4 per ton, or £60 an acre.

507. At present you pay 10s. per ton for carriage? Yes.

508. At 15 tons to the acre, that means £7 per ton per acre for carriage? Yes.

J. Lackey.
6 Aug., 1900.

- J. Lackey. 509. Are there any other charges? There is the Government charge of 9s. 8d. per ton, and 2s. 6d. for the loading from Darling Harbour to the market. There is also 1s. 6d. for market dues. That means about £33 an acre, which leaves a net profit of £27 per acre.
- 6 Aug., 1900. 510. Out of a total charge of £33 per acre there is a cost of £7 10s. for road carriage? Yes.
511. Do you think that, which is not a quarter of the cost of growing the cabbages, is a serious handicap to the development of the industry in the district? It would be very serious, because the industry has increased from 30 tons to about 2,000 tons. I think, however, that if we had the railway the industry would increase still more.
512. If you had a railway and the charge for freight was brought down to, say, £3 10s., that would be a reduction of 10 per cent on the total cost;—do you think that that would greatly stimulate the development of the industry in the district? I think it would.
513. And it would make your profit £30 per acre, instead of £27 per acre? Yes.
514. Do you regard £27 per acre as a fair profit to make off land? Yes.
515. Do you not think that with a profit of £27 per acre every available acre would be put in, and that other gardeners would take up the land? I think they would.
516. Then you do not think the absence of a railway is seriously interfering with the development of the district, as far as that phase of the matter is concerned? I cannot say that it is, because it is increasing every year; but if we had a railway it would of course double. Again, it would benefit the main trunk line as well.
517. *Mr. Levien.*] What is the general feeling with regard to giving the land free for railway purposes? I cannot say; but if it were to come through my land I should be glad to give it free.
518. *Mr. Shepherd.*] Do you plough or dig your land? I plough it. When we put the plants in we put the manure in and dig it with a fork.

William White, butcher, Robertson, sworn, and examined:—

- W. White. 519. *Chairman.*] How long have you resided in Robertson? Thirty years.
- 6 Aug., 1900. 520. Can you give us a general idea of the progress of the district during the period of your residence? During the last two years the district has been stationary; I might say it has been going back. That has been largely due to the bad seasons.
521. Previous to that, was the progress of the district fairly uniform from year to year? Yes.
522. Do you think the district has arrived at such a stage when its further progress is likely to be retarded unless it has a railway? Yes.
523. Can you give us an idea of the development which the construction of a railway is likely to bring about? Of course, the farmers would be advantaged to a great extent by the decreased cost of carriage. Their produce would be largely increased if they had a direct and speedy way of getting to market.
524. Would much live stock be sent from the district to Sydney? A large number of pigs and calves would go.
525. Do you think 14 miles is too far to drive them now? Yes.
526. What is done now with the calves bred in the district which are not kept for dairying purposes? They go in various ways. Some of the farmers give them away.
527. Can you say what amount of live stock would be trucked at Robertson if there were a railway to it? I should say that at least 1,000 calves and 2,000 or 3,000 pigs would be trucked per annum.
528. Can you give any evidence with regard to the development of the dairying industry consequent upon the construction of the proposed railway? It largely depends upon the success of the producers in being able to get their milk away.
529. Do you think it would be more profitable for them to send away at least part of their milk than it would be to have the whole of it converted into butter? Yes. It would be better to have a good trade in milk than to depend upon the vicarious market in butter.
530. Can you state what is the general destination of the butter from this district? A large quantity of it is exported, and there is a large consumption in Sydney.
531. Can you offer any opinion as to the possibility of the railway paying? I think the estimated loss is likely to be made up within a reasonable time after the construction of the railway.
532. Is any other industry likely to be carried on in the district which cannot at present be carried on on account of the absence of a railway? I believe that other industries would be carried on. For instance, I think there would be a large fruit trade in the district. I feel certain that people can afford to pay 50 per cent on the trunk line rates for the privilege of this line of railway, and then they would largely benefit themselves.
533. The deficiency is calculated on local rates;—do you think they could pay higher than the ordinary local rates? I think they could pay 50 per cent. more than they do.
534. Do you think the producers of this district would be prepared to do as they are doing in the case of the Rock to Green's Gonyah railway—to pay a small amount per annum, based on the land-tax, to make up the deficiency on the railway? I believe a great many would, but some people are not satisfied unless they get things for nothing.
535. How many teams are engaged per annum in bringing up the traffic from Shellharbour? Only one.
536. What amount does it carry per month? I could not say—perhaps a ton.
537. You think, then, that the fears of the Railway Commissioners with respect to that railway are unfounded? They need not be the least afraid of it.

Joseph Scott Armstrong, farmer and milk-tester, Robertson, sworn, and examined:—

- J. S. Armstrong. 538. *Mr. Levien.*] How far do you live from Robertson? Six miles; I live on the Upper Kangaroo River.
- 6 Aug., 1900. 539. Do you wish to make any statements? Yes. With regard to the upper portion of the Kangaroo Valley, I may state that a larger traffic would in the future be obtained from there than has been taken into account, because of the construction of a new road. Many people in the Valley think it would be more convenient to them to get a railway from the Nowra side; but if they do not get it, Robertson or Myra Vale would be the best outlet for the whole of that district, and that has not been taken into account.

540. Has the population increased of late? No; but since the former inquiry was held we have got a road graded 1 in 20. There is a good deal of land on the upper Kangaroo River which is under cultivation, and if we had a railway it would be greatly increased.

541. Do you know anything about the market gardening business which is likely to be done in that district? I think it is largely increasing. There must be 100 acres, if not more, under cultivation. Some people, however, have had to give up the industry on account of the length of carriage.

542. I suppose the statements you have heard to-day as to the cost of carriage are correct? Yes. It is only fair to state that Mr. Lackey has good roads from his place, whereas others have bad roads, which require bullock teams.

543. Do you think the construction of a railway would develop the market gardening industry? Yes; I am sure of it?

544. What business do you carry on? That of milk testing at the factories, and I have a farm of 100 acres in the Kangaroo Valley. I have from 8 to 10 acres under maize and green food for cattle. The soil is good for maize growing.

545. Have the people in the district in which you live been retarded in carrying out their industries on account of want of good roads? Yes. If the railway were constructed it would be worth our while to make roads to it ourselves.

546. Are any Crown lands available? Yes. 2,000 acres could be selected about the edge of the mountain, and if there were conveniences for getting goods away they would be selected.

547. What is the quality of the land to which you are referring? Some of it is the very best.

548. Is it fit for agriculture? The greater part of that of which I speak is rocky, but it could not be better for grazing cattle.

549. Do you think the estimated loss on the proposed railway is likely to be made up? I think the moment the line is taken in hand more land will be put under cultivation, and I also think there will be nothing like the estimated deficiency. I know of many lots of cabbages which have been lost on account of the difficulty of getting teams.

550. Do you think the people would be willing to contribute towards the loss on the line? I think they would pay extra charges to make up any loss.

551. Do you think they would be likely to sign a bond to that effect? I believe the bulk of the people would be quite willing to do anything towards assisting to make the line pay.

552. *Chairman.*] You have stated that you think the estimate of revenue does not include the traffic to be drawn from the Kangaroo Valley? Yes.

553. What population would be served by the proposed line in the upper end of the Valley? The part which has been spoken of has about forty farms—on the Upper Kangaroo River.

554. Are you aware that the estimate includes the traffic from 1,000 people from the Kangaroo Valley? Those who made the estimate must have taken in part of the township.

555. What part of the proposed line would the Kangaroo Valley people strike? The people on the upper part would strike Robertson; but about Barrengarry they would strike Myra Vale better.

556. Could we expect that traffic now if there were a fair road into Myra Vale? Yes; if the new road which has been graded is constructed. As it is, a good deal of the traffic goes over Cambewarra, but it would come to Myra Vale if the road were constructed.

557. Is there any special quality in the artificial grasses grown here which makes the butter of high quality? The grasses here make a rich milk and butter yield, but I do not think there is anything special in them. I have heard that the milk from the mountains is very much preferred for consumption. Many doctors consider it advantageous to use it, and I think it would be very much sought after.

558. *Mr. Shepherd.*] Are there many visitors in the district during the summer months? Yes; a stream of visitors goes through in summer.

559. What are the principal places which they visit? The Fitzroy Falls. The Belmore Falls, however, are considered to be more attractive. Then there are the Carrington Falls, the Gerrigong Falls, and the Macquarie Falls, which lie close to Robertson—all within a radius of 6 or 7 miles. I have been to those places with visitors, who say that there is nothing equal to them on the Blue Mountains. There is a greater variety of foliage here, and between Robertson and my residence there are many falls which have not yet been opened out which would prove a great attraction. I heard of one yesterday, within half a mile of my residence, which I am told is about 200 feet high. I could enumerate twenty or thirty falls which are equally as attractive as the Fitzroy Falls.

560. How far is it from Robertson to the Macquarie Mountain? Five miles.

561. Is there a fairly good road? Yes.

562. Do you think the number of visitors would be largely increased by railway communication? Yes.

563. Do you think the railway would be likely to derive considerable revenue in that respect? Yes; but that might take up a little time.

564. Are you aware of what the superiority of the mountain milk over the low-land milk is? I think it is due to the amount of ozone there is in the air.

565. Does the milk from this district bring a higher price in Sydney than that from the low lands? I cannot say that it does; but our cattle are more healthy, and there is less tuberculosis amongst them here.

William Graham, storekeeper, Robertson, sworn, and examined:—

566. *Chairman.*] How long have you resided at Robertson? Fourteen years.

567. Can you give us an idea of the amount of goods likely to come into this district along the proposed railway, and your opinion of the suggested competition from Shellharbour along the coast? I do not think the competition would mean anything at all, as far as I am concerned. Goods have been brought to me that way; but, as a rule, you can get them cheaper the other way. If the railway were extended to Robertson there would be no possibility of competition from the coast.

568. How many storekeepers are there in Robertson? Two.

569. What tonnage of goods do you receive per annum? About 500 tons.

570. Are they mainly brought from Sydney? Yes.

J. S.
Armstrong.
6 Aug., 1900.

W. Graham.
6 Aug., 1900.

James Alcorn, dairy-farmer, East Kangaloon, sworn, and examined:—

- J. Alcorn. 571. *Mr. Shepherd.*] How long have you resided in the district? Since 1862.
 6 Aug., 1900. 572. How far is East Kangaloon from Robertson? A little over 3 miles.
 573. What is the extent of your holding? A little over 200 acres.
 574. And you carry on dairy-farming? Yes, and potato-growing. I have 3 acres under potatoes.
 575. What is your average return from those 3 acres? Five to 7 tons; but I do not use manure.
 576. How many cows have you on your run? Seventy.
 577. Is much of your farm laid down under artificial grasses? Yes, over 150 acres, which are under cocksfoot, rye-grass, and a little prairie grass.
 578. Do you grow crops for winter use? Yes; oats and barley.
 579. What effect will the construction of the proposed line have upon industries generally in this district? I think there will be a great increase in the potato and cabbage growing industries. There are many portions which are not of much use as grazing land, which would grow cabbages. If we had greater facilities for getting produce to market the cabbage industry would increase very largely. The great difficulty is to get the crops away, especially in wet seasons.
 580. Do you feel handicapped by the difficulty experienced in getting to a railway station? Not at present, because the milk goes to the factory; but during the recent bad seasons we have experienced a difficulty in getting food, such as bran, &c., for the cattle.
 581. Do you agree in the main with the evidence which has already been given? Yes.

John Thomas Hayter, farmer, Robertson, sworn, and examined:—

- J. T. Hayter. 582. *Mr. Shepherd.*] How many years have you resided in the district? Thirty-four.
 6 Aug., 1900. 583. What is the extent of your holding? 320 acres.
 584. Are you carrying on dairy-farming? Yes; dairy-farming and agriculture. I also have a small orchard, in which I grow gooseberries, currants, strawberries, and raspberries.
 585. Do you find the Hobart market antagonistic to your interests? Yes, sometimes.
 586. Have you any difficulty in getting strawberries or raspberries to market? You cannot get them to market in good condition when the roads are rough, and where I am living off the main road they are very rough.
 587. How far are you from the main road? Three-quarters of a mile, and it is a very bad road.
 588. Do your crops pay you pretty well? Yes.
 589. What average do you get per acre for gooseberries? I could not say; but I get bushels off the land I cultivate.
 590. Do you get many strawberries? Not many. Some kinds do not bear well.
 591. What kind of gooseberry are you cultivating? The large green kind and the red gooseberry. I am also growing potatoes, and I get an average of about 6 tons per acre, without manuring.
 592. Do you find the want of a railway a drawback? Yes. I milk 109 cows, and about a quarter of the calves are killed as soon as they are dropped, because there are no means of getting them to Moss Vale.
 593. Would you go in more extensively for cultivation if the railway were handier? Yes. I have a lot of land in Yarrunga suitable for cabbage-growing.
 594. What extent of ground in the district is under cultivation for cabbage-growing? Between Robertson and Robertson Park there must be fully 130 acres.
 595. Do you know whether many of the settlers are going in for gooseberry, raspberry, and strawberry growing? I do not think that many of them are.
 596. Do you think that that industry would be largely increased if the proposed railway were constructed? I think it would.
 597. Do you usually pack your strawberries into small boxes? Yes.
 598. Can you get your raspberries carried to market without trouble? Yes; but sometimes they get very much bruised.
 599. Have you any information to add to that which you have already given? I do not think the proposed line would cost as much as has been estimated. There is plenty of clay in the district which would make the bricks which would be required. We also have blue-metal and timber. Of course, we do not want elaborate railway stations. I have heard the evidence of the former witnesses, and I fully agree with it.*

John Bernhard Wilson, Medical Practitioner, Robertson, sworn, and examined:—

- J. B. Wilson. 600. *Chairman.*] Can you give any information concerning the Robertson district as a health resort? I consider it is an exceptionally healthy district. I have been here for nearly three and a half years, and there has never been any epidemic of fever.
 6 Aug., 1900. 601. Is it a district which, with railway facilities, is likely to attract a considerable number of persons in search of health? Yes.
 602. Does it offer advantages over other places already connected by rail? The summer climate is an exceptionally good one for lung diseases.
 603. Do people come here now on that account, or are they prohibited by the absence of a railway? I think the absence of a railway prevents them coming. It is a good climate for such people in the summer, and I am sure they would come if we had a railway.
 604. Can visitors to this district obtain good accommodation? There is plenty of accommodation, and, in the event of a railway being constructed, I believe sanatoriums would be built, at which people would stay exclusively for the benefit of their health.
 605. Is it a good district for a doctor? It is the worst I have ever been in.

Robert Wilson Moses, dairy-farmer, Myra Vale, sworn, and examined:—

- R. W. Moses. 606. *Chairman.*] How long have you been in the district? Since the settlement of it in 1862.
 6 Aug., 1900. 607. How far is Myra Vale from Robertson? A little over 5 miles.
 608. How far is it from Bowral? About 14 miles. 609.

* NOTE (on revision):—I wish to add that, if the proposed railway were constructed, tons of blackberries would be sent away from the district.

609. What is the size of your holding? 150 acres. R. W. Moses.
610. What is the average carrying capacity of the Myra Vale district? About a beast to 3 acres. 6 Aug., 1900.
611. Have your operations as a dairy-farmer been handicapped by reason of your distance from a railway? Yes. Twelve months ago we received an offer from the Fresh Food and Ice Company to supply milk to them at 7d. per gallon. At the same time we were receiving under 4d. per gallon at the factories, but the cost of carriage into Moss Vale was too much. It did not allow us profit enough.
612. You think that, with the construction of a railway, a portion of the milk will be sent direct to Sydney for consumption? Yes.
613. And that would give a larger revenue to the railway than would the carriage of butter? Yes.
614. Is there anything in the quality of the milk which would enable you to compete successfully with the South Coast districts? It is a very rich milk, and certainly we are more free from tuberculosis, and that, I think, would, in itself, be an advantage in connection with the delivering of milk into Sydney.
615. Do you think that the traffic in milk could be carried on successfully throughout the summer? Yes; because the climate is fairly cool.
616. Do you agree with the evidence which has been tendered by the other witnesses? Yes.

William Mackenzie, farmer, Myra Vale, sworn, and examined:—

617. *Mr. Shepherd.*] How far do you reside from Robertson? Nine miles from Robertson, and 12 miles from Moss Vale. W.
Mackenzie.
618. Have you any information to supply in addition to that which has already been given? I think the construction of the proposed railway would greatly improve the district; the distance is too great for the carriage of produce. 6 Aug., 1900.
619. Do you cultivate much land? Twenty acres, including oats, barley, corn, and sorghum for home consumption. I have also tried ensilage-making. I pile the stuff as I would an ordinary stack, and cover it with saplings. The Railway Commissioners say that the proposed line will not pay, but I think it will do so without difficulty in the course of a few years.
620. Do you think the people generally would guarantee to contribute towards it? Yes.

Robert Mansfield Graham, auctioneer, Robertson, sworn, and examined:—

621. *Chairman.*] What is your experience of the value of land in this district? We have had many severe seasons, but during the twenty years I have resided in the district, I have, at one time or other, put up to auction or sold privately, three-fourths of the district. For farm land, the prices have ranged from £30 per acre downwards. Prices now are not so good as they were a few years ago; but there must be an inclination for them to increase in the near future. The last two years have been very unfavourable, but I have great expectations of an increase in value at an early period. Much has been said about cabbage-growing, but all other kinds of vegetables could be successfully raised here. The low-lying land is fed from the richer ranges, and is manured from time to time by the decayed vegetation and other matter deposited by floods passing over it, and it is not likely to be easily exhausted. We have hundreds and hundreds of acres of exceedingly rich black soil, which is highly suitable for the purpose of growing all kinds of vegetables. The fruit industry could also be successfully carried on. As far as tourists are concerned, I think this district would become a very important one in the course of time. At present, however, the facilities afforded tourists of getting in and out of the district are not very convenient or comfortable. It is only a matter of time before the district must become a most popular summer resort. R. M.
Graham.
622. Has there been much loss of stock in the district on account of droughts? Yes. We have had to send thousands of stock out of the district. With regard to the raising of calves, I may state that at present we only get 6d. to 9d. for calves' skins. We kill the calves off, whereas if we had a railway line we could send thousands of them into the city market, and we could get from 30s. to £2 for them. The district sends thousands of stores and mixed cattle per year to the Goulburn market. They come chiefly from the coast. It is reasonable to expect that all that come from the coast for Goulburn, instead of travelling, would be trucked at Robertson and sent through. In fair seasons we import thousands of "springers," which we receive largely from the Goulburn district. Mr. Henry Dunn used to be a large supplier of this market, and we must in the future again obtain large supplies from the interior if the seasons continue prosperous. Pigs are also largely reared. 6 Aug., 1900.
623. Does the distance of the market prevent successful pig-raising? Yes, particularly fat pigs.
624. What number of calves and pigs would be trucked here if you had a railway? It would be very considerable. I should say that 9,000 or 10,000 would be a reasonable estimate.
625. Would there be any traffic in timber along the line? There are some timber mills here. They usually cut messmate, which is used for building purposes and bridge work. A road has been surveyed into the Kangaroo Valley, which would be 14½ miles from Robertson, and the grade would not exceed 1 in 14. If the proposed line were constructed to Robertson the traffic from that district would come to the line by teams.

Frank Anthony Tatlow, cattle-dealer, Robertson, sworn, and examined:—

626. *Chairman.*] How do you regard this as a fattening district? One of the best I ever saw in my life. F. A. Tatlow.
627. What is the nature of your operations? I go abroad to buy cattle for the district, and I also buy cattle in the district, which I send away. 6 Aug., 1900.
628. For what purpose are cattle usually bred in the district? For raising dairy stock.
629. Is this a beef-raising district? We have some of the best beef-raising stock in the Colony.
630. Do you send any cattle to Goulburn? I would do so; but on account of the want of railway facilities we are forced to sell them almost at our own doors.
631. Do you think that, with the construction of a railway, you could now and then get small consignments sent away? Yes, both ways. I have handled 1,100 head of cattle during the last eight months. I have also trucked many from the Picton and Camden districts; but I think it is as cheap to drive them as to truck them. There being no railway between Robertson and Moss Vale, we have to drive them 14 miles

F. A. Tatlow miles from Moss Vale to Robertson, and it is just as well for me to drive them from Picton to Robertson.
 632. Do you think the farmers would find a market for the calves which are now destroyed if the proposed railway were constructed? Yes.
 633. What market do they look to? Sydney for fat calves, and Goulburn for store cattle.
 634. *Mr. Shepherd.*] Are the cattle which you bring to the district store cattle? No, cattle for milking purposes, and the cattle I remove from here are chiefly young cattle which are to be raised for dairying purposes.
 635. Do you consider that 14 miles is too great a distance to drive stock of that kind? It is not too great; but we are so isolated that we have to take a circuitous route. I may state 14 miles by rail sometimes means 50 miles by road.
 636. Can you get a nearer cut to Picton than by going to Moss Vale or Bowral? By driving I can save 20 miles.
 637. *Chairman.*] What is the quality of the cattle the dairy-farmers about here have? The best in New South Wales. We have cattle here which have taken the champion prizes at the Sydney Exhibition.
 638. Do they, as a general rule, keep up the quality? Yes.
 639. Have you anything further to add? Yes; with regard to the mineral wealth of the district. We have some of the richest iron deposits to be found in the Colony in the Jamberoo Mountains. Those deposits would be within the influence of the proposed railway if it were built. The best seam of coal in the Colony, 18 feet thick, is adjacent to it.
 640. Are there any bands in it? I could not say. Some years ago an expert was brought here from England by Sir Henry Parkes to examine it. Within from 5 to 15 miles of Robertson we have some of the richest outcrops of ironstone to be found in the colonies, and eight or ten men are engaged opening it out. The manager of the Smelting Works at Dapto inspected it last Monday, and considered it highly satisfactory. The outcrops of iron are frequent in the district. I have been given to understand that there is an iron outcrop towards the Macquarie Pass. At the Jamberoo Mountains there are areas of it in several places 30 and 40 acres in extent. Mr. Bruce Smith and a syndicate to which he is attached are prospecting it. They have coal, iron, and limestone there in close proximity. As I have stated, in years gone by, Sir Henry Parkes had an expert brought from England to prospect the coal, and he gave a friend of mine to understand that we had the keystone of the Illawarra mineral deposits, meaning that we have iron, coal, and limestone there alongside each other. The nearest outcrop is 5 miles from Robertson, and the coal and limestone deposits are to be found from 10 to 12 miles away.

MONDAY, 27 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. SOLOMON HERBERT HYAM.
 The Hon. ANDREW GARRAN, LL.D. | ROBERT HENRY LEVIEN, Esq.
 JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bowral to Robertson.

William Henry Hall, Sub-editor, Statistical Year Books, Government Statistician's Department, sworn, and examined:—

W. H. Hall. 641. *Chairman.*] I understand you have some figures showing the estimated population and cultivation returns in regard to the districts to be served by the proposed railway from Bowral to Robertson? Yes; the estimated population of the Robertson district is 1,680; that of the Burrawang district is 600; making a total for the two districts of 2,880. The agricultural, pastoral, and dairying statistics are shown in the following return:—

PROPOSED RAILWAY FROM BOWRAL TO ROBERTSON.
 AGRICULTURAL, Pastoral, and Dairying Statistics, 1897-1900.

| District. | Cultivation. | | | | | | | | | | | | | Live stock. | | | | | Dairy produce. | | | |
|------------|------------------------|--------|--------|--------|--------|---------|-------|---------------|-------|-------|-------------|--------------------------|----------|-------------|---------|-----------|-----------------|------------------|----------------|--------------|----------------------|-----------------------------|

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

H. Deane. 642. *Chairman.*] I understand that you have the statement respecting the proposed extension of the Bowral to Robertson line to the sea-coast? Yes; I have two reports—one from Mr. Weber, who was appointed to take some levels, and whose proposal to connect with the coast I believe this is. I have a report sent in

in by Mr. McDonnell Stuart, Supervising Engineer, Railway Construction Branch, Department of Public Works, who has been over the line with Mr. Weber. I have also a plan of the proposed line prepared by Mr. Stuart. Mr. Stuart's report reads as follows:—

H. Deane.
27 Aug., 1900.

MEMORANDUM to the Engineer-in-Chief Railway Construction.

Illawarra to Robertson Railway.

Department of Public Works, Railway Construction Branch,
Engineer-in-Chief's Office, Sydney, 27 August, 1900.

Sir,

In accordance with instructions received, I have made a further investigation into the proposed Illawarra-Robertson connection, or, properly speaking, into a connection between the Illawarra and Great Southern Railways, notably with reference to routes *via* Mount Johnstone and Mount Terry respectively. The first of these, as far as an ordinary adhesion line is concerned, is altogether out of the question, the distance from the Main Illawarra Range to the foot of this spur being far too short. This is the spur next to the one on which I suggested the possibility of a rack railway in my previous report. Again, the route *via* Mount Terry, working its way up from the Illawarra line, *via* Stock-yard Mountain, would enter the Main Range by a tunnel at the foot of a high cliff, the difference in level between this point and the summit being several hundred feet, and as the plateau at the back falls away very slowly, this tunnel would be of such a length as to make any further extension in the direction required prohibitory.

Another route discovered by Mr. Weber, although very difficult and costly, would, possibly, be the most practicable, as it crosses the main Illawarra Range at the lowest point between Mount Kembla and the head of the Macquarie Pass. This route, shown by a green line on the accompanying diagram tracing (the previous exploration being shown in red), leaves on the southern side of Dapto station on the Illawarra line at a point 57 miles from Sydney, and thence proceeding in a south-westerly direction it commences to rise on the northern side of the Marshall Mount spur (and maintains an ascending grade till it reaches the summit at the back of the main range); thence bearing round to the right it crosses the valley of Duck-holes or Yallah Creek, and turning to the east contours round the Avondale Spur, gradually working back in a westerly direction till it reaches the slopes of the main range; thence it bears northerly along the face of this range until the lowest point in the same is reached, where it crosses with a short tunnel into the valley of Gallagher's Creek; thence it follows down this valley for a short distance, still maintaining the ascending grade, and again doubling back it winds its way up through some very broken country until it finally reaches the plateau at the back of the mountain, about the Devil's Gap; thence it gradually works its way through broken country till it gains the first explored line near the head of the Avon River, a tributary of the Nepean. The line can then be carried on to suit a connection with either the Bowral or Moss Vale to Robertson extensions by the routes shown in red and green respectively.

The best feature in connection with this proposal of Mr. Weber's is that it crosses the Illawarra Range at a very low point, and with a very much shorter tunnel than on the previous proposal *via* Mount Macquarie. Some difficulty will, no doubt, be found in locating the curves on the entrances to the tunnel; but this may be obviated by cutting the range on the skew without materially increasing the length of the tunnel. Against the route there are some of the same objections which I raised to the Mount Macquarie proposal, namely, crossing a series of spurs on the eastern side of the main range, necessitating very heavy earthworks and bridging, with a possibility of some slips. Added to this, the line debouches on the western side of the range into a narrow mountainous gully with steep sides, and out of this gully it works up to the summit round broken country, necessitating considerable curvature, heavy earthworks, and possibly tunnelling through some of the subsidiary spurs of the ranges forming the watersheds of the respective watercourses.

The ruling grade aimed at on this proposal is 1 in 50, with curves of 10 chains radius; but viewed even in the most favourable light, it would entail very heavy expenditure, possibly running into £500,000, and the length required in order to obtain a grade is excessive, being some 45 miles from the junction on the Illawarra line to Moss Vale, as against 24 miles in a direct line. This difference is specially noticeable between the same point on the Illawarra line and the Devil's Gap, where the distance is under 5 miles, as against 21½ by the proposed route.

CHAS. McD. STUART.

The following is Mr. Weber's report:—

The Honorable The Minister for Works, Sydney,—

Sir,

Wollongong, 24 August, 1900.

I have the honor to report my having explored the Coast Range from Mount Kembla to Stockyard Mountain, as instructed, to discover the best place to cross with a railway from Robertson to the Illawarra line.

The best and lowest point for crossing the mountain is almost due west from Dapto railway station. The line sketched on my rough tracing goes through the mountain at 1,000 feet above sea-level, with a tunnel about 30 chains long into a deep gully on the west, from which point a succession of gullies and ridges, requiring continuous curves, give ample length to make easy grades upwards to Robertson, the ridges being of a solid sandstone formation, and well timbered.

The eastern slope, immediately south from the tunnel, may possibly be liable to slips in places for the first mile, whence, by contouring ridges and gullies, a good grade is obtainable to Yallah, on the Illawarra line.

The line can possibly be much improved by any of the alternate lines dotted in red ink on the county map forwarded with the tracing, viz.:—By crossing the mountain without a tunnel, the length to Robertson would be reduced by some 2 miles, and the avoidance of the tunnel should more than compensate for the extra length along the face of the range.

There is nothing to contend with on any portion of the lines sketched that would require any special engineering skill, and a little extra care in laying out would, no doubt, avoid many expenses.

The grades need nowhere be steeper than 1 in 50, and the curves can be kept to a 10-chain radius.

The distance by the line sketched on tracing from Moss Vale to Dapto would be about 47 miles, leaving about 34 to make between Illawarra line and the Moss Vale and Robertson line, and even this can be reduced by 2 miles, and avoid the tunnel.

Estimates can only be gone into after a traverse has been made, and, if based upon the present mode of day work, could be worked out at about two-thirds, or nearly one-half, the cost of lines already constructed under the big contract principle.

Mount Terry, the continuation of Stockyard Mountain, would have been a good spur to descend by had it been practicable to get up the 600-foot cliff at the top, but even with a 3-mile tunnel the line would be too low to reach Robertson with reasonable grades.

All elevations of points inspected are marked on the map of the district now in possession of the Railway Construction Officers, and will, no doubt, be handed in with Mr. Stuart's report.

I have, &c.,

CARL WEBER,

Surveyor and C.E.

P.S.—A simple traverse of grade line without the expense of laying down curves would give a good estimate of cost, provided the mode of letting was previously determined on.—C.W.

643. Could you make a comparison between the distance in a straight line from Robertson to Albion Park and the distance according to this proposed extension—say, from the western point of the mountain to the nearest point on the South Coast railway? The distance from Robertson, in a direct line, to the railway at Albion Park is 11 miles.

644. Following the exploration, how long would it be? Thirty miles.

TUESDAY,

TUESDAY, 28 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq., (CHAIRMAN).

| | | |
|--|--|-----------------------------|
| The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | | JOHN CHRISTIAN WATSON, Esq. |
| The Hon. ANDREW GARRAN, LL.D. | | ROBERT HENRY LEVIEN, Esq. |
| The Hon. SOLOMON HERBERT HYAM. | | JOHN McFARLANE, Esq. |

The Committee further considered the expediency of constructing a line of Railway from Bowral to Robertson.

Charles McDonnell Stuart, Supervising Engineer, Railway Construction Branch, Department of Public Works, sworn, and examined:—

C. McD.
Stuart.
23 Aug., 1900.

645. *Chairman.*] You have been recently engaged in trying to discover a practicable route for extending the proposed Bowral-Robertson line to the South Coast line? Yes.

646. Can you give the Committee the general result of your investigations? I think it would be better described by reading it from the report. Speaking generally, you would leave the Illawarra line on the southern side of the Dapto station. You then gradually work your way up by a fairly steep grade along the slopes on the eastern side of the Illawarra range until you cross this range at its lowest point. That is between Mount Kembla and Macquarie Pass. You then get into rough broken country, formed by different branches of the Nepean River, through which you gradually work your way round, and thus up to the table-land at the back of Robertson. Thence you can join either with Bowral or Moss Vale, whichever is considered most expedient.

647. What is the character of the proposed line by the longer or latest route you have explored? It would be a very costly line. There would be one tunnel through the range—possibly more. In negotiating the eastern slopes of the Illawarra Range you work along land that is practically made country. This would be no doubt liable in places to slips such as is the case on the Illawarra line, between Stanwell Park and South Clifton along the foot of the range.

648. Could you give an idea of the approximate cost per mile of that section of the proposed line? Yes; it would cost about £15,000 per mile; that would be for about 25 miles of it. On the other part of the line the cost would be lighter.

649. *Mr. Watson.*] Twenty-five miles is the distance from Dapto, upon the oldest exploration, to where it joins the Robertson line? It is a little more.

650. But from where it joins the Robertson line, what distance is it from Dapto by your suggested route? About 33 miles.

651. And for 25 miles of that length the cost would be about £15,000 per mile? Yes.

652. Will you give us the distance, as the crow flies, from Robertson to a point on the Illawarra line, where the proposed extension joins? It is about 12 miles.

653. *Chairman.*] So that to get a suitable grade you have to go a roundabout course, involving about three times the distance? Yes. The worst point is from where you leave the Illawarra line to the Devil's Gap, on the western side of the range. Between those two points the distance, as the crow flies, is under 5 miles.

654. Of the 34 miles of new construction which this proposal would involve, 25 miles would have to be built at a cost of £15,000 per mile? Yes.

655. And the remainder? I have put it down at about £5,000. To lay the whole line down right through to Moss Vale would cost about half a million of money.

656. With respect to that portion of the line that would be liable to slips on the ranges, how many miles of construction would that involve? About 5 miles.

657. From your experience of the South Coast line and the Mudgee line, would you think it highly undesirable to construct this line? About 5 miles of it would be bad. It would be liable to slip; and I consider it extremely undesirable to construct lines in such country.

658. Is there no other way in which the South Coast could be reached so as to avoid that 5 miles of unsound country? No.

659. It has been suggested that the difficulty of connecting the Southern line with the South Coast line might be overcome by a rack railway down the Macquarie Pass;—do you think that would be a reasonable way of overcoming the difficulty? No, because the spurs are too steep to get a good rack railway; the grade would be too steep on the rack itself.

660. So that the only practical method is the one you now suggest, which involves a very large expenditure, and would also involve a large annual cost for maintenance over the bad ground? Yes.

661. Would there be any objections, from a railway construction point of view, to this proposal—that is, in the way of gradients or curves? I do not think so. The great objection to this line arises from its liability to slips in the dangerous part.

662. *Dr. Garran.*] Let us come back now to the purely local line, from the present main line to Robertson;—you are aware that some years ago the proposal was to carry the line from Moss Vale to Robertson? Yes.

663. Have you been over that route? Yes.

664. Was it a fairly easy line? Yes.

665. With regard to that proposal, do you think we could do it for £10,000 a mile? I should have said that it was a little easier than the route from Bowral to Robertson.

666. What is the cheapest route we could take? You have Mr. Deane's estimate. A line from Moss Vale to Robertson could be made more cheaply than one from Bowral to Robertson.

667. But by the new method of making cheap lines, could you give the Committee any idea of the cheapest line that could be made in this part of the country? I have not got the estimate with me.

668. You are aware that the Committee at that time recommended Bowral as a point of departure? Yes.

669. And I understand that one reason for that was that by starting from Bowral and keeping along the northern side of the swamp you could catch the West Kangaloon traffic first and then get the Wild's Meadows traffic on the southern side of the swamp, and so secure the traffic from both sides? Yes.

670. As you have laid it out, would there be a station to catch the West Kangaloon traffic? Yes; near the Sheep-wash.

671.

C. McD.
Stuart.

28 Aug., 1906.

671. Near Robertson Park? Yes.
672. The traffic coming from Bowral could easily come down to the station? Yes.
673. How far from the main road would they have to turn off? I do not know exactly the distance, but the hill is a steep one to go down.
674. Nor has the station a good access? No.
675. Do you think the dairymen, the potato growers, and other producers, having got their goods on the dray, would come down that hill, or do you think they would go straight into Bowral? I think they would prefer to go straight into Bowral.
676. So that a station there would only partially take the traffic? Only partially.
677. If that is so, the idea of starting from Bowral is partly neutralised? To some extent.
678. The idea was that the West Kangaloon traffic would come in by the Sheep-wash, and the East Kangaloon traffic would come in by Robertson, and that, therefore, the whole of the Kangaloon side would be served? Yes.
679. You think that would not be realised? Not to a very great extent; you would get some of the Kangaloon traffic, but I think people would prefer going to Bowral.
680. You have a line surveyed from Robertson Park, or the Sheep-wash, and you go across just at the outlet of the swamp and get to Wild's Meadows? Yes.
681. Is it fairly easy country? Fairly easy; it is undulating country.
682. But from Wild's Meadows to Robertson it is bad? Yes.
683. If we have to stop at Wild's Meadows, should we get the Robertson traffic too? I think you would get some of it.
684. To which station does the Robertson traffic mostly come—Bowral or Moss Vale? I do not know.
685. Instead of going to Wild's Meadows, would it be easier to go to the head of the waterfall—Cataract Village, as they call it? I think it would be very much the same. It is a good road from Wild's Meadows to Robertson.
686. Could you catch the traffic from both Wild's Meadows and from Fitzroy Falls by extending the line? I should think the traffic from Fitzroy Falls would go straight into Moss Vale.
687. But would a station at Wild's Meadows catch it? Some of it; but not all.
688. Could you have a line from Wild's Meadows to the Fitzroy Falls? It would be preferable to take it from Moss Vale. I should not think of going from Bowral to the Fitzroy Falls under any circumstances. I do not think the traffic would equal that from Robertson.
689. Then we may put Fitzroy Falls out of the question? I think so, unless you go to the Fitzroy Falls first, and afterwards down to Wild's Meadows.
690. If the line from Bowral will not catch much of the Kangaloon traffic, it is a better line to Robertson to go from Moss Vale? I think so.
691. What advantage would there be in going from Bowral? I do not think there is a great deal.
692. Is there any? As a local line, there might be a little in it; but if it is ever to be extended to the Coast railway, it would be better to go from Moss Vale.
693. You think that the people of Robertson would rather be connected with Moss Vale than with Bowral? I do not know.
694. By a line to Wild's Meadows, do you think the whole of the district south of the swamp would be accommodated? Fairly well.
695. That 4 miles of country that you spoke of, lying between Wild's Meadows and Robertson—that is hard, trap country, is it not? All trap country.
696. There are some stiff cuttings? Yes; and there is no room to get any curvature.
697. Suppose you only want to go from Bowral to Robertson, by keeping to the edge of the swamp could you get a more direct line that way? It might be a little cheaper. It was explored by us on a previous occasion; but that side of the swamp is pretty rough—you cannot get just on the edge of it.
698. It would not accommodate the district so well? I do not think it would be any better; you would lose the Wild's Meadows traffic.
699. Taking the south side of the swamp, could you have had level country from Wild's Meadows to Robertson by clinging to the swamp? You might get it by keeping on the southern side of the Winge-carribee Swamp; but you would not get right into Robertson.
700. And you would not so well accommodate the farming people? No.
701. The line you have laid out goes right through the farms? Yes.
702. Taking the local trade as a whole, which would be likely to secure most traffic to the railway—from the farmers on the north side of the swamp, or those on the south? Those on the south side would send most, I think.
703. If we could not serve the two sets of farmers equally by one station, which would it be better to try for—the trade on the north side, or that on the south? I think the south side.
704. That would rather be in favour of making Moss Vale the terminus? Yes.
705. And if there is to be any future extension, the connection would be better made at Moss Vale? Yes.
706. The great intention of this proposed extension is to carry ores to the coal-mine? Not necessarily.
707. But as they come from the south they had all better be shipped at Moss Vale than be taken on to Bowral? Yes; it would save 6 miles.
708. This line down to the Coast railway would be very expensive to make, and very expensive to work? Yes.
709. Unless they get extra prices for carriage, would it pay? I do not think the mineral traffic alone would pay, and there is not much other traffic to carry.
710. The mineral traffic is at present slight? Yes.
711. And what there is of it goes round by Sydney? Yes.
712. The idea is, that if this line were constructed it would multiply the mineral traffic by shortening the distance and decreasing freight? Yes.
713. Would it have to come up to a very large amount to pay? Yes.
714. Is there any immediate prospects of an increase of traffic? I do not know.
715. The freight for minerals is very low? Yes.
716. Apart from mineral traffic, would there be much passenger traffic, or much goods traffic? It is doubtful.

- C. McD. Stuart.
28 Aug., 1900.
717. At present there is nothing to justify the construction of this line as a mineral line? Not as an expensive mineral line.
718. Do you think the surveyors of your Department have found out all the defects in regard to the line that is now proposed? It was not one of our surveyors who discovered this last route, it was Mr. Weber. Certainly he has taken the lowest point on the mountain. You might go into the thing more in detail; but, considered as a whole, I think it as good a line as you could get.
719. You have examined the people living in the districts proposed to be served by this line? Only a few.
720. You do not think there is much probability of a better route being found? I do not think so.
721. It is not unexplored country? No; one can get on the range, and see the country for himself.
722. You have seen the new road lately made down the Macquarie Pass? Yes.
723. It would not be possible to take a railway by that route? No; there is a zig-zag at the top of that road to begin with, and the descent altogether from the top of the hills to the foot is nearly 2,000 feet. Up to Robertson it rises to nearly 2,400 feet.
724. In starting from Bowral, and going as far as the Sheepwash, you have pretty level ground to go over? It is fairly level. You follow the valley of the Wingecarribee River. It is undulating country.
725. All your cuttings would be in hard rock? The lower part of them, certainly.
726. *Mr. Watson.*] How does your most recent survey compare with the first suggestion you put forward, and which Mr. Deane mentioned in his report? I think in the recent survey or exploration there is more outcome for improvement than there would be in the first.
727. Do you think the total cost of a line made by the recent survey would be less than that by the original survey? I could not say without surveying both routes; but probably it would be less.
728. The gradient would be better? The gradient is better.
729. *Mr. Hyam.*] Have you been over the route proposed by Mr. Weber? Yes.
730. What is the nature of the country from Robertson to the top of the mountain? Sandstone.
731. From there down until you get on to the lowest spurs it is sandstone; then the basalt country begins? No; you get into the shale and coal; the face of the main range is all sandstone.
732. That would not be so hard to work as the basalt? No.
733. Is there much of that country;—would there be 15 or 20 miles of it? Yes; from Robertson until you join the Illawarra line. You have to go through basalt country from Bowral to Robertson.
734. *Mr. Watson.*] Have you had any exploration made of a route towards the Illawarra line from any point about Marulan or Wingello, on the Southern line? There was an exploration made from Braidwood down to the coast, but it was abandoned as being impracticable.
735. But not down from Marulan? Not to my knowledge.

WEDNESDAY, 29 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SILPHERD.
The Hon. ANDREW GARRAN, LL.D.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bowral to Robertson.

Harold Clyde Manning, surveyor, Roads Branch, Department of Public Works, sworn, and examined:—

- H. C. Manning.
29 Aug., 1900.
736. *Chairman.*] You are aware of the nature of the inquiry before this Committee? Yes.
737. I understand you have been for some years professionally engaged as surveyor in the Bowral-Robertson district? Yes.
738. And, therefore, you have a pretty good knowledge of the district? A fair one.
739. The proposed railway line goes to the south of the Wingecarribee Swamp;—do you think the line as projected would serve the greater part of the good land in that district? No.
740. What deviation would you suggest in order to accomplish that? It should go to the northern side of the swamp.
741. But, if you took it by the northern side of the swamp, would you not lose much of the Kangaroo Valley traffic? Unless you run it on from Robertson to the head of the valley.
742. Do you know whether a practicable route for a railway, from Robertson to the head of the valley, could be obtained? I think you have a line of the kind shown on the map. There would be no engineering difficulties.
743. Then, to accommodate the Kangaroo Valley traffic, means that you would have to make the line double on its own track to the Southern line? Undoubtedly.
744. Do you think the Kangaroo Valley trade is of sufficient importance to justify an extension of that kind? I hardly think so; I do not know exactly what mileage there would be, but, probably, 10 or 12 miles extra.
745. There is this difficulty about the proposal: To go to the north of the swamp it would better accommodate the Kangaroo traffic; by going to the south it would better accommodate the Kangaroo Valley traffic;—which is the more important traffic to be catered for? That is not an easy question to answer. The Kangaroo Valley people make use of the ocean-going traffic to get a good deal of their produce away.
746. People at the head of the Kangaroo Valley have indicated that a railway towards the mountain would suit them better than one towards the coast? Kangaroo Valley is only a small portion of the rich dairying land. A great part of the good land is about Broger's Creek, a tributary of the Kangaroo River.
747. That is, the lower part of the valley? No, on the upper part of the valley.
748. Does that agree with your former statement as to its being a small valley? I might explain that the Kangaroo River runs through the Kangaroo Valley, and Broger's Creek is a tributary of the river. The place is always called Broger's Creek, not the Kangaroo Valley. The Broger's Creek people send their produce to Berry and Nowra, and thence by steamer to Sydney, thereby saving freight.* 749.

* Note (on revision):—The small part of the valley referred to is the narrow part extending upwards from Broger's Creek junction.

H. C.
Manning.
29 Aug., 1900.

749. Have the people resident on Broger's Creek to cross a high ridge to get to the ocean? They have.
750. Is that a serious impediment to them in the way of traffic? Not very; it is not so high as the Barrengarry Mountain; that mountain is the outlet from the Kangaroo Valley to Moss Vale.
751. The proposed line is estimated to cost £94,978;—do you think there is sufficient good land in the district to justify so large an expenditure? I really do not.
752. The land about there is very good, but it is limited in quantity? Yes; the railway could not go any further.
753. Is there any other reason you could urge in support of the construction of a line to the north of the swamp, in addition to what you have stated? The only reason to me is that it would tap the best country. If you put it on the southern side of the swamp you do not tap the best side of the country. On the northern side of the swamp the country is all of volcanic origin. On the southern side you run into much poorer country, only fit for grazing.
754. Do you think the land on the northern side of the swamp suited to railway construction—is it sound country? It is sound, but difficult to cut; the railway could be made along the north side of the swamp the whole way.
755. You have the Kangaroo-road, leading into the valley? Yes; but it is very lilly.
756. On the whole, the roads of the district are very good? They are, very.
757. Do you think the inhabitants suffer very much inconvenience in their business for want of a railway;—are there places from which they find it difficult to get their produce to market? They have much difficulty and would be much benefited by a railway.
758. A rival proposal has been suggested, viz., from Moss Vale;—which of the two would be the better to make to suit the district as a whole, Moss Vale to Robertson or Bowral to Robertson? I think that is a matter for the Railway Commissioners to decide; I do not think it would make much difference as regards cost or convenience of the public.
759. But if the line were taken to the north side of the swamp, would it tap much more good country? Oh, yes.
760. Which of the two connections would you prefer, Moss Vale to Robertson, or Bowral to Robertson? A line from Moss Vale to Robertson would go to the southern side of the swamp, and I should say that the best line would be from Bowral to Robertson.
761. It was given in evidence yesterday that a good deal of the traffic comes from the south side of the swamp? It is fairly good grazing country, but the rich soil is on the north side.
762. Is there a large area of good country to the east of Kangaloon? Not very large; I should think 3 miles would be the limit of it.
763. *Mr. Hyam.*] Have you been residing in the Robertson district for some time? Yes; for a number of years.
764. Then you know the Kangaroo Valley very well? Very well, indeed.
765. You spoke just now of Broger's Creek;—is that not known as Broughton Vale? I think it was at one time; but it is always locally called Broger's Creek.
766. Is there a good deal of settlement there? Yes.
767. And also in the Kangaroo Valley? Yes.
768. Do you think the proposed railway, either from Moss Vale to Robertson, or Bowral to Robertson, would divert any of the traffic from those parts from its present outlet? That would depend upon which route is chosen.
769. By either route? You mean by going from Bowral to Robertson, on the north side of Wingecarribee, and stopping at Robertson.
770. Yes? I do not think it would divert any of the traffic. A great deal of the traffic from this side of the Kangaroo River and Kangaroo district goes to Moss Vale; and when the people have once got on to the mountain with their loads, they would hardly go to Robertson to meet the railway there, in preference to taking it on to Moss Vale, especially after they have been in the habit of going to Moss Vale for so many years, although they might, in doing so, save 2 or 3 miles of journey.
771. Since the construction of the Coast line railway, has a good deal of the traffic from the Kangaroo Valley been diverted to that line? Yes.
772. A good deal goes to Nowra? Yes.
773. You know the Cambewarra Mountain? Yes.
774. It is very much lower than the Barrengarry? Yes.
775. And it is your opinion that once the carriers get up the Barrengarry they would, instead of unloading into the train, prefer to go on to Moss Vale? If the railway be run from Bowral to Robertson, on the north side of the Wingecarribee, and stop at Robertson, the present traffic from Kangaroo Valley would still go to Moss Vale, I think.
776. They would not discharge their load on this railway, but would continue on to the Main South-western line? If a line comes from Moss Vale, I think they would divert, because it would be much nearer for them.
777. If there was a station at Wild's Meadows? I could not say; it is probable that they would, as they would save about 6 miles of haulage.
778. It hardly seems feasible that when they are loaded up with a good load from the valley, they would unload to save 6 miles, especially when they have a good road;—do you not think so? It is not so much on that account; but when people get into a groove they stick to it. They have been going for many years to Moss Vale.
779. Do you know the country immediately east of Robertson, trending towards the coast? Yes.
780. It is good country? Yes.
781. How far does that good country continue in the direction of Kiama, the nearest port? There is, I suppose, very nearly a mile of very rich, good country; then it gradually merges into poor country of no value whatever.
782. How much of that is there? It extends to the limit of the cliff.
783. The traffic of that good country;—do you think it would be attracted to Robertson if a railway were constructed? Undoubtedly.
784. It would not go east? It never has gone east; it all goes to Robertson as it is.

- H. C. Manning.
29 Aug., 1900.
785. You think the volcanic country only extends about a mile east of Robertson? I should say about a mile; it may be a mile and a half. Then there is very fair country for perhaps a couple of miles; then it gradually merges into swamp country.
786. I suppose that that stretch of country would be served by the main line running in from Loseby's Road? I think the proposed line goes north of the swamp.
787. I think I heard you say that you heard nothing of the proposed extension of the railway from Robertson to the coast? No; nothing at all.
788. *Mr. McFarlane.*] Have you a good knowledge of the country between Bowral and Robertson? Yes.
789. How would you describe it—from Bowral to Robertson Park would be very easy; but a line from there to Kangaloon would be difficult;—could you say if such is the case? The easy country would extend for about 7 or 8 miles. The total distance to Kangaloon is, I think, 14 miles; that would leave about 6 miles.
790. And from there to Robertson? I do not remember the distance; but that is difficult country too. For the first 8 miles to Robertson is difficult country for a railway. There are no cliffs; but it is hilly, and would require many cuttings.
791. In the difficult country you have referred to, is there much settlement? Yes; it is all settled; it is all good soil.
792. Is it settled by agriculturists? Yes.
793. How do they manage with their produce;—do they send it to Bowral? Yes.
794. They have sufficiently good roads, and there is no difficulty in getting produce to Bowral? Not that I know of. The roads are very good.
795. Is there now much land available for settlement? I think it has all been secured.
796. So that the construction of a railway would not increase settlement to any appreciable extent? Smaller holdings might, perhaps, suit people better.
797. Are they large holdings at present? I do not know the extent of the holdings. They are often cut up and leased. One which I measured a little time ago was 320 acres. It was divided amongst two brothers, each having about 160.
798. Would that be considered a large holding? For that district I think it is fairly large. Forty acres in that country will support a man very comfortably.
799. You think that the construction of a railway would have the effect of causing these areas of 160 acres or more to be subdivided? I think it would be an inducement to the holders to divide their estates, but whether they would do so or not I cannot say.
800. Is it costly to carry produce from Robertson to Bowral? I do not think so. I do not know what the rate is. I think the settlers nearly all carry their own.
801. Have you a knowledge of the country from Robertson towards the coast? Yes.
802. What class of country is it? On the plateau that Robertson is on, to the eastward of Robertson, there is some volcanic soil which extends for some distance. Then you get into poor and swampy country.
803. Is there much settlement there? On the good soil there is; but beyond that none. It is practically all taken up as mineral conditional purchases.
804. Would it be difficult to take a railway line from Bowral to Robertson, and then extend it further from Robertson to the coast? I think it would be very expensive, indeed, to extend it to the coast.
805. Do you think such a line would be desirable? I have not given the matter consideration at all. I do not see what object there would be in extending it. The returns would not be commensurate with the expenditure.
806. Robertson is a pretty high locality? Yes.
807. And between there and the coast it is difficult country? Yes; you would have to go down the cliffs. There is a belt of cliffs between the tableland and the coast.
808. Whereabouts is the good land you refer to between Robertson and the coast;—is it nearer Robertson? All of it is near Robertson.
809. Would a line of railway from Bowral to Robertson serve the whole of that area of good land near Robertson? Yes; of course everyone cannot have a station at his own door. It would be in a central position.
810. What distance from Robertson would include the good area you speak of? To the east it goes for nearly a mile or a mile and a half, to the north it might be as much as 3 miles. It branches off there. To the east again there is a little patch. That might be about $3\frac{1}{2}$ miles from Robertson. I do not think any of it would go more than about 3 miles.
811. The only argument in favour of continuing the line from Robertson to the coast is that there would be considerable traffic from country which the Bowral to Robertson line would not serve? I do not think there is any necessity for it at all.
812. Are there any other places between Robertson and the coast which the line would serve? There are many underneath the belt of cliffs.
813. After leaving the mountain? Yes; Jamberoo, for instance, is under the cliffs.
814. Have you looked at the map showing the route of the proposed extension from Robertson to the coast;—do you know the country? Fairly well.
815. What class of country would it be? Very mountainous; very difficult for railway construction.
816. You notice also that it leaves out the town of Robertson;—would that be desirable? I hardly think it would.
817. Do you think if a line were constructed connecting Bowral with the coast there would be much through traffic? No; it would be chiefly used by tourists.
818. Would it open much additional land for settlement—that is, taking the whole distance from Bowral to the coast? Do you mean new country.
819. Yes? No; it would not open a pennyworth of new country. The good country has all been secured. The bad country might be taken up by people who were ignorant of its real worth. Some people will even select rocks; but they do not stay for more than a few years. Something of that kind might happen on this new line. The land is only fit for residences; it will grow nothing.
820. It is not of any use for settlement? Not a bit. It is not fit for agriculture or grazing purposes.

821. Is there much dairying carried on in the Robertson district? Yes; a great deal.
822. Is that the principal industry? Yes; they do grow a small quantity of crops and potatoes. They chiefly grow stuff for their own stock. Potatoes they grow for sale.
823. Can you say if the dairying industry is increasing in the district? I could not say.
824. When produce is sent from any distance between Robertson and the coast, is it put on the train to Sydney or sent by steamer? I am under the impression that it is sent by steamer; but I cannot say definitely. City orders would go by train, no doubt. It does not pay anyone to send produce by train, unless they are compelled to, when they can get it carried by water; they will always send it by water—it is cheaper.
825. That would mean that those living within a distance of 10 or 15 miles from the coast, along the Illawarra line, would prefer to send it by steamer to Sydney than by railway? Do you mean if the train went by their door.
826. No;—I mean that those who are living that distance from the line, when they have carted their produce in, they would prefer to send it by steamer, and not by train? I do not think you can solve that question, because people living on the land down there do not go in for produce at all; they go in for dairying. The butter would have to be sent by steamer or train; but I am not in a position to say what they would do.
827. Has road-making in the district been expensive? Yes.
828. Is that from want of proper material, or is it difficult country? Because it is difficult country.
829. The roads now in existence between Robertson and Bowral;—were they very costly? I should imagine they were; but it is not in my province to say. I have nothing to do with the formation of the roads at all.
830. But you could give an opinion whether a road has been costly or otherwise? From the tableland, I do not think that the roads have been more costly than the average between one township and another.
831. Is there much timber on the inferior land? Oh, yes; it is fairly well timbered.
832. Is it good timber? Some of it is; that in the gorges and gullies is. You get good timber there in places; but on the tableland the timber as a rule is of an inferior quality; it is stunted.
833. Has much timber been got for the mills where you say the good timber is? No, I do not think so; although I cannot say definitely.
834. What class of timber is got? That I could not tell you. I have never actually been down that part of the country you speak of. The waste lands lie considerably to the north of this proposed railway line; but out nearer Kangaloon you come across fine timber, such as woollybutt, sometimes.
835. I understand there is a sawmill at Robertson? Yes; but that is not near the waste land.
836. Does the timber for that sawmill come from the good land? All the timber on the good land has either been ringbarked or cut down.
837. Where does the mill get its supply from? I cannot tell you now. The mill has been removed more than once. All the timber which I have seen going through Robertson is timber not suitable for putting into the ground; it is messmate, principally.
838. The marketable timber you refer to, is that to be found on the north of the proposed railway line? I do not think the line would run through any good timber country. The good timber has either been ringbarked or cut down, as I have said. There are patches of good timber further north.
839. You think the timber trade would not be a feature in connection with the traffic on the proposed line? I do not think so; it would only be a slight source of revenue.

H. C.
Manning.
29 Aug., 1900.

SATURDAY, 1 SEPTEMBER, 1900.

[The Committee met at the Drill Hall, Dapto, at 11:30 a.m.]

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Bowral to Robertson.

Carl Weber, surveyor and civil engineer, Wollongong, sworn, and examined:—

840. *Chairman.*] A short time ago you made an exploration survey, with the view of finding a practicable route for a railway from Robertson to the South Coast line? Yes.
841. You furnished to the Railway authorities a report upon that route? I did.
842. Will you kindly make a statement, either adding to what you put in the report, or amplifying anything you stated in it? I did not go into estimates on the report, and that is a most important point.
843. We have received on that point a rough estimate from the Railway authorities, that the line which you propose, as an extension to the South Coast line of the proposed Bowral-Robertson railway, and that estimate is between £400,000 and £500,000, a good deal of it being at the rate of £15,000 a mile? In my opinion that estimate is too high.
844. Can you give us a rough estimate of what you think the connection between Robertson and the coast would cost? Well, half of that amount should be enough.
845. Have you had any experience of railway construction? Of actual construction—none.
846. Or of the making up of the estimates for railway construction? Yes, a great deal.
847. The line indicated on Mr. Stuart's map is practically the route you discovered and suggested? Yes.
848. Is there any further information, apart from what you placed in your report, that you can give to the Committee? I think that a distance of 2 miles at least, and a tunnel, could be saved by actual survey, which the exploration survey would not allow of.
849. That is, it would be that improvement on the exploration survey? Yes.
850. Is the tunnel a costly item in the scheme? A very costly one. Mr. Stuart's estimate for the tunnel was £35 per lineal yard, and there are 30 chains of tunnel.
851. Can you suggest any other alteration that might be made? I think that is the chief one.

O. Weber.
1 Sept., 1900.

- C. Weber. 852. *Mr. Watson.*] Regarding the saving of a tunnel, do you mean that you think that it would be so if the route were actually surveyed? Yes.
- 1 Sept., 1900. 853. But did it appear from the exploration that it would be likely to be saved? It did not strike me until after I had finished my report, and when I went into the matter a little more carefully.
854. Have you any information on any other aspect of the question? In regard to utility resulting from the construction of the line, there is a good deal to be said.
855. What main advantages would you urge in support of its construction? Some time ago it was suggested to duplicate the Southern line from Moss Vale to Sydney on account of the heavy traffic. The construction of this line would do away with the necessity for that duplication.
856. This line would relieve the line from Moss Vale to Sydney of the ore traffic? Yes.
857. Can you say whether that would mean an appreciable relief of the Southern line? It should be an enormous relief.
858. Do you suggest that the construction of this line would relieve the Southern line, not only of the mineral traffic, but of general traffic as well? Yes.
859. Can you indicate in what particular ways the relief is likely to occur? One is the limestone traffic.
860. Where does that traffic come from, and where does it go to? All the limestone that goes to Sydney comes, as a rule, from Moss Vale and other points on the Southern line.
861. Any other kind of traffic? Not with regard to the relief of the Southern line.
862. Do you know what the distance is from Bowral to Sydney, *via* the proposed route, from Bowral to Robertson and Dapto, and what the distance is from Bowral to Sydney direct along the Southern line? I think there is very little difference.
863. *Mr. Hyam.*] You said just now that the limestone came principally from Moss Vale? Yes.
864. Is any limestone at all sent from Moss Vale,—do you not mean Marulan? Well, it all comes through Moss Vale from places on the Southern line.
865. But none from Moss Vale itself? From Moss Vale itself, none.
866. I suppose you know the distance from Bowral to Sydney along the Southern line? About 80 miles.
867. And the distance from Bowral to Sydney *via* Dapto, supposing this line were constructed? 100 miles, in round figures.
868. Do you think that, in face of that 20 miles further carriage, it is possible that any considerable portion of the heavy traffic would go over this line? Yes; a large portion of it.
869. Do you think that people would submit to paying an increased rate because of the 20 miles further haulage in order to send their goods over this proposed line to reach the Sydney market? Not to reach the Sydney market.
870. I mention that, because you said that the whole of the limestone would go to Sydney? I was talking of the limestone that did go to Sydney, as being one of the principal items.
871. Even if the Railway Commissioners were inclined to send that heavy traffic over this line, I do not think the consignors would consent to pay for 20 miles further haulage? No.
872. *Mr. McFarlane.*] Apart from this being a relieving line, can you indicate what direct traffic there would be from the Southern line to the coast line? Ores, to a very large extent, if this line were made. Ores that are now paying expenses in the Braidwood district at 10 and 15 dwt. per ton, with the most crude way of dealing with them, would be brought into profitable working at once by a better means of extraction.
873. Is there provision for better treatment of ores here than there is elsewhere? Undoubtedly.
874. Are there any other classes of goods that would come this way, or would there be any large passenger traffic? The passenger traffic, of course, would be principally tourist; and this being one of the most picturesque lines in New South Wales, would draw a great amount of traffic of that kind.
875. That traffic would be from the Southern line? Yes; to Dapto.
876. Would there be any additional goods traffic? Yes; coke and coal that are now blocked from going inland owing to the roundabout route through Sydney.
877. Could coal be supplied to places in the interior from the South Coast district cheaper than it can be from the Newcastle district? Yes; undoubtedly.

John Brown, Alderman, Central Illawarra, sworn, and examined:—

- J. Brown. 878. *Mr. Shepherd.*] Have you made yourself acquainted with the country between Robertson and Dapto? Yes.
- 1 Sept., 1900. 879. Where do you think the best junction would be for a line from Robertson—Albion Park or Dapto? I think Dapto; because I think that a tunnel could be driven through the mountain at West Dapto, immediately opposite where we are now.
880. Do you think that a fairly good grade could be secured? Yes; I have formed that opinion from a general knowledge of the mountain and the country through which the line would pass.
881. You have given this matter some consideration? Yes.
882. Would you kindly give the Committee the advantage of any knowledge you have that would assist them in coming to a determination in reference to the proposed continuation from Robertson to Dapto? I think, from my observation, that a tunnel could be driven through the mountain at West Dapto into a place called Fern Gully, and from there the line might be run to Mittagong. That has been my view for some years.
883. Would you kindly state any advantages that would be derived from the continuation of the line from Robertson? The advantages would be general. I think that a very large trade would be opened up between this district and the Southern districts, especially as regards bringing minerals to the smelting works at Dapto; and as the Government are now opening a harbour at Port Kembla, a trade would also be opened up between that port and the Southern districts.
884. Do you think that there is every probability of the line becoming self-supporting in the event of its construction? I think so.
885. You think that the carriage of minerals would form a large portion of the traffic? Yes. The passenger traffic would also be great. This line would, to some extent, relieve the line which runs now through Campbelltown and Liverpool. Passengers would travel this way to and from the Southern districts, which would be a relief to the present Southern line between Sydney and Mittagong, and the connection of the South Coast and southern lines would cause a great increase in the passenger traffic.
886. Is there anything else you would like to state? Nothing particular.

Charles]

Charles Henry Hayward, secretary, Smelting Company of Australia, Ltd., Dapto, sworn, and examined:—

887. *Mr. McFarlane.*] What position do you hold? I am the secretary for the Smelting Company of Australia, Ltd.

C. H.
Hayward.

888. Does the Company you represent do a large trade in ores? Yes.

889. From what part of the country do the ores principally come? They come from all over New South Wales and outside. 1 Sept., 1900.

890. But what are the principal directions they come from? The great bulk of the ores come from Broken Hill.

891. They come by steamer to Sydney? Yes.

892. Do you get any considerable quantity of ores from the Southern districts, *via* the Southern line? Yes; we get a considerable number of small lots.

893. Can you give us an estimate of the quantity in tons that you get annually from the southern districts? No, I cannot. I have come here suddenly this morning at the instance of the manager, who had to go away, and I had not time to get any figures on that point.

894. Do you think that there would be a very large quantity per annum coming from the southern districts? I have not really much of an idea at the present moment as to what would be the tonnage.

895. Do you think that, if the proposed railway from Bowral through Robertson to Dapto were constructed, the whole of the ore coming from the southern districts would come that way, instead of round *via* Sydney? Yes; I should certainly say so.

896. Are you aware of much trade that is likely to come from the Southern line to Dapto? The direction in which it would affect us most is as regards fluxes with which to treat the ore, and not the ore itself.

897. Would they come from places on the Southern line? Yes, from several points. The whole of our fluxes would come over this line. At present we are getting our ironstone from Carcoar; but if this line were made we would not get any more from Carcoar, but we would get our fluxes from either Picton, Mittagong, or Marulan, or from each of those three places.

898. Can you give us an estimate of the tonnage of that material which you use per annum? Roughly speaking, we use 10,000 tons of ironstone per annum.

899. Do you use any limestone? Yes; in round figures, 5,000 tons per annum.

900. From which direction does the limestone come? At present from Portland Siding, on the Mudgee line; but we would not get it from there if this line were made. We should certainly go to Marulan or Goulburn for our limestone.

901. Could you get it in quantity there? Yes.

902. Is there any other material in connection with your company you think would give traffic to this line? A certain quantity of lime would come from Goulburn, which does not come now.

903. Would that be an important item? Not a very great item.

904. Could you give us an estimate of the tonnage per annum? Perhaps 400 or 500 tons a year.

905. Is there any other company such as yours in Dapto? No.

906. Is there any other information you can furnish to the Committee with respect to any traffic that would be likely to pass over the proposed line? Only in general terms. I think that a great deal of ore would be brought to this district. Some very good districts would be tapped by this line, such as Cooma, Captain's Flat, Yass, and Gundagai. It would also bring in business from Wyalong, which originally supplied us with a great deal of ore, which we have, however, lost for some time past, on account of the railway freight. I understand that a line is going to be constructed to Wyalong. I do not know whether from Grenfell or from Temora, but in either case that would bring an increased quantity of ore to us. Certainly, if a line at the other end and one at this end were made, it would suit us very well to take a lot of the ore from Wyalong, and it would certainly tap a great many mining fields, and this would bring us an increased quantity of ore.

907. Do you think that it would be of mutual advantage to the mine-owners and to the company you represent to have this railway connection? Yes; because the greater the saving you can give the mine-owners in the way of railway freight, the more will they develop their output and send to you.

908. Have you calculated how much cheaper it would be to carry the ore over the proposed line than to bring it *via* Sydney? Yes; for instance, take ore from Temora, coming out of the Wyalong gold-field. At the present time the railway freight on that is 14s. 4½d. a ton, but with this proposed new line it would be about 9s. 7d.—that is a difference of 4s. 9d. a ton, which is a large consideration to get off the freight on the ore; and from other places it is the same in proportion, according to the distance.

909. Would any traffic from your company go from here to the Southern line? No; all our traffic outwards goes to Darling Harbour.

910. *Mr. Hyam.*] In mentioning the different sources from which you draw your ores, you did not mention Braidwood;—is Braidwood likely to be a contributor? Yes; Braidwood has given us a quantity of ore before, and it would be one of the places.

911. It is supposed that there are large quantities of low-grade refractory ores in the Braidwood district? Yes.

912. And naturally you think they would be trucked to Dapto? Yes.

913. In speaking of traffic outwards from here, do you think there would be any trade in coke from this district to the interior over the proposed line? I do not know where the coke would be consumed, if it went that way. Of course there are large coke-works here, but I do not know where they would find a market for coke over the proposed line.

914. Not for the different mines? The mines would not consume it, unless they had smelting works. Lithgow would not take coke from here, because it has its own coking-works in the neighbourhood, I understand.

Thomas Armstrong, farmer, Albion Park, sworn, and examined :—

- T. Armstrong.
1 Sep., 1900.
915. *Mr. Watson.*] You know the proposition before the Committee? I do.
916. And the suggestion that has been made that a line might be constructed from Dapto to join the Main Southern line, say, at Bowral? Yes.
917. Can you state in a general way what results might be expected to accrue from the construction of this line? The question of ores has been pretty fairly dealt with, therefore I need not go into that. Now that the Port Kembla Harbour Act Amendment Bill is practically law and a harbour will be constructed at Port Kembla, I anticipate that a very large quantity of wool, tallow, meat, and so on, which now has to go to Sydney, will come from the south and south-western districts to this district.
918. That will be for export, I presume? Yes; and in the near future this Illawarra district must be a large manufacturing district. We have the necessary coal, water, and building stone, and various ores, including iron ores. There will also be a very large local market in this district in the near future.
919. What for? All kinds of produce. I think that the farm produce grown in the Wingecarribee district will be a very considerable item of consumption in this district—fruit and vegetables of various kinds.
920. Are these not produced locally in sufficient quantities? No; we import a great deal. Even potatoes we do not grow locally except to a small extent. There is a large tract of timber reserves on the tableland, timber from which would find its way down to this district.
921. Is that timber suitable for export or for local consumption? Either.
922. Of what class is it? Hardwoods principally.
923. Would you state the kinds of hardwoods there are? Red-gum, spotted-gum, stringy-bark, some of the boxes, and some of the ironbarks. The country lying back there over the mountain is largely the watershed of the Sydney water supply, and a great deal of it would be invaluable for timber-growing, for I suppose we will go in largely for forestry there by and bye.
924. That being a water supply reserve, it would not be wise to go in for anything else there but timber-growing? That is my idea. It would not be possible to use that land for ordinary farming purposes. Even at present the farmers there are not allowed to run their cattle upon that land, because that would contaminate the water; but it could be utilised for timber-growing to a very large extent.
925. Do you think that it is likely that the producers of the southern district would send wool hither for export rather than send it to Sydney, where they can have a chance also with the local sales? I take it that Port Kembla will be an export port for a very large amount of our southern and south-western produce.
926. Is not the tendency rather to concentrate wool, for instance, in one market, with a view of submitting it locally for auction sale? There may be something in that; but the Sydney market trade appears to me to be getting congested, and while a considerable amount will go in that direction, there is always a considerable quantity exported.
927. Is there any produce that you think would be sent from here towards the interior by this line? Yes. The difference between the climate and soil of this district and the climate and soil of the tableland is so very marked that a considerable quantity of our produce would go up to places there. They cannot grow maize, but we can, and things that they can grow we can grow at a different season. There will be a constant interchange of produce between the tableland and this district. The principal population in this district now is the mining population, and we shall have a much larger population because of our mining and manufacture. I have just received a wire from a gentleman who lives at Shellharbour, and who runs a large pork and bacon business, regretting he cannot attend; but there will be a considerable trade of live stock in that direction.
928. From there to here? Sending it to here. We have the facilities for manufacturing here, and the conveniences of shipping and rail.
929. Is there any other feature that strikes you? I am not a military man, but it strikes me that, from a military point of view, some line like this is a necessity. There is scarcely a mile of this portion of the South Coast line that could not be shelled from the ocean. But with a connection between the South Coast line and the Southern line, and with the connection from Harden to Blayney on the Western line, assuming that any trouble came, the connection between the South Coast line and the Southern line would, in my opinion, be very valuable. As it is, our South Coast line might very easily be made useless; but if we had a connection with the Southern line, and then could connect with the Harden-Blayney line and the Western line, we would not be dependent on the South Coast line, as we are now.
930. Do you know of any better route than that suggested by Mr. Weber? I cannot say that I do. I have been a resident of this district for over forty years, and I think that Mr. Weber is about as good an authority on the question as we could get. He knows the district very well. I have travelled about with him a little in connection with the preparation of his report. As to the particular point where the two lines might converge, as a resident of Albion Park, I should say naturally that it should be there. But I know this is one of those cases where there is no local interest sufficiently strong to warrant the Department in bringing the line a mile this way or a mile that way.
931. Whichever suits the engineers best, I suppose, you would agree with? Yes. I do not think there is any local interest sufficiently large to divert it a mile from any particular point; but I should say that the further south it was the more trade it would get. For instance, Kiama, and places further south might send a lot of produce by rail to southern districts.
932. The further south you took it the less value it would be as a line to relieve the southern line, because that would give you a further round? I cannot see that it would. To get through the mountain you would have to go a considerable distance either north or south, in order to get a grade to come down by, and it is a question whether you might not have to go a little northward, and come back. It is an engineering question. I may say that I know that in the Marulan and Goulburn districts there is any quantity of limestone which would naturally come to this district. There are also the iron mines at Mittagong which has been opened, and afterwards closed for want of convenience of working, and there might be a large development there, where there is some of the best ironstone in the Colony. Locally we have ironstone and limestone of a class; but whether of any commercial value or not I cannot say. The timber question is a very important one, because in future large quantities of timber will be required here. The local supplies will hold out for a time, but eventually will give way.
933. Would the ironworks at Mittagong require to have coal brought from this district, or could they get it

it locally? I should say that it would pay them better to send their ore to us rather than establish such large works as otherwise would be required there. T. Armstrong.

934. And also rather than use the class of coal they have at Mittagong? They have tried it several times; but it was found not to be good enough, and the works were closed. Either the ore would be sent hither, or coal would be taken to Mittagong from here. Coal and coke, instead of going to the south and south-western districts from here *via* Sydney, would go direct by this line. 1 Sept., 1900.

William John Wiseman, Mayor, Wollongong, sworn, and examined:—

935. *Mr. Hyam.*] Do you know the route of the proposed railway from the South Coast line to Robertson, or near Robertson? I do not know the route, but I have travelled several times from Wollongong to Robertson *via* the Macquarie Pass and over the Bongbong Mountain. W. J. Wiseman.

936. Have you any knowledge of railway construction, from an engineering point of view? None whatever. 1 Sept., 1900.

937. You do not know whether the route is a practicable one or not? Only from hearsay.

938. Have you been present during the whole of the inquiry here since we commenced it;—did you hear the evidence given by previous witnesses as to the nature of the traffic this line would be likely to attract? I heard Mr. Armstrong say that it would, perhaps, attract the wool trade.

939. Do you think it would? Yes. I have been in the interior lately, as far as Cooma, and I know that large agencies there purchase wool, and I believe that if railway communication were made shorter and cheaper, and if the interior were practically brought nearer to a seaport, to which it is likely large steamers and other vessels would come, it is probable that eventually those agents would export their wool from such a port as Port Kembla.

940. Do you not think that it is very likely that those people who grow wool in the Cooma and other districts would send their wool to Sydney, because of its being a central market, where they might have the benefit of the local wool sales? Yes; but why could not they have wool sales at Port Kembla in the same way. I do not know why they should not. Port Kembla harbour, when it is completed, will be the best harbour in New South Wales. We have 36 feet of water there at low tide.

941. I suppose you are aware that wool sales were carried on at Newcastle some years ago? I have heard so.

942. You know that Newcastle is a port of considerable importance? Yes.

943. Do you know that they had to discontinue those sales? I am not aware of that. People used to send a large quantity of wool through Morpeth as well.

944. With all the wool that came from the north and north-west districts, still they could not carry on their wool sales successfully at Newcastle; and, in face of that, do you think it is likely that wool agents would establish a market here for the sale of wool? I suppose it depends upon the conveniences and whether it would pay the people who would do it. Of course, Port Kembla would make a good *dépôt* for the wool, and a good place for exporting all kinds of produce.

945. Then you are very hopeful as to the possibilities of Port Kembla? Yes, I am.

946. When do you think Port Kembla will be completed? I do not see why its completion should take very long. We have stone right at the mouth of the breakwater, and if the Government here are like Governments are in other parts of the world, it will not take them long to run a breakwater out.

947. Have they commenced yet? I understood they could not commence until the matter was passed properly into law, and the amending Bill was passed only last week. When that harbour is completed we shall be able to float the largest ocean-going vessels in the world at present, and for years to come. They will not be able to take into Sydney such vessels as we could take in there. In going into Newcastle the depth of water is something like 22 feet; but the ocean-going vessels that carry wool carry something like 7,000 to 8,000 tons. Can those vessels get into Newcastle, and is it a wonder that the wool industry there failed.

948. Well, then, one big steamer would take the whole of the wool brought to Port Kembla? Perhaps it would. We have had in our port already a vessel of 8,000 tons. Independently of the wool, there is the mineral traffic. I was in Cooma recently, and found at Bushy Hill several mining industries that are stagnant because the cost of sending mineral to the smelting works either here or at Newcastle is really too much for them. The Monaro district is full of gold and other minerals, and I have no doubt that we should help to develop those mining industries if we could only shorten the distance of railway communication. I was speaking to some of the company there who own the mine, and they told me that they are sending the ore right to Newcastle now. I suppose there is sometimes a lot of red-tapeism about sending stuff to Newcastle from the interior, because of small detentions at Darling Harbour, or something of that kind; but if we had railway communication between here and the interior it would shorten the distance, it would cheapen the cost, and therefore it would help those industries. It would give increased employment there, and make it better for the Railway Commissioners and better for the country.

949. I suppose you are aware that the charges for conveying ores and fluxes are so low that, unless traffic of that class were augmented by some other class of traffic, it would not pay to construct a railway for the conveyance of that particular class of goods? Yes; but still that would be only one class. There is the wool, as well as many other things.

950. Do you think there would be any great augmentation of trade from other sources? Well, Federation is coming about, and we have such a large quantity of coal. Some time ago I took up the cudgels to fight against the Illawarra Lake Company when the Government were absolutely going to hand that lake over to the company. Over ten years ago I had more than 300 maps printed, and sent one to every member of Parliament. That map will show you that, even at that time, this railway was contemplated. That gives an idea of all the coal measures and the owners of the coal-mining properties. At that time, if I had not taken the matter up, the Government would have absolutely handed over that large sheet of water to that company. At that time we contemplated a railway from Moss Vale.

951. Was there not a strong contest between the Port Kembla Company and the proposed Illawarra Harbour Company;—was that not a great deal the cause of the fight? The people of Wollongong would try to help them along so long as they went on right lines.

952. Did you not give evidence before a Select Committee of the House? Yes, I did; and you will find that

W. J.
Wiseman.
1 Sept., 1900.

that I did not offer any strong opposition to the lake, and I said that if the lake could be opened properly by that company I believed there would be room for both companies.

953. You have spoken of wool and ores;—do you think there would be any other traffic? Yes. The distance from Goulburn to Sydney will be shortened by this route. It is 86 miles from Moss Vale to Sydney, and only about 45 miles from here to Moss Vale. From Goulburn, Cooma, and other places on the Southern line, if people want to come to Wollongong, the distance will be shortened by 102 miles by their coming across by the proposed railway instead of going round by Sydney. So long as business people could depend on vessels coming to Port Kembla for goods, they would, in the course of time, have their imported goods brought to that port, especially if we had a train running up and returning; and if the people, not only of Goulburn, but also of other large centres, could shorten the distance, and thus save a few shillings, they would do it, and that would help this line by imports.

954. Do you think there would be any considerable trade in live stock from the Southern line to the coast line? There might be. People might go in for sending cattle home from a port in this district as they now do from Sydney.

955. I meant for local consumption;—where are you supplied from now? We could be supplied from there.

956. Do you think there would be any return traffic from the coast in the direction of the Southern line? There would be return traffic in regard to both coke and imports.

957. Were you here just now when the accountant for the Smelting Company gave evidence? Yes; but I was not listening.

958. Did you hear him say that it was not likely that great quantities of coke would be sent from here, but that ores would be brought hither for treatment? I did not hear him say that.

959. What do you think of that argument? I think it would be cheaper to bring the ores hither than to take the coke to the mines.

960. Even supposing that your argument holds water, that Goulburn and other places would get their goods from Port Kembla, would that not be starving the other line? I believe in decentralisation, and I think that in the course of a little time, with the advent of Federation, a city will spring up in Illawarra, and I believe that it will help the revenue of the country, and of the Railway Commissioners too. Sir William Lyne, in a speech in the House lately, said that a company were now prepared to start a large ironworks near Port Kembla; and he said that something like 100,000 people will be fed directly and indirectly by that.

961. At Port Kembla? Yes. It may, perhaps, seem a small thing.

962. I think it seems a very large thing? Well, it might take a thousand years to bring it about; but if they start ironworks in this district, a very large number of men will be employed. We have the coal and coke industries, and two more good coke industries are being started in Illawarra—one on the Mount Keira land and the other at Bellambi.

William Brownlee, farmer and miner, Tongarra, sworn, and examined:—

W. Brownlee.
1 Sept., 1900.

963. *Chairman.*] Where is Tongarra? Four miles east of Robertson, close to the Macquarie Pass.

964. Are you a coal-miner or a gold-miner? I mined for about ten years on gold and copper, and for about twenty-five years I have been connected with coal-mines.

965. Do you carry on farming at your present residence? Yes; and coal-mining, too.

966. What is the extent of your agricultural operations? Mine is only a small dairy-farm.

967. Where do you generally send your produce to? Sydney.

968. By which way? By the South Coast line.

969. Do you corroborate in general the statements that have been made with respect to the anticipated traffic on this line? Some of them.

970. Would you state on what points you disagree with them? I do not disagree with much that has been said in regard to the anticipated traffic. But there is a great deal more traffic to come on this line than any gentleman has suggested this morning.

971. Will you kindly suggest what omissions have been made? There are large quantities of iron-ore on the South Coast, but we have no lime to smelt these ores.

972. This line you think would afford a means of obtaining the necessary fluxes? Yes; and in return we could send large quantities of coal and coke on to the Great Southern line.

973. What centres do you think would take coal and coke from here? It would be consumed at places on the Great Southern line. I could put "Illawarra" coal—coal obtained from a mine 16 or 18 miles from Illawarra—on the Great Southern line at Moss Vale, whereas at present the "Illawarra" coal has to be sent round *via* Sydney from Port Kembla and Wollongong, and also sent up the Southern line. Some years ago I was connected with a mine when we sent small coal to Mittagong to make iron, and it cost us as much to land 3 tons of small coal there from Illawarra, to make a ton of pig-iron, as they could land the pig-iron for on the Circular Quay. By the proposed line we could land this coal at Mittagong, where there are large quantities of iron ores. I have made iron from some of them for Mr. Lahiff. We could also fetch ore from Mittagong and mix it with our poorer ores. We have millions of tons of iron-ore in the Illawarra ranges that will go from 22 to 40 per cent.

974. How many tons of coal does it take, on the average, to smelt a ton of iron-ore? About 3.

975. Would it be cheaper, then, in all cases to carry the ore to the coal than to carry the coal to the ore? The ore should come to the coal by all means. That is the reason why the Mittagong ironworks were a failure so often.

976. Then your statement with respect to coal being despatched from this district to the Southern line did not refer to coal to be used for smelting purposes? Not for that alone, but also for commercial purposes. I have analyses from the Government Geologist and others, proving that at Tongarra we have some of the best coking coal in New South Wales, and a good seam of household coal also. The analyses show that some of the coal is of good coking quality. It has one of the smallest percentages of ash in the Colony.

977. Is there anything further you would like to say? With regard to the industries, there is most valuable cement-ore equal to making the best Portland cement. We had a gentleman there from Sydney some years ago, and I have brought a sample to show you. There are millions of tons of it at Tongarra. It is 40 feet thick, and I have traced it for some miles.

978.

978. Is there any other point you would like to bring before us? If this new line were to go by Albion Park, all this new industry could be brought into operation. W. Brownlee.
1 Sept., 1900.

979. *Mr. Watson.*] From what you say, it would appear that the coal that has been used hitherto at Mittagong—local coal—is not suitable for smelting purposes? The Mittagong coal is not suitable for making iron.

William Smith Thompson, farmer, Dapto, sworn, and examined:—

980. *Mr. McFarlane.*] Have you been farming for a long period in Dapto? Yes; I have been carrying on dairy-farming for the last forty years here. I have been about forty-five years in the district. W. S. Thompson.
1 Sept., 1900.

981. Do you endorse the statements generally that have been made this morning relating to the probable traffic on the proposed line? Yes; I believe there will be a large traffic, and that in the near future we will have a large population here. I also believe that produce will be brought from the interior for consumption here; and there is a good deal of iron back near Wingecarribee. One of the foundrymen and a few others, eight or ten months ago, found a very good seam of iron about 7 miles from where Mr. Weber said the railway would cross the mountain, near Mount Murray. I think there will be a good deal of traffic with coke. Mr. Wiseman said there would be no traffic with coke, but I think that coke and coal will be taken back. Mr. Brownlee did once supply the milk factory at Robertson with coal from Illawarra. I know the whole route, and I think that if ironworks were carried on here, there would be a large traffic in limestone coming from Marulan and other places on the Southern railway. When the Mittagong ironworks were being carried on, there was a very large cart traffic between Marulan and Moss Vale. I believe that in the near future we shall have a large population here engaged in mining, smelting, and so on.

982. Would the proposed line be likely to be used largely by the farming population in this district? Yes.

983. In which direction? I believe the Kangaroo Valley traffic would come this way, because the route would be much shorter.

984. Would that be a large traffic? Well, the Kangaroo Valley is a beautiful district and very prolific.

985. Do you think they would use this line? They send now to Bowral, but I believe they would send this way, because this route would be much shorter.

986. Which is your market for your produce? Sydney. Very few people grow any produce here for sale. Whatever green-stuff they do grow they mostly use for fodder.

George McPhail, farmer, West Dapto, sworn, and examined:—

987. *Chairman.*] You have given some consideration to the question of connecting the South Coast line with the Southern line by an extension of the proposed railway from Bowral to Robertson? I have; a good deal. G. McPhail.
1 Sept., 1900.

988. Can you supplement the evidence given this morning? I approve of the bulk of what has been said in regard to the traffic. I know that there is a considerable quantity of coal every year going from the Lithgow Valley mines to the principal towns along the Southern line, and if the South Coast line were connected with the Southern line coal would go from this district instead. I have been several times to Lithgow, and have a son-in-law who is a manager there, and I know that coal would go from here to the Southern line if this proposed railway were constructed. This district being a dairy district the fat stock consumed in it chiefly comes by rail, and instead of coming *via* Flemington the bulk of it would come by this proposed line if it were constructed.

989. Do you know from what districts the fat stock is mainly drawn for the supply of this district? A friend of mine, who has been butchering for the last fourteen years, has received some hundreds of head from Braidwood, which he had to travel by road over the mountain, as there was no good railway communication.

990. Would there be any traffic not mentioned this morning? I feel convinced that there would be a considerable quantity of fish going from Lake Illawarra up Goulburn way.

991. Any other point? As regards the traffic, I do not know that I can add anything to what has been already said.

992. You agree in the main with what has been said about the course of mineral traffic along the proposed line? Yes; I believe that that will certainly increase, because there is such a large quantity of poorer ores obtained on the Southern line which would not pay if sent through Sydney to be smelted here, whereas this short cut would enable those ores to be worked to a large extent. As regards the route, I am not a practical man, but I took two or three days, two or three months ago, in exploring at the back of the mountain here, and I believe that there are not many men living who are better acquainted with the whole of the country between Mittagong and the top of the mountain here than I am. Many years ago I had stock there, and knew every nook and corner of it. I ascertained from Mr. Weber, on his return from his exploration trip, that he had an idea of the railway going through the mountain at West Dapto. I agree with him that that would be the easiest place to tap the mountain, but I am not so much in favour of that as I am in favour of another locality, simply because the northern passage through the mountain would make the line at least 7 miles longer, and it would go through 8 miles of barren country. There are two spurs capping the mountain, one is called Marshall Mount Range, and the other is called Avondale Range, and there is a very large depression at the back of the mountain that could be got down into from the Robertson direction, or from any direction at the back there. To penetrate the mountain there would make the line 7 miles shorter, and my idea was that the line would be connected with the South Coast line between here and Yallah platform, about 3 miles from here.

Thomas Gillard, carpenter and builder, Dapto, sworn, and examined:—

993. *Mr. Watson.*] I understand you have had some mining experience? Yes.

994. You know the proposal to connect the Southern line with the Illawarra line? Yes. T. Gillard.
1 Sept., 1900.

995. Is there anything you would like to state in addition to what has been already stated, bearing on the question generally? Yes. I have here a sketch of the locality I propose to bring under your notice. It is on the Shoalhaven River, and I think that if the proposed railway were constructed it would be developed. It is all auriferous country, and abounds with reefs. It is about 15 miles from Marulan railway station. The ore would have to be trucked at Marulan, and as the cost of carriage would be materially lessened

- T. Gillard. lessened in consequence of the railway going across from here almost direct, it would give an inducement to companies to take up the reefs that exist in that locality.
- 1 Sept., 1900. 996. You think that they would send the ore to the Dapto Smelting Works if this line were constructed? Yes.
997. Is it ore that requires smelting for treatment? It does not necessarily require smelting; but to erect machinery there means an outlay of £10,000 at least, whereas by transmitting the ore to the smelting works here direct, you could avoid that great outlay, and there would be a bigger inducement held out to companies to go into the matter in consequence of not having to erect machinery there. If the railway were to be run direct to Dapto, that would be a great inducement for people to develop that country. As a matter of fact, I am now forming a company to take up reefs in that particular locality, with the object of transmitting the ore to these smelting works. Two years ago I wrote to the Mines Department in order to get information in reference to that locality. It abounds with reefs, and does not seem to be very well known, either to the mining community or to the Mines Department, and that country has been entirely neglected up to the present time. As far back as 1870, when I was a boy, I obtained prospects there equal to 3 oz. to the ton, and the ore to be obtained there would pay handsomely if it be brought to the smelting works, though not otherwise.
998. You think that the cost of carriage to the smelting works at the existing rate would be too great? It might not be too great even now; but the expense would, of course, be materially lessened by a railway running direct from here, and I am sure the back country would be developed in due course. Both sides of the river there for several miles is auriferous country—in fact, there are payable reefs within 11 miles of Marulan which I do not think are being worked now. There were some reefs opened there; but, in consequence of the cost of machinery and other things, they have been abandoned for the time-being. There are a number of reefs that show good assays; but they have never been properly opened up.
999. *Mr. Hyam.*] You mentioned the gold-reefs near the Shoalhaven;—that is commonly known as the Shoalhaven gullies, is it not? I refer particularly to Yellow Springs and Spring Creek.
1000. How far is that from the nearest point on the Southern railway? Very nearly 15 miles, I think.
1001. It is very mountainous country? Yes.
1002. And very broken? Yes.
1003. Would it not be difficult to get a road from those reefs into Marulan? No; it would not be very difficult. Although the country is mountainous, there is a way of making a road in between the mountains. It would not increase the length of the road very much, and you could get the ore out.
1004. Which way would you go then from the Shoalhaven? You would leave Spring Creek a little to the right in going from Yellow Springs, and you would then go *via* Croker's Creek.
1005. There would be a lot of heavy haulage, and the cost of taking ores from the Shoalhaven to Marulan would be considerable? Well, with 3 oz. to the ton, I think there is a very fair opening. At any rate, I have a company that intends to try it.

Patterson Bryen, dairy-farmer, Arondale, sworn, and examined:—

- P. Bryen. 1006. *Mr. Shepherd.*] Are you acquainted with the country pretty well from Dapto to Robertson? Passably well; but not particularly well. I have been along the road through Macquarie Pass to Moss Vale, and other places.
- 1 Sept., 1900. 1007. You have a fairly good knowledge of the country? Yes.
1008. What is your opinion as to the desirability of constructing a railway from Bowral, *via* Robertson, to Dapto? I think that the line would be a payable line. It would go through fertile country all along, except, perhaps, a few miles on the top of the mountain, and I consider would develop the mineral wealth of the locality. I quite agree with the last evidence given, because I myself have been prospecting in the Marulan district for minerals.
1009. You have heard the evidence that has been given? I have heard what was said by Mr. Armstrong and Mr. Weber, and I concur in that.
1010. Is there anything you could add to it? Nothing, except that I consider that our coal on the mountain is equal to any coal above us. I have prospected on my own property, and have spent about £300. As far as I have gone, I have found a coal which is as satisfactory as any coal that has been produced in the coast district.
1011. Do you think there would be a considerable quantity of coal required on the Southern line, in the event of this railway being constructed? I certainly do. The smelting works here are a great boon to our district, and I think that this railway would help the district very materially.

Carl Peterson, storekeeper, Dapto, sworn, and examined:—

- C. Petersen. 1012. *Mr. McFarlane.*] Have you considered the proposal to construct a line of railway from Bowral to the Illawarra line, near Dapto? I have heard all the evidence that has been given before the Committee to-day.
- 1 Sept., 1900. 1013. What is your opinion concerning it, as regards traffic? In regard to traffic, it is a line that eventually would be bound to pay, inasmuch as the Government are constructing a harbour at Port Kembla. That I consider is an inducement to connect the Southern line and the coast line.
1014. Do you think it would pay in the near future? Yes; in the very near future.
1015. You have heard evidence given to-day by a number of witnesses concerning the traffic and other matters in connection with the proposal;—do you endorse generally what was stated by the previous witnesses? Yes, I do. Perhaps the country from the coast inland might not turn out so good as has been anticipated; but I maintain that the coal trade on the South Coast is growing very extensively, and with the construction of this cross railway there will certainly be a very large opening for an additional coal-field. The coal-field I mean is over the mountain. It has not been properly prospected or really proved beyond that we know that under the mountain we have a coal of better quality than the coal on the face of the mountain.
1016. When you say over the mountain, what do you refer to? The table-land. There are Government reserves and mineral leases to a large extent.

C. Peterson.

1 Sept, 1900.

1017. Would that coal be sent to the Southern line? Not from immediately over the mountain here.
1018. How far from here or from the Southern line? To the mountain from here is 3 miles; from the base of the mountain for 10 miles west good coal exists.
1019. Would that coal be as good as the coal obtained on the coast? Yes.
1020. Do you think there would be much trade in coal from here to the Southern line? No; I do not think there would be a great deal of coal trade from here south. There would certainly be some; but when I referred to the opening of that coal-mine I meant for export trade.
1021. Could they not send that coal by the Southern line? They could, but only at a bigger expense to an export port in taking it through Sydney.
1022. But I mean for places on the Southern line? It would be cheaper coal for places down south than people there could get from Lithgow or Newcastle or from the Southern mines now in operation.
1023. Then there would be no traffic in coal from the coast to the Southern line in the event of that mine being opened up? Yes, some; but no material traffic. I referred to it merely for export business. Coal would be carried by this new route over the mountain to Port Kembla for export purposes. If the proposed railway were constructed along Mr. Weber's route, it would follow the mountain out towards Avondale, a distance of 7 or 8 miles, to get a good grade; and on the face of the mountain there are coal-mines now, and people are only waiting an opportunity to open these mines, particularly in view of the completion of Port Kembla. There is a property under offer in Melbourne, which will probably be floated very soon, known as Wongawilli.
1024. Is there any other source of traffic you think of that has not been mentioned by previous witnesses? Yes; there is one kind of traffic that I consider, in the course of a few years, would be very considerable for this railway. I refer to the cattle trade that would come from the Southern line and the meat-export trade. From the Southern line a quantity of live stock goes now to Sydney, and is treated at various refrigerating works around Sydney. The live-stock could be carried right down over the mountains, and there are good pastures near the mountains in which cattle could be rested and refreshed before being killed for the export trade. It is better for cattle before being killed to be rested and refreshed, and I do not know of any place, either on the Newcastle side or about Sydney, where such pastures can be obtained as those on the South Coast.
1025. Do you think that that would mean a considerable traffic for this railway? Yes. I maintain that that would be a very considerable traffic in the course of years. I do not say that it would be an immediate trade.
1026. Is there anything you wish to add? Seeing that the Government are about to construct a harbour at Port Kembla, it seems to me that this railway in conjunction with that harbour would create trade in itself. In the four Colonies there is no port as good as Port Kembla will be for boats of very deep draught. Now, vessels with very deep draught have some difficulty in entering either Sydney harbour or Newcastle harbour, but in that respect there would be no difficulty at Port Kembla. Thirty-five or 40 feet is no question there, and, in view of what is promised in connection with that harbour, I think that the construction of a railway of this kind is absolutely necessary, and eventually, if not in the near future, I think that it will have to come about.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM TEMORA TO WYALONG.

THIRD REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of Railway from Temora to Wyalong," have, after due inquiry, resolved that it is expedient the proposed railway should be constructed; and, in accordance with the provisions of sub-section (IV), of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly :—

REASON FOR THE PRESENT REFERENCE.

1. The present reference to the Committee, to consider and report on the expediency of constructing a line of railway from Temora to Wyalong, was consequent upon the resolution passed by the Committee in their further inquiry respecting the proposed Railway from Grenfell to Wyalong,—that it was not expedient that proposed work should be carried out, as, in the Committee's opinion, a line from Temora to Wyalong was preferable.

DESCRIPTION OF THE RAILWAY.

2. The proposed line, which would be 41 miles 48 chains in length, is officially described as an extension of the Cootamundra to Temora branch railway, and would proceed north-north-westerly, occupying one side of the main road, to within $4\frac{1}{2}$ miles of Barmedman, at which point it would diverge slightly to the north, and after crossing the main road, and passing Barmedman on its western side, would again follow the main road generally to Wyalong, where, passing south of the township, it would end at the southern side of West Wyalong. The works would be light, and the ruling gradient 1 in 100. The land passed through would be almost entirely Crown land. The line is longer than that submitted on the previous occasions when it was under inquiry. In those cases it terminated at the Government township, or East Wyalong; as now proposed, it is extended to the private township, or West Wyalong.

ESTIMATED COST.

3. When previously considered the estimated total cost of the line, when first referred, was £104,430, or £2,707 per mile, and on the second reference £92,000, or £2,300 per mile; it is now £126,810, or £3,048 per mile, the increase being due to the higher prices ruling at present for rails and fastenings, and to extra station accommodation.

In

In 1895, when this line was last before the Public Works Committee, the price of rails was £4 10s. per ton delivered in Sydney; it is now £7 10s., which, the Engineer-in-Chief explains, means that the rails and fastenings add to the cost to the extent of about £360 per mile. The requirements of the Railway Commissioners with respect to station buildings and other accommodation, which are greater now than originally contemplated in connection with pioneer lines, are also, the Committee understand, responsible for some of the increased cost. Platforms on lines of this nature are made 2 feet 9 inches above the rails, though the late Mr. Eddy thought a height of 9 inches sufficient; and the extra height, in addition to cost of material, means, in many instances, extra cost of earthworks. Instead of dead-end sidings at platforms, loops are provided; and the station buildings, waiting-sheds, goods sheds, and platforms are more commodious, and, although of a cheap class, generally better than at first contemplated. All this, it is pointed out in the evidence of the Engineer-in-Chief, materially adds to the cost of a railway.

THE COMMITTEE'S INQUIRY.

4. As the question of a railway to Wyalong from Temora was very fully inquired into on three previous occasions, the Committee did not consider it necessary to take much evidence in the present inquiry, and they, therefore, examined only official witnesses. The list comprised the Engineer-in-Chief for Railway Construction, who supplied the necessary details relating to the construction of the railway; the Chief Traffic Manager, Department of Railways, who produced the Railway Commissioners' report on the proposal, and gave evidence with regard to the present traffic prospects of the line; an officer from the Government Statistician's Department, and the Government Astronomer, in respect to population, production, and rainfall in the districts that would be within the influence of the railway; and the Chief Inspector of Mines, with reference to the present condition of mining at Temora, Reefton, Barmedman, and Wyalong.

RAILWAY COMMISSIONERS' REPORT.

5. The Railway Commissioners, in their report, estimate the annual cost connected with the line at £8,242, which comprises interest at 3 per cent. on the capital expenditure, £3,804, and maintenance, traffic, and locomotive expenses, based upon a train service every week-day, £4,438; and the annual revenue at £5,715, made up of merchandise and live stock, £2,980, and passengers, parcels, and mails, £2,735. These figures show that the working expenses are exceeded by revenue to the extent of £1,277. The Commissioners say that the time has arrived when Wyalong should be afforded the advantages of railway communication, but they are still of opinion that the connection should be with Grenfell.

• TRAFFIC PROSPECTS.

6. A report by the Chief Traffic Manager to the Railway Commissioners states that there has recently been considerable agricultural development within a radius of 20 miles of Temora, in the neighbourhood of Reefton and Barmedman, and also an increase in the Wyalong district since the consideration of the Grenfell-Wyalong railway proposal. The intermediate traffic between Temora and Wyalong, which was not an important factor at the time the railway question was dealt with in 1894 and 1895, is now deserving of consideration. Altogether, there are about 23,000 acres of cultivation to be served at the following trucking stations:—

| | | | | |
|---------------------------------|-----|-----|-----|--------------|
| Reefton, 12 miles from Temora | ... | ... | ... | 11,000 acres |
| Barmedman, 22 miles from Temora | ... | ... | ... | 5,000 " |
| Wyalong 42 " " | ... | ... | ... | 7,000 " |
| | | | | 23,000 acres |

These figures relate to land under cultivation or cleared ready for the plough. It may, however, be confidently expected that the construction of the line will lead to further large areas being placed under cultivation. The bulk of the cultivation shown for Reefton is, it is pointed out, within 14 miles of the existing line at Temora, but it will be better served at Reefton.

Wyalong

Wyalong is reported to be in a very prosperous condition, the amount of gold having increased every year, and reached, in 1899, as large a quantity as 44,675 oz., valued at £178,700. Assuming that Wyalong will retain its present population, the following is the Chief Traffic Manager's estimate of the traffic that will be obtained by the railway :—

| | | | | | | |
|----------------------------------|-----|-----|------------|-----|-----|--------|
| Goods, 4,120 tons | ... | ... | ... | ... | ... | £1,532 |
| Wool, 1,982 tons | ... | ... | ... | ... | ... | 595 |
| Agricultural produce, 7,700 tons | ... | ... | ... | ... | ... | 601 |
| Live stock, 600 trucks | ... | ... | ... | ... | ... | 252 |
| | | | | | | <hr/> |
| 13,802 tons | | | 600 trucks | | | £2,980 |
| Passenger traffic | ... | ... | ... | ... | ... | £1,881 |
| Parcels and other coaching | ... | ... | ... | ... | ... | 350 |
| Mails | ... | ... | ... | ... | ... | 504 |
| | | | | | | <hr/> |
| | | | | | | £2,735 |
| | | | | | | <hr/> |
| Total | ... | ... | ... | ... | ... | £5,715 |

REASONS FOR SUPPORTING THE ROUTE FROM TEMORA TO WYALONG AS AGAINST THAT FROM GRENFELL TO WYALONG.

7. The Committee repeat the reasons given by the majority, in the last Report upon the proposed Railway from Grenfell to Wyalong, for their preference for the Temora route as against the Grenfell route :—

- (1) It is considerably shorter than the route from Grenfell to Wyalong.
- (2) It will cost £45,000 less.
- (3) It will serve a larger population.
- (4) It will open up a larger area of land suitable for close agricultural settlement.
- (5) It will serve the mineral area around Rcefton and Barmedman.
- (6) It will preserve existing trade relations.
- (7) It will allow the residents of the districts affected an opportunity of trading indifferently with either Sydney or Melbourne.
- (8) It will facilitate the transfer of stock in times of drought from the west to the high country about Gundagai and Tumut.

RESOLUTION PASSED.

8. The resolution passed by the Committee is shown in the following extract from the Minutes of Proceedings :—

Mr. Hyam moved,—“ That, in the opinion of the Committee, it is expedient the proposed Railway from Temora to Wyalong, as referred to the Committee by the Legislative Assembly, be carried out.”

The motion was seconded by Mr. Levien, and passed on the following division :—

| | |
|-------------|----------------|
| Ayes, 4. | Noes, 3. |
| Mr. Dick, | Mr. Shepherd, |
| Mr. Hyam, | Dr. Garran, |
| Mr. Watson, | Mr. McFarlane. |
| Mr. Levien. | |

W. T. DICK,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 2 October, 1900.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM TEMORA TO WYALONG.

WEDNESDAY, 22 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LYNDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee proceeded to consider the expediency of constructing a line of Railway from Temora to Wyalong.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

1. *Chairman.*] I understand you have a statement you desire to read to the Committee in respect to this inquiry? Yes; I have a statement prepared by the Under Secretary on the proposal now before the Committee. It reads as follows:—

H. Deane.
22 Aug., 1900.

RAILWAY FROM TEMORA TO WYALONG.

The proposal before the Committee was referred by the Legislative Assembly for the Committee's consideration on the 9th August, 1900, in the following terms:—"That it be again referred to the Parliamentary Standing Committee on Public Works to consider and report on the expediency of constructing a line of railway from Temora to Wyalong."

The question of providing the important mining district of Wyalong with railway facilities has been frequently before the Public Works Committee during the last six years.

The first proposal was, as now, to extend the line from Temora; but after due inquiry the then Committee resolved, in May, 1894, to defer their decision thereon for a period of six months. On the proposal being again brought up, the proposal was, in June, 1895, negatived by the Committee on the following grounds:—

- (1.) That the population of Wyalong alone does not justify such an expenditure.
- (2.) That the successful development of the field depends largely upon a permanent water supply which, at present, is not in existence.
- (3.) That the policy of the Government with regard to the leasehold areas in its vicinity has not yet been disclosed.
- (4.) That the Parkes-Condobolin line having been approved by the Committee, an extension, *via* Wyalong, can no longer be regarded as a line to tap the western country.

After an interval of four years the question of railway extension to Wyalong was again referred by Parliament to the Committee, the fresh proposal being to extend the line from Grenfell to Wyalong.

In the course of that inquiry, the question of the route from Temora had also careful consideration by the Committee, as being a rival of that from Grenfell, and they reported that much could be said in its favour, as being shorter, cheaper in cost, and passing through mostly good agricultural land. The Committee, however, approved by a majority of one, of the Grenfell route; but on their report being submitted to Parliament, the Legislative Assembly saw fit to refer back the proposal to the Committee, "because the matter had not received sufficient consideration."

The Committee, whose *personnel* had meanwhile been subject to some changes, after a second inquiry resolved, by a majority of one, that the proposal should not be carried out, "as, in the opinion of the Committee, a line from Temora to Wyalong was preferable."

Consequent on this resolution, the Minister felt compelled to ask the Legislative Assembly to refer the present proposal to the Committee, namely, a railway from Temora to Wyalong, which will form the basis of a line to Hillston.

The official description of the proposed railway:—

Length, 41 miles 48 chains; estimated cost, £126,810, or £3,048 per mile, exclusive of land and compensation.

This line is an extension of the Cootamundra to Temora branch railway, and begins at 291 miles 63 chains 54 links from Sydney, and proceeds north-north-westerly, occupying one side of the main road to within 4½ miles of Barmedman, where it diverges slightly to the north, and passing that township on its western side, again follows the main road to Wyalong at 330 miles; here the line bends westward, passing south of the township, and ends at the southern side of West Wyalong, at 333 miles 31 chains 54 links.

The works are light, and the ruling gradient is 1 in 100. The line passes almost entirely through Crown land.

The following is the statutory report of the Railway Commissioners submitted to the Committee in 1894-1895:—

PROPOSED EXTENSION OF THE COOTAMUNDRA-TEMORA BRANCH LINE TO WYALONG.

(1)—B.

Office of the Railway Commissioners of New South Wales, Sydney, 11 May, 1894.

In reply to your letter of the 29th March, I am directed by the Railway Commissioners to inform you, for the information of the Secretary for Public Works, that they have, at the earliest possible moment (having regard to other pressing matters of business), inspected the proposed extension from Temora to Wyalong.

It is estimated that the line should, if constructed as a pioneer line, as described by the Commissioners, in a paper dated the 10th October, 1892, and referred to in their annual report for the year ending June, 1891, be made, and all necessary accommodation provided, at a cost of £85,000.

H. Deane.
22 Aug., 1900.

The estimated annual cost would, under these circumstances, be—

| | |
|---|--------|
| Interest on estimated cost of construction, at 4 per cent. | £3,400 |
| Estimated cost of working :— | |
| Traffic expenses | 800 |
| Permanent way expenses | 2,000 |
| Locomotive expenses..... | 750 |
| | 3,550 |
| | £6,950 |

As regards the probable revenue, really nothing definite can be stated. In railway construction the proposal, from a traffic point of view, is unique, as the future entirely depends upon the permanency of the gold-field at Wyalong, which it is understood, is the basis of the extension. There is country adapted for agricultural purposes around Wyalong, and *en route* thereto; but there is no present necessity for providing it with railway communication, while there are large areas suitable for the purpose contiguous to existing railway lines available.

The present population of Wyalong (about 5,000) cannot be accepted as any indication of the future. Everything there at the present may be said to be in an abnormal condition, as was the case at Peak Hill, where, it is understood, there were, when the field was first discovered, 12,000 people, the present population being 1,500; however, basing the estimate of traffic on the assumption that there will be a permanent settlement at Wyalong, to the extent that now exists at Temora—about 1,800—the value of the annual revenue will not exceed £2,800.

In view of the great uncertainty of the future of Wyalong, the Railway Commissioners recommend that the proposed extension of the Cootamundra-Temora branch line be deferred for six months, or until such time as there can be no reasonable doubt as to the future of the place.

I am to add that the Commissioners have ascertained that both passengers and goods are being carried at reasonable rates between Temora and Wyalong; and, therefore, no hardship would be consequent upon the postponement suggested.

H. McLACHLAN,
Secretary.

2—(B.)

Government Railways of New South Wales, Secretary's Office, Sydney, 15 May, 1895.

In reply to your letter of the 14th instant, requesting a further report from the Railway Commissioners as to the proposed extension of the railway line from Temora to Wyalong, for the information of the Secretary for Public Works, I am directed by the Railway Commissioners to state that little can be added to the information conveyed by my letter of 11th May, 1894—copy attached. Twelve months' experience of the gold-fields and its requirements had not indicated anything to warrant a change of opinion as to the probable result of the extension of the line.

The population was at that date estimated at 5,000, and at the present time it does not equal that number; and the output of gold for the twelve months ending 15th March last—the date of the latest information before the Commissioners—was 7,328 oz., which does not indicate a large field, or evidence of extensive working.

The Public Works Department have placed the worst portions of the road in fair order, and the cost of carriage between Temora and Wyalong is as low as 15s. per ton, passenger fares being equally reasonable, and there does not appear to be any great disability, consequent upon the want of railway communication.

The question of the extension, moreover, would appear to a very large extent to affect local interest only, as the course of traffic from the outlying districts would, it is thought, be better served by the extension of a line in another direction than *via* Wyalong.

The present requirements and those of the near future of the gold-field are reasonably met, and the probable results would not, in the Commissioners' opinion, warrant their recommending that the line be undertaken.

H. McLACHLAN,
Secretary.

In view of the present improving conditions of Wyalong as a mining district as compared with five years ago, and of the increased estimate of cost, the Railway Commissioners have been asked to furnish a further report on this proposal.

The details of cost are stated as follows :—

TEMORA TO WYALONG.—*Permanently staked line.*

23 March, 1900.

ESTIMATED cost of a single line of railway 41 miles 48 chains in length, with 60-lb. rails. Ruling grade, 1 in 100. Sharpest curve, 20 chains radius.—New fastenings; new 4 feet 6 inch T.Os.; $\frac{1}{4}$ ballast. Sleepers, 2,464 per mile.

| Description. | Estimated Cost. | | | Average per mile. |
|--|-----------------|----|----|-------------------|
| | £ | s. | d. | |
| Earthworks | 9,162 | 5 | 10 | 220 |
| Timber bridges | 4,856 | 0 | 0 | 117 |
| Level crossings, cattle stops, fencing, and road diversions | 3,079 | 0 | 0 | 74 |
| Permanent-way materials (rails taken at £5 5s. per ton)..... | 25,910 | 4 | 3 | 623 |
| Freight | 5,819 | 8 | 0 | 140 |
| Platelaying at 1s. 2d. = £4,270 18s. 8d. | 24,588 | 6 | 2 | 591 |
| $\frac{1}{4}$ ballasting, at 4s. = £3,650 16s. | | | | |
| Sleepers, at 3s. 3d. = £16,656 11s. 6d. | | | | |
| Station works, including sidings | 11,538 | 14 | 0 | 277 |
| Station buildings, passenger station, £1,212; waiting shed, £720; platforms, £888; loading banks, £780; goods sheds and platforms, £900; station-master's houses, £1,224; 20-ton weighbridges, £504; cranes, £636; trucking-yards, £1,536; carriage-shed, £240; engine-shed and pit, £840; turntable, £690; coal stage, £204 | 10,284 | 0 | 0 | 247 |
| Water supplies | 3,000 | 0 | 0 | 72 |
| Gradient and mileage posts | 686 | 8 | 0 | 17 |
| Telegraph | 686 | 8 | 0 | 17 |
| Miscellaneous..... | 1,000 | 0 | 0 | 24 |
| | £100,610 | 14 | 3 | |
| Engineering and contingencies, 15 per cent. (nearly) | 15,091 | 5 | 9 | 363 |
| | £115,702 | 0 | 0 | 2,781 |
| Add for extra cost of rails and fastenings at £7 10s. and £13 2s. per ton respectively..... | 11,108 | 0 | 0 | |
| Total cost | £126,810 | 0 | 0 | 3,048 |

2. Have you anything yourself to add to that statement? I may say that the line is longer than the one submitted before. It goes to the private township. The first two lines submitted stopped at the Government township.

3. Is there any other variation in the line now submitted as compared to the one submitted before? No; there is no alteration. The location of the line is the same. The cost is considerably higher; and that

is

is due to the higher price of rails and fastening, and the extra siding accommodation. I think that is pretty well all. Of course, we are paying higher wages now.

H. Deane.
22 Aug., 1900.

4. Would you describe this as being a light line? Yes; it is a light line—an unballasted line. You see by the summation of the first six items that this line is of the same character as those we have had before. The cost of the running road would be £1,765 per mile. You cannot expect to make earthworks much under £200 per mile. The cost of the permanent-way materials and freight is absolutely fixed; then there is the cost of hauling. In the estimate the sleepers may prove to have been a little higher in price than necessary; if so, there would be a saving in that respect.

5. *Mr. Watson.*] If you could get sleepers there you would not have to pay much freight? No; if we have a free hand, there will be a saving.

6. *Chairman.*] Do the same remarks apply to this line as to the Bogan Gate—Bulbodney line with respect to increased estimate for station buildings and appliances? The requirements of the Railway Commissioners with respect to buildings and other accommodation and incidental expenses are higher than originally contemplated for these pioneer lines.

6½. Is there any other reason for the higher cost per mile? If reference is made to the estimate submitted to the Committee, when they last considered this proposal, on the 22nd May, 1895, it will be seen that rails then were very low. They were then £4 10s., delivered in Sydney. They are now £7 10s. The last rails ordered cost us that. That means that rails and fastenings would add an additional cost to the line of about £360 to the mile.

7. *Mr. Watson.*] How does the cost of the Temora to Wyalong proposal compare per mile with the Grenfell to Wyalong line? If the Committee will allow me, I will submit a comparative estimate at a future meeting.

8. *Mr. Shepherd.*] Are you of opinion that cross lines are more useful than parallel lines? As a general rule, parallel lines are the best. On the whole, they give shorter distances to the central port.

9. But they are likely to cut up the country to more advantage? Yes; I think that may be admitted.

10. With regard to the expense, the line *via* Grenfell could not be constructed at a less cost per mile than one from Temora to Wyalong? I would not like to say; but I propose, with the Committee's sanction, to answer Mr. Watson's question by submitting a comparative statement showing the cost of both lines.

11. Would you care to give an opinion as to whether the line from Grenfell to Wyalong would leave the larger portion of country unserved, that is, presuming the line from Grenfell to Wyalong will never be constructed? I do not think I could give an opinion on that which would be of any value to the Committee, because I have not really studied the country.

12. But you express an opinion that you consider parallel lines preferable to cross lines? As a rule, I have no doubt about it.

13. *Dr. Garran.*] These additional stations and accommodations that are required, are they mostly at the terminal points, or are they at little local roadside platforms? It makes a difference to local roadside platforms as well as to the terminus. As I explained to the Committee the other day with regard to other lines, all the station requirements have been increased in every case.

14. Even to the platforms? Even to the platforms. Instead of dead-end sidings we have loops now; the station buildings, waiting sheds, and goods sheds, and platforms are more commodious; they are of a better class, although of still a cheap class; they are better and more commodious than I was allowing for previously on the estimates on the basis of what Mr. Eddy himself laid down. I think the Railway Commissioners have come to the conclusion that the accommodation previously asked for was a little too small.

15. Taking the platforms we have on the Western line, for instance, are your platforms going to be like those? I think they would be about the same class of stations.

16. Would the stations, for instance, be anything like the Springwood station? I do not think they would be anything like the Springwood station.

17. Could you name a station as a pattern one? No, not exactly; but I can show the Committee the diagram plans of the station buildings and explain the difference between what is now proposed and what was proposed originally. It was after Mr. Eddy came here that pioneer lines were talked about. They were to have low platforms about 9 inches above the rails. We are now making in every case platforms 2 feet 9 inches above the rails, so that in addition to the cost of material there is in many instances an extra cost for earth works. Most of these lines are not in cuttings; but are embankment lines. The foundations of the buildings have consequently to be raised. Then again the buildings are more commodious. They may be of the same class; but the dimensions are larger. The overhanging of the roof is greater. That applies especially to certain classes of passenger stations, shelter sheds, and so on, and also to goods sheds. They all have a wider overhang, and the platform attached to the goods shed is wider. That all means extra expense.

18. Are the stations you propose on the Temora to Wyalong line going to be more expensive than on the line to Moree? Yes. No doubt the changes are good; but these small items all help to mount up the cost.

19. *Chairman.*] It seems on a review of the estimates of station buildings and station accommodation that from the time when these pioneer lines were mooted by Mr. Eddy there has been a steady increase of accommodation, and consequently a steady increase of cost? Yes.

20. At whose instance is this increased accommodation placed on the estimates? At the instance of the Railway Commissioners.

21. Do you think as a matter of railway policy it is a good thing in regard to these developing lines to make the requirements for passengers and goods at stations as commodious or extensive as on lines that serve highly-developed districts? No, that would not be wise.

22. Can you state what the practice in other countries is in the case of lines built for the purpose of developing the country? The practice is to put down just as much as you want at the time, and leave room for the rest to be added when required.

23. If that course were pursued here it would considerably lower the cost per mile for construction? I do not think it would.

24. Would it not mean a lower cost per mile? I think it is very likely that a railway company which is not so immediately answerable to the public as a governmental body is would not put up things so extensively. They would try to do with a good deal less at first. At the same time, I think, a good deal

of

H. Deane. of the expenditure which the Commissioners now ask for is very well laid out. I think, according to the first ideas, the accommodation was a little too small, too cramped. I think Mr. Eddy would have acknowledged that himself. A case in point is the Moree station. That was declared to be, soon after it was opened, too cramped.

22 Aug., 1900.

25: Was it not one of the peculiar circumstances in connection with the Moree line that the traffic was far greater than was anticipated before the line was constructed? Yes.

26. Have you had similar experience in any other part of the Colony? No, I do not think so.

MONDAY, 27 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD. | The Hon. SOLOMON HERBERT HYAM.
The Hon. ANDREW GARRAN, LL.D. | ROBERT HENRY LEVIEN, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Temora to Wyalong.

William Henry Hall, Sub-editor, Statistical Year Books, Government Statistician's Department, sworn, and examined:—

W. H. Hall.
27 Aug., 1900.

27. *Chairman.*] You have some statistical information to submit to the Committee with regard to the proposed line of railway from Temora to Wyalong? Yes. As supplementary to the evidence I gave about twelve months ago, I have brought the returns down for the past year. The statistics are drawn from an area of about 20 miles from each side of the proposed line.

28. Do your figures include the return from Hillston? Yes.

29. How far is that from the Wyalong line? I was asked simply to continue my figures which I furnished last year, and to bring them down to the latest date. My figures last year included Hillston. If you exclude Hillston you have the influence of the line only as far as Wyalong.

30. Do the Hillston figures seriously affect the total result? So far as results are concerned they do not, because the wheat yield is only about 1½ bushels to the acre.

31. *Mr. McFarlane.*] What was the yield in previous years, say in 1897? About 8 bushels to the acre; then in 1898 it was only a trifle over a bushel.

32. *Chairman.*] Now, will you read to the Committee the returns you have prepared? The estimated population that will be served by the construction of the proposed line from Temora to Wyalong, and thence to Hillston, is as follows:—Morangarell, 610; Reefton, 440; Barmedman, 790; Wyalong, 3,500; Ungarie, 400; Yalgogrin, 280; Hillston, 1,340—total, 7,360. The mineral production for the district is as follows:—Barmedman, 1,172 oz. of gold, of the value of £4,542; Reefton, 340 oz. of gold, of the value of £1,340; Wyalong and Wyalong West, 44,675 oz. of gold, of the value of £178,700; Yalgogrin, 1,060 oz. of gold, of the value of £4,240. The cultivation returns are shown in the following table:—

STATEMENT showing the area under cultivation, and yield therefrom, for the year 1899.

| District | Cultivation. | | | | | | | | | | | | | | |
|-------------|------------------------|--------|----------|--------|----------|---------------|---------------|--------|--------|--------|----------|--------|-------------|-----------|--------------|
| | Total area cultivated. | Wheat. | | Maize. | | Other grains. | Hay—area cut. | | | | | | Area under— | | |
| | | Area. | Yield. | Area. | Yield. | | Wheaten. | | Oatcn. | | Lucerne. | | Green food. | Potatoes. | Other crops. |
| | | | | | | | Area. | Yield. | Area. | Yield. | Area. | Yield. | | | |
| | acres. | acres. | bushels. | acres. | bushels. | acres. | acres. | tons. | acres. | tons. | acres. | tons. | acres. | acres. | |
| Morangarell | 5,381 | 4,204 | 23,570 | .. | .. | 8 | 1,081 | 559 | .. | .. | .. | .. | .. | .. | |
| Reefton | 6,585 | 4,940 | 6,561 | .. | .. | .. | 1,645 | 1,074 | .. | .. | .. | .. | .. | .. | |
| Barmedman | 9,255 | 5,783 | 30,050 | .. | .. | .. | 3,402 | 1,238 | 60 | 20 | .. | .. | 1 | 9 | |
| Wyalong | 4,147 | 1,605 | 4,220 | 12 | .. | 12 | 2,518 | 431 | .. | .. | .. | .. | .. | .. | |
| Ungarie | 4,165 | 1,837 | 7,524 | .. | .. | .. | 2,321 | 632 | .. | .. | 7 | .. | .. | .. | |
| Yalgogrin | 423 | 6 | 48 | .. | .. | .. | 417 | 119 | .. | .. | .. | .. | .. | .. | |
| Hillston | 12,480 | 5,221 | 8,873 | .. | .. | .. | 7,235 | 725 | .. | .. | .. | .. | .. | 24 | |

Henry Chamberlaine Russell, C.M.G., Government Astronomer, sworn, and examined:—

H. C. Russell, C.M.G.
27 Aug., 1900.

33. *Chairman.*] Can you furnish the Committee with any particulars of the rainfall over that part of the country which will be served by the proposed railway line from Temora to Wyalong? Yes; I have some figures which will give you the information. At Morangarell, just near the starting-point, the average rainfall is 21·64 inches; at Barmedman it is 19·32 inches. There are very few stations actually on the line. Wyalong has only about four years' record, which give an average of 13·64 inches; Blow Clear is just about on the line; it has an average of 17·42 inches. Ungarie, a little north of the line, has 17·48 inches. Youngara, a little further south, has 17·50 inches. A few miles north of that comes Murrumbogie, with an average of 21·34 inches; that is about 10 miles north of Youngara. The record for Naradhan extends over twenty years, and that place has an average of 18·97 inches. Cudgellico has an average of 17·24 inches. The records for that place extend over about sixteen years. Yarawa, a little north of the line, has an average of 22·46 inches. The record for that place extends over about sixteen years. Hillston, with a record for thirteen years, has 15·61 inches. There is no other station immediately adjacent to Hillston; but at Yathong, about 15 miles west of it, there is an average rainfall of 14·94 inches. At Cowl Cowl, a little further down the river from Hillston, the average is 14·98 inches. The stations I have enumerated are all within a moderate distance of the proposed railway line. 34. Would it be difficult to give any general idea of the character of the rainfall in that district as a whole? It is getting into the margin of 16 inches, you see. The average at Hillston would only be about

about 16 inches, even if it were so much—that is, if you took in all the stations around it. The distribution is fairly good; but it is getting into the most uncertain country we have; it is going so far west.

35. What is the average rainfall at Temora;—did you give us that? It is 20·29 inches.

36. From what you know of the district, is it more subject to drought than other parts of the western country? No, not more so.

37. I think you indicated that Wyalong had only about four years' record of rainfall? Yes. Barmedman, immediately under it, has thirteen years' record, showing an average of 19·32 inches. Marsden's is too far to the east, but it has a rainfall of 19·72 inches.

38. *Mr. McFarlane.*] Do you consider the rainfall sufficient to carry on agriculture in that district? So far as my own opinion is concerned, I do not think it is. I do not think a rainfall which averages only 16 inches is sufficient to make satisfactory progress in wheat-growing. Of course, if wheat-growing was limited to seasons when the rainfall is abundant, its cultivation would be safe enough; but such seasons as we have had during the last four or five years would not be sufficient.

39. Do you think that there will be occasional years of failure? Yes. It seems to me that wheat-growing is limited to districts where the rainfall exceeds 16 inches. If the rainfall gets much below 16 inches there is not much hope for the industry.

40. Have you any record of excessive rainfall in this district? Yes.

41. Have excessive rainfalls been frequent? No; very heavy storms that affect that part of the Colony are far apart.

42. Do you think that any other produce could be grown with a lighter rainfall? I am afraid my opinion would not be of much value in that respect, because I do not know much about agriculture; but I think this: if the rainfall of abundant years could be conserved, many of the difficulties of the drought could be got over.

43. Would that apply to agriculture? Yes.

44. You mean by irrigation? Yes.

45. For stock purposes, do you think the rainfall sufficient to enable you to call it a good stock district? I do not think so. I know one squatter, who lives 20 or 30 miles west of that, has been complaining terribly of the drought. At times he has had to buy hay for his stock.

THURSDAY, 30 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD,

The Hon. ANDREW GARRAN, LL.D.

The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Temora to Wyalong.

William Henry John Slee, Chief Inspector of Mines, Department of Mines and Agriculture, sworn, and examined:—

46. *Chairman.*] You know the district from Temora to Wyalong, I suppose, very well? Yes. I have given evidence here with reference to it several times. In 1894 I gave my first evidence on the same line.

47. Will you start from Temora and, going out in the direction of Wyalong, give us a general description of the character of the country from a mineral point of view, and the operations have taken place there, and what developments are likely to take place? Between Temora and Wyalong, and between Barmedman and Wyalong, it is auriferous country right through.

48. Auriferous country right through from Temora to Wyalong? Yes. I do not think that any silver or copper ores of a payable nature will be discovered there.

49. What are the prospects of Reefton as a mining field? The prospects of Reefton have rather gone down.

50. Is that due to the difficulty of water, and not to the poorness of the ore? They are quartz reefs. They have not found any alluvial so far.

51. But have not the operations of the miners there been hampered greatly by water? Yes.

52. At Barmedman, recently, a new development has taken place? Yes; at Barmedman they have taken up the old reefs—at the Phoenix, the Fiery Cross, and one or two others—and are working them again. Those reefs have been idle for a great many years.

53. What is the character of the mineral there? Well, all our auriferous deposits, after they get into the water-level, become refractory, and there is no doubt that those at Barmedman will fare the same. Some of them go to a depth of over 200 or 300 feet.

54. Is it an ore that will require furnace treatment? Yes; and concentrating.

55. As regards the construction of a railway, would the same remark apply to Barmedman as to Peak Hill—that a railway would enable them to carry on their operations better through being able to obtain fuel more cheaply? Yes. If they require, as they will no doubt require, coke and such like, they will be able to get it cheaper than they could at the present time.

56. Do you anticipate that, between Temora and Wyalong, any further discoveries of auriferous deposits are likely to take place? I believe there will be. I believe there is likely to be alluvial as well as quartz reefs.

57. Do you look upon Wyalong as being a permanent field? I said in 1894, when the population was 8,000 or 9,000, that it would not carry that population. I stated that in my evidence here, but I also said at the same time that I believed it to be a permanent field. I certainly think that Wyalong ought to have a railway, whichever way it may come.

58. Does this mineral belt go further west than Wyalong? To Yalgogrin, and right on further west to Hillston.

59. Is the mineral character of the country the same right out to Hillston? No; the geological formation is not the same. At Wyalong, the reefs are all found on hornblende granite, whereas, in the other places, they are found in slates on porphyry rocks.

H. C. Russell,
C.M.G.

27 Aug., 1900.

W. H. J. Slee,
30 Aug., 1900.

- W. H. J. Slee. 60. Would the construction of a line from Temora to Wyalong stimulate mining operations? Of course it should. If you can get everything carried more cheaply, it should do that to some extent. Mines that hardly pay now might pay well then.
- 30 Aug., 1900. 61. Can you supply us with any details of the yield of gold that has been obtained at Wyalong;—has it been increasing? The warden last year gave the yield as having increased, compared with that of former years, but that is, of course, a great deal through the cyanide process being carried on. However, independently of that, the reefs have gone down a good depth in hard country, and so far they have never lost their gold-producing power.
62. Mr. Hyam.] Did I understand you rightly to say that the reefing country about Wyalong was granite country? Yes; and all the country between Temora and Wyalong is auriferous country.
63. Did I understand you rightly to say that it was hornblende granite? About Wyalong the reefs are discovered in hornblende granite country, but in going to Temora you have diorite, porphyry, and slates.
64. But immediately about Wyalong it is granite country? Yes; the reefs there are found in granite.
65. Is granite country considered good auriferous country? Yes; at Lambing Flat, Young, and in the Braidwood district, the reefs have always gone down to a depth, but as soon as they go below the water-level they become refractory.
66. You think then that the Wyalong gold-fields are permanent—that they will carry the reef down with them as they go down, notwithstanding the ore being refractory? Yes; I think the same to-day as I said here in 1894. I believe that Wyalong is a permanent gold-field, and deserves to have a railway, no matter where it may come from.
67. Are the ores at Wyalong very hard to treat? The first 150 to 200 feet is all pick work, and then the hard rock comes in to a depth of 150 to 200 feet. The water comes in, and very hard rock comes in with it, and it requires blasting; but on the top levels for 150 or 250 feet it is pick work. Wyalong was an unusual gold-field, having so many reefs and no alluvial.
68. Would they be able to treat the ores at Wyalong without coke or coal? They cannot very well. They have to get coke, to a certain extent, to keep their furnaces going, but so long as there is firewood close by they will use as much wood as they can.
69. Would they require furnaces for the treatment of the ores? Not at the present time. As soon as the firewood ends they must have other fuel.
70. Do you think that the mines are of sufficient permanency for you to say that in time they will use up the whole of the fuel obtainable in the neighbourhood, and will have to resort to outside places for a supply of fuel? Yes, I think so. I think there will always be a fairly large population settled in that district. I have never had extravagant views of Wyalong, as most people have.
71. But you have had a fairly good opinion of it? Yes; I had a fairly good opinion of it, which I have now. I may be considered conceited, but my reports have been borne out almost to the letter.
72. You have said that that belt of country extended to Yalgogrin, and from there towards Hillston? Yes; but when you have left Yalgogrin 10 or 20 miles the country becomes less mineralised.
73. There is less chance of getting a payable gold-field in the locality of Hillston? Yes; you must not look for much gold towards Hillston, nor for much other mineral towards Hillston.
74. Nor at Hillston, I suppose? No; you must not.
75. Do you know anything of the country between Temora and Wyalong from an agricultural standpoint? Yes; there is fairly good agricultural land between Barmedman and Wyalong. I do not know whether it has been taken up or not.
76. Have you been off the road—at right angles, say, to the road? Yes; I have been all round the district.
77. And the nature of the country is all the same? Yes.
78. Fairly good agricultural country? Yes.
79. But a great deal of it unimproved? Yes; as far as I could see. But I have not been over that land for two years.
80. Chairman.] You have a return of the yield of the various mining centres along the proposed route;—will you kindly hand them in? Yes. It is signed by our Under Secretary for Mines, and, therefore, it must be as correct as it could be got. It is as follows:—

TEMORA (LATE BAKER'S).

GOLD-MINING in this Division dates back to 1879. The following are the statistics, as to yields from this field, to date:—

| Year | oz. dwt. gr. | | valued at | £ s. d. | | Year | oz. dwt. gr. | | valued at | £ s. d. | | | |
|------|--------------|------|-----------|---------|----|------|--------------|---------|-----------|---------|----------|----|---|
| | oz. | dwt. | | gr. | £ | | s. | d. | | £ | s. | d. | |
| 1879 | 200 | 0 | 0 | 760 | 0 | 0 | 1891 | 309 | 1 | 7 | 1,199 | 1 | 0 |
| 1880 | 9,167 | 13 | 0 | 32,503 | 14 | 0 | 1892 | 288 | 6 | 3 | 1,112 | 17 | 3 |
| 1881 | 35,227 | 17 | 12 | 136,508 | 0 | 4 | 1893 | 520 | 0 | 0 | 2,007 | 0 | 0 |
| 1882 | 33,348 | 4 | 3 | 129,224 | 4 | 11 | 1894 | 1,875 | 0 | 0 | 7,308 | 0 | 0 |
| 1883 | 12,415 | 2 | 3 | 48,108 | 2 | 6 | 1895 | 7,473 | 2 | 16 | 28,218 | 18 | 0 |
| 1884 | 11,333 | 0 | 0 | 43,917 | 2 | 10 | 1896 | 4,066 | 0 | 0 | 16,094 | 14 | 8 |
| 1885 | 6,222 | 0 | 0 | 24,110 | 5 | 0 | 1897 | 3,419 | 12 | 20 | 13,381 | 19 | 3 |
| 1886 | 4,200 | 0 | 0 | 15,278 | 0 | 0 | 1898 | 2,849 | 0 | 0 | 9,258 | 10 | 0 |
| 1887 | 2,191 | 0 | 0 | 8,490 | 2 | 6 | 1899 | 2,794 | 5 | 0 | 8,390 | 11 | 8 |
| 1888 | 1,771 | 0 | 0 | 5,862 | 12 | 6 | | | | | | | |
| 1889 | 690 | 0 | 0 | 2,672 | 10 | 0 | | | | | | | |
| 1890 | 474 | 17 | 0 | 1,840 | 1 | 0 | | | | | | | |
| | | | | | | | | 140,335 | 18 | 21 | £536,247 | 7 | 5 |

It will be noted that ever since 1881 there had been a steady falling off of gold won in this Division up to the time of the discovery of the Wyalong field, which appear to have given a fresh impetus to the mining fields adjacent to it. During the last year or two mining matters within the Temora Division have been seriously hampered by want of water, caused by drought, by the want of crushing plants, and by the want of capital generally wherewith to develop its mineral resources. It is believed that with the advent of capital a large quartz-reefing field, capable of supporting a considerable number of miners, would be developed. There are two cyanide plants at work within the Division, and a good deal of the gold recently won has been from the treatment of old tailings by this process. There are at present about 425 men engaged upon the field, and the value of machinery, plant, &c., is stated at £3,350.

REEFTON.

THE Reefton Gold-field, which lies about midway between Temora and Barmedman, formerly formed portion of the Barmedman Division. The effect of the Wyalong discovery is here again in evidence, for the reopening of the quartz-reefing industry in the locality of Reefton was undoubtedly due to the attention directed to the surrounding country by the great Wyalong rush, when several abandoned reefs were taken up by experienced miners who had been attracted to the district, with determination of giving the ground a thorough trial.

The

MINUTES OF EVIDENCE—RAILWAY FROM TEMORA TO WYALONG.

The following are the yields from this field to date :—

| Year | Yield (oz.) | Valued at (£) |
|--------------|--------------|----------------|
| 1895 | 1,603 | £5,075 |
| 1896 | 1,820 | 6,949 |
| 1897 | 1,339 | 4,500 |
| 1898 | 305 | 1,186 |
| 1899 | 340 | 1,310 |
| Total | 5,402 | £19,050 |

W. H. J. Sles.

30 Aug., 1900.

At present there are about twenty-six miners employed on the field. Work, however, during the last two years has not been encouraging owing to the claims at work having reached the water level, a stage at which the working miner finds it difficult to earn a remunerative wage, and the assistance of capital is essential if further development is to be proceeded with.

BARMEDMAN

BARMEDMAN is situated about 20 miles from Temora, and is about midway on the main road from the latter place to Wyalong. The records of the mining industry in this Division date from 1882, and the following are the yields to the end of 1899 :—

| Year | Yield (oz. dwt. gr.) | Valued at (£ s. d.) |
|--------------|----------------------|---------------------|
| 1882 | 108 9 15 | 431 5 0 |
| 1883 | 4,652 8 12 | 18,029 10 0 |
| 1884 | 3,351 5 12 | 12,986 2 6 |
| 1885 | 1,798 4 0 | 7,000 0 0 |
| 1886 | 2,054 10 1 | 7,961 3 11 |
| 1887 | 1,541 19 7 | 5,075 2 3 |
| 1888 | 989 4 15 | 3,833 5 5 |
| 1889 | 450 0 0 | 1,743 12 0 |
| 1890 | 327 0 12 | 1,250 17 5 |
| 1891 | 54 5 0 | 207 10 0 |
| Total | | 25,829 1 23 |

The renewed activity in this Division, as a mining centre, is also due to its proximity to the Wyalong field. Unfortunately, during 1896, little or no work could be done on the principal claim owing to the water-level having been reached, and the want of capital needful to overcome the difficulty. During 1897 a large amount of tailings were treated by cyanide with very satisfactory results, but the Fiery Cross Gold-mining Company's claim was still under suspension, its capital being exhausted through the heavy expense incurred in trying to cope with the great influx of water. During 1898, with the exception of the cyanide plant, which was still at work, mining matters were almost at a standstill. The Fiery Cross Gold-mining Company, which has been attempting to secure fresh capital wherewith to proceed with the work, had its leases forfeited. These were applied for by another, but the application was opposed, and litigation ensuing prevented work being done, or the importation of capital. During 1899, however, mining matters in the Division have shown improvement, and at the present time there are three large mining concerns carrying on operations, besides a number of smaller claims, from some of which very good returns have been obtained. The principal mine, the Fiery Cross, started work in earnest about the middle of the year, but most of the time up to the present has been occupied in dead work—unwatering the mine, &c. The product of the field for the current year should show a marked increase. There are some sixty or seventy men employed. Machinery and plant in the Division are valued at about £15,000.

WYALONG.

This gold-field was discovered at the latter end of 1893, but it was not until the early part of 1894 that general attention began to be directed to it. As the lodes in which the gold occurs have been proved to extend downwards into the undecomposed rock, and to preserve their character and productiveness to a considerable depth, the permanence of the field appears to be assured. It has already proved itself to be both a rich and extensive one, and its importance will be recognised when it is pointed out that in 1897 Wyalong produced 2,484 oz. more gold than any other single Division in the Colony. During the first five years of its existence it produced no less than 136,593 oz. of gold, valued at £533,628. The annual yields up to the end of 1899 have been as follows :—

| Year | Yield (oz.) | Valued at (£) |
|--------------|----------------|-----------------|
| 1894 | 9,649 | £35,946 |
| 1895 | 24,497 | 91,864 |
| 1896 | 33,495 | 130,000 |
| 1897 | 34,370 | 137,490 |
| 1898 | 34,582 | 138,328 |
| 1899 | 44,675 | 178,700 |
| Total | 181,268 | £712,328 |

The foregoing figures exemplify the marked and steady progress the field has been making since its discovery.

The population of the towns of Wyalong and Wyalong West (which are practically one) at the end of 1898 was estimated at about 4,200, and there can be no doubt that during last year some slight increase must have occurred. Sixteen hundred miners were employed in 1898, being some 500 less than those employed in 1897. For last year (1899) the same number is returned, but it is thought to be an underestimate, as the Warden in his report to end of 1898 stated that the decrease then reported would shortly disappear, as four of the chief mines intended putting on a large number of men. From the large increase in the output of gold during last year it would appear extremely probable that an increase in the number of miners must have taken place.

The value of machinery and appliances on the field at present is estimated at £52,000, and includes three substantial batteries—one Huntingdon Mill, three cyanide, and two chlorination works.

YALGOGRIN.

This field lies some 25 miles to the west of Wyalong, and is practically an extension of the discovery of that field. There are at present about 125 men employed in quartz-mining, and the population would probably be between 400 and 500.

The following are the yields of the field to date :—

| Year | Yield (oz. dwt. gr.) | Valued at (£ s. d.) |
|--------------|----------------------|---------------------|
| 1894 | 348 12 0 | 1,296 6 0 |
| 1895 | 804 5 0 | 3,116 9 4 |
| 1896 | 1,250 0 0 | 4,375 0 0 |
| 1897 | 1,631 0 0 | 5,872 0 0 |
| 1898 | 1,180 0 0 | 4,130 0 0 |
| 1899 | 1,060 0 0 | 4,240 0 0 |
| Total | 6,273 17 0 | £23,029 15 4 |

It will be noted that during the last two years there has been a falling off in the quantity of gold won. This, however, is in no way due to depletion of the field. On the contrary, some very satisfactory results were obtained last year from crushings, one small parcel giving 14 oz. to the ton, and the greater portion of the stone raised during this period remains yet to be treated. There is one 10-head stamper battery on the field, and two small cyanide plants, with a plentiful supply of water. It is thought possible that the present year will show a record for the locality.

81. *Mr. Shepherd.*] Is it not a fact that the returns from Reefton and Barmedman have been decreasing for the last few years? Yes; but not for this year. The returns from Barmedman for years back have been very little; but this year the mines have been taken up again, and gold is again being obtained there.

82. Can you account for the gradual falling-off for some years? No; it is just the ups and downs of mining—just the same as it was at Cobar. At the Great Cobar Copper-mine there were only two men and

- W.H.J. Stec.
30 Aug., 1900.
- and the manager at work in the whole of the mine, and the late Mr. Wilkinson and I were always looked upon as blockheads for reporting so favourably of the Cobar district; but now the Cobar railway is one of the best paying lines we have; and so the railway might be in this case. Mining is always up and down. I shall have had forty-six years' experience of it next November.
83. Have you found that to be the case generally with first-class mining districts? With the exception of Broken Hill, that is the case throughout Australia. Broken Hill has kept continually going.
84. With regard to Reefston, in 1896 the return was 1,820 oz.; in 1897, 1,339 oz.; in 1898, 300 oz.; and in 1899, 340 oz.; that is a tremendous come-down? Yes, as far as Reefston is concerned; but that is a small place.
85. What would you generally gather from a falling-off of that kind? The reefs there have always been very narrow, and have gone to a depth only to which individual miners could go with their poor means and primitive appliances; and the proprietors of the quartz-crushing plant, which was on the place, got into trouble with each other, and they could not crush there. For over eighteen months they had not sufficient water in the dam to crush, and that may have had a lot to do with the falling-off.
86. Under such circumstances, do you think it would be encouraging to construct [a railway with a view of assisting these mines? Yes; I think so. I cannot say otherwise than I have said so many times here—that I always favoured a line to Wyalong, whichever route it might come by.
87. The same rule almost would apply to Barmedman, although during [the last two or three years the returns seem to have picked up again? Yes; and this year it will show a very good return.
88. In 1895 they had only 117 oz.? Yes; Barmedman was opened long before either Wyalong or Temora was known as a goldfield.
89. Then, in 1897, they seemed to have had a big jump-up, and since then they have gone back? Yes; since then Wyalong broke out, and the Conroys and other people went to Wyalong, and took up some of the best claims there; but they have since sold out, and gone back to Barmedman to retake their mines—the Phoenix, for one of them.
90. Wyalong seems to have had a steady progress from the commencement? Yes.
91. There does not seem to have been any falling-off there; but in the case of the other two mines, the returns seem to have fluctuated very much; what is your opinion really of Barmedman;—do you think you are justified in saying that it will be a permanent field? I believe that the last time I was here I said that the mines were all idle, but I thought that they would be retaken, and be found good gold-producing mines. I hold the same opinion now.
92. What is the greatest depth they have attained at Barmedman? About 250 feet. Barmedman was discovered in 1871 or 1872. I crushed the first quartz stone ever crushed from Barmedman. I had a quartz-crushing machine at Grenfell then.
93. Is the lode there at a depth as wide as it is on the surface? Yes. Now you require to keep all the tailings, and use the concentrating plant, so as to save everything. Formerly it was thought that the gold saved on the blankets was all, but now we find that the slimes take a lot of the gold away, and that has to be looked after.
94. Do you know the number of miners employed at Barmedman? I should say there are not 100 men employed there at present. But there is a population surrounding the place, and Barmedman is a fair-sized township, with three hotels, stores, &c.
95. Has the number fluctuated much? It came out far lower than that during the height of the Wyalong rush, but now it is gradually creeping up to the old standard.
96. There is no alluvial? No alluvial has ever been found at either Barmedman or Reefston, but I believe we shall get alluvial between Barmedman and Wyalong.
97. *Dr. Garran.*] Admitting that there should be a railway to Wyalong, is the importance of Barmedman and Reefston sufficient to give to the route from Temora a superiority over the route from Grenfell? I always favoured the Temora route. I have been over the Grenfell route since I gave evidence here last. Of course, that is a good agricultural route. My interest is with Grenfell, but I favoured this route. I thought that starving stock out in the far west, coming to Hillston, could be taken to the mountains, and I took that into consideration as well.
98. Supposing that the Grenfell route were adopted, these two places, Reefston and Barmedman, would be still within fairly easy reach of a railway? Barmedman is 22 miles from Temora, and about the same distance from Wyalong.
99. How far do you reckon Reefston is from Temora? I think it is only about 9 miles. It is about half-way between Temora and Barmedman.
100. That is not an out-of-the-way distance for a mine to be from a railway? No.
101. Therefore, you would not say that Reefston would be kept back by the want of railway communication? No.
102. How far do you say Barmedman is from Wyalong? About 22 miles, but the road is very bad, and I think the Barmedman people would go to Temora.
103. But supposing they want to get coal from Lithgow? They would have to go to the Western line.
104. What I mean is that both these townships, which are not very strong at present as gold-field townships, are within a practicable distance of a railway, even if a line to Wyalong were made by another route? Yes.
105. They would be better off than they are now? Yes.
106. Wyalong would have a complete railway to itself, and these other towns would be the one within easy reach of Temora, and the other within easy reach of Wyalong? Yes.
107. So that if a line were made for agricultural and other reasons by way of Grenfell, these two townships would be fairly supplied? Yes; they would be fairly supplied so long as Wyalong gets a railway, which, taking a natural view of the matter, I think it ought to have. I have given evidence here four or five times, and I have always advocated the Temora line, and I cannot go back on it. But I would like to see Wyalong get a railway even if it had to come by another route.
108. *Mr. Hyam.*] Still you are of the opinion that a railway from Temora to Wyalong would be the better line of the two? A railway from Temora to Wyalong would better suit the Wyalong people, I think, than the Grenfell line would.
109. Do you know anything of the wishes of the Wyalong people;—do you know whether they prefer one route to the another? The Wyalong people are like the people of all other little townships. There are always two sides, they fight against each other, and keep away what they would otherwise get. 110,

110. *Mr. Watson.*] It is a fact, is it not, that at Barmedman there has recently been rather a large development? Yes. People at Barmedman have recently taken up the Fiery Cross and the Phoenix—the very mines I mentioned in my last report, I think. W. H. J. Sloe.
30 Aug., 1900.

111. Was not the sudden jump in the apparent production of gold at Barmedman in 1897 due to the fact that they were treating ores that were then coming from Wyalong, but that afterwards the Wyalong people, having plants of their own, had no necessity to send ore to Barmedman? Yes. The only crushing plant in the district was at Barmedman. The Wyalong people sent ore to Barmedman to have it tried or crushed. That was in 1894.

112. So, as a matter of fact, the gold production around Barmedman has been increasing lately as compared with what it was a few years ago? Yes.

113. The actual production? Yes.

114. The Fiery Cross people have not begun to get ore yet—I mean those who have taken up the mine recently? Yes. It has been taken up and abandoned, and taken up again for years past. They have always been fighting with each other.

115. The people who have it now, I understand, have got the water out, and have erected a lot of machinery on the ground? Yes.

116. You have not seen it since they have taken it in hand? No; I have not been there for two years; but I was in the old workings only a short time before they were abandoned. I know the Fiery Cross reef, and everything else. I went into the Phoenix and other mines before they were abandoned. They were abandoned for some years.

117. You know that at the Phoenix they have within the last few years put up very expensive new machinery? Yes; and they have broken into the old workings, and are now sinking a deep shaft to get below them.

118. There are no mining developments or appearances between Grenfell and Wyalong that you know of? There are not at the present time. But there has been prospecting on the Bland and at other places.

119. No results so far? No.

120. Do you think it is likely that there will always be a mining population of greater or less extent between Temora and Wyalong, leaving Wyalong out of the question? Yes; I think so. Temora was opened in 1880, and Barmedman long before that, and they are still townships.

FRIDAY, 31 AUGUST, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.

The Hon. ANDREW GARRAN, LL.D.

The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing a line of Railway from Temora to Wyalong.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works,
sworn, and further examined:—

121. *Chairman.*] I understand that you have a comparative estimate you wish to hand in? I have a comparative statement asked for by Mr. Watson, showing the estimated cost of the Grenfell to Wyalong line, brought up to date and prepared on the same basis as the estimate for the Temora to Wyalong line. It is as follows:— H. Deane.
31 Aug., 1900.

GRENFELL TO WYALONG.

REVISED estimated cost of a single line of railway, 59 miles in length, with 60-lb. rails. Ruling grade, 1 in 100 against, and 1 in 75 with the load. Sharpest curve, 10 chains radius.

| Description. | Estimated Cost. | Average per mile. |
|---|-----------------|-------------------|
| | £ s. d. | £ |
| Earthworks | 12,850 0 0 | 218 |
| Timber bridges | 10,903 0 0 | 185 |
| Level crossings, cattle stops, and fencing | 3,894 0 0 | 66 |
| Permanent-way materials (rails taken at £5 8s. per ton, see below for extra cost) | 37,582 9 4 | 637 |
| Freight | 8,564 17 6 | 145 |
| Platelaying, at 1s. 2d. = £6,057 6s. 8d. | } 34,872 18 8 | } 591 |
| ½ ballasting, at 4s. = £5,192 | | |
| Sleepers, at 3s. 3d. = £23,023 12s. | 10,339 13 7 | 175 |
| Station works, including sidings | 10,254 0 0 | 174 |
| Station buildings:—Passenger stations, £1,212; waiting-sheds, £720; platforms, £996; loading-banks, £936; goods-sheds and platforms, £900; cranes, £636; twenty ton weighbridges, £504; station-masters' cottages, £930; trucking-yards, £1,536; engine-shed and pit, £840; carriage-shed, £240; turn-table, £600; coal-stage, £204 | 5,000 0 0 | 85 |
| Water supply | 973 10 0 | 17 |
| Gradient and mileage posts | 973 10 0 | 17 |
| Telegraph | 1,000 0 0 | 17 |
| Miscellaneous | 137,207 19 1 | |
| Engineering and contingencies, 15 per cent. (nearly) | 20,581 0 11 | 349 |
| Add for extra cost of rails and fastenings, at £7 10s. and £13 2s. per ton respectively | £157,789 0 0 | 2,674 |
| | 14,794 0 0 | |
| Total cost | £172,583 0 0 | 2,925 |

H. Deane. 122. *Mr. Watson.*] Can you say what goes to make up the extra cost per mile of the Temora-Wyalong line, in view of the fact that, under the old set of estimates, taking the two lines, the Temora-Wyalong line was held to be the cheaper? The Temora-Wyalong line was always a little more per mile—£3,048.

31 Aug., 1900.

123. The estimate in 1899 for the Grenfell to Wyalong line—that is, on the old price of rails—as furnished to the Committee was £2,411 per mile? Yes. I think there was a previous estimate for the Temora to Wyalong line—£2,300. They were made at different times.

124. The previous estimate for the Temora to Wyalong line was about £2,300? All I can say is that I have had this matter very carefully gone into, and that is the way it comes out.

125. The increased amount per mile for the Temora-Wyalong line is, perhaps, due to the greater number of stations compared with those on the other line? Yes; and the increased amount of accommodation.

126. If you had even the same number of stations and accommodation to provide for the shorter length of line, it would mean so much more per mile in making the estimate? Yes. As a matter of fact, in making out this estimate I have put down for station buildings and for station works practically the same amount for the two lines. I think that the cost of the station works, including earth-works, metalling, and sidings, comes to rather more on the Temora to Wyalong line, and I believe that it is chiefly due to the proposed Barmedman station; there happens to be more earth-work there.

127. How many stations do you propose to have on the Grenfell-Wyalong line? I cannot say how many have been included without referring to the details.

128. I should think there would be one more required on the Temora line than on the other, judging by the centres of population;—going from Grenfell, I suppose, there would probably be a station at Piney Ridge, and one at Carragabal, near Marsden, whilst on the other route you would have a station at Reefton, one at Barmedman, and possibly one between Barmedman and Wyalong, as well as one at Wyalong, and another at Wyalong West? I have taken the passenger accommodation as being about the same in each case; but the cost of such accommodation as loading-banks—for wool, for instance—would be higher on the Grenfell to Wyalong line.

129. That is on the plain? Yes; but some of the other items come out more on the Temora to Wyalong line, so that they just about balance. Of course, this is merely an estimate; it is possible that when it came to the actual construction of the line we might have to modify these things. It is not worth while to go into every little detail until authority for construction is given; but, approximately, I should say that the estimate is correct, and that the cost of the accommodation, although it might be different in its items, comparing the two lines would come to the same total.

130. But you have a greater population to provide for in the way of stations on the Temora-Wyalong line than you have on the other route? Yes.

131. *Dr. Garran.*] Will not this Temora-Wyalong line, if it be made, make rather a sharp angle with the projected line to Ariah and Gunbar? Yes.

132. For the first 10 or 15 miles they would fight for the traffic, I suppose? Yes; I suppose they would, to some extent.

133. That is unavoidable? Yes.

134. Do you still adhere to your original opinion that there is no material difference in crossing the Bland country? Yes.

135. You have heard of what has been said about the overflowing of the land there, and the risk of washing away a low embankment? Yes; but I am not at all afraid of that. The flood is so very low that even if it went over the line it would not matter.

136. Have you arranged for your banks to be covered by water in a flood? No; I have got them out of flood level, and I can put in cheap waterways to do all that is required.

137. You think that will be sufficient? Yes; I think so.

138. Is the flow of the water strong or very quiet as it runs along? I think it is very quiet.

139. Unless it were pinched up by having insufficient waterway, it would not make a strong current anywhere? No.

140. What is the full length of line you expect to be nearly covered sometimes with water on the Grenfell to Wyalong railway? In giving evidence on the Grenfell to Wyalong railway, at Question 46 I was asked:

Have your officers who have been engaged on the detailed survey got any particulars as to the flooded area, and the depth, and the velocity of the water in flood-time? They have reported on the flood levels. There is a considerable extent of flooded country; but the current is for the most part slow, and the depth of water for the most part very small. In going through the question of the waterways on this line, I added £1,500 to the estimated expenditure over and above what the surveyors recommended. That would be chiefly applied in crossing the Bland and Back Creeks.

In crossing the two main creeks? Yes; and the flooded waters.

141. I wanted to know the full length of the flooded country, and also the length of all your waterways put together;—what proportion would your escape bear to the whole length of the flooded line? The extent of the flood may be very considerable; but some of it is only a question of a few inches, and really consists of backwater very largely. On referring to my evidence I see that the bridge-work for crossing the main Bland Creek I calculate would amount to about 1,000 feet of viaduct and bridge, which I should say would be quite sufficient; but if it were found necessary we could put flood-openings right across from end to end of the flood-country.

142. You think that that central opening would carry off the whole of the water? The 1,000 feet,—Yes. It might, and probably would, be divided up according to the flood channels of the creek.

143. Have you provided for anything more than that central opening? Yes. The main opening is 240 ft., and the viaduct on each side of it would probably be between 700 ft. and 800 ft. altogether.

144. But I mean east and west of that, have you any other openings? There would be the Back Creek. That would be provided for.

145. Your officers estimate that that would be enough? Yes; in fact they put their estimate lower, and I have increased it myself. A reference to Question 55 might, perhaps, give some information to the Committee. I thought that that would meet the case, and nothing has occurred to alter my opinion with regard to the matter. The question is:

How high is the embankment which you have provided across the plain? The water does not generally rise high. All you want to do in a case like that is to bring the top of the formation, say, about a foot above the possible level of the water, so that in parts where the water was only 6 inches deep it would be only necessary to make the embankment about

18 inches high. Between these higher places you would naturally run on a level, so that it might be any depth above that, according to the position and the levels of the ground. I should say that the formation over the worst places, that is, the long flats, but not over the parts where there is a defined watercourse, is from 4 ft. to 3½ ft. high; and that would be quite sufficient, according to the flood levels which have been observed. H. Deane.
31 Aug., 1900.

I mention that because it means that openings would be provided all over those places where the water is deeper, but I suppose that where the water is only a few inches deep for the most part it would not be necessary to put any openings in at all. However, for the money that is put down, I am quite sure that satisfactory waterways can be built.

146. You do not think there will be any risk of these banks melting away with water on both sides of them? I am not in the slightest degree afraid of that. The only danger to the higher banks is the washing out at the ends of the bridges, and in all cases where they are liable to flood I put sheeting so as to protect them. The mere standing of the water against an embankment does not hurt it.

147. Are there not some clay soils that will dissolve a good deal from water pressing against them? I think that where the water flows against them in such a way as to erode them it might be so, but they are not in any sense soluble. At the ends of the bridges the embankments will be protected against scour. At any rate, whatever difficulty there might be could easily be got rid of by protecting the sides of the embankment with large stones. As regards these railway embankments, the water does not stop very long at its full height. Even if it did, I do not think it would hurt very much. Where the water would be standing—the deeper parts—there would be waterways; therefore, as a matter of fact, the water would not be standing against the embankment for any length of time.
